## Chapter 1: Introduction

*Fires of War* is a cross between a wargame and a tabletop roleplaying game.

### *Game Masters and Players*

The game master is the storyteller of the game, serving as both the rule arbiter and the mastermind behind the plot. Players are the characters within the story, serving as the protagonists to the plot the game master is weaving for them. The relationship between the two should be one of mutual storytelling rather than competition and fighting.

### *The Dice System*

This system is a *d20 system*, in which players roll a twenty-sided die (abbreviated to a d20) and hope for higher results in order to beat target numbers for skills, attacks, and so on. Additional dice are used beyond the d20, these dice include; d4, d6, d8, d10, and d12. What's known as a d% or d100 is also used. This is done by rolling two d10 dice, and designating one as the tens digit, and one as the ones digit.

### *Fires of War and The Fade Tabletop*

*Fires of War's* core setting takes place in the distant past within the universe of *The Fade Tabletop*, however players are free not to use this setting and to modify it or make new ones. *Fires of War's* scope is a lot smaller than *The Fade Tabletop*, and focused more on an individual world rather than multiple worlds within a spanning galaxy. That doesn't mean these aren't present in *Fires of War*, however they're not accessible and anything beyond the core world is viewed as equivalent to a spirit world.

### *Themes in Fires of War*

The themes of *Fires of War* play towards a high fantasy, war-torn world.

#### **High Fantasy**

Magic is dominant within *Fires of War*, influencing every aspect of life around the players. Despite its prominence, it is still seen as a bizarre power with seemingly no rhyme or reason to the mechanisms and how it works. At the current time, magic and science are progressing steadily at the same rate, leading to a technological world on par with the Viking Age.

If GMs wish, they can instead decrease the prominence of magic and make it rarer and more exotic. This lends itself instead to a *Low Fantasy* world.

## Common Terms

- **Ability Score / Stat:** Characters possess seven stats; Strength, Magic, Defense, Resistance, Skill, Speed, and Luck. Each have different applications, and the higher the number - the better.
- **Actions:** “Actions” are physical or mental actions which take up time during the game. Different kinds of actions exist, depending on how advanced the action being taken is.
- **Bonuses:** These are modifiers that add to attack, damage, skills, and so on.
- **Armor Rating (AR):** This is how hard an opponent is to hit physically.
- **Magic Rating (MR):** This is how hard an opponent is to hit magically.
- **Checks:** This is a catch-all term for any d20 roll you make. Attack rolls, skill checks, and so on.
- **Stamina Points (SP):** This is a physical pool that a character spends to activate abilities.
- **Magic Points (MP):** This is a magical pool that a character spends to cast spells.
- **Creature / Character:** These terms are used interchangeably as a catch-all term for any type of being within the world including PCs, NPCs, and monsters.
- **Difficulty Class (DC):** When you attempt certain checks, there is a Difficulty Class (or DC) associated that you must meet or beat in order to succeed at the task.
- **Experience (EXP):** Points accumulated over the course of playing the game which advance the characters to the next level.
- **Hit Points (HP):** This is how much damage a character can take before they are knocked unconscious (or worse, killed).
- **Level:** This represents how powerful a character. The higher a character’s level is, the more innate benefits they receive.
- **Player Characters (PCs):** These are characters controlled by the players.
- **Non-Player Characters (NPCs):** These are characters controlled by the GM.
- **Rounds:** In game combat is measured in rounds, each taking 6 seconds. One round passes when every character on the initiative tracker has acted at least once.
- **Initiative:** When a battle begins, every character participating rolls initiative. The higher the result, the sooner they act in the initiative round.

## Chapter 2: Character Guidelines

Characters in Fires of War have 7 ability scores, each representing different aspects of training.

---

**Strength:** This is the character's raw physical power.

**Magic:** This is a character's 'outer soul' strength, which is the energy which surrounds their body and soul. The outer soul is used to cast magic in all forms.

**Defense:** This is the character's physical bulk or ability to shrug off damage from a foe.

**Resistance:** This is the character's 'inner soul', which is also known only as the soul of the character. It is used to resist spells and magic.

**Skill:** This is a character's innate training and skills, and determines how accurate a character is. It's also used for mental-related abilities.

**Speed:** This is a character's agility and quickness, and determines how easily a character can dodge an attack.

**Luck:** This is a character's innate luck, and serves as a "miscellaneous" stat that adds to everything in small increments. It also used for social-related abilities.

---

Character's base stats are determined by their class, and are modified by other aspects such as a character's History and Standing.

