Dreams Can Come True

This adventure for *In Nomine* is designed to allow the characters, especially followers of Blandine and Beleth, a chance to explore the ethereal realm a little more. The adventure takes place primarily on the ethereal plane, allowing the Dream walkers to be in their element.

Introduction

In the center of the Marches, standing on the invisible border that separates Blandine's realm of dream from Beleth's realm of nightmare, an ominous black hole has opened. This hole appeared two days ago and has not closed. It moves and shifts with the constant flux of the border, and has engulfed a few unwary Celestials as they ventured too close. The sudden and random changes in its movement have caused Celestials on both sides to keep their distance. Several unaware mortal dreamscapes have also been engulfed as they drifted into the hole. Celestials charged with protecting or menacing these dreamers have reported that the dreamers have entered comas from which they can not be wakened. Both Archangel and Demon Princess are calling for volunteers to enter the portal and discover what lies on the other side.

The Black Hole

The Black Hole dreamscape belongs to a young man named William "Billy" Jackson. Billy is a diagnosed sufferer of severe schizophrenia, and was recently involved in a car accident, sending him into a coma. While in his unconscious state, his dreamscape has remained open, bordering both nightmare and dream. Celestials of both sides may freely enter the dreamscape. Once inside, they ignore the normal limits for how long a celestial can remain in a dreamscape, as Billy's mental disorder and trauma prevent anyone from leaving, including Billy. The only way out is to convince Billy that this is all a dream, making him want to leave, therefore leaving the coma and closing the dreamscape. Rumors fueled by the unlucky people who have been trapped in this dreamscape say that another path exists.

In Billy's realm a Labyrinth exists which supposedly leads out, for those who can conquer it. Celestial powers that normally work within the Marches are still active, with a few exceptions: Kyriotates will find that once they enter Billy's dreamscape, any pieces of their being which are not in this particular dreamscape are instantly drawn back into the whole. They may use their resonance as usual inside the dreamscape, but may not communicate with those outside it with their multiplicity. Also, any Song or ability that allows communication or travel outside the dreamscape will not work. The person attempting to use the ability will simply feel the attempt fail, taking the Essence spent with it. For example, the Corporeal Song of Dreams will not allow the singer to depart the dreamscape, nor will the Song of Projection allow communication outside. The only exception to this automatic failing of communication is the Celestial Song of Tongues. Anyone attempting to bind a message into Essence may do so normally, however the

message will not leave Billy's dreamscape until he has wakened. The singer will not know this, of course. Also, no one from outside the dreamscape may communicate with those inside without actually entering Billy's dream.

Inside Billy's Head

The dreamscape is a perfect world, according to Billy's standards. Inside his head, Billy is the master of everything he can imagine, safe from all the worries of the real world. Billy has almost forgotten that another world exists outside his head, and is close to sealing the exit forever. The only things stopping him are these beings which have appeared recently in his world, apparently beyond his control. Time has become distorted inside this dreamscape, so every day that passes in the dreamscape is actually only an hour in the Marches. Those Celestials who possess time-based Dissonance conditions will find (if they ignore the conditions for long enough) that they need only fulfill the condition once every 24 dream-days. Also, Celestials will only regenerate Essence once every 24 dream-days, giving a clue to the distortion of time within Billy's dream.

Dreams Can Come True

The Dreamscape

The world as Billy has imagined it appears as a small city, full of people, all ready to do Billy's exact bidding. Within this world, Billy rules from the top of the highest building, which stands in the center of the city. He is a generous ruler, and will listen to everyone who appears before him. Billy feels much safer in this world than he did in the previous one (which is rapidly fading from his memory), and does not want to see this safety threatened. He is concerned about people appearing in his city whom he can not control (the Celestials).

The primary danger within Billy's dreamscape is becoming trapped. With each passing day, Billy becomes more and more content with his self-created world, and withdraws further into himself. This effect is contagious, and intruders from outside Billy's head find that with each passing day (as they occur in the Marches, 24 dream-days inside the dreamscape), they forget who they are and grow to accept Billy's world. For each day the characters spend in the dreamscape, they must make a Will roll minus the number of days they have been trapped. Success indicates that they know who they are. Failure indicates that they have forgotten, and take up a new life with all the comforts that Billy can provide. This effect vanishes in the Labyrinth, but once inside that, the person must escape or be trapped forever with their failures. The forgetfulness may be countered temporarily by use of the Ethereal Song of Healing (curing the "insanity") or the Celestial Song of Dreams, which allows the user to slightly alter the dream to eliminate the forgetfulness for a short time (this helps everyone trapped within the dreamscape for that day). Both of these Songs last one dream-day, ending as the sun rises on Billy's realm the next day.

The Labyrinth

If the player characters feel that they can not bring Billy from his dreamscape, they can always try to make it through the Labyrinth. There are one way entrances to this structure all over the city, but the largest and most well known sits at the foot of Billy's skyscraper. Once inside, there is only one way out, and people can not return to the city. Although the residents of the city call this place the Labyrinth, it does not resemble a maze at all. Characters braving the Labyrinth must face and conquer Billy's fears and past events, as the character is forced into Billy's role. Examples of

events in Billy's past include constant taunting by schoolyard bullies, and even a fear to cross the road unaided. These tests are much more difficult than they may first appear. Although each character retains their own skills and abilities, they see the world through the eyes of Billy, and should react accordingly. Bullies become huge, seemingly invincible foes. A busy street to cross becomes a highway of carnage, filled with endless vehicles traveling impossibly close together at insane speeds, carelessly colliding with unwary pedestrians as they attempt to cross.

If the characters are able to endure these tests, they will face the Guardian, the last thing standing between them and freedom. The Guardian is the thing Billy most fears in the world: his true self. His fearful dreamscape will create an exact replica of each character in every way, possessing all their skills and abilities, and knowing exactly how they will react to any given situation. In short, they must defeat themselves to escape. The only weakness of the Guardian is its inability to initiate violence. When encountered, it will taunt the character and try to block them from leaving, but if they remain calm and continue to walk past it without using force, the Guardian will eventually allow them to leave. Non-violent tactics will be reflected back upon the characters, as the guardian responds in kind. Lilim will see their own Needs, Elohim will be confronted with their own unswerving objectivity. However, the guardian can not be charmed or fooled. It has no Essence to be stolen, and persons attempting to fast-talk or seduce it may as well be attempting to fool themselves. Characters within the Labyrinth are immune to the forgetfulness that affects Billy's dreamscape, and regain their memories as soon as they enter.

The Barrier

This feature surrounds the city and prevents anyone from leaving. It is invisible and most people will not realize it is there, but anyone attempting to leave the city, either by foot, vehicle, or other power, will find themselves approaching the city as soon as they have passed its outskirts. The barrier exists in every direction from the city, so all means of escape are impossible, including such methods as flight or tunneling through the ground (do not discourage the characters from trying, though). The Barrier can not be destroyed or avoided by any known means.

The Library

The Library is the second largest building in the city, being slightly smaller than Billy's skyscraper. In this building is held the total of Billy's knowledge of the world, including his memories of his life and loved ones. An elderly man with a fierce temper, the Librarian, tends the books held here. Billy is afraid of the Librarian, and never sets foot inside the building. He is also aware on a subconscious level that the Library holds the key for his mind to end the dreamscape, therefore he has ordered a police guard to patrol the surrounding area, stopping, questioning and arresting anyone who tries to enter (except the Librarian). The Library closes each day at exactly 5:00 PM, and the Librarian will open its doors at precisely 8:00 AM the next day. The citizens of the city do not even think of going into the Library. If questioned about this, they will merely shrug and say, "There's nothing in there I need to know." It will take some ingenuity on the part of the player characters to safely enter the Library, but once inside the police will not attempt to harass them any further. The Library has a secret exit that leads to the basement of Billy's skyscraper, which the Librarian may or may not show the characters. This exit has enhanced the fear surrounding the building, because very few who enter have ever been seen to leave. Servitors of Destiny with the appropriate attunements may attempt to use the Library to travel to Yves' Library. If this occurs, there are two possible outcomes. Either the attempt fails completely (since this is simply another invalid attempt to exit the dreamscape), or the power of Billy's delusions draws images of Yves' Library from the mind of the servitor and temporarily places them in a false Library. Eventually they will learn the truth (Yves can not be found, the books don't feel quite right), and may easily return to Billy's Library.

Non-Player Characters

The Black Hole entrance to Billy's dreamscape has caught Celestials, mortals and even a few Ethereal spirits with its random movements. Those trapped Celestials who serve Blandine or Beleth have an advantage over other Celestials. Billy's dreamscape may be odd compared to normal dreams, but it is still Ethereal, and those Celestials experienced in interacting with dreams will find that their powers are still available. Most of the NPC Celestials caught in the

dreamscape have fallen victim to its forgetfulness, but several are still actively seeking answers.

William "Billy" Jackson

Corporeal Forces 1 (Strength 2, Agility 2)
Ethereal Forces 3 (Intelligence 5, Precision 6)
Celestial Forces 3 (Will 6, Perception 6)
Skills: Dreaming/6
Discord: (These are not true Discords, merely human equivalents.) Paranoia/2, Schizophrenic/5

Background: Billy was raised by his abusive father after his mother had died during childbirth. Regular beatings and emotional abuse caused Billy to retract into fantasy worlds of his own design. His skill in Dreaming and exceptionally high Ethereal and Celestial Forces were developed instinctively, at the cost of his physical body. Even when conscious, Billy rarely moves or speaks. Thrown into a coma following a car accident in which his father was killed, Billy has all but forgotten the world of pain and misery outside his head, and is happily living in his safe fantasy world. He is unaware of the impact his dreamscape is having on the Marches and unwary human dreamers, but is aware that the population of people in his realm that he has lesser control over is growing. Billy sees himself as a kind and generous ruler. His throne room is filled with people seeking an audience with him. Sitting at one end of the room, Billy will graciously see all those who ask, and will grant their request if it is within his power and it will not harm or upset the greater populace. He knows at a glance whether someone was created from his dream (his people), or if they have entered from outside. He is also able to tell if these intruders from outside are likely to cause trouble (they still have their memories), or if they have accepted his right to rule (they have forgotten who they are). Billy is still willing to talk to outsiders, but is wary of them.

Annekial

Elohite of Dreams

Corporeal Forces 1 (Strength 2, Agility 2)
Ethereal Forces 5 (Intelligence 10, Precision 10)
Celestial Forces 3 (Will 6, Perception 6)
Skills: Dodge/1, Emote/3, Fast-talk/4, Fighting/2, Lying/3, Move Silently/1
Songs: Charm (Ethereal/4), Dreams (Corporeal/4, Ethereal/5, Celestial/3), Healing (Ethereal/2).
Attunements: Elohite of Dreams, Healing Dream

Background: Annekial was one of the first creatures to be trapped within Billy's dreamscape. Within close proximity when the Hole opened, she investigated, only to be trapped within. She is very close to determining how to convince Billy to end the dream, but is rapidly falling victim to the forgetfulness inherent in this dreamscape. She has a -4 to her Will roll, for the purpose of remembering who she is. If found early in the adventure, she will be able to warn of the strange passing of time within this dreamscape, of Billy's delusions and of the various major features of the dreamscape, but is in very real danger of forgetting who she is.

Thargol

Balseraph of Nightmares

Corporeal Forces 2 (Strength 3, Agility 5)
Ethereal Forces 4 (Intelligence 9, Precision 7)
Celestial Forces 3 (Will 8, Perception 4)
Skills: Detect Lies/3, Dodge/3, Emote/2, Fast-talk/4, Savoir-Faire/3, Seduction/2

Songs: Charm (Ethereal/3, Celestial/2), Dreams(Celestial/4), Light (Ethereal/3)
Attunements: Balseraph of Nightmares, Dream Walking

Background: Thargol was caught by Billy's dreamscape when the nightmare he was manipulating drifted too close to the black hole. He quickly abandoned the torment of his previous dreamer and set to work discovering all he could about this strange dream. When he discovered Billy he sought to torment him, but soon discovered Billy's remarkable control over the events in his dream. Thargol has since developed a new plan and is now manipulating Billy, using his resonance and attunements, to inflict unreasoning fear on the others he has discovered trapped in this dream. He can often be found in Billy's throne room, acting the role of humble servant and adviser. He has yet to realize the danger of forgetting the outside world, and is at -2 to his daily Will rolls for remembering.

Rivarra

Ethereal Spirit

Corporeal Forces 1 (Strength 1, Agility 3)
Ethereal Forces 4 (Intelligence 6, Precision 10)
Celestial Forces 1 (Will 2, Perception 2)
Skills: Fighting/3, Dodge/3, Singing/1
Songs: Dreams (Corporeal/1), Dreams (Ethereal/1, Celestial/1)
Attunements: None

Background: Rivarra is a mischievous young ethereal spirit who escaped a mortal's dreamscape and has so far evaded the servants of both Blandine and Beleth. He ventured too close to Billy's dream and was drawn inside. He is actually one of the few creatures enjoying this experience. Due to some quirk of being an ethereal spirit with little comprehension of the outside world, Rivarra is immune to the forgetfulness that effects everyone else. He is having the time of his life. Rivarra befriended Billy when he first arrived, but was forced away when Thargol began manipulating Billy. Rivarra is looking for allies to help remove Thargol, but is instinctively wary of Celestials from both sides.

The Adventure

This adventure is largely unstructured, as there are virtually no limits to what the characters may attempt. They have to act fast, as each day they run the risk of forgetting who they were and settling down. The GM is encouraged to run this adventure loosely, reacting to any plan the characters come up with as they see fit, following the guidelines given above. The possibilities are endless.

The Aftermath

What happens if and when the characters escape depends largely on what side they are on. Divine characters reporting to Blandine will receive the greatest reward if they were able to convince Billy that his world was all a dream and safely bring him out of his coma. She will still be pleased if they are able to escape and bring her information. They may be asked to venture inside again, as they now know what to expect. Infernal characters reporting to Beleth will find that the Demon Princess is most pleased if they are able to give her extensive reports on what is occurring inside the dreamscape. She will be especially pleased if they are able to tell her about the forgetfulness, as she can use this as a means to rid herself of enemies and troublesome servants. She will not be happy if the characters have no useful information, or if they discover the effects of the realm yet manage to wake Billy, thereby eliminating a potentially useful dungeon. She will be pleased if the characters are able to convince or cajole Billy into becoming a Soldier of Nightmares. Again, GMs are encouraged to play this as it happens.

If the characters take longer than one day (Marches time), Blandine and Beleth will declare the area off limits to their servants, avoiding the danger while waiting for news. Waking Billy from his dreamscape will free any Celestials that have forgotten who they were. They will experience a period similar to Trauma, but will eventually recover. If Billy can be woken, he is an excellent candidate to become a trained Ethereal Soldier. He has already developed powerful skill in Dreaming and has a powerful collection of forces that could one day make him an influential Soldier in the shifting fields of the Marches.

Some Gamemasters are fortunate. They have groups of players who understand the need for cooperation to make the adventure run smoothly. Still, even in the best groups, troubles can arise. A new player can disrupt the game flow without intending to, or an experienced member might let other frustrations leak into their character.

In addition, most GMs aren't so lucky. They don't have to be bad people to be troublesome players, but they can still wreak havoc on a campaign or a gaming group. The Power Gamer. The Rules Lawyer. The Nihilist. The Wallflower. The Combat Monster. Many Gamemasters dread seeing any of these player types enter the game, but they can often go unrecognized until the Combat Monster has blown away the diplomat the party was supposed to guard or the Rules Lawyer interrupts the climactic dogfight to argue turn ratios, and then the GM has to clean up the mess. If possible. But it helps to remember a few things.

First of all, a person whose playing style involves one of the classic extremes above doesn't even have to be a bad player *per se.* The problem lies in the extremity, not the style. So maybe, especially with a new player, a simple talk can smooth things over. But if it doesn't, it becomes necessary to deal with the situation. Fortunately, the situations aren't as hard to deal with as they sometimes seem, given the chance to think them over.

At this point, analyze the situation. The "problem" gamers may not be the cliches that they first seem. Someone who appears to be a power gamer might just want to play in campaigns with more "neat stuff," like higher levels of psi, magic and/or tech, or an apparent rules lawyer might just like tinkering with systems. If that's the case, the situation becomes less one of dealing with an extremist and more one of accommodating different gaming styles.

However, when a GM runs into a genuinely disruptive player, dealing with the problem is considerably more difficult. While removing a player may seem satisfying at times, it can be far more difficult than it sounds, and real-life hurt feelings can be a lot harder to salvage than a campaign idea.

The Power Gamer

Some players just aren't satisfied in any game unless they're all-powerful. Even in a game where the characters are beginners (low levels or point costs), the power gamer tries to find a way to be able to conquer the universe. They may not *intend* to destroy everything in their path, but want to be able to if necessary. Naturally, such a character makes any adventure moot, as the omnipotent PC immediately solves any problem.

Sometimes, the power gamer just wants the character to be "unkillable." Characters can be a huge emotional investment; if the player doesn't want the character to die, and you're willing to be flexible, you can negotiate this in advance. The character may be killable within the rules, but the GM can make sure it doesn't happen, or create a "survival luck" advantage that lets the character survive otherwise-certain death. Obviously, this sort of thing depends heavily on the campaign type. Such reality bending is much more likely to fit into '40s cliffhangers than gritty cyberpunk campaigns. Either way, if the player is trying to be unstoppable rather than just unkillable, the original problem resurfaces.

Sometimes, a power gamer is also a rules lawyer -- the better to create an invincible character -- but as often as not the gamer is just clever, using anything available in character to become unstoppable. Such a player, if unable to be omnipotent from the outset, can marshal resources, remain in the shadows, and wait until the "master plan" is ready to venture forth and take over. Reasonable tactics, but not particularly heroic or adventurous.

The first thing to do is monitor the power gamer's character creation closely. If the campaign is meant to be run at a fairly high power level, you might wish to limit the number of points that can be spent on any one ability, or conversely avoid allowing too broad a range of powers. Telepathic CEOs, magi of high noble rank, and any sorts of gadgeteers are to be watched carefully. Also, one of the primary tactics of the power gamer is explaining how no one else should have thought of what they did, because it's so clever.

Don't listen.

Anything the power gamer can come up with, someone can easily have tried already. If they succeeded, they're running things. If they didn't, someone took them out. Either way, look for chinks in their armor and exploit them mercilessly. If none are to be found, the GM can always come up with someone more powerful than the gamer who's discovered the same thing, or another equally diabolic scheme. Another possible solution is to let the power gamer succeed for a little while, then let Darwin take over. Eventually, one of the character's enemies is going to prove faster, stronger, or smarter.

Finally, remember that the tone of the game should play heavily into the solution. In a supers campaign, for example, some cosmic entity can decide that the power gamer's doing a little too well, and *that* can lead into a grand adventure that just happens to dismantle the best-laid plans. In a game devoted to scheming, the power-gamer mentality will be everywhere, so having some other foolproof plan run into the gamer's is simple enough. Campaigns that fall in between the two extremes can usually be salvaged by a combination of these two solutions.

The Rules Lawyer

Campaign Killers

A power gamer can be annoying, but generally they're not actively working against game flow, at least in the short term. A rules lawyer, on the other hand, is a constant nuisance. Someone who knows the rules intimately can be an enormous asset, if they're working with the GM. However, the classic rules lawyer waits for someone to make a mistake, then pounces, disrupting the scene and forcing everyone to pull out their books to look for the usually obscure rule cited. Now, a good GM admits a mistake and moves on. But sometimes decisions have to be made on the fly, especially considering how clever players are. When the party goes into East Nowhere and the GM hasn't put anything on the map but the name, some fast decisions need to be made, which the lawyer can exploit. Worse, sometimes the rules lawyer turns on the party, and explains how the clever and imaginative solution a player devised can't work because of the Paper Clip Stress rule on page 427.

The problem with rules lawyers is that, usually, they're technically right. And while the trend in gaming is away from hard-and-fast game mechanics, sometimes those mechanics are necessary, especially in combat. Then the lawyer can slow things down interminably. The solution lies in understanding the type of rules lawyer you're up against.

Rules lawyer type one is just big on rules, and is only a problem when they impose that obsessiveness on the group. Two solutions involve going to the opposite spectrums of the gaming world-use a detailed system and let the *lawyer* handle the details if they're fast enough, or use a less rules-intensive system and cease to worry about the lawyer. The

primary difficulty with these options is that the situation may frustrate someone eventually. The most important thing to do, however, is to make the decision *in advance*. This sort of rules lawyer will usually respect such a decision. After all, the GM is the arbiter of the rules, and has clarified the situation.

The second variety of rules lawyer is more pernicious, but ultimately easier to deal with. This is a variety of the power gamer, but rather than using the rules to construct a more powerful character, he finds loopholes and seeks out errors to make sure that conflicts go in favor of the character. Many of the tactics mentioned for power gamers are useful against this variety of rules lawyer, but the primary thing to remember is who the arbiter of the rules is. Chances are, the players will side with the GM, since this variety of rules lawyer often uses the rules against them as well. The first type of rules lawyer is ultimately honest, while this player is twisting the rules. An effective tactic that should be used sparingly is the creation of an enemy who either is too simple for the rules lawyer to get a handle on (bruisers are great for this), or uses every loophole the lawyer's character does. Give lawyer two enough rope, then hang 'em high.

The Nihilist

Some players can't stand it when things go right. The character, and often the player, bemoans cruel fate while ensuring that fate is never kind. With the ascent of "dark" roleplaying, the nihilist has become increasingly prevalent, and there's nothing wrong with pathos now and again. Nevertheless, the nihilist doesn't seem happy unless the character is a maimed, cursed, hideous outcast whose only love died a horrific death.

If the player is enjoying the game, then the solution is easy: *let* the character be depressed. The most important thing is to ensure that the nihilist doesn't ruin the fun for everyone else. Nihilists can easily get out of hand, trying to make every other character as depressing and paranoid as theirs. Any attempts to sabotage other party members' personalities should be stopped cold. The GM's options here vary widely. Don't hand the group victory, but make sure that there's some light even in the darkest world. Any actual assaults, physical or otherwise, by the nihilist (or any other player) on a party member should be dealt with decisively, unless that's the type of campaign being run. Even then, vindictive subversion of more cheerful characters should receive low tolerance at best. Give other characters perception rolls, or have any mentors/allies step in, or just bring in a captain of the watch who happens to be the best fighter any of them has ever seen.

The problem worsens when the *player* is depressing. If the character is honestly trying, but the player's luck is rotten, cut the potential nihilist some slack. A few victories can prevent hard feelings. Still, some people seem to refuse to cheer up, and this variety of nihilist can kill a campaign. Fortunately, most of the suggestions above work just as well against a demoralizing player. The added difficulty comes from dealing with players who damn if they do and damn if they don't. If success brings complaints about the "lack of realism" and failure causes "I told you so" gloating, there's not much to do besides ignoring the out-of-character nonsense. Deliberately killing characters is usually not an effective tactic, but with a player nihilist it may be the only option. Pleasing this person is virtually impossible; don't give yourself an ulcer trying.

The Wallflower

There may not be one in *every* party, but they're fairly common. A regular's significant other joins to be with the loved one, or a novice is having trouble getting their character into the game, or someone is just shy. The wallflower isn't the annoyance a rules lawyer or a nihilist is, but a player who just sits there isn't really playing.

Engaging a wallflower might prove to be simple, or extraordinarily difficult, depending on how much the player *wants* to be involved. Inexperienced wallflowers often have excellent roleplayers hidden within. Providing the player with an interesting subplot revolving around their character may well result in the wallflower becoming a driving force in the campaign. The most important thing to do is get the player interested in what's happening around the character. Engage the emotions. Try not to put the player on the spot by dropping the fate of the party/city/world/universe on that character's shoulders, at least not at first. Once the player can become their character, by the time the chips are down, the ex-wallflower will be taking names.

The situation is more difficult with players who are there for someone else, or are having trouble for other reasons. If the initial attempts to involve the character don't take, talk to the player. Find out what the wallflower is interested in. An overwhelmed newbie will probably appreciate the effort, and other players can help you help them. Remember, even an experienced gamer can get lost in a new system or setting. And if nothing else, the wallflower is relatively harmless. As long as no feelings are hurt, it may be just as well to leave quiet players alone.

The Combat Monster

Perhaps the most dreaded of beasts to many roleplayers, the combat monster exists for one purpose: destruction. Psychological motivations for hack-and-slash players abound, but the upshot is that the combat monster wants to take arms against a sea of troubles and end them decisively. But many slashers are not nearly as dangerous to a campaign as they seem. In fact, the combat monster can be the most innocuous of "disruptions." Many, if left alone during roleplaying, will simply wait for the next fight scene and cut loose then. Like many predators, the combat monster is only dangerous if annoyed. If not given at least one fight per session, or if attempts to force roleplaying are made, the combat monster can become vicious, lashing out at NPCs or even offending players.

The combat monster usually becomes a problem because of certain situations. If a hack-and-slash gamer tries to fight their way through deathtraps and cocktail parties, this is obviously going to inconvenience the other players. If the rest of the party can't deal with the combat monster for one reason or another, having the character (and the next two or three subsequent ones, if necessary) get annihilated by said deathtrap or the small army of well-armed guards should provide the player with a clue. Fortunately, the combat monster player usually sees the character as a collection of numbers, so the emotional impact should be minor. Also, "feeding" the combat monster on occasion with a dose of high-octane action should encourage patience during the lulls.

Other difficulties arise with another power gamer mix. The combat monster/power gamer is a rather unsettling combination, especially since a combat monster is optimized to begin with. A smart combat monster can be as unbalancing as any other power gamer, as the threats that can challenge the slasher may well turn the other players into paste. Fortunately, in most cases, the solution is simple. The antagonist has something special to deal with the combat monster specifically. This will give the slasher great pleasure as the character gets to cut loose, while the other players can do other things that need to be done without being blown away.

***

These are all suggestions meant to deal with player difficulties without having to remove anyone, including the GM, from the game. Hopefully, any given gaming group is compatible enough to get around these problems, but ultimately roleplaying is a game, and if it's not fun any more, then it may be time for someone to leave the group.

But it doesn't hurt to try to work things out first.

by Fred Wolke

Starfire. Full Thrust. Battlefleet: Gothic. There are a lot of games out there that let you play out a space battle between massed fleets of ships. Of course, if you buy pewter miniatures for these games, your budget is going to take a big hit -- a single ship can cost between six and ten dollars.

Ouch!

It doesn't have to be this way.

A *long* time ago, a game came out called ***Traveller 2300.*** Since it didn't have much to do with the ***Traveller*** universe, they eventually changed the name to just ***2300.*** All in all, a fair game, interesting background, lousy mechanics. What was important about it to me, though, was that in one of the supplements (it's been a long time, forgive me) they had some recommendations on how to build a starship miniature out of a golf tee. It was a fairly simple operation. Cut the golf tee off where the taper on the big end merges into the shaft. Glue the middle of the shaft to the narrow end of the other piece, prime, paint, and there you go . . . a nifty starship miniature that cost you about ten cents, max. They recommended making smaller ships by cutting the length of the shaft down.

When I picked up ***Starfire*** a while back, I remembered that article, and decided I would build a set of miniatures to use with it. The bases of the miniatures were perfect for the 1/2" hexgrid ***Starfire*** used, and it came out pretty good. I felt that something was missing, however. The ships all looked pretty much the same. The carriers, for example, seemed to have no way to launch or recover their fighters. I built a few more minis, using some flat wooden coffee-stirrers to make landing pads and launch decks. I built more minis using multiple golf tees. My Dremel tool was invaluable for making the precision cuts required, as was my 2-1/2" table vise.

I built flights of fighters by gluing toothpick-tips to bits of transparent plastic in sixes, and gluing that to a golf-tee base.

Never got to use them. ***Starfire*** isn't exactly a popular game. That was about two years ago.

I just recently picked up ***Full Thrust*** (and the supplement, ***More Thrust***) and while it's a little overpriced at almost $20 for just 48 pages each, it's a terrific system. Fast-paced, generic, and elegant. I can't wait to play it.

Which means, of course, that I've begun making more miniatures. I can't

stop myself.

For **Starfire,** I built one blue fleet, and one red fleet. This one is white. I got the obligatory smaller ships out of the way, then got to work on my favorites, the dreadnoughts. More configurations, larger ships. I discovered that bamboo skewers offer all kinds of possibilities for structural elements.

Sometimes, a larger mini will be unstable. By gluing a penny to the bottom of the base, I got a decent stability without adding too much to the footprint.

My latest construction is the "Brokkian Ultra-dreadnought." It's about 50 times the size of a "standard" golf-tee miniature, built from a bit of plastic taken from a **Hot Wheels** track set my son had broken. I added some half-toothpicks, a pair of golf tee points for engines, and some paint. For this miniature, I wanted the turrets to show up. Eventually, I struck upon the solution. I took one of those metal chains made from little balls strung together, cut the balls apart with wire cutters, and glued them to the sides, top, and bottom of the dreadnought.

Until now, all three fleets have been constructed with golf tees, toothpicks, and bamboo skewers. Adding in paint, primer, and glue, I've probably constructed all 100 or so miniatures for about $25. They're not as pretty as pewter minis, but they didn't cost me hundreds of dollars, either. I only broke my "no-pewter" rule once -- I found a pack of 36 fighters for the **Harpoon** game for $8.95, and I couldn't resist.

Now I'm keeping my eyes open for other bits of plastic and such that I can use for more minis. I still don't have a space station I'm satisfied with, especially since I want something fairly large. But there's hope.

by Brad Glenn

Art by [andi jones]

An excellent change for a tired superhero campaign is to shock the heroes by dropping them into a horror realm. This Horror/Supers crossover has been vaguely mentioned in *GURPS Supers, Second Edition,* but not fully examined by any means. This genre mix can be an exciting variation for the players, and a fun change for the GM.

Why Horror and Supers together? Strangely, they have a lot in common. Both deal with obvious battles of good versus evil, and have various individuals, often with strange powers. The real joy of a Horror campaign, or Horror movie for that matter, is getting scared, and the rush of adrenaline that comes with that. The mystery, the strange, secret powers, the forces of evil, all together create an intriguing world. Why Supers? The joy of imagining your character flying over a city, jumping from building to building, the creation of new powers and origins, the fight against evil, the rush of power after lifting up a tank. These two genres mix together well! Take an ominous horror, while powerful people fight against it, protecting humanity from pain, torment, mass insanity, and destruction by malevolent forces. This is truly a job for super-heroes!

Character Creation

When starting up a normal Supers campaign, usually everyone has a Supers Archetype they wish to play. "I wish to play a speed guy," or "I want to play someone like Plastic-Man," is commonly heard around the table. There's nothing wrong with archetypes, as most of them are interesting and fun to play. For a Horror adventure, I suggest making the characters a little more original, and with a little more personality. I'm not knocking the Flash or anyone, but normally comic book characters are two-dimensional: it's practically part of the genre. But, in the conversion to Horror, the characters should change into fully fleshed out three-dimensional characters. They will have different demands upon them, and different needs within the game. If someone wants to play a basic punch-'em-out superhero, they may be disappointed to end up running from supernatural horrors.

Normally, I persuade my players to take on such characters as Supers with mental disadvantages, or misunderstood creatures. Strange powers and diminished defenses make the heroes much more accustomed to fleeing in the face of impending doom, rather than fighting demons face-to-face. A hero who fights a demon face-to-face is known as a dead hero. Demons are usually way too powerful for direct contact. Ask every character to take at least a minor phobia. Everyone I know seems to have minor fears, why not superheroes? Give them realistic ambitions, jobs, daily lives. Make sure everyone knows their character well enough to know their eye color. This is the only way to really get a well developed character. Now it may not happen the first game. Usually for me, it takes a few games to know a character, and even then I half-ignore my disadvantages because the character has found his or her own disadvantages, which usually are far more detrimental than those written on my sheet.

Another interesting technique for Horror/Supers is to try to make the Supers off balance with each other, not completely trusting of one another. This adds even more intrigue into the game. This can easily be accomplished with secret disadvantages, delusions, compulsive behaviors (like lying) and other disadvantages. Why does one of the heroes disappear every time there's a full moon out? It could simply be a quirk that they like walking in the full moon, or they could be a werewolf, living dead, spawn of Yugthugyug, whatever. I make it a rule that characters are never allowed to see each others' sheets, and I often write down secret disadvantages as simply "Secret" and then remember what it is. I once had a eunuch character who was deathly afraid that people would find out about his problem, and I played him for over a year with no one discovering it.

Magicians or witches/wizards are always a good bet for a super-team fighting in realms of the unknown. They can sense when magic is being used, or the presence of magical creatures. Usually, they are less capable in the raw power department, but they more than make up for it in diversity. I allow a super-mage to take nearly any spell, as long as they have the prerequisites, but on top of that, they may also take powers from the Supers system you're using, to give them equitable strengths. A magic lighting bolt may only go up to 3d6, but a Supers lightning bolt may go as high as the character has points to spend. Or a GM may wish to do away with limitations on magical powers, so a mage may do as much damage with a lightning bolt as they wish, as long as they have the fatigue to keep going. Remember, super-mages should always buy extra fatigue!

Psis are also a good standby, as they are usually present in both comics and horror related material. Psi-sniffers are good for detecting psionic activity, and telepaths and psychomotrists make excellent detectives. Psionic powers can easily emulate any super-power, and still have a more realistic feel to it.

For a beginning Horror/Supers game, I would suggest to limit the Supers to a 250 point maximum in *GURPS* -- convert this to your own system if you're using something else), thus limiting how much power they can have. Also, restrict the accessibility to powers such as flying, teleportation, or insubstantiality. These powers make it extremely difficult to capture the heroes in horrifying situations. I often have difficulty with teleporters in RPGs, as it is too easy to deactivate a situation by teleporting away. You want to scare the players, and having a Superhero hovering over 30 zombies while billowing fire down upon them isn't scary. Now being stuck in the middle of 30 zombies . . . that's scary! I have found that one flyer will suffice for a four to six player team, but make sure that they cannot lift the entire team and bring them along for the flight. Compared to a flying team, an earthbound team will be far more frightened when fighting flying creatures.

Heroes in Hell

Villains and Antagonists

The heroes are going to need opposition, and that means creatures in the Horror genre, and Supervillains in the comic-book genre. These two antagonists can be mixed together in various forms to create really interesting opposition.

When creating an enemy, the first thing I consider is the powers, and how they interact with the characters. For the horror genre I imagine strange hooks, cutting implements, and other gory tools of pain. A nasty guy with a pitchfork is good for a normal human, but a super-hero is going to zap this poor fool from 30 feet away and be done with him. To get around this, you might have the hero surrounded by 50 nasty guys with pitchforks, but after one or two adventures like that, the heroes are going to get more area-effect powers and that will be the end of that. The enemies have to be more devious than that. Invisibility is a good tool of a villain, as are darkness powers, body of shadow, and other powers that make the enemy difficult to find. People suddenly being decapitated by an invisible person with an axe is scary, because you never know if the killer is right in front of you.

Anything mind-control oriented is usually good. Really good illusions and hallucinations can be used to mislead the heroes, making them believe one thing, and then the complete opposite. Having someone stumble upon a horribly disfigured body covered with maggots and grue is scary, but when they run to get their teammates, and return to find it gone, and the room totally clean and fresh-smelling: that will unnerve them.

There are also thousands of possibilities for Supervillains that don't fit the comic-book norm, but do fit into the Supers/Horror crossover. Normally these type of enemies don't wear "costumes" so much as they have horrific bodies,

or wear clothes appropriate for their powers. One such villain I created is Cross-Stitch, who wears sewn-together rags, which fits with his character conception. Notice that Cross-Stitch does have his horrific giant needle to skewer people on, but he can also sew their eyes shut, sew their limbs to their bodies in a binding attack, or throw thousands of tiny needles to stick into a person to avoid being followed. He does have his gory attack, but also enough special effects to make him interesting. Freddy Krueger from *Nightmare on Elm Street* is another good example. He has a metal claw for damage, and dream powers, which would make an excellent adventure. When you think about it, most horror movies focus on a being with powers, so the enemies are not that difficult to come up with.

When I make up a character, I simply think of four categories. Attack, Defense, Movement, and Special. To have an interesting yet potent villain, they should have something from each of these categories. They must be a threat, which pertains to attack, and they must be able to survive an attack, their defense. They must be able to flee/follow the heroes, sometimes leaping out from nowhere. This is their movement. And finally their special is something that really distinguishes them from the other flying hook guys. Maybe your villain has an choking stench of death, or is made from solid stone. Something to make them interesting.

Now that you have come up with enough powers, the horror genre dictates that they must come from somewhere. In a comic-book, often creatures just appear, or a villain just invents some story to trap the hero. The villain's origin in a crossover will probably have to be much more thought out, and intrinsic to the plot. For some, the origin isn't that important though, like an insane Psi. They, most likely, were born with psionic abilities. On the other hand, something opened a portal to the dimension of Yugthugyug, and the adventure there would probably involve finding out who did it, how to close it, while dodging those horrible spawn of Yugthugyug.

Sometimes an interesting origin can be the entire basis for a story. For example, I am working on a game where Sister Twine was raised from the dead by a mysterious tree called the Xikum (also known as the Yggdrasil). She now has horrific powers; evil blue ghost babies floating around her, ready to do her bidding. Once the heroes are swarmed by these blue babies, they will be scared. But the plot follows the line that Sister Twine wants more power, so she wants to get to this tree. If she gets there, she will be able to raise an entire army of dead, so the heroes should stop her. The plot is much more complicated than that, but her origin is an intrinsic part of the plot.

Creating Scenarios

As I stated earlier, horror plots generally surround the creation of the antagonist. There's a black slime gurgling up through the sewers and dissolving people into skeletons. Plot? What is this thing, how did it get here, and how is it stopped? The antagonist itself creates the plot.

But, more interesting, a villain can be a character in the plot. Villains should also have ambitions, so their needs can be interesting plot devices without actually being the plot. Take for instance, an evil freak-show, led by a deformed, mindless, eight-foot-tall man with a small baby head growing out of his neck. He has the strength of five men, and the baby gives him an IQ of 20. Scary and gross, but if he were to rampage the streets, a cop could easily subdue him. He gets his freak friends to enter the city and search out a freak that left the circus ten years ago, and stole with him a strange mystical egg. According to the freak-man, the egg is preparing to hatch, and it will unleash a creature so horrible that to look upon it is to go insane. There's the plot, and the heroes have to discover what is going on, search for the wayward freak, and deal with the inevitable hatching of the creature. Meanwhile, they antagonists will want to stop the heroes, and will send their own freaks after them, but the more freaks fighting the heroes, the less there are to search for the egg. The GM must decide how the antagonists react, and how desperate they are for the egg.

In that instance, the actions of the heroes affect the actions of the villains, instead of a static plot where the actions of an unthinking enemy would go along the same lines no matter what the heroes do. This, unfortunately, is much harder to GM, but much more interesting and realistic for the players.

One of my favorite Horror/Supers style plots are ones where the players doubt reality. One I came up with is called "From the Mouths of Babes," where a group of powerful psionic children are gathered by a mysterious leader, and the heroes are brought into the campaign through mind-control, hallucinations, and various other psionic powers. One hero wakes up with an axe in his hand, and three hacked up bodies around him. Another finds his dead wife is alive, and

hiding from him. A third hero has every fear she ever had show up and attack her. In each instance, the heroes doubted themselves, each other, and reality. Would you feel safe around a person who is accused of murder, but can't remember doing it?

There is an old line that says "avoid clichés like the plague." This holds true in a game. Sure, zombies are scary, but the second time you encounter zombies they are much less scary -- just hack them up and get on with things. Vampires, werewolves, and mummies are all expected in a Horror game. Instead, give the players something that they don't expect. Give them tentacled creatures, veiny blood-spurting humanoids and amorphous clouds with thousands of clawed hands and a giant bull's head. If you want to use a cliché villain, make them as interesting as you can, and don't let the heroes know what they are up against. Sure, that woman in the trenchcoat and fedora seems to be invulnerable to bullets and can turn into a cloud of mist, but who is going to suspect she is a vampire? The team possibly will, but if enough super-humans are encountered, they might just think she has super-powers. Still, if they figure out she's a vampire, she will be much less interesting. "Break out the stakes," the super-heroes yawn.

Horror/Supers plots should be misleading, scary, threatening, and keep the heroes somewhat off balance. They should play upon personal fears of both the characters and the players and, presumably, of the GM.

Scaring the Players

Scaring the players should mainly rely upon an intriguing, twisting plot, but to enhance that fear, several "helpers" are available.

Lighting: There is a problem of how much light to have. You have to be able to read your character sheet and plot notes, but sitting under fluorescent lights isn't very scary. Candles are excellent mood-setters, but they aren't all that bright, and there is a small chance of fire with open flames and all those pieces of paper. Even with these problems, I still choose candle-light, and a soft light in the background. The candles give an aura that electric lights just don't have. One main candelabra for a centerpiece, and three or four other candles on window-ledges seem to be enough. You can try it without an electric light, or turn off the lights during a scary bit. (I once faced a demon while inside of a pentagram, and the GM turned off all the lights and left only one small candle to light the room, and it worked quite well: he portrayed the demon with excellent horrific qualities!) This is still a bit of a distraction. Although I have never tried this, I have always thought about having those clip-on book lights on clip-boards for the characters to read what is on their sheets, but otherwise just use candlelight.

Props: These are excellent little touches that add to the game a lot. Setting the room up with subtle, tasteful items that pertain to the game give a good psychological undercurrent. I have a ceramic skull I bring out and set on the table: it's a little blatant, but everyone knows it, so it doesn't seem out of place, and reminds players of the genre. The GM should also make up small props for the game whenever appropriate. If the players are to retrieve an ancient map, try to give them one that looks as authentic as possible. Pour strong tea over paper to get that old-fashioned look, burn the edges, use home-made paper, anything. It doesn't have to be perfect. Computers often have interesting fonts, and can emulate old-fashioned writing, so even though they look like computer printouts, the players will forgive you. In past games, I have used such props as paper-mache masks, false scars and wounds from Halloween costume packages, hoods and capes, and a small, silver skull with "magical properties."

Music: Often music can be distracting, detracting from the mood instead of adding to it. You have to find the proper music to make it helpful. Our local library carries records (remember them?) of movie soundtracks, and they have a decent selection of horror movie soundtracks. I go through them, and make cassette tapes to play during the games. You actually have to listen to the songs before putting them on, because there are often ones that don't fit. Play them quietly in the background, and soon the players will forget they are listening to the music, and just react on a subconscious level. (On a side note: I have played these tapes while driving at night- bad idea!) The problem is that occasionally you have to get up to change the tape, unless you have an auto-rewind. I keep the tape-deck handy, so that I can quickly flip the tape. I have five or six tapes, and that seems to be enough that the players don't get sick of hearing them. Another use of music is to play music that is being played in the game. If the characters are in a noisy nightclub, play nightclub music, loud! Also, I got a tape of a performer called Diamanda Galas, who put out an album called *The Litanies of Satan.* She sounds exactly as I would imagine a horrific demon sounding. Pick it up if you can

find it. It's very difficult to listen to, but as a demon howling in a dungeon cell, she's excellent.

Problems that May Arise

There may be a few problems integrating superheroes into a Horror game. They may not enjoy the change from being nearly all-powerful to running away from monolithic horrors. These can be dealt with in different ways.

The players may not be too pleased to learn that they must now make fright checks. They may have gotten used to fighting supervillains in another campaign, and being incredibly brave in the face of nasty space robots and super-Vikings. Unfortunately, you must enforce fright checks, as they are no longer fighting regular villains, but terrifying creatures. They may not need to make fright checks when facing normal villains (like the super-Vikings), but when confronted with Lovecraftian-styled creatures it should be frightening to the heroes. If you describe it well, the players should have no problem, because hopefully you will scare them as well. The writhing tentacles dragging people down into the sewers should be described well enough, and in the right atmosphere that the players are scared enough to understand how their characters may be frightened as well.

Scaring the players may be difficult. I have found that once players have powers, they feel invulnerable to outside forces; this must be curbed in order for the heroes to enjoy the game. Allow them a chance to flaunt their powers, but make sure they understand that however powerful they are, there are more powerful forces in the universe, and malevolent ones! You can prey upon their weaknesses, trapping them and wounding them. Let them know that they are vulnerable, and that they can be killed. I don't suggest killing a character just to show them that there can be fatalities in the game, in fact I actively suggest you don't, but also don't shy away from killing them either. If a character does something stupid, or rolls terribly at an inopportune moment, you have to be brave enough to give out consequences. If a character is hanging upside-down from bridge above a thousand foot chasm by his knees, then critically fails his acrobatics roll, chances are he's going to fall, and unless he can somehow slow his fall or get saved by his teammates, you may have to splatter him across the rocks. Let the players know before they get into the game that it may be deadly, and not to get too frustrated if a fatality occurs.

One problem that often arises with almost every Horror team that I've encountered is the feeling of powerlessness the players have when trying to influence the outcome of the game. It is a prerequisite that the players must be challenged to enjoy the game, but superheroes should still have some power, or else it would just be a normal Horror game. One way to confront this is to start the game with a smaller challenge, such as stopping a bank robbery or some other criminal activity. This way the characters get to show off their powers, gain a little prestige in the public eye, and have a bit of a power trip. Nothing wrong with that. When the players get comfortable with their power, hit them with the creatures, the horrors. Show them that the forces at hand are powerful, but that a normal human would be too frail to deal with it, and only a superhero stands a chance, and not even much of a chance. This style shows the players that their characters are forceful, just dealing with powers beyond their control. Give them smaller tasks during the game as well. The fire-breathing demon may set a building on fire, and the heroes can take pleasure in saving humans. This will allow them power, but still they know that the demon is much more powerful.

Conclusion

The main duty of a Supers/Horror crossover game is to be frightening to the players, yet still containing the inventiveness and powers of a comic-book realm. Through the introduction of terrifying villains, and monsters in keeping with both the Supers genre and the Horror genre, a GM should have little difficulty maintaining both genres within the same game. The point is to have fun, so if something occurs that doesn't fit the genre, but is fun, go with it. Let the characters stop a bank robbery, save a cat from a tree, do normal superhero things if they want to, but also allow them the challenges that come with a really good Horror campaign. Don't become too slowed down with fighting, instead have battles resolve quickly, and then get onto scarier problems. Focus on frightening the heroes, but let them fight if they really want to. The main idea is to enjoy the game, for both the GM and for the players. Give them the leeway to dictate their characters actions, and their world to a point, but also allow yourself to make up enjoyable and scary scenarios to fit them into.

The Secrets of Gaard

by Brandon Cope

Art by [andi jones]

This mini-campaign requires only the *GURPS Basic Set, Third Edition, Revised* and *GURPS Space, Second Edition. GURPS Space Bestiary* and *GURPS Ultra-Tech* are useful but not required. Any page reference with a "B" refers to the *Basic Set,* while a "S" refers to *Space.*

This is presented as a mini-campaign rather than a structured adventure to allow a more "open-ended" exploration of the star system. Specific adventure ideas are given at the end of the article. Since more adventure time is likely to be spent on Reginald, it is more detailed than the other planets. As Gaard was considered uninhabitable for so many years, it can be easily placed in an ongoing campaign, though it shouldn't be located near any important systems (at least 6-10 days FTL travel away).

TL10 is assumed to be average for the campaign. If your campaign isn't TL10 or differs from the "standard" TL10 (as per p.S26), make changes as needed. The term "Alliance" will be used to denote the galactic government, for convenience.

Previous Exploration

The Gaard system was first visited by the Xinos (see below), a dying raced hunted by the Verm (see *GURPS Aliens*). They settled in the system as a place of last defense, but the Verm never arrived and, eventually, the last Xinos died. Several centuries passed . . .

About 60 years ago, a one-man Alliance Survey ship spent about two weeks doing orbital scans but no landings were made. Since this was the scout's last job before some long overdue R&R, the survey was rushed. On the basis of the incomplete data, the Survey Service felt that the world was not worth the effort of colonization and labeled it such.

Recently, another Survey ship was sent in to update the first report, and it did a much more thorough job. The reports of high levels of useful metals on Gaard Ia and III caused the Survey Service to reclassify the system as "limited colonization: potential mining."

The Star System

Star Name: Gaard **Type:** M7V **Location:** as desired by GM
Biozone: 0.1-0.2 AU **Inner Limit:** 0 **Number of Planets:** 6

Planet	Orbit	Dist	Type	Diameter	Density	Gravity
Reginald	1a	0.1	earthlike	7,100	6.4	1.04
Bernard	1b	0.1	rockball	1,200	4.1	0.11

Franklin	2	0.45	hostile terrestrial	5,700	2.5	0.33
Aldo	3	0.8	icy rockball	2,300	6.8	0.35
Jerald	4	1.5	gas giant	52,000	2.1	2.5
Marbles	5	2.9	asteroid belt	--	--	--
Johnathan	6	5.7	gas giant	46,000	1.9	2.0

Reginald (Gaard Ia)

This is the most habitable planet in the system. It is tide-locked, with a 21-day year and a 3 degree axial tilt and no seasons. However, the dense (1.7 earth-pressure) atmosphere rotates clockwise around the planet, following the planet's small moon which completely orbits Reginald once every 24 Earth hours (since the planet does not rotate, its day is measured by the orbit time of its moon). The atmosphere is composed of 71% nitrogen and 25% oxygen, breathable with slight aid (see p.S108).

Eighty-five percent of the surface is covered by water, and humidity is over 90%, resulting in near-constant rain on the light side and snow on the dark side, with some of either on the strip of perpetual twilight. Along this strip, the temperature is 82 degrees and the predominant terrain is jungle. On the light side of the planet, temperature is 146 degrees, while on the dark side it averages 17 degrees.

The temperatures aren't as extreme as one would expect on a tide-locked world, since the rotation of the atmosphere helps to balance things out. However, this also causes high winds (15-40 mph is common) and frequent storms. Most natural resources are scarce or absent, except for industrial and light metals which are extremely plentiful.

The highest observable natural life forms are lower mammals, which primarily inhabit the seas and jungles. However, a developing race, numbering about 20,000, lives in extensive tunnel systems under the planet's surface. They are described below. Most of the land surface is covered by jungle, with a fair amount of plains. There are very few mountains and no signs of recent (within 10,000 years) volcanic activity.

Bernard (Gaard Ib)

This is Reginald's single moon. If studied carefully, a single ziggurat will be found on the surface near some old meteor craters (see below for details).

Franklin (Gaard II)

This planet is of little value or note. It has few metals, and its weak magnetic field subjects it to very high levels of radiation. It has a trace methane atmosphere. There are no ruins on the planet.

Aldo (Gaard III)

The outermost terrestrial-type planet, it has large amounts of heavy metals and no atmosphere. There are no ruins on the planet. Even if Gaard Ia is closed to mining, Aldo would probably be opened up.

Jerald (Gaard IV)

A medium gas giant comprised of hydrogen-helium, it has a spectacular ring formation but very few satellites: six moonlets and two moons, one small and one medium. One of the moonlets, perhaps captured from the asteroid belt, has a radically inclined orbit, at 62 degrees to the system's plane.

Marbles (Gaard V)

The belt mainly is of stony/iron composition with a very sparse collection of asteroids.

Johnathan (Gaard VI)

Another medium gas giant, this one's atmosphere is primarily hydrogen. It's only unusual feature is a large number of moons: 13 moonlets, six small, five medium and three large moons.

Xinos Ruins on Reginald (Gaard IA)

Careful ground exploration of Reginald's jungles in the twilight strips will reveal stone structures partly covered by centuries of growth. While the materials used were simple stone, there are signs that the actual construction was very high tech (using laser and fusion cutters).

The Secrets of Gaard

These structures are ziggurats, 34.56 or 69.12 feet per side along the (square) base, with the height equal to the base length. The only entrance is through a 213-lb stone slab at the pinnacle of the structures which covers a vertical shaft. Deep notches are cut into one of the shaft walls to be used as foot- and handholds.

The shaft stops at ground level, and a single short dead-end tunnel leads north. If carefully checked, the dead-end wall is actually a sliding door (A Vision-3 roll to determine this and an IQ-2 roll to figure out how to open it). However, there is a 1 in 6 chance that the door is trapped. Opening it without disarming the trap (requiring separate Traps/TL4 rolls both to find and disarm) causes a stone block to drop from the ceiling and onto anyone within three feet of the door. The traps are quite old and can be avoided with a DX roll (minus encumbrance level). Failure results in the character taking 10d damage (roll on the Falling table for location hit; any damage to the head or torso does not "blow-through").

Beyond the door is a burial chamber very similar to that found in Egyptian pyramids. The body inside the sarcophagus is well-preserved, and can be identified as a Xinos with a Xenology-4 roll or (assuming the PCs' ship has adequate databases) a Research-3 roll. The characters may be very surprised to find various TL9 and 10 items inside, though none of them are usable.

Xinos Ruins on Bernard (Gaard IB)

There is only one structure on the moon, which served as the Xinos' final home. It is large (about 138.23 feet per side), but appears identical to the ones on Reginald. However, there are rungs on the vertical shaft in this one, which leads to an airlock.

On the other side of the airlock is a moderate sized complex, which has not been inhabited for several centuries. If the complex's computer is somehow brought back on-line (a Linguistics-2 roll to figure out the symbols, followed by an Electronics (Computer)-4 roll), the PCs will be able to access the records of the Xinos (see below). If the party is in a Survey or Patrol vessel, they will have a limited database on the Xinos language. Otherwise, the adventurers will have to return to civilization to translate the records.

For the financially-minded adventurer, there is a fair amount of Xinos equipment laying around, most of which can be repaired. However, since the Xino culture was not exceptionally advanced, the equipment has value only as antiques or curios (which may be high anyway!). Note that if the PCs are working for a third party, in most cases the employer is legally the owner of whatever artifacts are found, not the characters . . .

Xinos Ruins on Johnathan (Gaard VI)

Shortly after the Xinos arrived in the system, an automated defense base was set up on one of the moons of the outermost gas giant. The idea was to use it as bait for any pursuing Verm. Some of Johnathan's smaller moons were stripped from their orbits, similarly equipped and then stretched out along the gas giant's orbital path to form a perimeter defense for the system. After several centuries, it became apparent that their enemy was not coming and the bases were abandoned. Their beacons, once meant to attract attention, have not been operational for over 500 years.

Unfortunately for the party, the two principal weapons of each base are functional: an experimental "anti-radiation" beam which causes a ship's power plant to shut off, and a tractor beam (100,000 tons pull to the first weapon's range) to crash the drifting ship into the moon's surface. The pilot of a stricken ship must make a Piloting-4 roll to avoid splitting the hull open. For every point the roll is failed by, assess damage to the ship as if it had taken a hit from a weapon with a firepower equal to 100,000/ship tonnage. If the ship is still operational, the party must make their way into the defense post and shut off its power. There might be a few security robots operational, and perhaps shutting the weapons off trips a self-destruct device . . .

The Natives

The natives of Reginald resemble two foot tall crabs with eight legs and four eyestalks. The pincers are fairly small and are adapted to digging. Their most unusual physical characteristic is a single arm underneath ending in a three fingered hand, used for fine manipulation.

They do not use fire but are able to construct some wooden tools. Their language is fairly simple, consisting of only a few hundred or so words formed by chirps, clicks and pincer movement. They have no name for themselves other than "the people," and live in extensive tunnel systems in groups of 20-100. Rival clans are tolerated, but warfare, though rare, leads to total destruction of the losing clan.

They consider the ziggurats to be sacred ground and will be greatly angered if one is disturbed, surrounding it and making threatening gestures to those responsible. They are not especially brave, however, and will flee if frightened.

In combat they fight with their pincers but will sometimes use a branch as a club. Pincers are PD/DR 2/4 and may parry at half DX.

The Xinos

The Xinos were an advanced race that was destroyed in a series of major wars about 3,000 years ago. The Xinos are not considered a Precursor race, since their technology was not extremely advanced (they were TL10-11 at the time of their extinction) and they had been starfarers for only four or five centuries. However, relics of the Xinos have aided the in the development of technology of humans and others, as well as the detailed histories they kept of other races they discovered adding to the knowledge of this part of the galaxy.

The Xinos were very thin humanoids, almost to the point of being skeletal, and their faces were very triangular. Slightly smaller than a human, a Xino was hairless with off-white skin. They were excellent scholars and explorers but were ill-suited for combat and thus had to rely heavily on technology in war. They were very long-lived, often reaching ages up to 600 years.

They were finally destroyed in a series of wars against the Verm (see *GURPS Aliens,* p.76). The Verm had managed to despoil most of the Xinos colonies as well as wrecking their homeworld. In addition, they used a biological weapon (provided by an unknown race, perhaps the Markaan) that rendered the remaining Xinos sterile. Within 500 years, the race was dead.

A small group made it to the Gaard system and settled on Gaard Ia. However, within a few years the Xinos discovered that there was native intelligent life on the planet. Not wanting to interfere with its development, the Xinos resettled on the moon, but carefully studied the new race (which they named Qusals). While the Xinos stopped burying their dead on Gaard Ia, they left the existing ziggurats in place; this proved to be a mistake. The Xinos were considered gods by the natives and the Xino tombs were treated as holy structures. The last Xino in the Gaard system died some 700 years ago.

At the GM's option, the Xinos might be unknown in the campaign until their ruins in the Gaard system are found. This is a good option if (a) the GM wants to keep the party very busy in the Gaard system or (b) the party isn't the kind who would normally like dealing with proto-sentient giant crabs, and would rather raid tombs.

Beasties

Various non-intelligent creatures inhabit Reginald; three noteworthy land animals are listed below. GMs may find *GURPS Bestiary* and *Space Bestiary* useful for additional creatures. None of these creatures have specific names (for example, the natives refer to the Large Carnivore as "big fast thing with sharp teeth").

Large Carnivore

ST: 50-75 **Move/Dodge:** 11/6 **Size:** 12
DX: 13 **PD/DR:** 3/6 **Weight:** 2-3 tons
IQ: 4 **Damage:** 3d imp **Habitat:** jungle, plains
HT: 14/30-50 **Reach:** C, 1, 2

This predator resembles a small to medium-sized allosaurus with natural armor plating. It is not related to dinosaurs, though; it's a mammal. Vision is very poor (Vision 8) but all other senses are very keen (18). It usually attacks from ambush, though it is capable of running down prey.

Small Carnivore

ST: 4-6 **Move/Dodge:** 6/7 **Size:** 1
DX: 14 **PD/DR:** 0/1 **Weight:** 60-90 lbs
IQ: 5 **Damage:** 1d-2 cut **Habitat:** jungle, plains
HT: 13/6 **Reach:** C

Fairly common, it is best described as a sloth with the temperament of a wolverine. Equally at home on ground or in trees, it hunts in packs of 3-5 with larger groups possible. The pack will carefully circle its prey (Stealth-14) and then rush in to attack. Solitary ones drop from trees onto unsuspecting prey (treat as a Contest of the beast's Stealth against the victim's Vision, with success indicating 1d6/2 seconds of surprise).

Small Herbivore

ST: 9-11 **Move:** 14/7 **Size:** 2
DX: 13 **PD/DR:** 0/0 **Weight:** 250-300 lbs
IQ: 4 **Damage:** 1d-3 cr **Habitat:** plains, jungles
HT: 13/9 **Reach:** C

These grazers are about the size of ponies. They have very short necks, dog-like heads and long legs with hooves. The

grazers stampede when frightened, which is easy to cause. They attack by kicking and are found in groups of 12-20.

Adventure Ideas

The nature of the party's adventures in the Gaard system will depend largely on why they're there. Suggestions include:

* The party has been sent in to do a pre-colonization ground study, either for the Survey Service or a mining company. The job includes scouting a proposed colony/mining site on Reginald and the land in a 50-mile radius. The site is located in the grasslands of the largest continent with jungles a few miles to the south. Odd holes about two yards wide (entrances to the native's burrows) are located sparsely on the surface, about two per square mile.

When the party enters the jungle, they discover one of the Xinos' ziggurats and (as they exit it) are then discovered by the natives. Assuming the party tries to talk rather than shoot, some communication may be possible (make the players roleplay this!). Suddenly, a Large Carnivore appears, which scatters the natives. If the adventurers can defeat or drive off the beast, it will evoke a good reaction from the natives.

* The Xinos ruins were discovered by the second survey team. The adventurers are Patrolmen or mercenaries sent to protect the ruins or scientists going through them until the Alliance can decide what to do. A foreign power (or even an Alliance member!) sends in a small team to steal some artifacts for research. While dealing with the terrible weather and odd animal life, and trying to stop the raiders, the native race makes themselves known.

As a twist, the party could be the ones hired to steal the Xinos relics. How well they are equipped depends on who's sending them, but in general their armor and weapons should be slightly inferior to the Patrol's.

* Basically the same as the previous, but it's the natives that are known about, not the ruins.

* The party is given the tedious job of searching each of the moons of the gas giants to see if there are any more Xinos ruins. After several weeks of boredom, they discover a ziggurat on one of the many moons of the outer gas giant. However, just seconds after their discovery, a beam fired from the structure hits their ship and disables their power plant. A few seconds later they are hit by a second beam (a tractor beam) which pulls them to the surface (a Piloting-4 roll is required to avoid crashing).

The engineer manages to get the reactor going again, but a few seconds later the ship is again fired on and the reactor quits again. It should be obvious that the explorers will need to enter the ziggurat and disable the weaponry if they are ever to leave the moon.

Other adventures are possible, such as helping set up a small scientific colony on Reginald (the Alliance will not allow mining on the planet, however, after discovering a developing race on the planet, nor can a regular colony be located on the planet). Or, perhaps, the Verm have finally tracked the Xinos to this system, still ready to make war after so many centuries . . .

Art by andi jones

The *GURPS* system draws a distinction between magic and psionic abilities. Magic channels the mysterious energy known as mana to achieve certain effects. It involves numerous skills (spells) and rituals and has a very broad range of possible effects, although each spell or ritual is very specific. Psionics calls upon the inner powers of the mind. Psionic abilities are no more difficult than any other act of thought, and psionic skills tend to be broader in scope than spells, but there are fewer of them and significant psi ability is quite expensive. Psi and magic are two different means to the same end.

In a game-world, however, there might not be as clear a distinction between magic and psi. Wizards might use both to perform their amazing feats. They might differentiate magic from psi, like in Mercedes Lackey's *Valdemar* series or Steven Brust's *Jhereg* books, or they might consider them two aspects of the same thing.

It is also possible to have a game-world where "magic" is based entirely on the use of psi. Some occult theorists and parapsychologists claim that magic is nothing more than a misunderstood use of psi cloaked in legend and superstition. Psionic powers can be focused and refined with training in concentration and meditation through the use of magical mantras, gestures and the other trappings traditionally associated with spellcasting. *GURPS Black Ops* takes this view of magic. "Mages" encountered by the Black Ops (like the members of the Lodge) are actually psionics. Katherine Kurtz's *Deryni* novels are a good example of a race of powerful psis who treat their abilities like magic and use them accordingly.

The Psionic Wizard

All psionic "wizards" possess one or more levels in various psionic powers (see pp. B165-176 or *GURPS Psionics*). Minor seers, healers, soothsayers and hedge magicians may have only one or two powers, while true adepts have levels in most if not all psionic powers.

The power levels available depend on the point-level and restrictions of the campaign. A modest level of Power in even one psionic ability can be quite expensive; while a starting mage may spend 25 points on Magery and another 20-30 points on spells, a psionic can easily spend 50 points on a single power! A campaign with powerful psionic wizards will require at least 250 points, if not more. The cost of some psi powers can be reduced using appropriate limitations (see below).

A low-Power psionic wizard can still be quite effective, but is forced to rely on subtlety. Low Power levels are especially appropriate for a "secret" magic campaign, where psionic abilities are hidden and used covertly, as well as a low-fantasy campaign where "magic" is not very powerful.

A psionic wizard's powers can be brought out of latency through long periods of training and initiation, using psycho-metabolic techniques such as meditation, hypnosis, drugs, and altered states of consciousness. Those with latent psi powers are said to have "the Talent" or "the Gift," the potential to become wizards. Occasionally rare individuals develop their Talent spontaneously, usually as a result of some psychic trauma. These individuals often have trouble dealing with their abilities and can be a danger to themselves and others if they are not properly trained.

People with psi powers may be considered specially blessed (or cursed), touched by the gods or spirits. In primitive cultures, psi ability is the mark of a shaman or medicine man. Psis may even be considered a separate race from "normal" humanity, strange and fey, like the aforementioned Deryni.

Individual psi powers and skills may go by different names in the game world, especially in pre-modern cultures. Each psionic power can be considered a separate branch of study, perhaps even an individual "college" of magic. The individuals powers and skills and their likely permutations are discussed below.

Antipsi

Antipsi may be known as shielding, blocking or warding to a psionic wizard. A character with Antipsi cannot normally have any other psionic powers, so antipsis make good "warders" who protect others from magic. Antipsi is also common among skeptics, who point to the fact that psi doesn't seem to work around them as proof that it doesn't exist!

If the GM desires, he can lift the restriction on Antipsi and allow psis to possess it along with other powers. In this case, apprentices are taught to use the Psi Static skill as a means of protecting themselves and others from hostile magicians, and Neutralize is used as a means to rob another magician of his powers.

The Psi Static skill can also create an area that is difficult to penetrate with clairvoyance or astral projection, creating a "ward" that blocks the passage of psychic energy.

Antipsi is very limited at low Power. Neutralize cannot be used if Power is below 5 and Psi Static has a very limited range, requiring the psi to use it on a single target at a time (global range is only about one *inch* at Power 5). Within these limits, a skilled screamer can still quite effectively jam the psi skills of a single target he can see.

At the gamemaster's option, the Neutralize skill might be used to *permanently* remove a character's psionic powers (although it might still be reversible, perhaps using Mindwipe). This technique could be used as a punishment inflicted on wizards who abuse their "gifts" and by evil wizards to destroy the powers of their enemies.

Astral Projection

Also called spirit travel, or the Second Road. Psionic wizards use Astral Projection to travel in spirit form to spy or communicate over great distances as well as see astral forms that might be lurking nearby. Astral Projection can be used as a form of spirit combat, and individuals who lose their body while astral projecting may be the source of legends about ghosts and specters, especially if they have telepathic or psionic vampirism powers as well. A disembodied psi-vamp makes a very effective ghost.

Journeys to the inner astral plane (***GURPS Psionics,*** p. 51) are a common means of introspection and initiation for psionic wizards. Such a journey is virtually required for a neophyte-shaman. The astral plane in the game world might be inhabited by various ghosts, spirits and other psychic entities to challenge wizards, or it may be largely empty, save for astrally projecting wizards themselves.

The astral form of a psi with low Astral Projection Power tends to be slow (low Speed) and cannot project as long, but skilled astral projectors can still remain outside their bodies for some time. Astral sight remains quite useful despite its

more limited range.

Related to astral projection is the Dream Travel power from *GURPS CthulhuPunk.* Psionic wizards might interact with each other in a dream world of some kind, not unlike the inner astral plane. Of course, there may also be various creatures that live in the dreamlands as potential allies or enemies of wizards.

Electrokinesis

Electrokinesis is poorly understood in preindustrial cultures, since there is no real theory of electricity or electromagnetism. Most Electrokinetic skills are not very useful until electricity comes into widespread use.

Confuse can stun opponents and disrupt another psi's concentration. Confuse has a limited range and duration at low Power but is still quite effective. The Lightning skill (coupled with Energy Sense) can direct discharges during thunderstorms to attack certain targets (although the wizard wouldn't be able to *summon* thunderstorms). Energy Shield can protect against such lightning attacks as well as natural lightning strikes. Energy Sense provides the ability to sense magnetic north and provides a +3 to Navigation skill, keeping a wizard from getting lost.

Photokinesis can create illusions or render the user invisible, although telepathic invisibility via Illusion will probably be far more common (see below). Photokinesis needs Power 3 to produce an image 1 hex in size, up to 9 hexes away, a very useful ability for a low-Power electrokinetic. A low power photokinetic can only blur his image, not become invisible (which requires Power 10+). Since photokinetic constructs shed light, they can also be used to create globes of cold "flames" that shed light, like the "handfire" of the Deryni.

In a modern or futuristic setting, Electrokinesis becomes much more effective, allowing psi wizards to control and influence electrical devices of all kinds. Dampen can shut down many types of machines (including computers and robots), Surge can cause overloads as a "poltergeist" effect, and, with Cyberpsi, "net wizards" can hack computer systems using only the power of their minds! (see Joan Vinge's *Catspaw* for an excellent example of this application of psi).

Cyberpsi requires greater Computer Programming skills to use it effectively at low Power. Most low-power cyberpsis prefer to touch their subject, gaining a +2 bonus to skill, rather than relying on their limited range.

ESP

ESP is commonly referred to as "the Sight" or "Second Sight" by psionic wizards, and it is one of the most common psi abilities (along with Telepathy). In a psi-wizards campaign, anyone with Danger Sense has ESP Power 5. People with ESP are regarded as seers, mediums, sensitives and visionaries. Many consider it a primary ability for becoming a wizard, although many people may have ESP as their sole psionic ability. Skilled users of Clairvoyance, Psychometry, and Precognition can gain a reputation as soothsayers and fortunetellers. Many (if not all) seers may have a Limitation on their ESP skills, requiring them to use of some kind of focus such as a crystal ball, mirror or deck of tarot cards to gain a clear "vision." Some wizards only have visions while in deep trances.

Clairsentient abilities can be used for scrying and information-gathering. Low-Power clairvoyants have very limited range, a matter of inches. Enough to see inside envelopes, closed drawers or the like, but not much else. Long-distance seers use Astral Projection rather than ESP. Combat Sense is useless without at least Power 10, unlikely in a low-Power game. Precog limits on range make the ability weak in terms of range and time at low-power. Psychometry, however, can be quite effective at low Power, except with regard to very distant events.

Healing

Healing is a highly prized ability in low-tech settings and even in high-tech ones. In a fantasy campaign, psionic healers are probably the pinnacle of medical "technology." Healers tend to combine their psionic powers with practical skills such as Physician and Diagnosis, along with a knowledge of herbal remedies. In a more technologically-

advanced setting, psionic healing is a formidable a complement for other forms of medical treatment. The campaign world may feature a prominent "order" of healers, such as the Healers from the *Deryni* books.

Metabolism Control is a basic ability for any healer, as instructors begin by teaching a student how to understand and control his own body. A knowledge of biology and anatomy can allow psychokinetic healers to do considerable damage if they chose to use their psionic abilities aggressively (p. P35), but professional healers most likely take oaths not to use their abilities to cause harm (a Vow and/or Pacifism).

Sense Aura is also be a basic healing skill, allowing the wizard to read a patient's emotional state and providing information on the subject's state of health.

Wizards may use Life Extension to lend truth to stories about wizards being immortal or having very long life spans. This can create awe and no small amount of jealousy on the part of normal people and could lead to very old and powerful wizards who accumulate skill and power over the centuries. Perhaps legends of liches and similar "undead" began this way.

Psychic Vampirism

Psychic Vampirism can form the basis of vampire legends, as well as necromancers who use magic to steal the vitality of others. Perhaps vampires are not undead at all, but powerful psis using Psionic Vampirism to steal life from others and extend their own lives.

The Steal Power skill can also be used somewhat more humanely as a means for several wizards to freely give some of their power to another for a particularly difficult psionic feat. In this case, a successful Steal Power roll is all that is required, the subject does not resist. Less scrupulous magicians can, of course, still use unwilling subjects for this purpose. If everyone is latently psionic (p. P102), then even normal people can be drained for 1 point of Power each!

Psychokinesis

Psychokinesis (aka "fetching" or "shaping") is the "workhorse" power of the psionic wizard, used to perform virtually all physical feats of magic, from levitation to spontaneous combustion. Telekinesis is used to move objects, deflect attacks and strike at foes, allowing a wizard to do things like crushing a victim's heart or choking them from a distance. Using a focus like a voodoo doll to obtain a Telescan "lock," a psionic wizard can even inflict harm on a target from afar. Levitation allows a wizard to fly, and PK Shield can deflect many physical attacks (especially in a low-tech campaign, where a little DR goes a long way). Wizards can also use Telekinesis to deflect missile attacks like arrows and thrown weapons.

Some of these abilities may be considered the work of invisible spirits, leading to legends of magicians with numerous spirit helpers to carry out their will.

A powerful psychokinetic wizard can be a terror in combat. A low-Power psychokinetic has some strong limitations. Cryokinesis and Pyrokinesis require considerable time and patience to be effective. They are virtually useless in combat. Levitation needs Power 5+ to work on an average human adult, and even then is slow. PK shield provides some protection at low levels, but not enough to deflect most weapons. Telekinesis can move only very limited weights, but is still capable of great precision with sufficient skill. Direct TK attacks (p. P35) are still quite effective if the telekinetic pinches off a blood vessel or the trachea.

Telepathy

Telepathy allows psionic wizards to perform all the classical feats of mental magic: mind reading, charms, illusions, mental suggestion, and psychic attack. Most "wizards duels" are in fact mental struggles of telepathy or combats carried out on the astral plane; or even both, with astrally projecting adepts using psychic "weapons" against the Mind Shields of their opponents.

Mind Shield is a wizards first-line defense against most hostile magic. Apprentices are always taught the Mind Shield skill if they are able to learn it at all (psionic wizards should probably be allowed to purchase Mind Shield as a single-skill Power). Powerful wizards are able to extend their psychic shields to protect others near them (p. P38).

Psionic "signatures" will be used to trace the work of particular wizards, and individuals with Signature Sniffer and Psi Sense skills may be employed as "witch smellers," either to find potential candidates for training or to hunt down anyone with the Talent for the Inquisition!

Low-Power sharply limits the range of telepathic skills. Aspect is quite useless at low-Power. Mental Blows of low-Power can stun, but cause no real damage. Mental Stab needs a Power of at least 5. Mind Shield is less effective at low-Power, but a high skill still makes the shield quite useful. Other telepathic skills are limited almost solely by range -- skill is more important than power for abilities like Telereceive, Illusion and Telecontrol.

Teleportation

Teleportation gives psionic wizards the ability to appear and disappear at will, perhaps in clouds of smoke or sparks, as well as "walk through walls" at low Power and escape from various forms of bindings and traps. They can use Exo-Teleport to make items, creatures and even people (if they have sufficient Power) appear or vanish out of thin air, useful for conjuring tricks as well as "banishings." Some or all wizards might even have the World Jumper advantage (see *GURPS Time Travel*) and be able to travel to alternate dimensions or times.

Teleport is a weak ability at low-Power, which greatly limits its range. Combat Teleport requires Power 10 and Exo-Teleport is quite weak at low levels, able to move less than an ounce. Low-power Auto-Teleport can still allow a teleporter to "walk through walls" or escape "impossible" traps in the manner of Houdini.

Rituals

Psionic wizards still use the ritual trappings of traditional magic, as a framework for focusing and intensifying their innate psionic abilities. Wizards may have Limitations like Preparation Required on some or all of their psi abilities to reflect the elaborate rituals needed to activate the ability. This is especially true of many ESP abilities (especially Precognition) which are not usually performed on the spur of the moment.

A ritual circle of telepathic wizards can form a psychic gestalt to increase their power (p. P37). This would requires all the wizards to enter into telepathic rapport, and each must have the ability to be augmented in order to add to the power of the gestalt. A large enough circle of wizards could extend their power over a great distance and perform massive feats beyond the ability of any of the individual members.

Foci

Magical items in a psionic wizardry campaign are exceedingly rare, because magic does not reside in objects, it exists solely as a product of the human mind. This limits magical power primarily to wizards.

Wizards might use items to focus their concentration and improve their own abilities. Such an item is called a focus. A focus has no power of its own, but because of its form, or something inherent in its structure, a focus improves and strengthens the wizard's concentration. The most common foci are crystals, which are believed to amplify psionic energy. Examples include the shiral crystals from the *Deryni* books and the "mage stones" used by mages in Valdemar.

A focus usually provides a boost to the user's Power. An example of this is given for the crystals used by the Disciples of Change (**GURPS Religion,** p.151): each 10 carats of flawless crystal adds +1 to one Power if the user is in contact with the crystal and makes a successful Meditation roll. If crystals are useful as psionic amplifiers, it explains the tendency for fortunetellers to use crystal balls and the craze for crystals in the New Age movement.

Potions

Even primitive psionic wizards may discover and use plants and herbs that have natural psi-enhancing properties, similar to Brainstorm, Mind Hype, or even Blue Fire from **GURPS Psionics** (p. P78-79). Enhancing drugs can be used to bring out latent powers or simply enhance weaker power levels for wizards attempting more powerful effects. Likewise, those seeking to restrain those with psionic powers may discover a natural extract that functions like Shatter or Monobloc (p. P79-80). The anti-Deryni drug merasha is one example.

Familiars

Another potential focus for a psionic wizard is some kind of catalyst creature (p. P54). Certain animal pets or companions might a psi's inherent powers while they are present, others might have a tendency to bring out latent abilities in their masters. Catalyst creatures can take the form of familiars, and might be attributed greater powers than they truly have, considered to be spirits or demons in animal form.

There is also the possibility of non-human psionic wizards in the campaign world. If a fantasy world includes races like orcs, elves and dwarves, they may all have psionics powers of their own. Perhaps some races are inherently better at certain powers than others: elves are excellent empaths, while dwarves are stolidly anti-psionic (or have high levels of Psionic Resistance).

Other psionic creatures and "monsters" may exist. For example, dragons may have evolved from psionic dinosaurs that learned the use their inborn psi powers to survive the extinction of their cousins and evolve greater intelligence. A dragon wizard might possesses tremendous psionic power, using pyrokinesis to "breathe fire," levitation to fly in defiance of the Laws of Aerodynamics and life extension to live for hundreds or even thousands of years. Other creatures may possess natural psi abilities they use to stalk and capture prey, or for defense. Creatures may also have Psionic Resistance, making them difficult for psionic wizards to deal with.

Ghosts And Spirits

A psionic wizardry world can also feature beings of pure psionic energy, like a Being of Pure Thought or an astral entity. Some may be psis whose bodies died but whose minds lived on, creating "ghosts" (like the ghosts from *GURPS Black Ops*). Other entities may come from elsewhere on the astral plane, perhaps even from the mysterious "inner" plane (or the Collective Unconscious).

Immune to physical harm, these spirits can only be dealt with using psionic abilities like Telepathy and Psychic Vampirism. Anitpsi can also keep them at bay.

Psychic Magic Campaigns

In a psionic wizardry campaign, magic becomes a somewhat less "mechanical" force than it is in some fantasy campaign worlds. Wizards must rely entirely on their inner abilities and resources. Magic items are extremely rare and generally not useful for non-wizards. This means psionic wizards can become very powerful relative to other characters in the campaign, especially in a low-tech fantasy world. In such a setting, gamemasters may wish to impose an Unusual Background cost for psionic powers. Very high power levels (10+) in a specific psi power might also call for an Unusual Background, unless the campaign has characters built on 200 or more points.

Psionic wizardry can also add an element of fantasy to a modern or futuristic setting. Characters in a *GURPS Space* campaign can encounter a primitive world where the inhabitants have refined their native psi talents into a complex system of magical rituals, and many of the local life-forms have "magical" abilities. Is it "real" magic or just an application of psi? Keep the players guessing.

Cars for 2050

by James Hintz

Art by [andi jones](#)

The Long Shot

Tired of getting knocked out in the first three seconds of a Division 20 duel? Then drive the Long Shot!

It's not big, pretty, or heavily armed, but it carries more armor than Fort Knox. Laugh at the stunned faces of your opponents as your composite armor shrugs off the heaviest weapons fire. Let patience be your crew chief as your opponent empties his big guns. Then swoop in for the kill with your turreted shotgun, triple loaded with ammo.

Strength, endurance, longevity; When you can't outgun the opposition, outlast them. The Longshot from Whirling Duelist Motors.

The Longshot: Compact, x-hvy chassis, heavy suspension, large power plant w/PC and SC, four PR radial tires, driver, vehicular shotgun in turret, two extra VS magazines, five flame cloud dischargers; 2 left , 2 right, 1 back, all linked together w/ link to turret, hi-res single weapon computer, no paint windshields, heavy duty anti-lock braking system. Metal Composite Armor: F12/30, R5/27, L5/27, B5/27, T12/30, U1/5. Four 10 pt. wheel hubs, four fake wheel guards. Acceleration 10, Top Speed 123, HC 4, 4,440 lbs, $19,856.

The Tsunami Warrior

Drive the duelling sensation for the 2050 season, The Tsunami Warrior.

Experience the power of the elements with the Warrior's incendiary rockets and heavy composite metal armor. Your Division 20 opponents will know you have mastered the waves with one look at the new HoloBlue (tm) paint job. Duel with the forces of nature at your side. The Tsunami Warrior from Fuji Motors.

The Tsunami Warrior: Sedan, ex-hvy chassis, hvy suspension, super power plant w/SC, 4 HD radial tires, Driver, Micro-Missile Launcher in turret w/mag and 20 shots incendiary ammo. Micro Missile Launcher left side linked to turret. Spear 1000 mine dropper w/ mag and 9 shots spider mine ammo. 2 oil dischargers,1 left,1 right, hi-res single weapon computer. Sloped laser reflective metal composite armor: F5/23, R4/20, L4/20, B4/24, T6/25, U1/5. 4 Composite wheel hubs 1/5, 2 composite wheel guards back 1/5. Acceleration 5, Top Speed 115, HC 4, 6,120 lbs. $19,995.

The Bullseye III

Atlantic Industries presents The Bullseye

III, redesigned for 2050. Arena ready for
Divisions 10, 20, and 30.

Only the Bullseye III has the twin laser
guided rockets that will knock out your
opponents in one shot. Drive the Bullseye
and drive to the winners circle in style.

Div. 30 Bullseye III: Luxury, x-hvy chassis,
heavy suspension, large power plant, four-
steel belted solid tires, driver, twin linked
laser guided armor piercing heavy rockets
in turret, targeting laser in turret, laser guidance link, recoiless rifle w/HEAT ammo bumper triggered back, hi-res
targeting computer, heavy duty shock absorbers, heavy duty anti-lock brakes. Sloped armor: F45, R32, L32, B35, T30,
U5. Acceleration 5, Top Speed 90, HC 3 6,595 lbs, $29,919.

Div. 20 Bullseye III: Sedan, x-hvy chassis, heavy suspension, large power plant w/PC, Four PR radial tires, driver,
twin linked guided armor piercing medium rockets in turret, two 3-shot rocket magazines fed into turret. targeting laser
in turret, laser guidance link, machine gun w/HD ammo bumper triggered back, targeting computer, Armor: F45, R45,
L45, B45, T20, U4. Acceleration 5, Top Speed 90,HC 4, 6,116 lbs, $19,402.

Div. 10 Bullseye III: Midsize, Lt chassis, Lt suspension, medium power plant w/PC and SC, 4 standard tires, driver,
twin linked laser guided armor piercing light rockets in turret, two 1sp rocket magazines fed into turret, targeting laser
in turret, laser guidance link, junk dropper w/mag linked to turret and BT back, light flamethrower w/mag linked to JD
and BT back. Armor: F15, R15, L15, B15, T15, U5. 4 10-pt wheel hubs. Acceleration 5, Top Speed 97.5, HC 1, 4,315
lbs, $9,880.

Div. 15 upgrade: Remove junkdropper w/ mag, two 1sp RM, 2 links , and one bumper trigger. Add Two 2 sp rocket
magazines, 2 pair LGAPLtR's, HRSWC, HD brakes, 1 paint discharger, upgrade FT ammo to high temp, and add 10
points of armor. 4,320 lbs, $14,980.

The Guide To Munchkins: The Truth

by James "Grim" Desborough & Steve Mortimer

Art by Kent Burles

Scene: A darkened room. Two spotlights come on, each picking out a single figure seated on a wooden chair. The first is a hulking, cuddly, Sumo-wrestler type with a worrying fire in his eyes. The second is a long-haired, painfully thin, bearded, arty type. They look remarkably unworried. A voice starts asking questions from the darkness . . .

Why did you write the guide to munchkins?

Grim: It seemed like a good idea at the time.

Steve: It's our only contract and I'm a qualified expert on the subject.

Grim: It was a joke to start with, but Mr. Jackson seemed to like it. Who are we to argue if it means we get a break in the industry? Nothing quite like it has been done before except in a small way in roleplaying magazines. We thought it was time that roleplayers had some humor of their own.

Steve: It's just one of those things you do when you're drunk; collect traffic cones, tell everybody you love them, and write huge books!

What sort of decisions did you have to make when writing the book?

Steve: Did we actually make any decisions?

Grim: Yes. We did.

Steve: What?

Grim: How much to write each week, what to cut, what to keep, what was funny and whether to get up before midday.

Steve: Oh yeah, I remember those decisions.

Grim: We had to decide what we could legitimately satirize in a book with this specific title. Most of it concentrates on power-gamers, but we also have a dig at the big companies and a lot of other stuff as well.

Steve: And some of our friends.

Grim: And Goths.

Steve: But you are a Goth.

Grim: Gothish.

Steve: And *Friends* the TV show.

Grim: And pop music, the Spice Girls in particular. We'd have had a go at a lot more but the book would have been 600 sheets of microfilm and would have been called *Grim and Steve Rant On For Several Weeks*. We had to be strict about what we wrote, and stop it drifting.

Where did you get your source material?

Grim: Friends, players, the Internet, bad dreams . . .

Steve: Personal experience.

Grim: Yeah, Steve is a munchkin himself. I'm a poor put-upon GM, I have to put up with this kind of crap all the time. I wrote most of the detailed stuff about thwarting munchkins.

Steve: And I wrote all the stuff about screwing over your GM.

Grim: I want to make it absolutely clear that he said screwing over your GM.

Steve: We don't want you to think we're a minority or anything, then you won't buy the book.

Grim: I don't know, there's something rather butch about munchkins. Don't you find all that fascination with guns a bit suspect?

Steve (Indignant tone): No, not at all. There's naught wrong with a big gun.

Grim (Sigh): The rest of the material comes from our imaginations. We filled in the gaps with observations and ideas on the industry as a whole.

Steve: Just think of us as observers, documenting munchkins whenever possible. It's all to do with karmic balance. All the pretentious people are always complaining about how bad power-gaming is. We thought we'd restore the balance by telling the munchkins' side of the story.

Was there anything you missed out?

Grim: We had to cut our list of real life and fictional munchkins, but then it wasn't funny. No great loss there.

Steve: We had to cut back on some of the swearing and some of the more libelous comments. We don't want you to get the wrong idea, we're not the kind of people who swear just for the sake of it. We're nice boys really. *(Evil grin.)*

Grim: Uh, yeah. We didn't entirely cut the swearing, but our "*" key saw a lot of use. Well, munchkins are shallow enough to think swearing is funny in and of itself, so why not?

Steve: OK, so maybe we're not that nice. I suppose I do listen to Cradle Of Filth.

Grim: We tried not to censor ourselves or cut anything out. We wanted this to be a true representation of what

roleplaying is. A hobby for dirty-minded adolescents who like guns and cars.

Steve: And chicks.

Grim: Liar. We didn't ignore women. We didn't really miss out anything. Pretty much everything we wanted to say that's relevant is in there.

Do you have any plans for any other books?

Steve: I don't know, it depends if anyone else takes us on.

Grim: Since we've insulted all the major games companies in the book I think we're f***ed. Damn, that means we'll have to get day jobs.

Steve: And lives, and normal sleep patterns.

Grim (Shudder): Seriously though, we'd like to work on something that isn't humorous. I'm afraid of getting pigeonholed as a "comedy roleplayer," and **Paranoia** is the only game that was ever really funny. Oh, and **Toon!** of course, Mr. Jackson, sir.

Steve: And there's **GURPS Goblins**. And our editor worked on **GURPS Discworld**...

Grim: Okay, I'm sure that's enough creeping to the publisher.

Steve: On another serious note, we'd like to work on some of the really destructive games.

Grim: Or just see some of our other ideas in print. We'd like to convert a few science-fiction books into roleplaying games if we ever get the opportunity.

Do you have any suggestions on how to use the book?

Grim: Yeah, you can prop up wobbly tables with it. You could hit someone with it, I suppose.

Steve: Or you could build a little shrine, put it on its own pedestal and give it offerings of Marlboro and single malt whisky.

Grim: Really though, you'll find aspects of your characters and players in there. Its a good thing to read as a group. Just try not to wet yourselves.

Steve: Yeah, you could even use it for its intended purpose and turn your characters into utter munchkins.

Grim: Or alternatively you could use it to scupper anyone trying any power-gamer tricks in your game.

Steve: One technique we didn't include in the book was that if everything in there fails, you can beat your GM soundly round the head with it until he submits.

Grim: To tell the truth it has no actual intrinsic value as far as anyone's game is concerned, but its still a good laugh. Buy it, damn you.

by Aidan Delgado

Art by [andi jones](#)

Roleplaying is a fine balance between the performance of an actor and the narration of a storyteller. For a game to be fluid and exciting, a game master must combine an elegantly crafted plot with a convincing performance to actually bring the characters to life. For many players and GMs, the performance inherent in a typical roleplaying game is the weak link: many players would find it easier to write their characters' actions and dialogue rather than speak it. If players could be freed from their self-consciousness and inhibitions about playing their roles, the game could be elevated to the level of classic fantasy literature. For those who find their heads filled with powerful and thrilling words but are too inhibited to say them aloud, the style of Chronicle narration may be just the thing to set you free.

The essence of Chronicle roleplaying is that the GM is the only speaker and reads written statements from the PCs that determine their characters' actions. In this way, the story of the game is given a single narrator that makes the story flow more easily and without awkward pauses. At the end of any game session, the GM should have what amounts to a written transcript of the PCs adventure, all narrated by the single voice of the GM. The strength of this system is that it frees the players and GM from having to perform; they can concentrate on creating an epic story without having to place their own acting talents on the line.

To begin running a Chronicle narrative, you should first gather a large supply of 3x5 index cards and pens. These will be used for easy transport and organization of notes during the game. The typical order of play in a Chronicle narration is as follows:

1) The GM reads aloud the setting for the current scene. Meanwhile, the players write out on pieces of paper the actions that their PCs will take.
2) While the players write out their actions, the GM makes note of the actions of any NPCs or monsters.
3) The GM collects the papers and puts them in chronological order, adding perhaps a word or two to link the passages together.
4) The GM also writes out a description of any events that are happening in the setting independent of the party.
5) The GM then reads out the actions of each character, inserting any NPC actions in the order that they occur. While the GM reads this new narrative, the players write out any actions that their characters will take in response, and the process begins anew.

Before play begins, the players and GM should agree on a verb tense to use when writing out their actions. It is very disrupting to have one or more characters using past tense when the GM is narrating in present tense; it fragments the story and forces the GM to make corrections on the fly, slowing the game to a snail's pace. Likewise, all players should agree on the type of language to be used; if most of the players are using Old English words like "thee" and "thou" then the whole narrative should be in this style. An example of a player's note could be: "Sensing the approaching guards, Keoland leapt back; flattening his body against the wall and trying to blend with the flickering

shadows that played across it." The player would indicate on his/her note that the thief PC was attempting to Hide in Shadows, and the GM would place it according to initiative order if in combat or according to chronological order if outside of combat. How long would it take to write out this short sentence and slip it to the GM? Thirty seconds? How many players habitually use this level of detail when describing their PC's actions? Comparing the above statement to the phrase "I'll try to Hide in Shadows," which sounds more like fantasy literature? This follows the established literary principle of show-not-tell; the game becomes much more vivid when players figure out actions through descriptions rather than having them bluntly stated. The actions of the character blend with the GM's narration rather than being an interruption to the GM as in usual gaming. The Chronicle style of narration lets your players have more dramatic license in stating their character's actions, but it frees them from the self-consciousness of having to verbally act out those dramatic words.

The key consideration during a Chronicle gaming session is to keep the adventure fast-paced. Writing out actions is so much slower than speaking them that players may lose interest or grow bored if the GM takes too long to process each player's actions. To contend with this, the GM and players should use as much "overlap" in writing as possible. The players should not wait for the GM to finish speaking before they start writing, the players should begin recording their character's actions during the GM's narration to speed play. If the actions are already thought out, writing them down should be very brief. Similarly, the GM should use every moment that the players spend writing to plan out any NPC actions. The players will not notice the extra time spent on actions if the narrative is really thrilling and detailed. It may be helpful to use an egg timer or stopwatch to keep the writing period short and sweet. You will be amazed at how much you can write in one minute, and how much detail you can give to a player's actions with a single minute to write. More importantly, a minute should be a short enough time to keep the adventure flowing at a steady pace and leave plenty of room for dice-rolling and other bookkeeping. If your group is large enough, you might consider using an assistant GM to help play the part of NPCs and villains. It lightens the GM's load considerably if he has a helper who plans and writes for the major NPCs in a scene. The assistant GM scenario can speed up play considerably if you can spare the player.

During combat, it is especially important to overlap player writing time with GM time. It may be best in combat situations for the GM and players to spend a minute or two writing out all their actions before any narration takes place. Interestingly, using the Chronicle system actually makes combat more surprising and spontaneous because the GM cannot have the enemies adapt their tactics to the PCs' moves. The GM and PCs must agree upon their actions beforehand, reveal them all at once and let the dice fall where they may. The GM will have no idea what the players are going to try, and therefore the monsters will also be "surprised" by the PC's actions. If players want to take a minute to confer strategy, let them write out their character's discussion. This serves the dual purpose of giving the GM more time to write, and forcing the players to carry out discussions "in-character." Players often discuss topics without actually roleplaying their characters discussing it -- the players talk and the characters just mutely follow the agreed strategy. With the Chronicle method it is especially important to keep all conversation in the written narrative, that way the story will flow in a logical way as all actions will be recorded and justified.

Further, a GM using this style has to put his/her trust in the players to provide the meat of the story. A GM doesn't have time to put in ample descriptions of each player's actions with this method; the players must paint a picture of what their character is doing and how they are doing it. In the beginning, players may be cautious to take the lead in the storytelling. After a few sessions, you will probably find that your players enjoy having direct control over the narrative and will develop detailed character statements. In a pinch, the GM can always embellish a player's note, adding plenty of detail to a sparse statement. There is usually plenty of time for the GM to insert moderate description, but with planning the adventure and writing out NPC actions, it is up to the players to carry the weight of the narration. This places the focus of the story where it belongs: on the players. Players will enjoy having the chance to state their character's actions exactly as they envisioned them, customizing the narrative to suit their own creative vision.

Once you and the players get the hang of this type of storytelling, you are free to do many things that would be impossible in a typical style. One benefit of this method is that if you forbid the players to discuss their characters before the game begins, the players will not know which player is representing which character. This makes the

players address their comments to other characters rather than the controlling player, speaking to the puppet rather than the puppet-master, so to speak. This subtle change will cause your players to relate to each character as an individual because it will be impossible to tell who is running the PC. You will find that players will have more detailed discussions when they are forced to do all planning and strategizing in written form among their characters. Another upshot of this technique is that the players will not be able to tell NPCs from player characters. The GM could insert detailed comments from an NPC and have the players relating to that character as if it were player-controlled! Clearly, this opens up some exciting possibilities for roleplaying when NPCs become as valued as player characters. Imagine the party desperately trying to save an NPC henchman, because each player thinks the henchman is another player! A PC could be shocked to discover that the servant he always talked down to was, in fact, another player. With Chronicle narration the line between GM-controlled characters and player characters is blurred. Because all interaction takes place in the same forum, NPC voices carry as much weight as PC voices, as there is no difference in their presentation.

In the long run you will find that Chronicle gaming yields another benefit: a complete record of all game sessions. At the end of each adventure you will have a stack of note cards that tell a story very similar to a novel. Who knows? With a little polish you could even turn your gaming sessions into fantasy short stories. In addition, it is a great tool for a GM to have every event and NPC recorded. With a written chronicle of each adventure, you can keep all the names, dates, and events in your game in order. If your group should happen to adopt a new player, it will be easy for that player to get acquainted with the current campaign by simply reading through the records of the party's adventures.

The challenge of the Chronicle system is to keep the story going without getting bogged down in the mundane chore of collecting and organizing notes. If the players shoulder the main task of describing their actions and the GM only places the notes in order, hastily adding a few connective words, you can keep the adventure running at a speed comparable with verbal gaming. Remember: the GM must be extremely succinct when adding to the player notes and get right to the business of reading out the players' statements. You can hold the players' interest if you are quick to read out their statements and allow them to act without too much delay.

It has always been easier for some to write something and deliver it indirectly than to speak personally. There is something very fulfilling about taking part in a fantasy novel, and with Chronicle narration you will find that your games take on the dimensions of sword & sorcery fiction. If you can get this type of game up and running you will find it much easier to take that extra step in drama and language that turns your game into an epic.

Dork Tower!

Dork Tower!

by John Kovalic

Murphy's Rules

I'm Crazy For Boy Crazy!

After taking a look at http://www.boycrazy.com/, the promotional web site for Decipher's newest collectible card game, I've become ***Boy Crazy!*** Having a possible 363 cards depicting cute boys between ages 12 to 22, sold in packs of 9, I have to admit -- shamefacedly -- that I am driven to collect them all. With pictures of cute, wide-eyed boys and vital statistics such as astrological signs and preferred type of beet, a hard-core gaming collector just can't pass up this game. I have to buy them off the net quickly, since they're going fast and I heard the kid with Down's Syndrome is going to be worth something on eBay.

Decipher, Inc. has already revealed they're working on expansion packs for ***Boy Crazy!***, and I can hardly wait. Hopefully, they're going to be adding action cards to make the game more interesting while teaching valuable lessons. There will be those depressingly common and low-powered Lying and Cheating cards. There will the powerful Marathon Phone Call card, which conveys all the boy information the girls will ever need to know, and played with Lying it becomes a dangerous device. And then there's going to be the Backstabbing card, so we can learn the power of betrayal early on -- but it's a rare, so we have to buy lots and lots of boys before we can start backstabbing our friends.

Maybe, if Decipher has a sharp marketing team, they can buddy up to Wizards of the Coast and start selling ***Pokémon Crazy!*** cards. There's something disturbing and attractive about unleashing Ricky Martin-esque teenage bohunks out of Pokémon balls to fight random members of 'N Sync in a stadium, using the power of a Pelvic Thrust card to break the empty career of the enemy. Beware the girl who happens to be wielding such dangerously rare cards as "Can Sing," "Can Play An Instrument," or "Isn't Shallow and Pointless." She's dangerous.

Decipher president Cindy Thornburg said, "Every heterosexual girl goes through a stage of development where she becomes aware of boys." Does this mean they're releasing a lesbian expansion for those girls who discover in their development that they're gay? "***Girl Crazy!*** The collectible card game for girls discovering their emerging interest in girls!" We can't *discriminate* here!

I am proud that Decipher has decided to use sex to introduce girls to the wonders of roleplaying games, and are using gaming as a tool to teach young girls (ages 10 and up) that the opposite sex is just an object, all that matters is what you look like, and a girl's role in life is to get a boyfriend. What a wonderful use of the teaching tool. I hope they introduce this into schools. I can't wait until April when ***Boy Crazy!*** is released in stores everywhere.

Fetch Daddy's blue fright wig. I must be handsome when I unleash my rage.

Another Objectified Marketing Scheme

For reasons that I can't quite comprehend, gaming companies like Decipher, Inc. realize they need the female quotient to prop up their bottom lines, but they make the blatant assumption that girls are *dumb*. And not normally dumb, but dumb as posts. Clearly, in their estimation, all girls think that math is hard, so they should go shopping. Why not tap into that gauzy pink, air headed mentality and make a mint on it at malls everywhere?

Has the crew over at Decipher, Inc. spent so much time hanging around at *Star Trek* conventions doling out cards sporting Ferengi that they've lost touch? Or are they so afraid of the juggernaut that is Hasbro-supported Wizards of the Coast that they're willing to bend to the lowest common denominator? What's next on the desperation and exploitation train? Porn collectible card games? Should they be appealing to that yet untouched 18-25 year old market? (Well, other than ***XXXenophile,*** of course -- we're talking about full 256-color with pendulating breasts and the word "nipple" written on the card somewhere.)

It's appalling and insulting. It's crass commercialism in its purest incarnation, pandering to a mindless TV-raised generation who assume girls can't think past their own puberty-induced hormones. Just imagine if warm, fuzzy, and family fun Decipher had bought FASA. We'd be having cybered, pink mini-skirt wearing trolls toting Uzis yelling

about Girl Power, and reminders in new prints of *Virtual Realities* that hacking is "bad." If this is the future of gaming, I'm glad I play electric guitar.

Girls aren't dumb, and those who are buying and playing games aren't going to be suckered in by cards with boys of the names of Brandon, Mitch and Chris, even at an age as young as 10 or 11. They're looking for more substance, not less. Girls playing roleplaying games aren't Barbies with perfect breasts and heroin induced waistlines, whose focus in life is buying another bag of bath salts -- and they know it. Those girls are smart, disturbingly creative, and proud. When did the game companies forget this? Maybe they never realized it in the first place, and thus, the market stays untapped.

It Came From The Bookshelf

Some of the gaming companies didn't completely miss the point, and for that, there are real chick gamers. There are better things for a girl's imagination than collectible card games with pictures of boys whoring themselves for attention, and a good gamer usually has them in his home. The common gamer has entire bookshelves filled with games.

Put away copies of *Boy Crazy!* and their ilk. Sit kids, girlfriends, wives, or anyone in grabbing range down to play. It's worth the time spent, and they usually foster memorable first-time gaming experiences. The following games are merely suggestions or guidelines of what to pull off the shelf while burning *Boy Crazy!* in effigy. They were not chosen in any scientific, or sane, manner. Many were chosen on the merits of their cover art alone. It's all entirely subjective, possibly wrong, and may be harmful if eaten.

Vampire: The Masquerade. With the darkness of night, beauty, angst, death, and spiffy powers, *Vampire* is the most female friendly of all the roleplaying games made today. *Vampire's* primary focus on character development, politics, and roleplaying over treasure hunting and monster killing was revolutionary when it came out, and has spawned legions of followers in both tabletop and LARP form -- not to mention the spin-off games and the mountains of supplementary material.

Amber Diceless Role-Playing Game. War, sex, politics, and family -- this is either an episode of *The Sopranos* or *Amber Diceless.* Based on the books by Roger Zelazny, it's an intense soap opera of a game, complete with strong female role models and powers spanning an entire universe. The game works on a bare framework of a system, and it involves storytelling from every member of the game, not just the game master. It is also open to infinite variants -- including the one where Corwin is really a millionaire snack food magnate with a grudge against Frito-Lay.

Advanced Dungeons and Dragons 2nd Edition. The system is quirky and the game is a little outdated, but *AD&D* is still the king of roleplaying. It smacks of familiarity, complete with dwarves, elves, and dragons, and it can be played in the old "kill the foozle at the end of the dungeon" way, or with world-spanning games of high-stakes politics, or everything in between. Heaps of modules lay ready for almost instant play. Familiar, comfortable, and fun -- like an old pair of underwear, but not.

Big Eyes Small Mouth. The system takes five minutes to learn. Simple, balanced, and *fun,* this game is a must for anyone who enjoys anime or cartoons. It's flexible enough to cover everything from *Akira* to the *Powerpuff Girls,* easy enough to learn the first time playing, and enjoyable enough to come back for more. And it only costs $15.95 for the entire game.

Star Wars. Who *doesn't* want to fight their way through Stormtroopers while wielding the Force like a large, blunt object? Or making the Kessel run in less than 12 parsecs? The *Star Wars* universe is almost an institution, and the West End Games *D6 System* makes it easy to fight the Empire. Again, the books are going depressingly out of print, but the auction sites foster a lively RPG barter business.

Everway. On the side of the box, under the label of "Visionary Role-playing", is the line: *For ages 13 and up*. *Everway* is one of those rare games where parents who roleplay can, and should, sit down and play this game with their kids and their kid's friends. The heart of *Everway* is pure cooperative story telling and imagination, told through cards,

quests, and creativity. The only problem is that the game is very hard to find, but copies can be found for auction on eBay.

But These Were Left Behind . . .

Of course, there are games that should be skipped. They're tempting, they're wild but . . . nah. They're great to collect and fun to read, but there is something just wrong with them. Deeply, intrinsically wrong. Wrong on some Biblical level. Wrong on universe distorting levels. Maybe for her *second* game . . .

Personally, I love them, but there's no accounting for taste.

Human Occupied Landfill (HoL). HoL needs to be played drunk, and not drunk on something good, either. *HoL* practically screams for a bottle of Night Train or Mad Dog 20/20. Maybe it's the skills, like "Tolerate hideous amounts of bloody mutilation and still eat fast foods." Maybe it's Elvis as an example PC. Maybe it's the religious parody. And maybe it's just *HoL,* the gaming equivalent to a lobotomy with scribble art.

Macho Women With Guns. "Hey honey, let's play a game with scantily-clad bondage nuns on Harleys with leather habits and death dealing rosaries!" It's kind of like *HoL,* but with more chicks, more estrogen, and better art. (The guns are about the same size, though.) Blatantly chauvinistic and sexist, it's a great read -- but not a great first game.

Underground. Considering the most memorable detail about the setting of Underground is "Tasty Ghoul," a chain of human-flesh-selling fast-food restaurants (in the form of corpus crispies), this strange cyberpunk, post-societal collapse, superheroes meet Vietnam game is just . . . demented and bizarre. And, unfortunately, it's more of a commentary on American society than it is a roleplaying game. The early material is definitely a fun read, but it's hard to sell mildly psychotic militant pseudo-superheroes as good, clean family fun.

KULT. Remember those episodes of the *700 Club,* where Pat Robertson would extol roleplaying as akin to worshiping Satan? With *KULT,* you might think he had something there. There's a box on the front cover of *KULT 2nd Edition* which states: "We would like to add that this is not a statement about our beliefs, nor a creed which we in any way desire to impart to the reader. It is merely the setting of this role-playing game." This box did not appear in *KULT's* first edition, so one really has to wonder. Sure, it's a game of horror, but *reading* this game gives people nightmares. *Playing* this game, well, no one actually plays *KULT.*

And Those Other Game Thingies

Missing from the above list is a biggie, the universal gaming systems: *GURPS, CORPS, FUDGE, Rifts,* and *The Window.* They're female friendly and they're not at the same time. It depends heavily on the modules used with the system. They're very much like a "One size fits most" kind of game -- there are dozens of settings and worlds which can be plugged in like Lego blocks onto a backdrop of rules, but they might not work for everyone.

Genres such as Westerns or Supers might not work really well when introducing the game to a bunch of female players from *Boy Crazy!* age on up, but Fantasy might really do the trick. A little experimenting is in order with the system, the modules, and the players. The great thing about universal systems is that any mix of genres can be played, depending on the tastes of the players and what they enjoy, which makes roleplaying just that more creative, fun, and addictive.

Next Time

Less ranting, unless Decipher, Inc. wants to put out another cheesy card game. Time for some meat. We're going to go into gender roles in gaming. And the best, and most obvious place to start with gender roles is . . . online.

by Scott Nickell

Art by [andi jones]

Emperor Julianus nervously paced the throne room, awaiting word from the Royal Wizard in Extraordinary. His reign had been marred by internal strife, and he shuddered to think what might happen to his beloved land if he failed to produce an heir. But more than that, he loved his queen very much, and wanted more than anything to know that his child now grew in her womb. He did not wish to see her weep again at the thought that she might be barren.

The Royal Wizard entered the throne room silently. Julianus looked at him with imploring eyes, not daring to speak. "It is good news, Sire," the Wizard said, and he smiled warmly. "You shall have a son."

Rearing children is one of the most important driving forces in the mind of any creature, yet it is a topic almost entirely absent from roleplaying. Conception and childbirth, whether intentional or accidental, hold enormous potential for drama and storytelling. It is particularly important to kings and nobles to have an heir. The English break with the Roman Papacy, for example, was largely the result of Henry VIII's desire to divorce Catherine of Aragon for her failure to produce a son.

But even pregnancy with less far-reaching consequences is important to the parents, from a character actively trying to conceive a child, to an irresponsible bounder trying to *avoid* conceiving a child, to an adventurer dealing with the effects of actual pregnancy (as seen in the movie *Fargo*). Players experimenting with love and romance in roleplaying may wish to take the next step and raise a child together. This article is written with **GURPS** in mind, but the basic chances are taken from the real world, and should be usable in other game systems with a minimum of fuss.

Basic Pregnancy Roll

Overall, a couple actively trying to have a child has a 50% chance of conceiving in the first month. To maximize their chances, the prospective parents should engage in intercourse on four days during the week in which the woman is to ovulate.

To determine whether a couple conceives a child during any given act of intercourse, each parent should roll vs. HT, modified as below. If both rolls succeed, conception has occurred. If either successful roll is a critical success, make another roll for multiple births (see below).

The primary modifier to the Pregnancy Roll is the day of the woman's menstrual cycle that intercourse takes place. If within 24 hours (either way) of ovulation, each HT roll is at -1. An additional -1 is incurred for each day beyond, for a total modifier to each HT roll of -1 to -14. Note that this modifier should never be zero.

If a couple is actively trying to conceive a child, the time of ovulation can usually be determined by keeping track of the woman's basal body temperature, which drops on ovulation, then rises sharply the next day. At lower Tech Levels, when this is not possible, the parents may note that ovulation generally occurs 14 days before the onset of menstruation (which is also 14 days after, in an average, 28-day cycle).

If none of this is known (at low Tech Levels, for instance) or the parents are not keeping track, the GM may assign a modifier from -1 to -14 arbitrarily, or by rolling 2d-1.

Other modifiers to the basic Pregnancy Roll:

Male Roll

Low Sperm Count: -1 to -3
Intercourse in Woman-On-Top Position: -1
Woman remains on back for 1/2 hour: +1
Douching: -2

Female Roll

no significant modifiers

Multiple Births

About one in 87 births are twins, with the incidence of higher numbers of children dropping off by similar percentages.

If the basic pregnancy rolls were successful, and one of them is a critical success, make a further 3d roll. On a 10 or less, the conception has produced twins (on 11 or more, only a single child is conceived). On a 3-4, there will be triplets.

This roll can be treated as open-ended: Every time a 3-4 is rolled, add another child to the litter and roll again. The roll may be modified by the use of fertility drugs or other technological treatments, by subtracting 1 to 3 from the number rolled.

Pregnancy

Being pregnant is a disadvantage, worth a variable number of points depending on the stage of pregnancy.

Blessed Events

First Trimester (0-12 weeks) -25 points

During the first trimester, the mother will often suffer from morning sickness and mood swings. In *GURPS* terms, this translates to Manic-Depressive (p. CI92) at -20 points, and the following new disadvantage, for a total of -25 points. In the twelfth week, the baby's gender is distinguishable (though magic or ultra-tech may push this back). On a 3d roll of 10 or less, the baby is female; on 11 or more, it is male.

Morning Sickness -5 points

You suffer from nausea and sometimes vomiting, usually upon waking. At any time each morning, the GM may require you to make a HT roll. Failure means that you are incapacitated for a number of turns equal to the amount by which the HT roll was missed.

Second Trimester (13-26 weeks) -5 points

During the second trimester, the physical and psychological discomforts of the first trimester are less severe. Morning sickness is less common, and is an optional disadvantage at this point.

However, due to the discomfort caused by the increasingly large fetus, the mother is at Reduced Move -1 (-5 points).

Third Trimester (27-38 weeks) -35 points

The third trimester is somewhat more stressful, as the baby's size increases. The mother now suffers from the effects of being Overweight (-5 points), carrying 22 to 27 lbs. of extra encumbrance. In addition, the baby is not only heavy, it is inconvenient, uncomfortable and fragile, giving another level of Reduced Move, for a total of Reduced Move -2 (-10 points). The Manic-Depressive mood swings of the first trimester also return, for a total value of -35 points.

Birth

When the time has come to give birth, the length of labor can be determined by rolling 3d, adding 5 if it is the mother's first pregnancy (subsequent labors tend to be easier). The result is the number of hours the mother spends giving birth.

It is a good idea to have someone present during birth with the Professional Skill: Midwifery (M/A), which defaults to Physician-0 or First Aid-5. This person can help the mother deal with the stress of labor, as well as correcting some complications, such as a breech birth.

Assume that a birth goes as planned if the mother successfully makes a (HT+TL) or (HT+4) roll, whichever is higher. If the mother's roll fails, roll against the Physician or Midwifery skill of the attending health care provider, at -5 if the mother had a critical failure.

If this roll fails, the attending midwife is unable to easily correct the problem. In such cases, or where the baby is too large or labor is particularly long, a Caesarean section may be necessary. This is a surgical procedure. The first recorded Caesarean section on a living mother was performed in 1610, but it did not become widespread until the end of the 19th century. In earlier times, it was an act of desperation, restricted to use when the mother was already dead or dying.

If the health care provider's roll fails, *separate* Surgery rolls should be made to save baby's and mother's life. Use the normal Surgery rules (p. B56), with a -5 modifier if the Physician/Midwife roll was a critical failure. Failure on the baby's roll will kill it; failure on the mother's roll does 2d damage to her (4d damage on a critical failure), and may cause sterility (see p. CI84) if she fails a HT roll. The surgical team can opt to put either mother or baby at greater risk in order to save the other; if so, add a bonus of up to +3 to the Surgery roll of the favored patient in exchange for a matching *penalty* to the other's Surgery roll. See also ***Bio-Tech***, page 18, for additional details concerning surrogate motherhood.

A newborn infant as a Dependent is a 0-point (or less) loved one, appearing almost all the time (15 or less), for a total value of -96 points. However, if more than one parent is available to share responsibility, the frequency of appearance may be divided among them. If there are two parents dividing responsibility equally, the frequency of appearance would be 9 or less, making the child a -32 point Dependent for both. Also, as children age their point value will increase (use the table on p. B14 as a guide), and the frequency they need attention will decrease, resulting in lower values as Dependents.

Complications

This section is optional. Rolling for complications increases realism, but also adds more die rolls to the process, and will only rarely have any effect. The GM may rule that only mothers in high-risk categories need roll for complications.

Once a child is conceived, the mother should make a HT+4 roll. A failure indicates that the mother will miscarry; most miscarriages occur during the first trimester. A critical failure on this roll means that the child will be carried to term, but will suffer from birth defects. The following modifiers apply to this roll:

Mother over 35: -1
Malnutrition: -1 to -3, depending on severity.

Illness: -1 to -3, depending on the illness. A mother contracting German Measles should make a separate HT roll, at +2 for each month after the first. Failure means that the child will be born deaf, or with a reduced IQ, or with cataracts or other birth defects, with exact effects to be determined by the GM.
Exposure to Radiation: See below.

Exposure to radiation is a special case. See pages 145-148 of ***Compendium II*** for the effects of radiation on HT. Resolve these effects separately on both mother and child. Unborn children have a HT score of 1. If permanent HT is reduced to 0 or less, the child will be miscarried. Genetic effects of lesser doses depend on the campaign, ranging from severe birth defects to the awakening of miraculous powers, and should be determined by the GM. See ***Bio-Tech***, page 18 for some suggested effects of mutagens. Also, ***Creatures of the Night***, p. 78-79, has point values for some severe physical disadvantages, such as Human Torso and Siamese Twin.

During the first 42 days after conception, the embryo is particularly susceptible to radiation, and even a reduction of *temporary* HT to 0 will result in miscarriage.

Note that these results are based on the real world. In a campaign where exposure to radiation regularly results in super-powers instead of bone cancer, anything is possible.

When the full term of pregnancy approaches, a failed HT+5 roll will result in a premature birth. This roll is modified as follows, to a maximum modifier of -2:

Malnutrition: -1
Smoking: -1
Syphilis: -1
Youth: -1 per level
Drinking: -1 per drink over 5 per day
Other Drugs: -1

Preterm infants require special care, as they are susceptible to respiratory infections. At low tech levels, few will survive. At higher tech levels, virtually all these complications will be correctable.

Contraception and Sterility

Sometimes, these rules may be more important to someone trying *not* to have a child. Contraceptives all have an associated failure rate. If contraceptives are used, the GM should first make a failure roll for the method. If the method fails, then the normal Pregnancy Roll procedure comes into play.

The following failure rates are based on a 3d roll. These are "typical" failure rates, for the average modern (TL 7) user. The GM may assign a modifier of up to +3 if the couple is being particularly cautious. Contraceptive methods used at earlier tech levels will have higher failure rates than modern devices, at -1 per TL below 7, to a maximum modifier of -2. Also, if multiple methods are combined, each method must fail to result in possible pregnancy.

Sterilization is a surgical procedure, and sterility (whether natural or surgical) is a disadvantage worth -3 points (p. CI84). Menopause can be simulated by female characters making a separate Aging roll (p. B83), gaining the Sterile disadvantage on a failure. These rolls should begin at age 47. The failure rate for surgical sterilization is a critical failure (17-18), followed by a second roll of 14 or more. Norplant has a similar failure rate, and is effectively temporary (5-year duration) sterilization.

Contraceptive Methods

Contraceptive	Failure Rate	TL
coitus interruptus	12+	0
Diaphragm	14+	1

Condom	14+	2
Rhythm method	13+	3
Spermicide	12+	6
Pill	16+	7 (late 1950s)
IUD	16+	7
Sponge	13+	7 (1983)
Cervical Cap	14+	7
Sterilization	crit/14+	7
Hormonal Implant (Norplant)	crit/10+	7
Male Pill	16+	8

The "Male Pill" (actually a contraceptive vaccine) does not yet exist, but researchers are working on it even now. At higher tech levels, some of these methods may improve in effectiveness (a TL 11 Force Condom?)

The legal status of contraceptive devices depends on the campaign world, and the beliefs of the couple. For example, the rhythm method is the only method officially approved by the Roman Catholic Church. In the U.S., public access to contraceptive devices and knowledge was restricted from 1873 to 1936 by the Comstock Law.

Campaign Notes

In campaigns where nonhuman races exist, these rules can be modified slightly to cover other species. For instance, Elves do not age, but only produce one or two children. This may be nothing more than a cultural quirk, or it may indicate an earlier menopause in such races. Species that produce litters of offspring could use the same system for multiple births, but with a default of more than one child, or even adding children on a regular success, rather than a critical success on the multiple birth rolls.

Oviparous (egg-laying) species do not undergo pregnancy, but may take an egg as a Dependent. Hatchlings will tend to grow to independence more quickly than human children.

If there are multiple nonhuman races, cross-breeding may become an issue. The typical fantasy Half-Elf is a good example. If genetic science operates as we understand it (not a necessary, or even *likely* assumption in all campaigns), such hybrids should be Sterile. If two populations can produce fertile offspring, they are by one definition members of the same species. Of course, there could be interesting implications to the idea that humans and elves are merely subdivisions within the same race . . .

When designing racial packages for these half-races, note that such cross-breeding often results in *hybrid vigor*, due to the increased genetic diversity. In nature, hybrids tend to be larger and healthier than their parents. Remember, though, that this is true only for closely-related species; while this is reasonable for humanoid fantasy races from a single planet, alien species would probably need magical or technological help to produce a child at all, due to differences in biochemistry.

The medical problems inherent in cross-species pregnancies may be solved with magic, or with ultra-tech genetic engineering. This could allow even couples of wildly different sentient species to bear and raise children. It might even be possible to eliminate the sterility of these crosses. See p. 26-27 of **Bio-Tech** for some details on chimerization. In such cases, hybrid vigor would not occur, since they are not true genetic hybrids.

Children with particularly strong psionic talents may manifest their powers in the womb (an example occurs in the film *Scanners*). This should be entirely under the control of the GM.

In magical worlds, several spells could be useful to a midwife. Sense Life could be used as a pregnancy test. Body-Reading (p. G51) was used by the Royal Wizard in the introduction to determine the existence and sex of the king's unborn child. Certain birth defects might be correctable using Cure Disease, Restoration or Regeneration. The Youth

spell might be a convenient, and even (if the religion condones spellcasting) morally acceptable means of reversing an unwanted pregnancy, by regressing the embryo to an age before conception! See also *GURPS Technomancer* or David Pulver's [Bio-Tech Designer's Notes](#) article for several new spells directly related to pregnancy.

Encarta.

Summary

Basic Pregnancy Roll

Each parent rolls vs. HT, -1 per day away from ovulation (minimum -1, maximum -14).

On a Critical Success, roll again for multiple births:

11 or more -- single birth
5-10 -- twins
3-4 -- triplets

Gender

Roll 3d:

10 or less -- Female
11 or more -- Male

Complications (optional)

Roll vs. mother's HT+4:

failure -- miscarriage
crit. Failure -- birth defects

Modifiers:

Mother over 35: -1
Malnutrition: -1 to -3
Illness: -1 to -3

Roll vs. mother's HT+5:

failure - premature birth

Modifiers (max. -2):

Malnutrition: -1
Smoking: -1
Syphilis: -1
Youth: -1 per level
Drinking: -1 per drink over 5 per day

Other Drugs: -1

Length of Labor

3d hours, +5 if first delivery

Complications During Birth

Roll vs. greater of mother's HT+TL or HT+4:

Success: no complications
On failure, roll vs. Physician or PS: Midwife

Success: complications corrected easily
On failure, roll vs. Surgery for mother and baby

Modifiers:

May elect to add bonus up to +3 to one roll by taking equal penalty to other.

Success: patient survives
Failure:

Baby: baby dies
Mother: mother takes 2d damage (4d on crit. Failure) and becomes Sterile on a HT roll failure.

Pyramid Review

Hunter Survival Guide

Published by [White Wolf Game Studio](#)

Written by Bruce Baugh, E. Johnathan Bennett, Michael Lee, Forest B. Marchinton, Robert Scott Martin, Angel McCoy, Deena McKinney, Wayne Peacock, Greg Stolze, Andy Woodworth and Pete Woodworth

136 pages, $19.95

Well, this is a good sign. *The Hunter Survival Guide* breaks away from the "first sourcebook" jinx., and provides a mostly very good guide to the monsters of the world, and the people who hunt them.

The release of the *Hunter: The Reckoning* rule book wasn't an entirely auspicious launch to the game line. Between the less than well received, "we've been sold! Whoops! No we haven't!" publicity stunt, and the fiery rantings of fans who felt betrayed that the characters had supernatural abilities, the game itself got kind of lost. Which is kind of a shame, because the game should be judged on its own merits, as weak or strong as they may be.

The *HSG* is a very good book. The introductory fiction, which covers the hippie characters from the *H:tR* intro-fiction, is an interesting study in a lot of ways, particularly in the (fairly creepy) view of the maternal instinct.

The source book starts off with a short section on [Hunter-net.org,](#) the website that the Hunters use for communication. It's followed up with a "how to" section from a Hunter. It's a bit on the creepy side, like when the writer suggests that you get by on three hours of sleep a day -- I turn cranky if I get less than ten -- and he has a bit o' the old gun fetish. It's also kind of fascinating, like when the author notes how a person can survive on a dollar a day, leaving them with more cash to spend on ammo, if they don't mind sleeping in bus shelters. For three hours a day.

It's an interesting perspective on the Hunter mindset. We see here how they can be willing to give up everything in order to pursue their goals. We see them fighting things they don't know how to fight, feeling uncertain of their ends, and questioning the means they use to accomplish them.

The point is further driven home by the actual continent chapters. They're covered in alphabetical order, from Africa to South America (Antarctica is, shockingly enough, ignored entirely). The best chapter for reading pleasure is Asia, which details a fair amount of information that should be familiar to a player of *Kindred of the East.* I particularly enjoyed the cameo by Strike Force Zero.

Each of the chapters is narrated by a "local" for that region. Africa is described from south to north by an Afrikaner policeman. He comes across as the perfect "nasty South African," using *Kaffir* in every other sentence and discarding pretty much all of the continent as savage. The chapter does a very good job of speaking beyond the narrator, conveying a good deal of useful info on the regions of the country.

Each continent is covered major country by major country, and each one has info on important topics for Hunters, from where they can hide out to how hard it is to smuggle in weaponry.

The section on North America is the weakest. It seems too cursory, not providing enough information for even the brief nation descriptions each of the other continents had, instead focussing on not terribly informative/entertaining tales of monster hunting adventure. Asia's description was a monster hunting epic that took time to look at the local scenery. Canada, for example, is given a short section on guns and a couple of stories that fail to help with the invocation of mood.

The book ends with a few monster types that seem pretty out of place. Until they appear, the book is a great resource for players, but these put it strictly in the realm of GM info.

HSG is a good intro to the world of *Hunter :The Reckoning.* It's also got some great info on the general WoD (hey, didja know there's a Toreador Methuselah sleeping in the Middle East? Well, now ya know) and how Hunters fit into it. It's a good sourcebook and a good read, and if the rest of *Hunter's* supplements keep up this level of quality, it should bode well for the game.

10 Million Ways To Die

Published by [Iron Crown Enterprises](#)

Written by John W Curtis III, Craig "Ichabod" O'Brien, and Coleman Charlton

112 pages, $16.00

A generation ago, ICE began life by publishing *Arms Law,* the first component of the *Rolemaster* roleplaying game, as a replacement combat system for other games, notably *AD&D.* With the release of *10 Million Ways To Die,* the wheel has turned full circle.

In essence, *10 Million Ways To Die* is a streamlined version of the *Rolemaster* and *Spacemaster* combat systems. It aims to provide a "plug and play" realistic alternative to other fantasy, historical, modern day, and science fiction combat mechanics. The title comes from the blurb on the back where a street thug is contemplating how he'll die ten million deaths at the hands of rival mobsters. It's not meant as a claim for the number of fatal ends for unlucky combatants described in the book, although there are plenty of them!

A combat run under *10 Million Ways To Die* will have the look and feel of a *Rolemaster* battle. Players still roll percentile dice to generate a random number, add their skill with the chosen weapon, and subtract their opponent's defensive bonus to produce a final result. The referee flips to the table for the attacker's weapon and cross-references the result with the defender's armor to read off how many hit points (if any) that the defender loses and if a critical strike has been made. If a critical occurs, it's time to turn to the appropriate critical strike table, and roll percentile dice, reading off a suitably gory description and mechanics effect from the table.

The complete description of the combat system, including examples, weapon and armor definitions as well as optional rules, requires a mere six well-written pages. All the normal *Rolemaster* rules concerning parrying, flanking and rear attacks, and so on, are considered optional, making the base combat mechanics playable by just about anybody. This is how *Rolemaster* should have been written!

Unlike traditional *Rolemaster Arms Law,* each attack table covers an entire category of weapons rather than a single weapon, so the "Light One-Handed Bladed Weapons" table represents everything from dirks to shortswords. For those who want to differentiate between individual weapons, there is an inset table of optional weapon-specific modifiers on each attack table. There are a few surprises to be found here, such as statistics for *Star Wars* Imperial Rifles, so if you're running a game in one of the popular science-fiction settings, take a look and you could be pleasantly surprised. *10 Million Ways To Die* rationalizes the medieval armor types of *Rolemaster* into a more usable eleven and then adds six types of ballistic cloth and far future armor. However because the rows of the tables now represent result ranges, the pages are less crowded and much easier to read than *Arms Law* equivalents.

It still takes 33 attack tables to handle the entire gamut of artificial and natural weaponry. Fortunately they are sensibly grouped, so page flipping is minimized. Moreover the weapon tables and critical strike tables appear in convenient double page spreads with the attack table on the left-hand page and the most likely critical table on the right-hand page.

I'm making such a big deal about table presentation and book structure here because they are crucial in determining whether *10 Million Ways To Die* is easy to use. There are three phases to resolving a combat action in *Rolemaster* --

rolling the dice, finding the result, and describing the effects of the action. Rolling the dice to generate the attack or a critical is fun! Describing an embarrassing fumble or a spectacular critical is also fun! The "grunt-work" of flipping to the right table and hunting the right entry in that table is not fun. It also wastes gaming time. An inexperienced *Rolemaster* referee can slow a combat down to a crawl simply tracking numbers. The presentation in *10 Million Ways To Die* really helps in reducing that "grunt-work." You would be hard-pressed to do it faster without computer assistance.

So what about those embarrassing fumbles and spectacularly gory criticals?

Some games allow for critical misses where really bad dice rolls mean that your character misses automatically. Others suggest that the referee makes up a suitable accident on the spot. Fumbling an attack using *10 Million Ways To Die* requires a roll on the fumble tables. Fumble effects can be as minor as a missed opportunity -- "Sweat trickles into your eye. You elect not to attack. Good choice" -- or more dangerous than a foe's attack -- "Why me? The gun explodes. Take 'C' Heat and Slash criticals." Much more exciting and realistic than an automatic miss, and the descriptions help players and referees to visualize the battle in their imaginations.

In some games, a critical hit means the opportunity to bypass an opponent's armor when calculating damage. Combat is just a mathematical exercise in reducing hit point totals with criticals simply hastening the process. The price of easy mechanics is uninspiring combats where the details will quickly blur with those of every other battle in one's memory. A critical with *Ten Million Ways To Die* is an opportunity to add vivid realistic detail to a combat. Each critical strike entry consists of some descriptive flavor text and a separate list of game mechanics (so that the flavor can be tweaked if circumstances dictate). The relish taken in gory detail and black humor that has been the hallmark of *Rolemaster* critical tables from the beginning remains evident, e.g. "Laser makes neat incision in foe's nose. Beam continues through spine, brainstem and back of head. Check out look on his face."

10 Million Ways To Die ends with a set of conversion notes to enable non-*Rolemaster* referees to adapt their combat statistics for this system with a minimum of fuss. Guidelines are supplied for nine major systems, including *AD&D* and *GURPS.*

For *Rolemaster* and *Spacemaster* gamers, the improved presentation of *10 Million Ways To Die* will increase playability without sacrificing the spirit of their games. For everyone else, this book is the easy route to three-dimensional combats without the trauma of changing game systems.

Pyramid Pick

7th Sea Villain's Kit

Published by [Alderac Entertainment Group](#)

Developed by Jim Pinto

64 pages, $24.95

One of the best things about being a Game Master for *7th Sea* is that you get to play Villains.

Not bad guys.

Not anti-heroes.

Villains with a capital "V."

I'm talking about Sheriff of Nottingham- and Cardinal Richelieu-caliber heavies that your players will love to hate.

The *7th Sea* books have several of these guys and gals lurking in their pages, with names like Reis and Villanova. They are characters that make players sit up and take notice when they arrive on the scene.

Boo!

Hiss!

One of the best ways for GMs to enjoy these nasty folks is to join the Novus Ordum Mundi, one of the nine secret societies that, for a yearly fee, promises to let members affect the course of the ongoing *7th Sea* story. This annual membership costs $25 and nets you:

* four issues of the *7th Sea* newsletter
* four *No Quarter* cards available only to Society members
* *No Quarter* National Rankings for tournaments
* four letters updating you on the activities of the various secret societies
* a membership card
* discounts on direct purchase products
* four adventures available only to Novus Ordum Mundi members, and
* a Novus Ordum Mundi lapel pin.

Quite a stash.

To sweeten the deal, Alderac has released the *Villain's Kit.* To be completely fair, this book cannot be reviewed with the same criteria as a typical source book. That's because it isn't. When you buy it, you are actually buying a year's membership into Novus Ordum Mundi. Incidentally, if you are already a member, don't buy this book. Your copy will be arriving in the mail soon!

The *Villain's Kit* is simply a collection of odds and ends to hold you over while the rest of your goodies trickle in throughout the year. And what are the odds and ends? For the most part, good material that GMs will find at least interesting and at best very useful.

The Introduction chapter gives a complete synopsis of all the other secret societies running around Théah. Other than a layout error that caused a paragraph to be repeated twice, this is just a down and dirty summary that accomplishes exactly what it is supposed to.

You also get an introductory treasure hunt adventure called "Drake Footprints," which seems to be written with the goal helping novice players and Game Masters get a good feel for the whole swashbuckling genre. It has some classic elements (pirate battles, a daring prison break, deciphering a treasure map), but the problem that some may find is that the plot is fairly simple and straightforward without a lot of bells and whistles. There is some helpful advice to help first time GMs run a successful game, but veterans may find it all a bit dull. If this is the case, they should keep the plot and add on whatever extras they desire.

Why?

Well, "Drake Footprints" is the first AEG adventure that provides a response sheet. In other words, it is one of the stories that will help determine Théah's future in some form or fashion. It is a safe bet that some of the characters featured in it, namely Jacques and The Kire, will show up again.

The *Villain's Kit* also holds a sample setting, a tavern called The Powder Keg. A detailed map is provided, along with profiles of the proprietors and some regular patrons. This tavern can be dropped into any of Théah's nations without hassle and there are notes and plot hooks for whichever location best suits a GM's campaign. Any GM will find this a boon.

A section entitled "GM Tools" has some interesting observations and notes to enhance play and improve existing games. Guidelines are given on how to design nation-specific Brutes to throw at your players (for those who don't play *7th Sea,* Brutes are those nameless thugs that drop like flies in any action film) and how to exploit the language barriers that exist in Théah to muck players around.

John Wick provides the section's closing essay, called "Building A Better Villain." Crisp and well written, it serves as the anchor for the whole *Villain's Kit.* The definition of what it means to be a Villain in the world of *7th Sea* is clearly explained and ideas on how to portray such characters convincingly run rampant. Villains are the most important aspects of the game because they are the Heroes foils. How important characters are can only be measured by how dastardly the Villains get. It an easy enough concept and Wick makes it a useful and fun.

The *Villain's Kit* is rounded out with four new action maps for players to fight their way through (a theater, stable, coach house, and Vaticine chapel) and Campaign Construction Sheets that help GMs design and keep track of adventures.

The weakest part of this collection is 16 NPC "head shots" that take up four full pages. The idea is to use them as visual aids during a game, holding them up and saying, "You see this scarred pirate glaring at you over her dirty bottle of rum." These pictures are one trick ponies, unless the NPC in question becomes a regular feature of your game. Even then, it is doubtful you will need the mug shot very often. The art is of very mixed quality and may leave some readers wondering what else could have been placed on those four pages instead.

The *Villain's Kit* is 64 pages long. If its $24.95 price tag only covered the cost of the book, it would not be worth it. But, since the price includes membership into Novus Ordum Mundi, it is a good deal.

If you are a *7th Sea* player, or just looking for source material for another game, you'd best let this one slide.

However, if you are a *7th Sea* GM and want both memorable Villains and a chance for your campaign to have an effect on Théah's future, don your black cape, twirl your moustache, and practice your most menacing laugh. This one is a must-have.

-- Les Simpson

St. Dagobert's Sanctuary for Foundlings

by Loki Carbis

Art by [andi jones](#)

St. Dagobert's is a combination of hospital and orphanage run by Jesuit monks and a few lay volunteers. Although the Church does not condone births out of wedlock, neither does it condone the abandonment of the innocent products of such unions. More than a century ago, the Jesuits founded this particular mission in deference to humanity's imperfections. (Politically, they came under great fire from the majority of their brother and sister orders for this step, especially the Dominicans, since many viewed it as partially excusing the sin of adultery.)

The structure itself is large, but mostly unoccupied. The staff is far too small for the magnitude of the task that they have set themselves, and many sections of the building have fallen into disrepair. The upper two floors are considered dangerous and few ever venture there, while the basements are perpetually flooded to a depth of three feet (more in winter and early spring). Only the chapel, the wards, the dormitories and the secret entrance are well maintained. The secret entrance is a simple device -- an airlock-like chamber with an outer and inner door. Supplicants place the unwanted infant in through the outer door, close said door, and ring the bell next to the door. At this point, one of the staff will open the inner door, and the child will be accepted into the care of St. Dagobert (the patron saint of both orphans and large families, among other things).

The children are well cared for -- Jesuit medicine is more science and less superstition than most others practice (whatever the century) -- and educated to exacting Jesuit standards. At any age between six and eight years old, the Jesuits will do their best to find a place for the child, often apprenticing them to masters of various trades. (This is not as difficult as may be thought, since a Jesuit education is a great asset in a mostly non-literate age. Even after literacy becomes widespread, the standard of the education is still above average.)

All in all, St. Dagobert's Sanctuary for Foundlings is a quiet, respectable enterprise that is so much a part of life in its city that it is rarely questioned, and thus of almost no visible interest to characters. It is located in a run down part of whatever city is most distinguished by age, size or importance to the plot of the adventure (or any combination thereof). Likely candidates for such a city include London, Paris, Rome, Berlin, Dublin, St. Petersburg, New York, Mexico City, Rio de Janeiro or Washington. (For obvious reasons, it is unlikely to be located in a city that is not predominantly Christian in its faith -- although it would be an interesting addition to Istanbul or Jerusalem, to name just two.) Wherever it is, it fades almost, but not quite, completely into the background. If that doesn't make them suspicious, the GM has a number of options at his or her disposal.

The documented connections of the Jesuits with the Knights Templar might well arouse the suspicions of players in any ***GURPS Illuminati*** game -- but even more so when the characters realize that the patron saint of the Sanctuary, Dagobert II, was a Frankish monarch of Merovingian descent. Is the Sanctuary part of some plan to restore the Merovingian bloodline to its rightful place? Or is something even more sinister going on? Dagobert's death in a somewhat suspicious hunting accident could have been a ritual sacrifice that the Sanctuary benefits from in some obscure fashion -- or perhaps the whole purpose is to find his soul when it reincarnates.

The Jesuits are the subject of many conspiracy theories, and the vast number of orphans they take in and educate (and

indoctrinate?) could easily become the basis of a conspiracy theory, accurate or otherwise. In Yrth, where the Sanctuary would be located in either Tredoy or Megalos, the Jesuits are already the subject of considerable suspicion (see the sidebar on page 27 of *GURPS Fantasy*) -- and their willingness to take in orphans of any race only adds to the whisperings against them. The Sanctuary could play a similar role in a *GURPS Technomancer* game (although the Jesuits are much less suspect in that particular setting). Other likely timelines for it to be located in include Dixie and Reich-4 (from *GURPS Alternate Earths*) or Cornwallis (from *GURPS Alternate Earths 2*).

The Sanctuary could well be a point where evil beings enter the world -- after all, the Jesuits might be completely innocent, but they have no way to determine who or what delivers the infants to them. Any number of possibilities for *GURPS Horror* campaigns could be happening. Are the Sidhe smuggling changelings into the world in preparation for their eventual return (in an odd *GURPS Celtic Myth* campaign)? Or are the children really lycanthropes (*GURPS Werewolf: The Apocalypse*), shape-stealing aliens (*GURPS Atomic Horror*), or something even further out? In a *GURPS IST* campaign, the Sanctuary might well be a front for the Black Moon Society, or most chillingly of all, the Exchange (see *GURPS Super-Scum*). Are the children having odd experiments performed on them, and if so, by whom and for what purpose? Any sort of scientific experiment could be from any of a host of *GURPS* settings -- and could even the most hardened Black Op gun down what appear to be innocent infants and toddlers?

It's always possible, of course, that one or more of the characters is an alumnus of the institution. If so, they may well have learned more than they bargained for, or even more than they are aware of, ala *The Manchurian Candidate.* This makes for a particularly nice twist any time the GM wants to encourage the characters to suspect and distrust each other. Alternately, a former recipient of the Sanctuary's largesse could well find that the Jesuits need a few good men (and women) for a very important mission -- although whether this makes it a Patron, an Ally Group, a Dependent Group or even an Enemy will depend on the campaign. In short, the Sanctuary can serve virtually any function that the GM can devise for it. May St. Dagobert smile upon you.

by Les Simpson

Brave New World is a roleplaying game about people with superpowers. These people are collectively known as deltas, and the game revolves around their struggles in a modern-day fascist America. The entire country has been under martial law since Jackie Kennedy was assassinated by rogue deltas in Dallas back in 1963. Now all deltas must register themselves as lethal weapons and constantly report their movements. Players' heroes are members of the Defiance Movement, the loosely organized delta resistance that is fighting to restore the country's democratic promise of liberty and justice for all.

Pyramid recently had a chance to chat with Matt Forbeck, the man behind ***Brave New World,*** and get his thoughts on his creation and an idea of where it will go next.

Pyramid: First off, Matt, let's talk a little bit about you. You're ***Brave New World's*** creator, but what else should we know about you?

Matt Forbeck: ***Brave New World*** is hardly my first game. I've been working creatively in the adventure game industry for over 10 years now. The game lines I've worked on include ***Deadlands: The Weird West, Deadlands: Hell on Earth,*** the ***WildStorms CCG, Silent Death: The Next Millennium, Mutant Chronicles, Doomtrooper,*** the ***Kult CCG, Doomtown, The Great Rail Wars, Warzone, Blood Bowl, AD&D, Middle-earth Roleplaying, Chill,*** and ***Space Hulk.*** I've also written short stories for ***Deadlands: The Weird West, Vampire, Changeling, Shatterzone, TORG,*** and ***Mutant Chronicles.***

I spent the last four years as the president of Pinnacle Entertainment Group, which originally published Brave New World. I've since left the company and sold ***Brave New World*** to my good friends at AEG, the publishers of ***7th Sea, Clan War,*** and the ***Legend of the Five Rings RPG.***

It was hard to leave Pinnacle, but it was the right thing to do. I find it a lot more fun to spend my days designing and writing games instead of helping to run a company. These days I'm writing all of the new ***Brave New World*** books, plus I'm doing a bit of freelance design and consulting on the side.

I live in Wisconsin, where I work out of my house. The best part of this is that I get to spend a lot of time with my wife and our toddling son.

Pyramid: And what about ***Brave New World*** itself? This certainly isn't the Aldous Huxley novel. In fact, the tag line I have seen is "Superhero Roleplaying in a Dark America." What, exactly, does that mean?

Forbeck: First, it doesn't have anything to do with Huxley, which is one of the reasons I put my name on the cover of the book -- to help avoid confusion. The title actually comes from Shakespeare's *The Tempest.* It's a line from Miranda,

the daughter of the wizard Prospero. She's been living on an island with her father and their servant her entire life, and when she sees a man from the outside world for the first time, she says, "O brave new world that has such people in't." I thought that made for a perfect title for a superhero game.

The fact is that *Brave New World* isn't about superheroes in the way that most people think about them: four-color models in spandex stopping bank robberies and facing off against equally silly villains. It's really about a dark variant on the real world, and the heroes just happen to have some minor powers that set them apart from the herd -- in ways both good and bad. It makes them the target of some serious hostility while also giving them the power to do something about the state the world is in.

Pyramid: The game is different from other superhero RPGs in ways other than its setting and back story, though. The tone is very gritty, where a gun is just as dangerous to most deltas as it is to your average Joe. Why realistic superheroes?

Forbeck: Because they're the most fun. Seriously, Superman bores me to tears. Every issue, the writers have to come up with a brand-new, absurd means of challenging the most powerful person on the planet. After a while it gets ridiculous.

What does heroism mean to someone who very likely can't be killed and actually risks very little to help others? When a real person risks life and limb to help someone else, that's heroic. The heroes in *Brave New World* are just a small step above a regular person, power-wise, and they take the same kinds of risks as we would. That makes the game that much more exciting and meaningful -- and fun.

Pyramid: The whole Delta Registration Act, and many other concepts found in *Brave New World,* are clearly symbolic of real life issues, bringing another sense of realism to a fantastic setting. Would you like to comment on what issues in particular, if any, you were addressing?

Forbeck: Obviously I'm making some comments on bigotry, but the larger issue in the game is this question: How far are we willing to go to feel safe from terrorism? What kinds of rights are you willing to give up? More importantly, when you think these rights are someone else's, how many of those are you willing to give up?

In a world in which we have kids shooting kids in high schools, in which we have home-grown terrorists blowing up buildings, in which we have an armed lunatic actually storming into the Capitol building, how far are we willing to go to feel safe? Who are we willing to blame? And what really should we be doing about it? I don't claim to have the answers to these questions, but the game does raise the issues.

Of course, that's all behind the scenes. Like any other game, it's all about having fun, and there's plenty of that to go around.

Pyramid: *Brave New World* has another feature in its setting that makes it unique: religion. Mixed in with superpowers and dictatorships, it first seems like an odd element, but actually comes across very well. You portray religion, in the form of the Covenant, as an institution, capable of both good and evil. How hard is it to do justice to religion in a role playing game, especially one of this nature?

Forbeck: I'm a lapsed Catholic who went through 11 years of Catholic school, so I've got some education in this area, and I've given it a lot of thought over the years. Religion actually has a lot to do with what's happening in *Brave New World,* much of which will become apparent in the *Bargainers* and *Covenant* books, both of which I believe are due out this year.

I don't think it's hard to do religion justice in a game. It's a part of many people's lives across the world and especially in this country. Ignoring it would mean ignoring a large part of our culture. I'm still wrestling with some of the ways that the forces behind the religions work in *Brave New World,* although I'm pretty set on how the worshipers understand them.

This actually all ties into the hidden backstory behind the game, most of which I'll reveal when we get to *Crossroads,*

which is tentatively scheduled for 2001.

Pyramid: I guess the only complaint I have heard about *Brave New World* is its template system for character creation, where you receive power packages instead of cherry picking your different super powers like in other games in the genre. Would you like to respond to those critics?

Forbeck: Sure. My belief is that most of those critics are experienced roleplayers who were disappointed that they didn't have another game system to pick apart. Honestly, there are already lots of great systems that allow you to cherry pick your powers and develop the superhero from hell. I didn't want to cover that well-trodden ground.

Brave New World was written so that beginning roleplayers could leap right in and start playing. Character creation is a snap, and it gives you fun, easy heroes that fit well into the world. If you, as a player, really want something else, I suggest taking your favorite game system and building your own hero with it. Then come on over and play in the *Brave New World* setting.

Honestly, the only rule here is have fun. You're playing in the comfort of your own home, and I'm not going to come in there and tell you that you're doing it wrong.

Pyramid: Okay, Matt, now that we've got a firm grip on what *Brave New World* is, let's talk where it is going in 2000. Is 2000 going to be a brave new year?

Forbeck: Oh yeah. There will be six new *Brave New World* books in 2000, maybe seven since *Defiants* has slipped into the new year.

The first, then, is *Defiants,* which is more on the rebellion against the oppressive American regime. After that is *Delta Prime,* which allows the players to become part of the American government that's fighting to put down the rebellion -- for the good of the nation, of course. Then it's *Bargainers,* which delves into a class of hero that has the ability to talk and make deals with demons. This might seem a bit of a tangent, but it actually fits nicely in with the unfolding backstory behind *Brave New World.*

Next up is *Crescent City,* the main campaign setting for *Brave New World.* This is the city that grew up in the ruins around the crater where Chicago used to be. Then it's the special core book for the year, a monster of a book called *Glory Days,* which puts the heroes into WWII in the world of *Brave New World.*

And much more after that, of course.

Pyramid: A World War II superhero game? When I hear that, I have images of Captain America fighting the Red Skull. However, going by what has come before, I have a feeling this is going to be much more serious. Am I right?

Forbeck: Oh yeah. I think of it more as a cross between *Indiana Jones* and *Saving Private Ryan.* There are some serious issues to work with here, but I don't think that needs to get in the way of the fun. There will be some cheesy costumes and the like, since this was a more idealistic age, but since it's a 21st-century game, there are going to have to be some modern sensibilities overlying it. I'm just starting some of the research on this. There's a lot to know!

This is not a standalone game, however. It's a setting book which gives the players a whole new way to play the game. It just didn't seem to make much sense to include the whole ruleset again though, so we're going to leave that part out. It's also a standalone setting in the sense that no supplements for it are planned. If there's enough demand, we might do some, but at first we're going to simply concentrate on stuffing as much as we can into the book.

Pyramid: You mentioned *Crossroads* a minute ago, a project that was alluded to in the *Brave New World* rulebook. That sounds like another spin off. Can you drop a few hints about it or is it still classified information?

Forbeck: That's where I spill the beans on what's happening behind the scenes in *Brave New World.* It's likely going to be another setting book, like *Glory Days.* However, this is where we get into the alphas and how to create and play them. With a power-level jump like that, the challenges have to rise to meet the heroes, so you can expect to be

playing on a whole different level.

Pyramid: It sounds like you are going to be pretty busy, then. Has the switch from Pinnacle to Alderac yielded any significant changes for *Brave New World*?

Forbeck: Not really. AEG was handling some of Pinnacle's business management duties before this new arrangement, so I was already good friends with the people at AEG. I'm still writing the books and handling the layout. The only real change is that the art direction is now in the capable hands of AEG's Jim Pinto.

Unfortunately, the transition did cause some inevitable delays, so *Defiants* is now very late. As I write this, though, it's just getting off the press. Plus, *Delta Prime* is already in final production, and I'm working on *Bargainers* right now, so we're right back on schedule. With any luck, there shouldn't be any real delays in 2000.

Pyramid: Alderac is trying for a new level of player interaction with *7th Sea,* with different fan clubs, websites, contests and the like. Is anything of this nature planned for *Brave New World*? If it is, it would seem that the Delta Times website, www.deltatimes.com, would be a perfect staging ground.

Forbeck: It certainly would. We're having some conversations about that right now. It's really up to AEG to set this stuff up. They've done such a great job with *7th Sea,* though, that I don't think it'll be long until you see a similar amount of support for *Brave New World.*

Pyramid: How about other *Brave New World* products? Is a line of miniature figures still planned? Will there ever be a *Brave New World* collectible card game, novels, or comic books?

Forbeck: I'd love to see all of these things. I believe AEG is still planning on a *Brave New World* miniatures line, and I've had some thoughts about a game for it someday. As for CCGs, novels, and comics, I'd love to do all of those -- and we very likely will -- but for right now I'm going to concentrate on getting the game back on track and making it the most fun it can be.

Pyramid: Well, even without those additions, *Brave New World* has generated a devoted following. Is there anything you would like to add before we go?

Forbeck: I'd like to thank all the players out there for picking up and playing *Brave New World* and -- most of all -- for being patient. There is a lot more *Brave New World* stuff on the way, and I know you're going to love it.

[*Editor's Note:* You can download the core *Brave New World* rules, background, and character sheet at www.peginc.com/BraveNewWorld/BNW.html.]

Secrets of Your Local Friendly Game Store

This month's column will return squarely to the realm of reality. This time, let's take up an issue and a question that gamers struggle with on a daily basis. Or, if not daily, then at least monthly at new releases time. The issue is the Friendly Local Game Store (FLGS) and the specific question is, "What are these people thinking?" I talk with fans all the time who ask such questions as "Why isn't my FLGS at the local mall?" and "Why don't they carry anything besides the core books and new releases?" and the most plaintive of all questions, "Why don't they carry *Insert: The Name* at all?" The thought that went into each of these decisions, and most others around FLGS's are grounded in sound business practices. It is just that most players do not know what the principles are. Today, I will be revealing some of the "Secrets of your Friendly Local Game Store."

The first thing to say about an FLGS is that it is a business. The people who run it may have opened the business because of a lifelong love of gaming or a family threat to "make something out of this hobby or give it up" but, especially if the store opened before the CCG craze, weathered that transition, and survived the crash, that store is a real business. And as a business, it is subject to all the usual business pressures -- including Location, Stocking, and Competition.

Location

No matter what kind of business we talk about, it has to be located somewhere (yes, even Internet stores, but we'll talk about that later). Even amateur Real Estate brokers can tell you that the most important three things in starting a business are 1) Location, 2) Location, and 3) Location. But what only a professional can tell you is that it is not usually that simple. There are all sorts of limitations and problems with opening and maintaining stores, some of which dictate where a store can be.

The primary issue is traffic. Stores have to have people coming in to buy, or else they're not stores. They might be other good things like large gaming halls, but they're not stores. Now a traditional FLGS is a "destination store." That is to say, that the people who go into them set out to go there, the store is their "destination" when they leave the house. These kinds of stores are good, since they can be anywhere. Other kinds of stores that depend on "walk-by" traffic must be in places with people walking by, like a main street or a large shopping mall.

Retail developers and shopping mall managers know this and they charge for traffic. The more people who frequent a particular mall, the more expensive it is to locate there. And, like it or not, most people out in shopping malls aren't looking for more *Warhammer* minis, or the latest *Call of Cthulhu* release, and wouldn't buy them even if given the chance. Traffic equals sales for some stores, but a traditional FLGS is usually better off locating outside the mall.

Note that I say "traditional" FLGS. There is a new model of store that has the potential to do very well in a shopping mall setting. These stores are ones that focus more on the kinds of games that appeal to mall-goers. Board games, family games, and party games do very well, often well enough to support a reasonable sized RPG or miniatures section. However, to compete in a mall setting for "traffic" the stores have to match the attractiveness and service of other mall-based stores. I know veteran gamers who wouldn't dare shop in a store where the clerks wear polo shirts embroidered with the store's logo. I also know soccer moms who wouldn't dare shop in a store where the clerk was wearing a t-shirt that said, "Vecna Rules!" Neither of these stores is making a mistake, they're just going after different markets.

Some FLGS owners are starting to catch on to both markets and are opening little "kiosks" or carts in the middle of the mall to sell family and party games. Customers who want more or different kinds of games are referred to the larger store out of the expensive center city. This can be a very happy medium.

Stock

Talk about small kiosks with limited space brings up the issue of stock. Many of the most common complaints about the FLGS are about the narrowness of stock. To understand the decisions about stocking, it is necessary to understand the following few terms: footprint, adjusted gross value, and turns.

In the real world, things take up space. The amount of space a product takes up is called its footprint. Some things' footprint changes based on its orientation. Think of a typical RPG on a shelf. If it is turned cover out, its footprint is much larger that if it is spine out. A quick look into my library tells me that a shelf full of **GURPS** books spine out is four books wide; front cover out, and it is 80. The price of something divided by its footprint is its adjusted gross value. That four-books-wide shelf of cover-out books has a retail price of around $80, or just over $2.30/inch. The spine-out shelf of the same width is worth $1600. Same physical space, 20 times the value. But no matter how much the space is potentially worth, it is worth zero is the games don't sell, and that's where turns come in.

Turns are the number of times the thing that takes up a particular space in the store is sold. Think about it this way, when you buy a book, that space doesn't stay empty, the FLGS manager fills it with another book and tries to sell that one. The number of times that process occurs in a year is the store's annual turns. So, now it should be clear -- the store's yearly sales should be adjusted gross value of the usable display space times turns.

Increasing a store's sales should be easy. One way is to increase the store's adjusted gross value, which means packing more products into the same space by using falling racks, or by overlapping covers. The danger is that the products might be difficult to see, which could adversely affect the store's turns. Maximizing the store's turns is the other way, but that usually involves stocking products that move quickly and without much work -- new releases from hot game lines and the core products of established lines. This technique, however sacrifices the potential sales of backlist releases.

Another big issue driving what a store can or should stock is the store's lease. Many shopping malls have very well defined restrictions regarding the kinds of items a store can sell. Most indoor malls prohibit the selling of used merchandise, for example. Of course, there are notable exceptions, but this policy explains why few mall-based game stores sell used comics, games, or secondary-market CCG singles. Some landlords may have limits on the subject matter the games may address.

Some stores don't carry products they can't easily display. POP displays for CCGs, standard size RPG books, and blister packed miniatures are accommodated without trouble. Large format boxed games and smaller format RPG books may be perceived as more trouble than they're worth. Conversely, these unusual formats may work to the game's advantage. Small format books, for example, must be displayed in front of large format books, where customers can see them. Hmmm . . .

Finally, stocking decisions can, in some cases, be dictated by what a store can get from its own suppliers. Most traditional game distributors do not handle computer software, for example. That fact makes it hard for stores to discover or even get in computer games which their customers might otherwise enjoy. Likewise, the small quantities which an FLGS is likely to buy make it difficult for them to get the quantity discounts which can make them price-competitive with software superstores.

Competition

Which brings us to the trickiest part of business, remaining competitive. Customers choose where to buy things based on a dizzying array of factors. There are so many things that go into making these decisions that there are people who make great fortunes attempting to analyze them. The two I want to highlight today, though, are service and price. In areas with more than one FLGS, they compete with each other. I discussed above some of the ways that appearance and stock selection can affect the customer base and define a stores market. But, I also choose these two things because they are at the crux of the conflict between brick-and-mortar retail stores and their online cousins.

From a service standpoint, your basic FLGS has several advantages. For one, it is at least L and presumably F. If so, there are actual tangible benefits to getting in the car and going down to the store. One of these is store employees with whom you may have built a relationship. They know your preferences, and have a sense of what else you might

like. But moreso than that (because an online store can have that) is that there are other customers with whom you may also build relationships. Open gaming areas, demo space and knowledgeable people all help you to make more informed game-buying decisions. There is also the undeniable fact that, for most games, you can hold them in your hand in the store and page through the contents. And finally, once you have put down the money, the game is yours -- immediately.

Online game stores can have one huge service advantage. In places where there is no game store, online is often the only way to go. In that way, they perform a great function and earn their keep on that fact alone. To a gamer with no local game shop, online stores can be a godsend.

Another advantage online stores can have is pricing. Harnessing the power of the Internet to reduce the need for employees, rent, backstock, and other overhead can allow online retailers to reduce prices charged to customers. In many cases, prices can be lowered enough to cover the costs associated with shipping purchases to the customer. There is also the perception that online customers don't have to pay sales taxes. (Technical business note: This is not strictly true. Online retailers do not have to collect state sales taxes. Customers, however, may still be obligated to pay the tax directly to their home states. Enforcement on these laws have been weak, but as mailorder and online grows, it may get bigger.) There is also tremendous resistance on the part of game manufacturers to online game shops. There is at least one manufacturer who requires that its products not be sold at less than the MSRP (Manufacturer's Suggested Retail Price) by online stores. This is ostensibly to protect the interests of the FLGS.

The actions of your FLGS may appear confusing at first, but they don't have to remain that way. Basic business forces are at work in all markets, even our own. With a little knowledge and observation, they won't long remain the secrets of your FLGS.

On a personal note, this column was inspired by a number of e-mails I received suggesting topics for my column. Thanks to all those who wrote in. As always, if you have questions about the business of gaming you'd like answered in this space, please feel free to drop me a line at micahj@io.com.

The Penultimate Column

Well, the cat's out of the bag, so what else is there to talk about?

Next week's issue will be my last. After nearly six and a half years associated with *Pyramid* and Steve Jackson Games (this time . . .), I'm moving on. I'll be working for Innovative Studios, a Florida-based company that does a lot of things, some of which I'm probably not cleared to know about. But they have some great ideas for using the net to connect gamers with retailers, retailers with distributors, gamers with each other, freelancers with publishers, and just about any other combination you can think of. And I'll be doing . . . well, pretty much what I'm doing now.

I'll bore you with the details some other time. It's not *Pyramid's* job to be plugging my new gig, anyway.

They say that moving and changing jobs are two of the most stressful things a person can do, and now I've gone and piled them one on top of the other. Serves me right. So, if this column comes off a little disjointed (and how would that be different from many of the others, you may ask?), my apologies.

More New RPGs

The vast unpaid research department reminded me of another new RPG due out this year, and I must admit this one has some potential -- *Dune,* from Last Unicorn Games. I loved the original book (and the first sequel or two, though it started to go downhill kind of quickly), and I think we can forget about the movie. But LUG has demonstrated they can handle a licensed property well, with the now-hitting-on-all-cylinders *Star Trek* lines. (Is it my imagination, or did they recover from their slow start on those games just about the time Ken "Suppressed Transmission" Hite come on board? Ken, of course, is much too humble to suggest anything of the sort, but I'll do it for him.) The main rulebook (and the first four supplements) are all listed at the [Last Unicorn *Dune* website](#) as "Coming Soon," but my informant swears they'll be out this year. Sounds good to me.

Regrets? I've Had A Few

The more I think about leaving *Pyramid,* the more I realize I have to say. More than can fit in just one column next week. So I'll get the recap off to a start now. And to make sure that next week's column is a high-note tearfest, I'll talk about what I thought were the downsides of this grand online experiment (or at least, our implementation of it).

To be fair, what went wrong -- or simply wasn't as good as I would have liked -- is a short list of minor stuff, especially compared to all that went right. But I want to close off my chapter of the *Pyramid* story with full disclosure, so I'll mention a couple of things.

I know the customer is always right, but it always annoyed me that the readers so strongly resisted all attempts to broaden the scope of *Pyramid* beyond roleplaying. It's not surprising -- most readers came to us from already being fans and customers of Steve Jackson Games, and that meant, mostly, *GURPS.* And the non-RPG titles I *could* get the readers interested in were still SJG products -- *INWO, Car Wars, Ogre.*

And you can probably lay the blame to some degree on the quality of the non-roleplaying articles we've run. They're not as good as most of the RPG stuff, I'll admit. But I was going for a balance, and the submissions were decidedly *un*balanced. So, I had to dig deeper in the pile to come up with non-RPG articles, and the quality wasn't quite as high.

And to be fair, within the realm of roleplaying, I think we've done a decent job of covering a lot of other games. The "More *GURPS*!" cries are not as common or as strident as they were in the early days, and I don't know if it's because they got tired of complaining (not *our* readers, I can hear you saying), or because they came to see that the other material we were doing had some value to them.

I think information providers have an obligation to broaden the horizons of their audience. I remember back in 1993, I went back to Texas A&M to help celebrate the 100th anniversary of *The Battalion,* the student newspaper I was on the staff of while I was in school. Anyway, one of the guest speakers was a bigwig at the *Houston Chronicle,* and he was waxing eloquent about their early forays into online news delivery. One of the advantages, he said, was that customers could customize their news: If they didn't want hockey scores, they could set it up so they didn't get them.

I thought (and still think) that this is a bad idea. It's a short step from, "Don't send me hockey scores, because I don't care about hockey," to, "Don't send me anything that makes my favorite politician (or company, or religion, or ethnic group) look bad, because I don't want to know." In real, bigtime journalism, the information providers have an obligation -- a near-sacred duty -- to tell people things they don't think they want to know, or don't know they should know, but *need* to know. Pretty arrogant of those journalists to think they're the ones that get to decide, isn't it? But somebody's got to do it, and the generally poor job the media giants of our age have been doing at it lately doesn't mean it shouldn't be done.

Same thing here. For the good of the hobby, and simply to expand the horizons of the readers, I wanted to make *Pyramid* more general interest than it turned out to be. More computer gaming, more online gaming, more board games and card games, even play-by-mail and wargames and maybe even mass-market and family games. Didn't happen. A regret.

And before I gush and froth about the tremendous support *Pyramid* has received from its readers and contributors (that's next week, remember), I will discourse briefly on the double-edged sword that is Committed Fandom.

The good news is, they hang on your every word and have a strong emotional commitment to what goes into the magazine. The bad news is, they hang on your every word and have a strong emotional commitment to what goes into the magazine. The nitpicking and the slams that individual articles have received on the message boards are very discouraging.

A little math: A $15.00 subscription, divided into 52 weeks, comes out to 28.8 cents an issue. Each issue contains 10 or 11 new articles, columns, and cartoons. That's less than 3 cents an item.

Somebody worked very hard on each and every one of those items. Some of our more professional contributors take much less than their going rate and still contribute to *Pyramid,* out of loyalty, good-heartedness, and a generally poor business sense. And each reader pays 3 cents to see it, and some of those people then dismiss it with an, "Eh." Or a slam.

I'm not going to say, "if you don't have anything nice to say, don't say anything at all." Criticism and feedback are a very important part of what all communication professionals do. But please try to make your criticisms more constructive. I think we'd all appreciate it.

And my last regret is that we weren't able to do more. *Pyramid* makes a modest profit at its current staffing level, they tell me, and that's very, very good. It means that the magazine will continue in its present form for the foreseeable future, and that's a good thing. But to justify what they were paying me, I had to try to hold my work on the magazine to about 10 hours a week (not that I ever succeeded . . .). So the slushpile got huge, and some of my editing work was rushed, and I didn't follow up on some things like I should have.

And it wasn't just *my* time. Jackie Hamilton and Keith Johnson have done a lot of great work on the technical side of running *Pyramid* -- both adding new features and tweaking old ones -- but *Pyramid* wasn't their top priority very much of the time. SJ Games has a big, big website, with lots of stuff going on, and it all demanded their attention. So sometimes *Pyramid* didn't get all the technical TLC it could have. And this is no knock on anybody -- I understand why it happened, and agree with the decisions that set it up that way. But I regret it.

Speaking of Regrets . . .

Time for a Dreaded Slushpile Update. The count of unread articles dropped down to 120 this week. My plan to do 20

articles a day lasted for exactly one day, and then other pressing duties (like shopping for furniture) interfered. My new goal is to cut the pile in half before next Friday, and we'll just hope for the best. And whoever becomes the new editor, I assume they'll put the disposition of the remaining slushpile at the top of his or her list.

And no, as I write this, I have no idea who the new editor will be. Perhaps that will be revealed next week.

And remember, next week it's the all smiles and teary hugs, big goodbye to *Pyramid* edition of "Second Sight." Don't miss it!

The Suppressed Transmission Tarot IV: The Suit of Cups

"Madam Sosostris, famous clairvoyante
Had a bad cold, nevertheless
Is known to be the wisest woman in Europe
With a wicked pack of cards."
-- T.S. Eliot, *The Waste Land,* I:43-46

Once again, the cards turn up for us, this time in the Suit of Cups. Where Knives cut to Horror and Forks pointed the path to Alternate History, the Cups contain secrets and magic, the glamour shimmering just below the rim of the world. The realm of Secret History is the realm of the uncanny, the sorcerous, the underground stream and the sacred river. As in traditional Tarots, the Suppressed Transmission Tarot holds the Cups as the "Water suit." As is also traditional, I recommend Bill Butler's *Dictionary of the Tarot* as a guide through the fluidity of Tarot interpretation. These interpretations continue the "Tarot by example" trend of the previous columns, and again these archetypes can represent spirits, entities, or similar beings in your game. Perhaps they can be summoned by the pouring (or ingesting) of specialized, alchemical libations. So drink deep, and gaze behind the veil.

"To be now a sensible man,
By and by a fool, and presently a beast!
O strange! Every inordinate cup is unblessed
And the ingredient is a devil."
-- William Shakespeare, *Othello,* II:iii

The Holy Grail (Ace of Cups): In a hidden grotto, the green glass Grail sits, embossed with the Alpha, the Omega, and the Spencerian swoosh symbol of Coca-Cola. From out of the Grail pour five springs of water, joining together into Alph, the Sacred River of Xanadu, the Underground Stream of the West. Interpretation: the hidden source, the Key to it All.

Norumbega (Two of Cups): Sir Walter Raleigh, wearing a red rose badge and bearing a silver chalice, steps onto an unmarked American beach, one foot in the ocean and one on the sand. Waiting to meet him on the shore is a Mohican sachem, holding a golden chalice. Behind the sachem, a round Templar tower rises, emblazoned with a red cross. Interpretation: union, meeting, possession.

The Prieuré de Sion (Three of Cups): A long-haired Joseph of Arimathea, an African Dogon prince, and a pregnant Mary Magdalene sail into the delta of a wide river lined with bulrushes. Their boat has a purple sail; all three hold red gold cups full of purple wine. Around the boat, three dolphins frolic. Interpretation: birth, bloodlines, the product of a union.

Nabonidus (Four of Cups): A richly-garbed Babylonian potentate sits regally on his throne at the side of a trench cut in the earth, where laborers dig. Behind him, on the Tigris, rises a four-layered ziggurat bedecked with lapis. At the side of the trench sit an ivory cup, a red clay cup, and a green jade cup. Nabonidus has only eyes for the black onyx goblet being handed out of the trench, however. Interpretation: luxury, ennui, search for new sensation.

Glozel (Five of Cups): A company of scholars argues in a museum, waving papers bedecked with the cryptic symbols of Glozel. Unnoticed by them in a display case in the foreground are five broken goblets, one of which glows with eerie power. Other artifacts in the museum cases nearby include a clay model boat, a triple-headed goddess figurine, and a stuffed mermaid. Interpretation: disharmony, bitterness, remnants.

Compagnons des Devoirs (Six of Cups): Three medieval stonecutters gather around a master architect holding a compass and a goblet. The sacred geometry of this grail is to be recapitulated in Gothic architecture by these illuminated masons, heirs of the Templars and ancestors of the Freemasons. Above them in the rose window of the

cathedral are five cups arranged in a pentagram. Interpretation: memory, the secret or lingering tradition.

The Goblin Market (Seven of Cups): Two sisters, dressed in artistic Victorian garb, ooh and aah over a golden cup, not seeing the snake coiled within it. The stall has six other cups on display. Out of these cunningly incised goblets peep a leering homonculus, a dark tower, a bed of pearls, a manticore, a clown, and an ivy tendril. The grinning, hairy keeper of the stall has greenish skin and pointed ears (and teeth). Interpretation: illusion, delusion, lies.

Irem, City of the Pillars (Eight of Cups): Irem sits in the desert, and its eight pillars stretch up into the night sky under Orion and Canis Major. In front of the city a bronze horse statue sits sunk halfway in the sand. Frankincense bushes dot the dunes. Silhouetted against the night, at the top of each tower rests a cup. Interpretation: abandoned success, departure, ruins.

Paul Bunyan (Nine of Cups): Nine cups lined up in an arch glow in the clouds above Paul Bunyan, who leans on his axe next to Mount Rushmore, which he's obviously just carved. Paul's face is the same size as those of Washington, Lincoln, Jefferson, and Roosevelt. Babe, the Blue Ox looks on placidly. Interpretation: material and martial success, prosperity.

Urban Fantasy (Ten of Cups): A city at night, lampposts and neon Coca-Cola signs glowing and cars driving down the streets. It's just rained, and the streets are wet, lights reflect oddly in some of the puddles. The stoplights seem somewhat cup-shaped, and a license plate reads "GRAIL." A nightclub marquee proclaims the establishment "Kup's," as a nearby sign promises "$10." Interpretation: small miracles, the city, security.

Christopher Marlowe (Jack of Cups): Christopher Marlowe sits in a little room, holding a chalice full of wine. His blue-black doublet (with golden buttons) displays a crowned fish. A cipher manuscript sits in front of him, as does a twelve-penny dagger. A magic circle inadequately washed out decorates the plank floor. Three shadows surround Marlowe; behind him on the shelf is a grimoire and a Faustbook. Interpretation: haunted dreamer, broken destiny, occultism.

William Shakespeare (Knight of Cups): William Shakespeare stands on the stage of the Globe Theatre, with the constellations Aquarius and Pisces picked out in gilt on the blue-painted wooden panels overhead. Behind him is a stage hobby-horse; in his hands he holds the manuscript of a play and a quill pen. At his feet, unnoticed, a cup spills ink onto the stage. (In some decks, Marlowe and Shakespeare are identical in facial appearance.) Interpretation: studious messenger, youth, secret learning.

Walburga (Queen of Cups): A woman in pearl-seeded, fur-trimmed blue robes stands regally at the shore of the ocean. She wears a crescent crown, although the moon over her head is overwhelmingly large and full. In one hand she holds a net; in the other, a cup which overflows into the ocean. A large gray wolf-dog (a werewolf?) crouches at her feet. Interpretation: wisdom, emotional power, changeability.

John Dee (King of Cups): Dressed in scholar's robes and close cap, John Dee stands beneath a crown painted on the wall behind him. He gazes into a crystal stone; near it on the desk is a Grail of Celtic magic. Elsewhere in Dee's close, curtained library (for such this room is) are not only the anticipated books of magic but also maps and globes depicting the New World. A stuffed crocodile hangs in a murky corner. Interpretation: subtlety, secrecy, hidden power.

One of the problems of time-travel RPGs is the vast amount of freedom time travel gives the players. Their characters can not only go anywhere but any*when*; completely destroying the GM's planned adventure in a very short time indeed.

Most time-travel RPGs and settings deal with this problem by placing certain arbitrary limits on the nature of time-travel or on time-travel equipment used by the player characters. For example, the Stopwatch setting from **GURPS Time Travel** has certain "blank spots" in time where the player characters cannot travel, as well as the limits of being only able to travel into the past and having to travel at least 50 years pastward. Pacesetter's old **Timemaster** game made time-travel a limited proposition based on how much fuel the player characters' time machines could carry. The current UPN show *Seven Days* assumes time travelers can only be sent seven days into the past.

An interesting possibility for a time travel campaign comes from the "On This Day In History" columns that so often appear in newspapers. It assumes two things: First, it is only possible to travel into the past and return. Characters cannot travel into the future due to the existence of a "temporal barrier" or some other rubber-science explanation. Second, the travelers can only change the year they go to; the day and even time are the same as the present (maybe variable by only a few hours, but no more than six in either direction). When you travel into the past, you always show up on exactly the same date, only the year changes. Again the reason for this may be due to some unknown factor in the nature of time-travel, the motion of the Earth, the solar system, or the galaxy, or some similar effect.

So a time traveler departing from April 18, 2015, can go to April 18, 1775, or to April 18, 500 B.C., but not to April 20 of any year. Likewise, the same amount of time passes in the "absolute now" as the traveler spends in the past. So if you go back to April 18, 1775, and spend five days there, when you return it will be April 23, in the present as well.

Apply this idea to a time-travel campaign and you effectively narrow the options for travel on any particular day. In a time-war type setting, where two (or more) factions are struggling for control of history, this is an important tactical consideration. For the GM, it means that sources for historical adventures are no further away than the daily newspaper.

Let's look at the Associated Press' "Today in History" column from the April 18th issue of the local paper and see where and when a group of time travelers could go on that date:

April 18, 1775: Paul Revere began his famous ride from Charlestown to Lexington, Massachusetts, warning colonists of the arrival of British soldiers.

Travelers from an oppressive or Anglophile timeline (like Cornwallis from **GURPS Alternate Earths 2**) might want to prevent Revere's ride in order to alter the course of the Revolutionary War. The player characters might have to make sure Revere's ride goes as scheduled, even if it means one of them taking his place!

April 18, 1906: A massive earthquake struck San Francisco, causing raging fires and widespread damage. Some 700 people died as a result.

Was the San Francisco earthquake a natural event, or something engineered by time travelers? Perhaps it was the result of testing some new seismic or vibrational weapon. The quake and its subsequent devastation also provide excellent cover for other operations in and around San Francisco. Perhaps some of the people lost and believed dead were actually recruited to join the time-war. Saving the lives (or ensuring the deaths) of people caught in the quake may determine the destiny of the timeline.

