Greetings to all you long-standing, beginning, or would-be Dungeon Masters and Wilderness Referees. (If you are none of the above, you have probably taken a wrong turn somewhere, and belong in some other book entirely.)

You hold in your hot, little hands the first in a series of Referee aids designed to help you with purely mechanical parts of Dungeons and Dragons and its various spinoffs, specifically the Warlock version. This volume is designed to save you several hours of generating men and man-like beings to be encountered by players in your game. Please note that these are NOT player characters and should not be used as such, since their characteristics take into account certain survival characteristics that make many of them better than an average rolled character.

At the top of each page, there are fourteen headings, and each will be explained in turn, as follows:

TYPE — This refers to the basic type of each man, according to D & D rules. In this version, these are limited to Fighters (FITMAN), Magic Users (MAGUSR) and Clerics (CLERIC). Please note that some pages have only one of these types, and some have all three. The former are for use when only one type is encountered, the latter for mixed parties of more than one type. Later booklets, if there is sufficient demand, may include Thieves, Rangers, and other types not in the original D & D rules.

LEVEL — This is the experience level, corresponding to the original rules. Thus, a FITMAN 4 is a "Hero", and so on.

STR — This is Strength, the prime requisite of Fighters and fighting types. If using Warlock rules, note strength adjustments to combat abilities for strengths 19, 20 and 21. If using Greyhawk rules, re-roll any strength over 18 on the Strength table. Leave any strength (exactly) 18 as is; no re-roll.

INT — Intelligence, the prime requisite of Magic Users. If using Warlock rules, note spell point adjustments for high intelligence types. Also, use this column for figuring out the number of languages known by the character.

WIS — Wisdom, the prime requisite of Clerics. If using Warlock rules note adjustments in the efficiency of healing and affecting undead for characters of high wisdom.

CON — Constitution is the physical and mental toughness of the character. This is used in calculating Death Levels in Warlock rules, and chances of surviving hazardous circumstances per Greyhawk, as well as resurrection in both.

DEX — Dexterity, which is quickness of hand and eye. This affects archery accuracy, as well as how quickly combat or magic occur in some systems.

SIZ — Size, the physical bulk of the character. Page 35 of the Warlock rules converts this into Goll Piece weight. If you don't use that, simply bear in mind that sizes 10-11 constitute the average character with size 3 being rather small, and size 18 being large.

AGI — Agility, the physical maneuverability of the character. In the Warlock rules, this helps determine the ability to avoid some traps, as well as adjusting defense levels.

CHA — Charisma, the general likeability of the character, affecting the number and morale of followers and friends among other things.

HITS — The hit points that a character takes before falling over. (Unconsciousness in Warlock system.) These are calculated bases on the ORIGINAL hit dice progressions in Warlock, which are the same as in Volume 1 of Dungeons and Dragons for Fighters and Clerics, and 1 Hit Point higher than the original progression for EVEN levels (2, 4, etc.) for Magic Users.

If you are using Greyhawk hit progressions and Constitution bonuses, you will have to make the following adjustment to HITS: look 1 column to the right of HITS, called "DIE". If you are using Greyhawk, and the character is a fighter, add the number listed under the DIE to his hits. If the character is a Magic User, add 1/2 the number listed under DIE. If the character is a Cleric higher than the 4th Level, add 3 to his hits. If you are using Greyhawk Constitution Bonuses, multiply the number listed under DIE by (Greyhawk Bonus per die -1) and add that to the HITS.

DIE — In addition to all above, if you are using Warlock or other versions using Attack and/or Defense Levels, use this number for that, allowing for adjustments caused by Strength, Agility, or magical implements.

MAXC — This is the maximum carrying capacity for a 3" per turn speed for each character. This is based on the Warlock tables based on Size and Strength. As in the original D & D rules, this number will allow you to calculate the amount of gear a character can carry and still move 6, 9 or 12" per turn (1/2, 1/3, or 1/4 of MAXC, respectively). This also helps you to determine which kind of armor is being worn, since a small, weak character probably won't wear plate, since he couldn't carry it and still maneuver quickly.

MAGICAL STUFF — Here is where you get to have some fun. These two-letter abbreviations determine the shape or type of magical items being carried, but you get to determine the individual items from your own tables and charts. Please note the low overall incidence of magical items. This part can be used as in games with a low amount of magic. In games with a lot of magic items simply consider these to be the major, or primary, magic items being carried, and add more to taste in terms of minor magics.

SW — Sword (note: some systems allow Magic Users to use magical swords, so a few of them show up on the MSU lists).

MW — Miscellaneous Weapon, appropriate to the type of character (i.e. daggers and such for MU's and blunt ones for Clerics).

SH — Shield

AR — Armor. Determine the type in terms of what the character can wear.

PT — Potion. In flasks or what-have-you.

SC — Scroll. In the case of Fighters, these are generally Protection Scrolls or Curses.

WS — Wand or Staff (both for Magic Users; Staff for Clerics).

RI — Ring.

MM — Miscellaneous Magic, that motley group of items that include both the powerful and the hopeless: Boots, Cloaks, Amulets, Crystal Balls, Books, and a host of other shapes.

The relative commonness of these Magic Items is based on the tables in Volume 2 of the original D & D rules as well as on other calculations of reasonable occurrences of different types of magic.

That about wraps things up for now. All you have to add to this booklet is a little bit of imagination, and Voila!: Instant bad guys!

By now you should already know how to get D & D rules. If you're interested, the Warlock variant can be obtained for \$3.00 from: BALBOA GAME CO., P.O. Box 989, Bellflower, CA 90706, or from Spartan International, Box 1017, Bellflower CA 90706.

Thanks for buying this, and happy D & D-ing.