### *Alternate Rule: Point Buy*

Alternatively, the GM can opt to use a point buy for players to fully customize their stats. With these rule, each of the character's stats start at 1.

Characters receive 15 points to spend. The max a stat can be during point-buy (not including Species, History, and Standing bonuses) is 10. Stat points can be spent on HP like normal.

## Character Advancement

The following chart and rules are for character advancement including stat, HP, and abilities gained at higher levels. These rules apply to all types of classes - Recruit, Standard, Promoted, and Advanced.

Level	HP	Stat Increase	Weapon Rank	Abilities
1	—	—	E	1
2	1	2	E	1
3	1	1	E	2
4	2	2	E	2
5	1	1	E	3
6	1	2	D	3

37	1	1	S	19
38	2	2	S	19
39	1	1	S	20
40 ‡	1	2	S	20

† - Recruit max level | ‡ - Standard max level | † - Advanced max level | ‡ - Promoted max level

Standard classes must reach level 20 in their class and level up while still level 20 in order to promote to their Promoted class. This sets them as Promoted Level 1, or effectively Level 21. Promoted level 20 (effective level 40) is the maximum level that can be achieved.

**Effective Level** is a character's level if they are promoted, including their past levels from when they were an Standard class. A character that is Standard 20 / Promoted 5 is Effective Level (or EL) 25.

**HP Advancement:** Each character gains a HP in a +1/+1/+2 pattern each level.

**Stat Advancement:** Characters gain 2 stat points every even level and 1 stat point every odd level which they can spend upgrading their stats.

**Weapon Rank:** Weapon Rank increases 1 step starting at 6<sup>th</sup> level, and every 5 levels thereafter, to a maximum of S rank at 26<sup>th</sup> level.

**Abilities:** Characters start with 1 free ability at 1<sup>st</sup> level, and gain a new ability every odd level to a maximum of 20 abilities at 39<sup>th</sup> level. Abilities encompass Maneuvers and Spells together.

Characters also gain abilities from their Species, History, and Standing as well.

**Experience Points:** Characters gain EXP through fights, encounters, and roleplay. The group of player characters all have an EXP pool that starts at 0 and increases up to 100.

**Awarding EXP:** Defeating an encounter (combat intense social situations, or roleplay scenarios which involve risk or importance) awards you EXP based on its difficulty. This is up to a GM's discretion.

Encounter Difficulty	EXP Yield
Trivial	5 EXP
Easy	10 EXP
Moderate	25 EXP
Hard	45 EXP
Impossible	75 EXP

Lower level enemies being defeated by higher level characters yield less EXP, and higher level enemies defeated by lower level characters yield more EXP. The following chart determines the level based on the average level of the group of enemies.

≤ Level	EXP Multiplication
3-5 Levels	x0.75
6-10 Levels	x0.5
11-14 Levels	x0.25
15+ Levels	x0.05

When a character reaches 100 EXP, they level up and their EXP is reset to 0. Characters at the maximum level for their class (Promoted 20, Advanced 30). Recruit and Standard classes are the exception as when they reach their 'maximum level' (10 for Recruit and 20 for Standard) and they promote after advancing to the next level. See more in the *Promotion* section.

## Promotion

Characters promote into new classes based on level requirements, and these promotions unlock new options for players including abilities and maneuver choices.

**Recruits** who reach 10<sup>th</sup> level promote when gaining enough EXP to level up to 11<sup>th</sup> level. This sets them at Standard 11<sup>th</sup> level.

**Standard** classes which reach 20<sup>th</sup> level promote when gaining enough EXP to level up to 21<sup>st</sup> level. This sets them at Promoted 1<sup>st</sup> level.

Similar to Promotion, characters can *Reclass* using a special item. This allows characters to change into alternate classes in order to acquire feats and abilities which are only available normally to specific classes. This is explained in more detail in the Classes section.

---

## Ability Score Caps

Classes each have capstones on their ability scores. The following are the stat caps for the class types.

**History:** In ancient Dwarven history, the Dwarves were forced from their homeland by a demon wishing to make its new lair for more demon spawn. Being pushed from their ancestral homeland has fueled an endless war between Dwarves and demons which has seen no end as countless Dwarvenkind fight over a homeland they've never even seen.

**Associated Religions:** Ellonian Orcs worship a vast pantheon of deities, most tying into various aspects of war and family.

**History:** In Ellon, Orcs inhabit vast desert regions and seldom come out from these sand dunes, instead preferring to make these places their home. Despite this, Orcs travel in packs frequently and set up new camps within the desert or near it. This leads to Orcs living a nomadic lifestyle, and being dubbed “Brute Gypsies” by some.