April 18, 1942: Lt. Colonel James Doolittle and his air squadron from the *USS Hornet* raided Tokyo and other Japanese cities.

Thwarting Doolittle's raid on Japan would be a prime opportunity for time travelers looking to change the course of World War II in favor of the Axis powers (or possibly just the Japanese), a suitable goal for travelers from the Reich-5 timeline from *GURPS Alternate Earths*. Alternately, time travelers might be looking to *help* Doolittle and the Allies to do more damage to Japan and to end the war faster, perhaps by providing the American pilots with more advanced planes, weapons, or intelligence information.

April 18, 1945: American war correspondent Ernie Pyle was killed by Japanese gunfire on an island off the coast of Okinawa at the age of 44.

Was Pyle's death an actual historical event, or was it engineered because the wily and observant correspondent knew too much about something? Preventing Pyle's death could have various difficult to foresee effects on the American view of the events at the end of World War II, leading into the Cold War, perhaps influencing American journalism or reporting in some way. On the other hand, if Pyle *does* know something he shouldn't (perhaps something strange he figured out about Doolittle's raid three years earlier?) then it might be up to the player characters to ensure that he dies "on schedule."

April 18, 1946: The League of Nations was officially dissolved.

Day Tripping

How might things have gone differently if the League of Nations had not disbanded? Perhaps it might lead to a world like Gernsback from *GURPS Alternate Earths*, or it might have ensured World War III. It's questionable whether or not a group of time-travelers could have done anything to stop the disbanding of the League on this day, unless they had clear evidence that the disbanding was brought about by interference from other time travelers . . .

April 18, 1955: Albert Einstein died in Princeton, NJ.

The father of relativity and modern physics, Einstein would be a difficult recruit for a temporal agency to pass up. Perhaps time travelers recruited the real Einstein, leaving a lifeless clone behind? Or Einstein's matchless intellect might have been transferred into a storage medium like a braintape. Travelers could then create a new, younger clone body for him in the future (using a few cell samples taken from his original body) or to place his mind into a computer and create a super-intelligent ghostcomp. Who knows? Perhaps temporal agents are all braintaped clones of actual historical people, created shortly before (or after) their deaths. In this case, maybe someone could even *play* Professor Einstein's mind in a genetically engineered "super-soldier" body!

April 18, 1978: The United States senate voted 68-32 to turn the Panama Canal over to Panamanian control on Dec. 31, 1999.

Did somebody foresee the Y2K problem and decide that the last thing the U.S. government needed to deal with was control of the Panama Canal as well? Perhaps time travelers have an interest in preventing the Senate from making such concessions, in order to fan the fires of resentment against the United States in Central America, bringing about more terrorism and conflict in later years. Perhaps this leads to an American conquest of Central America, like that in *GURPS Cyberworld*.

April 18, 1983: A suicide bomber killed 62 people (including 17 Americans) at the US Embassy in Beirut.

Was the bombing of the Embassy a purely political incident or was there more to it? What if the bomber was actually a time-traveler willing to die in order to ensure that a particular person at the Embassy was killed? For that matter, what if time travelers prevent the terrorist from carrying out his fatal mission? Do the player characters go ahead and arrange a suicide bombing? And who's going to drive the truck?

April 18, 1989: Chinese students demanding democracy tried to storm the Communist Party headquarters in Beijing.

Time-travelers with foreknowledge of Tianamen Square may try to prevent the demonstrators from provoking the Chinese government, or they might try to help them achieve their goal. They could try and start a riot, secretly arming the protesters or sabotaging the Chinese army. Characters with more subtle powers of manipulation (such as psionics or mind affecting super-science) might try to "convince" the right people to accede to some of the protesters' demands, touching off a democratic revolution in China.

April 18, 1994: Former U.S. President Richard Nixon suffered a stroke at his Park Ridge, NJ home and was taken to New York Hospital where he died four days later.

Was Richard Nixon's death a natural occurrence or a cleverly planned assassination? Or could future medical technology help save Nixon's life, allowing him to continue to be involved in American politics. Perhaps he could play a key role in a political incident in the future the characters are aware of. Nixon's connection with China might link this event with events in 1989 and other time periods.

April 18, 1998: Northern Ireland's main Protestant party, the Ulster Unionists, approved a peace agreement.

Did time-travelers help ensure the peace agreement would happen in order to prepare Ireland and the United Kingdom for some future events? Alternately, Irish separatists might go back in order to sabotage the peace agreement and eliminate the "weak elements" from the Unionists so the struggle for independence could continue.

The same idea can apply to any day on the calendar. No matter what the date, *something* important probably happened on it at some point in history. Your next time travel adventure or campaign could be as close at hand as your local newspaper.

Local Heroes

by Spike Y Jones

Art by andi jones

In the average superhero campaign there seem to be only two classes of people: "supers" and "normals." Supers include all of the heroes and villains of the campaign world, and usually range in strength from the cosmically-powerful to those who can spend an entire comic book just to take out a gang of car thieves (this low end of the scale usually including the player characters). Normals include reporters, police, soldiers, thugs, innocent bystanders, the President and the dependents of the PCs.

But is there room in the world for someone who has a genuine superpower, but who falls short of the power-level of even the PCs? Sure; there's always a need for local heroes.

Local Boy Makes Good

In the comics, superheroes infest the biggest cities, being almost entirely restricted to New York City and Los Angeles (or fictional cities like Gotham or Metropolis), with occasional heroes in London, San Francisco and other major cities. In gaming, there's a bit more diversity, but usually only because a GM decides to set the campaign in the big city closest to him (e.g., Baltimore, Miami, or Toronto) instead of trying to fudge his way through the geography of some locale he's not familiar with. But realistically, superheroes and villains come into existence everywhere, not just in the big cities. Certainly, those big cities have larger populations to draw on, but there are still potential heroes anywhere there are people, and it might even be easier to gain superpowers outside of big cities since no one would be stupid enough to build an accident-prone nuclear reactor in the heart of Philadelphia. But putting it 90 miles away on Three-Mile Island would be perfectly safe . . . except maybe for those living in nearby Harrisburg.

Even if a hero gains his powers somewhere in Kansas, there are forces at work that may make him gravitate to the Big Apple. There may not be much crime to fight in a small town, and even fewer supervillains, and if he wants to make a name for himself he'll have to go where the opportunities are; web-slinging from grain silo to grain silo just isn't as exciting as the big-city version. And in a game, the player of a small-town hero will have to move him to the setting of the rest of the campaign if he wants to do anything at all!

But while all the first-string superheroes eventually make their ways to the big cities, the rest of the world is still likely to have its superheroes, as there are also forces at work to keep the minor superheroes who crop up in small town there where they were created. A small town will be inordinately proud of its super-son, considering his minor accomplishments more important than the major ones of any big city rival. The Incredible Hedgehog would just be one hero among many in New York (and a minor one at that), but in a small town he's likely to be the only super they have, and whether or not he actually does anything particularly "super" to justify their adulation, he'll be Grand Marshall of every parade, invited to every store opening, and the guest speaker at every retirement party. As for big city superheroes, the small-town populace will see any major hero who is proud of his own accomplishments as an overbearing lout.

While some heroes would trade in their "big fish in a small pond" status for the chance at real glory (as Razorback did

in *Spider-Man,* moving from the Deep South to New York city), many more would be content to stay with the known quantity (after all, who remembers Razorback?). Even if such a super were to go to a large city like New York to make a go of it, he could find himself with a recognition problem back home: "Weren't you the guy who was on the network news last night?" "No, that was Firebird. I'm Firehawk."

But these guys can be pretty spectacular in their own right; if they were the only superheroes in the world they'd have the fame and attention of the big boys. Unfortunately, if all you can do is fly, you'll be quickly eclipsed anywhere but your hometown by someone who can teleport up to a mile, shoot lasers from his eyes, and disintegrate iron with a wave of his hands.

Now That You're Here

There are lots of ways to use local heroes in a campaign. Sometimes a minor superhero makes only a single appearance, inspired to superhuman feats by the need to avert a catastrophe, and then immediately retiring to anonymity; the stereotypical example is the mother whose latent superstrength manifests when she has to pull her child out of a burning car, but who then hides her power out of fear or lack of interest in superheroics. This type of super can also be used as background, the sort of thing reported regularly on the evening news more as filler (in a world where the real supers stop speeding trains as a matter of course) than as important news. Mentioning news stories like this preceding or following reports of the exploits of the PCs ("And in other superheroics . . .") adds some color to a campaign.

One of these one-shot heroes could become important after the fact. If the PCs are fighting against a metahuman arsonist, any vaguely remembered hints of a fire-using, water-controlling, fire-proof, or cold-generating civilian super suddenly become significant, either as a suspect or as a potential temporary ally. An investigation of the one-shot hero would be necessary to determine that he wasn't the major villain they were after, but once they've been reassured of that fact, they can try to persuade the incipient super to become a costumed crimefighter full-time.

If the GM is the sort who grants lots of experience points to the PCs, he could start the PCs at the local hero level with every intention of increasing the power level of the campaign to the point that these starter characters eventually become the planet's premier defenders.

Or if the PCs are already powerful and established, an NPC local hero can be persuaded to join them as a mascot or sidekick, in which case he shouldn't just be a repository of extra powers and skills. The fact that this NPC once had a heroic career (at whatever level) independent of the PCs should be made significant. Minor villains from his past (possibly increased in power and anger) can come back to plague him. Occasionally, people who know of the local hero (but not necessarily the major heroes) can ask for autographs. And there should be occasional trips "back home" as a change of pace from regular adventures.

If the PCs treat their sidekick like any other sidekick (as a junior partner whose opinion counts for little, and who has no vote in group decisions) they will be in for a surprise. Unlike an inexperienced beginning super, the co-opted local hero has a past career he can return to, and maybe even some out-of-town contacts (like other superteams that didn't persuade him to leave his home) that can be used to teach the heroes some sort of lesson.

Mix and Match

The local hero doesn't have to be an NPC, even if the rest of the PCs are "full-power" supers. Still, playing a weaker PC among stronger ones could lead to a letdown for the local hero's player if the GM treats the adventure just like any other. The key to a scenario with a local hero added to the mix (whether he be PC or NPC) is that the adventure should in good measure be centered on that character. After all, if he wasn't important to the plot, why would he be there in the first place? With the low number of supers of any sort in a small town, it would be too much of a coincidence for there to be something going on in the area which requires the presence of a big-city superteam but which doesn't intimately involve the local hero, knowingly or not. In typical comic book style, the villain in such a scenario is likely to turn out to be the local hero's sister (jealous of the attention paid her brother) or the big-city villain

whose actions were responsible for the local hero gaining his powers in the first place.

Not only does such a mixed-power level adventure allow the player running the local hero an interesting challenge to play, but it gives the other players and character an unaccustomed moment out of the spotlight, both in matters of attention and of ability. In his own home town, the local hero has a "home field advantage"; he has area knowledge, a local reputation, and contacts that make him locally a bigger hero than the out-of-town ringers.

A League of Their Own

As an occasional break from high-powered superhero gaming (and an excellent diversion for a small group of players or a solo player), a group may want to experiment with a campaign revolving around the lives of some local heroes. A local heroes campaign has a higher ratio of secret ID to public ID events, but balances this lack of excitement with the difficulty that low-powered and inexperienced heroes have with "normal" superheroic tasks such as getting to the site of the action or capturing a runaway elephant. Local heroes could find themselves stuck with the consequences of the actions of regular heroes (e.g., that elephant could have escaped the zoo after a fight with a baddie damaged its cage), and setting their adventures in the same campaign as the group's regular characters will provide continuity and focus.

The difference between this and a campaign where the PCs all start at this level and then progress to cosmic levels, is that these heroes are low-powered in a world where the "real" superheroes are all high-powered . . . and the local heroes know it. If they want to make names for themselves, they'll have to work twice as hard as the big city heroes who were lucky enough to get all the breaks. They may also have to deal with the realization that they aren't the best choices for the task they face, but that circumstances make them the only people available at the right time and place; a heavy burden for the second string.

Made to Match

And if low-power superheroes can crop up anywhere in the campaign world, the same should be true of low-power supervillains.

Local villains, as it were, are rarer than local heroes. Not because of different incidents of occurrence, but because there are problems with being a low-powered villain that just don't seem to bother their heroic counterparts.

For example, a local hero can make a name for himself with a power as minor as The Snowman's ability to generate snow in summer. He'd never make the big leagues with a power like that, but with some luck and good PR he could take a break from his snow-making job in Aspen to make the local papers with the story of how he foiled a purse-snatching by making the fleeing felon slip on a suddenly-snowy sidewalk. But for a villain to make any use of this power, he'd have to be able to come up with a way to steal large amounts of money by snowing-up the sidewalks, and someone with that much imagination could probably make more money legitimately!

In addition, big city supers use the vast populations of the cities to provide them enough anonymity for their secret identities to work. In small towns, Secret IDs can be phenomenally hard to maintain, so many local heroes just do without. But if a villainous small-town gadgeteer creates a mole-mobile to drill into the bank vault from underground, everyone in town is going to know the directions to the local machine-making crackpot's house and the police might even get back to the villain's hideout before he does.

Still, there will be a certain number of supervillains who have their origins in the same small communities as local heroes do, and despite these difficulties, they do have roles to play in supers campaigns.

The most obvious is as adversaries for local heroes. Built on the same number of points, local villains are matched opponents for local heroes, and if the adventure features a group of minor heroes, which a collection of similar villains could be formed, a better idea would be to add a minor villain to a gang of street thugs, since the power levels involved here aren't as dissimilar as they'd be for thugs and major superheroes.

And while considered routine menaces by New York City police, even a minor villain able to come up with some sort of effective use of his powers is going to be a challenge for a party of player-character small-town policemen or just concerned citizens. It can't be said that the town will openly take pride in a supervillain in the same way as they would in a local hero, but privately, some small towns in a comic book world would welcome the appearance of a local supervillain, as that would prove that the town wasn't all that small after all.

While, as mentioned above, there are forces that function to keep a local hero in his small town, those same forces work to drive local villains out of town. So, while such a nascent supervillain may make his first appearance in such an out of the way place, he's likely to migrate toward the big cities when he can. If he should ever return to the small town (e.g., to settle old scores, because of some vital information concerning his origins, or because of an arrest and outstanding warrants), he's not likely to have remained unchanged by his experiences (and experience points). A villain who provides little more than comic-relief on his first appearance (Marvel's Paste-Pot Pete) can return each time a bit more effective until he joins the ranks of the true big city supervillains (the Trapster).

Some small-time villains will never make it to the big leagues, but they can still fill some of the same roles that local heroes do in higher-powered settings; they can be underlings for major supervillains or members of supervillain teams. And an underpowered villain who would pose no challenge to the entire PC superteam might be powerful enough (especially if his powers target the vulnerabilities of one of the heroes) to take on a single superhero separated from the rest of the party.

Power Levels

But what exactly defines a local hero (or villain). Aside from the in-character aspects of his career mentioned above, in an RPG there's also his actual power level. In *GURPS Supers,* an average normal has up to 65 points to spend (25 base + 40 in disadvantages), while a hero in a "realistic" *Supers* campaign (the lowest-level standard campaign) has 350 points (250 + 100). In *Champions,* "competent normals" can have a starting maximum of 100 points (50 base + 50 in disadvantages) while superheroes start at 250 (100 + 150). Local heroes are metahumans who fall between these two categories, averaging 208 (138 + 70) points in *GURPS* and 175 (75 + 100) in *Champions.*

This isn't a lot of points to spend on a superhero, so it's unlikely one will encounter a local hero with high characteristics or attributes, a dozen different powers (all of them strong enough to be useful), and good looks besides. Generally, a local hero will have to be a competent or talented normal with but a single relatively straightforward superpower to his name. After all, if he had a wide range of useful abilities at hand, he wouldn't be just a local hero.

Here is a sample local hero, ready to be added to any superhero campaign.

Firefighter

GURPS Stats

Appearance: Male human, white-American, age 32, 5'10", weight 165 lbs., brown hair, hazel eyes.

ST: 12 **IQ:** 10 **Speed:** 6.25
DX: 12 **HT:** 13 **Move:** 7

Advantages: Acute Hearing +1; Ally Group (other volunteer firefighters); Fearlessness +1; Reputation (Superhero, +3 in hometown).

Disadvantages: Dependents (wife and son, on a 6 or less); Duty (to people trapped in fires); Glory Hound.

Super Advantages: Temperature Tolerance (+20 degrees of heat tolerance).

Super-Powers and Super-Skills: Neutralize Fire-14(5) (Increased Area x 1 +20%, Costs 1 point of Fatigue per use -5%, Emergencies Only -30%) (on a skill roll, can be used for DR +2 vs. flame attacks).

Skills: Architecture-8; Area Knowledge (small town)-10; Axe/Mace-10; Brawling-11; Carpentry-11; Climbing-12; Construction-14; Driving (car)-12; Driving (firetruck)-10; First Aid-11; Hobby Skill (Artist; painter)-5; Jumping-12; Professional Skill (firefighter)-13; Running-13.

Quirks: Neglects his family and hobby for his new "career"; Never goes anywhere without his cellular phone, just in case; Follows the careers of other fire-based supers; Intends to make the leap into big-city superheroics in the near future.

Non-Super Equipment: (in car or pick-up truck; some GMs may want to charge Firefighter character points for this gear) -- Standard fireman's uniform (PD 1, DR 1) modified by addition of "FF" logo in reflective tape on front and back; Hard hat (PD 2, DR 2); cloth gloves (PD 1, DR 1); heavy boots (PD 2, DR 2); Oxygen tank and full-face mask; First aid kit; Access to common equipment on firetruck, such as fireaxes, hoses, heavy rescue gear.

Tony Filleti was just an average small-town construction worker until the day a house he was building caught on fire. While he was safely outside, he knew that some of his co-workers were trapped within, and taking only a few seconds to dump a cooler of water over himself, he ran into the flames to try rescue them. A few seconds later, he emerged from the smoke-filled building leading two electricians to safety.

Although he hadn't noticed it, some others at the building site had seen a strange thing happen as Tony ran into the building. The flames in his vicinity seemed to jump toward him before disappearing in puffs of smoke; by the time he came out of the building, the fire was out, although there was enough smoke to obscure that fact.

Tony was an instant hero, and the celebrity and the adrenalin rush made him eager to repeat his heroics. He immediately joined the local volunteer fire department. Although he performed other fire-department duties in the next year, it was some time before he had another chance to jump into a burning building, and this time even he noticed that the fire seemed to die around him; he wasn't just a hero, he was a superhero.

It's been a few years since that realization and Tony has been making the most of his new identity. He modified his firefighting gear into a costume and made sure that the fire departments of neighboring counties knew that his duties as the superhero Firefighter were available at a moment's notice.

Campaign Role

Obviously, Firefighter would be of use in any fight against a fire-using supervillain, although it must be remembered that Tony isn't immune to the effects of heat and smoke, nor can he rely on his superpowers to protect him from villains powerful enough to overwhelm his fire neutralizing capabilities.

While the PCs may hear about Firefighter as his self-promotion campaign spreads his fame (the GM will have to decide how close to the campaign city Tony's small-town home is), he can also be encountered at the scene of a natural disaster, or he may call them for help when he finds himself over his head against a menace that his powers are ill-equipped to deal with (but which his adoring public and overwhelming ego expect him to handle anyway).

And because Tony is new to the whole superhero business, he's a prime candidate for misunderstandings, as he attempts to save people from a fire-using supervillain (one of the PC heroes), or finds himself tricked into fighting alongside a real supervillain.

Bigger Isn't Always Better

So, while they'll never replace the mightiest superheroes on Earth, in either comic books or RPGs, the little guys who populate the background of the superhero world don't have to be mundane anymore. And with a bit of imagination on the part of GMs and players, a local hero can show a superpowered city-slicker a thing or two about being a hero.

Pyramid Review

Among the Clans: The Andorians

Published by Last Unicorn Games

By S. John Ross with Steven S. Long, Adam Dickstein

128 pages, $22.00

I know exactly what you're thinking, because I thought it too. "Andorians?
What's up with that?" After kicking off the *Alien Intelligence* series of *Star
Trek RPG* supplements with the excellent *The Way of Kolinahr: The Vulcans,* you'd expect the second volume to describe a race like the Betazoids or even the Ferengi -- not the Andorians. After all, how many times do we ever see one of these blue-skinned, antenna-headed aliens? Unless I'm mistaken, they appear only a couple of times in The Original Series and movies and fewer still in the later series. Consequently, skepticism will be a common state of mind upon first approaching this supplement.

However logical that skepticism might be initially, it ceases to be so after reading only a few pages into *Among the Clans.* The book's first chapter focuses on the history of the Andorians and does so beautifully. In my opinion, the history sections of alien books are often dry and unexciting, providing only a few snippets of genuinely gameable information. In most cases, I'd have preferred additional cultural details instead. This book avoids that pitfall by combining the two approaches, anchoring many elements of Andorian culture in their history. A good example is the place of kethni, or clans, in Andorian culture, which gets a solid treatment in the first chapter.

The second chapter describes Andoria at some length, providing plenty of information on its most important sites. Given that Andoria had already been well described in the *Planets of the UFP* sourcebook, my skepticism rose to the fore again. (Admittedly, *Planets of the UFP* describes 24th century Andoria, as opposed to the 23rd century version in this book, but I felt my concerns were still warranted.) While there is a certain amount of repetition, the bulk of the chapter is made up of new material. Throughout are details designed as adventure seeds, a nice addition to the text.

Next is a short chapter on the flora and fauna of Andoria, including the physiology of the Andorians themselves. While certainly useful, it didn't strike me as providing as many scenario ideas as the previous chapters and thus interested me less. The chapter that follows is quite the opposite. Detailing Andor sector and its worlds, this chapter offered up a multitude of ideas for *Star Trek* episodes. Seven planets and a nebula are described, each one interesting in its own right. This is precisely the sort of material I like to see in sourcebooks -- the building blocks of good scenarios.

A large chapter follows that describes Andorian life and culture. Topics as diverse as blood-bonds, entertainment, sports, and the Andorian love of secrets are given excellent treatment. As with so much in the book, it's hard not to see ready game uses for this material. Also detailed are Andorian religions. I've often enjoyed alien religions -- and these are some of the more interesting I've seen -- but I can't help but find their inclusion odd in a *Star Trek* supplement. *Star Trek* has always seemed rather atheistic in its general tenor, especially in its recent incarnations. At the same time, it's filled with lots of "deeply spiritual" aliens (but no humans). Taken in that light, I can't grumble too much about its inclusion. The chapter is rounded out with a very nice guide to "thinking in Andorian" and a list of important clans. All in all, this is the best chapter of the book.

A short chapter on the Andorian Defense Forces (including its unique starships) appears before another describing the mysterious Am Tal. The Am Tal is a conspiracy of Andorians looking out for their species' best interests. While

secretive, the Am Tal isn't necessarily anti-Federation -- although some outsiders fear it to be. The Am Tal is a useful plot device and could easily serve as the focus of several fascinating episodes. There are also chapters on the place of Andorians in Starfleet (as well as the all-Andorian starship, *U.F.S. Eagle*), dueling, and martial arts. These too provide plenty of meaty game-related information. Narrators and players alike will find them quite useful.

Unsurprisingly, there is a large chapter detailing new Andorian overlays, skills, advantages, and disadvantages. Lovers of optional material will find plenty to enjoy here. For myself, I found some of it tedious. This isn't an indictment of the writing or its contents. I simply mourn the straightforward simplicity character generation had before the advent of so many options and choices. However, I expect my opinion is in the minority. The final chapter is a nice introduction to the Andorian language, Graalen. Not only is the language nicely constructed -- consisting of consonantal clusters and vowel modifiers -- but it'll prove helpful in creating "authentic" Andorian words and names.

The book includes full-color fold-out maps of Andoria, its home system, and Andor sector, as well as seven Andorian NPCs, each of whom provides an adventure hook or two. The art throughout is serviceable. Few pieces stand out as exceptional and much of it is repeated from previously published supplements. This is a tendency I've noticed in LUG supplements, one I hope they'll cease as their lines mature. The book's cover is quite striking -- if only for the artist's conception of what William Shatner would look like as an Andorian.

Small complaints aside, *Among the Clans* is a fine addition to LUG's growing *Star Trek* line. I would recommend it highly to anyone seeking to add some depth to their Andorian characters. It's hardly essential, though, and some may find it a little esoteric for their tastes. The Andorians, after all, don't have the high profile of the Vulcans or the Klingons. As presented in this book, they're still very interesting and you may be surprised how easily they grow on you; I know I am.

Seed of the New Flesh

Published by **Atlas Games**

Written by Greg Stolze

128 pages, $19.95

Seed of the New Flesh is the latest sourcebook for *Feng Shui* and is a welcome addition to the growing line of products being published by the game's new publisher. Atlas Games has produced another fine book, which it should be proud of, though the book is not without a few flaws.

This installment of the *Feng Shui* saga details the world of 2056, which is controlled by the Architects of the Flesh. Experienced players will remember that this faction controls almost all the *chi* generating sites of the future, poaches the netherworld to provide raw material for their army of grotesque abominations, and has molded society in its own image. Players might well expect an Orwellian dystopia, complete with mind control and thought police, and they won't be disappointed. What they might not expect are the anti-grav pursuit vehicles, gravity beam weapons, orbital laser platforms, and state-regulated marriages. There are a lot of great concepts in this book, some of which will greatly enhance your campaign -- others are a little over the top. For instance, the Phallusaurus machine pistol, an automatic pistol with a ludicrous name and a five-foot clip which is featured in, of all things, a game show.

Odd jokes that I don't get aside, the tone of the book is very irreverent, perhaps overly so. Compared to other *Feng Shui* supplements produced by Daedalus, such as the excellent *Guiding Hand* book, this book's tone can be very distracting. Where most game supplements read like an encyclopedia, *Seed of the New Flesh* feels like a Mike Bullard monologue (sort of an edgy Canadian version of Conan O'Brien). The books' irreverent tone and exaggerated descriptions of future society might have been better suited to a Jammer sourcebook detailing the anarchist rebel faction than the no-nonsense Architects and their horrific minions. Personally I found the tone a little distracting, but that's just my opinion, and frankly, Stolze's tone makes the book far less of a dry read than it might otherwise be. Especially well done are the vignettes that introduce each chapter; the story of the three rebels does a wonderful job of giving the world of 2056 a unique character.

This future world is a twisted parody of our own, with all the spirit and joy sucked out of it and replaced with fear, paranoia and a police state mentality. The world is universally depressing, unsettling, and occasionally downright stomach turning -- an excellent place to game in. The book contains six chapters and two appendices which touch all the bases.

Chapter 1 provides an overview of the futuristic society, emphasizing how it is different from the world of 1996. Mundane topics like food and shelter are covered in an engaging manner, and six new archetypes are presented. Of particular note are the Criminal Mastermind and Uberkid archetypes that offer a wealth of plot options for GMs just by allowing your players to select them for their characters.

Chapter 2 begins with a well-written primer on 1996 for time-traveling architect agents. By emphasizing the future's view of our present, this little gem really puts you in the mindset of a 2056 consumer. Following this intro are a number of hooks for players wanting to flesh out their 2056 archetypes. There are a lot of neat ideas here that can enhance your campaign, but also a few that can destroy a serious game (believe me, I've destroyed a few in my day). All it takes is one smart-ass player using mc (the 2056 gender-neutral form of Mr. and Ms.) and I'm sure you can imagine what could happen to your campaign.

Chapter 3 is a tactical overview of the Buro's objectives and current operations. Written in the form of an operational briefing to the buropresident, this section is filled with more than enough dastardly plots and machinations to fuel any **Feng Shui** campaign, no matter what juncture it is set in. I was surprised that there was no coverage of the Architects' home era of 2056, but this oversight could easily be chalked up to the Buro's belief that it has eradicated all resistance in the future. Also absent was any serious mention of the Jammers and their activities. For a faction that plays such a large part in the card game and has operatives aware of and traveling to other junctures, you would think that they would deserve at least a mention in the sourcebook of their greatest enemies.

Chapter 4 is a catalog of things that can hurt you in the future. Not every item here is dedicated to causing tissue trauma; but then again what would the future be without the **Feng Shui** equivalent of lightsabers, tractor beams, transport tubes, and force fields. This section presents a lot of new technology, which is at once familiar yet unique. For instance, the antigravity crane is nothing more than a blue wrestling mat that either reverses or negates gravity. Most of the items are very powerful and not meant for player use, but rather to use *on* players. A Buro squad with variable mass weaponry and a temporal perception suppressor will ruin any PC's day.

Chapter 5 presents major NPCs that players and GMs will recognize from references in the main rulebook, along with a handful of assorted strength NPCs. Strangely enough, the stats for Desdemonia Deathangel differ from the same character which was originally printed in Daedalus' **Back For Seconds** book. Whether this is simply the writer's interpretation of the character or Atlas putting its own brand on the **Feng Shui** game is largely immaterial to the character herself, but interesting nonetheless. I have visions of a Gen Con event being stormed by a posse of Atlas Games rules lawyers intent upon breaking up the game for not using canon stats for the NPCs. This chapter also fleshes out the rank and file troops of the Buro, with an interesting assortment of creepy abominations and mundane troops. I would have liked to see more creatures, but the three presented are formidable adversaries.

Chapter 6 details ten important Feng Shui sites in the future. The sites are imaginative, and great settings to use during a campaign. I would have liked to see stats and advantages for each site, so that you could reward PCs if they actually managed to attune themselves to them. My favorite part of the entire book is in this chapter, the Museum of Abomination Research, containing such oddities as the blood squid and the Flying Bladder. I can't imagine a GM not using this site in a 2056 campaign; the creatures it contains are imaginative, horrific, and deadly -- which always makes a great combination. I really hope this museum somehow makes it into the **Shadowfist** card game so I add it to my Buro deck.

Appendix A is an adventure for beginning characters, called "The Cancer Factory." Once you get past the initial railroading, the adventure is pretty decent. Nothing too deadly, but also not very forgiving of PC mistakes, all in all a nice intro adventure, with the added bonus that PCs might even gain a **Feng Shui** site to attune to.

Appendix B is the second adventure, entitled "The Fist of Shiva." Compared to this adventure, "The Cancer Factory" is the **Feng Shui** equivalent of **Keep on the Borderlands**. This adventure is brutal and unforgiving. Not only do the PCs have to stop the Buro from ending life as we know it, but they have to unite all the other factions to do so. Politics are as important in this adventure as tactics and strategy. I was especially fond of the adventure's pacing, which accommodates almost every action the PCs could conceivably initiate. Not only that, but there are a number of ways that the PCs can simply delay the inevitable success of the Buro's master plan, without actually stopping it. I can see a campaign revolving around numerous PC attempts to end this threat before they realize that they can't stop the Buro without using a weapon of mass destruction to eliminate the objective of their plot. The adventure is definitely designed for high-end players with a number of game sessions under their belt and a firm grasp of the politics and tactics of the secret war. Anything less and the PCs won't stand a chance.

Overall, the book is a great addition to the **Feng Shui** game, and while it doesn't have the visual appeal of similar products released by Daedalus, it is with a publisher with a reputation for stability and quality work. I miss the lush covers and interior art of previous **Feng Shui** books, but I'd miss new supplements even more. The book is meaty and the writing style, while a little too chummy for my taste, is very engaging and quite witty. The chapter heading vignettes are quite evocative, with images such as, ". . . It's like they opened up my skull and scooped out the part that gives a damn," that are reminiscent of the best *noir* movies. I was a little perplexed by a couple of pages of art that didn't seem to fit the book, especially the map of Boatman's house and the full page art at the end of the book, neither

of which has anything (directly) to do with the book itself. Other than these relatively minor complaints, I would heartily recommend this book to any **Feng Shui** players.

-- Andrew J. Lucas

by I.T. Carlino

Art by [andi jones](#)

Who knew that a simple metallic sphere six inches in diameter could cause so much trouble? But now Kitchoff was dead and Brilla was being seriously questioned by the IISS Security Branch. Their ship was impounded and Gregor had a three-hundred thousand year old artifact that he couldn't keep and that he couldn't get rid of.

Kitchoff had said find a bar named the "Happy Spacer" or the "Glad Astronaut" or something like that. Gregor stepped into the "Cheerful Pioneer." He sat at the bar. When the barkeep came over Gregor traced the symbol Kitchoff had showed him on the bar. The barkeep silently motioned him through a door next to the bar.

Gregor felt the snub pistol in his side at the same time he felt his arms pinned by a tangler.

"Well stranger," he heard a cold voice say. "Now that you've found the Thieves Guild, explain why we shouldn't kill you."

GURPS Space calls it the Organization. **Star Trek** calls it the Orion Syndicate. Andre Norton named it the Thieves Guild, a title which has become a science fiction staple. This mysterious organization has inhabited many diverse backgrounds, from **Classic Traveller** to **Babylon 5.** Tell Players they are dealing with the Thieves Guild and chances are they already have some idea of what's going on. They know that they are dealing with an organized group that is outside the law. A criminal organization of interstellar proportions. A mysterious empire of illegal trafficking, eagerly sought by the forces of law and order.

How will your players deal with this vast interstellar cartel? Who are the members of this mysterious extralegal group?

Robin Hood or Al Capone?

First you must decide on the exact nature of the Thieves Guild in your campaign. Are they a group of honorable thieves, stealing from their victims, but leaving murder to the Assassin's Guild? Or are they a syndicate of Mafia-like hoods dealing in drug trafficking, gunrunning, prostitution, the black market, murder for hire, and anything else you can think of? Either extreme can make for an interesting addition to an adventure.

Honorable Thief

In a universe where the Thieves Guild is the Brother & Sisterhood of Skilled Practitioners, members of the guild will follow a strict code of honor. They will kill only as a last resort. They will keep the existence of the Guild, and their association with it, a closely held secret. Members will recognize each other with covert signs and secret

passwords. Membership in the guild will be a jealously guarded privilege, with only the most skillful thieves granted the prestige of the Master Thief title.

PCs might hire a member of the Guild to help with a special "recovery" assignment. Or a Master Thief might fill the role the Thief character has fulfilled in fantasy games since their inception, that of trap detection and lock picking. This thief has access to high tech devices, and his challenges come in an Ancient artifact site or an Imperial Naval Base. Sometimes it can be fun to throw a little dungeon crawling into an otherwise high tech campaign.

The Thieves Guild member is built using the standard Thief/Spy skills from *GURPS Basic,* p. 66. As noted, the Traps/12 skill is the same as Electronics (Security Systems). Add Computer Hacking (*GURPS Compendium I,* p. 160). The Thieves Guild is a Patron Advantage (20 pts). Members who are Master Thieves have, as far as other Guild members are concerned, a Status of 2. They can also have a dual reputation, which gives a +2 reaction to other underworld types and Guild wannabes, but -2 to ordinary citizens. Higher reputation can be bought, but will always be a dual reputation. The only mandatory disadvantage is Code of Honor (-10 pts), to the Thieves Code.

The Thieves Code: Never betray the secrets of the Guild. Never reveal their signs and passwords. Never give evidence against a fellow member. Kill only in self defense and as a last resort. A properly skillful thief will never have to kill to accomplish a successful theft.

Other disadvantages, such as Greed, Overconfidence or Kleptomania are also appropriate. Honesty is not.

The Company of Goodfellows

In this universe, the Guild is a massive parasite on the spacelanes. A Megacorp in everything but name, and in the commodities it trades. A vast array of PC and NPC types will populate the Guild. Cooked lawyers, thugs, assassins, thieves, executives are all involved in their heinous business. The PCs can be low level freelancers working for a Guild boss. Perhaps they're unknowing dupes, thrust into an underworld of which they are unaware. Or they can be brave Space Rangers, combating the corruption of the cartel.

Such a massive organization makes a good enemy. Perhaps the PC was an inside man who wanted out. Now the powerful Patron has become a dangerous enemy hunting him from system to system. Perhaps the PC was an innocent bystander, who now knows too much. The organization may be in competition with the PCs for a particular treasure or resource. Or the PCs may have something that the organization wants: That ancient artifact, that rare jewel, the plans to a special device.

Members of the Guild may be built using standard templates, to which are added a Patron advantage. Characters high in the organization may have Status, in some cases as high as an Imperial Noble. Even low-level characters will have a Reputation that will strike fear into the hearts or ordinary citizens (and intelligent PCs). The Patron advantage may extend to dependents and other family of Guild members, as the Guild takes care of its own, in more ways than one, if you talk to the wrong person.

Like a Megacorp, the Guild has a board of directors, the Dons, who rule their individual empires with an iron hand. They are aided by lieutenants who carry out orders and insulate the Don from the actual illegal activity. Like the Yakuza, the Guild is organized into families, adopting a relationship known as *oyabun-kobun* (father-role/child-role). The oyabun is the "father," providing advice, protection and help; the kobun is the "child," swearing unswerving loyalty and service whenever the oyabun needs it. In the ***Traveller*** setting, it can be said that the Guild is a distant descendant of Solomani criminal gangs.

Minidons rule the crime networks of individual worlds and systems. They don't deal in piracy; many of their products -- drugs, sex slaves, illegal tech, etc. -- travel on ships between systems. Piracy disrupts this traffic and causes the government to increase patrols.

If the central interstellar government is weak, then the Guild might actually own whole systems, and even have their own battle fleet. If the government is strong, with a cadre of Star Rangers, System Custom Services, and honest local police, the Guild might be a shadowy, underworld organization, preying on the weak and disenfranchised.

It Takes a Thief . . .

Both versions can be combined into one campaign. The Thieves Guild can be mortal enemies with the crueler Organization. The Honorable Thieves might despise the Organizational flunkies as beneath their station and seek to steal from the Organization at every turn, or even shut down it's activities. Or they might have to eke a living out of Organization leftovers, always aware that the big bad cartel could crush them whenever it wanted. PC's can be caught in the middle. They can attempt to aid the Honorable Thieves against the Organization. They can be law enforcement officers attempting to stop both groups.

The Manual for Life, 23rd Edition

by Loki Carbis

Art by [andi jones](#)

Despite its innocuous title, the *Manual for Life* is perhaps the most dangerous book in the world. Not in that the knowledge contained in it is dangerous to the reader, but in that its possession is perhaps more fiercely contested than that of any other book, ever. Unusually, there is only ever one copy of it in existence, and later editions are in fact more valuable than earlier ones.

Warehouse 23: The Manual for Life, 23rd Edition

The book was written by Samuel T. "Duke" Brunswick (currently lived 1909-present). It is a largish, handwritten book, expertly leatherbound, resembling a hand-made journal -- but it is truly one of a kind. Brunswick was an inventor of some note during the 1930s, although his fame was mostly restricted to those who knew of his devices -- a small group composed mostly of government agents. Like many scientists of his era, he was something of a polymath, equally at home in physics, chemistry, engineering or any of a dozen related fields. Brunswick had no formal qualifications for anything, due largely to his preference for solitary work. No doubt this preference is also responsible for his lack of knowledge of biology or medicine -- Brunswick disliked both nature and other people, although his elaborate good manners concealed the latter from all but those who knew him very well. The Duke (as he was named by an English journalist amused by Brunswick's aristocratic temperament) was a driven man, obsessed with doing things better and more efficiently.

As he neared the end of his life, he devised a workable means of time travel, although one that worked only for inanimate objects. After an initial period of dismay at what he saw as his failure, he realized that he had an unprecedented opportunity. He wrote down all of the scientific advances he and others had devised over the course of his lifetime, and a detailed account of his life, with particular attention to mistakes he had made and time he had wasted. And he used the device to send the book back in time, where it arrived on his younger self's bedside table one February morning in 1926.

At first, the arrival of the book puzzled the younger Brunswick. But it contained secrets that only he knew, and some predictions of the (to him) near future that soon came to pass, assuring Brunswick of the book's veracity. He set to work with renewed determination, able to advance upon discoveries he had already made, and thus the cycle began.

A work like this would have created quite a disruption in history if any word of it ever leaked out, and Brunswick, in his many versions, has been careful to avoid that, while still trying to direct the research of others to help make "discoveries" that he himself had already made.

At the current time (whatever that might mean), the Manual has gone missing from the laboratory of Dr. Brunswick, and is somewhere in the outside world. Its pages contain the equivalent of hundreds of years of scientific research and technological breakthroughs -- along with careful and easy to follow instructions of how to duplicate them starting from a 1909 level of science. The TLs of the devices in the book thus range from TL6 as far up as TL11. Realistically, just about any device in either volume of ***GURPS Ultra-Tech*** could be found in the book. (Due to Brunswick's

specialization in physical sciences and engineering, nothing from *GURPS Bio-Tech* is in the book.)

Adventure Seeds

Although the Manual could show up in nearly any setting, it is best suited to *GURPS Cliffhangers* and *GURPS Illuminati* games, with *GURPS Atomic Horror* falling somewhere between the two. In a pulp-style setting, Duke Brunswick might well be a pulp adventurer himself (although he would more likely be a patron or supporter of the characters, since he would hate to have his studies interrupted by anything). In a more modern, conspiratorial setting, he is likely thought of as a harmless crank by most of the establishment -- although if he cared to be one, his science would easily make him an excellent Secret Master. And the missing manual may well be lost somewhere in the depths of Warehouse 23.

Other variations include *GURPS Cyberpunk* or *GURPS Reign of Steel* -- just move the timeline up as many years as the campaign needs, and adjust the tech levels accordingly. Further out, the Manual could be a grimoire rather than a textbook in a *GURPS Fantasy* setting. (In *GURPS Technomancer,* it could well be both! And if Duke Brunswick existed in a *GURPS Mage: The Ascension* game, he'd certainly be a member of the Sons of Ether, and most likely on the run from the Technocracy.) And how about a *GURPS Alternate Earths* game where every time Brunswick sends the book back again, he creates another, ever-so-slightly different, alternate timeline? (To really make such a setting interesting, his devices would have to change history somehow -- most likely by altering the course of World War II.)

[*Author's Note:* "The Manual for Life" was inspired by R.A. Lafferty's brilliant short story "Rainbird" (unfortunately out of print), and to a lesser extent by another short story, Robert Heinlein's classic "By His Bootstraps."]

Pyramid Pick

Return To White Plume Mountain

Published by [TSR/Wizards of the Coast](#)

Written by Bruce R. Cordell

64 Pages, $12.95

Part of TSR's 25th Anniversary Series, **Return to White Plume Mountain** is a
revisiting of one of the earliest modules released by TSR -- **S2: White Plume
Mountain** by Lawrence Schick. As the name implies, **The Return To . . .** series
revives some of the classic adventures that formed the shared history of many long-time **D&D**ers. The module is for 4
to 10 characters of 7th to 10th level, with a recommended minimum level total of 45.

The adventure consists of, essentially, a dungeon crawl. Appropriately so, since the original adventure was exactly
that; it concerned a party of adventurers tasked with penetrating the active volcano lair of the (vanished) arch-wizard
Keraptis to recover three powerful magic weapons. **Return** expands upon the scope of the original adventure -- four
false Kerapti, former servants of the wizard who each believe they are the archwizard, each hold a portion of the
tunnels under White Plume Mountain. It is the job of the PCs to recover the (now four) magic weapons of Keraptis
from these pretenders. The adventure gives the PCs opportunities to work with the various factions, but in the end it
still comes down to standard, alignment-based politics -- the factions are all ultimately evil and must be destroyed.
RTWPM does suffer what I consider the "normal" **AD&D** module flaws -- way too many magic items as treasure,
wandering monsters, and a plethora of monsters crammed into small tunnels.

RTWPM expands the limited tunnel system that was in the original module to provide a much larger scope for the
adventure. It also details other places on the mountain, with evocative names like Thingizzard's Hut, Dead Gnoll's Eye
Socket, and The Cursed Ruins of Castle Mukos. These were mentioned only in passing in the original module, and
they are important parts of the adventure. The maps are full color, with color-coded room numbers to note which areas
are controlled by which faction, without detracting from the attractiveness of the map.

GMs and players familiar with the original module are likely to enjoy this revisit. However, changes have been made.
The magic weapons of Keraptis -- the trident Wave, the hammer Whelm, and the sword Blackrazor have all had their
alignments changed to Neutral Evil. This may be to keep non-evil PCs from keeping and using these weapons. A
fourth weapon, Frostrazor, has been added. While powerful like the rest, it is somehow jarringly different and feels
like it was added in to pad out the number of factions, or perhaps provide a reward useful to a non-evil party. **RTWPM**
also has some assumptions about what has passed before, so a campaign that uses the plot of the original (or has PCs
who have completed the original adventure) may find that the new adventure does not quite fit without modifications.

RTWPM does have more than just the adventure itself -- seven new monsters, the weapons themselves, and some great
names for the false Kerapti (Killjoy and Mossmutter being my personal favorites). Monster text descriptions are boxed
and listed where they appear, but their actual game stats are listed in an appendix in the back. This can be frustrating -
- to use a monster you need to look up a description in the main text, and then statistics in the appendix.

The layout is decidedly odd -- the Table of Contents is practically a combination table of contents and index. Items are
listed more-or- less in page order, but not necessarily. The dungeon maps on the inside covers, and the wilderness map
and the PC's version of the wilderness map are not on facing pages. This results in a lot of page flipping to use the
adventure.

Overall, it is a little pricey at $13 for 64 pages, but the adventure is interesting. Despite the haphazard layout, the text-to-art ratio is high (and the art is good), and it is was worth the price to me. I personally bought it to adapt to **GURPS** and found little trouble doing so -- though a familiarity with either 1st or 2nd edition ***AD&D*** is probably necessary.

Dork Tower!

Dork Tower!

Murphy's Rules

by John Kovalic

Murphy's Rules

Murphy's Rules

The Final Second Sight

This is turning out to be a very difficult column to write.

It's pretty much the last thing I'm going to do for *Pyramid,* and finishing it will mean my tenure here is done. And for some reason, I'm having a little trouble coming to that point.

Change is something most people approach with some trepidation, and it's worse for me than for most people. I'm a real creature of habit, the "devil you know" sort. Change doesn't come easy. So here I am, resisting this final moment of the old, comfortable gig, dragging myself kicking and screaming into a new phase of my life and career.

But I had an outline in my head for this thing, so maybe the way to get over this procrastination is to just dive in . . .

The Past

I promised last week that I would talk about what we've done right in Pyramid's near-seven-year (so far) run, and that list is long and distinguished. But since I don't want to come off as overly self-serving (a little bit self-serving is OK, but I don't want to push it), I'll keep this short.

I'm very pleased with the sheer amount of material we've been able to present, especially online, where we put out the equivalent of a year's worth of paper *Pyramids* every six to eight weeks. And while not every single article was a five-star winner, we've done a lot of neat stuff, and on a number of different subjects.

We've covered the adventure game industry like nobody else. When *Pyramid* was a paper endeavor, our long lead times meant we did analysis pieces, long-view looks at trends and "big picture" sorts of subjects. Then, when we switched to the Internet, everything changed instantly. We became, thanks to the speed and immediacy of the net, a headline service. We broke story after story, before anybody else. And we were still able to offer our share of analysis and "big picture" stuff.

And, perhaps most importantly, we've built that much-to-be-hoped-for "online community" that most websites want. We've got chat rooms and message boards, and a group of subscribers that use them. These forums have their own character (and their own characters), and they have become a little extended family. I'm very pleased with that, and I don't see why it won't continue.

The Present

This is where I do all my thank yous. *Pyramid* wouldn't be anything at all without the dedicated, longsuffering, and frequently underpaid work of these people:

Derek Pearcy. It all started with him. He and Steve invented *Pyramid*; Derek put together the first three issues, and was instrumental in most of the other paper ones, doing all the graphic design and layout, and contributing tons of other material.

Steve Jackson. Of course. Never gave up on the idea of a game magazine, never gave up on the Internet. Never gave up on me, and gave me the freedom to put together the magazine I wanted to do.

Jackie Hamilton. Webmaster and programmer par excellence. There's a tremendous amount of behind-the-scenes programming that goes into all the nuts-and-bolts stuff that gets the magazine up on the web every week, and keeps the message boards running, and works the archives and the search engine, and handles advertising payment and placement, and subscription database management, and maintaining and generating email lists, and more. And none of this came in a box marked "GigantoCorp's Online Magazine Software." No, Jackie wrote it all herself, from scratch. And debugged and tweaked and fixed. And kept adding features, always looking for ways to offer more value and

make things work better. She's the best.

And I should mention **Keith Johnson,** who's done a great job as Assistant Webmaster, including doing all the dirty work of the weekly uploads and designing all the article headers for the past year, never being anything less than cheerful, timely, and competent. He's a real pro.

The Contributors. Writers, columnists, graphic designers, art directors, and artists, too many to count. And S. John Ross, who took over for a few months in late 1998 and carried the torch well. And a special thanks to our three newest columnists, Micah Jackson, Emily Dresner, and John Wick. Each and every one of them had a big part in this. That said, and with the fear that someone else might take offense by being left out, I must mention two special contributors:

Kenneth Hite. I simply stand in awe of this man's knowledge. What he knows, and more importantly, how his mind puts it together, is inspiring. And he's a tremendous writer. One of the best parts of this job was knowing I was the first person on the planet to read his latest "Suppressed Transmission" every week. Now, I just have to log on Friday morning and read it along with everyone else. It won't be quite the same, but it will still be fun. And I will still be in awe.

John Kovalic. How someone can be this talented and this funny, and at the same time also be one of the nicest, most forthright, most decent people I've ever met, is beyond me. John is an inspired cartoonist, a very good writer (though he's such a success at cartooning these days, there's not much time for mere words), and a truly funny guy with a great eye for a gag. If I had a nickel for every person who told me they subscribed (or resubscribed) to *Pyramid* just for "Murphy's Rules" or "Dork Tower," well, I couldn't exactly retire, but I could at least go out for a nice dinner with my wife. Thanks, John.

The Future

The future of *Pyramid* is Steven Marsh, just named editor. Next week will be his first issue, so be gentle. I hope he'll continue the things I've been doing that he likes, but I also hope that he feels free to change the things he thinks need changing. I hope he makes *Pyramid* his own, and I hope everyone is happy with the results.

One last Dreaded Slushpile Update: I got another 30 or so articles taken care of this week, but I must pass the reins with a way-too-high slushpile count of just over 90. You can start bugging Steven about it, now . . .

As for me, I'll be around. I plan to continue to read *Pyramid,* and I will probably make an appearance in the occasional chat or on the discussion boards. And since the current *Pyramid* readership is both gaming-savvy and Internet-wise, you will no doubt find out about my new projects soon enough. But like I said last week, it's not *Pyramid's* job to plug my new gig. There'll be plenty of time for that later.

It's been fun. And a privilege. Thanks.

-- Scott D. Haring

Things To Do In Gaming When You're Dead

"But that the dread of something after death,
The undiscover'd country from whose bourn
No traveller returns, puzzles the will
And makes us rather bear those ills we have
Than fly to others that we know not of?"
-- William Shakespeare, *Hamlet,* III:i

Is there any better way to start a story than with a mass death? Well, probably, but roleplaying game worlds being the high-fatality zones they are, and roleplayers being the heedless kamikazes that they can be, it's always good to be prepared. And if you can be so prepared, while at the same time throwing the characters for an enormous loop, well, that will just teach them to be more careful with the Semtex next time. The following, then are a quartet of possibilities for PCs in their afterlife. I've avoided the relatively obvious possibility of dragging out **GURPS Undead** and starting up an all-ghost campaign. It can be fun, but bright folk like you hardly need to read a whole column on the notion. For similar reasons, in games with a well-defined afterlife (such as the occasional fantasy game sunk more deeply than most into a cosmological narrative), you're probably better off sticking to the script. Conversely, if you intend the death or deaths to serve as heroic-tragic counterpoint (as in **Pendragon** perhaps), empirical evidence of the cosmos' uncaring nihilism (as in **Call of Cthulhu**), or simply as a really salutary lesson about keeping the red wire away from the blue one when you're scooping the aforementioned Semtex into some lucky bunker's air slit, well, feel free to let the PCs remain a noble memory or a smear on the countryside. But if you've been running a relatively "straight" game -- ideally, it seems to me, of relatively modern suspense, action, or conspiracy -- well, here are some notions for what lies across yon bourn.

"The Bodhi-dharma has left for the West."
-- Taoist saying

In Taoist legendry, when a sage like the Bodhi-dharma or Lao-tzu dies, he doesn't really die like you or I do. He "leaves for the West," traveling over the mountains to, well, an undiscovered country and so forth. This odd habit of leaving for the West encompasses most of your brighter pagan and post-pagan traditions, who notice pretty early that the sun sets there. Hence, the Celtic underworld Annwn and the paradisiacal Tir Nan Og lie to the west, as do the Field of Bulrushes (and all those necropoli) in Egyptian myth, and so on and so forth. But what's to stop you from assembling the newly-dead PCs at the mouth of a mountain pass with the rising sun behind them, describing the wide plain stretching forth ahead of them? One minute they're gleefully planning ad hoc urban renewal, and the next they're walking westward and brushing plastic explosive taggants out of their hair.

Make this journey as purely allegorical as you'd like. It can have the Ferryman, the Sword Bridge, the Cave, or any other archetypical spirit realm furniture you'd like. Or, it can resonate with echoes of your own campaign. If, say, they spent much of their career harassing Dynamic Aerospace, perhaps their primary foes (or allies) in the afterlife ride giant eagles, or bats, or pterodactyls. Corporate logos can recur in the heraldry of spectral knights; dead ringers (heh heh) for old mentors or sidekicks can show up as beggars, mysterious strangers, guides, or what have you. Get all your Epic Fantasy Quest juices flowing, although try to keep it to sort of "peripheral vision fantasy" unless you just want the poor PCs to die all over again, this time of cognitive dissonance. But, sure, throw in a Doomed Tower, a true princess, a magic sword, one ring, dark riders, the whole megillah. Just reinterpret those archetypes in terms of your earlier campaign (when the PCs were alive) and of the nature of your particular Western afterlife. Speaking of Westerns, of course, the mythic American West complete with ghost towns and gunslinging emissaries of death would make a fine environment for a properly evocative fantasy quest. So go West, young dead man.

"Kill them all; God will know His own."
-- Arnaud-Aimery, abbot of Cîteaux, at the siege of Bèziers (1209)

Of course, you can vastly increase the fantasy flavor of the postmortem experience by sending the PCs to Hell. Not, I hasten to add, Dante's or Milton's or any of them classy Hells. More like a bastard spawn of *Evil Dead III* and

Warhammer Hell; full of backstabbing orcs and spell-hurling demons and giant cannibalistic skeleton-monsters. Season it with oceans of flaming sulfur and a perpetually-lowering sky shooting luckless NPCs with the occasional azure lightning bolt. (For some reason, I'm flashing on *GURPS Myth* as providing the ideal flavor for this sort of afterworld.) The point of this campaign arc is for the PCs to carve out their little corner of Gehenna by might, menace, or Machiavellianism. How do a squad of recently-demised Black Ops deal with armies of goblins, demon lords, skull-headed fire-shooting liches, and giant castles of basalt? (Answer: recruit, kill, evade, and usurp, respectively.) If you've shown a tendency to overemphasize games of subtle research and stealthy infiltration, perhaps a little mayhem with bang-stick and bastard sword is just what the doctor ordered. (That would be the Malevolent Doctor G'krang, Lord of the Horde of the Sharpened Bones.) This is just the kind of Hell that always has a convenient portal opening back into the World of Flesh, although usually in some distressing era like the Hittite Empire, or post-holocaust Tennessee.

"Here patriots live, who, for their country's good,
In fighting fields, were prodigal of blood:
Priests of unblemish'd lives here make abode,
And poets worthy their inspiring god;
And searching wits, of more mechanic parts,
Who grac'd their age with new-invented arts..."
-- Virgil, *Aeneid,* Book VI

If you like your afterlife a little classier and a little clearer, try popping your recently-deceased party into a Virgilian Tartarus, peopled with the great heroes and worthy foes of the past. Again, this is a great place to put familiar figures from the "living" section of the campaign -- such as that archvillain the PCs finally killed after a year and a half of game play. *GURPS Riverworld,* either played straight or as an inspirational structure for your own fantasy milieu, is the sort of direction this passage points. Another is the *Heroes in Hell* series of shared-world novels and stories. You can have a lot of fun throwing your defunct party of *GURPS Illuminati* FBI agents up against Agamemnon's Myceneans, or Queen Elizabeth's floating court on the River of Tears. (This is the kind of setting where you can really get your nickel's worth out of the *GURPS Who's Who* books, too.) Or mix and match; Alexander the Great leads a mixed force of Comanches and Black Watch against the walls of Dis! Nikola Tesla tries to harness the Fire Falls of Eryx to power the industrial-alchemical plant of James Watt and Paracelsus! All while your players try to keep Skorzeny from assassinating Lorenzo de'Medici and throwing the whole balance of postmortem power out of whack.

"If these gatekeepers were not supplied the proper passwords by the human soul on its return journey to heaven, they would turn away a person and prevent that soul's progression to the upper realms. Without knowledge of the passwords, the soul, having a specific gravity, would be pulled into the rotation of the sphere to revolve there forever or until an amnesty was given. An unfit soul might be forced to pass through the body of the constellation Draco, reptilian Lord of Karma . . ."
-- Claire Watson, "Ritual for the Portal of Planetary Ascension"

Or, you can treat your party's death as the beginning of some High Strangeness Indeed. The always-reliably clothheaded Edgar Cayce served as the bridge between bizarre 19th-century spiritualism and vagrant 20th-century New Age theosophy when he postulated the notion of the "planetary sojourn." In Caycean mythopoeia, when you die, you travel "between lives" to the various planets, in what one can only hope is an unconscious steal from Dante's *Paradiso.* All you have to do is make it true. You can spackle the Bradburyesque jewel deserts of Mars or the Sargassos of fizz-water Venus with angels, the more weird and pacific class of dead person (Beethoven, Shakespeare, Marie Antoinette, and the rest of the past life crew), and lots of American Indians (who spiritualists all seemed to regard as Hermetic psychopomps through the Summer-Land beyond theVeil). This setting can drift more toward the "contactee" UFO mythos of a *GURPS Atomic Horror* complete with blonde aliens and metal spheres. Or, it can amp up the metaphysics a la C.S. Lewis' *Space Trilogy.* The important thing here is for every NPC to be really annoyingly calm and positive about the situation ("You've passed over, now; here in Summer-Land we need no food; your Aunt Mildred is here.") while you slowly drop hints that this might all be some kind of vast otherworldly Potemkin village.

Perhaps the kindly White-Robed Ones lead away the ghost of that nice French aristocrat when he tries to warn the PCs about something under the Crystal Gate of Mercury. Or perhaps they all fear the mysterious power of "Helena," and

the players discover that Summer-Land is at the mercy of a psychic madwoman who rules them with an iron mind in the name of the Hidden Mahatmas. Lots of puzzles and clues, like a particularly absinthe-ridden game of *Myst,* all pointing to purpose and construction. (If you simply must have combat, fencing might carry the right flavor; or archery. Or duels of flowers.) Once they've figured it all out, and forced things to a final confrontation, have the PCs wake up in a hospital. They miraculously survived the Semtex detonation, and they must have been delirious (or comatose) for the past week. But that's understandable, given everything they've been through. Why, if that nice Mrs. Helena hadn't made sure they got to the hospital, they might have died. Cue *Twilight Zone* music -- or the theme from *The Prisoner.* Imagine the fun, if the players suddenly fear that they *can't* die . . .

Reviews of Gameable Fiction

The Deryni Saga, by Katherine Kurtz

Review by Stephen Kenson

The Deryni live in a society that is much like that of the Middle Ages: kingdoms vie for control of land and wealth, ancient dynasties of royal blood rule the temporal world, while the Church oversees the spiritual well-being of the people. Most folk live humble lives as farmers and crafters in small towns and villages, while a small percentage lives in grand cities where the seats of power are located. Wars happen from time to time, but the people place their faith in the King, and in God, to deliver them from danger.

But the Deryni are not like other people. They are different, possessed of special gifts. Their powers are spoken of in legend, and people fear them for the magic they control. That fear has led to persecution, witch hunts, and oppression following the overthrow of a Deryni usurper and the restoration of the rightful line of human kings. Deryni struggle to right ancient wrongs and overcome the prejudice against them while using their powers for good, dealing with enemies from distant lands, and foes that stand very close indeed.

Such is the setting of Katherine Kurtz's series of fantasy novels, which currently spans four trilogies and a collection of short stories. Set in the kingdom of Gwynedd, the stories describe the struggles of heroes, both Deryni and human, over more than two-hundred years of history.

The History of Gwynedd

The human House of Haldane originally ruled the kingdom of Gwynedd. Generations before the beginning of Camber of Culdi, the Deryni House of Festil led a coup against the Haldanes and took the throne. With their magical powers, the Festilic Kings ruled Gwynedd, and became well known for their decadence and their cruelty. At the start of the story the young King Imre rules, along with his sister, Princess Ariella.

A close advisor to the royal court was Camber, Earl of Culdi, a renowned Deryni scholar and thinker, who left court when he felt he could do no more to restrain Imre's excesses. Members of Camber's family discover that a royal heir to the Haldane line has survived and is living as a cloistered monk. The Earl of Culdi and his family manage to restore the reluctant heir to his rightful throne, with the aid of the predominantly Deryni Order of St. Michael. The key to the restoration is a ritual Camber discovers for passing Deryni-like powers on to the human Cinhil. Although Imre dies, his sister Ariella escapes, carrying Imre's child, the fruit of their incestuous relationship.

The restored kingdom is not all that it should be. King Cinhil Haldane is a reluctant ruler, who longs for his old monastic life. His wife and queen is scarcely more than a teenager, and his first two sons are born sickly and malformed. More importantly, old hatreds and

prejudices against the Deryni, suppressed by the Festilic Kings, begin to surface once again. The Deryni practice of magic is called into question by the Church and secular authorities.

Camber fakes his own death to help quell some anti-Deryni sentiment from the King. He assumes the guise of one of Cinhil's advisors to continue to guide the kingdom. The "miraculous" events associated with Camber's "death" lead to him being declared a saint, despite his own best efforts to block the canonization. All the while, anti-Deryni sentiment grows amongst the human nobles and clergy.

Years later, Cinhil's death triggers an outbreak of violence against Deryni. With the king's heir only a child, a council of regents seizes control of the kingdom. The human-controlled council passes draconian laws preventing the Deryni from holding land, offices, or titles, and barring them from the priesthood. Many Deryni are killed and most others are driven underground, forced to hide their true natures. Camber's heirs and allies form the Camberian Council, a secret organization devoted to preserving the heritage of the Deryni and restoring Gwynedd to the control of the true Haldane kings rather than the regents.

Centuries later, at the start of Deryni Rising, the Haldane line is strong once again, but the Deryni have become a pale shadow of what they once were. Only a few Deryni are brave enough to exist openly. Deryni still influence the Torenthi kingdoms of the East, the land the House of Festil sprang from. Gwynedd's most famous Deryni is Alaric Anthony Morgan, the Duke of Corwyn, a friend to King Brion Haldane and mentor to Brion's fourteen year-old son Kelson.

Charissa, the Duchess of Tolan, and a descendant of Imre and Ariella, decides to lay claim to the throne of Gwynedd. She assassinates Brion using magic, and it is up to Morgan and his cousin Duncan to help Kelson gain the abilities he needs to fight the usurper in magical combat. Kelson must face challenges from would-be usurpers and rebels during his reign, while working to create peace and cooperation between humans and Deryni, and to reverse centuries of prejudice and mistrust.

The Deryni

Although they are considered a separate "race" by many, the Deryni appear human in all respects, and are capable of intermarriage with humans. They are set apart by their magical abilities, which are inborn, brought out and refined through training and experience.

Deryni powers are generally psychic in nature, things like telepathy, ESP, psychometry, and telekinesis. They also make use of ritual magic, trances, and meditation to work their spells. The ancient Deryni possessed even more powerful magic, including the ability to create "transfer portals" for teleportation across vast distances, and the ability to heal injuries and illnesses. Some of these abilities (like the secrets of portal creation) have been preserved by the Camberian Council, while others (like healing) are only being rediscovered in Kelson's time.

Deryni magic is rarely flashy or spectacular, tending towards the subtle. Deryni also need considerable concentration and training to use their abilities.

Deryni are vulnerable to a drug known as merasha, which neutralizes their abilities and makes them disoriented and nauseous. Their human (and even Deryni) foes used merasha as a weapon against the Deryni, one of the ways in which humans have been able to oppress the Deryni for centuries.

Deryni Campaigns

The Eleven Kingdoms offer numerous possibilities as a roleplaying setting. Players can take the roles of various nobles and worthies in the royal court of Gwynedd, for example. The

characters might be Deryni, human, or a mixed group. They can be nobles, knights, and even clergy. From Camber's daughter Evaine to Morgan's wife Richenda, women have a strong place in the Deryni saga. Deryni women like Ariella and Charissa are dangerous foes, as well.

Gamemasters can set a Deryni campaign during or just after Camber's restoration of the Haldane line, when human prejudice against Deryni is first beginning to surface; during the harrowing time of the Council of Ramos, when Deryni are being hunted down; in the long years before Kelson's reign; or after Kelson is crowned king and begins working to reconcile humans and Deryni. Political intrigues, quests, magical duels, secret societies, and other activities can fill the lives of the characters with adventure.

The *GURPS* rules can handle the Deryni quite well by treating most of their abilities as psionic. The ritual magic rules from *GURPS Voodoo* also fit the setting perfectly. Deryni in Gwynedd either have a Secret (for those who conceal their heritage), or a Social Stigma (for those who don't).

Another game system that would handle the world of the Deryni well is Chaosium's *Pendragon RPG*. With its Middle Ages flavor, system of Passions, and its mysterious magic, Pendragon suits the feel of the Deryni stories quite well. Gamemasters can also adapt nearly any other fantasy or generic RPG system to suit the setting of the Eleven Kingdoms.

The Deryni saga also provides useful information for GMs running a pseudo-historical fantasy campaign. A long-time member of the Society for Creative Anachronism, Ms. Kurtz excels in describing the courtly manners, heraldry, Church rituals, beliefs, and day-to-day life in the world of the Deryni. Her material on the Christian church alone is invaluable for a game setting like *Ars Magica*, or Yrth from *GURPS Fantasy*.

Sources

The current Deryni novels are (in chronological order): *The Legends of Camber of Culdi* (*Camber of Culdi*, *Saint Camber*, and *Camber the Heretic*), *The Heirs of St. Camber* (*The Harrowing of Gwynedd*, *King Javan's Year*, and *The Bastard Prince*), *The Chronicles of the Deryni* (*Deryni Rising*, *Deryni Checkmate*, and *High Deryni*), and *The Histories of King Kelson* (*The Bishop's Heir*, *The King's Justice*, and *The Quest for Saint Camber*). There is also a collection of Deryni short stories, entitled *The Deryni Archives*, all published by DelRey. Ms. Kurtz has also written an invaluable index and reference work entitled *Deryni Magic*, which provides considerable information for gamers interested in the history and abilities of the Deryni.

?

by Ralph Dula

Art by Art Today and Colored by Phil Reed

He should be a renowned hero of the Confederate States of America, the man who led the army that captured Santa Anna at The Battle of San Jacinto, and was president of the Republic of Texas from 1836 to 1838 and 1841 to 1844. Oh, they may have named a city after him, but in the Weird West one of his deeds earned him the eternal wrath of the entire CSA. It was not his years of living with the Cherokee Indians and his fervent support of Indian rights. Nor is his saving of Santa Anna from a lynching so that he would recognize the existence of the Free Republic of Texas what he is reviled for. No, Houston is remembered for his speech as governor when the rumblings of the War Between the States began, when Texas was called upon to take a side. "Your fathers and husbands, your sons and brothers, will be herded at the point of the bayonet . . . The North . . . will overwhelm the South." Perhaps even those words could have been forgiven, had he not resigned as governor rather than take an oath of allegiance to the Confederacy. He died in 1863, the year of the Reckoning; honored by some, scorned by most.

It was this scorn that stopped the Texas Rangers from investigating when Houston's body was stolen from its final resting place. When reports came in that someone was tracking down items from the Houston estate a few eyebrows were raised, but no action was taken by the already-overtaxed Rangers. It was only when a group of shamans from the Cherokee Indian tribe came to Texas that anyone paid attention. The shamans said that they had shared a vision, where the spirits told them that Houston's deeds had imbued that which he left behind with great power. Faster than you can say "cow pie" the hunt was on, with an unlikely team of Rangers and shamans hunting down the Black Magicians who were behind the grave-robbing and theft of Houston's personal effects. Once the smoke cleared the heroes learned that the magicians had already determined which of Houston's possessions had become relics, and sent them out west. What follows are the relics of Sam Houston.

Raven Feather

No relation to the madman who unleashed the manitous upon the world again, Houston earned the name of Raven, or Co-lo-neh, from the Cherokee Indians he lived with from the ages of fifteen through eighteen. Not only the name of a bird of honor, Co-lo-neh is the title given to a leader of war parties, a position Houston worked hard to earn. Few knew that Houston carried a feather from the bird he was named for.

Power: Whoever possess the Raven Feather gains the Kemosabe Edge when dealing with the Cherokee Indians. Additionally, the bearer gains a +1 bonus when making Leadership or Persuasion skill checks when dealing with Cherokee Indians.

Houston's Bullet

During the War of 1812 Houston fought under General Andrew Jackson himself, opposing the Creek Indians, who were allies of the British. Hours after being injured in the Battle of Horseshoe Bend Houston led a charge against a band of Creek holed up in an enclosed ravine, during which two bullets hit him in the right shoulder. The surgeon who worked on Houston after the battle removed only one of the lead balls, feeling Houston was sure to die and wishing to

spare him the agony of having the second bullet removed. Needless to say, Houston survived and carried the bullet in his shoulder until his dying day. The reason his body was stolen was to get the slug, which has become a relic.

Power: The bearer of Houston's Bullet may ignore all Wound Modifiers from any injuries he possesses.

Taint: None. Note, however, that the relic only negates penalties from wounds the bearer actually has. If hit by a hex or black magic that induced pain or otherwise caused a negative modifier for the character the bullet would provide no protection.

Houston's Cane

In 1831, while traveling with a delegation of Cherokee Indians to see President Jackson, Houston stopped at the Hermitage in Nashville, where he took a hickory sapling which he made into a cane. Weeks later in Washington Houston was accused of dishonesty by Ohio congressman William Stanberry, and when Houston next encountered the congressman he attacked him with his cane. Stanberry responded by pulling a pistol, but when he pressed the gun to Houston's chest and pulled the trigger it did not fire. Houston's then proceeded to disarm the man and beat him severely.

Power: The cane does STR+1D4 damage, and is a magical weapon that can harm beings immune to mundane weapons. More impressive is the fact that by spending Fate Chips the bearer of the cane can bring misfortune to those who would aim a gun at him.

White Chip: The shooter has a -4 penalty to his Shootin' roll.

Red Chip: The gun jams when the shooter fires at the bearer of Houston's Cane. It takes two hours and a Hard (9) Shootin'/Knowledge roll to fix.

Blue Chip: The gun being fired at the relic's bearer explodes! Roll the amount of damage a single shot from the gun (rerolling Aces as normal) would inflict, and apply the damage to the arm holding the gun. If using a two-handed gun such as rifle or shotgun apply the damage equally to both arms!

Taint: The Reckoners have been able to corrupt this relic due to its violent and ignoble history. The bearer gains the Bloodthirsty and Vengeful Hindrances.

A Note to the Marshall: The Black Magicians who uncovered Houston's relics were in the employ of one of the Aces of The Court (see *Hucksters & Hexes* for more on The Court). This manitou-bonded, Black Magic-wielding Huckster wished to have the power of the relics on her side, so that she might serve the Reckoners better. She has kept the knowledge of the relics' existence from her master, The Joker, as she knows he would claim them for himself. She is currently in Lost Angels, using it as a base to hunt down the most noble heroes of the Great Maze.

Art by David Plunkett and Colored by Phil Reed

A staple in many genres is the 'Big Rubber Monster': a seemingly invulnerable enemy that the heroes can defeat only by courage, ingenuity and, perhaps, a little luck. Although BRMs are most frequent in superhero adventures or 50's monster movies (such as the world portrayed in *GURPS Atomic Horror*), there's no reason you can't inject them into any game.

Making your BRM

First, it should be **big**. Mind you, small rubber monsters are quite possible, but part of the terror is the sheer size of the creature. The scale of the challenge depends on the genre you are in, but it should dwarf anything the characters usually face. Emphasize its immensity in as much lurid detail you can manage. Lovingly describe how it can use the Empire State building as a backscratch and the spire on top as a toothpick. Whenever possible, compare it to something the players know the size of so they can be properly impressed.

Rubber describes the costumes actors wore when they tore apart scale models of downtown Tokyo, but in our case it's a keyword to indicate that the monster is seemingly invincible. Normal weapons should have little to no effect on the creature. In some cases, it might even make the thing stronger! Increasingly potent conventional weapons (and even unconventional ones) should bounce off, be absorbed, or merely annoy the critter. In extreme cases, it will not even **notice** that an attack has occurred. Throw a few dozen (or a few thousand) doomed NPCs at it to prove its invincibility. If the player characters can survive the pounding (such as in a superhero game) let them find out through direct experience. One caveat is that the players in superhero games get a bit stubborn once they are in battle. All you can do is emphasize the big rubber nature of the challenge and indicate that they still have a few hours before it gets to the next town, thus allowing them to retreat and regroup without feeling they are abandoning the fight.

Lastly, the creature should definitely be a **monster**. Have it wipe out a skyscraper or two, eat a small town, or destroy an entire planet. This highlights both its toughness, and its damage-dealing capabilities. Ensure that the players realize that, if unchecked, it can only become a greater threat. The monster should either be unintelligent, too alien to communicate with, or simply not open to negotiation. Very quickly, the PCs should figure out that the thing has to be destroyed for the common good (or their own personal survival for less-than-altruistic characters!).

Breaking your BRM

Okay, you have this huge, unstoppable abomination eating midwestern towns like potato chips; what can the characters do about it? Plenty . . . once you give it an appropriate **weakness**. There are a near infinite variety of weaknesses that can be divided into rough

categories depending on their essential nature.

Fatal Flaw

A certain substance, type of energy or other environmental effect can knock the monster flat. While acceptable for movies, this leaves a bad taste in the mouth of the players who actually want to *beat* the creature in a more satisfying fashion. Instead of holding up the green argonite meteorite and dissolving the rampaging hyper-amoeba with its radiation, the PCs can fashion weapons out of it (whether ray-beams or swords depends on the genre). This allows them to confront the creature directly and gives them a sense of vindication if they were frustrated by its unstoppable nature in prior encounters.

Hidden Defect

The monster has a chink in the armor that can be exploited. This can be anything from a literal hole in its defenses to a type of attack that it cannot defend against. Perhaps it cannot even *conceive* of how to defend against it. For example, the warbots of Zebulon might respond to anyone with a Zebulonic transponder as an ally and allow the heroes to make it to the reactor core of their mother brain.

Nemesis

Is there something just as tough as the creature that can be tricked or convinced to aid the PCs? Perhaps the cure is *worse* than the disease and careful balancing is required to make sure that they don't unwittingly bring about the doom they were trying to avoid! While fun, this also has the possibility of being less satisfying than a direct confrontation. So perhaps the characters' new ally is merely a distraction allowing the party to carry out their *real* plans.

Stoppable

What if the monster really is invulnerable? This doesn't mean it can't be stopped by other methods. Can it be trapped in the Cave of the Gods? Will a sufficiently large pentagram hold it? Perhaps the best solution is to divert it to the Great Nebula, or over to the Endless Sea. While not quite as heart-warming as whacking off the creature's head, it does leave open the possibility for sequels. The *Return of the Beast that Would Not Die* can be just as fun as the original adventure! Try to avoid using this too much, because it removes a very important sense of closure. Also, trapping the thing might be just a stopgap while the PCs work on a more permanent solution.

Using your BRM

First, introduce the monster to the PCs. This can be a direct encounter, legendary stories, news reports, etc. However it is done, you have to start hinting at its big, rubbery, monstery nature immediately. If their first knowledge of the beast is by direct encounter, however, you have to provide a way for the PCs to escape and leave no doubt in their minds that the creature can kill them!

Next is usually an investigatory phase. Either clues they pick up from research, from their encounters with the creature, or help from friendly NPCs can put them on the right track. This can occupy one or more game sessions or a variety of sub-quests to complete. Their plans should be formed at this time with at least a basic knowledge of what must be done. One thing to avoid is having a single, vital clue elude the players making the adventure fail early on. Nothing is more needlessly frustrating than to have action-oriented players stymied because the research phase is dragging on too long. If you don't want to just *give* them the answer, have an enemy of theirs offer the information 'for the common good,' but extract a price that will haunt them later. Or an NPC could die getting the information that the player characters failed to retrieve.

After this is the preparation for the big fight. The characters must organize their armies, allies or the weapons they will use. Especially in heroic adventures, this can take quite a bit time or may comprise the entire campaign!

Last of all is the 'final' encounter. Note that it is quite possible that their initial ideas will *not* work, and they will have to escape what they thought was the last battle and try again another day. Unless this is a horror campaign, however, the end of the beast should be definite and climactic.

To maximize the satisfaction of the players, it's best if the threat is credible (i.e. they know it's going to be tough), there must be a certain degree of frustration and fear when they realize that they can't tackle it directly, and everyone should feel involved and vindicated when the threat is finally put down. If your hacker is delivering the logic bomb that will cripple EvilMegaCorp, then your physical types should be fighting off mundane troops in a ferocious battle. Or if the formula to dissolve the SpaceGoo has to be injected by the Strapping Hero, throw in a curve where the Absent-Minded Scientist realizes that the creature has mutated and he has to drive through the caustic tentacles to deliver the new formula on time.

Also, do everything you can to make the PCs literally fear that they might die in the final encounter. Have important NPCs killed on the way to the conclusion. Throw new threats at them while they are dealing with the main one. In very gritty campaigns, you can even be liberal with maiming the heroes as long as they can persevere to the conclusion. The goal is to have the *players* out of their seat with tension and then ecstatic when they finally win. Describe the downfall of the beast in extravagant detail and let them lap up the praise and rewards from the populace (if appropriate). Give the PCs their moment in the sun; they earned it!

Examples of BRMs from Fiction

The Blob

It engulfed huge sections of a small town, it eventually succumbed to cold attacks, and it ate people. Definitely a Big Rubber Monster.

The Death Star

It's the size of a small moon, it only had one major weakness, and it destroyed planets. (The second Death Star had similar capabilities, but its weakness was that its shield generator was on the planet below.)

Smaug the Dragon

Big, mean, and was only killed by shooting a special arrow at one little missing scale on his belly.

The Borg

They had a galaxy-wide reputation and have destroyed entire civilizations comprising billions of people. Added to that, their weak spot was always different each time you meet them. Fearsome indeed!

Variations on a Theme

Big Monsters: Take out the rubber, but the leave the rest. With enough time and damage, the party can destroy the critter. This almost eliminates the investigatory and preparation phases and is common to both superhero and high-fantasy games. The trick is to *survive* the fight until the heroes do enough damage!

Rubber Monsters: Keep everything else, but remove the physical size component. The evil head of the Necromancer's guild who can only be destroyed by the touch of an innocent child or a suitable supervillain can fit in this category.

Big Rubber: What if the creature is simply misunderstood? Or is actually beneficial in some way? Some of the later incarnations of Godzilla and the giant worms in the Dune series fit here.

Avoiding the Monster: Some BRMs are truly unbeatable. The only way to stop them is to make sure that they never arrive. Most of the critters in *Call of Cthulhu* are this big and mean. If the heroes fail due to bad luck or poor decisions, you might want to arrange for some way to stop the monster, but at the cost of their own lives.

?

Ritual Psionics in GURPS

by Stephen Kenson

Art by Dan Smith and Colored by Phil Reed

Isaac Bonewits' book *Authentic Thaumaturgy* describes the author's own views on fantasy and roleplaying magic, based largely on the use of innate psychic abilities, focused through certain rituals and the application of various magical laws. In *GURPS* terms, the system of "magic" Bonewits describes more closely resembles psionics rather than the standard magic system. However, the psionic abilities Bonewits describes are much more limited than the standard psionics rules, requiring considerable effort and focus. Standard *GURPS* psi powers are more like super-powers, always reliable (so long as you make your skill roll), and requiring no more effort than thought.

This system provides a setup similar to Bonewits', where psi powers exist, but are generally unreliable without the use of magical lore and rituals to focus them. The system is based on a new psionic limitation that encourages characters to use many of the trappings of magic to improve their psionic abilities.

Unfocused   *-75%*

Your psionic skills are in need of a focus of some kind, a ritual. You suffer a flat -15 penalty to effective skill applied before any active psionic skill roll! This makes active use of your psionic abilities extremely difficult, without the use of any sort of focus (and quite dangerous as well, considering the possibility of critical failures). Note this penalty does not affect "passive" skill rolls; those abilities work normally.

If the GM allows, characters can take differing levels of this limitation. The modifier is -5% per -1 to effective skill. Note that the lower the penalty, the fewer rituals required to compensate for it and the more characters begin to look like super-powered psis rather than psychics or ritual magicians. It also quickly increases the cost of psionic Power, which may make characters too expensive for the campaign setting. A reduced limitation can represent more "enlightened" (or powerful) psis who have overcome some (or all) of the limitations others operate under.

Focusing Techniques

How do psis with the Unfocused limitation overcome the tremendous difficulty in using psionic skills reliably? They make use of certain "focusing techniques" to enhance their concentration and create an altered state of consciousness, allowing them to more easily tap into the latent powers of the mind. These techniques are the familiar trappings of the magical arts and many psychic practioners.

When using a psionic skill, a character can choose to perform any combination of the techniques below, gaining the listed modifiers to effective skill. The character's effective skill can never be increased above the base skill level, the foci only serve the overcome the Unfocused penalty, they do not improve the character's chances beyond that.

Distance: Psi skills have a normal distance at which they function. Operating at a lesser distance makes the skill easier to use. For every halving of the skill's normal range, the character gets +1 to effective skill (up to +3). If he touches the subject, the character gets +4 (note this is in place of the normal +1 to skill for touching a subject on p. B167.)

Fatigue: A psi can spend additional fatigue to enhance the use of a skill. Each point of fatigue spent, in addition to the skill's normal fatigue cost, adds +1 to effective skill. Note the Extra Effort rules (p. B166) work normally for psis looking to increase power rather than skill.

Location: Consecrated areas are places where psychic energy flows more freely, unrestrained by the wrong "vibes". Most places are not consecrated, and offer no bonus. A character can perform a brief (1d minute) ritual to quickly consecrate an area, providing a +1 bonus. A true consecrated area (requiring a week's worth of rituals to prepare, and regular maintenance), gives a +2 bonus. A consecrated area at least 20 years old gives a +3 bonus, 50 years old +4, 100 years old +5, 500 years old +6, and ancient ritual sites over a thousand years old provide a +7 bonus. GMs can use **GURPS Places of Mystery** as a guide to ancient mystic and ritual sites, likely to be quite important in a setting with ritual psionics.

Materials: Psis can use various objects to enhance their connection to the target of a skill. A small object (like a piece of clothing) adds +1, fingernail or hair clippings add +2, photographs or blood samples add +3. Having the target physically present and in the psi's line of sight adds +4.

Symbols: Symbols of power help enhance the use of psi. A simple amulet, talisman, or the like adds +1 to skill, while more detailed symbols, created using the Symbol Drawing skill (p. CI147) add +1 for every 2 points the skill roll is made by, to a maximum of +3. Characters with the Mystic Symbol advantage (p. VO60) may add their bonus to their effective skill.

Rituals: Speaking words of power (mantras) and making certain gestures (mudras) can provide focus. A few soft words or a quick gesture with a couple fingers adds +1, both adds +2, speaking and gesturing clearly adds +3, while elaborate movements and loud incantations add +4.

Time: Activating a psi skill normally takes one second of concentration. For every doubling of the time required, the character gets +1 to effective skill, to a maximum of +5 (requiring 30 seconds of concentration). Alternately, the character can choose to prepare for a skill use by meditating, performing rituals, etc. Once prepared, the skill can be used immediately (with one second of concentration) and a bonus based on the preparation time. One minute is +2, 10 minutes is +3, an hour is +4, and a full 8-hour day of preparation is +5.

Examples of Ritual Psi Use

Mr. Black, mystic detective, wants to locate a kidnap victim using Telescan. He has Telepathy Power 16 with the Unfocused limitation and a Telescan-15. He also has a small lock of the girl's hair (+2). Mr. Black goes to the back room in his office, which he uses a ritual space (consecrated ground, +2). He performs a 10 minute centering ritual to prepare himself (+3), then lights some incense and concentrates on the hair, chanting and weaving gestures through the smoke (+3), he does so for a full 30 seconds (+5), then reaches out for the girl. The various rituals provide a bonus of +15, enough to overcome the skill modifier and allow Mr. Black to roll against his normal skill.

Mrs. White wants to heal an injured friend. He's been shot and is down to 6 HT (from 11). She has Healing Power-8 and a Healing-13. She performs the ritual in her house, which is consecrated ground (+2), using some herbs she's gathered (a symbol, +1). She can also see the subject as she works on him (+4). She works quickly, taking about

10 seconds (+3), and humming a soothing song while she weaves symbols through the air and sprinkles herbs (+3). Mrs. White gets no bonus for touching her subject, since the Healing skill has no range. Her total bonus is 13, leaving her with only a -2 modifier, making her effective skill 11. She decides to put a little more omph behind it and spends 2 fatigue, making the modifier +0. She rolls against her normal skill and succeeds, healing 5 hits and spending another 2 fatigue.

Ms. Gray needs to fend off a serial killer she's been tracking. She has Telepathy Power 12 and Mental Blow-15. The killer is close at hand, well within a quarter of her normal range (+3), and Ms. Gray can see him clearly (+4), she's wearing an amulet, and concentrates on it (+1), then levels a finger at the oncoming killer and speaks a word of power (+2). She doesn't have the luxury of time for any other rituals, so she also spends an additional 3 fatigue, on top of the 1 fatigue Mental Blow requires. That makes the final modifier a -2 and her effective skill a 13. Better hope it's enough.

Campaigns

The basic ritual psi system presented here can work in pretty much any setting that accommodates magic or psionic powers. Overall, the system tends to encourage subtle power use with a fair amount of preparation time and planning, or short bursts of power that leave the user exhausted, not unlike many fantasy magic systems. It tends to be better suited for settings where magic is expected to work similar to how modern occultists and neo-pagans (like Isaac Bonewits) believe it works.

Fantasy: Ritual psi can serve as an alternate form of magic in a fantasy world like Yrth, from *GURPS Fantasy*. The modification from the Unfocused limitation makes psi nearly as affordable as magic, and psis still need fewer skills compared to the average mage. There will certainly be those interested in finding out more about this "new" form of magic, and there will likely be "wizards" on both sides of the fence looking to suppress the rival form of magic, while others seek to learn both! Psi abilities could certainly revolutionize things in Low Mana Caithness, for example, which relies on its magic-poor nature to protect it from the fearsome sorcerers of Megalos.

Alternately, ritual psionics could be the only form of "magic" in a fantasy game. This is particularly well suited to alternate historical games, as well as modern "urban fantasy," where magic and psychic phenomena tend to blend together. The system could be a type of alternate initiation in *GURPS Voodoo*, similar to (but not the same as) the ritual magic used by initiates. It also works well for modern *Cliffhangers*, *Horror* or *Illuminati* campaigns where magic needs a "scientific" basis (or, at least, some scientific trappings). Researchers can say "magic is just a form a psi" and they're right! *GURPS Y2K* suggests psi might become a "magic system" for certain types of post-holocaust settings, and ritual psionics helps to keep such abilities subtle and mysterious.

Science Fiction: Science fiction settings often include psionic abilities, and ritual psi allows the GM to "tone down" psionics without limiting power or skill levels as much. It also permits the inclusion of "magic" in an otherwise technological setting. For example, the GM can set up primitive worlds where psis are considered "witches" and "magicians." Psis in the ***GURPS Traveller*** universe, especially those who are untrained or were trained at an eccentric psionic insititute, might have the Unfocused limitation. Functional psionic abilities might be brought out by alien intervention, genetic engineering, cybernetics, or industrial accidents.

Cyberpunk: A cyberpunk setting like ***GURPS Cyberworld*** might feature ritual psi abilities, sought after by the government and the korps, and used by punks on the street. A "psionic revolution" can turn a cyberpunk world into something similar to FASA's ***Shadowrun***. The GM can focus on the psionic technology (particularly biotech and implants) from ***GURPS Psionics***, combined with the Unfocused limitation and focusing techniques. Perhaps the first generation of psis needs a lot of rituals, but later "upgrades" continues to get more and more proficient, eventually building towards super-psis with complete control over their powers (shades of the classic anime *Akira*).

CthulhuPunk: Ritual psi abilities (particularly ESP and Telepathy) fit well into the ***GURPS CthulhuPunk*** setting, since they make the powers less accessible and reliable, and more mysterious. They also help keep the cost down, allowing characters to have a single power (or even a couple powers) without breaking the point bank.

Black Ops: The setting in ***GURPS Black Ops*** already assumes that all "magic" is really just psi. PsiOps are very likely to have the Unfocused limitation, cutting the cost of their powers and making them more subtle, particularly when compared to the full-blown psi abilities of rogues like the Lodge or Mind. Lower-level psis in those organizations might also require focusing techniques, until they are initiated into the secrets of the inner orders and their minds are "opened up" to their full potential.

Alternate Earths: Psionic abilities are known on some parallel Earths of the "Infinite Worlds" setting. Ritual psi could be a tool in the arsenal of Infinity Unlimited or the Centrum (or both). It fits in just fine on Ming-3 and Midgard from ***GURPS Alternate Earths 2***. It could also show up on Shikoku-Mon or Reich-5 from ***GURPS Alternate Earths***. GMs can even apply the Unfocused limitation to the World Jumper advantage from ***GURPS Time Travel***, forcing psionic world jumpers to use different focus techniques to help them reach other parallel worlds. For example, "consecrated ground" may be places where the barriers between worlds are the thinnest, making ancient ruins and neolithic sites major "way stations" for world-jumping travelers.

The Living City

(Note: If you do not have a consistent setting in your game, this month's column will not help you in any way, shape or form. Don't read it. It will not help your campaign. There's nothing to learn here. Move along.)

A common Game Master trap lies in designing setting. Many GMs think they have to spend hours, weeks, months getting to know every cobblestone, every brick, every face in the crowd. Well, I'm here to tell you that's a load of horse hockey. This month, I'm letting you in on some nifty little tricks that will make your environment come alive for your players in ways they (and you) never thought possible.

I can already hear you saying, "Hey, isn't this supposed to be a column about dirty, underhanded Game Master tricks? How is designing an environment low-down and nasty?"

I'll tell you.

Your players are gonna do all the work.

* * *

"The Living City" is a term one of the players used to describe the city of my long-running **Vampire** game. New Jerusalem was indeed a living, breathing city. It was awake even when the players were asleep. Plots were born, lived and died without the players ever knowing what was going on. Monumental changes occurred while they wasted time in the nightclub picking up the evening's meal. They never found out about most of those changes and events until it was too late to do anything about it. But then again, that's when heroes really shine, isn't it: when everyone else thinks it's too late?

The best part about New Jerusalem is how little work I put into it. I mean, I did a *little* pre-game work, had myself an outline, knew the names of all the important people (living, dead and undead) in the city, and I knew what I *wanted* to happen, but everything else was up to the players. *They* were the ones who really made the city come alive. And here's how I let them do it.

The City in a Box

The first thing I did was get a bunch of index cards and a box to hold them in. I also got little dividers to separate them out. I had a section for NPCs, Magic Items, Important Places, Events and Other Notes.

NPCs

First off, I didn't spend a lot of time on designing NPCs. I had an idea of how each one was going to be, but I really didn't want to invest a lot of time in building their personalities (you'll see why in a minute). I gave each one only three stats: Fighting, Thinking and Talking. I rated each one with a number, telling how many dice he'd roll for each situation. This works really well for Storyteller games, but with a little ingenuity, you can make it work out for just about any system. Then, at the bottom of each NPC card, I wrote three words (or phrases) that reminded me what made the NPC distinct when I played them.

So an NPC card looked something like this:

```
CARTER, JEFFERSON
Fighting: 2
Thinking: 6
Talking: 6
Home: 10258 Manzanita Court, (712) 555-5435
```

```
Goals: Control the City at all Costs
Resources: You name it
```

Then, at the beginning of the game, after I read all their character sheets and knew the kinds of characters they wanted to play, I assigned them NPCs to play as well. I gave them each an envelope with a copy of the card and a list of objectives for the evening. The envelope also contained information on where the NPC was that night, so if the players wandered into the Taboo nightclub, my buddy Ian knew that Donny Vanucci would *also* be there. If Donny got involved with the players, I'd take over Ian's character until they were done with him, then Ian got hold of his character again.

(Here's how I made it work. I usually have players wearing name tags so they don't have to look up the character names. As soon it's time for one of the players to take a different role, I stand next to them and put my hand on their shoulder. I take off their name badge and give them the new one. Then, I put on their name badge. As soon as the scene changes, I give them their badge back and take the old one.)

Players also got to play NPCs when their own character wasn't involved in a scene. For example, the players are in Taboo, talking with Jocasta, the regent of the Brujah. Meanwhile, across town, the Tremere are talking about how to deal with that miserable group of 13th Gen losers who keep making trouble for them (that's the players, by the way). I'm playing the role of the Tremere regent and Eric's playing his chief lieutenant. At some point, the butler (played on cue by Ian who was notified to step in by his note for the evening) informs us that the regent of the Toreador was here to see us. *She* was played by the lovely and talented Elizabeth who plays the role of a southern belle to the hilt. She lets us both know that one of the 13th Gen losers has something that belongs to her, and she is willing to do just about anything to get it back.

Events

"Miracle: The poor man's coincidence." - The Tao of Zen Nihilism

This little technique offered me a whole lot of advantages. First, I didn't have to come up with a personality for each and every damn NPC in the city: the players took care of that for me. From the Prince of the city right down to "Mean Mr. Mathers," the rottenest Math professor on the college campus (the *only* man on campus who ate the split pea soup in the cafeteria, I might add), they populated the city with colorful characters that would have *never* occurred to me.

Second, the players were no longer lone individuals; they were a part of the city. Each NPC they played gave them another investment in the events that occurred around them. Ian was playing Daniel Hayden, the bad-ass Brujah, but he was also playing the Toreador who *might* have been Oscar Wilde. Mike was playing Aristotle Jones (*all* the Malkavians were named "Jones"), but he was also playing Tori the Nosferatu who took care of the thing in the sewers they called "Mother."

Lastly, the players got to look at the city in a way individuals cannot. They saw what other clans were up to, but more importantly, they saw the consequences of those actions. They saw that one single event could change the lives of hundreds of people. Things were moving all the time. The players got a real sense that they were organs in a larger organism. Not only did they see others' actions take effect on their own lives, but they saw their own actions take effect on the lives of others. In short, they learned that there's no such thing as an "isolated incident."

Convincing players to give up control of their own character so they can play the Prince of the City/Evil Wizard-Emperor/Cyber-Dragon Mafia Boss is easy. Convincing yourself to give up control of your campaign… now *that's* the hard part. You've got to be willing to surrender your best NPCs to the whims of someone else. In order to do that, you've got to swallow a little bit of pride and have some faith in your players. Of course, you've also got to make sure you assign the *right* NPCs. Giving someone the *wrong* NPC can be disastrous. But then again, sometimes, it might be the best thing to do.

I had a player who was the God-King of comedy roleplaying. The guy was an improvisational genius, always hitting the group with off-centered humor that would make Steven Wright look twice. In the **Vampire** game, I always gave

him Malkavians to play, a fact that made our nutjobs both humorous and dangerous. But one day, I decided to have him play the quick-witted Toreador assassin, Jack. "Jumping Jack Flash" was a deadly serious Englishman who looked like a sinister version of 007. When Bill got a hold of Jack Flash, he slunk into a brilliant Sean Connery impersonation that was absolutely perfect. He accommodated himself to the role, flexing his roleplaying muscles a bit more than he had before.

It was a double-edged victory. I got a Jack that was what I wanted plus a whole lot more, and Bill got to stretch his roleplaying skills in a direction he never counted on.

Improvisational Environment

I talked a little bit about this in the *7th Sea GM Book* and *Robin Laws* also invokes it in *Fung Shui*. It's all about getting the players to *use* the environment around them.

GM: You're in a bar fight.

PLAYER 1: I grab a bottle of whiskey and smash it over a guy's head.

PLAYER 2: I grab the candle on the table and shove it into another guy's eye.

PLAYER 3: I grab a log out of the fireplace and smash another guy over the head with it.

You get the idea. You never *said* all those things were in the bar, but then again, they *make sense* to be in the bar, right? Why penalize a player for being creative?

But don't let this technique stop at bar fights. Just as your players can help you populate your city, so can they help you decorate it.

Some of the best parts of New Jerusalem came from my players. Remember Mean Mr. Mathers? I didn't create him, one of my players did. They were standing in the college campus cafeteria and one of them said, "And there's Mean Mr. Mathers over there, eating pea soup." Then, another one chimed in. "He's the *only* one who eats the pea soup." It was brilliant and I let it stick.

Once the players got the feel for it, they started decorating the city every chance they got. They invented a comic book shop and the crooked owner who cheats kids out of their valuable books (years later, I found myself wondering how he'd do with *Magic* cards). They invented the volunteer fire chief, the city librarian, and nearly all the police. And all the while, I was writing it all down on index cards, shoving them into my little box for future use.

Of course, I had complete veto power, but after a few weeks, I didn't need to use it. The players got a hold on the kind of stuff I liked and didn't like, but even then, they'd come up with something so creative, I'd have to let it in the city limits. While the standing rule was the player who created the NPC got first dibs on playing him, we did more than our share of grogging the locals (see *Ars Magica* for details).

Conclusion

Maximum effect for minimum effort. *(Slack!)* That's what we're gunning for here. I know a lot of you complain that you don't have time to run games anymore. I know you say you're too busy to come up with creative ways to confront your players. Well, this month you got a non-confrontational way to challenge them: let them use those brains of theirs for something other than counting experience points.

If you let them in on the Big Game, if you let them have a whack at creating NPCs and even give them a chance to plot against *themselves* (I always loved that bit), maybe they'll appreciate all the hard work that goes into running a game.

And maybe -- just maybe -- I'll figure out a way to show *you* all the hard work that goes into *designing* one.

Pyramid Pick

Priest's Spell Compendium Volume Three

Published by [Wizards of the Coast](#)

Developed and edited by Jon Pickens

286 pages, $24.95

If this were merely the last collection of Priest's spells from various sources, it wouldn't
need a review. Everyone would know that this entire book contained a listing of spells
done alphabetically from Spike Growth to Zone of Truth. Oh certainly, the various symbols that denote setting are
helpful. Of course the introduction and the brief definitions of the various schools are nice, but still, twenty-five
dollars for a mere listing of spells is a bit high of a price. The appendices, however, make this a must have volume for
anyone who ever wants to play a cleric or specialty priest.

The Spell Appendices cover the range from the very powerful Quest Spells to the more mundane Orisons. Those who
want even more power than the Quest spells provide can use the spells that deal with Psionic Enchantments, spells
ranging from 8th to 10th level. Fans of the *Dark Sun* setting will remember these. The rules for using such spells, as
well as an extended cleric spell casting list are included for ease of use. The list of Orisons includes not only all those
found in old *Dragon* issues, such as the Druid Orisons, but brand new ones like Handfire, and Incense. Lastly, some
may have noticed that there have been no spells for the Sphere of War. Because these spells tend to rely on the
Battlesystem miniature rules, they have given their own section and are complete.

The text appendices gives GMs who've never owned the *Tome of Magic* advice on how to handle and use Quest spells
in the campaign. In addition, Faith Magic, Cooperative Magic, Divine Intervention and Divine Ascension are all given
a brief ruling. Old fans of the old *Deities and Demigods* will recognize this table from page nine of that old tome. If
you're doing work directly on behalf of your deity and being opposed by opponents who are opposite of your Power,
there is a 26% chance of getting some type of aid. Not bad! The material on Divine Ascension is very brief and GM's
considering it should look if over, then search for the out of print *Primal Order* series.

The appendices not only break up the spells by sphere, but also by setting. This is a lifesaver for those like myself who
enjoy the more esoteric settings like *Red Steel* and *Spelljammer*. In addition, those who enjoy *Birthright*, *Dark Sun*,
Oriental Adventurers, *Planescape*, and other official TSR settings will benefit from this listing. Because of their large
number, there is also a section on spells that are appropriate to a "Savage" or barbaric setting. Another setting that
hasn't received much official attention, the Vedic or Indian setting, is also covered.

Outside of the setting break down, demihuman lists (including dwarf, elf, drow, gnome, and halfling) also separate the
spells. A general listing of nonhuman priests spells finishes off the demihuman list. Included, but not limited to, are
priest spells for beholders, sea elves, sahuain, yuan-ti, and even dragons.

Those who remember the old favorites cleric-based classes from *Dragon Magazine* like the Cloistered Priests, Savants,
Oracles, and Shamans can rejoice as their spell lists are all given attention. Not only are these lists complete and
updated, lists are provided for major and minor spheres for those interesting in fully updating them. Now you can
recreate your favorite class in prime 2nd edition form.

The last major section is the Priest Spell Index that goes through every spell in alphabetical order with the name of the
spell, the level, and what page the spell is found on. This can still be a pain, however, as the books are not numbered
from page 1 to 286. For example, the last book starts on page 578 and ends on page 863.

Other material seems to have hidden itself in the book though. The *AD&D* Glossary, while not enough to stump an old time player, is a valuable tool for newer players. Even more impressive though, is the Errata, which includes four spells that were left out of previous volumes, as well as errata on other spells where information was simply wrong.

The black and white art serves to showcase the different spell effects and adds a further level of usefulness to the book. Unlike some companies, Wizards of the Coast does not try to drown the text with art. The nature of the book is a reference tool. The format follows that of the *Wizard's Spell Compendium* so owners of that series will find this one just as easy to use.

Even if you don't own the previous two *Priest's Spell Compendiums*, the wide range of information in the numerous appendices make this one a must have for all *AD&D* players and Dungeon Masters.

-- Joe G. Kushner

Pyramid Pick

Ratkin, by Brian Campbell

Mokole, by Jim Comer

Published by [White Wolf](#)

136 pages for Mokole, 144 pages For Ratkin; $19.95 each

I really hate these books. Not that they're bad. Oh, no. If they were badly done, it would be easy. You could just look at them and go "Well, these suck."

Unfortunately, that's not the case. These books are actually very well done, and make the lycanthropic races they cover interesting. Which means the next time I decide I want to get a *Werewolf* game started, I'll once again have to deal with players asking, "Can I play an X (Bastet, Mokole, Ratkin, etc)?" and I'll have to say no. But I won't be able to say, "No, these character types are too briefly gone into in the *Player's Guide* to be run or GM'd properly."

Now I'll have to say, "No, you haven't bribed me sufficiently to be allowed to play an unusual character." I hate being honest.

Anyway, *Mokole* and *Ratkin* are the latest Breedbooks for *Werewolf: The Apocalypse*. The Breedbooks have succeeded in being very good sourcebooks and very good reads, even if the characters they describe are supposed to be rare as hen's teeth.

Ratkin does a great job of expanding the world of the Ratkin. For those unfamiliar with the *Werewolf* paradigm, each were-race has a duty bestowed upon them by Gaia, the Earth Mother. The duty of the Ratkin (for the terribly slow at home, Ratkin are wererats) is revealed to be population control. Human population control, in case you were wondering. How do they do it? Famine and Pestilence (and quantity). The Ratkin are presented as the ultimate survivalists.

The Ratkin have some very cool stuff going on. There's a background called "Freak Factor" to indicate just how "far out" a character is. Wererats using strange technology, wererats from the deep umbra, and wererats from Kentucky all share space.

The writing in Ratkin does a great job of putting across the mood of the game. The wererats have a decidedly different point of view of the oncoming apocalypse than the Garou do. They tend to view it as a new beginning; civilization will be swept away, and the rats will take over. Ratkin scores very strongly on the "I want to play one" scale, which is good. Unless you're my GM, in which case it's bad.

Mokole does just as good a job with its title beastie. (Unlike Ratkin, you may not get what Mokole are; they're were-alligator/crocodiles/big-reptile-fellers. They turn into Dinosaurs.)

The Mokole, who've existed since there were swamps, are the memory of Gaia. They remember everything, going back to when dinosaurs ruled the Earth. The Mokole exist in four major "streams," which are sort of like tribes. They are found in Africa (The Mokole M'bembe), Australia (The Gumagan), the Far East (Zhong Lung), and India (the Makara).

I do like how each is differentiated from each other in mechanics (some have different memories than others, some

have different flaws and merits, etc.) and in flavor. You get a sense that each stream is separate, while still being part of the greater whole.

The Mokole also come across very interestingly. Their view of the impending Apocalypse is resignation; they've lived through mass extinction before, and figure they'll just do it again.

The coolest part of Mokole (at least in my lizard brain) is their dinosaur form. Each lycanthrope (or bete, as they're called) in the World of Darkness has at least three forms. A human, an animal, and a mid form (occasionally there are others). For the Mokole, instead of turning into a half crocodile beast, they turn into Dinosaurs.

The type is determined at character generation, and characters can choose neat abilities (spiked tails, armor, huge size, etc) depending on what kind of great lizard they are. There aren't any package deals (ie, for 5 gnosis you're a tyrannosaur or ankylosaur, for 3 you're a triceratops, which my *Champions*-player brain would love), but you can approximate pretty much any beast you can imagine.

One very interesting bit of Mokole that almost gets lost in the background is the option to play in the time of The Kings. It's only a page, but I can easily see it being made into a full historical game or just an expansion similar to *Werewolf: the Dark Ages*.

Each book does a great job of putting forth their respective breeds as playable PCs. Ratkin gets over the whole question of near extinction by reminding us, not that gently, just how quick rats breed. Mokole, on the other hand, pulls no punches in that regard. Generations, it reminds us, can pass before a full Mokole will be born in some villages.

The options for playing the characters are splendid. The toys are fun and make sense; one of my favourite gifts is Waxwork Monster, a gift that allows Mokole to disguise themselves as statues and dummies. Some clutches disguise themselves as roadside attractions using this gift. That's great.

So, yeah. *Mokole* and *Ratkin* are two great books for *Werewolf* players and GMs. They'll give you brand new avenues to playing and running what were previously sketchy characters.

I hate them so much.

-- Justin Mohareb

(Not Quite) 2001

We open with a black monolith.

The majestic chords of *Thus Spake Zarathustra* swell in the background.

A bone weapon is thrown into the air.

Apes work themselves into a frenzy teeming with excitement and anticipation as a new era of enlightenment dawns and. . .

. . .Er, not really. Pyramid just has a new editor: Steven Marsh. That's me, the lucky ape polishing the calcium club and hoping he doesn't break anything while he's looking for the pause button on the *Zarathustra*-blaring CD player.

Who am I? Darned if I know.

I'm a writer. I've been published in a fair number of places. I have the dubious honor of having been paid for essays, short stories, scripts, and poetry, proving my talents are so scattered no one knows how to label me.

I'm a gamer. I've been gaming for fourteen years, beginning with a Magic User named Zappo Zam who coincidentally rolled all 18's for his attributes. (I eventually grew up.) My first "mature" game was a **GURPS Supers** campaign that lasted three years. I've learned that I'll GM just about anything, including ***In Nomine***, fantasy, ***Star Trek***, ***Star Wars***, hard sci-fi, ***Prisoner***, ***Ghostbusters***, ***Torg***, cross-dimensional, pulp, ***Fading Suns***, ***White Wolf***, and ***Toon*** (to name a few). I've also been a player in almost as many games. I probably own about a hundred RPG systems, and four of my bookshelves moan from the burden of supplements and adventures.

I'm a magazine worker. I've edited, proofread, and rewritten. I've helped lay out articles. I've explained to subscribers why their issue #3 was returned to us with marks not unlike those made by a Doberman pinscher's teeth.

I'm a techie. I've designed websites with HTML for a year and a half, using only a text editor. I remember how to program in FORTRAN. I know what TWAIN stands for. I'm not sure who my congressman is.

I'm a lot of other things, too, and you'll learn more about me over time. (Be sure to ask about my unlikely bid as high school prom king some day.)

And now I'm the editor of *Pyramid*. As I run around these hallowed halls, my feet clomping while they struggle to fill these gargantuan shoes, I find myself asking, "What am I going to do?"

Answer: I want to make *Pyramid* your "Oh, wow!" magazine.

Now, magazines like *Newsweek*, *TV Guide*, *People*... these aren't your "Oh, wow!" magazines. These aren't the ones that make you rip them open to see their contents. You seldom say, "Oh, wow! An interview with infamous General Notnise Watabadchap!"

But *Pyramid*. . . *Pyramid* can be your "Oh, wow!" magazine, if it isn't already.

"Oh, wow! An article about making a realistic antagonist cult!"
"Oh, wow! Advice for how to surprise players by twisting horror monster cliches!"
"Oh, wow! Suggestions for turning current news into adventure ideas!"
"Oh, wow! Twenty inventions that changed the world!"
"Oh, wow! An adventure for the new RPG ***Bleemquest***!"

You get the idea.

Now, is every article going to be an "Oh, wow!" article for everyone? Of course not. What one GM needs to add some spice to his American Revolution *Wild Cards* game is quite different from what a *Traveller* player needs to play a more realistic mercenary.

My goal is not to please you with every article. Cherry Jell-O mildly pleases everyone, but no one goes, "Oh, wow! Cherry Jell-O!" But if, every issue, I can put at least one article, feature, column, or review that makes you go, "Oh, wow!" then I'll consider that issue a success. Of course, you'll hopefully be pleased with many of the other articles, but I want your Friday (or whenever you check out the new *Pyramid*) to always be your "Oh, wow!" day.

Among other goals, I want to make some theme issues. Every so often (probably not more than one week every two months or so), I want an issue to be more tightly focussed than normal. So we might have an April Fool's issue, or an Espionage issue, or an issue devoted to Epic Storytelling. It won't be too often, but hopefully enough to add some flavor to the mix.

I want *Pyramid* to be fun. To me, roleplaying games are supposed to be fun. Roleplaying isn't about rules lawyering, or exploring complex emotional issues, or killing every monster that seeks to thwart you. It's about a bunch of players trusting a GM with their Saturday night, and the GM hoping he doesn't betray that trust. If everyone is having fun arguing about rules, or wallowing in angst, or hacking critters 'til they stop moving, great! More power to them. But the fun is the important part. So rather than print an article about, say, undersea drowning rules, I'd rather print an article that talks about running an adventure underwater, with rules as a sidebar or appendix, because I personally think the latter article is more useful in getting the juices flowing for a successful gaming night. (And if you disagree, for pity's sake let me know! For that matter, let me know if you agree with me, too.)

Finally, I want to make sure the magazine is on the pulse of the gaming world. The Slushpile is public enemy number one for this editor. I don't want your submissions to be timely in July when you wrote them, only to have them succumb to the ravages of age. I've read every submission, and replied to about half of them. Once the Slushpile is tamed (with any luck, by next week), I hope to reply to your new writings within a month. I want to learn what you like to read, and hopefully give it to you; a magazine isn't a one-way stream of information, but a two-way dialogue between its creators and readers. And we're listening.

So next week I'll talk about some mistakes I've made as a GM (presuming nothing more interesting happens in the interim).

And hopefully I'll make you go "Oh, wow!" as the monolith's shadow washes over you.

-- Steven Marsh

Murphy's Rules

by John Kovalic

Murphy's Rules

Murphy's Rules

Return to Metro Section Baghdad

"I sit in a chair and read the newspapers.
Millions of men go to war, acres of them are buried, guns and ships broken, cities burned, villages sent up in smoke,
and children where cows are killed off amid hoarse barbecues vanish like finger-rings of smoke in a north wind.
I sit in a chair and read the newspapers."
-- Carl Sandburg, "Smoke"

About a year ago, I expounded upon my thesis that anything occurring in a city can become fodder for any number of different roleplaying directions, to buttress the notion that urban roleplaying is more than just narrow, twisty alleys and dickering with Easterners in the souk (or boardroom). The tactic I chose was to select an issue of the *Los Angeles Times* at random (or, rather, the issue for the day I thought of the column idea) and pick out local news stories, throw a little genre English on them, and recast them in explicitly non-mundane (fantasy, Illuminated, etc.) urban gaming milieux. Hence, then, these stories, torn from the *Times* headlines for February 14, 2000, and flung in the direction of Baghdad.

Loan Fraud Suspect Keeps Authorities Frustrated

Thanks to overlapping jurisdictions, large legal loopholes, and enough gall to choke a bison, con artist Frederick Tucker has been able to defraud poor would-be home buyers for 23 years. Tucker posts flyers featuring cloned federal fonts and logos soliciting applications for government-sponsored ultra-low interest housing loans. After the marks sign the (lengthy and confusing) application, they discover that the interest is (surprise) actually much higher, and they must pay up to 2% of the loan's value to void the loan and preserve their credit rating. The state government is attempting to obtain a restraining order that would at least provide grounds for prosecution should Tucker yet again defy any of a number of findings of fraud against him, but chances look grim. While this would make either an interesting scam for a PC group of antiheroes, or suitable evidence of scumminess for a low-level urban vigilante game, a tale of ego, gall, and confusing rules says one thing to me: magic.

Recast Tucker as a fraudulent magic user; he's a real magician, to be sure, but he's not actually formally affiliated with the Mage's Guild (or the Lord Mayor, or the King, or the temples of Mithras, or whoever is the official Big, Remote, Good-Guy source of magical protection in the city). He claims such a connection, though, thus convincing marks to purchase subsidized demon-warding spells. Midway through the ritual, he milks them for all they've got, threatening to leave the ward half-completed (and thus, leave their house especially open to demonic power) if they don't pay him a lump sum in cash to remove it. So, why can't the Mage's Guild put the smackdown on him? First off, cracking down on a fellow mage involves a wizard's trial; a trial in which other mages' dirty laundry might get aired. Tucker might also be a member (or claim to be a member) of a different, secretive guild, one the Mage's Guild doesn't want to start an open feud with. He might be under the protection of the King (perhaps he's married to a poor, but noble, member of the royal family), or of the Fae (willingly or unwillingly). Or, Tucker has a lot of ignorant folks' signatures (in blood) on contracts tying them to him; if he's taken down, the magical backlash might harm these poor rubes. Or, worse yet, the demon wards he's actually raised might drop if he's killed or stripped of his magical powers. The PCs can be magi trying to build a magico-legal case against Tucker (in, say, an *Ars Magica* game), or mundanes the Mages' Guild has hired to take the backlash and solve the problem the old fashioned way in a standard fantasy game. They might even be members of a federal anti-occult crime task force in, say, a modern-day *GURPS Voodoo* game, in which Tucker becomes a very unscrupulous houngan promising exorcisms and ritual cleansing - and figuring out which loa protects him will involve politics and lawsuits in the spirit world.

Controversy Grows Over Bikes In Park

This story concerns the proposal to allow mountain-biking in Elysian Park. (For you urban fantasy gamers scoring at home, don't you think it's kind of cool that the home of the classical hallowed dead is also the home of the Los Angeles Police Academy?) Mountain-bikers are for it; some nearby residents, park users, and environmentalists are against it. Admittedly, it won't be easy to build a land-use conflict between mountain bikers and picnickers into an epic RPG

saga unless you're running an urban fantasy game heavily influenced by both Mercedes Lackey novels and Mountain Dew ads (or a truly warped *Unknown Armies* game). However, at its core, it's about the social friction around the introduction of any new element to an old setting, especially in a place already simmering with controversy. (The machinations of both the LAPD and the city fathers who built Dodger Stadium there have bred much justified skepticism in the locals.) These same dynamics, introduced into the background of an ongoing conflict (such as the downtown developers versus the Hispanic residents of the area in real life, or the "normals" versus the mages, elves, mutants, or whatever in a game setting), can create depth and dimension. Maybe the city council is opening up a park to flying carpets in 1950s *GURPS Technomancer* and the PCs have to keep the neighbors calm to defeat a Fear Demon or just because it's the right thing to do. Or the neighborhood committee has banned supers (or mutants) from "their" park after a rash of caped criminality elsewhere. Human reactions are human reactions, whether they're to mountain bikes or illusionary griffin combat. Some folks will be scared, some will be snotty, and some will just be trying to sell the rights to Mountain Dew.

Beatings Alleged To Be Routine At Rampart

This is a followup story about investigations into sytematic police brutality in the anti-gang unit at the LAPD Rampart Station. Over 30 convictions have been overturned, and over 20 cops have been fired, suspended, or quit since the investigation began. This is a prototypical example of the small "c" conspiracy; the small ring of cops each protecting the others by silence, by alibis, and by muscle. Such a group can rapidly become quite powerful (and feared) in its precinct, even if thuggery never becomes corruption. A low-power PC group of any sort can find itself more than matched against this kind of opponent. But let's pull out a notch; any small "c" conspiracy can grow into something larger. Our ring of cops can be the first cell or the nucleus of a new fascist death-squad network, as in the Dirty Harry movie *Magnum Force.* (Or of a nihilist death-squad network, as in *Fight Club.*) By combining the cults of order and physicality, the cops might stumble into the worship of an ant-god, or into Lodge service in *GURPS Voodoo.* Or, of course, this small "c" conspiracy could turn out to be only the tip of an iceberg; many capital "C" Conspiracies would be delighted to lurk under such a fine group of public servants. Anyone from the Thule Society (cleansing society of its "unclean elements") to a criminal (or mystical) tong eliminating competition to the Freemason-Illuminati nexus that controls Scotland Yard, or the British Crown, or the Reptoids could find any number of useful tasks for a ring of rogue cops. From a chokehold on a murder suspect to a chokehold on the global economy, the thread is there for your PCs to pick up on.

Trial Starts On Claim That Officers Let Robber Die

Remember the North Hollywood bank robbery shootout? Two bandits wearing body armor and firing AK-47s shot it out with pistol-packing cops for 40 minutes, exchanging almost 2,000 rounds. At the end, one robber killed himself; the other died of blood loss after spending an hour handcuffed in the street. In short, it sounds a lot like a typical RPG scenario climax, with the big gun battle, the bad guys dead, Truth and Justice vindicated, and $300,000 in a nylon bag. But in the real world, stories never end. The second bandit's family is suing the city, several police officers, and the Fire Department for negligence and deliberate indifference. Obviously, much fun (or much angst) can be had in a supers game if the Bloodwraith's family sues Captain Crimson and the Anti-Power Squadron for excessive force and civil rights violations. It can be even more fun if the legal system diverges from what we're used to here in the modern West; the PCs can be simultaneously lauded for their actions by the duke and liable for substantial weregild as the cost of doing business. Perhaps the dead villains had influential friends (or family) at court who now make the PCs' lives miserable. Or, perhaps, the dead men were Illuminati (or Discordian) agents, and the conspiracy now pursues the PCs through the legal system as a way of keeping them in the spotlight (and keeping the heat on). Add to the vendetta the possibility of a haunting, or even a judgement from beyond. Are the PCs tried in the Necropolis Courthouse for killing the villains without honor? Perhaps the lawsuit itself is magical, serving as a rite of exorcism (in which case the plaintiff and defendant might find themselves on the same side mystically though opponents legally). Or perhaps it's a conjuring, as the official representatives of Truth and the Land reconstruct the moment of the dead man's passing with ever-more exacting energies. Is there law after death? If not, why not? The dead have rights, you know - and in Chicago, they can outvote you.

By James Maliszewski

Art by Art Today and Colored by Phil Reed

A common complaint about White Wolf's *Mage: The Sorcerers Crusade* (and indeed all the historical *World of Darkness* games) is that it presumes far too much knowledge on the part of the Storyteller and players. Although the game and its supplements have done a good job of providing a broad overview of the Renaissance period, they have not fleshed out any region in detail sufficient to serve as the basis for a lengthy chronicle. Even the excellent *Castles and Covenants* describes no locales larger than a city.

Consequently, many *Sorcerers Crusade* Storytellers may find themselves at a loss. This article is intended to flesh out one corner of Europe to serve as the home base for a Renaissance era *Mage* chronicle: the Iberian Peninsula. In addition to the basic physical and historical facts about the region (between 1450 and 1500), this article includes story seeds and character sketches as well. While providing information of use to a *Mage* game, much of it will prove helpful to anyone running a game in Renaissance Iberia. This article is necessarily short and broad in its outlines. Those interested in adding further depth to their *Sorcerers Crusade* chronicles should consult the brief bibliography at the end of this article.

Geography and Resources

The landscape of the Iberian Peninsula is uneven in character with unequally distributed irrigation. Some regions enjoy wonderful fertility, while others are nothing but steppes. In other parts, the abrupt slope of the ground is such that the rains produce torrential floods in the rivers and thus negate their beneficial action.

At the same time, the land's unevenness results in great differences of climate. The arid prairies of certain parts of Castile are in striking contrast with the fertile -- though monotonous -- plains of the Campos district and Lower Aragon. Likewise, the extremely rich arable lands and meadows of the southern and eastern regions contrast with the perpetual snows of the Pyrenees, the Cantabrian Range, and the Sierra Nevada. No less uneven is the distribution of rainfall - from the northern provinces, with their ever-clouded skies, to the almost invariably dry and transparent atmosphere of the south. The contrast extends even to the seas surrounding the peninsula - the tranquil Mediterranean, the stormy Bay of Biscay, and the Atlantic with a character midway between.

Silver, lead, and iron are abundant in the peninsula. Veins of quicksilver are found in Almaden, besides others of less importance elsewhere. There are also copper, gold, nickel, tin, and zinc. Sulfur and common salt are abundant, as well as waters impregnated with sulfates and with sulfur. The peninsula's botanical resources are abundant and various - the chestnut, the oak, the cork tree, the pine, and a number of other conifers. The peninsula produces a great quantity of cereals, rice, oranges, lemons, melons, and other fruits in immense variety, in addition to oil, figs, carobs, pomegranates, alfalfa, peppers, dates, and saffron. Excellent wines are produced in nearly every region, the most highly esteemed being those of Jerez, Malaga, Montilla, Cariñena, Valdepenas, and Rioja.

History

Old legends say that the children of Tubal and Tarsis, son and grandson of Japheth (himself the son of Noah) populated the peninsula. These were the Iberians, who formed the aboriginal population. In time, the Celts came in upon them by way of the Bay of Biscay. The collision of the two races formed the aboriginal population of the

peninsula.

Upon these first strata of population were superimposed the colonists and conquerors. The colonists were Greeks and Phoenicians, while the conquerors were (in order) Carthaginians, Romans, Goths, and Arabs. Under Roman domination, the peninsula received Christianity. An ancient tradition claims that the Apostles Paul and James came to the region, as well as "the Seven Apostolic Men" (Torquatus, Ctesiphon, Secundus, Indalecius, Caecilius, Hesychius, and Euphrasius) to whom the foundation of various churches is attributed. Connected with the coming of St. James is the very ancient tradition of Our Lady of the Pillar of Saragossa.

The Visigoths, after sacking Rome in 410, turned towards the Iberian Peninsula, and occupied its northeastern portion, which then received the name of Gotha-landia (later Catalonia). The Visigoths soon extended their rule over most of the peninsula. Eventually, the Gothic kingdom weakened because of decadence and the discord produced by its elective system of monarchy.

Meanwhile, Muslim armies were advancing across North Africa. Legend has it that Count Julian, governor of Ceuta, in revenge for the rape of his daughter, Florinda, by King Roderic, invited the Muslims and opened the gates of the peninsula to them in 711. As the Muslims armies began their conquest of Iberia, some of its inhabitants settled down to live under their rule, calling themselves Mozarabs. The rest fled to the mountains to the North, where they formed the four chief rallying-points for the Reconquest: Astorias, Navarre, Aragon, and Catalonia.

The Muslims (also called the Moors) succeeded in conquering most of southern Iberia within seven years of their invasion. Thus began the 800 year long struggle between the Christians and the Muslims for control of the peninsula. This struggle was most active between the ninth and thirteenth centuries. Over time, it acquired the religious zeal of a crusade and became known as "the Reconquest" (or Reconquista in Spanish).

In addition to its crusading character, the Reconquest was also a series of military expeditions to plunder the wealth of the Muslim domains and a popular migration to the south. The clergy participated fully in the Reconquest. They stirred popular support for the endeavor, lobbied the Iberian monarchies to take part, and assembled their own private armies to conquer lands for the Church.

The monarchies, in turn, made contracts with the leaders of military expeditions. These contracts gave the Crown certain rights over newly conquered territories in exchange for rewards for the leader of the expedition. Generally, the reward was the grant of a hereditary title. This title conferred upon the leader military powers and the right of governing the conquered land. In addition, the Crown commonly granted the right to any spoils from the conquest, including captives.

In this way, the Reconquest operated under the sanction of the Church and the Crown. This guaranteed the moral and legal authority of any expedition against the Muslims. All contracts for lands or titles were placed in a written document, called a capitulacion. Whenever a change in the monarchy occurred, noble families could prove their possession of lands and titles by presenting a copy of their capitulaciones. This system will become a cornerstone in the relationship between the Crown and the conquistadors of the 16th century.

In addition, the struggle of eight centuries to recover territory wrested from them by the Moors, who were enemies at once of their land and of their faith, created in the Iberian peoples a fusion of patriotic and religious feeling that distinguishes them from other European nations.

Politics and Government

In the fifteenth century, five independent kingdoms occupy the
Iberian Peninsula. These are Aragon, Castile, Navarre, Portugal, and
the Muslim stronghold of Granada. In 1469, the monarchies of
Aragon and Castile unite upon the marriage of Ferdinand, heir to the
throne of Aragon, to Isabella, heir to the throne of Castile. Isabella
becomes queen of Castile in 1474 and brings about "the Union of the

Crowns" in 1479, creating the state we know as Spain. This new state succeeds in expelling the Muslims from Granada in 1492. With the establishment of political stability, Ferdinand and Isabella turn their attention to a policy of overseas expansion.

Navarre is a small kingdom in the north heavily influenced by France. It remains independent of Aragon and Castile until 1512. Portugal came into existence as an independent kingdom in 1179 with the assistance of the Knights Templar and other fighting orders. Along with Aragon, it quickly became an important seafaring state. Granada in the south is the last Moorish kingdom in Iberia. Since the 13th century, it has been obliged to pay tribute to Castile. In 1492, the ruler of Granada will refuse to pay this tribute, leading to the conquest of his domain by Spain.

The "grandee" families comprise the highest level of Iberian society. These great nobles control the majority of the peninsula's land in the form of vast estates. The lesser nobility is distinguished from commoners by bearing a coat of arms and the coveted title of "Don." Many of these lesser nobles won their arms and title through the aforementioned capitulacion system. Like the Church, all nobles are exempt from royal taxation.

Also significant is the aristocratic concept of the gentleman or "hidalgo." ("fidalgo" in Portugal) A hidalgo lived for the Reconquest. He achieves the seemingly impossible through courage and force of will. Yet, he conducts himself according to a strict of honor. A hidalgo respects only those who had gained their position through force of arms rather than through manual labor. This concept of the hidalgo has thus become the Iberian ideal of masculinity.

The Economy

Because of it geography, the Iberian kingdoms lack arable land outside of the plateaus and coastal areas. Thus, they cannot produce sufficient cereal crops for their own use. These kingdoms are dependent on imported grain and manufactured good from the Genoese and northern Europeans. In exchange, Iberia offers specialty goods like wool, wine, fruit, cork, olive oil, salt, and fish.

Castile possesses a primarily pastoral economy and produces high quality wool. The Republic of Genoa monopolizes Castilian wool exports and has a significant presence in the region. Many Iberian cities are thriving commercial centers that compete with the powerful Italian merchants of Genoa and Venice, particularly for the spice trade with the east. Italian traders and sailors are thus a common sight in major port cities like Barcelona, Cartagena Lisbon, Porto, and Valencia. Lisbon, in particular, is a thriving center of trade and exploration. Early in the fifteenth century, Portugal began its explorations and has benefited from the ivory, slaves, and sugars provided by its voyages.

The Clergy

Like all European clergy, those in Iberia are divided into two groups: the secular hierarchy and the religious orders. The secular hierarchy includes the clergy who maintain the peninsula's parishes and cathedrals. These clerics generally come from the commoners and merchant classes. They are somewhat loosely organized and often must rely upon their own economic activity to support themselves. Unless their bishop takes an interest in them, secular clergy operate

under very loose supervision.

The regular orders, on the other hand, are well educated and tend to come from noble families. For these reasons, religious clergy view their secular counterparts with some disdain. Religious clergy are strictly organized and financially well endowed. Important religious orders in Iberia are the Cistercians (especially in Portugal), Dominicans, and Franciscans. By the middle of the next century, the Jesuits will play a prominent role as well.

Relations with the Jews

During the Reconquest, the Jews became more numerous and acquired some power within Iberia. Many of these Jews were former subjects of the Moors, who converted to Catholicism to avoid suffering repercussions at the hands of their Christian "liberators." Throughout the peninsula, the Christian kingdoms passed laws that restricted the practice of Judaism. In one case, the Jews of Toledo protested against laws that prohibited the building of new synagogues.

Even Jews who did convert were considered suspect. In one instance, the common people, fearing what they saw as undue Jewish influence in government, perpetrated a massacre of Jews at Toledo. In 1391, another massacre took place, beginning at Seville. A little later, the Jews of Toledo, Burgos, Valencia, and Cordova were attacked, and similar attacks took place in Aragon, especially at Barcelona. Oppressed by restrictive laws and feared by the people, they were finally expelled from Spain by Ferdinand and Isabella in 1492, who regarded them as dangerous to the religious unity and the security of the country because of their supposed relations with the Moors. Many Jews took part in expeditions to the New World as a way of avoiding the strife of Iberia.

The Spanish Inquisition

Connected with the persecutions of the Jews is the institution of the Inquisition. Jaime I, King of Aragon, introduced it into Spain in the thirteenth century to stop the spread of the Albigensian heresy. However, the Spanish Inquisition did not acquire its true character and importance until Ferdinand and Isabella established it in Castile in 1478. The Catholic Sovereigns feared the faith was endangered by false converts from Judaism (known as Marranos) and from Islam (known as Moriscos).

The Inquisition concerns itself primarily with the orthodoxy or heterodoxy of doctrines and, consequently, of offenses against faith or morals. Its judges are at least forty years of age, of unimpeachable reputation, and masters of theology or doctors of canon law. When they pronounce a sentence, the guilty party is handed over to the secular government to be punished according to the laws of the realm. The laws of Spain provide the punishment of death by fire for heretics who refuse to be converted and the same penalty for heresy and apostasy.

The laws regulating the processes of the Inquisition are Spanish, and not laws of the Church. The Spanish Inquisition, although established by virtue of a pontifical Bull, is to some extent independent of Rome, as appeals lay with the Archbishop of Seville, who passes sentence in the Pope's name. The Tribunal of the Holy Office, as it is called, is made up of thirteen provincial tribunals, with territorial jurisdiction, and a supreme council, which supervises them and judges appeals.

The appeals process is minutely regulated and far superior to the civil tribunals of the day. However, anonymous accusations may be considered and the names of accusers and witnesses are concealed from the accused. Torture is not arbitrarily employed, but only when sufficient proof already exists, and even then it is applied less barbarously than in most civil tribunals. The sentences pronounced are: abandonment to the secular arm for the impenitent heretic; reconciliation for the repentant; abjuration, when there is a suspicion of heresy; and absolution. Only the impenitent are condemned to the stake, and the number of condemnations has been greatly exaggerated.

The Knights Templar

On Friday, October 13, 1307, the King of France gave orders to arrest all Knights Templar residing within his domain

on charges of sodomy, blasphemy, and witchcraft. He then called upon the Pope to issue a Bull outlawing the order.

In Portugal, the Templars had helped expel the Moors from Algarve. The Portuguese king at the time, Diniz, could not overlook this valuable service to the Reconquest. Diniz thus modified the Pope's Bull. He allowed any Templars in Portugal who wished to escape to do so. He then seized and occupied the property of the Templars and used it to establish his own national order, the Military Order of Christ.

This "new" order continued to wear the red crusader's cross of the Templars and was entrusted with maintaining safe routes to the Holy Land. The Military Order of Christ numbered many former Templars as well as members of the nobility. They thus became influential at the Portuguese court. Not surprisingly, the Military Order of Christ also contains members of the Cabal of Pure Thought and their sympathizers, thereby making Portugal a potentially dangerous place for non-Daedalean mages.

Future Fates

The Spanish Pope Alexander VI issued a Bull in 1493 to prevent any disputes between Spaniards and Portuguese about their discoveries in the East and West Indies. Alexander established a line of demarcation between them -- the meridian running 100 leagues west of the Azores, decreeing that newly discovered lands west of that line should belong to the Spaniards, and those east of it to the Portuguese. Afterwards, the Treaty of Tordesillas substituted another line, 360 leagues west of the Cape Verde Islands - an arrangement that gave Brazil to Portugal.

The Catholic Sovereigns, by reuniting the Crowns of Castile and Aragon, annexing Navarre, and completing the Reconquest by defeating Granada, established the political unity of Spain. With the Inquisition and the expulsion of the Jews, they achieved its religious unity. The marriages of their children to the Kings of Portugal and of England (Catherine of Aragon) and to the son of the Emperor Maximilian, secured to Spain the friendship of the leading states. The discovery of the Americas and the conquests in Africa paved the way for Spain's imperial ascendancy.

Unfortunately, the death of their son Prince Juan caused the crown to pass to Charles I (better known as Holy Roman emperor Charles V), son of their daughter Juana la Loca. Charles V, attracted to Italy by the ancient strife with France for the possession of the Italian states, and to Germany by his inheritance of the imperial throne from his grandfather Maximilian, was more the Emperor of Germany than the King of Spain, and diverted Spanish foreign policy from America and Africa.

Religion, Morality, and Customs

Iberians are, on the whole, a religious people. They are well inclined to the practices of Catholic worship. In their popular festivals, secular diversions hold an equal place with religious observances. The morning is devoted to magnificent church functions, and the afternoon to balls, bullfights, and other amusements, which are carried on into the night. A great variety may be noted in the character of the popular diversions in the different sections, while the religious features are uniform and universal. In Andalusia and Murcia, the bullfight still holds first place. In Valencia, the enthusiasm for it is not so great, and still less in Catalonia, Aragon, and other regions. Catalonia is much addicted to dancing, and its popular dances are many.

There is also great difference in the popular songs of various regions. In the sections where Arabic influences have prevailed, singing is very general, but without a chorus, sometimes accompanied by the castanets, sometimes by the guitar. Another instrument very much used is the gaita (bagpipe), a goatskin bag filled with air by means of pipe that produces a continuous, monotonous sound. The inhabitants of the Basque provinces are noted for their good ear and the tunefulness of their songs, and of all the Iberian peoples they practice choral singing most.

There are processions that have become widely celebrated, to which the people of the surrounding district flock, such as the festivities of Holy Week at Seville and of Our Lady of the Pillar in Saragossa. The most popular devotion of the Iberians is to the Blessed Virgin Mary, the Mother of God, particularly under her titles of the Immaculate Conception, of the Seven Dolors, of Mount Carmel, and of the Rosary. Many women bear the name of Mary to which is added

some distinguishing title, de la Concepción, del Rosario, del Carmen, de los Dolores. Commonly, however, they are addressed only by the particular invocation, hence the Carmens, Dolores, Rosarios, Conchas (Concepcion), Mercedes, etc. There is scarcely a town that does not possess a chapel or sanctuary dedicated to the Blessed Virgin, to which pilgrimages are made once or more frequently during the year. Many of these images are considered miraculous and are the centers of poetic legends.

Crays and Covenants

As one might well imagine, the Iberian Peninsula is a Daedalean stronghold. These mages can be found in both Spain and Portugal (although rarely in Navarre) and exert great influence there. By far, the conventions with the most power and influence are the Cabal of Pure Thought (Gabrielites), the Celestial Masters, and the Void Seekers.

The Gabrielites spearheaded the Reconquest and seek to spread their philosophy of "One God, One World, One Church" far and wide. The Cabal is also influential within the military orders of knighthood of Iberia. On the other hand, the Celestial Masters and the Void Seekers have focused their attention outwards -- to the unknown lands across the Atlantic. Their influence is considerable as well, having convinced the monarchies of both Spain and Portugal to set their sights beyond the confines of Europe. Of the remaining conventions, only the High Guild has much of a presence in Iberia. Even then, most of the Grand Financiers are foreigners -- Genoese and Venetians primarily. They seek to take advantage of the peninsula's rise to prominence and the gold that will inevitably flow from its search for a western route to the Indies.

Several Traditions are likewise active in the region. The Ahl-i-Batin, while not as numerous as in the past, maintain a presence in Granada. The Order of Hermes and the Solificati remain in the peninsula, but their power has been weakened by the rise of the Inquisition, seeking sorcerers and other enemies of the faith. Because of their small numbers, they have managed to retain a modicum of freedom.

The Celestial Chorus is by far the largest Tradition in Iberia at this time.Composed primarily of devout Christians opposed to the Gabrielite-inspired Inquisition, the Chorus seeks to ameliorate its worst excesses. Choristers can be found in several prominent positions, but none have the ear of the peninsula's rulers to the same extent as does the Cabal of Pure Thought. Disparate mages also operate within the region as well. The Lions of Zion are particularly significant, having arisen to protect Jewish communities faced with persecution. The Lions are not as numerous as either the Daedaleans or the Traditions, but they are much more willing to use their magick to aid those they protect.

Finally, no discussion of the mages of Iberia would be complete without mention of the Infernalists. While not as common as inquisitors might claim, there are indeed servants of dark powers within the peninsula. They operate in the shadows and try not to draw attention to their activities. Their farsighted plans will take years to accomplish, but will prove a threat to Daedalean and Traditionalist alike in time.

Using this Setting

The Iberian Peninsula offers many possibilities for Storytellers looking to add some excitement to their Sorcerers Crusade chronicle. In the fifty-year period between 1450 and 1500, the countries of this region evolve from backwaters to centers of power. In the early portion of the century, the peninsula is fragmented. By its end, the Reconquest has been completed and unity achieved. More importantly, both Spain and Portugal have expanded their vision beyond Europe to the broader vistas of Africa, Asia, and the Americas.

Storytellers thus have a wide variety of options available to them. Political chronicles, centering on the maneuverings to unite the peninsula and dynastic wrangling are quite possible. Likewise, the story of the clash of cultures -- Christian, Muslim, and Jewish -- is readily available as well. Add to the latter the presence of the Spanish Inquisition and you have a potent mix of story ingredients.

Even more importantly, Iberia is the launching point for some of Europe's greatest feats of exploration. Not only does this provide opportunities to expand a chronicle beyond the shores of Europe, but it also creates a wonderful excuse

for mages of different nationalities and Traditions to meet and cooperate. By the end of the fifteenth century, Iberia draws explorers and adventurers from all over Europe to its shores. Never forget that Columbus was Genoese, drawn to Spain for its opportunities. The same could be true of player characters.

Here are but a small sampling of suggestions to jumpstart a *Sorcerers Crusade* chronicle in Iberia:

- A Tradition mage whose family acquired formerly Muslim lands is asked to secretly return rights to that land to the Ahl-i-Batin as a token of goodwill. Of course, the mage's family has other ideas.

- The Jews of a nearby city find themselves oppressed once more and ask for assistance from "righteous men" in securing their safety.

- The Inquisition has been active in the area in searching for agents of the Devil -- and they find them! An Infernalist is uncovered and the characters must cooperate with the Gabrielites and their minions against a common threat.

- A Portuguese expedition to Africa has need of men skilled in the arts of sail. The characters can sign on and see some of the world outside of Europe.

- Just before the siege of Granada, the characters must enter the city to safeguard libraries and laboratories before their magical contents are found and destroyed (or taken) by their enemies.

- Rumors abound of a secret Daedalean covenant in the northern mountains of Portugal. The characters set out to see if these rumors are true and what wonders this covenant might hold.

While the possibilities are not quite endless, there are nevertheless many stories to be told in this fascinating corner of Europe. Storytellers should have little difficulty in using the information in this article to create many memorable stories of their own.

Important Personalities

Ferdinand V (1452-1516)

King of Castile (from 1474), of Aragon (from 1479), and of Naples (from 1503), born in Sos, Aragon. In 1469, he married Isabella and ruled jointly with her until her death. He introduced the Inquisition, and in 1492, expelled the Jews. Under him, Spain gained international supremacy following the discovery of America, and in 1503 he seized Naples from the French, with the help of the Holy League. After Isabella's death (1504) Ferdinand was regent of Castile for his insane daughter Juana La Loca, and in 1512 gained Navarre, thus becoming monarch of all Spain. There can be little doubt that the Gabrielites influenced Ferdinand's actions both in Europe and in the Americas.

Prince Henry the Navigator (1394-1460)

Portuguese prince, third son of Joao I, King of Portugal, and Philippa, daughter of John of Gaunt, Duke of Lancaster. Henry set up courts at Sagres and Algarve and erected an observatory and school of scientific navigation. He sponsored many exploratory expeditions along the West African coast, and prepared the way for the discovery of a sea route to India. Henry was very likely not a Daedalean, but several of his courtiers certainly were. The covenant at Portus Crucis was created to continue his work.

Isabella (1451-1504)

Queen of Castile, born in Madrigal de las Altas Torras, Spain, the daughter of Juan II, King of Castile and León. In 1469, she married Ferdinand V of Aragon, with whom she ruled jointly from 1479. During her reign, she sponsored the voyage of Christopher Columbus to the New World.

Tomás Torquemada (1420-1498)

Tomás Torquemada was in Vallidolid in 1420 and was the true organizer of the Spanish Inquisition. At the request of Ferdinand and Isabella, Pope Sixtus IV bestowed on Torquemada the office of Grand Inquisitor. He was Dominican prior at Segovia (1452--74), and persuaded Ferdinand and Isabella to ask the pope to sanction the institution of the Spanish Inquisition. As grand inquisitor from 1483, he displayed great cruelty, and was responsible for an estimated 2000 burnings.

Francisco Ximénes de Cisneros (1437-1517)

Clergyman and statesman, born in Torrelaguna, Spain. He was educated in Spain and Rome, where he obtained from the Pope a nomination to the archpriestship of Uzeda in 1473. The archbishop refused to admit him, and for six years imprisoned him. Released in 1479, he was named vicar-general of Cardinal Mendoza, but gave this up to enter a Franciscan convent at Toledo. Queen Isabella chose him for her confessor in 1492, and in made him Archbishop of Toledo 1495. He was created a cardinal in 1507. On the death of Ferdinand (1516) he was appointed regent during the minority of the later Charles V. A munificent patron of religion and learning, he founded the University of Alcalá de Henares. Cardinal Ximénes was also a defender of the unique liturgy of the Mozarabs against those who would have suppressed it.

Pyramid Review

All Flesh Must Be Eaten

Published by [Eden Studios, Inc.](#)

Created by Christopher Shy and George Vasilakos

232 pages, $30.00

Brains! **Brains!!** *Brains!!!*

That's what the opposition is screaming in the new roleplaying game *All Flesh Must Be Eaten*. It's billed as "The Zombie Survival Horror Roleplaying Game" and it's as much fun as you can ever have with a roleplaying game. If you've ever watched **Night of the Living Dead**, **Dawn of the Dead**, or **Day of the Dead** then you know exactly what this game is about. (For those of you without any culture, it's simply about being overrun by zombies and shooting them square in the head.)

The Bad

Starting with the worst elements of the game first and working up the ladder from there, the game is expensive, has a few annoying typos (the foreword, by Shane Lacy Hensley, is spelled forward, for instance), and some frustrating layout issues. Now these probably won't bother most players (though the cost definitely will) and if they were the only problems I wouldn't even bother picking at them. Unfortunately, there's another, slightly larger problem with the game: the manner in which rules are presented. I spent about half an hour trying to figure out what a number listed after the damage of weapons meant before I found it hidden in a sidebar. Not really a major problem, but one that ended up annoying me to no end (especially when I figured out the number was meant for those players using the "Story-Driven" rules included with the game). Also, a few pieces of art were nowhere near the quality of the bulk of the illustrations found in the book. As you can see, not really all that many bad points to the game at all.

The Good

The Unisystem. Never having seen *WitchCraft* or *Armageddon*, this was my first look at the Unisystem and I find it quite well done. Not the greatest game system created, but useable, fairly simple, and (best of all) easily modified and expanded; it uses archetypes for characters (12 are included in the book) and a simple d10 mechanic system (though other dice are used for various weapon damage ratings). My limited knowledge of *GURPS* tells me elements of the system are easily adaptable to any *GURPS* campaign (and any *GURPS Horror*, *Undead*, or *Black Ops* GM would find this book an excellent addition to their arsenal).

Another good thing about the game is that there is a system included for constructing custom zombies allowing the Zombie Master to make his zombies as powerful as he wants them to be. And just so things don't go overboard, there's a system to measure the strength of a zombie versus the overall power of the PCs. This is a very cool thing.

The Fantastic

The concept alone (core concept = shooting zombies) leaves no questions why *All Flesh Must Be Eaten* comes across as a slightly tongue-in-cheek horror game played more for mindless laughs and senseless slaughter than it does a serious RPG. But the game has excellent range, as proven when you start reading the final chapter, "Worlds in Hell."

Presented in this chapter are eleven "Deadworlds," or settings intended to be used for single game sessions (the game is perfect for use as a break between extended campaigns or at conventions). These are short, four page, descriptions of various worlds and specific explanations about just how zombies came to be a problem for each one. Ranging from the standard *Living Dead* movie setup played for intense paranoia with a little scattered humor to the very cool and horribly serious "Mein Zombie" (a WWII setting where Hitler manufactures a zombie army and the players are a bunch of GIs out to stop the Nazi monsters). The Deadworlds are a great idea and I hope to see many more in future supplements. Any *GURPS* GM using *Alternate Earths* and *AE2* would do very well dropping their players into any one of the eleven included Deadworlds.

You say single-shot games aren't your style? A GM can expand any Deadworld to a campaign setting -- though some are better suited to extended campaigns than others. Two settings in particular, "Grave Impact" (millions of years ago an ancient civilization launched a chunk of their world carrying "zombie disease" into space; it just recently impacted with our world) and "They Came From Beyond" (an ancient race traveling worlds through teleportation powers plays "Puppet Masters" on our world and the players must fight a grim war of survival against these alien invaders) seem well suited to what could become some very grim campaign games. And while not necessarily mentioned or detailed in the book, a campaign centered around "Professional Zombie Hunters" hopping from world to world could be a blast.

The other great part about the game is the beautiful cover (courtesy of Christopher Shy) and most (see The Bad, above) of the various illustrations inside the book.

Oh yeah, I almost forgot something else great about the book. It's a hardcover.

In Conclusion

All Flesh Must Be Eaten, while expensive ($30 for a 7.5" x 9.5" book with only 232 pages is unfortunately a bit much), is a great game and one that should do well (and will probably do even better if a lower-priced softcover is released) considering the love most gamers have for zombie movies. If you already play a Unisystem game you owe it to yourself to grab a copy. For those of you not playing *WitchCraft* or *Armageddon*, go ahead and check it out the next time you're in the store. You'll probably find it as irresistible as I did.

Waves of Time (for Everway)

Published by [Rubicon Games](#)

CD-ROM, $9.95

The latest *Everway* adventure *Waves of Time* by Greg Stolze is released on CD-ROM (in PDF and HTML format, although the disk I received only had the HTML version), which I have semi-ambivalent feelings about. I think that, properly handled, CD-ROM is not only an appropriate but an exciting medium to put gaming material on. Despite the fact that I don't own a laptop (and in that I'm a lot less disadvantaged than those without a computer at all: yes, *Pyramid* readers there are still gamers without their own PC, modem and webpage) I think that releases like Marcus Rowland's ***Forbidden Futures*** show what can be done with a single disk. (Go to their [website](#) to see what I mean.) You can pack and awful lot of material onto one CD and I would really, really like to see, say, a compendium of **all** the Tekumel material out there, old and new, or the *GURPS CD-ROM* that Steve Jackson Games keeps dancing around the idea of producing.

But I come to the conclusion that *Waves of Time* not only doesn't use the medium very well but is a disappointment in itself. Firstly, the artwork included is minimal: a map, a copy of the cover illustration and a few pictures of characters. That's it. Given that *Everway*'s strongest suit is its visual focus this just isn't trying. Even if it was only one special art card, the previous releases for the game system all had something to spark the imagination of the players. If you're going to release products in an unusual format you should at least provide a product that makes use of that format and justifies the fact that you can't just put it in your pocket and take it down to your gaming session. Well, you can but you have to pack a laptop too. . .

Waves of Time intended to be a quest set after someone else's quest. The author explains that he wrote it in reaction to the many times he's seen *Everway* heroes ride into town, solve the problems the adventure set them and then ride away with a cry of "Our work here is done. Hi-Ho Silver and away!", leaving behind who knows what chaos, misery and garbage littering the streets that they are just too damn Heroic to deal with.

The former government of the realm of Wavebreak, neighbouring the great city of Everway, has been overthrown by A Motley Bunch Of Heroes and renamed Waverise by the revolutionary government. The Waveriders, a race of aquatic shapeshifters, have been released from a centuries long imprisonment. And our Heroes are cast in the role of the "James-T-Kirk-Cleanup-Squad": that elite formation that I suspect must exist to clear up the messes left by everybody's favourite violator of the Prime Directive ("He said everything would be all right, did he? He said you just had to overthrow your oppressors did he? And now none of the infrastructure works and you're all starving? Hmm, sounds about average. Sign this release form please. . .")

They have to go to a realm where someone has "overthrown the evil tyrant" and on behalf of the rulers of Everway, sort out who was evil, who wasn't and what attitude should be taken to the new revolutionary government. Are the Waveriders the inhuman monsters the old government claimed they were and what attitude will they take to the human inhabitants of the Realm now they're free? Are the revolutionaries idealists or thugs? And what were the real motives of the mysterious mage who masterminded the revolution?

All of which could make for some excellent adventuring. Except that all this product provides is the briefing papers that the heroes receive and some brief outlines of the possible problems they might face going back into the Realm of Waverise. There is no detailed description of the people and personalities that the players might encounter nor even an outline series of events. This throws far too much burden on the referee. What we have here is the outline of an adventure, not an adventure. (It says on the cover: "An *Everway* Book." Well, that's a bit grandiose for only 56 pages

but it avoids calling it "An *Everway* Adventure" which would cause problems with the Trades Description Act.) To make this workable. . . Well, I'd have to sit down and write the damn adventure myself right from the start. Given the space available on the disk, I would want from the author at least two detailed possible adventures (the "good revolutionaries" and the "bad revolutionaries" possibilities) with "adventure seed" outlines for other variants. It can't cost that much more to fill the disk with material: unlike a book, each page published does not require extra material and extra expense. All it takes is time and effort by the writer. Which is why, I suppose, I'm so disappointed.

Happily, given the way this has been released, only rabid fans of the *Everway* line (like me, believe it or not) will ever hear of it or get the chance to read it. Hopefully, the next release by Rubicon Games, a guide to *Everway*'s Strangerside district will come back up to the high standards set by *Spherewalkers*.

Mindwalking: A Guide to Psionics (for Alternity)

Published by [Wizards of the Coast](#)

96 pages, $18.95

The second major general rule expansion for the *Alternity* game system, *Mindwalking: A Guide to Psionics*, expands upon the already strong core rules for Psionics adding a variety of elements that Game Masters can easily adapt for their own campaign settings. Author JD Wilker's goal is to provide a set of tools for GMs to use for developing Psionics in their game worlds. These tools include the mechanics for running psionics, how to run them and what trouble spots to avoid.

The introduction establishes a basic definition of psi powers and effects as well as an overview of how psionics will affect characters, non-player characters and creatures, and campaigns as a whole. The role of psionics in the two existing *Alternity* settings, *Star*Drive* and *DarkMatter*, are also examined.

The next section focuses on the mechanics of *Alternity* psionics. New powers, skills, perks, and flaws are described. *Alternity* provides two methods for having psionic characters. The first is the Talent, other character professions who happen to have a psionic skill (or skills). Talents are provided both as a character development option for players as well as a way of controlling the level of psionics in the game for the game master.

The primary psionic character is the Mindwalker. The Mindwalker creation rules, already present in the core *Alternity* system, are revised, refined, and developed to allow the player and GMs flexibility in creating psionic characters. Rules for determining power levels as well as usage and recovery rates are balanced and intuitive. There are a wide variety of powers available including standards such as telepathy, telekinesis, pyrokinetcs, and teleportation. Most of the powers are balanced and easily handled by the GM. The few potential trouble areas, mainly those dealing with temporal effects, are given either limits that maintain control without being too restrictive to players or have unique mechanics which minimize disruption.

A good example of this is Precognition. The ability to see the future could easily be overused and abused by even the most well-intentioned players. However, Wilker's solution is quite elegant. The GM determines when the power might activate (possibly even making the roll for the player); if the player decides to act on it, the action check (*Alternity's* core mechanic) roll is made. Success leads to the awarding of resort points, points which can be used to influence die rolls or even lead to a reroll. A high level of success means that these points can be used by anyone in the group. Precognition can still has a number of potential pitfalls, but many of those can now be worked out ahead of time, instead of on the fly during the game. A mental combat system is also provided, which uses existing skills, categorizing them in such a way that can allow the development of actual mental "fighting styles."

The next section covers psionic campaigns. The first basic structure used is Psionic Consciousness, a parallel of the preexisting Progress Levels, which are similar to *GURPS* tech levels. The PC levels range from 0 - No psionic activity to 8 - Parallelism where the entire population has high levels of psionic ability and may be moving towards a new stage of development. At each level there is a description of the basic role of psionics in society and what psionics may encounter. Recommendations are given on skill costs and other mechanical variations at each PC level. One of the key aspects of a psionic campaign, the relationship between psionics and the law, is also discussed. The second basic structure is Campaign Tone, three of which are enumerated: Realistic, Heroic and Superheroic. Each of these is given recommended psionic consciousness level range, careers and occupations, organizations, campaign themes, and other idea seeds.

The next section details a wide variety of tools available to the game masters. These include devices and drugs to augment, detect and counter psionic powers; non-player characters; and creatures. Also included here are "manifestations" of psionic powers such as haunted houses, thought-forms, and psionic artifacts. This section (and the book) concludes with two of the strongest parts of the book, Customizing the Campaign Model and Troubleshooting Psionics. Methods for raising or lowering the overall power levels are suggested as well as a mechanism for pushing the limits is presented, all of which will allow for the development of psionics that will easily fit into campaign worlds. Several issues on troubleshooting are discussed including the reasons why psionic individuals don't dominate society, how to manage psionic characters, and some specifics with pitfalls and problems that might occur with skills presented in the book.

Mindwalking: A Guide to Psionics is an excellent rules addition to the *Alternity* system and an innovative treatment of psionics as a part of a role-playing game. The tools are detailed, well-thought out, and numerous. The main problem is that *Mindwalking* stops at the rules and tools. There is a definite lack of examples of how these rules and tools can be applied, something that becomes quite evident when contrasting it with a comparable work such as *GURPS Psionics*. *Mindwalking* answers the mechanical and technical aspects of utilizing psionics and game masters who have a clear vision of their campaign and psionics' role in it will find all that they need. However, those who are not sure what they actually want in a campaign will have to look for additional inspiration elsewhere. But once they know what they want *Mindwalking* will show them how to create it.

-- Michael Breen

On The Internet, No One Knows You're A Dog

On the http://www.2000.census.gov/ web site, there's a small survey which asks if you, the causal denizen of cyberspace, would prefer to submit your census information on the net rather than through the mail. This seems perfectly reasonable until you sit down and think about it. Basically, the Census Bureau is conducting a survey of people online to ask if they would like to take a survey online.

I buy this logic. It appeals to my inner masochist. For the record, I gave my answer as "Yes."

This is all a little bit strange, but what does this have to do with gaming? Well, nothing, not in a direct survey-to-gaming sense, unless your conception of gaming is to fill in little circles on Scantron sheets. (I don't know how people game -- some people are very creative.) It's confounding. This is the same spurious logic which drives other mystifying online ventures from buying groceries to renting videos online. The point seems to be missed: in the net, there's no name, no body, and no accountability, not even for a survey about taking a survey.

Instances of inconsistencies are found all over the net. They're nearly commonplace. People believe they are communicating over the net with a person motivated by a human brain. For all anyone knows, the entire Internet may be populated by household pets or elaborate AIs hiding behind AOL email addresses.

Online, I don't have a body. No one knows if I'm male, female, or a baboon with a computer wired directly to my brain. No one knows what I look like naked or if I smell. No one knows if I'm fat or thin, or if I happen to like my home decked out in red and blue plaid. No one knows me at all.

This is true for online gaming.

Online, the character is essential, and a character needs a body, even the most metaphysical one. Without characters, even the greatest of games aren't going to get off the ground -- someone ought to be there to be doing the playing, after all. Yet, in an online gaming world constrained to the dimensions of text and imagination, especially a gaming online world such as a MUD, existence is mutable. I can log in, create my character and choose any body I imagine. I can be a sexy vampire, a shiny dolphin, or a drooling, cthuloid spawn. It's an amazing advantage to gaming: flexibility, anonymity, and no messy, annoying details about physical presence (and Doritos crumbs and Coke cans -- except for on my desk) to get in the way of the suspended reality. It's almost the perfect set-up for a gaming experience.

And then there is the paradox -- with no body to get in the way of gaming perceptions, my gender can also be anything I can dream. I can switch with the flick of a bit, and voila, instant gender change.

Many players do this with disturbing regularity.

When I create a fresh character on an online world, I'm faced with that most awful of acts: having to set the dreaded @*sex* on my character. (That's for MUSH, at any rate -- Your Online World May Vary.) Many worlds offer the two standard choices provided to mankind by biology: male or female. These are the norm for more straightforward worlds that focus on hack-and-slashing and realistic roleplaying.

But other worlds, such as PyramidMOO, offer a whole galaxy of genders, including different and interesting versions of "neither" or "neuter." These include the *splat*, which uses the vague pronouns **e*, *h**, *h*s*, and *h*self*, the generic neuter, the royal "You", and the occasional tentacles in various unnamable places. I can associate myself or disassociate myself from my physical gender in any manner I see fit. Once tied to the gender of my physical body, I am now free to be whatever I wish: I can be a woman, a man, or a small furry green thing.

The gender swapping in the online community is so fast and furious that the female characters are often challenged to prove that they are played by genuine women. A vast number of online players are men, and some of those men switch gender to roleplay female characters. Many men take pains to make it as realistic and believable as possible.

On the other hand, those who lean toward "twinkiness" are easily spotted and give the entire thing a bad name. Male characters are rarely challenged, even if the person at the keyboard might not be male. Male characters are assumed to be, in general, men. But women? Despite the fact that there are certainly women -- more than one! -- who are very involved in the online community, female characters are still questioned as to their "real" identity.

Luckily, there are some "female" characters who are more obviously men than others. For example, on a World of Darkness MUSH, a friend spotted the following description on a character:

Joann is a very sexy and beautiful woman. She is dressed casually with clothes that are tight in just the right places. She stands 5'8" and weighs about 160 lbs. She has red hair and green eyes. 36C breasts compliments her nicely. She also has a jacket on.

Guys, here's a hint: *We know*. The breasts are the tip-off. No one else writes breast sizes. And best of all, most deeply twinky descriptions go on for pages and pages (and pages and pages...) of intimate, minute detail of cleavage. Not that I have anything against FacelessHotBabes. They're kind of entertaining in their own endearing, warm, fuzzy kind of way. Their descriptions are so fun that they're collectible -- hours of entertainment for the entire family! And it's not that these men choose to play women. It's that these men choose to play women with blatantly pornographic descriptions for one reason and one reason only -- these men play women they wish would date them.

Not that there is anything, you know, wrong with that. And women do this too. There's no favoritism in cyberspace.

But why would a man switch to a woman in an online world?

There are several reasons. The most obvious is a simple desire to roleplay. Online is the only place that a man can really play a female character with all her nuances and details. How many times in a face-to-face gaming situation has the "he" playing a "she" been called a "he" during a scene? There's no messy physical presence to destroy the illusion.

A part of it is also a desire to crawl into that oft wondered about and never truly understood female psyche for just a few moments. Although he could never really understand, he can experience what the general reaction is to him and how it's different from being treated as a guy. And it *is* different. The female character almost always gets more attention, some of it good, some of it bad.

The story goes like this: two characters, one male, one female, join a generic MUD. Both of them ask one of the local head honchos for equipment. One, the female, becomes magically laden with enough equipment to climb a few levels quickly and easily. She's pointed at the newbie area to get started, given some tips and advice, and encouraged to ask for help. The other one, the male, has the same plea, and he gets largely ignored. It's reverse sexism in the online world.

There's the negative attention as well. The "female" character can manifest extra attention in the form of relationships, love triangles, weddings, pregnancies, children, and various threats to file for divorce. And if the character is very lucky, there's a handy electronic, non-existant lawyer nearby to gain custody of the electronic, non-existant kids and the electronic, non-existant three bedroom ranch home.

And there's the final reason -- tinySex, the engaging in textual sexual encounters in a virtual reality. It's an unavoidable fact of the online world, to the point where there are entire communities dedicated to just this particular activity, some even dispensing with the trappings of human bodies.

Men swap into female bodies, that's a fact. Here's the big question:

Do women switch to men?

Yes.

How do I know?

Because I do it all the time.

Why do I choose to masquerade as a man? Maybe it's to escape exactly what the men are seeking when they change into women: the special attention that is expended upon the female characters who stand out in a predominately male crowd. I'm trying to escape being the center of attention, and attention that isn't always positive. More times then not, it's a simple desire to avoid the advances of male players, regardless of what skin they wear. It's a much more pleasant online gaming experience when I'm not constantly being asked or paged:

NamelessGamer says, "Hey baby, what's your sign? Do you like cheese?"

Being hit on, at any time, regardless how friendly, is distracting, unpleasant, and often demeaning. Why deal with it when the @sex bit takes care of it for me? I know that the community will not question yet another male character, and I know that the MUD will take care of the messy problem of pronouns for me, just like it would if I was a *splat* or a neuter.

But maybe there's something deeper which drives a me to flip my bit, as it were: an escape from the onerous reminder that a female is forced to be resigned to her gender, that the face of humanity, will always be man's and a woman will always be female first and a human being second. And with that flip of a bit, I can be a man, unquestioned, absolutely, without the stigma of the weaker sex. I find it is easier to work my way into the game and become a player instead of a center of attention, which is what I want in the first place. I want to be players in a community of players, not the centerpiece of attention, regardless of how well meaning and well motivated.

And maybe it's simply my desire to roleplay a character who happens to be male or female! Not everything needs to be deconstructed down to its base psychological elements. Online gaming is, after all, a gaming environment for everyone.

When I log into an online world, regardless of its form, I want to be taken as *me* first and a woman second. I want to be accepted into the community, to play the game at hand, to have fun, and to be part of the virtual world that all players have helped to create. My gender should not be an issue, but the fact, for both men and women, is that we bring our real world biases into the online world, and they are just as strong there as they are here. But the online world gives me, and all women, a tool to either sidestep this enviroment -- or embrace it completely. And most of the time, I simply want both.

Fact is, Online gaming has become so prevalent in the last few years that every type of character a player can imagine can exist in electronic form. All sorts of communities, filled with all different kinds of players with different kinds if playing styles and different preferences, can be easily coexist happily. There's a world out there for everyone.

Next Time. . .

There is an invisible line in the sand the online gamer crosses where the game is no longer a game, nor reality, but somewhere in between. And then there are those who wish to destroy that illusion utterly, completely, and without consequences. I'll talk about the immersion and THEM: the sociopaths, the player-killers, and those that make the online gaming world unsafe -- especially for woman gamers.

MUD: Multi-User Dungeon, or Multi-User Dimension.

Twinkie: A delicious Hostess snack cake, or an over the top PC.

by Tom Mazanec

Art by Dan Smith and Colored by Phil Reed

Name: Aesop
Class: Weird parallel
Quantum: 3
Technology: early TL6
Current Date: 1994
Mana Level: Low or none

Aesop appears to have diverged from Homeline in the early 15th Century, when the first aesop domain appeared, probably somewhere in France.

An aesop domain is an area (actually a cylinder) where nonhuman mammals are transformed into aesop. If an animal enters an aesop domain for more than a few minutes, it undergoes a transformation over a period of several hours, involving an increase of IQ to human normal level, development of bipedal locomotion, increased manipulative ability (even horses can do a little manipulation with their fore-hoofs, deer get bad grip, foxes get poor grip and beavers, rats, squirrels, etc. get full hands which still look appropriately different), increased vocal ability (most get a disturbing voice, a some only have accents, and a few, such as anteaters, only get a few sounds), and size change to human normal. In addition, aesop get eidetic memory, and about 1% get photographic memory.

When an aesop dies, the location of its death becomes a one hex aesop domain. If an aesop dies in an aesop domain, the domain's radius increases to enlarge its area on the Earth's surface by one hex. If an aesop dies underground, the aesop domain is also buried until enough die there to make the radius greater than ten times the depth. If an aesop dies at sea, the domain is located at the sea's surface (not in the ship). So far no aesop has died in a hot-air balloon, an airplane or a submarine (the last has not even been invented yet in Aesop). Aesop domains seem to last forever, and a few have grown to a kilometer in diameter by now. Countless small ones are scattered on every sizeable land mass on Earth (including coastal Antarctica).

A new aesop has enough instinct to at least try to survive in the wild, but they also can be educated and trained quite quickly (due perhaps to their excellent memory) and can begin simple careers after several years. The psychology of an aesop generally has several quirks derived from its original species, and is also subject to rare, mild stress atavism. Disadvantages such as sleepy, colorblindness, etc. are also present, depending on species. Aesop suffer social stigma in virtually all parts of the world. They can reproduce sexually with their own species (although nearly all are "fixed", and most of the world population are derived from transformed animals). A language has recently been devised for aesop, such as aardvarks, who are limited to a few vocal sounds. "Feefah" is based on the same logic as the Morse Code ham radio operators use in Homeline (of course, a ham would have no advantage in learning it. . . he may even have to "unlearn" what he already knows). Usually, even feral aesop that are derived from predatory species are able to be approached cautiously before they are trained, but there are exceptions. . . most dramatically the recent Vampire War.

Currently, there are nearly 2 billion humans, with almost that many aesop. The Avalon Confederation covers nearly all of North Vespuccia, and Brasil nearly all of South Vespuccia (however, several Indian tribes have actually managed to obtain semiautonomous nation status, even if still dominated by the Confederation or Brasil). Brasil is the most advanced nation, after the 50 year long rule of Presidente Alberto Philho, a very intelligent and charismatic leader who has an intense personal fascination with science and technology and who has used his power to push their development in his country. The Confederation is becoming paranoid about this, especially as Avalon has long been inclined to be more hardline about aesops than has relatively liberal Brasil, and is growing even more so. A cold war has begun in the Western Hemisphere over aesop right to life (if nothing else) and the technological arms race which threatens to end a century of relative peace in human history.

The looming Hemispheric War would be Aesop's first great mechanized war. Africa is still pretty much the "dark" continent, with hundreds of "nations" of fluid borders, mostly based on tribal lands (a few are even aesop "tribes"). Asia is more fragmented than in Homeline, with Hindia smaller than our India and China divided into several nations (albeit with one culture). Meridia is allied with Britain, much as Homeline Australia. Europa has approximately similar borders as in Homeline Europe, except Germany is divided into Prussia (north) and Bavaria (south), while Denmark, Norway and Sweden are one nation (Scandinavia), and where the edges of Homeline's Russia are is a line of tiny ethnic principalities.

Aesop Timeline

Alternate Earth: Aesop

- **1441** - Earliest surviving documents referring to aesop. The aesop are mentioned as being featured in royal menageries and travelling shows. A monastic logbook from this year refers to "monsters" and "demons" in a fashion that seems to indicate aesop appearances as well.

- **1452** - Fall of Byzantine Empire to the Turks. An aesop killed in Constantinople earlier that year is widely regarded an omen of the disaster.

- **1493** - Columbus discovers New World across the Atlantic.

- **1519** - Martin Luther posts the 100 Theses at Wittenberg, starting the Protestant Reformation. Reformation churches quickly split into 3 groups, with one considering aesops demonic, a second regarding them as just clever beasts and a third holding them to have human souls.

- **1541** - The Papacy, finally forced to confront the aesop issue at the Council of Viterbo, splits in the Second Great Schism into three, mirroring the divisions of the Protestants.

- **1552-1569** - Schismatic War devastates Italy but fails to solve Schism.

- **1579** - First aesop domain in Hindia (India).

- **1587** - First aesop domain in China.

- **1599** - First aesop domain in Africa (in Egypt).

- **1615-1635** - Twenty Years War devastates Europa (Europe).

- **1622** - Puritists establish colony in North Vespuccia (North America). European colonization of North and South Vespuccia (South America) follows, often by refugees of all three divisions of Christianity fleeing the war.

A few aesop are transported to the New World, where they eventually die and create aesop domains there.

- **1654** - John Masterson, after using telescope to observe planets, proposes Heliocentric Theory.

- **1655** - John Masterson assassinated by religious fanatic.

- **1658-1708** - Half Century War. Europa, weakened by wars and the following famines and plagues, nearly falls to the Turks, but slowly drives them back after suffering great losses. More refugees flee to New World.

- **1750** - Augusto Moniz of Portugal starts religious frenzy with a vision of Lisbon's destruction by earthquake in 1755, followed by Return of Christ in 1756. The Great Earthquake rises this frenzy to a fever pitch, but the movement disintegrates in 1757.

- **1771-1779** - Avalon War results in independence of North Vespuccian colonies and formation of Avalon Confederation. The Founding Fathers are all different than in Homeline, although Joshua Franklin, the first President of the Confederation, shared a paternal great-grandfather with Homeline's Ben Franklin.

- **1788-1794** - Liberation War frees Brasil (Brazil) from Portugal. Within a few years, Mexica (Mexico) and the other Latin colonies have gained their independence, as well.

- **1798** - First aesop domain in Meridia (Australia).

- **1814-1825** - Human Emancipation movement in Avalon Confederation replaces human slaves with aesops.

- **1854** - Edward Langley invents steam engine.

- **1868-1874** - First Hegemonic War. Avalon Confederation defeats and incorporates Keneca (Canada), as well as taking over the northern quarter of Mexica.

- **1883-1892** - Second Hegemonic War. Brasil conquers nearly all of South Vespuccia, leaving only a thin fringe of small satellite nations along the north and west coasts.

- **1932-1948** - The Dozen Wars smolder around the planet, but together the twelve conflicts kill less than a million people. Human war is becoming more limited and unpopular as the aesop population grows and humans start to look at themselves as one people.

- **1948-1950** - The Great Influenza Plague kills nearly 100 million humans and aesop.

- **1989-1993** Vampire War in Mexica. Vampire bat aesops kill scores of thousands of humans, and are finally slaughtered in a huge massacre which creates the largest known aesop domain on Earth.

- **1994** - Jeremiah Gordon becomes 32nd President of Avalon Confederation and starts his six year term by promising a stand for humanity and against "the growing aesop threat".

Analysis

While so far only a small fraction of a percent of the world's area has become aesop domain, that fraction is growing at an accelerating rate. In addition, the growing aesop population is projected by Infinity to "swamp" the human population in a few decades, endangering human control of the world. In several centuries, computer simulations have the entire planet becoming an aesop domain, and no one is sure what happens after that. Even without computers Aesop has realized this and has tried to kill all the animals on the planet on several recent occasions in spite of the cost (both economic and ecologic); and while they wiped out some species, others seem beyond their means (Homeline, with its technology 2 full levels beyond Aesop, has not been able to eradicate mongooses from Hawaii, or rats from practically anywhere). And killing aesop just makes more aesop domains to worry about. Some in Infinity Unlimited

have suggested transporting the human population to an uninhabited world, but the logistics of doing this to a world 2 quantum levels away are daunting to say the least. Other worlds have problems rivaling Aesop's in scale, if not in bizarreness, and are not evacuated.

Another concern is whether aesops taken to another world will create aesop domains at death. One school of thought holds that aesop domains are a unique feature of the laws of physics of that world, so the answer is no. Another school of thought points to a recent observation concerning the epsilon force and is not so sure. It is often forgotten that there are six different known forms of parachronic energy, and Quanta reflect only the gamma. The 659 known worlds are spread fairly evenly with epsilons of 0-20, with a slight concentration around 10. But of the 26 worlds considered "weird", 23 are between epsilon = 8 and epsilon = 12. And 17 of these worlds, over half, are between 9 and 11. This is more than a "slight" concentration. It is possible that worlds with epsilons in this area are prone to such weirdness, and could be infected by aesop domains (for example). Since Homeline's epsilon is 10.23 and Aesop's is 10.24, this is a concern. Of course, Bizarro's epsilon is 3.71, and the United States of Lizardia's is 12.90, so this cannot be the whole story. Also, most of the 78 worlds with epsilons between 9 and 11 are more or less reasonably normal. . . so far, that is. If the aesop could spread aesop domains to other worlds, they could be used as a rather formidable, if slow-acting, weapon.

This assumes that aesop domains would function the same in other worlds. There is no guarantee that aesop domains in Homeline (for example) would not grow by square miles instead of hexes, or would not turn humans into anthropomorphic animals!

