A single number represents a Subsonic cartridge that has the same DD value for unsuppressed and suppressed use.

A split number represents a supersonic cartridge that has separate values for unsuppressed (first) and suppressed (second) use.

A "~" represents no value available, generally because no data is available. If you need a DD for the .17in Remington at 2250m, the GM is going to have to wing it.

Note: The JDJ series is optimised for use in Contender and Encore pistols (using SSK supplied barrels only) even though they are clearly of rifle cartridge size and power.