**Associated Religions:** Ellonian Goblins pay tribute to the Heir of Eylonda, an ancient folk hero who liberated Goblin-kind from slavery to demons.

**History:** Ages ago, Goblins were once bound to demons and were forced to serve their will. However with the help of the Heir of Eylonda, Goblins were freed and settled an island and created a kingdom named Goblinian. The small kingdom is isolated from the mainland, and has stayed that way for a long time. Goblins from Goblinia are civilized, respectful, and can follow proper etiquette. **Associated Religions:** Due to their status as undead, vampires often follow deities of Undeath, Resurrection, or some even revere legends like Alucard as deities in their own right.

**History:** Vampires are an 'ancient evil' of Ellon, risen corpses with human intelligence unlike the standard zombies and utilizing their charm in order to lure humans into a false sense of security before draining their blood for food. Not all vampires are evil, however this stigma has remained with them since their prominence in the global sphere.

**Subspecies:** Nosferatu are feral vampires who have gone without blood for an extended period of time and instead of dying from starvation they have instead transformed into pale shadows of their former self. **Associated Class:** The Kendari are most often tied to the Magus and similar classes, utilizing both physical and magical attacks as a means to decimate their opponents.

**Associated Religions:** The Kendari have a single, main religion. Banadar Arkenach. Banadar is the creator of the Kendari, having made them himself and in his image, and in turn imbued them with corruption to make them susceptible to him.

**History:** The Kendari's history is unknown on Ellon due to their status as beings from another world entirely. All that is known about them is their bloodthirsty nature, and the fact that they come from a far off land known as "Corta Diez". Most Kendari on Ellon however are rebels who have escaped this land, and prefer not to talk about it.

**Subspecies:** The Gersekir are exiles of Corta Diez from ages ago, around the time of the land's first formation. They have deviated massively from their origins as corrupted humanoids, take on a more natural human-like appearance while maintaining the tan skin and dull maroon eyes.

**Physical Description:** Fox-like humanoids complete with fox ears and tails. Some appear more human-like than foxlike, and vice versa. All Kitsune however have the look of someone up to no good, and have an almost mischievous air about them wherever they go.

**Associated Class:** Kitsune are drawn to the Thief class due to its natural capabilities matching up with their own skills, however some find luck as Myrmidons as well.

**Associated Religions:** Tending towards trickster gods like Kayan, Kitsune prefer those which offer the most interesting experiences for them rather than the most kind-hearted or good-willed.

**History:** The history of Kitsune is a long and tricky one, starting first with experimental druids using their magic to try and combine the intelligence of a human with the lithe and sneaky nature of a fox. This led to an unexpected creation instead of a half-human, half-fox hybrid species. Instead of scrapping and starting over, said druids allowed these fox creatures to roam and let them expand their influence.

**Subspecies:** Nine Tails are a subset of Kitsune who have powerful magic backing them up, allowing them to perform some mystical deeds their less magically inclined brethren can do.

---

### **Kitsune Abilities**

- Kitsune gain a +1 to Speed and Luck.
- **Lithe and Quiet:** Gain a +2 to Acrobatics and Stealth.
- **Fox's Wit:** Gain a +2 to Magic Defense.
- **Language:** Vrusian, Kitsune

### **Subspecies Alterations**

- *Nine Tails:* They use +1 MAG and LUK instead.

**Associated Class:** Lycanthropes make excellent Fighters, Pirates, or even Cavaliers.

**Associated Religions:** Lycanthropes tend to stray away from most religions, seeing them as pointless.

**History:** Lycanthropy is an old disease of unknown origin which has infected a small population of people - humans and other humanoids alike. Purebred lycanthropes are the most animalistic looking, being one with the disease and never having been a human before infection while others are born with it or infected at one point in their life. This change, while drastic, is usually not harmful to their social status or livelihood and is viewed like any disease; the person is pitied instead of viewed as a 'demon' or 'monster'.

**Subspecies:** Youkai are spiritual lycanthropes who come in a variety of forms, usually tying to animals or even concepts - having much more diversity than standard lycanthropes though being much more inclined towards harming humanoids.

---

### **Lycanthrope Abilities**

- Lycanthropes gain a +1 to Strength and Speed.
- **Physically Adept:** Gain a +1 to Stamina Pool.
- **Reaching Pounce:** Spend 1 SP to move an additional 2 squares on a move.
- **Language:** Vrusian, Sylvan

### **Subspecies Alterations**

- *Youkai:* They use +2 STR instead.

## *Abomination*

**Physical Description:** Pale-skinned humanoids with gaunt facial features and a lumbering stride, Abominations look like a cross between humans and zombies with half-rotted features doing little to disguise their undead taint within their blood.