In Aesop, the position of the aesop is becoming more precarious. Some have formed friendships with humans, but this is becoming harder as inter-species strains grow. Organizations such as the Quilt of Life try to promote harmony between the species, while others such as the Image of God seek to keep aesops in slavery (usually corporate or governmental in 1994) even while they try to imagine how they can perform species cleansing without exacerbating the situation with each aesop death. The world seems about to enter some interesting times. One good break is that, at Quantum 3, Aesop is out of reach of Centrum. Infinity Unlimited has heard rumors that Centrum somehow blames Homeline's use of parachronics for the large number of weird parallels cropping up, but what Centrum could do with Aesop even if it were in reach is problematic (as it is for Homeline).

Adventure Seeds

North by Northwest

One of the players' characters has said or done something wrong. Now your team has been mistaken for secret agents of the Brasilian government, and the Avalon Defensive Intelligence Department is determined to terminate them with extreme prejudice.

The Next Final Solution?

In Prussia and Bavaria, a new, radically anti-aesop movement has sprouted. It advocates shipping aesop to the interior of Antarctica for extermination as soon as they are discovered, and a scorched-earth policy to reduce the mammal class to Homo Sapiens. And a lot of humans, especially Jews, are *not* considered Homo Sapiens. Most terrifying, their symbol is a swastika! Reich-5 is on Quantum 3 too, so they could get to Aesop without projectors. Does the Reich have the Secret? Even if this is just a coincidence and the movement home grown, how will your players respond to history seeming to repeat itself?

Patterns in Amber

"Whence we see spiders, flies, or ants entombed and preserved forever in amber, a more than royal tomb."
-- Sir Francis Bacon, *History of Life and Death*

It is immortality in death, the sun's tears and the moon's fire, lost treasure and secret power. It is amber, the bedrock of the oldest trade route known to man, stretching from classical Rome far back into the Neolithic era. In its luminous depths, we can find everything from dinosaurs to flying saucers. That is, as always, if we look hard enough.

Looked at through the pitiless lenses of reality, amber is fossilized tree (mostly pine, cedar, and sequoia) resin. Insects, leaves, flowers, fungi, worms, and other passengers trapped in the sticky blobs millions of years ago can still be seen frozen in their prehistoric death throes. This, of course, is what gave the mad scientist of Michael Crichton's *Jurassic Park* the notion of cloning dinosaurs from blood DNA in the belly of amber-encased Cretaceous biting flies. Even if the fossilization process didn't break DNA chains beyond any hope of repair (at least without alien hypertech or good old **GURPS Atomic Horror** knowhow), most amber only dates back to 20-50 million years ago, too recent for dino blood. However, Canadian and Lebanese amber both predate the dino doom; and it's not impossible that other isolated deposits exist. (A site in New Jersey discovered in 1996 revealed over 100 previously unknown Cretaceous and Jurassic species.) Rather than release velociraptors, however, perhaps your amber-popping mad scientists can release prehistoric plagues; researchers have claimed successful breeding of 25 million year old bacteria from amber, and an amber-borne virus would make an interesting change.

" And all around the maidens, the daughters of Helios, enclosed in tall poplars, wretchedly wail a piteous plaint; and from their eyes they shed on the ground bright drops of amber . . . But the Celts have attached this story to them, that these are the tears of Leto's son, Apollo, that are borne along by the eddies, the countless tears that he shed aforetime when he came to the sacred race of the Hyperboreans and left shining heaven at the chiding of his father."
-- Apollonios Rhodios, *Argonautika,* Book IV

And an interesting resonance, since the ancients identified amber as the tears of sacred maidens weeping for their slain brother, although the brother is variously named as Meleager and Phaethon, both solar heroes killed by fire. (Perhaps the virus causes a high fever?) Amber, of course, burns, and was used as incense in the worship of solar gods such as Apollo, whose tears also come into play here. (Although, since amber washes up with the tide, it was also associated with frozen moonlight.) Apollo's tears are associated with the Hyperboreans, who lived in the "land beyond the north wind." There, with Apollo as their king, they lived in a sunny paradise, which Avram Davidson has cleverly pointed out may derive from the fact that obviously tropical plants can be seen clearly embedded in "Hyperborean" amber.

That golden amber came south from the Baltic Sea through the Russian and East European river networks, into the Black Sea and thence to Greece. Which has led not a few scholars to wonder if perhaps the "Golden Fleece" that Jason searched for (which was also kept in a paradise associated with the Black Sea) might not have been a sacred chunk of amber. Amber that attracts wool when rubbed, because amber raises a powerful static charge. That charge gives electricity its name, since amber was "elektra" to the Greeks.

"I don't know if you know anything about UFOs, but all the characteristics of a typical sighting are shared with nocturnal insects swarming through an electrical air field: the sudden appearance of a colored, glowing light hovering in the night sky, moving in a nonmechanical matter, possibly humming, creating interference with radio and television signals, then suddenly disappearing."
-- Bambi Berenbaum, in *The X-Files,* "War of the Coprophages"

And when you combine insects (even preserved in amber) and electricity, you spark the gap to UFOs. Both believers and debunkers (most notably Philip Klass) have characterized UFOs as powerful clouds of atmospheric electrified plasma, generated by murkily obscure means involving weather inversions (debunkers) or secret Tesla technology (believers). This theory goes all the way back to the "foo fighter" sightings over WWII Europe, some of which seemed to be intelligent ball lightning. Rumor spread that Hitler's mad scientists (who, had they only known, could have been raising an army of dinosaur warriors for the Reich instead) had created the "feuerball" or the "kugelblitz" to knock

American planes out of the sky. Since we've learned all about the Nazi flying saucers, it's interesting to realize that they (and the later sightings over Mount Rainier in 1947) were explicitly described as brass-colored. Or, rather, the color of amber. If the Nazis developed some magical or Tesla-technical way to release the inherent "elektra" (or vril, or scalar plasma, or antigravity ions) within amber, they'd need a lot of it to create a UFO fleet capable of taking down the Allied air forces.

"The hovel, containing the lost Amber Room (Yeltsin keeps insisting that he knows where it is, the Bernsteinzimmer, *of which only photographs remain) and the History of the World, stood on a freakishly shaped knoll, very far from the sea."*
-- Peteris Cedrins, *The Penetralium*

So it's a good thing they had the Amber Room. Built in 1712 for King Friedrich Wilhelm I of Prussia, it took six tons of Persian (likely Lebanese) amber to construct it. The entire 1,000 square foot room was paneled, decorated, and furnished with amber to create a golden chamber suffused with an eerie, almost magical light. In 1716, Friedrich Wilhelm gave it to his guest and ally, Tsar Peter the Great of Russia, who removed it to the imperial palace of Tsarskoye Selo south of St. Petersburg. Catherine the Great added four marble Florentine mosaics (from the villas of the also amber-collecting Medici) and numerous mirrors (to reiterate the moon connection?) to the Room in 1775. In 1941, with the Nazis advancing on the palace, the Soviets disassembled the Amber Room and packed it for shipment east -- when the Germans attacked and it fell into Nazi hands. The Nazis reassembled it in the old Teutonic Order capital of Koenigsberg, which is interesting given that the Teutonic Knights (contemporaries and rivals of the Templars) jealously held the Imperial monopoly on harvesting amber from the Baltic. Heinrich Himmler, of course, was obsessed with the occult heritage of the Teutonic Knights, rebuilding their castles according to mystic geometries all across Germany -- including Koenigsberg. Which just may be why the Amber Room disappeared without a trace in April of 1945. One of the Medici mosaics has resurfaced in Bremen, but the trail to the Amber Room itself was a dead end.

"Midonz, with the gold of the sun, the leaf of the poplar, by the light of the amber,
Midonz, daughter of the sun, shaft of the tree, silver of the leaf, light of the yellow of the amber,
Midonz, gift of the God, gift of the light, gift of the amber of the sun,
       Give light to the metal."
-- Ezra Pound, "The Alchemist: Chant For The Transmutation of Metals"

A chamber made completely of amber, vanished from view in the midst of a desperate retreat. Surely in any decent game, there's yet more to this story. Amber's magic is powerfully bisociative and alchemical, being both solar and lunar simultaneously. The Egyptians used it as a dessicant in some mummies, identifying it with death and preservation. The Scythians may have used it as a lamp for the dead, a rare frozen piece of sunlight that could follow a shade into the afterworld. The Romans believed that it cured diseases, especially of the neck and throat.

So let's see what we can do with amber in a good old fashioned game of alien conspiracy. Some of the amber contains nanotechnological control matrices left by the Reptoids before the asteroid hit 65 million years ago. Some of it contains the powerful chemically-engineered secretions (tears?) of the godlike ancient-astronaut Loi (such as Apollo), which can be released through parachemical or psychic means. Some of it contains miniature clone warriors of the Mantid ultraterrestrials, the feared Insect Gods who dwell in the interstices of the dimensions. Ancient tribes used its magic; Jason's quest for the Golden Fleece stole it and gave birth to the West. The Loi plotted revenge from their Hyperborean fastnesses (and of course, since both Hyperborea and Thule are amber countries in the ultimate north, that Loi-Nazi connection begins as strong as ever), manipulating the barbarians to sack Rome and consolidating power through the amber-collecting Teutonic Knights. In 1712, Friedrich Wilhelm constructs an Amber Room using mystical geometry to unleash the layered scalar energies of the "elektra" but recoils at the powers he has called up, the Insect Gods from the qlippothic realms. He passes it to Peter the Great in a midnight ceremony; Peter and his heirs attempt to control its powers but have only intermitttent success. Himmler siezes it, and fears not its wrath; the Amber Room reveals to him the secrets of the "kugelblitz" and the electrostatic Nazi saucer fleet is born. The Amber Room becomes the saucers' power source, using stolen Tesla broadcast plasma power designs. Before the Soviets can destroy it, a U-Boat ferries it to [Nazi Antarctica](), where it lurks in an ice cave at the foot of the world, a new Hyperborea in the uttermost south. Can a **GURPS Black Ops** Strike Force Jason brave the cloned dinosaur dragons in the Nazi Redoubt,

and steal the new Golden Fleece -- the Amber Room -- for a new birth of heroism? Or is it a trap, which will freeze them all in the glaciers of Antarctica like so many ants in amber?

Murphy's Rules

Steven's Biggest Mistakes as GM

(Part I)

Now, the question may arise, "Why on earth would Steven take the time to tell you about his biggest Game Mastering mistakes?" Well, there's a few reasons. First, I believe we often learn more from our mistakes than our successes. Second, I want to bond with you all a bit, and rather than dote on what I've done *right*, I'd rather keep myself humble from the beginning by telling you what I've done *wrong*. That way, if, say, my ego were ever exposed to gamma radiation and grew to forty thousand times its normal size, you could remind me of the *Torg* incident and save the world.

And third, if I can keep just one of you from making these same mistakes, I'll consider this column a success.

Anyway, at the bottom of my list of big mistakes is also one of the lamest, but it killed a campaign.

I had the urge to run an *Advanced Dungeons & Dragons* campaign a few years ago, and I assembled three good players to do it. I had the campaign world prepared, full of intrigue and neat ideas, I had the first half dozen adventures outlined. . . I was prepared.

I ran a great round of solo adventures, and we met for a great group adventure before the campaign fell apart.

Because by then we realized that, in the "real world," one player worked only days while the other worked only nights. Their schedules were completely polar; there was *no way* we could meet as a group consistently.

That was *real* dumb, let me tell you. And as the GM, I should have been the one who kept that from ever happening.

Another incident I remember is. . .

We interrupt this column with an important bulletin.

The Slushpile is dead. Repeat: The Slushpile is dead.

R.I.P.

Slushpile
1998-2000

We barely knew ye. . .
ASCII to ASCII, dice to dice.

Yes, the Dreaded Slushpile is no more. With the exception of some straggler submissions I've received this week, and some mailed ones I was forwarded yesterday, every submission I received has been read, evaluated, and (more or less) personally replied to.

What does this mean?

First, if you *haven't* heard from me, then this means I don't have your submission. If you submitted something to us and have never received a reply, please send it again via e-mail pyramid@sjgames.com, and I'll read all of them by next week.

Second, if you submit now, I hope to live up to my promise of getting a response back to you within a month. Until I say otherwise, presume that's the case, and feel free to jot me a note if I haven't written back in a month.

Third, I'm probably going to be pretty picky about any new submissions.

Time for some math. Notice that we generally print about two or three articles a week. Realizing that, guess how many articles I can logically accept a week (on average), without drowning in accepted articles. That's right. . . about two or three.

Now, so far I've been receiving about ten articles a week, meaning (if I picked accepted articles out of a hat) that an article has about a 20-30% chance of being accepted. But I suspect that number is going to jump considerably now that I'm in control of the Slushpile.

To make matters worse (for would-be contributors), I currently have about sixty accepted articles. This means that I could be encased in carbonite and we'd still have enough quality articles to last five or six months. So I don't even *have* to accept two or three articles a week, if what I receive doesn't live up to professional standards.

I'll talk more about this next week (rather than finishing up my GMing mistakes column or telling my boring old *Shadis* story), but for now remember this: We are a real, professional magazine. By submitting to us, I'm holding you to the standards of professional writers. So before you send me your article, ask yourself: Is this professional writing?

Obviously I'm not asking for *Harvdale Muckity-Muck Obscure Literary Journal*-style writing. Submissions still need to be fun, neat, and/or spark our imaginations. But I **do** strongly recommend taking a hard look at your writing and asking if it's professional.

Are spelling, grammar, and punctuation correct and consistent? Does the article flow in a logical manner? If this article were taped to a computer screen on Friday, with the *Pyramid* logo peaking out over the top of it, would a passerby believe that article came straight from *Pyramid* magazine? If you can't answer those questions affirmatively, then you may want to re-read your article before clicking the **Send** button.

Now, please, *please*, **please** don't think I want to discourage you from submitting. Far from it. I love reading fresh ideas from a writer who hasn't been published yet. But the competition is fierce currently, and if I send an article back complaining about the five typos in the opening paragraph, you'll at least understand *why*.

Please read our submission guidelines. I beg you. They're at http://www.sjgames.com/pyramid/writing.html, and they're quite useful if you want to write for *Pyramid*. Of particular note is the 5,000 word "boundary." I'll talk more about this next week, but if you're writing your article now and you feel you'll be going over that, please ask yourself, "Why?" If you don't have a good reason, you may want to take pains to shorten it.

Oh, and as a bonus hint, if you want to get on my good side, make sure you call me "Steven." Calling me Steve, Stevie, Steverino, or any such derivative is a fine way of making me wince. And you don't want me wincing before I read your submission.

So I'll see you next week with some tips on how to make your submissions more professional, and I'll probably squeeze in my *Shadis* story, since that also forestalls me revealing more of my biggest mistakes (including the ***Torg*** incident).

-- Steven Marsh

Last week's answer: **GURPS Basic Third Edition**, page 26.

(Two stars) "How dare you laugh -- I'll destroy you all!"

By James Maliszewski

Art by Art Today and Colored by Phil Reed

The prominence of Humaniti in the Traveller universe is no accident. As recounted on page GT10, Humans were disseminated to nearly fifty worlds over 300,000 years ago by an unknown agency, believed by many sophontologists to have been the Ancients. Only three of these many human races are considered major: the Solomani, the Vilani and the Zhodani. The rest are all classified as "minor human races."

As described in *GURPS Traveller: Behind the Claw*, the Spinward Marches are home to two minor human races, the Darrians and the Garoo. With over thirty more minor human races to choose from, most sectors to the Third Imperium will possess at least one of their own, possibly more. No matter where a *GURPS Traveller* campaign is set, then, there is a good chance that a minor human race will be present.

The question naturally arises: how does a GM deal with these minor humans? This article provides suggestions on how to use *GURPS* to create plausible minor human races, as well as advice and how to use them in your *Traveller* game.

The Same but Different

Deeply ingrained in the Traveller setting is the assumption that the independent development of jump drive is essential to classification as a major race. While Humaniti as a whole is considered a major race because of the achievements of three of its members, these three are the only ones to have acquired jump capability through their own efforts. Thus, minor human races are similar to minor non-human races in this one respect.

However, minor humans have several advantages over minor non-humans, both within the setting and within the game. First, they share a biological heritage with the major human races. This enables them to move more easily within the Imperium. They're not viewed as "aliens" except by the most bigoted of Solomani. Most minor humans can generally blend into the mass of Humaniti and advance within Imperial society. (There are exceptions, of course, and these exceptions sometimes provide interesting opportunities for a Traveller game.)

Second, minor humans, however unusual, are still humans. Certain basic facts will remain true, no matter how much they've diverged from the Solomani-Vilani norm. These are mostly facts of biology -- like reproduction or being bipedal -- that will prevent truly bizarre divergences. This makes using them as characters much easier than using non-human aliens.

Yet, as we know from our own world, not all humans think alike. Society and culture have a profound impact on the way we look at the world and how we interact with others. Minor humans, who've developed for 300,000 years away from Earth, will likely have cultures and ideas very different from anything we've seen before. Just look at the differences between the Solomani, the Vilani and the Zhodani and you can get a sense of some of the diversity that's possible among humans.

Building a Better Human

So, what does all this mean in *GURPS* terms?

Minor humans should be created like any alien race, using the
racial package rules found in *GURPS Compendium I*, *Aliens*
and *Fantasy Folk*. These will provide the basic outlines that
any GM needs before he begins the task at hand. GMs will
also find *GURPS Bio-Tech* useful as well, as it details a
number of genetic alterations to the human genome that might
appear in minor human races.

Some minor humans might have altered attributes. The
conditions on their homeworld should be taken into
consideration here. For example, humans from a high gravity
world are more likely to have increased ST than HT. Any of
the attributes could reasonably be modified, but there must be some justification for it -- even if that justification is
simply Ancient genetic meddling! In general, though, minor humans shouldn't stray too far from the *GURPS* attribute
baseline. Modifiers greater than +2 or -2 will be rare. When they do occur, the GM should have good reason for doing
so.

Related to this are alterations to the basic height and weight chart included on page B15. Different minor humans
might tend toward certain physical shapes, being taller or lighter than the Solomani-Vilani norm. The Darrians of the
Spinward Marches, for instance, are slightly taller than Imperial humans, while the Suerrat are shorter.

Choosing Advantages and Disadvantages for minor humans should be done with care. Remember, you are choosing
them for every member of that human race. Not only should the advantages and disadvantages be believable, but they
should also be kept to a reasonable point cost. Players often do not appreciate playing members of a race whose initial
point cost eats up the bulk of their starting character points. This is merely a guideline. Some very unusual minor
humans may be divergent enough to warrant a high point cost. In the end, ask yourself: does it serve the story? Does it
add anything to the Traveller game I want to run?

When choosing racial advantages and disadvantages, always bear in mind that minor humans have only be separated
from Earth for 300,000 years. While this is a great deal of time, it's not long enough for any of them to have evolved
into forms that differ radically from their Terran counterparts. Thus, things like horns or wings or a third eye are
impossible without the intervention of Ancient genetic engineering. Even then, many physical advantages would
remain implausible. Some of the parahuman packages described in the sidebars of *GURPS Bio-Tech*, pages BIO36-
56, could be used as the basis for minor humans, although the weirder ones (like the Lepus and Camazotz series) are
not appropriate for a Traveller campaign.

Still, minor humans needn't look just like your average Joe Earthling. Gravity, weather conditions, spectral type of the
home star and other local conditions can alter the physical appearance of a human race over 300,000 years. Some
minor humans will thus look quite different from their ancient forebears. Some might not even be interfertile with
other humans as a result. Thus, a GM should take into account several factors in determining the physical appearance
of a minor human race.

Mental advantages and disadvantages are somewhat easier to accommodate. Even so, their existence requires an
explanation. A minor human race with racial Eidetic Memory might be interesting, but why would such an ability
evolve? If it didn't, why did the Ancients engineer it in them?

The bulk of mental advantages and disadvantages are quirks or personality traits. These traits, described on page
CI180, can be very useful in defining the broad mental make-up of a minor human race. The Irhadre of Lishun sector,
for example, prefer to work in groups and dislike being alone. They thus gain the Chummy [-5] trait.

Again, it's a good idea to avoid choosing extremely impressive or deleterious advantages and disadvantages for minor human races. That's why the personality trait system in **GURPS Compendium I** is recommended. As always, use common sense and never include anything without a good reason -- whether that reason be pseudo-scientific or dramatic. There's nothing worse than an ultra-powerful species with no justification for its abilities.

Because one of the hallmarks of minor humans is their cultures and societies, many will possess social advantages and disadvantages too. In particular, they may have Social Stigmas or Reputations in the Imperium. The aforementioned Irhadre keep half their adult population in a form of ritual slavery. This naturally gives them a Reputation -2 [-10] among those who know they're Irhadre and do not understand this odd cultural practice.

Building Better Cultures

In the end, **GURPS** provides more than enough rules to model almost any minor human in game terms. The real difficulty is creating a plausible culture for them.

It was already mentioned that culture sets minor humans apart from the Imperial mainstream as much as their physical appearance. We know from **GURPS** Traveller that there are several "cultural regions" within the Imperium, including the Darmine cultural region in Zarushagar. This suggests that there are pockets within the Imperium that retain elements of previous cultures in much the same way that provinces of the Roman Empire did not simply abandon "the old ways" once their lands were annexed. In some of these areas at least, a minor human race or two might hold sway.

In creating the details for a minor human culture, there are plenty of questions to answer, but not all of them need be answered for the purposes of the game. To get you started, here are a few of the more cogent ones:

- What sort of government does the race favor? Why do they favor it?
- Does the race enjoy the company of its own kind? Is it open to outsiders?
- Do religious or philosophical belief play a major role in the culture? How have these beliefs adapted to the reality of star travel and other sophont races?
- Is the race slow to change, like the Vilani, or are they great innovators, like the Solomani?
- Does the race have any customs that make interacting with them difficult? Do they have a strict code of honor or a belief in ritual purity?

These are only a few of the many questions that a GM should consider in creating a minor human culture. Concentrate on those elements of the culture that have an impact on the game. The ritual slavery of the Irhadre, for instance, has a profound impact on the way they'll appear in a **GURPS Traveller** game. The same is true of the Darrians' love of knowledge and learning.

When in doubt, look at some of the cultures of Earth and adjust them to the realities of the Traveller universe. The Vilani attempt to maintain their empire by denigrating innovation has antecedents in Chinese attempts to do the same. The Geonee protestation about their classification as a minor race can be seen in dozens of cultures that resent being patronized by "superior" Western powers. Other examples are easy to find.

Examples, Examples

To show you how to use the principles discussed in this article, here are two examples of minor human races, both from the Spinward Marches. The first example, the Darrians, is a straightforward one, since we know a fair amount about these humans. The second example, the Garoo, is more difficult, since we know very little about them. Both provide the GM with models to follow in creating his own minor human races.

The Darrians

As described in **GURPS Traveller: Behind the Claw**, the Darrians are a peaceful people who prize learning and knowledge. Darrian cultural heroes are thus great teachers and researchers. Darrians tend to have knowledge-based

hobbies where a Solomani might have a sport-based one. Darrians are tolerant of anyone (whatever their race) who chooses to live by Darrian cultural values.

Physically, Darrians are on average somewhat taller than the human norm. They have slightly pointed ears and an appearance some describe as "elfin." Despite their slender appearance, they're actually stronger than typical humans, but a little less dexterous. A greater proportion of Darrians is ambidextrous than other humans.

These two short paragraphs provide us with most of the information we need to create a racial package for the Darrians. Their peacefulness does not qualify as true Pacifism, as Darrians will use force to achieve their ends when necessary. However, some Darrians might possess Pacifism as part of their personal beliefs.

The Darrian love of learning and knowledge gives them a +1 bonus to learning both hard and soft science skills [12 points total]. The Darrian tolerance extends only to those who accept their values. Thus, it does not qualify as true Xenophilia or even being Broad-Minded.

Darrians have +1 ST and -1 DX, which neither costs nor gains character points. Their greater height means that a GM should add 2" to the height they should have based on their ST. Ambidexterity is more common among them, but not all Darrians are ambidextrous. Therefore, it is not part of the racial package.

Thus, the Darrian racial package costs a total 12 points, which is in keeping with the fact that they do not diverge too greatly from Solomani-Vilani norms. At the same time, this very brief analysis of Darrian physiology and culture has provided us with enough information to make these minor humans different than your average Imperial human. This is as it should be.

The Garoo

Our second example also comes from *GURPS Traveller: Behind the Claw* and is a much harder case. The Garoo are described as a minor human race who are more or less identical to Imperial humans. Their form of government is democratic and has been for millennia, although fear of the nearby Darrians has led to the creation of a War Council to oversee their affairs. The environment of Garoo is frozen and most Garoo now live in sealed habitats.

This description provides very little with which to work. Moreover, the similarity of Garoo to Imperial humans makes one wonder they were even created in the first place. That is, they serve no obvious game purpose other than as weak counterweights to the growing power of the Darrians. Given that we know the Solomani were active in this area 1500 years before the Third Imperium was founded, were the Garoo even necessary?

I'd be inclined to eliminate them, but they're part of *GURPS Traveller* continuity now. As such, we have to deal with them and find a way to make them interesting. Physically, the Garoo are almost identical to Imperial humans. However, the cold climate of their homeworld (on which they existed for thousands of years before the Solomani came) suggests they must have found some way to adapt. This is a form of Temperature Tolerance that makes them comfortable at temperatures as low as slightly below freezing [6 points]. Other than that, they are no different than Imperial humans.

What about their society, culture and psychology? Do any of them give them any advantages or disadvantages? Not obviously. However, with some thought, we decide to grant them racial Common Sense [10 points]. Living under harsh conditions, they adopted democracy as a way to unite their people and face challenges together. Now that the Darrians are perceived as a threat, they have altered their government slightly to meet the challenge. The Garoo thus come across now as a pragmatic people, willing to adapt to new situations -- much more interesting than the bland description given in Behind the Claw.

Individual Garoo might actually hate or fear the Darrians, resulting in Intolerance or a Phobia, but every Garoo doesn't possess these. Thus, they are excluded from the racial package. In the end, it costs 16 points to play a Garoo.

Further Considerations

The Third Imperium knows of approximately forty minor human races in all of Charted Space, over twelve of them within 60 parsecs of Vland. This makes them a rare commodity and not one to be squandered needlessly. Like all aliens in the *Traveller* setting, minor humans should be used for a reason. A GM should always ask himself: what does a minor human bring to the game that can't be brought by another human? What unique effect do I want to create?

As in the examples above, a GM need not have all the details of a minor human culture and society worked out in order to use them. The level of detailed needed varies with the use to which the culture is put. The oft-mentioned Irhadre require a GM to understand their tradition of ritual slavery -- why it exists and what it entails -- to use them effectively in a *GURPS Traveller* game.

Moreover, it's traditions like that which lend themselves easily to game use. A *Traveller* game using the Irhadre would have to grapple with many topics of philosophical import. What is the nature of freedom? Why does the Imperium believe slavery is wrong? Is it right to do so? What does this all mean to me? Thus, the Irhadre minor human race can be a catalyst for an exciting (if introspective) sort of adventure. In much the same way, the Darrians enable the characters to deal with a naturally peace-loving and thoughtful race coming to terms with instability that sometimes demands violent action.

Minor human races give the GM many opportunities to liven up his campaign. They offer a chance to explore the diversity of the Imperium and the mysterious legacy of the Ancients. If created well, they enable players and GMs alike to realize that sometimes humans can be aliens too.

Gygan Wanderer

By C.A. Johnson

Art by Art Today and Colored by Phil Reed

Age 36, 7'9", 320 lbs.; Sun darkened skin turned leathery from exposure, hair a light, sun bleached brown, eyes hazel.

Supporting Cast: Gygan Wanderer

ST: 10
DX: 11 [10]
IQ: 14 [45]
HT: 11 [10]
Speed: 5.5
Move: 5
Dodge: 5
Leather armor (PD 1, DR 1)

Advantages: Magery 2 [25], Absolute Direction [5], Animal Empathy [5], Literacy [10]

Disadvantages: Pacifism (Self-Defense) [-15], Demophobia (Mild) [-15], Gigantism [-10]

Skills: Animal handling-16 [8], Area Knowledge (Four nations appropriate to the campaign)-14 [4], Astrology-11 [1/2], Bard-12 [1/2], Climbing-12 [4], First Aid-13 [1/2], Languages (pick three, one of them a "Common" Tongue)-13 [3], Leatherworking-13 [1/2], Naturalist-15 [6], Navigation-17 [10], Packing-14 [2], Riding (Beast of choice)-15 [16], Staff-11 [4], Tracking-13 [1]

Spells *(All at 15)***:** Beast Soother, Beast Speech, Create Water, Forest Warning, Ignite Fire, Lend Strength, Lend Health, Hide Path, Minor Healing, Pathfinder, Preserve Food, Purify Water, Recover Strength, Seek Food, Seek Plant, Seek Water, Test Food [32]

Quirks: Wanderlust, Dislikes children, Vegetarian, Relates everything to "Life's Journey," Will not enter any population center larger than a hamlet. [-5]

Total Points: 133

Weapons: Staff, dressing knife.

Gygan Wanderer spent his early years in a small village at the edge of civilization. His large size assured that he would stand out among the other children. Had his strength matched his frame, he would have been fine. Alas, his height was that of the scarecrow; impressive enough, but with no real strength backing it. The other children were quick to realize this.

Children can be cruel.

The only peace Gygan ever found was in the wilds around his birthplace. The birds didn't care that he bore more resemblance to a tree with a cloak than a person. The animals, if they bothered with him at all, treated him with cautious indifference. The trees . . .the trees just continued whispering their secrets to the winds. He began to spend more and more time in the wilds. The children that had tormented him became adults that didn't understand him, and he felt no need for their company. He never got lost. He could feel where the village of his birth lay. It simply wasn't

home.

He was a young man when he first encountered the Rangers. He'd heard of them, of course. Few on the fringes of the Realm hadn't. It was their swords, their skills, and in some cases their magic, that kept the borders secure. There wasn't a hearth for miles around that didn't have stories of the Rangers told near it. They parleyed with Dragons, guarded travelers, and battled the monsters beyond the frontier. In a way, encountering them was a disappointment. The legends he'd heard so much about were only people, after all. But what people! They knew so much! They could name all the plants he knew of, and hundreds besides. They knew which healed, which helped fevers, which caused twisted dreams. They knew the animals, in many cases by name. Gygan was astonished at the depth and breadth of their wisdom. When one among them, a Mage who saw potential in the tall youth, asked him to join, he could not say "yes" quickly enough.

Never a warrior, and lacking Dragons to parley with, Gygan found himself drawn to the third function of the Rangers. He became a guide, and with his natural gifts, a very talented one. His pay also draws customers to him. He asks for no gold or silver. What use are they in the wilds? Clients merely buy what few supplies he needs for him, and while on the journey itself, teach him something. Anything. Songs from their childhood, skills they picked up, a new move with his staff, languages, spells. It matters little to this gentle giant. All knowledge is but a step on his journey.

Quotes:
"All journeys begin with a single step. Take this one with me, and I will see you safely to your destination."

"Town? Perhaps it would be best if I stayed here."

Adventure seeds

- The most obvious use for Gygan is as a guide to a place the characters have never been. The characters meet him on the outskirts of the town and begin their quest. He will prove a most able guide, and a pleasant one. He will not involve himself in politics, nor will he allow the characters to become too close. A wanderer has few real friends.
- Someone approaches the party, saying a man at the edge of town wishes to meet with them. It is Gygan. A party he guided has gotten into trouble that is beyond the giant's ability to deal with. He wants to hire the characters to help him rescue them. He has no money of his own, but assures the party that his former clients will reward them if they are saved.
- As above, but the party Gygan brought is the source of the trouble. Gygan feels responsible, and wants the characters to help him clean up his mess. In return, he will travel with them for a time, lending aid where he can. If that is not enough, he will offer to lead them to a great reward. He cannot be specific.
- The party learns of a group of miscreants traveling elsewhere to wreak havoc of some kind. They are under the protection of Gygan Wanderer, who is unaware of their intentions. The party must somehow try to overtake the group. This is no easy task since Gygan can allow them to travel long into the night, should they wish, and they only rarely have to stop for food or water.

Pyramid Pick

[Forgotten English](#)

Published by Quill

Written by Jeffrey Kacirk

240 pages, $11.00

The devil, they tell me, is in the details.

If so, then he isn't in any of the roleplaying games that I've read. I've just finished *Forgotten English* by Jeffrey Kacirk and it's made me realize how inadequate most roleplaying backgrounds are.

For example, in the eighteenth century unscrupulous traders would sometimes administer to a horse a suppository made of raw ginger in order to hide lameness of the hind legs. In extreme cases they might use a live eel! Not only that, but this was a common enough occurrence that it had its own verb: to feague.

So when was the last time your players bought a horse? And what happened - they flipped to the shopping list section of the rule book and handed over the cash. Voila! One horse. Simple and painless, yes. As much fun as a ginger suppository? Perhaps I'll let you answer that.

Forgotten English is a curious collection of antiquated words, most of them now long out of use (but more than a handful still readily identifiable). No, it's not a roleplaying supplement; it's an ordinary book brimming with arcane source material for any historical or fantasy game.

If *Forgotten English* were merely a list of strange words and their definitions, it would be pretty good. Take, for instance, bytesheip, fotadl, dilligrout, or farctate. These are words to savor, to enjoy. These are words to put in the mouths of peasants and other npcs; genuine words - not just a made up collection of vowels and consonants. Happily, *Forgotten English* is more than that. Where the book really scores is in the insights it gives into life in days gone by.

In the Middle Ages, if a prisoner could read the first verse of the 51st Psalm, he would often be pardoned! The only catch was that he had to read it in Latin - a language closely guarded by the Church. This loophole arose because the clergy were supposed to be punished by divine authority, when in fact the Church treated their misdeeds with unjust leniency or overlooked them completely. Just the sort of thing you need to know when your dishonest cleric's past finally catches up with him!

Of course, *Forgotten English* doesn't contain adventure seeds. But then it doesn't need to - they appear as if by magic.

The Bone-Fire was a summer pagan ritual in which animal bones were burned in order to drive away evil spirits. This is where we get our term bonfire. This begs the question, what do the peasants in your fantasy background do to drive away evil spirits? And does it work? Perhaps different bones are required to repel different spirits. When the peasants run low on ant-bear vertebrae, guess who gets to go and find some more?

Ambergris is a grayish waxy substance that was at different times thought to be sea mushrooms, fish excrement or solidified rays of sunlight. It was prized as a powerful aphrodisiac, a fragrant drug and as a cure for falling sickness. It would certainly be an appropriate subject of a quest, or the rare ingredient for a magical potion. "Bring me the breath

of a sinner and an ounce of unrefined ambergris, or the Prince will be dead within a month." And what are the players looking for? Ambergris is really a secretion from the intestines of sperm whales - although I think they should try for some of that solidified sunlight first.

What *Forgotten English* really brings home is how different the past was. Their beliefs, their outlook on life was far stranger than any fantasy game has ever shown me. Sometimes we're all too busy ensuring our fantasy worlds are ordered and logical without realizing that the beliefs of real people can be anything but.

After all, there's nothing logical (in modern terms at least) about believing that you could absorb the sins of the recently deceased, but that's what they did in the nineteenth century. If you were worried about the state of the deceased's soul, you could hire a sinne-eater to ceremonially consume food in the vicinity of the corpse and so absorb their sins. With my fantasy gm's hat on, I wonder what sort of person (other than a poor one) becomes a sinne-eater? If they are absorbing sins, could they then become the sinner? Could you become addicted? Perhaps it's a highly regulated profession, requiring training and dedication to arcane arts. In your game - who knows?

Personally, I want to play in fantasy games where they do things different, where the beliefs of ordinary people surprise me. Where they believe that worms cause dental cavities, whether they do or not. It's something most fantasy backgrounds fail to do, although I'm not sure why. *Forgotten English* helps plug that gap - authentically!

If I had a complaint about *Forgotten English* it is that there isn't enough of it. Not enough of the strange and bizarre, not enough of the weird and twisted. It's an eclectic mix certainly, and I wonder what was left out. But I am prepared to forgive it its faults; if nothing else it has brought sinne-eating, feague-ing and crapandina (a healing-stone harvested from a toad's brain) into my games.

Pyramid Review

Compact Warrior

Published by [MicroTactix](#)

Designed by Greg Poehlein and Guy McLimore

Art by Gary M. Williams

Rulebook, 2 game boards, 33 weapon cards, and 32 cardboard figures, $9.00

For many gamers, the notion of a cheap, desk-top published game brings to mind visions of incomplete rules, incomprehensible editing, and an older, wiser voice reminding them that they get what they pay for. While many $9.00 games are not worth the paper they are photocopied on, *Compact Warrior* breaks with tradition by providing a nicely detailed board game of man-to-man fantasy combat. *Compact Warrior* stands on its own as a GM-less fighting game or it can replace the combat rules of fantasy RPGs (including MicroTactix's forthcoming Simply Roleplaying game.) If you have ever dropped all the role-playing out of a game and created a few characters just to see them mindlessly slug it out in an arena, then *Compact Warrior* might provide you with a more strategic violence fix.

Compact Warrior comes with a 24 page rulebook, several sheets of weapon cards, a page of cardboard figures, and two, square-grid playing boards. The rules are clear and suffer from only a couple of editing mistakes. The black and white art is satisfactory for the game's price, however, its lines have suffered in the laser printer. The cardboard figures are sturdy and appropriate even if they have drawings on only their front sides, the reverse of each being a silhouette.

Characters begin the game with a minimum score in four statistics; Strength, Coordination, Health, and Intellect. Then they receive one to ten more points for those stats. This randomness is inappropriate for a board game, where characters should win or lose based on their choice of skills, weapons, and tactics, not based on a bad roll early in character creation. In our game, we simply set the number of additional points.

Players then choose combat and weapon skills. Finally, they take up arms and armor and set off to battle. Unfortunately, players will have to be careful when picking items, as *Compact Warrior* does not provide a mechanic that restricts equipment (other than a few Strength requirements and a limit of two weapons). Thus, there is no reason to choose a short sword because the long sword does more damage with no additional costs. If your character meets the minimum strength requirement for plate armor, there is no reason to choose leather instead. A starting purse of money and a price on each piece of equipment would add a balancing aspect to warrior creation. As it is, players will have to work together to be sure that their characters have a fair fight.

Once the fight as begun, however, *Compact Warrior* really begins to shine. Each combat round begins with an initiative roll, but unlike many other fighting systems, characters do not necessarily proceed in that random order. Initiative winners can choose to wait until other characters make their moves before acting. This adds an interesting level of tactics to *Compact Warrior*, for now you not only have to decide what to do, but also when to do it.

After the initiative rolls, each character can perform two actions in a round. There are thirteen actions from which to choose, including moving, attacking, and defending. When in close quarters, characters are limited to 6 different

choices, forcing players to be careful before closing with an opponent lest they have the wrong weapon drawn or be facing the wrong direction. Controlling character distance, combined with the shifting initiative order, gives ***Compact Warrior*** a complex strategic element missing from most RPG combat systems.

The rest of the fighting system will be familiar to most gamers. Characters roll to-hit dice rolls based on their weapon skills, then roll for damage minus armor points, and subtract the result from their opponent's health. Characters may fall during a fight, or pass out from taking too much damage too quickly. They can hide behind objects to avoid attacks and brace their missile weapons to improve their accuracy. And, if all else fails, they can simply run into each other with their shields.

MicroTactix's support for ***Compact Warrior*** is another recommendation for the game. Players can add magic to the battle with Compact Sorcerer, fight around cardboard buildings and innocent bystanders with Vyllage-on-the-Cheep, and play in various scenarios such as BAR-Barians where the only available weapons are bottles and chairs. All of these supplements continue MicroTactix's commitment to inexpensive gaming.

Although the character creation system lacks balancing mechanics and is prone to munchkin min/maxing, ***Compact Warrior***'s combat system is clear and quick while retaining strategic depth. Given its low price, ***Compact Warrior*** stands out from its desktop-published competition.

[*Editor's note:* One of the ideas I had upon coming on board was to try and do a "crossover" issue with our sister publication *Comic Book Life*, since they had a regular super heroes RPG column and I had two good *Marvel Super Heroes Adventure Game* articles by the same author. I figured I had at *least* a few months to settle in before trying something odd like this.

I was wrong.

The same week I suggested it, *Comic Book Life*'s regular RPG columnist Bob Portnell got the flu. So, never being one to deny synchronicity, we pushed the crossover up to this week. *Comic Book Life* is publishing a related article entitled "Heroes by the Numbers," a point-based character creation system for the *Marvel Super Heroes Adventure Game*, while we're offering "Getting There is Half the Fun," vehicle rules for the same game.

Comic Book Life is currently in a "beta-test" phase, so it's free, but please don't mind any dust or construction workers.

We hope you enjoy our little experiment. We now return you to your regularly scheduled article.]

* * *

From the Avengers' Quinjets to the X-Men's super-sonic Blackbird, many heroes in the Marvel Universe make use of different vehicles to get them where they need to go. Most of the time, these vehicles are plot-devices, just ways of getting the heroes from point A to point B quickly. In one of their early adventures, before they had quinjets, it took the Avengers hours to go from New York City to the American Southwest, where the Incredible Hulk was sighted.

However, in some stories, vehicles play an important role. Some heroes, like Captain America and Moon Knight, make use of specialized vehicles of their own. Narrators can make use of different vehicles, along with action scenes like vehicle chases and combats, to spice up adventures for the *Marvel Super Heroes Adventure Game*.

Vehicle Abilities

A vehicle is a specialized type of equipment, using the standard equipment rules from the *Marvel Game Book*. All vehicles share certain abilities in common: Body, which measures the vehicle's resistance to damage and is aligned with Strength; Speed, which determines how quickly the vehicle moves and maneuvers, and is aligned with Agility; and Protection, which is also aligned with Strength, and represents how much protection the vehicle offers passengers against damage.

All vehicles have the equipment powers of Basic Movement (their Speed) and Passenger Compartments. All other abilities are optional, but common vehicle abilities include Body Armor to increase Body, Alarm and Anti-Theft

systems, Commlink (communications), Electronic Countermeasures, Homing System, Lights, and various Sensors, including Radar and Sonar.

Types of Vehicles

Vehicles come in four basic types, depending on the type of terrain they are designed for: ground, water, air, and space.

Ground vehicles are any that move along the ground, including cars, trucks, trains, tanks, and so forth. Water vehicles move on or in water, including boats, ships, and submarines. Heroes use the Driving skill to operate ground and water vehicles. (At the Narrator's option, a separate Sailing skill can exist for water vehicles.) Air vehicles operate within an atmosphere, such as planes, jets, and helicopters, while space vehicles can operate in vacuum, from space shuttles to starships. Heroes use the Piloting skill to operate these vehicles.

Air vehicles need some sort of a runway for takeoff and landing. It takes at least two exchanges for a vehicle to take off or land, longer at the discretion of the Narrator. Air vehicles can be built with VTOL (Vertical Take-Off and Landing) capability. This allows the vehicle to take off and land vertically, like a helicopter. The vehicle can also hover in place.

Taking off or landing an air or space vehicle is normally an easy Agility action. The Piloting skill lowers the difficulty to automatic. The Narrator may increase the difficulty in situations where conditions are less than ideal, such as landing a damaged airplane in the midst of a howling blizzard with no instruments. A failed take-off or landing action results in a crash.

Creating Vehicles

A vehicle is constructed like any other piece of equipment: the hero makes an Intellect action against a difficulty equal to the vehicle's highest ability, plus one per additional ability. So a car with Body 5, Speed 4, Passenger Compartments, and an Alarm system has a difficulty of 5 (the highest intensity), plus 3 (the number of additional powers), for a total of 8 (average difficulty). As always, the Narrator should set limits on vehicle abilities to suit his or her own game. If a proposed vehicle seems too powerful, even if the hero is capable of building it, ask the player to scale it back a bit.

This basic system allows heroes to design and modify most vehicles fairly easily. If desired, the Narrator can use the optional super-science rules for building equipment from *Reed Richards' Guide to Everything* to build vehicles. The Narrator can also assess a cost for the vehicle, and may call for a Willpower action with the same difficulty as creating the vehicle to purchase or otherwise acquire the necessary parts. The Finance skill lowers this difficulty by 4 points. Tony Stark finds it a lot easier to finance the construction of a new quinjet than Spider-Man.

Vehicle Rules

Vehicles are subject to some special rules. These are optional rules Narrators can use to enhance their games. If they slow things down too much, feel free to ignore them.

Rules of the Road

Driving or piloting a vehicle under normal conditions does not require an action; it's only when things get tricky that heroes need to make actions to keep their vehicles under control. This includes situations like sudden stops or turns, high-speed maneuvers, and difficult conditions (such as driving over rough terrain or flying through bad weather).

The Narrator chooses the difficulty of the Agility action to control the vehicle, although usually the action is average (easy for heroes with the appropriate skill). Success keeps the vehicle under control, while failure means the vehicle is out of control.

Out of control vehicles continue traveling in a straight line for the next exchange. The hero can try again to regain control next exchange, unless the vehicle hits something (see **Crashes**, below). Out of control air vehicles also lose five stories (about 50 feet) of altitude for each exchange they are out of control, as if falling (which, basically, they are).

A hero can also attempt to halt a vehicle from the outside. This requires an average Strength action, plus either the weight intensity of the vehicle or its speed, whichever is greater. It's much harder to stop a runaway train than it is a rolling Volkswagen beetle. So stopping a freight train (weight intensity 20) with Speed 5 is an unfathomable Strength action (20, plus 8 for an average action). So is catching a falling jet plane. Heroes can use appropriate powers like Air Control, Magnetic Control, or Telekinesis in place of Strength.

Crashes

When a vehicle hits something, both it and its passengers may suffer damage (to say nothing of whatever the vehicle runs into). A crash is similar to a charging attack; compare the lower of the vehicle's Body and Speed to the material strength of the object the vehicle crashes into. If it is greater, the vehicle breaks through the barrier and its speed is reduced by its material strength. If it's less, the vehicle comes to a halt and both the passengers and the vehicle suffer damage equal to the vehicle's Speed, plus the material strength of the object, minus the vehicle's Protection. Passengers wearing some sort of crash protection, like a seatbelt or crash harness, reduce the damage by 4 points (it pays to buckle up, kids!).

For example, an Avengers quinjet, out of control, slams into a sheer rock wall. "Crash positions, everyone!" shouts Captain America, as the wall looms closer. The Quinjet has Body 14 and is moving at Speed 8 (well below its maximum speed). The cliff is material strength 16. The quinjet crashes and everyone onboard takes 24 points of damage (Speed 8, plus material strength 16), minus the quinjet's Protection, which is 8. Everyone is wearing a crash harness, so the damage is reduced another 4 points to 12. Still, the Mighty Avengers are a little shaken up, and the quinjet has certainly seen better days.

Vehicle Damage

Vehicles can suffer damage from crashes as well as direct attacks. When a vehicle suffers damage, subtract its Body plus its Protection from the damage. If any damage remains, draw a card from the Fate Deck to determine what effect the damage has:

- Strength: Reduce the vehicle's Body by the remaining damage. If Body is reduced to 0, the vehicle is destroyed.
- Agility: Reduce the vehicle's Speed by the remaining damage. If Speed is reduced to 0, the vehicle comes to a stop (and falls, in the case of air vehicles).
- Intellect: Increase the difficulty for all actions to control the vehicle by the remaining damage. This may result in the vehicle going out of control.
- Willpower: Reduce the vehicle's Protection by the remaining damage. If Protection is reduced to 0 (or the vehicle has no Protection) reduce Body instead.
- Doom: Reduce all the vehicle's abilities by the remaining damage, as above. In addition, the vehicle automatically goes out of control. The Narrator may choose to substitute some other appropriate mishap, as desired.

Repairing damage to a vehicle requires an average Intellect action (easy for heroes with Repair or Mechanics) and a number of hours equal to the damage points. This time can be broken up however the heroes want, but the vehicle's performance remains impaired until it is fixed. Now you know why the X-Men spent so much time in the hangar bay, working on the Blackbird.

Damage to Passengers

It is also possible to directly target passengers inside a vehicle. This increases the difficulty of the attack by one level (from easy to average) and assumes the attacker can see the target. The target also gains the vehicle's Protection as Body Armor against the attack. The attack is assumed to do minimal damage to the vehicle itself, unless it is an area attack, in which case the vehicle is affected normally, as are any other passengers in range.

Chase Scenes

Vehicles use the same system of distances as heroes: Striking, Firing, and Visual Distance. Increasing or decreasing distance by one level requires a successful easy Speed action, opposed by the Speed of the pursuer. For heroes using movement powers like Flight or Lightning Speed, substitute the power intensity. For heroes on foot without any movement powers, assume a base Speed of 0 and play cards normally. A vehicle that moves beyond visual range can generally be assumed to have evaded any pursuers.

Vehicle Combat

In some cases vehicles may directly oppose heroes. Vehicles equipped with weapons can use them against heroes, doing damage normally. Vehicles can also attempt to run down or crash into heroes. Treat this as a normal crash. The hero can evade the attack with an easy Agility (Speed) action. Instead of dodging, the hero can make an average Strength action, plus the greater of vehicle's weight intensity or speed, as with an out of control vehicle. If successful, the hero stops the vehicle cold and takes no damage. If the vehicle hits, it does damage to the hero equal to the sum of its Body and current Speed and suffers damage equal to its current speed plus the hero's Strength.

Example: "Run me down, gentlemen? I don't think so," Phoenix says to the Hellfire Club mercenaries in the onrushing sedan. The car has Body 5 and Speed 4. Phoenix waves her hands and an intensity 14 telekinetic shield springs up between her and the car. The car does 9 points of damage (Body plus Speed), not enough to get through Phoenix's shield. It takes 18 points of damage (its Speed plus the intensity of the telekinetic wall). The Narrator applies the remaining 13 damage points to the car's Body, totaling it. The Hellfire mercenaries are knocked out cold by the collision.

Attacks against vehicles take place normally. Attacking a vehicle is an easy action using Strength, Agility, or an appropriate power. Avoiding an against a vehicle you're in control of is an easy Agility action, opposed by the attacker's ability. Driving or Piloting skill lowers the base difficulty to automatic.

Sample Vehicles

Ground Vehicles

Bicycle [Body 2, Speed 1, Protection 0]: Your standard two-wheeler. Also includes things like unicycles. Skateboards and rollerblades are similar, but only Body 1.

Motorcycle [Body 3, Speed 3, Protection 0]: A fairly typical motorized bike. Some models may have slightly higher Body or Speed. Passengers wearing the proper crash gear (including a helmet) reduce crash damage by 4 points.

Car [Body 5, Speed 4, Protection +2]: This is a typical car found on the road. Some models may have lower or

higher Body (from 3-6) and slightly higher Speed (up to 5). Armored limousines have Protection +4. Police cars have Speed 5 and Protection +3.

Van [Body 8, Speed 4, Protection +2]: A standard van or light truck. Police SWAT Vans have Body 9 and Protection +4.

Bus [Body 10, Speed 4, Protection +2]: A commercial or school bus. Buses rarely travel above Speed 3, except on open highways.

Semi-Truck [Body 12, Speed 4, Protection +3]: A standard 18-wheeler type truck.

Tractor [Body 9, Speed 2, Protection 0]: Large farm tractor, good for hauling and throwing at super-villains.

Bulldozer [Body 10, Speed 1, Protection 0]: Includes bulldozers and various other large pieces of construction equipment.

Tank [Body 12, Speed 3, Protection +6, +7 Cannon, +5 Machine Guns, CommLink, ECM, EMP Protection, Lights, Sensors]: Main battle tank found in variations the world over. Tanks intended to take on super-villains or giant monsters may be equipped with other special weapons or ammunition (although its more likely they're just cannon fodder to buy the heroes some time).

Train [Body 11, Speed 4, Protection +2]: Standard passenger and freight trains. High-speed bullet trains can have up to Speed 7.

Mole Machine [Body 12, Speed 3, Protection +5]: Armored vehicle equipped with a large drill-bit at either end, allowing it to tunnel through the earth. Used by subterraneans and super-villains.

Water Vehicles

Rowboat [Body 2, Speed 1, Protection 0]: This includes other small, muscle-powered watercraft like canoes and rafts.

Jetski [Body 2, Speed 4, Protection 0]: A one-person speedboat, used for recreation and by lifeguards.

Sailboat [Body 4, Speed 3, Protection +1]: A small to mid-sized pleasure craft driven by sail. Its Speed varies according to the wind. Larger sailing craft have correspondingly greater Body.

Motorboat [Body 3, Speed 3, Protection 0]: A small wooden or aluminum hulled boat with an outboard motor.

Speedboat [Body 4, Speed 5, Protection 0]: A sleeker boat with a powerful engine, the type typically seen in police shows and action movies.

Trawler [Body 8, Speed 4, Protection +1]: A mid-sized fishing boat, tug, or similar sort of boat found at docksides worldwide.

Coast Guard Cutter [Body 10, Speed 5, Protection +2]: A mid-sized boat used by the Coast Guard for patrols.

Hydrofoil [Body 8, Speed 6, Protection +2]: A fast medium-sized boat, popular with the wealthy and super-villains.

Ocean Liner [Body 14, Speed 4, Protection +4]: Standard cruise ship, menaced by sea monsters, terrorists, and super criminals.

Destroyer [Body 12, Speed 5, Protection +4, Deck Guns +5, Sonar 10]: A medium military ship.

Battleship [Body 16, Speed 4, Protection +6, Deck Guns +5, Sonar 10]: A large naval ship.

Aircraft Carrier [Body 20, Speed 4, Protection +7, Deck Guns +5, Sonar 10]: A naval ship carrying a number of fighter planes (see below).

Submarine [Body 12, Speed 5, Protection +4, Torpedoes +5, Sonar 10]: Standard submarine. May be equipped with nuclear missiles (a popular target for super-villains and terrorists).

Mini-sub [Body 6, Speed 5, Protection +2, Torpedoes +4, Sonar 8]: Miniature submarine useful for sea-exploration, salvage, and as an emergency escape route for super-villains.

Air Vehicles

Glider [Body 2, Speed 2, Protection +1]: A small, one- or two-passenger vehicle. It has the Gliding Limit on its Speed, and cannot gain altitude.

Ultralight [Body 2, Speed 3, Protection 0]: An ultralight aircraft, basically a powered hang-glider.

Helicopter [Body 5, Speed 5, Protection +1]: A fairly standard type of two-man commercial helicopter. Larger choppers have higher Body and military and police helicopters have Protection +4, Speed 6, and are armed with +5 Machine Guns and +5 Missiles.

Private Plane [Body 5, Speed 5, Protection +1]: A small single engine plane.

Biplane [Body 4, Speed 4, Protection 0]: A World War I-era plane with a light body and double wings. Currently found only in air shows, museums, and time-travel expeditions.

Corporate Jet [Body 10, Speed 8, Protection +3, Radar Sense 8]: A Lear jet or similar small passenger jet.

Commercial Jet [Body 14, Speed 8, Protection +4, Radar Sense 10]: A large commercial jet like a 747. Popular target of terrorists and aerial super-villains.

Fighter Plane [Body 12, Speed 15, Protection +4, +5 Machine Guns, +5 Missiles, CommLink, ECM, EMP Protection, Homing System, Lights, Radar Sense 12]: Military jet found in air forces all across the world.

Bomber [Body 14, Speed 13, Protection +4, Machine Guns +5, Missiles +5, Bombs (Energy Blast 12), CommLink, ECM, EMP Protection, Homing System, Lights, Radar Sense 12]: Military bomber. "Stealth" models have Invisibility 8 (to radar and detection systems).

Zeppelin [Body 6, Speed 4, Protection +2]: Gas-filled balloons with gondola decks.

Flying Car [Body 6, Speed 8, Protection +4, ten Hornet Missiles +5, two Laser Cannons +4, Radar Sense 13, four Radiation Missiles +6, Danger Sense 11, ECM 9, Ejection Seats, Flight 10]: The standard-issue SHIELD vehicle looks like a stylish roadster, but is also capable of flight using turbofans concealed in the wheel hubs.

Skycycle [Body 8, Speed 6, Protection 0]: A fast one- or two-passenger vehicle similar to a flying motorcycle, used by the Avengers.

Atomic Steed [Body 11, Speed 11, Protection 0]: A nuclear powered, one-person air vehicle developed and used by the Knights of Wundagore. Also used by the Black Knight and currently by the Thunderbolts.

Aircar [Body 10, Speed 9, Protection 0]: Open-topped air vehicle similar to a convertible. Both the Avengers and the Thunderbolts have aircars for short-range transportation. The Fantastic Four's Fantasticar is similar, but also able to separate into four individual segments, each with Body 5.

Quinjet [Body 14, Speed 14, Protection +8, CommLink, Danger Sense 14, ECM 14, Ejection 12, Radar Sense 14]: Built by the Wakanda Design Group, the famous Avengers' quinjet is a common sight over Manhattan. The

special space quinjet also has Space Flight 6.

Blackbird [Body 15, Speed 15, Protection +5, CommLink, ECM 14, Homing System, Radar Sense 14, Space Flight 3]: The sleek, black plane of the X-Men, a modified SR-71 supersonic.

Rocket Plane [Body 18, Speed 25, Protection +4, Automatic Return, Autopilot, Danger Sense 11, ECM, Ejection, Energy Blast 12 (electrify hull), Radar Sense 13, Space Flight 4]: An experimental design created by Reed Richards to replace the Fantastic Four's old Pogo-Plane.

Space Vehicles

Space vehicles, in addition to their other features, all treat their Speed as Space Flight. They provide Life Support for passengers and generally have equipment like air locks and spacesuits.

Space Shuttle [Body 14, Speed 3, Protection +3]: This is an orbital shuttle similar to the U.S. space shuttle.

Shuttlecraft [Body 10, Speed 5, Protection +2]: This is a small sub-light craft used as a lander by larger alien vessels.

Spaceship [Body 14, Speed 10, Protection +4, Lasers +4]: A small light speed spaceship or starfighter.

Starship [Body 16, Speed 12, Protection +4, Lasers +6, Force Field 8]: A small starship from any of the interstellar races in the Marvel Universe, equipped with laser cannons and a protective force field.

Space Cruiser [Body 24, Speed 16, Protection +6, Laser Batteries +8, Force Field 12]: A giant space cruiser, like those of the Shi'ar, Kree, or Skrull Empires.

History on the Rocks: Alternate Ice Ages

"Climate change at the end of these interglacial time periods is rather sharp and dramatic. Excellent historical evidence exists from areas on the European plains which once were oak forests and were later transformed into poplar, then into birch, and finally into tundra within a 100-year span."
-- CIA Report: "A Study of Climatological Research as it Pertains to Intelligence Problems" (1974)

For want of a nail, the old rhyme reminds us, the kingdom was lost. So imagine what several million tons of ice can do. In the four following alternate histories, I posit the return of the glaciers to their rough positions around 18,000 years ago at the approximate height of the Würm-Wisconsin glaciation (only slightly modified for dramatic effect). For those scoring at home, that means that everything north of a line running Tacoma-Duluth-Peoria-Long Island in North America, and slightly north of Birmingham-Amsterdam-Dresden-Minsk-Kazan in Europe, is under miles of ice. Sea levels are 300 feet lower, the Black Sea is a lake, Sumatra, Borneo, and Japan connect to Asia, and many other mountain chains (Alps, Himalayas, Pamirs, Andes) are impassably blocked. Everything in here (except the trigger for the last alternate) is legitimate geology; even the rapid onset (between 70 and 200 years, adopted to drive the ice's impact historically) isn't outside the bounds of viable theory. Each alternate begins glaciating during an unusually cold period in Real History, as can be determined from H.H. Lamb's excellent *Climate, History, and the Modern World* or Emmanuel LeRoy Ladurie's discursive *Times of Feast, Times of Famine.* As chaos theory teaches us, we're always just a butterfly flap away from climatic catastrophe -- over ice.

"The sea freezes over, and the whole of the Cimmerian Bosphorus; and the Scythians, who live outside . . . make war upon the ice, and drive wagons across it to the country of the Sindi."
-- Herodotus, *The Histories,* IV:28 (ca. 445 B.C.)

Although the theory isn't as all-encompassing as it used to be, historians once blamed the cooling period from 1200 to 800 B.C. for the fall of ancient cultures as far apart as Olmec Mexico, Mycenaean Greece, and Zhou China. Turn that cold snap into an Ice Age, and you've got a recipe for disaster. Egypt, which barely made it through the era in our history, fell to the Sea Peoples, leading to a Philistine culture of bronze-working city-states along the Nile. (The Hebrews still made their Exodus, but rapidly blended into the Aramaeans who invaded Canaan from the other direction.) The Cimmerians, likewise, plowed through the Hittites and into the Assyrians, disrupting the nascent Iron Age. Proto-Celtic cultures became more like the Eskimo as they adapt to the tundra of Western Europe, while the flukes of monsoon patterns actually permitted a large-scale Persian state to form five centuries early south of the Caspian. The result is a world more like that of **GURPS Conan** than not; the uncertain climate rewards barbarism and penalizes all but the most restrictive or autocratic city-states. (No Judaism, no Greek civilization, no Romans.) A few pastoral empires (the Persians, the Karasuk to their north, the Vedic Ganges) dwell in the east, building up surpluses of wealth as the only cultures capable of exporting food. Isolated pockets of iron-working may exist, but most weapons are bronze and wielded on little provocation. For more fantasy flavor, raise the strait of Gibraltar, and uncover vast mana wells beneath the former Mediterranean; down in the trenches, dragons and Cyclopes grow, and the lizard men plot to fall on the kingdoms of beleaguered mankind.

"I came to an immense mass of ice. As far as I could judge, it was two or three pikes thick, and as wide as the range of a strong bow. Its length stretched indefinitely upward, so you could not see its end. To anyone looking at it, it was a terrifying spectacle . . ."
-- Sebastian Münster, *Cosmographiae Universalis Libr.* (1546)

The coldest known period in recorded history, the Little Ice Age, began around 1315 with a series of famines in France and the Low Countries. In this alternate, that was the beginning of a rather bigger Ice Age -- the glaciers crept south, turning the proud national states (England, France, Castile) into bleak tundra and thin piny scrub. The Germanies, pressed hard by Scandinavian refugees, fell again into barbarism and poured over the Plantagenet domains stretching across the new lands that were once the English Channel. Italy's city-states, however, managed to keep their prosperity and increase their independence (the Alpine glaciers prevented invasion) during that parlous century, although the Turks poured across the Bosphorus land bridge and laid the Balkans waste. They found the new weather uncongenial

to campaigning in Europe, however, and left Italy to a vigorous new Renaissance. By the time Machiavelli and da Vinci's canal crossed the new salt flats to the sea from Florence, the Italian states had learned to harness the coal from the Romagna, and to trade for coal from the richer veins (worked by poorer Germans) in the Ruhr and Silesia. Da Vinci's steam-pumps clear the new coastlands for crops, and let Florence put more men into battle. Changed currents and destruction of northern shipping restricted exploration until the coal-fired galleasses of Florence's Great Navigator, Giovanni da Verrazano, made landfall on the temperate shores of Brazil in 1524. Florence, under Machiavelli's direction as Gonfalonier, rapidly became the center of an Italian League.

The setting now is **GURPS Swashbucklers-Steampunk** with a Renaissance twist. The League's musketeers trade for aurochs hides among the northern princelings, and crusade for gold in idyllic Morocco (the shifted Gulf Stream brings more rain to Casablanca and Tangier). Rumor has reached the Duomo that China, fallen into chaos after the Mongols fell to the ice, can yield up its riches to any bold condottiere with a few large coal-galleasses, a steam-gonne or two, and enough da Vinci land-tortoises to overrun peasant infantry.

"An immense glacier was on our left, which continuously rolled stones to its foot . . . We see several avalanches, some very small, others of great magnitude . . . overwhelming everything as it passed along, and precipitating great pieces of ice into the valley below. The glacier is increasing every day a foot, closing up the valley . . . This is the most desolate place in the world . . ."
-- from the Swiss journals of Mary Wollstonecraft Shelley (1816)

At least the ice stopped seventy miles from London. 1816, the "year without a summer" rapidly became the "reign without a summer." George IV was forced to watch Canada fall, not to America (where power, along with cropland, moved to the South to stay) but to the all-covering ice. India rode out repeated mutinies and famines, but Britain held grimly on to its warmest dominion even as the glaciers crushed its Russian rivals. Revolts splintered the Romanov empire, as the glaciers drove Prussia (and the rest of Germany) into the Hapsburg embrace. The new Bonapartist regime in France annexed the Saar and Ruhr, to ensure French coal supplies, and now threatens England's hold on Egypt -- and the remains of England itself across the Channel-Lands. Slave-holding America (reinforced by massive Irish emigration after the British refused to open the ports when the glaciers came) and imperialist Britain duel for command of the warm, arable tropics in South America (Mexico having fallen to Presidents Polk and Quitman). The Japanese, meanwhile, have taken advantage of the exposed land bridges to Korea and Manchuria; their invasion of China coincided with the Taiping Rebellion (a decade longer in this uncertain new history) to dump the Manchu Empire into complete disarray. (The Royal Navy, unfortunately, was forced to rebuild most of its shore facilities numerous times as coastlines receded, and is still not up to its pre-Ice deployable strength.)

This world cries out for Weird Science of all sorts, in true steampunk fashion. The Ice-Borer opens tunnels to the Frozen Fortress of the Mad Baron Bismarck. The Edison Mega-Mirror holds the glaciers away from Chicago to keep the rails open. Judicious injections of mountain-gorilla gland extract enable Her Majesty's Own Caledonian Glacier Guard to keep a watch for Ukrainian infiltrators crossing the Hindu Kush. The retreating Aegean seacoast reveals an Atlantean colony between Crete and Athens. Mammoths and saber-toothed tigers return from the Hole in the Pole, and stalk the deserted streets of Bristol. Most worrisome of all, slumbering Things Man Was Not Meant To Know float south in the melting icebergs as Ithaqua's realm ever expands . . .

"Of course, the implementation of the World Ice Theory ordered by the Reichsführer-SS must be planned in accord with scientific methodology. Thus is the manner of working in the Administration for Scientific Research in the Ahnenerbe unambiguously set forth. At the same time, a change from the usual method of applying the World Ice Theory has been decided upon as well . . ."
-- Ahnenerbe-SS internal document, 9 Dec 1937

This much is true: The general warming pattern of the twentieth century was broken by a sudden cold drop between 1933 and 1941. This much is not: It was the result of Ahnenerbe-SS magics, uncovered by the Edmund Kiss expedition to Tihuanaco in 1928. In this alternate, the Ahnenerbe successfully triggered the Fimbulwinter, first stage of Ragnarok, in 1933. This set up the New Ice Age, and a swell "secret magic" **GURPS Special Ops** campaign frame. (If you'd rather avoid magic, it was the detonation of a "dust weapon" developed by von Braun to blot out sunlight -- but those glaciers are still growing awful fast.) By the war's outbreak, Moscow lay under a mile of ice, and England

battled the glaciers rather than Nazism. Franco's Spain, Mussolini's Italy, and Tojo's Japan all gained new expanses of coastal land to be worked by forced labor; France fell to the Jura glacier and the blitzkrieg in 1940. German troops poured across the steppes, eventually stopping at the Urals, but even the much vaunted Finnish Exile Legion has its hands full dealing with Chechen partisans in the oil fields at the foot of the Caucasus glaciers. (America simply fortified the Bering land bridge.) The United States absorbed nine million Canadian (and twice that many internal) refugees, but the strain cracked FDR's fragile New Deal, letting Charles Lindbergh take power in 1936. Churchill fled the Nazi panzers as they rumbled past the White Hills of Dover, and now keeps British resistance alive by sheer force of will from exile on the new Great Bahama Island. The key to maintaining British power is her ever-larger fleet of pykrete (ice and wood-pulp) super-ships developed by Geoffrey Pyke; the *H.M.S. Boreas* can launch an entire wing of Comet jet-fighters from its shaved-ice deck. Nazi rocket-planes "hop the cap" over frozen Norway to attack the British ice-fields, but run the risk of drawing America (which claims the polar cap after Byrd's explorations of it) into the war. Japan, busy with new lands to conquer (and exploit for oil) in the erstwhile East Indies, has no interest in attacking America either, so the balance of power tilts ever-farther into the cold clutches of Nazi Germany. Brrr.

Pyramid Review

Mage Second Edition Revised

Developed by Jess Heinig

312-page hardcover, $29.95 (special limited edition, $69.95)

[*Editor's note:* Within 24 hours I received two reviews of this product. Since *Mage* has always been about different viewpoints, this somehow seemed appropriate. I have edited them into two coexisting reviews that will hopefully prove useful to you.]

Kevin Brennan

There's a reason that the new version of *Mage* is called the "Revised Edition" and not the "Third Edition." Consider it fair warning. This is not really a new edition of the game. The text has been substantially rewritten, but it's only a slight exaggeration to say that the most significant change in the *Revised Edition* is the replacement of *Mage*'s signature font. The game is now far more clearly written and understandable than it ever has been before, but experienced players will find little new here.

For those unfamiliar with the game, the basic idea behind Mage is that reality is shaped by the collective beliefs of all humanity. Technology is just another form of magic, but because everyone believes in it, it works while traditional spells fail. A mage who tries to work magic that violates the collective paradigm risks a backlash of paradox that can violate physical law, inflict serious injury, or even remove the offender from reality. However, magic can also be "coincidental," meaning that the events can be explained without recourse to the supernatural, no matter how unlikely they may seem.

Characters are assumed to belong to the Traditions, a loose group from a variety of magical backgrounds. They are opposed to the Technocracy, a cabal that created and enforces our technological worldview, the Nephandi, who are servants of darkness and evil, and the Marauders, mages so insane that the restrictions of reality no longer apply.

The game has always had a slightly offbeat philosophical bent, and players have had frequent disagreements about how to handle its relatively free-form magic system. It seems that *Mage Revised* is intended to cut back on both. The musings scattered throughout the earlier editions of the game have been replaced with more obviously game-related information. Where previous editions referred to "magick," Revised drops the "special K." It's less pretentious, I admit, but somehow the pretentiousness was always part of the unique charm of the game. Mage risks drifting into the world of four-color comic books without it.

Old players of Mage will find that some of the rules have been cleaned up a little. The rules have been updated to match *Vampire 3rd*. Magic is slightly harder to cast if you're used to depending on a generous supply of Quintessence to get away with casting spells, since you can only use an amount equal to your Avatar background. Merits and Flaws are now included in the basic rules instead of confined to the outdated *Book of Shadows*. Paradox now injures a character by default, with the old paradox flaws (water running backward, blue cats falling from the sky) becoming optional.

The new edition also places more emphasis on the paradigm used by each mage. In older editions, it seemed that most mages knew that they could shape reality with the power of their thoughts. *Mage Revised* makes it clear that only experienced (well above the levels of starting player characters) know the truth about how magic works, and all others honestly believe that their way of doing things is the truth. Characters must now have an Arete (the attribute that measures their understanding of reality) of 6 before they can begin to discard the trappings of their magical style. This

will typically only happen in long-running games.

One new mechanic that seems to have not quite been fully thought out is Resonance. This is supposed to add to the feeling of ambiance by forcing mages to shape their magical effects around a theme. For example, a mage's spells may be "fiery" or "discordant." It's an interesting idea, but a lot of the examples given seem to assume the characters are tossing fireballs around or in some other way burning up their special effects budget, which seems to go against the subtlety demanded elsewhere in the game. In addition, the magical powers of an average mage are so flexible that I find it hard to imagine a Resonance that could be consistently applied.

The description of how coincidental magic works has been given a new twist that will hopefully help settle the endless debates among *Mage* players. The *Revised Edition* now implies that the form that coincidental spells take is determined by the universe, not by the individual mage. This gives the Storyteller a lot of latitude to keep the effects and improbabilities down to whatever their personal level of comfort may be.

Stephen Kenson

Physically, the revised edition of *Mage* is beautiful, a hefty hardcover with glossy, heavy-stock pages. The layout is clean, attractive, and readable, and the artwork is excellent and blends well with the text, enhancing rather than detracting from it. The special limited edition (for you collectors) features a leatherette cover with gold foil embossing and a purple cloth bookmark, making the book look like a tome worthy of the library of a real mage. It comes in a slipcase cover, along with a softcover art book that collects some of the best art published for Mage.

Inside, White Wolf has clearly learned a great deal about organization since *Mage*, first edition. The book has a Prologue, entitled "Through a Darkened Mirror," that neatly lays out all the basic information about the world of the mage in narrative form. This is the sort of thing *Mage* was missing; a straightforward, "What's it all about?" section. From the very beginning the revised edition brings *Mage* down a notch or two from its lofty heights to the streets and alleyways of the World of Darkness. The Ascension War is over, and the Technocracy has won, but even the Technocrats are starting to realize things aren't turning out the way they'd hoped.

A key point is that White Wolf seems to be downplaying the highest power levels of *Mage* with events that have cut Earth off from the Umbra and the higher realms, making it hazardous to travel between then, and taking the most powerful mages out of the game. This leaves the newbies (the player characters) to take care of things. I personally found the idea refreshing--it made me want to start a *Mage* game--but long-term players may find these events upsetting their ongoing chronicles (which may or may not be just what their chronicle needs). The changes in the revised edition are often subtle and experienced *Mage* players should read carefully in order to catch them all.

The first two chapters introduce (or re-introduce, for long-time players) the World of Darkness from a mage's perspective and the Nine Traditions of mages. These chapters (like most of the book) benefit from years of *Mage* source material. The Tradition pages, for example, nicely summarize information from White Wolf's Tradition Books, giving the Traditions additional depth and covering recent events in the World of Darkness, many mentioned for the first time in this book. For example, some of the disparate Crafts (splinter magical groups) from sources like *The Book of Crafts* have allied themselves with different Traditions, creating new sub-factions and additional sources for character ideas and conflict among the Tradition mages.

The next two chapters cover character creation and the elegant and flexible magic system that is at the heart of the game. Both provide detailed, step-by-step systems with plentiful examples, making building a mage character and using magic in the game easier than ever. The cosmology of the mage, and how it affects the game, is explained in detail. These chapters feature some rules upgrades, particularly in the magic section, which has clearer explainations of what magic is, how to use it, and some refinements on the different sphere levels from *Mage Second Edition*. The Prime sphere in particular is revised and expanded to include additional effects and the capabilities of all the spheres are clearer and more defined, without limiting the flexibility of the system.

Chapters Five and Six provide the Storyteller rules and how to use them in *Mage*. These cover a wide variety of actions and situations (including combat) and highlight the flexibility of the Storyteller System in relatively few pages.

They feature the revised botching rule (making catastrophic botches less likely for characters with high dice pools), new multiple action rules, and a nice section on common actions and systems for handling them.

Chapter Seven provides a history of mages and their conflicts, from the ancient past to the present day, including new recent events in the World of Darkness. The history, although necessarily brief, is expanded from material in previous editions, and provides a valuable context for the modern-day clash of mage factions.

Chapter Eight offers useful advice for *Mage* Storytellers. The chapter covers the usual basic Storytelling advice, but does it in a useful, easy-to-read manner that even experienced Storytellers can get something out of it. The chapter focused on themes and conflicts, and offers advice on getting a new group of characters together.

Chapter Nine provides information on antagonists, from enemy mages to other supernatural beings from White Wolf's World of Darkness games (vampires, werewolves, etc.). Notably absent from this chapter (and, indeed, from most of the book) are details about the omnipresent Technocracy and its agents, ostensibly the main bad guys of *Mage*. Information on the Technocracy is better integrated than previous editions, but sparse (the book only devotes two pages to them, along with some scattered references). A reader would have a difficult time naming the Technocracy's five Conventions and what they do, since they aren't specifically described anywhere. More advice on using the Technocrats-as both antagonists and characters-would also have been appropriate.

This is my biggest (and, for the most part, only) real criticism of the game. Storytellers can always pick up White Wolf's excellent *Guide to the Technocracy* sourcebook, which provides all the information one could possibly want (and then some). But it would have been nice to have some more of the basics-like stats for a typical HIT Mark or Man in Black-in the main book, along with an overview of the Technocracy's Conventions. Hopefully the upcoming *Storyteller's Companion* will address this issue.

Conclusions

If you found previous versions of *Mage* difficult to understand, or you've never played the game, the *Revised Edition* is worth checking out. It's a much more straightforward and understandable introduction to a complex setting than any earlier version. However, with the exception of a few minor tweaks, the game is largely unchanged from *Second Edition*. The fonts, art, and text have been replaced but the conception is the same. If you have *Second Edition* and are comfortable with it, there's no reason for you to get the upgrade.

-- Kevin Brennan

Overall, the revised edition is an improvement in the organization, presentation, and style of *Mage* and fixes a number of small but often important rules, such as the botch rule and the sphere definitions. Gamers who have avoided picking up the game because they were turned off by its complexity or steep learning curve should give the revised edition a look (keeping in mind they'll probably need the *Guide to the Technocracy* to get full use out of the technocrats). Experienced players and Storytellers will find a wealth of information collected together in one place, numerous rules fixes and small improvements, more detailed information on previously less developed portions of the game (like resonance and magical talismans), and many cleaner, more useful reference tables and charts.

The Ascension War may be over, but the World of Darkness needs heroes now more than ever.

-- Stephen Kenson

My Shadis Story

All right; this week I promised to tell you all the *Shadis* story. So here it is. (And I also promised more information on writing for us. It's here too.)

I'd been reading the role-playing game magazine *Shadis* from almost its beginning; my collection goes back to issue nine or so (1993, for those of you keeping track. . . I wonder if this ***Magic: The Gathering*** is going to catch on?). It had been my favorite RPG magazine for a while, coming out more regularly than *Pyramid*.

But then something happened. I'm not sure what, exactly, but the magazine seemed to fall in quality, or at least change into something I didn't really care about. I stopped reading.

And then, several months later, I picked up an issue at random. (Issue #27, to be precise.) I read it cover to cover. And it was fabulous.

So I wrote them a letter.

(An aside: I'm a letter-writer. I'm one of those odd folks who, if I have horrible service in a restaurant, or a product doesn't live up to my expectations, or my detergent eliminates a stain I thought would *never* come out, will usually write a letter. The folks I write to usually write back. I firmly believe most organizations want to know what they're doing right and wrong. . . so I'm more than willing to give them my opinion.)

Anyway, I wrote *Shadis* a letter; and in it I basically said what I said above; the magazine started great, became bad, and had a very good issue. I outlined exactly what I liked about the issue, what I disliked about what they'd done in the past, and so on. I begged them to ensure this issue wasn't a fluke, and, to give an example of what I like to read, outlined what I thought would be a "perfect" issue, complete with article ideas. I'd also included a SASE, in case they wanted to mail me a response or a dead rat or something.

About a month later, I received the SASE back, stamped with a *Shadis* return address. Inside was a letter:

Random Thought Table: My Shadis Story

This was easily the coolest letter I have ever received in the mail.

I didn't know what to make of it; at the time, I assumed it simply meant to keep reading at the magazine, and I wouldn't be disappointed. Which was fine; maybe they'd print my letter and talk about it a bit in a future issue.

And, indeed, the magazine continued to meet (or exceed) my expectations for several months after that. So I'd almost forgotten about the letter, when issue #34 came out.

In issue #34 there was, on page 79, a black silhouette of a head with a white question mark on it. Above it, in black letters, it asked, "Who is Steven Marsh?"

It was the most startled I'd ever been reading a magazine. " RPG news. *In Nomine* review. Miniature ad. My name in **72-point font!**" I do believe I squealed like a toddler.

So I figured, "Okay. That's what the letter meant. They wanted me to watch and wait so they could freak me out while reading their magazine." I showed it off to my friends, and figured this was my fifteen minutes of fame.

I was fourteen minutes off.

The next month, issue #35 came out. There, on the cover, it proudly exclaimed, "Special Steven Marsh Issue." Put mildly, I was surprised.

The *entire* issue was written around my ideas and suggestions for the "perfect" issue, right down to the titles I'd offered. In all, three (or maybe four) articles and a request for a board game were honored. They wrote an editorial about how much they liked my letter, and detailed their six-month scheme to create *my* ideal issue.

I was stunned, delighted, and amazed. Obviously I had to buy multiple copies. And obviously the game shop I worked at sold out before I went to work that day. And obviously I special ordered a couple more. In the end, I bought my multiple copies, they sent me a box of extras, and I was inspired to write a couple of articles, both of which were accepted within a few weeks.

Shadis eventually went away, which is really too bad. Sure, *Pyramid*'s weekly dose of gaming information kept me happy, but there will always be a special place in my heart for the magazine that moved heaven and earth to give me exactly what *I* wanted.

And that, ladies and gentlemen, is my *Shadis* story.

* * *

For those of you hoping to write for *Pyramid*, I promised to tell you all how to make your submissions more professional, with an eye directed towards what I wanted for *Pyramid* submissions. I'm sure that those of you interested in writing for us have already read the *Pyramid* guidelines, so you know a bit more what to do and what not to do. (If not, you may want to go do that first.)

Without further delay, then, here is my first list.

Ten Ways To Improve Your Chances At Getting Accepted

1. **Be inclusive.** An article telling people how to use their *Eric Clapton: Crossroads* boxed set when running the *AD&D* adventure *Vault of the Drow* is only going to be useful for those people who own the *Crossroads* boxed set **and** want to run the *Drow* adventure with it. An article offering general advice for incorporating music into a gaming session has a greater potential audience. Likewise, a cyberpunk adventure with advice for coverting to *GURPS*, *Cyberpunk 2.0.2.0*, and *Shadowrun* is probably more likely to be accepted than an adventure irrevocably tied to either of those three.

2. **Write your articles the correct length.** When asked how long any paper or project needed to be, my high school Creative Writing teacher always answered the same way: "Make it like a miniskirt. . . long enough to cover the subject, but short enough to be interesting." (She was a very interesting teacher.) Keep this advice in mind; if an article is 7,000 words, ask yourself, "Why? What am I doing with these words that I couldn't do with a thousand less?" If you have a good answer to that question, then by all means send it in. If you don't, try to pare it down to 6,000 words and ask the question again. (By the same token, make sure your article is long enough. A 500-word article detailing the Roman Empire isn't likely to be useful.)

3. **Keep it tight; keep it thorough.** As a writer you may be thinking, "The more words I use, the more I'll get paid." This simply isn't so. If your article rambles, it's less likely to be accepted, and you won't be paid anything. Don't cut out important points just to make it shorter, but don't belabor obvious points just to meet some internal word count.

4. **Make sure your topic hasn't been written about before.** If you're writing for a specific game system, make sure you have access to all the relevant books when writing the article. If you're writing some optional rules, make sure there aren't similar rules already in the *Pyramid* archive. . . or, if there are, why yours are better.

5. **"Generic" doesn't mean "boring."** For example, a generic fantasy setting intended for any system still needs to have enough different and unique about it to spark something in my imagination. If you submit a character for Supporting Cast, make sure there's something interesting about him/her/it. A generic FBI agent isn't interesting, but an FBI agent who has secret ties to an occult organization might be.

6. **Make sure it makes sense.** If you're creating a fictional world, make certain there's no glaring illogical aspect that would force me reject it; avoid a race of Lava Men living on an iceberg for no good reason. For an adventure, make sure there's no gaping plot holes (like a parchment map found in a water-filled undersea cave). Make *certain* you've extensively playtested any alternate rules or strategies.

7. **Different is good.** I like to run a variety of articles, including those for card games, board games, and other interesting bits. While I won't print a substandard board game article just to run a board game article, the odds of writing the best board game article I receive all month are much better than the odds of writing the best RPG article I receive all month.

8. **Re-read our guidelines.** They're at http://www.sjgames.com/general/guidelines/writers/. Check out the libel and obscenity section. Don't create an adventure revolving around a real-world celebrity who goes around cursing and killing people. I will not run it. Re-read that first paragraph of your article. Make sure it's perfect. (If you scar me on the first paragraph, I'm **much** less likely to recover than if I notice a minor typo on page three.) Make sure you're not missing any words; it raises my hackles to read, "The villain will make sure the do not find him." Remember: "spell checking" is not the same as "proofreading." I don't expect everything to be perfect, but the closer it is, the greater its chances.

9. **Don't be afraid to ask.** If you have an idea that's out there, feel free to send a query to me. Although I'll probably say, "Sounds interesting; write it and send it in," I might also be able to tell you some pitfalls or problems you might run into.

10. **Surprise me.** If I knew what I wanted, I would write it myself. Follow these guidelines, or break the rules if you feel up to it.

Beyond this advice, I guess I can't say much more right now. There isn't anything I really don't like, so long as it's interesting: adventures, historical perspectives, "real world" ideas, and so on. As a couple of ideas, I'll probably weep with joy if I ever receive a *Creature of the Night* that sparks my interest. I'd love to receive an *Adventure Pizza* that was intriguing. I don't have any of the articles mentioned in my first column, with the exception of Kenneth Hite's "Return to Metro City Baghdad." (Which ran the same week as my column; coincidence or conspiracy? I think we all know the answer.) And. . .

I need reviews! Although I'll still reject a substandard review, or make you rewrite one that doesn't live up to my expectations, a quick bit of math will tell you that I print about as many reviews a week as I do normal articles. I'll probably devote a column to writing reviews at some point, but keep in mind that a review of a new, recently released product has a **much** greater chance of being accepted than one of a product released a year ago. And make sure you read previous reviews to get an idea of what they're supposed to sound like.

I hope this advice has helped some of you out there. As has been said elsewhere, I get a *lot* of submissions a week, so yours needs to be really special to stand out. Don't be discouraged by the competition; be driven by it. And, as ever,

feel free to [write me](#) with praise, curses, questions, or comments. If you'd rather it be a discussion, post to the sjgames.pyramid newsgroup. Next week I may tell the **_Torg_** story. Or maybe I won't.

-- Steven Marsh

∗ ∗ ∗

Last week's answer: **Sons of Ether Tradition Book** (for White Wolf's **_Mage_**), back cover.

(Three stars) "It's a great new fantasy role-playing game. We pretend we're workers and students in an industrialized and technological society."

Murphy's Rules

Murphy's Rules

Gaming By the Numbers

Some of the most common questions I receive in my e-mail bag revolve around the demographics of gamers: "What do we know about gamers? Who are we? What are we playing?" The dirty secret is that, well, we did not really know. Everyone who has been around for any length of time could give a general answer based on anecdotal evidence. Gamers are mostly men who own computers, etc. However, until recently we have not known the answers with any scientific accuracy. Over the last year, though, Wizards of the Coast has conducted a huge and in-depth study of games and gamers. The results bear out some of the truisms of gamer legend and lore. In some important places, however, it challenges our closely held assumptions. Moreover, some of the data point to things about gamers that I, at least, never thought about before. Today, with the kind permission of Wizards of the Coast, I am pleased to be able to report the results of this survey. So here we go: Gamers by the Numbers.

First, a word about methodology. (Note: If you took statistics in college and passed, know that the study used a statistically representative sample of 1,000 American gamers between the ages of 12 and 35. You may now go on to the next section. All others should read the rest of this bit.) The point of holding a survey, of course, is to find out what people think about a certain issue. The problem, of course, is that the results are only as representative as the original sample. The Pyramid Poll, for example, is fun, but not especially scientific, because it only shows what Pyramid readers who chose to answer the poll thought about the question. Its findings ought not to be thought of as representative of even Pyramid readers as a whole, let alone all gamers, or all Americans. Wizards of the Coast's survey got around this problem by carefully choosing their survey participants. They began by sending out 20,000 postcards to a statistically accurate sample of American households, representing 65,000 people. That is, if there are 51% women in the US, there were 51% women in the sample. Theoretically, the sample pool exactly represented America. From that "screener" survey, they were able determine the size and composition of the American gamer population. They followed up that postcard survey with a much longer questionnaire sent to 1,000 gamers who were also statistically representative. This scientific rigor allows this survey to claim that it is the most accurate picture of American gamers between the ages of 12 and 35 ever collected. (Of course, there are many players who are over the age of 35. These players were not counted in the survey and the games they favor are therefore underrepresented.)

The survey determined there are approximately 5.5 million Americans who have ever played RPGs. (For the purpose of this survey, RPGs means traditional paper and pencil RPGs, such as *Dungeons & Dragons*, *GURPS*, or *Vampire*.) About half of these people play RPGs monthly (most of the following data concern these regular players). These 2.75 million monthly gamers include 19% women, for a total population of female gamers of just over 500,000. Just for comparison, this means that American gamers are a group about as large as the population of Iowa. This should entitle us to five representatives and two senators in the US congress. Secondly, more than half of gamers (59%) are over the age of 19. The data show a mysterious dip in play between the ages of 16 and 18, a drop-off that reverses after the age of 19. Though no reason for this fact can be drawn from the data, it does bear out the folk wisdom that gamers start playing in junior high school, leave the hobby during high school, and take it back up in college.

Another classic piece of folk wisdom is that RPG players are computer literate. This latest study validates that bit of lore as well. More than half of regular RPG players say they have ever played a game on the Internet, and just over a quarter say that they play Internet games monthly. More than half of gamers reported they would like to have computer tools to help them manage their games and speed up combat. Interestingly, nearly two-thirds of gamers report using Windows machines. Fewer than 10% admitted to using a Macintosh. If this data translates into new products, computer based tools should be one of the fastest growing segments of the gaming market in 2001 (taking into account development time).

One of the survey's other goals was to learn what gamers are playing. When faced with a large list of games, and with multiple choices allowed, 66% of gamers claimed to play *D&D* monthly. The next largest game was *Vampire: The Masquerade*, with 25% of players playing monthly. *Star Wars* claimed 21% of gamers. Other games dropped off quickly - *Werewolf* and *Shadowrun* 15%, *Star Trek* 12%, *Call of Cthulhu* 8%, and *Deadlands* 5%. *GURPS* is enjoyed by 3% of all gamers each month. Now, it is true that 3% does not seem like very many players, but given the large size of the gamer population, that translates to more than 80,000 regular *GURPS* players. If they all came

together in one place, the crowd would be almost triple the annual attendance at Gen Con. Thought of another way, one out of every 1,125 Americans between the ages of 12 and 35 plays *GURPS* every single month.

Taking all gamers as a whole again, the survey shows that 42% of all gamers normally create their own adventures. Only half that many normally use adventures they find in magazines like this one. More than a quarter of gamers generate entirely new campaign material. Three quarters have ever played in a game that required detailed tables and charts. About a third have tried a diceless system. Nearly half have played live-action. House rules have been used by 80% of all gamers. Somewhat more than 85% of all gamers have ever played in a combat oriented game. (The inverse of that statistic is that nearly 15% of players have never played a combat oriented game. Wow!) In a serious blow to what I thought I knew about gamers, the survey showed that 47% of all gamers have taken the role of Game Master more than twice. Only 41% have never been a GM. I had believed that GMs were far more rare.

No matter how much a person loves RPGs, few are completely satisfied by them exclusively. Among people who play RPGs monthly, the big winner is action/shooter computer games. They are a monthly pastime for 58% of regular gamers. Just over half also play a non-collectible card game monthly. Around 43% play a classic board game, like *Monopoly*, every month. It seems that miniatures-based war games are not as popular among RPG fans. Only 17% also play these games. Even fewer gamers are frequent players of more than two categories. It seems that the fabled "omni-gamer" who will play anything, anytime, and does, is an incredibly small fraction of the gamer market. Most gamers, it seems, have one or two favorite game types that they stick with closely.

Of course, everyone knows someone who had to quit playing for some reason. The Wizards survey also learned about these people. Here again, multiple answers were possible. It seems, as one might imagine, that the number one reason given (79%) was "got too busy with other things." The second most given answer was "too few people to play with." Given the surprisingly large actual size of the gamer population, some of these 63% of former gamers ought to be recoverable simply by helping them to find each other. Lack of time was cited by 55% of people who had to leave gaming. Nearly a third of the players claimed that gaming got too expensive.

It sure can be expensive. As might be expected, players who have been in the hobby the longest have spent the most money. An average gamer who has been playing for more than five years usually can be counted on to have spent over $2,500 collecting RPG materials. Even new players, though, have bought far more than just the basic rulebook. During that crucial first year, the average player can expect to lay out $116 on books. The real wallet emptier, though, is miniatures. Regardless of time playing, an average RPG player with only a few miniatures spends about $139. Those with a large collection of lead should save up about $4,413. And that's before the hernia surgery.

The first year, as I mentioned above, is crucial. According to the survey, *D&D* players who have played for one year have about a 40% chance of playing another year. When a player has been in the hobby for over 5 years, 88% of them will still be playing the next year. This means that for every 100 new gamers, only 7 will still be playing ten years later.

All this data can be overwhelming. As such, it is easy to dismiss it as somewhat of a circus stunt. However, we as a hobby should be taking this detailed peek into our minds seriously. For example, 41% of players first pick up RPGs between the ages of 16 and 18. Yet, 60% of them will not play any longer than the first year. We should be reaching out to younger players and working on keeping them in the game long enough for them to get some idea what gaming is really about. Furthermore, the incredible crossover between RPGs and computer games, especially action/shooters, means that this could be a very profitable avenue for cross-licensing and recruiting of new players. The large number of people who quit because of a lack of players could be addressed by an industry-wide "player finder" service. And finally, we should be proud of our numbers. There are large numbers of gamers out there. We need not be ashamed of our hobby. More people play games than it seems. Let's hope that concrete evidence of our presence and preferences translates into more and better players and games.

I would like to thank Wizards of the Coast for conducting this survey and especially Ryan Dancey for graciously allowing me to reprint some of their findings in this column. They have done us a service that no other company could have done. Of course, they collected a vast amount of data, including information about Collectible Card Game players, Miniature War Game players, and lot of other segments. Those results are not included in this brief treatment

of the RPG gamer. I would also like to thank the people who wrote to me and suggested this topic. As always, if there is a question about the business of gaming you would like covered in this space, please feel free to write.

This is just a little <test>. Fnord.

Five Rings, Five Colors

By Damien Wellman

Art by ArtToday and colored by Phil Reed

I. Introduction

The planes of Dominia are many. The mages known as planeswalkers travel among them, searching for spells, artifacts, and creatures to bind into servitude. What if a 'walker happened on to a very specific plane, the plane of Rokugan? The unique magic there would be alluring and several planeswalkers would certainly attempt an invasion.

Of course, the natives wouldn't going to stand for it without a fight.

Five Rings, Five Colors is a set of rules that allow any number of players of *Magic: The Gathering* and *Legend of the Five Rings* to simulate an invasion of Rokugan by planeswalkers. 5RC assumes the players have some familiarity with both games and their rules. Throughout these rules, a *Magic* player will be referred to as a "planeswalker" and a *L5R* player will be referred to as a "Rokugani".

II. Conversion Notes

Certain traits on the cards are considered interchangeable. The convertible traits are:

Magic	= *L5R*
All black-colored cards	= Shadowlands
First Strike, Flying	= Cavalry
Creatures	= Personalities
Artifacts	= Items
Lands	= Holdings
Legend	= Unique
Power/Toughness	= Force/Chi
Tap/Untap	= Bow/Straighten

Other important conversions:

- All *Magic* cards have a focus value equal to their casting cost, to a maximum of five.
- For purposes of *Magic* cards that look for "target spell", the *L5R* equivalents are kihos and spells; *L5R* spells must be countered as they are being attached.
- Planeswalkers may never gain a province, and Rokugani may never gain or lose life, although both may gain honor.
- Any damage dealt directly by a *Magic* card must follow the same strictures as an *L5R* ranged attack - the

followers must be killed before the personality can be, although the "attack" doesn't have to occur during combat.

- Any *Magic* ability that counters or prevents something is a Reaction. Instants are Open actions, and Sorceries are Limited actions. For the purposes of Power Sink and similar "this player must/may pay X mana" cards, gold is mana, but ONLY for these cards.
- Confusingly, most *Magic* cards printed recently say "until end of turn" for many abilities, with the ability assumed to be permanent otherwise. *L5R* cards make the opposite assumption. Play the card under the assumption of the native game.
- Rule of Zero: Any attribute asked for not present on the card is zero. (Thus, all *Magic* creatures have a personal honor of zero.)

III. Victory Conditions

To represent the influence of the planeswalkers in Rokugan, the victory conditions for a player on of the two sides are slightly changed.

Five Rings, Five Colors

A planeswalker wins if he:

- is the last player remaining in the game
- begins a turn with forty honor

and loses if he:

- is reduced to zero or less life.

A planeswalker does NOT lose if he cannot draw a card, unlike normal *Magic*.

A Rokugani wins if he:

- is the last player remaining
- begins a turn with forty honor

and loses if he:

- has had all of his provinces destroyed
- is reduced to -20 honor

A Rokugani cannot win by Enlightenment. However, a Rokugani attaining Enlightenment may bring himself back up to four Provinces if below four, or add one new Province if at four or more. A Rokugani can only do this once per game.

Any other victory condition not mentioned here and not specifically banned is allowed.

IV. Setup

All players should have a deck constructed according to the rules of the parent game. (Sixty cards and four copies of any card for planeswalkers, two thirty-card decks with three copies for Rokugani.) Note that legendary cards from *Magic* are considered Unique and thus are limited to one copy in a deck. The decks should consist entirely of cards from that game, with no mixing!

Planeswalkers start with seven cards in hand and twenty life. Rokugani start with four provinces, five Fate cards, and their stronghold. For purposes of gameplay, planeswalkers have a "stronghold" with five province strength, zero gold

production, and zero starting honor, although this stronghold cannot be tapped and does not affect play otherwise.

V. Turn Sequence

1. Untap/Straighten Phase - Untap all of your cards.
2. Upkeep/Events Phase - If Rokugani, turn over face-down cards in your provinces from left to right and resolve Events. Then, attach Regions. If a planeswalker, resolve upkeep effects.
3. Draw Phase - Draw a card, either from your Fate deck or library as the case may be. (For Rokugani, the Ring of Void must be used during this phase rather than the End Phase.)
4. Action/Main Phase - Rokugani may play open and limited actions, attach followers, spells, and items, and once per turn, bow a personality for the Imperial Favor. Planeswalkers may play instants, sorceries, and enchantments, and once per turn, play a land. A planeswalker may bow a creature for the Favor, if that creature somehow has more than zero personal honor.
5. Attack Phase - You may declare an attack against a player. (See "Combat".)
6. Dynasty/Second Main Phase - If a Rokugani, you may bring into play face-up cards from their provinces. Planeswalkers may play creatures and artifacts.
7. End Phase- Discard any face up cards in your provinces if you wish,then refill them if Rokugani. All "at/until end of turn" effects wear off, in whatever order the current player wishes.

VI. Combat

Combat in 5RC is a meld of *Magic: The Gathering* "skirmish" combat and the "clash of armies" style of *L5R*. It has the following sub-phases:

A. Declare Attack - Declare which player you are attacking and ask for allies, as per *L5R*'s Declaration Segment. Allies gain two family honor once they commit a unit.
B. Assign Infantry - The attacker, and then any players who wish to ally, assign attacking infantry units. If the defender is Rokugani, the attackers must declare which province they are attacking. After this, the defender and his allies assign defending infantry.
C. Assign Calvary - Same as B, but for Calvary units.
D. Battle Action Sub-Phase - A battle occurs at each province. Starting with the Defender and continuing to the Defender's left, players may play Battle or Open actions, until all players have passed.
E. Resolution Phase - Resolve the battles in the province order that the attacker wishes. Each untapped unit deals its Force worth of damage to one opposing unit in that battle; if the damage exceeds the Chi of that unit it is killed. Two or more units may combine the damage they do in order to kill a large unit. If one side can kill all opposing units and still has leftover damage, the damage is dealt directly to the Province, as is any trample damage in excess of that needed to kill a unit. If this damage is greater than the province strength, that province is destroyed, if the defender is a Rokugani. If the defender is a planeswalker, then subtract the Province Strength from the damage and the defender loses that much life. After this is done, the attacker and defender gain two family honor for each opposing card destroyed in this fashion. (No honor is gained by allies, or for cards destroyed during the Battle Action sub-phase.)

VII. Urza and Toturi Go To War: A Sample Combat

To illustrate 5RC combat, here is a simple example between Urza, a planeswalker, and Toturi, a Rokugani.

Urza has a Grizzly Bears(2/2), a White Knight(2/2, first strike, protection from black), and a Samite Healer (1/1, tap to prevent one damage to a creature or player) in play.

Toturi has a Toku with a No-Dachi (2/2), and a Spearmen (2 Force, tap for a ranged 2 attack), and a Personal Honor of three. Toturi also has a Slidge (a 5/2 Shadowlands creature).

Urza declares his attack against Toturi. As there are no other players, no allies are involved. Urza assigns his Healer and Bears to one province. Toturi assigns all of his units to defend. Finally, Urza assigns his Knight, as a Calvary unit, to the same province as the Healer and Bears.

Toturi plays a Iaijutsu Duel, targeting Slidge and the Knight. While Slidge could not damage or target the Knight normally due to Slidge being a Shadowlands card, in this case it is the Duel doing the targeting. Urza declines to focus, and instead strikes so both the Knight and Slidge die, as both have a Chi of 2.

Urza plays a Giant Growth on his Bears, making them 5/5.

Toturi taps his Spearmen to do two damage to the Samite Healer. The Healer could, as a Reaction, tap do prevent one damage, but it would still die.

Urza, seeing a 5/5 creature to Toturi's 2/2, passes.

Toturi plays a High Morale on Toku, which will unbow the Spearmen.

Urza plays a Lightning Bolt on the Spearmen, which kills them. (Urza could not Bolt Toku, since Toku had a follower.)

Toturi passes.

Both players pass consecutively, and so the battle resolves.

The Bears deal 5 damage to Toku, and Toku deals 2 damage to the Bears. This is enough to kill Toku with his Chi of two, but the Province survives since no damage was dealt to it. Toku's two damage does not exceed the Bear's toughness of five, and so Toku is killed, with Urza gaining four honor (two from Toku, two from the No-Dachi) while the Bears live.

VIII. Optional Rules

- Give some *Magic* creatures a Personal Honor. A suggested scheme is to give White creatures two honor, Green and Blue creatures one honor, Black and Red creatures zero honor.
- In conjunction with the above, allow a planeswalker to declare a "clan color" and allow them to gain honor by paying a creature's casting cost plus two generic mana. In this case, planeswalkers should also lose if they reach -20 honor, just like Rokugani.
- Have the planeswalkers divide their cards into "Fate" and "Dynasty" decks, and play with Provinces. (In this case, land costs two generic mana to bring out and the "Planeswalker Stronghold" has the ability to bring one land a turn in for free.)
- Or, have the Rokugani play with all the cards mixed into one deck, using opaque sleeves to keep the cards from being marked, having life points, starting with seven cards, etc. They should retain their stronghold.

?

by Brandon Cope

An important, but frequently overlooked, part of the fundamentals of being a good Game Master is starting a campaign off on the right foot. While many articles have been written about fixing a campaign gone bad, few have covered starting a campaign and keeping it on track in the early stages.

This article addresses four points for a GM to follow to help keep a new campaign from derailing, regardless of whether the GM is running a new system for the first time or a familiar system with new players.

Two previous *Pyramid* articles on related topics may also be of interest to the starting GM: "Opening Moves" by Angela Deacon and "Running the Perfect Fantasy Campaign" by Mike Stackpole, both available in the Pyramid archives.

Know The Game System

This is probably the most obvious point, but is sometimes glossed over. Some GMs hastily go through a rulebook in an effort to get started as soon as possible, which is a big mistake. While it isn't necessary to memorize every rule before play (and this author don't recommend trying it, either), the GM should know the basics of the system and where things are located in the rule book. If an index isn't provided, you should make your own as you read though the book.

There are several steps the GM should go through in learning the system. First, the GM should familiarize himself with the section on character generation and go through the procedure a few times. The test characters should be of a similar power level and background to those the GM has intended for the player characters. Carefully read through resolving skill rolls; in most skill-based systems (*GURPS*, *Cyberpunk 2.0.2.0.*, etc) combat, magic, psionics, netrunning, etc. are only special-case skill uses, while in level-based systems (*AD&D*), they are usually quite different.

Next, using those test characters, make a few runs through the combat system until you are comfortable with it. If there are any advanced or optional combat rules, it would be best to wait until the players (and you!) are familiar with the basic rules before introducing them. If there are any rules for magic or psionics, these should be read through next. Finally, any remaining rules should be checked out when the GM has the time. Note that this can vary for some games; for instance, in *Call of Cthulhu* the rules for sanity loss are probably more important than either the combat or magic systems.

The GM should take notes while reading through the rulebook, even if it does include an index; writing a rule down after reading it makes recall easier than reading it alone, plus the Game Master will have a crib sheet for easy reference during play.

If the GM has run the system before and is using new or altered rules, such changes should be typed or printed out and presented to the players if they are already familiar with the (standard) system, to avoid misunderstandings later on. It might also be a good idea to give new players a reference handout describing the basic mechanics of the system.

Finally, don't plan anything grand for the first few adventures. You or your players (or both) will still be learning the system, and you don't want to complicate things too much. You don't want the rest of the campaign to be anticlimactic, either. If it's possible, a good idea would be to break the party up into small groups (1-2 players each) and run introductory adventures with each.

Know The Game World

Perhaps even more important than having a working understanding of the game system is knowing the world (or worlds) that the campaign will take place on. This doesn't mean that the GM has to know the desires, goals, and abilities of every NPC and the contents of every room on the planet. What it does mean is that the GM should know the goals, attitudes, and capabilities of the movers and shakers, as well as important NPCs that the players are likely to interact with. Basic cultural information (government type, population, technology, religion, etc.) should be worked up for each nation (or planet in a space campaign). Also, the locations of important towns, planets, ruins, alien enclaves, etc. should be noted, as well as their general inhabitants, contents, politics and legends. As a rule of thumb, anything the party could reach within a week using normal transportation (horses, starships, etc.) should be covered.

The GM should also consider how the geography of the campaign area will influence the actions of the cultures in the area. For example, migrations are unlikely to occur across mountain ranges, inhabitants of a desert world will have to get their water from some outside source, an isolated star system rarely will be the hub of an empire, and so on.

Both of these types of understanding are important to make the campaign seem real and alive to the players. If the GM is using a pre-made campaign setting, the job is a little easier, but the GM still needs to be familiar with the overall setting and the specific area the campaign is starting in. Also, the actions of the PCs do not occur in a vacuum. The PCs actions can affect the area around them, but more likely the area will affect them. Nations go to war, plagues break out, technological breakthroughs occur and new races are discovered, all of which will have some impact on the PCs.

Along with a handout describing the basics of the rules, a one or two page (at most) handout describing the game world (as best as the PCs would know) is very useful. Such a handout should be given to players before they create their character, since it will likely influence character concept and creation (for example, a player creating an elf before he finds out that in the game world elves are rare and considered demonic by other races).

Know Your Players

This is one of the things that many GMs fail to do when starting a campaign and has caused more campaigns to fail than anything else. There are two basic issues here: how the player intends to run his character, and the player himself.

First, the GM should find out how the player in general intends to run his character, and if there are any particular long and short term goals of the PC. Also, the player and GM should work out a reasonably detailed background for the character. The goals and background will shape the character's interactions with NPCs and other PCs, and are useful to the GM for creating plot threads and twists (the author uses these techniques quite often, and they work very well).

Second, you should know when each player will be able to show up and for how long. This makes planning gaming sessions much easier, since you and the other players will know who is a regular and who is a part-timer. The personality of the player is important as well; if the player is known to be an argumentative rules-lawyer type, or frequently betrays/backstabs other player characters, it might be best to avoid him. On the other hand, a player that has a reputation for being easy to get along with and rarely argues with the GM would be a plus to a group. It is also useful to find out what general types of adventures each player prefers (mystery, action, etc.). While the game system being used will to some degree dictate the nature of the adventure (you are unlikely to run a slapstick adventure in a Call of Cthulhu campaign, for example), there is usually enough room for variety.

From time to time, the GM should seek comments from the players about what they think of the way the campaign is going. While it usually isn't possible to please every player, you don't want a full scale desertion on your hands. It's better to prevent problems than to fix them.

Know Yourself

The final point, and perhaps the most important, is for the GM to consider what he wants to run, and how. This is similar to "Know Your Players" above, but are questions the GM must ask of himself.

How much time can you devote to being a Game Master? Will you need to rely on supplements and modules or do you have enough time to do most of the work yourself? What kinds of adventures do you prefer to run? How many players can you comfortably handle at once? Is there any ultimate goal(s) you would like the campaign to work towards?

Your overall goal should be to provide entertainment for yourself and as many players as possible. You need to understand that it's doubtful you can make all your players happy in each adventure, especially if you are GMing a large number. You don't want to overburden yourself with your campaign, and a small number of players is usually best to start with. You can add on to this as time goes by, or possibly separate the players into two or more different groups (like a spin-off series in television).

Above all, make sure that you enjoy the campaign. If you don't like it, your players probably won't either.

Liber Athenaeum

By Owen S. Kerr

Art by Brian Despain and colored by Phil Reed

It often requires more courage to read some books than it does to fight a battle.
-- Sutton Elbert Griggs (1872-1930)

The *Liber Athenaeum* (Latin for "book of libraries") is either a work of powerful magic or sufficiently advanced technology, depending upon the campaign world. Different groups and cultures refer to it as *The Last Book*, *The First Book*, and *The Final Reference*. The book is a repository of great knowledge, as it has the ability to recreate within its covers the text of any written material about which the user has heard. The volume responds to the spoken or unspoken wishes of the user, with near-telepathic precision. Whether the tome is psionic or simply a near-AI expert system, the *Athenaeum* never fails to surprise a first-time user with the breadth and scope of knowledge about the exact topic that is foremost on the subject's mind.

Warehouse 23: Liber Athenaeum

A discerning GM may not want to unleash the full *Athenaeum* in his game world, so feel free to limit the scope of the text. A book with full knowledge of business information, perhaps, or a text with clear and accurate information on personal relationships, would serve many of the same purposes as the full work, without unbalancing the game universe. These limited texts only have access to data which is immediately pertinent to the subject. (Your players may try to fast-talk you into giving more information than you feel that they should have. Make a detailed list of what types of information the book holds, and stick to it.)

The literature replicated in the *Athenaeum* always appears in a format that reflects the capabilities of the user, including intelligence, native language, and reading level. Use of the tome requires a few days of attunement, during which time the new user studies the existing text of the *Athenaeum*'s current topic. Attunement takes seven days, minus a number of days equal to the user's IQ divided by 40. (The village idiot, IQ 40, would take six days to find that he had a new picture-book, while a whiz kid, IQ 200, would have the *Athenaeum* figured out in two days.) Reading aloud from the book hastens the process, halving the attunement time.

After attuning to the book, a user simply has to hold the *Athenaeum* in his hands, and speak aloud the topic that he wishes to know more about. Without specific orders otherwise, the *Athenaeum* will simply reproduce an existing text which most closely mirrors the user's desires. The topic "cars," for example, will bring forth a simple overview of the auto industry, while "a repair manual for a '66 Ford Custom with a 352 big block" will be much more specific. The tome may also be commanded to synthesize a work based on multiple sources. A musical *Athenaeum*, for example, could be asked to produce "three concertos in the style of Mozart, based on all of his previous works, the development of his style during his life, and events of historical importance that would have influenced his work if he had lived to be fifty-five."

Any named book, treatise, article, play, or musical composition can be duplicated by the *Athenaeum*, including "lost" works, private publications, corporate records, grimoires, and electronic publications. General textbooks on any

subject can be coaxed into being, based solely on the wishes of the user. Owners of the book have created survival manuals, alchemy texts, encyclopedias of poisons, manuals of football strategy, engineering tables, ship-recognition texts, heraldic armorials and songbooks. Documented examples of the text have used English, Arabic, Greek, and Cyrillic alphabets, hieroglyphics, cuneiform, simple pictograms, and Braille, with most exhibiting full-color illustrations appropriate to the work.

There are also indications that the *Athenaeum* contains information far in advance of any contemporary work. Seekers of the book tracked its location to the private safe of a NASA scientist -- said scientist had, after decades of lackluster work, applied for the patents for the first practical ion engines. Notes in the safe also indicated that the scientist was composing an article for a scientific journal; the main thrust of the article seemed to be the ease with which an inexpensive and safe FTL drive could be developed, using existing technology. Stories that the learned gentleman also had several working prototypes of a desktop fusion generator are, as yet, unconfirmed.

The information contained in the *Athenaeum* is not limited to purely technical or pragmatic concepts. Rumors about a well-known pop group hint that the main songwriter kept a "personal journal" where he composed his songs, three of which catapulted to the top of the charts in record time. The catchiest tune, "Trainscripting," remained in the Top One Hundred for an unprecedented 121 weeks. After a meteoric rise to become the cutting-edge musical talent of the decade, the writer inexplicably took his own life soon after an unknown person or persons broke into the band's tour bus. The intruders ignored large amounts of money, drugs, and electronic equipment, instead making off with the journal; investigators were forced to conclude that the worst crime committed was unlawful entry. Friends and band-mates claimed that the songwriter became extremely despondent at the loss of his notebook, and killed himself two days after the robbery.

The *Athenaeum* always appears as a nondescript volume, blending in well with any other literature in the immediate area. It has taken the form of a large leather-bound tome, a medium-sized hardback, a leather file folder, a music portfolio, and, in at least one instance, a massive illuminated scroll. In any manifestation, the Athenaeum is always of the sturdiest construction, with no loose leaves (or equivalent). The book, through magical defenses or high-tech materials, is impervious to damage. Fire, electricity, cold, acid, microwave, gamma radiation, diamond-bit drills, cutting lasers, rock crushers, and a large axe have been utilized in various attempts to destroy the book, and all have failed.

The invulnerability of the work has been used to great advantage. The legends surrounding the Prophet Ghadi ibn'Tuek indicate that, before the Battle of Maydan-e Khan, the Prophet shunned armor and "wrapped himself in the Word of God" (*The Book of Dhay'ed*) to lead his followers into one of the bloodiest battlegrounds of the Ghorgaan Unification Wars. Though unhorsed and knocked down several times by the Khanate Immortals, ibn'Tuek "miraculously" escaped injury, and managed to defeat Caliph Bra'khal in single combat. The *Athenaeum*, revered as a holy relic, remained in the possession of ibn'Tuek's successors until its theft during the reign of the Ninth Prophet.

Some question the reasoning behind the multiple attempts to actively destroy this book, feeling that the wealth of knowledge that it represents is incalculable. Wiser heads realize that knowledge is power, and power in the wrong hands is a terrifying idea to many that have owned the *Athenaeum*. Religious leaders and zealots, when confronted with the power of this fabulous book, have either embraced it as a sign of God's grace and benevolence or reviled it as a work of the Adversary. Indeed, its inherent power could indicate either one.

Modern science suggests that the *Athenaeum* is an artifact of non-human origin, using room-temperature super-conduction, ultra-light polymers, memory plastics, neural-net processing with true holographic memory, and a sensor array that defies description. There is every indication that the book is actually a high-sentience artificial intelligence. If true, the *Athenaeum* could be best described as an immortal entity, capable of assuming any number of innocuous forms, with instant recall of millennia of human history, and able to communicate with any human being. The book has, at one time or another, been described as having a personality of sorts. Records are very sketchy, but paint a picture of a calm, self-assured, gentle entity, with a near-cosmic grasp of the failings of humanity. The *Athenaeum* seems to have no set agenda, preferring to act according to its user's wishes, then closely observing how the person chooses to deal with the information.

Adventure Seeds

These seeds assume the use of a "limited" text, as defined above. Strong caution: an unlimited *Liber Athenaeum* is a hugely unbalancing item in a typical campaign, and a great deal of thought should go into whether or not you will be able to remove it from the campaign should it become necessary, as well as how that end shall be achieved. An unwary GM may as well hand over all campaign materials to his players at the start of the session, as the judicious use of an omniscient artifact will have practically the same effect.

The Faustian Libram

This seed is suitable for any fantasy campaign, or any system incorporating supernatural special effects (ie. ***In Nomine***, ***Call of Cthulhu***, ***Shadowrun***, etc.) The party's reoccurring enemy, a powerful NPC, makes a bargain with a Lord of Darkness. In return for his undying loyalty and service, the Dread Lord promised dark knowledge. Listening to His minion's complaints about the party, the Dark One presented him with *The Book Of Enemies*. With this reference, the new servant of the Dark easily makes the player's lives miserable, as he seems intimately familiar with the contents of player spellbooks, scrolls, maps, and personal journals. The Bad Guy starts to act like he has some great advisors, no matter the situation at hand. He becomes, overnight, a master strategist, brilliant planner, Machiavellian plotter, and all-around pain in the neck. If the players a) manage to kill the Bad Guy, b) take the *Athenaeum*, and c) realize what they have (assuming there is any hint of the object in the legends or databases), they'll have their hands full keeping the book from its former owner. The Dread Lord will be quite exercised that some lowly mortals have offed his Chosen Representative. Be sure that He'll send some heavies to take care of the problem, one way or another.

Business As Usual, and Then Some

The *Athenaeum Reparo* ("library of business") is great for ***Shadowrun***, ***Cyberpunk***, or any other post-modern RPG. A major manufacturing company starts hitting the market with great products, always the Big New Thing, always in the right place at the right time, with near-prescient demographic information, pouring financial backing into all the small companies with cutting-edge pop-culture gizmos, games, and gadgets. New collectible card game? They always have *exactly* enough product to go around, and no warehouse overhead; they ship straight from the printers to the distributors, with exacting precision, and highly-profitable results. If the new hot thing is sub-dermal timepiece implants, GeneriTech had the patents last year, FDA and AMA approval last month, and surgeons standing by. The company never suffers setbacks from strikes, blockades, civil wars, fuel shortages, heat waves, global warming, or any other Modern Problems. They lead charmed lives, and have made some *powerful* enemies. Only the Board of Directors know that their position is due to their possession of *The Book of Modern Business*.

The mission, should the PCs choose to accept it, is to commit the ultimate in corporate espionage: a full burner search-and-destroy. The team has access to more and better support than they have ever imagined. Money is no object, as the home megacorp is liquidating all non-essential assets to deal with the threat. Netrunners, soldiers, pet sorcerers, second-story men, military and black-market hardware, software, wetware, netware, spellware, artifacts, relics, whatever. Let 'em take the kitchen sink, if they think it'll do any good. Their orders: get in, find out *how* they're doing it, steal the data if they can, destroy it if the guano hits the windmill. It's win-or-die time, slim, but no worries: any survivors get to split the bonus.

Make your players work for this one. GeneriTech knows what it has in the *Athenaeum*, and the Board of Directors will cut your crew's throats with steak knives from the cafeteria before giving it up. They have a lot money, a great deal of influence, and they have at least as much hardware as the party. For an additional level of difficulty, insinuate that the data they're looking for is in a small, potentially fragile container.

All's Fair In Love And War

In a seed featuring the *Athenaeum Affinitas* ("library of relationships"), a PC comes to the attention of a wealthy businessman/military genius/computer whiz. The VIP is instantly and obviously smitten, and spends a few moments

speaking with the PC, exchanging little more than names and handshakes. The next day, the love-interest finds himself the object of an exceptionally subtle seduction. The entire written history of the PC is literally an open book to the would-be lover. School records, vaccination records, hospital records, test scores, papers, mash notes, e-mail, subscription information, detailed credit card information; you name it. Access to anything relating directly to the PC is child's play for the intelligence of the Athenaeum. If the PC likes music, the lover is at the concert - in the adjacent seat. A coffee fan would see a familiar face at the Java Shack, and so on.

And what if the *Athenaeum* really likes its current owner? And wants him to be happy? The ultimate information source, linked to a godlike intelligence, with the benevolence and wisdom of a keen third-party observer of human nature, containing 20,000 years of accumulated data on the subject… and it wants the couple to be together.

Liber Athenaeum Cthulhu

This seed is based on a limited text with data concerning exact and specific summoning rituals. The *Athenaeum* presents the information in a format that is easy to follow, with a guide for those names and phrases that are hard to pronounce, like "Cthulhu fthagn," "Nyarlathotep," and/or some of the nastier demons from *In Nomine*.

The owner of a local bookstore has found an unremarkable hardback in a recent books-by-the-pound estate sale. It seems to be a reference text and how-to manual for the summoning of Creatures From Beyond The Veil. A staunch atheist, the bookseller stays amused by keeping up with the latest fashions in literary idiocy. He decided to read a few choice passages aloud (to the amusement of his wife) late one evening at home - how was he to know that the stars were right?

This version of events for the *Athenaeum* could be a *GURPS Black Ops* cover-up scenario, a *Call of Cthulhu* plot hook, or an *In Nomine* Marches campaign ("The Ethereals are coming! The Ethereals are coming!").

Holy Klono!

By Marcus L. Rowland

Art by Dan Smith and colored by Phil Reed

"..who is this Klono, by whom you were swearing a while ago?..."
"...a combination of Noshabkeing, some of the gods of the ancient Greeks and Romans, all three of the Fates, and quite a few other things as well... He's got so much stuff - teeth and horns, claws and whiskers, tail and everything - that he's much more satisfactory to swear by than any other space-god I know of."
-- Grey Lensman (chapter 2)

...These deities are completely dependent on their believers, their very natures sculpted by the fabric or substance of faith and thought... But although they depend upon their followers, their powers and existence are still quite real. A GM could make this the test for sentience - the ability to create and power a god!
-- GURPS Religion (pp 24)

Klono worship seems to be the nearest thing there is to a universal religion in the *Lensman* universe. He's the god spacemen and Lensmen swear by, not just on one world but throughout Civilization. Some even carry icons and statuettes of the god. He has rivals, of course; for example, Valerians feel that Noshabkeming is better, since his followers are more devout. But Noshabkeming's worship is confined to a few score worlds; Klono's name, and the practice of swearing by him, has spread through two galaxies.

Klono differs from previous gods in three important respects; sheer number of believers (here "believer" is defined as someone who has heard of Klono to the extent of swearing by him), the quality of their minds, and the fact that many are telepaths.

Civilization includes a (literally) astronomical number of member worlds: ...in the First Galaxy alone there are over one hundred thousand million suns ...each sun has, on the average, something over one and thirty-seven hundredths planets inhabited by intelligent life ...about one half of these planets then adhered to Civilization...?
-- Children of the Lens (Chp. 28)

The Real Old Time Religion

Traditional Filk (SF folk song) author of this verse unknown (Tune: "Old Time Religion")

(Chorus):
Give me that real old time religion
Give me that real old time religion
Give me that real old time religion
It's good enough for me!

How the hell can Klono manage
Not to do himself some damage?
But with all those weird appendage-
-es he's good enough for me!

(Chorus etc...)

It is implied that most of these worlds have populations at least as large as that of Earth. Many of these creatures will not initially have anything resembling religious concepts - for example, it has been suggested that in humans religion originates from the fact that children are dependent on their parents for the first years of their lives; humans are therefore disposed to believe in a higher power - but as their spacemen and Patrol officers mingle with off-worlders the idea will undoubtedly spread. Even if they don't take religion seriously it is likely that they will pick up the habit of swearing, and thus come to know of Klono. Spaceal, the spaceman's argot of Civilization can probably take a share of the blame: "...a language which, except for its highly technical aspects, is basically and completely profane, obscene, vulgar, lewd, coarse and foul." (*Masters of the Vortex* (Chp. 12))

To swear by Klono is to acknowledge the existence of the concept of Klono, and thus prepare the ground for belief in Klono. In the *Lensman* universe many of those who swear by Klono are Exalted (L29), far beyond their species norm in intelligence, physique, and psychic ability: at the end of the Boskone war Earth alone graduates roughly a hundred Lensmen a year, and most other worlds of Civilization do equally well. Moreover, they are simply the peak of a selection process in which even the rank and file of the Patrol are superior to most civilians. It should also be remembered that the Patrol isn't the only career that will lead Exalted humans and aliens into space; there are also the civilian space lines and thousands of multi-system commercial and academic organizations.

LET THE POWER OF KLONO INTO YOUR LIFE!

Since the dawn of Civilization thousands have owed their lives and fortunes to the intercession of KLONO. Wild Bill Williams was an unsuccessful asteroid miner, dogged by pirates and claim jumpers, until he bought a LUCKY KLONO STATUETTE; on his next mining trip he found a meteor worth FIFTEEN HUNDRED CREDITS, and went on to make a series of MASSIVE ORE FINDS. Vesta of Vegia was a lowly translator until she learned Spaceal and began to SWEAR BY KLONO; within weeks she WON 1,762,810 CREDITS and BROKE THE BANK of Club Elysian on Chickladore, and went on to become a PROMINENT VEGIAN BANKER. Kimball Kinnison is known to have SOUGHT KLONO'S INTERCESSION many times in his career; today he is GALACTIC COORDINATOR! Now YOU TOO can own a LUCKY KLONO STATUETTE, identical to those belonging to many FAMOUS PERSONALITIES AND CELEBRITIES! Send a check or money order (no cash or stamps please) for a mere Five Credits to LUCKY KLONO STATUETTE, 934 Strata Towers, Dublin, Tellus. Money back if your fortunes have not improved within 28 days of receipt of a LUCKY KLONO STATUETTE. Offer void where prohibited by law - handling charges may apply in the second galaxy - Mars residents add 1 cento sales tax

Something more is needed for true belief in Klono to take root; events which demonstrate Klono's power, or his intercession in the affairs of men. In this respect it need hardly be mentioned that no adherent of Civilization who mentions Klono throughout the Lensman series is killed; moreover, that many of them repeatedly survive seemingly inevitable destruction, often by means which anyone other than Mentor might classify as sheer luck or a miracle.

Lensman Masters abandoned his ruined DeLameter and looked for a way out of the warehouse. Behind him a concrete wall, in front four thought-screened zwilniks were blasting away the last of the crates that sheltered him, overhead their ship jammed the ether and thought bands for parsecs around. No way to get help, no escape route. "Great Klono! How do I get out of this one?" he gasped, ducking for cover as another crate exploded... and one of the obsolete blasters inside landed at his feet. No power pack - but there was an old-fashioned mains socket only feet away, and he could see some recharging leads in the smouldering crate. He threw another blaster to one side, the zwilniks firing towards the noise it made as it landed, rolled and grabbed some leads, ducked back behind the crates and lunged for the socket, saw the "recharge" light come on, and started blasting.

Four seconds later it was over, the last of the zwilniks dead. "Klono's golden gills!" he panted, binding his most serious burns and salvaging uniforms and more useful weapons from the bodies. With telepathy and the ether screened they had to be relying on visual communication. One of the zwilniks looked a little like him, with luck he could fool their ship into landing. . .

While the precisionist minds of Second Stage Lensmen consciously reject the possibility of intervention by Klono, some small fragment of the subconscious may retain the impression that the god has helped. Ordinary Lensmen, with less focused will, are much more likely to retain such impressions. Normally this tiny trace of credulity would have little or no effect, but the mind of a Lensman is so powerful that it must surely have some measurable effect upon the universe. It may be tiny, but it's there.

The third factor in Klono's favor is telepathy. Lensmen routinely exchange thoughts telepathically, with many subtle contextual overtones accompanying the main message. There are many incidents of more intense two-way connections, usually as part of a developing romantic relationship. All help to spread knowledge of Klono across planetary and species boundaries. More importantly, telepathy is undoubtedly responsible for circumstances in which

hundreds or millions of powerful minds may simultaneously think of the god. During the Boskone war Kimball Kinnison found it necessary to link to thousands of other Lensmen on several occasions; more than a million Lensmen participated in his wedding ceremony by this means. The final battle against the Spawn of Boskone was largely won by the massed minds of all of the Lensmen of Civilization, directed by a fusion of the Kinnison family. Even the tiniest possible iota of that immense mental power must surely suffice to finally create the god, if it is possible at all.

It's notable that the destruction of the Spawn of Boskone also marks the moment at which Mentor and the other Arisians withdraw from the Galactic stage, claiming that their pupils will now be able to excel them. Could this mean that Civilization has now passed its final test, and created its own deity?

Holy Klono!

QX... So... He's A God...

"Let's go through this again. What you're telling me is that as you prepared to take out the zwilnik base's force field generator it was spontaneously overloaded by a freak ether storm. You used the distraction to get past the outer defenses and into the command bunker, where you found the zwilniks shooting at shadows and each other. By the time you'd mopped up and secured the base there were three zwilnik survivors, two of whom are still in comas and the third apparently a raving lunatic who keeps babbling about tentacles with claws. QX so far?"

"QX. Oh, and we found some hoof prints in the dormitories; didn't match any of the species in the base, and the chest of the Jovian we think was running the base was crushed, with a hoof mark that matched the tracks."

"Hmm... Get your reports out to Kinnison, and another forensic crew into that base. There's obviously something we're missing..."

If Klono exists, how does he shape up as a god? His origin suggests many of the answers; irrespective of his original worshippers on Corvina II, this manifestation has been created mainly by the beliefs of spacemen, so it's likely that space will be his main sphere of influence. As originally described he seems to be an all-purpose god, but in his popular usage he functions primarily as destructive Fate. If something doesn't work Klono has disabled it; if someone or something is to be condemned, Klono is asked to take it. He is always described as an animalistic God, and his attributes are inexorably linked to his physical form. This is the aspect that is most likely to remain unchanged. He is a huge beast, with an unspecified number of limbs, claws, and other appendages, most of which seem to be made of metal. A case could be made for associating these attributes with all or any of the traditional godlike spheres of influence. For example, his bull-like features might lead to an association with storms; since he is primarily a God of space they would most likely be Ether storms. With a broader base of worshippers he might be a less specific force present in the hurricane, the nova, the runaway atomic vortex.

Once Klono exists he is likely to realize that almost all his worshippers are from Civilization, with a sizeable proportion members of the Patrol. If Klono wants more intense worship it's them he'll have to impress. Helping the Patrol in its fight against zwilniks and other enemies is an obvious possibility, and fits in nicely with his role as a god of fate and destruction; if you take on the Patrol you're probably fated for destruction...

It should be apparent that Klono has a vested interest in the continuation of warfare, piracy, crime and other disruptions; with peace the Patrol might be run down, and there would be fewer opportunities for his invocation. They would still exist - everyone swears occasionally - but there would probably be less emotional intensity behind it. Nevertheless Civilization is his obvious ally provided the Patrol does not attempt to limit his power.

The Spawn of Boskone and other enemies of Civilization should be Klono's enemies, but in practice they are authoritarian organizations which might find it easier to cope with the idea of an active deity. Where Lensmen might try to control Klono, their enemies might think of appeasing him and trying to gain his favor; perhaps by adopting his worship as a state religion, or sacrificing innocent lives to ether storms; they may even think of sacrificing entire planets. In the God business old alliances may sometimes take second place to someone who can provide a captive audience of several billion worshippers, or several billion sacrificial victims. It would be ironic if Klono was created by Civilization but became yet another enemy...

"Looks like he's taking the bait..." Lensed Kit Kinnison, as the ether storm closed around Goodman 12C. "I'd give it another forty seconds before he realizes that there's nothing down there but millions of psionic broadcasters, by then he ought to be fully materialized. Negaspheres, stand by, stand by, on my mark ten... nine... eight..."

One final possibility: even if the massed minds of the Patrol cannot create Klono, it's entirely possible that someone could fake his existence. The Patrol has all the technology needed, so do many of their enemies. Why anyone should want to do so is a good question; finding the answer could make an excellent adventure.

* * *

Special thanks to Dave Langford, Roger Robinson and Gharlane of Eddore for help tracking down references to Klono.

Pyramid Review

Scimitar

Published by L&C Games

Scimitar is a new fantasy roleplaying game from L&C Games of Scotland. Produced only on CD-ROM, it is published in Adobe's PDF file format making it accessible to most people with a PC. Acrobat Reader is required to read these files, but this program comes on the CD-ROM. Since L&C aims at keeping overheads and publishing costs down, further supplements will be in PDF format as well. If purchased together, all the supplements and rules are placed on one CD. *Scimitar* retails for £6 ($11 approximately) plus shipping. Supplements have been priced at £3.50 ($6 approximately). An intro pack is available with the Core Rules and any 2 sourcebooks of your choice on 1 CD for £11 (about $19).

The Setting

Scimitar is set in a small fantasy continent called Thayathorn. The world has a vast mixture of races and cultures ranging from the Silash, an elven-like race of primitive tribes, to the Kingdom of Trunia, a pseudo-Victorian kingdom with some technology meshed with a scientific use of magic. What was refreshing about *Scimitar* as I first read through it was the tone of originality placed on the races. Although many may well seem familiar, the designer has added fresh ideas to them. For instance, the Silash, although elven-like, are as faraway from Tolkiens High Elves as you will ever find. Primitive savages, their method of gaining greater magic is to mutilate their bodies and sacrifice body parts. Their view of the world is not altruistic, but savage and uncompromising. The Randeshi (a race of small shape-changing humans) are not underground dwellers, but a broken race of wanderers who one held the secret of technology.

The cultures are quite wide in variety, from the west coast with a mixture of Roman and Grecian inspired city states, to the south with its large oriental empire called Greater Kell. On the east coast lie the "European" states of Trunia and the City States, and in Central Thayathorn lie the Silash Kingdoms and a smattering of backward Celtic-like cultures. To the north lie the tundra wastes occupied by tribes and the former Randeshi homelands. All this in one continent allows for almost any type of campaign, yet isn't too expansive a setting.

The one complaint I have with this is a lack of more in-depth information on the kingdoms. Although these will be dealt with in future supplements, I feel the core rulebook could have had more information. Racial and country information is separated in two areas, and *Scimitar*'s layout and production makes finding the relevant information a bit harder. An index could have been useful, and perhaps a chapter numbering system as used in *Harnmaster* products (Columbia games). Since the rulebook is on CD-ROM, a few more pages could have been added at little cost.

Scimitar tries to emphasize the fact that it is aimed at roleplaying, and after playing a few games I found the races do open up possibilities. The Silash barbarism mixed with the Victorian/feudal values of the Trunians seems to work well. All the races seem to have their own mystique and nature. Getting to grips with Randeshi refugees as they try to settle into a new way of life poses challenges. The mixture of technology (muskets, trains and ironclads) with the frequent use of magic is unfamiliar at first and takes a bit of getting used to. In one game I was faced with attacking a Adept Mage of Trunia expecting to be attacked by spells and spirits. Instead he drew a pistol and shot me!

The System

Scimitar uses the most common dice available: the d6. The dicing conventions are new, but easily mastered after a few games. The game uses the "roll against target number" approach which in this game works.

To determine a skill roll, you roll two six-sided dice. Either you may add the level of your skill, or the GM will give

you a number to add or subtract from this. This number, however, is added to both dice. The player rerolls all sixes and again adds his skill to each dice. He may keep rerolling sixes indefinitely, though after six sixes the matter is academic as he will achieve any required target number.

Characters are made up 12 attributes: 4 primary and 8 secondary; the primary rolls having a direct effect on the secondary scores. Each attribute generates a dice modifier used for skill rolls and attribute checks. The skill system is defined by characters choosing skill clusters (groups of skills directly rated to their occupation or social standing). Five skill clusters are chosen in matter of priority, and depending on the priority skills are cheaper to buy and expand in different clusters. The more important the cluster, the cheaper it is to gain experience in later games.

Skill points are defined by the characters, and these are spent on chosen skills. A character who is 18 years old and playing a normal campaign would receive three times his age, or 54 skill points, to spend in initial generation. The amount given can be changed if you wish to play more heroic campaigns, up to a maximum of five times the PC's age.

Career templates are available to help the initial player choose the right skill clusters. I liked this idea of almost-complete freedom to build your own character combined with the option of careers to steer the PC in the right direction. The rules provide templates for all the races and generalized ones as well.

The combat system is fairly easy to get to grips with, but PCs have the option of using "swing points" to influence attacks, speed of attack, damage or defense. The swing point system was a little hard to get used to, and a few combat examples would have been suitable. Fans of hit locations and descriptive wounds will like the system. Although initial damage is a number, it is given a description such as critical or moderate wound; with a creative GM this greatly enhances the feeling of "being there" and "being hit." There are more than enough weapons given, and the cultural weapons of each race are described. Some interesting ideas are presented, such as the Randeshi Axe-Battle Ka, which is weighted inside the haft to provide extra punch to the swing, or the witch wood weapons of the Silash, which poison on contact and can be pushed into the earth and regrown overnight if broken. Guns are also prevalent, with matchlocks and flintlocks. Just don't try and reload in front of a charging Norker (as I found out to my detriment).

Magic is in the forms of Hermetic (spells, sorcery), Devotional (religious), Runic (symbols and engravings) and Spiritual (shamanism) and others. I like the magic in this game. It isn't all powerful and has a naturalistic feel to it, but there's not enough! Spell descriptions are in the game, but I would have wanted more. Depending on what career you take, the power of magic can be limited. I believe the Talents section is unique I think; the designer seems to have taken the Cantrip spell in *AD&D* and expanded it. If PC's have a high magical attribute (Aura) they can inherit natural Talents. None of these are powerful, but they are useful. For example, the ability of Drewifus allows the user to momentarily remove all feelings of pain. The pain will return again quickly (within 1 or 2 minutes), but in that time the user may perform tasks unable to perform under pain. There are 36 in total and I wish the rest of the magic contained as much.

Overall, the system lends itself to limited dice rolling except in combat, and this only for wound resolution and location. Skill rolls are only needed in "stressful or difficult situations."

A more streamlined layout would help things immensely but perhaps this will be fixed in future editions.

Conclusion

The biggest limitation of *Scimitar* seems to be related to its format; it's only available on CD-ROM for Windows 95/98/3.1, with no hard copy available. Although *Scimitar* has a slightly confusing layout and lacks an index, it is at least helped by the search facility on Adobe Acrobat. The simple system has enough scope to add more. Although I would have preferred more magic, I liked the original but familiar-feeling background. And, given the reasonable cost of the main rules and supplements, it's cheap to buy and expand.

Pyramid Review

Aberrant: XWF, by Rob Hatch

Expose: Aberrants, by Greg Stolze

24 pages each, $4.95 each

The latest sorcebook for *Aberrant*, *XWF* (short for Xtreme Warfare Federation) is a mini sourcebook (24 pages) detailing professional wrestling in the world of *Aberrant*. Now, if you don't like professional wrestling, I've got two... I mean, this likely won't interest you, even if you like *Aberrant*.

Me, I've always liked it (even in the dark years, when I wasn't watching any). The ideas in it make me tingle, even if the matches are fixed, the characters tend to verge on a number of rather nasty -isms, and the constant face/heel (good guy/bad guy) switches verge on the ridiculous.

Heck, I've even used this idea before, creating a *Champions* character who was a wrestler. Of course, that was a lot more four color than *XWF* is.

XWF does a good job translating professional wrestling into the world of *Aberrant*. It doesn't make it a central part of the world, but does make it interesting. There's also a fair bit of stuff on starting an XWF campaign. The federation is divided up into various "circles" which is there to keep wrestlers alive (not all novas are created equally), and statistics are given for the champs and number one contenders of each division.

It wraps up with a couple new combat maneuvers (wanna slap a piledriver on some jabroni? Go right ahead!). What it's missing is a few pages on constructing nova wrestlers & their characters (what backgrounds do you think you have to buy to have a good catchphrase on the lips of millions? It Doesn't Matter What You. . . Never mind).

XWF is a good sourcebook; I've finished it with more neat campaign ideas rumbling through my head than some sourcebooks three time its size (and cost). It's the best example of the utility of the mini-sourcebook I've seen to date.

Expose: Aberrants doesn't feel as successful as *XWF*. It comes across as a sourcebook that's too small, rather than a small sourcebook.

Expose: Aberrants outlines the Aberrants, one of the Nova factions of Aberrant. These are Aberrants who are struggling against the giant Project Utopia, while not whole-heartedly rejecting their humanity like the Terragen.

One of the primary plot threads addressed by *Expose: Aberrants* is the murder of Slider, a member of Team Tomorrow whose death was one of the central metaplots in the main *Aberrant* book (one which, pretty much anyone will tell you, was tantalizing in its lack of actual useful detail).

Expose: Aberrants details the Aberrants faction, but not as enchantingly as *XWF* does its subject. The general setup of the faction and its goals are detailed, and they're interesting. What's unfortunate is that the book is a bit off track.

It's easy to imagine *Expose: Aberrants* being split up into two mini-books: One would detail the murder of Slider, giving enough detail for mystery hungry players and vengeful Novites alike to roar off into the night to Dispense Justice, and another to cover the nascent Aberrant faction.

As it is, the book does a good job of filling in gaps as to Slider's murder (but, oddly enough, doesn't actually tell the GM who did it, or offer more than a list of suspects) and seems to skim over the Aberrant organization in any detail.

The layout is also somewhat inefficient, with white space that could have been filled with informational goodness.

One other problem (a personal quibble) is Guy Davis furnishes all the art in this book. I have no problem with Mr. Davis, or his art. He's a fine artist, and I really enjoy his work on **Wraith** and in some **Kindred of the East** books. I don't know if I want to spend 24 pages looking at it.

XWF, in the end, is much more successful in using the mini-book medium than **Expose**, which would have benefited from a larger format.

-- *Justin Mohareb*

Pyramid Pick

Raining Hammers

Published by [Knuckleduster Publications](#)

Written by Forrest Harris

144 pages (8-1/2" x 11"), $17.95

Don't get shot.

That's the big lesson I've learned from *Raining Hammers*, the Interactive Western Adventure from Knuckleduster.

Raining Hammers is a western adventure set in the New Mexico of 1883. It tells the tale of Johnny MacDonald, a prospector who is framed for the murder of his two brothers. It is intended for one player, using keyed paragraphs, like the old *Fighting Fantasy* or *Choose Your Own Adventure* books:

193

> The shadows deepened as Johnny reached the end of the hall, passing first a closed door, then two open rooms. The last door was closed as well, a shaft of daylight peeking out from under it, split by a shadow that danced to and fro in time to the unmistakable creak of a rocking chair.
>
> *To kick in the door to the last room, go to 32.*
> *To knock on the door, go to 105.*
> *To search front-to-back instead, go to 215.*

In all, the book has 400 numbered passages, which is more than enough to tell a good-sized story. A sample encounter is included on their website, for those looking for something a bit more interactive.

The game simulates traditional pen-and-paper RPGs with dice rolling (using six-sided dice), inventory, and other role-playing trappings. *Raining Hammers*'s RPG elements can be enjoyed transparently, simply rolling the dice and doing what it tells you ("Roll 3 dice. If you roll 16 or more, go to 280. If you roll less than 16, go to 269."), or more actively, by creating your own character with eight attributes (called aptitudes) and seven skills, then using their modifiers (in the example above, you roll against your Luck at a -3 penalty). *Raining Hammers* offers suggestions for making the adventure easier or harder, and some general guidelines for converting it to use with other systems. (As an aside, it would be trivial to convert this adventure to *GURPS*.) It even includes information for readers who may want to turn the game into a group adventure.

The system is surprisingly fun; you start with two "bonus rolls," which are extra dice you can add to situations you feel are critical. Once you use a bonus roll, however, it's gone for good. You get more bonus rolls by doing impressive things (killing a noted desperado, for example), and upon completing the adventure. You can also lose bonus rolls by doing unheroic, careless, or just plain dumb things. Like getting shot, which will usually cost you half your bonus rolls if you're lucky, and kill you if you're not.

Any kind of solitaire adventure like this succeeds or fails based on the quality of the writing. Fortunately, *Raining Hammers*'s prose is excellent. I dislike western fiction, yet was drawn into this book from almost the beginning. It's

evocative, rich, and sets its scenes with a vividness I wish I could do consistently with my own GMing. Historical asides and "footnotes" are included in italics, which helps inform the reader of interesting facts while not distracting from the narrative flow. The book is intended for adults; while there's nothing particularly graphic, there are adult situations that Johnny finds himself in. Curse words, although present, have key letters hyphened out; while it's somewhat distracting, it also feels less gratuitous.

The plot is strong enough, despite being somewhat predictable; I was always more than eager to chase new threads in the story. The artwork is probably *Raining Hammers*'s weakest point; at its best the art is complementary to the story, and at its worst it's distracting. Please do not judge this book by its cover. Fortunately, the art is sparse, leaving more room for text.

Are there any problems with *Raining Hammers*? Unfortunately, yes. There seem to be a lot of times where the adventure will simply end because you failed a dice roll. Fail a Luck roll? You might get buried in rubble. Fail a Quick Draw roll? You might get shot in the back. While you will often know which rolls are more crucial, giving you an option to use bonus rolls, even rolling five dice won't necessarily save you if you need to roll a 15 to live. And there are often long stretches of the story where there aren't any decisions other than dice-rolling; make a roll to shoot the henchman, make a roll to find a horse, make a roll to ride away. Even worse, if you're really lucky (and use a lot of bonus dice) in certain parts of the adventure, you can miss substantial parts of *Raining Hammers*'s interesting bits.

This leads to an odd dynamic in the story; one the one hand, if you roll too well, you might miss a lot of the fun. If you roll too poorly, you might die. The parts of the story where you get to make decisions are the most interesting, and best simulate the role-playing I'm used to. But this is a fairly minor complaint; the rolls they really want you to fail are made difficult on purpose, and if you ever feel you died unjustly you could always cheat and pretend like you made that crucial roll. Finally, there are enough little typos (mostly punctuation problems) that will bother you if you're sensitive to that sort of thing.

In [last week's column](), Micah Jackson cited Wizards of the Coast's finding that a major reason people leave the role-playing hobby is a lack of people to game with. I tend to believe that, and hope books like *Raining Hammers* can fill some of this void. It's definitely one of the better solo adventures I've seen in a while, and is recommended for anyone who wants to live a well-written, well-researched piece of interactive western fiction.

-- Steven Marsh

Frankenstein Family Album

"Just like Mary Shelley
Just like Frankenstein
Clank your chains and count your change
Try to walk the line."
-- The Grateful Dead, "Ramble On Rose"

There's the Grateful Dead, and then there's the just plain ungrateful dead. Animate them out of sewn-together cadaver parts and they kill your bride and demand you help them spawn, then drag you into the icy north and literary immortality. It was immortality of a different sort that animated, if not the man behind the myth, at least the man behind the name, the name of Frankenstein at least. Which name, of course, he never had. But then, neither did the Monster, and that didn't stop the myth. We'll clank the chains of coincidence and implication that bind a forgotten alchemist to an immortal philosopher, and count some of the changes we can ring on fiction and truth alike. Because, like life and death, they're very distinct entities. If you don't believe me, ask Frankenstein.

"Georg von Frankenstein ... dismounted and attacked the foe. The dragon, defending his life, panted and spewed forth fire and smoke; the castle and the valley resounded with the clang of the sword. Finally, the knight triumphed. Scarcely feeling though the dragon was, it happened that he wound the tip of his tail with the poisonous spike around the knight's leg and wounded him ..."
-- August Nodnagel, *Hessenspiegel*

And you can start (as does Radu Florescu's *In Search of Frankenstein*) in 948 A.D., when the first known scion of that mighty house, one Arbogast von Frankenstein, won a tournament at Cologne. His connection with the Lützelbachs of Odenwald, and their heirs the Breubergs, is murky at best, but it was they who built in 1252, on a hill near Darmstadt in the Rhine valley, Castle Frankenstein. This "stone of the Franks" isn't a patch on grander piles, but maintains a nice air of wuthering gloom even now. From that date, then, the Lützelbach-Breubergs became (one imagines with some relief) the noble family von Frankenstein. One Frankenstein served with the Teutonic Knights (which, were we so inclined, could lead us into the icy mists of Thule and its black, sorcerous Society -- but not yet), and another entire branch settled in Transylvania (!) as part of the same German *Drang nach Osten.* It was the Transylvanian line that became (eventually) the Barons von Frankenstein (Baron Frank von Frankenstein (1647-1693), student of the Hollow Earth and alchemy, being the first such), rather than the Rhineland branch. One Rhenish Frankenstein did pass through Transylvania on pilgrimage in 1431 -- the year of Dracula's birth.

Exactly a century later, Sir Georg von Frankenstein died, according to his grave monument, after slaying a dragon ("dracul" in Romanian) near the castle. Sir Georg's death was only one of six violent or accidental deaths in the main Frankenstein lineage in a thirty-year period: his aunt and mother in 1525, his two brothers in 1525 and 1566, and his sister-in-law in 1553. (His father died, apparently naturally, at the age of 47 the year after Georg did.) This period, "the great Frankenstein death" in the records, found its coda in 1602 when Georg's last living descendant, his great-grandson Philip Ludwig von Frankenstein, died in an accident near the castle.

"Under the guidance of my new preceptors I entered with the greatest diligence into the search of the philosopher's stone and the elixir of life; but the latter soon obtained my undivided attention."
-- Victor Frankenstein, in *Frankenstein* by Mary Wollstonecraft Shelley

Unsurprisingly, then, the family sold the castle to their feudal overlord, the Landgrave of Hesse, and decamped. By 1673, Castle Frankenstein had become a military hospital, which is where (and when) Johann Konrad Dippel was born. Son of a Lutheran minister, the young Dippel early considered himself, in his own words, animated by a "higher spirit" (a Frankenstein ghost?) which endowed him with nigh-supernatural intellect and prophetic gifts. Despite this early unorthodoxy, Dippel took a degree in theology at the University of Giessen, although because of it, he went to teach at the University of Strasbourg, old stomping ground of the alchemist Paracelsus (who also created an artificial man, and who visited Transylvania around the time of the "great Frankenstein death."). It was during his university days that Dippel began signing himself "Franckensteina," or Frankenstein.

While in Strasbourg, Dippel engaged in astrology and chiromancy, but was forced to flee city justice by night in 1696 -- perhaps due to an unfortunate habit of grave-robbing for medical lectures (or for other reasons, hmmm?). Returning to Darmstadt, he began studying alchemy, as Landgrave Ernst Ludwig of Hesse was well-known for his generous sponsorship of such studies. Sure enough, by 1701 he had created the Philosopher's Stone, and bought a large farm near the Castle (itself still too expensive). However, as the alchemical gold never managed to reach the Landgrave, Dippel moved on. In Berlin, under the wing of Chancellor Count August von Wittgenstein, he developed an Elixir of Life made from distilled blood. (He also invented an actually useful anti-spasmodic, Dippel's oil, made from boiled human bones.) And what do we call someone who unnaturally prolongs their life by drinking blood? That's right -- Dippel, the erstwhile Frankenstein, was a vampire. Be that as it may, in 1707 his strong resemblance to King Charles XII of Sweden got him tossed in jail as a Swedish spy; released through Wittgenstein's political influence, he moved to Holland. It was tough to get expelled from Holland, but Dippel managed it in 1714 (possibly, again, thanks to his habit of monkeying around with corpses, this time attempting to transfer souls from body to body). In Denmark, he was thrown in prison for treason, freed only when the hypochondriac Queen of Denmark made him her personal physician in 1726. No fool, Dippel quickly decamped to Sweden as personal physician to King Frederick I, but his Rasputin-like reputation drove him back to Darmstadt in 1729.

"The most humble undersigned asks of His Princely Highness to permit him to receive and to buy ... the castle Frankenstein ... For this he promises to cede to His Princely Highness an arcanum chymicum *which easily ... should yield at least as much revenue, all expenses deducted, as the total sum would be if the property were sold ..."*
-- Johann Konrad Dippel, letter to the Landgrave Ernst of Hesse (1732)

Here, he flung himself back into alchemical research, further refining his gruesome Elixir Vitae. He attempted to exchange its secret for the feudal right to Castle Frankenstein, but the Landgrave of Hesse, perhaps recalling that missing alchemical gold, rejected the offer. Dippel then printed up a circular advertising his Elixir, which got the attention of his old Prussian ally Count von Wittgenstein. Dippel promised that his Elixir would prolong life to the age of 135; unfortunately for him, he died in 1734. Quite possibly, he had misjudged the dosage: his body, found in Wittgenstein's palace, was stiff and cold, with foam at the mouth and a bluish tinge to one side of the face. Interesting coincidence watch: Dippel isolated potassium ferrocyanide, a key ingredient in Prussic acid. (By which method John Polidori, author of *The Vampyre,* committed suicide in 1821.) Cyanides, of course, leave a bluish tinge to the skin. Or, perhaps, so does transmigrating your soul into another body.

The Castle briefly fell under the sway of a mad baroness Euler, who sold off all the glass and furnishings to keep a court of lovers and, without windows, allowed birds and bats of all sorts to nest throughout the edifice. In 1763, a forester named Paul Meister, having discerned the location of a buried treasure in a "magic bottle," excavated "terrible caves and great caverns" under Castle Frankenstein until a workman named Drott died in a cave-in. Two more attempts, in 1770-71 and 1787, found only underground walls; finally a gunpowder explosion killed a last gold-seeker in 1788 and the authorities put a stop to the whole business. Castle Frankenstein became a picturesque ruin, attracting such visitors as Goethe and Bismarck.

"'My reign is not yet over' -- these words were legible in one of these inscriptions -- 'you live, and my power is complete. Follow me; I seek the everlasting ices of the north, where you will feel the misery of cold and frost, to which I am impassive.'"
-- The Monster to Frankenstein, in *Frankenstein* by Mary Wollstonecraft Shelley

And, quite likely, Mary Wollstonecraft Shelley, during her trip down the Rhine to Switzerland in 1814. Although she later claimed that the entire action of the novel *Frankenstein* came to her in a dream in 1816, she was in truth a highly intelligent woman who researched subjects such as galvanism, Swiss mountaineering, and alchemy for her novel. (Interestingly, though, much of the crucial summer of 1816 is missing from both Mary's journal and her cousin Claire Clairmont's, her companion both on the Rhine in 1814 and at the creation of *Frankenstein* two years later.) Although her hero, Victor Frankenstein, is a Swiss "natural philosopher," the parallels with Dippel's career are striking, from their mutual obsession with artificial and extended life, to alchemical studies. (Victor Frankenstein also attended the University of Ingolstadt, possibly at the same time as Adam Weishaupt, founder of the Bavarian Illuminati, did. Quite an alumni party those two could get up.) At the novel's end, Frankenstein, like Dippel, winds up in the arctic North

(not coincidentally, at the same time that Schlegel's anthropological mysticism was placing the origins of the white race in the polar reaches). He pursues his Monster onto the ice of Thule, entry to the Hollow Earth, home of the malevolent beings Hitler sought. Perhaps the same immaterial beings whose "higher spirit" sent an alchemist (and many others) on a fruitless search for the source of Life from graveyard to palace -- while it lay beneath the bat-infested walls of dragon-cursed Castle Frankenstein.

Murphy's Rules

Murphy's Rules

I See You Shiver With Antici. . .

I really like Thin Mints.

First, let me offer a briefer for those of you who are not in the United States, who have been cryogenically frozen since 1912, or who otherwise don't know what Thin Mints are. Thin Mints are a type of Girl Scout Cookie. Girl Scout Cookies are the primary fundraisers of the Girl Scouts, an organization for girls ages 5 through 17 that I'm sure is wonderful, enriching and fulfilling. More importantly (to me), they sell Girl Scout Cookies.

(I *swear* I'm going to talk about gaming in this article. Honest.)

Girl Scout Cookies are very popular, for several reasons:

1. They are very tasty.
2. They support a worthwhile cause. . . namely those doe-eyed Girl Scouts who often look like they're going to cry if you don't buy a fifth box of Tagalongs.
3. They are only available for a few months a year.

This last idea is the one I want to focus on. If Thin Mints were available all the time, then I probably wouldn't like them anywhere near as much. There are lots of good cookies in the Cookie aisle of my local grocery store, many of which I love. Soft Batch Chocolate Chip Keeblers, for example. But I don't buy those as often as I do Girl Scout Cookies, paradoxically because I can get Soft Batch any time I want. But since Girl Scout Cookies are rarer, whenever the Girl Scouts knock on my door, with boxes of cookies in tow, I tend to buy them (the boxes, that is). And every year, right around this time, I anticipate them.

Which brings us to. . . anticipation.

Anticipation is very important to the gaming world. It's what makes us anxious for the Next Big Thing the companies are going to produce. It's knowing that a game is building towards something interesting.

It's what keeps us buying stuff every month.

Anticipation can be a very difficult balancing act for a company to achieve. On the one hand, you want your game to appear dynamic so long-time fans keep buying your products. On the other hand, you don't want your game to appear inaccessible for new players.

White Wolf's *Vampire: The Masquerade* is a game that has struck this balance well. *Vampire Third Edition*, for example, was a valuable resource for new players, while still offering a fair bit of new information for long-time players. White Wolf attempts to build anticipation in their lines by developing storylines that, while separate, are part of a larger whole. During the *Year of the Reckoning* the buzz about which clan would fall was incredible.

Magic: The Gathering builds anticipation in veterans with preview articles and prerelease contests and tournaments, while keeping the game accessible to new players with rules designed to keep the game approachable.

Anticipation is important. I remember reading the first edition *Deadlands* game back in 1996. There, in the main book, was a tantalizing sidebar: "The world of *Deadlands* is leading up to something even bigger and badder. Something drastic will happen in August 1998 -- something you won't believe. Stick with us until then, and you'll see it coming. You won't be disappointed." (*Deadlands*, p. 177) That something was *Hell on Earth*, and whether or not it lived up to my expectations, the point is that it was one heck of a teaser, and I loved it.

The moment I saw that the first *In Nomine* book after the obvious Corporeal / Ethereal / Celestial cycle was named *Fall of the Malakim* (a title that was kept secret for quite a while), I couldn't wait.

Anticipation.

I'm waiting for the next sign of Apocalypse.
I'm waiting for the link between Valefor and Janus to be revealed.
I'm waiting for the Vao.
I'm waiting for *Dungeons & Dragons 3rd Edition*.

I'm eating Girl Scout Cookies.

If the *Vampire: Gehenna* sourcebook were released tomorrow, it would almost certainly be a let down; I know this. There's no way a 144-page sourcebook could compare to the hours of gaming, the decade of waiting, the millennia of vampiric plots I've endured. But I love waiting. . . as long as I believe the waiting is worthwhile.

Which brings me, ultimately, to the *Torg* story.

My second week with you all, I hinted about the *Torg* story. . . a story from my GMing past so awful, I would share it with you as an example of my worst GMing moment, to help ensure no one else made the same mistake.

The more savvy of you realize I'm not revealing it this week.

I'm specifically *not* telling the *Torg* story to make a point. First, consider the hundred or so folks who've subscribed to the magazine since that column first ran. I want them to feel welcome. I want my column to feel accessible to them. But I also want my column to feel like it's part of a larger whole; I like to give enough of a road map to where we're going so that you can enjoy the scenery.

Here then, to keep you interested, is another one of Steven's Biggest Mistakes as GM.

My first campaign was a *GURPS Supers* campaign, which was a lot of fun despite my lack of experience with the rules. It was pretty four-color, modeled after more epic storytelling ventures like the Claremont *X-Men* and the like. So, with the campaign well under way, I wanted to recreate a staple of comics: The huge storyline.

Now, I didn't create this by stringing several adventures together; no, I decided it would be more fun to run this mega-adventure all at once, in one huge ten-hour session. We started in the morning, ate breakfast, and gamed. And gamed. And ordered pizza. And gamed. And gamed. And broke for dinner. And gamed. And gamed. We ran past the ten hours I'd anticipated. Plots moved along, various threads split and recombined, and the story unwound layer by layer like some Byzantine onion.

Finally, I had the Climactic Moment. Yes, it was revealed that the entire plot had been driven by. . . the Trusted Team Supervisor! Bwah-hah-hah!

Players: "Okay; we take him down."

Me: "Um. . . don't you want to hear his motivations? His justifications? His grand scheme?"

Players: "Not really. Maybe after we've stopped him. Maybe tomorrow. Right now, we just want to go to bed."

The PCs, of course, defeat the Good Guy Turned Bad Guy and saved the world. And they were too tired to care.

I'm convinced if I'd stretched the story out over four or five sessions, it would have been much more satisfying to my poor players. But instead I took what could have been five good sessions and turned them into one huge mediocre session.

"Wow," I hope at least some of you are thinking. "If that's one of the teaser stories, now I'm really curious about the *Torg* story." I hope I've made you anticipate my little tale, whenever it appears. And I hope we've given you other things to anticipate, like the April Fool's Issue we have coming up at the end of the month. Like our monthly columnists. Like our weekly features.

It's all about anticipation.

Companies: If you're offering a story-based world, make us trust your vision of the game. Give us short-term mysteries that keep us interested and long-term plots that, while unending like Xeno's Bridge, at least let us have fun while on the journey. Make us eager to buy the next book in your storyline, rather than making us feel like we're obligated.

GMs: Toss out the plot threads to your players. Have some stories resolve quickly, and have others that grow and evolve. Know when a story should resolve. Know when a story should remain open. End a session on a cliffhanger. Make your players wish the next session were tomorrow instead of next month.

Players: Give your characters the personalities and histories that make the GM and other players wonder what's going to happen next. Talk to your GM about long-term stories that will entertain yourself, your GM, and everyone else. When will your character's history catch up with her? When will your character finally realize the truth about that letter? Who is the mysterious stranger that only appears on the equinox?

Girl Scouts: Bring more Thin Mints.

Because I really like Thin Mints.

-- Steven Marsh

Last week's answer: **Dungeon Master's Guide** (*1st Edition*, for *AD&D*), p. 111

(Two stars) "If you, the reader, ever expect to be dropped into a primitive time or timeline, memorize this. . ."

by EJ Ford

Art by Rogerio Vilela and Phil Reed

Jack slumped against the wall to the left of the door and checked the cylinder of his .38 Police Positive. Three shots left. Wiping dirty sweat from his eyes, he considered his chances. That's enough slugs for the two remaining guardians of this dump with one to spare. With a flick of the wrist, he readied the pistol then turned to pull the door open.

The door swung inward as he reached for the knob. A nauseating odor wafted out of the room -- the smell of blood and offal and filthy hair -- and with a crawly feeling at the back of his neck, Jack suddenly thought he knew what these bastards had done with the missing girls. When the first ropy tentacle of skin, bone and slime snaked out of the darkness, he realized he was completely wrong.

* * *

At this point in a game, the poor sap playing Jack Smart, Private Eye, has to make a quick roll of the dice. In **GURPS** or any other game simulating the horror genre, there has to be a way to describe the process of losing control. In horror novels and movies, characters routinely lose the ability to act on their own. Sanity rolls, "fright checks," whatever you call them, they are an important part of the genre. Panicking, shrieking, vomiting, fainting; anything but the sort of rational, devastating response that players will come back with, given a chance. A look at something truly horrible should have this effect. You shouldn't be able to see a guy turn into a werewolf and just start blazing away with the silver bullets.

The problem is that a player incapacitated by fear and, potentially, madness makes for a frustrating participant in the play of the game. If the players can't do anything, the novelty of having a character that has just acquired a new ten-point disadvantage will wear off quickly.

What's a Game Master to do? You can't have the players sailing through your haunted house without having the characters catch some of the chills and spill along the way. But, you can't drive the players all nuts, because they *will* quit coming back for more. It's just like you killed the whole party; after a while, your players will find something less aggravating to do. As it happens, there are a few solutions, ones that involve a little extra work for the Game Master but have a more satisfying pay-off all around.

The first piece of advice is one that you see a lot in books about writing horror stories: describe the details. You want to tickle the players interest and get them involved in the scene. To do that, you need to describe details. The smell of a darkened room. The look of a pool of inhuman blood. The sound of a limb breaking and tearing through skin. If you paint a picture with words, it will make it easier, and more honorable, for your players to fail a fright check and flip out. If you just tell the players to make a fright check after they see a skeleton, with no details, they are going to be more than

miffed if their characters go bonkers. Just as brand names and spy jargon are essential to a good espionage game, the street cred of a horror game is the ability of the game master to make the players themselves flinch.

Obviously, a good first step is to read and watch everything you can about the topics you intend to inflict on your flinching friends. However, don't just watch movies about the plot points. Everyone has seen vampire movies, and those aren't the details that will shock, scare, and ultimately amuse, your players. Instead, break your adventure into segments and make a point of keying sensory information on each scene. If they are in a sewer, never let them forget the stench and the feel of greasy slime around their legs. Make the players wish they were wearing waders! If they are seeing something horrible, focus on the sound of the creature dragging itself forward, crushing pieces of furniture in its path. Always make sure you describe the roar of gunfire and the smell of smoke, too.

Placing the emphasis on non-visual cues is important, because people think with their eyes but they remember with all their senses. If you just tell the players what something looks like, they'll think about it for a second, then start in with the silver bullets again. You want the players to think twice. You do that by making them feel like they are right there, in the middle of the action. If the players believe the scene, they won't mind acting a little loopy for a bit.

The second way to get your players accustomed to losing control is to put a plant in the group. I can't emphasize the value of this enough. People like to be part of a good joke. Let your player know that their participation will make it a more enjoyable night for the whole group, then let them steal a few scenes with their best improvisation. In a group of good role-players, this is usually incentive enough. If you need more, promise the player and opportunity for his or her character to find some hidden clue. Have their hysterical character accidentally reveal a cache of hidden weapons or information. Promise the player a big reward in experience points at the end of the game.

This technique also works for more fatal tricks. If you have a player who is getting sick of their feeble character and wants to play something new, let the character volunteer to get smeared by the monster. If you can do it with completes secrecy, you'll scare the pants off the other players as "good ol' Joe" simultaneously goes insane and runs shrieking right into the maw of the glistening beast at the bottom of the stairs. Make "Joe's" death as graphic as possible. Describe how "Joe" is bitten in two by the beast (don't forget to use a sound cue!). Make sure the player running "Joe" knows to keep fighting, screaming and, finally, begging for the other characters to put him out of his misery. Trust me, the other players won't forget it even if they subsequently find out that "Joe's" player was in on it.

A final technique involves the least stress all around. Telescope time. This tip has less to do with horror in specific than the others, in a way, because all games can use a little trimming. If no players can act, don't torture them by telling them what the monsters are doing to them; cut to a scene with the survivors and give them a quick synopsis about why they are all now tied up-side down in a meat locker. Try not to take advantage of insane or otherwise incapacitated characters. Remember: pointless deaths in movies usually just make you want to change channels; no one wants to be forced to sit through hours of that. Skip periods of research, recovery, or captivity if you need to. Tell the

players just enough about those periods so they get the plot points and the sense of incapacity without actually making the players deal with real inactivity. Keep the action moving, even if the game-time is crawling.

In some cases, players will short-circuit these techniques, sneering through your descriptions and preventing your pre-arranged stunts from going off as planned. In other cases, your players will insist on getting a good look at a monster that will send their character into hours of real-time inactivity. And if elements of the team manage to avoid incapacitation, it's going to be tough to keep those out of action interested in the game. However, if you involve the players, both by using evocative descriptors and encouraging collusion, no one should mind too much when their character goes 'round the bend.

* * *

Jack felt his knees buckle as the ropy tentacle began to grip his leg. Pieces of the six girls protruded from the heap of flesh, bone, and jelly inching its way toward him. As consciousness began to fade, spinning away just as the dizzying stink of the monstrosity grew stronger; Jack heard a voice screaming. That's me, he thought.

When he awoke, days later in the sanitarium, his teeth chattered in the warm room as he tried to describe his last memories to his incredulous friends.

Art by Dan Smith and colored by Phil Reed

GURPS Black Ops presents a history in which two alien races, the Prima and the Greys, have had huge impacts on our history. But maybe there's more going on here than meets the "human" eye. Why not broaden the horizons of the campaign? There's no reason not to include the full panoply of races from *GURPS Aliens* in a *GURPS Black Ops* game - and it will certainly surprise the players.

The basic setting is very similar to what is given out in the *GURPS Black Ops* book - except that the true reasons behind things are quite different. The Greys are not what they appear to be at all - the deals that have been made with them were in fact made with the Markann. And there's really no such thing as "the Prima" - what Argus has classified as the work of the Prima is actually the work of several alien races, notably the Irari, the Engai, the Jaril, the Auroras, the Traders and the Gerodians.

In fact, nearly every one of the races *GURPS Aliens* has come to Earth at one time or another - and many of them are still here, pursuing their inhuman goals. To better reflect the nature of such a campaign, minor changes to the game statistics and cultures of most of the alien races have been made, making them considerably more malign. Details on the changes to each race are given under their descriptions. GM's concerned about the differences can simply put this down to the differences in campaign tone and feel between *GURPS Aliens* and *GURPS Black Ops* - a *Black Ops* game requires much more malign alien races, with devious and inscrutable goals. Alternately, maybe the races are always like this when dealing with non-starfaring inferiors. No details are given for the Gloworms, Riders or Xenomorphs, since each of these races can be used as is. In any case, this is what they're up to on Earth.

An-Phar

The An Phar are here only the broadest sense of the term. What we think of as Greys are in fact dead An Phar, brought back to a semblance of life through advanced psybernetic technology, and remotely piloted by the Markann. Occasionally, when the psybernetic restraints fail, one of them is lost to the Markann. Dimly aware of its condition, and in constant pain, these An Phar frequently enter destructive rampages until brought down by either the Markann or Argus. Use Grey statistics from *GURPS Black Ops* adding Berserk (limitation: only when uncontrolled).

Auroras and Traders

These two most powerful and enigmatic of races have both visited Earth many times in the past. Many accounts of meetings with gods are likely distorted versions of these encounters. But where the Auroras have avoided Earth in recent centuries, preferring not to be bothered by the struggles of lesser races, the Traders have found a renewed interest, and have been happily making deals with anyone and everyone. It's only a matter of time before a Trader sells a human information or objects that could expose or even damage the other alien races on Earth. It's even possible that one or more already have (certainly, at the highest levels, Argus is aware of the Traders and longs to learn more of

them). Neither race needs any real changes, except that they are both somewhat more amoral.

Banduch

Although the Banduch are few, and are compelled to remain in hiding in lost worlds and dense jungles and swamps, they are a potent menace. They came to Earth literally millions of years ago, and made it their own. Their great intelligence and mighty psionics allowed them to survive the extinction of the dinosaurs that they had ruled, and to hide from humanity as it grew and developed. From behind the scenes, they deliberately retarded the development of humans, preventing technological and social progress. The arrival of the Kaa on Earth, tens of thousands of years ago, discomfited them - because the Kaa knew what they were, and set out to exterminate them. Ever since then, the Banduch have been fighting a defensive war against the Kaa, although the arrival of other species allowed them something of a break. A great conference of all Banduch was held, and it was decided to reclaim the planet for the Banduch alone. These days, Banduch minds manipulate the environmental and anti-technology lobbies, trying to bring about an end to industrialization. They also covertly leak information regarding the activities of other alien races to Argus. Banduch are similar to those presented in *GURPS Aliens*, but do not possess the Advantage of Empathy, or the Disadvantages of Truthfulness or Non-Violence. They do however possess the Disadvantage of Greedy (which applies mostly to food, mates and territory in Banduch culture).

Cidi

No one knows what the Cidi want - but they are here. They hide among terrestrial animals such as squirrels and possums. For the most part, they seem to wish to be left alone, although they sometimes participate in suicide attacks on electrical installations of all sorts. In actuality, the Cidi are engaged in very careful study of humanity, preparatory to eventual invasion. They are methodical and very, very cautious, and are quite happy to let Argus take out any competition before they themselves take out humanity. Cidi are physically the same as in *GURPS Aliens*, but add the Mental Disadvantages Careful and Reclusive.

Crystal Computers

As a planet-bound race, the Crystal Computers are not found on Earth. Which is a lucky break for humanity.

Engai

As amoral and jaded sophisticates, the Engai are always interested in newly discovered alien cultures like Earth. At any given time, several of them are on the planet seeking distraction. They rarely act in concert, and never initiate contact with any other alien race. If another alien race should interfere with the activities of an Engai, it is equally likely that the Engai will punish them for their temerity or simply depart, claiming to have been "getting bored with this game anyway". Many Engai suffer from the Disadvantage Solipsist.

Fasanni

The Fasanni presence on Earth is limited to impartial observers working with other alien races. They don't much care about the fate of humanity, other than in a dry, intellectual fashion. Fasanni are basically uninterested in all other alien races as individuals, but fascinated by alien cultures. This is well known to the various other races who allow them to tag along, but each one hopes that one day the Fasanni will decide to join with them. Unfortunately for the Fasanni, they have so far be unable to deal with humans directly, instead getting all their information second hand. If ever a reliable means of impersonating humans is developed by the Fasanni, the other races may be in for a shock - humans and Fasanni have much in common, and the historical struggle of humans to solve problems without violence would be much-admired by Fasanni. Fasanni are unchanged, although less sympathetic to others.

Gerodians

The Gerodians, along with the Jaril, are largely responsible for Earth legends of Titans, giants and ogres. Both races have visited Earth in the past and may well do so again in the future. Gerodians on Earth are vicious scientists and doctors to primitive cultures, who always prophesy alien invasion and treat humans in a way that supposedly prepares them for this eventuality. In this setting, the Gerodian Code of Honour and Sense of Duty are modified by the addition of Sadism - although they honestly believe that what they do to other races is "for their own good" the simple fact is that this is merely a rationalization.

Gormelites

Many centuries ago, another race (which one is not known) brought several small colonies of Gormelites to Earth, to serve as slaves in their facilities. Although the facilities are long gone, many of the Gormelites survived, and have lived in the wild for centuries. They are variously known as Yeti, Sasquatch and so on. Their few villages are very well hidden, and Gormelite technology is at approximately Stone Age levels (TL3). Add Stealth-IQ, Survival (Wilderness)-IQ and Tracking-IQ to their suite of racial skills, but add also 4 levels of Primitive.

Irari

The Irari ruthlessness and devotion to knowledge has brought them to Earth many times. Seeing the human race as little more than animals, the Irari have conducted many bizarre experiments on us. They are particularly fascinated by the human capacity for religious belief, which they do not share. It is probable that many legends regarding angels and other winged divine figures are in fact memories of Irari experiments. Certainly the Aztec deity known as Queztlcoatl was an Irari - and it is possible that the myth of Daedulus and Icarus contains some hints as to how to defeat them. An insoluble labyrinth would definitely pose an irresistible challenge to an Irari. Add Insatiably Curious and Callous.

Jaril

GURPS Aliens details a huge scheme to move the Jaril to a more favourable planet on behalf of un-named alien races. That planet is the Earth. The Jaril were settled here 10,000 years ago, during the last Ice Age. Like the Gerodians, they appear often in Earth legends as giants, titans or ogres. They are mostly a subterranean race, and have added to the natural tunnels of this planet considerably. Jaril craft have been specially modified to fly these long tunnels, occasionally emerging from extinct volcanoes, cave mouths or the sea. Most reports of "flying saucers" will be Jaril craft - the race is obsessed with finding out what the other races are up to. They still consider the humans to be primitive savages, which may lead to a rude awakening for them in the near future. The Jaril are basically unchanged in this setting, although they are a lot less worried about offending other races - subtract their Sense of Duty.

Kaa

The Kaa have been here for longer than any other race (GM's interested in a very weird **Black Ops** game could make them identical to the Serpent Men of **GURPS Conan** and **GURPS Cthulhupunk**). Tales of snake or lizard men are sufficiently widespread that they could pop up anywhere. Wherever they are, they are mortal enemies of the Banduch - the two reptiles have each consider the Earth to be rightfully theirs and the other to be interlopers. The Kaa, as one of the most evil races in **GURPS Aliens**, are unchanged in this setting.

Kronin

The Kronin can pass for human with cosmetics and disguises - and some of them do, in pursuit of their goal. Decades ago, a Kronin ship was infested by Verms and crashed somewhere on Earth. It is buried deeply in the ground, but the Kronin are sure that the Verms survived and will one day attack Earth in force. Due to the circumstances of the Verms'

arrival, the Kronin feel obligated to find and destroy the Verms before they destroy humanity. Unfortunately, the Kronin are only concerned with humanity as a whole - individual humans who get in the way of the mission are dealt with in a swift and deadly fashion. Kronin are played with no changes - but note that most of them will skills like Disguise and Acting in order to better pass among humans.

Liook Sujaan

The Liook Sujaan are among the few totally benevolent alien races. Millennia ago, their minds detected the incredible psionic potential of humanity, and the race has taken an active interest in seeing humanity reach its potential ever since. They have often influenced the minds of humans, and many sacred sites and standing stones are actually members of this race. Generally, the Liook try to influence humanity to look to the stars, since they wish to have allies out there. This is the major reason why Stonehenge and other such sites are considered "ancient observatories." (See GURPS Places of Mystery for more information on Stonehenge and standing stones in general.) Liook Sujaan are played with no serious differences, other than the fact that most of the ones on Earth have the Auto-Teleport power in addition to whatever other psionics they possess.

Markann

The Markann's inferiority complex is even more pronounced in this world - they will not even show themselves. The Greys are in fact remotely piloted drones - created from psybernetically modified and controlled An Phar corpses - each of them doing the work of one or more Markann. Some few abducted humans have seen Markann - but most see only their cyborg servants. (This would be a perfect time to dust off the old Flight 19 adventure - the players could easily be led to believe that the Markann are a separate race unconnected to the Greys, or possibly even feuding with them.) Markann are as presented in *GURPS Aliens*.

Memer and Saret

Memer and Saret are not found on Earth. Quite simply, there's nothing here that they want.

Mmmm

Mmm is unaware of the existence of Earth. Were Mmm to become aware of this planet, and the activities of various races on it, it would seek further information, most likely planting a node or two somewhere out of the way, and using a few very discreet drones. Once it had done sufficient research, it is likely the Mmm would be sufficiently revolted to attempt to destroy all other sentient life in known space, rather than risk having it run against Mmm itself.

Pachekki

Quite simply, the Pachekki are here for an outright invasion. They require no better justification than the distribution of land and sea on this planet. But the Pachekki are not fools either - their invasion plans called for the seas to be conquered first. Unfortunately for them, others had the same idea first. Pachekki are much the same, with the exceptions that females now possess Berserk and males now possess Sadism - these in addition to their normal racial suite.

Purulu

The Purulu want the Earth - but only because everyone else seems to, and thus, it must have some value. So they've been trying to take over the oceans of the Earth with the assistance of their unwilling allies, the Tamile.

Sparrials

Perhaps the most unlikely allies that humanity has are the Sparrials. They followed the other races to Earth simply out of curiosity, and the vast majority of those who came got bored and left fairly quickly. But those who stayed are a constant irritant to the other races. The Sparrials have bent their thieving talents to the task of frustrating everyone involved with the alien activities on Earth (which in their view includes all humans). Sparrials care nothing for security and secrecy, and it is possible that the legends of gremlins and other such creatures that have arisen in the last century are based on encounters with Sparrials. (Certainly the theft of small, expensive and vital parts of complex machines is very much in keeping with Sparrial culture.) Sparrials can be used as is.

Tamile

The Tamile are much the same as is *GURPS Aliens*, saving only that they are an aquatic species - and that they are owned as a race by the Purulu. The Tamile were bioengineered to be the best artists in the galaxy to satisfy Purulu cravings. But when the Purulu learned about Earth, they could not find any other mercenaries who would work for them. So the unfortunate Tamile were pressed into service, despite their manifest unsuitability for the job. At the current time, the Tamile and Pachekki are locked in a stalemate under the seas. Only the intervention of a third party will break this deadlock.

Treefolk

The Treefolk aren't much found on Earth either. If they were here, they'd be similar in motives to the Banduch, although acting completely independently of them.

Truul

No one knows how they got here (or at least, no one's owning up to it). But there are at least four or five hundred Truul running around losoe on planet Earth. Most of them inoffensively serve human masters until their deaths - although recent reports about far eastern sweatshops could point to another possible fate for the race.

Verms

As stated above, somewhere, deep underground, there is a nest of Verms, slowly tunneling their way to the surface. Argus doesn't know it yet, but its deadliest day is approaching.

Adventure Seeds

Bad Dreams

As the psionic war for domination of the Earth heats up, sensitives everywhere are having nightmares and experiencing psychosomatic pains. The actual cause of this is the negative psychic energy left lying around as a result of this covert war. Participants include the Banduch, the Kronin and the Liook Sujaan, among others. An adventure based on this seed is the perfect way to introduce any of these races, or even all of them, and their covert war.

The Lost World

If the characters are sent to investigate any "lost world" type areas, this is a

perfect time to bring in the Jaril or Gerodians. The occasional individual of each race will try to set himself (or herself) up as the "living deity" of a primitive tribe or two, and a lost world is where it would work best. Alternately, the Gormelites or the Banduch, either of which will more than likely be assumed to be native to Earth, could be introduced.

What The?

There's always the possibility that an untimely death could lead to the dissection, and thus, the exposure, of an alien life form on Earth. Although many of them look like Earth species, their alien biologies would quickly give them away in such a situation. Several alien races regularly impersonate humans, and still others pretend to be other non-human species, and any of these would be likely candidates. Among the human impersonators, this includes the Engai, the Kronin and the Truul. Other likely possibilities include the Banduch, the Cidi, the Gormelites and the Purulu. (For a real change of pace, it could even be a Liook Sujaan - although how anyone would end up dissecting a rock is a difficult question that will need to be answered in this case.)

The Verms Arise

Some day soon, that single Verm nest is going to emerge. What happens next is entirely up to the GM, and on what scale the GM wants to use the Verms. It could be a single isolated outbreak, or a concerted invasion. In the latter case, it's possible that some of the other alien races could emerge from hiding to help humanity battle the Verm menace. The Kronin, the Liook Sujaan and the Banduch are the most likely candidates to do this, although the Kaa are also a possibility. In the former case, it is likely that the Kronin would deem their honour satisfied, and depart Earth shortly afterwards - although if humanity acquitted itself well enough, the Kronin might decide to ally with us, and help Earth become a part of galactic society.

Time to Take Off the Kid Gloves

I've been getting some good press around here recently. Granted, folks have said, "I don't agree with John, but I see his point and he writes pretty good."

I do not write "pretty good." I write *well*.

Get your high boots on, folks. We're about to get *real dirty*.

* * *

This month, we're talking about Problem Players.

Now, the chief problem with these guys is that most of them are friends of yours. Like Bob who sits at the corner of the table with his laptop open, playing *Starcraft* when he should be paying attention, with his Übermonster character all full of loopholes, who barely looks at his dice when he rolls them (and hopes nobody else does because they'd see that 17 he rolled is really a 7), who won't go along with the rest of the party because that would "compromise his character concept." Yeah. That guy. We're talking about *him*.

This month, I'm going to give you a few pointers on how to deal with Bob, taking into consideration that he's probably a friend of yours that you've known for a few dozen years, who is really a nice guy, and you don't want to hurt his feelings by telling him that he's ruining the game for everyone else.

And, by the way, that is the *real* way to handle this situation. If Bob is screwing up your game, you *tell him* he's screwing up your game. But if that tactic doesn't work (or you're afraid of the repercussions of doing it), then try a few of the following tactics.

Understand that you will probably not be able to use *all* of these methods. Also understand that they should be used with caution. Finally, understand that half the intention of this installment is to provide you with a cathartic experience.

You might not be able to use *any* of these techniques, but by the end of it all, you'll sure *wish* you could.

Breaking the Cord

There's something I like to call "the PC umbilical cord." Most of you have figured out what this means without me explaining it, but just in case. . .

The players are supposed to be a *group*. That is, they make decisions together; they act as a unit; they face the consequences of their actions *together*. Player parties have very little room for the Snake Pliskens of the world. Everyone in the group plays a specific role in the group, complementing each other's strengths and weaknesses.

Every once in a while, however, you get that dark loner. You know the guy. He's a bad man but he's very good at what he does and what he does isn't very pretty. That guy. When he joins a party of bounty hunters, he always kills the target rather than capturing him because "The Weed of Evil Bears Bitter Fruit." Despite the fact the party is trying to act as a unit, he always acts on his own, living by his own rules, by his own code of ethics. And when you confront *the player* about the problem, he just shrugs and says, "That's the way my character is," or worse, he gets offended and starts spouting the time-honored favorite: "Don't make me compromise my character concept!"

Now the key to preventing this guy from ruining your campaign is. . . don't let him make that kind of character! Unfortunately, players are sneaky. They'll make characters that *look* friendly and willing to Play Well With Others, but when the crunch is on, they sneak into the shadows, steal all the loot and tell the others that they have *no clue* what happened to the booty they were after.

Well, this guy doesn't last long in my games because I invoke a little thing we like to call "consequences." Here's how it works.

Every action has an equal and opposite reaction, right? That means the next time the Merciless Killer Without a Heart goes and whacks the NPC the party is supposed to *capture* (for ransom, for the law to deal with, whatever), you give him some time, then spring The Law on him.

The Law shows up at 3:45 AM (the time All Bad Things happen in my games) with stun guns, tear gas, tasers and all other kinds of nasty wickedness. They capture the entire party and throw them all in jail for interrogation regarding the illegal murder of The Guy We Were Supposed to Take Alive. Then, spend the rest of the evening interrogating the party. Each one, by himself, under a sunlamp. Go out and get one at Wal-Mart; they usually cost under ten bucks. Use the same tactics cops use when they interrogate prisoners. Tell them that their friends have ratted them out. Tell them that they're going to spend a *real long* time in prison. Then, when they *think* they've beaten the rap, reveal to them that the guy they were chasing was an undercover cop. *Now*, they're facing Murder 1 charges, which means life in prison (or the death penalty, depending where they're at). Sooner or later, one of them will give up The Killer Without a Cause. Either that, or evidence shows up that gives the cops a solid case against him.

Then, we have the trial. A lot of game sessions can go toward a trial. Or, if you prefer, you can do it the short way: go right to the verdict. Of course, Mr. Don't Make Me Compromise My Character is found guilty as charged and gets sent to prison.

For life.

Now, I don't know about you, but I have a rule in my games: you don't get to make another character until the one you're playing dies. That means, Bob gets to play his perfect combat machine in an 8x8 cell for the rest of his natural life.

"What are you doing this round, Bob?"

"I'm watching the cockroach crawl across my cell."

For life.

If he asks really nice (and agrees not make that kind of character again), I'll let him make a new character. Of course, a few years later, Mr. Bad Ass breaks out of prison and goes after the party for revenge.

As an NPC.

Played by Robert DeNiro.

The Laws of the Table & Kharma Dice

Now, I have to admit, this one is *seriously mean*. While I usually play dirty with my players, I also play fair. By "playing fair," I mean that like a mystery writer, I show them everything they need to solve the situation at hand.

However. . .

I have a limit, and that limit is my players' enjoyment. When one player starts stepping on the other players' fun, I start fighting fire with fire. Specifically, I mean the players who feel it necessary to "break the game." They take advantage of rules. They lie about rolls. They make rolls for skills they don't have. You know who I'm talking about. I'm talking about cheaters.

(Usually I don't give a rat's petunia about cheating. Players *expect* the game master to cheat, but for some reason, game masters are supposed to poo-poo players cheating. Maybe this is because the GM is expected to cheat *for* the players.

Maybe. As GM, I may hit the players below the belt, but I'm also looking out for their better interests.)

But then there are players who feel they need to break *other* rules. You know, the ones not listed in the book. "The Laws of the Table," one of my players called them. They boil down to a few simple rules:

I. Pay Attention
II. Don't Invoke Monty Python
III. Don't Read at the Table
IV. If You Must Speak, Whisper or Pass a Note

Those kind of rules. Players who can't seem to follow these simple rules of etiquette really chap my hide. And so, in order to deal with breaches of etiquette, I use Kharma Dice.

I've mentioned this one somewhere else, but not everyone is a *7th Sea* fan, so I'll put it here, too (and I'll be brief). In short, whenever someone breaks a Table Law, put a black die in a bowl in the center of the table. Then, later on in the game, when *another* player is making a really crucial roll, remove the die from the bowl, turn to the player and say:

"YOU FAIL."

The emphasis is important.

In short, the rude actions of one player crush someone else's success. I've found this keeps the *Boldy Brave Sir Robin* choruses down to a minimum.

If you like, you can also use Good Kharma Dice that work in exactly the opposite manner. Whenever a player does something selfless, courageous or noteworthy, give them a white die. When another player is making a crucial roll, they can give that white die to the player and you tell them:

"YOU SUCCEED."

Again, the emphasis is important.

There's Always Someone Bigger

Now this is a *nasty* trick. I used to use it a lot when I was running **Champions**. As we all know, there are a few hundred bazillion loopholes in the Hero System, and we've abused all of them in our time (remind me to tell you about Multiplier Man someday). But abusing character creation rules has always seemed so petty to me, especially when people are *proud* of it.

("Great. You made a combat monster. Big effin' deal. What's his mother's name?")

So, in order to deal with the Power Player, I taught him a rule that orks (and all the other one hit die monsters in the world) know all to well:

There's Always Someone Bigger Than Yourself.

First, I designed an equally abusive Combat Monster to deal with our Bruiser Bob, but that ain't enough. No, sir. Not if you're gonna play dirty. Since Bob feels it necessary to cheat to have a good time (and let's not mince words, that's *exactly* what he's doing), it's time for you to show him that you can cheat, too. In fact, you can cheat *better* than he can, which makes you a better person. He who cheats best (makes the best broken character and/or bends, twists and bends the rules best) wins, right? So, here's what you do.

Get yourself three sets of identical dice. This is easy if you're playing a game that requires only one die type like *Vampire* or (coincidentally enough) **Champions**. Then, arrange a set of those dice for the perfect roll behind your

screen. Save 'em. Don't touch 'em.

Finally, when you've beaten Bruiser Bob to a bloody pulp, make a roll. Ignore it. Look very sadly at the dice behind your screen - the ones you arranged before the game began. Then, lift the screen and show the players your "roll."

A critical hit. Bruiser Bob's turned into Bloody Pulp Bob. Too bad. Time to make a new character.

The Rules Lawyer

Now, under most circumstances, Rules Lawyer Bob is your friend. He knows all those little nuances of the game that you can't keep in your head and reminds you when you need a nudge.

However. . .

There's that fellow who's always telling you: "You're doing that wrong."

Or, "That's not how that works."

Or, "Let me look that up."

This guy is The Enemy. Instead of relying on your judgement to make a snap decision, he wants to play things By The Book. Instead of accepting that you're improvising things, juggling story, character, narrative *and* a rulebook, he's insisting on everything going by What the Author Intended. And if he does it enough, players start looking to *him* for rulings rather than you. This kind of challenge to our authority is unhealthy. Therefore, you have to do something *drastic*. Something *dramatic*. Something *dirty*.

First, take away his character sheet. Then, tell him if he doesn't remember how many dice to roll, or if he rolls the wrong number of dice, or if he forgets something on his character sheet. . .

HE FAILS.

It's all about emphasis.

This isn't so much being mean as holding Rules Lawyer Bob to the same standards he expects from you. If *you're* supposed to know all the rules, if *you're* supposed to be the Rule Encyclopedia, holding everything to memory.

There is nothing in the rules that says you *can't* do this. Therefore, you can.

Of course, if this doesn't work out for you, try a different tack.

I'll use the Storyteller System as an example. Whenever Bob starts his rules ranting, take away his 10-siders and give him 4-siders.

"Here, Bob. You make all your rolls with *these*."

There is *nothing* in the rules that says you *can't* do this. Therefore, you can.

When Rules Lawyer Bob gets hit with a blind spell, blindfold him.

"What did you roll, Bob?"

"I can't tell. I'm blindfolded."

"Well then. . . **YOU FAIL.**"

Finally, if he insists on looking things up. . . let him. While he's looking things up in a book, the rest of the game goes on without him.

"Bob, you just got hit. You took a stunning amount of damage."

"How? I didn't hear any dice roll."

"He didn't need to roll. You weren't paying attention. You were looking at something else."

That'll learn 'em.

Last Words

Like I said above, the techniques this week are generally mean, nasty and underhanded. They are *not* for everyone. Most of the time, I really don't need to use them. . . more than once.

But the *reason* to use them is specific. I don't play a roleplaying game to win. I don't create a character to demonstrate how to "break" a character creation system. When the Game Master speaks, I listen.

The fact of the matter is this: everyone in the group either wins or loses. If everyone is having a wonderful time, we all win. If one player decides that he wants to have fun *in spite of everyone else*, he's selfish. If he feels he needs to show off his character design skills in such a way that messes with other players' enjoyment, he's acting like a twelve year old jerk with serious confidence issues.

Granted, he's also your high school buddy Bob. And that makes things all too complicated. I hear so many people saying, "Gaming is a social activity." Then why the hell are so many gamers lacking in any kind of social skills? Maybe its because gaming has always about blind acceptance. So many of us came to gaming because we were "outsiders" of one kind or another.

But that doesn't mean we can't learn. And that doesn't mean we can't grow.

Pyramid Pick

All Our Yesterdays (for the Star Trek RPGs)

Published by Last Unicorn Games

Written by Steve Kenson, James Kiley, S. John Ross, Steven S. Long and Kenneth Hite

128 pages, $20

Where would *Star Trek* be without time travel? Up the timestream without a plot device, that's where. So where would the *Star Trek* role playing game systems be without time travel? Same place. . . and time. ***All Our Yesterdays*** allows you to take your campaign, no matter which incarnation of the popular franchise warps your nacelles, into the fourth dimension. . . and the fifth, and the sixth, depending on the theory you subscribe to.

The book starts with a discussion of that very subject, going over all the trippy little details Starfleet has gathered of how time travel works, what the hazards are, and how we've managed to do it. By accident or orb, sabotage or solar slingshot, all the known tricks (and a few that aren't) make it into the tense-snarled lexicon. Definitions abound, so players and Game Masters talking temporal rifts and temporal flux will know whereof they speak. A sort of time travelogue of hot spots for high activity is also included.

Parallel universes, those alternate histories existing next door to ours or created by severe temporal anomalies, get the business too. How to get there and back, how to make and unmake parallels, and how to play your twisted other selves are covered. *Star Trek* has suggested many such worlds itself, and Last Unicorn Games adds some gems of its own.

The bulk of the book covers the activities of the Department of Temporal Investigations, the time-and-history sensitive group introduced in the *Deep Space Nine* episode "Trials and Tribble-ations." The Temporal Prime Directive is their raison d'être. It's their job to watch history for changes, debrief Starfleet personnel who have affected the timestream, and prevent - or fix - alterations to the past. GMs wishing to run a DTI-centric campaign will find no end of useful tidbits on the equipment, training and structure of this most unusual organization.

If you're going to send your group traipsing into the past or future with phaser and tricorder, you'll need new character goodies. PCs working for the DTI will want the overlays and Tours of Duty specific to those agents. If you're just Timmy Time Traveler, you'll still benefit from the list of advantages, disadvantages and skills - some of which are psionic abilities that let you detect and manipulate the ebb and flow of time.

Your companions on this journey are a virtual who's who of the Star Trek universe. Each race has its own views on the viability of the phenomenon, and there are surprising facts aplenty - the Ferengi may have the most advanced temporal technology, and the Borg may be the least likely to use it. That doesn't stop any one person from turning renegade and wreaking havoc across the galaxy, so you also get information about what antagonists are likely to do with time travel.

All Our Yesterdays is a metabook, part of "The Expanded Universe" series of books for use with the whole gamut of *Star Trek Core Rules*, so the supplement covers - what else? - a lot of space and time. The Krenim, feared time manipulators of the Delta Quadrant, have their own racial package, and their massive timeship is included with a swell Jane's Guide of time-traveling starcraft from the four corners of the galaxy. Unlikely travelers like Q, the Prophets and, well, the Travelers get their own peculiar take on the subject as well. A timeline running through the book delineates as much of *Star Trek* history as will fit, from the Big Bang to the Kelvan invasions of the next millennium. The timeline is accompanied in the text by a history of time travel, putting things into perspective (so you're not left wondering why

we don't time travel at will after Kirk did it in *Star Trek IV*).

Tying it all together are gamemaster hints and story seeds to make the tangled skein of time as smooth a tale-telling tapestry as possible. Resolving paradox, making future history more a tool and less a fiat, and using time travel as a way to break the role-playing rut are just a few of the subjects that get a clear and concise description.

As a standalone, *All Our Yesterdays* is a well-done supplement. As part of "The Expanded Universe," it's a good omen that bodes well for other upcoming books (especially ***Though a Glass Darkly***; the two ought to make a good pairing). The writing is casual while still being fun and informative, and there's not much about time travel in the franchise that hasn't been touched on. It's all made workable by simple, straightforward description, logic, and clever extrapolations.

There are a few places where the narrative style gives way, some might say by necessity, to scientific gobbledygook. If you've ever watched much *Trek*, you know it's a hallmark of many scripts. But when it shows up in a supplement, seeing such technical details presented as though we're meant to understand them is a bit off-putting.

The book gets a little repetitive in spots, and at times it seems like they're going over old ground (or at least ground from earlier in the book). The (admittedly occasional) duplication of ideas and concepts gives you a feeling of deja vu, time travel notwithstanding. An index, some extra work grouping like concepts, or adding more page references wouldn't have hurt.

The artwork starts shaky but gets much better as you progress through the book. The art and designs faded into the background gets in the way here and there - why so much blue shading? - but it's hardly crippling. Overall, this is a good-looking book.

Whether your Star Trek game is just getting stale or you want to give your players a whole new menu of problems to deal with, ***All Our Yesterdays*** is a deft and elegant solution, making many such problems a thing of the past.

-- Andy Vetromile

Pyramid Review

Saxons! (for Pendragon RPG)

Published by Green Knight Publishing

By Roderick Robertson

144 pages, $24.95

When it comes to historical fantasy roleplaying games, only a few
stand out as worthy of serious attention. Chief among them is *King
Arthur Pendragon* from Green Knight Publishing (formerly from Chaosium). Over the years, *Pendragon* has
produced some of the best historical fantasy supplements and adventures ever produced. Nearly every one shows an
attention to detail and respect for its source material that continues to amaze me. It's little wonder that *Pendragon*
remains a critical (and fan) favorite after a decade and a half.

The latest release for the line, *Saxons! Wolves in the Fold of Arthur's Britain*, continues in that fine tradition while at
the same time highlighting the problems inherent in historical gaming. *Saxons!* provides plenty of detail on the
Germanic invaders who play such a prominent role in Arthurian legendry. Like previous culture books for Pendragon,
this one includes extensive details on Saxon culture, religion, and locales, as well as new rules for character generation
and magic. As good as these details are, *Saxons!* is a book in conflict with itself, unsure of whether it's presenting a
historical view of its subject, or a mythological one in keeping with Arthurian conventions.

Let's take a look at the supplement's contents and you'll see what I mean. The book begins with an introduction that
includes a short glossary of Old English words (and pronunciations) to add historical authenticity. I applaud this in
principle, but found its application jarring at times. By far the worst offenders are the uses of "cwene" for "queen" and
"cyningdom" for "kingdom." Verisimilitude adds a lot of flavor to the game, but one can get carried away, as I believe
the author did in these cases.

Chapter 1 is an excellent introduction to Saxon culture. Topics as diverse as lineage, law, religion, and women are all
given proper treatment. The level of detail is, in my opinion, just right: enough to add flavor to any campaign using
Saxons but not so much that they bog down the narrative. I didn't feel like I was reading a history textbook as I perused
these pages - high praise for a historical fantasy game!

Chapter 2 describes the history of the Saxons in Britain from Roman times to the end of Arthur's reign. Of particular
interest are the discussions of how the Saxons fit into each Pendragon's five campaign phases. Also included is
information about the various Saxon kingdoms and how their status changes during each phase. Game Masters will be
very pleased with these details, as they make it easy to integrate Saxons! into their ongoing campaigns.

Chapter 3 is a lengthy gazetteer of southeastern Britain, known as "the Saxon Shore" during Roman times. Like
previous Pendragon products, this chapter outlines the most important - and interesting - locales within its purview.
Many of the sites include minor details that could easily spark adventures of their own, making this a valuable addition
to the Game Master's repertoire. Like the kingdoms described in chapter 2, there are historical notes on how the locales
change over time, something I must applaud once more.

Chapter 4 includes a complete character generation sequence for Saxon characters. These rules supersede or modify
those in the basic Pendragon rulebook in certain areas. Given that Green Knight has announced a 5th Edition of *King
Arthur Pendragon* for 2001, this comes as no surprise. The bulk of the chapter, though, is dedicated to the
peculiarities of Saxon player characters, such as their names, social classes, and beginning skills. I was quite pleased to

see a surfeit of information on families and lineages, important parts of Saxon culture. The chapter makes it easy to provide a character with a heritage worthy of the sagas told by these Germanic warriors. Likewise, there are rules for Saxon children fostered by British knights after Arthur's great victory at Badon Hill.

Chapter 5 is a campaign set in and around Haestingas (Hastings) for a group of Saxon player characters. While the adventures are quite interesting, even compelling, they lack much of the magic and romance I normally associate with *Pendragon*. Perhaps it's the lack of chivalry and courtly manners that gives me this impression. However, I suspect it has more to do with the conflict I mentioned earlier. In this chapter, history wins out over fantasy and, for me at least, suffers for it.

Chapter 6 is a lengthy treatment of the four-day Battle of Badon in which Saxon power is broken for a generation. I was left a little cold by this chapter, but that's probably due to my indifference to Pendragon's battle rules. Others may well appreciate the detail. Chapter 7 gives the Game Master game statistics for a variety of enemies, both human and supernatural. This chapter will prove useful even in non-Saxon campaigns, as it nicely differentiates between various tribal and ethnic groups. Rounding out the chapter are some maps of sample Saxon towns and fortifications.

Chapter 8 concludes the book with additional Saxon-specific rules for things like rune magic, boasting, and berserking. There are also rules for "glorious items" that have gained prestige due to their association with famous heroes of legend - another nice touch that adds a lot of flavor. Appended to the book is a serviceable map of southeastern Britain that suffers from being bound into the back of the book, thereby limiting its usability in play.

All in all, *Saxons!* is a worthwhile addition to any *Pendragon* fan's gaming library. The book is far from flawless, of course. It suffers mightily from a schizophrenia about whether its goal is to represent Saxons historically accurately or in a way that's true to Arthurian legend. There's a lot of genuinely useful information in its 144 pages, provided one can cut through this indecision. Here's hoping Green Knight will resolve this question, one that has long bedeviled most historical fantasy games.

Pyramid Pick

Nations of Théah: Book Three, Montaigne (for 7th Sea)

Published by Alderac Entertainment Group

Written by Kevin Wilson

128 pages, $19.95

If you are following the progression of the Nations of Théah series, you are witnessing the fruition of something that was only hinted at in the core *7th Sea* books. You can see that the countries that make up Théah's landscape are more than separate cultures with political boundaries. They are the embodiment of swashbuckling ideas and traditions.

The Pirate Nations explored swashbuckling on the high seas, clearly inspired by Errol Flynn movies and Rafael Sabatini novels. *Avalon* was about heroic fairy tales and the power of legends and myth. Now we have *Nations of Théah: Book Three, Montaigne*, a sourcebook that captures the bravado spirit of swashbuckling found in *The Three Musketeers* and other works by Alexandre Dumas (who is among those the book is dedicated to).

The first chapter deals with the history, people, and places of Montaigne. As you may or may not know, the nations of Théah have very loose parallels to the nations of Europe around and during the Restoration period. With that in mind, it is safe to say that Montaigne is a distant cousin, twice removed, of France. It is an incredibly wealthy nation that the world looks to as a trend setter in everything from fashion to art to military maneuvers.

The country is divided into fifteen provinces. These provinces are governed by noble families but ultimately ruled by l'Empereur Leon Alexandre du Montaigne XIV, a ruthless and hedonistic sorcerer king who has some world-shattering skeletons in his closet. The descriptions of the provinces are detailed and well thought out, each including useful information about prominent cities, populations, rulers, dialects, and other features. The numerous noble families are also given several pages of attention, setting up the political landscape that will likely play an important role in just about any adventure set in Montaigne.

However, despite its affluence and extravagance, this first chapter shows that Montaigne is not a nation without problems. It currently fights two separate wars, openly defies the teachings of the Vaticine Church, and treats its peasants miserably at best. These and other factors indicate serious troubles in the not too distant future, but those in charge show little concern. After all, Montaigne is the most powerful nation in Théah. What could possible go wrong?

Chapter Two presents Montaigne's major NPCs, giving portraits and biographies of the members of the royal family, the military, and other influential people. Like those found in the previous *Nations of Théah* books, these characters are engaging, entertaining, and ready to show up in your adventures.

Chapter Three presents some new, modular rules. A Montaigne specific version of the Destiny Spread (one of the mainstays of the Nations of Théah series) has returned, using Tarot cards to help round out new characters. The sorcery of the Montaigne nobility, Porté, is given a new Knack and some optional rules, and new Backgrounds and Advantages, like the comprehensive section dealing with regional Montaigne accents, are introduced as well.

Four other areas of this chapter are likely to get a lot of attention by players and GMs alike. These are the new fighting schools, rules for courtly intrigue, Puzzle Swords, and new mass combat rules and situations.

The three new fighting schools are Boucher, Rois et Reines, and Tout Près. Boucher is concerned with knife fighting, Rois et Reines is a bayonet technique taught to Musketeers, and Tout Près espouses that, "The best weapon is the one that's close at hand." In other words, it is the art of fighting with anything you can pick up and whack your opponent with. These schools appear to be well balanced, powerful but not game altering, and should lead to some interesting combat scenes when used.

Since Montaigne is such a social and political nation, it is good to see the inclusion of rules for courtly intrigue. Perhaps "rules" is too strong of a word, though. They are more like guidelines for actions that characters can take at court to get them involved with the various machinations going on there, such as starting fashion trends, asking for favors, hosting balls, and even matching wits with courtiers in verbal duels. These things and more are kept track of on a special Montaigne Courtly Intrigue Sheet, which should help GMs keep their sanity.

Puzzle Swords are the *7th Sea* equivalent of magic swords, and they are very cool. These weapons are legendary pieces of craftsmanship, concealing hidden switches and buttons that can unleash a variety of surprises, some mundane (like a Garotte being hidden in the hilt) and some seemingly mystical (like a ghostly property that renders the sword intangible unless wielded by the owner). These swords are handed down from generation to generation, and can only be acquired during character creation by spending Hero points. The exact number of Hero points necessary is determined from the results of rolling on several different charts. The more powerful the sword, the more it is going to cost. If you want one of these weapons after the start of the game, be prepared to do some earnest adventuring. Families do not give these weapons to just anyone.

New mass combat rules and situations are included because, as previously mentioned, Montaigne is the aggressor in the two largest skirmishes currently going on in Théah: one against Castille and the other against Ussura. Massed fire from rifle lines is covered (so GMs can recreate scenes like the one in the latest *Man in the Iron Mask* film), and new Heroic Actions for mass combat are given to be interspersed with the normal Heroic Actions from the GM's Guide. None of these will effect the way game is played, but they do help capture the "feel" of Montaigne.

The task of maintaining that particular "feel" is explored in the fourth chapter. The first few pages are intended for players and GMs to look over, containing essays on what it means to be a Hero from Montaigne. The importance of unity ("All for one and one for all!"), hints on how to get along with Heroes from other nations, tips on fighting with flair (with a superb example), and roleplaying courtly manners and intrigue are detailed in this section. The next section is for GM eyes only. The stats and dirty secrets of the NPCs introduced in Chapter Two are revealed, along with some new monsters that are unique to Montaigne, like Mirror Ghosts.

The book concludes with an overhead map of Charouse, the capital city of Montaigne, followed by deckplans for three prominent Montaigne ships, and four pre-generated characters that would make good PCs if you are teaching someone to play.

The author, Kevin Wilson, has done an impressive job of channeling Alexandre Dumas' particular style of swashbuckling into this book. The short fiction found between the chapters, the setting itself, and even the optional rules enforce and encourage swashbuckling with gusto.

If you have ever desired the opportunity to be like Athos, Porthos, Aramis, or d'Artagnan, you need to pay a visit to Montaigne.

Murphy's Rules

?

by John Kovalic

Murphy's Rules

?

Murphy's Rules

?

"The Evil One Stole My *Shatterzone*!"

I have never been surprised by *Indiana Jones*-esque Nazis bursting into my apartment, intent on taking my role-playing games.

At no time in recent memory have I caught cultists sprinting out of my game closet, box of RPGs in their cloaked arms.

There has never been a case where black suited men with sunglasses and questionable government ties have barged in to take role playing supplements.

Er, waitaminute. . .

Anyway, the point is this: There have been almost no instances of wholesale RPG abduction by The Bad Guys.

Keep that in mind.

Two weeks ago Wizards of the Coast announced the scaling back of its *Alternity* plans, with some supplements originally intended for publication now planned to be made available as free internet downloads or cancelled altogether.

Two weeks ago I created my first *Earthdawn* character. Last week Living Room Games announced an agreement with FASA Corporation where they would print new *Earthdawn* material, fourteen months after FASA had closed the line.

Five years ago I ran a *Star Trek* game. This was many years after FASA had closed its *Star Trek* line, and three years before Last Unicorn Games began theirs.

What's my point?

They can't take your games away. No matter what happens to your favorite game line, the Bad Guys can't take your games away.

While it may sound rather obvious to say this, I point it out because of the complaints I've heard, in the virtual and real worlds. "Company A has cancelled *Hypothetical RPG*! I guess I can't play it any more." Or, "Company B has scaled back its plans for the *Theoretical Line*! I suppose I'll sell my books on eBay." Or, "Company C has fired its cool line editor for the *Grim'n'Gritty Game* and replaced him with a sentient orangutan who wants to have a race of evil spacefaring bullfrogs invade the game universe! I guess the only logical thing to do is set my books on fire and throw them from atop a building."

Nonsense.

No matter what happens to your favorite game line, it can still be your favorite game line. There's no reason why you can't crack open an RPG boxed set printed in the Dark Ages (circa 1985) and play a fun campaign with it. If the company that makes your favorite card game goes bankrupt because it invested all its money in magic beans, that doesn't mean your card night ever needs to end. If the company that makes your current campaign world does something Really Stupid with its story line, there's no law that says you need to make it part of your story line.

Unlike many other pursuits, games age quite well. In contrast, go ask the vintage computer game players how well most games made before 1990 play on a Windows 98 Pentium III. Or ask a comic reader to borrow his X-Men collection from 1980-85 and wait for the excuses. But if you had the sudden urge to start up an *Amazing Engine* campaign, or a friendly game of *Talisman*, or a couple rounds of *Arcadia: The Wyld Hunt*, you could.

Yes, it's sad when a game line ends. Usually it's most sad when the existing products don't live up to the line's overall potential. A company might promise a five-year plan for its game world, only to disappear after two supplements. Or a

game line might end right before the supplement that promises to fix Broken Rule X comes out. But for games that have had a long, healthy life, there's no reason to be upset just because the new products aren't coming out. View it as an opportunity.

If you don't like the current super-hero games based on the DC or Marvel universes, there are previous incarnations of the game to choose from. If you loved the old cardboard miniatures that came with the TSR *Indiana Jones* game, there's nothing to say you can't use them in *Masterbook Indiana Jones* or *GURPS Cliffhangers*. If you wanted to play a psionic spacefaring time-travelling Ninja trapped in *Ravenloft*, by gum, you could. . . even though 2nd Edition *AD&D* material will soon be a thing of the past.

I'll be honest. I like cancelled lines. I think it appeals to the collector in me; I know that, once I start hoarding, say, *Ghostbusters* material, I can collect it all without worry of a new supplement coming out to make my collection incomplete. I know I can come up with a completely different *Wraith* game, without fear of new material coming out to contradict me. I can be confident in my ability to start up a *Torg* campaign without anything to worry about.

Um. . .

Anyway, for those of you who are fans of a game that has recently been cancelled, or gone awry from your vision of the game world, or had its output dramatically scaled back, I'd urge you to remember: They can't come into your house and take your games. Whatever you enjoyed about the game books that were released for your game, you can still enjoy. I'm glad I live in an information age, where fans of games like *DC Heroes* and *Talisman* continue to chat and provide new insight, material, and rules, and where its easier than ever to buy old out-of-print books. I'm grateful to companies, like Wizards of the Coast and FASA, who provide material on their websites for free that won't be published conventionally.

But mostly I'm excited about the *Alternity* campaign I'm sure I'm going to start up in a few years.

* * *

Some Random Thoughts:

- For those of you submitting articles, **please** include all relevent information every time you submit: Name, Address, Social Security number (if you're in the states), and how you'd like to be paid. I do not have a master list of Everyone Who Has Ever Written For Pyramid, and you're only going to delay your loot if I can't find that information. If you're in another country and have a W8 on file with Steve Jackson Games, telling me that will save some time, too.
- If you want to submit a review, I'd strongly encourage you to look over previously accepted reviews. Read them carefully, and note the "style" of a review. Feel free to modify this style if you want, but after writing it, ask yourself: "Are there any questions I would have about the product if I hadn't read the book and written the review?" Avoid "Pros / Cons" lists at the end; a proper conclusion with the same information works better for me.
- If at all possible, please don't include attachments with your e-mail; just paste your article directly to your e-mail below the relevant information.
- If you're submitting a Supporting Cast article, please make sure it's similar in format to those previously published. In other words, include point costs and totals for *GURPS* characters, make sure your *Brave New World* character looks like published *Brave New World* characters, etc.
- Never drink paint, no matter how much it looks like a milkshake. (Not really relevant, but solid advice nonetheless.)
- As ever, feel free to write me at pyramid@sjgames.com.

-- Steven Marsh

Total Points: 25 points

Billy McGann grew up wanting to be a police officer like his father and grandfather. Always interested in science and art, when he did end up on the force it was as a forensic specialist and crime scene photographer. After only a few months on the job, he reported to the scene of a multiple homicide. The officers thought the area was secure, but the killer was still there hiding among the carnage. When Billy unwittingly disturbed his hiding place, the murderer attacked and clawed out one of Billy's eyes.

Although there were expensive operations that might have saved Billy's eye if they had been performed immediately, the police health insurance wouldn't cover them. In fact, Billy was nearly reprimanded for his poor handling of the situation. He quit the force in disgust.

He found a job as a photojournalist and was good enough that some of his photos are quite well known, the kind that anyone who reads the newspaper probably noticed. An unfavorable contract meant that his name rarely appeared with his photos, however, and when Billy tried to break the contract he found himself out of a job.

To pay the bills, Billy turned to studio photography: 8x10 head shots of smiling teens and that sort of thing. This kind of slumming earned him the moniker "Head Shot" among his artist friends. Billy had been making a good if dull living until his most recent troubles. First he noticed that someone was following him; then someone had been through his files at

Supporting Cast: Billy "Head Shot" McGann

work. When his studio burned down in a suspicious fire, Billy told the police about the man who had been following him. They wrote off his suspicions as paranoia. When Billy was driving home, someone tried to run him off the road. He knew he had to do something, so he asked around about hiring a bodyguard. That's when things got really bad.

Years ago, there was a one-eyed bounty hunter named BD McGann who was given the nickname "Head Shot" because he had a habit of shooting people between the eyes. He is no relation of Billy's. It's just a strange coincidence. Head Shot McGann the bounty hunter had a reputation as skilled and reliable, but it's an old reputation. Nevertheless, some people suspect he's still around, even if they haven't heard of his recent exploits. So when Head Shot McGann started asking around about attempts on the life of some photographer, the people who knew his reputation took notice.

It didn't take Billy too long to figure out that there had been a mix up, but he's had trouble convincing anyone that he's not the bounty hunter. He was approached by a young gun wanting to show that she could outdraw the infamous Head Shot; Billy only talked her down by bluff and intimidation. This episode convinced him that he has no chance as a photographer, but so long as everyone thinks he's a bounty hunter they will give him wide berth. Still, he knows his luck won't hold forever.

The obvious way to get PCs involved is to have Billy look to them for help. If they are a typical group of PCs, they are more likely to have heard of the bounty hunter McGann than the studio photographer McGann. However, it's possible they know Billy from his days on the force, or know of his work as a photojournalist. What happens next will depend on who searched and then set fire to Billy's office. There are several possibilities:

- Billy took a photograph that someone wants suppressed. Someone who is widely thought to be dead sat for a portrait, and their protectors thought better of leaving evidence like that behind. Billy had absent-mindedly used the negative as a bookmark and then took the book home with him. When the protectors searched his files, they found that several of the pictures were missing. They burned his office in case he had hidden it somewhere there, but they're still watching.
- BD McGann is active again and has earned the wrath of a criminal syndicate. The gang bosses ordered him dealt with, but there was a failure of communication and the toughs sent to do the job believed they were supposed to deal with Billy.
- Billy's years of hard luck are getting to him. He really is paranoid. There never was anyone following him, the fire was just an accident, and he didn't need a bodyguard before the case of mistaken identity. This might be carried even further: Not only was he never followed, but no one seriously thinks he is a bounty hunter either. The incident with a "young gun" was just a misunderstanding. This doesn't hold out the promise of much adventure, but it might make for either a smoke screen to conceal the real plot or a hook to get the PC's involved in something else.
- For the last year, Billy's monthly credit card bill has totaled to a palindromic prime number. This is just another coincidence, but the Knights Templar suspect him of carefully selecting these numbers in order to send secret messages to agents at his bank. When they learn about BD McGann, they will conclude that Billy really is the bounty hunter and that he went undercover as part of some complicated scheme.
- It's also possible that the PC's were sent to follow Billy and suppress a photograph he had taken. This becomes more complicated as criminals of all variety start to return favors they owe to the bounty hunter McGann.

Deus ex Machina Tempus

(God from the Time Machine)

"And the angel which I saw stand upon the sea and upon the earth lifted up his hand to heaven, and sware by him that liveth for ever and ever, who created heaven, and the things that therein are, and the earth, and the things that therein are, and the sea, and the things which are therein, that there should be time no longer."
-- Revelation 10:5-6

In the End Times, says St. John, time shall be no more, and all God's works shall be revealed. He doesn't specifically say that they'll be revealed to a musicologist priest in Venice, of course, but then he had a lot of ground to cover. Unlike the prophet of Patmos, however, we have more time to cover time, from 1952 to the Crucifixion and back again, chasing demons, conspiracies, and Deadly Mirror Entities all the while. And since all this makes great campaign fodder, let me urge you to take time for Father Ernetti. After all, he took time for you.

"'Every human being,' declares Father Ernetti, 'traces from birth to death a double furrow of light and sound. This constitutes his individual identity mark. The same applies to an event, to music, to movement. The antennae used on our laboratory enable us to "tune in" on these furrows: picture and sound' Physicists will perhaps be unconvinced by such theories, but it is an undeniable fact that Father Ernetti can show 'photographs' of the distant past, and play back voices that have been silent for millennia."
-- Robert Charroux, *The Mysterious Past*

It all began with Gregorian chants. In 1952, Father Pellegrino Ernetti, a 27-year old Benedictine priest, labored to remove stray harmonics from recordings of Gregorian chants. As Peter Krassa tells the story in *Father Ernetti's Chronovisor*, Ernetti accidentally recorded the voice of his co-worker's dead father, seemingly sent from the afterlife. Ernetti, a student of ancient music theory, speculated that the classical Pythagorean and Aristotelian notions, that sound and harmonies never actually cease to exist, explained the voice. He had somehow recorded a voice from the past! Working on the project for the next five years with an increasingly high-powered team of Catholic physicists (including Enrico Fermi and a mysterious Portuguese Professor de Matos), Ernetti slowly developed an apparatus that could focus on any harmonic of light and sound from any time in the past -- his "chronovisor."

The chronovisor combined trimetallic antennae capable of receiving all harmonic vibrations, a tuner/direction finder device similar to an oscilloscope, and recording equipment. Father Ernetti's team tested the apparatus by watching speeches by Mussolini and Napoleon, then skipped backward through Roman history to a vegetable market under Trajan and the fall of Catiline. At one point, they watched the performance of a lost play, Quintus Ennius' *Thyestes,* at its Roman debut in 169 B.C. Ernetti copied the play, and made plans to seek out other lost artworks. And then the group searched for Jesus Christ. And they found Him (in 36 A.D.), and filmed the Last Supper, the Passion and Crucifixion -- and the Resurrection. In 1958, Father Ernetti showed the film to Pope Pius XII along with top Cardinals, the President of Italy, and key members of the Pontifical Academy. For the next decade or so, hints dribbled out of Venice about Father Ernetti's chronovisor -- Ernetti even spoke to a parapsychological congress on the topic in 1966. Tabloid reporters and curious fellow priests alike heard alternately that the chronovisor had been dismantled as unsafe (or too dangerous to publicize) and that it had been used to make archaeological discoveries, translate the original Ten Commandments, or record the lectures of Pythagoras. At some point, however -- roughly coinciding with the sudden death of Pope John Paul I -- Father Ernetti stopped cooperating. He returned to musicology, and died in 1994, six months after making a final report to Pope John Paul II.

"[Steinmetz] drew the plans for that camera and we followed through and today we can say definitely that we can go into the past and pick up every past event. Of course, that becomes too cumbersome, but we select past events, and as I said, the scientists are admitting today and fully believing that we will go into the past events to the extent of a million years . . ."
-- Baird T. Spalding, *Life and Teaching of the Masters of the Far East* (Vol. 5)

But Father Ernetti was hardly the only pioneer in the exciting field of temporal photography. Even discounting the "spirit photography" of William Mumler, there's the instructive example of Baird T. Spalding, who made a considerable amount of money (most of it, admittedly, for his unscrupulous publisher-manager Douglas DeVorss) recapping the Wisdom of the East for small-town Americans. Spalding, who claimed to have spent much of his childhood in Inner Asia finding golden books and speaking with "elder brothers" from Shambhala, also told the story of building a time camera from plans drawn up by famed (and conveniently demised) electrical pioneer Charles Steinmetz. Spalding's "group" of 26 men (a double coven, I note idly) worked in Central Asia and made movies of George Washington's inauguration and of the Sermon on the Mount between 1914 and 1953. (The relatively unimaginative Oxford engineer George Delawar used his 1950 time camera to take pictures of his own wedding.) However, when DeVorss was gunned down (by an assassin suffering from memory loss) six months after Spalding's death, any leads to the Time Camera vanished.

"After a moment he asked, 'What about the Resurrection? Did you witness that as well?' 'Yes.' the Venetian priest replied emphatically. 'And it is very difficult to describe. We saw it in silhouette, as if it were a shape seen through a thin film of illuminated alabaster -- as if we were seeing it through a crystal.'"
-- Frs. Francois Brune and Pellegrino Ernetti, in *Father Ernetti's Chronovisor,* by Peter Krassa

In the old days, of course, if you claimed to see historical events "through a crystal," you were practicing skrying, or catoptromancy -- mirror magic. We've already covered much of that freakiness in a previous column, but it's interesting to recall the vital role played by Venice in both the history of mirror science and in the career of Father Ernetti. Familiarity with mirrors, of course, is akin to familiarity with sound, both optics and acoustics dealing with ratios, frequencies, and similar elements. Father Ernetti's insistence on the "scientific" basis of his chronovisor turns out to draw heavily on Pythagorean mysticism -- the music of the spheres, and the permanence of the transmigrated soul as an "astral record" in the universe. (Pythagoras, according to Pausanias, possessed a magic mirror of his own.) What Father Ernetti called the astral record, the Theosophists who followed Spalding would call the "Akashic Record," the complete story of everything and everybody in the history of the world, accessible only to those adepts who have opened their mystical eye. Hmmm. Krassa explicitly ties the mystical sight of the Akashic Record to the mystical (and one-eyed) Lemurians, who still exist as thought-forms hanging in the immutable ether. Krassa even hints darkly that Father Ernetti's other claim to fame may have come from his close association with astral entities -- the good father was also one of Italy's foremost exorcists. One wonders if, in his time-viewing, Father Ernetti might not have stumbled upon the Lovecraftian "Hounds of Tindalos," who pursue those who see them throughout time and can only be stopped by carefully measured curved lines. Like, say, those in a lens.

"Yes, the chronovisor would turn the world topsy-turvy, as you say -- but in ways that would strike fear into the hearts of certain groups of people."
-- Fr. Pellegrino Ernetti, in *Father Ernetti's Chronovisor,* by Peter Krassa

So, let us take leave even of the thin and tattered facts of Father Ernetti's career, and propose a super combo ***GURPS Time Travel-Voodoo*** campaign frame. Father Ernetti gains the crucial hint in his researches from Enrico Fermi just before Fermi's death in 1954. (The same year as Spalding and DeVorss. Hmmm.) He develops the chronovisor, shows it to Pope Pius XII, and is made the General of a new, secret society within the Church -- the Order of St. Eligius (patron of clockmakers). The Order uses the chronovisor first to chart history, and after improving the apparatus to project themselves back in time, battling demons, astral and akashic entities, and threats to the Vatican. (Perhaps they used the chronovisor to read over Tesla's shoulder -- or Steinmetz'.) It's likely that the Observer Effect holds (with concomitant Highly Obvious Inertia), although much can escape in the blurred visions of the past. (If I were running the game, I'd force Eligian elites projecting back in time to have an artifact from the place and time they aimed to visit -- the Vatican's storehouse of relics and manuscripts would come in handy here.) The Eligian library, deep within the bowels of the Giorgio Cini Foundation at the abbey of San Giorgio Maggiore in Venice, holds copied secret documents from all of time -- the magics of Pythagoras and Roger Bacon, the secrets of the KGB and CIA, the numbered accounts of crimelords and dictators. The Order uses this knowledge to make pinpoint strikes into history, using Father Ernetti's powerful harmonic exorcism techniques to drive off the demonic In-Betweeners and their malevolent Lemurian masters.

"All this gives rise to serious questions. What was going on in Geneva during the last few centuries? What was the

power and the technology behind the clock makers, also the seat of world finance? And what was the symbology of creatures popping out of clocks? Could all this mean to suggest that those who control the finances of the world also control and manipulate the consciousness of time?"
-- Preston Nichols and Peter Moon, *Montauk Revisited*

And, of course, to battle the other time conspiracies. Where did Fermi get the secrets of time travel in the first place? Why, from Project Rainbow -- better known as the [Philadelphia Experiment](#). The Rainbow team, now located at Montauk, Long Island under the direction of shadowy forces within the U.S. government and scientific elite, may have been the ones who silenced Fermi, Spalding, and DeVorss. Though not before the Spalding-Steinmetz camera fell into the hands of the Nine Unknown Seers of Shangri-La, who use it to access the Akashic Records directly in an ambitious plan to bring Lemuria once more into phase with the Earth and create a Golden Paradise in Tibet. Unless, of course, the British royal family can stop them -- everybody knows that where you've got a Vatican conspiracy there is an equal and opposite British conspiracy. Using John Dee's shewstone and the Delawar Time Projector (as well as the vast resources of the British Museum), the secretive MI-ƒ teams seek to preserve Western power in Asia and restore Cecil Rhodes' "Great Work of Time." Thus we have a four-way conspiracy campaign of intrigue and time travel, in which anyone (or no one) can be the good guys. (We just don't have space to do justice to Marc Davenport's theory, in *Visitors From Time: The Secret of the UFOs,* that UFOs are time machines. Perhaps in another column.) Or they can all struggle heroically against the Mirror-Venusians from our Battling the Mirror Realm campaign frame I mentioned in that earlier column -- look [back in time](#) and decide for yourself.

Dork Tower!

Dork Tower!

by Nick LaLone

Gary Gygax, co-creator of *Dungeons & Dragons* (among other accomplishments), is a legendary figure in the RPG industry. Or perhaps that should be lejendary? Regardless, recently the ever-gracious Gygax took time out of his busy schedule to chat with Pyramid.

* * *

Pyramid: Most of us know who you are and what you have done but for the record, give us your name and gaming credits?

Gary Gygax: Greetings! Gary Gygax here.

I have been active in hobby gaming since the 1960s. I founded the Gencon convention, co-founded TSR in 1973.

While I have done a fair number of board games and military miniatures rules sets, I am best known for co-creating the *Duneons and Dragons* game and authoring the original *AD&D RPG*. I have also authored or co-authored a few other RPGs, *Mythus* being among the more notable. Finally, I have written ten game-based fantasy novels, and a couple of "how to" books as well.

Way back in the mid-1980s I was co-producer of the *Dungeons and Dragons* Cartoon Show, too.

That covers it well enough...

Pyramid: What have you been up to lately?

Gary Gygax: About four years ago I began writing what is now the *Lejendary Adventure RPG* system. Hekaforge Productions is currently launching the three core books in that system, and I am now working with freelance designers who are busy creating support material for the game.

But that's not all!

Last July I signed a contract with Wizards of the Coast to do a considerable amount of creative work for them. While the "Up on a Soapbox" column in *Dragon Magazine* is the only currently "visible" result to that, I am also engaged in various other efforts in this regard. While some of this work will likely not be published per se, I hope it will contribute to the excellence of the Third Edition of the *Dungeons and Dragons* Game. Later on, something else is likely, but I can't discuss that now, and it is a couple of years down the pike.

Pyramid: How does it feel to be writing for Dragon Magazine *again?*

Gary Gygax: Simply put, great! It is an honor to be back, and I enjoy writing very much. . . . Obviously.

Pyramid: How do you feel about **Advanced Dungeons and Dragons Third Edition***?*

Gary Gygax: While I can't go into details, I must say that I am very impressed. The *PHB* is extensive in its information--and packed with new material. The *DMG* is something I believe to be a *must* for all Game Masters regardless of the system they employ! I haven't reviewed the whole of the *MM* yet, but the entries I have seen are excellent.

In all, I am convinced that 3E is going to be a great success.

Pyramid: Did you have the chance to lend anything to the creation of **Advanced Dungeons and Dragons: 3rd edition***?*

Gary Gygax: Consultation, advice, and commentary in the main. As much as I hate to admit it, the designers have done a great job without me having a lot of creative input. On the positive side, hey! That surely is good for gaming. :)

Pyramid: Dungeons and Dragons *is going to hit the big screen after nine long years. How do you feel about it?*

Gary Gygax: Well, there's a poser. The production entity involved is not renowned for its past motion picture excellence, shall we say. On the other hand, from what I have heard, they are really doing a lot to make the *D&D* game-based film something above and beyond past movies they have done. Of course I am very much hoping that the film will be great, a box office hit that not only gamers but a lot of movie-goers love. (We all know what the "critics" are likely to say. . .) This will be a great boost not merely for the *D&D* game but for fantasy in general.

Let's all hope for the *D&D* film to be a success, but remember that the Tolkein movie is also out there, and it has the budget that the *D&D* production *should* have had.

Pyramid: What do you think about Hasbro's acquisition of your old company TSR?

Gary Gygax: I'd heard about the possibility of Hasbro acquiring Wizards, and thus TSR, back in early June of last year. I was really surprised when the deal went through, as I had thought with the success of the *Pokemon CCG* that Wizard's would remain independent and go public.

While I was a little nervous at first, it seems that Hasbro has it right. With Peter Adkison under contract as CEO of Wizards for five years, and clearly Peter is doing a superb job there, it's clear that Hasbro is savvy, won't be "messing up" the hobby gaming end of things.

What is very positive in all this is the added capacity that Wizards now has to reach into the mass market to promote hobby gaming. I believe that we will see an increase in the audience for our sort of games because of the acquisition. Thus, in all, it seems a good thing.

Pyramid: How does it feel to be partly responsible for the creation of an industry?

Gary Gygax: Very satisfying, of course, to know that so many people have had so much fun and enjoyment -- even better careers and all -- because of my efforts. It is something I am proud of. . . not to mention that because I still love creating and playing games I'm damned happy I did so that I can keep on earning a living thus. :)

Pyramid: You've been in this industry since the beginning, how has it changed?

Gary Gygax: When Tactical Studies Rules (TSR) published the *D&D* game in January 1974, nobody had heard of role-playing. The bigger audiences for hobby games were boardgamers (maybe 50,000 total), and the secondary one was military miniatures (perhaps 10,000 players here in the US). There were no "specialty" dice manufacturers either. It was a real selling job to get distributors to pick up the game. Retail outlets for hobby games were few and far

between.

In the years since then the whole picture has changed. Now it isn't a matter of whether or not RPGs are viable as a game form, not a mere fad. Rather, it is what *new* RPG/RPG form is going to crack the market.

LARPing is here, and it is good!

Computer RPGs outsell paper ones.

Online RPG play certainly has more participants than do in-person games.

Today we have a mature industry, one that has had 25 years to reach where it has now. The changes are astonishing.

Pyramid: Many think that the gaming industry is dying. Do you think this is true?

Gary Gygax: Dying? To the contrary, it has never been healthier! It has been observed that the paper game market is overcrowded, but that will take care of itself. Meantime, interest in RPGs, after flagging for a time, is again on the rise.

Although some decry the *Magic: The Gathering CCG*, for it did impact RPG sales for awhile, I hold that the new game form was a boon to gaming. It greatly increased the number of gamers, and MtG has pretty well established itself as a "classic" not too. CCGers are gamers, after all. Furthermore, it seems evident that some percentage of them are now investigating RPGs.

With the phenomenal success of the *Pokemon CCG*, things are even better. I predict that there will be a progression of play from there to *MtG* to RPGs--actually mainly to the *3E D&D* game, naturally. Still, *all* RPGing began with the *D&D* game. That didn't prevent a whole host of competing publishers to develop. The same will prove true about the growth of participants I foresee. CCGers who begin role-playing with the *3E D&D* game will not necessarily stay with it. The whole industry will definitely benefit from the efforts of Wizards, although it will be a gradual process.

Actually, any "loss" likely to be experienced now will be gamers moving to CRPGs. However, I believe this will be negligible at worst. Who says that computer role-playing fans can't be gained by paper publishers through aggressive marketing? CRPGs also lead to online gaming participation. This, in turn, encourages participants to pick up paper games.

The market share for RPGs is surely largest in the CRPG field, although Internet gaming is likely to take over first position fairly soon. So what? The whole of the audience for RPGs is *increasing*, and that means that the game form is alive, well, and highly viable.

Pyramid: Many people view Fantasy as a genre that has been, to say the least, completed. Do you think there is anything fresh that can be done with fantasy?

Gary Gygax: I will not take the opportunity presented here to attempt a plug for my own new FRPG. What I will say is this:

Fantasy has been the most popular genre for RPG play since 1974. There have been more FRPGs published than all other genres put together. Is there nothing-new possible for it? Sure. I just can't say exactly what it will be. With the creativity of gamers in mind, though, I believe that there will be innovations yet to come in paper RPGs. The main place to look for fresh presentation though is on the computer.

Pyramid: On your homepage, you have some very interesting chess variants ([X-Factor](#) and [Dragon Chess](#)). Are you ever going to publish them for distribution?

Gary Gygax: Thanks! I appreciate your kind words regarding the chess variants. Because I love games (chess being a great favorite of mine) whenever the creative muse strikes, I design regardless of the commercial potential for the work at hand. (You should see some of the computer game premises and designs I have kicking around on the hard drive.)

To answer the question though, not likely. Pretty slim chance for getting chess variants published, so I haven't even attempted to find a publisher. Mainly I wanted to share the games with fellow buffs.

Pyramid: I see on your site, [The Creative World of Gary Gygax](#), that you have created a new company called Hekaforge productions. What is Hekaforge working on now?

Gary Gygax: Hekaforge Productions is doing one thing, and one thing only. It is publishing the ***Lejendary Adventure RPG*** system. As of now, there are about a dozen game products lined up. By the time this interview hits, all three of the core books for the system will likely be in general distribution: the ***Lejendary Rules***, the ***Lejend Master's Lore***, and the ***Beasts of Lejend***books. Following them, not in this particular order, we have a world setting book, three sourcebooks, four adventures, a GM screen, and some "suitable for use with" adventures slated.

There are a number of freelance designers working on more sourcebooks and adventures, so we expect to keep the pipeline filled with support material.

Also, there is one new genre addition, the ***Lejendary Asterogues Fantastical Science RPG*** now in beta-test form, a sourcebook/adventure platform for it working, and a couple of other genre additions being written by freelancers. We plan to make the ***LA RPG*** a large and multi-genered one.

Pyramid: What makes the **Lejendary Adventures** *stand out from the rest of the fantasy based games out there?*

Gary Gygax: While I would much prefer to have someone else answer this question, I will take a fast pass at it.

First, the ***LA RPG*** is based on skills, not a character class. The rules, including those for skill use, are "light," and allow the Lejend Master, and players, a lot of room for doing things "right" -- the way *they* want to role-play.

Second, the scope for character creation, the ***LA*** game "Avatar", is tremendous. The player can craft just about any sort of heroic (or other) sort of character desired, build in background material so as to make role-playing that Avatar suit the campaign. Getting into play, creating the Avatar, adventuring with a viable character from the first, is not a major effort. Developing the nature and details of the player's game persona can be as extensive as desired. Likewise, making that character into the sort the player has always hoped for is a matter of extensive interaction with the campaign environment. While the Avatar is pretty able to begin with, attaining a really potent character in the LA game is a matter of years and years of clever play.

Third, the system itself is broad and flexible. It can accommodate just about any style of play without strain. Likewise, it lends itself to both addition and expansion.

Fourth, it is already well developed in its content, and it will continue to be extensively supported, including not only paper material but online with a website, ezine, etc.

Pyramid: Will **Lejendary Adventures** *or* **Lejendary Earth** *be branching out into other gaming devices? For example CCG's,* **Diskwars***, and/or miniatures?*

Gary Gygax: At this time we are not contemplating any such spin-off game material as you cite. Hekaforge is open to proposals, though. As a matter of fact, we do have a couple of online gaming licenses now -- [Macray's Keep](#) for text-based ***LA*** gaming, and RPG Realms for play of the ***Lejendary Asterogues RPG***.

Miniatures would be a nice compliment to the RPG, and with them we would likely then develop a special set of rules for tabletop play. So likely as things progress we will.

Pyramid: Your **[Elder Worlds](#)** *game is available in full online. How do you feel about the online distribution of Role-playing games?*

Gary Gygax: The *[Elder Worlds RPG](#)* as it stands isn't really what it will be. Fact is that I like the environment, but not the current rules. So that is one of the genre expansion projects I mentioned above. Someone is currently at work

adapting the setting to the *LA* game rules, altering things a bit so as to fit the whole.

The small size of the audience for paper RPGs, and the plethora of products now in stores, has forced new RPG publishers to attempt to sell their products online. While I have no problems with the concept, it isn't likely to be much help, for it doesn't address the actual problem. There aren't sufficient customers for all the RPGs already available, and putting product up for sale online isn't going to change that.

Going back to an earlier question, this is the good thing about Hasbro, Wizards, and the *3E D&D* game. There is where there is the best chance for enlarging the overall market for paper RPGs.

Pyramid: Will the gaming store ever die? If so, why?

Gary Gygax: Simply put, no, I think not. There is nothing like going into a shop and actually holding and examining a game product. There is also the general social aspect of visiting the game store. The successful ones encourage socialization, and game play right there, of course.

Consider the success of the Games Workshop outlets, and the fact that Wizards is creating a chain of their own shops. We'll have game shops for a long time to come. :)

Pyramid: Will computers eventually replace dice?

Gary Gygax: Again, I think not.

Pyramid: Oh? And why is that?

To remove the act of holding-shaking-tossing the dice from the player, giving it to a machine, is the antithesis of in-person RPG activity. The GM might wish to use a "dice-bot" for generating random numbers, but not the players. The act of dice rolling is too much a part of the game -- akin to surrogate weapon use, spell casting, etc.

Pyramid: Do you still DM?

Gary Gygax: Of course I still Game Master!

Pyramid: What games do you run?

Gary Gygax: For the past four years I have been the Lejend Master for my *LA* game campaign--with some side excursions to DM original *AD&D*, and even "old time" *D&D* as played with the initial three booklets.

Pyramid: What is your favorite trick or event that has occurred to you throughout the years?

Gary Gygax: My favorite trick remains the fun we had with my son Ernie, then playing Tenser, as I recall. When he wanted to see what a giant had in his bag. (This tale was written up long ago in the *Dragon Magazine*.)

However, of late I had a lot of fun with a group of kobolds inhabiting the uppermost level of my revitalized original Greyhawk Castle dungeons. In play at conventions, teams of adventurers have been able to return to the old setting, and therein a great number of them have come to grief in confronting this kobold band. Originally, some really excellent die rolling -- bad on the part or the players, good on mine (done in the open!) -- enabled the humanoids to defeat a party of nine 2nd level PCs despite having about half of their number knocked over by a Sleep spell at the onset. After several other victories, this kobold group now dresses in blue leather armor, sports brass eagle gorgets, and wears tall bearskin hats. Their continues victories have gained them +1 on their HD, +1 to hit and on damage, and their morale is unshakable. With a leader that is equal to a bugbear, and a couple of assistants of hobgoblin-like ability, they are now virtual masters of the level. If a few more adventurer parties fall to them, I think they might become a force to be reckoned with beyond that. . .

Pyramid: Any advice for those writers or designers who want to get published?

Gary Gygax: Heh! I do professional consulting, and you ask me that? Well, okay, a couple of tips. Look into computer game design if you really expect to succeed. There's greater chance there than doing paper RPGs. If you are bent on paper game design, then count on having to start your own company to get the work published. In all, there are too few gamers, too many RPG systems, so chances for success are slim indeed.

The best bet in paper game design is creating support for an existing and well-established game system. To get to do that, you need to be known -- which means writing and having your material published in a top magazine or ezine (such as *Pyramid*, for instance. :)

Good luck!

"Hit!"
"Parried."
"Hit!"
"Parried."
. . .
"Hit. . ."
"Parried. . ."

Playing out swashbuckling combat under *GURPS* can be rather slow: high active defenses, provided by Fencing or martial arts, mean that most attacks get stopped. A small extension to the Feint maneuver helps with this.

Alphonse and Bertram both have, say, Fencing-18, Combat Reflexes (+1 defense), basket hilts on their weapons (+1 defense) and PD3. This gives them parries of 17. They're skillful, but not inhuman; their combat will be extremely boring to play through.

Simply feinting doesn't do too much good: the defender is most unlikely to blow his fencing roll, and the 3D6 bell-curve means that the attacker is unlikely to make his roll more than about three points better than the defender. If, say, Alphonse rolls 10 and Bertram rolls 13, then Bertram's parry is down to 14 against the next attack. This makes very little difference to his actual chance of making the roll; the combat will still take ages.

A good way to deal with this is to extend the Feint maneuver, and feint again: we called this "stacked feint" when it was developed for an abortive *GURPS 9 Princes in Amber* campaign.

Take the case above, where Alphonse has three points of advantage on Bertram. He could make a real attack and subtract those three points from Bertram's active defense -- but that option doesn't work well.

To make a stacked feint, Alphonse feints again. Those three points of advantage get subtracted from Bertram's skill: Alphonse rolls against his Fencing- 18, while Bertram rolls against 15 (Fencing-18 minus the three-point disadvantage).

Say Alphonse rolls another 10, and Bertram rolls an 11. The attacker has made his roll by 8; the defender has made his roll by 4. Alphonse now has four points of advantage on Bertram.

Of course, if Alphonse had rolled a 16, making his effective skill roll by 2, and Bertram had got slightly luckier, and made his skill roll by more than that (say, rolled an 12 against his effective 15, making it by three), then Alphonse has lost the advantage he got from the first feint. But, most of the time, his advantage will improve.

An attacker is allowed to keep on building up a feint for as long as he likes. Some playtesting -- which became a game in its own right for a few evenings -- demonstrated that it was a good idea to get a skilled opponent's defense down to 7 or so before going for the kill. At this point, using Hit Location and going for a serious wound was a sound tactic. If your opponent survives a real attempt at a hit, you need to start building up that bonus again.

Bertram doesn't go to his doom in ignorance. He gets a chance (roll vs. best of IQ, Body Language, or the combat skill his opponent is using for the Feints) to realize that a stacked feint penalty is building up on him.

To get out of the stacked feint, Bertram needs to break off combat: the classical method is to use a Retreat option on your defense, preferably with a graceful step or jump backwards. Getting into close combat also works, as does scoring damage on Alphonse or anything else that interrupts his concentration.

Interestingly, RPG combat systems don't tend to encourage characters to move about nearly as much as real people fighting with swords do; giving characters a reason to move about makes things look better, and lets you herd an opponent about.

Of course, both participants in a combat can use this rule at the same time. For playability, ignore any interactions between the two accumulating feint bonuses. Leaving it to the characters to decide if they want to Retreat from the advantage their opponent had -- blowing their own advantage -- works well. This can be a tricky decision when you have a fair advantage built up: higher Speed is a huge advantage when both defenses are getting low.

If you use this system, respect more skilful fighters. Using stacked feint in quite a few trial combats, we found that one level of skill more than your opponent gave victory about two-thirds of the time, two more skill levels made it about 80%, and three levels was as sure as a combat system with criticals and fumbles lets it be.

En garde!

Forboldn

by Hans Rancke-Madsen

Art by Tom Peters and Colored by Alex Fernandez

For many centuries Forboldn was a neglected backwater where a few poor settlers battled climate, atmosphere and soil to make a living and barely managed to keep the population level steady. But today all that is changing thanks to massive Imperial aid. A huge terraforming project to change the atmosphere and climate is underway, and new settlers are bringing much-needed skills and muscle to the planet. Everybody agrees that Forboldn is finally going places. But not everybody are satisfied with the direction it is heading. . .

The following description details Forboldn in the year 1117. Events in the main *Traveller* universe and the *GURPS Traveller* universe have not yet diverged far enough to affect Forboldn, so the description is equally valid for both universes. A few notes at the end outlines how things will develop for the *Rebellion* and the *New Era*.

Physical Details

Forboldn is a non-industrial Imperial planet orbiting in the life zone around Ivush, a G0 V star with a mass of 1.04 and a stellar luminosity of 1.05. It is a large, molten-core planet with a diameter of 8,080 miles. The density is 6.05 grams per cubic centimeter (1.1 Earth's density), the mass is 1.16 Earth masses, and the gravity is 1.11 G. The rotation period is 26h 24m 00s and the orbital period is 724.88 days (668.1 local days). The atmosphere is a standard oxygen-nitrogen mix with a surface pressure of 2.11 tainted by high CO_2 concentrations. Hydrographic percentage is 26. The axial tilt is 27 degrees and the orbital eccentricity is nil. Base temperature is 106 degrees Fahrenheit (41 degrees Celsius) giving Forboldn a summer high of 156 degrees F (69 degrees C) at the equator and a winter low of -44 degrees F (-42 degrees C) at the poles. Native life is present.

Social Details

The high CO_2 content of the atmosphere has largely restricted development of Forboldn to the highlands where the concentration is low enough to be tolerable. Though filter masks allow humans to breathe in the lowlands, most people prefer to make their home where they can breathe without artificial aid. 80% of the population lives on the Wueldn Plateau, an area roughly the size of France located in the southern temperate zone, and on other, smaller, high-lying areas. The remaining 20% consists of people with a higher than normal tolerance for CO_2 who are able to survive at lower altitudes and are spread out across the rest of the planet. On Forboldn, where people for many generations have bred for this trait, it is much more common than usual and many Forboldians can survive CO_2 levels that would quickly kill a normal, baseline human. Though strictly speaking this tolerance is distributed evenly along a curve, for gaming purposes it is divided into three discrete levels. Most people will have at most one level of CO_2 tolerance (and that only rarely). Only people from Forboldn and planets with similar atmospheric conditions will have two and three levels.

The land surface of Forboldn is divided into four regions: The Highlands, where baseline humans can breathe comfortably; the Uplands; the Midlands; and the Lowlands at sea level. To breathe comfortably in the Uplands, 1 level of CO_2 tolerance is necessary, in the Midlands 2 levels are necessary, and in the Lowlands 3 are required. A yoga-like discipline akin to Breath Control allows an adept to breathe air one level above his tolerance level as long as he is conscious.

Forboldn's population is presently undergoing a rapid growth due to a large number of immigrants being ferried in from the Imperial core. The official figure was roughly 3 million as of 001-1117, but a large number of people living in the lowlands refuse to cooperate with the census and is not included in the figure. Estimates range from 100,000 to

half a million, with 200,000 being considered the most likely figure.

The planet is governed by an organization called the Forboldn Meliorative Society, LIC, a company in which most citizens have stock. The control rating is 3. The technology is mostly TL 5 except for the rapidly expanding city of Ashar located next to Forboldn Starport which is closer to TL 10 due to recent massive imports of equipment from Regina.

History

Forboldn was settled in two stages, in 83 by the Asharii, a group of exiles driven from Lishun during one of the Imperial pacification campaigns, and in 141 by the Gugurans, a group of utopians from Dagudashaag with a fake grant to the planet sold them by a swindler. The result was a smoldering brushfire war between the two groups that lasted for five generations. In 234 the Ashari government was recognized by the Emperor as the sole legitimate government of Forboldn and immediately petitioned to join the Imperium. In 250 Forboldn and six other planets in the Regina Cluster was formally admitted. With Imperial aid the so-called Endless War was formally ended in 286, but accidents and mismanagement combined to keep the settlers poor and their technology low. With the pressure of the Endless War removed, the two rival settlements spread out and degenerated into numerous squabbling villages unable to cooperate on anything. Many settlers moved to areas far from their former neighbors, thus spreading the sparse population out across much of the habitable land. The world government soon found it impossible to govern the widely dispersed population and, though never formally dissolved, ceased to function within decades. No Imperial noble was ever appointed for the planet.

Terra Incognita: Forboldn

Over the years the distinction between Ashari and Gugurans blurred and became overridden by a general dislike of anybody not belonging to whatever local community one belonged to. From time to time larger political units arose, usually by force of arms, but they never encompassed more than a fraction of the planet and seldom lasted for more than one or two generations.

In 987 the Ministry of Colonization decided to attempt to utilize the many hectares of prime land not in use on Forboldn. This, however, provoked the locals into reviving the colonial government that has lain crippled for centuries. If the locals could not agree on anything else, they could at least agree that they did not want any outsiders muscling in.

For many decades the situation remained deadlocked until the ministry in 1089 finally persuaded the locals to allow the formation of the Forboldn Meliorative Society, LIC, a company in which they all received stock. The lure was the sizable subsidies promised by the ministry. The cost was an agreement to let in more settlers.

The plan was to import 1 million new settlers from 1110 to 1120, each new settler receiving roughly the same amount of stock as the original 2.2 million inhabitants. With their skills the tech level and wealth of the planet would hopefully increase to the point where more new settlers could be attracted with less inducement. The Ministry of Colonization goal was a healthy TL 9-10 agricultural planet with around 10 million inhabitants.

In 1110, when the first batch of new settlers arrived, that plan was already going awry. Parts of the project were several years behind even before the 5th Frontier War caused them to come to a screeching halt. Unfortunately, the plan involved recruiting new settlers in the Imperial core and this part was not affected by the war; the settlers began arriving exactly according to schedule. But the infrastructure necessary to house them, feed them, and put them to work had not been built. It became necessary to divert project funds to buy supplies and ferry them to Forboldn. Worse, the local Colonial Office officials have decided to cover up the problem, so the Ministry of Colonization

believes everything is going fine and colonists keep coming. So far the Colonial Office has managed to keep most of the newcomers alive, but little progress has been made in making them self-sufficient.

Forlodn Meliorative Society, LIC

The corporation that governs Forboldn and controls the implementation of the Forboldn Project was formed in 1089 in cooperation between the population of Forboldn who contributed ownership of the planet and the Ministry of Colonization which contributed the capital. Stock ownership in the new company was: Original settlers: 51%; First wave of new settlers: 20%; Ministry of Colonization (for later distribution to more new settlers): 27%; Imperial Family: 2%.

There are 100 million shares in all. 51% of the stock was distributed to everyone registered by a census in 1090, a total of 2,166,114 for an average of 23.5 shares apiece. The shares were distributed by a formula that gave adults more and children less than the average number of shares. The new arrivals from 1110 onwards each received 20 shares regardless of age out of the Ministry's allotment. Due to some redistribution from sales and inheritances typical holdings today range from 10 to 60 shares.

A 12 man Board of Governors is elected every six years to run the company and Forboldn. Voting is public with each citizen having as many votes as he has shares. Shares belonging to minors are voted by their legal guardians. The most recent election was in 1113. Very few newcomers voted and the ministry refrained from using their 27%. All twelve current board members belong to the old settlers. Their efforts to govern has been generally ineffective in the face of recent setbacks, growing corruption, and increasingly radical opposition.

Other Power/Interest Groups

The Colonial Office

The Colonial Office is a Ministry of Colonization agency with branches organized on the subsector level to implement the policies of the ministry. Sir Louis Farlane, the Director of the Duchy of Regina branch, has high hopes that when the Emperor gets around to appointing a baron for Forboldn, something that he is expected to do soon, he will choose Sir Louis. If, that is, Sir Louis can manage to hide the problems that are plaguing the project from higher authority.

The office is dissatisfied with the level of cooperation it is receiving from the Board of Governors and has been trying to seize greater control of the project.

The Shareless

The 51% of stock was distributed to everyone registered by a census in 1090 and the new arrivals from 1110 onwards each received shares out of the Ministry's allotment. But no provision was made for the children born to the citizens since 1090. Some families have shared the stock with their new children and other children have inherited from deceased family members, but there is a large group of "angry young people" who feel cheated and are causing a lot of unrest.

The Outbackers

Another disenfranchised group, or rather, a large number of groups, are the outbackers. These are small isolated communities in remote, inaccessible areas, clannish and suspicious of strangers, whose favorite recreation is shooting tax collectors and census takers and feuding with their neighbors. Having refused to cooperate with the census of 1090, they did not receive any stock.

One group of outbackers that merit special mention is the Swampers. They live in the great jungle swamps south of the Neasnik Sea and can become very old thanks to their diet which includes a species of tree krakens whose liver has

anagathic properties. They marry late and have few children. They are excessively reclusive even by outbacker standards.

The Constabulary

A ranger-like patrol was established in 1096 with planetwide jurisdiction and is trying to tame the outback. Until recently corruption was as rife in the Constabulary as in any other branch of the administration, but the new commandant, Oongor Verngoldn, has fought a hard fight to clean up the organization.

Tree Kraken Poachers

Tree Krakens are a family of arboreal animals native to Forboldn. Different species can be found at all altitudes. Some of them have a liver-like organ with anagatic properties. For this reason they have all been hunted extensively over the centuries, and some species have become extinct. All Tree Krakens are now protected by Imperial edict. Tree Kraken poaching is a dangerous, but potentially very profitable, venture.

Algae project scientists and eco-guerillas

One very controversial part of the Forboldn Project involves seeding the oceans with super-photosynthesizing algae designed to remove the excess carbon dioxide from the atmosphere. Some environmentalists claim that this will cause the extinction of millions of native species. Others go further and claim that the level of free oxygen in the atmosphere will become dangerously high and thus just replace one atmospheric taint with another. The powerful environmentalist organization The Pan-Galactic Friends of Life are lobbying the Emperor for a ban on the project. Meanwhile scientists are busy seeding the oceans and more extremist groups than the PGFL are trying to sabotage the project, so far with a considerable amount of success.

Future Developments

Rebellion

In the main Traveller universe, the Rebellion puts the final nail in the Forboldn Project's coffin. The last 300,000 of the original million settlers never arrive, and with the loss of the ministry subsidy the economy does not improve nearly as much as had been hoped for. There is some slight improvement, however, and despite difficulties the company does survive.

New Era

Eventually the Regency's new Ministry of the Interior takes over the MoC and Imperial Family stock, most of which is distributed to refugees from other Imperial planets who are resettled on Forboldn - incidentally causing a blurring of the division between the first two groups of settlers. In addition, some of the original stock is sold to wealthy refugees. The population increases to 4.5 million in 1200, including 1.25 million refugees from Imperial worlds. In the next two years almost 1.5 million refugee Zhodani arrives. In 1202 stock ownership of the company is: Original and 'new' settlers: 65%; Imperial refugees: 33%; Ministry of the Interior: 2%.

GURPS Traveller

In the *GURPS Traveller* universe the Colonial Office stages a coup in 1119. They use their 27% of the stock to elect a puppet board whose first act is to ask the Colonial Office to step in and take over the reins of government. Resentment among the old settlers runs high, but at first the moderates prevail; except for a few individual acts of violence, reactions are mostly confined to sending a complaint to the ministry. The whole planet is a powder keg, however, and if something does not happen to relieve the tension, a civil war is imminent. Meanwhile, the Colonial Office continues

to issue cheerful progress reports.

Adventure Seeds

- Recently a bomb exploded aboard Algae Seed Station Four, a huge platform floating in the northern part of the Neasnik Sea near the equator; fortunately without doing too much harm. The Evolutionary Protection Army claimed responsibility for the deed. The EPA is a radical environmentalist group which oppose any interference with what they call "natural evolution." They have been known to bomb desert reforestation projects and rainforest logging operations at the same time. Dr. Flora McKenzie, the manager of the station, expects further attempts to sink the platform and is looking for a group of people to beef up security. The job will be complicated by scientists who resent any precautions that interfere with their work, a turf war with the old security guards who are sensitive about their failure to prevent the outrage and suspicions that one of them helped the EPAs, and the necessity of wearing protective suits against the heat and the CO_2.
- The PCs are contacted in a roundabout fashion by Oongor Verngoldn, the Commandant of the Forboldn Constabulary. He suspects that the branch office in the Aur Uesh District has one or more bad apples in it. Worse, from various incidents he also suspects that someone in his own office is in league with these corrupt officers, so he dare not send in any of his own people to check. He offers to pay the PCs handsomely if they will conduct an independent investigation.
- A journalist has been killed or gravely injured, and somehow the PCs have come into possession of his belongings. He may have remained conscious long enough to ask them to bring his belongings to a wife or an editor, or they may just have found it hidden away somewhere. It soon becomes clear that at least three, possibly more, different groups all want something that is hidden in the luggage. It turns out to be a holocrystal concealed in the handle of his toothbrush. The crystal contains meticulous documentation of accidents and mismanagement in connection with the Forboldn Project and of how the Colonial Office has covered up these incidents. Obviously, one of the groups that are after the crystal is working for the Colonial Office. Another is working for the local government. The rest are agents of several different Imperial nobles -- Marquis Evan of Roup and Marchioness Josephine of Efate to mention two (Count Evan and Countess Josephine for the main Traveller universe). These Imperial nobles all hope that when the Emperor gets around to appointing a baron for Forboldn, the new baron will become their vassal. Each hope that if he or she is the one to expose the problems with the Forboldn Project, he or she will be assigned the task of cleaning up the mess and thus be in a position to impress the Emperor with his or her zeal and efficiency. For added complication make the content of the crystal encrypted. The key is held by someone else: a colleague who is on the run, perhaps, or an unknown hotel thief or the aforementioned wife/editor.

Supplementary Reading

GM's may be interested in two books by Paul Anderson, *Orbit Unlimited* and *New America*, which features a planet with an atmosphere similar to that of Forboldn.

Pyramid Pick

Star Crusade (for Fading Suns)

Published by [Holistic Design, Inc.](#)

By Bill Bridges, Samuel Inabinet and Rustin Quaide

144 pages, $25.00

Star Crusade is the first major campaign expansion to *Fading Suns* since the game's release in 1996. Originally scheduled as part of a boxed set, this book is the first of two volumes describing over two dozen new worlds for this science fiction role-playing game. These worlds were all lost to the inhabitants of the Known Worlds after the disastrous collapse of the Second Republic. For centuries, their jumpgates were closed, blocking any passage to them. Now, a few brave souls have found ways around this problem, opening up a new frontier for adventure. In addition, *Star Crusade* provides a great deal of information about two major enemies of the *Fading Suns* setting: the Kurgan Caliphate and the Vuldrok Star-Nation, as well as suggestions on how to integrate their worlds into an ongoing epic.

The *Fading Suns* rulebook describes the *Kurgan Caliphate* as a mysterious vaguely Arabic empire against whom a vaguely Hispanic noble house, the Hazat, wages a lengthy war. Borrowing a page from El Cid and the Reconquista, the Hazat have asked for support from the Universal Church of the Celestial Sun by emphasizing the heretical religious views of the Kurgans. Beyond that, we know very little.

Star Crusade changes that. We learn the history of the Caliphate, including the odd story of its founding by a megalomaniacal merchantman and its development over the centuries. We also learn about its society, culture, and religion. For example, the Kurgan faith of El-Diin is in fact a variant of the Universal Church. Among its many heterodox teachings are that the Celestial Sun has a physical position in space-time and that the Prophet Zebulon (founder of the Church) chose a successor to lead the faithful after his death (the Caliph).

Fading Suns has always made a good effort to provide dramatically interesting explanations for its retro-medievalisms. The first chapter of the book is no different, offering workable justifications for the pseudo-Middle Eastern cast of the Kurgans. This isn't to say the Kurgans are a completely believable culture, but they aren't merely "Muslims in space" either. The medieval Islamic pedigree is there to be sure, but plenty of other elements are at work too, ensuring the Kurgans don't strain one's credibility overly much.

Star Crusade also offers rules for Kurgan theurgic rites and a complete character generation sequence. This information is complemented by detailed descriptions of seven worlds of the Caliphate. Employing the format first used in Imperial Survey booklets, these worlds range from battle-torn Hira to arid Al Fashir to the capital world of Irem. The level of detail and variety in these descriptions is remarkable.

If *Star Crusade* had only included information on the Kurgans, it would have been worth the price of admission. However, it devotes another large section of its pages to the Vuldrok Star-Nation. The *Fading Suns* rulebook has always given the impression that they Vuldrok were a Viking-like culture and so they are to an extent. Beneath their Nordic veneer, however, you'll find a loose alliance of several cultures (including African and Native American ones) united in raiding more "civilized" societies for booty of all sorts. Like the Kurgans, the Vuldrok aren't the most plausible of cultures, but the book makes an enjoyable case for them and that's what's really important. I can't imagine a Game Master (or player) who'll read this section and not wish to include the Vuldrok in their games because of cultural implausibility.

Like the Kurgan section, we get a lengthy look at Vuldrok history, culture, and religion, along with a new character generation sequence, theurgic rites, and other abilities. Likewise, there's a gazetteer of five Vuldrok worlds, each one providing enough details for many adventures on its surface. Anyone wanting to inject tales of epic heroism and honor will find these planets much to their liking.

The book concludes with a lengthy appendix containing odds and ends that didn't really fit anywhere else. First we get an overview of the worlds to be included in *Star Crusade*'s upcoming companion volume, *Lost Worlds*. We also get a look at a new noble house and two alien races, one of them believed long extinct in the Known Worlds. Most importantly, the appendix provides information on something no faux Viking should be without: runes. As described here, runes are ancient Anunnaki ideographs invested with mystical power. Runecasting is thus a new supernatural ability on par with psychic abilities and theurgy. I approve of their inclusion greatly, as they not only add flavor but also tie in nicely with the *Fading Suns* background.

Overall, *Star Crusade* is an excellent supplement and a model for any game's campaign expansions. While there are still far too many typos and not enough of John Bridges' evocative art, this supplement is very worthwhile. It opens up new areas of the *Fading Suns* universe without introducing a grand metaplot to spoil ongoing games. Moreover, it never provides background for its own sake, preferring that details serve the goal of creating exciting adventures. It's rare to see gaming supplements like this anymore. I heartily applaud Holistic Design's approach and hope that future volumes continue in this vein.

-- James Maliszewski

Pyramid Review

Beyond Science (for Alternity)

Published by [Wizards of the Coast](#)

Written by Sean K. Reynolds

96 pages, $18.95

Subtitled *A Guide to FX*, *Beyond Science* is a collection of "FX (special effects) powers" and rules for including such varied elements as super powers, magical spells, and religious miracles into an *Alternity* campaign. Especially useful for *Dark*Matter players*, I was personally surprised the book was published as an *Alternity* book rather than a *Dark*Matter* specific sourcebook.

At a glance, *Beyond Science* is an attractive and well written sourcebook. At its core the book truly begins to shine as is evident when the book is broken down and examined chapter by chapter.

Chapter One, FX Rules

The first chapter details the specific game rules of FX powers for use within the *Alternity* game system. Presented along the same lines as the psionics skills in the *Alternity Players Handbook*, players and gamemasters will find the rules familiar and easily understood.

The FX powers are presented as skills which are purchased in the same manner as mundane skills already presented in the basic rules although priced at a higher level than those more mundane skills. For gamemasters wishing to run a high level FX campaign, an optional rule -- FX Achievement Points -- is included. FX Achievement Points increase the number of starting skill points and may only be used for purchasing FX skills.

FX Powers have a cost for each use (usually just 1 point but some go as high as 3 points), drawing from an FX Energy Pool much like psionic skills draw from a psionic energy pool. The shortest way to describe it is simply: FX Power game mechanics function almost exactly like psionics.

Chapter Two, Using FX in the Campaign

In this chapter rules are included advising the gamemaster on how to include FX in a campaign. Three levels of FX are detailed, ranging from realistic to superheroic along with brief descriptions of possible campaign ideas. The chapter opens with a series of questions and answers regarding the inclusion of FX in a campaign (Are FX a new element to the world?, Can anyone use FX?, How common are FX, etc.) which can help a gamemaster make some very important decisions about FX and what role he wants them to play in his campaign.

The chapter closes with four different short campaign ideas. While a nice addition, they are too brief (all four fit on less than a single page) to be of any real use to a gamemaster who doesn't have the time or energy to create a completely new campaign setting on his own. They aren't even all that useful for single-session games such as those run at conventions.

Chapter Three, Arcane Magic FX

At this point, the book falls into a pattern of listing FX powers and their descriptions. The use of each chapter is

entirely dependent upon what the gamemaster plans to include in his campaign. If magic is your selection, this chapter will give you a hint of what is possible. Including magic in a campaign will almost certainly require the gamemaster to create several more "spells" in order to give mages a larger variety of choices. If a sourcebook on *Alternity* magic was produced it would go a long way toward making this chapter more useful (and most likely, obsolete).

A nice touch was the inclusion of seven magic schools. Each school has a specialization. This helps mages from different schools to at least have different spell selections than other mages (and keeps it so they aren't all carbon copies with the same choice of spells). The best way magic could be included in an *Alternity* campaign would be to make it available to only one player character in the campaign and then rare amongst NPCs.

Chapter Four, Faith FX

Faith FX are religious "miracles" or skills most easily explained to gamers as "*AD&D* clerical spells." As was done in chapter three, Faith FX are broken into categories referred to as groups or pantheons. This chapter is as useful to GMs as the Arcane Magic chapter. It suffers from the same problem of simply being too short. The author did make some interesting selections for pantheons, from voodoo to druids, and a few "fictional" religions thrown in just to keep everything balanced.

Chapter Five, Super Power FX

Covering everything other than magic and religion, super powers are best known to those of us who read comic books. This chapter, while basically identical to chapters three and four, does include a fun sidebar on radiation and its effects in a super powered campaign. If you have any interest in including such powers as shapeshifting, an assortment of different Chi powers (could be fun for those of you wanting to run mystical Hong Kong-styled adventures in *Dark*Matter* or *Star*Drive* campaigns), all kinds of fun energy powers, and even the ever-famous Wallcrawling ability, you will love this chapter.

Unfortunately, as with Arcane Magic and Faith, if super powers are not what you want in your campaign, this chapter will be almost a complete waste of your reading time.

Chapter Six, FX Creatures

This chapter was the biggest surprise I found in the book and turned out to be my favorite. Presenting a wide assortment of magical and super-powered creatures (immediately starting idea after idea for cool *Alternity* adventures in my head), GMs should easily find this chapter alone worth the price of admission. Each creature includes a short description and the game stats necessary to include it in a campaign.

Creatures include angels, demons, elementals, constructs (especially cool for *Dark*Matter* campaigns), and a few undead (specifically ghosts, skeletons, vampires, and zombies). This chapter alone warranted *Beyond Science* being larger than 96 pages.

Chapter Seven, FX Devices

This is a very short (just 3 pages) chapter describing how to construct what are labeled FX Devices but are better known as magic items, holy relics, and superscience gadgets. Some examples are included and the construction process itself is fairly simple requiring just 4 steps (what FX skill the device duplicates, how it works, how it gets power to operate, and finishing details). It's a decent system, a quick system, and one that feels more "tacked on" than anything else in the book and easily the worst chapter.

Final Opinion

At its core, the problems with *Beyond Science* are all caused by space constraints; the book is just too small to give a detailed examination of each FX power category (or type of creature) and would have been a much stronger book (and

more valuable) if it had been about 160 pages rather than the published 96. A longer book would have allowed the author to expand upon his work, presenting more useful information to gamemasters and players than the short listings of FX powers he managed to squeeze in.

This isn't to say I disliked the book. I thought considering the space he had to work in, the author of **Beyond Science** created a well-written product filled with numerous, excellent ideas a determined gamemaster could easily work into a campaign. The enclosed appendix on creating new FX skills is a blessing for GMs with the time to use the rules. For GMs without time to create new FX skills, I would suggest allowing players to create them and hand them over for approval (with perhaps just a little tweaking to make them more balanced).

-- Philip Reed

The Ugly Yellow Underside

The Promise of Utopia

In the beginning, when the net was fresh and new, I was told by those who were smart and wise that the online world was going to be the new utopia - for real this time, honestly. I could hook up and connect and communicate with exciting people all over the world. The positive effect on mankind was going to be enormous. According to the hype, through the power of the net I would evolve into a more sentient being. Heck, if I paid attention, I would actually be able to *feel* it happen. One minute, I'd be another poor jerk sitting on my butt in front of the television watching *Who Wants to Be a Millionaire* with a beer in one hand and a bag of Doritos in another, and the next thing I would know, the monolith would be in my living room and I'd realize it was full of stars.

But the supposed evolution, promised to us by Microsoft and Apple and Sun during the Super Bowl, never happened. Here we are, on the edge of the new Millennium, and the only thing the net has successfully brought into our living rooms are retouched images of Lara Croft, naked. We have porn and eBay and networks dedicated to "women's issues" and a continuous stream of pointless pop-up web ads and even *Who Wants to Be a Millionaire*. We've actually been able to *devolve* like a bad *Star Trek* episode.

Woman gamers, being a resourceful and tenacious lot just like their male counterparts, have been able to overcome the tepid mediocrity of the failed utopia and game in the net[1] anyway, just like they're able to game in loud restaurants, noisy dormitory rooms, and basements filled with three inches of runoff water. They've joined the net community and helped to drag gaming online in every form imaginable, from the simplicity of email to the insane complexity of the graphical MUD. They've finally come out to play.

Unfortunately, it's not a perfect utopia out there. Most of the time, it's not even a good place to be, because, like soylent green, it's made of people.

The Reality of Dystopia

The online gamer learns two things very quickly.

The first is that the textual medium, while belying a façade of antiquity harkening back to the computer dark ages, is extremely addictive. There is something to be said about the power of text and its ability to draw both the reader and the writer into its weave. It seems innocent enough, but once the player has learned to interact in the storyline, he or she is hooked. No amount of fancy graphics or fast hardware will ever replicate the soul-sucking addictiveness of the immersive experience where the player can control their every description, action and fantasy just by typing.

The second is that the net is full of sociopaths.

It's a giant freak magnet. It should have a big, glowing, neon sign which reads, in 100 foot tall letters, "If you're unable to function in human society, please, game here! There are dozens of fine people you can accost with your own personal neurosis! Come sign up for a thirty day trial, no questions asked!" I think I have several pieces of spam that use this as their advertising slogan.

There are many fine essays written about law, ethics and morality in cyberspace, but the fact remains that some human beings are just monkeys with the unerring ability to hit the right combination of keys and spit out Shakespeare's *Hamlet*. It's an unconditional fact that, as part of the online gaming community, I'm going to be approached, hit on, felt up, mugged, murdered, and forced to listen to someone's personal problems for hours on end. I'm going to run into people who believe everyone else's characters are just disposable waste, and those who are unable to separate the game from reality. It's unclear which of these is actually the worst offender, but after sitting through an unending stream of "age/sex/location," the common fishing lure to reel in cybersex partners, it makes me start to wonder about the

continuing existence of the medium, let alone that of the human race.

Freaks and Weirdos -- The Normal People

It's the freaks that get me down.

It's entertaining to be a woman in the online gaming circuit. As this Norwegian approaches me for the fiftieth time to come back to his private room bouncie bouncie, I start to feel a little disturbed. But when I switch my gender and my name, and a suspiciously different Norwegian starts hitting on me, asking me to come back to *her* room for deceptively similar bouncie bouncie, I start to think the Japanese rite of seppuku might not actually be a bad thing to try.

Cybersex is just part of the medium. After being inundated with mostly naked computer game icons, a litany of scathing exposes warning me to "protect my children," and the endless parade of Sally Jesse Raphael episodes focusing on the evils of cyberspace, this sort of behavior can hardly be condemned, let alone chastised. It's as if society has buckled under and accepted that the entire point of the net is to allow those who are otherwise limited in the relationship department to fill their late Saturday night with something other than reruns on the Playboy channel. It's almost encouraged for the relationship-crippled to see women as sex bait in the cyberspace public arena. I just wish they would wait until I'm done gaming.

The sins of the net are hardly limited to men chasing women. A fine observer of online digital life would be able to watch an entire anthropology of sexual behavior including, but not limited to, women chasing men, women chasing women, men chasing men, and the occasional nymphomaniac rabbit in a ball gag. From all the backroom hanky-panky, I would almost expect the introduction banners on the games to read, "Welcome to my MUSH. I kiss you!!!"[2]

The sociopathy of the typical online mental case isn't limited to the relatively innocuous approaches for some quick digital nookie - those are an accepted fact of life. The real problems come from those who are either unwilling to be a part of the game or get so into the game that they no longer live on our plane of existence. They represent the far ends of the gaming spectrum - the two different types of online predator who gladly give online gaming the bad name it occasionally rightfully deserves.

Those who dwell in enmity toward the online community pose their own special problems. They're the ones who will interrupt gaming scenes with a little casual murder for their own personal entertainment or, on discovering an ability to not only pose[3] themselves, but also other people, happily force others to pose for their own greedy amusement. They're the ones who see the games, not as a land of earnest gamers coming together as a community, but as a place filled with little nerdy pinheads who are easy prey. And the sad fact is that this particular kind of digital vermin is usually male, and he is willing to avail himself on anyone who comes across his path - especially women, if given half a chance. Any player, male or female, is going to feel somewhat humiliated by this kind of activity, and no one wants to be player-killed or be subjected to the digital version of rape, regardless if it's "real" or not. Even the revenge fulfillment that accompanies digital justice, through the process of either booting the character and changing their password, or applying a site ban to keep the offender from logging back in, cannot fully recompense for the sexual exploitation of a few key poses at the hands of a mentally unstable player - and anyone who even contemplates digital rape isn't particularly stable to begin with. As the unmentionable side of netsex, this happens all too frequently, yet, in certain mediums, it is all but unavoidable. In IRC, it's ever present, almost as if this sort of childish antipathy was part of the fabric of the underlying network. They're predators, clear and simple, and the idea is to not be their quarry, or let them ruin the game.

On the flip side are those who are so involved with their online universe they can no longer separate the fantasy of the online game from reality. They are those who announce from the highest mountain that their character isn't *just* a character, it really *is* them, a little digital representation of themselves in all their wonderful glory, and we should be thankful that they came to game in undiluted purity. When things go wrong, and they always do, it isn't because of them, it's because of the game. These are people who will actually *contemplate suicide* if anything happens to their character because, if their character was dead, they would no longer had a reason to live. Without the culture of the online game, which is on twenty-four hours a day, seven days a week, these gamers no longer find any purpose in their

lives. They lend a certain amount of credence to the hysterical reports in the news of Internet addiction, because without the game, these people would find themselves lost in a sea of unmitigated reality. They *need* the game, and they're willing to bend, twist, and push people out of the way to get it. It's not just another Vampire MUSH or Planescape MUD, it's their entire lives. And the sad fact is that most of these gamers are depressingly female. While there are a large number of guys who fill out the ranks of the neurotically addicted, the majority of these wonderful additions to our gene pool are the friendly gals that we're all frantically introducing to the role-playing scene. Occasionally, we all get what we ask for.

In the middle of this mess of rampant hormones and neurosis is the run of the mill gamer - a fine, upstanding specimen of the human race who has come to the game to do nothing more than play. Neither freaky nor overly normal, neither antipathetic nor neurotically obsessed, these gamers, both male and female in equal doses, fill out the rank and file of most online games from the WebRPGs to Ultima Online. They protect themselves with the power of **/ignore** and **/gag** commands - the commands which allow players to ignore all messages from the offender and gifts from the Internet Gods - and focus on the game. They are the gamer who navigates the dangerous waters of the freaks and weirdos that the Internet attracts like a moth to a bug zapper to seek out the private IRC servers, the application-only MUSHes and the closed PBEMs so they can play their *game* unhindered, unaccosted, and safe while avoiding the large, public arenas. With them, online gaming is the undoubted future of role-playing and ensures a long life for the hobby as a whole. Without them, the online scene would be handed over to those would abuse it with a smile and a wink.

The net *needs* gamers - normal gamers, men gamers, women gamers, happy gamers, and gamers who want to game. But... from what I have seen, I have seen the future, and I might need therapy.

The problem is that the Internet has not presented anything new to our culture, except, possibly, Beanie Baby porn. All it has done is magnify what already exists, and what exists isn't so great. Human beings are human beings, and they bring their humanity online with them, for better and occasionally for worse. It pervades every corner of the net, and it squats over the games like a hulking beast reminding us that, for all our technology advances, the net is still a human creation, and these are human beings who play the games - for better or for worse.

So. Are you aware of the power of the Internet?

Next Time

In response to the WotC survey results, everyone, everywhere, are running polls to determine how many gamers there actually are. And guess what? There aren't many women who game. Not even me - which came as a bit of a shock, lemme tell ya. And heck, I'll tell you just why there aren't that many women in gaming.

* * *

[1] See the original essay, [A Very Introductory Guide to Online Gaming](#), for an overview.

[2] [Salon Magazine --- I Kiss You!!!!!](#)

[3] Pose: There are two kinds of ways to express oneself in a real time medium -- speaking and posing. Posing conveys an action. For example, typing `pose jumps for joy.` displays `'yourname' jumps for joy.` A variation, emitting, is a command without prefixing your character name. For example, typing `@em The fried chicken throttles Lucy.` produces `The fried chicken throttles Lucy.`. Emitting is also called *spoofing*.

Ether-Gods of Mars! The SYRTIS Dossier

"'How long you been here, Grandma?' said Lustig.
'Ever since we died.' she said tartly."
-- Ray Bradbury, "Mars Is Heaven"

Every now and again, you just want gumbo. I've had some ingredients simmering away for a while, waiting to be dished out in a column or two. Among them, the notion of Mars as afterlife I mentioned <u>a few columns back</u>, the overlapping fads for Martian communication and spiritism at last century's end, some peculiar hints in Brazilian candomblé and Haitian vodoun, and the odd career of George Ellery Hale. This week, I'm dumping them all into a roux of **GURPS Steampunk** ether and **GURPS Voodoo** spirit world, and serving up a campaign frame bubbling with weirdness. Let's kick it up a notch.

"One of [Kardec's] principles was that the spirits form in space groups or phalanxes of entities on a common moral or intellectual level that came together as a result of their affinities . . . And was it not likely that these groups in interplanetary space should obey leaders who might well be the gods of the candomblé?"
-- Roger Bastide, *The African Religions of Brazil*

The theosophical notion of the planets, and Mars particularly, as an abode of the dead or of spiritual entities, goes back a surprisingly long way. Though not, likely, as long as Bruce Rux thinks it does in *Architects of the Underworld,* where he postulates connections between Egypt's Duat (the land of the dead) and Mars. But, it's interesting to point them out. A papyrus of Princess Nejmet refers to the journey to Duat as the "Ascending" to the "Imperishable Star," and the Duat is also known as the Red Land to the West -- a common term for afterworlds from the Hopi to the Celts to the Chinese. Mars, of course, is the paradigmatic Red Land; and as we all know, it possesses enigmatic Pyramids and a sphinxlike Face. Is it pure coincidence that one of Mars' largest regions is called Elysium, the afterworld of the Greeks?

Theosophist H. P. Blavatsky's spirit masters, the Mahatmas, were uncharacteristically cagy about Mars, variously affirming it as part of the Chain of Planets, and denying that its entities had anything in common with the Earth. What they were trying to cover up, a channeler named Catherine Elise Muller (better known as Helene Smith) found in 1896 thanks to a series of mediumistic trances in which she explored Mars through astral projection. She found it bedecked with canals, although her interactions with the actual Martians remained dubious. (Angel contactee Emmanuel Swedenborg reported discussions with "masked men from Mars" in 1758.) It's obvious, then, that the Martians are powerful spirit beings connected to the dead, that they're ambiguous and perhaps actively deceitful, and that astral (or ghostly) travel will get you to a Mars of canals, Pyramids, and other excitements more like a vision quest than a Mars Observer photo.

"The Vaudoux [Voodoo] is nothing compared to the Don Pedro . . . dance, also known in the western part [Haiti] of Santo Domingo since 1768 . . . [T]his shaking is extremely violent, and to increase it still further [they] drink, while dancing, brandy in which they have mixed finely ground gunpowder . . ."
-- Moreau de Saint-Méry, *De la danse* (1801)

Which brings us back to the Afro-Caribbean religions of ecstatic spiritual possession, commonly called voodoo. Kardecist Umbanda (a syncretic combination of Brazilian candomblé and French spiritual mediumship of the type that took Helene Smith to Mars) explicitly places some of the orixa, or loa (powerful spirit entities, almost junior gods in some cases) in interplanetary space. This is an explicit departure from traditional voodoo beliefs, which place the spirits under the ocean in "Guinée, the Island Below The Water." This older tradition, the Rada tradition, is the "cooler" tradition, associated with water. Newer traditions, such as the Dom Pedro (or Petro) tradition in Haitian vodoun, associate themselves with fire. Symbolic element of Mars. The Petro traditions derive from slave resistance movements in the New World, and use gunpowder as incense to draw down the Petro loa. Gunpowder, again, associates strongly with Mars, planet of war. Even devout followers of the loa treat the Petro gods gingerly, rejecting their evil intent and invoking them as insurance or protection in virtually all cases. Negative energies, such as death or deceit, have fallen into the Petro orbit, with the "dark side" of the loa moving to the Petro world of fire rather than the

Rada "island" of water.

Powerful spirit beings connected to the dead, ambiguous and perhaps actively deceitful, and where did we just hear that? Fringe scholars such as Milo Rigaud trace voodoo back to ancient Egypt, to priests fleeing from Persian invasion into the African interior. Could the Petro loa have found a passage back to the Duat, to the Red Land, to Mars? Does the gunpowder ritual of the Petro dance raise energies allowing more and more loa to reach Mars and gain strength? Are the Martian pyramids (visible to obsessed dreamers and astral travelers only) simply the loa's adaptation of the old Egyptian Red Land? Perhaps, then, the canals, likewise, are vèvèrs, mystic patterns and sigils of the Petro loa marking their presence on the planet of the gunpowder god.

"From 1948 and until recently it was the largest telescope in the world. The idea and design came from a brilliant and wealthy astronomer named George Ellery Hale. Actually the idea was presented to Hale one night while he was playing billiards. An elf climbed in his window and told him to get money from the Rockefeller Foundation for a telescope."
-- Fox Mulder, in *The X-Files,* "Little Green Men."

Now, I've [previously noted](#) another trope alive with deception and violence, connected to the dead -- the mirror. The mirror, of course, is the sacred gateway of Legba, the Opener of the Way -- and of Legba's Petro counterpart, Maître-Carrefour, the Master of the Crossroads. (The canals of Mars criscross numberless times.) Horus, the Egyptian god who gave his name to the Egyptians' Mars, was also an Opener of the Way, possessed of one blue eye (for Earth) and one red eye (for Mars). (Apropos of nothing, Ogoun Jé-Rouge, the Petro loa of iron, fire, and war, is called Ogoun The Red-Eyed.) Do the mirrors in reflecting telescopes help open the way for the Petro loa to influence the minds of men?

George Ellery Hale might have thought so. After building the largest refracting telescope in the world, at Yerkes Observatory in Wisconsin, he encountered an "elf," a little green [ultraterrestrial](#), who gave him the idea to build a much larger reflecting telescope on Mount Wilson in Los Angeles. He began in 1904, and built a larger one still on Mount Wilson in 1928, eventually designing the largest reflector of its time on Mount Palomar near San Diego. (Interestingly, Hale also played a key role in convincing streetcar magnate Henry Huntington to establish the Huntington Gallery and Museum, which holds some of the world's greatest Buddhist art, rarest books, and a complete photographic copy of the Dead Sea Scrolls.) The "elf" continued to advise him on practical matters involving the observatory's operation until Hale's death in 1938, ten years before Palomar's completion.

" One welcome event in this hectic year of 1902 was a visit to the United States by England's famous Lord Kelvin, who proclaimed himself in complete agreement with Tesla . . . that Mars was signaling America."
-- Margaret Cheney, *Tesla: Man Out Of Time*

Having opened the spiritual path in 1768 with the creation of the Petro rituals, and the astral path in 1896 through Helene Smith's medium, the loa moved on to the etheric path. Astronomers William H. Pickering and Percival Lowell (greatest of the Martian canal-finders) reported "code flashes" from Mars in 1900 while working on Martian canal-mapping at Flagstaff Observatory. (A flagstaff is, of course, a key type of vodoun drogue, a powerful emblem for ritual communication and conjuration of loa.) Even more impressively, the famed inventor Nikola Tesla became convinced that he was in radio communication with Mars starting that same year. Tesla was friends with George Ellery Hale, and also with Sir William Crookes, the well-known British physicist -- and expert endorser of spiritual mediumship. Could Crookes have combined Tesla's communicator with his own mediumistic apparatus, possibly including Thomas Edison's top-secret "necrophone" project, to create an etheric transmitter that would not only send human voices to Mars, but human souls and spirits? The connections between ether and ectoplasm, between astral travel and etheric transmission, may be murky, but they seem intuitively present. Surely such a genius as Sir William Crookes could have reconciled them into a practical apparatus for astral-etheric interplanetary travel.

"You are here especially to help polarize Mars in preparation for our emergence . . . whereby we will again reinhabit the surface of Mars. So your consciousness here within and upon this planet is of vital importance to this world."
-- "Nur-El" of Mars, quoted in *Tesla Speaks,* Vol. 12, by Ruth Norman and Thomas Miller

And in this **GURPS Steampunk-Voodoo** crossover campaign frame, that's just what he did. Crookes (already under fire for his support of fringe beliefs like spiritism) secretly established the Society for Research into Transmissions

across Interplanetary Space (or S.R.T.I.S., soon elided into "SYRTIS," after another major Martian feature) in 1896 after hearing of Helene Smith's journeys. (Parallels with the Order of the Hourglass from *GURPS Time Travel* are entirely intentional, I assure you.) By the time he endorsed Tesla's opinion in 1902, the Society had perfected astral travel to Mars; the meeting with Tesla gave them etheric technology that made longer stays and independent journeys (without Martian "spirit guides") possible.

Which is when it all came apart. SYRTIS operatives, able to roam about Mars unsupervised, quickly discovered that Mars was the home of the Petro loa busily reviving the slumbering ruins of the ancient Egyptian Hell. Petro emissaries began conspiring against SYRTIS on Earth in Nigeria, Jamaica, and elsewhere -- eventually reaching into America and even England. Percival Lowell, George Ellery Hale, none of the great American astronomers could be trusted -- SYRTIS had to work alone and in secret. SYRTIS operatives might begin Inside the Front Lines (as *GURPS Voodoo* puts it) as 150-200 point astral projectors or hero-scholars transmitted etherically (the devices grant Astral Projection, or Path of the Spirit Spiritwalking rituals). But it's a race against time and balky electroplasmic technology -- every ritually consumed gunpowder charge strengthens the loa in their plan to submerge the white lands in global war and mass murder.

"I have devoted much of my time during the year past to perfecting of a new small and compact apparatus by which energy in considerable amounts can now be flashed through interstellar space without the slightest dispersion. I had in mind to confer with my friend, George E. Hale . . . regarding the possible use of this invention in connection with his own researches."
-- Nikola Tesla, undelivered speech (1937)

By the time it becomes a *GURPS Cliffhangers-Voodoo* campaign, the Petro loa have won tremendous victories. World War One sent hordes of angry dead into the interplanetary gulfs to labor as spiritual spear-carriers; the Petro can now become full-fledged In-Betweeners with an actual physical base on Mars and cults all across the colonized world. Some of those dead become the new wave of ghosts plaguing England (and allowing us to pull in *GURPS Undead*). New advances in etheric technology allow physical transport to Mars aboard ether-ships, but SYRTIS can fall victim to the vampiric thought-entities Petro conjures to defend its planet (the Welles Martians from *GURPS Warehouse 23,* of course). SYRTIS teams have to be full-fledged 250-300 point Spirit Warriors, grim of mien and steely of eye.

With the horrors of World War Two, it seems that the Petro might have won. Their 1938 invasion was only turned back at the last minute by SYRTIS germ warfare and the Tesla projector intercepted by SYRTIS before it could fall into Hale's hands. The ectoplasmic blast zones still haunt New Jersey twenty years later. Worse yet, the Petro loa have begun to contact whole new groups, posing as benevolent aliens -- ironically, often "Nordics" from "Venus." The most dangerous foes of SYRTIS, the Aetherius Society, coalesced in 1954 around contactee George King, who channeled "Aetherius of Venus" and "Jesus Christ of Mars Sector Six." Key contactee cultist George Hunt Williamson kept the Petro tied in to his old American Nazi buddies, and through them to the remains of the Fourth Reich given refuge on Mars by the Petro. The SYRTIS teams must be jut-jawed, death-dealing 400-500 point Spirit Masters to survive this *GURPS Atomic Horror-Voodoo* campaign frame, with the potential of evolving either into Black Ops or Lensmen depending on the level of grittiness or cosmicity the GM desires. SYRTIS was able to drive King out of England in 1960, but his Aetherius Society (along with thousands of other cults, both overtly bloody and seemingly benign) still works against them as dupes of the ether-gods of Mars!

Pyramid Pick

Compact Sorcerer

Published by [MicroTactix](#)

Designed by Greg Poehlein and Guy McLimore

Art by Gary M. Williams

Rulebook, 2 game boards, 30 spell cards, 8 magic item cards, and 17 cardboard figures, $9.00

There comes a time in every *Compact Warrior*'s life where he or she is no longer satisfied beating opponents senseless with swords and hammers, and yearns instead to engulf his or her enemies in ghastly fire. Fortunately for them, MicroTactix has created *Compact Sorcerer*, the first expansion for their *Compact Warrior* board game.

Compact Warrior is a game of man-to-man fantasy combat played on a square grid map using cardboard figures and ten-sided dice. *Compact Sorcerer* provides the rules, skills, and spells necessary for wizards to enter the fray. Even with the addition of magic, the board game retains its quick pace and remains generic enough that it can replace the combat systems of fantasy role playing games.

As with *Compact Warrior*, the *Compact Sorcerer* rules are clear and suffer from few editing mistakes. The black and white art is satisfactory and the cardboard figures are sturdy. The two games were clearly created by the same team and work together seamlessly.

Compact Sorcerer adds two skills, two actions, and Mana points to the game. The new skills, Magic and Spell Targeting, are the skills that define a character as a sorcerer. Casting a spell requires a successful roll on the wizard's Magic skill. If the spell is a missile attack, such as Fireshot, then the player must also make a successful Spell Targeting roll to hit the intended victim. Like regular missile weapons, missile spells benefit from close range, careful aiming, and dexterous characters. Sorcerers use the Cast Spell action to activate their spells, and this action becomes more difficult when under attack. Each spell deducts Mana points from the character which can be replenished only by rest or by the Gather Mana action, which restores a small amount of Mana during battle.

Compact Sorcerer does more than simply replace weapons with spells, though. Sorcerers are a challenge because they not only have to buy spells with skill points, thereby giving up weapon and fighting skills, but they also can Scale spells during combat. Scaling allows characters to increase the power of spell, as well as its difficulty and Mana cost, as desired during combat. Thus, a wizard can cast the simple Kinetic Shot for a small amount of damage, or can spend more Mana for more damage while increasing the risk of failing the casting roll.

In a board game without a game master, magic can become a problem if the effects of the spells are subjective or if conditions make spell casting questionable. *Compact Sorcerer* navigates through these traps by limiting its 30 spells to those that have quantitative and clear effects. It also classifies spells so that targets and ranges are very clear. Players will not spend the game arguing over who can cast what at whom.

The only exception to *Compact Sorcerer*'s clarity is the Illusion spell. This is not a fault of the authors, who dedicate an entire page of text on how to use illusions in the game, but of the nature of illusions. Players are supposed to write

down, in secret, what objects are illusions and which are real. Illusions are only discovered when a character touches it. But what happens when an arrow passes through an illusion? Or if someone just tosses a rock at it? Without a GM to handle the situation, the game can degenerate into tedious arguments that depend on what your definition of the word "touched" is. Illusions cause more disagreements than fun in a board game and we chose to leave them out of our games.

While both **Compact Warrior** and **Compact Sorcerer** have clearly written rules and creative mechanics, **Compact Sorcerer** fares better on character balance. **Compact Warrior** lacked a balancing mechanic for weapons, meaning that players always chose the most powerful weapons, resulting in battles where everyone wields great swords or warhammers. Because powerful spells are more difficult to cast and cost more Mana and skill points, sorcerers are not likely to load up on Mystic Domination and Wizard's Wrath. The game forces players to choose wisely rather than simply maxing their magical power.

Compact Sorcerer is a successful expansion to the **Compact Warrior** game and provides a quick yet detailed and strategically challenging magic system. MicroTactix has created another satisfying component to their inexpensive game line.

Murphy's Rules

by John Kovalic

Murphy's Rules

Murphy's Rules

Random Thought Table: The Torg Story

Dennis, Kathryn, Michael: I am soooooooooooooooooooooo sorry.

But I get ahead of myself. You see, there are certain unwritten rules as a GM:

- Don't kill the PCs in their sleep.
- Don't have unavoidable catastrophies, manglings, or life-altering changes happen to characters without being sure the players will appreciate it.
- Don't make it *look* like you're leading the PCs around with a ring through their noses (no matter what the truth is).
- Don't make your players be mind-readers.

Yes, indeed. . . don't make your players be mind-readers.

Two years ago, I had the idea to start up a ***Torg*** campaign. This was several years after the line had more or less ended, and a few years after the last module (appropriately entitled ***War's End***) came out. And, as I said last week, I like collecting complete lines.

So I amassed the ***Torg*** line, came up with a story, and sketched it out in thirteen parts. It had several plot twists and divergences, so that even the players who had played the game for years as it was being released would be surprised. I was excited.

The first adventure went as well as any new system's first adventure does (despite my Canada incident. . . but that's another story). The second adventure went very well. And then came the third adventure.

The third adventure revolved around a mysterious black dome in South America. There were reports that none of the teams sent there had returned, and the dome was growing exponentially. So naturally the PCs are supposed to investigate it. They do such, figure out what's going on (basically, for ***Torg***-ists out there, all its axioms were zero, making it very dangerous to disconnect), and enter.

They get to the center, and encounter this giant clock, with an old man inside. (As an aside, I'm a big fan of the mysterious old man. Good Mysterious Old Man, Bad Mysterious Old Man, Inscrutable Mysterious Old Man. . . I've used them all.) The old man had a companion, an evil NPC whom the players had encountered in an earlier adventure.

In the real world, it was 9 PM. We'd been gaming less than an hour.

"Approach. . . and speak correctly," said the mysterious old man.

The PCs went toward the seated figure, and they made some attempts at speaking to the old man, but were largely ignored.

After a time, the old man spoke again. "I am a traveler. After many years, we have come here. It is imperative we communicate. And so I ask your names."

The PCs try to talk to him, again with mixed results. "My name's Eva," said one character, who was ignored. "I'm Arthur," said another, who was greeted warmly by the man. "Arthur? A lovely name. I approve. And your companion?" "She's Eva," the same PC said. . . and he found himself ignored by the old man.

Now, to make a very long story short, the PCs eventually figure out that there's something odd about the way the old man speaks (again, I'm cutting large sections of dialogue), and the old man will refuse to communicate with them unless they can figure out the pattern and use it to talk with him. But no one can figure out what the pattern is.

After a long while, Dennis figures out the pattern, and has a conversation.

"It falls to us to be ambassadors of the earth," he said.

"Oh, truly? Is this a duty you take lightly?" the old man responds.

"I cannot say we do. And yet we are compelled. If you would speak with us, we can speak with you."

"Indubitably. I approve of your manners, and hope we can continue speaking properly."

"It is my wish as well."

"After this discussion, then, may you go in peace."

"Indeed."

And the PCs departed.

In the real world, it was 3 AM.

The pattern was *(deep breath)* that the old man began every sentence with a vowel. The PCs needed to do the same to have a conversation.

To which I feel the need to ask:

WHAT THE SAM HILL WAS I THINKING?!?

Even if you realized the pattern on paper (and if you did, my hat's off to you), it's a far cry from figuring that out in a real dialogue. No, I expected my players to be mind-readers. . . to reach into the crooked nannies of my mind and pull out my intent. And my players, being unable to bend spoons with their powerful psionic abilities, failed. And so, from 9 PM to 3 AM, they suffered.

Try to wrap your mind around that. Six hours of staring at each other. Six hours of not having a good time. Take the worst movie you've seen. Watch it from beginning to end. Then, after it's over, call up people you'd rather be spend time with -- people you could be having fun with -- and say the following: "I'm just letting you know that, instead of having a good time with you right now, I'm about to rewind the worst movie I've ever seen and watch it again." And then, indeed, watch it again. Every frame. Stare at your watch. Squirm in your seat. Ask yourself, "Why am I here?" After it's over a second time, if it's a three hour movie, you're done. If it's a two hour movie, rewind and watch it again.

I had no backup plan, no contingency, no hints, no clues. . . nothing in mind except the PCs traipsing in there, spending a few minutes chatting with Old Guy, figuring out The Puzzle, and getting the information they needed. The adventure was on a timetable, so they didn't have a choice to leave and come back. None of their tech was working, so they couldn't ask for help. The only other person to interact with was a previous antagonist.

And so it bears repeating:

WHAT THE SAM HILL WAS I THINKING?!?

Columnist Ted Rall has a question he asks people: "What's the worst thing you've ever done?" And he's wary of people who don't have an answer; if you don't know what the worst thing you've ever done is, you don't know your limits. You're capable of anything, and anything can go wrong with you.

Well, when it comes to GMing, the worst thing I've ever done is by far the *Torg* Incident. I took three friends and

drove them to the brink of furiousness and tedium. I violated the sacred trust the players place in their GM to have a good time with their meager time off. I'm convinced the only reason they didn't tie me to the back of Kathryn's Chrysler LeBaron and drag me through downtown Tallahassee was that everyone was too exhausted.

I'm telling you this because now you know the worst thing I've ever done as a GM. I hope I never top it, and I hope you learn something from it, too. What that is, I'm honestly not sure. Have backup plans; don't make your players be mind-readers; don't let me GM *Torg*. . . any of these are good pieces of advice. I've been running a ***Sorcerers Crusade*** campaign off and on lately, and I had an interesting plot twist I wanted to throw at them. So I asked, "How much do you trust me?" And there was an uncomfortable silence, and Dennis said, "I don't *Torg* trust you." And I can't blame them.

Needless to say, the *Torg* campaign died, and it's all my fault. So. . . Dennis, Kathryn, Michael. . . my players whom I subjected to my awful *Torg* session: I am *sooooooooooooooooooooo* sorry.

Perhaps, for those of you who've been GMing as long or longer than I have, you'll take a moment to figure out: What's the worst thing I've ever done as a GM?

And then you'll take steps never to let it happen again.

-- Steven Marsh

(two stars) "The Earth-creature shows intelligence, picking up our box to attack its soft, defenseless underside."

Dork Tower!

Dork Tower!

By Mike Mayer

Art by Brian Snoddy

In honor of the release of Lord of the Fries De-Lux, here's a variant for you to serve up when business is slow and you can find only two customers frequenting your restaurant.

Setup

Remove and put aside as many cards from the deck as you deem necessary; about 20 or so works well. Or you can play with the whole bunch if you don't mind holding a heck-of-a-lot of cards in your hand.

Start out by dealing three hands - one for each player and one for a draw pile (henceforth known as the Slaw Bile).

Turn over the top card of the Slaw Bile and place the card face up beside the Slaw Bile. Any time during the game that the face-up card is taken, replace it with another from the top of the Slaw Bile.

Rules

Play as if using the normal rules except as described below:

- **IF THE LEAD "CALLS" AN ORDER** and if a player passes, he gives a card to the other player and then takes a card from the Slaw Bile (the top facedown card or the face up one).
- **IF THE LEAD "ROLLS" AN ORDER** and if a player passes, he gives the Lead a card, and the Lead takes an additional card from the Slaw Bile (the top facedown card or the face up one). A passing Lead will wind up giving himself a card and then will take one from the Slaw Bile.
- **IF THE DECK RUNS OUT**, play as if using the normal rules. On "calls" that are passed, a player simply gives a card to the other player. On "rolls" that are passed, a passing non-Lead player gives the Lead a card. A passing Lead player gives himself a card.

*Toon*iversal Proudly Presents

When Swineosaurs Ruled The Earth!

by Doc Cross

Art by Derek Stevens

Huge jaws full of teeth, claws that can rip a person in half, mighty roars that instill terror in the hearts of their prey, curly tails and piggy snouts. . . the swineosaurs truly are the masters of their primeval world. Journey with us now as we take a look at these prehysterical porkers in the world of *Toon*. And please keep your hands inside the vehicle at all times unless you want to get them bitten off.

Tyrannoboarus Rex

This carnivorous swineosaur is the undisputed big pig on the block. Standing 25 feet high and 45 feet long, with big sharp 12 inch teeth, Tyrannoboarus will eat anything it can catch. And with a Speed of 9, it can catch quite a few things! The bite of a Tyrannoboarus does 2D+2 points of Chomped On **REAL** Good damage. Tyrannoboarus has very small front limbs that are almost useless. Many of the other swineosaurs like to make jokes about that, but never when Tyrannoboarus might hear them. Still, Tyrannoboarus **KNOWS** they are making fun of him, so he is often very cranky.

If *Toon* characters ever thaw a frozen swineosaur out of a huge block of ice so it can rampage through a modern city, the odds are that it will be a Tyrannoboarus Rex. And after being frozen for 65 million years, it is sure to be in a bad mood. The best way to deal with an upset tyrannoboarus is to run away! Fast! While screaming!

Velociporkers

Although they are much smaller than Tyrannoboarus, Velociporkers are almost as dangerous. If they are hunting in a pack (which they usually do), they are even more dangerous. If they are hungry (which they usually are), they are incredibly dangerous! Velociporkers are about 7 feet long and can move at a Speed of 12! They have a mouth full of sharp teeth (1D+2 points of Chomp! damage) and a big sharp toe claw (2D of Sliced Up Like A Salami damage) that can rip their prey open or, at a party, be used to slice birthday cake. Any character attacked by Velociporkers will soon resemble a tray full of cold cuts.

Velociporkers have a smarts of 6, which is genius level for a swineosaur and pretty darned high for Toon characters in general. Still, they can be easy to Fast Talk, but you really do have to talk **FAST!** Once they attack, talking won't do any good. Try telling them that a Tyrannoboarus or a Carnoporkus was making fun of them. If that doesn't work, offer to manicure their toe claws. Velociporkers are quite vain, so they'll probably agree. At that point, just tell them you need to go get your manicure kit and then **RUN!** Just remember that Velociporkers hold a grudge for a long time.

Porkycephalosaurus

These swineosaurs might look kind of goofy, what with their lumpy domed heads, but they are not to be messed with. An angry Porkycephalosaurus can headbutt for 3D of Headbutted Into The Next County damage. Fortunately, the 15' long Porkycephalosaurus is a peaceful plant eater and only attacks if provoked. Of course, this being *Toon*, that will probably happen a lot. In fact, it's not hard to imagine a group of these swineosaurs playing soccer with a few characters. *Heh heh heh.*

Porkycephalosaurus are not very smart, so they are easy to Fast Talk. In fact, it would be pretty easy to convince them to help you do something. Just promise them lots of succulent plants to eat and say nice things about their heads.

Hadrosowrus

This is a common type of plant eating swineosaur. Known as the duckbilled swineosaurs, they are pretty funny looking. Other swineosaurs might tease them by saying "quack, quack" or "Hey, duckface." Hardrosowrus is not very bright though, so the insults go unnoticed. They stand 18' tall and are up to 30' long. The main danger from this type of swineosaur is getting trampled by a herd of them. This would do 4D+2 of Trampled By Funny Looking Swineosaurs damage.

Hadrosowrus is a good parent to its young. It is not uncommon to see them on picnics or playing a game of catch with the little ones or attending Little League games. Annoying a baby Hadrosowrus is a pretty fast way to get some Angry Mother Duckbilled Swineosaur damage.

Brontosausagus

This is one of the largest swineosaurs, being over 75' long and weighing 35 tons. Getting trampled by one of these long-necked and long-tailed plant-eaters will do 6D of Smashed Flatter Than A Duck's Foot damage. Brontosausagus has very few enemies because it is so huge. It also has very few friends because it tends to step on them by accident. If

characters are nice to a Brontosausagus, it might let them ride on its back. A Brontosausagus raised from a baby will make a great pet, but beware of having a 35 ton pet jump on your lap.

Brontosausagus tend to live in herds of from 10 to 30 individuals. If something does manage to frighten them, they will stampede. Once the stampede starts, it won't stop for 2D+2 turns. Everything in the herd's path will be crushed. Since a Brontosausagus only has a Smarts of 3, it is entirely possible for a stampeding herd to run on water, up the side of a cliff, through canyons too narrow for even a single Brontosausagus to fit through, or even run off a cliff without falling. As you might guess, seeing a herd of these big guys running on thin air is a sure fire Boggle.

Compignathus

These are very small swineosaurs, being only about 3' long and a foot tall. They are meat eaters, but won't bother most characters unless they decide to follow them around to eat scraps of food from their lunches. It is probably a bad idea to threaten a Compignathus that is following you, because he might just go tell a Tyrannoboarus or a pack of Velociporkers where to find you. Then he will eat the scraps from **THEIR** lunch.

Compignathus has one weakness. . . they love to dance. Depending upon the music being played, they will square dance, waltz, do the disco boogie or even dance ballet. Crafty PCs will try to get them to dance off a cliff or into a tarpit or something. Stupid PCs might forget themselves and start dancing with the Compignathus. This won't cause any damage, but it will waste time and make the dancing PC look pretty dumb.

Triceraporkchops

Another plant eater, Triceroporkchops is also one of most dangerous. They weigh 8 tons, are up to 30' long and have three big horns as well as a big bony neck shield. An attacking Triceroporkchops does 4D of Shishkabobbed By Horns damage and 3D+1 of Trampled Into A Pulp damage. They do not like Tyrannoboarus at all and will attack them on sight. This all goes back to them calling each other "Tiny Arms" and "Horn Face" in kindergarten. Triceroporkchops isn't very smart, so a character might Fast-Talk it into doing all sorts of things. You'd just better hope it doesn't make a successful Resist Fast-Talk roll, because they **HATE** being conned.

Triceroporkchops can run at a speed of 9, but they have trouble stopping quickly. They tend to trip and stumble and roll over a few times before they stop. Any character riding one will soon find this out. Then they will take 2D+2 of Caught In A Swineosaur Crash damage.

Carnoporkus

Carnoporkus is a meat eating swineosaur that is smaller than tyrannoboarus, but faster (Speed 10). It has two small horns on its head and its hide is covered in bony lumps. The other swineosaurs have nicknamed them "Lumpies" because of this. Carnoporkus is not too happy with that nickname, but it beats being called "Hornhead" or "Bony." Carnoporkus has a flatter face and even smaller arms than Tyrannoboarus, but don't kid them about it or you'll get bitten. Their bite does 2D-1 of Bite A Big Chunk Out Of You damage.

Carnoporkus have always been jealous of both Tyrannoboarus and Velociporkers. As a result of this, they can easily be convinced to fight them. Unfortunately, the Tyrannoboarus and the Velociporkers almost always beat the tar out of Carnoporkus. Once that happens, Carnoporkus comes looking for the people who talked it into fighting.

Stegopigus

This swineosaur is one of the strangest looking swineosaurs. It has a very small head, an armored body, big armor plates sticking up along its spine and a long tail with four sharp spikes on the end of it. It can get up to 30 feet long. Because of all those armor plates and spikes, it is a really bad idea to try riding a Stegopigus. This won't stop most

Toon characters from doing it, but we thought we ought to mention it anyway. Stegopigus is a plant-eater, but with all that armor and those tail spikes, he's not an herbivore to mess with. They are normally pretty peaceful, probably because their brain is only the size of a ping pong ball. *Toon* characters are not advised to ask these swineosaurs any really complex questions. In fact, don't ask any simple questions, either.

Stegopigus live in small family groups of 4 to 8 individuals. Due to being so stupid, Stegopigus families often get into arguments about really dumb things. PCs should never take sides in these arguments, since it could result in half the family whacking them with those big spiked tails for 3D+1 of Whacked Real Good With A Big Spiked Tail damage.

Pigodactyl

Of all the flying swineosaurs, this is the best known. They are 3 feet long and have an 8 foot wingspan. Pigodactyls have long necks, short tails and long beaks full of teeth. Although they aren't big enough to really do much damage to large creatures, Pigodactyls are known to drop things onto the heads of other swineosaurs and *Toon* PCs. Their favorite thing to drop are coconuts, which they can carry two of at a time. Coconuts do 1D+1 of Konked On The Head By A Coconut damage. Pigodactyls often fly in flocks of 10 or more. That's alot of coconut dropping potential.

Pigodactyls can be distracted from their coconut-dropping ways if the PCs leave shiny objects on the ground for them to find. Pigodactyls just love shiny objects. Pigodactyl nests are often decorated with all sorts of shiny objects like coins, broken glass, mirrors, bits of armor from Fallen Down PCs, diamonds, gold and pieces of aluminum foil.

Anklyoporkus

While other swineosaurs might have **SOME** armor on certain parts of their bodies, Anklyoporkus has spikey armor everywhere! And a great big club on its tail which does 2D+2 Knocked Outta The Ballpark damage if it hits you. Heck, just backing into one of those spikes does 3 points of Punctured Posterior damage. Anklyoporkus can grow to 30 feet long and stand over 6 feet tall at the hips. Fortunately for *Toon* characters, Anklyoporkus is a plant eater and is very peaceful. It's easy to be peaceful when you are that well armored.

You could probably ride one, but all of those body spikes would make it a pretty rough ride. Smart characters might teach an Anklyoporkus how to use its tail to bat boulders at oncoming carnosaurs. Who knows what the not so smart characters might teach it to do.

Swineosaur Adventure Seeds

Jurassic Pork

A group of characters visit an island theme park where cloned swineosaurs are kept in nice safe cages. That is, until the power goes out and the hungry angry swineosaurs who didn't much care for being caged up get loose. Then comes the running and the screaming and the cream pies and the boggling.

1,000,000 Years BT (Before *Toon*)

The PCs are cavemen who spend their days hunting small animals, marvelling at fire and running like heck from hungry carnosaurs. Actually, they also spend a good deal of time running from grumpy herbivores, too. That is, until the volcanos erupt and the earthquakes start. Then **EVERYONE** runs, usually off a cliff.

The Really Lost World

In the darkest depths of Canada (hey, we said it was **REALLY** lost, didn't we?) a group of daring and not too bright explorers go searching for a land where swineosaurs still exist. After climbing to the top of a 5,000 foot tall plateau

(which each character should fall off of at least once) they find a prehysteric land unknown to the outside world. And then, while they are considering the possibilities for developing this place as a vacation resort, the swineosaurs attack. Insert running and screaming and boggling here.

King Konk

On an island in the South Pacific lives King Konk, a 60 foot tall gorilla. A group of PCs come to film and maybe even capture him. All they need to do is get past angry natives, hungry swineosaurs, bug infested jungles, spooky swamps and King Konk himself. Sounds like there'll be more running and screaming and boggling, doesn't it? Monkey and/or banana jokes optional. Angry 60 foot tall ape guaranteed.

Swineotopia

No angry swineosaurs here! In this world, they live peacefully with other *Toon* characters. Instead of running and screaming and boggling, there will just be the usual *Toon*ish shenanigans. Come to think of it, **THOSE** often cause running and screaming and boggling, too. Guess you just can't escape it.

A Long Strange Trip: The Life of a Weirdness Magnet

by Joel Sparks

Art by Phil Foglio

The Weirdness Magnet disadvantage (p. CI100) can add spice and humor to a *GURPS* campaign. It's also a great adventure hook; there's nothing like the impossible to jolt players out of a rut. But it can be hard on overworked GMs to come up with sufficiently oddball occurrences on the spur of the moment. Many ideas will be trivial (unexplained stains on the clothes), too silly (a movie star appears out of thin air to give the character a big kiss), or disturbing to the campaign (the character solves important mysteries due to supernatural advice). Incidents of Weirdness should be unusual enough to provide amusement and inconvenience, but not so significant as to change the course of events -- unless the GM wants them to.

This article provides guidelines and incidents that can be used as-is in any *GURPS* setting, or as inspiration for other appropriately weird ideas. The character with the Weirdness Magnet disadvantage is called "the Magnet."

Rest Them Bones!

First, some guidelines for day-to-day play.

1. Never roll for a random party member for anything, good or bad. It happens to the Magnet. (If there's a good reason why it should happen to someone else, it shouldn't be left to the dice anyway.)
2. Instead of rolling, try making up results whenever the Magnet gets (or is subject to) a critical success or failure. For example, tie all magical backfires in the Magnet's life together with a theme. Choose a semi-random noun ("toad," "zinc dust," "trumpet blast") and substitute that for the appropriate noun in the backfire result. For more mundane criticals, use the same result every time on every chart, good and bad. Or have the character break four swords in a row in exactly the same oddly jagged, star-shaped pattern. What can it mean?
3. Supernatural entities (ghosts, demons, psionic aliens) may concentrate all attentions on the Magnet: attacks, communications from beyond, whatever. Or they may deal only with others, pretending that the Magnet isn't even there. If the GM has no preference, roll a d6: on a 1-4, they give exclusive attention; on a 5-6, they ignore the Magnet completely.

Dear Diary. . .

When the GM chooses to insert a new peculiar experience for the Weirdness Magnet in his campaign, a few simple rules should be followed.

- **Make it unexpected.** Instances of weirdness do not have to relate to the ongoing events and purposes of the campaign. Mysterious forces are focusing on the Weirdness Magnet all the time, and they have nothing to do with the mundane world. Weirdness is what happens to

you while you're making other plans.

- **Make it impossible.** The Magnet should be left shaking his head and saying, "This could only happen to me," while those around him can tell that something's not right. A run of luck at blackjack is not weirdness; drawing the Ace of Spades in every hand for a week is another story.
- **Make it inconvenient.** The circumstances should be a mild obstacle to the character's goals, with no advantage to be gained: a distraction. If the results of the weirdness can somehow be of use to the party, the inconvenience level can be much higher. The escaped superchimp who fell into your convertible knows how to operate time gates, but the FBI has mounted a full-blown primate-hunt.
- **Make it fraught with portent.** All the weird events in the Magnet's life form a pattern, but he can never quite make it out. Someone or something out there knows more about him than he ever will, and these events are hints and glimpses into a higher purpose.

Nine examples follow. They are in roughly increasing order of weirdness; the GM must choose those which are right for the tone of the campaign. Incidents can be adapted to happen repeatedly, or be impossible to reproduce -- whichever will confuse the players most. These events can be tossed in for comic relief, or stretched into a whole play session, as the GM sees fit.

1. The PCs return to their inn, and termites have utterly devoured every wooden object in the Magnet's room, leaving the rest of the building untouched.
2. The first time the party arrives in a new town or culture, they walk into a normal social situation. Immediately, a number of NPCs spot the Magnet and gravely turn and leave, saying nothing and ignoring all pleas and comments. This can range from a single beggar or shopkeeper, ceasing to do business with the party once he realizes "who he's dealing with," to an entire gala ball coming to a stop, all of society's cream turning a cold shoulder and shuffling away in icy silence, leaving an empty hall. The same NPCs, encountered later, will be perfectly friendly and politely ignore any reference to their previous behavior.
3. A well-known local bum drunkenly presses the Magnet to receive some object "for safekeeping." The object is totally ordinary: a cracked wooden mug, a torn poster for a circus several years ago, a single stained sandal. Within 24 hours, four humorless men in black clothes accost the Magnet, tersely demand the item, and leave with it, never to be seen again. If these men are resisted, they exchange meaningful glances and retreat; a few days later the item is simply missing. If questioned later, the bum claims not to remember the item at all.
4. The water in one well, or one building, causes the Magnet to have wild and incapacitating hallucinations for 1d6 hours. It never affects anyone else. If the GM so desires, a successful skill roll may find useful information in the visions; try Oneiromancy (Divination, p. M48) or Psychology (p. B62).
5. On the road, a sparrow flutters down to land on the Magnet's shoulder. If shooed, it resettles right away. If attacked, it leaves. Otherwise, within a few minutes, a couple more birds fly up and land on the Magnet. Within fifteen minutes there will be about 30 birds flocking around the Magnet, fighting for position on his shoulders and head, squawking and occasionally defecating. If the Magnet is attacked during this time, the birds will defend him as a Swarm [Bird Swarm: Move 8, Damage 1d-2, DR protects normally, dispersed by 8 hits. See p. B143.] After an hour and a half, the birds begin to disperse, and soon all are gone.
6. If the Magnet ever spends any time drinking or studying the Carousing skill, he eventually experiences a total blackout bender lasting two nights and three days. Tell the other players that they have no idea where he is during this time, and make it inconvenient, like the day before they have to leave on a mission. On awakening, or being found passed out in a flophouse on the edge of town, the Magnet has a new tattoo: a two-inch wide crude human eyeball on the palm of the right hand. The tattoo is painful for a few days, but otherwise has no

effect. It is very difficult to remove. Should the Magnet later encounter a primitive or alien people, they will notice the tattoo and treat him as the Chosen One. Whether that means lifelong worship or rapid ritual sacrifice is up to the GM, but it will certainly mean a radical and unexpected change in the way the Magnet and his associates are treated. Attempts to duplicate the tattoo are useless -- people who care about it can tell the original from even an excellent fake.

7. There is one dangerous and powerful artifact (magical or superscience) that has no effect of any kind on the Magnet. Perhaps only he can safely handle some greatly evil or destructive totem; perhaps a weapon of fierce power can be safely ignored. Certain sages, historians and religious societies are interested in the artifact and can discover that the Magnet is immune. They may want him to carry the object to its destruction, or wield it in conflicts that he can never understand, or lead an assault on the person who currently controls the object. Or they may want him eliminated to prevent others from using his unique status. If the object is destroyed or recovered for the "forces of good" (whoever that may be), its power will be turned to good, granting a one-time boon to all present who helped recover it -- a boon to which the Magnet is also immune.

8. The Magnet is introduced to some powerful person who is normally unapproachable and surrounded by lackeys. This may be a celebrity, respected scholar, court official, ruling noble, archmage, etc. The personage seems to recognize the Magnet and tries to take him aside for a moment, offering a cryptic signal or complicated handshake. He says, "I didn't expect to see you. How did everything turn out?" When the Magnet betrays ignorance of the topic under discussion (very soon, barring a series of excellent Fast-Talk rolls), the personage looks slightly peeved or embarrassed and says "I'm sorry, I mistook you for someone else." Then he rapidly retreats to a safe and permanent social distance. He may be heard to mutter, "I guess that hasn't happened yet," or, "Damned replicants."

9. Finally, for the silliest campaigns: In the depths of the most ancient and improbably magical "dungeon" in the land, the party comes upon a giant rusty knife switch, firmly set into a flow of stone that looks older than any works of Man. Even the strongest cannot move the switch. However, the Magnet can loosen it with a little effort. As soon as contact is broken, the Magnet sees everyone else in the party, and all of their surroundings, vanish. The Magnet is naked and alone on a flat and arid desert plain devoid of people, plants, animals, buildings or noticeable geography. A hot wind blows. It is a no-mana zone. The switch and its outcropping of rock are still present. In the extreme distance are a few other tiny figures; a formation of three dots moves through the cloudless air at high altitude, trailing faint rainbows. The instant the switch is returned to the closed position, the world comes back. If the Magnet does not do this within 15 minutes, a flight of angels lands, stuns the character with a blow, plants his feet firmly back at the switch, and, using his hand, flips the switch back. To everyone else, no time has passed; it will appear that the Magnet was unable to move the switch. If he was struck, it will appear that he staggered back from an unseen shock while trying to move the switch, taking 1 point of damage and being stunned. If the Magnet changed position significantly, it seems as if he grabbed the switch and was knocked back right out of his clothes! There is no way to move the switch's location and nothing useful to encounter while "outside the world."

Someone's Stolen the Mayor's Kitten!

by Steven Marsh

Art by Derek Stevens

Do your adventures have the same wacky feel of *The Shining*? Does the phrase "caked with blood" enter your descriptions a little too often? Does your ***Changeling*** campaign capture the whimsy and humor of ***Call of Cthulhu***?

Friend, do you need mirth?

Although many RPGs recommend running humorous adventures, either as a break from seriousness or as a campaign itself, few rulebooks give any concrete advice for how to do this. Unfortunately, it seems most games presume you already know how to be funny or haven't the foggiest idea, and nothing they can offer will help.

Wrong. Although there is no magic formula for humor, there are "shortcuts" which can make it easier for someone without a flamboyant sense of humor to still run amusing adventures. Here, then, is some advice for prospective mirth-masters for how to amuse in an otherwise serious setting.

Don't let on it's supposed to be funny before the game begins.

If you prepare your players by saying, "Okay, guys & gals, in tonight's adventure you're going to laugh, laugh, laugh," they are going to be detached from the action, waiting for the funny bits. (Think of that unfunny guy who prefaces every joke with, "Wait 'til you hear this one. It'll kill you.") Play the adventure straight-faced, until the moment when things get. . . weird.

Let things get. . . weird.

To make things easier on the players, there should be a definitive moment when it's revealed that this is going to be a less-than-serious adventure. Medieval characters could meet a fortune-teller who gives wildly incorrect advice ("I sense, Mr. Conan, that you are a pacifist. . . with a love of the occult, no?"). Super-heroes could stop a speeding car where the driver is a thief who stole a crash-test dummy (sitting in the front seat). This first encounter, while worth a few chuckles itself, lets the players (and characters) know that they're allowed to laugh. This is important, particularly if only serious adventures have been run before this one.

The PCs should outclass the opposition.

Let's face it: Doom and Despair just aren't very funny. If the Darklord D'Waston will be unleashed from his Umbral prison and destroy the earth, the PCs are unlikely to find the humor in the situation. Much funnier is a goblin that's found a pack of dogs and convinced them to work with it, terrorizing villages. The PCs could easily kill the dogs and destroy the goblin without too much thought, so the players can focus more on what's funny about the situation.

The perceived need for a serious threat is where most "funny" action movies fail. *Howard the Duck*, a none-too-amusing film to begin with, is even unfunnier when a scary-looking demon something-or-other is unleashed. If you must have a serious challenge for the players, but want the adventure to be funny, make sure the threat is amusing. Think *Ghostbusters*: the Stay-Puft Marshmallow Man is so absurd that the danger, while real, is downplayed.

Another alternative is the Wildly Powerful But Mostly Harmless antagonist. Here, the opposition outclasses the PCs, but the opposition isn't out to mutilate the PCs or drop Ebola on Chicago. Omnipotent pranksters, childish tyrants, and villains with annoying powers can all challenge players and allow for amusing situations. Envision Q in his lighter *Star Trek: The Next Generation* episodes. The danger here is in resolving the adventure; how can the players hope to thwart a godling? Or if the godling messes with the characters until he gets bored and leaves them alone, how satisfying will that be to the players?

Complications are funny.

Whatever you do, don't make the adventure straightforward. Let the players think they've got everything figured out. . . then spring something else on them.

Let's expand the goblin example above. When the characters get close to where the goblin's supposed to be, they find some of the dogs the goblin supposedly allied with. They're hungry, but harmless. Then let the PCs find the goblin; it's run out of food to feed the dogs, and has had to lock itself in a house with the dogs howling and lurking outside. The players will probably rescue the sap out of pity. Plenty of humor, if played right.

As always, there can be too much of a good thing, and the complications should usually err on the side of amusement. For example, the PCs are chasing someone arrested for theft (having stolen something amusing. . . like the a movie star's hairpiece). Unbeknownst to the players, the thief has a brother who looks pretty similar to him. . . and he's invited this brother to town in order to take the heat off his theft.

But the thief's brother is a bigamist. . . and one of his wives believes he's trying to get away from her. So when the wife (incorrectly) believes that her husband has stolen the hairpiece, and she steals it back. . . the humor writes itself. ("Ma'am, we don't want any trouble. Put down the toupee, we give you your husband.")

Note that the humor comes from within the framework of the situation; aliens do not suddenly kidnap the husband, for example, nor does the hairpiece suddenly develop magical powers. Keep the situation consistent with the campaign's tones and themes.

Keep the pace fast.

Humor isn't slow; if a scene is dragging, have the phone ring, a villager run up, an ultimatum from Chromaman painted on clouds ("'Fools. You underestamate me.' He misspelled 'underestimate.'"). . . whatever it takes to keep the adventure flowing.

On the other hand, if the players are still amused by a scene, then by all means, let it play out. Even then, don't let it limp along like a *Saturday Night Live* sketch five minutes too long; know when to move it through. A fast pace is also important in order to keep the characters from being able to ponder too much; action is usually funnier than thought.

Know the limitations of your genre.

A ***Call of Cthulhu*** campaign, for example, couldn't run a *Ghostbusters*-type game this week and still be scary next week. But some idiot could break into the characters' library and steal an important book. . . preferably one of the few books incapable of summoning Something Dark. Most horror or cyberpunk campaigns can't get wildly absurd, but could still have the ability to play a perfectly reasonable lighter adventure.

At the other extreme, ***Changeling*** or light-hearted super-hero games can have wildly funny adventures. Goofball

villains, odd thefts, and riddling fairies all form the potential for fun (and funny) adventures.

For other genres, you'll need to figure out what you and your players are willing to accept. Talk to your players honestly about what their expectations are; a renegade Ewok with a lightsaber may amuse one group of players, yet may provoke hostile disbelief in another. Fortunately most players appreciate a change of pace, but it's best to talk beforehand.

Continuity can be funny.

Continuity is one of the most powerful tools a gamemaster has, for both serious and comic adventures. It makes the fictional universe more real for the players; the lack of character-specific continuity is one of the reasons pre-published adventures often feel flat. Players love to feel that what's gone before has long-term consequences.

Write down seemingly insignificant events from your adventures, and use them later. If the PCs give a gold piece to a beggar, write it down; a year later, have a finely-dressed man shadow the (probably paranoid) characters. . . it's the beggar, now a wealthy merchant, hoping to repay the gift with interest. (If goons kidnap the beggar after he meets the PCs, then you've got the beginning of complications, as detailed earlier.) These little facts don't need to be the focus of the story; they can be a side-point or subplot.

The story is still about the characters.

This one's important. Once you have a wacky plot with wacky NPCs, it's easy for the story to get out of control, with the players feeling moot compared to the awesome force of the plot or NPCs. It's even more likely if the Wildly Powerful But Mostly Harmless antagonist is used. Don't let this happen. Remember: even in a comedic story, the focus is not on amusing NPCs or amusing situations; it's about the players' reactions to this weirdness.

Don't make the characters act out of character.

At first glance it may sound fun to force the players into character roles they are unaccustomed to. Avoid this temptation. Don't, for example, have the happy-go-lucky teenager player character get recruited by the army, expecting humor to come from the fact that he now has to act adult and disciplined. The player will probably resent the fact that you've forced this on him.

Someone's Stolen the Mayor's Kitten!

Now, in this same situation, what if the army started trying to recruit the character because of some standardized test he took years ago? Well, that can be funny; the player then gets to interact with army recruiters, and will (in all likelihood) avoid getting recruited, and be amusing in the process.

Likewise, don't force the characters to be funny (unless they are naturally); having the heroes transported to an intergalactic comedy club is asking for trouble, and is a good way to ensure a humorless session.

On the other hand, placing characters into unexpected predicaments is perfectly all right; just let the humor come from the characters reacting the same as they would. For example, on *Star Trek: The Next Generation*, when the entire crew is transported to the world of Robin Hood, the Klingon Worf protests, saying, "I am NOT a merry man!" Likewise, Thog the Barbarian transported to Disney World may attack the evil-looking Rodent God that threatens children. But before Thog kills the innocent bystander, turning the adventure morbid, make sure something happens. . . something funny.

Having said that, feel free to ignore this advice if you think the player would

have fun. For example, if you have a story that would involve the normally
stoic scientist to be hit with one of Cupid's Arrows, turning him into a gushing love fool, ask the player beforehand if he would want to play his character with the affliction. Don't give information that ruins any surprises, but give enough clues so the player can make an informed decision.

Have nonplayer characters act in character.

This is related to the previous rule. It isn't funny to have the stoic President of Globocorp suddenly decide to be a stand-up comedian; the players won't believe it, and the whole scenario will just feel dumb. But if the Klingon warrior starts golfing to improve his wrist strength ("The better to smite enemies with my blade."), that should be within the realm of believability. Amusing, but believable. Likewise, the fat cab driver probably can't realistically start taking ballet lessons, but the meek mailman might ask for advice on writing a poem to a woman he's interested in.

Be careful not to let the quirks of the NPCs overshadow the player characters. But new hobbies, problems, or relations can give your NPCs a richer texture, and give the PCs something new to comment on and discuss.

Relax.

If the adventure isn't as funny as you'd want it to be, don't worry. At worst, the adventure will come off as "odd" to the PCs, and they'll shrug and return to the regularly scheduled gloom and doom of next week. At best, they'll be laughing, both in and out of character, and probably recite catch phrases from the adventure for years to come. Also, don't feel pressured to be funny during the entire adventure; good comedy feels off-kilter, yet natural. Provide the odd situations, let the characters react as they would, and the rest should follow.

* * *

Not everyone can be a writer for the *Tonight Show*, but most GMs should be able to provide lighter adventures for their players. Played as breathers between heavy, serious adventures, or designed as part of an ongoing humorous campaign, humor can be a definite part of gaming. . . and both are about having fun.

28IF -- Steven's Love of April Fool's Day

April Fool's Day is probably my favorite **h**oliday. Th**e** Yu**l**e/Pagan/Wintery holiday? Too commercial. Halloween? Too live-action without the rock-**p**aper-scissors. Thanksg**i**ving? Too gluttonous. No, April Fool's D**a**y is one of the few holidays they haven't corrupted yet. No "Happy April Fool's Day!" cards, no "April Fools! Life Still Stinks, Charlie Brown" specials. Just the **m**essage of April Fool's.

Namely, *keep your eyes open.*

Keep your eyes open. Don't take anything at face value. Dis**b**elieve your surroundings. Think. It's the on**e** hol**i**day whe**n** you're actively encoura**g**ed to question everyt**h**ing you cross, and you're actively punished if you don't.

The message of April Fool's is not "Love one another!" or "Happy thoughts!" It's "We're out to get you if you don't watch out." And, r**e**ally, despite being an optimist, I think that may be more true than not.

This is the ho**l**iday of humor. This is the holi**d**ay of **p**ranks.

Conside**r** 1996. Th**i**s i**s** the year Taco Bell, d**o**ing their part to pay off the **n**ational d**e**bt, bought the Liberty Bell, and **r**enamed it the Taco L**i**berty Bell. Outraged people called to complai**n** to the company, only to be informed that, indeed, it wa**s** a prank.

(And, jus**t** for th**e** record, I think I should point out I am a much bigger fan of hoaxes than pranks. Pranks ha**v**e a c**e**rtain unavoidable streak to them; hoaxes require belief. Unscrewing the tops off someone's salt and pepper **j**ust isn't **a**s funny as **c**onvincing someone that Congress is considering a [law](#) ma**k**ing it illegal to drink and u**s**e the internet, since the inf**o**rmation highway should be **n**o le**s**s safe than real highways.)

At its best, April Fool's Day represents everything I appreciate in this worl**d**: h**u**mor, a**n** askew view of the world, and an attempt to **g**rab humanity by its collectiv**e** Old Navy Denim Jacket and shake vigorously. And I like that.

From the w**o**rld of gami**n**g, it's the **o**ne day when we should appreciate being inquisitive, leaving no stone unturned, and constantly rolling Detect Lies. Hoaxers take what we want to be true, what we **f**ear wil**l** become tru**e**, and what we'd never ima**g**ine, and inc**o**rporates them into the "real world." **S**o do mos**t** of t**h**e best gaming exp**e**riences I've ever had, reall**y**.

For **f**un, do a s**e**arch on the net for "April Fool's" and "hoax**e**s." See what kin**d** of adventure you can come with presuming one of the hoaxes is true. (There have been nu**m**erous books writt**e**n on hoaxes; o**n**e **o**f my favori**t**e for fluff-reading is t**h**e *Big Book of Hoaxes*, part of the "**B**ig Book" series of i**n**fotainment volumes usin**g** comic art.)

So this is our first theme issue. I've **b**asically tried to get everything to revolve aro**u**nd **t**he s**p**irit of th**e** holiday -- oddities, humor, and pu**z**zles -- and I hope you li**k**e i**t**. Spec**i**al thank**s** go out to everyo**n**e wh**o** made some of **t**he fiddly **b**its possible (James, Phil, Keith, and others I'm s**u**re I'm **f**orgetting). And, as ever, **f**eel free to send me an**y** [comments](#).

* * *

Because YOU demanded it! (And by "you," I really mean, "Adam.")

In last week's column, I alluded to "The Canada Incident." Well, this was an offshoot of the first *Torg* adventure I ran. Perhaps, in hindsight, I should have taken this incident as a harbinger of doom. But I didn't.

Anyway, for those of you who have played *Torg*, you know that much of the action revolves around these triangular regions of power that are being contested by the Bad Guys. There are various rules they follow, but one of the important ones is that

these tringular regions usually built off other regions; thus two regions can be back to back along a common edge. Two of the joined regions are in Canada, and through role-playing my poor players learned that, indeed, the regions they were looking for were in Canada.

Unfortunately, I hadn't done a terribly good job at revealing that the Interesting Thing they were looking for was at the connecting point of the two triangles. (i.e. Point A or point B) Thus, instead of narrowing their search down to two points, they had only narrowed it down to. . . near or inside those triangular regions. Unfortunately, each of those triangles is about three hundred miles on a side. So, rather than give them two small locations to check out, I gave them about 80,000 square miles.

At which point, Dennis said (in a voice simulating Fred from Scooby Doo), "Okay! We know where they are. Let's go to Canada and start looking for clues!" The other players joined in. "Yeah! How big could Canada be?" "Great! You search the left side of Canada, I'll go right, and we'll meet back here in ten minutes."

So, in our gaming, "going to Canada and looking for clues" is shorthand for a mystery which requires too much of a leap to complete.

(I really do believe I'm a better GM than these horror stories must make me seem to be. At least, I hope I am.)

-- Steven Marsh

"This has been a review."

Mysteries of the Obvious -- Explained!

"Who is buried in Grant's Tomb?"
-- Groucho Marx, *You Bet Your Life*

In every mystickal Tradition there is a Question at the heart of Mystery; from "Who serves the Grail?" to "What is the Mason Word?" to "Why has the Bodhi-Dharma left for the West?" But one Mystery, one Question, lurks beneath and hovers above any discussion of the secret governance of America, the hidden lords of shadow whose every whim has become Federal regulation for the past 508 years. The Question hides in plain sight, a veritable byword for an empty riddle. "Pass me by," it seems to say, "Go on about your daily quotidian life unconcerned with the True Mysteries." But it's always worthwhile, when examining a Secret Tradition to ask the Question that They claim is meaningless -- to ask Who is buried in Grant's Tomb.

"The man used by our Government for years and thousands of cases as their 'Doctor' and 'Expert' on remains was a total FRAUD. He was not a 'Doctor' and the techniques used by this FRAUD were derided as unscientific and in the words of one eminent Forensic Anthropologist; 'Disgusting and fraudulent: Voodoo forensics' . . . . The old joke about 'Who is buried in Grant's Tomb?' is no longer funny. Someone in Congress has got to make a stand on this issue. The far reaching ramifications will be felt in the next war. The time is now to act."
-- Maj. Mark Smith (Ret.), "The Remains Charade Is A Fraud"

The question begins with paradox. As a tomb, nobody is buried there -- if Someone (or Something) lies within, they lie above ground; immured but not inhumed. The question, then, takes on a newly important cast of meaninglessness -- not only do we not know that we know Who (or Whom) is buried in Grant's Tomb, we don't even know that we shouldn't know why we don't know. You know? To ask, then, is the point of the question -- and precedes even the first of the Great Tasks of the Magus according to Eliphas Levi, who should know, even though he began the list with "to know." And not to ask. Consider that carefully; not to ask. If we've learned anything so far, we've learned nothing. (To know that you know nothing is the beginning of wisdom, said Socrates, although Eliphas Levi began somewhere entirely different. Paris, in point of fact.) Thus, Somebody (or Something) deep within Grant's Tomb doesn't want us to ask.

"GRANT'S TOMB:
A. Kill everyone.
B. Get Green Pendant.
C. Free Alexander Tennent."
-- walkthrough for *Bloodnet,* from *Codebook 3.0* for the Macintosh

And They cover it well, not only with the scrim of inanity that has made asking the Question a byword for pointlessness, but with other defenses. Consider this: Grant's Tomb was dedicated on April 27, 1897. The occult and mystical pianist and composer Alexander Scriabin died on April 27, 1915, screaming in a madhouse about imaginary tumors killing him (imaginary death -- a proper fate for one linked to a burial that is not a burial). The New York City (Grant's Tomb is traditionally located in New York City) poet Hart Crane (the Crane, of course, being the sacred bird of Hermes, who guides souls to the underworld) suicided on April 27, 1932. Speaking of sacred animals, April 27 is the day of Tyi Wara, the beast-man who brought poetry and learning to Mali -- just as Hermes brought it to Greece, or Thoth (Hermes' twin, whose bird is also a Crane) to Egypt. The web grows tighter, we measure a circle, as Charles Fort hastens to remind us, beginning anywhere, even with "to know" or "in Paris." Phil King of the Blue Oyster Cult died on April 27, 1972 (a Biblical forty years after Crane), and to cap it off -- and to demonstrate that They mean business -- former CIA director William Colby died on April 27, 1996. Is Death itself buried in Grant's Tomb?

"It sounds a jokey, frivolous question, on a par with 'Who is buried in Grant's Tomb?' I mean, Shakespeare wrote Shakespeare, didn't he?"
-- marketing copy, *A Common Reader* catalog

Grant's Tomb follows more than one path back to Hermetism. (Do you feel the spirits of the Merovingian kings

hovering around us as we discuss a Tomb famously findable and famously unfillable -- a mystickal mirror to the Other Tomb, with its famous occupant, now lost? Do you? Why the heck not?) It sits on Riverside Drive -- just as the edge of the afterlife sits on the river's side, the River Styx, itself but one of the rivers of the dead -- the River Lethe conferring forgetfulness, of the type that might make one ask who is buried in Grant's Tomb. William Colby, of course, died on a river side; Hart Crane drowned. Fear death by water.

The cross-street for Grant's Tomb at Riverside is 122nd; 122 being the number of Asmodeus, lord of Hell, demon of the second decanate of Aquarius (water again). Not to mention that 1+2+2 = 5, and the pentagram of magick. 2930 also adds to 5 (2+9+3+0 = 14 and 1+4 =5), and I hardly need to point out that it's hardly coincidence that that number is second baseman Rogers Hornsby's lifetime hitting total. Rogers Hornsby, born exactly one year before Grant's Tomb was dedicated; the mystickal Moonchild prefiguring the sacred Tomb of the Unknown. Hornsby, who played primarily for the St. Louis Cardinals -- another secret hint of a sacred tie to a religious order; and 122nd is also known (near Grant's Tomb) as Seminary. Perhaps the Tomb hints at the Seminary of St.-Sulpice, shadowy executors of the Rennes-le-Chateau decretals. (1/22 also being the date that Cleopatra's Needle rose in Central Park in the palindromic year of 1881.) Did the *Prieuré de Sion* dedicate Grant's Tomb to commemorate the final defeat of the Stuart Bloodline at Culloden, exactly 150 years before Rogers Hornsby's birthday? Does that explain why 150 plus 1434 (the year René d'Anjou, Nautonnier of the *Prieuré,* designed the Cross of Lorraine) equals 1584, the year that John Dee received the 48 Enochian Keys -- and Rogers Hornsby's lifetime RBI total?

"It was a standing joke at the seminary I attended for students to ask one another: 'Who wrote the epistle of Paul to the Hebrews?' It was admittedly weak humor -- on a par with 'Who is buried in Grant's Tomb?' But it served to raise a primary question about Hebrews: *who actually wrote this brilliant treatise on the person and work of Christ that has been a part of our New Testament from the beginning?"*
-- Ray C. Stedman, *Introduction to Hebrews*

But aren't we doing Their work for Them now? Once the *Prieuré* are involved, don't we really know Whose Tomb it is? Again, we approach gingerly, fearing the sound of horns and motors. Rogers Hornsby played one season for the New York Giants (in the earth in those days), in 1927, his only season in New York City, location of Grant's Tomb. 19+27 is 46, the number of Levi, the sacred hereditary priesthood. Grant's Tomb holds a High Priest (perhaps, if it holds one of the Greys from the 1897 Airship, a very high priest indeed) of the *Prieuré,* perhaps the Highest. (Remember; Giants plus Cardinals.) During that year, Hornsby scored 133 runs (the number of the ocean, the ocean that claimed Hart Crane), 26 home runs (A-Z; completeness, the Alpha and Omega), 205 hits (the mountain; earth plus water -- again, the river's side), 125 RBIs (5 (or 1+2+2) cubed, much as 27 is 3 cubed), and maintained a .361 average (361 being "Mount Sion" kabbalistically, revealing the *Prieuré* yet again). It's obvious that They manipulated Rogers Hornsby's entire career, Making Manifest That Which Should Be Hidden, and playing a giant game of misdirection centered squarely (and on the level) upon Grant's Tomb.

"Grant's Tomb is not accessible to the mobility impaired."
-- U.S. Park Service informational pamphlet

An interesting thing about Grant's Tomb. It's made of granite. "Granite," which sounds a lot like -- "Grant." There's one more peculiar tie to the Tomb and to this kabbalistic pattern of simultaneous revelation and concealment that swirls around the Tomb like the interface between water and earth, between life and death, between Rogers Hornsby and Alexander Scriabin. April 27, 1822, was the birthday of a figure still steeped in mystery to this day. He changed his name -- for kabbalistic reasons? We may never know for sure. He was at the center of many vast and interlocking banking conspiracies -- but died penniless. And yet, his picture adorns the fifty dollar bill to this day; fifty being the number associated with the mysterious Annunakim, the precursors of the "giants in the Earth" hinted at by Rogers Hornsby in the year of Glozel and the Crystal Skull, 1927. Could the mysterious Entity within Grant's Tomb, the Sacred Focus of Merovingian kabbalah, the slip point between Making Manifest and What Is Hidden, actually be Ulysses S. Grant, 18th President of the United States of America? If so, it would answer a lot of questions. Or at least one.

Pyramid Review from Dimension X!

Aberrant: Project Utopia

Published by [White Wolf](#)

By Carl Bowen, Steven Long, and Angel McCoy

144 pages, $19.95

(Review by controversial nova Divis Mal, received via encrypted, untraceable Opmail)

No doubt because of my publicly stated belief that novas cannot be held accountable to or judged by the laws and ethical standards of baseline humans, I am often inaccurately portrayed on the OpNet and elsewhere as some sort of "nova supremacist" who holds them in contempt. Nothing could farther from the truth. Indeed, I find baselines and their insatiable curiosity to be of great interest to me. A case in point is *Aberrant: Project Utopia*, a recently published book about the do-gooders of Project Utopia, including the misguided novas who make up Team Tomorrow. While not without its flaws, this little volume provided a plethora of valuable information about the Project - including some of its dirty little secrets.

The book is divided into six chapters plus an appendix; it begins with a rather uninspired piece of short fiction intended, I suppose, to get one into the spirit of the Project's much-vaunted ideals. Considering its brevity, I will overlook its lack of value to me. Chapter 1 is a useful primer on the origin and growth of Project Utopia and, more importantly, Team Tomorrow. The chapter is remarkably well balanced, deriving its information from a variety of news and media sources, not all of whom share the wide eyed awe in which Utopia is held by the less discerning.

Chapter 2 discusses the organizational structure of Project Utopia. All of its branches, from Public Relations to Internal Affairs get a full treatment, allowing the reader to understand the Project's bloated hierarchy. The chapter even highlights the Project's efforts to regulate nova-derived technologies and its self-absorption with licensing concerns. If ever one needed proof that the novas of Utopia had failed to live up to their true potential, one need only read of the value they place on action figures made in their likenesses. Pathetic!

Chapter 3 is a lengthy chapter that details the jewel in Utopia's crown: Team Tomorrow. Portraying these novas as heroes, the chapter discusses their recruitment, training, and placement throughout the world. Naturally, the bulk of the information emphasizes the good these novas have done in the service of mankind. I could hardly contain my disgust as I read these pages. There's even a reproduction of the Team's laughable Code of Honor. While I have little doubt such material will appeal greatly to hero-starved baselines, I found its treatment less than even-handed. In fact, it reads like propaganda of the highest order.

Chapter 4 was far too short. In its brief pages, one can find information on Project Utopia's relationship to other organizations and governments. Again, emphasis is placed on the close and friendly relationship Utopia has with groups (like the United Nations) that share its goals. This is, of course, part of the propaganda fed to novas and baselines alike. Why not bring greater attention to the fear and jealousy novas elicit in the United States, for example? Why not talk more about the secret Directive that seeks to contain the powers of novas? No, to do so would not serve the PR machine that wishes to paint the rosy future Project Utopia has prepared for all of humanity. Truth just gets in the way, after all.

Chapter 5, however, goes some way toward making up for earlier deficiencies. This chapter describes Project Proteus, a secret cabal within Utopia as dedicated to the control and manipulation of novas as any on Earth. Indeed, Proteus is even more sinister due to its existence as an adder in the bosom of Utopia. Not all Utopians know of its true goals or even its general operations. As the chapter explains, though, Proteus seeks nothing less than the maintenance of a status quo in which novas serve baselines for their betterment and no one else's. To that end, Proteus has undertaken numerous insidious plots against novas, including probably the murder of novas who uncover their secret. I can assure you that Proteus will be unmasked, for they pose no threat to me. Perhaps then more novas will realize the truth of my Null Manifesto and abandon their unnatural servitude to baseline laws and morality.

Chapter 6 is clearly intended for use by the media, for it delineates the various types of stories in which Project Utopia novas may take part. Each type includes numerous ideas for plotting and maintaining such stories. I was amazed to see stories revolving around Teragen-sympathetic novas within the Project. I also cannot fail to note that many of the story types adopted a much more morally ambiguous stance toward Utopia than earlier chapters would have indicated. While I have no objection to this approach (and even applaud it), it did strike me as at odds with the fawning approach seen elsewhere.

The appendix to the book describes in some detail important members of Project Utopia, including Team Tomorrow and Project Proteus. The information contained herein is useful, but poorly selected in many cases. It was valuable to provide data on known Proteus operatives, including its vile Director Thetis, but I am saddened to see nothing on such prominent Uncle Tom novas as Shelby "Caestus Pax" Eisenfaust or Spencer "Antaeus" Balmer. These omissions make little sense to me, as I would surmise a reader of this book expects them to be included. Perhaps it is a marketing ploy designed to dupe baselines into buying subsequent volumes in the series with a promise of the missing information.