**Associated Class:** Abominations do well as any physical combat oriented class.

**Associated Religions:** Due to their undead heritage, Abominations tend to worship a deity like Malakai due to the terror he invokes in mortal's hearts, seeing it as their true purpose in life: to terrify the living.

**History:** Some question the creation of an Abomination, and they'd be right to do so. Everything about them from their birth to their very existence is unnatural. Being the sons of a zombie and a living humanoid, the union can only be achieved through dark rituals which involve magically enhancing the undead and controlling it long enough to do its deed. Once the Abomination is born (which takes all but a few hours), the female (regarded as a host) is eaten by the undead before it is killed. The Abomination as a child is then taken to safety to be raised as a tool for protection.

**Subspecies:** Gaunts are skeletal in nature with very thin bodies and stark white skin. Their skin is so tightly stretched against their skeleton that they are practically skeletons with the main indicator being their organs and ribs not being visible.

---

### **Abomination Abilities**

- Abominations gain a +2 to Strength.
- Abominations are of the Monster type.
- **Cold Dead Body:** Immune to cold, weakness to light.
- **Lack of Pain:** Gain a +2 to Physical Defense.
- **Language:** Vrusian, Necrotis

### **Subspecies Alterations**

- *Gaunt:* They use +1 STR and SPD instead.

## Chapter 4: Classes

Classes determine a character's innate abilities, and each class has different options, maneuvers, and spells available to them.

There are four class types.

[Recruit](#)

| [Standard](#)

| [Promoted](#)

| [Advanced](#)

---

Each class receives the following innate abilities:

**Innate Skill:** Some Standard classes, all Promoted and Advanced classes have an Innate Skill.

**Training:** Each class gains a Training at 1<sup>st</sup> level.

**Awakening I:** Each class gains Awakening I at 10<sup>th</sup> level.

**Awakening II:** Each class gains Awakening II at 20<sup>th</sup> level.

**Awakening III:** Each class gains Awakening III at 30<sup>th</sup> level.

**Awakening IV:** Each class gains Awakening IV at 40<sup>th</sup> level.

Characters keep their Innate Skills, Training, and Awakenings from all of their classes (except those they re-class into). This does not apply to *In Training* below or a class' Weapon Proficiency if they'd lose any by promoting.

Recruit Classes receive the following innate abilities:

**In Training:** Recruits are constantly looking to better themselves. Recruits have 15 EXP they add to the Party's EXP Pool when determining when the Recruit levels up. This means they level up faster despite being weak units baseline. Recruits lose this when they promote to Standard. (Example: If a Party's EXP Pool is 50, the Recruits in the party are considered to instead have 65 EXP as part of the pool while everyone else has 50.)

---

In addition to all of these, all classes receive a single Intrigue Power. This Intrigue Power is meant to be used only in roleplay scenarios. Characters gain all of the Intrigue Powers from each class they have been in previously. For example, a character who manages to promote from Recruit to Standard has both the Recruit class' Intrigue Power and the Standard class' Intrigue Power. This also works with reclassing.

---

### **Reclassing:**

This is the process in which a character uses a Reclass Seal in order to change into an alternate class. These are determined by the character's Standard or Advanced class (Recruits cannot Reclass). For Promoted characters when reclassing they instead choose a promotion of one of the Standard classes they can reclass into. They gain all appropriate abilities (such as Intrigue Power) that they'd gain from playing through the Standard class.

## Shadow Knight

Donning black and red garbs, and standing firm when danger is afoot, Shadow Knights utilize their strange and eerie skill to stop and forcibly move foes.

**Innate Skill: Bloodthirsty:** Shadow Knights receive an extra Simple action upon killing an opponent. This can only be triggered once per turn.

**Training:** So long as the Shadow Knight has 1 SP they are immune to the Grappled, Tripped, and Fatigued conditions.

**Apex:** Shadow Knights are able to toss their enemies around with ease, making the battlefield theirs. As a Complex action the Shadow Knight can target an enemy within 6 squares. That enemy is forcibly moved 4 squares in a direction of the Shadow Knight's choosing. This cannot cause them to fly if they aren't already.

**Awakening I:** Shadow Knights can spend 1 SP to push an enemy 2 squares back after a successful attack.

**Awakening II:** Shadow Knights can spend 3 SP to absorb Dark damage for 5 rounds.

**Awakening III:** Shadow Knights can spend 5 SP to select an opponent within 6 squares. On that opponent's turn, the Shadow Knight determines their movement and how they'll take it.