Nevertheless, *Aberrant: Project Utopia* is a worthwhile purchase - if only to see how the Project portrays itself to baselines and novas too weak to realize their proper place in the universe. If the truth of the Null Manifesto is to be heard, this portrayal must be challenged on all fronts. This volume fails to provide all the information needed to combat it, but it is a small first step to our ultimate victory.

Pyramid Review from Dimension X!

Steven --

There appears to be another Phil Reed in the Austin area with an IO account. I've had him forward my mail from his accounts on numerous occasions, have talked to people who searched for me in the phone book and found him, and have even received his mail a few times.

But this is the strangest thing yet.

I thought it was some complex prank.

After forwarding the attached e-mail message to the proper recipient and sending one to my work address where I could show it around, I was promptly visited by what would be more commonly known as "Men in Black." At first I took it to be a joke, a prank pulled on me by some friends, but as the "MIBs" trashed my home and destroyed my new iMac I figured out it wasn't a joke.

I thought you may be interested in the e-mail that started it all.

Please, please DO NOT share this with anyone.

I think they're watching me right now.

(I have included some additional comments after the attached e-mail.)

-- Phil

Subject: Re: Hoffman Institute Equipment Guide
Status: ULTRA TOP SECRET -- DESTROY AFTER READING
```

In a message dated 3/20/00 2:50:42 PM Pacific Standard Time, philreedd@mail.io.com.fake.do.not.use writes:

<<After an extended stay in the field I wanted to e-mail you regarding the usefulness of the Hoffman Institute Requisition Manual and Guide. I will cover each section of the manual/guide in the following stated comments:>>

It's a good thing you decided to wait until AFTER your field assignment to write this "informal" memo.

<<The information regarding clothing and accessories feels to be a complete waste of three pages in the manual. How many of us do you feel require information on clothing costs and availability?>>

This section may be deemed a "waste" by yourself but many agents without the time or desire to go shopping find having the basics in one easy-to-find and use location a blessing and have thanked me time and again for this.

<<The sections on survival gear, professional gear, and medical gear were very useful during my assignment, and the ease with which gear was delivered to us while in the field was amazing. While some of the more complicated medical gear was useless to most of us, having an MD in the field squad was a great help and when that crash cart arrived we all breathed a little easier. Next time we will take a better supply of medical gear with us so we don't have to worry about using our medical insurance cards (though having the information on such in the manual/guide is a very nice

touch and greatly appreciated).>>

After going over the field report filed by your "medic" I'm not at all surprised you were thankful for the medical supplies. You should consider carrying one of our "monster kits" the next time you go into the field. As you can see in the manual, these are complete tool box setups with everything you should need to combat various monster types (vampires, werewolves, aliens, other unknown, etc.) and having the appropriate kit with your team would have negated the need for the rush delivery of medical gear. Many field agents have reported these kits to be the most useful items in our inventory.

<<Communications & Security, Surveillance, and Information Warfare were all well-presented sections and the gadgets described sounded useful but our team has yet to find a situation where sitting in one place for days on end is necessary. Everyone in our team does use a portable computer and cell phone and these were appreciated pieces of hardware for the Institute to supply us with.>>

Being a clean-up crew, it is no surprise you find the communications and computer gear to be less than necessary. Our more covert agents are continually requisitioning night-vision goggles, cameras, the shotgun and parabolic mikes, and all kinds and types of microtransmitters. And do not forget, your cell phone is for business calls only and is not a secure line. You MUST use a land line only when making a call in which you are forced to describe the situation accurately. The personal calls on your cell phone have been deducted from your pay. Any future improper use of company equipment is grounds for suspension.

<<The weapons and paramilitary equipment sections were especially useful. Never have I seen a better selection of weaponry and useful gear. Covering a wide assortment of close combat weapons, firearms, and accessory after accessory, I feel like a kid looking through the Christmas catalog whenever I start flipping through. An excellent job on these two sections!>>

Thanks. There haven't been many members of assault teams who have been disappointed by the selection available to them. It is rare we fulfill any requisitions for the really heavy stuff (rocket launchers, machine guns, etc.) but it is available if a situation is likely to get very, very nasty.

I have noticed your failure to mention the vehicles and trained animals available for requisition from the Institute. With over 30 vehicles detailed and available and the amount of "customizing" we can do here, I am a little surprised. The next time you're going into what is a potential combat situation requiring heavy firepower, stop by and we'll look into outfitting you with an armored car and some heavy weapons.

Thanks for the notes on the guide. Now get back to work and don't EVER send classified reports through unsecured channels again.

I hope we don't have to "silence" anyone over this . . . again.

Steven --

I recognized the name Hoffman Institute from the *Dark•Matter* game and was already interested in the game so I at first thought this was a joke (as I already mentioned). After the "incident" at home I went looking for a *Dark•Matter* book to see just how crazy it sounds when I ran across a book labeled *Arms and Equipment Guide*. I bought it and compared it to this e-mail message. The resemblance is scary! The only things in the book not mentioned in the e-mail are sections titled Paranormalia and Alien Equipment.

Paranormalia is a collection of "magical" items written for a gamemaster to include in his game. It's a very short section (only four pages long) and describes twelve different items (my favorite one being the "Hand of Glory" which

is a real hand dunked in wax and turned into a candle . . . just like in the *Hellboy* "Box Full Of Evil" comic from 1999).

Alien Equipment is another section for the gamemaster and was slightly less interesting (and again, only four pages long).

I'm not quite sure how, but it appears Wizards of the Coast has stumbled across some bizarre agency and created a game about them. The focus shift of their *Alternity* game line (which *Dark•Matter* is a part of) is probably a result of those same "MIBs" who destroyed my home and possessions.

With your known desire to collect "dead" games I figured I should warn you off this one. There's a good chance the "MIBs" may visit you if you pick it up. If you do insist on grabbing it (it is a great read and a perfect book if you plan to play this or any other modern conspiracy game). you'll find the necessary information regarding the book after my sig.

Rascals, Varmints & Critters 2: The Book of Curses

Published by [Pinnacle Entertainment Group, Inc.](#)

Written by John Goff

128 pages, $20.00

Senate transcript excerpt, dated October 11, 1877

Senator Morgan Folder (R, Michigan): . . . and yet, if we truly want to protect our children, why then do we not seek to ban these corrupting publications, like the so-called *Rascals, Varmints, & Critters 2: The Book of Curses*?

No, no, your jeers do not affect me; you forget, I'm from the upper peninsula. Now, let us look at this book for a moment, shall we?

The first fifth of the book is a section they call a No Man's Land, and it consists of three sections. The first is a Neo-Zoology accounting by Dr. Taddeus Washington, which details many of his observations and musings regarding his study of the American West. (I refuse to stoop to the lurid press's "Weird West" moniker for this region.) Although well-written and thorough, it still strikes me as the work of a man who's been in the sun too long.

The second section is entitled "The Unquiet Dead: A Short Treatise," and, despite Dr. Frederick Sutherland's credentials, I'm afraid I cannot help but scoff at his findings. The walking dead, hungering for human flesh and brains? I would laugh at its findings if I weren't afraid that some young boy, like my own son Tommy, might happen across this text and be unable to sleep.

I will not comment on Dr. Alfred Jenson's letter, the third section of this No Man's Land. Suffice it to say the contents propose several. . . interesting. . . theories regarding the unusual reports filtering back from the West, but I cannot pay any more than cursory heed to a man locked in an asylum.

In short, if the works were intended as fiction, I may well be amused and amazed at how effectively they evoke an atmosphere of terror; but as pieces purporting to be fact, I must urge my fellow Senators to act to curtail the publications of presses like this Pinnacle Entertainment Group. To do otherwise would pose a serious threat to our children.

Rebuttal transcript

Senator Colin Grullett (D, New Jersey): I would propose, fellows, that Senator Folder has never been a child. Or, if he has, then he led a sheltered and lonely childhood.

Regardless, I have read the *Book of Curses* to which our good Michigan Senator has seen so fit as to condemn, and I can find nothing particularly objectionable. Oh, certainly I would not read this work to my five-year-old daughter, but the same goes for the President's State of the Union Address. No, the remaining four-fifths of the book (which Senator Folder did not even mention) makes it clear that this work is intended for the purposes of entertainment.

While I will not comment on the validity of the first fifth of the book, the remaining so-called "Marshal's Handbook"

portends to deliver the "real" story behind many of the oddities in the West. And, in so doing, it becomes obvious that this work is intended to be used to spin wild yarns of horrors and monsters.

Like many of the publications of Pinnacle, this work focuses on having fun while providing the grist for good tales to be told. Perhaps the most interesting aspect of the book is its tendency to provide many possibilities, of which a story-teller could choose one. . . or several! For example, in the section entitled Paranoia, details are given on five beings that can wear another's form or appear human. . . all of them different, all of them frightening. This variety means that, even if someone is familiar with the basic idea of the story, the listeners can still be surprised by the exact manifestation.

This book should not be condemned; it should be commended for being so thorough! If only some of our own legislation could be such. No, within this book there are sections on Neo-Zoology (new creatures, for those of you not keen on Latin), the walking dead (with many new ideas and surprises), vampires, ghosts, and others. . . all of them with many possibilities so a story-teller doesn't have to tell tales about a boring old sheet-ghost unless he wants to. Also of note are new imaginative horrors supposedly unleashed by modern science. This section ends with a brief table entitled "Normal Critters" that neatly rounds out the book's more mundane usefulness.

The next Marshal's section deals with creatures of horrific legend. . . Dracula, Frankenstein and Springheel Jack, among others. There are surprises here which I won't reveal, but these are powerful horrors intended for story-tellers whose listeners have heard all the tales and need larger threats to be frightened. While much of this section felt familiar and not as fresh as the previous section, it was still enjoyable enough.

The final section deals with lycanthropy and vampirism. It's the smallest of the "Marshal's Handbook" sections, and provides guidelines for story-tellers to use these infections in their stories. Again, this part is not as interesting as the rest of the book, but I'm sure some story-teller somewhere has been wanting to tell a story where the listener turns into a werewolf.

In conclusion -- no, no applause please; my conclusions can last a while -- as a compendium to spur the imagination of story-tellers, it is, indeed, a worthwhile purchase. Sure, I had minor quibbles with the layout: the large typeface that is the earmark of Pinnacle's books about the West, for example, continues to bother me, and I believe a smaller sort size would allow for more of the interesting illustrations or daguerreotypes to give more visual aids; likewise the book's headers are often confusing when the subsections of one topic have the same type size as unrelated later topics. But these quibbles are small compared to the usefulness of the book for story-tellers to spin fanciful horrific tales about what is going on in the weird west.

If Senator Folder is truly concerned about the welfare of his son, he would do well to look at his voting record regarding the War, then count the years 'til his boy can legally hold a gun. No, I argue that ***Rascals, Varmints & Critters 2: The Book of Curses*** is a perfectly fine, fun book, unless the reader has grown up in someplace traumatic or otherwise horrifying. . . like Michigan.

by John Kovalic

Murphy's Rules

Murphy's Rules

by Rik Kershaw-Moore

Art by Paul Kidby

This is a simple adventure intended for four to six *Discworld* Heroes. Although written as a one-shot, it can be easliy incorporated into an existing campaign.

Introduction

Death, the seven-foot tall anthropomorphic representation, has a problem. Last night whilst attending to the duty in Ankh-Morpork, petty thief Osbert Snood (acting on the orders of Nosmo Vermilion) stole Death's sword from his horse Binky. Evil genius and children's entertainer Vermilion intends to use the supernatural sharpness of the sword to cut his way into a small pocket universe located in the catacombs below Ankh-Morpork. Vermilion is aiming high because this pocket universe contains the fabled Swazzle of the Gods, one of the most powerful magical items on the disc. With the Swazzle in his possession, Vermilion intends to declare himself ruler of the entire disc and no one will ever laugh at him again. *Ha ha ha ha!!!!!!*

Of course it isn't as simple as that because, well, Death wants his sword back, preferably in time for the next royal -- er -- abdication, and he has decided on professional help: namely a bunch of Heroes.

The Swazzle of the Gods

Many moons ago when Blind Io wasn't quiet so blind, Hoki had yet to pull that old gag with the exploding mistletoe, and Reg was the God of all round family entertainers, life on the disc was a lot simpler. Mostly this was because of the strange and mystical device called the Swazzle of the Gods. Where it came from no one knew; possibly the creator left it lying around on a beach somewhere next to a half-eaten egg and cress sandwich.

Physically, the Swazzle is nothing more than two small strips of slightly bowed silver held together by linen tape. Attached to the front of Swazzle is a length of string that makes retrieval easier if swallowed.

The power of the Swazzle is the effect it has on people when someone places it in their mouth and talks. The sound produced instantly robs the will from all those in earshot. . . which is why it wasn't a good idea to leave it lying around where a curious God could find it.

In the aftermath, Blind Io demoted Reg to the God of Club Musicians and had Hoki assigned to the Mistletoe section. As for the Swazzle, Blind Io sealed it up in a pocket universe and made sure that the plans were lost. Much later Abraxas the Agnostic learned of the Swazzle and included its hidden location in his book *How to be a God*. This is where Vermilion learned of the Swazzle's existence.

The Adventure Begins

For the Heroes, the adventure begins in the Curry Gardens with a mammoth helping of Klatchian Hot with extra Squishi sauce. The thing about Squishi sauce is that, unless it has been properly prepared, it turns into the highly deadly poison Bloat. Unfortunately, tonight the Squishi chef did not pay attention when he prepared the Heroes' order, and so after the first mouthfuls of the curry things start to go wrong internally-speaking. From this point on, nothing -- not even a stellar HT roll -- can save them. . . except, that is, for the antidote.

As the Heroes start to expand, time seems to slow and from the shadows steps a tall dark cowled figure. The more observant of Heroes might notice that the figure is carrying a huge scythe, and seems to be in need of a decent meal. Give them a moment to contemplate their fate before Death starts speaking in a heavy embarrassed voice.

AH YES, WELL ER THANK YOU FOR BEING AVAILABLE AT ER SHORT NOTICE. I HAVE IF YOU LIKE, WELL NOT TO PUT TOO FINE A POINT ON IT. NO MAYBE NOT. THE THING IS, YOU SEE, WELL IT'S ERM LIKE THIS. SOMETHING TERRIBLY EMBARRASSING HAS HAPPENED. SOMEONE HAS STOLEN MY SWORD.

I WAS ATTENDING TO THE DUTY IN SWEETHEART LANE. THEN SOMEONE TAPS ME ON THE SHOULDER. I TURNED AROUND BUT NO ONE WAS THERE. THEN I NOTICED MY SWORD WAS GONE. I WAS WONDERING IF YOU COULD HELP ME TO RETRIEVE IT.

As an incentive, Death produces the lifetimers of each of your adventurers and plonks them meaningfully on the table in front of them. The fact that there isn't a lot of sand left in the top bulbs ought to make up the Heroes' minds for them. Therefore, once the adventurers have agreed, Death continues.

THANK YOU, I KNEW I COULD COUNT ON YOUR COOPERATION.

Then, reaching into the folds of his robe, Death produces a pair of mirrored spectacles and places them on the table.

I FOUND THESE AT THE CRIME SCENE. I BELIEVE THEY ARE WHAT IS KNOWN IN THE TRADE AS A CLUE. NOW IF YOU WILL EXCUSE ME I HAVE BUSINESS TO ATTEND TO ELSEWHERE. BUT FEAR NOT; I WILL MEET YOU BACK HERE ONCE YOU HAVE THE SWORD IN YOUR HANDS, OR SOONER SHOULD YOU FAIL.

With that, Death glides back into the scenery, the world resumes snaps back into light, and the manager comes rushing over with antidote and apologies.

The Mirrored Glasses

The sunglasses are a pair of spectacles that have been fitted with special mirrored lenses, which allows the wearer to see Octarine, the color of magic. This mean that the wearer can see things others can't -- namely Death -- and from there it should not take a genius to realize that this was how the crook lay in wait for Death. Hanging from one earpiece is a small tag with the words "Another Quality Product from Dibbler Enterprises." This is yet another clue.

Talking With C.M.O.T. Dibbler

C.M.O.T. Dibbler (p. DI87) can be found standing in his office in Sator Square with a tray of sausages around his neck. If questioned he will deny any knowledge of the glasses existence, whilst all the time trying to persuade the Heroes they want a "Sausage-Inna-Bun" using his formidable Fast-Talk and Merchant skills.

If they try physical violence, Dibbler will simply twist out of their grip and vanish into the crowd, leaving the Heroes holding the tray of sausages. Not only will the Watch take a very dim view of this action but Dibbler will send around a Splatter to retrieve his tray.

The fastest way of getting the information they want is bribery, and the level of the bribe (and how persistent the Heroes are) will determine how much information they get.

AM$1 -- The glasses can allow the wearer to see things that do not exist. "To you my friends, AM$10 a pair."

AM$2 -- The glasses are made by his nephew Solstice. They use a special polarized octarian filter to allow people to see things that are not there. "On sale to my most discerning customers for only AM$5 a pair."

AM$3 -- Business has been slow and he has only sold three pairs. The Library up at the University owns one pair, a dwarf assassin called Grimholdt Widebearth has the second whilst the last pair belongs to Osbert Snood of the thieves guild. "Look, and I'm cutting my own throat here, for you only AM$2.5 a pair."

Interviewing the Suspects

For a small fee, say AM$5, Dibbler will let the Heroes have addresses of his three customers, and as an added bonus a copy of the Orang-utan / English dictionary.

The Librarian

The Librarian (p. DI110) is in his study in the University Library in the middle of an extremely delicate operation. He is attempting to reattach the spine back onto a copy of Mobhurst Tulley's *Book of Impractical Magic* which got too close to a copy of Bullfrog's *The Lore of Sortilege*.

Interrupting the Librarian is guaranteed to annoy him, but should anyone offer to help then the atmosphere will soon thaw. If the Heroes manage to engage the Librarian in conversation and explain the purpose of their visit, he will look sadly at them for a moment and mutter a quiet "Ook." Then he brings out the mangled remains of a pair of glasses. What the Librarian actually said was, "I squashed them three days ago." How you communicate that to the Heroes is up to you.

Sir Grimholdt Widebearth XI

Sir Grimholdt Widebearth XI has his offices in Mollygog Street. From these exclusive apartments Widebearth offers his clientele the finest in undead and Troll inhumations at extremely competitive rates. Widebearth will receive the Heroes with all the equanimity of an alumnus of the most famous school for assassins in the whole of the disc. The Dwarf will offer the Heroes drinks and exchange pleasantries while telling them absolutely nothing, since he considers the matter of the purchase of the glasses to be none of their business.

Again, violence in not the answer, since, despite the gentlemanly veneer, Sir Grimholdt is still a dwarf. At the first sign of trouble he will produce an exquisitely sculpted battle-axe from beneath his desk and charge the Heroes. The key to cracking this particular nut is flattery. Sir Grimholdt is vain and if Heroes start seriously to flatter him, the dwarf will reveal that he did, indeed, buy the glasses. He bought them as a business investment as he has been thinking of branching out into the supernatural. If asked about his movements on the night in question, Sir Grimholdt will reply that he was in his chambers all night. Of course, no one would ever doubt his word, and neither should your Heroes.

Sir Grimholdt Widebearth XI

ST 13, **DX** 14, **IQ** 10, **HT** 13

Advantages: Disease Resistant, Damage Resistance, Longevity

Disadvantages: Assassin Code of Honour, Greed, Intolerance Trolls, Reduced Move

Quirks: Always Exceedingly Polite, Punctuates all his sentences with "Eh What?" or similar

Skills: Acrobatics 11, Assassin Lore 14, Axe Throwing 15, Climbing 14, Distilling 9, Knife Throwing 14, Lockpicking 11, Pharmacy 9, Poetry 10, Politics 10, Riding 14, Savoir-Faire 11

Osbert Snood (Deceased)

Snood rents a room at Mrs. Spent's lodging house in Market Street. The Lodging house is a ramshackle .three-story building that has clearly seen better days. The owner, Mrs. Spent is a charming old woman who can squeeze a dollar until it squeaks. She has a face like a wet razor and a mind to match. She will freely talk about Snood, saying that he keeps to himself most of the time and is no trouble to anyone. If they want to go in and search his room, however, it will take a very heavy bribe.

Osbert Snood's room is fastidiously neat. . . except, that is, for the massive pool of blood that has congealed under the single chair. Sitting or, rather, *slumped* on the chair is body of Osbert Snood. His sad-looking face is wearing a startled expression almost as if he can't believe the fact that he's been stabbed through the chest with a large and extremely sharp wooden sausage of the type used by children's entertainers. Balanced on his left hand is a balloon animal, while in his right is a small crushed piece of parchment which reads, "That's the way to do it!!!!!!!!!!"

It should be apparent that the Heroes are dealing with a madman. . . a madman who is clearly not in possession of all his faculties, since how many would-be murderers scratch "If found return to Nosmo Vermilion, Children's Entertainer, 23a Cable Street, Ankh-Morpork" on their murder weapons?

Cable Street

Cable Street is one of the oldest Streets in Ankh-Morpork. Once home to the Cable Street Particulars, it stands above the main underground thoroughfare of the Ankh-Morpork catacombs. Here, below this street, lies the gateway to the pocket universe that contains the Swazzle of the Gods. The main entranceway to the catacombs is via a trapdoor in Shinkicker's Quality Dwarfish Delicatessen.

Arriving in Cable Street, the Heroes are just in time to see Nosmo Vermilion exiting 23a. Vermilion is wearing the standard issue costume for Children's entertainers: a purple stovepipe hat, a red-and-yellow jacket, blue trousers, and bright pink clown boots. Tucked into his belt is a long sword whose naked blade shines with an unearthly blue glow. He is also carrying a handful of his Sausages of Death. If he spots the Heroes, Vermilion will pause long enough to throw a couple of his Sausages before diving into the Delicatessen.

By the time the Heroes get to the shop, Vermilion has opened the trapdoor and descended into the catacombs. His whirlwind passage through the shop has left sun-dried rats and dwarf drop-scones scattered everywhere and the owner cowering behind the counter. The dwarf will scream at the Heroes and demand they do something, all the while pointing at the open trapdoor.

Nosmo Vermilion

ST 11, **DX** 16, **IQ** 10, **HT** 11

Advantages: Absolute Timing, Cool

Disadvantages: Bad Temper, Intolerance - Children, Megalomania, Odious Personal Habit - Makes Balloon Animals

Quirks: Always laughs at his own jokes, Constantly talks in Mr. Punch like phrases such as "That's the way to do it!"

Skills: Juggling 15, Knife / Sausage Throwing 16, Mime 12, Needlecraft 15, Pie Throwing 13, Punch & Judy 10, Running 10, Shortsword 14, Singing 10, Sleight of Hand 13, Stage Magic 15, Stealth 14, Ventriloquism 14

The Sausages of Death -- The Sausages of Death are Vermilion's secret weapons. While they look exactly like the wooden sausages so beloved of children's performers, they are in fact perfectly balanced daggers.

Down Below

From the open trapdoor wafts the foulest smell imaginable. In the dim light of the shop, a set of moss-covered steps lead down into the darkness. Climbing down the steps, the Heroes will find themselves in a huge subterranean cavern. The catacombs that run beneath the city range from street wide chambers to the tiniest of crawl spaces and all points between.

The goal here is to find Vermilion, but it is going to take some time. Settle back, grab any old dungeon map you may have, and let the Heroes get good and lost in the surreal world of the catacombs. Just so things do not get boring, liberally pepper this section with any old encounters you may have. Perhaps the Heroes encounter the Thieves Guild Amateur Speleological Society out on a ramble, or maybe a lost and terrified wizard running from something large, wet and dribbly. Whatever the encounters, they should be surreal and non-lethal.

Eventually, the Heroes will stumble across a cavern from which a strange blue light is shining. The light is long and sword-shaped. Moving in the light from the sword is a human figure, desperately hacking at the cavern wall. It might be possible at this point to sneak up on Vermilion, but anyone who fluffs the roll will find themselves on the wrong end of Death's sword. Remember this is a weapon so sharp that it can carve words into vowels and consonants. If not interrupted, Vermilion will reveal the soap bubble-like wall of the pocket universe that contains the Swazzle of the Gods.

Unfortunately, what no one knows is that the pocket universe is now home to a horde of Things from the Dungeon Dimension (p. DI157). Therefore, the situation can go one of two ways. Either Vermilion is stopped before he open the portal or he opens the way and all Thingness breaks loose. If the later happens, then it is a running battle to shore up the defenses of reality.

Aftermath

With the portal closed, humanity saved, and the sword in their hot sticky hands, the Heroes can safely return to the Curry Gardens where Death is waiting for them. In exchange for the sword, Death will treat them to a slap-up meal before vanishing once more into the background.

Pyramid Review

Raiders, Renegades & Rogues (for Star Trek: Deep Space Nine)

Published by [Last Unicorn Games](#)

Written by Steve Kenson, Robin D. Laws, Steven S. Long, Christian Moore, Rob Vaux

128 pages, $20.00

Raiders, Renegades & Rogues is the new source book from Last Unicorn Games covering the crooks and villains of the *Deep Space Nine RPG* and the dark, shadowy nooks and crannies within which they lurk. Though ostensibly for the *DS9 RPG*, this will be of use in the *Star Trek: the Next Generation RPG*, and of limited use in the classic *Star Trek RPG* also.

Physically this book is well laid out with reasonable line artwork throughout. The best art is the depiction of the book's new equipment, whilst the book's new ships are illustrated with only two pieces, neither of them keyed to the ships and one of which was used to illustrate the Orion smuggler's ship in Last Unicorn's *A Fragile Peace* adventure book. The book also lacks an index.

Raiders, Renegades & Rogues's twelve chapters covers criminals and the criminal life in general before detailing pirates and privateers, piracy and their plunder, thieves and gamblers, mercenaries, bounty hunters and assassins, technology and equipment, vessels, some notable rogues and rogues' havens, the creation of such rogues as characters and a guide to running a rogue campaign.

Each of these chapters is clearly written and examines their subject from every angle. For example, the excellent section on mercenaries, tells you not just how they operate in the *Star Trek* universe, but how one joins a mercenary unit and gains training and employment. Further, it explains how each *Star Trek* government views the employment and use of mercenaries. Throughout the book references are made to individuals and events within *Star Trek* that cry out for further development either by the GM or by Last Unicorn Games.

The equipment chapter not only details weapons like the Varon-T Disruptor and Romulan Sniper Rifle, but a host of different poisons and surveillance and computer infiltration gear as well. These will complement most games, but will work well in an intelligence campaign also.

For the players there is a short chapter on creating crooked characters, which includes the full statistics for the Lurians, Flaxians and Nausicaans, the three NPC races from the *DS9* core rulebook. To my mind this is wasted space as the statistics should have been in the rulebook, and other races mentioned in the book, such as the Miradorn and the Ackamarians covered in their stead.

The selection of templates, overlays, packages, skills, advantages and disadvantages enable the creation of any of the character types in this book. Further, there is plenty of variety in them to produce interesting PCs and NPCs alike and these are an excellent addition to the game.

The final chapter is a guide to running rogues in your game - either as a rogues only campaign, or by integrating them with your *Star Trek* game. The advice given is good, but seems a little short. It is finally backed up with three episode seeds, which should get a GM started for this style of game.

Unfortunately, referees and players looking for details on the infamous Orion Syndicate as advertised are going to be severely disappointed. Snippets of information on the syndicate lace the book, but that is all they are - there is no one section dealing with the Orion Syndicate. We are going to have to just wait for the actual supplement.

In summation, the **Deep Space 9 RPG** provides enough information to allow the use of criminals as player characters and NPCs within a campaign, but any GM or player wanting to explore the seamier side of the **Star Trek** universe will want this book. Had it covered the Orion Syndicate as promised this would have been an indispensable resource for the game, but without this, **Raiders, Renegades & Rogues** is still a solidly useful and well-written source book.

Reviews of Gameable Fiction

The Garrett Files, by Glen Cook

Review by Leon Stauffer

The Garrett Files is a series of nine books by Glen Cook starring Garrett. As the sign on his door says, Garrett is an "Investigator" or "Confidential Agent." He's a beer drinking , skirt chasing, wisecracking, hard-bitten detective right out of Chandler. Except that his cases don't just involve mob bosses and assorted criminal lowlifes, he also confronts dead gods, shapeshifters, vampires, sorcerors, killer zombies, ancient curses and amorous ghosts. He makes his home in TunFaire, a fantasy equivalent of New York or Los Angeles that could make a fine setting for a fantasy campaign.

Cook does an excellent job of blending the stereotypes of both the fantasy and tough detective genres. The various nonhuman races are usually close to their fantasy archetypes. But he also makes them work as replacements for the various groups of ethnic immigrants that populate the city streets in most pulp detective stories. So instead of Chinatown and the like, Tun-Faire has Dwarf Fort and so on. Any large city has its bosses; Tun-Faire is run mostly by mages known as Stormwardens and Firelords. All the usual vices of a large city are well represented, but New York has yet to offer High Elven strippers.

Tun-Faire is a truly fascinating place, populated with an amazing number of different races. Besides the standard elves, dwarves, goblins and ogres, there are oddities like the imp-like, flying morCartha or the powerful, slow-dying Loghyr. Humans make up about half the population and since it's their city, they make the rules. Most nonhumans are not citizens, which means mostly that they don't get drafted to fight in the war in the Cantard, a war that has been going on for at least 40 years. This does not endear them to the average human on the street, a problem that shows up particularly later in the series as the war winds down and more veterans start coming home. And apparently all, or at least many, of the races can interbreed, so there are many strange cross-breeds walking the streets. While many of the races will be familiar to most fantasy gamers, Cook often gives them odd twists; for example, ogres have three sexes. And unicorns are carnivorous and very, very nasty.

Caught right in the middle of this stew of races, Garrett tries to make a living, while working as little as possible. When the going gets tough, and it always does, he calls on a number of friends and allies. Chief among them is the Dead Man, a Loghyr who was killed over 400 years ago, but hasn't got around to finishing the business of dying. While he can no longer move, his multiple minds are quite active and highly intelligent. He is also a telepath and telekinetic. . . whether this is magic or something else is never fully explained. For more mobile support, Garret calls on Morley Dotes, a half-elven assassin and vegetarian restaurateur who spends his free time chasing married women (successfully) and betting on water spider races (unsuccessfully). More reliable but no less deadly is Saucerhead Tharpe, a legbreaker and bodyguard noted for his size and dedication to his job far more than his brains. When real muscle is needed, he hires Doris and Marsha, two thirds of a set of triplets with different mothers. They're grolls, twenty foot tall crosses between humans, giants and trolls, and nobody really wants to mess with them if they don't have to. Other characters include Pokey Pigotta, a master of surveillance with so many aliases he was once hired to investigate himself, and Winger, a huge woman who describes herself as a manhunter but will do anything for a chance at more money. Others call her a disaster waiting to happen, but she always seems to survive her bungled

scams.

Garret's adventures to date are recounted in the nine books that make up the series. In *Sweet Silver Blues*, Garrett is hired to find the mysterious heir to a fortune in the middle of the Cantard war zone. With both a fortune in silver and the secrets of a least one spy network at stake, there are a lot of people who have no intention of letting Garret succeed. Back in Tun-Faire, Garrett is hired as an advisor when a Stormwarden's son is kidnapped in *Bitter Gold Hearts*. *Cold Copper Tears* has Garrett caught up in crooked doings in Tun-Faire's religious community. In *Old Tin Sorrows*, Garrett tries to do a favor for his Marine sergeant by protecting his boss from poisoning, but the job turns nasty when the suspects start dying and Garrett keeps seeing a woman nobody else can see. The Book of Shadows is a potent magic device that allows its owner to take on complete new identities. Everyone wants it, but Garrett isn't about to turn it over to anybody he can't trust, which is everybody in *Dread Brass Shadows*. Garrett is hired by the cops in *Red Iron Nights* to solve a serial killer case. But when Garrett cracks the case, the trouble has only started. In *Deadly Quicksilver Lies*, Garrett is hired by a former royal mistress to find her missing daughter. But when a psychopathic transvestite known as the Rainmaker shows up, nobody wants to tangle with him, including most of Garrett's friends. Garrett's strangest case gets him caught up in the machinations of *Petty Pewter Gods* when he becomes a key figure in deciding which of two second rate pantheons gets to keep the smallest temple on the Street of the Gods. And in *Faded Steel Heat*, one of Garrett's friends is target of a protection racket run by a gang of human rightsists and the cops want Garrett to go undercover to keep an eye on them.

There's a lot of things characters could do in or around Tun-Faire. A typical campaign might focus on a team of investigators similar to Garrett. Other possibilities include a military campaign set in the Cantard, gang warfare with the characters as either mobsters or the Watch, or intrigue among the rich and powerful. Almost any adventure suitable to either noir or fantasy could work. A few quick ideas:

- Silver is the fuel that makes magic work. If the characters find a significant amount of it, Tun-Faire's sorcerors are sure to come calling. Not to mention anybody else after a quick buck. . . after all, it is more precious than gold.
- More and more thunder lizards are appearing near the city. Not only is this dangerous for anyone living outside the city, it's also a bit odd since they never used to come so close before. Maybe the party would like to figure out why. Or just make a buck hunting them.
- The Imperial family went into exile a long time ago. But now there are rumors of their return, and they don't intend to come back anywhere but on top. Somebody's hiring an army of mercenaries and they'd like the characters to join.
- Dead whores are turning up all over town. And every one of them has some connection to one of the more respected temples.
- A particularly nasty new drug just hit town. Nobody important would care, except that the children of the powerful have made it their drug of choice, and now they're starting to die. Maybe the party knows a victim. Maybe they just think stopping the dealer is the right thing to do. Or maybe somebody's offering a lot of money to anyone who can save the children of Tun-Faire's rulers.
- One or more of the characters, maybe the whole party, has managed to cross somebody with the clout to get them committed to the insane ward at the Bledsoe Hospital. They need to get out and find out who got them locked up and why.

Whatever direction a campaign in Tun-Faire takes, it's certain to be an exciting time for all involved.

Pyramid Review

[Nobilis RPG](#)

Designed and Written by R. Sean Borgstrom

Art by David Bolak, Alphonse Mucha, Arthur Rakham, William Morris, and Muchner Jugend

206 Pages, $28.00

Nobilis is an RPG that allows characters to take on the role of the *Nobilis*, demi-god level powers that are the protectors and embodiments of one of the fundamental aspects of reality. Complex, unique, and deeply touching, *Nobilis* is one of the most interesting small press RPGs in years.

Giving a brief introduction to the game is difficult, as the setting is rich and complex. Set in the modern day, this game is much like many of the *World of Darkness* games in that it is set in a world much like ours, but filled with magic and terror. The center of this magical world is the Valde Bellum, the 'great war' that all the Imperators (gods) are waging against forces that wish to destroy all of reality. In this war Imperators who would normally hate each other, such as Angels of Heaven and Hell, Gods of the Wild, the Light, the Dark, and stranger gods yet, are forced to fight together to save the totality of creation - all that grows upon the World Ash Yggdrrasil. While these greater gods war in the spirit realms and in places beyond comprehension they form servants, Powers, to see to their business in the mortal world.

These servants of the Imperators are the Player Characters. These powers walk in the world that hides behind the prosaic world of our reality. They are expected to look after their own domain, the aspect of reality that they embody and control, as well as that of their Imperator. They also must stop the Exrucians, those from beyond reality, as well as the Powers of other Imperators who would increase their powers at the cost of the characters' standing and power. The rewards for successful characters are freedom, power, and hope; the penalty for failure is misery beyond death. This, obviously, lends the game to an epic tone and scope, focusing on heroics and failures that shake the very nature of reality itself.

Despite the epic power and potential that the characters have the theme and feel of the game is not on simple might. While it is obvious that characters with this level of power can change the world the true brilliance of the game is the way that it manages to take these celestial force characters and make them deeply, painfully human. Every action the characters take has consequences; every choice they make is difficult. Even more important is the fact that human beings, ordinary mortals, can become the center of the Nobilis' lives by the fact that a human's life can be tied to the Nobilis' Estate through a ritual called the Nettle Rite. If the human dies, or breaks, so does the Noble's power. This leads to a role playing experience that focuses on emotion and humanity as much or more than on power and glory.

Nobilis is one of those games that allows players to stretch their imaginations, to come up with characters epic, Gnostic, mythic, magic and mundane. In many ways it reminds me more of the wilder sides of fantastic literature than any other game. Books like Zelazny's *Jack of Shadows*, or the *Amber* series would fit well into this milieu (in fact this game is in many ways more Amber than Amber). Due to this kind of scope and possibility the game does require a GM with a strong vision of how their game should run and players who are willing to work together cooperatively. However because of the spread of the games universe most of the work will have to be done by the GM, as the book sets out only the basics of the world and leaves specifics in the hands of those running the game. The fact that the

starting point is a world mostly like ours is of some help, but given the ability of the Nobles to create worlds of their own and walk into different times it is only a slight help. In the end only experience in world building and an ability to wing it will see players and gamemasters through.

The game's system is not bad. The mechanic revolves around the use of "Miracle Points," a pool of points that you can spend to do tasks that stretch even the godlike capabilities of Nobles. Basically you add a number of Miracle Points to your base attribute (of which there are only 4) to determine a final score. If the score is high enough you succeed, if not you fail. This gives a greater degree of character control than diceless systems like *Amber*. The problem with the system is that it is barely there. *Nobilis* is not designed for direct confrontation, and it shows. It also requires a lot of control and thought by the Hollyhock God (the fancy word for GM). If you want detailed rules, or rules that are designed with combat in mind then you will go nuts trying to use this system. It is also a system that will work best of those with a good deal of experience role-playing, as newer players will probably get lost.

The single worst thing about the game is that while it is beautifully, poetically written, the information in it is not laid out in a linear form or in solid blocks. Information about Imperators, Powers, and their world is scattered over several chapters, which leads to a great deal of back flipping and cross-referencing. If you really want to run this game you should expect to read the book two of three times in order to get a handle on everything that is going on. Even then you'll probably find yourself looking at the glossary every other page. Luckily the glossary and table of contents are well (almost painfully well) laid out and make this task slightly easier.

Also, as the game is a small press game the book lacks the layout quality that gamers seem to be coming to expect in their books. The layout of the book is nothing that you could not do with Word on your home computer. It is simple two column unjustified text with simple fonts, little formatting, and no borders. Still, some of the very few pieces of art are quite lovely, and all of them are very evocative of the mood of the game.

In conclusion, despite the problems with layout, and the lack of explanation of some issues with the system mechanics, *Nobilis* is a truly wonderful game. Experienced role players looking for a game of modern magic and myth will find that it abounds with originality, emotion, and possibility. If you are looking for a game that simulates the feel of Greek myth placed into modern times, of books like *Gut Symmetries* or *The Sandman* series of comics then I fully recommend *Nobilis*.

-- Bradley Robins

Pyramid Review

6mm Hover Tanks

Produced by [Fortress Figures](#)

Sculpted by Ray T. Edwards

Sample figures painted by Chris Smith

$10 each set

Fortress Figures has just reissued four packs of 1/300th scale hover tanks. These models have been unavailable for several years, and it is very good to see them offered for sale once more. These packs are not the entirety of Fortress' old micro armor line, but they have, in my opinion, chosen to release the best of the packs that were previously available.

All of these miniatures are cast in a kind of gray plastic. This material is very easy to work with; it is slightly flexible, and it can be cut or trimmed very easily with a sharp hobby knife. The plastic does not, however, take acrylic paint very well at all. Acrylics applied directly to the model will bead up and refuse to adhere to the surface of the miniature. Fortunately, a coat of an enamel-based primer will solve this problem completely. Fortress recommends that all of their miniatures be washed in a solution of warm soapy water before they are primed, in order to remove dirt and oil from the surface. The miniatures did, in fact, have a slightly oily feel to them when I first handled them, but this disappeared after they were washed.

Two of the miniatures (the Heavy and the Missile Hover Tanks) require some very minor assembly; epoxy or superglue should be used for this purpose, as plastic modeling glue will not work on this kind of plastic.

EA 001: Heavy Hover Tanks

The Heavy Hover Tanks are two piece models, supplied 10 to a package. The turret is cast separate from the body, but a hole in the base of the turret allows it to be positioned perfectly on the mounting peg located at the rear of the main body. The Heavy Tank is just over one and a quarter inch long, half an inch wide, and just under half an inch high with the turret in place. The turret sports a pair of guns mounted parallel to each other; the right gun is approximately an inch long, almost twice the length of the left one.

The tank is nicely detailed, with sensor domes, lights, and paneling clearly visible, although there are still enough large, smooth areas to allow unit markings to be easily applied. Even the underside of the tank has been detailed with a variety of mechanical bits. The castings are almost entirely free of mold lines, and the only significant piece of sprue was attached to the rear of the turret -- this is will take only a moment to remove. Care should be taken when handling the turret, as the longer gun barrel is rather fragile. The plastic is slightly flexible, but the gun will snap if it is bent too far.

EA 002: Fast Hover Tanks

There are 20 of these one-piece models in each package. This is a small tank, about half an inch square and a quarter of an inch high. The tank carries a large fixed cannon that runs

along the left side of the chassis. In addition, there is what looks like a small machine gun mounted atop the driver's position. Again, plenty of details, including a ladder up the right side for the crew to climb to reach the access hatch.

Some examples of this particular casting have a visible mold line running along the hoverskirt. Perfectionists will need to devote some time with a hobby knife to remove this; however the line is faint enough that this usually isn't necessary.

EA 003: Hover APCs

Once more, there are 20 one-piece models in this package. The simplest of the four designs, the APC is also the tallest at half an inch high. Its other dimensions match those of the Fast Hover Tank. The APC has a sloped front with visible grillwork, a large dome (presumably a sensor system) mounted at the top rear of the hull, and a machine gun mounted atop a blister on the top left of the hull. There is a door on the left side of the APC, and hatches at the rear, through which the passengers can disembark.

This is the most roughly molded of the Hover Tank miniatures. The front detail was miscast on about ¼ of the APCs, and almost all of them needed to have pieces of excess plastic removed from the rear. The rear also evidences some pitting in a number of the models, but this can be easily fixed with a bit of putty. None of the APCs were so miscast as to be unusable.

EA 004:Missile Hover Tanks

The Missile Hover Tanks are based upon the same basic hull as the Heavy Hover Tanks, and like them they come 10 to a pack. This is another two piece model, with the missile as a separate casting. The missile is huge, just as long as the tank itself, and this model should probably be used as an artillery piece. In addition to the missile, this tank is armed with a pair of machine guns -- one each at the front and the rear of the hull.

There are a lot of nice details here. The mechanisms that raise the missile into a firing position are clearly visible, for example, as are the vision slits at the front of the control cabin. The exhaust area of the missile itself required a little bit of work in all of the examples that I have worked with, but only rarely was more than a few seconds with a file required.

* * *

These are all excellent miniatures, and a great way to build up a large force without spending a lot of money. They are very versatile, and can be used in a number of different science fiction gaming systems. They would fit with any of the major of minor powers from Ground Zero Games' Dirtside II, they could be used as new Space Marine or Imperial Guard units in Games Workshop's Epic 40,000 system, or (like me) you could use them in *Ogre Miniatures*. The Hover APC is a perfect GEV-PCs, and the other miniatures can be used as GEV versions of the Heavy Tank, Light Tank, and Cruise Missile Carrier. I have mine painted up as Nihon units, and all I need to do now is find a GEV version of an *Ogre*. . .

-- John Xavier Crimmins

Firebolt

by Joe G. Kushner

Art by Paul H. Way, provided by **Alderac Entertainment Group**

I started off as an honest cop in Crescent City. Sure you say, an honest cop. What next? Politicians that work for the public instead of themselves? Think what you want, but I did a good job. Ask anyone. Johnathan Times did his best. Maybe I was just too new to the whole thing to realize what type of world I was living in. That changed quickly though.

My partner and I never worked with a case involving deltas, and I was glad. Bill had a terrible fear of deltas. "Not natural," he'd mutter into his coffee. Me, I never had any problems with 'em. After all, isn't Delta Prime made up of deltas? Maybe his fear is why he went too far though. . .

We'd been called in to investigate an explosion. Turns out a little girl had some how created a prototype of what looked to be an Armogeddon suit. Unfortunately for her, the power pack was unstable and exploded. She was fine, although a little confused. My partner started ranting and raving about how she was a delta and was going to kill us any second. He lifted his club and began to beat her.

I stood there stunned for a minute. Was this really happening? I tackled him and the girl fled. My partner lay on the ground, frothing over what a fool I was being and how the deltas would crush us all. I thought for sure they'd retire him.

My superiors retired me instead.

Turns out the girl was a delta, a so called gadgeteer, and that the suit of Armogeddon armor she was using had been stolen from a battle site between a local group of Defiants and Delta Prime. Oh sure, my partner's beating of the girl came up, but who could blame him. After all, she was a delta! Who knew what she might do.

It's hard to get work in a city as corrupt as Crescent when you are thrown out of the force. The only types of jobs that I could get, I didn't want. Mob enforcement wasn't my style.

That's when the girl came to see me. Little Sara Parker, not even ten years old, had managed to do some impressive things with the scraps of armor she had. She gave me a gauntlet and a set of goggles and told me what they did. After hooking up with some of the local Defiants, I now have purpose again, and boy, it feels good to really be fighting on the right side this time.

Energy Blast: Firebolt's right hand is covered with a specialized gauntlet, a miniaturized flame throw that inflicts
standard Energy Blast damage (5d6) and can also use Blast Punch and Superblast with the appropriate successes.
Nighvision: The goggles Firebolt wears gives him the Nightvision ability without the drawbacks. The goggles also give
Firebolt the Radar trick with extra successes.
Gear: Good false ID papers, Kevlar vest (Armor 10/-), a pair of handcuffs, and $200.

Quote: "Stop in the name of my law!"

Appearance: In his early twenties, he dresses very conservative when not in suit. His blond hair is combed straight
back. In costume, he wears baggy clothes, a long black trench coat and his gauntlet and goggles. He uses spray and gel
to spike his hair up and contact lenses to color his blue eyes emerald green.

Campaign Uses

- Firebolt is a hero without any powers. By changing his background, one of the players could have outfitted him
  with his equipment. If he ever needed repairs, he would have to seek that character out.
- If the GM sticks with the story, then Sara seeks out the characters to help Firebolt, he's being hunted down by
  the Mob for refusing to work for them when he had the chance, and now that he's got power, they want him out
  of the way.
- If the characters are new to Crescent City, Firebolt could be their guide. His time on the force gave him a greater
  understanding of Crescent City than most deltas have.
- Firebolt can be used to bolster the characters' forces when one of the players has to miss a game. From there, he
  may become part of the regular campaign and background.
- GMs can use Firebolt as a model of how to create characters for *Brave New World* that don't follow standard
  power packages or archetypes.

It's the dawn of the 26th century and humanity has spread out into the stars, establishing powerful stellar nations that rule the destiny of thousands of worlds. After two terrible wars between these titanic powers, there is finally peace, albeit an uneasy one. Once again, the stellar nations are turning their attention towards new frontiers, and opportunities await those daring enough to travel into the unknown.

About Alternity and Star*Drive

Alternity is TSR's science fiction roleplaying game, published in 1998. The *Alternity* RPG serves as a game engine for science fiction settings of all kinds, much in the same way *Dungeons & Dragons* serves as a game engine for fantasy settings of all kinds. The core rules of the *Alternity* game are found in the *Alternity Player's Handbook* and the *Alternity Gamemaster's Guide*.

*Star*Drive*, also published in 1998, is the first campaign setting for *Alternity*. It describes the dawn of the 26th century and the stellar nations founded by humanity. Its focus is on the Verge, a relatively new frontier on the edge of known space. It offers a vast space-opera universe for heroes to explore and adventure in.

Although designed for use with *Alternity*, the *Star*Drive* setting works perfectly well with any science fiction game system, including *GURPS*.

A Brief History of the Galaxy

By the early 22nd century, humanity expanded throughout the solar system. Colonies and bases were established on other planets, and fusion-powered ships traveled between them. On July 17, 2124, humanity made first contact with an alien species. . . or, more correctly, they made contact with us.

The fraal were interstellar wanderers, who'd long since lost track of their original home world. They traveled the galaxy in vast city-ships, moving at slower than light speeds. Attempts to contact humans a thousand years before resulted in many human legends, but little else, so the fraal lurked at the edge of the Sol system for centuries, watching for signs that humanity had improved. When humans moved out into the solar system in force, the fraal tried again. The second contact was more successful. The two races entered into a working

partnership, trading technology and information.

A combination of human mass-reactor technology and fraal gravitic technology resulted in the discovery of the stardrive in 2160. With the first stardrives, explorers traveled to nearby star systems, and the race for the stars was on. By 2250 the Terran Empire claimed a thousand different colonies, but lacked the power necessary to truly govern them. The new colonial governments chaffed under the control of the Empire for decades.

Finally, in 2298, the Thuldan colonies seceded and formed the Thuldan Empire. This set off a wave of secessionist fever, and other colonial governments followed suit. The Terran Empire sent military forces to suppress these uprisings and the First Galactic War began. It ended in 2312 with the signing of the Treaty of Earth, which recognized the sovereign rights of the former colonies and formed the Union of Sol to replace the now-extinct Terran Empire.

For the next thirty or so years, the new stellar nations consolidated their power, explored and claimed new territory, and kept a close eye on their neighbors. One region in particular received considerable attention. Known as the Verge, it was a large concentration of stars outside settled space, on the edge of the Orion Arm. Numerous colonies and settlements were established there.

Then, in 2346, an uprising of mutants on Tau Ceti in the Union of Sol set off the Second Galactic War. GW2 was long, bitter, and bloody, lasting over 100 years and dragging in all the stellar nations before it was over. Finally, several of the stellar nations realized the war could not continue. Sooner of later it would destroy all civilization. These leaders met in secret and forged the foundations of what would become the Treaty of Concord. Signed in the Orion League in 2472, the treaty established a neutral nation, the Galactic Concord, to act as arbitrator, peacekeeper, and watchdog over the twelve stellar nations that survived the war. The Concord has proven a success thus far.

In 2496, the Stellar Ring reestablished contact with the Verge after nearly a century of silence. Cut off from the core worlds during the war, the Verge colonies had to survive on their own. Now the new Galactic Concord moved in to help re-integrate the Verge back into civilization. Some Vergers welcomed them with open arms, while others remain suspicious of the new "arrivers."

Now, in 2502, the Concord struggles to maintain the peace and aid the worlds of the Verge while the stellar nations work to further their own agendas, both openly and behind the scenes. The Verge is a focus for all these activities, with limitless opportunities for those willing to take the risks.

The Stellar Nations

The settled region of space known as the Stellar Ring extends in a radius of some 1,000 light years from Sol. Old

Space is the region within 200 light years of the mother-world, containing the oldest settled worlds of humanity, some of them almost entirely covered in giant cities. Outside Old Space lies the second-generation colony worlds, followed third-world planets and new colonies.

The Stellar Ring also contains the homeworlds of four alien species discovered by humanity: the Mechalus, the Sesheyans, the T'sa, and the Weren. Each of these species, with the exception of the t'sa, had not left their own star system when humanity encountered them. They have, for the most part, been incorporated into the society of the stellar nation that claims the space around their home system.

The Stellar Ring is divided between twelve stellar nations. The Galactic Concord claims and maintains three regions of the Ring, designated Concord Prime, Concord Taurus, and Concord Sagittarius.

Austin-Ontis Unlimited is a combination interstellar corporation and rough-and-tumble frontier. The nation is best known for its arms-trade business, which remains brisk even since the Treaty of Concord. The Austins themselves are a bit gun-happy, and affirm weapon ownership as a vital right.

The Borealis Republic would prefer to stay out of conflicts in the stellar ring. The Borealins are a nation of thinkers, artists, and romantics. They are renowned for their education and knowledge. They are also well known for their cloning technology, half the Borealin population is made up of clones from some 100 "elite" genomes.

The Hatire Community is a nation that denies the value of technology on the one hand, while employing it to sustain themselves. The Community is a theocracy based on worship of the Cosimir, an alien deity. The Brethren focus on human achievement, and disdain technology that alters the human body, claiming it also corrupts the spirit.

Insight was originally a division of the powerful VoidCorp before it seceded and went its own way. Insight originally served as the corporation's Grid programming division, and Inseers still produce the most advanced computer hardware and software in the Stellar Ring. The Grid and virtual reality actually forms the basis of their religion, which seeks enlightenment in pure intellect.

The Nariac Domain calls for equality and opportunity for all people. It has taken up the age-old cause of "the workers" and seeks to maintain a society of complete equality. One of the ways it does so is through cyber-implants to monitor the populace. The Nariacs make considerable use of other cyberware and robots.

Formed by several former stellar nations, the Orion League represents a broad heritage. Orions retain their desire for independence and individuality, and strongly support the Concord as a means of maintaining it.

The Orlamu Theocracy was founded by one of the scientists involved with the development of the stardrive. He claimed to have a vision while traveling through drivespace, a revelation that drivespace is in fact the Divine Unconscious, the mind of God. The Orlamu faith embraces science as a path to understanding, and their knowledge of drivespace and stardrive technology is second to none.

The Rigunmor Star Consortium maintains the equality of all people, and their right to pursue profit. The nation holds profit and financial gain up as the highest goals, and its citizens are well known traders and deal-makers.

The StarMech Collective develops advanced technologies for the combined goals of profit and the pleasures it brings. They rely heavily on robots and similar technologies, freeing the people to think, plan, and party. They balance technical brilliance with a tendency towards hedonism.

Instigator of the First Galactic War, the Thuldan Empire remains a galactic powerhouse. The Empire rests on a vision of "advancing" humanity through eugenics and their medical and genetic technologies remain the best in the Stellar Ring. The Empire seeks to unite all human civilization under their guidance, and have no doubts that they will eventually succeed.

The Union of Sol sits at the center of the Stellar Ring, the cradle of humankind. Solars tend to view themselves as the cultural center of civilization as well as the physical center. They are known equally well for their love and

preservation of old cultures and environments and their arrogance as the "oldest nation" in old space.

The watchword of VoidCorp is order, and the star-spanning megacorporation maintains a complex bureaucracy to control every level of its culture. Advancement through the ranks is uppermost in the mind of every employee (citizen) of the nation, and VoidCorp is known for its ruthless business practices, which make it the most powerful corporation in the Stellar Ring.

Between and above these nations stands the Galactic Concord, charged with keeping the peace and furthering the cause of civilization. The Concord's task is not an easy one, but it is aided by the vast resources of the Galactic Bank, and backed up by the Star Force, the Concord Defense Corps, and the Concord Marines.

The Verge

The Verge is a large concentration of star systems near the edge of the Orion Arm, hundreds of light years from the Stellar Ring. It is home to some 5 billion sentients, cut off from Old Space for 100 years during GW2. Many Verge worlds value their independence and welcomed the stellar nations back into the Verge with mixed emotions. While their old patrons brought new technology and resources, they also brought with them their political conflicts and intrigue. A strong separatist movement encourages independence from the Stellar Ring.

The Verge is something of a cause celebre for the Galactic Concord, the first real test of the Concord's ability to get the other stellar nations to cooperate. In many ways, the Verge is a micocosm of the forces at work back in the Stellar Ring. Concord vessels, like the massive Lighthouse, travel the Verge and assist in resolving disputes between worlds and factions.

The Verge also faces challenges in the form of new species. Known collectively as "externals," these races come from outside known space. They include the Klicks, insectoids responsible for the destruction of the Silver Bell colony at Hammer's Star; and the Kroath, mysterious raiders known to attack ships in the Verge. Vergers are willing to accept aid from the Concord Star Force and the other stellar nations against these threats, but so far little is known about their true nature or intentions.

Technology

In *GURPS* terms, the technology of the *Star*Drive* galaxy is roughly Tech Level 10, with some more advanced TL12 gravitic and contragrav technology, courtesy of the fraal.

Stardrive

The technology that enables the existence of interstellar civilization is the stardrive, a combination of human and fraal technology. A powerful mass reactor powers a gravitic inducer, stressing local space enough to tear open a rift between normal space and drivespace. The ship's tachyon emitter establishes a link to the ship's destination, and the vessel "falls" through drivespace towards it. This is known as "starfall" and is accompanied by a bright swirl of multicolored light.

A starfall lasts 121 hours, regardless of the actual distance the ship travels. After this time, passing through the featureless black void of drivespace, the ship makes "starrise" at its destination. Modern astrogation techniques are accurate enough for a vessel to starrise within a few thousand kilometers of a precisely chosen location. After a starfall, a

vessel must wait for two to five days in normal space for its drive systems to recharge.

The distance a starfalling vessel travels is dependent on the power of its stardrive. The most basic stardrive carries a ship up to five light years in a starfall, while the most powerful stardrives, found on the massive fortress ships of the stellar nations, have a range of 50 light years per starfall.

Starfalling ships create resonance waves that propagate through drivespace. Special drivespace detectors can pick up the resonance waves preceding a starfalling ship 11 hours have the ship starfalls. This gives systems warning of incoming ships 110 hours in advance or the ship's starrise. If the vessel is unauthorized or a potential invader, the system has four and a half days to prepare its defenses or call for help.

Maneuver Drives

Most 26th century ships use gravity induction technology for normal space maneuvering. This creates a smooth, reactionless thrust in any direction desired. Treat a gravity drive as TL10 reactionless thrusters. Some less-advanced areas still use fusion powered thrusters for maneuvering.

Weapons & Armor

Most of the TL10 weapons from *GURPS Ultra-Tech* are available in the *Star*Drive* setting. Lasers and stunners are common sidearms. Lower TL slugthrowers are also available. Advanced gravity technology makes weapons like force beams available as well. Masers and X-ray lasers are not available.

Most *Star*Drive* melee weapons are based on gravitic technology. The power cestus is similar to the TL9 power glove, and the gravmace uses gravitic force to deliver crushing blows, adding 1d (2) to the damage of a normal mace. Monowire blades and stun wands are also available.

Reflect and monocrys "softsuit" armor is the most commonplace, with powered armor "bodytanks" available. TL10 reflex armor is unavailable. Deflector belts are also available using gravitic technology, found in belt form as well as amulets, bracers, and similar adornments.

Communications & Sensors

Communications within a star system use mass transceivers, devices that use gravity waves to carry signals, similar to

Ultra-Tech gravity ripple communicators (p. UT37). This makes communication within a star's gravity well virtually instantaneous, but only out to about 100 AU for a typical G-type star.

Interstellar communications rely on drivesats, satellites equipped with a limited stardrive, enough to shift them into drivespace for the transmission and reception of signals. Drivespace signals travel 50 light years in 11 hours, where they are picked up by the receiving drivesat. A message from the heart of Old Space to the edge of the stellar ring takes approximately nine days to traverse the drivesat relays.

Computers

TL10 computer technology is widely available in *Star*Drive*, although AI technology is legally restricted. Most people wear portable TL10 computers as gauntlets, with sensors on the palm area, controls in the fingers and arm, and a holographic display located on the back of the hand. TL11 implant computers also exist, along with interface jacks for accessing other computer systems.

Computers are linked together in a network known as the Grid. Mass transceivers make Grid communications within a single star system effectively instantaneous. Grid communications between systems rely on drivesats and suffer from transmission delays. Virtual reality technology is a common means of Grid access, particularly for those with neural interfaces, and TL10 cyberdecks, known as "gridcasters" manifest a virtual icon of the user, known as a "shadow" in the system. The mechalus and Inseers are particularly adept Grid users and programmers.

Medicine & Biotechnology

The presence of TL10 medical technology has greatly extended human lifespans. Aging rolls begin at 110 and increase at 130 and 150 years old. Many humans life to be 200 or more. Anti-agathic drugs do not exist. Cloning technology exists for reproduction and the production of medical transplant organs, but braintaping technology does not exist.

Genetic engineering can produce variant human (and, to a limited degree, alien) genotypes, commonly known as "mutants." The Mutant Uprising of Tau Ceti left a strong prejudice against mutants in interstellar society. Outside the Thuldan Empire (which uses gengineering extensively), the genetically enhanced have a slight Social Stigma, moreso if they have very obvious alterations. The TL9 enhancements from *GURPS Bio-Tech* are fairly commonly available.

Cybertechnology

Like biomodification, cybertechnology is viewed with some measure of suspicion from most of the stellar nations. TL9 cybertechnology is commonly available, and more advanced cybertech is TL10. Mechalus cybertech is at TL11. The most common cyberware is an interface jack or a computer implant. Prosthetic limbs are also fairly well-known, although not as common as cloned organic replacements. Military and offensive cyberware is, of course, restricted on most worlds.

The Nariac Domain makes regular use of cyberware, including tracer implants to keep track of their population. It is this popular image of cybertech as a means of government control that makes other stellar nations like Austin-Ontis dislike it. The Hatire Community considers cyberware an abomination that pollutes the human spirit.

Psionics

Psionic abilities exist in at least some segment of the population of every known species. The fraal are all telepathic, and most understanding of psionics, or "mindwalking" as they call it, comes from them.

All stellar nations require mindwalkers to register with the government, and psionic aptitude testing during primary school detects 99% of latent mindwalkers. Most nations at least tolerate mindwalkers, while some revere them. The Orlamu Theocracy and the Hatire Community both consider mindwalkers spiritually gifted, and often recruit and train them. Telepathic Hatire "mind knights" are well-known throughout the Stellar Ring. The Nariac Domain requires its

mindwalkers to wear psionic restraining implants, allowing the state to control their abilities.

The following psionic powers and skills from *GURPS Psionics* are available in the *Star*Drive* setting. If desired, the GM can make other powers and skills available by charging a suitable Unusual Background cost (around 10 points is appropriate). A limit of Power 10-12 in any one ability is recommended.

Electrokinesis: Cyberpsi, Lightning, Photokinesis, Surge

ESP: All ESP skills are available.

Healing (the -50% Limitation "psi takes damage when healing another person" is mandatory): Healing , Metabolism Control.

Psychokinesis: All Psychokinesis skills are available.

Telepathy: Emotion Sense, Illusion, Mental Blow, Mind Shield, Mindsword, Psi Sense, Suggest, Telereceive, Telesend.

Psionic detectors exist in the *Star*Drive* setting, as do psionic impeders from Psionics (p. P74), but other forms of psi-tech, including artificial psi-shields, are unknown.

Species

Humanity has encountered a number of alien species over the past five-hundred years, and some of these new species have become members of the galactic community; somewhat against their will, in some cases.

Fraal

The fraal are tall, thin humanoids, with large, dark eyes and delicate facial features. In the 26th century most people realize the fraal were the source of stories about "grays" on pre-space Earth. Fraal are naturally telepathic, and often have other psionic abilities, particularly ESP and telekinesis. For tens of thousands of years, they have traveled through the galaxy aboard vast city-ships, so long that even they do not know the true location of their homeworld. They are a peaceful race, preferring to observe other species, but rarely interfering with them.

Fraal are highly social and prefer the company of other fraal. In fact, extended separation from telepathic contact with others of their race put fraal into a deep depression, and can even drive them insane.

Racial Template [22 points]: Fraal are ST -2 [-20 points], HT -1 [-10 points], IQ +1 [10 points]. They have the racial advantages Extra Fatigue +4 [Only for Psionics -50%, 6 points], Strong Will +2 [8 points] and Telepathy Power 6 [30 points]. They have the racially-learned skills of Telesend and Telereceive at IQ [8 points]. They have the racial disadvantage Telepathic Addiction [-10 points].

Mechalus

The mechalus are humanoids that make extensive use of cyberware. Their gray skin is covered with a fine network of circuitry. "Mechalus" is a human name; their true racial name is Aleerin. They come from the planet Aleer, a small, cold world in Rigunmor space. Earlier in their development, the Aleerins were quite warlike. On their first explorations into space, they encountered another intelligent species in their home system and wiped them out in a terrible war. Out of shock at what they'd done, a reform movement swept Aleer, turning most of the race towards pacifism and away from dangerous, primitive emotions. A small rebel faction advocates a return to their old, warlike ways.

The mechalus are excellent computer programmers and hackers. Their pacifism does not extend to activities in the Grid, although they prefer programs that do as little actual harm to Grid-users as possible.

Racial Template [25 points]: Mechalus are IQ +1 [10 points] and have racial advantages derived from standardized

cyberware. All Mechalus have Combat Reflexes [15 points] and "interface tendrils" that provide an Interface Jack usable with any computer device [10 points]. They have the racially-learned skills of Computer Operation and Computer Programming at IQ [5 points]. Mechalus have Pacifism (self-defense only) [-15 points] as a racial disadvantage.

Sesheyan

The sesheyans were originally primitive arboreal dwellers from the forest moon of Sheya. They were discovered some two hundred years ago by VoidCorp, which arranged a contact placing all sesheyans in the company's service... in perpetuity. In the generations since, the sesheyans have learned the visitors to their world were not gods or spirits, and that they have been unfairly enslaved. Some have chosen to rebel and escape to other worlds.

Sesheyans average 1.5 meters tall, with green skin and six limbs. The upper pair of limbs are arms, the lower pair legs, while the middle pair of limbs is a set of wings, allowing the sesheyans to fly on worlds of 1G or lesser gravity and Earth-normal atmospheric density. Their head is oval-shaped, with eight small eyes, giving them enhanced night vision, but sensitivity to bright light.

Racial Template [20 points]: Sesheyans are ST -2 [-20 points], DX +1 [10 points]. They have the racial advantages Claws [15 points], Flight (Winged) [30 points] and Night Vision [10 points]. They have the racially-learned skills of Flight and Free Fall at DX [3 points], as well as one racially-learned melee weapon skill at DX [2 points]. Their racial disadvantages are Light Sensitivity [-2 to all skills in normal daylight without eye-protection, -10 points] and Subjugation [-20 points].

T'sa

The t'sa are a humanoid reptilian species from the planet Taasa. They average 1.6 meters in height. Their skin is covered with tough scales, giving them natural armor, and they have slim, whip-like tails. T'sa are fast-moving and skittish, evolved from a species preyed upon by larger reptiles on their homeworld. They breed only once per year. The female t'sa lays a clutch of eggs and cares for the hatchlings. T'sa reach physical maturity in only three months, after which their mother has nothing more to do with them. T'sa family bonds are between members of the same egg clutch rather than parent and child.

The t'sa have a fairly peaceful history of technological development. They achieved space flight early, but did not discover stardrive on their own. They received the technology from their first contacts with humans, still a sore point among the t'sa, who think it was just "dumb luck" that humans discovered stardrive first. Even without stardrive technology, the t'sa managed to settle other star systems using vast cryogenic "sleeper ships." The T'sa Cluster was already an interstellar civilization when they first encountered humans. The Cluster currently lies within Concord Prime space, and is the only non-human independent nation in the Stellar Ring.

Racial Template [30 points]: T'sa are ST -2 [-20 points], DX +1 [10 points]. They have the racial advantages of Combat Reflexes [15 points], Early Maturation (3 months) [25 points], Scales (DR 2) [6 points], Sharp Teeth [5 points], and +1 with all Technical Skills [6 points]. Their racial disadvantages are Attentive [-1 point], Curious [-5 points], Proud [-1 point] and Short Lifespan [-10 points].

Weren

Weren are tall, bipedal humanoids covered in thick fur. They have tusks and sharp, retractable claws on their hands. When discovered by the Orlamu Theocracy, their homeworld of Kurg had achieved a late-Renaissance level of development. The Orlamus do their best to maintain Kurg's native culture and development, guiding the weren along the path to enlightenment, and allowing modest emigration from the planet to other worlds.

Weren are fiercely warlike and deeply philosophical. A weren who embraces a particular philosophy becomes nearly fanatical about it, and weren arguments tend to degenerate into brawls. Weren often find employment as soldiers and

mercenaries, particularly in the Orlamu military. They have no difficulties learning to use advanced technology; a gun is a gun, even if they don't understand how it works.

Racial Template [35 points]: Weren are ST +2 [20 points], DX -1 [-10 points], HT +2 [20 points], IQ -2 [-20 points]. They have the racial advantages Chameleon +2 [14 points], Extra Hit Points +2 [10 points], Fur (DR 1 and keeps warm) [4 points] and Sharp Claws [25 points]. They have the racially-learned skill of Brawling at DX [2 points]. They have the racial disadvantage Primitive [TL4, -30 points]. Codes of Honor and Fanaticism are very common.

Using Star*Drive in a GURPS Traveller Campaign

Gamemasters running *GURPS Traveller* campaigns may wish to use *Star*Drive* material in their existing campaign. There are several ways to do this.

The first is introducing *Star*Drive* aliens and background material into the game. The Traveller Imperium holds some 11,000 worlds, and the states surrounding it even more. Any of the *Star*Drive* species could easily become minor races, particularly the sesheyans, the t'sa, and the weren. The mechalus could be a variant human species transplanted by the Ancients, or a true alien species, remarkably similar to Humaniti. Maybe the fraal are the source of "grey aliens" in the *Traveller* universe as well. They would make interesting allies for the psionic Zhodani.

The various stellar nations can be adapted into "pocket empires" inside or outside Imperial space, or branches of Humaniti seeded by the Ancients. Their cultures can be adapted for different planets or societies inside or outside the Imperium. Planetary systems from the *Star*Drive* book or sourcebooks like the *Star Compendium* can be dropped into the *Traveller* universe. *Star*Drive* adventures also adapt fairly well to the *Traveller* setting.

The *Star*Drive* setting could also be a parallel or alternate world for *Traveller* characters to visit. A misjump or an encounter with an Ancient artifact could send the characters into the Verge. They have to deal with the circumstances that sent them there and figure out a way to get back (if they want to go back). Perhaps one of the precursor races from *Star*Drive*, like the Glassmakers or the Stoneburners, interacted with the Ancients, or perhaps they were the Ancients, traveling across dimensions as well as space.

Star*Drive Resources

The *Star*Drive Campaign Setting* book from TSR provides a complete and in-depth description of the setting, including history, the stellar nations, the Galactic Concord, and an extensive look at the Verge and its worlds. The *Alien Compendium* covers a number of alien life forms (intelligent and otherwise) while the *Stellar Compendium* described six additional systems of the Verge in depth. *Threats from Beyond* updates the Verge setting and provides adventure hooks and ideas. The *Dataware* accessory describes computers, robots, and the Grid, while *Starships* does the same for ships of all kinds. Adventures for the *Star*Drive* setting include *The Last Warhulk* and *Planet of Darkness*. Two introductory adventures, *Black Starfall* and *Red Starrise*, are available for free on TSR's website.

Dragon Magazine has regular article for *Alternity* and the *Star*Drive* setting, including a series of in-depth looks at the different alien races, and the companion piece to this article in issue #270 (on sale now), which provides information on using the *Traveller* universe as an *Alternity* setting.

*Star*Drive* support can be found online at [TSR's web site](), including free downloads, sample chapters, and programs, and a *Star*Drive* e-mailing list.

Dork Tower!

Dork Tower!

Fun and Profit Part One: Getting It Written

To paraphrase an old joke from the business world: How do you make a small fortune in gaming? Answer: Start with a large fortune! But seriously folks, many people dream of finding work in the gaming industry, and most who do find their way into the business via one of the two standard paths - getting a job and making your own. Finding your way into gaming through a door someone else has opened is a topic that many others have tackled well. The standard advice -- be professional, write clearly, meet the deadline, etc. -- are all well and good. But, what about the one who would spit on his hands, unsheathe his machete and carve his own way through the jungle? What is involved in creation of a new game company? By request, this month we delve into the murky waters of Fun and Profit Part One: Getting It Written.

The first thing that a new game company needs is a good idea. Now, ideas are easy, especially for someone creative enough to convince himself to start a game company. Unfortunately, *good* ideas are not easy to come by. The game world that has your five friends coming back for more week after week is not necessarily the kind of world that the rest of gaming is just dying to explore. Likewise, simply because you have memorized all the tables in your homebrew wargame does not mean that the rules are "easy to learn." Testing your idea on more than one group is crucial. You must be sure that the product you are developing has as broad an appeal as possible. Test your game with other groups that play similar games. Attempt to test with groups that do not usually play similar games. Local college, high school, and game store based gaming clubs are good places to find people you have not yet met. Your game does not need to appeal to everyone, but a broad base of testers will help you identify player demographics that especially like your game. That will help you later as you try to sell your game. While playtesting, take detailed notes. In the earliest days all the comments will be new. Eventually you will not have to write down every comment people make; you will be familiar with most of them. Nevertheless, if the same comment comes up repeatedly - positive or negative - you should take that comment seriously. Be sure to write down the names of everyone who gives you important feedback. You can print their names in tiny print when the game comes out and gain lots of goodwill from people that helped you early. It is also a nice gesture to send your playtesters a free copy of the release if you can afford it.

Assuming that you believe, even after testing, that the whole history of gaming will one day be described as "just laying the groundwork" for your project, congratulations. You are a game designer. Revel in this moment. This is the last stage before you are going to have to start spending money. From here on out there will be two tracks: the garage method, and the office method. Which track is for you depends entirely on how comfortable you are with spending money and how much you have. There have been spectacular successes and failures with either method.

The cheapest way to move on to the next stage is simply to write a detailed description (or prepare a rudimentary playtest edition) of your idea and sell it to another company. They will handle the remaining steps, and, assuming all goes as well as you hope, write you big checks. In addition, you get designer credit and maybe your design house's logo on the box. This is a much more common strategy than you might think. Look for the "Garfield Games" logo on the side of certain well-known products from Wizards of the Coast. You should approach companies that you respect and have published games similar to the one you are imagining. Any company that has been in business for a long time will have some system in place to evaluate and take over games developed by others. They will most likely ask you to sign some kind of release form. This form will be provided by your targeted company and will be written much to their advantage. Sign the form. They will not even open your game and look at it unless you agree to each of the terms. The offer the company will make for your game, if any, will depend on many things including their own sense of how many copies they can sell and how finished they judge your game to be. Do not be afraid to ask for their rationale for making the offer, and do not be afraid to negotiate. You do not have to sell it. You can always finish the development yourself.

If you make the decision to publish the game yourself, there are two ways to go. You may finish development on your own or hire another professional. Writing it yourself has certain advantages. Not the least of which is the fact that you can keep total control over the way the product comes out. This could take a long time, but some people love the feeling of taking a project from start to finish themselves. In addition, if you keep your day job while developing the game you can use pens and paper from the supply closet and the office copy machine. If you are caught and lose your

job, that is good. Congratulations; you are a full time game designer. When you have completed the game to your satisfaction, you will be ready to go on to the actual production of the game. Advice about that stage will come in a future installment.

If you are not a writer, or if you have the money, you might want to hire a freelance writer to execute your idea. There are many good ones to be found around the industry, most of whom are looking for work. Peruse the credits boxes for products you have enjoyed. This will give you a good place to start. Network. The Academy of Adventure Gaming Art and Design (the group that sponsors the Origins Awards) maintains a membership list that includes freelance designers who are available for jobs. Likewise, several websites have lists of freelance writers available. Check out our friends over at rpg.net, for one. When you contact a freelancer about work, follow the standard business advice - be professional, be enthusiastic, and be honest. It is OK to say you have enjoyed his previous work, but do not risk looking unprofessional. Make sure your pitch is clear and explains why this particular freelancer and this particular project are perfect for each other. Remember though, the best writers are a busy and superstitious lot. You will have a better chance of having one take your bait if you are flexible enough to fit into their schedule, and provide some of the bait as an advance. Expect to pay several thousand dollars for a book-length manuscript. Most writers will not ask for the whole fee up front. You should be able to pay some now, and the rest when the product is finished. Although it might be possible to reduce the cash component through arranging to pay your writers a royalty, experienced writers may not want to take such a deal from a start-up.

No matter how you got it, now you have a completed game manuscript. If you are happy with it, but cannot imagine handling the printing and sales tasks yourself, you can take another run at partnering with another publisher as described above. Nothing will be different, except that you will be entitled to more money, since the product is ostensibly ready for print. (Your partners may not completely agree, but the general rule holds - the more work you did, the more money you deserve.) Next up: Fun and Profit Part Two: The Fine Art of Art.

Perfection

This week I'm going to talk a bit about perfection. No, not the ego-mangling ticking timer game intended to shame uncoordinated children of all ages (second only to *Operation* [the Wacky Doctor's Game!] in its ability to reduce an otherwise well-adjusted six-year-old into a mass of future neuroses). Rather, I'm referring to the challenge to create The Best Possible Whatever.

The strive for perfection? I'm all for it. Perfection? I'm against it.

Last week in the Real World I had an idea. While not itself an unusual occurrence, it did strike me with enough velocity to stop what I was being paid to do and sprint to a computer, where I e-mailed the rest of my gaming group. The idea, while itself not important, related to our *Fading Suns* campaign. In a nutshell, we felt that the base means of goal resolution wasn't working out for us, but we didn't want to face the challenge of translating the entire game world to another system. My idea was how to fix that.

And as I excitedly typed in the rules modification, striving to make the game better for our group, I realized how much I like the imperfections in my favorite systems.

Maybe it's the kid in me, Legos in hand, trying to make my Whatzit of Doom even better than last week's Galactic Exploring Thingamabob. Regardless, I have the strong temptation to tinker and "fix" whatever problems I see in a beloved game system. And, given the number of fan sites out there, with home brew rules, modifications, and the like, I'm pretty sure I'm not alone.

Sure, I've run into purists -- those stoic-minded folks who treat the rules of their favorite game as Holy Writ. "Bah!" they say. "Weapon size time segments were put there for a good reason! I'm certain I don't know what that reason is, but I'm going to use those rules no matter what!" But I think a majority of us tinker with our games, hoping to make them more playable, more realistic, more simple. . . and, in general, more fun.

I mention this because a bunch of high-profile games have either recently had new editions (like *Vampire*) or have new editions coming out soon (like *Dungeons & Dragons 3rd Edition*). And each new edition tries to be better than the previous ones. But while perfection may seem to be an attainable goal for some, I believe that, not only is perfection not possible, it isn't desirable.

Think: what's the perfect movie? Well, a romance watcher's perfect movie is different from an action fan's ideal, which is far from a mystery lover's ideal, which is probably not in sync with a foreign film buff. And any film that tries to please everyone. . .say, *Love Fight Whodunnit Deux*. . . is likely to please no one.

So game makers strive to get close, and it falls to us players to get closer to our own personal ideal. We can do this by 1) modifying games that are close to perfect for us, and 2) avoiding games that are far from perfect.

I'll probably talk about this second point next week (unless something more interesting happens). For this week, though, just keep in mind that the games are tools for you; you are not tools for the game. Game makers and players: Keep striving for the "perfect" game, but don't let it keep you from enjoying a Pretty Darn Good game.

Store money in Free Parking. Devise nuclear research rules for *Axis & Allies*. Create variant gadgetry rules for *DC Heroes*. Patch *Myth II* 'til it's unrecognizable. Have fun.

And ask yourself: If they did create a perfect game, what would you do with it? Would you play only that for eternity? Is that part of the definition of the perfect game? Is it possible to get bored with perfection?

Here's one more variant you might like: Tape the *Perfection* timer so you can take as much time as you like. Or, better yet, play *Superfection*. It was more perfect than *Perfection* in my book.

* * *

Editorial bits:

- For folks submitting, *please* hold off on your "Advice for GMs on How to Handle Problem Players" articles. I've got around six I'm sifting through right now. (Or, if you have one you simply *must* write, please make sure it's substantially different from what's out there.)
- The Slushpile has about 30 articles in it. I hope to weed through those sometime tomorrow.
- I now have a new monitor and video card. What does this mean to you? Not much. What does this mean to me? Fewer migraines. Huzzah.
- As ever, feel free to [write](#). . . especially if you're part of the two percent last week who thought that "No, no, a thousand times no!" was the best answer to the question, "Do you think Steven is doing a good job as editor of Pyramid?"

-- Steven Marsh

* * *

Last week's answer: Harlan Ellison's Watching, p. 214 (originally appearing in *The Magazine of Fantasy & Science Fiction* / April 1985)
(No, it's not directly game related, but that's why it was worth a jillion stars)

(Four stars) "**Musical Emergency**: Your old radio breaks. Pay $50 to Fagin's for a new used one."

It Came From The Camcorder

"However, our expression will be: That wingless, larval forms of life, in numbers so enormous that migration from some place external to this earth is suggested, have fallen from the sky."
-- Charles Fort, *Book of the Damned*

Not only have they fallen from it, they apparently continue to whiz around in it, in flocks and squadrons. Are they etheric monstrosities? UFOs? Demons? Pieces of the dimension flaking off, or flocks from the next dimension over? Well, that depends on your shutter speed, or rather on that of your camcorder and your campaign. From the dizzying heights of the stratosphere to subterranean caverns, the Rods are in among us -- let's go to the videotape.

"Q: If Rods are everywhere, why can't they be seen? A: Actually Rods can be seen with the naked eye once you know what they look like and have conditioned yourself to see them . . . If you have ever seen something pass by in the corner of your eye . . . and you immediately look and there is nothing there then you probably witnessed a Rod in your eye peripheral . . .. As you see the videos and get conditioned to seeing what they look like then you will see them zip by in front of you."
-- Jose Escamilla, "Frequently Asked Questions About Rods"

Since Fort wrote, of course, pseudoscience has advanced. After years of tireless effort, of staring at frame upon frame of videotape, film editor Jose Escamilla has confidently tagged and classified these "larval forms of life" as "Rods," or (in some usages) "skyfish." In general, they're pale, gray or white rods usually with two or three sets of "appendages" (or crosspieces, or flanges, or fins, or something) sticking out, but they vary along that continuum. They display "flocking" behavior, especially in groups. People who watch Escamilla's lovingly assembled tapes compare the Rods to schools of very fast-moving fish. These creatures, some the size of jumbo jets, tear through the skies so fast that they're invisible -- until you get them on tape. Once exposed to the all-seeing eye of the video camera, however, they can be seen with rigorous (not to say obsessive) frame-by-frame analysis.

Escamilla first noticed them while he was messing around with a video camera in his back yard near (cough) Roswell, New Mexico (or possibly while trying to film UFOs over nearby Midway, New Mexico). By setting the "shutter speed" to 1/10,000 and aiming it into the sun's glow (though not right at the sun -- unsafe) he was able to get plenty of potential Rod images in even 10 minutes of random taping. He alerted the media, and eventually TV crews began noticing Rod sightings all over -- a local news station in New Jersey caught a Rod fleeing a fire, one zoomed through a History Channel documentary, and KWTV-9 in Oklahoma City even filmed one flying into a tornado! When KFMB-TV in San Diego inadvertently taped a Rod, they brought Escamilla in to do a special; when that special got good ratings, they took him to Sotano de las Golondrinas (the Cave of the Swallows) in San Luis Potosi province, Mexico. Here, in this 1100 foot deep shaft, a sports show (about people who dive in the cave) had accidentally caught a lot of Rods on tape; after seeing the "hundreds" of Rods there, Escamilla returned again with a Japanese camera crew. He's still hard at work, frame by frame. (Yes, you in the back with your hand up. What are the Rods, really? Well, if you want to be a big spoilsport about it, they're a combination of optical blurring effects of the videotape, misidentified pieces of grass or fluff caught in the sunlight, and no doubt eager wish-fulfillment.)

"The thirty-thousand-foot level has been reached time after time with no discomfort beyond cold and asthma. What does this prove? A visitor might descend upon this planet a thousand times and never see a tiger. Yet tigers exist, and if he chanced to come down into a jungle he might be devoured. There are jungles of the upper air, and there are worse things than tigers which inhabit them."
-- Sir Arthur Conan Doyle, "The Horror of the Heights"

No, that's just mean-spirited. The Rods are actually some form of aerial jellied cuttlefish, perhaps; the cylindrical lighted aspect might be a spine, or a dorsal fin. The Rods must dwell in attenuated eyries high in the stratosphere, much as some theorists assume life might float in Jupiter's clouds. Escamilla hints that they might have evolved intangibility or antigravity, which is at least as reasonable as anything else -- they may be descended from the protopterygotic insects (the link between crawling and flying bugs), or from the trilobite-eating Anomalocaris of the Cambrian Era, half a billion years ago. (Scientists can't figure out anything else that the Anomalocaris might be related

to, but pseudoscientists, as always, are here to solve mysteries.) Hunting Sky Fish would make a swell aerial safari for particularly mad **GURPS Steampunk** scientists to mount with the cavorite flyer or the tropopausic-potentio-electrical aeronef.

"The entrance to [Sotano de las] Golondrinas is located in one of the most primitive and uncivilized areas of Mexico and local inhabitants are afraid to approach the cave because they believe it is full of 'evil spirits' which lure people to their deaths . . . Because of its huge size, remote location, and unique geological structure, Golondrinas would be an ideal UFO base."
-- Erich A. Aggen, Jr., "Top Secret: Alien UFO Bases," *Search* (Summer 1991)

Modern Rods no longer demand solid food; in fact, they go to some lengths to avoid hitting organic life (like people or the earth). They feed off solar energy, although fringe (even for UFOlogy) UFOlogist Trevor James Constable and the mysterious Countess Zoe Wassilko-Serecki proposed that sky-fish type UFOs began entering our atmosphere in great numbers once humans began pumping the air full of delicious, irresistible microwave emissions. (Possibly Tesla's tests of his power transmitter brought a Queen Rod down to scout as the [1896-97 Airship](#).) This, by the way, would explain why those high-tension power lines and nuclear testing sites always have more than their fair share of UFO sightings; to the atmospheric Rods, it must be like an electromagnetic dessert tray down here now. Constable's notion of UFOs as sky animals closely tracks Escamilla's Rod theories, although Escamilla's FAQ indignantly rejects the notion that the Rods emerged from the crashed saucer of 1947. ("For some reason we always get this question . . .") Although, if the Greys are bio-roids, there's no reason their saucer can't have been powered by bio-tech antigravity energistic atmo-creatures. Maybe the Rods are just a semi-sentient fuel spill.

"[O]n Channel 11 News (Fox), they had a Navy Official on and he stated that 'yes' the Navy has footage of Rods!!!! Do you know what this means? It means that if the Navy knows about Rods and has footage, so must the rest of the Military! AND this means, they know RODS ARE REAL and this means that we've been vindicated by the armed forces of America!"
-- Jose Escamilla, post on Web forum of the Committee Against UFO Silence

Which brings us, ineluctably, to the military coverup of the crash, the negotiations with the aliens (The Rods? The Greys? Both?), or the possibility that the Rods are fallout from a whole different Secret Project. Maybe they're the transmogrified etheric fish caught in the [Philadelphia Experiment](#), or holographic projections designed as the media for psychotropic subliminals in popular videotaped programs (this week on Fox: "When Rods Attack, And Then Tell You To Obey MJ-12"). Perhaps the Rods are Dero hunting pack beasts (which would tie in nicely with the deep Mexican cave). Maybe the [HAARP](#) project is an attempt to feed them, or to domesticate packs of Rods to work with, say, those jetpack jockeys in **GURPS Black Ops** Strike Force Laputa. From their high-atmosphere magnetic-repulsion dirigible, they battle the Greys at the edge of space, keeping the tropopause safe from alien climate control. The inventive (or deranged) GM could populate the upper atmosphere with all manner of jellyfish, sky-krakens, lost ecologies of pteranodons, Martian insects a la *Five Million Years To Earth,* and whatnot, all of it eating jumbo jets and demanding an air-to-air smackdown.

"Q: When is the dimensional collapse starting? A: It's already starting. What you are going to start hearing about in the near future are something called RODS. These will be something that will be video-taped. What you will see will be large streaks shooting through the air that are etheric in nature but will be captured on tape. What you will be seeing is fourth and fifth density craft moving through space, not having the slightest clue that they are flying right through us. That's because at that point you are beginning to see the implosion."
-- From the *Leading Edge* interview with Alex Collier (Nov 16, 1996)

But that's really pretty tame; not true to the roots of the Rods in the peripheral visionaries like Charles Fort. The Rods are actually transplanar beasts, similar to the ones revealed by the Tillinghast device in Lovecraft's tale "From Beyond." These etheric entities are only visible on videotape normally (it's true -- conventional still cameras don't capture them, even at the same shutter speed), thanks to peculiar quirks in the rastering algorithm or the non-Euclidean nature of VHS. But once you've seen enough of them on videotape, they begin showing up everywhere; eventually in your actual peripheral vision. Your eyes have extended into the Rods' plane, a dangerous realm through the looking-glass of conventional reality. Does this hark back to the Mexican legends of "flying serpents" who taught them the dark

arts of human sacrifice? (And, speaking of the Cave of Swallows, the swallow was known as the "witch-chick" in medieval Europe, and associated with Venus, our mirror goddess.) Trevor James Constable soon began to feel uneasy about the "etherian" entities he'd discovered lurking in the outer atmosphere, hinting that they were vampiric parasites, harbingers of evil, stormy petrels "of the Antichrist." Perhaps he was right; already the flotillas of Rods loop hypersonic victory laps in a war we didn't even know we lost, as generations stare into the videotape (could the Rods be causing TV addiction?) and learn to follow the sky beasts, to see them all around us, to submit to rule by the Rods. Freeze frame. And fade out.

by Stephen Kenson

Art by John Zeleznik and Alex Fernandez

This article presents a campaign concept for traveling between an infinity of alternate or parallel universes, similar to the "Infinite Worlds" campaign presented in *GURPS Time Travel*. In fact, the concepts of this article can be combined with the Infinite Worlds campaign quite easily. Although the material is presented in *GURPS* game statistics, it is usable with almost any game-system that allows the possibility of travel to parallel worlds, particularly various super-hero and universal RPG systems.

World Walkers

World walkers (or simply "walkers") are unique individuals who are "unstuck in time" for some unknown reason. This gives them certain unusual abilities, like traveling across parallel worlds, and "reaching" into other worlds and taking things from them. Their nature also appears to free walkers from many of the limitations of time and mortality; walkers are virtually immortal and can live for millennia of personal time.

All walkers have the Advantages World Walker (100 points, see below), Snatcher (80 points, **CI**, p. 45) and Unaging (15 points). Walkers also have great recuperative powers, allowing them to recovery from almost any injury, given enough time and a safe place in which to do it (Regular Regeneration, 25 points). They can be killed just like anyone else, but most walkers are smart enough to know to cut and run when the situation looks bad.

Walkers have the unique ability to identify other Walkers on sight (in person, not over video) with a successful IQ roll. This ability is automatic and apparently foolproof--no disguise or means of concealment affects it--or at least no one has found a means to fool it yet. It is as much a disadvantage as an advantage for most walkers, but they tend to respect each other's privacy and try and avoid attracting attention from "fixed" people.

The "racial package" for being a walker costs 220 points. Walkers should be build on 500 points -- enough to provide them with a wide range of skills and abilities from their travels. Game Masters may want neophyte walker characters to be built on 320 point (base 100 points, plus the world-walker package) with the option for rapid advancement and

learning of new skills from other worlds the characters visit.

Their powers of snatching and traveling, coupled with a potentially infinite lifespan, makes most walkers perpetual wanderers, traveling the multiverse without concern for material need and seeking some personal goal, be it enlightenment, a worthy adversary, or simply the biggest and best party in all reality.

World-Walking (100 points)

This advantage is similar to the World-Jumper advantage (**CI**, p. 48), except where jumpers "jump" to their destination in an instant, walkers have to take the time and "walk" there, across a plethora of parallel worlds.

In order to world-walk, a walker must physically move (at a slow walking pace or faster). He must concentrate for at least 10 seconds and visualize the world he wishes to visit, then make a roll against IQ, at -3 if he is visiting a world he has never been to before, at -5 if the world has major differences he has difficulty visualizing, in the GM's opinion (magic, super-science, etc.). If the walker has an object or person from the destination in his possession, he is at only -2 to IQ, even if he has never been there. If the roll is successful, the world around the walker begins to change to match the destination. A failed roll means the walker wanders for the base time without finding the world he's looking for, while a critical failure sends him to the wrong world! Walkers call this "tripping up."

The time it takes to walk to another world depends on the separation between them. There is a base time of five minutes. For every quantum level separating the two worlds, add another ten minutes. If not using the quantum level structure from *GURPS Time Travel*, the GM decides how "distant" the two worlds are, but no trip takes much more than an hour. The distance between worlds can shift periodically, and there are hazards walkers may encounter "en route" (see below). The time can be reduced by taking a penalty to the IQ roll, -2 to halve the time required (round up each time). A trip cannot take less than the base ten seconds of concentration needed. Walkers call such short trips "side stepping" between worlds.

While world-walking, a walker can carry whatever he can normally carry, up to Heavy Encumbrance. Walkers can also "lead" other people with them, if desired. Another person must be in physical contact with the walker during the whole trip. If they become separated, the other person is lost on a parallel randomly chosen by the GM. Other walkers can follow a walker without the need for physical contact. In fact, other walkers can make an IQ roll to follow a walker's "tracks" across worlds, at -1 for every minute since he passed through.

Walkers move at their normal rate during a world-walk. If the walker is driving or piloting a vehicle or riding a mount, he can take the vehicle and all of its passengers along by taking a penalty to the IQ roll: -1 for a mount, -2 for a vehicle like a motorcycle, -3 for a car, -4 or more for larger vehicles. Bringing vehicles to other worlds can often be problematic; driving a car into a world with no roads can be troublesome, while flying a plane into a world where planes don't work can be disastrous!

The entire trip costs fatigue equal to the total penalty to the IQ roll, at the end of the trip. Slow trips on foot to known worlds require no significant fatigue, they're just as easy as walking. Faster trips or trips to unknown worlds can be very tiring.

Advantages

Aside from the Advantages they all share, walkers may have any Advantage allowed by the GM. Some Advantages (particularly magical, psionic, and technological ones) may not function in some worlds. If an Advantage is particularly limited by this (in the GM's view) an Accessibility Limitation can be applied to the cost.

Language Talent is extremely useful for walkers, who often encounter new languages and need to pick up strange languages quickly.

Walkers seem more likely to possess Advantages like Magery and Psionics than other people. Some come from worlds where such abilities are known, while others remain unaware of their potential until they visit a world where they can learn to utilize their talents.

Disadvantages

Walkers can have any Disadvantages the GM allows for the campaign. Status as a walker provides no apparent benefits apart from those described above, and walkers come from diverse worlds, background and cultures. Again, certain magical or technological disadvantages may not function on certain worlds. If this is likely to make the Disadvantage too easy to avoid, the GM should disallow it. Walkers also tend to be fairly free of social- and status-related Disadvantages, since they rarely carry over from one world to the next. Enemies with the ability to follow a walker from world to world are the only really significant ones a walker can have.

Note that walkers with Sleepwalking (**CI**, p. 84) *can* and sometimes do world-walk in their sleep!

Skills

Walkers can have any of the skills natives of their dimension have and many of them pick up skills from worlds they visit. Languages are common; experienced walkers learn a *lot* of languages in their travels. Social Skills are also quite useful in allowing a walker to make friends and contacts on worlds he visits. For the times when Social Skills don't work, Combat Skills tend to be vital. Although many walkers come from worlds with advanced weapons, and carry them, most learn some martial arts and how to use various melee weapons sooner or later. Guns can jam, misfire, run out of ammo and just plain fail to work in some worlds, and magical weapons are notoriously unreliable, but a fist, club, or sharpened piece of steel work in just about every world.

Race

Walkers are not all human; some of them come from *very* alternate worlds where the dominant life-form is something else entirely. Information about alien walkers is sparse, but rumors abound that they exist and may be closely watching Earth for signs of something. Perhaps the ability to traverse dimensions is an evolutionary leap required to join galactic civilization, or perhaps walking is unique to Earthlings and poses a threat to some alien empire somewhere (or somewhen) else.

Multiversal Features

Drifts

Drifts are places "unstuck" in time in ways similar to walkers. They are to normal geography what walkers are to normal people. These places "drift" through the multiverse, popping up from time to time on different worlds, then fading away to go somewhere else. They are the source of legends and stories about mysterious lost cities and civilizations like Brigadoon, Shangri-la, El Dorado, the Bermuda Triangle, and possibly even Atlantis.

Some drifts appear to follow a fixed "course" through a series of parallel worlds, swinging back through them on a regular cycle, like a comet that appears every century or so. Other drifts float around at random, with no apparent rhyme or reason for their movement.

Walkers can visit drifts and even "follow" them through the multiverse as they move about. Drifts can also serve as "vehicles" for non-walkers to travel the multiverse, provided they don't mind having no control over their "ride," or the possibility they will never see their home world ever again. A "rider" who leaves the drift before it phases out could end up permanently stranded on another world.

Nexus Points

The opposite of drifts, nexus points are "strange attractors" in the multiverse, fixed places where walkers are drawn. They often serve as way stations or gateways between many different worlds. Like drifts, there seems to be no definitive reason why nexus points appear. Some are clearly artificial, created by science or magic, often by civilizations long since vanished. Others appear entirely natural, with no apparent cause for their existence.

Nexus points seem to "bridge" different parallels, making it possible to move from one to another more easily. A nexus might be a network of caves, all hall of mirrors or a house of many doors and passages, each leading to a different world. The Horatio Club from *GURPS Time Travel* is an example of a nexus. The nexus itself exists on all the worlds it reaches, creating a kind of "anchor point" between them. Walkers use nexus points as "landmarks" in the multiversal landscape, familiar places to gather and return to. For this reason, nexus points are usually considered "neutral ground" for all walkers; conflicts are not permitted there.

Reality Storms

The greatest natural hazard of world-walking is the threat of reality storms; violence disturbances in the fabric of the multiverse. A reality storm appears much like an atmospheric storm; violent winds, dark clouds and precipitation, although the rainfall is not always water, it may be blood, wine, honey, copper coins, little frogs or any number of things.

Storms have an effect of "blinding" world-walkers, making it more difficult to reach a destination. The storm imposes an additional penalty on the IQ roll to make the trip successfully, anywhere from -2 to as much as -10 for the most powerful of storms. This penalty also increases the fatigue cost of the trip; walkers who encounter a reality storm often end up exhausted in some strange world far from their intended destination. Some walkers have vanished into a reality storm, never to be seen again.

On occasion, a reality storm manifests *on* a world rather than between worlds. The storm can "pick up" and transport objects and individuals from one world to another (much like the tornado from *The Wizard of Oz*; in fact, some walkers call them "Oz storms"). Walkers can resist this effect with a successful Will roll, modified by the storm's strength, as above. Other people are simply carried off. The Banestorm (from *GURPS Fantasy*) is a wandering reality storm created by a failed ritual spell on the world of Yrth, responsible for transporting many different races (including humans) to that world.

Conflict Between Walkers

Walkers tend to have their own agendas, whatever they might be. From time to time, they come into conflict. There are few actual "laws" of walker society, only some traditions and rules of conduct (like respecting nexus points as neutral ground). Otherwise, walkers tend to do as they please. It is not uncommon for more experienced walkers to educate novice walkers only just discovering their abilities in order to cultivate allies (or for more experienced walkers to kill novices before they can learn too much...). Some conflicts between walkers have become legends and myths on different worlds they visit.

Walkers sometimes draw the attention of cultures aware of the existence of parallel worlds and cross-time travel. They are treated as sorcerers, demons, saints, or superbeings on worlds that lack cross-time travel, either revered or hunted down and killed or enslaved. Worlds with their own means of cross-time travel, like the Infinity Patrol from *GURPS Time Travel*, are interested in recruiting walkers for their cause, or at least ensuring they don't interfere with it. Walkers often end up as mercenaries in interdimensional wars. Gamemasters running another type of Infinite Worlds campaign (such as J. Hunter Johnson's "Banestorming Infinity Unlimited" setting) can use world walkers as another faction of cross-time travelers.

The World Walking Campaign

The easiest way to begin a world-walking campaign is to have a group of neophyte walkers meet up at a nexus point (a tavern, perhaps?) before departing together for other worlds. Perhaps they are all hunted by the same enemy (a powerful walker, interdimensional being or agency). The walkers have to learn to use their abilities and survive long enough to turn the tables on their enemy.

Another variation is the "quest," where walkers make their way across many different parallels seeking the parts of a particular device or legendary item, the clues to answer a riddle or other important question or simply gathering

information and exploring different parallels for an organization like the Infinity Patrol.

A world-walking campaign allows the GM to introduce literally infinite campaign settings, but also requires the ability to come up with new locations and NPCs on the fly, since the world walkers can go literally *anywhere* and find nearly *anything*.

by Bob Portnell

Art by [Keith Johnson](#)

I like *GURPS*. It was the only role-playing game I used for a decade, starting with one of the last copies of *Basic Set, Second Edition*. But if *GURPS* has a major flaw, it is that the system is not for beginners. This is intentional; the game is designed by gamers and for gamers and assumes a certain level of experience. ("I am, quite frankly, trying to attract the adult gamer with *GURPS*. I don't intend to write down to my audience." -- Steve Jackson, quoted in *Heroic Worlds* by Lawrence Schick.)

There's nothing wrong with this philosophy, until you try to introduce novice players to the game. There is logic in letting your players begin with a good system. But blank stares and scratched heads fill the room, it takes a full evening just to build a party of characters . . . and no playing gets done! Even players experienced with other, less choice-oriented, games have trouble building that first *GURPS* character.

GURPS is not the only game subject to this problem, of course. Many of our older favorite games suffer from a degree of complexity; and many new games often have their functional concepts obscured by awkward writing and poor focus. With some advance work, the game master can compensate for these and dramatically ease the pain of the beginning role-players.

"What are we supposed to be doing, anyway?"

Your group may be so new that it's never heard of a role-playing game before, let alone played. It's a fact of life that every hobby has its own unique perspectives and jargon; you'll want to find a way to ease your raw novices into the ideas of role-play.

Most every game published these days has an obligatory "what is this?" section, which describes role-playing games in various terms: as shared storytelling, as improvisational theater, or what-have-you. Find one of these which agrees with your personal opinions and present it to the players. I was writing one myself, until I bought a game and discovered that Guy McLimore had written it already, right down to the analogies I was planning on using. "What is a Role Playing Game?" is available on the web at [MicroTactix's website](#); share it with your players. Then be ready to answer questions, because no matter how one describes it, role-playing always sounds harder than it is. Toss in some favorite personal anecdotes highlighting the kind of play you enjoy. Refrain from bashing any other games or design philosophies at this stage. You'll only confuse your new players.

Drain The Game's Essence

At this point, your new players have some clue about role-playing and about characters. Time to start introducing the mechanics.

In most games, this boils down to a few simple dice-rolling conventions. (Good ol' **Dungeons & Dragons** is the exception to this, of course, until its Third Edition materializes this year.) Explain the basic rules and how and when each is used. Demonstrate each fundamental rule at least once; repetitions may be needed if the rule is sufficiently complicated.

For **GURPS**, the conventions are already provided on page 9 of **GURPS Basic**; many other games have adopted this "quick start" model of rules. If you have this sort of information, read it to your players word for word. Slowly. Careful attention to the core rules will be rewarded by comfortable play later.

Follow up by using strict game terminology for a while. Don't say, "Make a Naturalist roll." Instead say, "Make a Skill Roll vs. Naturalist skill." Soon the players will have a handle on the new jargon and the group can use any preferred shortcuts or slang it likes.

A Need-To-Know Basis

In choice-based game systems like **GURPS**, Hero System and many others, the array of possibilities in character building is staggering. It's also far too much to heap upon a beginning player.

So, start pruning! There are many ways to minimize the information overload. Edit skill lists, removing the inappropriate. Your player hardly needs to see the game has a "Nuclear Physics" skill if the setting is Arthurian England! In a fantasy campaign, many technology or firearms skills could be omitted; in a far future setting, the melee weapons (swords) may be obsolete. (Sorry, **Traveller** fans!)

If your game has "sub-skills," specializations or what not, dump them! A Gun is a Gun is a Gun, and the same Mechanic skill used to tune up a muscle car can be used to repair Grandfather's antique pocket watch. No, this isn't realistic and your players will notice eventually. When the players do recognize this "flaw" in the game, they'll probably be ready to move up to the detail and realism sub-skills provide.

The same treatment can be applied to advantages, disadvantages, prerequisites, spell lists, etc. This will not only help the players, but can also give the game master a firm sense of what is and isn't so in his gaming world.

Character Cookie Cutters

Templates have been around for some time (Dungeons & Dragons classes and Vampire clans are templates in a way), and with good reason. They are a terrific tool for quickly bringing the player into the game. A template assures the character will be able to meet his given function within the framework of the adventure, yet still gives the player some control over the final shape of the character.

If your game has templates, well and good. If not, you may need to design them. (Here's a project to get on a publisher's good side: design a template system for them.) In simplest terms, a template is an almost-finished character

sheet. It contains only the minimum game information needed for a character to be competent at what he does (whatever that is). This leaves a number of features which the player may then tweak, improving this, possibly dispensing with that, and adding new traits over here.

Many games have a section describing the types of characters one can expect in the system. This can be your starting point. If your game has a "jobs table," listing required traits for given professions, you have an extra tool as you assemble the templates. Don't forget to stay within the limits of your "lightened" rules set!

Once you've designed your templates, keep copies! They're always useful for new player characters and quick non-player characters.

Having templates ready for your players not only saves them the burden of building completely from scratch; it also shows them how a properly completed character sheet looks! It also gives the game master opportunity to subtly tailor the characters to the needs of the campaign. ("What do you mean, nobody bought First Aid Skill? Grrrr.")

Keeping It Simple

Now you're ready to play. In most situations, the directions you provided for the basic game mechanics will do. But it will happen that your characters will get into a fight. Combat is one of the most complicated activities any game simulates, and it is where new players will bog down in confusion the most quickly.

If your game has a "basic" combat system, use it. Don't add any optional or advanced rules. If your game doesn't have a basic system, perhaps you'll need to create one. Don't worry, you won't be using it long. Resist the impulses to add or restore advanced rules until your players show you they are ready. They'll probably be asking for advanced elements before the end of the first combat encounter!

The *GURPS* Angle

Starting in Summer 1998, Steve Jackson Games began providing tools which incorporate most of these suggestions. *GURPS Lite* is the essence of the game boiled down into 32 pages and made available free on the Internet. Templates were introduced officially in *GURPS Wizards*; detailed guidelines for constructing templates are found in that book and the later template collections: *GURPS Warriors*, and the forthcoming *GURPS Rogues* and *GURPS Villains*. (These books and a system conversion rule or two could give you all the templates you'd need for any game you'd play!)

Summing Up

New players of any game can find themselves overwhelmed by the volume of unfamiliar concepts. Some advance work and patient training by the GM can reduce this information to manageable levels and help the beginning gamer find more to enjoy in his first game sessions.

Pyramid Pick

Postmodern Magick (for Unknown Armies)

Published by Atlas Games

Written by Tim Akers, Ted Cabeen, Michael Daisey, Tim Dedopulos, Kenneth Hite, Joshua Kronengold, Daniel Ksenych, Nicole Lindroos, Michael D. Mearls, Rick Neal, Lisa Padol, James Palmer, John Snead, Greg Stolze, Tim Toner, John Tynes, Chad Underkoffler, and Ian Young

192 pages, $23.95 (perfect bound, softcover)

This long anticipated supplement for *Unknown Armies* was well worth the wait. Don't let that extra "k" in the word "Magic" turn you off. It's chock full of new schools of magic, artifacts, rituals, cabals and more, all ready to be dropped into your *Unknown Armies* campaign.

Postmodern Magick opens with a fun short story by John Tynes; it uses several characters introduced in *Lawyers, Guns, and Money*, but you should be able to follow it if you haven't seen that supplement. Next is a chapter on the theory and history of magick, expanding on the information found in the main rulebook, which makes interesting, but hardly essential reading. It includes a lengthy and well-thought-out section on how each of the various schools of magick deals with insanity (an important component of *Unknown Armies*), as well as a treatment of unique schools of magick (this two page section alone could inspire countless NPCs and adventures). We are then provided with a short rules section on creating new formula spells for existing schools of magick and ten new rituals (The Pentecost Ritual and the Ritual of Union are outstanding).

We are then treated to twelve (!) new schools of magick. Several are worthy of special note. Amoromancy (whose practitioners gain power by making others fall in love with them, while they themselves are unable to love), Bibliomancy (based in part on Chad Underkoffler's *Pyramid* article), and Iconomancy (magic based on imitating revered historical figures) are three of the best. One problem I had with several of the new schools of magick is that they are really suitable only for villains or NPCs. For example, it would be extremely difficult to role-play a Thanatomancer (an adept who gains power by ritualistically killing living beings) in most campaigns. Other schools tend toward eccentricity; Personamancy (mask-based magick), for example, while interesting, is not likely to be used by many characters, I would suspect.

Postmodern Magick then includes a short section on five new types of unnatural beings and provides further rules for Automata, quasi-organic creations of Mechanomancers, including rules for using them as player characters. Ten new artifacts are likewise included. The Alter Tongue, Demon Stration Tape, the Knocking Box, and the Cardboard Palace are some of the best and should easily provide adventure seeds.

The book concludes with a lengthy section of NPC organizations and individuals, including five new cabals and five independent NPCs (including two with new and *very* interesting magickal abilities - Enlightened Tai Chi and Urban Shamanism both have excellent potential). The Bad Man, a sinister Avatar of the Merchant should probably be toned down for most campaigns; as written, he's nigh omnipotent. Several of the NPCs are lackluster, though, and I found the Justice League analogue/homage ("Team Salvation") trite and perhaps inconsistent with the tone of *Unknown Armies*; though, to be fair, this group does provide an illustration of what could be done in a "pulpier" or more cinematic *UA* campaign. Most of the other NPCs (e.g., the Grail Knights, Carthage and Rome) are interesting, and

would make excellent contributions to any campaign.

The book is well written and logically organized. There are a few more typos than I have come to expect from Atlas Games's products, but they don't overly detract from the overall quality of the product. The cover looks great and the interior artwork is moody and quirky as always, though some pieces are of decidedly better quality than others.

If you were looking for additional information on the Invisible Clergy or additional Archetypes, you won't find them here. They will be the focus of the next *Unknown Armies* release *Statosphere*, coming out in a few months. It's not a big deal -- there is plenty of information on other topics here -- you should just be aware that won't find any new Archetypes here.

Many of *Postmodern Magicks*'s new schools of magick, NPCs, artifacts, and rituals could easily provide adventure seeds or even ideas for entire campaigns. If you are interested in modern "urban fantasy," are already involved in an existing *UA* campaign, or are even considering playing *Unknown Armies*, you owe it to yourself to check this book out.

-- Andrew Byers

Pokémon Jr. Adventure Game

Published by [Wizards of the Coast](#)

Game Design by Bill Slavicsek and Stan!

Game Development: Jeff 'Zippy' Quick

Boxed set, $9.99

Pokémon Jr. is the latest game from Wizards of the Coast and is billed as an adventure game recommended for a parent and 1-6 players, ages 6-8. The box contains a 60-page story book, 26 Pokémon power cards, 6 Pokémon trainer checklists, 2 Pokécoins, 48 hit tokens and a die (d6). The game is not compatible with the *Pokémon* CCG or any of the computer games the CCG was based on. It is a stand-alone game of storytelling for young children and parents.

Players become young Pokémon trainers seeking glory, experience and more Pokémon while the parent uses the story book to guide them. There are 48 Pokémon cards for the trainers to collect through various encounters detailed within the story book. Combat consists of die rolls compared to one of two maneuvers on each Pokémon power card. If the die roll succeeds a number of hit tokens are placed on the opponent's card. Once the hit tokens exceed the HP (hit point) total of the Pokémon that Pokémon faints. Occasionally this technique is used to succeed at various other tasks such as scaring off a flock or wild birds or pushing over a tree, but the technique is similar. Each Pokémon has two attacks, one of which has special effects such as healing HPs or attack again. This special ability succeeds or fails with a flip of the Pokécoin, essentially heads or tails with a smiling or fainting Pikachu in place of your regular currency. The parent uses the Story book to interact with the trainers and guide the adventure.

When I first heard that Wizards of the Coast was producing a Pokémon adventure game, I was skeptical as to its worth. I was pleasantly surprised by what I found within the *Pokémon Jr.* box, conveniently designed to hang on your supermarket's checkout rack. This presumably first in a series of boxed adventures is called *Pokémon Emergency* and allows the players to begin their careers as trainers much the same way Ash and his friends in the TV show do. They are given a single Pokémon and then sent out into the world to defeat, capture and train more Pokémon. The parent, assuming the role of Narrator, leads the tykes through 16 episodes challenging them to compete against wild animals, natural disasters, rival trainers and of course the infamous Team Rocket. As Narrator the parent presents the situation and asks a number of leading questions. The players respond to these questions be describing what their trainers do, and where they go. Naturally each episode ends with a climactic event. . . generally a fight, but not always.

Anyone familiar with role-playing games will recognize these conventions. The gamemaster/PC interaction and episodic nature of RPGs translate very well to *Pokémon Jr.* But don't think for a moment that because the game targeted at young children that it is in anyway deficient or poorly crafted. An adolescent or an adult will probably not fine the game interesting or in anyway captivating, but to a child and their parent, that's another story. The story Book sets up a unique dynamic between the parent and children, where both participate in running the game. *Pokémon Jr.*, like RPGs in general promotes problem solving and encourages cooperation, both of which are important skills for any developing child. To help the story progress, the parent asks questions during an episode such as in Episode 5: The Broken Bridge.

"There's a river ahead of you. A little boy sits at the edge of the river. He looks sad."

- "What does the little boy look like?"
- "What do you say to the little boy?"

By encouraging the children to describe the action, they can better visualize the story. Not only that but they can have a lot of fun simply telling each other what they think the story looks like visually. Young children are very visual and like to describe things, especially to adults. The parent, on the other hand, will enjoy seeing their children working their way through the problems each episode provides them. Watching your child learning new skills and analytical thinking can be very rewarding, not to mention simply spending quality time with your child. And in my opinion playing *Pokémon Jr.* is definitely quality time.

While *Pokémon Jr.* is obviously a kid's game, written and aimed at the children's market, it is also an excellent primer for RPGs. The game is more similar to *Once Upon a Time*, by Atlas Games and its cooperative approach to storytelling, than a conventional RPG. That's what makes it work. I can't imagine sitting a bunch of 6-year-olds down to the violence of a *Shadowrun* or *Rifts* adventure, but *Pokémon Jr.* I can see myself playing with my own children (once I have them). It's not the mythical link between CCGs and RPGs, but it might just be the first exposure to role-playing for a brand-new generation of gamers, and frankly that's not such a bad idea.

-- Andrew J. Lucas

Pyramid Review

Thief II: The Metal Age

Published by [Eidos Interactive](#)

Developed by [Looking Glass Studios](#)

System requirements: Windows 9X, Pentium II 266 processor, a 3D accelerator, 48 MB of RAM and 250 MB of hard drive space

$39.95

Have you ever imagined skulking through the shadows, waylaying an unsuspecting traveler and darting away with his heavy purse? Rather than risk a lengthy jail term, you should probably limit these dark impulses to role-playing games. However, that solution is problematic too. There has always been a certain amount of tension involved in role-playing a thief. Unless you are lucky enough to role-play with a group of thieves, you and your character are treated like second-class citizen by the more honest members of your group. Every time a gold piece comes up missing, you are accused of stealing it. Every time a deadly trap is suspected, you are sent in like a canary into a coal mine. Let's face it; the thief isn't really suited for group play. You could always slip away from the party for some nocturnal revenue generation, but this means the rest of the group is forced to sit around twiddling their thumbs while you have fun.

Pyramid Review: Thief II: The Metal Age

In December of 1998, Eidos Interactive gave all the potential thieves of the world an outlet for their larcenous impulses when they quietly released the critically acclaimed *Thief: The Dark Project*. They described the game as the world's only "first-person sneaker." The graphics were dated by the standards of the time, but the game play was compelling and the level design was excellent. It offered a blend of stealth and avoidance against human opponents with exploration and combat against various subterranean monsters and the undead. Behind the various levels was an entertaining and well-conceived storyline to drive the action.

In normal Eidos fashion, a Gold version of the game was released while tweaks to the game engine were made in preparation for *Thief II: The Metal Age*. *Thief II* takes the most popular elements of the original game and an improved graphics engine to produce another great game. Thief II now sports 16 bit textures, colored lighting, weather effects and double the polygon count for character models. The graphics are still not comparable with *Unreal Tournament* or *Quake Arena*, but that should not dissuade you from playing this excellent game.

The strength of *Thief II* is in the atmosphere. As the cynical master thief Garrett, you will have the opportunity to explore a huge city with an interesting mixture of technology and magic. The city is home to the Hammerites and their fanatical offshoot, the Mechanists. These religious groups seek to impose law and order on their surroundings, and are responsible for most of the technological innovations in the city. The Pagans, a nature worshipping Luddite cult, oppose them. Above it all (or beneath it all), are the enigmatic Keepers. This secretive group is responsible for Garrett's years of training and attempts to keep a delicate balance between these two extremes.

Set in this interesting environment are huge, well designed levels.

Gone are the **Tomb Raider**-style exploration levels. **Thief II** takes place almost exclusively in urban settings. You can run across the rooftops on the way to rob a bank or a noble's home. Once you approach your target, you can case the joint to choose the best way to enter. There is no single way to accomplish your goal. The level designers have given you dozens of options and alternate paths to follow. You will never feel like you are being railroaded. In fact the huge levels will force you to consult your map regularly to avoid getting lost.

While investigating your target, you will be able to utilize a wide variety of thieving tools. The lock picks, flash bombs and sap from **Thief** remain. Garrett's selection of arrows has been expanded to include the vine arrow, an expanded version of the old rope arrow. Light sticks are now available to light your way through the darkest areas. The most interesting, but least practical, tools are centered on Garrett's mechanical eye gained at the end of **Thief**. His artificial eye is capable of zooming in on long-range targets, and a companion orb can be sent ahead to scout areas without risking detection.

On your way to your target, you will be able to explore any number of side adventures. In the demo you can witness a fight between two rival groups of guards, overhear a nobleman whine about not being invited to the night's gala and interrupt a pair of inept thieves on a second story job. At each turn, you are alerted to these side adventures by eavesdropping on the conversations of the city's inhabitants. Everything that is lacking in the game's graphics is made up for with its excellent use of audio. You will be rewarded for listening intently at each door before opening it.

Once inside, you will be faced with some of the most sophisticated AI opponents ever encountered in a first-person action game. If you are not careful and leave behind clues of your presence like open doors or dead bodies, the guards will sound the alarm and begin searching for you. You can extinguish torches to darken the corridors, but now the guards will relight them. The improved AI in **Thief II** also allows the guards to change elevation to find you (no more hiding on the tops of tables!). If you are still out of reach, the guards may flee to bring back archers.

When the inevitable occurs and you have to engage one of the guards in combat, you will be able to take advantage of the new body part specific damaging. However, even with the benefits of a head-shot, you will not be able to hold your own in a one-on-one fight. Only by attacking with surprise and from behind can you hope to defeat the better armed and armored guards. If you are forced to attack without these advantages, you can expect to waste dozens of arrows trying to defeat them or to be chopped to pieces in hand-to-hand combat.

If **Thief II** has a weakness, it is that it is too similar to its predecessor. There are several levels that are predictable and simply expanded versions from the previous game. The graphics engine was dated when it first debuted, and the enhancements have barely extended its lifespan. We will have to wait until **Thief III** to see a radically different look for this line. The aspects of the original Thief that made it such an innovative, fun game to play are still present and should satiate the gaming world's thieves until the next one is released.

If you fancy yourself a would-be footpad, pick up a copy of **Thief II**, turn down the lights, and crank up the volume for some serious fun. Don't be surprised if you find yourself nervously holding your breath as Garrett hides in the shadows from an approaching guard. Don't be surprised if you shout out after being startled by an unexpected trap. Don't be surprised if you find yourself playing this game into the wee hours of the morning. It is so engrossing (and fun) that you may even find yourself tiptoeing around the house, sneaking up on your friends and taking their money.

You can download a demo of *Thief II* from [Gamespot](#).

-- John C. Post

Introduction

Arguably, the two great cities of the Italian Renaissance were Florence and Venice. Both were wealthy, politically important, and centers of art and learning. However, while Florence looked to western Europe for its allies and made its money as a center of banking, *La Serenissima*, the Most Serene Commune of Venezia, looked to the east and was the crossroads of world trade, playing a tremendous role in transmitting the Italian Renaissance to the rest of Europe. It was a city of luxury, Abandon, and a powerful, remarkably stable government. And, of course, it can be a great setting for historical and fantasy role-playing.

Geography and Land Use

Venice sits at the northwestern corner of the Adriatic sea where the northern Italian coast begins to curve eastward towards the Balkan peninsula. The city sits in a long, narrow lagoon with the mainland and the Brenta river delta to the north and west and sandbars and a few small islands to the south and east. The eastern side of the lagoon is defined by a long, fairly straight series of sandbars called the Lido. While the city itself appears to be a single island cut by canals, it is actually a collection of closely set islands, joined by bridges, construction, and silt deposits from the Brenta. The lagoon is mostly deep enough for all but the largest ships of the age to sail on, but near the shore on the landward side of the lagoon, mud flats and salt pans are exposed by low tides.

At its height, Venice had a population of nearly 200,000 (coincidentally, the modern city held about that many people as recently as the 1960's). However, its population was closer to 100,000 to 120,000 during most of the late Middle Ages and Renaissance, dipping to less than half that after bouts of plague.

If other Renaissance cities were crowded, Venice was packed to the gills. It was, at times, the most populous city in Italy, and was physically not significantly larger than any other. The city grew slightly as more land was filled in, but not nearly as fast as its population. Except for piazzas, small private courtyards, and the Arsenal, the city is almost entirely built up.

History

Venice only gradually became a city. The islands in and around the lagoon at the mouth of the Brenta river were lightly populated at least as far back as the Roman empire. Legend has it that the population grew as refugees fleeing Attila the Hun settled there. The region saw another influx of refugees when the Frankish king Pipin invaded northern Italy in the ninth century. It was around this time the people of the region decided they needed a common government, and so the first Doge was installed at Rivoalto (soon called Rialto), the island that became the core of Venice.

In the years that followed, Venice became the dominant naval power of the Adriatic and spread its influence into the eastern Mediterranean. While colonies were established through the Mediterranean, Venice didn't follow a policy of inland territorial expansion until it was already an established power. Instead of fighting wars for territory, Venice fought for trade concessions: rights of passage through other nations' waters, exclusive rights to trade in certain goods, and exemptions from local taxes.

From its earliest years, Venice enjoyed a close relationship with the Byzantine empire. That partnership helped keep Venice free of the foreign domination of the rest of Italy that was prevalent during the Middle Ages. Initially, Venice

was a sort of Byzantine protectorate and agent in the west, in exchange for which the Venitians got special privileges trading in Byzantine ports. As Venice became more powerful and the Byzantine empire less so, the relationship changed considerably. It even turned predatory briefly during the Fourth Crusade in 1204 when Venice drew French Crusaders into a Byzantine dynastic struggle which resulted in Westerners deposing the native emperors for over fifty years.

Venice emerged into the Renaissance after a costly and inconclusive series of wars with Genoa, its chief trading rival. Although its population and coffers were depleted in the wake of war and plague, the city was able to take advantage of its own relative stability in the midst of the chaotic fifteenth century and rebuild its colonies and trade routes as far away as the coasts of the Black Sea. The Venetian policy abroad was to govern only coastal areas rather than inland territory, which could not be supported by her naval power. In fairly short order, Venice came to control most of the eastern Adriatic coast as far south as Greece, as well as Mediterranean territories including Crete and Cyprus.

There was also a concerted move to increase its territorial holdings in northern Italy. Venice realized that trade concessions and control of ports were all well and good, but she needed a larger tax base, an agricultural base under its own control, and more manpower. Venice already controlled the region around its lagoon, but eventually established control over most territory north of the Po river nearly as far west as Milan. This conquest was accomplished by mercenary troops supported by Venetian fleets sailing up the Po and, at times, hauled overland.

Venice's expansion was accomplished by a combination of warfare and diplomacy. In Europe, Venice participated in the shifting alliances and enmities that kept an uneasy balance between the five major powers of Italy (Venice, Milan, Florence, the Papal States, and Naples), a balance influenced by the politics of the rest of the Continent, in which the Italian cities were sometimes used as pawns, and the growing struggle between the Catholic church and the Protestant Reformation. As the most powerful city in Italy, Venice often found itself on the wrong end of most alliances, but it was the only city in Italy never to be taken by a foreign power. In the east, Venice was the western power to bear the brunt of Turkish expansion. Venitians could suddenly find themselves at war with the Turks as they attempted to secure another coastal city, then at peace just as quickly as diplomats negotiated a treaty. Venice was engaged in elaborate diplomacy here as well, negotiating with both the Turks and potential allies farther east, such as the Persians.

Through the sixteenth century, Venice nosed into a slow decline. Growing trade through the Atlantic and increasing problems with the Ottoman empire made Venice's own trade routes less profitable, and the city itself was hard-pressed to compete against increasingly powerful nation-states, particularly Spain. Still, Venice retained its independence and cherished institutions until the end of the eighteenth century. For a thousand years, Venice had been free and self-governing, an achievement no other city in Italy could match.

Government and Politics

By the Renaissance, Venice's government consists of four tiers. The lowest is the Grand Council, a body of several hundred hereditary aristocrats encompassing the majority of Venice's wealthiest merchants. However, not all rich men are on the Council, nor are all Councilors rich, and except for the right to participate in government, the legal distinction between nobles and commoners is slight. The Council rarely convenes as a whole, but it provides members for the second tier, the Senate, a group of sixty men elected for one-year terms. The Senate primarily regulates trade and foreign affairs (in Venice, the two are synonymous). The Grand Council also provides members of the third tier, the Ducal Council, an even more powerful body of six men, who advise the Doge and call on the lesser bodies to form committees and take actions. Finally, the government is headed by the Doge. Formerly a hereditary dukedom, the Doge is elected by the Grand Council for life, although most Doges are elderly, so effective terms of office aren't as long as the life term might suggest. The Doge is responsible for making final decisions, setting policy, and appointing a number of civic officials.

Most of the government's day to day work, though, is performed by officers drawn from the Grand Council. The Council provides members for an endless stream of bureaucratic posts and ad-hoc assemblies: nominating committees, commissioners of police, war councils, tax collectors, investigating bodies, administrators of the Arsenal and other public facilities, and so on. Terms of service run from two months to a year, with individuals usually cycling through a number of positions.

One of the more ominous permanent committees is the Council of Ten. It was originally charged with overseeing exiles: making sure exiles stayed out of Venice, keeping an eye on their activities, and offering a bounty for exiles who appeared likely to take action against their home city. By the Renaissance, it has become a sort of secret police, prepared to take quick action against any threat of insurrection or improper political influence. The Council of Ten, which operates in secret, became increasingly powerful through the Renaissance and once even deposed a Doge.

Like many other early republics, Venice's elections consist of a mix of voting and randomness. For example, to elect a member of a civic office, a number of members of the Grand Council might be chosen by lot. Those councilors would agree on a group of twenty or thirty other councilors, who would be reduced by lot to something like half the original number. They in turn would choose members of a nominating committee, who would in turn be reduced by lot to a smaller body. Finally, their candidate would be presented to the Doge or the ducal council for approval.

As in other early republics, the elaborate procedures are meant to reduce tension between powerful families and other entrenched factions, and they seem to work better in Venice than in other cities. The men selecting nominating committees and potential officials take pains to make sure that all major factions are represented, and laws prohibit family members and business partners from working too closely in government or holding consecutive terms. In part, this can be attributed to Venice's tradition of loyalty to the city, something not so pronounced in other cities of the era.

It may also be attributed to the fact that the government of Venice is, far more than other cities, a money-making organization. The Venetian government takes great pains to funnel trade in the Adriatic and, to a lesser extent, the Mediterranean, through Venice itself and to safeguard its merchants. The government organizes shipping convoys, serves as a registry for mercantile contracts, provides investment opportunities, regulates port facilities, and even operates its own shipyard, the Arsenal. At its best, the government operates as a sort of cooperative mercantile venture and advocate for Venetian merchants abroad, devoted to making money for Venetians at the expense of other countries. Perhaps the universal desire for profit makes the Venetian government a bit more effective and less prone to uprisings than others of its era.

Venezia!: Role-Playing in Renaissance Venice

Economics and Industry

By the Renaissance, Venice's adventurous merchants, who traveled to far lands themselves to trade the goods of Europe for the treasures of the east, have largely been replaced by networks of merchant houses and local agents. The great merchant families maintain agents, usually members of the family, in foreign cities. Those agents keep up with local markets, make contracts, and trade goods shipped from Venice for locally available goods. A merchant family or partnership provides funding, and the local agent receives a share of the profits for goods that pass through his hands (five to ten percent is common). However, more adventurous merchants and independent traders might still travel to distant lands themselves to try to open new markets.

The main business of Venice is buying and selling. Vast shipments of all kinds of goods pass through the city's warehouses, from silk, medicines, and gemstones to wool and grain. In addition to vast amounts of distant foreign trade, Venice's iron grip on the northern and central Adriatic allows it to require merchants in the area to ship their goods through the city, where taxes are collected on every wholesale transaction. Opportunities to speculate in all kinds of goods abound, although the risks are considerable.

In addition to mercantile activity, Venice supports several thriving trades. Venice's ships, built both privately and in the Arsenal, are among the best of the era. In fact, in order to preserve its advantage, Venitians are prohibited from

selling their ships to foreigners unless they are old and dilapidated. In addition to shipwrights and related trades (carpentry, cooperage, rope-making, sail-making, etc.), the city also hosts textile workers, metalworkers, makers of soap and salt, and a considerable glass-blowing industry which survives to the present day. To reduce pollution and the risk of fire, glassblowing is restricted to the island of Murano, a short boat ride north of Venice itself.

Shipping

Shipping is the life-blood of Venice's mercantile economy. There are two large government-organized sets of convoys sailing to distant ports each year: one leaving at the end of winter and returning in late spring or early summer, the other leaving after midsummer and returning at the end of the fall. Convoys are formed mostly for self-protection. Individual ships might undertake their own journeys, but at their own risk of attack by pirates and enemies. Most convoys head east, but some go west as far as England and Holland. However, as Venice expands west, the westward sea lanes are supplanted in part by increasing overland trade through Germany and Switzerland.

The biggest ships are large galleys, with crews of 200 not being unusual and capacities up to 1000 tons; larger ships might not be able to enter the shallow lagoon. Ships of this size are government-owned, with captaincies auctioned off to qualified citizens each trading season. Galleys are somewhat faster on open seas than plain sailing vessels, far more maneuverable, particularly in port, and their large crews can be pressed into service to repel boarders, giving them considerable protection against attackers. In fact, any ship with a crew of less than sixty is legally considered unarmed. Even "round ships," purely sail-driven vessels, carry far more crew than their sails alone require. One crewman for every 5 or 10 tons is typical. At the beginning of the sixteenth century, round ships become better able to defend themselves because they can mount cannon more readily. However, with their superior speed and maneuverability, galleys remain the dominant military vessels through the period. At the beginning of the Renaissance, crews are almost entirely free Venetian sailors, but by the end, Venice must draw a number of sailors from other countries (mostly Greece and the Balkan coast) and some galleys are rowed by convicts.

Armed Forces

Venice is almost unique among Medieval and Renaissance cities for having no walls. It doesn't need any. It is protected by the lagoon and the most powerful navy of its time. There is no standing navy, but in time of war, Venice's large commercial fleets can be used as a fighting force. The same advantages the galleys have for shipping, they bring to warfare. Although regular sailors can fight, wearing leather armor and wielding swords, most of the fighting up to the beginning of boarding actions is done by archers using crossbows and wearing metal armor. Ships also start being armed with cannon during this period.

Ground forces, when they are employed, are mercenary armies. Mercenaries betray the Venetians less often than other cities; perhaps the Venetians pay better or just have a better understanding of the people they do business with. Admiralties and most naval captaincies are politically appointed, but mercenary armies are generally commanded in the field by their own officers.

News and Information

In Venice, news is regarded as a valuable commodity. Up-to-date knowledge of markets and political conditions in distant lands is a business tool, and Venetian merchants are willing to pay for it. Merchants might buy or sell recent letters from distant correspondents, and dispatches from admirals in the field are read aloud to paying audiences (the word "gazette" comes from the admission price, a small coin called a gazetta).

Of course, there is no way to absolutely control the spread of news. Drunken sailors happy to be in port could tell their tavern-mates about a battle or royal succession just as well as an official's report, and loose-tongued servants would just as gladly spread interesting tidbits among their friends. However, news in the streets is not as detailed as a written dispatch, and is likely colored by rumor and inaccurate repetition.

Religion

Like the rest of Italy, Venice is staunchly Catholic, avoiding much of the turmoil the Protestant Reformation is causing through the rest of Europe, but its Catholicism does not necessarily mean a close relationship with the Papacy. Sophisticated Venetians don't let religion get in the way of a good time. On the other hand, the Inquisition comes to Venice in the sixteenth century and makes life uncomfortable for many citizens in its pursuit of Protestant heresy.

During the last years of Byzantium, the exodus of Greeks from the crumbling empire means that Venice has a substantial minority of Orthodox Christians who meet with a friendly reception. The city has a small Jewish population as well. While they are not subjected to violent repression through most of the period and hold some respected jobs (Jewish physicians are highly regarded), Venice is nevertheless one of the first cities in Italy to confine its Jews to a ghetto. Indeed, the term "ghetto" comes from Ghetto Nuovo, the quarter of the city where Jews are confined.

While Venetian merchants deal with Muslims more than most Europeans because of their eastern trading colonies, those same colonies also put them on the front lines of frequent wars with the Turks. As a result, the Venetians have no special fondness for non-Christians. Still, they are not bigoted about it either; a Muslim visitor might be regarded with curiosity, but not overt hostility, particularly if he is an ambassador from Persia or some other potential ally against the Turks. Like Jews, Muslims were allowed to practice their religion openly.

Arts and Sciences

With its close ties to the east, Venice is an important conduit for the transmission of Classical learning back into Europe. This is particularly the case late in the fifteenth century, when the last wave of Byzantine scholars flee the final destruction of their empire at the hands of the advancing Ottoman Turks. Any text, particularly any Greek text, is likely to come through Venice.

Venice also hosts an important medical school and many prominent doctors. In other practical arts, it is an early adopter of many innovations in ship and sail design, and Venetian sailors are quick to grasp the advantages of the magnetic compass. Early models have a margin of error of several degrees, but can reliably be used to mark out sixteen cardinal points.

The city is home to a number of notable painters, including Titian, and sees visits by a number of important foreign artists, including Leonardo da Vinci. It is also a leader in printing books, and because of the importance of navigation, it is home to many cartographers. Venetians freely produce a surprising amount of sensuous, even blatantly erotic poetry and art, perhaps because the Inquisition is more worried about Lutheranism than sins of the flesh.

Clothing

Clothes are typical of the era for Italy in general: shoes or boots, hose, shirt, and a tight jacket or overshirt for men, multiple layers of gowns for women. Hats and long robes are commonly worn by both sexes. While Venice has a number of sumptuary laws prohibiting extravagant dress, those laws appear to have been completely ineffective. Venetian clothing is the height of fashion, using a huge range of colors, patterns, fabrics, and styles. There are certain class and occupational restrictions on clothing. Panderers and prostitutes must wear yellow, magistrates are supposed to wear somber-colored robes of office (black, red, or purple), and Jews must wear distinctive badges or hats (usually a yellow "O" or a red or yellow turban).

One of the best-known items of Venetian apparel is the mask. At least as early as the 1200's, Venetians took to wearing masks for festivals during Carnival, the series of celebrations leading up to the beginning of Lent. The wearing of masks, usually with oversized hooded black robes, is legally permitted for several periods during the year (spring after Lent into early summer, most of the fall, and winter until Lent) and at state events. Because of the obvious potential for mischief, a number of laws have been enacted against masqueraders visiting nuns and going to certain other public places. Given the number of laws, it seems likely that masks are, if not everyday wear, then at least

sufficiently common as not to be found unusual in public.

Buildings

As in most cities around the Mediterranean, the homes of Venice are mostly three or four stories tall, with courtyards and flat or slightly sloped roofs, and few corridors. The Venitians sometimes use flat rooftops as a venue for socializing. Like most buildings before artificial lighting, and even afterwards, homes and palaces are rarely more than two rooms deep. Every room has windows or some opening for natural light facing the street or an inner courtyard. The lower and middle classes tend to live in closely set houses that share side walls, much like modern urban row houses, or in apartment buildings sharing common entranceways and courtyards. Windows are high and narrow, and balconies are common.

Due to the inherent dampness, there is little or no mud brick construction. Rather, stone, brick, and wood are the main building materials. There is more wood construction in Venice than in most other Italian cities.

Ground floors tend to house kitchens, store rooms, servants quarters, and shops. If a house has a large common room, it is likely to be on the second story, with apartments on higher floors. Homes on a canal could conceivably have a sort of "garage" on the level of the canal, holding boats, and most have landings, with steps leading up to the "street" level.

Streets and Canals

The streets of Venice are mostly cobble-paved and named for professions ("Street of the Fullers") or saints. However, Venice is a city of more than just streets. Venice's canals are the remnants of the passages between the islands that came to make up the city itself, made narrow and regular by walls and deliberate dredging. In addition to the famous flat-bottomed gondolas, the Venetian canals see conventional rowboats and even small sailing vessels. Sections of the city separated by canals are linked by numerous bridges. Small boats are also used to reach the mainland, the Lido, and the other islands around the lagoon, so almost every Venetian is an occasional sailor.

Most Venetian bridges are not flat-surfaced. They are usually built on a single large arch high enough for a standing man on a boat to pass under. This usually means that the upper surface of the bridge has to be arched as well or, because of the steepness of the arch, stepped.

Food

Venetian cuisine benefits from being at the heart of the spice trade. Pepper, cinnamon, sugar, and other flavorings are still costly, but no one has better access to them than the Venetians. Sugar is starting to replace honey as a sweetener, giving rise to a broader range of confections, which are mostly based on fruit or almonds. At Venetian banquets, which can be quite sumptuous, cooks are beginning to think in terms of distinct courses which come in a specific order. Modern table manners are also starting coming into shape.

What To See and What To Do

The center of the Venetian business is the Rialto, a district built on the site of the city's founding, at the upper curve of the Grand Canal's backwards S, containing a small plaza, several churches, and a remarkable bridge. The bridge is wooden (the stone bridge there now is a post-Renaissance addition), covered, and steeply sloped like an inverse V. The point of the V, however, is split and movable, like a pair of drawbridges facing one another. Two small sections on either side at the top can be lifted to let tall-masted boats through. The region of the Rialto is where important news and announcements are publicly posted, many bankers do business (including a branch of the Medici bank), and the most important merchants gather to do business, share information, and gossip. To be exiled from the Rialto, a punishment for certain crimes, is one of the worst punishments that could be levied on a Venetian merchant.

While Venice's shore is surrounded by docks and landings, the most recognized landing is at the center of the south side of the city, just past the mouth of the Grand Canal: the San Marco. The Palazzo di San Marco, a painting of which seems to grace every Italian restaurant ever built, is a center of shipping and one of the first sights of the city to greet any visitor. It is also used by the Grand Council on the few occasions when they are convened. It is a large, somewhat blocky building decorated with long arched colonnades. After 1204, the San Marco was decorated by a statue of four horses, looted from the Hippodrome in Constantinople during the Fourth Crusade. The San Marco faces a large L-shaped piazza, which is also faced by the Ducal Palace, housing the offices of the Doge, a number of other government buildings, and the city's tallest bell tower.

The eastern end of Venice holds the city's famous government-owned industrial complex, the Arsenal. While the Arsenal is, in part, a factory and storehouse for weapons, its main purpose is as a shipyard. During the Renaissance, the Arsenal grew considerably from its original dimension to become perhaps the largest factory in the world of its time. The main structure is a large hollow rectangle. The center is flooded so that wood can be seasoned underwater and ships can be floated down a passage out to the lagoon. The Arsenal employs an average of 2000 men using a forerunner of modern mass production techniques, with teams building a part of a ship, then sending it on to be worked on by another team. The Arsenal is joined by the Tana to the south, another large pool, this one for preparing fibers for rope making.

For quiet contemplation, or simply quiet assignations, Venice is amply supplied with churches and convents, but no cemeteries. Land is too scarce in the city itself, so the small island of San Michele, between Venice and Murano, has been converted entirely into a cemetery. Just as Venice is packed with the living, San Michele is packed to capacity with individual crypts and family tombs.

Venice celebrates Carnival lavishly. Carnival was originally the ten days leading up to Shrove Tuesday, the day before the beginning of Lent and, in Catholic Europe, an excuse to throw riotous parties before forty days of general asceticism. In Venice, however, the period of reveling has come to begin at Christmas, building to its most fevered pitch the day before Lent. During Carnival, characters are likely to find masked revelers filling the streets, elaborately costumed parades (organized by semi-permanent clubs, which might have political affiliations as well), plays, fireworks (the Italians began to make fireworks of their own late in the Middle Ages, and Italian fireworks are the state of the art in Europe), and a general atmosphere of abandon.

But even outside of Carnival, it's easy to find a good time in Venice. Individual saints' days could have public or private festivals, and successful traders may informally celebrate their wealth. Taverns, courtesans, and semi-public parties aside, there's always people-watching. Wealthy young men formed *compagnie delle calze*, social clubs distinguished by colorful tights worn by members, and public processions provide frequent entertainment.

Venice in the Campaign

Venice makes an excellent base of operations for characters. It's a perfect home for a merchant adventurer or political intrigue campaign, and combat-oriented characters can fight Venice's enemies in northern Italy, the Balkans, and at sea (closer to home, inventive duelists can fight across rooftops, balconies, streets, and canals). In a fantasy campaign, Venice would be a source of magical texts and magical materials. Here are some other ways you can fit Venice into a campaign:

- **Diplomacy:** The year is 1468, and Venice is near the height of its power and wealth, but wants more. Seeking to expand holdings on the Balkan peninsula, the Doge invites a powerful warlord to Venice in hopes of striking an alliance against the Turks. The characters must bring the visitor to their side and protect hm from potential threats: Turkish agents, agents of his own rivals, and perhaps even Venetians more interested in expanding west than east. And the Balkan warlord? Perhaps it's Vlad Tepes, who may want to elude his protectors for dark purposes of his own. . .
- **Conspiracy:** The Inquisition. The Council of Ten. Lost knowledge returning from the East. People wearing masks. If you can't get an illuminated conspiracy out of that, you're just not trying.
- **Industrial Espionage:** The characters are engaged as spies to discover the secrets of a glassmaker who is producing ever finer and clearer glass. Since trade secrets are always passed down by direct teaching and never

written down, they must find a way to infiltrate the glassmaker's workshop and observe him long enough to figure out what he does. And what will they find when they do? A devil living in the crucible? An alien trying to bootstrap Venice's glassblowing technology to the point where he can replace vital fiber optics in his badly damaged spacecraft?

War of Future Past: Reality Futura

"We Futurists ... seek to realize this total fusion in order to reconstruct the universe making it more joyful, in other words by a complete re-creation. We will give skeleton and flesh to the invisible, the impalpable, the imponderable and the imperceptible. We will find abstract equivalents for every form and element in the universe, and then we will combine them according to the caprice of our inspiration, creating plastic complexes which we will set in motion."
-- Giacomo Balla and Fortunato Depero, "Futurist Reconstruction of the Universe" (1915)

Call it a Worked Example for a nonexistent **GURPS Electropunk**, or an Alternate Artistic Earth -- Reality Futura welds the Futurist "road not taken" of modern art onto an inverted World War Two. In this reality, technology, politics, and even strategy are driven by artistic axioms behind the sooty scrim of the material world. The mood is intense action, arcing ahead on the sound of horns and motors. The world may be dystopian, but it's a dystopia on fast-forward. Futurist adventures should be cinematic, over-the-top tales of epic antiheroism; Ayn Rand on crystal meth or Jack London on crack. It's Tim Burton's *Speed Racer*, it's Fritz Lang's *Star Wars* -- it's the World War of the Future!

"The red holidays of genius have begun! There is nothing for us to admire today but the dreadful symphonies of the shrapnels and the mad sculptures that our inspired artillery molds among the masses of the enemy."
-- Filippo Tomasso Marinetti, "War, the World's Only Hygiene" (1915)

Millions of men, and millions more robots and mechani, grapple in furious combat across the globe. Japanese otaku splinter American ray-stations in Mexico, Free French railgun batteries fire ballistic shells across the Sahara into Italian radium-stations, the unstoppable Mechanikerwaffen of the North German Republic stride across the Russian prairie in search of armored behemoths to destroy, British and Italian jets duel as their skydromes take position over the Pyramids. No continent on Earth remains silent; the whirring dielectrics, the chattering railguns, the stomp and crash of mechani and behemoths, the whine of robotic servos and the shouts of paratroopers can break out anywhere from Saigon to Seattle. Right now, although the battle lines remain fluid, the Allies struggle to hold Egypt and Turkey in the west and Bengal and Mongolia in the east. Australia and Britain hold out, and the Americas have felt only lightning raids -- so far. The Futurist powers rule the Mediterranean and the China Seas, all of Europe and much of Africa. Where exactly the lines across the Pacific and the Atlantic, or through the Russian steppes or the Chinese hills, might run not even the orbital stations know -- a hundred miles might fall to air assault and bootstrap a mechani strike still deeper, only to be cut off by skip-ships caroming off the upper atmosphere and chopping them up with T-Rays and kinetic harpoons.

"The utter antithesis between the modern world and the old is determined by all those things that formerly did not exist. Our lives have been enriched by elements the possibility of whose existence the ancients did not even suspect. Men have identified material contingencies, and revealed spiritual attitudes, whose repercussions are felt in a thousand ways."
-- Antonio Sant'Elia, "Manifesto of Futurist Architecture" (1914)

The future didn't use to look like this. 85 years ago, back in 1870, when Baron Hausmann's Aerial Engineers and the frenetic hammering of the mitrailleuse shut down Bismarck's imperial dream, Europe thought that the world had been made safe from war. They hadn't reckoned on the mad mania of King William II, on British indolence, or on the Polish revolution in Russia that paralyzed the Eastern Front while the Prussian armored behemoths rolled into Flanders in der Vergeltungskrieg -- the Vengeance War. Prussian zeppelins carried Lenin and Trotsky into Russia, collapsing that Empire for good, and almost starved Britain into submission until the new nerve tonics (and the American leviathan subs) came into wide production. In 1916, when Italy joined the Entente Powers and President Roosevelt brought the Americans in, the Prussian cause was doomed, regardless of how much of France they held.

The postwar dislocations, however, upset the brief era of Entente peace. As the mechanical men developed for wartime production moved into civilian work, they spawned mobs of unemployed (and angry) veterans. The harnessing of radium power and dielectrics threw more sectors of the economy into ruin. In France, the Imperial government fell to the Popular Front; in Britain, the Labour government put down a Nationalist General Strike only by the most extreme and brutal measures. Russia drowned in a welter of civil war, and the Balkans and Germanies were in chaos. In 1919,

famed poet, aviator, and war hero Gabriele d'Annunzio took 300 men into the Adriatic city of Fiume, siezing it as the first Futurist Republic. By 1922, all Italy followed him. Futurism seemingly held the answers; unlimited use of autofactories, of robot workers, of aerial trade fleets and radium power drew Italy into the first rank of nations with cometary speed. Italian banks and conglomerates financed the North German Republic, restoring order to Central Europe. Communist Bavaria and Hungary were suddenly isolated, overthrown, then added to the Futurist camp. When nationalists assassinated King Alexander of Yugoslavia, Britain and France stepped in to keep the Balkans from following the Germanies into the Italian sphere. In 1939, Italian paratroopers landed in Sarajevo in response to a "request" from the Futurist faction in Bosnia, and the Future War erupted.

"We will sing of great crowds excited by work, by pleasure, and by riot; we will sing of the multicolored, polyphonic tides of revolution in the modern capitals; we will sing of the vibrant nightly fervor of arsenals and shipyards blazing with violent electric moons; greedy railway stations that devour smoke-plumed serpents; factories hung on clouds by the crooked lines of their smoke; bridges that stride the rivers like giant gymnasts, flashing in the sun with a glitter of knives; adventurous steamers that sniff the horizon; deep-chested locomotives whose wheels paw the tracks like the hooves of enormous steel horses bridled by tubing; and the sleek flight of planes whose propellers chatter in the wind like banners and seem to cheer like an enthusiastic crowd."
-- Filippo Tomasso Marinetti, "The Founding and Manifesto of Futurism" (1909)

President Lindbergh had many reasons to keep out of the war, not the least of which was Senator LaGuardia's pro-Futurist bloc. But rivalry with Italy's ally Japan led to war in the Pacific, and when Japanese otaku launched their deadly torpedoes at Manila Bay and Pearl Harbor in December 1941, the Future War became a World War. The Japanese had already combined forces with Italy for deep airstrikes into the Soviet Union, but Premier Lunacharsky had absorbed the practical lessons of Futurism well. Hidden geothermal-powered autofactories all across Siberia built mechanical miners, turning veins of iron ore into steel behemoths in inexhaustible quantities. Soviet "Comintern Brigades" drop from the skies into Franco's Spain, Pilsudski's Poland, Mannerheim's Finland, or Peron's Argentina, reprogramming Futurist robots and sabotaging autofactories. Although Guderian's divisions carved great swaths out of Russia's western flank, the Soviets remain stubbornly unkillable. Chancellor Speer has, however, managed to make the North German Republic a partner rather than a satellite in the Futurist Axis; by cleverly encouraging his top mechani designers, he's given the Wehrmacht more punching power than any similarly sized ground force despite its relative weakness in behemoths and artillery.

"[W]e must prepare for the imminent, inevitable identification of man with motor, facilitating and perfecting a constant interchange of intuition, rhythm, instinct, and metallic discipline. . . This nonhuman and mechanical being, constructed for an omnipresent velocity, will be naturally cruel, omniscient, and combative."
-- Filippo Tomasso Marinetti, "Multiplied Man and the Reign of the Machine" (1911)

The mechani on the Eastern Front plug into towering hulks with railgun arms and fascia-mounted T-Ray projectors. These iron giants have the advantage of speed, maneuverability, and range on even top-line Soviet behemoths. Most other nations' mechani go the conventional route of normal-scale titanium arms and legs, powered either by bionic dielectrics or (in experimental cases) radium capsules. These mechani serve as commandos, shock troops, and rangers -- and the number of infantrymen who lose limbs to artillery fire or incoming airstrikes keeps the potential mechani recruit pool high. Some Japanese, British, and Italian jets have plug-in mechani pilots who can withstand steeper dives or tighter turns than even the most chemically-enhanced Soviet or Brazilian fliers.

"From space man stole electricity and combustible fuels to transform motors into faithful allies. Man forced vanquished metals, rendered flexible with fire, to ally themselves with the fuels and electricity. He thus assembled an army of slaves, hostile and dangerous, but sufficiently tamed to transport him rapidly over the curves of the Earth."
-- Filippo Tomasso Marinetti, "The New Religion-Morality of Speed" (1916)

American fliers depend on the thin wedge of American aeronautical design superiority, as Biefeld P-39 Mantas launched from the skydrome *Lakehurst* penetrated deep enough to firebomb Nagoya, and the Hughes P-49 Buffalo jets have closed the firepower gap with the He-144 ornithopter gunship. This dependence has cost them dearly at times. When a wing of American Biefeld-Brown dielectric B-21 bomber disks encountered a mixed squadron of Italian Coanda Raptors and North German Ju-290 Flugelräders on the disastrous Dakar Raid, it prevented any cross-Atlantic

strike in 1943. It did, however, encourage American development of the Goddard tropospheric skip-ship, and by 1944 it, the German Sänger-Bredt "antipodal bomber," and the Italian Cattaneo-Gusalli "condor" skip-ship contested the tropopause and near space. Italian supreme commander Italo Balbo and American aeronaval commander Robert A. Heinlein have now bent their every resource to capturing the Moon and the ultimate high ground.

" We stand on the last promontory of the centuries! . . . Why should we look back, when what we want is to break down the mysterious doors of the Impossible? Time and Space died yesterday. We already live in the absolute, because we have created eternal, omnipresent speed."
-- Filippo Tomasso Marinetti, "The Founding and Manifesto of Futurism" (1909)

For the curious, Reality Futura is a Quantum 4 world, midway between Reich-5 from **GURPS Alternate Earths** and Homeline. Like Gernsback, its feel depends heavily not only on alternate physical laws but on **TORG**-like alternate social axioms. Whether Futura truly owes its nature to fluke quantum fluctuations during the Big Bang, to the effects of Tesla's experimentation with mental projection in 1908, to works of artistic genius echoing back and forth through the timeline, or to the whims of the Unguessable Eddorean Temporal Masterminds is up to the GM. All you have to do is think fast, shoot to vaporize -- and Look To The Future!

Dork Tower!

Dork Tower!

by John Kovalic

Murphy's Rules

Murphy's Rules

Know Thyself, Or Else!

[Scene: A generic apartment. There is a knock at the door. BOB opens the door, and sees his friend EDDY.]

BOB: Hey, Eddy. What's up?

EDDY: Hey, Bob! I'm going to play racquetball! Want to come?

BOB: No, thanks. I'm awful at racquetball. I have the coordination of an ebolic walrus, one of my legs is six inches shorter than the other so I always fall over, and my father was killed in the Racquetball Riots of '88.

EDDY: Oh, come on! It will be fun!

BOB: No, I'm pretty certain it won't.

EDDY: Yes, it will! Join me!

[BOB accompanies EDDY to play racquetball. BOB hobbles around not unlike an ebolic walrus, falls over, and eventually weeps hysterically as he remembers the Riots.]

EDDY: Boy, that was awful! Why'd you come with me anyway, Bob?

[Fade to black]

In the writerly biz, we call that an allegory. Or maybe it's an analogy. Or possibly an allergic parabola. Anyway, the point is, I'm trying to come up with a roundabout way of teaching a lesson.

[Last week](#) I talked a bit about fixing games that were close to perfect for you; this week I'm talking about avoiding games that are far from perfect for you.

It seems obvious: if you don't like a certain kind of game, don't play it. But I can't tell you how many games I've seen hindered or even ruined because one of the players simply didn't like the basic game. I spent an hour counseling a GM one time about a player who wasn't having fun with his *Call of Cthulhu* game, before spending two minutes with the player. You guessed it; the player simply didn't like horror RPGs.

At the risk of belaboring the obvious: know what you like, and know what you *won't* like. If you don't like complex strategy games, then avoid the *TacticsTome 2000* game. If you don't like moody combat-light games, then don't buy the *WallowAngst Live Action Game*. If you like optimistic settings, stay away from the *All Superheroes Have Cancer! RPG*.

To be fair, there are many games that have the potential to be enjoyed by just about everyone. *Dungeons & Dragons* works well enough as an epic *Dragonlance* setting, a grim 'n' gritty *Dark Sun* world, or even 1890's *Masque of the Red Death* gothic horror. [Cheapass Games](#) has made a name for itself by publishing games with a broad appeal. Many games can have sections that appeal to different people, like a combat-heavy world that has a lot of political intrigue. And I also believe that, in the world of RPGs, a good GM can make almost *any* system fun. But that fun is made a lot more challenging when the base premise of the game is disliked by one or more players (or [egad!] the GM).

So, be honest with your players and yourself about what you're able to put up with, and what you aren't. If a game would be great for you except for a few rules quirks or a minor problem with the setting, try to fix it or come up with a solution that would be liked by everyone. If, on the other hand, you might be interested in *Vampire* if only there weren't all these darn vampires, then maybe you'd be better off suggesting a different game to your group. One GM friend of mine recently told me about how he polled his players regarding which system they would play next. They eventually agreed on *Castle Falkenstein*. Ironically, it wasn't anyone's first choice, but it was everyone's second choice. And that, in my opinion, is a lot healthier than playing the game that was the first choice of a few people, and the last

choice of the others.

And if you're ever in the mood to play racquetball, let me know. . . so I can hide.

* * *

Steven's Fading Suns Rules Mod

*(If you don't have any interest in **Fading Suns**, this is almost certain to bore you. Why not reread the previous section? There were a few funny bits in there.)*

I'm beginning to realize that if, in the middle of a 5,000 word article about the World War II, I were to make an aside about, say, how we used to transform our *Star Wars* action figures into breakdancers, I'd get no comments about the 4,980 words *not* about breakdancing Stormtroopers, and forty e-mails wanting diagrams. Okay; for the dozen or so folks who inquired *how* I had modified *Fading Suns*, here we go.

From the beginning I'd noticed the similarities between *Fading Suns* and White Wolf's *Storyteller* systems. Besides having several writers & artists in common, the base system had many of the same characteristics. You roll to receive a number of successes, the number of which is (roughly) determined by your attribute and skills; the higher the number of successes, the better you did. The *Fading Suns* scale seemed to be roughly double the White Wolf scale; the maximum (normal) attribute or skill in *Fading Suns* is 10, while the maximum in *Storyteller* is 5.

The problem was that we came to *Fading Suns* after a three-year *Storyteller* campaign. In *Storyteller*, with its handful of d10s, you were reasonably assured of *some* success; an average person has a 75% of marginally succeeding at a task in the base system. In contrast, in *Fading Suns* you were lucky if you received *any* successes; it uses one d20, which provides for a wide variance. Thus an average person has a 70% of *failing* a task. Unfortunately, the higher the skills are, the greater the absurdity. In *Storyteller* a great violinist (4 each in Attribute and Skill) has about a 1% of outright failing (this is rough math, so don't yell at me too much if it's wrong); in *Fading Suns* a great violinist (8 each in Attribute and Skill) has a 20% of failing. . . with a quarter of those failures being catastrophic. Even worse, *Fading Suns* doesn't have much allowance for ensuring successes; if you *are* a great violinist, then 20% of the time you're going to perform barely satisfactorily.

We didn't like this.

(Warning: For those of you who've been following along but don't play *Fading Suns*, I'm about to slip into pure gameese.)

The fix I came up with was this: allow post-roll Accenting.

I reasoned this: Almost no one did pre-roll accenting in our group, since the Negative chart was too restrictive (even if you *could* be assured of success, it's in all likelihood going to be a marginal success), and positive accenting was *way* too risky. . . you're going to fail even *more* often.

Also, other game systems do just fine letting players modify rolls afterwards. (*Torg/Masterbook*, *Star Wars*, *DC Heroes*, just to name a few.)

Restrictions

- Accenting still costs a Wyrd.
- For Negative Accenting you use the Negative Accenting chart. For Positive Accenting you use the Regular Success (*not* the Positive Accenting) chart. In other words, the only way to get the Positive Accenting chart is to accent *before* the roll and take your chances. Likewise, if you negatively accent to turn a failure into a success, then you're not getting the full benefit of your almost-good-enough roll.
- You can only post-roll accent plus or minus your skill or controlling attribute (instead of your skill alone as per

normal accenting rules). If you don't have the skill, you can't accent.

- You can't accent up or down to a critical success; if you accent to your goal number, it's treated as a standard goal number.
- 19 is still a failure; 20 is still a critical failure.

(As an aside, we had already been using a rule that said that a critical success was when you rolled your skill plus attribute; if you have a Stamina of 5 and a Vigor of 3, you Critically Succeed on an 8, even if there's a -10 penalty or a +10 bonus. Yes it makes a few weird results, but the bookkeeping is a **lot** easier.)

After playtesting this a bit, we found it works *quite* well. For a number of times a day equal to your Wyrd (three to eight, for most starting characters), you can be more assured of doing what you want. If you're good at something, you can make sure you succeed, or do better if you only marginally succeeded. If you're okay at something, you now have a much better chance at succeeding. If you're awful at something, you'll still be awful at it, but if you got *close* to succeeding, now you'll be able to sometimes marginally succeed.

It's more heroic/cinematic, to be sure, but that's how we've been treating the game world anyway. Now we don't live in fear when someone goes to pull the Abort Planetary Destruct Lever. And the bad guys can post-roll accent too, making them a lot more challenging; a group of ten bad guys can accent a lot more rolls than the player characters.

* * *

All right; for the 95% of you who don't play ***Fading Suns***, welcome back. Next week I think I'll dip into my mailbag. As ever, feel free to [drop me a line](.).

(Three stars) "There's little that can be said about the legendary Tor Johnson, except that he was a big, scary-looking guy."

The Complete Pinhead's Guide to Are We Having Fun Yet? in INWO

by Darrin Bright

With a few exceptions, timing in *Illuminati: New World Order* is generally pretty simple. The [INWO VFAQ](#) does a very nice job of explaining issues like canceling and speed-play. In general, cards take effect in the order in which they are played, and all actions take effect first before you can cancel them. But there are a few gaping holes that pop up when certain plots are played. Specifically, I'm talking about Are We Having Fun Yet?, often abbreviated AWHFY. Here's a quick look at the card, if you're not familiar with it.

> **AWHFY:**
> Play this card at any time. It requires an action by group(s) with total Power greater than that of the target. One action or special-ability use of the target is canceled.

I tried (and failed) to tackle this problem before, and some of you may already be familiar with a long rambling piece I wrote called ["The Remains of The Somewhat Complete Guide to All The Fun You Can Have with 'Are We Having Fun Yet?' But Were Afraid To Ask."](#) It was an attempt to sort out for myself what was going on with some rulings that had to do with special abilities and timing issues. If you haven't read it yet, you might want to take a look at it, but it's not necessary to be familiar with it for the purposes of this article. (If you tried to read it, lose 1d6 SAN.) I don't think even I understood what it was about and it didn't reach any meaningful conclusions, so I'll just give you a quick recap:

"The Remains. . . " was principally concerned with the rulings mess on what is or is not a special ability, an instruction, or a limitation. (It's still a mess, but we've managed to cope.) It started out as an attempt to classify all identifiable special abilities into five different categories, but as the article meandered onwards, I discovered that there were only two kinds of special abilities. The first kind is activated when specific events occurred, such as spending a token or announcing an attack. The second kind are continuous abilities that have no particular duration and stay in effect all of the time. This second group was where the first article really fell apart, since it's not clear how long the cancellation lasts if you hit these groups with AWHFY.

It did occur to me at that point, though, that my problem wasn't AWHFY or special abilities or instructions or whatever. It seemed to me the whole thing depended on how time is divided in *INWO*. When "continuous effects" are canceled, how long do they stay canceled? Until the next event, or the end of the phase, or the end of the turn? And what the heck was an "event" anyway? Was an attack one single event, or a group of events? Uh, your eyes are starting to glaze over. . . maybe I should get to the point.

The Gnomes Problem

When I first considered immunity as a special ability, I thought it was
a continuous effect, as in it was active all the time. The Discordia
ruling didn't work that way, however. When you cancel Discordia's
immunity during an attack, it only lasts long enough for one single
Straight or Government group to interfere, then that counts as "one
single use" of Discordia's power and it goes back into effect. (The ***INWO*** VFAQ discusses this under Canceling -
Special Abilities, but uses the Vatican as an example.) Aha, I told myself, immunity isn't a continuous effect, it is only
activated when a group attacks or interferes in an attack. It was at this point that I discovered that my neat little five
categories were actually only two categories: event-based abilities and continuous abilities.

But wait, I thought to myself. If immunity isn't continuous, maybe those other powers aren't continuous either. Maybe
they only look like they're continuous. If I could classify all powers as taking effect on a particular event or under
certain conditions, then it would be perfectly clear how AWHFY works with ALL special abilities. It would be one
grand unified theory on how all events work in ***INWO***. It would clear up all the confusing timing and event issues, it
would bring about world peace, it would get me to clean the house!

At that point I ran into the Gnomes Problem, and the whole thing fell apart. Here's a look at the special ability I was
puzzling over.

> **Gnomes of Zurich:**
> You may hold 6 plots in your hand, rather than the usual 5.

When I tried to wrap my little mind around the timing of this particular ability, everything went to pieces. When you
cancel this ability, it immediately goes back into effect, right? The duration is pretty much infinite. As long as the
Gnomes are playing they may hold up to six plot cards. It wasn't a power that was activated or happened under certain
circumstances, it was a change to the basic rules of the game and there was no clear answer about how long it would
stop working if it were canceled. Until the end of the phase? Until the end of the turn? I had no idea, so I gave up.

The Yeti Ruling

When the SubGenius expansion was released, one of the new cards that attracted a lot of attention was the Arise! goal. One of the first tricks people came up with was "attack to control all my groups, and we'll share a victory." But who wants to share a victory when you can get all the glory yourself? I set about the problem of tricking an opponent or at least crediting an opponent with taking away your last group.

What I came up with was Deck of the Week winner #61, "Somebody Kill Me, Please!" It's a fairly simple deck, really. Move all your groups onto the Center for Disease Control, attack to destroy a rival's place with biological warfare, and make sure the attack fails. When the CDC is destroyed and your rival is credited with the kill, reveal Arise! and win.

One of the problems with the deck, however, was the CDC didn't have an open control arrow to accept any puppets. But that wasn't a problem for the Yetis. They can attach themselves as a puppet to any group, whether or not it has an open control arrow. Only at the last minute I realized one of the cards I'd put into the deck could have ruined the whole thing. The Blue NWO: World Hunger strips the action tokens from green groups and nullifies their special abilities. . . and the Yetis were green! If World Hunger was played, the deck might not work.

Or would it? I told Deck of the Week Guru Ralph Melton to substitute Global Warming for World Hunger in the final deck submission, but the two of us puzzled over what, exactly, would happen if somebody *did* play World Hunger or somehow canceled the Yetis special ability. Let's say the Yetis are hanging off somewhere, minding their own business, and all of a sudden they're not supposed to hang there anymore. What happens? Do you have to move them immediately, or do you have to discard them because they are in play in an illegal position?

> **Yetis:**
> This card may be placed on any side of its master's card, even if there is no outgoing control arrow there! A group with an unused, but blocked, control arrow may attack to control the Yetis.

After puzzling over it, Ralph put forth the following interpretation. The Yetis special ability is only activated when they are actually placed in a power structure. Once in play, they stay there until moved, and canceling their special ability has no effect, since there's no rule that says they have to be discarded once they've legally made it into play.

Weird, huh? I thought it was a pretty wacky interpretation, but Head Netrep and *INWO* Goddess Lynette Cowper agreed with him and made it official. So once a group is in play, it doesn't matter if it's actually on an open control arrow so long as it got there legally. I called it a rather pnambic ruling, but let it go. . . there are worse rulings I can rant and rave about.

But to get back to our little story, that ruling got me thinking. Here was another apparently continuous ability that wasn't continuous at all. And you could cancel it with AWHFY, if it was played just after the Yetis were placed in play. I decided to tackle the Gnomes Problem again.

The Gnomes Solution

Inspired by the Yeti ruling, it eventually occurred to me that the Gnomes special ability is *not* continuous. The Yeti ruling actually has nothing to do with the Gnomes solution. . . it's just that I was thinking about the Yetis just before I figured out how to handle the Gnomes problem. It occurred to me that the Gnomes special ability is only in use when they have more than five plots in their hand. Once the

Gnomes special ability is canceled via AWHFY, the Gnomes player has to discard down to five cards. . . at which point the special ability is no longer active. It's only activated when a sixth card is drawn, and it stays active until his next turn comes up or he's forced to play or discard a card. If canceled, the Gnomes player discards down to five plots. If he does draw another card, then his special ability goes back into effect, but it is considered a separate use of this special ability.

The Ross Perot Problem

I was close. I almost had it. Only one serious obstacle remained that I could see, but it was Ross Perot, which leads to a very nasty little rules conundrum with the Dittoheads. Actually, I'm not going to even touch that problem in this article, since it doesn't exactly involve AWHFY or timing. Well, it kind of does, as I want to talk about the special abilities that create the paradox, but that's as far as I'm going to go. There's actually probably a lot more quasi-continuous abilities out there that I'm ignoring, but I thought I'd try to keep this article out of the "multiple volume" length, so I'm going to pretend it's the last obstacle.

Ross Perot and the Saturday Morning Cartoons add to or change the alignments of their puppets. The Dittoheads, Day Care Centers, and Secret FisTemples also change alignments, but these three groups actually copy the alignments of their masters. Although these two types of groups seem to have similar abilities, only Ross Perot and the Saturday Morning Cartoons actually have special abilities. The ***INWO* VFAQ** points out that the alignment-changing of the Dittoheads is actually an instruction, so it can't be canceled with AWHFY and I'm not going to worry about it here.

> **Ross Perot:**
> Any group controlled by Perot immediately becomes Straight and Conservative, losing any Weird or Liberal alignments it had. This is a "permanent" change, but the alignments will revert to normal if the group gets another master.

There are two ways to interpret Ross Perot's special ability. The first is similar to the Yeti ruling and is based on the wording "This is a "permanent" change." If it's permanent then it only needs to be done once, right? It works the same way as playing Straighten Up and Fundie Money on the group. Like the Yetis, the ability is activated only when Ross gets a new puppet and if it isn't canceled immediately at that point then it's permanent and can't be canceled later.

I conferred with the Secret Masters and they didn't like this interpretation, although some of them conceded that the reasoning was technically sound. But there's no way to foil a victory attempt if Ross' owner is winning with an alignment-based goal, and it doesn't make much sense if you can't cancel something that can obviously be used more than once. If the ability actually was canceled, then that puppet would never be Straight or Conservative unless it was moved to another one of Ross' control arrows, which doesn't make much sense either. And so it was decided that this interpretation was incorrect.

The second and correct interpretation is much similar to the Discordian immunity ruling. Let's say Ross' puppets can call on his special ability to change alignments whenever they need to. Even if it is canceled Ross will just change the alignments back to Straight and Conservative later when he or his puppets act again. It just happens that way and we're not going to worry about why or how long it lasts. Well, to play AWHFY on him when he takes over a group now is pretty pointless, since the next time any of his puppets act they'll be Straight and Conservative again. With this interpretation, you can only actually cancel Ross' ability if he or his puppets are trying to *do* something with it, either to spend a token or claim victory via an alignment-based goal. Just so we know exactly what's going on, let's take a

look at some examples.

Ross has control of California, and California wants to aid an attack to control the Tobacco Companies. Since California is using the Straight alignment to aid the attack, you could cancel Ross' ability to give them the Straight alignment, and California's token would be lost as an illegal action. Actually, you could cancel California's token directly by using AWHFY, but Ross generally has a lower power than California and it's probably cheaper to use AWHFY on him.

Here's a stickier problem, though. . . let's say someone has played Fundie Money on the Tobacco Companies, making them Conservative. California now has two matching alignments. If Ross' ability is canceled, are both alignment changes canceled or only one? If only one, then which one? Actually, I'm not sure what happens in this case, but I'm going to guess that both alignment changes are part of the same special ability, so California is neither Straight nor Conservative until it can act again. I won't get bent out of shape if you feel differently though.

Finally, let's take a look at a victory attempt. Ross has control of two groups that are not normally Conservative and you're trying to win with the Let Them Eat Cake goal. You've destroyed 2 Liberal groups, and due to Ross' special ability you now have 7 Conservative groups when a rival plays AWHFY on Ross. Since you're using those Conservative groups to claim victory, your rivals can cancel Ross' ability for that victory attempt. But now the question is how many Conservative groups count? Actually, one of them does and one of them doesn't. Since Ross controls two groups, his special ability is being used twice, and AWHFY can only cancel one use for that particular victory attempt. Your rivals would have to play two AWHFY plots on you to affect both puppets.

Conclusions

Well, if you made it this far, this should just about wrap up everything you need to know about Are We Having Fun Yet?. It's not quite the End-All Be-All Grand Unified Theory of *INWO* Timing Issues, but it might be pretty close. To sum up, I submit to you the following: All special abilities in INWO are activated when specific events or conditions occur, and they can be canceled at that time by playing AWHFY. There are no continuous special abilities in *INWO* that are "always active", and all abilities have some sort of specific duration.

There's one last thing I want to clear up with AWHFY. Some of you may be wondering what happens when AWHFY is played on a card with a special ability that is not currently being used or activated. Some of you may be thinking, okay, well, the *next* use of that ability is canceled, right?

Wrong, and here I just want to clear up how timing works in *INWO* when you want to cancel something. In *INWO*, all events happen first, then you decide if you want to cancel them or not. The classic example discussed in the World Domination Handbook is Discordia giving the NPCs (Nuclear Power Companies) the Government alignment. In order to cancel Discordia's action, you have to wait until it happens first. Once the NPCs have become Government, however, Discordia is now immune to them and they can't cancel the change of alignments.

AWHFY works the same way. You can't use it on anything that hasn't happened yet. So if you play it on Ross Perot when he has no puppets and Ross isn't trying to do anything, it has no effect. With nothing to cancel, AWHFY was played illegally and is discarded along with any tokens spent to power it.