-

## *Reclassing*

Characters are capable of reclassing instead of promoting, allowing characters to pick up new abilities usually locked behind other classes such as another class' Awakening.

Recruit classes are unable to reclass until they become a Standard class. Until becoming a Standard class, the Recruits are counted as not having class pack.

When reclassing, you keep your stats from before and do not modify them unless a stat cap would otherwise limit it. This stat is lowered to the stat cap's maximum number, however the points are not lost and once returning to a class with a stat cap high enough for the full stat, the points return to the stat.

Each class has a 'Class Pack' of classes they can reclass into, along with a single class chosen by the character which they wish to include into the Class Pack. This can be any Standard class (except Lord).

Standard Class	Classes Available	Advanced Class	Classes Available
Arcanist	Monk, Shaman	Bard	Mage, Myrmidon

## Chapter 5: Rules

*Unless otherwise specified, round down.*

### Hit Points

Hit Points (abbreviated as HP) represents how tough a character is and how much damage they can handle. Upon being brought to 0 HP a character is knocked unconscious. Enemies are automatically killed at 0 HP unless Mercy is used. Player characters are slain when all PCs on a map are brought to 0.

*HP Calculations:* Class HP + HP Level Bonus + Miscellaneous Bonuses

---

### Movement

Character's movement is determined by their class. The movement in *Fires of War* is calculated in squares (abbreviated as sq.) Moving diagonally counts as 2 squares, not 1.

If a character has a terrain and "Stride" listed next to their movement, this character is able to move at normal speed in this terrain.

---

### Stamina and Magic

These are pools of energy which are intrinsically linked to a character's maneuvers and spells. Characters must spend Stamina or Magic in order to activate these.

The Stamina Pool is equal to half the character's Strength stat.

The Magic Pool is equal to half the character's Magic stat.

---

### Defenses

Characters have two defenses: Physical Defense and Magical Defense. Physical Attacks defend against weapon attacks, and Magical Defense defends against magical attacks.

These defenses represent dodging, blocking, and all manners of avoiding damage in a thematic sense. Numbers-wise, it ties both blocking and avoiding together.

**Physical Defense (PD):** 5 + Defense + Speed +  $\frac{1}{4}$  Luck

**Magical Defense (MD):** 5 + Resistance + Speed +  $\frac{1}{4}$  Luck

---

## Attacks

### To-Hit Formula

*Physical:* 1d20 + ½ Strength + Skill

*Magical:* 1d20 + ½ Magic + Skill

If the wielder's CON is less than the weapon's weight, they take a -2 to-hit with the weapon.

### Damage

*Physical Weapon / Maneuver:* Base damage + ½ STR

*Magical Weapon / Spell:* Base damage + ½ MAG

Natural 1s on a d20 are an automatic miss for attack rolls, and a natural 20 is an automatic hit for attack rolls.

If a character's Speed is 5 higher than the opponent they're attacking, they can make two attacks against the opponent on their turn.

---

### Critical Hits

Weapons have critical multipliers (x2, x3, and rarely x4 or x5) and critical hit chance is determined based on a character's Luck.

Some classes include an ability which increases their critical hit chance. This treats the character's critical hit chance as the next step as if their Luck is higher. For example, a character with 5 Luck and the Improved Critical Chance treats their Luck as if it was 13-20 and use the 19-20 critical hit chance.

Luck	Critical Chance
0-3	Can't critically hit
4-10	20
11-16	19-20
17-22	18-20
23-28	17-20
29-30	16-20
Imp. Chance	15-20

---

### Counter Attacks

Characters in Fires of War who are struck by an attack can follow-up with a counter attack. A follow-up attack must be made with a held weapon, and cannot be made against opponents outside of the weapon's range.

In order to counter attack, characters must have at least 1 point remaining in either their Stamina (if countering with a physical attack) or Magic (if countering with a magic attack) pools.

---

## Rescuing

The act of rescuing a character allows characters to take their fellow allies out of harm's way. This is a complex action (see the actions section), and dropping a rescued ally is a swift action.

In order to rescue an ally, your AID score must be higher than the allies' CON. The following is how you calculate AID:

**Foot:** CON - 1

**Mounted / Flying:** 25 - CON

---

## Actions

Each character has the following actions they can perform within a round:

- **Complex:** Attack, using a staff, using items, rescue a unit, use maneuver/spell.
- **Simple:** Move up to your speed.
- **Swift:** Equip weapon, drop/swap a rescued unit

Characters receive one Complex, one Simple, and two Swifts that can be enacted in a turn. "Free" actions are non-actions which don't take up combat time. Examples include talking, examining, or thinking (using Knowledge skills). Their usage has no bearing on the combat's action economy.