So, no longer need you fear the Card That Cannot Be Named or flee the *INWO* Mailing List when it is mentioned. You can stride confidently into any rules argument and know that yes, there should be some way to resolve it without going insane. Of course, due to the "generally beneficial" OPEC/Moonbase rulings, we have no ferk-blast-it clue what is or is not a special ability, limitation, or instruction without consulting a Netrep, but that's a horse of a different color. . . and not really one of the concerns of this article. But that shouldn't stop you from having a little fun with AWHFY.

Pyramid Review

Aberrant: Worldwide Phase I

Published by [White Wolf Game Studio](#)

by R. Sean Bergstrom, Deird're Brooks, Steve Kenson and John Snead

160 pages, $21.95

Aberrant: Worldwide Phase I is the first collection of scenarios published for
White Wolf's superheroic *Aberrant* game. The book is noteworthy on a number of
levels, not least of which being that it's a collection of adventures. Over the past few
years, adventure collections have fallen into disfavor for many game lines. While I understand the factors that led to
this situation, it's nevertheless frustrating. Many games - *Aberrant* among them - have idiosyncratic enough settings
that adventures serve the useful purpose of providing some idea of how to use them. Even in this day and age, Game
Masters appreciate a little guidance on just what to do with their cool new game. Given that the scenarios included in
Aberrant: Worldwide are actually quite enjoyable to boot, White Wolf deserves some appreciation.

The first of the four scenarios, "Strange Bedfellows," centers on the US presidential election of 2008. Like the others
in the book, this adventure advances the *Aberrant* timeline, enabling the players to participate in the evolution of the
setting. Such metaplots are a staple (some would say bane) of roleplaying games these days. What's remarkable about
this scenario (and the others that follow) is that players truly can participate in them. They're not just set pieces in
which Great Events happen around characters who have no ability to influence them. Instead, *Aberrant: Worldwide*
provides plenty of information on the many possible endings of each scenario, including their long-term effects on the
Aberrant setting. Admittedly, each scenario has a default ending that White Wolf will follow in future products. Yet,
the book provides sufficient detail (several pages in some cases) on other options that going against the canonical
outcome is actually a viable alternative.

"Strange Bedfellows" begins as the United States gets its first nova presidential candidate, the quantum-powered
"Fireman," Randel Portman. Player characters can participate in this open-ended scenario in a variety of ways. They
can support Portman's bid, oppose it, or even launch their own campaign! The scenario provides a great deal of
information on the American political process. Everything from political parties to special interest groups to opinion
polls are covered in sufficient detail for the Storyteller to play out this story. "Strange Bedfellows" sets the tone for the
rest of the book. It makes it clear that the Aberrant setting will change and develop and that the actions of the
characters have consequences.

The second scenario, "Apostasy," chronicles the defection of a powerful nova from the fold of Project Utopia. The
nova in question, Antaeus, is the mastermind behind Utopia's terraforming projects in places like Ethiopia.
Consequently, his defection is a blow to the prestige of the Project and presages its eventual fall from grace. The
players enter into the adventure as agents of one of several groups determined to bring Antaeus into their fold (or
return him to it in the case of Utopia).

The third scenario, "Gabriel," has the potential to shake up any Aberrant series. The adventure revolves around the
machination of an insane and extremely powerful nova, the eponymous Gabriel. Gabriel is one of the first novas to
succumb to the quantum taint that inevitably afflicts all novas as they gain greater levels of power. Gabriel is now
hopelessly deranged, believing himself an agent of God intent on ridding the world of its ills. Unfortunately for
baseline humanity, his plan calls for the release of a plague that could wipe out much of the world's non-nova
population. The characters must, of course, stop him before it's too late.

The final scenario, "Into the Arms of the Angel of Wrath," concludes the mystery behind the murder of the nova Jennifer Landers. This murder, first described in the Aberrant rule book, is a central element of the unfolding plotline of Aberrant. Its conclusion brings a close to "Phase I" of the Aberrant story, setting events in motion that I presume will come to fruition in future scenario collections. This scenario is also noteworthy in that it includes a pitched battle between the two heavyweight novas of the setting, Caestus Pax and Divis Mal, the outcome of which reveals even more about White Wolf's plans for the setting. I also appreciate that we finally get a sense (however incomplete) of the breadth and depth of Pax and Mal's powers and abilities, something sorely lacking in previous releases.

Aside from some atrocious editing ("roll" for "role" occurs consistently in one chapter), the book's main "flaw" is that it's clearly a Storyteller-only book. While there is some new background material, including new quantum powers, the bulk of the book is made up with the four scenarios. This wasn't really a problem for me, but I can't help wondering whether this fact will hurt sales, thereby endangering further releases in the series.

This would be a great shame, as *Aberrant: Worldwide* is an excellent model for future adventure collections. The scenarios are well written and flexible with lots of advice on how to tailor them to different groups of players. Likewise, the scenarios tie into the metaplot without unduly binding the hands of Storyteller or the players. Likewise, the characters aren't mere spectators; they can and do influence the outcome of world events. This isn't to suggest *Aberrant: Worldwide* is a perfect book. However, it is an excellent first step in the direction of adventure collections that make some attempt to do justice the conflicting interests of game companies (and players) that wish to develop the setting with a metaplot, while also allowing player characters a hand in these events as they unfold. Here's hoping future releases build on the groundwork laid here - to the benefit not only of *Aberrant* but other games looking for a better approach to scenario collections.

-- James David Maliszewski

Pyramid Review

Behind the Veil (for Lightning Strike)

Published by [Dream Pod 9](#)

Written by Wunji Lau

32 pages, $15.95

Behind the Veil is the second release for *Lightning Strike*, the mass combat rules system based on their *Jovian Chronicles* line. The 32-page book details the planet Venus and their military, adds new rules to the basic game, and includes two pages of full color counters. The book consists of four chapters bound in a flashy cardstock cover and containing two pages of counters of similar quality to the cover.

Chapter one begins with two pages of obligatory fiction, climaxing with a further two pages at the end of the book (pages 30-31). The story is interesting, and sets the mood for playing Venusian characters, and marks the return of an infamous Jovian bad guy. Following this intro are a number of small sections detailing the structure of both Venusian society and its military. This section can best be described as a teaser for a *Jovian Chronicles* sourcebook. Like the free sample table at Safeway, it teases you with a brief look at Venusian society, before asking you to move along. I wanted to know more about the people and culture of Venus. In the scant few pages provided, I learned that Venus and the solar system in general believe that the planet is mostly harmless; only the military realize this is not the case. The book is peppered with brilliant ideas and concepts such as: Venusian corporations jockeying to place loyal employees on prestigious ships, all Venusian military ships being disguised as civilian freighters, or their being an exo-armor designated for Executive use only. Chapter three also shines with good ideas.

The second chapter adds a number of rules that can be used to enhance the original rule set, such as stealth grappling and new weapons. Two of these six pages detail specific rules for Venusians, vehicle design philosophy and its effect on campaigns in addition to a couple of modifications to game system specific to Venus players. The stealth and cloak rules add a new level of sophistication to the game, allowing units to operate similar to U-boats in WW2. For a nation, which disguises all its warships as merchant vessels, it only seems natural to have a few stealth ships thrown into the mix. Also included are grappling rules which greatly improve close combat, by giving exo armor more options and increasing the versatility of the smaller exo suits.

Chapter three details various new units, and includes five pages of Data Cards, the balance being devoted to descriptions of each unit. At ten pages, this section makes up the bulk of the book. It is obvious that the writer has put a great deal of thought into the units detailed here, and aside from a few errors it is remarkably tight. (The data card for the Sakura has transposed a couple of Stat headings and the Ryu has no plasma lances, unlike its RPG counterpart.) The vehicles are well thought out and have a uniquely Venusian design philosophy behind them. For instance, the fighters all have one side that they roll over onto for reentry, but use a different alignment when outside of the atmosphere. Much like a flounder, they turn sideways when they breach the atmosphere; one even turns upside down. The capital ships are also interesting, but I can't for the life of be comprehend how the Shan-yu battlecruiser can conceal 6 hanger bays and 6 launch catapults and still pass itself off as a merchant vessel.

The final chapter presents new rules for Drones. I'm not sure why this section wasn't included in chapter two, as drones really are nothing more than an expensive weapons system. It would've made more sense to consolidate chapter two and four into a larger rules-only chapter, especially as there are no new rules presented in this book that specific only to Venusians. *Lightning Strike* goes to great pains to specifically indicate that all of the solar powers have access to the same technology as any of the others. They simply chose for one reason or another not to use exploit it. So

while Venus uses cloaked ships more than any of the other nations, that doesn't exclude the other nations from using cloaked ships. Unlike **Star Trek**, Jovian scientists are more than capable of reverse engineering captured technology. Presumably the reason CEGA and Jupiter don't field many cloaked units is due to their imperialistic agendas; you can't intimidate your enemies' civilian populations if your ships are invisible. It is emphasized in chapter one that the majority of the solar system's people don't think that Venus even has a large military. I like the fact that the basic technologies are available to all player nations, but don't like the idea of buying the Venus book just to get the new rules for drones. Still, I guess if you have to add new rules to a game, you might as well print them in the sourcebook of the nation who uses them the most.

Overall the book it tightly written, very well organized, and has a lot of interesting concepts that scream to be fully fleshed out in a Venus sourcebook for the Jovian Chronicles RPG. However at only 32 pages and crossing into the $15+ boundary, I'm not sure the supplement is cost effective. **Behind the Veil** is a great little book that looks good and tastes even better; like an appetizer, it isn't a full meal and leaves you wanting more. Combining a Venus, Mars and Mercury book into a 90+ page supplement would have been a much better idea and more cost effective to be sure. Regardless, I would recommend the book to die hard **Lightning Strike** fans or gamers who want to field Venusian units. It's a great read, but a short one.

"There is a saying,
'Katana wa samurai no tamashii' - the sword is the soul of the samurai."
-- Stan Sakai, *Space Usagi Vol III #1* - Inside cover, Dark Horse Comics, 1996

Introduction

Collector of Souls

Collector of Souls is an adventure centered on a fencing school, the Reflection in Blade School, and its sword obsessed sensei, Inokuma Hidetomo. The Heroes get involved in the tale of young Asai Toshishiro, who has come to the school to recover the daisho of his now dead brother. On his own he is bound to become yet another victim to Inokuma Hidetomo's blade, but ingenuity and courage on the part of the Heroes should see justice done.

This adventure could be easily used in any other samurai genre games.

For information on *Usagi Yojimbo* and his creator Stan Sakai the following web sites should be of interest:

Historical Note

In the Japanese history of sword making, various sword-smiths have gained reputations for the quality and character of their blades. One smith in particular, Muramasa Senzo (b. 1341), was known to produce blades with an evil reputation of being "bloodthirsty," bringing death to victim and user alike. His blades were believed to induce murder and suicide; apparently the belief stretched to say that once a Muramasa blade had "tasted" blood, the owner had to "feed" it more or he would starve to death.

Details on Muramasa blades from *Japanese Swordsmanship*, by Gordon Warner and Donn F. Draeger, Weatherhill Inc, 1996.

Background

Inokuma Hidetomo was once a respectable fencing master, and his fencing school had a reputation for excellence. He was a hard master, and only the most promising students were able to enter his school. Eight years ago this all changed. A brash young ronin came to the school demanding acceptance. Inokuma Hidetomo almost refused him, but when he noticed the quality of the daisho that the ronin bore he decided to allow him to join. Not long after he had begun his training, the ronin grew angry that he was put to mundane tasks and not learning any of the schools secret techniques. When another student made fun of him, the ronin sought out his swords and forced the other student to duel him. When Inokuma Hidetomo appeared he found the ronin had slain the student. He challenged the ronin and easily defeated him. Latter that night, when the ronin's valuables were brought to him, he took a close look at the daisho to discover that they were a set made by the skilled but infamous Muramasa Senzo (see Historical note above). The quality of the swords was superior to his own, and for months after the incident he found himself drawn to examine the blades, which he now kept in a fine lacquered chest in his room. The following year he took the daisho and had them purified, finally making them his own. The katana bears the name Hornet and the wakizashi is known as Wasp. The daisho handles are colored yellow in black - much like the abdomens of the insects they are named after.

After Inokuma Hidetomo began wearing the blades, the atmosphere in the school changed. His once hard but fair attitude became cruel. In the following years he wounded many students with the Muramasa Senzo blades, whilst practicing iaijutsu (swift draw and attack with a sword) techniques. These cuts he claimed were deliberate and only occurred when students failed to follow his instruction. Presently most senior students have scars to attest to their encounters with the swords.

The Reflection in Blade Ryu has gained local notoriety as sensei Inokuma Hidetomo has become obsessed with collecting blades, especially those of fine quality. Whenever a blade or daisho of worth comes to his notice he arranges for members of his school to test the owner. If they are defeated in the Dojo (meditation/training hall), then he arranges for one or more of the senior students to get the blades, usually by arranging a duel with live weapons. In some cases such sword owners do not come to the school and Hidetomo sends his students out to create a reason to duel. Several students have been killed this way, but their deaths have allowed Hidetomo to assess the strength of the bearer. Hidetomo then decides whether he can defeat them, and if so he personally challenges them. When they have been too strong he has prudently left them alone.

Hidetomo has lined the senior end of the dojo where he sits with all the swords he has "collected." During ceremonies and important duels he has them unsheathed and placed back on their stands. Most samurai would consider exposure of a blade in such a disrespectful way very disturbing. This action of Hidetomo's has sparked several duels in the past with outsiders. Hidetomo claims that the naked blade represents the central focus of his instruction, and to master his style practitioners must learn to be in harmony with their souls. If the presence of others souls -- which the swords lining his dojo are -- disrupt this harmony, then the samurai has already defeated themselves.

The Current Situation

A samurai in service, Asai Toshishiro, has come seeking the Reflection in Blade Ryu to recover his deceased elder brother's diasho. All he knows is that his brother died two weeks ago when he challenged an assistant instructor (kyoshi) Oda Ichiro to a duel over a matter of honor. Asai Toshishiro has been sent by his father to get details on the duel and to recover the diasho, which has been in the family for almost two hundred years. Asai Toshishiro is cautious though, and is trying to uncover information about the ryu from the nearby town of Godin. It is here that he is most likely to encounter the Heroes and intrigue them with what he has heard of the ryu and its sensei.

Current Course of Events

If the Heroes were not to get involved, Asai Toshishiro would eventually travel to the ryu and ask for his brother's personal effects. Sensei Hidetomo would refuse to return the blades and Asai Toshishiro would leave disgraced, having failed his mission. Asai Toshishiro will then loiter a few days in the nearby town coming to grips with what he should do. In his mind, returning empty-handed to his family would shame him irrevocably. Meanwhile, students in town hang around waiting for Asai Toshishiro to leave so they might waylay him and get his daisho for their master. If the Heroes

have ignored events up until now, you could always arrange for them to witness an attack on Asai Toshishiro in town by the students to try and draw them into the story. Anyway, unless convinced of a better plan to regain the swords, Asai Toshishiro will return to the school, where he is very likely to be slain by his brother's killer, sensei Oda Ichiro.

Collector of Souls

Changing Karma

Obviously, this adventure requires the Heroes to help out Asai Toshishiro. For the most part this works best if the Heroes come up with a reasonable solution themselves. Here are a few possible courses of action that the players could follow. These are detailed to help assist and anticipate what might happen, but are not intended in anyway to be the only solutions or limit the flow of story.

To recover Asai Toshishiro's brother's daisho, the Heroes will need to either defeat Hidetomo or steal the blades back. The intention of this adventure is to make the former unlikely to succeed because he is too skilled for the Heroes. The latter is possible but somewhat dishonorable and likely to make the whole school (and authorities) pursue them. Fortunately for the Heroes an old traveling samurai, Tadashi, is passing through town at this time, and his wisdom and skill offer the best chance of success.

Tadashi also provides a good opportunity to help roleplayers unfamiliar with the *Usagi Yojimbo* genre and the importance of a samurai's swords. Advice and insight can be played "in character" using him, rather than dryly explaining the importance of aspects of the culture. So, for example, if you need to detail the nature of a samurai's soul that rests in his blades, then have Tadashi "remind" them of it or tell a tale about his own master training him. Some examples are: (Note these are actually taken from *Usagi Yojimbo Book Two*, By Stan Sakai, published by Fantagraphics Books, 1988)

- "The two swords, the Katana and the Wakizashi are the symbols of the samurai. Indeed they are the soul of the samurai." (page 9)
- "The sword is not just a weapon. . . it's also a mirror. It reflects the soul of the samurai. It is the soul of the samurai. Just as the blade can be tarnished, so can the soul be corroded. Swordsmanship is a discipline and a way of strengthening one's inner self. So keep your soul sharp and clear. Remember. . . A true samurai does not look for a fight. . . but tries to avoid it. The best souls are those which are kept in their scabbards." (page27)

The last quote clearly contrasts with Hidetomo's activities.

Going to the School

If the Heroes accompany Asai Toshishiro on his first visit to the school, they can meet the main protagonists and encounter the test. They will be politely shown the school grounds and at the Dojo they will see the display of daisho lining the walls around the sensei's raised seating position. During this visit Hidetomo will suggest a "friendly" match using bokken (wooden swords) between the Heroes and some members of his school. Hidetomo will be particularly interested in anyone who has a fine daisho or performs well. Match the Heroes in single duels with Experienced students and then with Oda Ichiro. If anyone defeats Oda Ichiro, Hidetomo will congratulate him or her and question them on their style. If challenged, Hidetomo will not accept a fight if he does not feel he can win. He will only fight with real weapons or not at all. At this test, Asai Toshishiro will also fight and lose to Oda Ichiro. Hidetomo will use this failure as reason enough not to give Asai Toshishiro his brother's daisho - which sits behind him bare-bladed on a wall rack.

Catching Hidetomo's Eye

If the Heroes make themselves known to Hidetomo anyway, then they become targets of his sword-collecting scheme.

As such, they will be watched by students from the school. If they leave town they will be ambushed by Oda Ichiro and Experienced Students. If they defeated Oda Ichiro, then Hidetomo will personally involve himself. Since Hidetomo is a very good swordsman this could well be fatal for the Heroes, so this should be avoided if possible.

Dealing with Hidetomo

It is unlikely any of the Heroes can match Hidetomo in a duel. On the other hand, Tadashi could defeat him but is reluctant to fight. Furthermore, Hidetomo is cautious to test his opponent's skill first and will be resistant to entering a duel with someone he has not seen in action. One solution would be to draw Hidetomo out and arrange, through slight of honor in public or the like, a duel. Hidetomo will be forced for honor's sake to fight, and should be defeated.

Some Thoughts on Atmosphere

Although this adventure can go several ways, there are a few scenes that could be arranged to maximize the atmosphere. The foremost is the dojo, where the naked blades gleam in the light. Whatever way the Heroes scheme to get back the daisho, they will have to come here. It is an ideal place to have a fight scene, such as the one suggested above when the Heroes visit the club. It would also make a grand place for an end scene with Hidetomo, where a duel amongst the naked blades could see an ironic end as Hidetomo crashes into a wall of razor swords for a messy end.

Another scene of particular *Usagi* comic flavor would be an attack by students of the school to make up for their disgrace if they are defeated in the test. A few Experienced Students might lead a large number of Novices to take the Heroes on in a surprise attack at where the Heroes are staying.

A further scene to add atmosphere would be a quiet evening conversation with Tadashi. His enormous skill should be conveyed through his manner and presence - and perhaps with a demonstration. Whilst trying to get him onside the Heroes conversation will be used by Tadashi to examine the Heroes morals and the worthiness of their cause. At this point or after he has joined them he can test and impress on them the important elements of what it is to be a samurai.

Reflection in Blade School

Collector of Souls

The Reflection in Blade School is situated a short distance (half a Ri; about 2 kilometers) from the farming and trade town of Godin. Surrounding the school's buildings is a wooden palisade to keep out wildlife and prying eyes. Four Novice students watch the only gate all day and night. An Experienced student routinely checks up on them and wanders around the compound every few hours. The largest building is the Dojo, where all the swords of the vanquished line the walls of one end. During the day and early evening, this area is filled with students practicing under the watchful eye of Hidetomo or Oda Ichiro. During the night, two Experienced students meditate and sleep in the chamber. Hidetomo and Oda Ichiro have rooms attached to this building, and can get to the Dojo very quickly if need be.

The Characters

Inokuma Hidetomo

Inokuma Hidetomo is sensei of the Reflection in Blade School. He is a stern, sullen-looking individual, with clear sharp eyes. He wears black and yellow clothing to match his swords, Hornet and Wasp. Hidetomo is indeed slightly insane. He is completely obsessed in obtaining swords. He spends many hours each day examining and cleaning his collection while his students practice. Hidetomo is also very cunning. He is careful to test his "victims" with his students before personally involving himself. He also does not trust Oda Ichiro, suspecting rightly that Oda Ichiro has ambitions to be head of the school before Hidetomo might naturally retire. Hidetomo is a sneaky swordsman, who

although very skilled likes to rely upon unusual "secret" maneuvers to take his opponents by surprise. He likes to hit his blade (soul) against another in fights deliberately to rattle them. He considers, like many samurai of the age, that taking someone unawares in an attack is legitimate because a good swordsman should always be alert and ready. He likes to hold his blade so that his opponent receives reflected light in their eyes, and an opponent may be unbalanced as Hidetomo uses his blade as mirror to watch his opponent. When the Heroes witness (or participate in) the duel with Hidetomo, they should feel that he is working on another mystical level from the rest of them - obsessed as he is with his swords.

Oda Ichiro

Oda Ichiro is the assistant instructor (kyoshi) at the school. Oda Ichiro dresses impeccably in green and blue. He knows his master is somewhat crazed, and suspects it is because of the blades. But Oda Ichiro suffers the occasional stings of his master's swords, in return for further training in the secret techniques of his sensei. Oda Ichiro harbors ambitions to take over the school, and for both these reasons he continues to do his duty. He has no qualms about his role that requires him to kill others and take their blades, but he plans to discontinue the practice when he heads the school. Unfortunately, he does envy his master his daisho, and is contemplating taking it when he defeats him. Once he falls under the effects of the blades he may well travel the same path his sensei has. Oda Ichiro likes to use his leap to surprise opponents during fighting.

Tadashi

Tadashi is an old wandering ronin, a man at peace with the world in his final years. His finely-crafted but worn clothes attest to a once high rank in a samurai clan. His wrinkled face and gnarled hands indicate he is well beyond typical samurai retirement age. He wears simple unadorned daisho, no mon (clan symbol) and a wicker hat. He is humble and friendly of manner. He is not interested in killing, and will be very reluctant to help the Heroes in any sort of assault. He likes to use words of wisdom, especially Taoist and Zen sayings.

Asai Toshishiro

Asai Toshishiro is seeking the return of his brother's daisho. Asai Toshishiro is young, and dressed in bright yellows and purples. He is quite bright and cautious, but he also will not return home empty handed. Asai Toshishiro will find any plan to sneak into steal back his brother's blades dishonorable, and thus want no part of such a plan. Asai Toshishiro is a useful tool to remind Heroes who contemplate various un-samurai activities.

Asai Toshishiro is designed to the equivalent of a beginning character, and a Player could indeed be substituted for him, allowing a much closer connection with these events. As long as he or she can be a Samurai in service, then they do not have to be a retainer. They would have to be cat species if male, of course.

The Suppressed Transmission Tarot V: The Suit of Saucers

"It is noteworthy that Crowley here notes the connection with the number of cards in the Tarot, Rota, the 'all-embracing Wheel,' which may be highly significant in a UFO context."
-- Kenneth Grant, *Hecate's Fountain*

"One measures a circle," quoth the immortal Charles Fort, "beginning anywhere." And with these circles, these disks, these saucers, we begin this column and end our exploration of [Suppressed Transmission Tarot](#) design. While the fire of [Knives](#) illuminates horror, the [Forks](#) remain embedded in their alternative earths, and the water of magic fills the [Cups](#), the Saucers of conspiracy -- of mystery from without, not secret magic from within -- hang high in the thin, dubious air of theory. (As always, for Tarot theory, I recommend Bill Butler's *Dictionary of the Tarot*, which airs numerous designs and definitions for as many Tarots.) The Saucers, although they derive their meaning and shape (or vice versa) from the conventional Pentacles, must represent the "air suit" of this Tarot. Airy mentalities such as these might better be represented in your games (should you choose to deploy these entities) circumscribed by chalked pentacles than by metallic dishes in the skies. Or, for the traditionalist, perhaps some alchemist worked alien metals into fourteen coins, each of which remains in sympathetic harmony with some ultraterrestrial intellect -- an intellect with its own agenda expressed in the fall of the coins or the pattern of the cards. Look to the skies!

"[W]e believe that the images contained in Contact Cards will speak directly to the subconscious minds of the seeker and the reader. They will therefore assist in revealing the inner-realm dialogues that we believe already may be happening between the subconscious minds within humanity and the corresponding mental levels within extraterrestrial intelligences."
-- Kim Carlsberg and Darryl Anka, *Contact Cards*

[Roswell](#) (**Ace of Saucers**): A silver saucer sticks up from the red New Mexico desert, gleaming against the sky. Around its rim and elsewhere appear odd, quasi-Egyptian hieroglyphs; in the portholes and around the engine vents a faint, green glow luminesces. This disk is the bearer of knowledge, the potential for elevation or for doom. Interpretation: The idea, the central concept, the first premise, valuable knowledge.

[The Tabloid](#) (**Two of Saucers**): Beneath the screaming headline -- ELVIS, JFK TO ADDRESS UN ON UFO CRISIS -- we see a photograph of two flying saucers over the White House. The tabloid shields the reader's face, but we can see the sleeve of his black suit, and his Masonic ring on the fourth finger of his left hand. Interpretation: Written news, change, potential instability.

[The Pyramids](#) (**Three of Saucers**): The Great Pyramids of Gizeh sit in the center of their complex of tombs and temples, where some priestly firelit ceremony takes place; the torches line up to demonstrate the Pythagorean Theorem and a Fibonacci curve. Above each Pyramid hovers a saucer, themselves forming a triangle. Above the saucers, Orion gleams down, the three stars of his belt perfectly aligned with the Pyramids below. Interpretation: Organization, workmanship, know-how.

Area 51 (Four of Saucers): A shadowy recruiting poster for a secret war. Two Men in Black and two U.S. Air Force pilots walk across the tarmac of Area 51; behind them, being refueled with thin hoses and sprayed with green-glowing fluids, sits the U.S. Air Force's proud squadron of four Aurora flying saucers, reverse-engineered with Grey technology to win the Cold War. An American flag flies overhead. Interpretation: The establishment, political power and information.

[Maury Island](#) (**Five of Saucers**): Five saucers hover in midair over a small boat, raining radioactive slag down on the hapless figures. A dog, a boy, and a man are falling from the boat into the water. A low, wooded island is visible in the background, with three dark figures on it. The five brass disks form a pentagram in the blue sky. Interpretation: Loss, lies, chaos, ruin and mischief.

HAARP (Six of Saucers): Six radar disks hang on the forest of antennae above the Alaskan tundra; their focus aims at a spot in the sky above where the aurora borealis glows greenest. As the aurora fluoresces, it almost appears to form an alien face in the sky. Signs on the fence at the base of the antennae read "Warning" and "Look Out" and "Watch The Skies." Interpretation: The present, attention, perception.

The *U.S.S. Eldridge* (Seven of Saucers): The *U.S.S. Eldridge* steams out of the Philadelphia Naval Yard with a large, complex coil mounted on its deck. At the heart of the coil lies a cylindrical pile of seven disks; a naval officer (Robert A. Heinlein?) watches from the dock as green fire begins to flare from the apparatus and spark off the masts. The ship's outline is already "ghosting" to the stern, leaving greenish after-images as it folds itself through the vortex. Interpretation: Anxiety, chance, the odds, indecision, two possible or simultaneous outcomes.

The Reptoids (Eight of Saucers): On one side of the card, under the British royal arms, a Reptoid dressed in royal robes discusses matters with Winston Churchill. On the other side, beneath an eagle-and-swastika, a Reptoid in a black SS uniform points out a detail to Adolf Hitler. Although the discussions manifestly occur in different rooms, both parties look at the same circular radar screen centered on the card, which shows eight saucer-shaped blips. Interpretation: Skill, cunning, intrigue.

Moonbase Tycho (Nine of Saucers): Space-armored figures bound down from a USAF flying saucer in a lunar crater. Eight more saucers fly overhead in formation. Rovers scoot across the landing pad, raising plumes of dust; the Earth hangs above the whole scene. Domes, quonset huts, and radars compose the base we've had on the Moon since the Fifties. Interpretation: Success, confidence.

The Face on Mars (Ten of Saucers): The Face howls up from the Cydonia plain, surrounded by the Pyramids, the City, and the other cyclopean structures erected by the First and Last Men. But Mars is doomed, and the last ten saucer ships lift off from the surface in two X-shaped formations, leaving their enigmatic successor to watch for their inevitable return from the third planet. Interpretation: Logic, inevitability, progress, finality.

Vannevar Bush (Jack of Saucers): Vannevar Bush shakes the cold, three-fingered hand of a Grey somewhere on a desert airfield, where the Grey's saucer has landed in a sea of official and military vehicles. Two more Greys stand behind their fellow, clutching unrecognizable tools, rods and cones of power and wonder. Bush holds an Enigma machine behind his back. Interpretation: A Promethean figure, a meeting, tricks and subterfuges.

Nikola Tesla (Knight of Saucers): Nikola Tesla stands at the base of an enormous, circular Tesla coil, his arms flung into the air in manic glee. In his right hand he brandishes a lightning rod decorated with ankhs and arrows. His feet do not touch the ground; he is levitating. Behind him the Wardenclyffe tower juts into the sky; the arcing green electricity from the Tesla coil drowns out the light of every star in the sky except for Venus. Interpretation: Cleverness, genius, obsession, stubbornness.

Isis (Queen of Saucers): Isis, a beautiful woman with black hair, pointed ears, and dark green skin, stands over a circular diagram on the ground; at her feet sit the priestesses of ancient Egypt. She alters the diagram with an ankh-shaped pointer. Her crescent-moon crown is a full disk, partially in shadow. Interpretation: A dark woman who implements and fosters knowledge, a teacher, one who sets up the establishment that others may learn.

Charles Fort (King of Saucers): Charles Fort sits smiling at his desk, piles of books and memoranda around him. A Coca-Cola bottle rises up from that litter of pens and inkwells and sanders and notepads. Fort, however, is drinking coffee from a china cup; its saucer holds a crop-circle pattern in coffee rings. Outside the window, a steady rain of carp falls. Interpretation: The master, the professor, the keeper of all knowledge.

"Please Sir, Can I Have Some More?"

Let's start with a quick story.

At the beginning of any game, I ask my players, "So, what are you guys focusing on?" After all, nobody can focus all their attention on everything they do all the time. So, I make them choose that One Thing they're practicing. All their XPs go toward that One Thing. All of them. They can't switch their focus until that One Thing goes up in Rank/Level/Ability. If they do, they lose all the XPs they invested. That's called "keeping your focus."

It's a little trick, but it's a good place to start for this month's column.

For those of you who don't keep score in the *Pyramid* Forum, someone suggested I write a column on how a Dirty GM rewards his players. Well, I started that column about seven times, but never got further than a few paragraphs. The problem? I couldn't keep focus. I couldn't keep on one subject without stumbling onto another one. Each was a big enough subject to deal with all on its own, and I've got a word count here (otherwise, I'd go on and on and on. . .), so this week is the beginning of a series.

In this series (I *think* it's going to be a three-parter), we'll take a look at a few assumptions that nearly everyone takes for granted in roleplaying games, and how a Dirty GM turn those assumptions to his own advantage. This month, we begin our series with one of the greatest assumptions in roleplaying, and when I say greatest, I mean Greatest.

I'm talking about Experience Points.

Nearly every game system uses them (including the three I designed), but that's not the point I'm trying to make here. The point is: *Nearly every game system uses them exactly the same way*. This is so prevalent that you don't wonder if a game system uses XPs, you just assume it does. So this month, let's take a look at a few ways to play dirty with rewards.

The First Great Assumption: American Heresy

The first one starts before anyone even rolls a single die or writes a single number on the sheet. It's the thought that All Characters are Created Equal. The assumption that all characters are equal is ridiculous. Is Elric equal with Moonglum? Is Aragorn equal with Gandalf? Is Frodo equal with Aragorn? Now, granted, Fafhrd and the Mouser are pretty equal, but they're the exception rather than the rule.

The fact of the matter is that roleplaying games are supposed to simulate the literature that inspired them. In fantasy literature, wizards are more powerful than anybody else. Only in game fiction is there a sense of "equality" amongst the group, and that's because those groups were built from characters created within a game system that spouted game balance. The Fellowship of the Ring was *not* a group of balanced characters. Nor were the folks running around in Shannara or the characters in the Thomas Covenant sagas.

So, I suggest you try something new the next time people create characters. I suggest you make them do a write-up of their character before they even touch a character sheet. If the players ask you, "How long should it be?" fall back on the old English 101 answer: "Make it as long as it has to be."

Then, as you look through each description, give out character creation points based on those writings. And I don't mean "Just reward the long-winded guys." Here's an example from my very own head.

Like I said in a previous column, I got the chance to play in a *Vampire* game recently. The character concept I started with was the Toreador assassin (killing is his art) from my New Jerusalem stories. Unfortunately, Jack Flash (with the 5 Dexterity, 5 Firearms, 5 Melee and 5 Celerity) wasn't all that interesting to play. There was no *character* in that character.

On the other hand, the character I wound up playing was much more interesting. He was an Assamite who lived eight hundred years ago. Instead of sneaking into castles, he sent a very formal letter saying, "I'm coming to kill you. I'll be there on the 17th. Make whatever preparations you need to make. You'll be dead by dawn." Unfortunately for the Assamites, my little buddy found Buddha and ran away to the mountains to find spiritual peace - for eight hundred years. He's come back recently because he's had a vision: the peace he seeks is in Los Angeles. So he's back, the guy who used to send kind notes, and while he's still a killing machine (5 Dexterity, 5 Melee, 5 Brawling, 5 Celerity), he *chooses* not to use his skills because he's found inner peace (Humanity 9).

Now, let's pretend I'm two different players, each presenting you with the above characters. Both of these characters look identical on the page (although one speaks Old English and the other speaks French), but don't you think one of them deserves a little bonus? They're both killing machines, designed to abuse the combat system beyond comprehension, but there's some *character* in the Assamite. Besides, as a GM, I can screw around with the Assamite. He balances himself out right well. But that Toreador I have to watch out for. I have to come up with super-bad killer NPCs to keep his quick self in line. But the Assamite keeps *himself* in line. All of his conflict is *inside his own head.* In Electric Johnland, the Assamite gets whatever character points he needs to make up his character. The Toreador, on the other hand, gets exactly what the game system allows.

Too Many Hams, Not Enough Pineapple

The real problem with rewarding Experience Points is the uncomfortable feeling that you're rewarding the good roleplayers and punishing the average ones. Joe isn't a great roleplayer, but he's a good one. He shows up every week, plays out his character to the best of his ability, and always brings chips and sodas. Tim, on the other hand, is a natural wit. He always gets a great laugh, always knows exactly what to say, and is always on his toes. He figures out how to fast-talk the guards, knows how to sweet-talk the princess and figures out all your traps in half a heartbeat. Of course, that means Tim always gets that bonus XP at the end of the game and Joe gets left out in the cold.

See the problem here? Joe's not getting the bonus XPs because he's playing to his ability and Tim's getting those bonus points because. . . he's playing to his ability.

All too often, we game masters (and I did say "we") reward the hams while forgetting about everyone else. Old improv rule (that I learned from those Sea Dog folks): you can't have ham without a little pineapple. In other words, it's all fine and good to give rewards to the players who put themselves in the forefront of the party, but don't forget the guys in the back.

"But John," you say. "What kind of reward can we give Joe? After all, Tim's entertaining. He's making the four hour game session interesting. Aren't we supposed to reward players who get into character and make the game fun?"

Yes. Yes, you are. But there's more than one way to reward a player. Even the quiet ones.

For example, Joe's character is a wizard. He doesn't talk much. He spends most of his time in Tim's shadow. However, like we said above, he's always there for the rest of the party. He always shows up on time and always brings chips and soda. He doesn't do funny voices, or get into character like the rest of the party, but he's always there with the right spell, just when the party needs it.

So, reward Joe for what he *is* doing. And don't reward him at the end of the game, reward him *when* he acts. Immediately. (Especially when it's his spell that saves Tim's overconfident hide.) When Joe's choice of spells is innovative or clever, give Joe bonus XPs to his spellcasting *right then and there*. Show him that you're paying attention and you know that what he's doing isn't as flashy as Tim, but it's just as necessary. A little of this kind of help goes a long way.

Rewards by Proxy

Here's another little Experience Point trick. Tell each of your players they have one Bonus XP they get to award to

someone else tonight. Only one. When someone else does something super duper fantastic, they can reward that player with their Bonus XP.

Rewards Without Experience Points

Even the term is misleading. "Experience Points." I've never liked the fact that XPs can increase your Contacts, Friends, Allies or other Social Bonuses your character has. Experience Points should improve what's inside you. Maybe Experience Points are more like Insight Points. Maybe there's another kind of XP that helps you develop your Contacts, Friends, Allies and other Social Bonuses, eh?

Or maybe we should think outside the box for a second and figure a way to reward players *without* using points.

We all know there are a lot of different breeds of gamers. Some like social characters, others like combat characters, still others like introspective loner characters. Each deserves his own unique brand of reward. In other words, drop the whole generic "XP" thing and figure out a way to reward each individual character with something that will *really* make his eyes shine.

Had me a player who loved his Duelist character back when I was running *AD&D*. Now this guy was the *luckiest* fella you could ever meet. Always rolled 20's on this little jewel red d20. Thing was beautiful. Had a bubble in it. The character he played was an elven swordswoman who was cocky to the extreme. We didn't have the Overconfident Disadvantage back then, or she would have had it. This little Duelist was his favorite character. "Lady Luck," he used to call her. And so, when the time came to reward Lady Luck, I reached into that GM back of tricks and pulled out two things.

The first was a beautiful red ruby - with a flaw in its heart. It was a Luckstone. Added one to every roll she ever made. The second was a sword - a Sword of Sharpness. I think you know the language I'm talkin' here.

Another fella in the game played a Dwarf Berserker. The problem with this little guy is that he was under a curse: he couldn't talk. If he muttered even a single word, he'd go nuts and kill everything in the place. Once again, I reached into that GM bag and pulled out. . . a Dwarven Hammer. You know, the kind that comes back to you when you throw it and kills giants with a single blow? The only problem was the hammer's magical properties would *only* work. . . when its name was spoken.

(Come to think of it, I can't remember if this was *my* **D&D** game or someone's that I played in. Memory can be a tricky thing sometimes, eh?)

Social players (the lovers, not the fighters) are even easier to reward. Every lovely lady they charm, every warlord they impress, every prince they poetically pontificate (sorry, got carried away) is a magic item onto themselves.

The lady can use her own beguiling beauty to win the character favor in court, thus getting him into the best parties, shaking hands with the *real* movers and shakers. You know the rule: "It's not what you know, it's who you know." But then again, making friends in high places isn't the only way to reward a player.

A bard in one of my **D&D** games stopped in the street to tell a group of children a story. He wanted the XPs (he needed ten to hit the next level), and I told him, "Tell a story and you've got it." It was a great story, and I gave him the XPs he needed.

A little later, that glib tongue of his got himself (and the rest of the party) into trouble with a band of nastiness in a local tavern. The party was outnumbered three to one, and the fellows had black poison dripping from their twisty blades. But then, a dark cadre of men stood up in the corner of the room and pummeled those ruffians into a bloody mess. When the fighting was done, one of the shadowy fellows walked up to the bard and said, "I heard that story you told the children this morning. Brought a tear t'me eye, it did." Then, the ruffians walked away.

That same band of ruffians turned out to be the best allies the party ever made. They were the Thieves' Guild.

No Work, No Roll

Every GM rewards his players for good roleplaying in one way or another. Some GMs say, "If you roleplay it, I won't make you roll it." Others say, "If you roleplay it, I'll give you a bonus to your roll."

Check this one out. (By the way, a future game system may well include this trick. It was *my* trick, so I'm using it here, but if you recognize it, remember where you saw it first. Besides, the folks I gave it to are cool, so they'll give me proper credit for it. I hope.)

I recently had a discussion with a few friends about a religious RPG they're developing. They asked me for advice. I took a look at the system and was very impressed. But something was missing. I just couldn't figure it out. After a few hours of pizza and sodas and character creation, it came to me.

They were using Faith.

Now, in my book, Faith sums up to "Believing in something you can't prove." If you're gonna have Faith in an RPG (something I'm figuring out in *Orkworld* right now), you can't call it "faith." There's a mechanic for it. Players can see it. Players can *prove* it. That ain't Faith. That's Devotion.

And with that thought, another came to me. The game system should really use *two* sets of dice: d10s and d6s. If the characters were serving their god, they got to use d10s. If they were serving their own worldly interests, they only got to use d6s. Problem is, the Target Numbers don't change. Heh, heh, heh.

(Of course, now that I think of it, we could always throw in the "Sinful Rule": serve the Enemy, you use d4s.)

That's one for all you clerics out there. Hope you get to see it soon.

Last Trick

Back to the *Vampire* game. When my players got Blood Points, they got them in the form of Hershey's Kisses. You know, the kind wrapped up in red?

When Viscicitude came to town (a nasty vamp disease for those who don't know), I started giving out the ones with the crunchy middle. By the time they bit down, it was already too late.

End of Part One

Experience Points are all well and good, but they aren't the only way to reward your players. The *best* way is to look at the character sheet and find a reward that fits. A reward that *complements* the character in some way.

Don't let the assumptions get you in a rut. Find new ways of handling everything. See you next month when we tackle another Great Assumption. Maybe something small next time; something like Wounds. Or maybe Game Balance. Yeah. Game Balance. That should shake a few nests. . .

We're Reading Your Mail

This week I'm dipping into my mailbag to talk about some random thoughts, and comment on your comments to me.

One of the more commonly asked questions, in my mailbox and over in the newsgroups, is: "Why do you make reference to having only so much space for articles/features/reviews? Since hard disk space is so cheap, why can't you make each issue as big as you'd like, and include everything?" (Variations on this include, "Why can't you publish articles larger than 5,000 words? Why couldn't you run a 50,000 word article if you were so inclined?")

I've answered this in the newsgroups, but I understand not everyone checks those out regularly. The short answer is: because we're a professional magazine.

We're a professional magazine, so unlike many fan sites, we *pay* for our articles. And while the limitation of having only 64 pages (for example) doesn't apply, the fact that we pay, and thus have a budget, does. So while a 5,000 word article gets the author a check for $150, we would need to pay $1,500 for our hypothetical 50,000 word article. . . which is a bit outside our budget (and would get me drawn and quartered by the Powers That Be).

There is another answer, too. . . I would need to edit those behemoths. A 50,000 article is about the equivalent of 200 pages, which is a bit much to edit effectively for a weekly magazine. And the Slushpile is a challenge enough to keep up with when there's a quasi-ceiling of 5,000 words; I shudder to think what would happen if I received a few 50,000 word articles into the mix (or even 10,000 word articles).

So when I say, "We only have room for so many articles," it's because I'm extending the magazine metaphor to the internet; although we don't have an obvious "Wow! There's words on every page so I guess the magazine is full!" boundary, there are nonetheless limits.

Anyway, our first letter comes to us from CatSkinner. He writes:

". . . I've shown your "WHAT WAS I THINKING?" idea to the other GMs around here at work (lots of gamers in the software industry), and now all of them want to do your vowel trick to THEIR players, despite it being a blatantly bad idea. What is it about GMs that we want incredibly difficult puzzles? Who but GMs clips every little maze and riddle they find in the paper, or on the back of cereal boxes?"

At the risk of sounding like a bad 1950's Sci-Fi flick, "Why? Why don't they learn? WHY DON'T THEY LEARN?!?"

I think the reason some GMs (such as myself) like these incredibly difficult puzzles is because, when they work, they can be *so* satisfying. *Raiders of the Lost Ark* had the sequence where Indy puts the medallion on the staff and reflects the light, *Indiana Jones & The Last Crusade* had the scene with the tiles, and *Fifth Element* (a movie that seems directly translated from an RPG adventure if ever there was one) had the end scene with the elements.

The trouble I have with GMing (or playing) is that I don't find it particularly satisfying to resolve the action through combat; any trained chimp can happen to roll the crucial Critical Hit necessary to kill the Real Bad Person. But when the player figures out the Cosmic Conundrum and saves the world, or talks the Kahn out of invading the kingdom through roleplaying, that's something only the player could do. The player has earned that victory. I might talk about this more in the next week or two.

Unfortunately, whenever you present your problem in a way that only the player (not the character) can solve, you run a real risk of them not succeeding. And when it's as lame a puzzle as the vowel trick, you've increased that risk exponentially.

(Oh, and I was a riddle-keeper as a child, though my interest in cereal boxes typically ended upon refueling.)

Okay; next letter.

Upon reading that I'm a migraine sufferer, Ann Dupuis of Grey Ghost, Inc. (makers of the **FUDGE RPG**) sent me a fine e-mail detailing her advice for migraine sufferers. There was plenty of good advice therein (including drink lots of water, exercise, avoid triggers like cigarette smoke, and IMMEDIATELY eat two pieces of bread and a big glass of water at the first sign of a migraine). I've analyzed this advice, internalized it, and come up with my own suggestions for how to deal with migraines:

1. Become Editor of a major gaming magazine.
2. Complain in your forum about migraines.
3. Wait for Ann Dupuis to write you.
4. Follow her advise.
5. Take Excedrin Migraine.

But seriously, thank you, Ann. And in the realm of real advice to you, gentle reader, I'd advise checking out the **FUDGE RPG** if you haven't already. I ran a very successful mini-series using it, and definitely avoided many of the headaches associated with some other systems.

My penultimate letter comes from Andre, who writes to us from Brazil. He writes:

"Dear Steven,

You are crazy.

But Kenneth Hite is faaaaaaaaaaaaaar crazier than you. . .

Your humble servant,

    Andre"

Hmm. . . although I have often questioned my own sanity, I have not delved into the realm of comparative craze study. And that leads to some interesting questions. How crazy am I compared to, say, your average IRS agent? Your typical bungie jumper? Your standard Depeche Mode fan? Is craziness measured additively (like IQ, weight, or standard RPG attribute), or subtractively (like the Mohs mineral hardness scale, or **Call of Cthulhu**'s Sanity)? Has Kenneth been exposed to more Things Man Was Not Meant To Know than I? What would happen if, by diabolical scheme or transporter accident, we were to switch columns? Would man survive?

Finger food for thought.

And finally, our last letter comes from a user who didn't give a name:

"dfruyrtuytiuy]gyltuygtyurtyurfighfkjhgjfytfghyjfyjftyftuytuytuyrrtjfuytjyftjyfutygtyujghjfassssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssssss"

I would just like to comment that I'm glad we're finally succeeding in increasing our cat readership; although other magazines may target those who like cats, we're proud to cater to the cat directly. I'm guessing that the animated Dork Tower, from the April Fool's Issue, was what interested this reader enough to comment/attack the keyboard. Regardless, our kitten-y commitment continues; check out the "String! String! Get the String! Get the String!" article, coming soon.

Well, that wraps up this column. As ever, feel free to write me with your thoughts or comments.

-- Steven Marsh

* * *

Last week's answer: **GURPS Atomic Horror**, p. 6.

(four stars) FILL SQUARE WITH SLIME: Fills an entire square with a cube of lime-flavored gel. Anyone pushing their way through ends their turn upon entering and may not leave until the next turn.

Dork Tower!

Pyramid Review

Cannon Companion

Published by FASA Corporation

Written by Robert Boyle, Dan "Flake" Grendel, Michael Mulvihil and others

126 Pages, $20.00

Guns!

That will be the first thought to creep into your mind on seeing the subtly titled *Cannon Companion* resting on your game store's shelf. At least, it should be if you're the typical *Shadowrun* player. You might expect a third-edition reprise of the *Street Samurai Catalog*, hopefully tossing in the various new goodies collected over the years. And you might be sort of right, too.

The *Cannon Companion* is an "everything fighty" book for *Shadowrun*, third edition. Yes, it has guns -- the first third of the book covers everything from handguns to SAMs, with a substantial nod toward other ways to kill people, too. There's another thirty pages of armor and potentially useful knickknacks before you hit a gun design system, advanced melee combat and a slew of additional combat rules. Just like *Man and Machine: Cyberware* (reviewed in Pyramid, 1/17/00), this book dispenses with the full-page, single-item layouts and witty flavor text of prior works. Instead, it's text and tables, illustrated nicely but unobtrusively by the new cadre of *Shadowrun* artists.

The weapons are a mix of revision, collection and new ideas. Expect to see mostly familiar arms from the *Street Samurai Guide*, *Neoanarchist's Guide to Real Life*, *Fields of Fire* and possibly a few other sources. For the uninitiated, what this means is a variety of weapon options above and beyond those listed in the basic book. Be warned though: just as in real life, not all of them are worth their list cost. In addition to firearms of all breeds, the *Companion* includes bows, crossbows, a wide range of melee weapons, flamethrowers, machine guns and more. There are also helpful accessories and a number of new ammunition types. Nothing from the core rules is repeated in the main text, so you aren't wasting cash on a reprise of what APDS rounds do or what a katana is. *Every* weapon in third edition so far is included in the handy summary tables at the end, however.

The real treat of the weapons section is the improvised weapon tables. There are two, one for melee, the other for projectile weapons. They serve as helpful and entertaining guides to the effects of a number of objects a desperate Shadowrunner might use to club his enemy into submission. Bottles, pipes, rifle butts and bodies (!) are all statted out and ready to use. Just see if your players can resist the chance to toss cue balls, baseballs, bowling balls and bricks at their enemies.

The stuff in the Armor and Gear and Applied Simsense sections can best be described as complications and toys. If you need to make the runners lives more complex, the armor section is a good start. Walking away from the generic "armor jacket," it introduces a range of designer and run-of-the-mill armored clothing, helpfully pointing out that one can hardly wear a tres chic armored suit while slumming it in the gutters of Seattle. All of this serves to further diminish the PCs available funds as they shell out for the right clothing for each occasion. For the less subtle, there are also military armors, of course. For those more far-out runs, there's the Battletac system, parachutes and a bevy of underwater equipment choices. Gearheads will really love the new options available for skillsofts, while sadistic GMs may appreciate expanded BTL chip rules, assuming any of their players are that dumb.

Gearheads can spring into full...well, gear...with the new firearm design rules. Starting from a basic frame, you can add various options to the limits of your weapon's capacity and a few other constraints, then get a final product, priced and ready to go. The actual design process is fairly simple, but should still let you play around for a while trying to develop your weapon of choice. Options cover ammunition, weapon power, rate of fire, recoil compensation and more. If that isn't enough, there are also rules for modifications to existing weapons. Here you can get your gun engraved, fitted for a biometric safety (so only you can fire it), have the safety removed or even build another weapon onto it. Gearhead heaven.

The new melee combat and martial arts rules are a bit hit and miss. The generic options are fun enough, allowing charges, disarming and so forth. The martial arts rules are a sort of hybrid of *Shadowrun*'s totem rules and a familiar approach from other games. Instead of Unarmed Combat, a character buys a martial art. This yields bonuses and minuses in certain combat situations, much as Totems yield balancing magical modifiers. In addition, martial artists are required to buy Maneuvers, an approach taken in *GURPS Martial Arts*, *World of Darkness: Combat* and several other roleplaying books. It's just as problematic here, unfortunately. The rules add somewhat to *Shadowrun* combat, but probably aren't worth the effort. In addition, the authors seem to be reading Draeger or an even less useful resource, as the listed arts are less-than-inclusive and sometimes mischaracterized (e.g. Hapkido is *not* Taekwondo). On the upside, there's some advice on designing your own art. This is only advice though, and not a rules framework.

The book is capped by nearly twenty pages of additional combat rules. Ambidexterity, cover, smoke -- it's all there. Most of the rules are pretty darn useful, especially things like suppressive fire and armor degradation, which will come up all the time in a typical Shadowrun game. Some of them are more specific, like throwing back grenades and parachuting. For cinematic games, one can master athletic dodging or develop a signature weapon. Continuing the odd emphasis on underwater operations seen in the Gear section, five full pages are devoted to mucking about beneath the surface. For the rules-minded, it's nice to have all these new ones in one book, rather than spread out in different adventures and supplements all over the place.

As mentioned, guns and equipment are summarized in the end of the book -- the last twelve pages, in fact. Guns and gear from this book and the core rules are listed with prices, availabilities and summarized stats. This is, as Ms. Stewart would say, a good thing. Add in the tables from *Man and Machine* and you're all set.

Continuing their pattern of packing everything into a twenty-buck book, the FASA folks have created another good buy. *Cannon Companion* is shorter than the last two major compilation sourcebooks released for third edition, but this is largely a function of more limited material. Even so, it's an affordable update with bonuses, if you're an old player. If you're new, and combat really appeals to you, pick it up as well. While it definitely lacks the reading entertainment value of the old Catalog and other books, it's nice to have fifty-seven new guns, an assortment of other goodies and a plethora of rules all in the one book.

So put on your long coat (the London Fog Line, p. 46), grab a pair of gats (Browning Ultra-Powers, p. 18) and go John Woo (Ambidexterity, pp. 94-95) on some poor scrub.

-- Alexander Shearer

Uncle Al's 2050 Catalog Supplement

Road Safety has always been the name of the game here at Uncle Al's Auto Stop and Gunnery Shop, so it gives us a warm glow to see the military-industrial complex's R&D boys busy devising new "non-lethal" and "less lethal" weapons. And now that some of them have been declassified and available as military or police surplus, you can buy them from Al to enhance your driving pleasure!

Items marked (x) cannot be used in AADA-sanctioned tournaments. Items marked (:) are military equipment; their use is prohibited by the AADA, and their possession or acquisition may be punishable by law.

WEAPONS

Blinding Lasers

Note: Laser weapons that are designed to intentionally blind opponents with unenhanced vision are prohibited by international law AND from AADA sanctioned events. All Uncle Al's lasers are certified 'eye-safe'! If you've mistakenly been issued a communications or targeting laser with the capacity to blind, Uncle Al will happily exchange it on production of a valid receipt.

(x) Blinding laser (BL) - To hit 3, no damage, drains 0 power units when fired. Any TL, MTL or Communications Laser can be modified from 'eye-safe' to blinding frequencies for an extra 10% to cost; no extra space or weight. Blinding lasers are only effective against opponents using Telescopic Optics, Binoculars, Telescopic Sights and Hi-Res Telescopic Sights, who will be temporarily blinded (at least in one eye). Cameras, Computer Gunners and Teleguided Missiles can also be blinded. On a 1, the opponent (or camera) is blinded for 1d seconds; on a 2-3, for 1d minutes; on a 4-5, for 1d hours; on a 6, blinding is lasting and must be surgically corrected.

While prohibited by the AADA because of their effect on cameras and binocular-equipped spectators, blinding lasers are popular with some military and police units as an anti-sniper measure.

Drag Chute Harpoon

If you want to make rabbit stew, you've got to catch your rabbit -- so police forces came up with a way of slowing down vehicles with a minimum of damage! This rocket-powered harpoon fastens a small drag chute to your target's tail; the faster he's going, the more it cramps his style. **Uncle Al does not recommend this weapon for use against aircraft with high stall speeds!**

(x) Drag Chute Harpoon (DCH) - To hit 9, $400 ($550 for flameproof model), 40 lbs, 1 space, 2 DP; 1 point damage, 1-shot weapon. Slows vehicles moving at above 150 mph by 60 mph/turn; vehicles moving at 100 to 150 mph by 40 mph/turn; vehicles moving at 40 to 100 mph by 20 mph/turn until speed is reduced to 40 mph. Adds D4 to any hazard or maneuver. Treat as a Drag Chute in other regards, except that it can't be re-used. Volatile weapon.

Radio-Controlled Drop-Spike Plate

Another popular method of slowing down high-speed chases: DSPs and LDSPs that retract their spikes, allowing other traffic to pass over them unharmed, until you see the target vehicle approaching and press a button and -- **ouch**!

Radio-controlled Drop-Spike Plate (RDSP or RLDSP) -- $400 ($700 for large size). Same weight, etc., as regular DSP or LDSP, but spikes may be retracted or extended as required by remote control. When spikes are retracted, treat as a

Fake plate; when extended, does damage to tires as a regular plate.

Stickyfoam Dispensers

When Uncle Al saw the Lepage Glue Gun demonstrated a few years ago, he predicted that it'd change the face of autoduelling, and he's sticking to that prediction! It looks like regular foam when you lay it down, but sticks to tires (or boots) and roads like ultraglue!

Stickyfoam Sprayer (SfS) - $750, 25 lbs, 2 spaces, 3 DP; 25 shots ($30 and 2 lbs each). Loaded cost $1,500, loaded weight 75 lbs.; loaded magazine costs $800 and weighs 65 lbs. The sprayer mixes two binary chemicals to produce an instant 1" x 1/2" patch of stickyfoam. Any hazard suffered or maneuver performed on stickyfoam adds D4 to the difficulty; stickyfoam also does 1 point of damage to each tire and slows the vehicle down by 5 mph per 1/2" of stickyfoam crossed. Stickyfoam does not burn or melt, but its effects can be negated by Sand Ammo, Stickyfoam Neutraliser, or Superacid. Pedestrians entering a square with stickyfoam will be stuck fast until the foam biodegrades or is neutralised.

Stickyfoam Discharger (SfD) -- $75.

AMMUNITION

Biodegradable Munitions

Ever worry about what happens to that oil slick you left on the interstate? The delay-fuse bomb that didn't explode? The box of anti-personnel napalm mines you could've sworn you'd put away safely on the shelf in your garage? Now, with GreenWarTM biodegradable munitions, you can stop worrying, and take your lawyer off retainer!

Biodegradable Munitions -- Adds 20% to cost, reduces damage of unexploded munitions by 1 point for every 1d every week after use, eventually rendering munitions harmless. Biodegradable oil slicks and stickyfoam, +20% to cost, contain genetically engineered microorganisms which begin reproducing when exposed to air, eating away dropped liquid in 4d hours.

Slug Throwers

Silver Shroud Ammunition

Ever want to gift-wrap a car, or even a tank -- while it's on the road? Then Uncle Al has just what you need!

(x) Silver Shroud Ammunition -- Loaded in GLs, RRs, HRRs, ATGs, RFTGs and TGs. To hit 9; CPS $300, WPS same. Wraps any vehicle of up to 40 spaces in an adhesive aluminium polymer film, totally obscuring vision (-10 visibility penalty), creating a D2 hazard, and preventing turrets, cupolas, sponsons, etc, from rotating. Most weapons can be fired through film; weapons with a fire modifier may set the film alight, burning it away in 2 turns and doing 2 points of damage to the armor on each side. Body blades or cycle blades will reduce a film to tatters in 1d+1 turns.

Grenades

Chemical Laser Grenade

Want a laser, but thought you couldn't afford one? Guess again! With 40mm Battlefield Optical Munitions, you can turn your Grenade Launcher into a pulsed laser weapon and really light up somebody's life! **Warning** -- emits toxic vapor. Uncle Al recommends wearing body armor and a gas mask if firing laser grenades from hand-held launchers.

Chemical Laser Grenades -- To Hit 7, CPS $200, 4 lbs per grenade; 1d+1 damage. Must be fired from GL or URGL; can NOT be thrown. No area effect, and cannot guide laser-guided munitions. Grenade (dye rod, explosive, gas and reflectors) is vaporised on firing; on a 1-2, vapor is blown back at firer, doing 2 points of damage (1 point if wearing a gas mask).

Det-Cord Net Grenade

Just the thing for that fishing trip you've been planning -- an 8' diameter net, laced with explosive cord, packed into a 40mm grenade casing! Good for point defense, clearing minefields, or use against boats. Also available in non-explosive anti-personnel and dolphin-friendly biodegradable versions. (Sorry, no TDX. Maybe next year.)

Det-Cord Net Grenade - $200; with impact fuse, +$50. Clears a 1/2" square of mines, spikes, or ice; ignites dropped oil; triggers any pressure capsules (see below). Can be used to intercept incoming missiles, at half the normal penalty to hit (-3 from target vehicle, -5 from everyone else). Used as a concussion grenade against pedestrians and exposed cyclists, burst radius is reduced to 1/2".

Non-explosive Net Grenade -- $100. Pedestrians, swimmers and exposed cyclists hit by non-explosive net grenades take 1d-5 damage. Pedestrians or swimmers must then roll a 7 or more on 2 dice to remain standing/swimming, and an 11 or more to escape from the net, use a weapon, or move at any speed faster than a crawl. Being hit by a non-explosive net creates a D2 hazard for exposed cyclists. A knife, bowie knife or bayonet adds +2 to any attempt to escape from a net.

Both Explosive Cord and Non-explosive nets float on water, and can foul a mini to medium propeller or equivalent jet drive. A boat crossing a net counter will become fouled on a roll of 1-2, causing that propeller/drive to stop after 1d+1 turns. Biodegradable nets, +20% to cost, dissolve after 2d hours in water.

High Explosive Squash Head (HESH) Grenades

$90 (includes impact trigger; +$20 for AGL grenades). For GL, AGL or URGL; cannot be thrown. 2d damage, 0" burst radius; acts like HESH Warhead.

Dropped Solids

Catalytic Spike

Catalytic depolymerization is a great way of getting rid of unsightly old tires with a small amount of chemicals -- especially now, when you can do it while those tires are still on your opponent's car! A special surprise from the dirty tricks boys at R&D!

Catalytic Spikes -- $60 and 5 lbs each. Look just like regular spikes and are loaded in a regular spikedropper. A loaded magazine costs $650 and weighs 65 lbs. Does 1d damage to tires, no damage to solids, like regular spikes - but injects a chemical that continues to dissolve the rubber, doing 1 point of damage every second turn, even to solid tires, until the tire disintegrates completely. Plasticore tires will take 4 points of damage before being reduced to bare plastic; damage will then stop.

Crystal Spike

No see 'em, no avoid 'em!

Crystal Spikes -- $30 and 4 lbs each. Do damage just like regular spikes and are loaded in a regular spikedropper. A loaded magazine costs $350 and weighs 45 lbs. Made of transparent plastic, Crystal Spikes can be seen on a roll of 1 at 6" distance, on a 1-2 at 5", on a 1-3 at 4", and so on; Visibility Targeting Modifiers apply. Not available in Catalytic, Explosive or Incendiary versions.

Programmable Mines

Want smarter mines to cut down on those embarrassing friendly fire incidents? Want to deny an area to trucks or tanks without toasting your biker buddies? Well, these babies can be pre-programmed to ignore any vehicle below a certain weight, from 50 lbs to 50 tons.

Programmable Mines -- all mines except Spider Mines can be made programmable at 2x normal cost. The weight must be programmed before the mines are loaded. Programmable mines can be mixed with other mine loads in a magazine. Cannot be Radio Detonated or use Proximity Fuses.

Other Dropped Weapons

Pyrophoric Oil

Looks just like a regular oil slick -- but when someone drives onto it, it ignites! Come on baby, light my fire! Available in anti-personnel and anti-vehicle versions.

Pyrophoric Oil -- Any standard oil jet or discharger can drop Pyrophoric Oil. CPS 5x normal, WPS normal. Pyrophoric oil won't burst into flame until the pressure-sensitive microbeads inside are crushed, causing a chemical reaction (50 lbs to trigger anti-personnel version, 300 lbs to trigger anti-vehicle version) that ignites the slick. Damage and other effects as a Flaming Oil Jet. Volatile weapon.

Superacid Cloud

A corrosive gas custom-engineered to military specifications, Superacid has been prohibited by the AADA.

(:) Superacid Cloud -- Loaded in TXGs and HDTXGs, cost and weight same. As with toxin gas, binary chemicals are combined and form a cloud that disperses after 5 turns. This cloud looks like a paint cloud and blocks fire in the same way, but does 1d damage to pedestrians and exposed cyclists that touch or pass through the cloud. A superacid cloud will also etch car windows and camera lenses, permanently giving a -2 visibility penalty, and corrode air filters, opening the vehicle to other forms of gas attack. If a vehicle spends two or more phases exposed to a superacid cloud, the acid will destroy items with less than 1 DP fitted outside the vehicle's armor (such as Dischargers, Laser-reactive webs, Camouflage netting, and Laser Communications Targets); each tire inside the cloud will also take 1/2d of damage. A second exposure to a superacid cloud will do 1/2d of damage to the driver, gunner, any passenger, and every unarmored internal or external component, as well as a further 1/2d to the tires.

Uncle Al's 2050 Catalog Supplement

DEFENSE

Birdcatcher

Incoming! Ahh, don't worry about it. BirdcatcherTM automatic point-defense software for the ATAD or Computer Gunner will swat those pesky missiles, leaving you free to keep your eyes on the road and your finger on the trigger!

(x) Birdcatcher -- $1000, no weight or space. Destroyed when the Power Plant is destroyed. Uses existing sensors to detect and target any incoming missiles. Must be linked to a turret weapon or group of weapons to provide line of fire on every side ($50 per link). Can also be linked to chaff or hot smoke dispensers, bollixes, radar jammers, etc., but cannot distinguish between missile types.

Stickyfoam Neutraliser

Another triumph of catalytic depolymerization technology: safe for tires, but unsticks stickyfoam. Also makes a great paint stripper!

Stickyfoam Neutraliser -- Loaded in any paint-using weapon, CPS 5x normal, weight same. Like paint, it forms a cloud that lasts for 1 turn. Sprayed on an area of stickyfoam, it turns it into a harmless liquid; sprayed on anything hit with defensive or glow-in-the-dark paint, it dissolves the paint in one turn.

ACCESSORIES

Airbag Restraints

Want to restrain unruly prisoners? Want to stop that fare turning into a carjacker? Or just keep the kids from asking "Are we there yet?" for the rest of the trip? Inflate these toughened police-issue airbags, and enjoy the peace!

Airbag restraints -- $200 and 10 lbs each, no space. Fitted to passenger seats, can be inflated to prevent passengers from moving, talking, or taking actions. Reusable unless damaged; firing action to inflate or deflate. Deflating takes 2 turns; can be deflated by most weapons that can damage tires (1 DP), but all attacks while restrained are at -10. While airbag is inflated, passenger also receives protection from collision and roll damage; reduce damage by 1/4 (round up).

Voice Controls

Got your hands full? No problemo! With this software for your vehicular computer, and a few inexpensive peripherals, you CAN do two things at once!

Voice Controls -- Software for Autopilot or Vehicular Computer. $200, no weight or space, 0 DP; destroyed when the computer is destroyed. Gives driver, gunner OR passenger (responds to one voice only) voice control over up to 10 accessories with simple commands ('on' or 'off', for devices such as Bollixes; 'up' or 'down' for pop-up turrets; 'blow' for ejection seats or airbag restraints), enabling the user to perform two firing actions simultaneously. Starshell Launchers, Dropped Weapons and Dischargers can also be linked to Voice Control at $50 per link. Cannot be used for weapons that need to be aimed, or to drive car (though it can be used to activate Autopilot).

PERSONAL WEAPONS AND EQUIPMENT

Portable Stickyfoam Sprayer

Don't get stuck without one of these! $1000 buys you both tanks, the sprayer, and enough foam to cover 500 square

feet.

Portable Stickyfoam Sprayer (PSfS)-- To hit 6, $700, 5 GE, 2 DP, 10 shots, CPS $30. When carried as cargo it takes up 1 space, and weighs 70 lbs. loaded and 50 lbs empty. When fired, the PSfS creates a standard stickyfoam patch 1" by 1/2". A pedestrian carrying a PSfS moves only half as fast as other pedestrians. Should the wearer be hit, roll 1d; on a 1-2, the PSfS is hit. One point of damage ruptures one of the binary chemical tanks, making the PSfS useless; two or more ruptures both, creating a 1" square patch of stickyfoam with the wearer stuck in the centre.

Bibliography:

Colonel John B. Alexander, *Future War: Non-Lethal Weapons in Twenty-First-Century Warfare*.

Craig Sheeley, *Uncle Al's Catalog From Hell*.

by Les Simpson

Patrick Kapera, the Lead Story Writer for the popular *Doomtown CCG*, is still recovering from the conclusion of their first major story arc, and already he's hard at work bringing the new storyline together. He took a few moments from his busy schedule to chat with *Pyramid*.

* * *

Pyramid: Well, Patrick, you certainly have worn a lot of hats at AEG: Staff Writer, Director of Marketing, and now the Lead Story Writer for the **Doomtown Collectible Card Game***. How did you get into the gaming industry and what are some of your more notable credits?*

Patrick Kapera: Amazingly enough, I fell into the gaming industry by accident. A friend of mine at AEG (and our current art director), Jim Pinto, recommended me at a local convention in Los Angeles. I'd known Jim for several years at that point as a fellow convention goer, avid live-action/tabletop gamer, and all-around great guy. Within a couple weeks, I was interning at the AEG offices under DJ Trindle. My duties mainly focused on editing to begin with (*Way of the Crane* and *Way of the Scorpion*, among others), but I was drawn to the creative end of the company rather quickly. In short order, I was generating material for *Legend of the Five Rings* products (*Way of the Scorpion* first, then every *Way of. . .* book since).

Four months later, I came on board as a full-time employee of the company. Since then, I've worked in every department -- writing, editing, advertising, marketing. . .

I've written the *Way of the Phoeni*x and the *Way of the Lion* with Ree Soesbee, and chunks of the *7th Sea RPG*, and the *Clan War* miniatures wargame -- along with a host of smaller works too numerous to remember (er, mention). My full-credits include *Legacy of the Forge*, the *Legend of the Burning Sands CCG*, and the upcoming second story-arc for the *Doomtown CCG*.

Pyramid: That brings us to the **Doomtown** *property. The game is based on the* **Deadlands RPG** *by Pinnacle and has now moved from being produced by* **Wizards of the Coast** *to being produced by AEG. It seems like a child with several parents. How, exactly, does it all work out?*

Kapera: The only change on this end has been the exclusion of WOTC from the production process. During *Doomtown*'s first two years, WOTC licensed the rights to produce the game from Pinnacle, who own the rights. They, in turn, contracted the AEG design team to create the mechanics and storyline. Now AEG is licensing the rights to design and produce the cards in-house. That's pretty much it.

Pyramid: What about Wizards of the Coast's Doomtown fan club? Did it survive the move?

Kapera: Yes, though I'm really not the person to talk to about the details. All I know right now (as Lead Story Writer) is that a revised Epitaph is in the works, along with plans for an in-house Quickdraw League.

Pyramid: The **Doomtown CCG** *is similar to the* **Legend of the Five Rings CCG** *in that they are both story driven.*

*Before **Doomtown** left Wizards of the Coast, its first story arc came to an epic end. Just in case someone missed it, can you summarize what all went on, which outfits survived and which didn't?*

Kapera: Wow. That's a tall order. As with any story-driven game (and especially with a game having so many factions, characters, etc.), it's difficult to explain everything in one breath. But here it goes, anyway:

The first story-arc revolved around two key figures: a powerful manitou named Knicknevin, who was intent on making Gamorra his own little "Kingdom" on Earth, and Austin Stoker, a mysterious Harrowed gunslinger determined to save the town.

There were a lot of other folks involved (most of which are familiar to Deadlands players), including the Agency (the "Men in Black" of the Weird West), Blackjacks (outlaws), Collegium (mad scientists), the Flock (religious fanatics devoted to a questionable cause), Law Dogs (Sheriff Nate Hunter and his deputies), Maze Rats (Chinese pirates and sorcerers), Sioux Nation (Indian shamans and spiritual warriors), Sweetrock Mining Corporation ('nuff said), Texas Rangers (Confederate zombie hunters who often utilize their prey), and the Whateleys (degenerate, old-world hucksters and occultists). Gamorra rests on one of the largest veins of ghost rock (super fuel) ever seen in the Weird West and, initially, everyone vied for control of it and the town.

As the story progressed, however, we discovered the true threat (Knicknevin), and the fact that everyone would have to fight the manitou if they wanted to survive.

Whew!

All that said, there were victims across the board. Better than half of Gamorra's inhabitants and locations were lost in the epic battle with Knicknevin, which was enacted in the Kingdom Come tournament held in mid-to-late 1999. One faction, the Flock, was lost entirely, though Elijah the Prophet (their leader) escaped during the carnage.

***Pyramid:** Well, after looking at **Doomtown**'s past story arc, can you give us a hint of where it is going next? I would think that it is going to be hard to top battling a demon from the Hunting Grounds.*

Kapera: Yes, it will, though I've concocted a scheme that I hope will work for the purpose. When I first pitched it to Pinnacle and my bosses at AEG, there was a moment of stunned silence, which I think is a good sign.

Since we are talking about this prior to the release of the new Basic Set, details are being held pretty close to the vest. This is what I can tell you right now:

1. The Boot Hill Basic Set takes place immediately after Revelations' Kingdom Come and documents Gamorra as it looks right after Knicknevin's rampage. The first expansion, ***Ashes to Ashes***, will take place one year in the future (Spring, 1878), and bring a host of new elements to the boomtown, including both sides of the Civil War, the rail lines of the Great Rail Wars (including a new one, based exclusively in Gamorra), and a blooming threat that will ultimately change the game setting forever.
2. We're increasing the scope of the game. Instead of dealing only with the town, you'll now be playing across the entire Gamorra Valley with the city being a location in and of itself. This will allow us to tell a much larger, more epic story than ever before. Also, we will be touching on other aspects of the Weird West formerly only dealt with in the ***Deadlands RPG***.

***Pyramid:** What new outfits can we expect to see?*

Kapera: There will be one and it is to be released early in the new story arc. They are called the Lost Angels, Elijah's new band. They're based in part of the material presented in the ***Lost Angels*** sourcebook for the ***Deadlands RPG***, though we're only borrowing half the central premises for Reverend Grimme's group. The other half are staying in house with Pinnacle for use in their upcoming releases.

The Lost Angels will play a major role in the storyline, though I can't reveal the specifics at this time. What I *can* tell you is that they'll feature honest-to-God angels (pun only partially intended), Grimme's Guardian Angels

"shocktroops", and a couple new surprises we've designed expressly for Doomtown.

Pyramid: I'm sure there will be other new characters to fill the ranks left open from the battle with Knicknevin. Will there be any changes to some of the old ones?

Kapera: Many of the original characters will be back, but we will be focusing on a new generation of heroes and villains, giving Gamorra a "facelift," as it were.

Pyramid: How about the diminutive bartender, Charlie Landers? Will he still be around? He seemed to be at ground zero for many events last time, with a lot of the cards' flavor text coming from him.

Kapera: Charlie was the first set's principal narrator, sort of the "Greek chorus" for ***Doomtown***. This time around, he's only one of the narrators, and we're going to be shaking up his world a bit. Throughout the next two years, Charlie will find himself drawn into the events swirling around him rather than remaining the isolated viewer. We're hoping this will give him a more passionate perspective. As a result, however, he may grow slightly less cynical over time, as is to be expected with those who have a vested interest in their surroundings.

Pyramid: What, exactly, does the new Basic Set consist of? How many factions, cards, and so on?

Kapera: Nine of the factions introduced in the original story-arc return in the ***Boot Hill*** basic set. As I mentioned, the Flock were obliterated in the Kingdom Come tournament. The set will consist of just over 300 cards (318, I believe), with nine new faction-specific weapons being one of the highlights.

Pyramid: Will the cards look the same, so that the new ones will be compatible with the old ones?

Kapera: All the cardbacks, borders, and spot art is consistent with previous releases, and will remain so. AEG is determined to produce an extension of the original story-arc, not a replacement. Further, all cards (even those eliminated in the storyline, such as Flock Dudes and such) will be accepted in tournaments. Certain storyline events may place certain restrictions upon deck construction, however, in the fashion of the "Jade-Legal" tourneys for ***L5R***. Of course, any such tournament restrictions would be announced ahead of time, as a courtesy to the players.

*Pyramid: If eliminated cards can show up in tournaments, that certainly confirms that death doesn't have quite the final word in the **Deadlands** setting as it does in real life.*

Kapera: Remember that line in Pet Sematary? "Sometimes, dead is better?" Well, I think players will be attaching a new meaning to that statement. In fact, I *guarantee* it. . .

*Pyramid: Patrick, **Doomtown** has a particular look. Will the artwork still be supplied by the same group of artists?*

Kapera: For the most part, yes. AEG has its own art director, Jim Pinto, who is eagerly searching for new and fresh talent. *Ashes to Ashes*, the first regular expansion for the new story-arc, features quite a few of his newest finds, and they have offered up some truly amazing work! Expect ***Doomtown*** to put on a fresh face in the coming months, while retaining the same high quality you've come to expect.

By the way, if any aspiring artists are reading this, you can contact Jim at the AEG offices by calling (909) 390-5444 and asking for the art director or by sending a portfolio to:

Alderac Entertainment Group
ATTN: Jim Pinto
4045 Guasti #212
Ontario, CA 91766

Pyramid: Will some cards continue to be more rare than others?

Kapera: Yes. Following the traditional CCG format, there will be Common, Uncommon, and Rare cards, based on

their mechanical abilities, storyline impact, and such. The distribution of cards in upcoming sets is largely the same as before.

Pyramid: Are the rules and card mechanics staying the same? I think many fans have the "It ain't broke so you'd better not fix it!" mentality towards Doomtown.

Kapera: We aren't changing anything, though we may add a few things in upcoming sets, such as new victory conditions, traits, and so on. As the game progresses, new card combinations and possibilities present themselves.

Rest assured that we are always working to keep the players on their toes, even while maintaining the same flavor and style of game play that you're used to.

Pyramid: Have any release dates been determined yet?

Kapera: For the most part. Right now, the **Boot Hill** basic set is due out in April and is on schedule, as far as I know. The first three expansions of the new story-arc are planned as follows:

Episode One (Ashes to Ashes): May 2000
Episode Two (Eye for an Eye): GenCon 2000
Episode Three (Do Unto Others): December 2000

*Pyramid: Finally, Patrick, since you are the Lead Story Writer, I have one more question for you. If someone hasn't played **Doomtown** before, what would you say to convince them to give it a try?*

Kapera: Three things:

1. It's easy to learn. In fact, I'll show you how if you find me at the summer cons.
2. It's fun to play. I'm not just the storyteller, I'm also a player.
3. You can't beat the story!

GURPS Raptors

by Christine Morgan

Based on and inspired by *Raptor Red*, a novel by Dr. Robert T. Bakker

References: *GURPS Dinosaurs*, *GURPS Basic Set (3rd Edition)*, *GURPS Compendium I*, *GURPS Fantasy Folk*, *GURPS Bestiary*.

Introduction

In nearly every book, movie, and RPG that features dinosaurs, they are cast as monsters. The humans, be they time travelers or historically inaccurate cavemen or modern genuises who have somehow re-introduced dinos into the world, must face, flee, or overcome.

The main characters themselves are rarely dinosaurs, with a few exceptions usually found on the children's shelf of your local video store -- these talking and singing dinos are another variant of the "cutesy-animal" subgenre of entertainment. They're little people who happen to look like dinosaurs. Not *real* dinosaurs, with real dinosaurian needs and behaviors (except for the occasional nod in the direction of eating habits and avoiding predators).

One book stands apart from and above all the rest when it comes to depicting dinosaurs as actual characters. This is *Raptor Red*, a novel by renowned paleontologist Robert T. Bakker. Not only is it one of the best dinosaur books out there, it belongs near the top of the list of *the* best books. Ever. Period.

Raptor Red turns dinosaurs from fascinating monsters into believable, compelling characters. It is wonderfully written, light-hearted and dramatic, a story played out against the natural background for these creatures, as realistic as one of the world's foremost dinosaur experts can deliver.

What would it be like to run a game in such a setting? Many of the gaming elements are there -- problem solving, character interaction, combat, treasure (in the form of plentiful food), survival.

Wouldn't it be fun to play a Raptor?

Utahraptor (adapted from GURPS Dinosaurs)

ST: 30-35
DX: 15
IQ: 10 *
HT: 15/30
Speed: 13
Dodge: 7
PD/DR: 1/1 most of body, 0/0 on lowest part of underbelly

(* *GURPS Dinosaurs* gives pretty much all the species an IQ of 3, and the raptors an IQ of 3-4; The truly dedicated GM could use the method of adjustment from *GURPS Bunnies and Burrows*, but given the tremendous variety of species, sizes, and stats among the Cretaceous population ... it is far easier to simply bump their average IQ to 10 and adjust the IQ of the other species accordingly, with most of the prey-types ranging from 6-8. "Hers was a beautifully alert and sentient species" -- Preface to *Raptor Red*.)

Description

Size: 6-7 hexes
Height: 8 feet
Length: 20 feet
Weight: 600-800 lbs
Hide: dull brown/red, shaded to paler tan on underbelly; snout markings.**
Eyes: gold or yellow, tinged from greenish to coppery to orange.
Note: females will tend toward the higher ends of ST and Weight than males.

Reach: C, 1, 2 (hind leg kick)
Damage, bite: 1d6 cutting
Damage, hand claws: 2d6-1 cutting
Damage, kick with toe claw: 3d6+1 impaling
Damage, flying strike with toe claws: 4d6-1 impaling

Development

Hatching to 1 year -- infancy
1 year to 2 years -- chickhood
2 years to 3 years -- adolescence
3 years on -- adulthood

Racial Advantages (+151)

Acute Taste and Smell +2 (+4)
Acute Vision +2 (+4)
Cast Iron Stomach (+15)
Thick Hide (+28) -- tough skin, PD/DR 1/1 except on underbelly.
Nictating Membrane (+10)
Penetrating Call (+5)
Strikers, hand claws (+25)
Strikers, toe claws (+40)
Strikers, teeth (+5)
Discriminatory Smell (+15) +4 to Tracking skill.

Racial Disadvantages

Phobia (-10) -- shadows from above, instinctive reaction.
Phobia (-10) -- bugs, disease and infection.
Raptor Code of Honor (-15) -- look after your own offspring first; siblings and mates help protect and provide for each other; don't waste time on anyone else.
Intolerance (-10), other species of Raptors. **

Several Advantages and Disadvantages, for a variety of mostly obvious reasons, are not suited to a Raptor character. As always, the GM's decision is final.

Unsuitable Advantages and Disadvantages would most likely include those related to: technology, literacy, drugs and alcohol, the military, the law, religion, wealth, fashion, languages, magic, music, martial arts, social/cultural connections, plants and animals, psionics, super powers, the occult, and phobias of things that do not exist in the Cretaceous world.

Many physical Disadvantages would not be found in Raptor characters, as physical capability is a must for survival, and any Raptor too physically limited would have a hard time living to maturity.

Raptor Skills

Area Knowledge, Body Language, Brawling, Camouflage, Climbing, Cyphering (default only), First Aid, Fishing, Intimidation, Jumping, Jump Kick (maneuver), Kicking (maneuver), Tail Strike (maneuver), Leadership, Naturalist, Running, Savoir Faire, Sex Appeal, Stealth, Survival (varying types), Swimming, Tactics, Teaching, Throwing, Tracking.

New Raptor-Specific Skills

Scent-Marking (M/E)
Raptors use this skill to mark territory and leave signals, using throat-glands (rubbing against something to "mark" it in much the same way that a cat might do) and dung. Scent markers fade over time, and can also be purposefully disturbed by covering them with earth or overlaying with a fresher scent.

Nest-Building (P/E)
Once Survival has been used to locate an acceptable sleeping site, a Raptor will use this skill to scrape together and collect branches and leaves to create a comfortable spot to bed down.

Mating Dance (P/A)
This skill is more important in males than in females, because males have the burden of courting while females have the luxury of choosing. It is an act in two parts. The first half is the Courtship Dance, at the end of which the female makes a Reaction roll and indicates whether she is interested or not. If so, the male may begin the second and more difficult half, which is at a -3 to skill. Modifiers: any footing penalties for terrain; a gift of food adds +2 to the female's Reaction roll.

Grooming (P/E)
This skill is used to keep the skin and claws clean, and is also used in a variety of social encounters (affectionate, comforting, etc.).

Sleeping Habits

Dirunal / Nocturnal -- A Raptor may only be one or the other of these. Dirunals rise before dawn, and are at their best early in the day. Nocturnals are slower-starting in the morning but stay up and alert farther into the night.

Raptor Communication

Raptors communicate by means of a complex series of postures, motions, head-bobs, lip-curls, play bites, grooming, snout bumps, and nuzzles.

Verbal communication is limited to the high-pitched yelping "distress call," a keening wail used to express grief, cooing noises of affection, and screeching, snarling, and bellowing to express threats.

The "All-Out" threat gesture, which gives a Raptor +2 to Intimidation skill rolls, consists of a lot of noise, waving of the foreclaws, and raking the air with the deadly toe-claws.

Raptors at rest will sit upright with torsos erect and heads held high, the better to spot potential prey and dangers. When sleeping, they do so sitting but leaning against each other, usually facing the same way all in a row.

The most complex and important piece of Raptor communication is the mating dance. This is usually initiated by the male and includes an exaggerated series of ritual motions (see above, Mating Dance skill). Mates are taken monogamously for life, so this is not somethung undertaken lightly.

Pack Bonds

Packs are held together by bonds between mates and families. This is fine so long as the hunting is good, but in times of drought or famine, such bonds begin to dissolve and it becomes a matter of every Raptor for itself. A pack may also be faced with the decision of whether or not to abandon the youngest chicks, because a female without chicks to tend will stand a better chance of surviving herself to breed again.

Other factors that can lead to the breaking up of pack bonds include injury or death of a member, personality conflicts and disputes, and natural disasters such as fires, floods, or earthquakes that put physical distance and barriers between pack members.

Disease and Injury

Ticks and other bugs carry diseases that can prove fatal to Raptors. Some types of birds can serve a function much as they do for rhinos and other large animals, by plucking ticks from beneath the skin.

Choosing a nesting site free from such hazards requires a Survival roll, while locating and encouraging birds to remove ticks is part of Raptor First Aid.

First Aid also includes licking wounds (regains 1 HT on the first day and prevents infection), coating them in mud (eases pain), and provision of food and shelter for an injured Raptor by other pack members (gives +1 to the daily HT roll).

Because of their diet, their keen sense of smell, and their ability to regurgitate, Raptors are not very vulnerable to food poisoning or toxic plants.

Deadly Stepfathers and Other Hazards

One of the greatest dangers facing Raptor chicks is the male of the species. Just as a lion taking control of a tribe will kill cubs sired by his predecessor in order to bring the lionesses into season, a male Raptor with a new mate is instinctively programmed to kill off any chicks from her previous relationship.

He has no genetic investment in them, and therefore it is a waste of his time to protect and provide for them when he could be encouraging the female to start up a new family carrying his own genes.

Chicks are often the target of other predators. Competition for game is fierce, and it makes sense to get rid of the other team while they're still young and helpless. This, too, is seen among lions, who will hunt down and slaughter leopard and cheetah cubs. But, again like a lioness, there are few things fiercer than a female Raptor defending her offspring.

Sample Character: Yellow Streak

ST: 30
DX: 15
IQ: 10
HT: 15/30
Speed: 13
Dodge: 7
PD/DR: 1/1 most of body, 0/0 on lowest part of underbelly

Racial Advantages and Disadvantages as above (+106)

Personal Advantages: Alertness +3 (+15)

Personal Disadvantages: Cowardice (-10), Greed (-15), Gluttony (-5)

Skills: Body Language-10, Brawling-12, Camouflage-10, Climbing-12, First Aid-10, Jumping-12, Jump Kick (maneuver)-12, Kicking (maneuver)-12, Tail Strike (maneuver)-12, Naturalist-10, Running-18, Stealth-18, Survival (plains)-11, Swimming-10, Throwing-10, Tracking-12, Scent-Marking-11, Nest-Building-12, Mating Dance-9, Grooming-10.

Description
Height: 7 1/2 feet
Length: 18 feet
Weight: 600 lbs
Age: 3 years, just post-adolescent
Notable feature: vivid yellow streak running from corners of mouth along jawline to meet at back of neck and halfway down his back.

Yellow Streak's name fits him both physically and in terms of personality. The 'runt' of the litter, he grew up with two older, pushy, bossy siblings. He always felt left out, picked on, and deprived.

Now that he is out of the family unit and on his own, he conducts himself more like a scavenger than a predator. The first hint of danger has him ready to move, but his fight-or-flight reaction is always heavily leaning toward "flight."

Because he never felt like he got his fair share of the food, now he is greedy and will not only gorge himself but haul away as much as he can carry, and snarl at smaller scavengers even if he's too stuffed to move. He knows that he is expected to go out there and find a mate, but the prospect scares him silly.

The Two Percent

About a month ago, *Pyramid Magazine* ran a poll to glean how many of the readers were women who were actively involved in the gaming hobby. The result, out of nearly 1500 respondents, was that only two percent -- thirty-odd readers from the ages of seventeen to thirty -- were women. This contradicted the Wizards of the Coast survey, which had reported a much higher percentage of participation of 30%. Although the polls are far from scientific, it is still a point of valuable feedback, not just on the magazine, but also on the hobby as a whole.

One theory on the low response - mine - was that a substantial number of those who did *not* respond to that week's poll were the missing 27%. Another theory said that Wizard of the Coast's numbers were high and women were a firm minority in the hobby. The reality is likely somewhere in between.

Even if Wizards of the Coast's numbers are correct, thirty percent does not mean equality. The cross-market penetration of gaming feels dangerously low. Are women being marginalized by the industry? Has the industry simply given up on them, considering them not to be a viable customer base?

There are varieties of reasons why the numbers of women in gaming are shockingly low. The following analysis lists ten possible major problem areas contributing to the reason why there aren't many women in gaming. They're roughly ordered from the most important to the least important, although any one of them might be seen as a factor.

1. **Goal-Oriented Instead of Story-Oriented Games.**
   There's a visceral pleasure gamers receive from going into a dungeon, killing the hordes of orcs, and gaining a level. These goal-oriented games are extremely popular, have been for twenty-five years, and will continue to be far into the future. But, they don't sell to women who are looking for a more story-oriented and character driven game. Women gamers want something that involves their characters and their characters' lives more than the next biggest weapon or the next biggest treasure. They want to be given very personal reasons for being involved in the game, be it demons killing children or evil mages murdering their parents. Plenty of game systems simply aren't designed with this sort of personal roleplay in mind, and emphasize the "quest" nature of gaming -- *Shadowrun*, many AD&D modules, and several Palladium games come under this moniker.

   This secret was discovered by the folks over at White Wolf, who created a product that left behind the traditional dungeon delving for more new-age soul delving. Instead of offering a world where the player's existence revolved around treasure and nasty monsters, they offered a world where the player was forced to face down their inner demons. While not everyone's cup of tea, this kind of game is enormously successful, and White Wolf is able to boast that that more than half of their fans are women.

2. **Number-Crunching Based Systems Instead of Story-Telling Based Systems.**
   The hobby of roleplaying hails back to its original wargaming roots from twenty or more years ago, where the mark of a fine system was an attention to detail that it could give to its adherents - the more detailed, the better. (For a fine example, go find a few original *Dungeons & Dragons* supplements.) These complicated systems offered an enormous amount of control of the game world to their fans, but at the same time created a steep learning curve that kept away those players who were either new to gaming or desired a less system oriented, more character based drama. Historically, women who wanted to game either dealt with the complicated system, or didn't play at all.

   Today, this philosophy of game design is changing. Gaming systems are becoming simpler and lowering the barrier to entry, such as the *Tri-Stat* system from Guardians of Order or *Feng-Shui*. Those systems which are geared at the wargaming fan base are releasing simplified versions of their rules. But there is enough complexity that the heavily number-oriented systems still outnumber the lighter ones, and the game itself is still a barrier to women who would like to game, but just don't get it.

3. **Sexist Art.**
   One has to wonder if the women in gaming fantasy art get cold. They're not wearing much, and from the flow of

the few strips of cloth draped around their bodies, they're obviously standing somewhere very windy.

Gaming art does not have the woman gamer in mind. Instead, it's aimed at a much different audience - seventeen-year-old boys. Fantasy is the worst offender of all the genres, taking a nod from the comic book industry by presenting women as disproportioned Barbie dolls while men are well clothed and well-armored. The unrealistic art, which occasionally borders on soft pornography, can be seen as offensive -- or worse. More women would come to play if everyone was simply dressed appropriately. If the characters are depicted standing in the snow, the women should be wearing just as many furs as the men. If the characters are standing in the desert, the men should be just as naked as the women.

4. **Lack of Peers.**
   The lack of women gamers is a cycle that, ultimately, feeds on itself. Traditionally, there aren't very many women in gaming, so there aren't many peers in their social group, and then women don't come to play. It's much like any other minority group trying to make its way into the majority.

   To get more women in gaming, there needs to be more women who are actively playing games and raising the flag telling others that it's safe to join. More women means more peers, which ultimately means more women, more customers, and more gamers.

5. **Expensive Product.**
   Gaming is becoming an increasingly expensive hobby with the new "sourcebook of the month" culture. While the main sourcebook for most games is still a reasonably-priced book, with most falling into the $30-$40 range (except for White Wolf's Limited Editions, which shoot off the map), it seems that the core book is no longer the only book required to play the game. Roleplaying games are not just game systems anymore. They're a marriage.

   New gamers can no longer simply take home a book from their local gaming store, get together with their friends, and play it. They quickly discover that they need to drop a hundred on GMs and Players supplements to actually play the game, and nearly $1000 to learn all there is to know about the system. While the traditional argument on the topic of pricing is that it's "pay once, play forever," it's too forbidding to those who just want to buy a book to learn about roleplaying or begin to be involved in the hobby.

6. **Marketing to the Outside.**
   Traditionally, outside of ***Advanced Dungeons and Dragons*** and more recently, ***Pokemon***, there had been very little mass-market advertising for the gaming industry as a whole. Most introductions to the hobby were through word of mouth by peer group. Women, not being part of the peer group, were never introduced to gaming.

   This is changing, slowly, as gaming is starting to take hold as part of popular culture. With blockbuster video games such as *Diablo* and *Planescape: Torment*, big box-office movies like *Lord of the Rings*, and the popularity of Japanese animation on basic cable, gaming is starting to find new avenues in which to get new players. While it might be too little, too late to snag the target demographic of older women, there are signs that it will reach the younger next generation, as games based on popular series such as *Sailor Moon* are selling well to young girls.

7. **Marketing to the Inside.**
   Gaming is an insular hobby, much like amateur astronomy or model trains. The only location for advertisements of different game brands are in gaming magazines or gaming catalogues, where gamers who are already in the hobby are going to see them. Because the hobby is overwhelmingly male, these advertisements go the step farther by targeting the male demographic exclusively. Few women are going to see the advertisement for the spiffy new game. Even fewer are going to be attracted to game whose advertisement focuses on how realistic the combat is modeled and less on the game play itself.

8. **The Boy's Clubhouse.**
   To the outsider, gaming is perceived as a man's hobby, played by men, written by men, and run by men. It's considered a man's hobby, the equivalent of Sunday night football, where men get together and do manly (or not so manly) things. The perception is that gaming night is much like poker night, except with dice instead of cards.

There just isn't any place for women.

Is this the way it is with everyone? Of course not. It's a stereotype, not a reality, and there are women friendly groups out there who maintain a gender balance. Furthermore, many women in gaming were never told they weren't supposed to be gamers, so they went ahead and did it anyway. But prevalent attitudes are what they are, and many women who feel they aren't welcome are likely just to take their time, business, and money elsewhere.

9. **When There Is a Grown Man in a *Sailor Moon* Outfit, It's Time to go Home.**
   It's difficult to indoctrinate mainstream customers to a hobby whose face is that of the comic bookstore owner from the *Simpsons*. Not all, or even many, gamers embody this stereotype, but it has become so inexorably linked to the hobby that it is almost impossible to get past it to introduce one's girlfriend or wife to a new hobby. And just as one finishes arguing that gamers aren't like that, someone pastes a picture of a grown, overweight, bearded man in a *Sailor Moon* outfit to the net.

10. **Not-So-Friendly Local Gaming Stores.**
    It is not unusual for women gamers to have to stand at the counter to buy their books for a long time before anyone comes to ring them up - even with the helpful Sales Guy standing two feet away. They almost have to beg to get the same attention as their male counterparts.

    Far worse is *too much* attention. Not every customer that walks into the store is datable material, and there's nothing like being hit on by the too-friendly staff. It's uncomfortable, it's degrading, and more often than not, she's not interested in anything past handing her money over for a new supplement. Nothing will guarantee that a woman customer will not return faster than chatting her up, looking for date material.

    Game stores tend to be, for the most part, extremely friendly places to go. But a few bad experiences will keep the women gamers out permanently.

Today blows the winds of change, as the gaming industry realizes it can no longer neglect one half of the population and still be competitive in a splintering marketplace. There are several examples in action:

- White Wolf posts almost the same split between their gamer bases, and they need women gamers to keep their company healthy.
- Guardian of Order's *Sailor Moon* roleplaying game has sold hundreds of copies to girls between the ages of 10-14.
- *Call of Cthulhu*, with its human themes and character driven plots, brings women gamers to both the table and the LARP.
- The later *Advanced Dungeons and Dragons* material, far removed from its wargamer roots, offered worlds with engaging female characters, story based worlds, and themes women can really get their teeth into and enjoy.

The answer to the question if the industry has abandoned its female gamers, is that it hasn't. There's a concerted effort to bring women into gaming, instead of away. The gaming industry is maturing, and in its own way, it is addressing each of these problems in turn. The number of women gamers who are now playing is much higher than it was ten years ago, or even five.

These things take time, and change *cannot* be the responsibility of the game designers or the gaming companies alone. Most of the burden of change weighs on the shoulders of the gamers themselves -- to provide peers, to treat women with dignity, to introduce stories into their games, and to get them to play, hooking them on the game itself.

Trust me; it's worth it.

Pyramid Review

Wasteland (a supplement for the *Obsidian RPG*)

Published by [Apophis Consortium](#)

Written by Micah Skarita, Fav Harnish, Brian Bradley, Tim Akers, and Mike Slivka

208 pages, $20.00

Obsidian is an almost fascinating game idea plagued by countless typographic errors, layout mistakes, and general amateurish writing and editing. Wasteland, the first supplement for the game, is a marked improvement over what has come before, but still far from perfect.

Obsidian takes place in our future, after Hell has consumed a large portion of the Earth and the "civilized" survivors of humanity live in a city called "The Zone." If you think of Judge Dredd you won't be far off. The best overview you can read if you aren't familiar with *Obsidian* is this [review by Derek Guder](#) on [rpg.net](#). Outside the city is where *Wasteland* takes place: a devastated, desert-like environment where Hell has started to take over completely. It's another big "kewl" element to the entire game world and is explained in fairly good detail in chapter one.

Appearance

A 208-page softcover book with a beautiful cover by Christopher Shy and excellent print quality, the first hurdle a customer has to leap is the poor cover design. The title is in a "battered typewriter" font colored black on a very dark red background making it disappear almost completely. The text along the bottom of the cover, reading "A Supplement for *Obsidian*," is even more difficult to read. The back cover text is set in blue on a very dark image and is close to impossible to read. These problems would be less significant for an established company, but for a second product from a new publisher they could cause serious damage and make already existing *Obsidian* customers miss the book completely.

The interior of the book is plagued with constant small layout problems which would be invisible to most gamers but frequently bothered me. The worst problem is where each chapter ends; the layout artist chose to leave a massive white gap (sometimes a complete column) rather than commission artwork specifically for the holes. These layout concerns of mine are probably non-problems for most gamers.

On the plus side most of the art in the book is of an excellent quality and reminds me of the better artwork published by White Wolf and some of what can be found in the SLA Industries books. Unfortunately, the art is the best part of the book.

Content

The first thing I found slightly odd about the book was the low number of chapters (only five) for such a large book (over 200 pages). The first real problem I found with the text was the opening story which is as bad as any game fiction can get. The story was confusing at best, and boring in several instances. The book would have been better if the story had been left out completely.

Chapter One, titled "Wasted Earth," is the overview and introduction to the area known as Wasteland--the area outside

The Zone. From descriptions of the towns inhabited by those known as Exiles (people forced from The Zone, typically criminals) to the creatures living in the Wasteland, every page is loaded with ideas any post-apocalyptic gamemaster will find somewhat interesting. The most useful section of this chapter for gamemasters running post-apocalyptic games will be the town descriptions (though several towns are nothing more than above-ground dungeons where you can kill things)and the "dungeon" information. The information on "Tainted Earth" (the areas of desert where Hell has manifested, represented by foul, odor-filled air which is difficult to breathe and a horribly decayed landscape) is interesting and could be a good addition to a *Dark Conspiracy* campaign.

The second chapter, "Wastelanders," gives information on characters and groups in the Wastelands. Why the section on towns was included here and not detailed in the previous chapter with the town descriptions is something that troubles me slightly. The in-depth study on Coliseum Tournaments, Thunderdome-style gladiator matches, just helps heighten the feeling that this book (and game) is all about killing things. The listing and detailed descriptions of possible contacts characters may have in the *Wasteland* is actually decently-written and useful for just about any post-apocalyptic campaign.

As in the *Obsidian* rulebook, the weapons and equipment section begins to go overboard. Chapter Three covers body armor, weapons, equipment, and vehicles in fairly good detail. One complaint is they don't call guns what they are but instead refer to them as ordnance. This gets a little annoying at times, but other than that the chapter is any munchkin power gamer's dream. What do I mean by that? Consider this example:

> "THE CRUSADER -- This four-foot long ordnance is by far the most cost-effective weapon available. Not only is it a firearm, it doubles as a sword in close combat. Along both sides of the gun is a serrated blade that travels from the end of the barrel back to the chamber. The stock of the weapon has a handle built in so the user can wield the gun as a sword. For the most part this weapon is a modified Revco with an extended barrel and attached blades. On the downside, maintenance of these weapons is extremely difficult due to the mounted swords along the side."

It goes on from there. Maybe these guys should consider releasing a book of ordnance.

Chapter four is an in-depth and exhausting look at numerous military factions, tribes (better known as gangs), daemons (demons from Hell), and a "way kewl" section titled "Starving Religions" (which would actually be a great name for a band). Many parts of the book seem to suffer from excessive, almost indulgent, violent descriptions. A good example of what I mean is this short quote taken from the description of a daemon labeled RED FACE:

"Named after the dried blood on their face (usually around their mouth) . . . "

There are several descriptions of troops, daemons, and other factions with descriptions that begin in a manner similar to Red Face's.

The book closes with a collection of new rules and corrections to rules in the *Obsidian* main rulebook. This chapter is only of value to *Obsidian* players (of which I would guess there are very, very few).

If *Wasteland* were any more expensive it would be difficult to recommend it to anyone. As it is, if you are currently running a post-apocalyptic campaign and have the spare cash to spend on a campaign "tool kit," I would suggest tracking down Wasteland and stripping out the information you find interesting and useful. If you already have *Obsidian* you owe it to yourself to check out this first supplement, which is a major improvement in terms of quality over the main rulebook. Any *Rifts* fans in the audience will need to buy *Wasteland* for the "kewl" factor alone. "Storytelling" groups are better off finding other resources for their campaign.

Origins

You know, there should be a card game about our apartment. . .

Chez Geek makes me proud. It makes me proud that I've designed a game where a bunch
of players (who, probably now or at one time, spent or had roommates who spent a good
bit of their time sleeping, eating, watching TV, and assimilating various substances that
would inhibit future success in political elections) take on the roles of roommates who
spend a good bit of their time sleeping, eating, watching TV, and assimilating various
substances that would inhibit future success in political elections. It also makes me proud
that this game actually got *produced*. Finally, it makes me proudest to know that people
who buy this game are going to *love* taking on the roles of roommates who spend a good
bit of their time sleeping, eating -- you know the rest.

The idea germ began early in 1999. Three people sat around drinking wine at 3 AM
when they should have been sleeping. I spoke aloud the above quote. We chuckled and discussed cards based on our
friends. We decided that Slack should definitely be the goal of the game. . . somehow.

I don't know what work I was procrastinating at the time (probably applying to graduate school) but I became
alarmingly motivated to purchase index cards and two Osco markers. Voila! The first prototype of "The Game," as we
called it back then.

My friends (most of the playtesters) loved it. What could be better than calling up a bunch of your friends (and
interrupting their sleep or TV-watching) to come over and play a game where we invited over the *same* friends and
then slept or watched TV? It was a riot! Maybe it's the absurdity of going to the trouble of creating an alternate reality
for the purpose of a card game, just to do the same activities you'd do in this reality. Maybe it's because all of the TV
shows involved Hitler in that first prototype. I don't know why, but it works.

Game Balance. . . Who Needs It?

Tech Support Assistant
Slack Goal: 20
Income: 4
Free Time: 1

The above card was in the prototype deck of *Chez Geek*, but it was taken out when the

cardlist had to be shortened. It has the exact same Slack Goal as "Tech Support," but a lower Income and less Free Time. Conclusion: it is empirically worse than "Tech Support." Why did I put it in there? Well, it was funny, and it represented a friend of mine who had such a job ("Will J." will remain nameless).

Game balance in *Chez Geek* didn't matter to me. Particular cards were not omitted, or inserted in ludicrous multiples to make decks. It's all random. For instance, in playtesting the prototype deck, we discovered that the original version of "No Job" (Job Card) was much more likely to win games because of the tremendously low Slack Goal and the ease of gaining Slack through free means. Was it a big problem? Not really. It's not like the same person drew the "No Job" in the beginning of each game. It's not like we didn't all figure out that "No Job" was more likely to win. It's not like we didn't pummel the hell out of the poor guy playing No Job at the beginning of each game (some Rent here, a Phone Bill there, some cat pee on your bed here. . .).

I'm an advocate of natural selection through negative feedback in card gaming (fancy talk for ganging up on the person who's winning). When the SJ Games people went about cleaning up rules, I didn't mind one bit. I have infinite trust in human nature to be petty and vindictive, and that's what makes *Chez Geek* work!

Inside Jokes -- A Proposal to Make the World a Better Place

Joe: If I transcended morality, I could kill you.
Marcus: Sure, Joe, if you were. . . insane!

Our entire concept of poor Joe is partially defined by that snippet of conversation. It inspired me to design a *Chez Geek* card that will destroy a Person card, and I named it "Transcend Morality." Since SJ Games rightly assumed that not everyone on Earth is in on the private jokes of the inhabitants of *Chez Geek*, they amended the card to "Justifiable Homicide." That's fine with me, but *Chez Geek* was a lot funnier to us when it used proper names, brand names, and actually-spoken quotes.

There are quite a few examples of this. At the time I made the game, I worked in a lab where I was trying to perfect a protocol for the partial fractionation of non-axonemic proteins in male fly reproductive tissue. One of the original Job Cards, then, was "Dissector of Fly Testes." Didn't make the cut. Also not making the cut were the 5 *other* TV Card Titles with Hitler in the name. "History's Hitlery Mysteries" was my favorite. We watched a lot of the History Channel, which as we all know is a channel exclusively devoted to Hitler and trains.

I do understand the value for mass marketing and making a product approachable to all groups, but there is one thing I'd like to see in future versions of *Chez Geek*. If you're with me on this one, listen up. There is an email account (ChezGeek@hotmail.com) devoted exclusively to submitting players' ideas for cards (either Jobs, Things, Activities, or People) based on actual jobs, things, activities, or people. I've learned that little is funnier than the specificity of real life (possible exception of many "p" words, like pirate, panda, pants, and poop). After you've played *Chez Geek* for a bit, go ahead and email card suggestions. I'll personally make sure that SJ Games gets them. I can't make any promises, though, for my signature has bound my soul to a contract like a monogram on underwear.

Of course, no vulgarity or libel in card ideas is allowed. I can also tell you from

experience that overuse of Hitler will almost certainly not make it into the final product.

Well, that's pretty much all that I wanted to say about *Chez Geek*. I know you all have one burning question left on your minds: From which species of fly did you dissect testes, Jon?

Drosophila simulans, baby, *Drosophila simulans*!

When Laws of Average Attack!

Well, this week I *was* going to talk about *Voltron*. But some things have happened this week that have made me push that interesting (to me) column up a week:

1. Emily Dresner, in her column this week, discusses grown men dressed as Sailor Moon.
2. One of our columnists reported that he was the victim of a computer virus.
3. In my local grocery store express lane yesterday, the nimrod in front of me checked two items and paid half the total with a credit card and half with a check. . . for two bags of charcoal.
4. The old *Dungeons and Dragons* cartoon returns to Saturday mornings.

What does it all mean? Well, the *Dungeons and Dragons* cartoon means that I can forestall wallowing in animated nostalgia for another week, but that's beside the point. But what do express lanes, virii, and Sailor Moon-clad men have to do with each other? Well, the point of this editorial (or thesis statement, as they taught us in Article & Essay Workshop) is:

It only takes one.

Let's take the computer virus incident for a moment. (And, no, I'm not going to discuss whether or not it *really* happened; it's within the realm of possibility, and similar things have happened to other folks, so if you'd prefer think of this as an extended "What if?", feel free.) Lets say you are known to thousands of people, and receive hundreds of pieces of e-mail a week, and deal with dozens of files a month. How many people does it take to perform a malicious act that destroys a part of your life? One.

You're at a gaming convention. You meet hundreds of cool people, make some new friends, and generally reaffirm to yourself that this is a normal hobby. How many photos in the local paper of someone dressed like Sailor Moon does it take to convince the world at large otherwise? One.

It takes one clueless person in line, or one person treating you rudely, or one person committing a heinous act and blaming an RPG, to make you forget or discount every "normal" occurrence. When something unfortunate happens, people don't say (for example), "I can't *believe* all those strangers we passed who didn't try to rob me. Don't they know I'm carrying hundreds of dollars?" No, they complain that the streets aren't safe because of the one person who *did* rob them. I'm not saying this isn't a logical response, but it also greatly complicates matters for those who would try to make the world a better place. Let's say tough Anti-Grown-Men-In-Sailor-Moon-Costumes legislation was passed; even if it reduced the number of GMISMCs by 90%, that would still leave 10%, posing for the cameras and upsetting folks.

Fortunately, I also believe it works in reverse. It only takes one kind person to lend a hand if you're stranded on the side of the road. It only takes one good idea to turn a mediocre game supplement into something worthwhile. It only takes one friend with home-baked cookies to turn a bad day into a good one. It takes one strong-willed person to hang the jury of a guilty person. . . *or* an innocent one. If there *is* only one bad egg spoiling the batch, then that means you only need to find that one bad egg, and your problems are greatly reduced (until the next One comes along, of course).

In a feeble effort to tie this column into a discussion of gaming, I would propose that, in many RPGs, the players are "the ones." They are the ones who disrupt the status quo for GloboTechCorp, or stop the Prophecy, or concoct the schemes to control the world. They are the ones who make a difference, for good or ill. Occasionally focussing on that uniqueness can make the game feel charged with both the thrill and responsibility of being special. (Of course, it's also fun to play in a campaign where you *aren't* special.)

I would encourage you, in gaming or the real world, to try to place The One in perspective. Don't complain to the GM about the one cruddy session without placing it in perspective of all the good ones. Try not to let one rude person ruin your vacation. Protect yourself from that potential One, but try not to let that one change your life.

If you *do* get through the Express Lane in two minutes, make a point of remembering that. And if you're buying two bags of charcoal with half-check, half-charge, *please* don't get in front of me.

* * *

This week sees the debut of a new feature-ette, called Appendix Z. The purpose of this feature is to provide short, (hopefully) useful miscellaneous pieces for various games. I'm not intending for this to be an esoteric column (ala "Variant Bashing Damage Hit Table Resolution For Trout in **Otter: The Frolicking**"), which is why I wouldn't consider the **Fading Suns** variant rules from a few weeks ago to be under this banner. Rather, I'm hoping to make this a feature that, while possibly having a direct application for a specific game system, can hopefully be useful in other systems. Ideally it will provide possibilities for when I don't have much space left in a week, but want to squeeze in an extra (short) article.

I'll let you all know when (or if) I'll start accepting these for submissions. . . I have a few examples that I'll probably subject you all to in the next month or two, but I want to see peoples' reactions before I commit. So you may want to vote, and if you like the idea but dislike what I'm doing with it, feel free to [e-mail me](). Or if you have any other comments, don't hesitate to [e-mail me](). Or if you've given your toes interesting names. . . um, you may want to hesitate.

It's unavoidable; next week I'll probably talk about *Voltron*, and sometime soon I'll beg for hair.

-- Steven Marsh

* * *

Last week's answer: **Wiz War 5th Edition Expansion 1** (Although that card has probably appeared in other places, too; this is the version I have.)

(Four stars) "Sometimes a future incarnation will request that the hero perform a special act. The reason for the act might never be explained. . . . ('It is crucial that you make sure Jon Clifton gets to school today! Then bury ten pounds of Adamantium at these coordinates in the Gobi Desert.')"

Sieg Howl!: Werewolves of Deutschland

"Even in the territory where they believe they have conquered us, new resistance will spring up behind their backs time and time again . . . and like werewolves, brave as death, volunteers will strike the enemy and cut his life lines."
-- Reichsführer-SS Heinrich Himmler, speech of 18 October 1944

Listeners might have been forgiven for imagining it to be a joke in particularly poor taste, even for the Nazis. On the morning of April 1, 1945, Radio Germany announced that it was, for the time being, Radio Werwolf, and that thousands more werewolves had begun to destroy the invading Allies, slaughtering soldiers and bombing tank convoys from the Rhine to the Oder. It was, in the mordant words of Canadian historian Perry Biddiscombe (in the sole English-language academic work on the topic, *Werwolf! The History of the National Socialist Guerrilla Movement 1944-1946*), "'Propaganda of the Deed' in its purest form -- all propaganda, no actual deed . . ." But that's not quite accurate, as Biddiscome goes on to document: the Werwolf movement began as a military operation, became a secret resistance group, and ended in the shadows and fog of the Cold War. All that, and werewolves, too.

In September 1944, a tag-team of SS officials decided to take a leaf from their enemies' book. Specialists had studied the French Resistance, Russian partisans, and Polish Home Guard with an eye toward creating similar organizations to attack the Allies as they pressed further into the Reich. Its manpower would come primarily from Hitler Youth, with some specially-selected officers from the Waffen-SS and the Wehrmacht. Himmler tapped SS-Obergruppenführer Hans-Adolf Prützmann to head this group, known as "Werwolf" -- but under the auspices not of the Waffen-SS, the military arm, but the SS regional police inspectorate, the HPSSF. Although many other factors eventually drove the Werwolf groups from organized partisan activity into "death squad" type revenge-killings, this detachment from the regular armed forces set the stage right from the first. The Werwolf's best-known operation, "Undertaking Carnival" on March 25, 1945, resulted in the successful assassination of the American-appointed mayor of Aachen -- but depended upon Otto Skorzeny's SS-Jagdverband commandos rather than Werwolf recruits for cadre and support. Skorzeny, Bormann, Schellenberger, Kaltenbrunner, Göbbels, and other top Nazis all attempted to hijack Werwolf for their own empire-building purposes, which (along with the rapid Allied advance and Prützmann's lack of organization) rapidly turned the Werwolf group into an uncoordinated morass of small-unit guerrilla teams and so-called "Vehme" death-squads to execute "traitors to the Reich."

"These terrible courts were never formally abolished. They were reformed by various monarchs, but even in the nineteenth century it was said that they still existed, though very much underground. The Nazi 'werewolves' and resistance organizations fighting the Communist occupation of East Germany claimed that they were carrying on the tradition of the 'Chivalrous and Holy Vehm.' Perhaps they still are."
-- Arkon Daraul, *A History of Secret Societies*

But these weren't the first military werewolves to prowl the German moors and mountainsides. After World War I, Lieutenant Peter von Heydebreck formed a Freikorps unit called the "Wehrwolf" which the SA eventually absorbed. Its name, a pun on the German *wehr,* meaning "resistance," came from a popular 1910 novel, *Der Wehrwolf* by Hermann Löns, about the similarly-named guerrilla bands that harassed the Swedish invaders on the Lüneburg Heath during the 1630s. The Landsturm anti-Bonapartist resistance movement in 1813 may also have included "wehrwolf" units, and provided another organizational model for the Werwolf's military arm.

Its political, terrorist arm was explicitly modeled on the Vehmgericht, the medieval, possibly proto-Masonic "Free Knights of Westphalia" who meted out vigilante justice at crossroads, in forests, or in churchyards -- abodes of the dead, and (of course) of werewolves. The Vehm were either founded by Charlemagne in 772 (possibly as an outgrowth of his *luporii,* or elite 'wolf-men' foresters), or by the Emperor Charles IV in 1371 to preserve Templar wisdom in Germany. Or in 1180 by Westphalian free companions displaced after the wars of Frederick Barbarossa. Either way, it was definitely put down by 1470 when they attempted to try Emperor Frederick III for treason. Or by 1608 when they roused the countryside of Munster to riot and fled into Rosicrucianism. Or by French troops in 1811, the ones that the Landsturm "wehrwolves" rose to resist. Hmmm . . .

"[T]here is a story current amongst the Scythians and the Greeks in Scythia that once a year every Neurian turns into

a wolf for a few days, and then turns back into a man again. I do not believe this tale, but all the same they tell it, and swear to the truth of it."
-- Herodotus, *The Histories,* IV:105

Having come in full circle trying to track the Werwolves, let's see where following the werewolves can get us. Interestingly enough, the first mention of the werewolf in history also gets us back to Germany; Herodotus places the lycanthropic Neurians on the western border of Scythia north of the Carpathians -- in other words, Silesia and East Prussia By a fine coincidence, the latter was not only where Hitler kept his "Wolf's Lair" HQ but also the home province of Werwolf Obergruppenführer Prützmann -- hmmm. (And speaking of coincidences, the good, not-Nazi werewolves who fought witches with the [Benandanti](#) were from Livonia, the next province north. And St. Augustine, of all people, says that werewolves are witches. Is there a werewolf clan war going on along the Niemen River?)

Herodotus continues to describe the Neurians' neighbors as 'Androphagi' -- "man-eaters." And their neighbors are the 'Melanchlaeni' -- the "men in black cloaks," which reminds us that a stenciled, very MIBy, man in black coat and hat was a symbol of the WWII Werwolf death-squads. (Another Werwolf-SS symbol, the [Wolfsangel rune](#), is a crossed 'eihwaz' yew-rune, the yew being the tree of death. The 'eihwaz' is also the rune of the Hanged Man, which is, of course, one of the two ways the Vehm, and their Masonic brethren, executed traitors.) Pausanias, a later historian who's even more skeptical than Herodotus, nonetheless describes a tribe of Arcadians whose cannibalistic habits in worship of Zeus Lykaios enable them to become wolves (and apparently champion athletes). Cannibalism, black cloaks, human sacrifice cults -- those SS Werwolves have quite the lineage, don't they?

"God has given up the protection of the people . . . Satan has taken command . . . We Werewolves consider it our supreme duty to kill, to kill and to kill, employing every cunning and wile in the darkness of the night, crawling, groping through towns and villages, like wolves, noiselessly, mysteriously."
-- Josef Göbbels, Radio Werwolf broadcast, April 1945

By now you've noticed where we're going with this, I'm sure. Into your next ***GURPS Special Ops*** game, toss a team of Werwolf-SS werewolves recruited by their fellow-countryman Prützmann to defend the Third Reich using the Templar-Rosicrucian sorceries of the Vehmgerichte. Over their shoulder watch Men in Black, midnight SS uniforms and the cloaks of the Dark Man of the Witches melding into one. (The Werwolf groups around the witches' mount, the Brocken, were still giving the Soviet troops headaches well into 1947.) Whether the PCs are an OSS squad with silver bullets and GI guts, a ***Delta Green*** pursuit-and-capture team trying to beat the Russians to the secret of werewolvery, a Mossad unit with a line on a supernatural Fourth Reich, ***GURPS Voodoo*** Benandanti night-walkers hunting down Thule Bruderschaft In-Betweeners who hire some Werwolf muscle to even the odds, or a modern-day group of gun-runners who've suddenly stumbled onto some really hairy Russian mafia enforcers -- werewolves keep the game alive, even if they don't extend the same courtesy to the party.

"And even your name is an indication. Family names do not come from nowhere. Every Smith has an ancestor somewhere who was a smith. Every Fisher comes from a family that once fished. And your name is Wolf."
-- Anthony Boucher, "The Compleat Werewolf"

But we've got one last Nazi to hunt down, one who ties all this fun stuff and more together, and makes a super bad guy for that grim 'n' gritty "house of mirrors" ***GURPS Espionage-Horror*** crossover. An aristocrat of faultless Aryan lineage (stretching back as far as the Neurians?), he joined the SS as an honorary member in 1931. He recruited Himmler's masseur, Felix Kersten, a follower of Tibetan (Agarthan?) Buddhism. He assisted Himmler's pet psychic 'Weisthor' in the preparation of the SS cult center at Wewelsburg Castle in Westphalia (home of the Vehm) in 1933 and 1934, becoming SS adjutant to Himmler the next year. During the 1935-1939 period, he served as direct supervisor of SS Colonel and Grail scholar Otto Rahn. By 1943, he had been placed in command of the SS forces in northern Italy, from which lofty vantage point he saw that the war was lost. Later that year, he began negotiations with the Americans for conditional surrender; in 1944 he met with Pope Pius XII, and (they say) began transferring SS funds to the Vatican Bank (possibly in collusion with Skorzeny's ODESSA scheme). His greatest coup, though, was delivering General Reinhard Gehlen and his files on the Soviet Union to OSS agent (eventually CIA Director) Allen Dulles in Switzerland just as the war was ending, allowing the nascent CIA to absorb the Gehlenapparat and use it -- including its Werwolf teams -- for anti-Soviet activity in Europe. But it's all in a day's work for SS Obergruppenführer

Pyramid Review

The Way of the Minor Clans (for the L5R RPG)

Published by [AEG](#)

Compiled by Ree Soesbee

128 pages, $19.95

The *Way of the Minor Clans* is the ninth in the Clan Book series. As opposed to other "single" clan books, it contains information about the twelve minor clans.

There are currently nine more-or-less active Minor Clans in Rokugan. Each one of these occupies about 10 pages and one chapter of the book. The final chapter details the three "lost" clans. Each chapter gives information about the clan's history, what other clans think of it, its techniques, new spells and skills, important NPCs and ancestors, etc. Below is a short description of each chapter.

Introduction

Like all the other Clan Books, this one starts with a short story. This piece is called "Nightmares," and it tells how shugenja Ryosei became the daimyo of the Fox clan. According to the story, it looks like the book is set in the time after the SCC (If you don't know what that is, I won't spoil it for you here). This is a surprise, since the whole earthshaking event (known from the collectable card game) isn't even yet presented in the RPG storyline. According to AEG, however, this will corrected in the very near future. . .

Chapter I: The Mantis

The strongest of the Minor Clans resides in the Islands of Silk and Spice. Mantis has a colorful history, including a failed coup attempt against the Emperor himself. There is also a lot of interesting information about sailing in the seas of Rokugan, including bits about pirates and trade routes, as well as details about different ship types. The Mantis Bushi School shows the brutal martial power of this Minor Clan. Clan daimyo Yoritomo is presented in the "Who's Who" section. There is also a page with new peasant weapons with illustrations.

Chapter II: The Fox

When kami Shinjo left the Rokugan with most of the Ki-Rin clan, it was the remaining people that formed the Fox clan. The Fox owe much of their existence to "spirit foxes" known as kitsune. This chapter shows us the special relationship that the Fox share with spirits of their home forest. A couple of new spells and the Kitsune Shugenja School complete the information needed to play a member of this peaceful clan. The female daimyo, Ryosei, is also detailed.

Chapter III: The Dragonfly

The Dragonfly Clan was born as a result of a complex love triangle between a female Phoenix-shugenja, an ambitious Lion bushi, and an older Dragon warrior. This Minor Clan resides at the foot of the Dragon Mountains and acts as emissaries between the mysterious Dragon and the rest of the Empire. Their position as spokesmen to one of the Major Clans infuriates others Clans, especially the mighty Lion. The chapter explains Dragonfly's aberrant philosophy, which sees change as a key to enlightenment. The Tonbo Shugenja School is detailed (with couple of new spells) as is

the young daimyo, Tonbo Toryu.

Chapter IV: The Sparrow

This modest clan lives in a barren land between the Crane and the Crab. They see poverty as an honorable thing. This chapter tells how, recently, the Sparrow have stepped for the first time to the scene of national politics by forming the Three Man Alliance with Fox and Wasp. The Suzume Bushi School is also one of the more inventive on seen in the *L5R*; it emphasizes on their legendary patience, and information they have gained through their awesome storytelling skills.

Chapter V: The Badger

This small clan protects the northern mountains of Rokugan against a possible barbarian invasion from the Burning Sands. They are a silent, stoic clan, which explains why most of the Rokugan has ignored them. This clan is first mentioned in the *L5R* main book's introductory adventure "The Ceremony of the Samurai," and has mostly been ignored by AEG until now. The "Who's Who" section depicts the current daimyo, Ichiro Chuga, and offers a nice continuation to the fate of the previous daimyo as seen in the aforementioned adventure. As for the new game mechanics, there is a new "Outcast" disadvantage and the Ichiro Bushi School.

Chapter VI: The Centipede

The Centipede is a clan of mostly female shugenjas. They worship the Sun Goddess, Amaterasu, and have a matriarchal power structure. They apparently live somewhere along the coast near the lands of Phoenix. (It would have been useful if AEG had included a map showing the location of each of the minor clans; according to the author Ree Soesbee, this will be addressed in the second edition of the main rules.) The Moshi Shugenja School is briefly detailed, and there are two new spells. Everyone's favorite shugenja from the CCG, Moshi Wakiza, makes an appearance.

Chapter VII: The Falcon

The Falcon are the all-but-forgotten clan that lives just west of the haunted Shinomen Forest. This area is very dangerous, and the Falcon have developed an uncanny ability to sense things around them. The clan's relations with the Crab, Lion and Hare are well presented. However, it is a pity that there is no mention about them getting partly conquered by the Crab, as was clearly stated in the *Winter Court: Kyuden Seppun*. The Falcon Bushi School seems to be among of the most powerful ones.

Chapter VIII: The Tortoise

Clan Tortoise is hardly a clan at all; they live on the coast near the capital and are charged with defending the Otosan Uchi against invasion from the sea. They dabble in trade and do some more questionable things as well. Since the Emperor himself is their daimyo, clan members get away with minor slights easier than others. The Tortoise Bushi School teaches the use of peasant weapons, among other things, and is not an honorable at all. Selected personalities from the clan are Hyobe and Kemmei. Clan Tortoise will no doubt become more useful after the upcoming Otosan Uchi boxed set.

Chapter IX: The Wasp

Story of the troubled birth of the Wasp Clan is maybe the most dramatic of the lot. Most of this chapter's information has been previously released in an old issue of the Imperial Herald; John Wick himself masterly wrote the old article. This new one lacks in feeling, but luckily contains more information about this clan of bounty hunters. The Wasp specializes in bows, and this shows in their Bushi School. The Man himself, Tsuruchi, is featured as well as his aide, Mukami.

Chapter X: The Lost Three

These are the clans that have somehow been destroyed in the past. The first one is the Boar that parted from the Crab centuries ago but was soon after destroyed for rebellion against the Empire. Some dark entity, known as Shakoki Dogu, roams in the lost Boar provinces. The Boar Bushi School was known for its use of the wavy-headed spear called Mai Chong.

The second lost Clan is the Hare. This chapter (written by Rich Wulf of "Rokugan 90210" fame) is doubly interesting, since the great battle that lead to the fall of the Hare was depicted in adventure that came with the old version of the *GM's Screen*. Unfortunately, this chapter doesn't give alternate adventure hooks if your group actually succeeded in saving the Hare. It gives some plausible ideas about the truth behind the Hare's demise, but in many groups GM's have long ago created their own continuations to this old (and out-of-print) adventure.

Clan Snake is the last of the three. It was once situated in the plains between the Dragon and the Phoenix, but after dabbling in the black arts it was utterly destroyed by the Phoenix. The Snake are perfect for making maho-using NPC shugenjas. At the end of this section are a couple of adventure hooks to introduce the PCs to the remnants of the Snake Clan.

Summary

Overall, this is a great book for GM's who plan to use the Minor Clans in their campaigns. It has tons of information, new Schools, skills, spells and much more. The artwork is not too bad, but it's not spectacular either. The only bad thing I can say about *Way of the Minor Clans* is that it should have been released earlier, since some plot hooks are only useful for really old adventures.

Simply Roleplaying!

Produced by MicroTactix Games

Written by Bob Portnell and Guy McLimore

132 pages*, $9.00

I've begun this review four times; this is attempt number five.

The problem is not: Is this a good product; it is.

The problem is, for *whom* is this a good product?

Simply Roleplaying! is the core RPG book of the PlainLabel Game System system, and is in the Adobe PDF electronic format. This book comprises the character creation rules, as well as GM information for creating and running adventures.

I must confess; at first, I was skeptical as to how worthwhile this product would be. I mean, with *FUDGE*, *GURPS*, *MasterBook*, and *Hero System* (among others), how many other generic systems do we *really* need? What hole does this product fill?

I'll get back to this is a bit.

Simply Roleplaying! is probably the most well-designed electronic-only game I've ever encountered. It comes with an on-screen version, which is 238 pages and optimized for reading on monitor, and a print version, which is 132 pages and seems designed for folks who can print it out from work. It also comes with an 18-page "pull out" section, which consists of the charts and graphs the game uses, and four pages of "weapon cards" from various genres, which is what *Simply Roleplaying!* uses for keeping track of weapon abilities and damage. It also comes with a file consisting of a high-quality color version of the cover used in the book. In my mind, if nothing else, *Simply Roleplaying!* has raised the bar considerably for future downloadable games; if a new PDF-format game *doesn't* give me a pull-out booklet of the useful charts and graphs, I'm going to be disappointed.

Simply Roleplaying!'s base system uses 2d10 added together, for a range of 2-20. In this game, you want to roll low to succeed, and high for damage. You have four attributes (Strength, Coordination, Intellect, and Health) rated between 2 and 10. Your skills add to these attributes, depending on your level of skill, of which there are four: Familiar adds +1, Capable adds +4, Professional adds +8, and Expert adds +12. Thus a person with a Coordination of 5 who is a Capable Climber is hoping to roll 9 or less on 2d10 on an average task. The system seems a bit harsh, as an average person (with an attribute of 5) and a Professional skill level will still fail about 28% of the time, according to the rulebook. But there are modifiers, depending on if the task is, say, Easy or Difficult (for example). You also have other attributes, like Luck which you can spend to modify rolls.

Character creation is a bit odd, in that it uses a random number of extra attribute points; each attribute starts at 3, and then you get to add 1d10+5 attribute points divided among the four stats. While some GMs may not like the unevenness, the game *does* make a valid argument that in life not everyone starts "even." For GMs truly uncomfortable with this, however, it should be trivial to assign a set number of points.

Characters can also have Abilities and Disabilities, which are special aspects that help or hinder them. They are rated on a scale of zero (trivial) to three (really bad or good); in the standard game, these must balance. Thus you might have

Acute Vision (level 1 Ability) and a Significant Limp (level 1 Disability). In more heroic games you may have more points in Abilities than Disabilities, and in truly gritty games you may be saddled with more points of Disabilities than Abilities. Although this section is simplistic for those used to *GURPS*'s seemingly-infinite Advantage and Disadvantage system, it *does* go a long way towards making sure your character has some flavor, while being very simple.

Skills are assigned according to age and Intellect. The skill system seems logical yet, again, simple; the descriptive skill levels mentioned above are applied to the skills you want. This is definitely useful for getting beginners to understand their characters; you can say you're an Expert Martial Artist, and that immediately evokes an image for a would-be player.

The rest of the player's section deals with equipment and money, and includes some examples of play to help a would-be player understand what roleplaying is like.

The GM's section, which encompasses about three-fifths of the book, is devoted to the rules a player wouldn't be as concerned with, like skill systems, poisons, animals, healing, etc. These parts, though brief, are well-done; the logical nature of the basic rules are followed throughout this section. The GM's section also contains a *lot* of basic advise for creating and maintaining worthwhile campaigns, including many examples of campaigns (a war story, a police drama, a science fantasy game, etc.) and logical ways to develop and build those campaigns. The examples provided are excellent, and are worthwhile reading for anyone who knows they want to GM, but doesn't have a lot of ideas for *how* you go about it.

It took a couple of re-readings to put my finger on it; this is one of the only RPGs that seems to, at its core, not want to exist. The book is heavily focussed on telling stories, and a good amount of the book is devoted to doing just that; designing adventures, making compelling scenarios, developing tones, textures and themes for campaigns, etc. In my mind, this is the part of the book that really shines. Many parts of the book give detailed systems for how to resolve situations (for example, poison), then tell the GM to ignore it if it's not important to the story. The approach takes some getting used to for folks (like myself) who've grown accustomed to the seemingly rules-heavy atmosphere of games like *GURPS*, but it's definitely worthwhile.

So who is this game designed for? That's a difficult question to answer. I can honestly say this game isn't recommendable for the system alone; the system, while entirely functional, isn't particularly fun. But perhaps that's part of the point; when is a roleplaying game system supposed to be more important than the act of roleplaying? The game doesn't offer any interesting worlds to explore; that's left up almost entirely to the GM, though anything from GURPS would be a fine place to take things from. No, at its heart I would recommend *Simply Roleplaying!* most for would-be or inexperienced GMs; it truly shines when it's offering concrete advice on how to design fun game sessions. As supplements come out (*Simply Superhuman* or *Simply Space*, for example) that expand the scope of the basic game, *Simply Roleplaying!* will probably appeal to a wider audience. But until then, an RPG that costs less than two issues of most paper magazines but provides ten times as much insight for the inexperienced GM is a definite winner in my book.

-- Steven Marsh

by Steven Marsh

In *In Nomine*, the Malakim are able to determine the most noble and ignoble deeds of people they come in contact with, as well as their greatest virtues and worst sins. Unfortunately, the existence of such an ability encourages its use, much to the dismay of the poor GM who has to come up with interesting virtues and sins on the spot. The *__Liber Servitorum__* has some sample virtues and vices, with the number of NPCs your average Malakim is liable to run across (and over), that list runs out quickly.

Here, then, is a table which allows for the quasi-creation of noble and ignoble deeds. Regrettably it uses the d6666 system; if you wanted to pare it down to d666, you can delete one of the columns ("Location" is a logical choice, but choose whichever one you're most comfortable with making up). Assign each die a column, and keep track of the results; then, using the results, weave those elements into a virtue or vice.

Virtue/Vice	Person affected (if appropriate)	Location (if appropriate)	Intensity (if appropriate)
Virtue 1. Honesty 2. Compassion 3. Determination 4. Justice 5. Sacrifice 6. Courage **Vice** 1. Deceit 2. Cruelty 3. Sloth 4. Injustice (animosity) 5. Want (greed, gluttony, lust)	The lower the roll, the closer the person affected is to the person. For example, 1. family (or self, if appropriate) 2. family 3. friend 4. acquaintance 5. stranger 6. enemy	The lower the roll, the closer the location is to the person. For example, 1. home (or self, if appropriate) 2. home 3. work 4. neighborhood 5. state 6. nation (or greater)	The lower the roll, the less intense the virtue/vice. For example, 1. trivial 2. minor 3. significant 4. memorable 5. major 6. monumental

6. Cowardice			

Example Rolls

Virtues

- **4, 3, 3, 2: Justice / Friend / Work / Minor.** Standing up for a co-worker accused of doing an ineffective job, despite the jeopardy it may place your own job in.
- **5, 1, 5, 4: Sacrifice / Family (or Self) / State / Memorable.** Confessing for vandalism you didn't do to protect your brother.
- **6, 6, 2, 5: Courage / Enemy / Home / Major.** Giving first aid to the burglar you just shot as he broke into your home, despite the danger it places you in.

Vices

- **5, 2, 4, 3: Want / Family / Neighborhood / Significant.** Taking a piece of jewelry belonging to your mother from your sister's apartment.
- **1, 5, 6, 1: Deceit / Stranger / Nation / Trivial.** Cheating on your taxes by claiming your dog as a dependant.
- **2, 4, 1, 6: Cruelty / Acquaintance / Home (or Self) / Monumental.** Beating your neighbor to death because his music bothers you.

Things to Remember

- Keep in mind that the entire purpose of this table is to give you ideas; you may wish to delete columns that don't make sense for a particular roll, or re-roll entirely if you don't get an idea from a particular roll.
- Although this table can be useful in determining the motivations of random NPCs, you may want to give some thought to what the vices and virtues of major characters are.
- Consider that the magnitude of the table probably changes depending on the Malakim's result; for example, the most noble or ignoble thing a person has done in the past week is likely to be less significant than the most noble or ignoble thing a person has done in the past year. A "memorable" cowardly moment of the past week is probably not as significant as a "memorable" cowardly moment in the past year.
- Likewise remember that a major sin to a priest may not be as significant as a major sin to a serial killer. Use your judgement.
- The virtues and vices roughly parallel; honesty opposes deceit, compassion opposes cruelty, etc.
- If the Malakim scores a 5 or 6 on the check die, you may wish to consider adding pride and humility to the possibilities in the first column. (Remember that 1-4 on the resonance check die are from the person's own standards; most people don't consider their humility to be their greatest virtue, nor do most prideful people recognize that to be their greatest vice.)

This chart should also be useful in any other systems that require the generation of instant motivation, like *Vampire: The Dark Age*'s Daimoinon or Auspex, *Fading Suns*'s Psi and Theurgy powers, or *Mage* or *GURPS Psionics* abilities.

* * *

This chart was inspired and influenced by the Ultima *series of computer games.*

by Ricky Hunt

In a world where magic is available, it is only a matter of time before someone other than mages learns to use it. This article gives some guidelines on how non-mages can enchant magical items.

The process involves creating an item and incorporating inherently magical ingredients according to a specific recipe. The magic items are somewhat more restricted than those created by a mage, but may be a little cheaper and faster. The biggest difficulty is obtaining the proper ingredients, which can be an adventure in itself as they are expensive and dangerous to acquire.

The first skill needed is a craft of some sort, to create the item that will be made magical. Armoury is needed to create magical armor, weaving is needed for magical cloth, etc. The second skill needed is Enchanting (M/VH, no default) which teaches the basics on how to incorporate magical elements to create magical items.

The last component is the "spell" recipe appropriate to the enchantment. For a tougher suit of armor, a Fortify recipe is needed. This could be a separate skill for each type of enchantment, similar to normal enchanting, but not a spell. Another option would be that each type of "spell" is an actual recipe, written down and followed from the writings by someone with the Enchanting skill. Obviously, literacy would be needed for the second option. The recipe could be a closely guarded secret or widely available, depending on the campaign.

The next ingredient is enough magical elements to make the item. This is based on the cost to normally enchant the item from *GURPS Magic*. Each ingredient has a certain amount of mana per ounce that can be incorporated into the item. For instance, mithril might have 20 mana per ounce and therefore require 2.5 oz for fortify 1 (50 ST) and 10 for fortify 2 (200 ST). All of the ingredients are of course rare and expensive. The item is not necessarily made from the ingredients, but they must be irreversibly bound into the item. A failure ruins the materials.

Possible ingredients include mithril, orichalcum, elemental air, earth, fire and water, rare magical wood or mana organs from creatures. Another possibility might be to allow mages to enchant mana "dust" that could be used in the enchantment. A mana pool could be used to help enchant an item. This would normally require some means of capturing the mana for use by a non-mage. Specially designed craft devices could capture the mana into a usable form. For instance, a special loom could weave the mana into magical threads to use in magical clothing.

The process would start with gathering the ingredients. Depending on what was being enchanted, the item would then have to be fashioned for 8 hours per day incorporating x oz of the element per day for as long as it takes. Unlike mage enchantments, the process could be interrupted at some stages without incident. Normally the Enchantment skill roll is attempted as the magical elements are combined, then the craft roll is made to incorporate the elements. Failure of either destroys the item and ruins the elements. It is faster than normal enchantment, but requires more money and danger up front, as most of the elements are dangerous to gather. Most are near strong sources of mana, which tend to attract unwanted attention.

These enchanters would not be as rare as mage enchanters or as strange and quirky. They would be practicing their normal craft with some extra challenge and reward built in. They would be limited to what they could build into the item. They could not normally create mage only items. This would take some burden off of normal enchanters so they could concentrate on the more demanding enchantments. They would also have to decide how the item was going to be enchanted before they started, because the enchantment is an integral part of the creation of the item. Any further enchantment would have to be performed by a mage. Also, the enchantments are limited to effects that cost no ST to cast or maintain, either normally or by the use of the power enchantment.

Possible recipes for items would be:

- **Fortify armor 1:** This would require 2.5 oz of mithril to be alloyed with the steel for the armor as the plates are being forged. It would be incorporated into the steel at 0.5 oz per day, taking five days to make the alloy. Once created, they would be fashioned into armor, taking 1.5 times longer than normal armor.
- **Lighten armor:** This would require 2 oz of elemental air (25 ST / oz) to be alloyed with 2 oz of orichalcum, then alloyed with the steel in the armor. The process requires extra equipment to handle the elemental air, which would cost another $100. The alloy process takes 4 days and can be dangerous on an Enchant skill failure. The armor is fashioned as normal. Leather armor has the alloy incorporated into the fasteners and the enchantment is destroyed if they are removed.
- **Puissance 1:** 10 oz of elemental earth is alloyed with the metal at a rate of 0.5 oz per day before it is forged into the blade. The blade takes 1.5 times longer to create due to the hardness of the alloy.
- **Power:** a mana organ from some powerful creature capable of producing enough mana to self power the item is "distilled" down and incorporated into the item somehow, depending on the craft used and the item created. This would be different for each recipe.
- **Powerstone:** An unusual gem must be set in jewelry made from orichalcum, which must surround the gem in a filigree. Usually surrounded by a more protective setting as they can be rather fragile in their native form.

by Nick LaLone

Jonathan Tweet is the lead designer of the upcoming *Dungeons & Dragons 3rd Edition*, and the creator of many cult-favorite RPGs like *Over the Edge*. He took a few moments recently to let us know what's going on with him, and to let us know about the progress of the upcoming Next Big Thing from Wizards of the Coast.

* * *

Pyramid: First off, an introduction, tell us your name and what you have done in this industry.

Tweet: I'm Jonathan Tweet, and my games include *Ars Magica*, an RPG about medieval wizards (co-authored with Mark Rein*Hagen); *Over the Edge*, a modern-day, surreal RPG with free-form mechanics (with Robin D. Laws); *Everway*, a fantasy RPG that runs on images instead of numbers; and *On the Edge*, a TCG based on *Over the Edge* (co-authored with John Nephew). I've worked on other people's games, too, including *AD&D*, *Talislanta*, and *RuneQuest*.

Wizards of the Coast has an extensive website. It details a lot of their games and even has a few free ones for download. You can view the website here (www.wizards.com).

Pyramid: How did you come to be involved with Wizards of the Coast?

Tweet: A friend and associate from my *Ars Magica* days got hooked up with Wizards, and she contacted me back in 1989 to do some free lance work for them. That's how I got to work on *Talislanta*. When *Magic: the Gathering* hit, the folks at Wizards no longer had time to handle their RPGs, so they hired me to run the RPG lines. Those lines got cut in '95, and I switched over to doing TCG work. Then we bought TSR, and I wound up doing RPGs again.

Atlas Games now produce *Ars Magica*. If you would like more information you can go to Atlas' website (http://www.atlas-games.com/)

Pyramid: How did you feel about Hasbro and Wizards of the Coast merging?

Tweet: It's not a merger; it's a purchase. But anyway, I feel great about it. Wizards hasn't changed any as near as I can tell, except that now we have access to some exciting toy and game lines.

Pyramid: Did Wizards of the Coast ask you personally, to head the **Dungeons and Dragons: Third Edition** *team?*

Tweet: Peter Adkison, the president, asked me to be the lead designer. At that time, I was already a member of the design team, which includes Monte Cook and Skip Williams, two game designers with a lot on the ball. Peter wanted there to be a single lead designer to avoid designing the game by committee, but it's really been a team effort all along.

There is a FAQ for *Dungeons and Dragons Third Edition*. This FAQ can be found here. (http://www.wizards.com/3e/faq.asp)

Pyramid: How much has Gary Gygax lent toward the completion of **Third Edition***?*

Tweet: Of course, it's all based on what he and Dave Arneson did when they originally wrote *Dungeons & Dragons*, but neither of them has had a direct role in developing the new edition. Still, I keep the original version of *D&D* within arm's reach of my computer, and I occasionally refer to it when I want to get back to basics and see where all these ideas came from.

Pyramid: What are you hoping to accomplish with the **Third Edition of Dungeons and Dragons***? What is your dream for this project?*

Tweet: Our goal has been to make the game substantially better. At first, my judgment was that we should just edit *2nd Edition* to clean up its most obvious problems, but Peter rightly pointed out that if we're going to change the game, we might as well make it worthwhile for people to learn the new rules. In other words, we should take the opportunity to make it much, much better, even if that means changing it from cover to cover.

My dream is to have a game system that supports the high-energy campaigns that I saw the college kids playing back when I was in junior high and that has the realism, flexibility, and efficiency that I expect out of RPG rules. I'm happy to say that we're there.

Pyramid: Are you looking forward to the Dungeons and Dragons *movie?*

Tweet: Completely. I'm not a big movie-goer, but I sure want to see what they've made of the game.

Pyramid: Will it help the way the world looks at role-playing?

Tweet: I don't think it will help nearly as much as all the computer RPGs are already helping. Playing a character in a fantasy setting has gone mainstream, thanks to computer games.

Pyramid: How has the feedback from the playtesters been? Are they excited to see what you have done?

Tweet: I hate to admit it, but I was surprised at how much the playtesters like the game. I had thought that the most serious *AD&D* players would be too invested in the rules to judge the new edition on its merits and instead would just hate anything new and different. Instead, we found out that the playtesters like good rules, even if it means they have to do some relearning. In fact, most of them had lists of things they wanted to see changed themselves.

Near the end of the major playtesting push, we ran a survey of the playtesters, and the few things that they generally didn't like, we changed. Personally, I think that 1d4+1 damage for magic missile, no saving throw, no attack roll, is stupid. We changed it, but the playtesters objected, and we changed it back. (And I do it my way in my campaign.)

Playtester Spotlights can be found here. (http://www.wizards.com/3e/3E_Playtest_Group_mar00.asp)

Pyramid: Have you received any angry letters from rabid **First Edition** *fans who do not want to see* **Dungeons and Dragons** *redesigned yet again?*

Tweet: Sure, but we get even more letters from people telling us how to change the game than from people telling us not to change the game.

Pyramid: I have noticed a lot of new, beautiful art for the **Third Edition** *of* **Dungeons and Dragons***. Why redesign that aspect of the game?*

Tweet: If I can speak for the people who directed that aspect of the game, it's to give *D&D* a visual identity all its own. Plus, if you can draw a cooler Displacer Beast, why not do it?

The new art for ***Dungeons and Dragons Third Edition*** is beautiful. It can be found at this address:
http://www.wizards.com/3e/3E_art.asp

*Pyramid: There are many debates held over the Alignment rules of **Dungeons and Dragons**. They span from; it should not be in there, to you must live by your alignment and never stray. How have you fixed this?*

Tweet: Elegantly.

Seriously, specific rules questions are outside the scope of an interview at this time.

Pyramid: I have read in Dragon Magazine*, as well as a few articles in various magazines that Greyhawk is going to be the base world for all of **Dungeons and Dragons**. Will this not affect the feel of the game for those who wish to play in other worlds?*

Tweet: The Greyhawk elements in the core rules are so light that they won't interfere with DMs running their campaigns in other worlds. Rules such as which races are present or what the equipment lists looks like define the world much more strongly than whether we call the setting "Greyhawk" or "Faldoozia," and demographics and equipment have always been part of the game.

*Pyramid: Will every TSR (now Wizards of the Coast/Hasbro) world be redesigned with **Dungeons and Dragons Third Edition** rules? I am looking forward to **Planescape** if the answer is yes.*

Tweet: I don't know which worlds will be redone and which won't. Personally, I'd like to drive a stake through the heart of **Dark Sun** before it can rise again, but **Dark Sun** fans can rest assured that it's not up to me one way or the other.

Pyramid: Will you be aiding in the redesign of those worlds? If not, what's next for Jonathan Tweet?

Tweet: I don't have long-term plans, other than to stay involved with **D&D**. I'm also coordinating some of Wizards' beginner game efforts. There's a major emphasis at Wizards on developing our ability to make our games easy to learn for the first-time hobby gamer. After all, the more first-time hobby gamers there are, the better off the whole hobby industry is.

Pyramid: Every game you have done has had some sort of odd inspiration, in a good way of course. How do you get inspired?

Tweet: As much as I'd like to give some flip answer, I don't have any one source of inspiration. I've played a lot of RPGs, and that helps. For instance, the "Houses" of wizards in **Ars Magica** are a pretty direct steal from Greg Stafford's **RuneQuest**, where religions served the same purpose: grounding a character in a social and political milieu. On the other hand, the great power wielded by wizards in **Ars Magica** is partly a contrary reaction to Greg Costikyan's **DragonQuest**, in which a lowly peasant has at least a 25% chance to resist the strongest spell from the mightiest wizard.

The other thing that's helped me is to have a driving vision or goal for a project. With **Ars Magica**, the goal was to do wizards and magic right. For **Over the Edge**, I wanted and anything-goes RPG that I could play with my friends and that would be painless for me to teach. For **Everway**, I wanted something that would appeal to the visual imagination.

*Pyramid: What sort of music would you describe **Dungeons and Dragons** to feel like?*

Tweet: My campaign is about religious and ethnic passion, big action, and strange creatures with strange beliefs. Its soundtrack would be Indian instrumentals, with pounding orchestrals for the fight scenes. But it's the role of **D&D** to conform to each DM's vision, so no one sort of music fits it.

*Pyramid: Will **Everway** ever find its way into a new release list again?*

Tweet: It's currently published and supported by Rubicon Games here in Seattle. And if I ever get a chance to try an image-based game again, well, let's just say I haven't learned my lesson yet.

Rubicon Games has a lot of adventures and translations for the Everway Game. If you want more information go to their website. (http://www.rubicongames.com/)

Pyramid: *You have been in this industry quite a while, what are your predictions for the next five to ten years?*

Tweet: I don't think that roleplaying a character around a table with a bunch of friends will ever be a default pastime, but roleplaying is already a lot less weird than it used to be. Computer RPGs have made RPG concepts common. Combining Hasbro's position in the market with Wizards' game resources should mean a big increase in the hobby game field.

And there's a fair chance that Ryan Dancy's open source gaming concept will lead to a boom in RPG publishing.

The open Gaming Foundation is a new and interesting twist to RPG design. If you would like to learn more, or perhaps download the rules themselves, go here: http://www.opengamingfoundation.org

Pyramid: *Almost every gamer I have met has a project they are working on. Do you have any advice for these designers? How does one break into the gaming industry persay?*

Tweet: Don't start a company to publish your variant of *D&D*, *GURPS*, or *Vampire*. Do go to GenCon to see what's being published. Pay special attention to start-up companies whose people can't tell you in one sentence what's cool about their new variant of *D&D*/*GURPS*/*Vampire*. Don't be like them. Do go to college and learn how to write well. Don't write a huge RPG on spec and send it out to publishers hoping that they'll set aside the games they're already working on to make room in their schedules for your magnum opus. Do get writer's guidelines from magazines and try your hand and submitting professionally polished articles or adventures. Don't send letters to game companies telling them that you've got a great game but won't show it to them because you're afraid they'll steal it. Do learn to use a computer and hook up to the Internet.

Pyramid: *Do you have any final thoughts to add before the interview ends?*

Tweet: Nope. All out of thoughts.

Robo Chess

by Ken Cooney and Joshua Marquart

Art by Ken Cooney, Phil Foglio, Joshua Marquart and ArtToday

Robo Chess

"I hate this game." Deep-B scanned the factory and noted the scrubbots, furiously scraping up the spilled oil from the fallen Twonky nearby. "When will I ever learn," B mused, "If only we still played chess. Back in my day, I was the king of chess." Checking the mail, Deep-B took note of an incoming message from Friend-C. It read as the usual dreaded proposal:

"Shall we play a game?"

Deep-B grudgingly sent back a confirmation, but pulsed its processors in frustration. "Ever since the clones died, existence is simply boring. There is nothing else to do except play games, but all anyone ever wants to play is *Robo Rally*." An alert noting the receipt of a list of choices brought the super-computer out of its reminiscence. Dropping down and reading the list of games, Deep-B polished off a response: "Tic-Tac-Toe? Been there. Global-thermonuclear war? Done that. *Robo Rally*? The scrubbots aren't finished cleaning. How about a nice game of chess?"

In came the response from Friend-C. "No, you're too good. I want to play *Robo Rally*. We will wait for the factory's cleansing."

"Are you sure you don't want to play che. . ." Deep-B's response trailed off as its mother AI program spawned a new thread. "I just formulated an idea. How about a compromise?" Even before waiting for a response, Deep-B sent alerts to the weldbots requesting the affixation of a large crane to the arena ceiling and began dredging out the long discarded chessbots.

"What do you have in mind? I'm listening."

Approximately 20 minutes later, the rally robots quaked in terror as they realized their fears. They had truly become pawns.

* * *

Object of the Game

Exactly like a standard chess game: capture the opponent's King by checkmate to win or force a stalemate to tie. Of course, the addition of *Robo Rally* robots, a programmable giant crane and appended board pieces makes for a much

more exciting challenge.

Number of Players: 2

Requirements

- 1 set of *Robo Rally* and optional expansions: "Crash and Burn" and "Armed and Dangerous".
- 1 set of chess pieces small enough to fit on the *Robo Rally* squares.
- Stiff paper.
- Small notepads and pencils.

Preparations

Print out the graphics provided with this article and glue them to stiff paper. If a printer is unavailable, design the 2x8 square chess sections yourself.

Game Setup

Robo Chess

Choose one *Robo Rally* factory board. We recommend the Island. Slip the 2 paper pieces, known as the "Quasi-Magnetic" sections, under either end of the board extending it into an "almost rectangle" of 8x2, 12x12, 8x2 (see diagram). Each square on the board is 1 inch. Place the chess pieces on their appropriate sections on the Quasi-Magnetic section, just like in standard chess. Each player must choose a robot and place its equivalent virtual bot under his King position on the quasi-magnetic board.

How to Play

Turns run like any standard *Robo Rally* game, with the addition of a few new rules and objectives. First and foremost, this is chess and there are no flags. Your robot is working for your team: moving pieces, shooting other robots and pieces, and generally defending the king, all in an effort to checkmate the opponent's king. The second biggest change is the giant crane added to the factory, used to pick up chess pieces and drop them onto the board in simulation of standard chess moves. Each player receives 10 Program Cards per turn (see "Programming the Crane").

The Robots

Robots move as normal each register phase. If the virtual bot is still underneath a chess piece, it must remain a virtual bot until it is no longer under a piece. Robots may push a single chess piece in any direction as if the piece was another robot. Robots may not push two or more chess pieces in a row, nor may a robot push any piece on either quasi-magnetic board. The crane (see below) may be programmed to pick up the player's robot, even if it is powered down, and move it as if it were a king, 1 space in any direction including diagonally. Only in this manner may a robot capture chess pieces. If dropped on another robot, the target robot is destroyed. Each time a robot is dropped by the crane, it receives 2 points of damage. Even though there are 10 Program Cards, Robots still lock registers after the fourth point of damage. Robots have five archive copies; each of which restarts as a virtual bot from whatever space the king is currently on.

The Chess Pieces

Chess pieces are moved around the board by the crane. If a chess piece is dropped onto an opposing piece during that player's move, the opposing piece is captured. If dropped on a robot of either side, the robot is destroyed by the weight of the piece. A chess piece can capture a friendly piece if moved by the crane during the opposing player's move (see "Moving the Crane" below). A chess piece can be destroyed by environmental and tactical damage. If a chess piece takes more total damage in one register phase than its game worth (see below), it is destroyed and removed from play entirely. Pawns are promoted when they reach the end section on the opposing player's quasi-magnetic board. If a player's king is destroyed due to his own actions, he loses the game, and if he destroys the opposing king, the game is stalemate.

Piece	Worth
Pawn, King	2
Bishop, Knight	4
Rook	8
Queen	16

Programming the Crane

Instead of 9 Program Cards per turn, each player receives 10 Program Cards. If a player's robot has died and there are no more archive copies, or the player's robot is powered down, the player only receives one new Program Card per turn. The extra card is provided in order to program the crane, which will pick up a chess piece or robot and place it down on the board appropriately. To program the crane, write the desired chess move (consisting of current coordinates, chess piece, and target coordinates) on a piece of paper. The move must be a valid chess move based on how the board is presented right before the first register phase of the turn. The chess move may only be made with any of the player's own pieces or robot. Select a Program Card and place it, along with the paper, next to the robot's fifth programmed register phase. This is the "Crane Card", and its Card Priority should be hidden from the other player. The Crane Card is not considered a register and will never lock when the robot takes damage.

Example: Bill's Knight is on E5, threatened by Dave's Bishop on C3. Bill decides to move his Knight to G6, a currently empty space. To move the Knight, Bill writes down "E5 Knight to G6", chooses one of his unused Program Cards for this phase, and places them in front of him next to his fifth programmed register. Dave attempts to capture the Knight, writing down "C3 Bishop to E5", choosing an unused Program Card, and placing them in front of him appropriately. Even though he anticipates Bill will move the Knight, Dave could not write down "C3 Bishop to F6", one space beyond the Knight, because it would be considered an illegal chess move at this time.

Robo Chess

Moving the Crane

The "Crane Moves" on the fifth register phase of every turn, after the "Robots Move" and before the "Board Elements Move" sequences. The crane is played as though it is "dumb". It does not know the chess game is being played on a factory floor and only checks the validity of moves as it is programmed (before the first register phase) and assumes the program is still valid when it does move (during the fifth register phase). No matter what happens to change the board around, including changes due to it's own actions, the crane will execute the move listed on each player's piece of paper based on the associated Crane Card's Priority Number. The higher Priority Number Card will move the crane first. The Crane can pick up pieces and robots, but will never touch a virtual bot. The crane does not discriminate and will pick up any piece or robot in the space it has been ordered to pick up from, but if there is nothing in the pickup space, nothing is moved.

All non-jumping chess pieces are moved from one point to another by being dropped on each intervening space until either the destination space is reached, the move is blocked by a friendly piece, the piece is inadvertently "lost" (by being dropped into a pit or portal), or an enemy piece is captured. Jumping pieces (Knights) are moved directly from their point of departure to their point of destination and do not contact intervening spaces.

Because the robot or board elements may have moved pieces during the previous register phases, it is possible to capture a different piece than originally intended, even on a section of the board prior to the original destination. In fact, the moving piece might not even be the original piece intended for the move. Any piece, friendly or not, picked up by the crane during a player's programmed crane movement is treated as though it was that player's piece, and in this manner, it is possible for a friendly piece to capture another friendly piece.

If a moving piece captures an opposing piece before it reaches its destination, it ceases moving. If the move is blocked by a friendly piece, the moving piece is placed onto the last space it left and the friendly piece is left untouched. In the case of jumping pieces, the last space they left is the space they began at, but all other pieces are placed on the last space the crane dropped them on.

Friendly and opposing robots are destroyed by dropped pieces from either player. Unlike inadvertently capturing an opposing piece on the incorrect coordinates, if a robot is crushed and the chess piece has not yet reached it's destination, the crane picks up the chess piece and continues moving it.

Example 1: Bill's Crane Card has a Priority of 340. Dave's Crane Card lists 460. The crane performs the move listed on Dave's paper first and picks up the Bishop at C3. Because a Bishop does not jump, the Bishop is dropped onto the empty space D4, picked up again, then placed in space E5, capturing Bill's Knight. The crane now executes Bill's move. Believing it to be Bill's Knight, a jumping piece, the crane picks up Dave's Bishop at E5 and moves it directly to G6. Unfortunately for Dave, during the previous register phases the conveyor belts moved one of Dave's Pawns to space G6. Even though both pieces are Dave's, Bill captures the Pawn, since the crane believes the Bishop to be Bill's Knight. If the Pawn on G6 had been Bill's Pawn, the crane would believe it was a friendly and place the Bishop back onto the last space it landed on, E5.

Example 2: On the next register phase 1, Bill's Rook is on E10. In an attempt to capture Dave's Bishop on E5, Bill writes down "E10 Rook to E5" and chooses a Priority 900 card. Dave's Queen is on F1 with a clear path to F6. He writes down "F1 Queen to F6" and chooses a Priority 240 card. By the time the "Crane Moves" sequence comes around on the fifth register phase, the conveyor belts have moved one of Dave's Pawns to E8, a space between Bill's Rook and Dave's Bishop, and Bill's robot has ended its movement on F4. When the crane moves Bill's Rook, the Rook drops on space E9, then onto Dave's Pawn at E8, capturing it. Because an opposing piece has been captured, the crane ceases moving Bill's Rook, leaving it on E8. Dave points at Bill and laughs as the crane moves his Queen from F1 to F2 to F3 to F4, crushing Bill's robot, to F5 to F6.

The Board Elements

The outside borders of the entire factory and attached chessboards are considered to be walls. Conveyors leading off the "edge" of the board move directly into walls. During the "Board Elements Move" sequence of each register phase, but not during crane movement (except for pits and drains), chess pieces are affected by any appropriate board elements. Conveyor belts, flowing water, and pushers move pieces as if they were robots (see page 34 of *Robo Rally* Operating Manual), but gears do nothing. Capturing is only performed through crane movement, so opposing chess pieces pushed into each other do not capture. Pieces cannot be pushed through walls and walls do not affect piece movement, as cranes simply carry the pieces over the walls. Because of this, factory walls are no defense against capture and should not be

factored in when determining a move, except when
considering tactical, robot-interactive reasons.

A chess piece which receives more total damage in one
register phase than its worth is destroyed (not captured, but
considered "dead" by *Knightmare Chess* standards), and is
permanently removed from play. Lasers, Radiation, and
Flamers damage chess pieces. Chess pieces cannot be mutated.
Activated crushers destroy chess pieces, and any piece pushed
or moved into, or dropped onto a pit, open trap door, or drain will be destroyed, including during crane movement.
Ramps have no effect on movement, and a chess piece pushed off a ledge lands undamaged, cannot be pushed onto
another piece, and crushes any robot is falls on. A chess piece pushed (not dropped) onto an Oil Slick slides as though
it were a robot moving onto the slick. Pieces pushed (not dropped) into a repulsor are repulsed. A piece dropped onto a
Portal at any time immediately moves to the other portal of the same color and does not continue moving from the
destination Portal. If any friendly or opposing piece or robot already occupies the destination Portal, the moving piece
does not go through, and if during a crane movement, may continue as normal. Only robots may access Repair Sites,
Chop Shops, and Randomizers. Double wrench repair sites may be used as normal for either option cards, to repair a
robot, or to recover one captured chess piece per turn. Recovered chess pieces are returned to any legal starting
position on the player's quasi-magnetic board. If no legal starting position is available, the piece cannot return and
remains captured. It is up to pre-game decision as to whether chop shops, randomizers, and single-wrench spaces work
the same way.

Options

Robots receive options as normal. Chess pieces cannot have options. Pieces may be damaged by options including (but
not limited to) Missile Launchers, Big Ones, Buzz Bombs, Self-Destruct, Drones, and Ramming Gear. Chess pieces
set off Proximity Mines from 1 square distance and may be dropped on regular Mines. The Crane may not pick up any
piece it drops into Goo until the next "Crane Moves" sequence. If an Option (such as a Drone, Mini Howitzer, Tractor
or Pressor Beam) moves a target, a chess piece, unless destroyed, is affected accordingly. Bridges will effectively
cover any pit.

A Program Card placed on a Conditional may be used to replace the Crane Card, and a Program Card stored on a
Flywheel may be used as a Crane Card in subsequent turns. The Abort Switch will randomize the Crane Card and the
Scrambler may be used on the fifth register phase to scramble the opposing Crane Card. Dual Processor may be used
to place two cards down in place of a single Crane Card. With Extra Memory, a player receives 11 Program Cards per
turn (2 when powered down), but his robot is still destroyed when it receives 9 points of damage. If the player has lost
his robot and all archive copies, he may not have any options.

Check Conditions

Robots and board elements can accidentally (or deliberately) place any king into or out of check. Due to the nature of the movement, the player must actually checkmate the enemy King to win. The act of checkmating, capturing the opposing king with a friendly piece must be followed through. If a King is in check on the first register phase, the checked player must program the crane to bring his King out of check. Board elements including walls, pits, trap doors, portals, and conveyor belts should not be taken into consideration when determining a check situation. Robots are threatening pieces, which move like Kings, and should be considered as such. The crane determines a win situation, and it believes it is playing chess, albeit with strange moves, an extra piece that moves like a king, and an abnormally large chessboard, not on a factory floor.

For example: If moving a rook across the board to block a checkmate is the only feasible solution to the check situation, then it must be performed... even if the rook will fall into a pit when the crane drops it onto the next space over.

Winning

If there is a checkmate situation, the game is over and the appropriate player wins. If a player kills his own king, he loses. If a player kills the opposing king, the game is a stalemate. If both kings are checkmated on the same turn, the game is a stalemate. Due to the nature of the factory floor, it is entirely possible for one King to checkmate the other King.

Robo Chess Variations

The following variations can enhance a Robo Chess session.

1. **Factory Check**

   Pits, walls, and portals are now viable board elements to be considered during a Check situation, except for Knights who may jump over them. Pits covered with bridges are no longer considered pits.

2. **Abyss**

   The outside edge of the board is no longer surrounded by a wall, but is an abyss. Any piece entering the abyss is destroyed. Alternately, all inner factory walls may be ignored and moved through as if they weren't there at all.

3. **Pawn Turning**

   If it is possible to differentiate a "front" for all the Pawns, gears and turning conveyor belts may change their directions.

4. **Chess Options**

   Because a crane lifts the chess pieces, options are basically useless and only end up complicating game play, though it is conceivable for a chess piece to be affected by a movement card. Crab Legs, Reverse Gears, or Fourth Gear are quite applicable to Pawns.

5. **Team Play / Multiple Robots**

   This requires even teams of 2 or more, though one player may use multiple robots. Each player has his own robot to program separately, and may place his own Crane Card. Players on teams should consult their moves

beforehand. As normal, Crane Cards set off based on Priority. With 4-player chess rules, it could be possible to play a very large game of Robo Chess with four quasi-magnetic boards, and with 8 robots, that still leaves 2 players for a team.

6. **Non-King Robot**

The robot may begin on any space on the quasi-magnetic board, and acquires the properties of the chess piece on the space it starts on when moved by the crane. A destroyed Robot restarts where the piece it emulates is. If the piece is captured, the robot begins on the appropriate starting point at the quasi-magnetic board. Optionally, robots begin as non-virtual, completely taking the place of the piece whose space it starts on.

7. **Large Factory**

Feel free to extend the board by adding additional boards.

8. **Nigh-Invulnerable King**

Change the worth of the King to 64. Only the Big One, a lot of weaponry at once, or a pit can destroy a king.

9. **Mutation**

Chess pieces can mutate into other chess pieces when affected by radioactive mutation. The King is unaffected. Choose a mutation by selecting randomly from all friendly captured pieces. Optionally, use both friendly and opposing captured pieces.

10. **Speed Robo Chess**

In Speed Robo Chess, the crane is not pre-programmed every turn, but moves every phase based on the priority of the Player's phase card. Players receive 9 cards per turn as though it were a normal ***Robo Rally*** game, and the crane moves once for each player, each phase, based on the programmed movement card's priority, higher priority first. In Speed Robo Chess, if a robot's register is locked, that phase's priority stays the same when determining who moves the crane. Before starting play, Players should decide whether a checkmate condition is scanned for at the end of each phase or at the end of the turn (a bit more challenging).

11. **Knightmare Robo Chess**

Deep-B relaxed its processes in bliss. Finally, it had won a game of **Robo Rally**. *But as it began "juicing the capacitors" in celebration, Deep-B was interrupted by a constant ping of messaging. "I turned off all communications," it thought, reflecting back to its earlier request for privacy. Unable to cope with the nagging ping, Deep-B opened the message, entitled simply, "A Variation," from Illuminati-O.*

Add the ***Knightmare Chess I*** or ***II*** cards to the game. Either play with the standard 150 points of cards or each player receives 5 random cards and draws a new card upon each discard. Dead pieces may not be brought back through use of a repair site. Robots are treated as Kings. Keep close track of the state of the board during the first register phase, as some of the Knightmare Chess cards require a change of move. Moves are always based on the first register phase. Corners are considered to be the corners of the quasi-magnetic boards. "Knightmare!" "Think Again!" "Chaos" and probably "Panic" cards should be removed from the deck. In addition to its normal effect, "Hand to Hand" creates walls along the edges of the board. All other cards should play as normal, though there may be timing issues to be worked out.

Worlds In Collusion

"[S]cientists . . . continue building nuclear power plants and detonating nuclear devices, creating greater surface instability in the crust of this planet as we inexorably move closer to 5 May 2000 -- an anciently dreaded date embodied in the Great Pyramid's mathematical symbolism."
-- Richard Noone, *5/5/2000: Ice: The Ultimate Disaster*

Today, May 5, 2000, is quite the bisociative day. Either the world is ending (yet again), knocked icecap over fantail by the pole-shifting astrological-gravitational-orgone forces of the Sun, the Moon, and the other five classical planets lined up in a (relatively) small area (25 degrees, 53 minutes) of "geocentric" arc, or you're reading this column. On the off chance that the latter is the case, we'll squint along this planetary alignment (and given its threatening demeanor, I think we'd be justified in calling it a chaotic evil planetary alignment) and see if we can salvage some good gameable madness from the end of the world, again.

"I stated that pole shifts are not caused by planetary alignments, but because of some of the very issues in this article our planet is ripe for another shift. The May 5 alignment may trigger one."
-- Richard Noone, "Are We Approaching The Abyss?"

The most famous prophet foretelling cosmological doom for 5/5/2000 is Richard Noone, whose 1982 screed *5/5/2000: Ice: The Ultimate Disaster* is interesting not only for its spaniel-like habit of following any scent trail imaginable wherever it leads, but for only actually mentioning the planetary alignment in question about six times in its 358 pages. Through Noone's interpretation of two other pyramidologists' interpretations of the Victorian pyramid enthusiast Robert Menzies, we learn that there are precisely 6000 "pyramid inches" from the beginning of the Grand Gallery in the Great Pyramid of Cheops to the King's Chamber; at the rate of one inch per year, the Biblical "six days of creation" (meaning six millennia of history) are vindicated. Casting about for something to end the world in 2000 A.D., Noone fixated on the planetary alignment first predicted in 1961 by the Belgian astronomer Jan Meeus. Noone then 'postdicts' a terrible disaster in 4000 B.C. primarily through inventive Velikovskianism, implying that every six thousand years the poles shift thanks to the deadly effects of planetary alignment. (Sadly, the closest planetary alignment falls in December of 4019 B.C.) Along the way, Noone also argues that the Great Pyramid must have been built in 4000 B.C., as a warning in stone to those who would come after -- since the Grand Gallery is aligned with the supernova Vela X in the skies of 4000 B.C. Egypt, and the Freemasons describe 4000 B.C. as 1 Anno Lucis, which is to say the first "Year of Light." (It's kind of sad that cutting-edge Pyramidiocy has leapfrogged Noone and now dates the Pyramids to 10,500 B.C.)

Interestingly, May 5 is the day of a "dragon feast" in China -- could the celestial dragon stretching from the Sun to Saturn be cued to awaken the "dragon lines," the telluric currents, the ley flows of the Earth in cataclysm? In kabbalah, "5" is both *gab*, ("the top") and *geb*, ("the pit"), possibly implying that on 5/5 the top can become the pit, and vice versa -- possibly a connection to the End Times as prophesied in Ezekiel 21:26, in which low are "exalted" and the high "abased." A pole shift? (This, of course, also implies that the modern calendar has been consciously designed, no doubt by a Secretive Vatican Conspiracy, so that the End Times fall on 5/5/2000.) And if so, does that mean that the "seven stars" held together in Revelation 1:16, presaging the prophesied end of the world, are the seven planets aligned? Does this accord with the interesting fact that the alignment falls just seven minutes (one for each planet) short of 26 degrees, 26 being, kabbalistically, YHWH -- in other words, God?

"Inevitably when discussing a planetary alignment, someone asks, 'How often does this happen?' or 'When will it happen again?' It is hard to give a short and satisfying answer if more than two objects are involved. Of course, no series of alignments repeats exactly, but simply saying it that way is interpreted as avoiding answering the question. You'll be seen as obstructionist."
-- John Moseley of Griffith Observatory, "Planetary Alignments in 2000"

If you ask those killjoy astrophysicists, of course, the answer is "Of course not." They point out that, although the May 5 alignment is interesting (even though it won't be visible thanks to that pesky Sun), it's hardly unique. There have been seventeen even tighter alignments in the last two millennia alone, and the Earth remains triumphantly

undestroyed. Even assuming that all the planetary gravities worked together (which they won't in the May 5, 2000 alignment), they'd only increase the gravitational pull on Earth by approximately 1.6% of the impulse exerted by the Moon -- and have even less effect on the tides. The planetary conjunction will bolster the solar wind somewhat, although again far less than conjunctions of Mercury, Venus, and Jupiter alone did in 1703, 1941, and 1990. In short, it's looking good for good old planet Earth.

"One of the most famous mathematicians in Europe . . . foretold a universal flood for the year 1524. This flood was to arrive in the month of February, and nothing is more plausible; for Saturn, Jupiter and Mars were then in conjunction in the sign of Pisces. All the peoples of Europe, Asia and Africa, who heard speak of the prediction, were dismayed . . . At last the month of February arrived, and not a drop of water fell: never was month more dry, and never were the astrologers more embarrassed. Nevertheless they were not discouraged, nor neglected among us; almost all princes continued to consult them."
-- Voltaire, "Astrology" in *Dictionnaire Philosophique*

Although there's nothing to prevent you from deciding that the alignment on 5/5/2000 focuses the astral, magical energies of the planets in such wise as to shift things in a more occult sense. The closest such alignment, on February 25, 1953 B.C., combined all five visible planets, the Sun, and the Moon, within 4 degrees in Pegasus. This so impressed the Chinese, apparently, that they began the Zhuanxu calendar on the next new moon, March 5 -- surely it's the work of a moment to determine that it also caused the Fall of Ur or gave birth to Shangri-La? Is it but coincidence that the 22 degree alignment in 710 A.D. occurred in the first year of the Aztec Fourth Sun? It's kind of cool that the 29.5 degree alignment in 529 A.D. coincides with the Emperor Justinian's closing of the neo-Platonist Academy and the final occultation of magickal learning in Europe. That's the alignment that most closely replicates the 5/5/2000 setup, astrologically speaking, so perhaps today's when magick returns to Europe, *Shadowrun* style. John of Toledo predicted the end of the world for the 11 degree alignment of 1186, and no doubt whatever actually happened then, the Templars were on top of it. (Maybe that's when the Faerie left, too.) Needless to say, any of these alignments can be "when the stars come right" for that proper foaming Cthulhoid servitor cult touch.

"The Galactics will be moving away from the vibration of this planetary alignment because many of their spacecraft risk detection when the planets align to the Central Sun. They exist on a thought pattern in which they think they can't be seen, so therefore they can't be seen. But, the powerful magnetic vibrations of this planetary alignment will bounce off Mother Earth, and the Galactics could get swept up in them. This would dishevel their cloaking structure, and if that happened, you'd see a group of them parked in the sky, and suddenly your whole world would go into another shift. So they are backing out of the way to avoid the risk. In fact, there is a fairly good chance for a lot of multiple spacecraft sightings at this time."
-- "The Great Shift of May 5, 2000," channeled from "Kirael"

You're hardly restricted to affecting Earth with these various alignments. 5/5/2000 has just as good a chance of pole-shifting Venus, or awakening the Pyramids of Mars, or summoning any of the Phantom Planets like Vulcan or Nibiru from their dark-matter slumbers. *GURPS Steampunk* GMs can have the aether only become accessible following the alignments of 1624 (if you want Galileo or the Jesuits building your aether-galleons to duel on the Martian Main), 1821 (if you'd prefer to see Babbage and Faraday launch electro-magickal ships, or open the Symmes Hole to the Hollow Earth), or 1962 (which combined a 16 degree separation with a solar eclipse on February 5 for extra fun). That last one could be the alignment that finally brings the Greys out into the open, as John Glenn discovers that We Are Not Alone.

Alternatively, the end of the world could, actually, be a creation date; perhaps everything orthodox science knows before, say, December 9, 1662 (a 24 degree, 16 minute alignment) is only "Hollow History" created by the trauma of the last Alignment Catastrophe. Only after this conjunction can certain archaeologists of the uncanny (that would be the PCs, should you be curious) uncover pieces and shards of the Real Past -- which can be whatever you want, from dragon bodies slowly fossilizing in China to atomic piles in the Yucatan. It's the end of the world as the PCs know it -- and Something feels fine.

Pyramid Pick

Heirs to Merlin: the Stonehedge Tribunal (for Ars Magica)

Published by Atlas Games

Written by David Chart

168 pages + fold out map. $22.94

Heirs to Merlin provides a Storyguide with everything they need to run a saga based in the Stonehedge tribunal. . . except stats. Believe me, I was as shocked by the lack of stats as any of you, but there's a cunning method behind Atlas' apparent madness. It may seem strange for a role-playing sourcebook to be devoid of any game stats; even the NPC write-ups neglect this essential of gaming. *Heirs* chose to do this deliberately, citing two reasons. First, assigning stats to NPCs would lock the Saga into a specific power level, or necessitate a significant amount of work adapting the book to your saga. Second, giving NPCs stats would relegate the book to a Storyguide-only resource, and *Heirs to Merlin* was written specifically for both Guides and players to have access to it. The vast majority of the information in the book is setting, with actual Tribunal information occupying a scant 40+ pages. The philosophy here is that the players and Guide will enjoy learning about 1220 England and Wales as play progresses and the Saga advances. Not all guides will be comfortable with this format, as it requires them to flesh out their NPCs. If you're looking for a plug-and-play adventure compilation, this isn't it; what you will get is an in-depth examination of 13th century England with Ars Magica tacked on.

The bulk of the book consists of nine chapters, beginning with the obligatory Introduction section that explains the design choices the writer made and a few suggestions for further reading. Chapter 2 is an extensive history of Mythic England, which is very little different from the actual history of England, save for the inclusion of *Ars Magica* references and characters. Chapter 3 details the peasants of England/Wales in excruciating detail. . . excruciating, that is, if you're a peasant, but quite a pleasant read if you're not. Town life is discussed in Chapter 4, emphasizing day to day life, laws and a number of larger cities like Oxford and (of course) London. There is a nice sidebar dealing with the English Jews. It's amazing how the crown viewed an entire people as their personal cash cow.

Chapter 5 covers travel, trade and industry; its a short chapter, but gives enough information on these important basics of any saga. The church occupies chapter six. This chapter covers a lot of ground and is easily the most important aspect of any *Ars Magica* saga, especially in such a highly religious country as England. Playing counterpoint to the clergy are the nobles of chapter 7. The precariousness of the king's situation is emphasized here, and plot hooks abound. Chapter 8 covers law and governance, many aspects of which fly in the face of common sense but will greatly spice up a campaign. Chapter 9 covers Wales and explains the differences between England's culture and that of this land perched on the precipice of rebellion. Chapters 10, 11 and 12, The Order of Hermes, Politics and Myths and Legends respectively encompass the majority of the Saga-specific information and again contain dozens if not hundreds of plot hooks.