---

## Weapon Durability

Each weapon has a specific amount of uses tied to how many combats these weapons can participate in. After being reduced to 0 Durability, a weapon breaks and is considered unusable.

The exceptions are *Bronze Weapons* and *Legendary Weapons*. Both of these weapon types are indestructible and can be used infinitely. Bronze Weapons are extremely weak weapons however, and Legendary Weapons are plot-important items only found by those seeking to slay deities and powerful entities.

---

## Initiative

Player Characters choose their spots in the initiative round before combat starts, discussing among themselves what would tactically be most beneficial. Alternatively characters can roll for initiative by rolling 1d20 + Speed.

Enemies and NPCs do not roll for initiative ever, and instead collectively go on their own turns. "Enemy Phase" takes place after all Player Characters have acted, and "NPC Phase" takes place after all Enemies have acted. After which, the initiative cycles back to the Player Phase.

In the initiative round, players can hold their turn in order to act later in the initiative round if they so choose, but their turn cannot leave the “Player Phase” and go between the Enemy Phase and NPC Phase.

Similar to holding a turn, characters can also hold an action. This allows them to make a statement (example: If an enemy comes in range, I shoot them with my bow) and if that condition is met, the action is triggered.

---

## Abilities

### Qualifying for Abilities

When an ability lists a level-based prerequisite, it will list EL (Effective Level) unless the ability ties to a specific class, in which it mentions the class and the level next to it (ex: Hero 5).

As a promoted character, you qualify for your previous class’ feats and meet prerequisites. The same does *not* however apply to Recruit classes and Standard/Promoted classes.

---

## Damage Types

There are three main types of elements, Physical, Arcane, and Divine. Physical relates to physical weapons, Arcane relates to Arcana tomes, and Divine relates to Light and Dark tomes.

**Physical:** Slashing, Piercing, and Bludgeoning

**Arcane:** Fire, Cold, Earth, Acid, Wind, Electricity, Sonic, and Arcane

**Spiritual:** Light and Dark

---

## Unit Types

**Foot:** Footmen with no armor or mount. This is the standard unit type.

**Magic:** Tome-users deeply invested in magical power. This is the same as Foot.

**Armored:** Heavy armor units that either trek on foot, or ride on horseback.

**Mounted:** Horseback riders or riders other exotic ground animals.

**Flying:** A rider of flying creatures such as pegasi, giant eagles, or similar creatures.

**Dragon:** Enemies that are dragons themselves or riders of a draconic steed.

**Monster:** This encompasses the non-playable beings from the Bestiary. Standard NPCs are not considered monsters.

**Gods:** Entities that can only be killed by Legendary Weapons.

## Terrains

Many different types of terrains may come up within the battlefields of Fires of War. Some are hazardous, and others merely prove difficult to walk through. Some even provide advantages to those within it.

Flying unit types are immune to movement-based terrain effects.

Movement-reducing effects only apply when moving into or through the squares that are counted as that kind of terrain.

**Name:** Flat Ground

**Description:** This is the most common type of terrain. This includes grasslands, snow-laden earth, interior floors of buildings, and so on.

**Name:** Desert

**Description:** Deserts are much more difficult for some unit types to move through. Foot units' speed is reduced by 1, and Mounted units' speed is reduced by 3. Magic units are immune to this effect.

**Name:** Mountains

**Description:** Mountains are particularly treacherous terrains that provide defensive capabilities. Units standing on a mountain terrain gain a +2 to Physical and Magical Defense. Movement in a mountain (without Mountain Stride) cost 3 movement to move through. Mounted units can't move in mountains. Mountains typically only occupy one square at a time.

**Name:** Peak

**Description:** Peaks are groups of mountains which occupy many squares at a time. Units without mountain stride or flying cannot enter a Peak. Units standing on a peak terrain gain a +5 to Physical and Magical Defense.

**Name:** River

**Description:** Rivers are water spaces that consist of a combination of water and land. Only non-mounted units can pass a river, though rivers cost 2 movement to move through without Water Stride.

**Name:** Sea

**Description:** Sea terrain includes any body of water such as a lake, ocean, or even swamps. Only flying units and Water Stride units can move on sea.

**Name:** Forest

**Description:** A dense patch of trees positioned together. Forests grant a +2 to Physical and Magical Defense, however cost 2 movement to move through without Forest Stride.

**Name:** Woods

**Description:** Densely packed together forests, Woods are to Forests what Peaks are to Mountains. Woods grant a +5 to Physical and Magical Defense, however those without Forest Stride can't move through it.

**Name:** Fort

**Description:** Single square forts are usually peppered among areas where a castle or strategic location is nearby. Forts offer a +4 to Physical and Magical Defense and heal the person standing on it for 5 HP each round. This healing occurs at the beginning of the Player Phase.

**Name:** Throne / Gate

**Description:** These single square locations serve as a location which must be conquered. Sometimes, multiple Thrones/Gates must be conquered within the same map. They do not offer defensive bonuses however heal the character similar to a Fort above.

A character can take the “Seize” action while adjacent or standing on a throne or gate. Seize actions are simple actions. Doing so causes all grunt-type enemies within the area to surrender. If there are enemies which would suffice as bosses, they do not surrender (however their lack of allies will make their defeat swifter).

**Name:** Lava

**Description:** Bubbling and dangerous, lava is a harmful terrain which characters typically do not wish to move through. Non-flying units who move through or end their turn on a lava square take 10 damage at the end of their turn. Flying units are immune to this. This is fire damage.

**Name:** Acid

**Description:** Pools of necrotic acid, this functions similar to *lava* except the characters take *acid* damage.

**Name:** Poisonous Gas

**Description:** This is applied on top of an existing terrain. Any characters who move through or end their turn in a square affected by poison gas take 5 poison damage on the end of their turn. Flying is not immune to this.

**Name:** Anti-Magic

**Description:** This is applied on top of an existing terrain. Any characters who end their turn in a square affected by anti-magic cannot use Tomes or use abilities which require MP to be spent. Flying is not immune to this.

---

## Status Conditions

Status conditions is a catch-all term for positive or negative effects which can be applied to characters. These conditions are typically applied to characters through the use of special weapons, spells, or staves.

**Name:** Poison

**Description:** Characters are usually subject to poison from weapons such as the *Toxic Sword* however some spells may also inflict this. Poisoned enemies take 3 poison damage for 3 consecutive rounds, after which it's cured.

**Name:** Grappled

**Description:** When a character is restrained by another character or an item (such as a rope tied around them) they have difficulty taking actions. Characters who are grappled cannot attack with weapons they have equipped unless they are under Weight 5. Characters also take a -5 to all Defenses.

**Name:** Tripped

**Description:** If a character is forcibly brought to the ground, they're tripped. Characters who are tripped have their speed reduced to 1 and they take a -10 to all Defenses. Foot units must spend a simple action to stand up, and armored units must spend a complex action. Mounted and Flying units are immune to being tripped.

**Name:** Silenced

**Description:** Characters who are silenced are unable to use tomes, staves, or use abilities which cost MP. This lasts for 3 rounds.

**Name:** Berserk

**Description:** If a character is under the effects of berserk they attack the closest character within their range - be they ally or enemy. This lasts for 3 rounds.

**Name:** Paralyzed

**Description:** This can be from effects such as electricity, being turned to stone, or mind control magic stopping the mind from acting. Characters who are paralyzed cannot act and have an effective Physical and Magical Defense of 0. In order to break out of paralysis on a paralyzed character's turn they must make a d20 roll adding CON, and beat a DC 20. On a success the character is no longer paralyzed and can act next round. They are immune to paralysis effects until the next turn.

**Name:** Bleed

**Description:** When a wound festers and the bleeding is difficult to staunch, characters take additional 3 additional damage for 3 rounds.

**Name:** Blindness

**Description:** Blinded characters are unable to move, and take a -4 to all Defenses. Attacks take a -10 penalty to-hit. Blindness lasts 3 rounds.

**Name:** Fear

**Description:** Characters under the effects of fear are unable to attack unless they are unable to move, and must move away from the source of their fear. This lasts 3 rounds.

**Name:** Deafened

**Description:** Deafened characters are unable to use abilities which require MP however they can still use their tomes and staves.

**Name:** Fatigue

**Description:** Fatigued characters are only able to move at half speed and take a -2 to-hit. This lasts for 3 rounds.

**Name:** Staggered

**Description:** Characters who are staggered can only take a Simple or Complex action, not both. They are still able to take free actions. This lasts for 3 rounds.

**Name:** Damned

**Description:** Characters become *Damned* when demons or demon worshipers use curses. Damned causes the character to take the damage they deal against opponents. This lasts for 6 rounds.

**Name:** Doomed

**Description:** Doom is an incredibly rare, deity-like curse which slays those it affects. Characters who are under the effects of doom have 4 rounds to remove this. After the 4<sup>th</sup> round, the character is instantly slain.

If the enemy who used doom is slain, all characters affected by its doom who have been slain by it are revived at the same age and appearance as they were when slain.