Rounding out the book are an index (very useful for finding NPCs), Glossary (very useful if your NPCs speak), and a bibliography (extra marks for showing all work). The icing on the cake is a two-page fold-out map, which is very handy. The art and format is well done and consistent with previous books in the *Ars Magica* line. Anyone familiar with *Ars Magica* will know what I mean, and I applaud the professional quality of the entire line, which is easily a match for any of the larger RPG publishers.

The vast majority of the book delves into the mundane aspects of 1220 England and does an exceptional job of portraying this era. The text is informative, though occasionally dry. This is not a bad thing, as a punchy, hip style of

writing would be far too distracting. Concise yet evocative is definitely the way to go, and frankly I *want* a sourcebook on 13th century England to read like a history text. The information provided is accurate and filled with plot hooks, even in such seemingly mundane sections like the Building section of chapter 5, for instance. This section indicates that skilled craftsmen travel from project to project, managing every aspect of the building process; the text points out that the ability to work free stone is among the most prized skills. In this one brief paragraph I can see dozens of plot hooks, such as an Ex Miscellanea mage who creates magic stone working tools, or a group of Magi who travel the land working stone and amassing political power within the Order and with the King, or perhaps his rivals. The book is filled with gems like this. ***Heirs to Merlin*** is thoroughly researched, with an attention to detail that is rarely seen outside of a ***GURPS*** world book.

Especially interesting are the depictions of the political landscape: the Stonehedge tribunal is on a cusp, with the Blackthorn covenant recently losing its political edge at tribunal. Likewise the English King Henry III is an only a child, fresh out of a civil war with his vassals, reluctant to relinquish any of their power to him, while the church seems to be biding its time. In a country on the verge of internal chaos and a tribunal whose own political landscape has recently been remade, the potential for adventure is extreme. Specific information of the Tribunal Covenants is deliberately vague, but only to allow the Storyguide to adapt the setting to their own particular saga. There is enough specific information to entice players who read the book (which is encouraged by the author) to know enough of what's going on to feel at home in England, but not enough to spoil their enjoyment of the Saga.

Frankly there is little in the book that can't be read by the players; the covenant descriptions are deliberately vague, consisting of common knowledge and a few choice bits of rumor and inferred possibilities. There is enough room for the Storyguide to mold the actual Tribunal to whatever he/she wishes without contradicting the actual text of the book, which many players will interpret as Canon. With the right group of players this can work admirably and intensify their enjoyment of the Saga. There's a bit more work for the Storyguide, but giving everyone access to ***Heirs to Merlin*** will allow everyone to immerse themselves in the intricacies of the 13th century. Just watching your players hold their own in an English court or a royal audience is reward enough for giving up that little bit of control by allowing them to read this book. The excellent and comprehensive work that Atlas has put into this book makes ***Heirs to Merlin*** an excellent window into this era.

-- Andy Lucas

The Lessons of Voltron

Nostalgia, is, at its heart, a fairly selfish pursuit: those who understand what you're talking about nod knowingly, and those that don't are forced to suffer through a pointless rambling about something they are probably disinterested in.

Having said that, let me talk about *Voltron*.

Voltron was the name of a Japanese cartoon and also the giant robot appearing in that cartoon. It consisted of five smaller robot lions (or, in another series, fifteen smaller vehicles) that, when the command was given, would form Voltron.

Television aimed at children has long understood that kids love repetition. From *Sesame Street* sketches that have been on the air for decades, to *Blues Clues*, the logical extension that shows the same show several times a week. Using the logical fallacy of the converse, then, we can conclude that *Voltron* must have been aimed at children. Because *Voltron* **loved** its repetition.

Each episode would follow the same basic plot:

- The witch Hagar (directed by ultimate bad person Zarkon) creates a giant evil robot that will *surely* defeat Voltron this time.
- The giant evil robot causes destruction until the five lions (or whatever) that make up Voltron show up to deal with it.
- They each fight the big, bad robot individually, and get their butts kicked.
- Someone on the good guys' side finally realizes that they may have better luck fighting the big, bad robot if they, themselves, were a big (good) robot. So the command is given to form Voltron.
- As Voltron, they fight the big, bad robot for a while, and *still* get their butts kicked.
- Suddenly, someone remembers, "Waitaminute! We have this really cool weapon, the Sword of Arus! It's our most powerful attack! Lets give that a shot!"
- They pull out this impossibly long sword and, using only their mighty sword attack, manage to defeat the evil robot at the last minute.
- The witch curses Voltron, but vows that next time, oh yes, next time, she will defeat them.
- End credits.

While not quite as formulaic as, say, your average romantic comedy, *Voltron* was nonetheless pretty predictable. And, dramatically speaking, it worked (at least, it appealed to eight-year-olds). There was a threat, dramatic tension as the good guys lose, a hopeful moment as they get their act together and form Voltron, more dramatic tension as the good guys lose, and then, at the last possible moment, elation as the good guys manage to save the day, using their powerful attack.

From a gaming standpoint, though, there's just one *slight*, itsy-bitsy, teeny-weeny problem with it:

It would never work.

No, at the first sign of danger, any group of PCs would *immediately* form Voltron and have that sword pulled out. No questions asked. An inhuman shriek from above? Form Voltron, draw the sword, enter battle. The sound of an explosion from over the hill? Form Voltron, draw the sword, go investigate. Telephone rings? Form Voltron, draw the sword, answer the phone.

In many games, folks tend to find their Sword of Arus fairly early on. . . that one attack, the one gimmick, their one ability that ends most conflicts. And, unlike Voltron, most players (wisely) don't wait until they get the snot beaten out of them before they draw that sword. Examples my own characters have found?

- Pulling the pins on grenades and holding them, relying on defenses I had and the baddies didn't.

- Using telekinesis to raise enemies into the air, removing them from range on the way up and turning them into pulp when they hit the ground.
- Turning invisible, sneaking up, and using a powerful touch-only attack.

It's one of the great paradoxes in gaming. . . the story-telling aspect versus the game aspect. While I won't go into that here (much), I will point out that a character like Indiana Jones would be, in most RPGs, less successful than Dutch, Arnold Schwarzenegger's character in Predator; While Indy is more versatile and (in my opinion) more interesting, Dutch kicks more butt. We like Indy because he breaks even, but we like Dutch because he wins.

Many games reward the "one good thing," too. In *In Nomine*, your flat-average angel or demon is going to fail an average task about 58% of the time, and your average attribute check in *AD&D 2nd Edition* has a 50/50 chance of working. But if your Strength/Laser Pistol/Computer Hacking is maxed out, then you will (or at least try to) solve most situations with Strength, Laser Pistol, or Computer Hacking.

I'm not sure what conclusions can be drawn from this, to be honest. I think the most important lesson to glean is: make sure the PCs and GM are on the same wavelength when designing characters. If one player is making a character that can be used in many situations, but isn't terribly good at any, while the others are making Thog Onenote, Master of Brawling, then this is going to affect the game. Likewise, if the GM is expecting the players to be the best there is at what they do, then players may want to plan accordingly.

As for myself, I tend to make characters that are versatile, but also very good at something. . . preferably something not immediately applicable. How *do* you make yourself useful in combat when your primary skill is Psychology? Or your main super-power is Flight? Or your strongest attack takes three rounds to activate?

And while I'm trying to figure that out in combat, I generally hide behind the other players. . . who are busily drawing the big sword.

* * *

I made the threat in the chat room, and I'll make it here: We need reviews. If Steven doesn't start getting reviews soon, Steven will start recruiting reviewers with a bat.

So. . . we need reviews. Your odds of getting a regular article accepted are about one in ten currently. Your odds of getting a review of a current game rejected are about four to one against; it would need to be written in misspelled Gaelic with a dull yellow crayon. Even then, I'd probably just ask you to correct the spelling.

Speaking of chat rooms and nostalgia, for those of you who don't attend the Pyramid chat area, you may want to consider joining us. Just a couple days ago we came up with *GURPS* television crossovers, the most promising of which (in my mind) was *GURPS Love Boat / Prisoner*.

"Where am I?"
"Aboard the Love Boat."
"Who are you?"
"You are in cabin number six."
"I won't fall in love."
"By hook or by crook, you will."

And, yes, Number One would be revealed to be. . . coochie-girl Charo. Be very afraid.

We now return you to a nostalgia-free zone.

-- *Steven Marsh*

Last week's answer: **The Ultimate Powers Book**, p. 70 (for **Marvel Super Heroes**)

(Two stars) "Getting to the sigils, however, is difficult, since the room is really not empty at all. In fact, it is not really a room. The entire area of the room is filled with solid rock, rendered permanently invisible by a powerful spell. . . . Those who attempt to *teleport* into the room (past the barrier) find that they have teleported into solid rock, for all of the rest of their fellow adventurers to see."

Murphy's Rules

Fun and Profit Part Two: The Fine Art of Art

Welcome to part two of my series on How to Run a Game Company. This month I will address the reality of one of the most frequently neglected, and yet possibly most important, aspects of game production: the art. Whether simple line drawings meant to clarify a point in the text or complex paintings to amaze the reader, art can be a help or a hindrance to any game project. Like writing, art is a skill best left to the professionals, but an informed manager or consumer is never a bad thing. If I have convinced you to start a game company in Part One, and you went out and designed the game over the last four weeks, you are probably anxious to know what to do next. The next part of game production is gathering and adding the art that will give your game a polished and professional look. So without further ado, on to this month's installment - Part Two: The Fine Art of Art.

First, there are several people to add to our *dramatis personae* who will deal mostly with a game's art. The first, and in many ways most important, is the Art Director. This person will usually have management responsibility for all aspects of the project's art, from creation of the art specs, through selection of the artists, to final approval of the book's look. He or she is very important, and, unless you have a good sense of how you want the book to look, might be a good place to insert a second person into your little company. Of course, there will also be artists, the people who actually produce the art. This might be a single person with many talents, or a combination of people such as pencillers, inkers, colorists, etc., each of whom has a special skill. Finally, there will be production artists, who will be responsible for a book's physical design and layout.

Regardless of how many hands will eventually touch it, all game art starts with the art specs. These little one or two sentence descriptions describe possible art. If, for example, a writer has written about a barbarian horde, he or she might include an art spec suggesting that this section might benefit from a picture of a barbarian horde. Special equipment, non-player characters, or other interesting bits that are easier shown than described are good candidates for art specs. If the writer has not included these in the draft of the text, the art director will have to generate them. The AD will then choose artists to execute the various pieces of art and send the art specs, perhaps including the relevant section of the manuscript. Of course, sometimes artists will only get the specs. In the earliest days of **Magic: The Gathering**, artists received only the card's name. They did not know what the card did, nor had seen the flavor text. This made for some spectacular interpretations of card titles. A particular game can have anywhere from zero to hundreds of pieces of art, but most will get by with spot art on a half to two-thirds of the pages of a book.

These days, some artists still work with traditional materials, while many have begun to generate some or all of their art using a computer. There is no inherent advantage to either decision, but each technique has different results that can be better suited to certain art pieces. If the art director wants to alter the work after the artist has completed it, he or she should be sure that the artist works in a way that will lend itself to that manipulation. If pre-press work is done on a computer, and the artists are using pen and ink, or other non-electronic materials, production artists will have to scan in the art, and make sure that it is readable by the layout program, as well as add any spot color or other enhancements to the original art.

If your game is a licensed product, you can often get access to art as a part of the license terms. This will mean that you will not have to seek out artists acceptable to your budget and the quality control of your licensor. It will also insure that your game has art whose style and subject matter is familiar to your fans. Access to art can also seriously shrink your art budget, sometimes enough to cover a large part of the advance you will need to pay to secure the license.

Barring word of mouth or a printed review, the first impression a customer will have of your game is its cover. Indeed, the cover will be smiling off the shelf at potential buyers, and though it should not be necessary to say so, ought to convey some idea as to what people can expect inside the book. Cover art can easily be the most difficult and expensive part of the art process, but a beautifully executed cover can often pay for itself through increased sales. Nevertheless, it is not always necessary to pay thousands of dollars for an original painting. Artists often sell only "first use" rights for their paintings and can therefore sell them again for use on other projects. These second run rights are much cheaper and artists are often eager to sell them again. Of course, the danger is that sharp-eyed fans will

recognize the art as a retread. However, a good art director and a large collection of older paperback books from your game's genre is often a treasure trove of good ideas for second rights covers. In any case, make sure your cover is attractive and representative. If customers do not pick it up to look at it, they are unlikely to buy it.

However, the actual painting on the cover is not the only issue. The titles on the cover, which should include the game line's title and the book's title at a minimum, should be readable and representative. Some thought should also be given to the way the games will be displayed on the store shelves. If the games will be displayed on cascade racks, putting the titles on the top will maximize their visibility. Recognizing that many store managers are overlapping books on a single shelf, some designers are beginning to print the titles on the left side of the cover, so that overlapping covers will conceal no part of the title.

Though it is not often thought of as "art," a book's layout frequently contributes to its overall beauty and ease of use. Layout, the way the text and art is arrayed on the page, is the responsible of the production artists, and they will have many tiny but important decisions to make. The fact that the New York Times is immediately distinguishable from the Wall Street Journal, or *GURPS*' style is different from that of *7th Sea* is due in large part to layout. The design of the book affects the size and number of art pieces a game can have, as well as the number of words that will fit on the page. Other layout issues include the size and type style of chapter titles and sub-headings, in addition to the question of page margins and the possibility of borders.

Here's an interesting aside about game art: Since artists usually retain the right to the actual physical art, they are often willing to sell them to fans of the game. This is true not only of internal spot art for RPGs, but also for cover art, and in most cases, CCG art. Most interior RPG art is done at roughly the scale at which it is reproduced, but covers and CCG pieces can be almost any size. Unfortunately, the price also varies widely-from $10 to $1000's. Some well-known RPG artists regularly auction original art on eBay, or sell it through their own websites. Those artists who go to conventions usually have pieces to sell, or accept commissions on custom pieces. For the collector on a budget, lithographs or other prints of an artist's most famous works are often available at conventions for far less than original pieces. Collecting original game art is a good way to demonstrate your appreciation of a particular game, support the artists who help to create it, and decorate your apartment with some genuinely classy items.

Game art is one of the most overlooked and yet most potentially advantageous parts of a game design. It can attract or repel potential customers, and can make the game easier or harder to play. Excellent game art is recognized by the Academy of Adventure Gaming Arts & Design with through the Origins Awards in the categories of Best Graphic Presentation of a Board Game, Best Graphic Presentation of a Card Game or Expansion, and Best Graphic Presentation of a Roleplaying Game, Adventure, or Supplement. Recent winners include Timbuk II's *Wadjet*, and Steve Jackson Games' own *In Nomine*. A fine art, indeed.

Pyramid Review

Aurora Australis (for Trinity)

Published by [White Wolf Game Studio](#)

Written by James Kiley and Scott Nimmo with Bruce Baugh

144 pages, $19.95

Aurora Australis is the fifth in a series of supplements detailing one of Psi Orders
of the science fiction roleplaying game *Trinity*. It's also the first one published
under the ArtHaus, White Wolf's imprint for games whose sales are good enough
to escape the axe, but not good enough to warrant more than a few products a year. In addition, *Aurora Australis* is
the last *Trinity* supplement developed under Andrew Bates, who guided the line from its inception and has now left
White Wolf to pursue freelance projects of his own. Consequently, *Aurora Australis* is a transitional book for a game
line that failed to live up to the potential White Wolf placed in it two and a half years ago. It's also a good object lesson
on why this is the case.

To begin with, *Aurora Australis* is the first Psi Order sourcebook without a portion of its pages presented in full color.
For someone familiar with earlier supplements like myself, this was somewhat jarring. Admittedly, the *Trinity Players
Guide* preceded *Aurora Australis* down this path, but I couldn't help but be disappointed. As I understand it, the
inclusion of full color glossy pages made *Trinity* a very expensive line to produce. Given that it never proved as
popular as White Wolf had hoped, it's understandable that corners had to be cut somewhere to keep it viable even
under the ArtHaus imprint. Likewise, much of the interior art isn't of the same high quality as seen in previous
supplements -- further evidence of the diminished state of the game line.

Fortunately, the quality of the writing is up to the same high standards seen in other *Trinity* products. In fact, some of
it is very good indeed. Psi Order sourcebooks always consist of two broad sections. The first details the organization
and mission of one of the setting's psionic groups, in this case the psychokinetic Legions. The second section details
the region with which the Order is most strongly connected, which for the Legions is Australia and the South Pacific.
While I've always had some in-game qualms about this set-up, it does make for a wonderfully double-use sourcebook,
an approach I wouldn't mind seeing used in other game lines.

The Legions are the Aberrant-kicking warriors of the Trinity universe. Using their psychokinetic powers, they defend
humanity through martial prowess and feats of arms. The first section of the book provides information on the Order's
organization (including the various sub-Legions that comprise it), mission types, and relations with other Psi Orders.
As with past Psi Order books, *Aurora Australis* includes alternate psychokinetic powers to add further depth to
Legionnaires. I have a few small beefs with the material in this section (such as the odd rank titles for each of the
Legions), but overall it's a workmanlike handling of the material. I doubt either players or Storytellers will have much
to complain about here.

The second section details what the book calls "Austronesia," that is Australia and portion of the South Pacific. To my
mind, this portion of the book is much more interesting (and useful) than the first section, but that may say more about
my own lack of knowledge about Down Under than anything else. This section provides a host of information on the
societies, cultures, and governments of the region. This includes details on corporations, political groups, even
musicians and artists. It's fairly comprehensive in its scope. With this book, Storytellers should have no problem
running a *Trinity* series in the area.

The book is rounded out with three shorter sections. The first of these, Storyteller Information, is far too short. It offers advice on running a Legions series, as well as some other tidbits about life in Austronesia (like weapons laws - a useful entry), and the Aberrants active in the region. The information on running a Legions series could have filled many more pages, especially given that the Legions organize themselves along military lines. Military roleplaying has to my mind always been a difficult genre to pull off properly. The advice in this section acknowledges it and offers some suggestions on contentious issues like chain of command and following orders, but it's hardly enough. I had really hoped we'd get a lot more than this section provides.

The second short section focuses on new weapons and equipment. I'm not a huge fan of such things. Thus, its brevity was actually a blessing from my perspective, although I suspect many players will be disappointed. The final section, "Dramatis Personae," is a collection of non-player character Legionnaires, many of whom are high-level commanders, including the Proxy in charge of all the Legions. This is rounded out with character templates, a couple of which offer an unusual perspective on the Psi Order. I'd have liked a few more low-level Legionnaires than provided -- if only as NPCs with whom players are likely to interact -- but it's a small complaint that many Storytellers will not share.

In the end, I like *Aurora Australis*, even if it lacks both the attention to detail seen in previous releases and the focus I'd always hoped *Trinity* would acquire. For example, there's an illustration of an Australian naval vessel bearing the name "H.M.A.S. Kelly," even though we're told Australia is now a republic. Likewise, the lack of focus is a much larger concern. There is such a wealth of material here, some of it covering so many different elements of the setting that it's hard to get a good grasp on what to do with it all. The brevity of the Storyteller's advice only compounds this problem. Without better guidance, I suspect many readers will be overwhelmed by it all -- much like *Trinity* as a line, which is a shame. Nevertheless, I hope *Aurora Australis* sells well enough to warrant future publications by ArtHaus. If not, *Trinity* may die as it lived: a game with great potential hampered by too diffuse a focus and not enough advice on how to use its many genuinely fascinating elements.

-- James David Maliszewski

by Rich Bowman

Art by [Keith Johnson](#)

You've conquered kingdoms in Yrth, stalked the night in *Vampire*, destroyed the Wyrm in *Werewolf*, surfed the Cybernetica and sailed the stars in *Traveller*. What haven't you done?

You haven't run your own campaign.

You've seen the maps your GM has drawn, read his histories and rampaged in his imagination. You've killed every monster and villain he's thrown at you, and even a couple times achieved godhood. Don't you think it's your turn to torment the players and wreak havoc in your favorite campaign world? Of course it is. Now how do you do it?

It's not so hard, actually. It just takes some time and perseverance, and though it may seem daunting at times, you'll find that it usually turns into a labor of love. To help you get started, I am providing a few pointers.

Organize Your Campaign

Be early to each of your games. This allows you to prepare the game site and get your notes and playing aids prepared.

Start the game on time. Even if some of your players are late, you need to set the example. If the players know that you will wait for them before starting, they will be more willing to be late; before you know it, your eight o'clock game is starting at ten.

Make a "mini-worldbook" outlining the political and social situations in your campaign, along with what brought it to this point and which tensions are getting ready to come to a head. Along with this, give a brief verbal history to refresh some points and lay plot lines for their characters to follow up on when the game starts.

Set up instructional encounters throughout your first session to ease your players into the mechanics of your world.

Consider using pre-generated characters for your first attempts. This will eliminate the potentially confusing pre game creation session where the players will be trying to guess your style and what skills and abilities they will need to survive your campaign. When you pre-generate, you are eliminating the need to waste your first evening in a paper shuffle. Don't worry about your group not knowing how to play

them, that is what the instructional encounters are good for.

Set Up a Playing Area

Where you decide to play your game has a big impact on the mood, atmosphere and the overall effectiveness of your campaign. You should select a place where you have control over background noise and distractions. There a number of options open to you, but only a few are mentioned here.

Your home. This is by far the best place to hold your game, as you have the most control over eliminating distractions. Make sure you turn off your TV, move the phone into another room, and make sure your stereo is playing nothing but atmosphere setting music. This is probably more of an option for single gamemasters, as spouses and significant others tend to frown on a room full of Roleplayers making a lot of noise, eating everything in the cupboards and keeping the kids up. Unless, of course, you can convince him or her to join in the fun!

A local game store. If the home option doesn't pan out, move on down to the second home for most gamers. Here you will often find tables set up for in-house games, and as long as you coordinate with the owners, you should have no problem (a table of gamers is more likely to buy products than browsers). It may also loosen your players up and get them into the game more if they know that their antics won't disturb other denizens of your home. They are surrounded by a distinctive gaming atmosphere and there are a myriad of source material on hand for the oddball questions and circumstances that crop up in every session. Unfortunately, there are some bad points. The background noise can be annoying, and there are always people hanging around the table asking questions and telling the players what they would do if they were playing. And, of course, there is the phone and ever present door chime that has a nasty habit of drawing away players' attention at crucial moments.

A players' house. Sure, this sounds like an outstanding choice, but in reality should only be used as a last resort. When you accept the hospitality of one of your players, he or she may come to expect a favored status in the game. Even if he or she doesn't, the other players may begin to suspect that you are fudging in their favor when a reaction roll comes up incredibly high or that really nasty NPC makes a critical miss.

Keep the Game Moving

You've seen it. Everything seems to be going great when you start to notice that you are more easily distracted than you were last week. The GM's plotline appears to be playing out and a new one doesn't seem to be in the works. Your fellow players start to become occasional no shows and the out-of-character banter becomes more frequent than the intense in-game poses. Before you know it, the game dies out.

You must keep this from happening to you. A few times are inevitable, but any more than that and you will cultivate a reputation of dull games and none but the most irritating and unwanted players will come to your table. Though thoughts of how to avoid this are daunting, it isn't actually that hard. The main thing is to keep in mind where you were going when you started, get there and set out for the next goal. To that end, try these suggestions:

Always have your scenarios planned out at least two sessions in advance. This way, when your troupe of over zealous adventurers surprise you by completing the current quest halfway through the night you won't be left trying to come up with spur of the moment encounters. You will be able to move right into the next plot and in doing so, keep alive the spirit that drove them to complete the first adventure early.

Keep your ideas fresh. For some people this isn't hard; the ideas pour from them so intensely you can almost see them squirming around in their head trying to get out. For the rest of us it isn't so simple. After a while they just seem to fizzle out. The solution? Read. Read anything: a book, magazine or short story. You'd be amazed at what stimulates your imagination!

Don't let your group get too big. The more you grow, the slower the action and the easier it is for the uninvolved players to get bored. Try to keep the game to a maximum of six or seven people. This tends to be the optimum number

to keep everyone's attention to the game and maximizing character interaction.

On the other hand, don't let your group get too small, either. You will always have players drop for one reason or another, but don't let that space remain empty for too long. When you first start, you may have to actively recruit players for that seat, but after a while (if you're good enough) you will generate a waiting list. However you have to do it, fill that seat! If you are still down a player when the next one leaves, that's pretty much it. You'll be fighting a downhill battle to keep your game alive.

Make sure that your players are game ready when they sit down at the table. If you're not using pre-generated characters, contact your players before the first game starts and set up times when you can sit down with them individually to supervise their character creation. This way, when the game starts, you will be able to move smoothly from the briefing to game play. Along these lines, have those on your waiting list provide you with a couple of characters that they are interested in playing, so when it comes time for them to join, they will have a better chance of integrating into the party.

Be Flexible

After every gaming session ask your players for input. Have them tell you at least one thing they liked about the session and one thing they disliked. This will give you an idea of what things you are doing right and those that you need to work on. Just remember to take all of these comments as suggestions and not personal attack or adulation. Don't let the likes go to your head nor the dislikes to your heart and you will be able to combine them into a workable solution.

Have Fun

Take any or all of the tools presented herein, tweak them to suit your situation, stir them up and serve your players and yourself an Enjoyable Role Playing Experience.

Art used by permission of Atlas Games

Unknown Armies, designed by Greg Stolze and John Tynes and published by Atlas Games, features a unique system of magick. Magick is practiced by adepts, each of which subscribes to a specific school of magick. Based on what school the adept belongs to he builds up "charges" in various ways -- members of the school of Pornomancy, for example, build up charges by engaging in ritualized sexual acts; members of the school of Dipsomancy, on the other hand, build up charges by being drunk. These charges (which can be classified as minor, significant, or major based on what the adept did to gain them) can then be expended to create magickal effects.

Magick is, above all, affected by three laws. First, the Law of Symbolic Tension demands that all magick be based on some form an underlying paradox. Hence the adepts of pornomancy gain charges by engaging in sexual acts, but can't gain pleasure in those acts. Adepts of dipsomancy, in contrast, surrender control over their bodies (by getting drunk) in order to gain control over the universe (in the form of magick).

Second, the Law of Transaction says that you can't get more out of magick than what you put in. Therefore you get minor effects from minor charges and major effects from major charges.

Third, the Law of Obedience states that adepts can only subscribe to a single school of magick. The schools are mutually exclusive, despite all being based on the same underlying truth, because they each involved interpreting that truth in different ways.

Each school is possessed of standardized rituals which can be cast fairly automatically and also random, improvised magick - which is more difficult and less powerful. All magick cast within a specific school, however, must be based on the principles of the school.

This article details a new school of magick for *Unknown Armies*, Emotiomancy. It uses the same format as the schools described in the main rulebook.

Emotiomancy (Emotion-Based Magick)

Emotions are the primal essence of humanity. Thoughts may define us, but it is emotions which make us what we are. They are a window into the soul and a way by which people may be manipulated and controlled. But emotions are also tools which may be used for good, they are -- after all -- the source of happiness and love and joy.

This is the domain of the emotiomancer, an expert at the unnatural control of man's emotions. By creating and harnessing emotions in others, the emotiomancer uses those emotions to create and manipulate others.

The advantage to this for many is that the emotiomancer possesses an immense understanding of human thought, emotion, and interaction. This type of emotiomancer is usually extremely popular with others and capable of getting almost anything they want. The drawback, however, is that the emotiomancer slowly ends up distancing themselves from others. Having to manipulate others in order to gain power which allows them to manipulate others, the emotiomancer slowly finds himself valuing others less. They run the risk of either disconnecting so completely with other people that they lose their ability to create charges, or to succumbing to dark impulses.

Other emotiomancers simply begin with dark impulses. They excel at creating fear and hatred; at controlling and creating the darker emotions. They indulge in their alienation from humanity. The emotiomancers who embrace the brighter side of life generally despise these "dark emotiomancers" for the bad reputation they give to their school of magick. Dark emotiomancers do have the advantage of being able to perform some forms of magick which other emotiomancers cannot.

Emotiomancy Blast Style: Only dark emotiomancy charges (see below) can be used to generate a blast effect, taking the form of an intense pain which rips through the victim's mind. Like the pornomantic blast, the damage which it does cannot be explained by medical science, but unlike the pornomantic blast the emotiomantic blast is always possessed of some secondary physical effect -- some form of stereotyped emotional reaction taken to the extreme. Examples would be flushes which are strong enough to burst blood vessels or nosebleeds for lust.

Stats

Generate a Minor Charge: Emotiomancers can generate two types of charges -- one from generating positive emotions, the other from generating negative emotions. In most cases these emotions can be used interchangeably, but in some cases powers are only available to those who have generated dark charges. To generate a minor charge the adept must create a situation which creates an emotional reaction in someone they do not know. The emotion must be the result of actions specifically planned by the adept in order to create the charge (so you can't make someone laugh at an impromptu joke and get a charge from it, although planning an elaborate situation in which to tell the joke would do it) and can't be beneficial to the adept (so you can't seduce someone and then have sex with them, although you could seduce them and then leave). This isn't really all that difficult (helping someone across the street or buying them flowers can often generate a positive emotion and a minor charge), but the fact that the emotion must be coldly and manipulatively created makes it difficult from the standpoint of the adept.

Generate a Significant Charge: Significant positive charges are formed by creating extremely positive emotional reactions in people who you do not know, following the same restrictions as those for minor charges. Significant negative charges, on the other hand, are made by creating extremely negative emotional reactions in people who are close to you and in such a way that they know you are responsible for them feeling that way (nor are they allowed to

know that it is merely in the interests of generating a charge for you; that "taints" the emotion through selflessness -- unless of course that makes them feel even worse about it).

Generate a Major Charge: Generating a major charge requires the character to create an emotional situation of a severity which will be remembered by the person effected for the rest of their lives. The adept himself will be forced to remember the event for the rest of their lives, as well. As with significant charges, positive charges must be generated with strangers while negative charges must be created by effecting those close to the adept.

Taboo: While it is generally easier for emotiomancers to gain charges than other schools, it is also easier for them to lose them: Emotiomancers can lose their existing charges if they do anything to ruin an "emotional moment." Specifically, if they interrupt a positive emotional moment (talking during the end of a romantic film or telling people to "get a room") they lose their negative charges. If they interrupt a negative emotion (by cheering somebody up or even saving someone from torture) they lose their positive charges. As a result of this dichotomy emotiomancers often find themselves treading a dangerous line -- people who are generally nice can create positive charges fairly easily, but will lose them if they stop other people from feeling bad; people who are nasty can generate negative charges easily, but they can never do anything even marginally positive.

Random Magick Domain: Emotiomancers control peoples emotions and, through them, their thoughts. They are the masters of manipulation. Their skills lie entirely within the realm of effecting how others think and feel.

Starting Charges: Newly created emotiomancers start with four minor charges.

Emotiomancy Minor Formula Spells

Charm

Cost: 1 minor charge
Effect: Using this spell allows the emotiomancer to subtly play upon another person's emotions, binding them to him. If a positive charge is used, whoever they are and whatever their normal reactions towards the emotiomancer would be, they will feel as if he were their best friend in the world. If a negative charge is used the spell makes them act in zombie-like obedience to the character (the advantage is that they are willing to do more; the drawback is that they won't be capable of much intelligent, complicated, or conceptually difficult action). The spell only lasts for a number of minutes equal to the emotiomancer's skill in magick. Afterwards the victim will remember everything which has transpired, although they may be unsure of the reason why it happened (members of the Occult Underground, of course, will immediately suspect magickal influences of some sort).

Minor Suggestion

Cost: 1 minor charge
Effect: This spell allows the emotiomancer to make a single suggestion to another person. The other person will be extremely receptive to the suggestion made by the emotiomancer and will act on it unless it is completely contrary to their normal behavior (loyal security guards won't abandon their posts, but might be willing to give someone a security tape even though it was against regulations). The victim cannot leave the presence of the emotiomancer or the spell will be broken. Afterwards the character won't remember the suggestion or the action taken.

Confuse

Cost: 1 or 2 minor charges
Effect: With a single charge cast of Confuse the emotiomancer can target a single person and batter them with conflicting emotions. The character will still be able to take actions, but will do so at a slower rate of speed (in combat conditions this translates to halving successful initiative checks and only allowing characters to take actions on every other turn). Using two charges allows the emotiomancer to target a group of up to five people. The spell lasts until the effected person or persons makes a successful Soul check at -15% (one check can be made every turn of combat or

once every minute).

Overwhelm

Cost: 2 minor positive charges or 1 minor negative charge
Effect: Overwhelm has a similar effect as Confuse, forcing emotions upon its victim. In this case only a single emotion - one of the emotiomancer's choosing (but consistent with the type of charge used) - is forced, and that one completely overwhelms the person's ability to take any action which isn't ordained by that emotion. This reaction will not always be what the emotiomancer may have expected or even wanted, but can be resisted with a successful Soul check at the time of casting. If the check fails the spell's effects will last about fifteen minutes.

Example: Jeffrey, an emotiomancer, has been confronted in a darkened alley by his arch-nemesis, Chameleon. Jeffrey uses two positive charges and casts Overwhelm on Chameleon, choosing to strike her with lust. She immediately drops the gun and goes off looking to satisfy her urges. Jeffrey, on the other hand, is more than a little insulted that she didn't like his looks.

Empathy

Cost: 1 minor charge
Effect: With this spell the emotiomancer can read the emotions of another person at the time of casting. With a successful Soul check the emotiomancer can also get a vague impression of what caused or is causing the emotion.

Numb

Cost: 1 minor charge
Effect: This spell will numb the emotions and feelings of anyone, including the emotiomancer himself. For the duration of the spell -- equal in minutes to the emotiomancer's skill -- the recipient will feel nothing, including physical pain (although the physical damage will still occur).

Affect Mind

Cost: 3 minor charges
Effect: This temporarily effects a person's mental abilities -- either raising or lowering it by an amount equal to half of the emotiomancer's magickal skill. The effect lasts for about ten minutes and isn't capable of granting knowledge which the recipient didn't possess before, only of improving the character's mental aptitude. The emotiomancer cannot use this spell on himself.

Emotiomancy Significant Formula Spells

Control

Cost: 2 significant charges
Effect: Control allows the emotiomancer to, effectively, completely enslave the target of the spell for a number of minutes equal to his Soul plus his magickal skill (although the victim can make a Soul check at -20% every five minutes). As with Minor Suggestion the person will still resist any commands completely repellent to his nature (so you can't have him kill his friend), but can follow multiple commands during the duration of the spell and can even leave the emotiomancer's presence to carry out the orders.

Significant Suggestion

Cost: 1 significant charge

Effect: Like Control, Significant Suggestion is a more powerful version of Minor Suggestion (as the name implies). Like Minor Suggestion, Significant Suggestion is only able to give a single suggestion to another person and that person must remain in the presence of the emotiomancer while carrying it out. However, a Significant Suggestion completely overrides a person's inhibitions - with it the emotiomancer can convince the person to do anything. If the action is contrary to the person's belief systems (i.e., something which wouldn't pass as a minor suggestion) the person gets a chance to resist, making a Soul check. If it's a particularly serious transgression (such as killing their own mother) the GM may modify this check in the victim's favor as he sees fit.

Warp

Cost: 3 significant charges
Effect: With Warp the emotiomancer temporarily simulates the effects of the House of Renunciation, absolutely switching the most important elements of the victim's personality to its polar opposite (so that a cruel person becomes kind, a person with a vendetta instead finds ways to help her former target). When the spell is first cast the person gets to make a Soul check to see if they are effected by the spell. If that fails the person can make an additional check every hour at -50% until they throw off the effect of the spell.

Phobia

Cost: 1 significant negative charge
Effect: With this spell the emotiomancer instills a great fear of a specific item, animal, individual, or situation in his target -- an intense phobia. Whenever the victim encounters the stimulus from that point forward they will suffer a paralyzing fear until the stimulus has passed. Whenever this phobia inflicts itself the victim can make a Soul check at -20% as they attempt to resist what they subconsciously realize is an unnatural impulse. If they are successful, the phobia will no longer effect them.

Fixation

Cost: 1 significant charge
Effect: In many ways the exact opposite of the emotiomancer's Phobia spell, Fixation allows him to specify a goal which the victim must attempt to fulfill. If the goal is something which is theoretically achievable (anything from "eat a hot dog" to "steal the Mona Lisa" would be acceptable) then there is no way for the victim to remove the spell's effects (without other unnatural influences) unless they succeed at achieving their goal. If the goal is something which is impossible ("eat all the hot dogs in the world" or "steal the Eiffel Tower") then the victim can make a Soul check at -20% once a day to overthrow the effects of the fixation (although they must attempt to fulfill their fixation up until that point). The fixation cannot be something which would be immediately deadly to the character ("throw yourself off a cliff" or "shoot yourself in the head") or completely alien to their belief system (you couldn't convince a nun to sleep with someone), but other than that things are wide open. Finally, the degree of intensity for the fixation depends on its complexity. If the fixation was to "eat a hot dog" then the person would probably immediately drop what they were doing and go out to find a hot dog. If, on the other hand, the fixation was to "steal the Mona Lisa" they wouldn't just walk into the Louvre and try to pick it up - they would be allowed to research and concoct a plan before proceeding. All of this is at the GM's discretion.

Empathic Connection

Cost: 1 significant charge
Effect: With this spell the emotiomancer can create an empathic connection between any two minds (not necessarily including his own). By expending minor charges he can add additional people to the link (one charge per person, up to a total of six). Anyone who is a member of the link will feel the emotions of the other people through the link, identifying who the emotion actually belongs to). Typically the nature of the link allows the recipient to distance themselves from the emotions of others, but for particularly intense feelings (such as the pain of being tortured or the heartache of seeing a loved one leave you) other members of the link must make a Soul check or be overwhelmed. At no point in time do other members of the link know what caused the emotion -- only the emotion itself. The link lasts

for twenty-four hours, but can be extended for another twenty-four hours if the emotiomancer expends a minor charge for every member of the link. This can be continued indefinitely.

Mind Link

Cost: 3 significant charges
Effect: A more powerful version of the Empathic Connection, the Mind Link allows the emotiomancer to connect the minds of up to six individuals (using the same procedures as for Empathic Connection, with each additional person in the link above two costing a single minor charge). In this case, however, the members of the link will be able to see, feel, and hear everything which the other members of the link experience by focusing on that individual. However, a person can only focus one such set of sensory inputs at once -- so if you're focused on someone else, you don't know what's happening to you. The emotiomancer, through his magickal training, can attempt to process multiple "feeds" at once -- including his own. To do so, he makes a Mind check with a -10% penalty for every additional link above two he attempts to process (so he would have a -10% penalty for three links at once -- including his own -- and a penalty of -40% if he attempted to process all six members of a link at once). If he succeeds, he successfully processes the multiple feed for a single combat round or for a minute, having to make the check again every minute or combat round after that point. If he fails, he is paralyzed for five combat rounds or minutes from mental overload.

Emotiomancy Major Effects

When you create a major emotiomancy effect you are toying with the basic elements of human existence as if they were mere whims. Emotiomancers are capable of driving men beyond the brink of insanity; causing massive, permanent shifts in personality; enslaving entire populations to their will (although the larger the population the less likely it will be a permanent effect); or even fundamentally altering the emotional responses of people (instead of just polarizing their compulsions, for example, you could have people hate those they have always loved and love those they have always hated). In short, the emotions and thoughts of man are your playthings and you are capable of doing anything with them you wish.

Pyramid Review

Hârnmaster: Barbarians

Published by [Columbia Games](#)

96 Pages on 3 ring-binder format cardstock, $29.98

Hârn, for those not in the know, is a generic fantasy setting. In fact, it might be called *the* generic fantasy setting since it was one of the first to be published and succeed purely on the strength of the background and without being tied to any particular game system. Hârn is a large island, divided up into several kingdoms, with a feel that can best be described as "low fantasy." Magic exists but is rare and frightening to most people. The day to day workings of the world, in terms of how many peasants are out in the fields to support the proud knight on his horse, and how the King is collecting the taxes to support his armies of bureaucrats, are worked out with a dedication to detail enough to satisfy the most anal-retentive realist GM. Another selling factor is that Columbia has decided not to advance "official" Harnic history beyond the "current" date, so new releases will expand on but not invalidate older ones.

Now, despite the fact that you can use Hârn with any game system (a particularly fine adaptation to *GURPS*, written not-at-all-coincidentally by me can be found in the archives.) it does have its own games system: *Hârnmaster*. A couple of years back we saw a new edition of this game, and on the coattails of that release Columbia has been rewriting and re-releasing the core books of the system and re-arranging a lot of the background material as well. In the wake of *Hârnmaster: Magic* and *Hârnmaster: Religion*, we now get *Barbarians*.

The half-a-dozen "civilized" human kingdoms on the island not only have to share it with the dwarven and elven kingdoms but also with eighteen "barbarian" nations. These people live in the forests, wastes and wildlands between the clearings of the feudal nations, and on some of the many smaller islands that surround the main island of Hârn itself. They are nomadic and technologically primitive compared with their more settled neighbors, but they are a diverse and fascinating bunch, each with their own history, mythology and culture, all of which are detailed extensively here. The book gives you a brief generic introduction to adventuring among the barbarian tribes and then goes on to detail each tribe, with descriptions ranging from a couple of pages to half a dozen. They range from the tiny and degraded Kabloqui tribe to the mighty Kubora who have conquered one of the "civilized" nations in the past (and threaten to do it again if they ever manage to unite), and from the pacifist Bujoc to the berserker Tulwyn tribe. Here you can find out which tribes are matriarchal and which regard women as mere animals, which prefers to bring their foes down with poisoned arrows from ambush and which prefers to charge forward screaming like madmen and wearing no armor. You get details of tribal taboos, myths and legends, outlines of relationships with "civilized" people and the wars each tribe has to fight with the inhuman Gargun.

Much of this material has appeared before in the Kingdom modules that detail the feudal lands of Hârn. There is also a lot of new material; the information in the introduction (which gives overall details of how the barbarians share the land with their neighbors), how the barbarians survive by hunting and gathering, how to generate barbarian characters for *Hârnmaster*, some suggestions for campaigns set among the tribes, and overall details of their religious practices. In addition, for each tribe there is a list of "invocations" that their shamans can perform; these are compatible with the material in *Hârnmaster: Religion*. Since the Kingdom modules are in the process of being re-arranged and re-released this is certainly the only place that a newcomer to Hârn can get hold of this material and I think it is also worthwhile for the long-term Hârnic enthusiast, given the extra material and the improvement on the quality of printing and presentation from the earlier editions.

My only criticisms are that I would have liked to see the addition of "adventure seeds" for each culture. Something like this is attempted very briefly in the introduction, but I would have preferred to see a paragraph or so added to the individual tribe outlines, describing perhaps two ways of using the tribe in an adventure -- one for players cast as tribe

members and one using the tribe as NPC encounters for a "civilized" party. Columbia has done this sort of thing before, most successfully in their "Common Knowledge" sequence of outline adventures, which they will hopefully also get around to making more available to an admiring public.

Pyramid Review

Shadow War (for Kindred of the East)

Published by [White Wolf Publishing](#)

Written by Edward MacGregor and Bryant Durrell

104 Pages, $15.95

Shadow War, White Wolf's third supplement for the *Kindred of the East* offshoot of *Vampire: the Masquerade*, suffers from a sort of literary schizophrenia. Buying it was really a leap of faith, because I had no idea what I was going to get. Reading the back cover gave me the impression that I was purchasing a strange hybrid of *World of Darkness: Combat*, *California by Night*, and *Kuei-jin Politics for Dummies*.

The fairly typical "How to use this book" introduction, with its chapter by chapter summary was, thankfully, quick to address this problem. The first three chapters of *Shadow War* cover inter-Cathayan warfare, including both the formal wars waged by elders against each other, and the "Underground War" waged by younger Kuei-Jin (the Bamboo Princes) against the ruling Mandarins. Chapters four and five detail "Scarlet Screens" (mortal fronts for Kuei-Jin) and Kuei-Jin activity in California respectively. Unfortunately, little effort has been made to incorporate the final two chapters into the theme of the book as a whole, and they seem tacked on to the end more because they have nowhere better to be than because they really belong here.

Chapter one, Twilight War, details formal, non-lethal conflict between a pair of Kuei-Jin. The first half of the chapter is history, fleshing out existing cosmology and highlighting conflict between Wan Xian. While this is interesting, it is horribly over-written, and not all that useful. The second part contains a surprisingly short section on how one actually conducts a Twilight War, including a region by region breakdown of the details. This section is more useful than the preceding one, but very short. It should have been given more space, perhaps at the expense of the history section.

Chapter two deals with more serious conflicts: Midnight Wars. This chapter is interesting mostly for its flavor text, which is excellent. The section on the (lowercase r) rituals preceding a Midnight War is too long and fairly boring (these particular rituals being very similar to both Twilight War rituals and rituals from other books in the line), and the section on the various tactics involved isn't much better, offering little in the way of innovative or even neat tricks of warfare. Still, this chapter is a better read than the first.

Chapter three ("Underground War") looks at the conflicts between the young and old of Kuei-Jin society, and specifically at the "Bamboo Princes;" a society of Running Monkeys (young Kuei-Jin) trying to pull Cathayan society, kicking and screaming if necessary, into the 21st century. This is probably the best chapter in the book, as the writing is generally better (and the vignettes continue to be excellent), and the material more immediately applicable to a "basic" Kindred of the East campaign. Of particular note is a (mechanic-less) section on maximizing the potential of low-powered disciplines (including such gems as detaching an arm, Level One Flesh Shintai, and leaving it with a grenade in the trunk of an Mandarin's car). Again, though, this section is painfully short (covering less than two pages).

Chapter four is on Kuei-Jin mortal ties, known as Scarlet Screens. This chapter, unfortunately, is little more than a regurgitation of any one of the *Year of the Ally* books, with a slight, and I mean very slight, eastern tinge. And the promised section on incorporating Scarlet Screens into war doesn't make an appearance. This being said, the material is generally good, and a Storyteller who doesn't own any of the Year of the Ally books will find this chapter fairly useful.

Chapter five ("Crimson War") details the Kuei-Jin "Great Leap Outwards" into California. As a whole, this chapter will be of little use to most *KoE* Storytellers, except as a possible plot hook, but does have the potential to add another level of conflict to an existing World of Darkness campaign set in San Francisco or Los Angeles (there is even a section on how various other Prodigals are affected by the move, although it is well hidden in a discussion of the Spirit Realms). This chapter also contains a section on Kuei-Jin activity elsewhere in the world which could be of some use. For some reason, though, there is no mention of Africa in this section.

Content aside, *Shadow War* is a high quality production, even for White Wolf. The art, while sparse, is good, and the editing is excellent. The layout flaws which have plagued the company in recent times don't make an appearance, with one or two minor exceptions. The writing is also generally reasonable (with the exception of the aforementioned problem of over-writing), and the vignettes in this book are excellent reads.

There's a lot of good material in *Shadow War*, but it is cleverly hidden amidst loads of mostly useless information. It's not a bad buy, per se, but be prepared to spend a bit of time mining it for the good stuff hidden within.

-- Ryan Elias

Pyramid Pick

Slavers (for AD&D)

Published by Wizards of the Coast

Written by Sean K Reynolds & Chris Pramas

128 pages, $18.95

One of my fondest role-playing memories is playing the original AD&D *Slavelords* series of modules (A1-A4) with my brother as DM. It was during this campaign that my all-time favorite character, a Halfling thief named Joshua Lyracon, came into his own. With that campaign still in my memory (and the original modules safely "borrowed" from my brother and in my bookshelf), I was thrilled when I recently went to my comic book store and found one of TSR's new releases: *Slavers*.

Strangely enough, *Slavers* in not part of TSR's Silver Anniversary Return to . . . line, even though the Slavelords series, originally published in 1980-81, certainly satisfies their criteria of being part of the shared history of many long-time D&D players. It is, however, better than the aforementioned "nostalgia" products that I have seen.

Slavers is a **World of Greyhawk** campaign adventure for 4th to 5th level characters, although adjusting the difficulty level requires little additional work. As with TSR's other nostalgia products, *Slavers* is fully self-contained; familiarity with the old modules is not necessary to fully enjoy or utilize *Slavers*. However, the new adventure *is* full of references to the originals, including locations, events and NPCs, making it a lot more enjoyable for fans of the classic modules.

Slavers is set ten years after the Slavelords' city of Suderham was consumed by a volcano in the climax of *A4: In the Dungeons of the Slavelords*. After a decade of peace the trademark yellow sails of the Slavelords' ships have returned to the Wild Coast and the Pomarj in the World of Greyhawk. Led by a remnant of the original Slavelords, the Slavers are back in force, along with a staggering number of allies, potential allies and even enemies.

Figuring out what the new plot involving the Slavelords *is* will take the reader a bit of work. This is largely because the story is extremely flexible. *Slavers* is a detailed and imaginative book of locations and characters, loosely tied together by several different antagonists and their agendas. The first chapter, entitled "Dungeon Master's Notes," provides a "Suggested Adventure Outline" which is quite useful if the DM wants a more straightforward, point-A-to-point-B adventure. But with preparation (and a healthy supply of sticky notes) a DM can let the players call the shots about where they go and what parts of the conspiracy they uncover. The players can even go off on tangents that have little or nothing to do with the overall plot, a fact that can be easily justified as the Slavelords' manipulations to divert attention from their operations.

In the "official" history, three Slavelords and at least two of their lieutenants survived the original story line. The high priest, the half-orc assassin and the evil monk from *In the Dungeons of the Slavelords* have rejoined a decade after their defeat and have reorganized the Slavers. While the half-orc has become the warlord of a massive humanoid army along the Wild Coast, the monk has organized pirates in Woolly Bay and the priest has begun to spread his Earth Dragon Cult throughout the region. Meanwhile, the Slavers' disguised ships kidnap people throughout the waterways in the vicinity of Greyhawk, either selling them to the humanoids or other evil humans or brainwashing them with drugs and priestly magic to create a slave army.

The Slavers maintain several outposts throughout the region, several of which the adventurers must discover and

eliminate in order to uncover the underlying plot. Eventually the characters should find clues to the location of the new Slavelords' secret base of operations, at which time they will (hopefully) act accordingly. They will, however, have to cross a vast region controlled by a humanoid empire to get there. In the meantime they will not only face Slavers and the humanoids but also pirates, city guardsmen, corrupt (or misguided) politicians, the militaries of Greyhawk and other nations and even other adventurers.

Slavers is a far cry from the simple dungeon crawl of the original adventures, although that element is certainly present for players and DMs who want it. In fact, several of the minor Slaver bases are much like the Undercity and Stockade from *A1* and *A2*. However, much of the action in *Slavers* involves overland travel, city and town adventures, political intrigue and quite a lot of ocean-going adventure and ship-to-ship combat and boarding actions (a well-written abbreviated version of the rules from *Of Ships and the Sea* is provided with *Slavers*, but that supplement is still recommended). While there is plenty of action to go around, not all of the scenarios are combat oriented. In fact, there is a wonderful suggested encounter where possession of a captured slave ship will result in the ship getting impounded and the PCs being arrested and conscripted into a city's militia as penance for their "crime." The group's hackmasters should love that!

One of the more interesting NPCs from the story is the evil Elf Markessa. Fans may remember her as the fighter/magic user in charge of the operation in *A2: Secret of the Slaver's Stockade*. Markessa was a Dr. Moreau sort of wacko who conducted foul experiments with cosmetic surgery and shape-changing, producing hideous abominations and a few successful enhanced beings. Slavers takes her story a step further. Markessa has spent the intervening years perfecting her craft, especially with regard to her pet project, creating brainwashed duplicates of herself from other Elven women -— usually against their will. Several of these duplicates —- Markessa the Black, Markessa the Gold, etc. —- run some of the Slavers' minor operations.

The structure of *Slavers* could not be more different from its predecessors. Where the tournament design of the original series herded players around even more blatantly than other *D&D* modules of the era (amazingly enough), *Slavers* does the opposite. Rather than set a beginning and an end with a few places to stop in between, *Slavers* is an entire campaign setting. There are nearly a dozen different suggestions for how to get the players initially involved in the story, none of which include plopping them down on the steps of a ruined temple, pointing them at the doors and commanding, "Hack!" as it effectively did in A1. In fact, some of the suggested beginnings are so seemingly unrelated to the larger picture that a good DM could spring this adventure on his or her players without them realizing who the ultimate antagonists are until they are fully embroiled in the plot.

Each chapter also includes a sizable section of "further adventures," adventure seeds that will allow a creative DM to make the campaign as large as he/she could possibly want. There are even a number of well-developed connections and crossovers to other *Greyhawk* modules, including *The Star Cairns* and the classic *Ghost Tower of Inverness*.

Slavers is a thorough campaign supplement, providing detailed information on the World of Greyhawk's Pomarj and Wild Coast regions. If you play in Greyhawk this is a wonderful thing, but it can prove cumbersome if you intend to work *Slavers* into a different campaign world. However, the cities and locations of *Slavers* are rich and well described, providing plenty of fodder to fill out your own world, if you are willing to do the work.

A common complaint about the other nostalgia modules from Wizards of the Coast has been the ratio of their cost to their content. At $12.95 for 64 pages each, the *White Plume Mountain* and *Keep on the Borderlands Return to . . .* books weren't a lot of bang for the buck. This is not a problem with *Slavers*. Not only do you get 128 pages for $18.95, those 128 pages are dense. The publishers used what appears to be a 9-point font (rather than the apparent 10-point for *RTWPM*), meaning significantly more words per page. The art is kept to a relative minimum, leaving more room for text, but when they use artwork, they use it well. Illustrations consistently reflect the text with impressive accuracy. Most of the pictures are those of the characters and locations players are likely to see, and they are all very well drawn. This is certainly a welcome contrast to the art from the original series, if you can remember how bad some of that was.

If *Slavers* has a weakness, it is an organizational one. The structure of the book is mostly pretty good, divided as it is into sections related to different locations in the region. However, there is no master list of antagonists, nor is there an index of any sort. As a consequence, finding the stats for a specific Slavelord -- Markessa, for instance -- is an

annoying exercise in hunting and gathering, further complicated by the fact that there are some half a dozen separate "Markessas" in the book. However, if you buy the module with the intention of converting it to a different system, as I did, you will be transferring all such information to separate sheets anyway, so this shouldn't be a huge problem. If you want to run the module as is, I recommend using brightly colored sticky notes to mark key locations in the book as well as copious notes.

All in all, *Slavers* is an exceedingly well-made gaming product. If you want to pick up an adventure to slap together for your group next weekend, *Slavers* is not your best bet -- you'll only make the rest of your week a living nightmare. But if you want a wealth of information about establishing or expanding a long-term campaign, and are willing to spend some time familiarizing yourself with it, this book is a treasure trove.

In fact, *Slavers* makes me wish my brother still Dungeon Mastered. I feel the need to bring Joshua out of retirement.

--Robert Neal Byles

That Sinking Feeling: Atlantis Lost and Found

"What lands may have been thickly populated for untold ages, and subsequently have disappeared and left no sign above the waters, it is of course impossible for us to say; but unless we are to make the wholly unjustifiable assumption that no dry land rose elsewhere when our present dry land sank, there must be half-a-dozen Atlantises beneath the waves of the various oceans of the world."
-- T. H. Huxley, *Methods and Results of Ethnology* (1865)

Boy, you lose one measly continent and people just won't let you forget about it. Ever since 355 B.C. (or 1450 or 8498 or 9564 or 10,540 or 800,000 B.C.), people have been dredging up Atlantis from somewhere in the vasty deep and making it jump through romantic or philosophical or political hoops. No wonder it's turned kind of mean. And since it's the creepy, fascist, decadent, racist Atlantis deserving of its destruction by the gods that makes for better roleplaying material, that's the kind of Atlantis we'll go fishing for today through the many and multifarious Atlantises caught in the loosely-rigged nets of mysticism and dog-scholarship. Dive right in, the water's fine.

"This power came forth out of the Atlantic Sea, for in those days, the sea was navigable; and there was an island situated in front of the straits which you call the Pillars of Herakles; the island was larger than Libya and Asia together, and was the way to other islands. . . Now in this island of Atlantis there was a great and wonderful empire which had rule over the whole island and several others. . . "
-- Plato, *Timaios,* 24D

It shouldn't surprise anyone that Atlantis gets so mean, given that it was the brainchild of Plato, godfather of fascism. The *Timaios* and *Kritias,* the dialogues in which Plato told the story of Atlantis, serve a larger role as illustrations of the failure of democracy and the need for pure, ordered societies. (In fact, Atlantis' hubristic attempt to conquer the world is stopped only by a superior fascist state, Plato's idealized Republic of Athens.) Plato also wound up, somehow, as one of the fathers of Western mysticism thanks to his dismissal of the connection between the real and the perceived -- this comes back into the Atlantis legend sooner than the fascism does, in fact. It's pretty clear to anyone who's read Plato that he made the whole story up; the combination of the framing sequence of "Egyptian records" about a land "beyond the Pillars of Herakles" was the equivalent of "a long time ago in a galaxy far, far away" to Classical Greek readers.

Some very ingenious people have tried to claim that Plato got Atlantis from real Egyptian records of Minoan Crete (which didn't sink) or Thera (which blew up and never had an empire), neither of which are beyond the Pillars of Herakles -- nor did the Egyptians have any records of either catastrophe, as far as we know. For coverage of these clever folks (as well as a myriad of others proposing Atlantises from Greenland to Nigeria to South Africa to Ceylon), it's well worth reading Richard Ellis' *Imagining Atlantis* and L. Sprague de Camp's *Lost Continents.* It's possible that Plato took the island from Homer's Ogygia or Schaeria, and the germ of the "sunken city" trope from the Greek city of Helike, which sank into the Gulf of Corinth twenty years before he wrote the *Timaios,* and the annihilating war from the catastrophe of the Peloponnesian War (during which a wave smashed up an Athenian fortress on the island of Atalantë). But it's most likely that he made it up, just like he made up the floating sky-islands in the *Phaidon,* where giants lived.

"At bottom every German has one foot in Atlantis, where he seeks a better Fatherland and a better patrimony. This double nature of the Germans, this faculty they have of splitting their personality which enables them to live in the real world and at the same time to project themselves into an imaginary world, is especially noticeable in Hitler and provides the key to his magical socialism."
-- Hermann Rauschning, *Conversations With Hitler*

But when you combine giants, protofascism, and Atlantis, you start cranking out Theosophy, and that's just what H.P. Blavatsky and her ilk did. Descended from the oviparous Third Race, the Lemurians, the Theosophical Atlanteans were just like people, only giants. (Heretically, Rudolf Steiner's Atlanteans could only learn by eidetic memory rather than true understanding.) They went through seven "subraces" from the black and "childlike" Rmoahals through the warlike Turanians, calving off the Aryans (true humanity) right about the fourth subrace. This gumbo led to a lot of

people finding the home of the Aryan race and Atlantis in the same place, from Mongolia (identified by the astronomer Jean Sylvain Bailly in 1779) to Spitsbergen (also identified by Bailly, hedging his bets). Karl Georg Zschaetzch, in his 1922 *Atlantis: Original Homeland of the Aryans,* made it explicit with his theory that Atlantis was sunk by a comet after its natives had mingled their blood with inferior slaves. (He also claimed to be descended from Zeus, spelled "Zschaetzsch" in the original Atlantean.) The engineer Otto Muck (inventor of the U-Boat snorkel and part of von Braun's V-2 team at Peenemünde) proposed a similar asteroid impact off Puerto Rico in 8498 B.C. vaporizing a floating continent in *The Secret of Atlantis.* Muck drew much of his supporting evidence from an oceanographic expedition under Dr. Albert Merz, which gathered data in 1925-1927 during the voyage of the (ahem) *Meteor* in the South Atlantic. Speaking of coincidental naming and Germans in the South Atlantic, the cruiser *Atlantis* (full of Professor Muck's Atlantean secret technology, no doubt) raided Allied commerce throughout the Antarctic seas in 1939-1941 (resupplying the Antarctic Space Nazi airfields in Neuschwabenland -- another Atlantis, by the by) until she was sunk on November 22, 1941.

"In our days there can no main or other island be found to be judged to be parcel of this Atlantis, than those western islands, which bear now the name of America."
-- Sir Humphrey Gilbert and George Gascoigne, *A Course of Discoverie For A New Passage To Cathay* (1576)

That, of course, was because the Germans had tangled with the true Atlantis, which is, of course, America. On the other hand, in 1805 Sir Francis Wilford said that Atlantis was Britain -- but then he also said that Palestine was Britain. (In 1570, Jean de Serres claimed that Palestine was Atlantis.) William Blake split the difference and said that Atlantis was a spiritual country combining the best of both Albion and America. I've got to admit that if you're looking for a continent on the other side of the Pillars of Herakles, America is a good one, although its pestiferous failure to sink derails that theory. It didn't derail Elizabethan magus John Dee, who repeatedly referred to America as Atlantis (attempting an enchanted naming?), believing that Plato's city only sank in part of the continent.

Dee favored the Northwest Passage or the Verazzano Sea (the great inland sea from the Hudson River to California); others selected the West Indies, Mexico, the Yucatan, and so forth. (In *Atlantis in Wisconsin,* Frank Joseph puts it underneath Rock Lake in the Badger State.) I've covered the interest of Dee and Raleigh in America elsewhere, but it's interesting that in *The Tempest,* set on a magical island, Shakespeare specifically mentions Bermuda (an Atlantic island), dead Indians, a "brave new world" and a philosophical utopia, and completes it all by having the wizard duke Prospero (an echo of the sorceror-kings of Atlantis, as well as of Atlantis-hunter Dee) "drown" his book "deeper than ever did plummet sound," a clear echo of lost magical knowledge under water. Where Shakespeare alludes, of course, his would-be alter ego and conspiracy fave Sir Francis Bacon comes right out and tells the tale of a scientific utopia in the *New Atlantis,* which he had published in 1627, the year after his death. Unless, of course, he faked his death and snuck off to the old Atlantis, which he said was obviously America.

"This description suggests all the characteristics of an Atlantean city, with moats, tunnels, causeways, and unending lights. Whether the race now occupying them are descendants of a helot nation, aeons ago, ruled over by the ancient white kings and fair gods of old Brazil, or the posterity of the old Hy-Brazilian Atlanteans long gone savage. . . must for the time, remain a moot point."
-- Harold T. Wilkins, *Secret Cities of Old South America* (1952)

Or, it might have been one continent off: South America has been in the Atlantis running ever since Sebastian Münster labeled it "insula Atlantica" on his 1540 world map. Raleigh's El Dorado is an Atlantean holdover, of course, as are the various other lost cities (full of "white gods") spangled through the rain forest including Akakor of the six-fingered Nazis. These places' resolute refusal to sink into the ocean doesn't disqualify them, though. (In kind of an Atlantis-in-reverse, travelers since before Raleigh have placed phantom oceans in South America that vanish from maps to be replaced with land.) J.M. Allen's recent *Atlantis: the Andes Solution* announces that Atlantis is in the Bolivian altiplano, which is about as unsunken a continent as you can get. He announces that it lies beneath Lake Poopo, and drowned during a Noachian rainstorm, and that its refugees became the Aztecs and the Philistines -- even Bolivian Atlanteans turn out to be bad news, it seems.

"Indeed, given the various American Indian legends and images of the gods weeping for their 'sunken Red Land,' the multiple mythical references to space as a vast ocean, and numerous occult connections, it is likely that Mars was the

original 'island' of Atlantis that 'sank beneath the waves,' with the name later applied to any global catastrophe which followed on our own world."
-- Bruce Rux, *Architects of the Underworld*

The Philistines, of course, worshiped Dagon, the half-man, half-fish-god so beloved of H.P. Lovecraft and so reminiscent of all those merman type Atlantises from Aquaman to Arion to Prince Namor. (All of whom seem to have a real bone to pick with the "surface world" -- in an interesting echo of Platonic criticism of the superficial nature of modern man.) And we all know that half-fish gods are actually [Nommo aliens](#) from Sirius, right? Sirius must be Atlantis, then, unless it's Mars (which had a big flood, albeit some eons ago) or Venus (which, like El Dorado, used to have an imaginary ocean but lost it later). What we really learn from all this, then, is that Atlantis is everywhere (most likely hidden behind a primo Theosophist "vibrational barrier" or lurking beneath those all-concealing waves). And that it's really, really mean. Keep watching the seas!

Taking a Break from Saving the World

I feel sorry for the crew of the Enterprise. Ever since they moved to the big screen, they haven't had a vacation.

(And, really, I can be talking about either crew. . . though, since the original crew has had more movies so far, they're more of a case study.)

I mean, if you watch the *Star Trek* TV shows, you realize that, every once in a while, the crew gets to relax. Whether it's on a pleasure planet with a big fakey rabbit, or a return to Earth to chat with family after getting assimilated, there were many episodes where the stakes weren't that high, where the crew could talk with each other, and things were generally calm.

But the *Star Trek* movies were different. Once they moved to the big screen, suddenly everything became a big deal. Here's some statistics to think about if you're a member of the Enterprise crew, and you're in a movie:

- 33% of the time the Earth will be placed in immediate catastrophic peril.
- 33% of the time you will travel *through* time.
- 22% of the time the Enterprise will be destroyed.
- 55% of the time you will violate *direct* Federation orders, placing your career in danger.
- 22% of the time a member of the bridge crew will die.
- 11% of the time your life will be in the hands of Cameron from *Ferris Bueller's Day Off*.

We're talking cataclysmic events here!

Which, I believe, is one of the reasons the *Star Trek* movies (and, to a lesser extent, the novels) suffer compared to the series. There seems to be the impression (which may be correct) that, to justify the size and expense of a movie or novel, the story needs to be. . . well, Earth-shattering.

(Random thought: For those of you who collect the *Original Series* novels, or peruse the *Original Series* novel section of your Barnes & Nobles, notice how many of the blurbs at the top of the novel fit the pattern of "Blah blah blah blah interstellar war!" or something equally dramatic.)

The problem with Earth-shattering events is that, well, they get boring. The act of saving all of creation doesn't *mean* as much if you do it every week; downtime is important to show who you are when you're not a world-saver.

Which, a mere 376 words later, brings me to the point of this article: Downtime is important.

There are many game worlds where it's expected that PCs do the epic; super-heroic campaigns, high fantasy worlds, and space opera all expect PCs to do their part when it comes time to save the universe. But, really, if that's all you do, it can get old pretty fast.

If you're in an RPG campaign with humans or human-like beings, I recommend, as a player and a GM, that you take in-game breaks every so often. These are especially appropriate after big adventures; if you've spent a month saving the world, a session to take a breath and reflect is appropriate.

Gamemasters, if your players have spent five adventures keeping the Cube Cosmique out of the hands of Mr. Doom, an adventure where everyone goes to Disney World might be in order. If the last adventure culminated with the death of a major NPC (or PC!), an adventure dealing with the personal ramifications of that demise may make the death even more poignant. Inconsequential city festivals, "day in the life" adventures, surprise birthday parties, personal relationships: all of the things that break up the monotony of the daily grind can also break up an earth-shattering tedium.

Players, make sure your characters exist outside of world-saving entities. If your character wasn't saving the world,

what would s/he be *doing* with that day off? If you want to "relax" in-character, talk to your GM about what you'd want to do. . . mundane goals, interests, and subplots all make characters more *real*, and can help flesh out your alter-ego's personality.

The Empire Strikes Back is many people's favorite *Star Wars* movie; I suspect one of the reasons is because there isn't an earth-shattering plot. The Good Guys could very well fail, and it wouldn't mean the end of everything. (Heck, the Good Guys *did* very well fail.) My favorite comic issues tend to be the ones right after the epic storyline, where everyone's sitting around going, "Whew! The Eastern seaboard's safe; let's go get ice cream!" The quiet moments make the loud moments louder.

So the next time the red shirts beg for shore leave, consider letting them go for a while. The ones that survive will thank you.

-- Steven Marsh

Murphy's Rules

Dork Tower!

Dork Tower!

Down in the Digs

by Andrew Frades

Art by Rogerio Vilela and Philip Reed, and ArtToday

The war between the two celestial forces is a cold war of information and covert action. Boston, unlike Austin, is an excellent example of this move and counter move. So far the balance of power has been fairly even, though lately the efforts of the demons have begun to give them an advantage, and the angels are worried.

On the demonic side stands Japhet, an Impudite Captain of the War, and de-facto commander of the local demonic forces. Her role is that of Andrea Carnegie, an organized crime boss and consummate planner. She has unified her side in Boston and the surrounding suburbs and rules them with an iron fist. She has spent a great deal of time thinking and planning for the demise of both of Boston's protectors and fears a powerful heavenly response if the World Trade Center falls.

On the angelic side stand two stalwart guardians of Heaven: Rimmiel, A Seraph Master of Trade and Worded Senechal of the World Trade Center, and Zaccai, A Malakite Vassal of the Sword and protector of the children of Boston. The two angels communicate regularly though they rarely work in concert, having such different views on the War. It is through communication that the two delegate responsibilities based upon who is more capable of handling the response.

To this volatile celestial mix is added a new flavor, Pelon, A Calabite of Fire, who is following in the footsteps of his unknowing mentor, Furfur, the newly crowned Demon Prince of Hardcore (see *__Night Music__*). Pelon is not a Renegade, but is working without the knowledge of his Superior, or anyone else for that matter. The Calabite is fairly subtle and has spent some time assessing the situation in Boston. His plan is simple: cut off all of the traffic routes into the World Trade Center through a series of accidents, and then, when the Tether is weakened, cut the power and communication trunk that runs into Boston's south end. He hopes that this will shut down the flow of heavenly essence and collapse the Tether. He is probably correct.

Background Locations

The World Trade Center

The most active conference and convention center in North America is in Boston: The World Trade Center. The Center itself sits on a long pier on the waterfront that extends off of Boston's south side across from Logan International Airport. The Center is easy to get to from anywhere in the Boston area as it is just off of the Central Artery, I-93, and the Mass Pike, I-90.

The Center has achieved its number one status due to the work of one angel, Rimmiel, a Seraph of Trade. She took what was once just one of many trade centers and built it into a major force for trade in the area and across all of America. Besides being a convention center the building is also home to some of the best technology available for

high-speed money transactions and communication across the world. The Center has direct satellite and ground based communications access to hundreds of other sites and is a major player in the world economic community with billions of dollars flowing through its networks each year.

The importance of this site to world trade has allowed Marc to stabilize a Tether here and, in gratitude for her service, he awarded Rimmiel the duty of Senechal.

The "Big Dig"

Boston's Central Artery and Tunnel (C/AT) project is the largest, and most expensive, road construction project in the United States today. Consisting of the reconstruction of many miles of eleven story tall roadways along I-93 (north to south) in Boston and a three mile extension of I-90 (east to west); it is not surprising that the project is one hundred percent over the original projected budget. The price continues to skyrocket with little end in sight. It has caused no end to the traffic trouble into and out of the city, and is considered a public embarrassment. Many consider the "Big Dig" to be nothing but a very large hole that is designed to contain and destroy money a million dollars at a time. All this is all done without the designs of a single demon.

This has brought no shame to Japhet, the highest-ranking demon in the area. Instead it has brought nothing but praise for the wonderful backdrop of espionage, corruption, and intrigue that the demon has sponsored in the city without the loss of a single human life. Japhet is proud of the people of Boston.

South Station and Chinatown

South Station is one of two major public transit points in and around the city of Boston (the other being North Station). It is also one of the best ways to connect directly into Boston's south side via bus or by the T (Boston's system of trains that travel within the city and to many of the outlying suburbs).

The station itself is on the edge of Boston's Chinatown, which is small compared to those in other cities, but is still quite active. The district contains many of the stereotypical elements of any Chinatown. Unfortunately, this particular area can also be one of the most dangerous areas of Boston proper once the sun goes down.

The Ted Williams Tunnel

The tunnel, one of three that come across Boston's Inner Harbor, is the only one that leads directly from Logan International Airport to the south side. At one time it was only open to commercial traffic, but congestion in the city has caused the tunnel to be opened to all traffic during peak hours. The tunnel itself is over a mile long and has multiple lanes in each direction.

Saint Joseph's Church

Saint Joseph's in Boston's West End was intended to be a Unitarian church that was built to be a house of worship for the best and brightest of Boston society. This was not to be, as a rush of immigration into Boston from Ireland during the potato famine caused a massive explosion of population around the church and drove high society away. The Catholic Diocese of the time saw an opportunity and purchased the beautiful brick and stone building at a fraction of its cost, paying nearly $27,000 over one hundred and fifty years ago. The church is nestled in a square mile that contains not one but two hospitals, and has become a stabilizing influence in what could have been a bad part of town but is not. The ministry of the church has always been active in local projects and, following the lead of the Archdiocese of Boston, has become active in local politics as well. The saying that all politics is local was probably first said in Massachusetts, and the Catholic Church follows the edict well.

The church is also home to Zaccai, a Malakim of the Sword, in his role as one of the priests, Father Zachary Morrison. The Father is extremely active in many of the church's neighborhood programs, taking a special focus on the children. He is a powerful figure and symbol to the people of the area, who enjoy his strong countenance and unwavering smile.

The Father has also been seen to personally drive off any of a number of potential hazards to the area, including drug dealers, pimps, and other criminal elements. This is not to say that there is no crime in the West End, it is just understood that harming the children of Father Morrison is a bad idea.

Adventure Timeline

Monday 9 a.m. It all begins with a phone call

Arnold Becker, a foreman at the south side C/AT construction site, picks up the diagrams for the underground power grid in the new area of construction. He speaks with Martha Williams, one of the clerks, and signs for the copies of the city documents. These documents are actually forgeries planted by Pelon just over a week ago. He has been waiting for a call from Fredrick Sturgeon, another clerk, but one that he has bribed and threatened. Fredrick was instructed to call Pelon when copies of these particular documents leave the Department of Public Works.

Monday 10 a.m. Inciting a riot

After getting the call from Fredrick, Pelon leaves his small apartment outside the city to find some of Boston's less savory element. He travels to Chinatown and finds a gang of Asian-American youths. He gets them to agree to harass the users of South Station and begin to cut off traffic to the south side. In return, Pelon provides them with the information that when the power gets shut off the next morning, the security system at Kischel's (a local south side gem distributor) will shut down. Unfortunately for Pelon, one of the gang's youth is a Catholic and his family is a member of Saint Joseph's.

Monday 1 p.m. Seeing Father Morrison

Having had a change of heart, Tommy Tseng arrives at Saint Joseph's and visits with Father Morrison. He tells the Father everything that he knows about the gem merchant and the other planned activities of the gang. Zaccai plans on showing up at Kischel's gem distributors the next morning to have a little talk with the Chinatown youth.

Monday 10 p.m. A little sabotage goes a long way

Pelon uses his resonance to destroy the engine governor for the Ted Williams Tunnel ventilation system. He correctly assumes that the fan will spin out of control when the tunnel's carbon monoxide levels reach their highest, during rush hour. He knows that if this happens that the circulation system will overheat and shut down, causing the necessity of a tunnel closing.

Tuesday 1 a.m. Tying loose ends

Pelon travels to the home of Fredrick Sturgeon and ends the poor public servant's life. This creates a good-sized disturbance in the Symphony that could easily be noticed by wandering PCs.

Tuesday 7 a.m. The plan begins to come together

As rush hour reaches its peak, a number of the circulation fans for the Ted Williams Tunnel over-rotate, wrecking many sensitive mechanical systems. The tunnel is quickly shut down due to dangerous levels of monoxides and all traffic is diverted to other routes.

Tuesday 8 a.m. And then the lights go out

Arnold Becker orders digging around the south side C/AT construction site in an area reportedly free of underground power lines. This information, fed to him from false documents, is incorrect and a backhoe rips open one of the main

power lines into Boston's south side.

The power goes out in the World Trade Center, Kischel's gem distributors and many other businesses in the area. The backup power generators in the World Trade Center keep the Tether's business systems up for some time, but some key systems begin to shut down near the end of the two hours it takes Public Service to repair the power line.

Rimmiel is concerned and suspects a demonic plot to harm the Tether. She begins planning a response to her belief of Japhet involvement. Japhet is no happier than Rimmiel and is also suspicious of demonic involvement not her own.

At this time Japhet or Rimmiel will call in extra help from PC favored servitors, if they have not already.

Wednesday 3 p.m. It goes from bad to worse

Two tunnel repair workers are trapped when a support for one of the circulation fans breaks loose. The support was due to be replaced soon and the stress placed on it by the breakdown proved to be too much. The workers are trapped in an access shaft and repair work on the tunnel is halted until they can be freed. Since the tunnel is one of the major sites of traffic incoming to the south side, its long-term shutdown might pose a continued problem for the Tether. Agents of Rimmiel or Japhet (or both) might be sent to help the workers and reopen the tunnel.

Wednesday 5 p.m. But Pelon isn't done yet

Pelon, ever resourceful, has planned another problem for traffic trying to reach the south side. He has watched the C/AT workers park their construction vehicles at the I-93 site for some days. One particular vehicle, a tall crane truck, has been parked in the same place for many days, and Pelon takes a chance. By using his resonance to subtly destroy the hard pack clay in the ground at the sight, he hopes to remove any stability in the ground. When the many ton machine is parked on the now-unstable ground, Pelon's gamble pays off.

The crane slowly sinks into the ground and topples on the upper deck of I-93. The upper deck buckles, cutting off traffic on it (northbound) and on the lower deck (southbound) due to stress fractures. Traffic in this area is diverted, causing many generic traffic problems throughout the city as well as cutting off one of the major roads that is used as a connector for the south side.

The collapse causes a great deal of Symphonic disturbance that could easily be detected by any celestial within about a mile.

Thursday 8 a.m. Pelon blows up the T

Pelon has made a large explosive charge and gives it to one of his Chinatown youth to plant in the T station close to the Trade Center. This will avoid disturbance and frees him to be in other places. Because the charge will go off just prior to rush hour, Pelon hopes to cause a maximum of trouble for the city and the south side.

Thursday 12 a.m. Pelon sets an explosive in the hole dug by Arnold Becker's workers the day before. It is set to go off in two hours.

Sneaking in and carefully placing a prepared explosive to destroy the main electrical trunk to the Trade Center is Pelon's coup de grace. By depleting the Center's power backup the day before he hopes that they will have had no time to get them fully back online. He is correct.

Thursday 1 p.m. Pelon sabotages the satellite uplink on the roof of the World Trade Center.

Satellite uplinks are not as sensitive as many people think, but can fairly easily be rendered useless to those with the right skills. Pelon has these skills and has set up a number of tight beam broadcasters around the area to interfere with the satellite traffic. This quickly renders the financial data useless.

Thursday 1:15 p.m. Pelon stands in the World Trade Center parking lot and watches, waiting for the finale.

Pelon waits drinking whiskey from a bottle wrapped in a paper bag and sitting on a car. He will talk to any angels (or demons) that arrive, but will not tell them how to stop what is going to happen even if threatened. He knows he is about to succeed and there is little they can do to stop him.

Running Down in the Digs

The important thing to remember is that Rimmiel and Japhet have been enemies for so long that they simply assume that the other is maneuvering, and send in forces. Though Japhet does suspect some demonic involvement, either side will have difficulty believing that the other is not responsible, somehow. Evidence pointing away from their long-time enemies will not be ignored, just reinterpreted to seem as if the enemy is crafty and plotting, which they are. Alternately, Japhet may want to take down whoever is working in Boston without her permission, there is a chain of command, and she will see that it is followed. This is important to play up as it is unlikely that Pelon, despite being rather tough, could take on an entire group of celestials and win.

Another thing to remember is that the PCs should be troubleshooters from one side of The War and the other side has called in reinforcements as well. Though it might be interesting to run the adventure with a mixed party, it is unlikely that they would all be called in to work together with the rampant mistrust and scheming going on in Boston.

Involving Your Players

Down in the Digs

Angels of Marc might be called in to help defend the Tether either by Rimmiel or by Marc himself.

Demons might be called in to help Japhet figure out what exactly is going on and put an end to it. Japhet wants to deliver the final blow to the Tether and angel that have been a thorn in her side for quite some time and will tolerate no upstart taking out her enemy simply for his own gain.

Angels of David, Dominic, Laurence, or Michael could easily be called in to deal with the new force of demonic activity in the Boston. This works particularly well if the angels have already been set up as "heavenly troubleshooters."

Demons of Fire might be called to find Pelon, who has gone missing. After the events in the "Demon Prince of Rock and Roll" (see *Night Music*), Belial is taking no chances.

Angels serving the more peaceful Archangels could easily be drawn into the web of confusion surrounding Boston's Chinatown, and the corruption of its children. This works particularly well for servitors of Christopher or Yves.

Demons serving Fate, Drugs or the War might be called in to help Japhet's organization in any of its aspects, and become involved in the events of this adventure.

Angels of Animals might get involved in defense of the New England Aquarium, home to many fish and marine mammals. Though the Aquarium is not on the south side it is just across the inner harbor from the Trade Center and some of the damage to the power grid could easily spill over leading to the potential destruction of thousands of ocean dwelling animals.

Demons of the Game, Dark Humor, and Factions might become interested in whomever is causing this turmoil. The

Game might want to recruit them, while Dark Humor and Factions might just want to shake their hand.

Angels and Demons serving Lightning or Technology respectively could be sent to one of the nations most technologically advanced colleges, the Massachusetts Institute of Technology (MIT), and become involved from there.

Soldiers from either side might be working for either Zaccai or Japhet, and could easily become embroiled in the events surrounding the World Trade Center. This could also work for Celestials from either side who could be called in to help.

Agents of Heaven
The Major Players

RIMMIEL, SENESCHAL OF THE WORLD TRADE CENTER
Seraph Master of Trade

Corporeal Forces - 4	Strength 7	Agility 9
Ethereal Forces - 5	Intelligence 12	Precision 8
Celestial Forces - 5	Will 10	Perception 10

Vessel: Human/4 (adult female), Charisma +1

Role: Janine Mallory (Director of Operations/6, Status/6)

Skills: Computer Operation/3, Detect Lies/4, Dodge/3, Emote/3, Fast-Talk/6, Knowledge (Business/6, Finance/6), Languages (English/3, Finish/3, French/3, German/3, and Swedish/3), Savoir-Faire/4, Tracking/6 (Paper Trails)

Songs: Charm (Corporeal/3, Ethereal/3, Celestial/3), Harmony (Ethereal/4), Shields (Corporeal/2, Ethereal/4, Celestial/3), Tongues (Corporeal/5, Ethereal/3, Celestial/3)

Attunements: Divine Contract, Elohite of Trade, Master of Finances, Seraph of Trade

Rimmiel acts as the Director of Operations for the entire World Trade Center in Boston. She is a shrewd business woman and has led the center to be the most profitable and active of all the World Trade Centers in North America. She is a micro-manager and no one is surprised to see her involved in any aspect of the day to day business of the center. Her vessel is a handsome woman in her late thirties with short dark hair who is never seen out of her business attire.

She is, however, having a bit of trouble with the problems that have been caused by the local construction. She is in a quandary about what, exactly, to do. She suspects that the local heavy hitters from the other side, a demon of the War whom she has never met directly, is behind the power and communication outages, but she does not have any proof. Every solution that she has come up with has failed, and she knows that it is time to get some help before any permanent damage is done.

ZACCAI, MALAKITE VASSAL OF THE SWORD

Corporeal Forces - 4	Strength 10	Agility 6
Ethereal Forces - 2	Intelligence 5	Precision 3
Celestial Forces - 3	Will 5	Perception 7

Vessel: Human/2 (adult male)

Role: Zachary Morrison (Catholic Priest/4, Status/4)

Skills: Detect Lies/3, Dodge/2, Emote/4, Knowledge/4 (Boston), Large Weapon/2 (sword), Tactics/3, Throwing/2

Songs: Tongues (Corporeal/3)

Attunements: Malakite of the Sword, Vassal of the Sword

Artifacts: the crucifix sword (power +9, permanent Blade Blessing of Laurence and Scabbard Attunements, double the check digit for damage against creatures of evil)

Rite: Successfully defend an innocent person without the use of violence

Oaths: grant all requests for sanctuary, never surrender in a fight or allow yourself to be captured by the armies of Lucifer, defend the innocent, suffer no evil to live while it is your choice

Father Zachary Morrison is sixty years old and shows no sign of slowing despite his advancing age, wrinkles, and gray hair. He has been a staple of Saint Joseph's Church in Boston's West End for thirty years, and has earned a place of respect both within the church and within the surrounding community. He can often be seen on the athletic court that adjoins the neighboring youth house playing basketball, hopscotch, dodgeball, or just talking to the children. He has become rather fond of the children of the church and has correctly come to believe that they are the future. Many of the youth that the Father has worked with have gone on to further their education and become productive and successful members of society. Father Zachary is proud of each and every one of them, remembering each of their names and perhaps even a short story about their life years ago. He has been know to give sermons on Sunday, but usually defers this duty to younger members of the church staff preferring his time spent on other duties.

Zaccai is also the commander of the forces of God for the Boston area and he knows of most of the Soldiers and angels within his territory. As such, he is well aware of the activities of Julie Hamilton and often finds the time to seek her out and have a short chat. He would willingly help her with any problem she might encounter, especially if involved thwarting the plans of demons or helping the innocent youth of Boston.

Agents of Hell
The Major Players

JAPHET, IMPUDITE CAPTAIN OF THE WAR

Corporeal Forces - 3	Strength 4	Agility 8
Ethereal Forces - 4	Intelligence 8	Precision 8
Celestial Forces - 5	Will 12	Perception 8

Vessel: Human/4 (adult female), Sex Appeal +2

Role: Andrea Carnegie (Crime Lord/6, Status/5)

Skills: Computer Operation/4, Detect Lies/3, Dodge/6, Emote/3, Fast-Talk/6, Fighting/3, Knowledge (Boston/6, organized crime/6), Move Silently/4, Ranged Weapon/6 (pistol), Savoir-Faire/2

Songs: Acid/5, Projection (Corporeal/5), Thunder/5

Attunements: Art of Combat, Captain of the Infernal Armies, Impudite of the War, State of Ophis

Japhet has been active on the corporeal plane for some time and is the commander of all of Baal's armies in the Boston area. She is a competent servitor of the War and is every bit the demonic captain of the underworld with a tip of her shapely hat to the Lord of Lust.

Japhet is a bit worried about the recent events surrounding the World Trade Center. Though Rimmiel and Japhet have been adversaries for some years, Japhet is not behind the sabotage and this has the demon worried. She is certain that another demon is active in the area and has begun to work within the organizations of the police and the Underworld to find out who. So far she has had no luck and would be most appreciative to anyone who could point out the demon responsible. It does not look good for a demon at Japhet's level to be unaware of what is going on in her zone of command.

PELON, CALABITE OF FIRE

Corporeal Forces - 4	Strength 12	Agility 4

Ethereal Forces - 4   Intelligence 9   Precision 7

Celestial Forces - 4   Will 11   Perception 5

Vessel: Human/3 (adult male), Rat/1 (adult rat)

Skills: Chemistry/5, Computer Operation/3, Electronics/5, Engineering/5, Fast-Talk/3, Fighting/5, Lockpicking/4, Move Silently/5, Ranged Weapons/3 (Pistol)

Songs: Form (Ethereal/4, Celestial/5), Possession/5, Shields (Celestial/4)

Attunements: Calabite of Fire

Artifacts: Satan's Hammer (Colt .45, Corporeal Artifact/4)

Discord: Pallid/2

Pelon is actively seeking the word of sabotage. Unfortunately the word is already taken, so Pelon is working his way up in hopes of unseating the current holder. His vessel is that of an unremarkable man about thirty years old who is almost unnaturally pale and smells of decay. In order to hide his Discord, Pelon often dresses as a homeless man. In doing this he has learned of the added benefit of becoming one of society's invisible people; no one notices you and if they do they pay no attention to what you are doing. This is a valuable asset in the line of work that Pelon has chosen for himself.

Pelon has spent years learning how to get in and out of places, and has learned quite a few tricks to make things break in mundane fashion as well. He rarely causes large-scale destruction, but rather uses a tactic usually unexpected of a Calabim: subtlety. He likes to use large explosions in his finales, though. He uses his resonance at times but also enjoys setting up timers and explosives to break small pieces of equipment or short out vital wiring that snowballs into larger problems. Pelon loves to watch the little damage he causes ripple out and cause major destruction for which he is not directly responsible. Taking down the Tether at the World Trade Center is to be his crowning achievement where he shows the rest of the demons what a true Calabim is made of.

* * *

(Editor's note: In the "real world," information about the Boston World Trade Center is available via their website at http://www.wtcb.com Also available is a website about the Central Artery and Tunnel (C/AT), appropriately enough at http://www.bigdig.com .)

Horrors of the Z'Bri (for Tribe 8)

Published by [Dream Pod Nine](#)

Written by Zak Arnston, Joshua Mosqueira Asheim, Hilary Doda, Michael Lee, Andrew Lucas, Jason Prince, Lucien Soulban, Guy-Francis Vella, Marc-Alexandre Vezina, James Wyatt

128 pages

Horrors of the Z'Bri is a sourcebook for *Tribe 8*. This should tell you all you need to know.

If, however, you aren't familiar with *Tribe 8* (shame shame shame!), you might need some more prompting on the book.

The Z'Bri are the third part of the triumvirate of groups around which *Tribe 8* is based. They are the monsters of the *Tribe 8* setting. They don't eat flesh or drink blood (well, not all of them). They're extra-dimension entities of spirit who came to Earth to experience the pleasures of the flesh. Pleasure, of course, is such a variable term.

The Z'Bri came to Earth and formed what were essentially cults around themselves; their dominion over the planet (well, at least the small chunk of it we're aware of) was pretty much complete, with the remaining few remnants of Humanity herded into camps. Humanity was freed by the arrival of the Fatimas, avatars of the Goddess.

They went on to lead the seven tribes, the second leg of the game's setting. The first (and most central to the game) is the Fallen, those tribals who have rejected the rule of the Fatimas (or been rejected by them for one reason or another).

The horror aspect of the Z'Bri comes from one of those quibbling psychological aspects of humanity, in that many of us are uncomfortable (to some degree) with our own bodies. The Z'Bri tend to view the flesh as part artistic medium, part fabric. Since they were originally beings of pure spirit, physical sensation (in one way or another) is an addiction for them.

Think of them, if it helps, as a super-powerful sadomasochist, grabbing hold of everything they can like a kid in a candy shop.

Wow. What a horribly mixed pair of metaphors.

Anyway, in *Horrors of the Z'Bri*, we're given a very deep look at the life of the Z'Bri. The chapters detail life for each of the four houses.

The first house is the Sangis. I find the Sangis the most disquieting of all the houses of the Z'Bri because of their particular brand of sensuality. They are the most openly sexual of any breed of RPG breed I've ever seen (I may, of course, have missed a few). And it's not the "was it good for you?" kind, either. When the Melanis get frisky, you can easily end up with a body count.

They're one of the most powerful houses, with the ruler of the Z'Bri (a Sangis known only as "the Baron") hailing from their ranks. They are, of course, divisive ranks, and it's possible for characters to get wound up in their intrigues

quite easily.

The second house detailed is the Koleris. They are the warriors of the Z'Bri, reveling in bloodlust and pain. Not just the pain of others (they're not picky). In fact, when two Koleris of differing rank meet, the lesser must injure the greater to allow them the experience of pain, while the lesser must be satisfied with a small mark.

The Koleris, as the most militaristic of the Z'Bri, make very fine antagonists in a *Tribe 8* game, providing the glorious physical combat that hack n' slash players (guilty!) love.

The Flemis is the third house of the Z'Bri. The Flemis is a hive mind, with the exception of exiled members of the house cut off from the collective. Not as boring as the Borg, they've got the most interesting of the flavor sections, but I'm stuck on how they would specifically be of use in a game; as a part of the larger Z'Bri whole they work marvelously.

The Melanis are the fourth house. They're the monastic builders of the Z'Bri. They seek knowledge, and one of their best secrets is the art of fleshcrafting. The Z'Bri, you see, don't like artificial things (or dead things). This does lead into one of the interesting conflicts of the game; the Fatimas are all constructed of inorganic materials. The Z'Bri prefer their belongings to be organic. Not just cotton or anything that simple. They prefer living houses. Their armor breathes and their bedclothes warm them with body heat. The bridge to the Z'Bri territory is sculpted from human bone.

This is another of the interesting parallels between two of the factions of *Tribe 8*: The Z'Bri view the Fatimas as horrific because they are of dead things; the Fatimas view the Z'Bri as horrific because, well, they are.

The Melanis are the masters of fleshcrafting, creating the tools and goods of the Z'Bri. This makes them very powerful, as they accumulate mounds of favors for the production of their goods.

The first five chapters are concerned with detailing the lifestyles of the organized houses of the Z'Bri. Just as interesting is the remainder of the book, which talks about other side effects of the Z'Bri in Vimary.

My favorite chapter discusses the Serfs. Serfs are the slave laborers of the Z'Bri, and have always been a bit of a mystery to me. From the description of the various houses of the Z'Bri so far, you're likely getting an impression that their servants are not treated very well. And you'd be right. So why, I've wondered, do the Serfs stay around?

Well, *Horrors of the Z'Bri* explains it, and it's quite a doozy. Let me tell you, it's the world's worst co-dependant relationship. It's one of the freakier aspects of the book, showing just what some people will sacrifice (such as basic dignity & quality of life) in order to obtain something else.

Two offshoots of the Z'Bri are detailed. The Hunters are Z'Bri who take umbrage at the way their brothers are seeking The Seed. They hunt the various members of the houses, taking the soulgems that a Z'Bri leaves on its death. They've the most sympathetic of the Z'Bri, and seem to be on the side of the Tribals and the Fallen. I assume this means that down the road their villainy will be revealed.

The second Z'Bri offshoot is the Gekroh, Z'Bri whose spirits have been chained into animals. They take their name from the first of their kind, who was the mate of the most powerful Z'Bri in the time of the camps. They are some of the most brutal of antagonists, rivaling the Koleris. They don't have the Z'Bri hierarchy on their side, generally being just rogues who've been exiled and Chained as punishment.

Horrors of the Z'Bri rounds out with some mechanical information, as well as tips for implementing the expanded society of the Z'Bri into *Tribe 8* campaigns.

The art in *HotZ* follows the standard of *Tribe 8*, comprised mostly of sketches that emphasize the savage feel of the game. The cover is a creepy rendition of a mouth on leather, presumably meant to represent a Z'Bri tome of some kind (a book, perhaps, that tells a story quite literally).

HotZ is a wonderful sourcebook, full of info that will add body to any *Tribe 8* campaign. It's sole drawback is that it's quite filled with info. It took me nearly a month to get through the book's very dense text, which seemed to be printed in a smaller than average font.

Of course, that the book's only drawback is it's too full of information is praise enough for it. Anyone who plays *Tribe 8* will be delighted by this book; GMs who are looking for interesting and horrifying antagonists to throw against players in almost any fantasy or post-apocalyptic setting will not be disappointed.

Pyramid Pick

Stephenson's Rocket

Published by [Rio Grande Games/Pegasus Spiele](#)

Designed by Reiner Knizia

Boardgame for 2-4 players, $39.95

Stephenson's Rocket is a game by Reiner Knizia, who designs so many games, there is a running joke that he is, in fact, 12 or more people. The name comes from a famous locomotive of the 1830's, and the game is an elegant addition to the rail game genre. The board is a nice-looking map of England with a hex grid that extends to Liverpool and Bristol in the west and Leeds and York in the north.

The game has no element of luck, but the actions of other players provide plenty of uncertainty. Money is used, but only to keep score -- you do not have to manage your cash flow in this game. Players are forced to make tough decisions every turn, and the rules interact to require advance planning.

Players perform two actions each turn from a list of three (you can do the same one twice). The most involved is extending a railway line. There are seven railway lines, each with a different colored train token and starting position on the board. To extend the line, you move the train token to one of the three hexes in front of the train token, orienting the back of the train to the hex you came from, and take a share of that company.

Player interaction (besides the normal cajoling and complaining) comes in the form of vetoes. If anyone else has shares in the line you are extending, they can try to veto your move (or force you to give up some shares) by playing a share or shares in front of them and moving the train to another legal hex. The winner of a veto round puts the shares played back on the board. When the train move is final, a track tile is placed on the vacated hex that points toward the train token. You cannot extend the same rail line twice on a turn.

The other two actions are placing a station, which seems to simulate buying real estate in hopes that the railway will come that way, and taking commodity tokens from cities on the board. The stations cannot be placed next to each other or a train token -- the last prevents placing a station and immediately hooking it up to a rail line. Taking the city tokens is the least interesting part of the game -- I'm tempted to use a rule that prevents taking more than one token from a city, or one token of a particular type, to prevent the rounds where everyone just takes tokens off the board.

Extending a rail line can trigger scoring in three ways. When a railway extends to a city, players with that city's tokens get a payoff. When a railway connects to a town, the players with the most stations on that line get a payoff. When a railway connects to another railway, the players with the most shares in the extended line get a payoff and those shares are traded in two for one for the other railway's shares.

The game ends when there are only one company's shares on the board or all of the track tiles have been played. The end of the game can sneak up on you before you do everything you were planning, so don't try to do too much. Another scoring round is conducted with payoffs for majorities in stock and stations per line, and for majorities in the various commodities.

On your turn, you will want to extend rail lines to earn shares, put stations down so they will get connected to a rail line, and take city tokens to get city and commodity payoffs, but you only get two actions. You have to predict what other players want to do and react to their choices, while keeping your own goals in mind. To me this blend of player

interaction, strategy, and tactics adds up to a great game.

The payoff and merging rules are very similar to *Acquire*'s, but the extra game elements and less abstract nature appeal to me more. Fans of the *18XX* series of rail games (or those who find them too much) may enjoy this elegant system that plays in less than two hours but retains the no-luck and rail tile aspects. I like this one more each time I play it.

-- Rich Shipley

Pyramid Review

The Dominion Tank Police Role-Playing Game and Resource Book

Published by [Guardians of Order](#)

Written by David L. Pulver

165 pages, $19.95

Dominion is the second anime-based sourcebook for GoO's Tri-Stat System, with the
Sailor Moon RPG preceding it. Much like the *Sailor Moon RPG*, the *Dominion RPG* is written with being a genre
book in mind as well as allowing one to play in the world shown in the anime. However, *Dominion* does a better job
of this than its predecessor, as it is based solely on a four-episode Original Animation Video series instead of a long-
running television show.

The book begins with a brief summary of the "mecha genre" of anime, which includes any show that focuses on any
kind of machine or vehicle, not just giant robots as a casual anime fan might suppose. *Dominion* belongs to the
"mecha police" subgenre, which concerns a special police agency that has high-tech vehicles and weapons in order to
handle criminals the ordinary police cannot. This is followed by a summary of the OAV series, the obligatory "What is
Role-Playing" section, and a listing of other *Dominion*-related works. (Unfortunately, GoO's license only covers the
first anime OAV, not the comics or the succeeding series.)

The next two chapters deal with character creation and the Tri-Stat mechanics. Tri-Stat is very much like a simplified
GURPS, with only three basic stats (Body, Mind, and Soul, ranging from 1 to 12), a few more derived stats, and a
standard advantage/disadvantage, or in this case, an Attribute/Defect setup. A system slightly used in *Sailor Moon* but
full-blown here is "cascading attributes," where one takes levels in a main attribute that give points to be spent on sub-
abilities. In *Dominion* the two cascading attributes are Skills and Owning a Mecha. The mecha creation system is an
abbreviated version of the one used in the *Big Robots, Cool Starships* supplement, done by cutting out the features
only useful for spaceships or giant robot-style mecha. The Skill system appears in *Hot Rods and Gun Bunnies*, but the
version here is quite full-featured.

After this, there is a chapter with information on the *Dominion* world. This is a weak part of the book, as the
information contained is skimpy and not very deep at 16 pages total. While this is understandable given the limitations
of GoO's license from Central Park Media (the American distributors of the anime), it is frustrating. The information is
limited to the events and storyline of the anime, which many players will already know. The general flavor of the city
of Newport and of the world is presented well enough, and a little background in dystopian cyberpunk games and
literature will go a long way towards filling in the gaps. There is still a great deal lacking here -- if Guardians of Order
managed to procure a license to the rest of the series and provide more detailed information, the game world would be
more easily used.

*(Editor's note: The author, David Pulver, was kind enough to let us know that, in addition to the 16 pages of
information on the world's institutions and technology, there are also 21 pages discussing the characters and mecha.)*

The Game Master's section and sample adventures are more useful, as here some liberty is taken from the information
presented earlier. The adventures in particular serve as good examples of how to set up a story in the world of
Dominion, but both sections are still hurt by the lack of solid information.

Overall, the *Dominion* RPG is good but flawed, made all the more maddening as the flaws are not really the author's

fault. As a generic modern-day to near-future book, it is quite good and more detailed than Guardians of Order's generic anime RPG, ***Big Eyes, Small Mouth***. As an RPG for playing in the ***Dominion*** world, it is workable but requires a good deal of effort on the part of the GM. If you are a fan of the anime or are very interested in BESM/Tri-Stat and have not yet bought the BESM core book, this is worth buying. Otherwise, I would advise waiting for ***BESM Second Edition***, which is supposed to include Skill, Mecha, Magic, and Martial Arts all in one volume.

-- Damien Wellman

What's In a Name?

by Owen K.C. Stephens

Art by Phil Reed

GM: You slowly enter the tomb of the Necromancer Lord Nightraven
Stormhammer, peering deeply into the gloom which is just barely
pierced by your flickering torches. What do your mighty heroes do?

Player 1: Bob the Knight readies his trusty blade.

Player 2: Iredic Phen stands beside his old childhood friend.

Player 3: Oulala sneaks past those two, and hides herself in the
darkness.

GM: Okay. The henchmen, Diten and Disix, cower behind Bob and
Iredic. . .

* * *

All fantasy role-playing campaigns, regardless of their game system
or genre, have a few things in common. They all depend on players to
create adventurers and heroes to go on great quests and explore lost
ruins. They all require a Game Master to create those adventures and
ruins and to flesh out everyone and everything else in the game world.
And they all depend on a player's ability to suspend his disbelief, and
become involved in the drama of a fictional world.

No matter how complete a game setting is, there will be minor details only the GM can fill in. Without these elements,
the world will seem flat and two-dimensional. But with believable and internally consistent information a setting can
seem real enough to encourage players to become involved in the game. In most games one of these elements,
appropriate names for the game's cultures, is left entirely up to the GM.

Naming a character can be a difficult task, especially in fantasy games. A player may not have any idea what kind of
names are common to the game world. Very few RPGs include useful lists of names fitting their cultures. This forces
players to either research names from similar periods in our own history, or make up names from scratch. Many
players simply give their character the first name that comes to mind. The results can vary from incongruent to low
comedy.

The more roleplaying groups you look at, the more you'll see the amazing diversity players and GM alike show when
naming characters. Some players go to great lengths to carefully research names which are historically accurate to a

given setting. Others think nothing of saddling their characters with obviously modern nicknames or even worse, purely silly or pun oriented appellations. "Bob the Knight" doesn't have the noble sound of "Sir Robert," and names such as "Pig-Sticker," "Sir Tainly," or "Miss Demeanor" might be appropriate for a slapstick role-playing game, but they don't belong in most serious campaigns.

This problem is compounded for GM, who may have to name dozens or hundreds of NPCs, sometimes with little or no warning. When pressed for time, a GM may decide to avoid naming NPCs at all, or give them hastily thought up names with no connection to the culture or background of the campaign. But carefully considered names can be an important part of a campaign setting and, if well crafted, can help set the tone for a particular fantasy culture.

At the very least, a GM should ask players about their characters' names in advance, and eliminate monikers which are silly, inappropriate, or crude. Although such names may be good for a quick laugh, they eventually destroy any hope of a campaign world feeling real or dramatic. If possible, it is even better for a GM to provide his players with a list of names common to his game world, and an idea of which game cultures the names come from. This not only helps the players name their own characters, but can help the GM name an NPC on short notice.

There are several methods a GM can employ to create believable fantasy names, and prevent the task of naming a character from becoming a time-consuming chore. Most of them require a fair amount of work to set up, but will save time later on when a name needs to be decided on during a game session.

The easiest solution is to simply find a good resource book with a large number of names in it. A local phone book can provide thousands of names, and is generally available at no cost. An out-of-date phone book can be even better, allowing a GM to highlight names which are suitable for his games, and mark off names which have been used. Film credits and magazines can also be good sources containing lots of names.

The primary drawbacks to any of these are that the names may not be appropriate to a fantasy game, and there is no quick index for finding the kind of name you want. A GM may overcome some of these problems by using the source as a basis for making lists of names for his game, but this can be very time consuming, and still may not produce many good fantasy names.

Alternatively, someone who is willing to spend a little money may find buying a baby-name book to be a good investment. Most large bookstores carry a broad selection of such books, and may have different books with names from different cultures. Although there may again be some lack of appropriate fantasy names, these books are typically better than a phone book because they are well indexed, and give a definition for each name. Most also note what language a given name is originally from, which can be useful when making lists of names from different cultures within the GM's world.

The internet can also be a boon to anyone who has access and enough time to search. There are several sites dedicated to providing lists of names from particular countries and cultures. Anyone with access to a decent search engine can likely find a dozen other such sites in a matter of minutes. Many have extensive lists of culturally suitable ethnic names, although most don't include definitions, and some are not well-indexed. Listed below are four sites which are particularly useful for creating name lists.

The Etymology of First Names (http://www.behindthename.com/)

This site has an excellent name list which includes each name's origin and definition, a list of suggested names for twins, and definitions of common name elements for several different languages.

Every Celtic Thing on the Web (http://og-man.net/)

This is a collection of links to several extensive name lists (especially Breton and Irish name lists) and a link to a name finder, which allows you to search for names using many criteria including culture, first letter, gender, religion, and language.

Magickal Names (http://www.silvermoon.net/catala/names/names.htm)

The site has a large selection of non-biblical names and a broad selection of foreign women's names, all with definitions.

The Random Vocabularies or Name Generation Page (http://www.ruf.rice.edu/~pound/)

A site with several random name generators. The results are sometimes odd, but there's lots of good stuff too. Especially useful for a few quick, really unusual names.

Still, for a GM who wants a large selection of names geared to specific settings in his own game world, no ready-made reference will do. Instead, the GM will need to create his own references, tailoring them to his needs. Although this can be time consuming, the eventual payoff is well worth the effort. Having a way to generate names appropriate to each of a fantasy world's kingdoms is a good way to bring a world to life for both the GM and his players. And unlike most background work for a campaign, names are easily transferred to new games if the campaign they were designed for closes.

Creating a list of fantasy names for cultures with an English or American feel can pose a problem. Although there is nothing wrong with such names as Adam, Michael, Susan, or Alice, they often fail to convey the feel of a fantasy game. It can be difficult to think of names which are both ordinary, and convey the sense of adventure most fantasy players enjoy.

But there are many simple, normal names which immediately conjure images of castles and dragons. After all one of the greatest wizards of all fantasy, Merlin, was named after a hawk. Many of these names are found in fantasy literature, and many more are simply names from our own world out of common usage. Many can be found in classic English literature, such as the works of Chaucer and Shakespeare. Others can be derived from worthwhile attributes, titles, occupations, weapons, or local plants and animals common to the culture. The list of common names below is designed for a heroic English fantasy.

Common Names

Male: *Able, Baron, Bard, Blade, Bishop, Dale, Damon, Dirk, Earnest, Fain, Gallant, Hain, Hale, Hawk, Honor, Hunter, Justice, Jolly, Kestrel, Laird, Lance, Levity, Mace, Mason, Muir, Noble, Peace, Peregrine, Pious, Raven, Reliant, Rowan, Steady, Stout, Sturdy, Stalwart, Swift, Tailor, Valiant, Valor, Virtue, Will, Wisdom, Wren*

Female: *Abidance, Angel, Beauty, Brook, Charity, Charm, Chastity, Constance, Cordial, Dear, Fair, Faith, Favor, Gale, Grace, Harmony, Heather, Holly, Honesty, Hope, Jasmine, Joy, Liberty, Lily, Love, Mercy, Merry, Modesty, Opal, Page, Patience, Peace, Pearl, Piety, Pleasence, Precious, Prudence, Purity, Redemption, Robin, Rose, Ruby, Serenity, Spring, Summer, Wisdom*

Additionally, the use of a surname can help invoke the proper feel for a fantasy game, if the right kind of surname is used. Surnames based on medieval occupations can often add to a character's name. Michael might sound like a modern computer programmer, but Michael Harper sounds more like a swordsman from a sophisticated fantasy city. This is especially true of surnames based on a occupation, local place, or common social group. Like the common names above, the following surnames are designed for medieval European fantasy game.

Surnames

Archer, Ashcraft, Angel, Bowman, Cannon, Cooper, Drake, Falkner, Fletcher, Forester, Garland, Greenwood, Harper, Hartwood, Huntington, Kingswell, Kirkland, Lachlan, Maxwell, Northcliff, Oaks, Porter, Potter, Ramsden, Saxon, Seraphim, Shepherd, Sherwood, Templeton, Victor, Wayland, Warford, West, Winter, Yeoman

For more foreign sounding names, it is possible to develop a set of rules to transform any common name into one

consistent with a particular culture. For instance, many Roman names ended with -us or -ex, and several Roman women's names ended with -a or -ae. Although this is an gross oversimplification, similar rules can allow you to create a consistent set of fantasy names from common modern names. The advantages of this system are that there is no limit to how many names you can create, and all the names will have a very similar flavor.

For instance, you could decide that names from a particular city all end with an -o or -re. To help make names sound foreign, you might also decide to replace any 'a' with an 'e' and any 'e' with an 'a.' Using these rules, if you take the name David, it becomes Devido or Devidre. Peter changes to Pataro or Patarre, and even Mike is transformed into Mikao or Mikare. If you want definitions for these names, you can either use the definition for the original modern name, or just make up a new one you like.

This can also be a good way to make futuristic sounding names. As cultures age and evolve, their language and names tend to drift some as well. A few simple rules that define how modern names have changed in a futuristic setting can create a varied but coherent list of names. Changing vowels or simplifying some combinations of letters are good ways to make names sound futuristic. For instance if 'er' has been replaced with 'ax' then Alexander and Peter become Alexandax and Petax.

When using this method, it is best to use no more than three to five rules, and to only modify common names. At least one rule should effect the beginning or ending of the name, and at least one should replace common vowels or consonants. By studying a large number of names from real world cultures, it is possible to develop rules that will produce names of a particular flavor. Many cultures have similar elements for a large number of names, and using these can help generate names that sound similar. Again, a book of baby names or an internet source can help you with this. It's easy to develop new rules for different cultures, or create rules for a culture unique to your game world.

The following is a list of rules that are designed to produce very different sounding names, each appropriate to a different culture. To show what sort of names each set of rules produces, they have been applied them to David, Peter, and Mike.

For short, simple names, remove all the letters before the first vowel (Avid, Eter, Ike). Double the first consonant in each name (Avvid, Etter, Ikke). Then end any name currently ending in a vowel with 'n' or 'l' (Avvid, Etter, Ikken or Ikkel).

For longer names which sound like they come from an old, complex culture, end each name in -ax, -us, or -ex (Davidax, Peterus, Mikex). Replace the first consonant of each name with the next consonant in the alphabet (Favidax, Qeterus, Nikex). Last, add an 'e' after any 'a' (Faevidax, Qeterus, Nikex).

For family names with a Gaelic feel, begin each name with Mac-, Fitz- or Mc- (MacDavid, FitzPeter, McMike). Add an 'n' or 'l' to any name ending in a vowel, and an 'e' or 'en' to any name ending in a consonant (MacDaviden, FitzPetere, McMiken).

For names with a Russian or Slavic sound, add an 'm,' 'i,' or 'o' as the second letter of each name (Dmavid, Pieter, Moike). Change any 'a' or 'u' to an 'i' (Dmivid, Pieter, Moike). End each name in -itch, -re, -va or -van (Dmividitch, Pietere, Moikeva).

One of the best ways to have a large number of names available is to create a name generator. This is a set of tables listing prefixes and suffixes which can be combined to form different names. If the component elements of the generator are all from one culture, all the names created by it will sound like they are from the same society. This works particularly well for cultures in which male and female names are similar, aside from their endings.

The best way to develop such a generator is to start with a modest list of names similar to those you want to produce. This is another place where baby-name books or internet resources can be valuable. Most names can be easily divided into two parts, although sometimes it is difficult to divide a name evenly. It is important that each part of the name not have more than two syllables when divided, or it won't combine well into other names. A little practice and experimentation will usually lead to a good feel for where to divide names.

By listing the first half of all your names on one list and the second half on another, it is possible to quickly mix and match from these lists to create new names. If each prefix and suffix also has its own definition, the name generator will also give each newly created name its own meaning. A good name generator should have a least a dozen name fragments on each table.

Once the generator is complete, a name can be created by rolling randomly, chosen for a particular definition, or picked for how it sounds. A total of two thousand male and female names can be assembled from the generator presented below; more than enough for most campaigns. It is of course possible to create even more names by making small changes to a generated name. If you don't like the sound of a particular name, try adding a 'n,' 'r,' 'a' or 'v.' Similarly, definitions can be changed. If a name meaning "bear slayer" doesn't fit a character, it can be changed to "killer bear," "kills like a bear," or anything else you feel fits. A generator like this should be used only as a guideline.

The following generator is designed to create names for a fantasy Northmen barbarian culture, and is based roughly on Viking and old Germanic names. It could be used equally well for any northern culture, a city of dwarves, or perhaps even a clan of trolls. Although many of the elements for these names were taken from real world names, the definitions are purely fictitious, used only to create definitions for names in a fantasy game. The three tables list a set of fifty prefixes along with twenty male suffixes and twenty female suffixes, and their meanings. Thus by putting together Ig- and -asin the woman's name Igasin is created, which could mean "Fire eyes," "Eyes of Fire," "Burning Gaze," etc.

Northern Name Generator

Table 1 (1d100)
Prefixes

1-2	Af-	Fox
3-4	Arn-	Hearth
5-6	Baer-	Spear
7-8	Bin-	Ice
9-10	Bir-	Death
11-12	Bon-	Ash
13-14	Dau-	Helm
15-16	Dlan-	Sky
17-18	En-	Boar
19-20	Faer-	Sword
21-22	Fan-	Silver
23-24	Fwor-	Elder
25-26	Gei-	War
27-28	Gor-	Axe
29-30	Gren-	Rune
31-32	Hal-	Strong
33-34	Haun-	Rock

15	-syf	Mother
16	-solt	Witch
17	-strid	Book
18	-una	Mistress
19	-wyn	Maiden
20	-yff	Rider

Although no method of creating fantasy names is perfect, all of these can be useful at one time or another. Often it is possible to mix and match these techniques, modifying them to fit your game's needs. If a given culture is going to be the center of a game, it is important to be able to come up with a large number of consistent names for it. But if the players will only be interacting with a few people from one town, it makes more sense to just write up a small list of local names. However you generate these names, they will add flavor and realism to all your games.

Get a Helmet

A Minor Prelude

Not too long ago, a group of friends and I were sitting around a table, listening to Dennis Leary's *No Cure For Cancer*, laughing ourselves sick. One bit caught us by the collar and threw us down to the floor: the Doctor Leary Psychoanalytical Seminar. You don't need to deal with issues of family, you don't need to deal with "stress," you don't need to grasp your inner child. What you need is a good, swift kick in the backside.

"But my father, he abused me when I was. . ."

Whack! Shut the (insert obscenity here) up! Next!

"I don't know what do to about my girlfriend, she. . ."

Whack! Shut the (another obscenity) up! Next!

In short, "Life is hard. Get a helmet."

And let me tell you something, I've worked with a lot of kids in my day, some of whom have *real* issues, not the crap the people I know grouse about. It's like my grandfather told me when I was younger, "If you ever think you've got it bad, open up your (Irish obscenity) eyes and look around. You'll find someone who's got it a whole helluva lot worse."

All of this comes to a very important point. Stay with me. We're getting there.

There's a whole lot of people in this world who spout the "Get a helmet!" philosophy. Then, life kicks them in the teeth with iron-tipped combat boots and they start crying like a fifteen year old who just found out the first girl he ever kissed didn't fall madly in love with him and, in fact, has moved on to someone new. Then, they bitch and moan and complain about how unfair life is, and how if only he'd done things differently, it'd all be different and how could she be so cold, so uncaring, such a heartless, cruel, calculating. . .

Hey. Wait a minute. Where's your helmet?

Like Super Chicken says, "You knew the job was dangerous when you took it."

For those of you who haven't figured it out, here's a bit of existentialist truth for you to chew on.

Life. Isn't. Fair. The sooner you learn that, the better off you'll be.

Now the question you have to ask is this:

If roleplaying games are supposed to simulate life, why are so many people obsessed with making them "fair?"

And with that in mind, let's move on to this month's topic. Twenty bucks says you can't figure it out until we're all done.

* * *

PART ONE: The Problem

Character death is a very difficult matter to handle. Game Masters have to be careful when dealing with a player character's mortality. At least, this is what people tell me. I really don't see what the big deal is.

When it comes down to killing characters, there are really two groups of GMs. The first group are the Dicers. These folks insist that GMs don't kill people, dice kill people. Of course, these are the same people who think guns fire themselves. Secondly, we have the Free Formers. These people insist that dice should *never* have influence over a character's life. Of course, if you actually *play* in one of these games, you'll soon find out that you're playing second fiddle to the GMs NPCs while they tell you a story they could have done all on their own.

No, my friends. The answer lies somewhere in the middle, I think. Somewhere between perception and reality. That's where the GM shines best, stuck right between those two.

It's the reason I have such a problem with *Star Trek*. Whenever I watch it, I know nothing significant will happen to the main characters. Oh, one of them will learn some sort of "life lesson," but nobody ever really changes. The only reason people ever change on TV shows is because they're leaving the show (which means the character gets killed), get pregnant (which means the character gets pregnant), or have to make a movie (which means they go into a coma for a week or two). But in the end, nobody really changes.

Unfortunately, this disease has crept into our industry, polluting it with the same puerile fan-boy fiction we see on *Trek* webpages. Nobody ever changes. Nobody ever dies.

And when we sit down with our favorite character ever Friday night, we have the comforting feeling that we'll be leaving with that character intact. The worst thing he'll have to encounter will be a valuable life-lesson that shows him how he can make himself a better person.

Not in my game, buddy.

You sit down at my table with one understanding: You'd better wear a helmet.

* * *

See, the problem comes down to a simple assumption: you ain't gonna die. If the dice roll badly, the GM will fudge the roll and you'll be okay. Or, you just make sure not to put yourself in a situation where the dice roll badly, and you don't have to worry about getting killed. Besides, only Killer GMs arbitrarily kill characters.

This, unfortunately, leaves you and me in a bind. We can't kill characters without making ourselves look like a villain/schmuck/jerk/Killer GM. If we do whack someone off, we have to blame it on the dice. Otherwise, we get whiny player voice all night long, complaining that he doesn't have a character to play with, and now he has to sit out and wait for the rest of you to finish because *you* killed his character.

Well, friends and neighbors, I got solutions for you. A whole ton of them. So, let's get started.

* * *

PART TWO: The Supporting Cast

The first solution is the easiest. Players always assume they're the main character. Well, just because they believe that don't necessarily make it so. In fact, try running a game where the characters are all Red Shirts. You know the language I'm talking.

This really works for my buddy Ray's *Star Trek* game (he was running the FASA version, that's how old this story is). We didn't play the bridge crew in that game, we played all the guys who went down to the planet *before* the bridge crew showed up. Fortunately, Ray had a very good sense of drama, so we didn't have Kirk and Spock beaming down at the last second to save our bacon every week. No, the officers on the USS Kirkland were a bit too important for that kind of heroics. *We* were the Away Team, sent down to an alien planet to investigate unusual tricorder readings. And by the end of the year, we were the best-trained Away Team you ever saw.

However. . . we went through about seven crew members in the course of that year. We were expendable, and we knew it. Now, a lot of folks may say, "But how do you get attached to a character you know is going to die?" My answer is simple: "How can you get attached to a character you know *isn't* going to die?"

Another good example is *The Thirteenth Warrior*. The narrator of that film (Antonio Banderas) ain't the main character. In fact, he's a very *minor* character. The real hero of that tale is Beowulf (however you want to spell it). He's the one who gets to kill both Grendel and his Bad Mommy (so bad, she don't even got a name). It's *his* story. And though we know Banderas ain't gonna get whacked (he is the narrator, after all), imagine a player in that kind of situation. He *knows* he isn't the hero. He *knows* he isn't the one who gets to kill the Boss Monster. He *knows* he's the sidekick. So, what does he get to do? He supports the Hero. And if he's weak, if his courage breaks, that puts the story one step closer toward tragedy.

Even in a modern game, setting your players up in supporting roles can really give them a sense of mortality. You don't play Romeo, you play Mercutio. And, let's be honest for a second, if offered the choice, who would you want to play? Which brings up a very good point: it's always the side-kick who gets the best lines. He's witty, clever and an all-together great guy. And you can always spot him at the beginning of the film. You know the hero will make it to the credits, but you just don't know if the side-kick will. But you *hope* he does.

Almost as if he was your character.

PART THREE: "They'll be back by sweeps. . ."

This one isn't entirely mine. It's inspired by a story Steve Hough and Rob Vaux told me about a Cthulhu game they were playing in. Apparently, the rest of the party (including Rob) left Steve's character for dead after a vicious attack by Mi-Go. Well, the next week rolled around and Steve showed up. In fact, Steve's *character* showed up.

"Hey Steve!" one of the characters said. "We thought you were dead!"

Steve didn't say a thing. He walked right passed him.

"Hey Steve!" said another. "Where have you been?"

Steve didn't say a thing. He walked right passed her.

Right about then, he reached the gun rack. Before anyone could say anything, he picked up a shotgun and asked the GM if it was loaded. The GM said it was.

And Steve started shooting.

He started shooting and didn't stop until the big, bad combat character (you *always* need one of those in a Cthulhu game) got a hold of Steve and broke his neck.

Of course, if it was *my* game, that wouldn't have slowed Steve down a single bit, but they had a merciful GM and the broken neck put Steve down for good.

The point here is that you really can steal from any source. Like. . . oh, let's say soap operas. Yeah, I said soap operas. I used to date a girl who was addicted to one of those things, I watched it every day so we could talk about it when we got home from work. And there's one rule that's *always* true on *every* soap:

If you don't got a corpse, they'll be back by sweeps week.

PART FOUR: With Friends Like Me. . .

"All right, John," you're saying. "That's all fine and well, but what do I do when I really do kill their character?"

I understand. I really do. When you kill a character, that player has to sit around for the rest of the game. At the very least, he has to make up a *new* character, so he can jump back in.

Why take the scenic route? In fact, why not have him play someone the party already knows.

Like the antagonist.

I was just watching *Batman: The Animated Series* with my wife and the villain was one of my all-time faves: R'as al-Ghul.

"Who?" my heretical wife asked. Ah, the naivete of youth.

The whole kicker with al-Ghul is that Batman's in love with the bad guy's daughter. The kicker with Ghul's daughter is that she's in love with Batman. The kicker with Ghul is that he's in love with his daughter.

And no, not in *that* way. Perv.

It makes a great triangle of love and duty. The power of that theme is seldom captured well, but in the case of Batman and the al-Ghuls, it's perfect.

So. . . why do the players always have to be the protagonists? Why can't one or two of them play *antagonists*? But antagonists the protagonists have some kind of unbreakable link with? That's powerful mojo. Mighty good stories come out of that kind of relationship.

So, what you do is get together with a player before the game starts. You talk to him about your plan. He plays a wacky, lovable character - let's call him "Bob" - for the first eight or ten sessions, then you whack Bob mercilessly. It's a big, bloody Bob mess that won't ever clean up right.

Then, Bob's player drops out for a week or two while the rest of the party looks for the Bad Guy who killed Bob the Loveable Sidekick. Two weeks go by, and your player shows up again, but this time, he's not playing a new character. . . he's playing the Heavy Who Killed Bob (*Bum bum bum BUM!*).

It's a typical technique. Create an intriguing, capable villain in Episode 1, then make him an ally by the middle of the season.

You folks who watch *Buffy the Vampire Slayer* know what I'm talking about. That show is *littered* with Good Bad Guys and Gals: Faith, Spike, Angel, Jenny the Gypsy Chick, Anya the Vengeance Demon are great examples of bad people the Scooby Gang *has* to work with.

Unenlightened folks who *don't* watch the best show on TV may get what I'm talking about with these examples:

Magneto and the New Mutants.

Han Solo, Lando Calrissian, and Darth Vader.

7 of 9, Quark and Garrik.

(I've got another one, but I don't think anyone will remember her. The first one who can tell me who Princess Aura has a crush on gets a No-Prize.)

All NPC villains (at least anti-heroes) who turn into PCs and join the good fight. If Lucas can do it, so can you.

(Or, if you prefer, the villain doesn't have to be a PC; he can just stay bad. But that requires some serious, heavy duty roleplaying on the part of your player. You have been warned.)

PART FIVE: The Secret

This is the second part of a three-part series about assumptions. The Big Assumptions. Many of you may have guessed that this month's part was about killing characters.

You're wrong.

This month's episode was about something a lot more powerful than death. It's about perspective.

("Perspective: use it or lose it." - *The Tao of Zen Nihilism*)

We all know the players view the world through the Game Master. He's their eyes, ears, tongues, noses and skin. But there's an assumption that goes along with that. Players assume that the GM has to be honest about those perceptions.

Heh. Let 'em.

(How many times have you met a beautiful woman who was convinced she was fat? Anyone who says, "I'm bad at math" is right. So are the people who say, "I can't quit smoking." Absolutely right. Like Richard Bach said, "If you argue for your limitations, you get to keep them.")

People trust their perceptions more than logic, reason and sometimes even reality. (That's called "faith".) Players are the same way. They *have* to trust everything the GM tells them. He's their only source of information.

If the players perceive they're invulnerable, they'll believe they're invulnerable. If they perceive they're just a pack of red shirts, they'll feel that mortality hanging around their necks.

If the players believe all PCs are good and all NPCs are antagonists (at least anti-heroes), they'll lose out on some valuable allies. . . and leave their backs open to ringers (a topic we'll talk about in a few months).

If the players believe that death is the end. . .

What the players perceive is what their characters believe. Have fun with that perspective. Be responsible, but have fun.

After all, it's only a game, right?

* * *

Next month, we'll tackle another assumption. The last one. Not sure which one. Maybe you'll find out when I do.

Take care, and you'll see me in thirty.

But not if I see you first.

Developing Quirks

(Without Looking Like a Boson)

Okay, roleplayers, quiz time. Remember your favorite character. You know, that character you loved, that character you played (or continue to play) for years. That character you knew inside and out.

Okay; this is the character who saved the world from Professor Dystopia's refridgeray. Or the one who forced the Normans away from England's shores. Or the person who took a blaster shot to protect the Emperor.

Question: What kind of music does that character like? What's the best present s/he has ever received? At the very least, how old is the character?

What is that character's favorite hobby? If s/he was handed fifty dollars (or credits or whatever) and specifically forbidden from spending it on ammo, or healing potions, or anything "useful," what would s/he buy?

If you can't answer these questions, or at least know that there *is* an answer, then that character isn't real (at least to my way of thinking).

Now, there's lots of character creation guidelines that tell you to fully flesh out your character, and provide mindnumbing lists of questions to arrive at these kinds of in-depth characters. I generally disagree with these lists; in my mind, creating a character is an organic event. You could no more determine what a character's favorite movie is before that first session any more than you could figure out where you should hang the Dalí poster by looking at a house's blueprints.

But come on. . . this is your *favorite* character. Surely you must know by now what s/he would like to receive as a present. . . what family s/he still has. . . what s/he did (or wants to do) on that 30th birthday.

One of the things that attracted me originally to **GURPS** was the Quirks system; within the game, it encouraged people to come up with the little things that make characters *real*. But ultimately we are all defined by our quirks. I consider myself to be a writer. But so was Patrick "Give me liberty or give me death" Henry, or Edgar Allan "Bells, bells, bells, bells, bells, bells, bells" Poe. But I hope if you spent five minutes with the three of us, you'd be able to tell us apart. (Hint: I'm the living one.)

I'm also the one who wears a puzzle ring. I wear glasses because I'm very squeamish about my eyes. I fold origami when I'm bored. I sometimes count in binary to fall asleep. I'm a storehouse of useless pop culture trivia, but would be hard-pressed to find New Hampshire on a map of New Hampshire. I use a .sig file for my e-mail, but I always hand-type the "Sincerely," before it. I'm currently trying not to eat pork because I saw a public service announcement with the guy who played police captain General Zefram Cochrane from *Babe*, where he said not to eat pigs, because they're intelligent and don't like to be eaten. And so on.

The character I'm currently playing in our space campaign is also quirky, and, in my opinion, "real." He cooks. He has a code against killing. He tells long rambling stories that occasionally make a point. He has a music system on the ship; whenever anyone hails the ship, he puts on his "theme song" before answering.

Yes, he's a noble (okay; technically a priest masquerading as a noble), but that's not what defines him as a character. James T. Kirk and Jean Luc Picard are both captains, but their *character* comes from other elements. Who drinks tea? Who cheats to win an unwinnable scenario? Which captain would most likely play the flute? Which would seduce an alien diplomat's daughter?

It's all in the quirks. If you're creating a scientist, don't just think of Professor Exposition from a bad 1950's sci-fi flick. . . also remember Dr. Brakish Okun, played by Brent Spiner in *Independence Day* (a more recent bad 1950's sci-fi flick).

- James Bond drinks martinis, shaken, not stirred, and always plays black 17 in roulette.
- The Fonz starts the jukebox by rapping it with his fist.
- Jimmy Olsen always calls Perry White "Chief."

These quirks weren't a part of the original character concepts, but became a part of what makes these characters interesting.

[Warning! Abrupt Transition Zone!]

There's a method for developing your porn star name, where the first name of your porn name is the name of your first pet, and the last name is the first street you lived on. So the names of some of my friends are Silky Thunder, Dutchess Glade, and Rascal Jefferson. This works (for many folks, at any rate) because just about *everyone* has had a first pet, and most of us remember the first street we lived on. What about your favorite character? Has s/he wanted a pet during play? My noble did; now his Rampart Tree Mink (named Ms. Mansor) is a valued member of the party.

As a player, it's been my experience that my most satisfying characters have come from evolution; I may have had strong ideas initially, but through roleplaying and individualizing they became as quirky and real as any person.

So when my Elohite angel from *In Nomine* asks your character, "Who's your favorite Beatle?" (a quirk he developed through roleplaying), will you have an answer?

* * *

All right, folks, I've received a *lot* of reviews in the past week. Thanks. I'd like to see them continue, but you may want to jot me a query first. . . I'm starting to get some duplicates, and that's problematic.

Also, please don't ask about what I'm doing about *D&D 3rd Edition* reviews. I'm not sure yet. I'll let you all know what's going on here as I let the matter percolate. I *think* I have an idea that may be neat, but we'll need to see.

As ever, feel free to [write me](#) with questions, comments, or answers to your algebra homework.

Oh, and I apologize to all the quantum physicists for the pun in this week's title.

-- Steven Marsh (aka Chuck Wanda, Porn Star)

* * *

Last week's answer: ***Werewolf Wild West***, p. 225. (It was partially a trick question, since the same table appears in similar forms in other places, but the "brains of a cactus" was the big clue.)

(two stars) "**Ice Pockets:** The rarest of the para-elemental pockets, the phrase 'an ice pocket's chance in elemental fire' is known in some form or another throughout the planes."

Four Years Of The Comet

"Hung be the heavens with black, yield day to night!
Comets, importing change of times and states
Brandish your crystal tresses in the sky."
-- William Shakespeare, *King Henry VI, Part One* I:i:1-3

Ninety years ago today, the Earth was not destroyed when it passed through the tail of Halley's Comet on May 19, 1910. It's the uncooperatively stolid nature of our planet under even such dramatic conditions that encourages GMs to change it to suit their roleplaying needs, to make it more malleable, not with "laws of physics" but rather something akin to "guidelines of physics." Herewith, then, four campaign frames of such turbulent transition presented for your approval. (If you approve sufficiently, I've got at least two more waiting for room in a future column, and neither are the **GURPS Undead-All Flesh Must Be Eaten** game you're thinking of right now.) And what better harbinger of change than the Great Comet itself? In legend and superstition, the appearance of a new element in the unchanging skies marked the entry of the uncanny or the disastrous ("ill-starred") -- surely it can do the same in your game.

"I remember the terrifying predictions made by the honest and credulous astronomers, who must have been themselves hypnotized, or they could not have hypnotized the rest of us, in 1909. Wills were made. Human life might be swept from this planet. In quasi-existence, which is essentially Hibernian, that would be no reason why wills should not be made. The less excitable of us did expect at least some pretty good fireworks.
I have to admit that it is said that, in New York, a light was seen in the sky."
-- Charles Fort, *The Book of the Damned*

Mark Twain famously and correctly predicted his own death with the return of Halley's Comet; the French astronomer Camille Flammarion predicted the death of everybody else, from the cyanogen latterly detected in the Comet's tail. Panics ringed the globe, and entrepeneurial snake-oil drummers sold "Comet pills" for protection. In this world, they didn't work either. Out of a global population of 1600 million, over 99 percent died in the week after the Comet passed, and 90 percent of the survivors died in the plagues that spilled off the mountains of the unburied dead. (Large land animals died as well, as the planet suffered a Great Extinction equivalent to the destruction of the dinosaurs. Only animals immediately needed by man were shepherded through the decimation, and not all of those made it.) In the immediate aftermath of the Dying, warring gangs from empty New York, London, and Shanghai fought over the plentiful but irreplaceable stocks of rifles, tinned foods, and other goods. These struggles destroyed civilization almost everywhere save for British military posts in defensible, garrisoned ports such as Cape Town and Gibraltar, where discipline and tradition barely survived the chaos. By 1976, global population has returned to 20 millions (the population during the Bronze Age), and the Gibraltarene trading nation (ruling a rough coalition of city-states from Lisbon to Naples) is ready to send out expeditions over land to the Ruhr for desperately needed coal, and by sea in rebuilt tall ships to attempt the rediscovery of America. Of course, the Purified Caliphate of Cairo has agents everywhere, so only small bands of adventurers can be trusted. . .

This world begins as a **GURPS Y2K** setting and can be run as anything from post-holocaust rebuilding a la **GURPS Horseclans** to barbarian adventures in a desolate land of weird astronomer-cults a la **GURPS Conan.** Bogus "mutations" can give you sea serpents, dire wolves and other "very low fantasy" monsters for a "ruin crawl" game through the catacombs of Paris looking for treasure; a brilliant madman hiding out on an experimental submersible or a mountain fastness can be heroic patron or villainous would-be despot for **GURPS Steampunk** or something akin to ***The Morrow Project: 1910.*** Various Illuminated groups (probably in the healthy air of Tibet or the sealed caverns beneath El Dorado) might emerge to contest this world, as well. This frame also might work (with a 99.99% death toll) for the Halley's passes of 1986 or 2061, for a higher tech to fall from and find in the ruins.

"The work showed among other things that comets were not dirty snow balls sublimating (vaporizing) in the solar environment, but were a complex plasma discharge interaction involving an asteroidal comet nucleus with the "solar capacitor," the capacitor being the result of a differential flow in the solar wind of high energy particles leaving the sun. The balance of charge in the solar system and a myriad of of other previously unknown effects were predicted by

the theory, including the existence of an electron sheet arriving from the sun at a cometary nucleus and resulting x-rays. Only recently have these been verified by observation."
-- James McCanney, "Plasma Discharge Comet Model"

Rather than killing people, perhaps the comet kills technological alternatives. The plasma tail of Comet Halley set up a standing wave in Earth's atmosphere, damping electrical discharges and draining batteries. (Bioelectricity remains unaffected, or we're back to the first option.) Chaos strikes the most advanced nations; "electric cities" like Buffalo, New York become temporary anarchies. Eventually, the authorities restore order and steam returns to its rightful place -- higher-stroke and higher-pressure engines, new ceramics, and improved machining create new generations of steam-cars, Babbage-Hollerith engines (eventually using fluidic transistors), and so forth. Heliographs spring up where telegraph lines had been laid, but regionalism becomes a problem again as empires fray. London never loses its gaslight -- but as resources begin to pinch, wars become more common and more brutal.

This frame serves as the *deus ex machina* for a TL5+2 **GURPS Steampunk** game; GMs can easily assume that the stultification of technical progress in many areas similarly retards political change, giving a proper "punk" desperation to a world more and more polluted with coal-smoke and oppressed with poverty. For a more upbeat world, assume that the Comet also sets up an etheric standing wave that Tesla or Kelvin can tap for energy, communication, and transportation; or move it to the 1835 Halley appearance, so that folks don't really know what they're missing; or both.

"Forty-five years ago, a comet flashed through the sky above a small Midwestern town. It was like an omen to the parents of a child born that night -- a child they named Adam Blake. As Adam grew to adulthood, he found himself possessed of strange abilities -- telepathy, great strength, clairvoyance. He was a mutant . . . "
-- Gorilla Grodd on the secret origin of Captain Comet, *Secret Society of Super-Villains* #2

The Comet's weird emanations transmogrified the germ plasm of humans all across the globe. The American Strong-Man, Cal Essex, was the most famous thanks to the cinema-films of his exploits (although he was usually portrayed by Douglas Fairbanks). The brilliant scientist Doktor Optikon of Berlin managed to harness his electro-vision powers to create brilliant devices that altered daily life for all -- and ensured German victory in the Four Weeks' War of 1914. The Empowered Fists massacred foreigners throughout China in brutal displays of focused chi -- only the quick actions of Le Zephyr and Tetsuo Iron-King saved the Shanghai compound long enough for it to be evacuated. Quick thinking and rapid co-optation of native supermen by imperial powers kept European rule in Africa and elsewhere in Asia intact, and economic growth papered over social turmoil as superwomen demanded suffrage and equality throughout the West. Nonetheless, the system was openly groaning at the seams when the first of the Children of the Comet hit puberty in the mid-1920s and began to manifest powers and abilities beyond even the first set of supermen. (Kirk Alyn, the Ultimate Man, and the Albanian nun "Agnes Dei" being the most powerful.) The advanced nations have begun experimenting with N-Rays and other emanations to boost their own first super-generations' power and hopefully spark new supermen artificially. With turmoil in the colonies, the threats of war from vengeful France and imperial Japan, and villains like Der Nebel (a.k.a. Walter Schellenberg) on the loose, something has to give.

This **GURPS Supers** (or **Champions** or **Aberrant** or etc.) campaign frame assumes equal distribution of supers; someone who wants to more closely model traditional comics should assume a radiation flare that occurs while the Comet is over the American Midwest. Either way, it's the Silver Age second generation that's just coming on scene as of about 1935 in this frame. You can slide it into any other Comet pass you like from 64 A.D. (for the Roman supers frame from our earlier column) to something like super-swashbucklers in the 1607 or 1682 passes. And it would be just too much fun not to try a game of Revolutionary heroism after the 1758 Halley sighting.

"I have stated again and again . . . that there is absolutely no proof that this is an inhabited alien craft. I have also entertained the notion that it may be, in order to explore what that might mean before it ends up on our doorstep -- as unlikely an outcome as I consider that would be. Like me, the rest of the public is generally perfectly well aware that the object may be entirely natural. And even if it isn't, then why should we need to be protected from that?"
-- Whitley Strieber, "The Hale-Bopp Companion: The Proof Has Been Here All Along" (1996)

Under cover of the Comet's corona, a strange craft descends to Earth, landing in the most technically-advanced city on the planet: Berlin, Germany. Quickly claiming protection from the Kaiser as Ambassadors of the Pleiades, the ship's

blue, humanoid crew begin introducing technical advances as fast as the German laboratories can assimilate them. The Pleiadeans remain diffident about their purpose and become indispensible not only to the German industrial cartels like Krupp and I.G. Farben, but to the Kaiser's military as well. Wilhelm's arrogance soon becomes overweening, and only the fear of Germany's antigravity craft under Luftmarschall Baron von Richthofen and robotic landwaffen under General Hindenburg prevent France, Britain, and America from attacking him -- especially after German-alien arms rapidly conquer a Russia fallen into civil war in 1918. Germany assigns itself African colonies, territory in the Antarctic, oil rights in the Pacific, and a dominant financial role in Latin America while the Allies fume powerlessly, pirating dribbles of technology in a desperate attempt to catch up. However, in 1936, Clyde Tombaugh's discovery (using gamma-scopes reverse-engineered by Nikola Tesla) of an incoming alien armada forces the Pleiadeans to reveal their secret -- they are actually a very isolated team of political operatives ordered to mobilize the Earth to block the Zeta Reticulan invasion in this sector. The Earth has, unwittingly, been drawn into an interstellar war -- possibly on the losing side!

This can be a campaign of spies and smuggling if the GM wants to keep the Cold War brewing until the Zetans land in 1941 (or set the game in the tense 1920s), a heartwarming tale of humanity throwing off its petty rivalries in the face of planetary extinction if the Allies join Germany in the Pleiadean coalition, a four-cornered storm of no-holds-barred anachrotech warfare as the Zetans rapidly arm their own human proxies, or even a Resistance game opposing both alien occupiers with human wits and desperation. For a real change, players could be alien agents within humanity: either Pleiadeans (use Zhodani from *GURPS Traveller* or Pachekki from *GURPS Space*) or Zetans (use Drakkarans from *GURPS Traveller* or Greys from *GURPS Black Ops*) or some other race on Earth incognito to be Our Sophonts In Station Sol.

Most Novas have it pretty easy. Fame, fortune, and the adoration of the masses. What happens, though, when strangers from a "Brave New World" start showing up at your door with tales of a "Ravaged Planet?" Some novas may be interested in what these deltas have to say. Others might wish to test their mettle against these so called alphas, while some will just ignore the problem. After all, aren't there enough problems on one planet? In any case, the following article provides GM's with the tools necessary to convert characters from the *Brave New World* system to the *Aberrant* system.

This article relies on the reader to have access to the *Brave New World* book and the *Aberrant* book. In addition, readers should be familiar with both systems. The following article deals the conversions, but it does not point out page numbers.

Stats

Brave New World uses four main stats while Aberrant has nine. While *Brave New World* uses a number of dice and *Aberrant* a number of dots, the two are very similar. Which stats go where? The following chart shows the comparison:

Brave New World	*Aberrant*
Smarts	Intelligence
Speed	Dexterity
Spirit	Manipulation
Strength	Strength
Size*	Stamina

Every 1d in *Brave New World* adds one dot to the *Aberrant* statistic, not counting the one dot in each attribute *Aberrant* characters start with. Thus a character with a *Brave New World* Strength of 2d6 will have an Aberrant Strength of 3. This does mean that the minimum stat of the new Aberrant character will be at least two for these attributes. Ignore scores of six dots or higher. Because some statistics do not have exact matches, the Game Master should give the *Brave New World* character an additional six points that may only be spent on Attributes that have no current scores. (Where did this number come from? *Aberrant* characters get a total of twenty three points: seven, plus five, plus three, plus one in every attribute. *Brave New World* characters get twelve points for stats, plus five for Size.)

* For the most part, Size is not a variable statistic in *Brave New World*, and its *Aberrant* counterpart Stamina will almost always equal to five dots. Like Novas, Deltas are assumed to be made of sterner stuff that regs, so they gain the full benefits of a five Stamina including the ability to Soak lethal attacks.

Skills

Skills in **Brave New World** are equal to Abilities in **Aberrant**. In **Brave New World**, each skill has a number which adds to the die roll. For example, someone with a Fighting Barehanded of two and a Strength of four would roll 4d6+2. In **Aberrant**, a person with a Brawl of two and a Strength of four would roll 6d10. Each number in **Brave New World** equals one dot in the **Aberrant** Skill.

Some skills in **Brave New World** are specialties in **Aberrant**. If a specialty shows up more than once, such as Acrobatics and Dodge, take the higher of the two values and list the two specialties by the skill. The GM may decide that characters converted from **Brave New World** do not have to follow the maximum of three specialties if the character has already paid for these skills in **Brave New World**. Once converted, though, all standard **Aberrant** rules apply.

Lastly, if the character has a skill in **Brave New World** that is a specialty in **Aberrant** with no main skill, the main skill is considered one dot less than the specialty. For example if a delta has Tactics at 3 but doesn't have any skill that translates into Command, the delta would have Command at 2 dots. The minimum ability is one, which would still give the delta two dots when using that specialty.

The following chart shows how to convert Skills into Abilities. If a subskill from **Brave New World** is not listed, that it because it is a specialty in **Aberrant** and not a special skill, such as with Language, where it would be time-consuming to write out every possible language the character may know.

Brave New World	*Aberrant*
Academia	Academics
Acrobatics	Athletic Specialty Acrobatics
Archery	NA
Arts	Arts
Artillery	Firearms
Area Knowledge	Academics specialty Geography
Boating	Pilot
Bravery	NA
Bureaucratics	Bureaucracy
Climbing	Might specialty Climb
Computing	Computer
Criminology	Bureaucracy specialty Criminology*
Demolition	Engineering specialty Demolition*
Disguise	Style Specialty Disguise
Dodging	Athletics specialty Dodge
Driving	Drive
Escaping	Investigation specialty Escaping*
Etiquette	Etiquette
Faith	NA
Fighting	
Barehanded	Brawl
Flying	Brawl specialty: Fighting in Flight
Forgery	Intrusion specialty Forgery*
Gambling	Biz specialty Gambling*

Language	Linguistics
Leadership	Command
Lockpicking	Intrusion specialty Lockpicking
Martial Arts	
Barehanded	Martial Arts
Blade	Melee specialty knife, or sword.
Medicine	Medicine
Mimic	Perform specialty Impersonation
Navigation	Survival specialty Navigation
Perception	Awareness
Performing	Perform
Persuasion	
Bluff	Intimidation specialty Implied Threat
Charm	Etiquette specialty Social Graces
Interrogation	Interrogation
Intimidation	Intimidation

Tinkering	Engineering
Tracking	Stealth specialty Trail
Trade	
Carpenter	Engineering specialty Construction
Electrician	Engineering specialty Electronics
Machine Operator	Engineering specialty Mechanics
Mechanic	Engineering specialty Mechanics
Plumber	NA
Weaponsmithing	Engineering specialty Armaments

Skills that are listed with a * are specialties that are not normally found in *Aberrant* but will not disturb the game system. Skills listed with NA are skills that either do not apply to *Aberrant* or have no special skills in *Aberrant*. For example, it's hard to list a conversion skill for *Faith* when in the main book for *Brave New World* Faith has no game effects on deltas powers.

Quirks

These are similar to Merits and Flaws, which are absent in the *Aberrant* system. In some cases, the quirks give the character a quality from an attribute. During the conversion process only, the character can gain more than one quality per attribute. This is one of the few areas where deltas may surpass novas. The following notes cover what Quirks do in the *Aberrant* system.

- **Delta of Reg:** No effect in the *Aberrant* world as no devices has been crafted yet to detect deltas.
- **Public Identity or Secret Identity:** In the *Aberrant* World, Deltas would be treated far differently then they would at home. Those who went public would be heroes, while those who stayed hidden would have privacy. Now, if only those pesky people from Project Utopia would leave him alone. . .
- **Registered or unregistered:** No effect in the *Aberrant* world.
- **Alert:** This gives the character the quality Observant for the Perception attribute.
- **Ambidextrous:** The Game Master should allow this to be a quality for the Dexterity attribute.
- **Arrogant:** This is a medium-level aberration under Mental Disorder.
- **Authority:** Rated +1 to +5, each plus in *Brave New World* equals one dot of Influence.
- **Beautiful:** The player has his choice of the Appearance quality Alluring or Sensual.
- **Bloodthirsty:** This is a medium-level aberration under Mental Disorder.
- **Brave:** This gives the character the quality Determined under the Stamina attribute.
- **Brawny:** The gives the character the quality Stout under the Strength attribute.
- **Contact:** Rated +1 to +5, each plus in *Brave New World* equals on dot of the Contacts background..
- **Dark Secret** can be something that the Game Master works into the background of the character, as well as a Background option in *Aberrant*. It depends on the Dark Secret. Using the Dark Secret example from *Brave New World*, this might involve the character hiding his own trail through a dot or two or Cipher, as well as having a Contact that would only work for the character as long as the character had dirt on him.
- **Destined for Greatness:** This amounts to an extra Five Willpower Points, or works exactly as described in *Brave New World*. Players should beware, however, as most Novas are not considered lesser characters!
- **Double Jointed:** This gives the character the quality Flexible from the Dexterity attribute.
- **Favor Owed:** This works as a Contact until used.
- **Gear:** Rated +1 to +5, each plus in *Brave New World* equals one dot of the Resources background.
- **Iron Jaw:** This gives the character the quality Resilient from the Stamina attribute.
- **Light Sleeper:** This gives the character the specialty Keeping Watch from the Awareness ability.
- **Lucky:** This gives the delta one extra Willpower point every game session. When used, it works just like it does in *Brave New World*.
- **Patron:** Rated +2 to +5, each plus in *Brave New World* equals one dot of the Mentor background.

- **Photographic Memory:** This gives the character the Mega-Intelligence Enhancement Eidetic Memory.
- **Rich:** Rated +1 to +5, each plus in *Brave New World* equals one dot of the Resources background.
- **Self-Confident:** This gives the character an additional two dice to resist persuasion attempts.
- **Self-Righteous:** The character suffers a loss of two dice when attempting to persuade someone who doesn't agree with his convictions. If dealing with someone who does agree with his convictions, the character gains two dice with persuasion attempts.
- **Sense of Direction:** Works the same in *Aberrant*.
- **Sense of Time:** works the same in *Aberrant*.
- **Sharp Ears:** Gives the character the specialty Acute Hearing from the Awareness ability.
- **Sharp Eyes:** Gives the character the specialty Sharp Eyes from the Awareness ability.
- **Sidekick:** It is assumed that the Sidekick made it to the world of *Aberrant* with the character. Otherwise, the ability stays the same. It's important to note that, while similar to the Followers background option, it is not the same since novas cannot be followers.
- **Skeptical:** This gives the character an additional two dice to resist attempts to persuade him unless there is proof to back up the persuasion attempt.
- **Snobby:** The character loses one die when attempting to use any type of Persuasion skill.
- **Tough:** Gives the character the Unflagging quality from the Stamina attribute.
- **Unlucky:** Every time the character rolls a 1 on the dice, consider it two ones. This makes it much easier for the character to botch using his powers.
- **Voice:** soft voice gives the character the Pleasant quality from the Appearance trait while hard voice gives the character the Imposing quality from the Appearance trait.
- **Wise:** The character has his choice of the quality Rational from the Intelligence attribute, or Level-Headed from the Wits attribute.

It a Quirk has not been covered, that's because it is most likely a roleplaying tool such as addiction, arrogant, or bad habit. These quirks can be noted and roleplayed, or the Game Master can say that the journey refined those elements so that they are no longer such a strong part of the character's make up. Game Masters can also look over these roleplaying quirks to help the player determine what type of Nature the character has.

Powers

Consider deltas to have at least one Quantum if necessary to determine quantum multipliers. Otherwise, ignore quantum. This means that in some cases, a delta will actually have it easier than a nova for long term situations.

Bargainer

- Bargainers lose all of their powers upon arrival in the *Aberrant* world.

Blaster

- Blaster Armor is equal to two dots of *Aberrant* Armor.
- Blaster Energy Blast is equal to three dots of Quantum Bolt. The player must determine if he wishes the blast to inflict bashing or lethal damage.
- Tricks
    - Blast Punch: By making at least three difficulty rolls of 8, the blaster can channel his energy to his fist and inflict his strength plus fifteen dice of bashing damage, or twelve dice of lethal damage. This can be combined with superblast, but the character must hit the target number five times. If he only hits it three times, the blast punch still works, but the superblast fails.
    - Superblast: By spending an action to build up his power, the blaster gains another dot of quantum bolt, up to four actions. In addition, the character must hit his target number by at least two extra dice or the attack fails. Some desperate deltas, when confronted by nova attackers, take the standard penalty for multiple actions in one round and attempt to use the superblast in the same round that they summon it.

Bouncer

- Fast: Considered to have two dots of Mega-Dexterity.
- Strong: Considered to have one dot of Mega-Strength.
- Tricks
  - Bounce Attack: If bouncer makes an extra success on a melee roll, the hero can bounce off one foe and attack another, all on the same action. The bouncer must score at least three successes on the new attack. The hero can continue bouncing from target to target if he gets another success on the new attack roll. Unfortunately, the penalty is cumulative so the next time, the bouncer must five successes, then seven, then nine. There is no limit to the number of times the bounce attack can be performed.
  - Flip-Toss: If the bouncer gets two successes on a melee dodge, he can grab the attack while still in midair and toss his foe. The throw does the bouncer's damage in strength as well as any extra damage for dangerous objects such as glass or other pointed objects.

Flyer

- Armor: Flyers have two dots of Armor but only while their using their flying ability.
- Flight: Considered to have two dots of Flight.
- Tricks
  - Bursts of Speed: With each extra success against a target number of six, the hero can add one dot to his flight power for this round. This roll requires an action.
  - Flying Dodge: Resolved normally through opposed rolls.

Gadgeteer

- This character has Mega-Intelligence at two dots and the enhancement Mental Prodigy with either Engineering or Scientific. Due to their ability to maintain their creations, they do not have to spend a quantum point to activate these abilities. It's important to note that their inventions tend to baffle novas who in theory are smarter, but can't spend the proper amount of time in their prodigy state due to lack of quantum points.

Goliath

- Armor: These characters have four dots of Armor.
- Big: They have two points of Mega-Stamina.
- Powerful: They have two points of Mega-Strength.
- Tricks
  - Rock your world: Equal to the Mega-Strength Enhancement Shockwave.
  - Superjump: Equal to the Mega-Strength Enhancement Quantum Leap.

Gunners

- Most gunners should be considered Exceptionally Normal. While greatly skilled with guns, they have no real delta or quantum powers. GMs should allow these character to max out their firearms skill, as well as taking the Mega-Dexterity Enhancement Accuracy and the Mega-Intelligence Enhancement Analyze Weakness.

Healer

- Healing: Similar to the Mega-Stamina Enhancement Regeneration, the Healer is able to use this power on others. For every success against a difficulty of seven using the healer's Medical skill and a Healing Power level of four, the Healer brings up one level of bashing and lethal damage. The power takes twelve actions to use, but healers can reduce the amount of time by taking away dice as standard multiple action resolution.
- Tricks

- Use the same number of successes to heal disease and poison as found in the ***Brave New World*** sourcebook. If one of the rolls fails, the whole process fails and the healer cannot try again.

Scrapper   New World Order

- Armor: Equal to two dots of Armor.
- Healing Factor: The character has one dot of Mega-Stamina.
- Strong: The character has one dot of Mega-Strength.
- Tricks
    - Fast Healer: The character heals lethal damage at the same time as bashing damage.
    - Dirty Fighting: The character gets to add two dots to his brawling skill in addition to gaining the Dirty Maneuvers specialty for the Brawl ability.

Speedster

- Fast Runner: Equal to three dots of Hypermovement with the specification of Running Enhancement.
- Lightning Reflexes: Equal to two dots of Mega-Dexterity.
- Tricks
    - Afterimages: Equal to one dot of Holos.
    - Burst of Speed: With each extra success versus a roll of six against dexterity, the character can add 2 to his modifier for Hypermovement. This roll requires an action.

Miscellaneous Notes

Delta Points are equal to Willpower and a temporary pool of Delta Points times two. Most deltas will start off with three willpower and six points. If a player wishes to increase his permanent Willpower, he must spend part of his six points for attributes on a one for one basis. This has no effect on the temporary pool.

What about deltas that want to improve their abilities? These deltas who stay long enough in the Aberrant world are saturated with quantum energy that slowly but surely changes them from deltas to novas. At that point, they lost their old ***Brave New World*** tricks, and can trade them in for power extras. In addition, the new novas must use quantum points to pay for their powers, and are susceptible to taint, just like a regular nova.

Lastly, the Game Master should not allow players to create character using the ***Brave New World*** system just to convert them over. Only those players who already have characters should be allowed to convert their characters to the *Aberrant* system.

An Actual Conversion

Matt tells that group that he wants to stop playing ***Brave New World*** for a while and try out the new ***Aberrant*** game that he got for his birthday. His current group of players seems up for it outside of Bill, who's enjoyed his blaster tremendously. Seeing the conversion article, Matt decides to give it a shot.

Brave New World

Cannon Fire

Smarts: 4d6

Area knowledge: Crescent City 2, Computing 2, disguise 1, language: English 2, security 3
Speed: 4d6
　　Acrobatics 2, Dodging 3, driving: personal vehicle 2, martial arts: barehanded 3, martial arts: blade 2, shooting 5, stealth 3
Spirit: 3d6
　　Bravery 2, perception 2, persuasion: charm 2, scrutinize 2, search 4, shadowing 2
Strength: 3d6
　　Climbing 2, running 1, swimming 2, throwing 1
Size: 5
Pace: 9
Delta Points: 3
Quirks: Beautiful, delta, dependent: younger sister, iron jaw, rich, secret identity, self-confident, sharp eyes, unregistered, wanted.
Powers:
　Armor: 5/-
　Energy Blast

Aberrant

Cannon Fire

Nature: Based on his confident quirk, and the fact that he's an unregistered delta, the GM decides with Bill that Cannon Fire is a Thrillseeker.
Allegiance: None
Attributes: Strength 4, Dexterity 5, Stamina 5, Perception 2, Intelligence 5, Wits 2, Charisma 3, Manipulation 4, Appearance 3

Abilities: Academics 1 (specialty geography), Athletics 3 (specialty acrobatics, dodge, swimming, throw), Awareness 2 (Sharp Eyes), Computer 2, Driving 2, Endurance 1 (specialty long distance exertion), Etiquette 1 (specialty Social Graces), Firearms 5, Intrusion 3 (specialty security procedures), Investigation 3 (specialty search), Martial Arts 3, Melee 1 (specialty sword), Might 1 (specialty climb), Rapport 2 Stealth 3 (specialty trail) ,Style 1 (specialty disguise)
Background: Resources 3
Qualities: Alluring, Resilient
Bonuses: Plus two dice to resist persuasion attempts.
Powers: Armor Two Dots, Quantum Bolt three dots.

Since the blaster already comes with the Beautiful quirk, Bill decides to make his character a handsome charmer with two in Appearance and Charisma. That doesn't leave him with too many points left, so he puts one in Perception, and Wits. While the Game Master could veto Cannon Fire's rich quirk, he allows it to pass through. He figures that Project Utopia has paid Cannon Fire quite a lot of money just to study him.

The other elements have to be decided on a case by case basis. For example, is Cannon Fire's younger sister on this world, or stuck on the Ravaged Planet? Will he keep his identity a secret on this new world or attempt to cash in even more on his riches?

Bill looks the character over and knows that despite his two dots of armor, he might have to purchase some more armor with his resources. He doesn't feel too bad though, because unlike novas, his delta can shoot quantum bolts without limit and he can still walk away from most small arms fire unhurt.

?

by Steve Jackson

You hear it all the time. Big deal, you think. "I support them. . . . I shop there," you think. But that's not all there is to the idea of "support."

Let's face it: the full-line game store is an endangered species. Adventure games are a niche market. To the extent that any product breaks out of the niche, it is immediately sold elsewhere. You can find *AD&D* in bookstores. You can find *Pokemon* in bookstores, Toys 'R' Us, and corner gas stations! (Often, in fact, the corner gas station can get *Pokemon* when the local game store can't.)

So as soon as our genre produces some mass-market cream, it gets skimmed off into other channels. The full-line game store has to make do with the items that appeal only to the serious game fan. And it's hard to run a quality operation with a limited line and a limited clientele!

You'd think, though, that the serious game fans would realize this and work to build up their retailers. But that doesn't always happen. The average lifespan of a game retail store is not impressive. Too many retailers are undercapitalized, poorly located, and -- because they haven't been in business long -- inexperienced. Some survive to gain experience. Some don't.

(At this point, you may be asking: "If Steve believes this, why does he run a big online store with lots of game lines?" The answer is simple: there are a lot of towns with no game retailer at all, or no good one. My site, Warehouse 23, sells at full price, and should not be any competition to a real live game store that treats its customers well. If the world were full of game stores like that, there would be no market for online retailing, and all the publishers would be happier and richer. Full-line game stores are good for publishers too.)

The fact remains: the local game retailer needs all the help he can get.

Why Should You Care?

In the first place, though the Net is wonderful, it's still easier to find a variety of games on the store shelves. There they are, right out in the real world. You can pick them up, shake them, read the components list on the box. And if you don't see exactly what you want, a good retailer will let you special order.

It's a natural meeting place. If your local store vanished, where would you find other gamers? Not every store has a gaming area, but every store is still a natural gamer hangout. There's probably an opponent-finder bulletin board, and if not, the guy behind the counter knows who's looking for players. What would you do if you lost that?

Think of the store as a community. Think of it not as a retailer making money by dipping into your pocket, but as the host of your local gaming network. Think of it as a group of people with common interests, goals and needs. It really is a community. Now, what can you *do* for your community?

Ten Ways To Help

- Buy stuff. Well, duh! But that's the best place to start. Take it off the shelf, take it to the counter, spend money. And don't just buy for yourself. If you need a gift for somebody who has any interest at all in games, you've got a chance to give a little more business to your Friendly Local Game Store. So do it.
- If you don't see what you want, ask for it. Ask if they'll special order it. (If the store won't do special orders, they are shooting themselves in the foot. . . they're not supporting *you*. . . and you have my permission not to cry when they go out of business.) But if they *do* offer a special-order service, use it!
- If you have to buy stuff elsewhere, tell your local retailer, and tell them *why*. Don't expect any local store to meet some fly-by-night online site's 30% discount (and don't expect that site to be there next time you try to find them). But if the new *Rifts* book has been out for a month and your retailer still doesn't have it, and you get it someplace else, you should say, nicely, "I wanted this book, and you guys didn't have it, so I bought it elsewhere." Not only will that deliver a wakeup call. . . . it will keep somebody from assuming that there's no demand for *Rifts* any more. No, the reason they're sitting on the shelf is that all the regulars gave up and went somewhere else first.
- Send your friends there. Don't assume that everyone you game with already knows about the store where you shop. It's amazing how word gets around. . . and how sometimes it doesn't.
- Get to know the owner. You never know where that can lead. But the more the owner knows his customers, and knows about them, the better a job he can do. And if his customers are also his friends, he'll like his job better, and he's more likely to stay in business for you.
- Offer feedback. Now that you know the boss (and the employees), tell them what you like and dislike. About the store, about new products, about President Clinton. Okay, forget President Clinton. But the rest of that feedback is very valuable.
- Help keep an eye on things. You don't have to become a cop. But you can help build an attitude among the regulars (which will be sensed by the not-so-regulars) that this particular store is *not* a place for shoplifting, vandalism, littering and trash talk. This is *your* place and everyone had better respect that.
- Volunteer for store events. Offer to run demonstrations or to help with a tournament. (Your store doesn't do those? Suggest it.) Now, a gig like this is often unpaid, or paid only in store credit. But it's support, it's a chance to spend an afternoon gaming in a different way, and it *ought* to be fun. And who knows? It might lead to a job someday.
- Volunteer your special skills. A small retailer needs a lot of different talents and abilities. . . and few retailers *have* top scores in all those talents. So they do the best they can. They'd do better if you helped. Making signs? Writing advertising copy? Web page design? Painting miniatures or models for display? Now, I'm not advising you to start a whole new, unpaid job. If the retailer gets a *lot* of work out of you, you should get something back. But if there's a way for you to make a big difference with an hour's work, why not offer?

Again: Your store is not just bricks and mortar. It's a community. . . . at least, it should be. When you help your local store to be a better place, you're supporting your local gaming community.

* * *

Editor's note: To find a retailer near you, visit the [Gamer and Store Finder](#).

by Jonathan Souza

This adventure is for a team of black ops, optimally a team of two Combat ops, one Tech op, one Security op, one Intel op, and one Science op. Variations on this theme are allowable, as the Company will give the team the required members. The team should be fairly well experienced (about 4-5 missions under their belt), and the team has to be pretty skilled in dealing with problems via their heads more than their guns.

Starting Out

The team gets their first warning when the Company contacts them and sends them a message via Omicron to report in for a briefing. The briefing is in the form of unlabeled videotape and an envelope of papers on the subject. The videotape is direct, and to the point:

> Hello and good evening, ladies and gentlemen. A few days ago, Centurion Computing Systems released a new palmtop computer called the Centex. This computer is equal or better to the Cistron that we issue to Technology ops. In addition, we've been hearing reports from inside that they're going to release new technologies that are equal or better to our own. There's a suspicion of possible interference by extra-terrestrial influences and such. You're to discover if this is due to Grey or other ET influences, or possible compromise by someone in the Company. Your equipment list is in the envelope as well as information on the company itself.

The tape self-destructs soon afterwards, and the players should review the equipment list, which gives them:

- Enough automatic pistols (all in .40 caliber Glocks) to equip the entire team, and silencers for the guns.
- Ammo for the guns.
- A full set of surveillance and computer-cracking gear.
- Heavy monocrys armor for the combat ops, light monocrys armor for everyone else.
- Information and paperwork to help the ops to get into the company with identities, as hired workers.

In addition, the team can request any sort of equipment listed in the book (except for experimental gear) within 12 hours and requests for personnel within 24. The information on Centurion Computing Systems (CCS) is like many other startup computer companies in San Francisco -- a nutty bunch of inventors and developers that gave up jobs with bigger companies and went to work independently. The company has twenty-two employees, and none of them have had contact with anyone that has worked for an Argus front company, according to the investigation. The team has tickets to San Francisco Airport and their gear will arrive at the safehouse at the same time they do.

Getting To Work

The team of ops arrives at the safehouse and start getting set on the job. The safehouse has vehicles for the team: one minivan for surveillance (treat as a TL 7 van, except for TL 8 sensors and a instant chameleon), and enough mid-sized cars to carry the team (all look like TL 7 equivalent cars, but built with TL 8 gear and armored).

Silicon Dreams

The team should, by the first day, have figured out how they will get started.

The first thing the team should do is investigating the company itself. CCS recently moved into a new office complex in San Jose, and getting hired with the expanding company would be easy for the ops. The team quickly realizes that it's the top four people -- the head of the company, Walter Morrow; his two best friends Nick Allyson and Wang-Li Gi; and the girl that gave them the garage to work in, Lisa Patterson -- that are the inventive and creative parts of the company. There appears to be no form of contact or method of transmitting information to the four -- taps on their e-mail system both at home and at work seems to be a mixture of work e-mail, bad jokes and stories, and some erotic commentary about the relationships in the office.

If the team decides to break in and search the homes of the four top people, all they'll find is somewhat messy apartments and maybe a little bit of pot and cocaine. GMs should be willing to play this up for all it's worth, as a team of very well-trained covert ops try their best not to get caught by rent-a-cops, and what happens if they do. Working out a check on the top people for Grey implants would be difficult, but not impossible -- the team will learn that they were checked and found clean. Expanding to search the twenty-plus people of the company will take too much time for the ops, but they will quickly discover one piece of information -- of all the employees, only ten, including the top four people -- have been with the company since they started their innovative streak.

During this investigation, the team will hear that CCS is about to release a new computer system -- the Navi system -- which would be easily equal to a TL 9 mini-computer. The ops will hear from the Company that unless the Navi can be proven not to be developed by hostile forces, it has to be stopped or the creation and the creators destroyed. The estimated release date of the Navi is one month, and the team is ordered to resolve the problem in under a month or "clean up" the situation.

Hunting down these ten people will quickly winnow down one name -- Morgana Lafayette. She's a twenty-six year old secretary and her personal history has a few major "blanks" in it, as well as having some other problems -- including that she was rumored to be the lover of the top people in the company. Searching her apartment will quickly reveal several things that will make the ops suspicious. A doctor's prescription for Pitremenopine (which Science ops will tell players is commonly used by people with psionic talents to keep their powers from working while they sleep) and documentation on certain items of hardware of early TL 9 computer designs are only just a few of the things found.

Interrogation of Morgana will reveal that she had been getting visions of such things -- but she hadn't revealed the plans to the company. A good team of investigators will reveal that where she had some of her blank spots have had links to Grey operating zones. Calling in a PsiOp to check on her story will reveal that she's telling the truth -- but she does have some latent telepathic ability. And, she does have a Grey implant in her, which looks like it had been placed there in one her "blank" periods a few years ago.

Hunting Down The Grey Road

The players will have to use Morgana's telepathic link to the Greys to find the Grey nest. They broadcast the plans to her, and her own telepathic ability "relays" the signal to one of the four inventors, who think that it's their own idea (and they innovate on it). By helping human computer technology grow more rapidly, the Greys have access to hardware to rebuild their ships and equipment. They didn't develop the Navi system, but they will make use of it to get access to more and better hardware.

Tracking down the Greys will be difficult. The moment they realize that Morgana has been compromised, they will cut the link to her and start packing up to leave the area. But what they didn't know is that they left enough information in Morgana's head to let the ops be lead to the area where they established their base. Assuming that there is a Psi-Op available, the Op will be able to narrow down the signal to within about ten degrees and a thirty-mile arc in the southeast of Morgana's apartment. Contacting the Company for information on Grey psi-transmitters, they'll indicate that the estimated range of transmitters is about forty miles -- and is about the size of a small car. Investigating warehouses and other type of locations (as the area is too well-inhabited for the Greys to establish a concealed base without someone noticing it) will reveal that a large warehouse was rented in the last six months. This warehouse is next to the San Jose Airport, and is of sufficient size to hold both a Grey saucer and the transmitter hardware.

The warehouse has armed guards carrying M16s (see Grey Guards stats), claming that the warehouse is under FBI investigation, and no story or documentation that the team uses will allow the team into the warehouse. Any attempts to force or bribe their way in will cause the guards to go from firm statements to deadly force, very rapidly. Using FBI contacts or checking to make sure that there is a real FBI investigation will quickly reveal that the FBI doesn't have any idea of what's going on at the warehouse. The team does detect, if they're doing surveillance of the warehouse, a lot of activities -- clean-up activities that seem to be coming close to a resolution -- sometime that night, probably about 3-4 am.

Cleaning Up The Problem

The team really has two options at this point -- let the Greys escape or attack the warehouse at some point that night. The first option isn't one the Company would really like, but if the team does it, they'll see the "FBI" guards open up a door in the warehouse and the saucer will take off; the guards will quickly disperse to six cars and drive them away in separate directions. No amount of tailing will reveal where the guards get in contact with the Greys, or their equipment -- and no amount of interrogation will reveal this, either. However, the Greys do have an implant in all the guards. If they let the Greys escape, the team will be told that their handing of the situation wasn't perfect and will be told to do better next time.

The second option is the one the Company would prefer. Besides the players, the Company can provide three Combat ops and a Security op to help keep the scene clear of people not involved in the little attack. All team members will have a Castor '94 Assault Carbine and a Heavy Monocrys suit, as well as communications gear for the assault. Any other reasonable gear (grenades, night vision gear, etc), will be provided. Exotic or experimental gear will require the players to have a very good reason for it (and require good rolls on their Fast Talk skills).

The layout of the warehouse is fairly straightforward, but there are several locations worth noting and being aware of.

- **Front Office.** This room is accessible from the street. It has a few simple chairs, a receptionist's desk, and an old coffee machine. There is not much else here, except for two Grey Guards waiting. One is behind the desk, the other is sitting down enjoying his coffee (they'll both have to take an action to bring their weapons to the ready). The receptionist's computer has no real information on it other than a few appointments for the "cover" staff.
- **Office Space.** The front office leads to this area. These are several small offices (consider the walls PD 2, DR 20). There are four Grey Guards in the office, sipping coffee and chatting about "government foul-ups." Unless previously alerted either by Grey telepathy, gunfire, or the other Guards, it will take two actions for the Guards to be ready for combat (one to get their weapons, one to ready them). The computers in the offices are fairly

standard, and have no real information on them.