## Chapter 6: Skills

Skills are abilities which characters can perform outside of combat (or sometimes inside of combat) in order to do certain tasks such as sneaking, crafting, or even initiating diplomacy with enemies in order to cease fire.

Each character starts with 3 skills, and their class' rank determines their amount of bonus skills they gain. Bonus skills do not stack, instead they supersede each other. Recruit does not modify this. Unpromoted characters gain +1 skills. Promoted and Advanced characters gain +2 skills instead of +1.

*Special:* Thieves gain +3 bonus skills and Rogues gain +4 bonus skills.

With these skill points, characters mark skills as being trained or untrained. Trained skill add level to the roll while untrained skills do not.

---

Skill roll formula:  $1d20 + \text{Skill's Stat} (+ \text{Total Level if trained})$

Difficulty Classes:

**Very Easy:** 1-15

**Easy:** 15-25

**Normal:** 25-35

**Hard:** 35-45

**Very Hard:** 45-55

**Impossible:** 55-75

## Chapter 7: Weapons

There are various weapon types, and a character's weapon proficiency is determined by their class and potentially other abilities which they may have.

Weapons use the following damage types:

**Physical:** Bludgeoning (B), Slashing (S), Piercing (P)

**Arcane:** Fire (F), Cold (Co), Electricity (E), Wind (W), Acid (A), Earth (Ea), Sonic (So), or Arcane (Ar)

**Divine:** Light (L) or Dark (D)

### Weapon Triangle

The weapon triangle and magic triangle determines which weapons are stronger than one another, similar to rock-paper-scissors.

Physical				Magical		
Weapon	Strong vs.	Weak vs.		Weapon	Strong vs.	Weak vs.
Axe	Lance	Sword		Anima	Light	Dark
Sword	Axe	Lance		Dark	Anima	Light
Lance	Sword	Axe	Light	Dark	Anima	

The weapon that is classified as "Strong vs." gains a +2 to attack and +1 to damage. The weapon that is classified as "Weak vs." takes a -2 to attack and -1 to damage.

Bows, Staves, and Firearms are outside the weapon triangle: they are unaffected by it completely and do not gain any bonuses or penalties.

**Starting Weapons:** Characters in the game start with a free Bronze or similar E Rank weapon of each weapon type they have proficiency with. It is highly recommended not to give players weapons without prices as starting weapons.

**Illegal / Rare:** These weapons are hard to find and only available at GM's discretion. Illegal weapons may incur legal penalties.

**Legendary:** These weapons are used for fighting and slaying deities. It is recommended GMs give these weapons to players at the late stage of the game when they'd fight enemies which must be defeated by Legendary weapons.

**Stat Bonuses:** Some weapons grant stat bonuses that are only applicable while using this weapon in combat and having the weapon equipped. These bonuses can surpass a stat's cap.

**Uses:** Weapon uses are depleted at the end of a combat. In order for the weapon's uses to be depleted, they must have been used in combat. Weapons that are held but the user never attacks with it don't expend their use.

**Might:** This is the base damage of the weapon.

**Crit:** This is the critical multiplier of the weapon. Weapons that cannot critically hit list “—” as the multiplier. The maximum the multiplier can be is a x6.

**Weight:** This is how heavy a weapon is. If its weight exceeds your CON, you take a -2 to hit with the weapon.

**Rank:** The minimum Weapon Proficiency required to wield this weapon. You cannot wield (however you can carry) weapons you're not proficient with.

**Range:** This is how many squares this weapon can attack out to. Weapons that do not include a range of “1” cannot be used in melee combat.

**Type:** This determines the weapon's damage type.

**Price:** This is how much gold the weapon costs.

**Special:** These are special abilities, stat bonuses, and so on that apply to the weapon. See the list of Weapon Special Abilities below.

---

## Chapter 9: Abilities

Abilities is a blanket term for powers which you gain as you progress in level that aid in combat in one way shape or form. These come in three varieties, Knacks, Maneuvers, and Spells.

Knacks are abilities which every character can perform so long as they meet the prerequisites. They do not need to be taken, as all characters inherently know them when meeting the prerequisites.

Maneuvers are physical-related tasks and focus on melee/physical combat. It also includes more general abilities which *can* apply to magic users, however it is mostly geared towards physical characters.

Spells are magic-related tasks and focus on magical combat. There are some spells which physical characters may benefit from, however without investment most are tailored to spellcasters.

If a Maneuver is used as an attack, it goes against Physical Defense. Spells go against Magical Defense. Maneuvers use Stamina, Spells use Magic Points.