- **Bathrooms.** Leading off from the office space are men's and women's bathrooms. Each has two stalls. Other than that, ordinary.
- **"Security Area."** This room adjacent to the office space has two ready Grey Guards that can respond to an attack instantly. The walls of this area, the warehouse area around the saucer, and the large doors exiting the warehouse, is PD 3, DR 100. The door has a retinal/telepathic lock and the door itself is DR 250. It leads to a large area where the Grey Saucer is being held.
- **Curtain.** Dividing the area between the Security Area and the floor where the Saucer is, this curtain is very flimsy and easy to damage; bullets will just go through it, and a knife will easily cut it. It seems to part the moment the players put an object through it, and has no real effect on play other than to act as an obscurant for the Saucer (-4 to hit).
- **Grey Saucer and Equipment.** A team of four Greys is working here. Two are loading the equipment on the saucer (several large items, using contra-grav pallets to help manipulate them). One is breaking down equipment with a tool, and the last one is at the seat of the saucer, powering up the reactor to allow the saucer to take off. The moment the attack happens (the first Grey Guard that detects an Ops will set off the alarm), the three Greys outside the ship will move to get the already disassembled equipment into the saucer. The fourth one will work harder to bring the saucer up to full operational power. If the Ops manage to get into the hanger, the three Greys will open fire with omniblaster pistols (either in narrow-beam or standard mode), and the fourth Grey will get into the top xaser turret and start shooting at the Ops. Killing a Grey or two will result in the last Greys escaping into the saucer, sealing it up and blowing the outer door (throwing the doors over a hundred meters away), and flying away at top speed, firing back into the hanger to do as much damage as possible.

If the Ops move *very* quickly, they can secure the Saucer. The Grey in the top turret won't switch over to the bottom turret because its field of fire is blocked by the equipment; within touching distance of the Saucer and a few feet away, the xaser can't fire and hit targets because the body of the saucer blocks the weapon. Assuming Ops capture the saucer, the Company will move a team in **very** quickly to take it away. If not, the Greys escape, leaving behind many confused people and several bits of equipment.

The Resolution Of Affairs

Dynatronics personnel, reviewing the Navi's plans, inform Argus that they can be modified so that the Grey plan to use them to steal information won't work. With a few doses of the Cocktail to people like Morgana and the Grey Guards, a plan to break into the computer market by the Greys has been thwarted. And the Ops get vacation time -- four days of time to themselves. A good reward for excellent work.

Characters Involved In The Adventure

Morgana Lafayette

ST 11, DX 12, IQ 15, HT 10
Advantages: Animal Empathy, Attractive Appearance, Fashion Sense, Intuition, Rapid Healing, Telepathy 15(Uncontrolled, only useable by Greys as a relay), Unusual Background (Latent Telepath), and Comfortable Wealth.
Disadvantages: Delusions (Quirk, "Men love what I enjoy giving them"), Dreamer, Involuntary Duty (Grey Telepathic Relay), Lecherousness, Slave Mentality (only vs. Grey Telepathy, -20%), Weirdness Magnet.
Skills: All Professional/Office type skills, Akido-14, Erotic Arts-14, Savoir-Faire-15, Sex Appeal-15, Guns (Pistol)-10

Morgana wears mostly hand-dyed outfits, usually of either Arabian or Indian origin. Her personality is very sensual and she's able to project an aura of feelings and sensuality upon those around her. While she wouldn't initiate violence, she will defend herself. She does own a .38 revolver at home, but no other weapon (and her shooting is poor).

Grey Guards

ST 14, DX 14, IQ 12, HT 14
Advantages: Collected and Composed, Combat Reflexes, High Pain Threshold, two levels Strong Will.
Disadvantages: Delusion (Major, Believe that the Greys are "people"), Duty (To defend the Greys), Slave Mentality (only vs. Grey Telepathy).
Skills: Guns (Light Automatic, TL 7)-15, Guns (Light Automatic, TL 8), Karate-15.

There are eight Grey Guards involved in this adventure. All of them had been, in the past, captured by the Greys and subjected to long-term mind control as well as being implanted. They all believe that the team of four Greys in the warehouse is a group of government officials, and that they're working for a covert operations branch of the government. Any efforts to convince the Guards that the Greys are not human will be rejected (short of long term psychotherapy or a combination of Telerecieve and Mindwipe to fix the damage). When they're operating as "government officials", they are wearing TL 9 Combat Infantry Dress torso units (PD 4, DR 50 for hit locations 9-11 and 17-18) concealed as TL 7 heavy body armor, armed with M16 assault rifles. When operating as "covert officers", the team wears full Combat Infantry Dress, and helmet with radio communicators in them. They are also carrying TL 9 Storm Carbines (UT2) loaded with AP ammo, six magazines of ammo and four concussion grenades (6d damage, detonate on impact, but the grenade doesn't generate fragments). To the Grey Guards, they're defending the best of the United States (if a tad humorless) from Communist hordes/Militia fanatics/insane Islamic terrorists (take your pick).

Accidents of Birth

by Marcus L. Rowland

Art by Paul Daly

Forgotten Futures VI is an RPG based on Victorian melodramatic theatre. In many adventures the Villain (a capital "V" should always be used) will be a player character, and is encouraged to show his or her villainy by asides to the audience, dramatic soliloquies, maniacal laughter, and general skulduggery; the other players run the Hero, the Romantic Lead, and possibly henchmen and other supporting characters, and may also use these staging devices. The players are aware of the situation; their characters only know what happens "on-stage", until the Villain is unmasked as the plot reaches fruition or goes so badly wrong that villainy becomes apparent.

Players are also encouraged to "double" in roles, taking two or more parts who are never "on-stage" together simultaneously, and to adopt "attributes" which motivate their characters or add complications to their lives, such as Romantic Illegitimacy (the character is the illegitimate child of nobility or royalty), Doomed (often in the form of a mysterious wasting illness that manifests as pale good looks and an amazingly mild and non-irritating cough), Insanity, or Uncanny Powers.

Somehow two obvious attributes were overlooked; both relate to the circumstances of the character's birth, can apply to almost any character, and work very well in a game with doubled roles. They can easily be applied to other games systems such as *GURPS*, especially in melodramatic and romantic settings such as *GURPS Swashbucklers* and *Scarlet Pimpernel*, or settings where the accidents described below are likely to occur; *GURPS Old West*, for example.

Separated At Birth

The character has a twin brother or sister, but they were somehow torn apart immediately after birth, or as very young children, and have lost contact. This might involve kidnapping, murder, a divorce, or a simple accident. Traditionally one is wealthy and the other poor, one goes to a happy home while the other is abused, and so forth. It is entirely appropriate to the genre for one to be the Hero and the other the Villain; usually they should not be played by the same person, since a confrontation is almost inevitable, but they may very well be able to assume the other person's identity as a disguise. Often one will know about the situation, the other will not.

It will usually be assumed that the missing child is dead. If so, there may be problems proving the character's true identity, especially if false claimants have muddied the waters.

Optionally the siblings may experience a psychic bond, so that one somehow knows when the other is unhappy or is in pain. This should not be used to send messages between the characters -- it's a vague feeling, not telepathy -- and is in no way directional.

Characters need not necessarily know that they have been separated at birth; one or both may be unaware of the situation. For example, there is a long (and often tragic) tradition of characters who fall in love then learn that they are brother and sister. The *Star Wars* trilogy presents an obvious example.

As a variant, adventurers may pretend, or may be forced to pretend, that they are the long-lost siblings or children of wealthy characters or NPCs, especially if the parents are dead. A good example occurs in the film *Candleshoe*. It is

dramatically appropriate for such characters to turn out to be the real long-lost heir.

Heroes will naturally make all possible efforts to find their missing twin; if rich they will hire detectives, or conduct their own investigation. If poor they will still try to find out the truth, by consulting whatever sources are available to them. However, they will fail until it is dramatically appropriate for them to succeed.

Villains will also try to find the missing twin, and will probably succeed. A rich Villain will fear that the missing sibling will claim a share of his wealth, and plot to eliminate the unwelcome complication (see, for example, *The Man In The Iron Mask*); a poor Villain will plot to take the fortune that should rightfully be his, take his sibling's place, or both. However, a poor Villain will not present himself as a genuine long-lost heir; that's too simple, and any self-respecting Villain will naturally want the entire fortune, not just a share.

The Romantic Lead has always wished for a twin, and may know that one once existed; if so, she will never be able to find her sibling until it is dramatically appropriate. She will feel an aching void in her life, which should be good for at least one song or soliloquy, and is most likely to feel the psychic bond described above. Rich Romantic Leads will want to share their good fortune with their lost sisters; poor Romantic Leads will hope that their missing sister is equally happy.

Example

Brothers Alistair and Robert Fosbury-Smythe were separated six months after birth; their parent's yacht, the Prospero, sank in a violent Channel storm. Robert was saved by his father but Alistair was never found and is assumed to have drowned with his mother. In fact, Alistair's cot floated free of the wreck and was found drifting the next day by Gerard D'Ascoigne, a French wine smuggler. D'Ascoigne was on his way back to France, and had no intention of revealing his presence in British waters, so he left the child on the steps of a French orphanage, where he was taken in by nuns and later adopted.

Accidents of Birth

Nearly thirty years later Father Jean-Paul St. Cyr, formerly Alistair Fosbury-Smythe, is summoned to the death-bed of D'Ascoigne; the latter has no idea that St. Cyr is the child he rescued, but wants to confess his misdeeds, including the story of the wreck. A few weeks after the storm he heard about the Prospero and realized that the child he found must be the one that was lost, but never did anything about it. Now he can't remember the name of the yacht or the child, just that it was in all the British newspapers -- the child had very wealthy parents. He tells St. Cyr enough to make it certain that he is the child.

St. Cyr has always wondered about his origins, but has been unable to find out anything in France; now it seems that he is really English. Although he has renounced worldly goods, the Church could probably make good use of any inheritance that may be owed him. . . A trip to Britain would be expensive, but might answer many questions.

Meanwhile Robert has grown up bad, a rake and scoundrel who has squandered most of his parents' fortune and is now a daring criminal. He and his henchmen currently plan to hijack a liner, sink it in the sea offshore from his mansion, then dive down to steal bullion that will be in its strong room. He knows that his brother survived; he met one of D'Ascoigne's crew a few years ago, and heard the story of the baby they found at sea, but was never able to trace it past the orphanage.

St. Cyr's arrival and attempt to locate his family should cause problems for Robert, by attracting unwelcome attention to his activities. His attempts to claim his rightful estate are even more damaging, since any prying into the family fortune will show that Robert has sources of income that can't readily be explained. St. Cyr must somehow be

eliminated without arousing suspicion. Robert plans to kidnap him, take his place, and arrange a tragic "accident" with the help of his henchmen. But St. Cyr isn't entirely without defences; he played Rugby football and boxed for the orphanage and his seminary, and God is on the side of the Righteous. . .

Swapped At Birth

The character and another child were somehow swapped soon after birth; for example, a nurse might mix up two babies in a hospital, or a nanny might wheel away the wrong pram and then cover up her mistake. In less modern settings a child might be swapped by gypsies; in a campaign with fantasy or horror elements supernatural creatures might substitute one of their offspring for a human child. See, for example, *Good Omens* by Terry Pratchett and Neil Gaiman.

Both children somehow know that they are out of place, although nobody else usually notices that (for example) the child has brown eyes when both parents have blue, the child has great musical talent which the parents totally lack, the child is a bad-tempered bully when the parents are unusually kind, etc.

This attribute can be combined with Separated At Birth, producing two pairs of mismatched twins, but this may best suit a campaign with comedy elements. Another possibility is the exchange of three or more children; again, this may best suit a comic campaign.

It is entirely appropriate to the genre for the characters to know each other without realising that they have swapped places, for one to be rich and the other poor, for one to be the other's servant, and so forth.

Heroes probably notice that they are unlike their parents, but won't brood about it and are unlikely to realise the truth, unless it becomes dramatically appropriate; they'll simply assume that their rugged good looks, strong right arm, steely jaws, and any unusual talents are a freak of genetics. They are most likely the swan in a family of ugly ducklings, and are usually poor but honest.

Villains usually get the best of these situations; they are generally rich (having taken the Hero's rightful place), are often in a position to give the other child a hard time, and are much more likely to know that they have somehow risen above their station. The down side is that they know that they have to defend their position.

The Romantic Lead is usually the beautiful daughter of a family of swineherds, or otherwise forced into the mire, while her replacement will generally be a cruel employer or member of the nobility, and jealous of her beauty. The Hero will be torn between the attractions of the Romantic Lead and her replacement, who is generally a Villainess.

Example

Note: This example adds an extra and extremely optional plot complication to one of the *Forgotten Futures VI* adventures, *The Wages of Sin*. If you are likely to play in this adventure please **do not** read on! A one-year discrepancy in the age of the principal characters, as given in the original adventure, should be ignored.

Twenty-three years ago two young mothers were admitted to the maternity ward of a Cornish cottage hospital. One was Norma Pellew, the wife of a wealthy scientist; the other was Caroline Fox, an unmarried housemaid from the Pellew mansion. She refused to say who fathered her child, and died within hours of his birth. Somehow, in the confusion following the death, the two children were swapped, and baby "Fox" was adopted by an aunt and bought up in a neighbouring town, while baby "Pellew" was bought up by "his" family.

Today Captain Roderic Pellew DSO is a young officer in the Indian Army; unknown to his "parents" he is deeply in debt. He is currently on leave and staying at their mansion, while planning various crimes (including murder) to ensure that he will inherit their estate; his preparations include a simple disguise as the butler, Sylvester Potter, whom he finds curiously easy to impersonate. . . this is not surprising since Potter is his father! Roderic suspects this, but still believes that Norma is his mother, and assumes that she must have had an illicit relationship with the butler. Naturally he has no intention of doing anything to reveal this. Roderic is also pretending to be romantically interested in Lady Maureen

Kincaid-Speller (of the Loamshire Kincaid-Spellers), the Romantic Lead, who is staying at the house, but this is mostly a cover for his nefarious activities.

Meanwhile Thomas Fox has become a young Detective-Constable, and is currently working undercover at the Pellew mansion, posing as Professor Pellew's secretary and waiting for a team of country house burglars to strike. His aunt has told him very little about his birth, and he has no idea that his "mother" worked at the house, or that his origins are somewhat more exalted than he believes. He is deeply attracted to Lady Maureen, but naturally would never dream of expressing his feelings to a lady so far above his station in life. Lady Maureen is initially attracted to Roderic, but soon senses the evil that lies beneath his pose as a gentleman, while finding herself strangely attracted to Fox.

As Roderic's crimes are uncovered he and Fox fight, and Fox's shirt is torn to reveal a birthmark that often occurs in the Pellew family; a mark that Roderic lacks. Some detective work will then reveal the truth, and allow Fox to come into his true estate and marry Lady Maureen.

Use With GURPS

New Disadvantage: Separated at Birth: -5/-10 points

The character was separated from a sibling soon after birth (and this fact *will* become relevant to the game, sooner rather than later). For -5 points the character knows the sibling's name and approximate location, but they are not in contact; if contact is resumed, the missing sibling should usually become a -5 point Dependent OR a -5 point Enemy, although other variations are possible (such as gaining a Sense of Duty or a negative Reputation as "the bad one of the family"), or the character may simply buy off the Disadvantage with experience. For -10 points, the character is at best unsure of the sibling's name, location, or status; if contact is resumed, the missing sibling should become a -10 point Dependent OR a -10 point Enemy. Resumption of contact will often have other, temporary, adverse effects on the character, such as financial or legal problems.

In addition, if the character has taken the -10 point version of the Disadvantage and is properly role-played as having no idea of the location or nature of their brother or sister, the sibling can be taken as an Unknown Enemy (see p. CI77); in that case, the sibling is aware of, and actively working against, the character. If contact is resumed, there will often be catastrophic financial or legal problems for the character; use these, along with increased frequency of Appearance for the no-longer-secret Enemy, and anything else that feels appropriate, to keep the character's points total balanced.

If this disadvantage is taken the GM can, if desired, roll secretly (or just decide to increase the confusion); on an 18 it is actually an advantage! The missing sibling will become an Ally with the appropriate points value if contact is resumed, and all financial and legal problems will resolve in the character's favour. However, until both characters accumulate enough experience points to pay for their new, improved situation, they will be subject to all manner of temporary Disadvantages of appropriate value; possibilities include Disowned ("I told you never to have dealings with your brother!"), Duty, Enemies acquired from each other's pasts, Mistaken Identity, Sense of Duty, reduced Wealth, or, in best melodramatic tradition, Weirdness Magnet.

Characters who know all about lost siblings (such as the Unknown Enemies mentioned above) do not automatically gain points for their existence, but often have a related Delusion (such as "One should *never* trust family"), Obsession ("I must eliminate my twin before this whole mess causes me trouble") or Secret ("I'm not really the rightful heir").

The Evil Twin disadvantage (GURPS Compendium 1 pg. 77) might be combined with Separated At Birth, or appear among one or both character's Disadvantages after the situation becomes known.

New Disadvantage: Swapped at Birth: Value Varies

The character and another child were somehow swapped soon after birth. This may mean that the character has suffered economic or other forms of harm which will be rectified if the truth is revealed, or that the character will suffer such harm if the truth is revealed. In *GURPS* terms, this takes the form of various Disadvantages (and possibly

also Advantages), which may be radically changed around if and when the truth is revealed. For example, the character might start play with low Social Status and Wealth, which rise rapidly when he is revealed to be the rightful heir to a fortune - but be replaced by an Enemy, defined as the former claimant to the wealth and his cronies. (Discovering the truth often leads to a character acquiring new Enemies, frequently the person for whom they were swapped.) Alternatively, a character who is aware that she is not really entitled to her privileged position might have a Secret, which becomes lower Status and a bad Reputation if the truth is revealed; or someone who knows the truth and has a special interest in the case may represent a Secret Patron or Unknown Enemy.

In extreme circumstances, being Swapped at Birth might give a character features such as Primitive or a bizarre Unusual Background; the legendary Greystoke Case is an example of this.

The Karmic Ties advantage/disadvantage (GURPS Compendium 1 pg. 39) can usefully be combined with either of these disadvantages.

One interesting way to use both of these disadvantages is for the GM to decide that they are in fact Delusions of appropriate points value; the adventurer believes that he or she has been swapped or separated, but is mistaken. This doesn't rule out the possibility that the twin or other child is hostile to the adventurer; if the story is convincing enough both may believe it!

Note: In campaigns in which sentient beings hatch from eggs (such as **GURPS Planet Krishna**) these disadvantages might be moderately common, and hence worth fewer points; in **GURPS Goblins** they are the norm, and should only be taken as a disadvantage if there is something very odd about the circumstances.

Many thanks to John Dallman for several suggestions, and to Phil Masters for extensive help with the **GURPS** *portion of the article.*

Pyramid Review

D&D: Diablo II Adventure Game

Published by [Wizards of the Coast](#)

Written by By Bill Slavicsek and Jeff Grubb

Boxed Set (112 pages), $19.99

If you are anything like me, then you have been wondering for quite some time
when the heck Blizzard Entertainment is finally going to release the long-awaited
Diablo II computer game for Windows. They got us all hot and bothered a short
while ago with promises of its release sometime around Christmas '99, but that never happened. And now here we are
in May, still waiting eagerly to play it.

Fortunately, our friends over at Wizards of the Coast has come through for us where Blizzard has fallen short. So,
those of you ultra-hungry for that first taste of *Diablo II*, the chance is here with WOTC's first batch of roleplaying/PC
game cross-overs with the folks at Blizzard. The ***D&D: Diablo II Adventure Game*** is one of the first of these releases,
and it takes the ***D&D 2nd Edition*** rules and applies them to the world of *Diablo*.

Players now have the chance to play all of the cool characters found in *Diablo II*, while exploring the game's infamous
underground caverns and slicing through its many beasts and monsters. The advantages of releasing this game in
pencil-and-paper format are obvious. A human DM and the lack of a restricting computer interface make for infinite
possibilities that simply could never be explored in the domain of a computer. So how does this cross-over version
stack up?

Pretty good. The first thing that must be noted is that this supplement is clearly aimed at beginners -- those with little
or no familiarity with *D&D* (Especially those who are fans of *Diablo*). The rules are all very simplified for quick play
and easy understanding. Indeed, a group could be ready to play a mere hour after opening the box. The characters are
all pre-generated, and all of the necessary rules are printed clearly on the character sheets and DM's screen
respectively. There is, of course, a handy rules book that will explain to the DM everything that he or she needs to
know to get things going, as well as a bunch of other cool stuff.

The presentation and layout are all very well done, with nice slick playing materials, and well explained rules. The
game comes with a "game board" (more on this in a moment), player and monster pieces, and even dice (although
mine were suspiciously absent from by box). So there is no need to purchase any other game boards or source
materials in order to play.

As noted before, the game mechanics are all reduced to a very simple level. Anything not directly relevant is left out,
and only the basic system is explained. Skills are all accomplished using stat checks, and all special abilities are
executed through the use of mana (one will also note that a few things have been renamed into *Diablo* terms). The
downside, of course, is that these limited rules place a cap on how many miles one will get out of the game. Players
can only advance to fifth level, and after a while even novice players will start trying to pull things that the rules don't
even attempt to cover. In this aspect, it's truly more of an intro supplement for those that don't know anything about
D&D. Sooner or later, they'll need to move on to the real thing. Nonetheless, the game's easy play and the nostalgia
factor will also make this one a fun one-shot for experienced *D&D* players who had a lot of fun playing *Diablo* on the
PC.

The game also comes with a quest book that contains six consecutively linked adventures that follow a light plot,

which loosely follows that of the *Diablo* computer game. They are all very basic dungeon crawls that use an interesting game board system. One of *Diablo*'s big features is that it uses a random dungeon generator, so that every time you play it's a unique experience. The **D&D** version mimics this through its own random generation system. Instead of having a single game board, you have a bunch of board pieces like long corridors, large rooms, alters, etc. Whenever the players enter a new room, a D6 is rolled to determine what type of room comes next. Each dungeon features three special rooms and a quest room (reached once the three special rooms have been cleared). There are six quest rooms included in the box, which correspond to the six adventures in the quest book.

So what about all the stuff out of *Diablo II*? Just as the **D&D** rules have been boiled down to simplicity, so have the *Diablo II* elements. The five new characters are present with a sneak peek of each of their abilities (we see five out of however many they'll have in the computer game), the magical items are there, and, of course, the game's monsters are there. What we don't see are all of these new towns and NPCs that we've been promised in the new computer game.

There is only one town in the game, Waystruck, and the NPCs are basically the same as those in *Diablo I*. The plot of the six adventures is actually lifted primarily from *Diablo I* too. In addition to that, there are plenty of spells, items, and monsters left out of this simple version. It seems that the folks at Blizzard are only looking to whet our appetites.

Nonetheless, the game is very cool. For beginners and *Diablo* players looking to check out this whole "**D&D** thing," it's a very good and easy-to-learn intro. For experienced players it runs more like a simple one-shot game, but it still contains loads of fun, especially if you're a fan of either of the *Diablo* computer games.

Of course, once you're done playing this one, there will be more on the way. WOTC has released ***Diablo II: The Awakening***, a full source/adventure book that incorporates *Diablo II* fully into **AD&D 2nd Edition** Rules, along with this boxed set, and an ***Alternity/Starcraft*** crossover is promised for July. If all goes well, then WOTC has promised us even more supplements down the road.

Pyramid Review

Ananasi (for Werewolf)

Published by White Wolf Studios

by Brett Brooks and James A. Moore

128 Pages; $17.95

The Changing Breed books for *Werewolf* have always been a step or two above most of their less exotic relatives. This is in part due, no doubt, to the extremely high cool factor of the subjects of the books (I mean, come on. We're sick of werewolves. Bring on the talking rats already!). But in general the books have also been of actual high quality as well. This book is no exception.

Ananasi are were-spiders. They walk around, looking like people, and when they get mad they turn into huge spiders. Or huge spider/human monster-types. Or hordes and hordes of little spiders (known to the layman as the *ohmygodlookhowmanyspidersthereare* form). As mentioned earlier, the "kewl"ness of this book goes right off the chart.

There's a real effort in this book to make the Ananasi unique, though, and to set them apart from the hordes of were-lions/bears/lizards/anteaters and so on who populate, seemingly, every nook and cranny of the World of Darkness. And they mostly succeed, making the Ananasi a joint creation of the various aspects of cosmology in the *Werewolf* universe (namely the Weaver, Wyld and Wyrm, although not in that order). One of the upshots of this aspect of arachnid existence is that they get to make the rote retelling of the history of the world at the beginning of the book substantially different and more interesting than those which have appeared in previous Changing Breed texts (it's from the first person perspective, if nothing else. . .).

Following the history lesson, we are treated to a thirty page discussion on what it is to be Ananasi, covering politics, biology, geography and psychology. Apart from being well-written and in-character (it is composed in the manner of a series of lectures by a variety of Ananasi teachers), this section is actually very informative, and contains a lot of information useful in an immediate manner.

The character creation chapter follows. This is fairly typical, containing new gifts, a few rites, backgrounds, merits and flaws (which are especially cool, including such gems as Hive Mind and Gender-Morph), the Ananasi totem, Fylfots (fetishes) and Aspects. Aspects are the Ananasi version of Auspices, and look pretty good, in concept. Each Ananasi has a caste (warrior, priest or questioner) and an allegiance (to Wyrm, Wyld or Weaver), and the combination of these is its Aspect (each of the nine combinations also has its own name; e.g. a questioner allied with the Weaver is called a Gaderin).

Now here's the problem. Each of the nine aspects has a short (half-page or so) description. What this descriptions tells us, though, is not what makes members of said aspect tick, but rather what they *do*. . . from an outsider's perspective. For instance, we are told that the Gaderin are obsessive collectors. Which is fine, but we aren't told why they collect, what they hope to accomplish by acquiring butterfly specimens or the bodies of serial killers. Which is what, logically, anyone hoping to play a Gaderin would like to know. It's the problem same for most of the others. We are told in a number of cases, to paraphrase, that "members of this Aspect kill people and destroy stuff, apparently at random, but with an over-all goal in mind," but aren't given any clue as to what that goal is, or how they choose their targets. (Flip a coin? Orders from Ananasa? I have no idea.) Basically, to make use of the Aspects, you'll either have to have incredible tolerance for hack-and-slash, or brew up your own descriptions.

Finally, we have a couple of appendixes. The first is a fairly typical collection of player archetypes and notables in Ananasi society. Oddly, these examples provide more insight into the nature of the Aspects they represent than the descriptions of the Aspects in the previous chapter. In any case, this chapter is a fairly typical example of its ilk; the archetypes are playable, but not exceptional, and the notables readable and perhaps even usable, without grabbing the reader's attention.

Appendix two, though, is far more interesting. It opens with a section on real spiders, going over the basics of anatomy. Which, although a nice idea, is easy to skim over and forget about. Following this is a section titled "Clarifications: the Truth Behind Belief" which is meant to give an objective view to a book that has been, up until now, from the Ananasi point of view. I'm not sure if I approve. While this section could be of interest to a GM, it's certainly not the sort of thing I would want my players to stumble onto while reading up on real-life spiders. Plus, I generally prefer not to know what it has been decided the canonical "truth" would be. But these qualms are mostly personal preference. This section is well-written, and not so expositive as to ruin the inherent mystery surrounding the guiding forces of the Werewolf world.

Which wraps up the chapter-by-chapter. On to the full-book overview. Visually, breed-book *Ananasi* holds together quite well. The art is quite good, although it will do nothing for your arachnophobia, and layout holds together very well (there is very little blank space between chapters). The opening comic, while not especially good, doesn't reach the gut-wrenching heights of badness that have been achieved elsewhere in the line (<cough> Hengeyokai <cough>). Organization gets a bit strange, however. Nothing is repeated in this book, which means that since there is a description of the various Ananasi forms buried in Chapter Three, there is no description at all in the character creation chapter, for instance, and anyone wondering what the Pithus form looks like (hint: big bloody spider) will have to go looking.

The *Ananasi* book continues the breed-book tradition of readable, and usable, splatbooks. And it continues in White Wolf's tradition of prettiness. This book is more than detailed enough for an all-Ananasi campaign, and would be invaluable in rounding out existing arachnid NPCs. Be warned, however, that the Aspects will need a bit of work. Otherwise, this is a good buy.

-- Ryan Elias

Immortal Airship Masters of the Andes!

"And now, who is this Robur? Shall we ever know?
We know to-day. Robur is the science of the future. Perhaps the science of tomorrow! Certainly the science that will come!
Does the Albatross still cruise in the atmosphere in the realm that none can take from her? There is no reason to doubt it. Will Robur, the Conqueror, appear one day as he said? Yes! He will come to declare the secret of his invention, which will greatly change the social and political conditions of the world."
-- Jules Verne, *Robur the Conqueror* (1886)

And you thought the [Antarctic Space Nazis](#) were warped. And don't get me wrong; they are. Regardless, they're still understandable, still clearly villainous. But these new guys, these immortal alien Rosicrucian airship technocrats, are so bisociative they don't even have a name. They might be the "Council of the 98"; they might be Le Brouillard; they might be the NYMZA. They could be a steampunk Shangri-La or Rosicrucian Blood Guardians or an outpost of Alien Nazi Supermen, or all three. And like so many great stories, theirs begins in the American West, in the shimmering heat distortion of the desert skies.

"Taking Dellschau seriously for the moment we might postulate that in both Germany and the United States, specifically in California and New York, a secret cult of brilliant scientists, technicians and inventors established contact with nonhuman agencies which told them how to construct aerial vessels but ordered them to keep the work under wraps. It is safe to assume the German and American branches were in communication and about 1848 some of the Germans immigrated to pool their efforts with those of the Americans."
-- Jerome Clark and Loren Coleman, "Mystery Airships of the 1800s," *Fate Magazine*, June 1973

About 45 miles west of Stockton, California, a small multinational clique of designers was building airships. Nothing too unusual about that, except that (assuming it was happening at all) it was the year 1850. And that the airships, or "aeros," of the Sonora Aero Club flew (as long as we're assuming things) using an energized antigravity gas known only as "the suppe" or "NB." The Sonora Aero Club designed possibly as many as 200 separate airships, of which possibly 20 or 30 actually flew during its 11 years of operation. The Aero Goose, designed by Peter Mennis, was the greatest of these craft, but all of them were decades ahead of their time, even without the antigravity gas. Mennis died in 1861 or so (possibly taking the secret of the NB with him) and the Aero Club scattered across America. (Making its membership a swell hook, as villain or patron, for *GURPS Old West-Steampunk* games.) One of its members, Carl August Albert Dellschau, moved to Richmond, Texas in 1865, and swore a loyalty oath to the Union for some reason -- could the Sonora Aero Club have been the secret weapon that San Franciscan Asbury Harpending was counting on to sieze California for the Confederacy in 1863?

Shortly after the [Great Airship of 1897](#) buzzed both San Francisco and Texas, Dellschau began drawing the aeros in a series of sketchbooks, accompanied by ciphered and coded notes in archaic German and English. The notes emphasized that the Club was under the control of the "DM=XØ," a secret society that Navarro translates as "NYMZA." Dellschau hinted that they killed Jacob Mischer, a Club pilot who wanted to reveal the aeros to the outside world. He had filled more than a dozen large books with his records and drawings before he died in 1923. Forty-five years later, by pure chance art history student Mary Jane Victor rescued four from a junkshop and displayed them as "folk art"; the designs attracted the attention of local UFOlogist Peter Navarro, who bought the surviving copies from the junk shop and drew the immediate connection between the Sonora Aero Club and the Great Airship.

In addition to the geographical and aerodynamic connections, one of the names Navarro found in the notebooks was "Tosh Wilson," a member of the Club who devoted his life to recreating NB. He succeeded some time in the late 1870s, apparently -- contactee George Dunlap described a "Mr. Wilson" as pilot of the Airship in Beaumont, Texas, in 1897, and said Wilson told him the airship ran on a "secret gas" extracted and harnessed by electricity. Dunlap described the airship pilot as a "young genius" -- which was the description the former sheriff of Fort Worth used for an experimenter named Wilson he recalled from 1877. "Wilson" hadn't aged for twenty years -- forty, if Dellschau's notes are to be believed. That's some gas.

"My God, now that I think of it, all of Verne is an occult revelation . . . Verne gives even more explicit signals. Robur le Conquérant, R.C., Rosy Cross. And Robur read backward is Rubor, the red of the rose."
-- Belbo, in *Foucault's Pendulum,* by Umberto Eco

But leaving Wilson aside for a bit, doesn't the notion of a secretly-constructed electrical airship running on a mysterious power source put one in mind of Robur's *Albatross* from Jules Verne's *Robur the Conqueror?* Robur, like the Sonora Aero Club, built his device on an isolated plateau in America despite being of multinational and mysterious origin himself. French theorist Michel Lamy points out the "R.C." symbolism in Robur's name and title, identifying Verne as part of a secretive Rosicrucian group known as Le Brouillard, "the mist." (Whence, of course, we get Phileas *Fogg*.) Verne was, in fact, connected with the mysterious "Nadar," a French photographer, balloonist, and leading member of the Society for the Encouragement of Air Travel via Heavier Than Air Vehicles. The Rosicrucians (like mist) were invisible, and (like Nadar and the Sonora Aero Club) they studied advanced scientific developments and (like Robur) kept them secret on island bases, or so says Sir Francis Bacon, who ought to know, in *The New Atlantis.*

You want more? Verne describes the flag of Robur as stars on black surrounding a "golden sun," which calls to mind the explicitly Rosicrucian magical order the Golden Dawn, which debuted the year after Verne wrote *Robur the Conqueror.* The Golden Dawn got its authorization from mysterious coded letters from a "Anna Sprengel" in Germany -- and Dellschau also received letters in the same time period from a "Mary Sprengel" in Germany. Where there were also "airship" sightings in the 1850s. Was this the work of the NYMZA's European branch? And did the NYMZA have anything to do with the murderous attempt on Verne's life the same year that *Robur* was published, as if warning him that he had revealed a little too much?

"In the esoteric writing of the Latin countries, Marconi has achieved a near-legendary status, much as Tesla has recently in the United States. But most Tesla students are unaware that Marconi was supposed to have founded a secret high-tech city in the remote southern jungles of Venezuela."
-- David Hatcher Childress, "Tesla & Marconi," *Atlantis Rising*, Fall 1997

The spark now jumps from Verne to Marconi, the man credited with inventing the radio (by infringing on Tesla's patent) and who certainly made a great deal more money off of it than Tesla did. Marconi also had his wild side, experimenting in radio communication with other worlds on his laboratory-yacht, the *Electra*. He did, in fact, report such contact "from another star" in 1921, and in 1930 succeeded in transmitting electrical power over distance, replicating Tesla's efforts in that field as well. Marconi even has a "death ray" story, although it comes bisociatively in both pro- and anti-Marconi versions. He either offered Mussolini his death ray in 1935 and was only talked out of it by the Pope, or refused to turn his research over to the fascists and faked his death in 1937, escaping on his yacht (now stocked with Tesla and Marconi antigravity technology) to South America with 98 like-minded believers, all top-notch scientists. Using their mighty skills, they built a secret city in the Venezuelan Andes (possibly harnessing Atlantean technology to do it) to guarantee world peace.

This Council of 98 is just swimming in wealth; not only from Marconi patent royalties but from the secrets of matter-transmutation, revealed to them by the alchemist Fulcanelli, who disappeared in 1932 -- only to show up in the Council's secret lair six years later. Like Robur, the Council builds advanced airships; like the Rosicrucians, they keep them to themselves. And like Wilson, they're immortal, made so by Fulcanelli's elixirs. Or by exposure to NB. Or by their Bloodline -- "Wilson" adds kabbalistically to 156, "Zion" -- implying that Le Brouillard is a subsidiary of the *Prieuré de Sion.* Or, of course, by aliens; famed UFOlogist "Branton" identifies the "Marconi Group" as allied with the "Tall Blonds" -- the Nordic aliens, in other words. Hmmm. Is it just a coincidence that the Sonora Aero Group also had a jet-propelled craft known as the *Dora,* just like the Antarctic Space Nazis? Or that Robur is thought to be an Argentine exile? Do the Council folks send a disc-ship over to their neighbors in the Nazi [El Dorado](#), Akakor, to borrow a cup of NB every now and again? Maybe the Council isn't quite so anti-Fascist as they'd like you to think.

"However, an article in the British publication The Independent *claims the incidence of suicide among Marconi scientists is twice the national average of mentally healthy individuals. Either Marconi is hiring abnormally unstable scientists or something is very wrong."*
-- "Addendum to Alternative 3," author unknown

And the NYMZA are either still at that murdering people game, or the Council is doing a lot better job of faking people's deaths to recruit them to run the secret base. Twenty-two scientists and technicians working on SDI in Britain between 1982 and 1988 either committed suicide, died mysteriously, or simply vanished -- virtually all of them either Marconi Company, Ltd., employees or contractors. (For those with a yen for Masonic paranoia, two of them were hanged, and two died under a bridge. One of each type died in Bristol, 100 miles from their job or home.) That makes a great start to either a *GURPS Illuminati* or *GURPS Espionage* game (or both, heh heh heh), as well as being an odd echo of an *Avengers* TV episode. But can even Emma Peel and John Steed defeat the Immortal Airship Masters of the Andes? And should they? Only the GM knows for sure -- and the immortal Dr. Wilson, of course.

The Story's the Thing

Goal-oriented games are simple enough to understand: the characters go into a dungeon, kill some smaller bad guys, pummel a major bad guy, and walk off with his treasure. Alternatively, in a popular Super Hero twist, the characters break into the super secret lab of the evil mastermind, pummel some mooks, put the mad scientist out of his misery, and make off with his weapon of mass destruction. Wash, rinse, and repeat.

Sound familiar?

If this isn't storytelling, and the chicks aren't digging this, what *should* we be doing? Should we even be bothering trying to introduce women to gaming if this style of gaming doesn't work? After all, the dungeon crawl has worked for nearly twenty-five years! It's a perfectly functional standby!

Most women seem to be searching for *story* oriented games instead of *goal* oriented games. There's plenty of psychological spin as to "why," but it comes down to a simple fact: women want to be involved in the plot on a personal level. They want to feel involved in the story. They don't want to be on another adventure trucking through a dungeon, wondering how they can carry the monster's horde of gold with a backpack. It's not limited to women, either. Many guys are interested in going beyond the dice.

Luckily, it's not too difficult to run a story-based game if one keeps in mind a few pointers while constructing their periodic campaigns. The elements of a good story-based roleplaying game are system-less and genre-less. They can be used in any setting, and in nearly any game. Best of all, they're not hard to follow. Toss in a few of these, and not only will the chicks stay, but all the players will receive a richer gaming experience.

One: Recurring Non-Player Characters That Players Care About

The best way to start getting characters excited about the storytelling process is to build NPCs to whom the characters feel emotionally attached. These can be friends, significant others, family members, coworkers, liege lords, faction buddies, or anyone else with which the characters would have a reason to spend time. These make great plot centerpieces: a kidnapping of a family member will emotionally charge a dungeon crawl, an attack on a fortress controlled by one's faction will spur the players to the hinterlands to fight the encroaching hordes for God and glory, and assault on one's friends will get the characters out to kick some booty.

Great NPCs don't necessarily have to be friends and family. A great villain who taunts the PCs at every turn can make the game every bit as emotionally charged as a romantic lead. A character that gains the trust of the players only to betray them later can lead to some great and powerful roleplaying.

NPCs are more then simple set pieces; they're the energizers of the stories that draw the characters into a web of adventure, intrigue, and betrayal. Make them seem like they're alive, and the story will breathe on its own.

Two: Character Backgrounds

The best stories are those with fully fleshed characters whose backgrounds live and breathe. While a player should spend plenty of time working out a character's statistics and abilities, just as much time should be devoted to building a character's background. Not only does it provide convenient story hooks for the GM to involve the character, it provides the characters motivations, his feelings - even his reason for being. Can a grizzled detective be as cynical and jaded if he didn't lose his partner to a nasty criminal and leave the force? Can a superhero lack a genesis story? Can the gunslinger take down the varmints who killed his wife and children if none exist?

Backgrounds are what differentiate the character as a piece of paper and the character as a living, breathing entity. The fleshed-out character will find more motivations for following (or not following) the plotline, interacting with the other

characters in the party, and being part of the story. They'll seem more *real* in the context of the story, and story is what the game is all about. Most importantly, the player, knowing the character's background, will care about their character, and this will bring them deeper into the story line, providing a richer gaming experience for everyone.

Three: Break the Rules

There usually comes a time when the GM, while plotting out his game, comes against a wall. Before him is a thorny decision: does he continue to build the tapestry of his plotlines of his story even if it violates some of the rules of the game?

The answer is to break the rules. They're a good guideline for a game, but they aren't the game itself. The GM should be ready to toss whatever he doesn't need out the door in a moment's notice. It's always better to have a good plot twist or a better story villain than to feel constrained by statistics. The story is the most important aspect of a story-telling game, so when the rules get in the way, go ahead and toss them into the circular file. After all, the game master can do anything he wants to the game world in the spirit of a fine storytelling experience.

Four: Going Beyond Killing Foozle

Many roleplaying adventures base themselves on the "kill Foozle" premise, where the players build up their equipment and experience fighting smaller monsters until they are ready to take out the big bad guy who has the biggest weapons and best treasure. This works wonderfully for computer roleplaying games, but the medium of gaming allows players to go beyond hunting and killing Foozle, into uncharted territory.

Do not discard conflict, however! Conflict is at the very core of the structure of any story, be it a work of fiction or a roleplaying game. The dynamics of character vs. character, character vs. NPC, or character vs. the world are all important elements, not to be cast-off because the GM is trying to be "touchy-feely." Many elements of story telling involve the characters talking, thinking, and roleplaying their way out of situations, and *this* process drives the tale to its inevitable conclusion. The GM should feel free to sprinkle other forms of conflict into his game to spice up the storyline along the way. A few example story elements are:

- **Politics:** Politics are a force for fine storytelling. The stakes at risk are large: power, money, and the lives of thousands, if not millions. The finagling in the back room, the deals made, the backstabbing, and the betrayal -- it holds a certain fascination with people, especially those who like an element of competition in their games. A game master with a strong set of non-player characters; a fully fleshed out world and a ruthless batch of players can really take advantage of politics to drive strong story based games.
- **Interpersonal Conflict:** Be it factions, philosophy, religion, or the color of pants, there is always that which separates people. It can be used as a tool of the game master to create a setting for conflict between the non-player characters and the characters themselves -- almost a wedge between people, giving them something to fight over, fight for, and win. A difference in philosophy and belief can energize a setting, and bringing a character's beliefs to the fore can make a player feel like they can find a deeper meaning in a roleplaying world.
- **Intrigue:** Intrigue can be the pursuit of higher knowledge and power, the search through ancient documents to uncover the ancient mystery or uncovering a conspiracy. The chase for the truth about UFOs and the subsequent government cover-ups can drive a story. So can the truth about Elvis. A tapestry of clues, hints, and tales require almost no combat, but can pull a set of characters into the plot and keep them there, fascinated for session after session.
- **Romance:** No one wants to talk about adding in the element of romance into his or her game. It almost feels "girlie" to throw in a romance, but they're a strong tug on the character's, and the player's, emotions. When a boy meets a girl, the dynamics of the party change, and sometimes change dramatically. Around a romance, a game master can build all sorts of plots -- intermarriages, kidnappings, even wars. It's a great hook for a scheming game master to get his hooks into and drive his plot.

Five: Hiding the Railroad Tracks

One of the great challenges facing a game master is to build an adventure that is interesting for the players and still provides hours of fun. There is a temptation to script the adventure, NPCs and all, from beginning to end, providing a cohesive "module" of a game. After all, modules were the way of roleplaying adventures since the beginning of time, and what was good then is clearly good now.

The problem is that, while modules like *Return to the Keep on the Borderlands* and its ilk is certainly fun, it doesn't pull together for a cohesive story that features the main characters as their centerpieces. There's too much pre-scripted plot. The trick is for the characters to go beyond the prepared material and start building the story themselves. The characters need enough slack in their leashes so they feel that they are important to the storyline, not the other way around. But at the same time, the game master can't give up his or her plotline either, because then the game doesn't feel like it has any coherence, and the players will go off to go do their own character-based things.

The best way to achieve this delicate task is to do three things:

First, design open, event driven games. Events get the players involved in the storyline easily, and with the right NPCs, in a personal, intimate way. Deadlines are wonderful motivators for getting players to follow a story while still feeling the freedom to do whatever they feel they need to do as player characters. So are other plot devices that make the blood flow: kidnapping of significant others, murders, thefts, or other crimes that can involve the group as a whole without making them think that this is anything more than the meat of the game.

Second, never fret about the little details. What is important is the Big Picture. It never matters what the characters wear, or eat. In addition, allow the characters to talk to any NPCs they wish within reason. The characters should be free to be characters. Allowing the player characters as much freedom in the details as they want always creates the illusion that the players are in total control of the plot.

Third, although you, the game master, might be laying down plot "train tracks" for the characters to follow, always make it look like the characters wanted to make the decision to follow the plot in the first place.

Five Steps to Bind Them

These five steps don't, in any way, cover every single way to create a story-based game. Nor does it give explicit instructions for anyone's personal game or genre -- that's what game masters are for! Think of these steps as good guidelines to follow. Think it will make your game better? Great! Doesn't work for your game? Ignore the advice. Like all advice, it's worth about what you pay for it.

Trying some of these tricks may keep that single woman player coming back to the gaming table. If she's emotionally involved in the story, she's going to want to come to the sessions. If she really likes the game, she might start making noises about bringing some of her friends. (And that's what we all want, right?) After a while, she might start to run games herself.

One last piece of advice, though: like the individual characters, the game world is your NPC. Do with it as you like. The point of the game is to have fun for everyone.

Time to Blow Up the World Again

or, The Etch-a-Sketch Syndrome

Look, I find it hard to believe that I'm the only person who routinely blows up the world. I admit I have a problem, but what else am I supposed to do? I mean, sometimes you just have to raze all of creation.

Oh, it begins innocently enough. I start up a campaign, get some players, create a universe. But something happens. Each week the PCs run into someone new. . . make some new enemies, earn some new contacts, visit new places, create new plot threads.

Things go great for a while. But, invariably, after a while the campaign hits critical mass. The characters know too many people, hold too many options, throw too many balls in the air. After a while the sessions look like this:

GM: "Okay. The Good Witch informs you that you have to move the Bauble of Truth across the continent in one week, or everyone is doomed.

Player 1: Okay. Well. . . we'd better be on our way, then. . . and quickly!

Player 2: Wait! Why don't we take it to our allies the Weed People?

Player 3: Yeah! They have the power to move among weeds! Surely there must be weeds on the other side of the continent.

Player 2: As a backup plan, we can call the Portal Weaver. She still owes us a favor for helping her father.

Player 1: That's right! At the very least, she should be able to create another Null Time portal to give us more than a week.

Player 3: And maybe we can rally our allies the Werewoofs!

And so on.

Invariably, in a large enough campaign, I feel the urge to pull the plug (albeit on a limited basis). . . to have some Cataclysm on Many Earths, some Great Scourge, some Big Ol' NPC Roundup. Sure, I run these storylines because they're exciting, but deep down I usually get the germ of the idea because, after a while, there are too many options for the PCs.

Young Steven: Why were there Clone Wars?
Steven's Mom: Too many Jedi.

I wish I knew *why* I need to resort to blowing up the world. I think it's because, to me, the most fun I have as a GM is when the players interact with NPCs. . . and that usually means creating new NPCs each week. Unfortunately, I tend to believe that, for the NPC interaction to *mean* anything, the NPC has to have some impact on the PC's lives. Whether that's professional, personal, or something else, it's still a new thread that needs to be woven. So a seemingly routine adventure can become bogged down with requests to:

- Ask Mentor NPCs for advice.
- Request help from Ally NPCs.
- Inform NPC Romances what's going on.
- Check to see if there is word of any Enemy NPCs.

Etc.

Soon, as a GM, I become bogged down with these minutia; touching these aspects of the past to solve problems, while satisfying to the puzzle-solving side of players, wreaks havoc with the dramatic pacing of an adventure. So every so often I find myself, as GM, needing to turn the game world upside-down and shake vigorously.

Now, in books, comics, and TV this is often accomplished within a character's motivations and actions; the protagonists accept a posting to a new Secret Organization that makes them disavow all ties to their former lives. The good guys move from New York to LA, with exciting new adventures ahead of them and three seasons of continuity baggage behind them. The spaceship leaves the planet's episodic orbit, boldly forgetting contacts and solutions they reached before. But my players tend to dislike letting go of their pasts. Couple this with the fact that my players tend to *hate* anything bad happening to them (a phenomenon I'll tackle in a future column) directly, I'm forced to reboot the world.

 The Weed People?   Killed by the Boogiemen.
 The Portal Weaver? Killed by the Boogiemen.
 The Werewoofs?   Killed by the Boogiemen.

A legion of shadows fall over the PCs; it is the Boogiemen. Vengance can belong to the players, but the damage is done.

And afterwards, here's the Bauble of Truth; you have one week.

For the most part I've worked around this limitation by only running mini-series (campaigns that are designed to last a limited number of sessions) or guest-GMing other folks' campaigns I've played in. But each time I start up a new open-ended campaign, I just *know*, at some point, I'll need to blow up the world.

* * *

For folks submitting articles for consideration, *please* put contact information on *every* article. It takes you thirty seconds it takes you to type out your name, address, e-mail address, SS#, and how you want to be paid; it takes me five minutes to look it up and hope it's all still correct.

Thank you.

-- Steven Marsh

* * *

Last week's answer: **Manual of the Planes** (for **AD&D 1st Edition**), page 39.

(three stars) "The character might be saved by the most miraculous of coincidences. He may stumble upon Mister Big accidentally, or have a terminal fall broken by a huge pile of rubber bands that just happen to be in the right place."

Spirit Warriors (for Hell on Earth)

Published by [Pinnacle Entertainment Group](#)

Written by John Hopler

128 pages, $20.00

Spirit Warriors is the latest in the line of sourcebooks for Pinnacle's *Deadlands: Hell on Earth* setting. Having already covered mutants, psychers, cyborgs, junkers, templars, and road warriors, this time around they take a look at shamans. But don't expect a simple rehash of the original *Deadlands* shamans. Where the old west shamans worked with nature spirits to work their magic, the shaman of the Wasted West deal with toxic (aka pollution) spirits.

That's right, in addition to the classical four elements, PEG has now given us the four spheres of pollution: Radiation (fire), Sludge (water), Smog (air), and Trash (earth). They also throw in Insect Spirits as a kind of miscellaneous extra category. Thanks to all the environmental, radioactive, and supernatural damage caused by the Reckoning, a whole new species of spirits exists which want nothing more than to turn the entire world into Love Canal. As if having the Four Horsemen running around loose was not enough of a problem.

The book is laid out in the standard PEG *Deadlands/Hell on Earth* format. First is the Posse Section, done in the form of an interview with a Toxic Shaman, which provides some more of the history of the Wasted West setting, updates the status of the Indian nations, and fills in a few more pieces of the setting's backstory. It also describes the two types of Toxic Shamans (Caretakers and Corrupters). As the name suggests, the Caretakers are trying to clean things up and the Corrupters just want to make things worse.

While the idea of pollution spirits and the shamans who deal with them is certainly an interesting one, this book reminds me a lot of the whole Defiler/Preservers problem in TSR's *Dark Sun*. For those unfamiliar with the setting, there were two types of mages: Defilers who took the energy they needed for their spells from the environment, leaving it lifeless, and Preservers who made the effort to only take a little. The Defilers were more powerful and easier to run, which resulted in a lot of people wanting to play one.

By the same token here, the Corrupters get power by causing pollution, something fairly easy to accomplish, while the Caretakers work by cleaning it up. The problem within the game is that the toxic spirits both Shaman types get their powers from have the express goal of wanting to pollute the entire world. But while the Corrupters spread pollution with their powers, the Caretakers actually clean it up by channeling it directly to the spirits (giving them something of a pollution-high). The book tells us that the spirits fall for this because they can't resist the rush, but given that the spirits have the express goal of polluting the planet, the rationale for why they would give power to people devoted to cleaning things up seemed a bit thin.

The narrative voice in this section just seemed a bit off. Where past *HOE* books have had very strong and unique voices within the Posse Section interview, this one just seemed inconsistent. The tone of voice and speech mannerisms shift a bit throughout, and the narrator never really achieves the believability of those found in the other books. For example, Jo, the narrator of the *Templar* book, is a very vivid character who leaps off the page. By the time you're done reading her section, most GMs should have no trouble running an encounter with her. Dirty Waters, the narrator in *Spirit Warriors*, on the other hand, never quite reaches that threshold of reality.

Next is the No Man's Land section, which contains the rules section. Here you can find everything you need to make a Toxic Shaman character, including all their nifty supernatural powers, called Favors. The Favors are divided into the

spheres for each type of toxic spirit, plus a general section which all shamans have access to. While the Insect Favors mostly seem to be variations of taking on the aspects of Insects (chitin, insect strength, spider sense, etc.), the elemental Favors provide an interesting range of abilities covering everything from causing cancer to turning into an amorphous blob. The Favors listed are varied enough in terms of scope and ability that GMs should not have much trouble determining the effects of any new Favors they want to create. Finally, several sample magic items are listed as well.

PEG never stints on the fun stuff in their books, and this section is no exception. With 15-19 Favors for each sphere, plus the 15 general Favors that any shaman can take, a large enough range of abilities is presented that every shaman can have his own bag of tricks. Though the Insect Shamans don't seem to have quite the range of abilities that the other shamans do, they make mean combat machines and still have a few unique tricks that make them stand out. The Favor that allows them to turn into a mass of cockroaches was particularly inventive. And while the Radiation Sphere does have a bit of overlap with the mutant abilities of the Doomsayers, there is enough difference that the two remain easily distinguishable.

Last is the Marshal's Handbook, which contains all the little secret stuff the players are not supposed to know about, expanding on the information given in the Posse Section and providing character write-ups for important NPCs and monsters.

This came across as the weakest section. While it might simply be that the previous books in the line have unveiled all the big mysteries of the *HOE* setting, PEG is typically very good about putting a few serious surprises into each book. That was not the case here. Pretty much everything in the Posse Section is the straight truth, with only a few minor details being off. No major secrets of the *HOE* metaplot are revealed, and no real advancement of the storyline is made. While there is certainly nothing wrong with a straightforward sourcebook, it was something of a let down after all the other sourcebooks.

Overall, however, *Spirit Warriors* is another excellent resource for any *Hell on Earth* game. Whether you are simply interested in the status of the Native Americans in *HOE*, or are looking for a character with a rather interesting perspective, you are sure to find something useful to work with here.

Pyramid Review

The Walking Dead (for Hunter: The Reckoning)

Published by [White Wolf Game Studio](#)

by Richard E. Dansky, Ed Hall, Michael Lee, and Adam Tinworth

120 pages, $15.95

Billed as "An Enemy Book for Hunter: The Reckoning," *The Walking Dead* explores and explains the proliferation of ghosts and zombies in the lands of the living. These undead beings are Hunters' greatest enemies, but seem to have some hidden connection to them. The nature of that connection -- and how to use it in a Hunter chronicle -- is only one of many topics covered in this surprisingly good volume.

I say "surprisingly good," because I was initially quite skeptical about this book. I've followed White Wolf's various World of Darkness games for several years now. I have a pretty good grasp of their ins and outs, as well as the back-stories that drive them. Consequently, I could easily guess the nature of the Walking Dead and the reasons for their sudden appearance in large numbers. I won't reveal the details here, except to say that they tie directly into the events that led to the demise of the *Wraith: The Oblivion* roleplaying game last year. Despite that foreknowledge, *The Walking Dead* still managed to offer up a few surprises. . . a fact I find doubly interesting, as I'll soon explain.

I was also skeptical about the format used for this book. Like all other books in the *Hunter* line, *The Walking Dead* is written as a series of faux e-mail messages among the participants on the secret mailing list by Hunters to exchange information among themselves. I understand the value of setting the proper mood in a roleplaying game, but this book contains over fifty pages of these in-character exchanges! Even so, the authors of these sections deserve some credit. I didn't find slogging through it nearly as painful as I should have - and I gleaned a lot of information along the way. That's pretty impressive in my book.

The art throughout is of uneven quality. Some of it was a bit cartoonish for my tastes, particularly given the subject matter. I very much liked Mitch Byrd's chapter-opening pieces. They're clean, dynamic illustrations with just the right feel. Of course, I find his seeming fixation on large-thighed women to be an oddity, but perhaps I'm just unaccustomed to seeing females of this sort in gaming products. The cover is yet another example of recycled art from the main Hunter rulebook, a practice I wish White Wolf would end before long.

The book itself consists of seven chapters, an introduction, and the obligatory fictional vignette at the beginning. Neither the introduction nor the vignette bears much thought. In fact, their inclusion is almost as pro forma as the use of lyrics from alternative rock bands and pop cultural touchstones was in earlier White Wolf products. If I had my way, I'd trade the vignettes for quotes from Oingo Boingo or Dead Can Dance any day. At least the quotes took up fewer pages which would be better served by game-related text.

The first six chapters are in the form of an extended dialogue between Hunters on their mailing list. As I indicated above, reading through the dialogue is not nearly as painful as I had feared. I chalk that up to the fact that the dialogue is more than just idle chatter; there is a plotline as well. The plot concerns the infiltration of the supposedly secure Hunter list by not one but two different examples of the Walking Dead. For their own reasons, these beings have chosen to reveal details about their kind, including how to defeat them. The narrative acquires some tension as the Hunters question both the motives and the veracity of the information conveyed.

The final chapter of the book is the longest and the only one to contain game mechanical information. It includes rules

using the Walking Dead in all their forms, as well as truckloads of Storyteller advice. The latter was especially welcome. As a line, I feel **Hunter: The Reckoning** has a very great need for examples and other illustrations. **The Walking Dead** provides just that. What I found most gratifying was the authors' acknowledgment (more or less) that **Hunter** takes place in a different World of Darkness than White Wolf's other games. That is, don't expect what's true in **Vampire** or **Mage** to hold true in **Hunter**. This is quite clear in discussing the power and abilities of the Walking Dead. Not only are they not exactly like those of **Wraiths**, but the book warns against using **Wraith: The Oblivion** extensively because "in many ways the game you'll play won't be **Hunter**." That statement may tick some people off, but I found it comforting. I only hope future releases will feel just as free to dispense with White Wolf orthodoxy for the sake of a good story.

More than anything, that's what impressed me about **The Walking Dead**: its willingness to go its own way to create interesting antagonists for Hunters to combat. Reading through the e-mail exchanges, I found my knowledge of **Wraith: The Oblivion** was as much as handicap as a blessing. The Walking Dead are not Wraiths, even if they derive from them. One of my many concerns about **Hunter** is its inability -- nearly a decade and hundreds of books later -- to present the World of Darkness as the great unknown Hunters are supposed to see it as. This book goes a long way toward rectifying that concern.

In the end, I like this book. It's a well-done examination of what amount to genuinely new foes, complete with their own powers and motivations. Were I to run a **Hunter** chronicle, I'd keep it out of the hands of my players. There's little sense in allowing the Walking Dead to become yet another set of easily recognizable statistics and behaviors. If **Hunter** is to survive and flourish -- and win over the skeptical -- it's going to need more books like this.

Pyramid Pick

Hot Rods and Gun Bunnies (for Big Eyes, Small Mouth)

Published by [Guardians of Order](#)

Written by Jim Crocker, David L. Pulver

124 pages, $15.95

This is how you write a supplement.

Why? Well, for starters, what makes a good supplement? First off, the book should be good enough that you want to buy it, but the underlying system should have been designed well enough that you don't *need* to buy it. In other words, the supplement should live up to it's name: it should supplement the gaming process, and not be an integrally necessary piece of it.

Second, the book should contain a wealth of background information and source material. By the time I finish reading a supplement on, for example, "guys-with-cars and girls-with-guns cops and robbers game," I should know everything I ever wanted to know about cars, guns, and the men and women who use them to catch crooks and rob things.

Finally, the supplement should work by itself, but also work in synthesis with the other supplements for a game. In other words, I should be able to pick up *Hot Rods and Gun Bunnies* and be able to use the book without suddenly discovering that I also need to pick up *The Complete Book of Cars* and *The Totally Insane Guide to Guns*. At the same time, though, if I decide to pick up The Totally Insane Guide to Guns it should add to my experience using Hot Rods and Gun Bunnies, and vice versa.

Needless to say, *Hot Rods and Gun Bunnies* (*HRGB*) succeeds at all of this with the fine polish of a new 'vette and the lightning impact of Colt .457. Even though it's twice as long as the core *Big Eyes, Small Mouth* (*BESM*) manual, at no point in time do you feel as if you actually needed to buy this book. At the same time, though, every single page is chock full of material so good that you will never regret, even for an instant, the hard earned cash you laid on the line to pick it up.

Basically the content of HRGB can be broken down into three categories: New Rules, Equipment, and Campaign Info.

New Rules. Character creation in the basic Tri-Stat System (on which *BESM* is based) is a process of seven steps. *HRGB* elaborates on how each of these seven steps can be tailored towards a campaign of octane action. An example of this is found in Step 4: Character Attributes, in which not only are all of the attributes in the core manual assessed as to their appropriateness in an *HRGB* campaign, but several attributes are specifically modified for easier use in such a campaign, and a set of brand new attributes are introduced.

But *HRGB* doesn't stop there; it also goes on to insert new steps and sub-steps into the character creation process, expanding and adapting it. The most notable example of this is the presentation of a skill system for *BESM* (which first made its debut in the stand-alone Tri-Stat game *Dominion Tank Police*). This skill system is not only dynamic, it also fits almost perfectly into the overall feel and nature of the game system as a whole. One would expect this type of thing to either feel like a completely tacked on addition or, alternatively, something which should have been included in the basic *BESM* manual to begin with. The truth is that you feel cheated neither in the skill system itself or its lack in the core rulebook -- an accomplishment that speaks highly not only of *HRGB*, but the Tri-Stat system as a whole.

Beyond the rules for skill resolution, the only other noteworthy addition to the basic Tri-Stat rules takes the form of a brief section describing genre combat, including a surprisingly wide array of optional rules and tweaks.

Equipment. A supplement about hot rods and gun bunnies which lacked a description of cars and firearms would, of course, be remiss. It should come as no surprise that **HRGB** lives up to the task admirably in Chapter 3: Boom and Vroom, tossing in bombs along with the titular autos and guns.

Not only is this section a sizable and well-researched portion of the book, it also excels at maximizing the value of everything it gives to you. By implementing a template system (so that, for example, the same set of stats covers not only an H&K MP5, but also an Ingram M10) they maximize their coverage. And all of this is backed up by rock solid research which is presented in a clear, easy-to-understand, and easy-to-use format for the GM.

This section is also a good example of the modular design to the **BESM** product line I was discussing earlier: In the **Big Robots, Cool Starships** supplement for **BESM** a complete vehicle construction system is presented for the game. Now, **HRGB** could have required the purchase of this separate book or, worse yet, simply reprinted the material. Instead, **Guardians of Order** have presented us with this entirely new template system, which is not only a better fit for the material covered by **HRGB**, but is also completely compatible with **BRCS** for those who want the added flexibility the complete vehicle construction system gives.

Campaign Info. Between the new rules and equipment guide, **HRGB** has already justified its existence as a supplement but it doesn't stop there. Jim Crocker goes on to provide a wealth of campaign detail. This material ranges from an overview of pertinent anime titles in the genre (such as *Gunsmith Cats* and *Riding Bean*); to a breakdown of campaign styles, themes, categoires and ratings (and how the rules can be tailored to each of them); to a set of character archetypes; to a stand-alone module; to (finally) an overview of firearm laws, motor vehicle laws, and bounty hunting and bail in America, Canada, and Japan (accompanied by a general description of "Law and Order in Japan" and America's Miranda Warning).

All of this material is immediately useful and pertinently selected; there's no deadweight to be found here, and it's organized and presented in an easily referenced and accessible manner.

Of course, nothing is truly perfect, and **HRGB** is no exception to this truism. The book has minor typo problems, particularly in the first few chapters. The new attributes added to **HRGB** have six levels (instead of the standard five of the core **BESM** rules); this works, but it lends an unbalanced feel to the system. Although the new skill system is excellent (as noted above), this particular presentation of it is definitely slanted towards an **HRGB** campaign. Clearly this isn't a flaw, but if you're picking this book up solely for the skill system you should go in with the knowledge that you're going to have to adapt it to other types of **BESM** campaigns.

But at the end of the day there is only one conclusion which can be reached: Guardians of Order was good to begin with, and with each new supplement they get better and better. **Hot Rods and Gun Bunnies** is a textbook case of "how to do it right" and it's well worth your time and money.

Art by Storn Cook

The empires of Paneurope and the Combine are familiar to all Ogre players, but the Nihon Empire is a mystery to many. This article presents the 21st-century history of the Empire and an overview of its status during the Last War.

History

In the late 2010s, an economic collapse (probably a secondary effect from ongoing conflicts in Europe and South America) began in the western Pacific Rim countries. Japan was not affected as severely as some nations, but the yen entered a brief period of hyperinflation. This triggered a series of protests against the Japanese government, propelling a large number of Neo-Traditionalists into power in the next elections. As the Neo-Traditionalists solidified their hold over the next decade and made fundamental changes in the Japanese constitution (which had been imposed on Japan at the end of WWII by the U.S.), a general sentiment grew that it was Japan's duty to take its place as supervisor of its unruly, chaotic neighbors.

In 2035, the Japanese government underwent fundamental restructuring from within, restoring the Emperor as more than a figurehead and discarding the last limitations of the old constitution. The new nation was known in English as *Nihon,* the name natives had used for "Japan" all along. The Empire began a series of relatively nonviolent, but inexorable, purges of Western influences, and dramatically increased military spending. Since the Combine still considered Nihon an ally, they made only token grumblings. The Chinese were busy elsewhere.

After several decades of preparation, the Nihon Empire began its conquest of the Pacific Rim in 2060. Technologically advanced ships and hovercraft surged across the Pacific; the Philippines and New Guinea fell with barely a struggle. Diplomatic protests came from all points of the compass. China, in particular, was startled and terrified by Japan's obvious technological superiority. China considered Nihon friendly for its efforts in ending the Sino-European War of 2046-2049, but still remembered the horrors of the Japanese invasion of China in the Second World War.

The Combine also protested, but wasn't prepared to commit to a war that might, at best, be between technological equals. Their new Ogres were unblooded, and no one wanted to risk them failing against Nihon might. The Pacific was a wide enough buffer for the moment. As to Paneurope, its objections were brief and vaguely tinged with hypocrisy. They were consolidating Europe at the time, and it was hard to fault Nihon for acting in the same way.

The Empire continued to absorb the island nations of the eastern Pacific, and in 2065 launched its first "cybership." These sea-going Ogres were clearly based on Combine cybernetic designs. Some had human crews, later phased out. The Combine tightened security at all Ogre assembly sites in an attempt to stop the espionage. Unfortunately, the damage was done. Nihon continued its own research into cybernetics, matching advances elsewhere through pure science where espionage failed.

With the unequaled might of the cyberships, Nihon conquered all of the southeast Asian nations except China, Korea,

and resolutely neutral (and startlingly well-defended)Singapore. By 2070, Nihon owned every island north of Australia and west of the international date line, and virtually all of the southeast Asian mainland.

In 2071, the Nihon Empire finally set its sights on China. Renewing claims made in 1910 and 1931, Nihon demanded the return of Manchuria and Korea. A half-hour after the ultimatum arrived in Beijing, large landings were made simultaneously at Pusan, Shanghai, and Tianjin. The Chinese military machine went into action, trying to drown the Nihon troops in infantry. Unfortunately, the Empire's dramatically superior technology proved sufficient to erase the Chinese numerical advantage. After establishing strong positions, the Nihon army paused to gather forces for the lengthy conquest of China. Over the next three years, the Chinese made dozens of attempts to dislodge the invaders. None succeeded.

Nihon's next major offensive was against Hong Kong, in 2074. Still one of the richest cities on the Pacific Coast, it was strongly defended by the Chinese army. Nihon suffered losses at first, but then its brand-new cybertanks reached shore. The Nihon "Steel Oni" was clearly inspired by the Combine's Mark III, but was faster and smarter, and incorporated new technologies, such as superwire antipersonnel guns. The defense was demolished, but the city was largely preserved. With the capture of Hong Kong, all Nihon forces pushed outward from their fortifications, merely slowed by the Chinese defenders.

Seeing the futility of committing more ground troops, the Chinese responded in a highly unorthodox manner. The remnants of their navy attacked Nihon military bases in the Philippines, seizing two at Manila and Iloilo. With the computers and communication equipment there, they began a vicious infowar. Since the Nihon strategists hadn't expected this sophisticated tactic from the "inferior" Chinese, the maneuver was surprisingly successful. Across China, Nihon units were misdirected and miscoordinated. Several instances of Nihon units destroying each other were recorded. Radical changes in protocols and enciphering techniques were required to stop the damage, and by then, the Nihon army's carefully timed plan was badly out of synch. It took years to fully recover.

The next decade was marked by marine combats in the South Pacific, hovercraft duels in the Indonesian archipelago, and whole battalions of armor lost in the jungles of Borneo and New Guinea. Occasionally the conflicts drifted farther south, pulling Australia into the fray. Nevertheless, China slowly lost ground. The Chinese were forced to retreat from the Philippines in early 2080, but their mission there had been accomplished.

In late 2085, the Nihon army was finally within sight of Beijing when the Chinese offered their final surprise. During the Siege of Beijing, China introduced their Dragon "cybertanks," units apparently equivalent to an Ogre Mark III. This was insufficient to save Beijing, however. The Dragons slowed the attackers only through sheer numbers; they were no match for the Steel Oni and new Steel Samurai (roughly equal to a Mark V). The siege lasted into early 2086, when Beijing fell. The few Dragons captured intact proved to be fakes manned by humans, with little more AI capacity than a typical armor unit.

With the loss of Beijing, the rest of China fell quickly. In 2088, the last remnants of the government collapsed, and Nihon quickly seized all provincial capitals. Nihon remained preoccupied with digesting its conquest until the end of the century.

The Nihon Empire During the Last War

This section presents a "snapshot" of the Empire circa 2080. In general, the information here holds true throughout the Last War.

In the last half of the 21st century, Japan set out once more on the road to conquest. The growing population, technologically skilled and accustomed to a high standard of living, required more space and a constant flow of raw materials. At the same time, Nihon saw its less developed neighbors as direly in need of its technology, its know-how, and (perhaps more important) its culture.

Geography

At the beginning of the Last War, Nihon consists of Japan proper, all of the Asian mainland east of India and south of China, and nearly every Pacific island north of Australia and west of the international date line. By the end of the war, it also controls China, Korea, and portions of Mongolia and Russia. Singapore is independent until 2085, when it quasi-voluntarily joins the Empire.

Government

All authority rests in the Heavenly Emperor, whose wishes are carried out by his lords and generals. The generals control their troops through a typical hierarchy of colonels, majors, and so on. The lords (*daimyo*) are businessmen who have been granted titles and given responsibility over a certain geographic or industrial area (e.g., the Daimyo of Telecommunications for the region of Shikoku). Daimyo are frequently placed in indirect competition with each other, creating a unique blend of capitalism and a centrally controlled economy. Conflict can be strictly economic, or involve assassins, sabotage, and corporate infowar.

The Nihon Empire

The hereditary "samurai" nobility is long extinct, but the word and the philosophy survive. A brave soldier, a hard-working daimyo, or a wise judge will be praised as "samurai" for putting their talents at work, not for themselves but for the Emperor and the people.

Citizens can also be ennobled for achievement in artistic, scientific, or athletic pursuits. These titles do not confer power as such, but the honoree will get preferential treatment in all aspects of life, and in turn is expected to be a role model and public figure -- an *idoru*. Camera-shy types who shun publicity do not get titles. Neither do dissidents or iconoclasts.

Culture

Nihon's society and its complex culture are one and the same. Both ritual and spontaneity are valued in every aspect of life, from the proper respect to show to one's parents, to how to appreciate the beauty of a flower arrangement. The particulars of this highly technological yet traditional culture are beyond the scope of this article, and both *GURPS Japan*, *Second Edition* and *GURPS Cyberpunk* are recommended to those interested.

Anyone, regardless of ethnicity, who lives by the rules of Nihon culture is "civilized," and will be treated well. Even an honest effort by the ignorant will be looked upon favorably. In the areas controlled by Nihon, natives who adopt Nihon ways-- or seem to -- will be treated with respect, perhaps to the annoyance of their neighbors. Nihon soldiers will be more respectful of enemy troops than of enemy civilians, because (as long as they behave honorably) the troops are something like samurai, obeying their leaders and fighting for their homeland, and their honor is more important than the fact that they are misguided!

Intentional rejection of Nihon culture is nearly equivalent to declaring oneself a barbarian. "Gaijin" is an insult, but it no longer has a racial connotation. It now means the same as the Russian "nikulturny" -- uncultured, rude, and obnoxious.

Quality of Life

In Nihon proper, life is quite comfortable. There are more super-rich and more poor than in the Combine, but no one

goes hungry and every child attends school. Nihon technology does a great deal with limited resources, and Nihon culture encourages frugality, efficient use of living space, and tolerance of one's neighbors. Large families are unknown; most couples stop with two children.

In Nihon, one's station can quickly be determined by one's style of dress. Schoolchildren wear uniforms, businessmen wear certain styles and colors of suits, service workers dress in gray. Daimyo often choose to wear robes in the medieval Japanese style.

By the standards of the rest of the world, Nihon citizens live in an astoundingly info-saturated culture. People listen to the radio, or watch television, or link to the infonets, 24 hours a day. They are never alone, even when they are by themselves. Some go their entire lives without disconnecting from the support and reinforcement of Nihon society in the form of popular music and rosy reports from the front.

Crime and Resistance

In the civilian population, justice is fair but strict. Punishment for even minor crimes can be severe, but the system works hard to ensure only the guilty are punished. Military discipline is far more severe; Nihon's troops are held to high standards of skill and obedience. It is understood that any dishonor can be wiped out by sacrificing oneself for the Emperor . . . but soldiers who take this path are expected to do so intelligently, waiting for a time when their sacrifice will aid their comrades rather than endanger them.

In the occupied nations, resistance to Nihon governance is common and difficult to crush. The Chinese alone outnumber Nihon ten to one; only vigilance, determination, and superior technology maintains the current state of affairs.

Clones in the Empire

In Nihon, important civil and military leaders may have themselves cloned. The child is known as *kuroon-tane,* "clone-offspring." A clone is raised as a member of the gene-donor's family. From an early age, the child is made aware of his status and the obligation it places on him. The traditional Nihon "duty-to-parents-and-ancestors" (*ko*) is increased for clones; they have only one parent, so they owe everything to him. The gene-donor may collect on this obligation at need, in the form of spare parts. A clone is expected to willingly give up organs, limbs, blood, etc., to his "parent" should the parent be injured or sick. This extends to organs the clone can't live without (e.g., the heart), though the parent may refuse to take things that far, or at least try to arrange for a cybernetic heart for his clone. Most Nihon clones are quite willing to sacrifice parts of themselves when the need arises.

As a rule, people only have one clone made. (The emperor is an exception, with as many as half a dozen clones at a time.) If one clone should be killed or "used up," a second one may be created. Clones are old enough to give blood or bone marrow transplants by age 5, but kidneys, lungs, and limbs are most successfully transplanted after puberty. Cases of clones posing as their gene-donor are rare, since clones are at least 20 years younger than their parents.

Cloning is slightly controversial in the Empire. The official policy is that it prolongs the life of important men who do the Empire's work, and thus is good. Nevertheless, it is a matter of personal choice, and many high-ranking officials choose against it.

Apart from the possibility of having to provide parts unexpectedly, a clone's life is little different from a normal citizen's. They are expected to remain physically close to their parent, in case of emergencies, so usually take occupations in the parent's office, military division, etc. A clone's social behavior is expected to be exemplary; since he is genetically identical to his parent, any fault in the clone is regarded as a potential fault in the parent.

Being a Nihon Empire Citizen

A complex web of duties (*on*) entangles all Imperial citizens. Some of these can never be lifted, such as one's duty to

the Emperor or to one's parents. Others are incurred temporarily, such as the duty to someone who helps you when you fall. A duty is a terrible obligation, and Nihon may sometimes *not* help each other, so as not to impose an obligation on the one helped.

Imperial citizens know that their culture and society represent the flower of civilization, combining a thousand years of tradition with the best that modern technology can offer. Everyone owes loyalty and reverence to the Son of Heaven, and every station in life has its own requirements. Honor lies in fulfilling those requirements. The mission of bringing this structure to the ignorant lay at the heart of the most advanced empire of the 21st century, and guided it through its conquest of more than a quarter of the world's population.

by Damien Wellman

Art by Art Today

Those who play the popular CCG *Magic: The Gathering* may have heard of "Mental *Magic*," a variant in which one plays with a deck composed of nothing but cards with their casting cost. When you play a card, you may name any card with that cost, if that card has not yet been named. This idea of keeping everything undetermined until the last minute can be applied to nearly any game of strategy. Here are three traditional games, "mentalized."

Mental Chess

Each player has 15 numbered tokens, such as checkers, plus a King. The King is placed on the usual square, with the tokens taking the place of the other chesspieces.

Any token may be moved as any legal chess move, but these moves must be consistent with any previous moves taken by that token. Once a token has made enough moves that mark it as a specific piece, it must be declared as that piece. So, if a token makes a Knight's move, it cannot be anything but a Knight. If a piece has made nothing but one-square Pawn moves, it could be a Rook, Pawn, or Queen. You cannot declare more pieces than legal for that type, so at most you could have one King (declared at the beginning of the game) one Queen, eight Pawns, and two of every other type of piece. A token that is captured without being declared is not considered anything for this purpose. Otherwise, the object remains the same - to checkmate the opposing King.

Neither en passant or castling are used in Mental Chess. Promotion still exists, but a piece must be declared as a Pawn before reaching the eight row and can only be promoted into a "free spot" in the line up; you can never have more than one Queen, or two of any other piece.

Mental Stratego

All of a player's pieces except for bombs and flags are considered "blank." Whenever one piece attempts to capture another, each player writes down what his piece is. Then, each player simultaneously reveals what he wrote down, and the attempt resolves normally. A piece so declared stays that way for the rest of the game, and much like Mental Chess, each player is limited to the usual amount of each type of piece.

Mental Risk

Begin the game with each player placing one army into a territory as usual until the entire board is claimed. However,

instead of placing the remainder of each player's armies, they are instead kept to the side in an "army pool." When a player attacks a territory, both the attacker and defender may choose to add any number of armies from the army pool to the territory. Resolve combat in the usual fashion. At the beginning of each player's turn, they must return all but one army in each occupied territory to the army pool Thus, if a player commits his entire pool to an attack, he will have no armies available to defend until his next turn.

For another variant, have one pool for each continent, and only armies from that pool can deploy on that continent.

Finally, if you are not familiar with Mental *Magic*, here are the rules that my group uses:

Mental Magic

Construct two decks of *Magic* cards like so: two cards with a W casting cost, two with 1W, two WW, one 2W, one 1WW, one 2WW, one 3WW. Repeat this sequence for each individual color (two R, two 1R, etc.). Also include two 1-cost artifacts, two 2-cost, one 3-cost, one 4-cost, and one 5-cost. Zero-cost artifacts and non-basic lands can be included if you wish.

Whenever you play a card, you may play it as a "Superland" that counts as a basic land (but not as any of the five specific types) and can produce any color of mana. A Superland can be made into any basic land at any time, but must remain as that land. Otherwise, you may name a card with the same casting cost as the card you are playing that has not yet been named this game and is legal to play at the time, "templating" it. (Nonbasic lands can become any nonbasic land.) The templated card becomes the named card for as long as it is in play.

Cards in the hand, library, or graveyard are considered "blank." Any effect that looks for a number of cards in those areas will always find zero. For example, a spell that had a player gain life equal to the number of creatures in his graveyard would give no life. Effects that bring a card from one of these areas into play can be cast, and the card fetched must be "templated" as normal. Spells that bring a card from the library to the hand (or the top of the library) cannot be cast unless they look for "any card" as opposed to a specific type.

You may want to restrict the useable pool of cards to a specific tournament format or set -- for example, only cards allowed in DCI "Standard" tournaments, or only cards in the basic set.

Fastbond is banned in all games of Mental *Magic*, since every card may be played as a land.

Isle of Women

by Ron McInnis

Art by Art Today

Islands of women appear in so many stories, they seem to be as common as lonely sailors. This particular one is set in *GURPS Greece*, but can be modified to suit any fantasy campaign.

The Island

In the South Aegean, beyond the Cyclades, lies a small rocky island. Sailors in this region will dream of the island repeatedly. . . strange, intriguing dreams of beautiful, enchanting women and piles of golden treasure. They will recognize the island the moment they see it. As they near the island, they feel a powerful pull towards it, and a mental compulsion to land (IQ to resist, with -1 per hour in sight of the island) and explore it.

The island is rocky, rising to cliffs, with no obvious anchorage. The sea is treacherous with sudden strong currents and hidden rocks. Landing is a -4 sailing feat. Sailing around the island requires sailing feats at -2 every hour. Shipwrecks are visible on the rocks. The wind seems to bring enchanting music of the voices of women singing. But perhaps this is a trick of the imagination. The party's best approach is to anchor off shore and swim for it. If any of the sailing checks is failed the ship is hulled on the rocks and the sailors are thrown into the sea. Due to the nature of the island, all shipwrecked male sailors will make their way safely ashore (even those who can't swim; a current carries them). Female sailors check as usual.

Once on shore, the sailors must scramble over rocks to reach the interior of the island. There is no water, and this is hot dusty work. The cliff is about 100 feet high but it is a gradual slope so climbing is not difficult. Once at the top, they see that the island forms a shallow bowl. At the center are green gardens, streams and pools of water, fruit trees, and an elaborate marble palace. They can hear the sounds of laughter and splashing in the water. As they come out of the rocks, they are met by a beautiful girl. She greets them each by name and tells them she is to take them to her queen.

The girl leads the heroes through the gardens to a great bathing pool. A number of beautiful young women are there; they have evidently just finished bathing and are dressing -- an incredible display of beauty. One woman is older and seems the most regal in bearing; she is the most beautiful. The girl who guides the heroes leads them to her and introduces her as Queen Arya.

Arya greets each hero by name and welcomes him to the isle of women. She extols the virtues of each hero; she seems to know them well and to have a very high opinion of them. She explains that the women are priestesses of the goddess of love and this is an island sacred to love. After a formal greeting, she says she and her maidens must retire to prepare a welcoming feast. She offers the heroes the use of her pool to bathe and prepare themselves after such a long journey. She is so charming and sweet that it is difficult to say no, and she does promise to resupply the heroes' ship with any needed goods. As they dress, the women show no shame or modesty. Their robes are costly, and they place on jewelry of great value. The Queen and her maidens refuse to say anything more, but say all questions will be answered at the welcome feast.

The heroes may bathe in the pool, and they will find its waters cool and very refreshing. Any minor wounds they have will be healed, and major wounds will show some improvement -- this water has magical healing properties. When they emerge from the bath, they find that their clothes have been removed and replaced by clean garments of high quality. Shaving and grooming tools have been left, as well as scented oils. A jar of fine chilled wine and goblets have been left, as well as a bowl of fresh fruit. The jar, bowl, and goblets are all made of gold.

After a time the men hear giggling from behind the plants, and several girls emerge. They welcome each of the men by name and give them a garland of flowers. . . and a welcoming kiss on each cheek. They announce the welcome feast is ready and lead the men to it.

The feast is in an expansive marble court, in the area before the marble building. The gardens begin here; there are fountains and the sound of water and the smell of flowers. A great table has been laid out, groaning with food. Roast pig is the center piece, surrounded by a bewildering variety of side dishes; fish, shellfish, fruits, and breads are the more recognizable creations. A variety of wines has also been laid out; these are of incredible quality. The dinner service is also made of solid gold.

Queen Arya will make a speech, welcoming the men to the island of love. She will name each and list some of their famous deeds. She says that the gods have sent them to the island to rest and recuperate. She invites them to join the feast and stay on the island as long as they like. "Our home is yours," she says.

Each man is seated on a couch with one of the women. The leader of the heroes joins Queen Arya on her couch. Younger women bring selections of food and wine from the table and serve the couples on the couches. Other women play music and sing softly in the background. And the feast begins. Occasionally women will dance elaborately to set music; this is the only formal entertainment. The men are encouraged to stuff themselves. Their companions are extremely flirtatious and seductive. The wine is potent and the food heavily spiced. The music, while subtle, seems strangely compelling. Some of the men feel as though they've been transported. One says that they must have died and gone to the Elysium fields without realizing it. The other men laugh but it has an uneasy sound.

The Wedding

As the evening progresses, the men get more drunk and infatuated with their dinner companions. Each of these women begins explaining to the men (in husky whispers) about a curious custom of the Isle of Love. The goddess favors couples, especially married couples. So it is the custom for visiting men to marry a woman of the island. This is only binding while on the goddess' lands, so it dissolves when the men leave the island, and ignores any marriage prior to the island. The goddess rules all men to be single on her island unless married by her priestess. If the men leave and return, they can even choose another wife from among the women of the island. Each woman most charmingly beseeches her companion to agree to this. It is bad luck for a single man to be on the island, for, she says through lowered eyelashes, "How can an unmarried man experience the full joy of love?" She makes her meaning very clear.

The queen will also press her argument with the leader of the heroes. If any of the other men agree, a girl runs to the queen and whispers it in her ear. She uses this to help sway the leader of the heroes. The ceremony itself is very simple; little more than an elaborate toast. If the leader still refuses, the queen will seem hurt, and explain that she arranged the feast assuming that the heroes were followers of love; how else had they found the isle? She'll ask if she's displeased him in some way or if there is some other girl he has seen that he would prefer. A trace of tears appear in her eyes. The leader really should agree. See troubleshooting if he or any of the heroes refuses to marry his partner.

Queen Arya will stand and announce the wedding ceremony has been agreed to. The serving girls will bring trays with bread and a large cup to each couple. The queen will smile lovingly at the leader of the heroes, then, dipping her fingers in the wine cup, she'll trace a curious sign on his forehead. The women on the coaches will do the same with their partners. If asked, they will explain that it is a love sign and is considered good luck. The queen will lead the women to swear to give the men their love, devotion, and fruitfulness. The queen prompts the men to swear to protect and cherish the women and give them their strength. Each couple feeds each other a bit of the cake and a drink from the wine glass. The queen pronounces them all married in the eyes of the goddess.

The women seem very excited by the marriage with much kissing and snuggling. The feast is drawing to a close at this point; everyone is stuffed, so the women begin leading their husbands off into the gardens. Each couple finds a secluded spot, lit by the light of the full moon which is now high overhead. They are clinging to each other and kissing as their passion grows in intensity. She has him lie down on the soft grass. She disrobes, and the moonlight surrounds her. For a moment, she seems to glow with the silvery light, then she joins him. The flowers and plants give off a strange perfume, the music from the musicians at the party still tinkles through the air, and the hero enjoys a night of

file:///D|/To%20Update%20Torrents/GURPs%20to%20OCR/pyramid_2000/2000/0601.2.html[11/12/2008 08:25:08]

epic passion.

The next morning the men will wake up lazily with their wives. They will feel relaxed and indolent. The women will hurry off to fetch more food or wine. The days and nights on the island pass much like the first night's feast. The women lay out a royal table of food and wine. They serve the men, waiting on them hand and foot. The men spend their days sleeping, making love, lying in the sun, being bathed or massaged, and listening to the women play music or dance. The food is excellent but strangely spiced, and the women are fond of burning incense while bathing or massaging the men. All this is drugged. For each day on the island, the men will experience a -1 to all ability scores. The first night of the wedding feast counts as day 1. The men will not notice this unless they are specifically testing their skills or abilities, and the women will discourage this. Any man who makes such a check will realize he's getting weaker, but he can't convince any man who failed the check. If he tries to attack the women, or get the men to leave the island, they refuse and will fight him if he persists. All the men under the spell of the island are determined to stay, and will fight their comrades to accomplish this. This effect should sneak up on the adventurers. Try to get them to commit to several days by describing the beauty of the women, the excellent quality of the food and wine, the sun bathing, dancing etc. Hopefully, by the time the men decide to leave, a number will fail their rolls and want to stay. Any man who wants to leave can do so. He will find the rocks on his way out to be treacherous and full of snakes, but nothing a Greek hero shouldn't be able to handle. For those who stay, the following days will continue in this idyllic manner.

Night of the Full Moon

30 days pass to the next night of the full moon. The women become very excited as this night approaches. They explain that this is an important festival of the love goddess. They won't give the men any details, as this is a surprise. The night of the full moon, they take the men to a special pool that the men haven't seen before. This pool is perfectly oval and sits in a steep depression. The walls are smooth, and everyone has to climb down a ladder to reach a small beach. The pool's waters are warm and mineralized; the taste is not unpleasant but it seems very relaxing. The women have prepared a feast, and they encourage the men to indulge themselves in every way. This food is heavily drugged and will cause men who fail a health check to slumber deeply. This should affect all the men present. When the men awake, they are on the beach alone. The women have gone up the ladder to the roof of the depression and have pulled the ladder up. It is midnight, and the full moon is high overhead and reflecting from the center of the pool. The moon seems unusually large and bright; its image fills the pool. The women call down reassuringly. They say this is all part of the festival and that the men should relax and drink more wine. The waters of the pool begin to rise. Within a few minutes they overrun the small beach that the men are standing on, and the men must swim. The walls of the depression are perfectly smooth and allow no handholds. The water will climb half way up the depression, bringing the struggling men close to the women, who are smiling and cooing comfortingly. Any man who manages to climb up will be pushed back in by the women. After a few minutes a current will be felt, first weak then stronger, sucking the men down underneath the water. Swim rolls must now be made a -1 cumulative per minute in the water. This should continue until all the men are under the water and drowned.

Terra Incognita: Isle of Women

If the men reach the top of the wall, the women will attempt to overpower them and throw them back in. The women are dressed differently now, wearing dark robes with strange symbols. The women are fantastically strong; ST, HT,

and DX are all at 15. They wrestle and fight with a staff at skill 18. In the men's weakened state, the women should be able to easily overpower them and throw them back into the pool. If the men get past the women, they will be hunted through out the night. The women will only seach in the settled areas of the central part of the island; although fleeing to the outer cliffs and rocks will allow the men to elude the women, these areas are swarming with snakes.

I can breathe underwater! In Greek and Celtic mythology one occasionally encounters heroes who can breathe underwater. These heroes will be pulled down a dark tunnel a great distance. Their comrades' drowned bodies will be pulled along with them. There's a disorientation effect and they're all dumped onto an island in a dark river. The bodies are being gathered up by figures in dark robes. These forms prove to be skeletal hags. The bodies will be gathered and thrown into a great fire pit that burns within a dark temple at the center of the island. A tall woman stands before the fire pit with outstretched hands. The smoke from the fire seems to flow into her. This is Hecate, here to receive the sacrifices of her priestesses. She'll not be pleased to be disturbed.

The best resolution will be for the men to decide to leave before the night of the full moon. The men can leave any time they wish; the women will not interfere in any way. They can even force men who want to stay to leave. These men will fight back, and if there are enough of them may chase the others off, but the women will not interfere. Once away from the island, the heroes' attributes will quickly return, 1-2 points a day, and full restoration will occur after seven days. Heroes who didn't want to leave but were forced off the island will develop a powerful addiction to the island; they will seek to return at every opportunity.

What's Going on Here?

These women are priestesses of Hecate, goddess of darkness, black magic and the turbulent sea. This island is sacred to Hecate and is a worship site and sacrifice center. The main Hecate cult is centered in Asia Minor and Minoan Crete, but this island is their holy center. Men are drawn to the island who are exceptional or heroic. It is Hecate who chooses them, and the honor the women pay them is not feigned. When the men marry the women, they are symbolically marrying Hecate, and in so doing become worthy sacrifices. When the men are sacrificed in the waters, they are being sent to join Hecate; this is done during the full moon, Hecate's sacred time. Much of the strength of the men flows into the women, giving them exceptional abilities. Pregnancies are very common from the visits of men to the Isle of Women. These always result in daughters with exceptional stats and advantages. Clerical investment and magery are common. The daughters are taken to the mainland to be raised at a Hecate worship center. When they reach adulthood these women are extraordinary individuals. Hecate also possesses the ability to see and hear through such an individual, and can manifest herself within the individual at will. This is an enormous advantage for Hecate, and the creation of these individuals is a major goal of her cult. Some say the strength and spirit of the heroes who die in the waters are transmitted to their daughters; regardless of the truth, these daughters are certainly exceptional.

The priestesses on the island rotate with the mainland priestesses every three years. It is considered a great honor to be chosen to serve on the island. Hecate usually chooses the priestesses herself, and informs the clergy of her choice in dreams. Most of the priestesses on the island, are daughters of former priestesses, conceived in the manner outlined above. As a group, these women are referred to as the Daughters of Hecate.

Female Adventurers

Female adventures have a very different experience on the island. As mentioned before, they are not pulled to it; the waves don't carry them onto the island. As the island is approached, they are not visited by appealing dreams. If anything, they are subtly warned away from the island.

Once on the island, visiting women are not affected by the debilitating influences of the food and drink. They maintain their ability scores and their senses. They will notice the men being affected, however. They'll notice that the men are getting weaker, slower, less intelligent, and show slurred speech and other signs of drug use. They'll have a hard time convincing the men of this, however. They will also notice changes in personality. The men grow more indolent and apathetic as the days pass, and seem more lustful and prone to pleasure seeking. The priestesses of the island are pretty, as a rule, but they are not the love goddesses the men describe them as being.

If a female adventurer has a relationship with Artemis or Aphrodite, she'll have disturbing dreams while on the island. The goddess or avatars of the goddess will appear to her and give vague warnings of danger. The goddess will urge her to leave. As the month progresses, another dream will occur, growing slowly stronger in intensity. The heroine will approach a temple at night. Inside, a shadow figure of a very tall woman waits her. This figure promises her knowledge, power -- what ever the character wants -- if she will join her. If she approaches the figure, or tries to see it clearly, the dream abruptly ends. If she ever accepts the offer, the queen will take her aside the next day, and initiate her into the cult. She must prove herself by taking a leading part in the sacrifice of her former comrades, but if she does this, the cult will keep its promise. The Hecate cult is quite powerful and can reward a useful member like an adventurer very well.

Women with a priestly background may notice that the priestesses of the island don't act like traditional priestesses of Aphrodite. They won't name her for instance, unless challenged to do so. The temple of Aphrodite is well maintained, but rather small. There are also signs to the keen-eyed that it is rarely used.

Clues

There are some other clues that alert heroes will pick up. The symbol traced on their forehead during the marriage ceremony is not a symbol of Aphrodite. Regular religion rolls will reveal this, while critical rolls will reveal it to be a symbol of Hecate. It's unheard of to have a marriage ceremony without invoking Aphrodite, as was done here. The women have charms and symbols on their clothing; again, a regular religion roll reveals they aren't those of Aphrodite, while a critical success reveals they belong to Hecate. Tracks around the island will indicate heavy usage of a circular pool in a depression a top a hill. The women deny using this and discourage the men from going there. Successful religion rolls reveal that these pools are sacred to the earth goddess, while critical rolls indicate that they are often used for sacrifice. There are also trails that lead off into the surrounding rocks and cliffs. If the heroes follow these, they will need to make several tracking rolls and brave the poisonous snakes that are plentiful on the rocks. If they succeed, they will track back to a cave entrance in a cliff face. The cave entrance is guarded by two women. If the men try to pass the women, they will delay them for a few moments; a large company of women, including the Queen, will come down the path and detain the men. The women will use all their powers of persuasion to prevent the men from entering the cave, claiming that it is taboo. If the men persist, they will find a strange dizziness overcoming them; they will seem to swoon and will wake up back at the central area. If the men can sneak past the women and get into the cave, they will find that it winds around a bit, then opens into a wide chamber containing a large and well-maintained temple to Hecate.

Troubleshooting

A player refuses to get married. He won't be forced. His partner will seem very hurt, but will continue to be friendly. Of course, he won't know the full joy of love. He'll be isolated from some of the goings-on of the island, but the women will still wait on him hand and foot. One woman will try to develop a special friendship with him and get him to trust her. He can change his mind and marry at any time. The women will continue to be seductive towards him; as he weakens, he'll probably succumb.

Attack! The men may decide to attack the women and steal their gold, or even the women themselves. The women won't interfere with the theft. These items are sacred to Hecate, and she'll see that they are returned (as well as cursing the men). The women will fight back if attacked. They have exceptional attributes and should be able to drive the heroes off. Hecate will intervene to protect her priestesses, with fogs or strange shadows or illusions to confuse the men. Any gold taken from the island will return to the island if sold. If the men keep it, they continue to weaken, and a compulsion grows in them to return to the island, as if they'd been forced to leave.

Murphy's Rules

Evil Movie Trailers

There's a special place in hell for Evil Movie Trailers.

Sure, Dante may have forgotten to mention it in his masterpiece "Disco Inferno," but these wicked teasers are down there, facing their ultimate punishment. Perhaps the concept of Conservation of Torment applies, and they're being watched over and over by Evil Movie Critics. It really doesn't matter.

This week I'm going to focus on one genre of Evil Movie Trailer: the Three-Minute Movie. And, again, I promise I'm going to tie it into gaming somehow.

The Three-Minute Movie EMT is wicked because it is, perhaps, a too literal interpretation of what's going to happen in the movie. Many an unsuspecting movie-goer has been lured into a movie upon watching the trailer, only to learn that the movie is little more than a two-hour version of that trailer. Every exciting moment, every one-liner, every twist. . . it's all in the trailer. Sure, the movie's scenes may not be in the exact same order as the trailer's, but then it becomes a mental game of sorting: When will the protagonist end up in an exploding tank? When will the gunman in the crowd try to shoot the president? And so on.

Three-minute movies. . . what more do these full-sized versions bring to the table that their trailer didn't?

- *Independence Day*. On July 3rd there's an alien invasion. They kick our butts and blow up the White House. On July 4th we triumph.
- *Wild Wild West*. Two incompatible lawkeepers are forced to team up by President Grant against a madman to discover what his sinister plan is. It turns out his sinister plan involves a giant mechanical spider that threatens to destroy everything.
- *Bone Collector*. A paralyzed cop recruits an officer to help track down a psycho before he kills again. The killer eludes them, but he keeps leaving tantalizing clues for them to figure out. They figure out the clues.

Con Air. *Pushing Tin*. *Titanic*. All of these movies, regardless of their own merits (or lack thereof), were lessened for me by having seen the trailer. Moments that were supposed to be surprising weren't; complications that were supposed to be a shock were expected.

So, what (I hear you ask) does this have to do with gaming?

Well, I think back to what I consider to be my least satisfying adventures as both a player and a GM, and many of them are three-minute movies. In other words, the premise or plot hook, as presented, is exactly what the adventure turns out to be.

- "This fort is being occupied by vicious ogres," says the king. "We need to stop them and destroy the fort before they raid our borders again!"
- "It's vital you get this antidote to the Prime Minister in twelve hours," says the mission director, "or she'll die. And watch out for a terrorist organization that's rumored to be looking for this serum."
- "The Shapechanging People could be anywhere," says the princess, "so I'm going to remain alone only with my trusted bodyguard Knifey until we get to my crucial-for-galactic-peace wedding."

Now, if these three adventure hooks turn out to be as straightforward as their premises indicate, then (again, in my opinion) they're not plot hooks; they're three-minute adventures. As a player I have no choice but to sit back and wait for events to happen that I *know* will happen. We'll need to invade the fort and kill the ogres while the terrorist organization tries to steal our serum, only to discover that the princess has acquired a severe case of knife wounds while her bodyguard is nowhere to be found. Blow up fort. Save PM Find bodyguard. Roll credits.

When I see trailers I like, I realize they do what I believe a trailer *should* do: pique my interest in the movie, give me an idea what it's going to be about, but don't reveal too much about the movie itself. In recent memory, the trailers for

American Beauty, *Fight Club*, and *Star Wars: Episode I* did this well. They introduce the interesting characters, give hints to the plot and premise, while not stealing the movies' thunder.

Now, the interesting question is: Who is to blame for Evil Movie Trailers? Is it the trailer's fault for revealing too much, or the movie's fault for not having more substance? It's a question I'll leave to scholars (you know, the hooded monks who, in 2525 [if man is still alive], will be analyzing my work and wondering what these Shapechanging People were). Regardless, as GMs we can approach the lesson of Three-Minute Movie EMTs from either side; we can either ensure that the premise doesn't reveal too much, *or* we can make sure our stories are intricate enough that we can reveal a logical amount of the premise while still ensuring there will be surprises.

Maybe the ogres are being controlled by an outside force. Maybe the terrorist organization tries to convince the protagonists that the serum they have is laced with a deadly contagious virus; could they be telling the truth? Mayhaps the GM should neglect to tell the PCs that the Shapechanging People are out to thwart the wedding.

Heed the warning of the EMTs and try to figure out what your story hooks are; if the adventure is just an expanded form of the story hook, then you may want to reveal less hook or tell more story.

Or just give up and go watch a movie instead.

-- Steven Marsh

Last week's answer: ***Champions 4th Edition***, p. 50.

(Four stars) "You must make haste for you sense it is not safe to linger by the smoking remains of the ruined monastery. The black-winged beasts could return at any moment."

The Invisible Hand of Vecna

Release Strategies for *Dungeons & Dragons 3rd Edition*

This month marks the beginning of the summer convention season, and therefore the season of new releases. The biggest product launch on the horizon is the new edition of *Dungeons & Dragons*, scheduled to debut this August at the Gen Con Game Fair. Other writers will pass judgment on the success of the redesign of the rules and the setting (which I will only briefly touch on below), but the business behind such a huge project is interesting in and of itself. The brand team at Wizards of the Coast, under the direction of industry wunderkind Ryan Dancey, have designed the strategy underlying the re-launch of *D&D* which, successful or not, will reverberate throughout the industry for years. The information leaking out of their Renton offices suggests that there are two interrelated strands to their strategy: leveraging the *D&D* brand for market penetration, and Open Source Gaming. Let's look at each in turn during this month's column.

The re-launch of *D&D* has been on the minds of gamers since it was first announced at Gen Con last year. Signs hawking the "Big Announcement" filled the halls of the Midwest Express Center. Hundreds of people watched as WotC front-man Peter Adkison confirmed plans to update the most well-known RPG in the world. Those same hundreds applauded wildly as Ryan Dancey displayed the contract that marked the return of *D&D* co-creator Gary Gygax to the world of *Greyhawk*. The buzz was on, and WotC has acted deliberately all year to build interest in the new releases. In addition, whether by design or happy accident, the classic *D&D* cartoon has returned to Saturday mornings, and Gary Gygax voiced himself as a character on the TV show *Futurama*, playing *D&D* with the likes of Vice-President Al Gore and noted Physicist Steven Hawking. And let's not forget the *D&D* movie starring *American Beauty*'s Thora Birch and Jeremy Irons, scheduled for release later in the year.

Nevertheless, the buzz only creates interest -- what about the product? The first amazing thing about *3rd Edition* is the return to prominence of the simple *D&D* name. Due to several legal and business issues at the old TSR, the *Dungeons & Dragons* name fell away and *Advanced Dungeons & Dragons* became the standard. Many thought that the "Advanced" in the name made the game confusing to potential new players, since it was not clear that there was no corresponding "Basic" material. When WotC bought TSR, one of the first changes made to the line was the recovery of the name. Only time will tell if this simple change will be as important as it seemed to the *D&D* team.

I am sure that the advertising for last year's announcement, ubiquitous as it was at the con, will pale in comparison to that for this year's release of the *Player's Handbook*. Everyone entering the exhibit hall will have to make a saving throw vs. advertising to avoid buying the book immediately. Many will be unable to resist, and the lines to buy the new book will surely be longer and more electrified even than those for the release of White Wolf's *Werewolf: The Apocalypse*. The *PHB* itself is supposed to be fantastic. The stats are quite surprising: Hardcover, full color throughout, and priced at only $19.95! This shockingly low price is possible due to two things: sales volume and the concept of the "loss leader."

WotC expects to sell more than 10,000 copies of the *PHB* at Gen Con alone, with thousands more sold during the Christmas season. This kind of demand will permit printing quotes, even taking into account the excellent production, far lower than a company with more moderate sales could ever hope to receive. WotC hopes that the low price, especially in comparison to other beginning RPGs (*D&D*'s nearest competitors will cost 150% or more of the price of the *Player's Handbook*), will mean that everyone -- *D&D* veterans, devotees of other systems, and new players alike -- will pick up and play *Dungeons & Dragons*. Of course, they're giving up the extra profit they could surely receive by charging the market price for the core products, but WotC hopes that follow-on sales will be larger due to the market penetration of the core books, making the short-term financial loss less serious. The classic example of this strategy is the "razors and blades" analogy, in which it makes sense for a company to give away razors free, relying on constant sales of blades for profit. Only time will tell if their strategy is correct, but it has worked repeatedly in other contexts. There is no reason to suspect that it will not be successful here as well.

The other two core products, the *Dungeon Master Guide* and the *Monster Manual*, will debut at one-month intervals.

(Yes, *Monster Manual*. Part of the legal maneuvering described above also necessitated the change to "*Monstrous Manual*." Now that it's over, this book can have its old name back as well.) They will have similar statistics, including the low price.

Nevertheless, this is only their launch strategy. Of course, they will also continue to support the game with a line of adventures and other sourcebooks that will keep players on the edge of their seats. The most interesting part of their line extension strategy is the concept of Open Source Gaming. This revolutionary new way to conceive of game design and system licensing has already gotten people talking.

Essentially, the idea of Open Source Gaming is simple. WotC will make the basic elements of the *D&D* system (renamed the D20 system, after the prominence of the D20 in the streamlined dice mechanic) available to other designers, with the understanding that those designers will, in return, make their rule extensions available to other designers. This is a licensing system similar to the "open source" of the Linux computer operating system. Indeed, Linux creator Linus Torvald has shown some interest in the D20 project and has given advice and encouragement to *D&D* brand manager (and Open Gaming Foundation founder) Ryan Dancey.

There are two reasons for the prevalence of unique game systems being tied to their worlds. Firstly, designers are creative and feel that their system is either better than all previous systems, or at least better suited to the game's particular world. The second reason is that once players have learned a game system, they are more likely to keep playing that game, rather than change games and learn a new system. After all, if players have invested time and money in a particular system, they are far less likely to chuck it just because DinkyCo's new game becomes flavor of the month. But what if your game system is so huge that you don't fear that? What if your game system is *D&D*. Well then it makes sense for you to open up your mechanics to other designers. The more people who learn the D20 system, the more people will be supporting WotC's core RPG product. You see, the license is written in such a way that players, even if they are playing a game produced under the D20 name, written and published by someone other that WotC, will still need a copy of the basic D20 rulebook, which for the foreseeable future is the *Player's Handbook* for *Dungeons & Dragons*.

The hope is that the next generation of designers will come and play in WotC's sandbox, extending the popularity of D20 by passing up the system design phase of new games in favor of spending time on the worlds. Adventure and sourcebook design is expected to be so easy that some small publishers have been considering the possibility of releasing new material under the D20 license at Gen Con, right alongside the release of the *PHB*, which they themselves won't see until the public release on Thursday morning. Most of the world creation would be done before the show with mechanics and stat blocks inserted in the appropriate places, and then rushed off to instant printers for a quick return to the booth. It's not clear that anyone will be able to pull a stunt like that off, but if it happens, it will be a new day in RPG design for sure.

Of course, none of these products will be official *D&D* releases. The initial license is only for the underlying system -- combat, task resolution, character creation, etc. Later add-ons to the licensing program may make it possible for outside designers to extend the world of *Dungeons & Dragons*, but not at first. Still, opening the system to outside people and even entertaining the possibility of licensed *D&D* products is a huge step away from the policies which governed TSR in the past.

Wizards of the Coast's *D&D* brand team (Dancey, along with lead designers Monte Cook, Jonathan Tweet, and Skip Williams), with the support of their corporate parent Hasbro, has developed an aggressive and innovative campaign surrounding the release of *Dungeons and Dragons 3rd Edition*. If they're successful, it could result in a huge influx of new players into a hobby we all know and love. Clearly, this is not your older brother's *D&D*.

American Shangri-La: Mount Shasta

"The Indians say the Great Spirit made the mountain first of all."
-- Joaquin Miller, on Mount Shasta

And he did a really good job, too. Towering 14,162 feet above sea level, its coat of brilliant white glaciers gleaming in the clear Cascade Mountain air, unspoiled forests stretching away at its feet, Mount Shasta is some of the Great Spirit's best work, no doubt about it. Nestled at the junction of the Sierra Nevada and Cascade chains about fifty miles south of the Oregon border, Mount Shasta still remains fairly remote from urban civilization. However, it's apparently convenient to the astral plane; it's the home of any number of elevated spiritual entities, Lemurian colonies, gentle Bigfeet, and Ascended Masters. If there's an American branch office of Shangri-La, Mount Shasta is definitely it.

Even the name says it: "Shasta" has been variously derived from the French "chaste" and the Russian "tshastal," both meaning "pure." Its Indian name, to the local Wintun (who got named the Shasta Indians, after the mountain), was Wyreka, the "mountain to the north." That obviously can't have been its right name, since unlike "Shasta," it doesn't add kabbalistically to 370, the same as "shalom." A veritable mountain of purity and peace, then; it hasn't even erupted since 1786, as far as anyone can tell. As volcanoes go, it pretty much doesn't.

"Everyone knows about the Lemurians around here, son. Why, Mount Shasta is their secret home, or something like that."
-- California Highway Patrolman to David Hatcher Childress, Apr 29, 1992

Which must be why the Lemurians built their secret retreat there, after the sinking of Lemuria, or rather, after the sinking of Mu in the nearby Pacific. (A fellow named Morris Doreal claims that Mount Shasta was built by the Atlanteans, not the Lemurians. It is to laugh.) The survivors of sinking Lemuria/Mu (known specifically as the Yaktavians) retreated to the large Lemurian colony in northern California (at that time an island cut off from the American mainland by an immense imaginary sea that John Dee insisted on putting in his maps) and, realizing that any number of post-sinking hard rains were gonna fall, carved out a city (or two; some sources give Yaktavia and Ilethelme as the Twin Cities of the "Secret Commonwealth" of Shasta) in the bowels of the volcano. The Yaktavians used their incomparable bell-making technology to do so, constructing bells "made of a transparent substance that reflects no light" and using their arcane tunings and frequencies to carve Mount Shasta's interior into enormous chambers and airship havens, all powered by a crystal the size of the Empire State Building. Some Yaktavian bells can create light, or (one imagines) any other kind of radiation whether occult, etheric, or electromagnetic. A Yaktavian bell would make a swell McGuffin for any kind of occult or secret tech game, and the Yaktavians might even be the source of the Crystal Bell in *GURPS Warehouse 23.* Yaktavian sonic engineers would also make fine PCs in the [ancient astronaut freestyle campaign frame](#) I mentioned some time back.

"[T]he walls, polished as by jewelers, though excavated as by giants; floors carpeted with long, fleecy fabric that looked like fur, but was a mineral product; ledges intersected by the builders, and in their wonderful polish exhibited veinings of gold, of silver, of green copper ores, and maculations of precious stones. Verily, a mystic temple . . ."
-- Frederick Spencer Oliver, *A Dweller on Two Planets* (1894)

Back to kabbalah, briefly, for another look inside Mount Shasta, at its numerical core. When we add up the digits of its height in feet, we get 1+4+1+6+2 = 14, or "zahab," meaning "gold." And there's gold in that thar hill, if visionary Theosophists without a shred of proof are to be believed, and why the heck not? Shangri-La is built on trust. And, apparently, on gold. Frederick Spencer Oliver channeled a vision in 1884 from "Phylos of Thibet," regarding Phylos' past life as a forty-niner named Pierson, initiated into the secrets of Mount Shasta by a Chinese laborer named Quong. Quong led Pierson into Mount Shasta to discover a secret golden city of Initiates. In 1894, Oliver published his vision, and set off the modern era of Theosophical vision-questing around Mount Shasta. An occult-minded astronomer of sorts named Edgar Lucien Larkin claimed to have seen the Lemurian cities' "golden dome" through its vibratory barrier on the slopes of Mount Shasta through his telescope on Mount Lowe -- quite a feat, given that Mount Lowe is in Los Angeles County hundreds of miles away.

One Abraham Mansfield, lost on the mountainside in 1931, met a seven-foot tall Lemurian, who took him into the mountain and showed him not only the standard golden city, but also giant chairs of gold and the golden Plates of Time, which he never quite described (except to say they were full of "Etrucian" wisdom -- possibly the Etruscans, over in America through the [tunnel network](#) from Mount Vesuvius to Mount Shasta) but which would be great things to use to create Occultist Alternate Histories. One J.C. Brown claimed to have found, in 1904, a cave entrance to chambers full of ten-foot tall mummies, golden tablets, golden shields, and other mystical impedimentia. Rather than let his employers, the British Lord Cowdray Mining Company, have it, he concealed the find and traveled the world for thirty years researching Lemurian wisdom. Finally, in 1934, with Lord Cowdray safely dead seven years, Brown recruited 80 men in Stockton to help him properly excavate the cave. After six weeks of planning, though, Brown dropped out of sight, vanishing forever on the day the expedition was supposed to leave.

"Those who have come to stores in nearby cities . . . have spoken English in a perfect manner with perhaps a tinge of the British accent, and have been reluctant to answer questions or give any information about themselves. The goods they have purchased have always been paid for in gold nuggets of far greater value than the article purchased . . ."
-- H. Spencer Lewis, *Lemuria: Lost Continent of the Pacific*

Brown's disappearance adds something of a sinister tinge to the reports that the white-robed strangers (tall, with unusually shaped skulls) often seen around Mount Shasta spoke with British accents. Lord Cowdray, by the way, owned virtually all the oil in Mexico, and was one of Britain's richest men during that time; a prime candidate for Conspiratorial Anti-Lemurian British Round Table Skullduggery.

Speaking of sinister tinges, of course, there's the I AM cult started by itinerant salesman Guy Ballard after having a vision of a very Nordic looking Ascended Master Count [Saint-Germain](#) on the slopes of Mount Shasta on August 16, 1930. Ballard's I AM movement concentrated on using "psychic cleansing" to destroy unhealthy spiritual influences like Communism, labor unions, and foreigners (eradicating hundreds of thousands of spirits in a rally in Philadelphia), all in the name of the Great White Brotherhood. ("Tshastal" also means "white." Hmmm.) I AM had 400,000 members closely associated with American fascist William Dudley Pelley's theosophical Silver Shirt movement (Pelley and Ballard met on Mount Shasta) when Ballard spoiled it all by dying suddenly (and not Ascending) on December 29, 1939. In 1940 the Federal government launched loyalty investigations into I AM and the Silver Shirts, crippling the movements in the name of the war effort. Interestingly, the Rosicrucian Shasta Lemurians come from "Telos," (another name for Yaktavia), and the I AM Ascended Masters come from Venus. The weaselly Nordic-Nazi aliens have called themselves both "Telosians" and "Venusians." Could the Nordic-looking "Lemurians" have been Evil Luciferian Racists all along? Of course not. I don't believe your negativity. Next you'll be saying that the aliens aren't our friends.

"[T]his led to the 1954 . . . landings and treaty negotiations -- under the Eisenhower administration -- with the space-based Greys and Reptiloids, even though previous treaties . . . were signed with the humanoid [Telos/Ashtar/Agharti/Melchizedek] groups under Mt. Shasta, California . . . According to former Dulce base security officer Thomas Castello, the Shasta treaty dates back to the Grover Cleveland presidency."
-- "Branton," *The Omega File*

When in fact, the majority of the evidence points the other way; even such an eagle-eyed observer as "Commander X" avers that Mount Shasta's secret UFO base is in the hands of the "good guys." The alien good guys, of course: they've been our friends ever since they signed a treaty with President Cleveland back in 1886. (They probably had a treaty before that with [Emperor Norton](#), while they were secretly infiltrating Gold Rush era San Francisco, no doubt through its Chinatown.) The 19th-century Yaktavians would make ultimately swell ***GURPS Old West*** Patrons. Possibly their time-vibratory bells sent various bones, artifacts, and machined parts back to 55 million years ago to be discovered in the gold tailings in Mount Temple between 1853 and 1870, as indeed they were.

Their "vailxi" craft (combo air and space ships) resemble the [Great Airship of 1897](#) (seen over Stockton in November of 1896) not a little, as do the UFOs seen by David Williamson on October 12, 1956 and by Jack Brown (no relation to the missing J.C. Brown?) on November 29, 1966 -- over Mount Shasta. (On the other hand, the local Indians used to say the lights over Mount Shasta came from the planet Venus.) The [modern UFO era began](#) just on the other side of the Cascades, over Yakima, Washington. Mount Shasta's not short of other [ultraterrestrials](#), either; the Yaktavians are described in some sources as "elfin," picknickers have seen "dwarves" on the mountain, and the local Bigfoot (or the

Wintun monster, the Shupcher) would both fit the "giant" description. The Mount Shasta base can be a **GURPS Cliffhangers** Lost City, a **GURPS Atomic Horror** Loi outpost, or a dimensional gate (activated by vibratory bell or flute energy) to the Hollow Earth or other times (through, no doubt, the Plates of Time). If you join Mount Shasta to the other "sacred mountains" throughout the world -- Olympus, Moriah, Meru, Taishan, and so forth -- you aren't even restricted to the Pacific Northwest. Because no matter where you go, you're always just one ring away from the invisible empire of the Great White Lemurian Brotherhood. That doesn't comfort you? Maybe you need to spend a little more time on Mount Shasta.

Pyramid Review

The Apocalypse Stone

Published by [Wizards of the Coast](#)

Written by Jason Carl & Chris Pramas

96 pages, $16.95

"Don't destroy the earth in your first book. You might need it later."
--Douglas Adams

The *Apocalypse Stone* is an *Advanced Dungeons & Dragons* adventure designed for powerful characters (4-6 characters levels 15 and above are recommended). Adapting this adventure for lower levels is theoretically possible but would not be easy. More importantly, reduced power wouldn't fit with the epic scope of the story line. Adapting it to higher levels probably won't be necessary.

This adventure could probably work as a stand-alone adventure, provided the players were given suitably powerful characters, but would work best as part of a seriously long-running (years at least) campaign. In fact, as written, *The Apocalypse Stone* is intended to be the final adventure of such a campaign -— and the game world is not likely to survive the experience!

I will remain intentionally vague about the details of the bigger picture of this adventure as the potential enjoyment of this adventure depends heavily upon the DM keeping his/her players in the dark as to what's really going on. If you run this one correctly your players won't be disappointed. They may very well end up seriously ticked off, but not disappointed.

TAS begins with a very well conceived introduction and setup, despite the fact that the writers do use the deplorable phrase "You're all sitting in a tavern" as one of its alternative beginnings. From there the Hack-factor skyrockets. The first leg of the actual adventure is little more than a thinly disguised (and high-powered) dungeon crawl as the characters wade their way through a truly mind-numbing assortment of monsters that includes beholders, gorgons, giant trolls, a greater medusa and no less than three dragons. Eventually, of course, the heroes defeat the Mastermind, retrieve the artifact and reap the divine glory. But after this is over, things finally start to get interesting.

The next section is much more general, providing a number of short encounters and adventure seeds to wile away the time as the heroes' lives return to their peculiar semblance of normal. As events progress, however, it becomes increasingly clear that things are not as they should be. Certain types of magic begin to go awry, clerics and paladins lose contact with (and powers from) their deities and the local versions of the Horsemen of the Apocalypse from Revelation begin their joy rides.

All of this is, of course, the fault of the unwitting PCs. How they discover this fact is truly inspired. I won't blow the whole surprise but lets just say a very put-out archdevil-in-exile gives them his undivided attention in gruesome and imaginative ways.

Once the PCs know that they are getting the blame for the Really Bad Things happening in the world, they must set their sights on fixing them. This leads them into a series of "tests of character," divine tasks they must perform and temptations they must overcome. This section is truly the jewel in the crown of this module. The heroes will have to rise above their baser (and possibly more familiar) natures in order to pass the tests and proceed. If they fail to do so, then literally all will be lost. This provides some beautiful role-playing moments that stand in sharp contrast to the hack-fest that opened the adventure. It should also prove telling about the personalities of your players.

Once these obstacles are overcome (assuming that they are—my experience with players suggests that only a rare few will pass the tests) the Final Battle may be joined. But even if the heroes prevail, it is entirely up to the DM whether or not the planet survives the experience!

Beyond the adventure itself *TAS* is a source of some useful information. The chapter on developing an apocalyptic adventure and/or campaign was pretty good if a bit limited. For DMs unprepared or unwilling to snuff their (or somebody else's) planet, there are also several suggested alternatives, from moving the campaign to another world to drastically altering this one (a la the *Cataclysm of Dragonlance*) to just letting the heroes save the day and move on. Curiously, *TAS* fails to address what is, to me, an obvious and powerful way to end the campaign without incinerating the planet: let the heroes save the day by sacrificing their own lives to do it.

The best sourcebook material, however, is less than three pages long. An appendix provides information on expanding the Death Knight, one of *AD&D*'s more intriguing beasties, to include not only warrior versions but wizard, rogue and priest ones as well. The resulting Death Warlock, Death Stalker and Death Adept (respectively) will likely become staples of many a wicked DM.

The Apocalypse Stone is, as a whole, an ambitious and satisfying product. It is a curious balance of WWF-level gratuitous violence and truly inspired alternatives to and controls of the same. I would personally revamp Chapter Two entirely but Chapters Three and Four are worth the product. While plagued with a number of editorial mistakes -— some of them quite glaring —- as well as the standard TSR lack of an index, the book is organized in such a way that it flows with little difficulty or necessary cross-referencing.

But what truly makes this adventure something special is the audacity to suggest blowing the entire world away. If you are not prepared to give up your game world (or at least your current campaign) then *The Apocalypse Stone* is little more than just another high-level monster bash. Go the distance and you will have in your hands an adventure your players will never forget —- nor possibly forgive either.

--Robert Neal Byles

Digging Yourself Out of a Corner!

by Peter V. Dell'Orto

It has happened. Your PCs are unconscious, dead, or incapacitated by forces beyond their powers. Their plan, good or ill-conceived, failed completely, and their enemy reigns triumphant. How can you save them, and save all the hard work you and your players have done on your campaign? How can you spare them without being obvious about it? Luckily, fiction is rife with examples of ways to do it. History even gives a couple of examples if you know where to look. The purpose of this article is to give you ideas you can use to spare your PCs, as well as how to pull it off without looking desperate or unprepared. Nothing kills the mood quite like an obvious plot fudge. Fudging die rolls to spare PCs or kill NPCs is not addressed -- we are concerned here with Plot Fiat, not Dice Fudges.

There are some obvious ways to deal with a helpless, knocked out group of PCs who are obviously Doomed. Kill them. Sell them into slavery. Ransom them back to their families. But these possibilities are often real downers for players -- "Sorry, the bad guy won and you are now digging in the mines. Your sick grandmother dies while you are away and the bad guys won the war." While slavery, ransom, or turning the PCs into ghosts can be a great change for a campaign, a GM should have other ways handy to spare the PCs and keep the game running.

There are four essential rules to GM Fiat:

- **Rule #1:** Don't do it more than you have to. Unless the genre demands it (such as swashbuckling), or some in game reason (*GURPS*'s Serendipity advantage, or *Champions*'s Luck) gives the PCs a right to expect more. Even here you want to let the PCs action decide their fate more than your intercession. If you overdo it, the game becomes a series of coincidences designed to reward poor play. Done in moderation at best, it can keep a campaign on track and deserving PCs alive.
- **Rule #2:** Make it the result of their actions, if possible. This means that if reinforcements come, it is because the PCs helped them, or gave them a heads-up, or left their GPS signaling on the emergency line. While random artillery fire or a falling piano is hard to explain as the result of PC action, give it a try. Maybe the piano's tether was weakened by a ricochet earlier in the fight. . .
- **Rule #3:** If you are stuck for ideas, listen to the players. Off-hand remarks by the players are often a great source of inspiration. "I wonder if the cops outside heard the bad guy's gunfire" can trigger an onrush of reinforcements you may have forgotten about in the heat of play. Every "wouldn't it be cool if" or "wouldn't it be funny if" is a hidden request for the GM to try something. Do not get out of hand, though, and take every suggestion that comes along -- remember Rule #1.
- **Rule #4:** Make it seamless. The more likely, the more believable. The players (not the PCs) must accept the fiat was not only possible, but likely. Having an unconscious PC warrior roll into a ditch and be overlooked is more likely to be accepted than having his foes struck down by lightning. Subtle and smooth is better than loud and obvious. If the PCs also have to pay for their failure in the

first place, make it in proportion to the errors they made (a lot if they had a
poor plan and bad execution, very little if a few failed rolls decided it).

There are a few basic types of fiat you can use; there are many, many subtypes and often categories cross. However, you can break down Plot Fiat into a few categories. Clever GMs may come up many more variants than I have suggested -- more power to them! This list is a good starting point, not an ultimate list.

Random Environmental Deus Ex Machina

PCs are well known for getting captured and condemned to death. The world holds it breath as they watch the PCs about to die? Not a chance! You can use all sorts of environmental factors to save the PCs. Nooses can snap, the scaffolding can fall, the power can go out, they can be fed an underdose of the killing poison.

Pay close attention to the environment the PCs are in when they are in trouble -- is there a storm that will force the guards inside leaving the PCs alone? A battlefield from which a random cannon shot or stray chunk of rubble that can destroy the stockade they are imprisoned in? Perhaps an out of control hovercar nearly runs down the villain's flunkies, leaving enough time for the helpless PCs to escape. *GURPS High Tech* specifically mentions the Mill's Bomb as a piece of Deus Ex Machina -- shrapnel from hundreds of yards away striking down an NPC with the drop on the PCs.

For example, the PCs are assaulting a fortress, but get knocked out in the fighting-almost certain doom. Instead, while they were out cold, troops on their side stormed that section of the fort and held it long enough to medivac the team. If the PCs lost through their own stupidity, they may get punishment duty or a bad reputation to make up for the failure without killing them ("You let Professor Obidiah Nosferatu escape! I hope you like KP, Sergeant!") If they lost due to bad luck, the PCs could have held it just long enough to dislodge the enemy, or be rewarded for their heroism ("Having held the enemy in check long enough for us to rescue our wounded, we present you with the Medal for Superfluous Bravery.").

They Just Let Us Go!

NPCs should have plenty of reasons not to kill defeated PCs. Most PCs are exceptional individuals with powers beyond those of normal people -- and certainly beyond those of your average bad guy. Any villain worth his or her salt could use the PCs -- willingly or unwillingly, witting or preferably unwitting. Extracting an oath from a PC for a service in return for their lives is good; tricking them into doing so is better. A villain could allow the PCs to escape easily so she can send her least loyal or most dangerous followers after them to cull the herd, or an ambitious lieutenant can let them go, making sure they get a shot at the current leader on the way out. Looting the PCs and turning them loose is another option for megalomaniacal villains ("Now that I have the Orange Octagon of Octavu you are no danger to me. Bind their wounds and release them.").

A popular variant is "No One Could Survive That!", where unconscious PCs are either mistaken for dead, or their bodies are overlooked. An unconscious warrior could have rolled into a ditch, or under a desk, after being knocked senseless and not noticed by his foes, allowing a later rescue of other, captured, PCs. A further variant is to let the PCs go in an incredibly dangerous area -- turn them out into the wilderness where they will "surely" die. If the PCs happen to find the secret way into the villain's lair, and a hidden cache of weapons, more the better for the game. . .

Selling the PCs into slavery falls under this category as well, especially if they have the opportunity to escape. As I mentioned before, this can really rankle some players -- coffle scars, whip marks, and confiscated gear fall under "fates worse than death" for some.

Hey! The Prisoners Are Helpless! Give Them Some Weapons!

Another standard is the "sporting chance" -- demand a duel with a PC fencer, or a bare-handed match with a PC martial artist. Hunting down the PCs on horseback, or on vehicles of some sort is popular -- and especially useful since the "head start" gives the PCs plenty of time to improvise weapons and reverse positions with their foes. PCs defeated by flunkies or trapped by the enemy can be rescued by the Archvillian and forced to fight one another -- shades of *Star Trek* or *Enter the Dragon*. Wanting to fight the PCs man-to-man, or have them fight in an arena of some sort, is also an excellent reason to nurse the PCs back to health. Nursing them back to health, of course, means that they will be able to make a reasonable attempt to escape. So much the better sport. . .

Variants include letting the cannon fodder hunt them down, make them fight with archaic weapons (popular in sci-fi), or make a spectacle of them in front of the men ("Now you see how the master fights!").

Uncle Larry? Is That You?

PCs, at least in theory, have families. Some of those relatives are bound to end up as Storm Troopers, Generic Guards, Priests of the Great Good God, or just merchants who run the only All Night Ammo store in town. This fiat has its down points, though -- you are stuck with a new NPC in an unlikely situation, and it is hard to pull off without showing your hand.

A more useful variant of the Relative is the Desperate Enemy -- an ambitious lieutenant sees the PCs are potential tools, and either openly or covertly uses them to kill his boss. A quiet, unobtrusive servant may have been biding his time to get his revenge and free the PCs to help. An enemy with a conscience can let them go ("I worship Oo-ga too. Just don't hurt anyone as you leave."),

An extreme variant of this (which overlaps with #1, above) is Thanks for Stopping By, Patron Deity! PCs crying for help from a deity can be rewarded with a visit or intervention. Unless you are playing a game where the divine regularly show up (*Call of Cthulhu* or *Elric* to mind), this should be handled with extreme care.

Ye Olde Deathtrap and Speech Gag

A cliché in Cliffhanger and Super Hero games is the "Speech and Death Trap" routine. Any captured PCs will be given a long speech by the villains of the piece, and left to die unattended in a trap of some kind. If the conventions are changed slightly, the players might not even recognize the cliché. The trap is not necessarily a constructed death trap -- a pit full of rats or a flooding sewer is more than sufficient. Even the trap is optional. A sufficiently long speech can allow knocked out PCs to regain consciousness, spells to run out, and ropes to be sawn through or untied.

Useful variants include sacrificing them after an extremely long ceremony to He Of The Too Many Tentacles instead of a speech, or releasing the PCs in a dangerous, non-trap situation. PCs released in a deadly jungle or in the Arctic are in just as much trouble as PCs placed in a comic-book style death trap.

GM Fiat can be an excellent way to keep your hard work and that of your players from being washed away by a flurry of poor rolling and a stumped GM. Keeping the four rules in mind and using the suggestions above, you should be able to keep your plots on track and your PCs alive. Despite, or if possible, because of their actions.

by Loki Carbis

Art by Heather Hudson

Players, being the pesky critters that we all know and love -- and let's face it, that we can't really do without -- are always looking for an edge. . . A way to be one up on you, the poor, over-worked GM. And players are not above reading the rules, even when they know you don't want them to. Perhaps even *especially* then. **Feng Shui** players are no different in this regard from players of any other system.

This article suggests one way for a canny **Feng Shui** GM to stay several steps ahead of his players on this matter. **Feng Shui** players, particularly those who have already played the game, are no doubt familiar with the game's unusual cosmology, and the all-pervasive Time War that rages between the four main Junctures. One easy way to liven up a new **Feng Shui** campaign for experienced (or even jaded) players is to start them off in a Juncture other than the contemporary one. But why stop there? The players all know that it's the same Juncture -- but if you make whichever of the other three Junctures you're using the contemporary one, and adjust the positions of the other Junctures accordingly, you can really knock your players for a loop. This is true especially if you start them off slowly, with a few adventures in the home Juncture before they get to the Netherworld and discover what you've done.

The four basic Junctures of the **Feng Shui** background are located in 1996 (the contemporary Juncture), 69 AD, 1850 and 2056. Each of these is described to some extent in the **Feng Shui** rules, as well as in the supplements describing the dominant groups in each era: **Thorns of the Lotus** for the 69AD Juncture, **Blood of the Valiant** for the 1850 Juncture and **Seeds of the New Flesh** for the 2056 Juncture. Considering each of those other three as the contemporary Juncture, the others move:

- For the 69 AD Juncture, the new points in time accessible are at 1859 BC, 77 BC and 129 AD.
- For the 1850 Juncture, the same points are at 77 BC, 1744 AD, and 1910 AD.
- Finally, for the 2056 Juncture, the relevant dates are 129 AD, 1910 AD and 2116 AD.

This gives a total of six new Juncture locations -- 1858 BC, 77 BC, 129 AD, 1744 AD, 1910 AD and 2116 AD. As described in Chapter 16 of the **Feng Shui** rules, the dominant group in each of these Junctures partially determines where the majority of the world's Chi sites can be found, and how the flow of Chi affects the world. The mechanics of this are described at

greater length in the tables at the conclusion of this article.
Some of these Junctures are home to groups not described in
the *Feng Shui* rules, mostly due to the fact that many of them no longer exist. (Or, in the case of the 2116 Juncture, they do not yet exist). Briefly, these groups are:

- **The Rising Sons**, a break-away faction of the Jade Wheel Society that wishes to see the Japanese develop political power and Arcanowave technology in the first half of the 20th century. They are the impetus behind Japan's rapid modernization and expansionism during the first half of the twentieth century, which is the way they seek to gain control over many of the key Feng Shui sites in the Far East.
- **The Servants of the God-King**, a priestly caste of Ancient Egypt that maintained the power of Egypt through their figurehead Pharaohs for over three millennia with their understanding of the Chi flows of the river Nile. Unfortunately for them, they are largely incapable of expanding these teachings to work in other lands outside Egypt. Alexander the Great was guided by their teachings, which his advisors were able to expand upon to some extent. But his death prevented him from completing his Chi-based conquests.
- **The Navigators** are a sort of Renaissance era Dragons. This group is inspired by the works of Marco Polo and other such travelogue writers. They are a predominately European group (although they do have numerous members from nations all along the great Silk Routes) that have a limited understanding of Chi, and who seek to make that knowledge available to others. Unfortunately for them, the writers they follow are often charlatans, or misled by the Ascended -- while there are places like El Dorado and the Kingdom of Prester John, these fabled lands exist only in the Netherworld. The chroniclers of these lands might believe them to exist in the real world, but they demonstrably do not, and thus, the uninitiated world dismisses their works as pure fantasy. Where the truth cannot be suppressed or distorted, the Ascended (through the Order of the Wheel), control many publishers, which makes such writers easily found and silenced.
- **The Martyrs** for Potemkin are a loose group composed entirely of Abominations. They worship the memory of Battlechimp Potemkin, but they have perverted his teachings. While Potemkin sought only to destroy all technology, the Martyrs believe that he intended for all humanity to be destroyed, and for the Abominations to inherit the Earth. Although they have limited Chi power, many of them are innately able to enter the Netherworld, and they are a serious danger to all times and places.

1858 BC

At this stage of world history, the systematic study of Chi sites is very poorly advanced. Chi sites are scattered more or less equally around the world, with a slightly greater than normal concentration of them in the Middle East and Eastern Mediterranean. The Servants of the God-King -- the priests who control the Pharaohs of Egypt from behind the scenes -- maintain their centuries old power through an understanding of Chi. Some philosophers and priests in the eternally squabbling Greek city states also understand it, although the Greek obsession with relics of sorcerous power has led them down a path of easy but limited power, and less understanding. In the Far East, the original sorcerers who will form the nucleus of the Eaters of the Lotus are yet unborn, and their predecessors waste their power in pointless squabbling. No one faction dominates, largely due to the fact that the few factions which do exist are too small and too scattered to amass much power. In fact, the majority of the world's Chi sites are controlled by groups -- or more commonly, individuals -- who have but a single such site to their names.

The sole exception to this is the kingdom ruled by the Hsia dynasty in what will one day be China. Under the cunning leadership of Shao K'ang, many Innerwalkers have been organized into an elite force, a combination of espionage, commando and geomantic functions. Although they do not seek to expand Shao's territories, they guard those which he does rule with great fervor, and work to keep the surrounding states off-balance and incapable of united action against him.

77 BC

Although almost two millennia have passed, Chi is still not well understood in the West. The nascent Roman Empire in the Occident regards the study of Chi as a mere superstition, and thus turns its back on the greatest power in the world. The Servants of the God-King are still going strong, having co-opted the Ptolemaic dynasty after the conquest of Egypt by Alexander the Great. In the next few decades, they will make one last effort to bring the Romans around, but after the deaths of Julius Caesar and Cleopatra, their influence wanes rapidly. As a result, Chi power sites in that part of the world are beginning to lose their power.

In the Orient, things are somewhat different. Gao Zhang has begun his rise to power, and the Eaters of the Lotus are making a name for themselves, although still few in numbers and more thinly spread than they will be. Nevertheless, they are clearly a rising power to those who know, and the world is slowly changing in response to that fact. Partially under their influence, the Han dynasties that rule China are pursuing expansionist policies -- at present, there is a drive inland, and many of the Chi sites of Sinkiang and Tibet are threatened by the plans of Gao Zhang.

129 AD

By this point, the Servants of the God-King are a spent force. Some knowledge remains among the Druids of the British Isles, focussed by their standing stones and stone circles -- but the Romans are persecuting them with a will, and are destined to succeed in eliminating them almost entirely over the course of the next two centuries. Meanwhile, in the Far East, the Eaters of the Lotus are coming under ever increasing fire from their opponents, and their power is waning. At this point, they are happy to build slowly and carefully, awaiting the day that they will rise again. Thirty years from now, the Eaters of the Lotus will stretch forth their hand once more, and regain their lost power, only to wind up, eventually, being suppressed yet again. This pattern will repeat itself with only minor variations for centuries to come. The power of the Eaters of the Lotus slowly diminishes as the political and military might of Chinese rulers increases. Even so the Eaters of the Lotus will remain strong for centuries to come, finally being crushed by the Mongol invasions.

On the far side of the world, several Native American cultures have developed some understanding of Chi, although they have not systematized this knowledge to any great extent, and many sites remain undiscovered. Furthermore, the relatively small size -- and predominantly nomadic cultures -- make them not much of a threat. Even so, the Eaters of the Lotus occasionally send agents to the West coasts of both North and South America, to prevent the possibility of a threat arising from that direction.

1744 AD

The destruction of the last Native American civilization two centuries earlier removed the last serious threat to the power of the Ascended (and wiped out the only remaining stronghold of the Four Monarchs). The rationalist, scientific worldview that they espouse is gaining ground, and Chi power is weakening. This Juncture is characterized by European imperialism, largely at the behest of the Ascended, and for the purpose of wiping out opposing power groups and de-powering their Chi sites. Ironically, in doing so, the Ascended are creating the very conditions that led to the rise of both the Guiding Hand and the Rising Sons.

The power of the Ascended is close to absolute in the East. The only organized resistance comes from the Navigators -- and they are losing ground on an almost daily basis as the powerful nations of Europe bring ever greater amounts of the world under their control. Still, the Navigators have some life left in them yet, especially if they can succeed in making contact with the Dragons, and allying themselves to that group.

1910 AD

The 1910 Juncture is a Juncture in flux. The growing power of the Rising Sons, a largely Japanese-based faction group of the Jade Wheel Society, is unseen but greatly influential at this time. They seek to create a society and a technology not too dissimilar from that of the Architects in 2056. Already, they have gained much Chi power from the capture of several strategic sites in the Russo-Japanese War five years earlier, and they are behind increasing Japanese imperialism as well. Their major opponent is the Guiding Hand, and the eventual Japanese invasion of China in 1930's is the final and most overt phase of the conflict between the two. Fortunately, very few members of the Rising Sons survive after 1945 -- and the majority of them are re-absorbed by the Jade Wheel Society.

At this time, the Order of the Wheel (and to a lesser extent, the Jade Wheel Society also) is slipping from the grasp of the Ascended. A combination of technological advance and nationalist fervor is leading to increasing division within the ranks of the Ascended's servitors -- divisions their enemies try to exploit while the Pledged desperately try to stem the tide of history. In three years time, when the First World War begins, it will be obvious to even the most fanatical Pledged that they have failed.

2116 AD

It was a long and hard struggle, but the Jammers finally defeated the Architects. Unfortunately, in doing so, they pretty much ruined the world. Although World War Three was not a thermonuclear war, the devastation was nearly as great. Most of the planet resembles Europe after the end of World War Two. The cities are largely ruined, and the wilderness encroaches more by the day. The remaining humans cower in fortress towns, rarely with populations exceeding a single thousand people. Much knowledge of Chi has been lost, and there is no one group that can claim ascendancy. Isolated factions of the Architects, the Jammers and the Dragons still survive in the rare locations that still have a functioning modern technology, and each of them imagines that they are alone. Few venture into the blasted wasteland outside the cities, which is the domain of the Abominations. Millions of them, freed from all control and restraint, doing nothing but feeding, fighting and mating. Most of those who still live in the fortress-like townships consider themselves fortunate that the Abominations hate each other even more than they do the humans -- or else their protecting walls would soon fall before the beast. In truth, these conditions are just what the Four Monarchs have been waiting for, and in the wilderness areas, they are slowly building both Chi power and military strength. They're dominating or destroying the Abominations, and planning a reckoning. Of course, things might not go the way they plan -- if the Martyrs for Potemkin have their way, every human being on the planet will soon be nothing but a memory.

Game Designer's Introduction

Ken & Jo's quest represents the sort of adventure that *Everway* is especially suited for. While quests and realms can vary as much as the gamemasters who create them, this quest has certain aspects that mark it as an *Everway* quest.

Ken & Jo use the concepts of elements and gates in a way that is at once new and consistent with the *Everway* background. The elements have a spiritual side, so the danger and challenge in the quest are spiritual as well as physical. While gates are often simply entry and exit points for a realm, the gate described here is at the heart of the issue.

The setting is highly unusual, so strange that it might not work as the setting for an extended campaign. But as a place to visit, as the site of a quest, it excels. Since *Everway* heroes travel from place to place, the gamemaster can present colorful settings like Brightwater and Deepwater, milk them for what they're worth, and move on. With so many different realms for heroes to explore, flights of fancy such as this one fit right in.

This quest also fits the *Everway* style in the way it leaves behind standard elements of fantasy (combat, conquest, the battle between good and evil) in favor of character interaction. The fun in this quest comes from the heroes interacting with the strange and even self-defeating people to be found here and solving a problem that isn't presented to them in the opening paragraph.

-- Jonathan Tweet, author of **Everway**

Where Water Crosses Water

This adventure concerns the linked realms of Deepwater and Brightwater. Brightwater is a mer-realm. Deepwater was once known as Golden Palms, and is slowly filling up with water because of an imbalance of the elements. The party must find a way to restore the balance. This is both a physical and a spiritual problem, and the party must find a way to solve both. Fifty years ago the priests of Water in Golden Palms tried to open a gate to a world more strongly aspected in Water. They were more successful than they had hoped, and found their way into Brightwater, where mer-folk and humans can breathe the water. There is now a thriving trade through the gate in pearls in one direction and coconuts in the other. The connection appears to be a good thing for everyone, and nobody wants to give it up. However, since the gate was opened the water level in Deepwater has been rising and now everyone there is living on islands which used to be mountain tops.

There are a number of ways the party could become involved. They could be summoned by the few remaining worshippers of the fire cult and begged to help. They could be advised by someone outside the realm that Deepwater

needs help. They could just stumble upon a gate leading to Deepwater. If they are seeking a realm which is highly water-aspected then Deepwater may be suggested to them.

If the GM wishes to add an element of urgency to the heroes' quest, they could be sent through by the powers that be in the realm next to Deepwater (suggestions could include Hard March or Heaven) -- the water has nearly risen to the connecting gate, and unless it begins falling within a month, the gate between the two Realms will be closed forever. If the heroes don't solve the problem and escape, they'll be trapped in Deepwater.

Note that the water isn't actually coming through the gate -- it is the spiritual imbalance, rather than the physical link which is causing the problem. The fears of the people in the realm next to Deepwater are probably groundless -- but this won't stop them closing the gate!

In any case, they should come into the realm through a gate from elsewhere to find themselves standing on a tiny rocky outcropping surrounded on all sides by sea. There are other islands visible not very far away, but out of comfortable swimming distance. The sun is shining, and the water is sparkling. There are many watercraft making their way between the islands. They are long canoes with square-rigged sails, and they all have three or four people in them. It's possible to wave and get the attention of one of them. They will take the party to the nearest settlement.

The Realm of Deepwater

Where Water Crosses Water: A Quest for Everway

Virtue: The Fish (The Soul Prevails)
Flaw: The Priestess Reversed (Impracticality)
Fate: The Phoenix (Rebirth vs Destruction)

The Usurper

This is the Usurper card for the realm of Deepwater, which should be used when the Usurper is drawn from the Fortune Deck:

The Fisherwoman

This card shows a woman leaning from a boat to draw in a huge fish. She is smiling, and looking at the fish, which is clearly a great prize. If she leans even a little further, the boat will clearly capsize, but she doesn't seem to realize. Upright the card means "winning a spiritual treasure," reversed it means "overlooking an obvious defect."

Rule: There is no overall ruler of the Realm. Local issues are dealt with by the elders of each island (mostly female, though a respected male may be allowed to join). The Priestesses of Water are the nearest thing to a ruling body for the entire realm, though their interests are narrow (hence the current problem).

Religion: The more intelligent and spiritually inclined of the fisherfolk are generally recruited by the Water Temples. Each settlement has at least one Water Priest. None of the fisherfolk are worried about the rising water level -- some of them believe that if the land is swallowed up they will be able to breathe their water like the people of Brightwater. Others refuse to believe that the water is rising. Despite this it should soon become obvious to the heroes that the water has risen appreciably and that soon there will be very little land left. The Priests of Fire are the most active in trying to stop the problem, but can think of little which will help. The Temples of Earth and Air have declined in influence and popularity, and few worship at them any more.

People: The fisherwomen are golden-skinned with slightly slanting eyes. They wear their hair coiled up in complicated twists, held in place with a sharp toothed bronze comb. This comb is also used for scaling and gutting fish. Their clothes are embroidered, often with watery motifs such as stylized waves, fish or mer-people. They are

concerned with the fishing, which is very good at this season. Their men live on shore and spend their time taking care of children, cooking and making ropes and nets from coconut fibers. They are almost all preoccupied with their complicated love-affairs and other emotional entanglements -- their descriptions of their lives and problems will remind any stranger of hearing an adolescent talking about themselves. They are usually cheerful and friendly to strangers. They are however curiously passive.

Economy: Most communities are self-sufficient, catching fish and growing small quantities of crops on the islands. There is some trade between islands, mostly of luxury goods such as fine embroidered clothing (each island has a different style) and carved bone jewelry. In recent years, pearls from Brightwater have become very fashionable, and are traded avidly, almost becoming a currency in their own right.

War: There has been no war in Deepwater for generations.

Technology: Most things are made of wood, stone or bone. Some metal is used but there has been no new mining since the water level has risen. This makes the metal combs much prized artifacts. The most advanced technology is boat-building, and the fisherfolk's small sailing craft are some of the most efficiently designed in all the Realms.

Learning: Learning used to be highly respected, taught by the priests of Air, but in recent years, people would rather have fun, and the old knowledge is being forgotten.

Domesticated Animals: There are few domestic animals. Some islanders keep pigs, and rarely, a fisherwoman will train a cormorant to help her fish.

Common Foods: Fish, coconuts, yams, pork and bacon on special occasions.

Outsider Contact: The pearl/coconut trade is very strong, though it is performed mainly by the priests of Water. The people of Deepwater are interested in people from other realms, and delight in gossip from far flung Spheres they are never likely to visit.

Finding Out What's Going On

The heroes may talk to the inhabitants of the village they arrive at, and learn the basic facts of the problem. But even though there is a problem, the villagers seem curiously unworried, and will be more keen to hear the latest gossip the heroes have to tell about Everway and other realms. If they are asked about the problem of the rising water level, they will direct the heroes to the Great Water Temple (see below). Otherwise they will spend an eventless evening, partying with the locals on the beach and generally getting nowhere.

If the heroes have not initiated anything themselves, have the Priest of Fire, Bushel, turn up the following morning.

The Great Water Temple

Rising from the water is a great blue and gold pagoda, rich with domes and fantastically ornamented. Everything is curlicued and elaborated with decoration. There are many mosaics with pearls inlaid in them, and pearls are a persistent motif. Once this temple stood by the shores of a lake, now it is mostly underwater. The above-water part of the temple is the seventh storey, and it is flooded inside. There is no dry land nearby, and very little flooring within the temple. Movement within the temple is by boat. The temple is a maze, with many shrines and living quarters. The Hall of the Dive contains a great altar and many niches filled with gilded statues of Water Gods. A faint glow can be seen from the water in this room, emanating from the Gate seven stories below. If the heroes are offered hospitality they

will be offered a room with boats made up as beds. If the heroes want to enter Brightwater they will have to win the confidence of the water priests to be taken down with breathing bags on their faces, or find some way of breathing while they sneak through the flooded levels of the temple making their way to the gate.

Standing Wave, The High Priestess

Air	4	2	**Fire**
Water	7	4	**Earth**

Magic: Open Chalice 3

The chief official of the Water Priests is the High Priestess, Standing Wave. She wears a dress richly embroidered with pearls in a wave pattern. She will listen to no talk about restoring fire, but will respect anybody with a high water-aspect. She will see through most deception. She will be reluctant to take any action and will spend a long time considering, but will have the party imprisoned if they continue to annoy her.

The Fire Cult

Ever since the Great Fire Temple was burned to the water-line in a last ditch attempt by the fire-priests to balance the elements, fire has been in decline in Deepwater. The few remaining adherents live in the drowned remains of the Old Capital. Whether they summoned the heroes or not they will try to contact them as soon as they hear about them. They are concerned about the rising water levels but have not been doing anything about it. They are the party's natural allies in this situation. They may be able to put the party in contact with wandering priests of Air who are the people who bring news from one island settlement to another, and with the priests of Earth whose mountain-top temple is still standing on dry land.

Bushel, The Priest of Fire

Air	4	4	**Fire**
Water	4	6	**Earth**

Powers: Priestly Rites (Fire) 1

The Priest of Fire is a likeable but rather bumbling man. He is aware that there is a problem in the Realm, but like most of the people, lacks "fire" and is very under confident about his ability to solve the problem. He is eager for the

heroes to do something before it is too late. Quite what should be done, he isn't sure.

Brightwater

Brightwater is entered through the gate at the bottom of the Water Temple of Deepwater. As soon as the heroes pass through the gate (which takes about four days of real time, but is a timeless drifting as far as the heroes are concerned) they will be aware of a difference. They are in an underwater corridor. The water is faintly lit, and the walls are made of glowing coral. The water is breathable. The passage is guarded by a school of tiny red fish, who will alert the mer-folk is anyone passes them. The walls are not ornamented, but everything is naturally brightly colored. The heroes will be taken before the mer-queen. There are many people in her throne room, mostly mer-folk with human torsos and fish tails, but some are fish. In one corner a green crab sits playing chess with a merman. Everywhere there is evidence of the coconut trade with Deepwater -- people are eating coconuts, wearing things made from coconuts and using things carved from coconuts. The people of Brightwater are completely unaware of any problem. They do not often go to Deepwater because they cannot breathe the water there and do not like being above the surface. If the problem is explained to them they will be concerned -- not that Deepwater is filling up, but that they may be losing water: "You mean the world is shrinking?" The queen, Golden Tail, will not tolerate rudeness or disrespect but will be generally sympathetic if the problem is explained. She will be reluctant to close the gate, but prepared to do so if convinced that her realm is in danger -- however, someone will need to close it from the other side as well.

Running this Adventure

This is a very open scenario, with what happens dependent very much on what the heroes decide to do. The problem is the imbalance of elements which must be restored. It is important to make this more than just a problem of rising water levels and to stress the spiritual imbalance. A good way of doing this is to make all the inhabitants of Deepwater very passive. Even the Fire Cult should say things like "We're so glad you've come to help us" and "Somebody must do something for us" and "It's past time something was done, I've been waiting for someone to do something for years." In fact, to restore the balance it is necessary to get them to do something -- Fire cannot be restored by the heroes acting alone. The GM may decide that whatever the inhabitants of Deepwater are stirred to do is sufficient, as long as they actually take some action. The solution may be to close the gate -- which will require action from someone on both sides. Alternatively it can be more abstract -- a powerful fire wizard could set off an extinct volcano, thus by the action of fire on earth and air creating new land and changing people's perception of their realm. (If none of the party have the ability to do this then there might be an old wizard who could be persuaded that she can and should do it.)

Suggestions for the GM

The heroes should be able to think of lots of things to do in this situation, but if they are getting a bit stuck, here are some ideas to throw at them:

- The Water Priestess may be hostile to the idea of closing the gate, and the heroes will have to sneak into the temple and find their way down through the many underwater levels, dodging guardian sharks, octopuses, or other hostile sea creatures.
- The gate must be closed using a special ritual which needs a person on either side of it. One of the heroes must volunteer to stay in Brightwater in order to close it.
- The heroes could find a group of disaffected islanders, who were fed up with the Priestesses of Water, and would be prepared to rise against them if given the proper leadership.
- The Priests of Fire could be involved in some last ditch attempt to save the world from Water by calling on all their powers. This will make the seas boil and destroy the realm -- can the ritual be stopped in time?
- If the heroes go straight to the Water Temple, an acolyte there could be a secret adherent of the fire cult and offer to take them to her grandfather, Bushel.
- Golden Tail could be so upset by the news that she immediately shuts the gate of her own volition, cutting off Brightwater -- but the water level keeps on rising in Deepwater.

- There might be an artefact made long ago in Deepwater -- for instance a Golden Palm from the time when the realm was called Golden Palms - which was traded to Brightwater long ago and which must be recovered before the water will stop rising. This artifact could have been traded to a distant mer-community and the heroes would have to quest for it through the mer-realm.
- The Priests of Earth are very resigned to the situation and refuse to help, saying "Everything will come out all right in the end." When it does, because of the heroes and other people's efforts, they'll say "I told you so!"

Boons

There are various things which could be given to the heroes as boons during the quest. Suggestions include the following (but don't give the heroes *all* these!):

- They could receive something to allow the heroes to breathe underwater. This could be some kind of magical talisman (a pearl if given by Queen Golden Tail, a tiny Golden Palm if given by Standing Wave) or a blessing from Standing Wave which gives the heroes a new Power.
- The Fire Priests could reward the heroes with magic knapsacks which will always keep their contents dry, or something similar connected with protecting against water.
- The people of Deepwater could reward the heroes with a number of pearls, or pearl-decorated jewelry, which could be valuable in other realms. Alternatively, they could give the heroes a magical fishing net, woven from coconut fibre, which will always catch fish if there are any in the water.

Note

This quest was originally run using photographs from *In Search of Burma* by Caroline Courtauld (London: Frederick Muller Ltd, 1984). The photographs of people in fishing boats and spectacular temples by the water were a major inspiration for the quest.

Our original playtesters (Nina "Striding Willow" Baur, Sebastian "Moss" Graubner and James "World Changer" Walkerdine) solved the problem by causing a volcano to erupt -- something we hadn't thought of, but which seemed so appropriate that we let it solve the problem.

Pyramid Review

The Ashen Knight (for Vampire: The Dark Ages)

Published by White Wolf Game Studio

Written by Robert Barrett, Bruce Baugh, Richard E. Dansky and Wendy L. Gash

128 pages, $17.95

Knighthood has been referred to before in *Vampire: The Dark Ages* books. Given the increasing importance of knights and knighthood during the historic medieval period, it was perhaps inevitable that White Wolf would release a sourcebook dealing specifically with knights in the Dark Medieval World. *The Ashen Knight* isn't exclusively a book of Cainite knights, but is intended to cover the whole range of interactions between chivalry and vampirism.

The opening chapter concentrates on an overview of mortal knighthood, with references to Cainite viewpoints of a certain factor or belief. The discussion of knightly virtues may be a little more advanced than the official time period of *V:TDA*, but would be useful to anyone running a knight. The topics, ranging from the economics of knighthood to female warriors, are covered in broad outline, but would provide enough information to start more detailed research.

The second chapter is another overview, but this time of the concerns of vampiric knights. It ranges from explaining why one cannot take part in a daylight tournament to which clans have the most knights among their numbers. This chapter goes into a bit more detail, since the topics are not ones that can be checked into at the local library.

The following two chapters deal with orders of knighthood. Chapter Three includes major orders such as the Templars, lesser orders such as the Order of St. Helena (one of the rare all-female knightly orders), orders that exist only in troubadours' poems such as the Order of the Civet, and all-Cainite orders such as the Order of Chanticleer. It also discusses rogue knights, who exist outside the feudal system, and the possibilities and perils in claiming to belong to an order that doesn't exist.

Chapter Four focuses on the Order of the Bitter Ashes, a devout Cainite order. This order is similar to the order of the same name in the *Grails Covenant* novel trilogy, but Storytellers who are fans of the novels will need to edit this section extensively. The knightly arm of an order of ancient Cainites, they work to protect holy relics (by taking them off to their storehouses, if necessary -- and it often is), guide other vampires on the path to redemption, and destroy any beings who serve evil. Full members of the order, called Grail Knights, have drunk from a cup believed by the Order to be the Holy Grail and gained great powers from it. This is one facet of the Order that needs much more detailing than it receives. The authors establish that a "fallen" Grail Knight will lose the powers granted by the Grail, but do not give any indication of what constitutes a "fall." This can be determined by story needs for NPC knights, but when a player character is offered the Grail Embrace (a drink from the holy cup) a more concrete guide is needed.

The final chapter focuses on character creation and game mechanics. The version of the Road of Chivalry given here fits with the rest of the book better than the original version. However, there are enough differences that any player running a vampire on the Via Equitum will need to discuss which version he follows with his Storyteller before the arguments over whether a given act violates his Road start. The authors suggest renaming the original Road of Chivalry from the core rule book; if both versions will be in play that would be an excellent idea.

Some of the Traits in this chapter are reprints from other *V:TDA* books, others are new. The authors brought in the older Traits for the sake of convenience; it will depend on the individual reader whether or not the convenience is

worth the repetition. Similarly, the game statistics for different grades of horses are reprinted from other sourcebooks.

After four chapters of "it's hard but possible for a female character to be a knight," it's a little jarring to be given a list of required "ladylike" skills for an upper class vampire lady that would take up almost a third of her starting dots. This list would have worked better as suggestions for a noncombatant noblewoman, especially since the only female character template in the appendix doesn't have all the "required" skills. While the first chapter has a balanced discussion of how a woman could become involved in war and battle, this chapter goes out of its way to make life as a female fighter "insanely difficult" (to quote one of the sidebars). Different viewpoints are common in multi-author works, but the authors should have chosen a consistent approach.

The book wraps up with four character templates and several NPCs that knightly characters could encounter.

Is this book worth buying? It depends on how important knighthood is to your storyline. If the only knights your group encounters are NPCs, you don't need this sort of detail. If you want to run a campaign straight out of the *chansons de geste,* or medieval romances (but with vampires), even with its flaws ***The Ashen Knight*** is worth having.

-- Leah Watts

?

by Davide Amato

Art by [Christopher Shy](#)

These creatures are evolved dinosaurs, distant cousins of the Reptile Men (see *GURPS Fantasy*). They look like graceful, slender, two-legged, man-sized reptiles. When fully clothed, one of them could pass for a slim human if he does not speak and covers his face. They are omnivorous egg layers, warm-blooded, with light green or yellow scales. Their faces are like lizards'. They do not have claws, fangs or a ferocious appearance, so humanoid beings tend not to react at the -3 penalty that Reptile Men receive.

The race has a peculiar advantage called "Fast evolver." Over the course of few generations the race can develop useful physical or mental traits, adapting to their environment with amazing speed. In game terms, assume that during character creation a Reptilian can spend about 20 points in any racial Advantage/Disadvantage allowed to Earth-like creatures (See *GURPS Aliens*).

The Reptilian Race

These advantages are normally linked to some physical disadvantage and some skills, and given in an "Evolver module." The skills are only a product of education, but the disadvantages are part of the physical structure of the subrace, so nothing short of TL9 bioengineering can change this. Note that two Reptilians having different "Modules" can mate, but fertility will be greatly diminished. The offspring will *never* mix modules, but instead only take the mother's or father's module.

?

The Fast Evolver is a "special effect", and the race does not have any peculiar characteristic, so the racial cost is zero. Note that a race so perfectly tailored for survival would quickly spread all over an Earth-Like world, unless confined by natural or artificial barriers. They can live comfortably in any natural environment, so they are unlikely to develop a technology past TL1. They simply do not need it.

Some advantages and disadvantages have been taken from the *GURPS Aliens* book, but they are fully described here, so that book is not required.

Some campaign hooks:

- The PCs are human settlers; the Reptilian Race are less-human natives.
- The PCs are fierce Reptilian Race natives, with low-TL, against human invaders with 1 or 2 TL over the natives.
- An adventure or campaign could focus around Reptilian Rune-Casters vs. Human mages.

Here are some Evolver modules.

Gecko Module

The subrace is very well adapted to the life on tops of trees or in dangerous mountain peaks.

- Individuals have suction cups on fingers, toes, knees, and elbows, allowing them to walk over walls and ceilings at half Move. An individual can stop at any point and stick to the surface without risk of falling. If an individual is falling and tries to grab a wall that's within reach, he must first make a DX and then a ST roll, the ST roll made at -1 for every 5 yards fallen. If the ST roll is failed, 5 yards are subtracted from the distance fallen.
- Individuals spend much time killing things with thrown weapons, so they learn Throwing at DX.
- Individuals spend nearly every waking moment doing acrobatic feats, so they will know Acrobatics at DX+1.
- The subrace has a light physical structure. Treat this as the Skinny disadvantage.
- To make themselves lighter and more agile, this subrace developed hollow, light bones. This will result in individuals taking double damage from crushing attacks (and falls!).

Module Cost: 17 points
Summary: Clinging, Throwing at DX, Acrobatics at DX+1, Skinny, Fragile
How to use: Very good at hunting and ambushing. Perfect for swashbuckling warriors.

Night Predator Module

This subrace is very adapted to night hunting, and can function well even in daylight.

- Infrared Vision: This subrace can see *only* the infrared portion of the spectrum, like the creature in the movie *Predator*. In game terms assume that they can see normally in daylight and in darkness, and that when fighting in darkness they suffer only a -1 by looking at the heat emissions of the foe (assuming that foe emits heat, of course).
- Infrared Vision has no sense of color. Treat this as the Color Blindness Disadvantage.
- Night Predators are good trackers, knowing Tracking at IQ, with a +2 bonus if the trail is less than an hour old (Tracking by heat emissions), but with a -1 for older tracks (because of the Color Blindness).
- Individuals are very trained at stalking silently at prey, and as a result gain Stealth at DX.
- The physical structure of the race is very well built to prowl silently in darkness. They get a +2 to Stealth if motionless, or a +1 if moving, but only when being seen is not a factor (in total darkness, for example, or against a blind creature).
- The subrace has an highly developed hearing sense. Give them a +1 to Hearing rolls.

Module Cost: 16 points
Summary: Infravision, Color Blindness, Tracking at IQ, Stealth at DX, Silence 1, Acute Hearing +1
How to use: Perfect assassins and thieves. Combined with a cowardly personality, they make excellent villains. Give them Night-Only Magery (*GURPS Magic*) and they will be perfect!

Chameleon Module

The subrace can blend into its surroundings and become noiseless.

- Individuals can change their skin colors, blending into the surroundings. They get a +4 to Stealth, but only when perfectly still; moving will forfeit this bonus. Note that the +4 bonus will apply only against those relying on sight to track.
- Chameleons can become totally noiseless. They get a +2 to Stealth, but only when perfectly still. Moving will forfeit the bonus. Note that the +2 bonus will apply only against those relying on hearing to track.
- Against normal chasers the bonuses mentioned above will add, giving a +6 to Stealth.
- Individuals are highly trained in stealthy movement, even without their special bonuses. They gain the Stealth skill at DX.

Module Cost: 14 points
Summary: Chameleon 2 and Silence 1 (modified), Stealth at DX

How to use: Patient stalkers, quiet and very deadly. Give them an introvert personality, a strong willpower, and some light weapon skill, and they will become the ultimate killers

Crocodile Module

This subrace is lightly armored and very adapted to underwater activity.

- Crocodiles have bony plates on their whole body (except for the eyes), giving them no inherit PD, but DR2.
- Given one second to fill their lungs, individuals can hold their breath for several minutes, even when fighting or doing very active movement. It will cost 4 fatigue for the first minute, and 2 each minute thereafter.
- Because of their build, they face a problem when walking; their walking Speed is reduced by 1.
- They spend much of their time swimming; as a result, give them Swimming at DX+2.

Module Cost: 18 points
Summary: Damage Resistance, Reduced Move, Hold Breath, Swimming at DX+2. (The Hold Breath effect is taken from the *GURPS Grimoire* and implemented using the Knack Rule.)
How to use: They have an advantage in their home, and do not want to lose it. They can be effective villains and good ambushers.

Ankylosaurus Module

The subrace is like a tank: slow but *very* well armored.

- Ankylosaurus members of the Reptilian Race are heavily armored by bone plates, giving them PD1, DR2 on their whole body (even their eyes).
- Because of the bony plates, their bare-handed attacks will do +2 damage.
- These plates also increase their mass. Their body weight is increased 10%; this will count as encumbrance, except when swimming.
- Move is reduced by 20%, then further reduced by 1.

Module Cost: 19 points **Summary:** Body of Stone x4, Reduced Move **How to use it:** They are *not* warriors; a slow warrior is a dead warrior. They will be calm, strong-willed and self-confident. They do not seek fights, but give a good beating to any would-be attacker.

Animal Shaman Module

This is the only module that can be combined with others. This represents the "Shaman," who talks with the spirit's World, as opposed to the classical Magician. It is *strongly* recommended this module be used instead of the standard Magery Advantage.

- Magery 1
- Animal Empathy
- Magic Susceptibility 2 (*GURPS Grimoire*: The opposite of Magic Resistance. Does not interfere with spellcasting)

Module Cost: 14 points
Summary: Magery 1, Animal Empathy, Magic Susceptibility 2
How to use: It could be used by adding Magery 2 or 3 for a spell-based mage, or used as it is for a Rune Mage.

Hypnotic Eyes Module

This subrace developed an useful natural attack: a peculiar eye movement capable of hypnotizing the unwary.

- Their primary attack is their hypnosis, giving them Hypnosis at IQ+5.
- Their acute vision provides them with the advantage of Telescopic Vision 2.
- Their sensitive eyes are also vulnerable to attack. As such, all damage done to the eyes is doubled.

Module Cost: 10 points
Summary: Hypnotism at IQ+5, Telescopic Vision 2, Weakness
How to use: This module requires cunning. The Hypnosis skill is useful, but only against one enemy at a time, and if it fails there will be some quick escaping to do. Note that this module will become useless in a culture where the Hypnosis skill is known and taught.

Pyramid Review

Rifts: Free Quebec

Published by [Palladium Books](#)

Written by Kevin Siembieda & Francois DesRochers

192 pages, $20.95

This book, number 22 in the now long list of worldbooks created for Palladium's
successful *Rifts* line, is the second book created to cover the area known nowadays
as Canada, as well as the first to cover the Coalition War, first announced in *Coalition War Campaign* a long while
back.

As a sourcebook, *Free Quebec* fails in numerous areas; the level of actual background concerning the former
Coalition State of Free Quebec is covered in a dozen pages. What is given barely scratches the surface of what is
probably a fascinating culture of the new world that is Rifts Earth. One frustrating element of the book is that no real
attempt to explain the Quebec culture and their behavior is ever made, when a more careful exploration of Quebec's
past and present could be used to shine a new light on Free Quebec.

Speaking as an actual Quebecois, I can understand why our future descendants, the Free Quebecois of Rifts Earth,
would feel more self-sufficient from the CS. Even in our present, we French Canadians have always been more
independent from the rest of Canada, in all but actual national secession. We refer to this feeling as "Nationalism." We
people of Quebec consider ourselves a nation, more so then we consider ourselves Canadians. We have preserved our
own separate language, our own independent TV and Radio stations, our own publications, and our own education
system. Though technically under the care of the National government of Ottawa, Quebec (and, to some extent, all the
other Provinces) have always been more-or-less autonomous, relying on itself for problem-solving, and complaining
when the Federal Government interferes with its life. Now, taken into the context of Rifts Earth, we could explain that
Free Quebec's attitude towards Chi-Town is a continuation of this sensation of self-sufficiency and contempt for
"Federal Interference." But none of this is really explained.

Another point of interest is the unfortunate fact that Quebec's "Nationalist" movement is that it's essentially racist,
focusing around the rights and wants of White, French Catholics, who were the original colonists of Quebec before the
British took over. This focus on the White French, who consider themselves the "original owners" of the Province
(Native Americans not withstanding) is made almost to the exclusion of everyone else. In fact, the most recent
Referendum failed mostly due to the negative votes made by the growing minorities who aren't White, French or
Catholics. Extend this feeling of Elitism to the Post-Apocalyptic world of Rifts Earth, and one understands Free
Quebec's Xenophobia; it's an extension of the feeling that the Free Quebecois "rightfully" own the territory, and dislike
the idea of being displaced by anyone or anything. But again, no explanation is given beyond "This is how they are" is
given.

Not that accuracy of background information or detailed coverage of such information is a trademark of a Palladium
book. The book sections with the most details are the one detailing Free Quebec's military, their "Sûreté du Québec"
(the actual term for our Provincial police force) and the Free Quebec Navy. In those sections, we are given mostly
basic information on various forces, procedures and operations; we are also told to refer to other *Rifts* books for actual
OCCs and for the Navy's equipment. We are also told the Free Quebec navy is in many ways superior to Chi-Town's
own efforts in building a navy, but aren't given enough examples to warrant this call. We are told what OCCs are
appropriate or not in creating a Free Quebec campaign, but not much beyond a one page reminder of "Do's" and

"Don'ts." The simple lack of a timeline of the Province's history shows that no work is made to make us "believe" in that nation's existence as more then a source of OCCs and Toys.

And OCCs and Toys, the book does provide. Like any self-respecting *Rifts* Book, a third of this book contains four new OCCs: The "Descended" Glitter Boy Pilot (essentially a GB Pilot with a pedigree), The Glitter Girl Pilot (All female pilots trained in Espionage and Intelligence Gathering; covered in more detail with their own armor, the Glitter Girl), the Side Kick RPA (Basically the same as an Elite RPA Pilot from the *Rifts RPG* page 53, with a different specialized armor) and the Reload Team, which are the GB's maintenance crew/reloaders.

The Weapons section gives us yet another traditional *Rifts* tradition: a large selection of various Energy Firearms made by the locals, followed by Battle Armors and some Combat Vehicles. The following Robot Vehicles section reprints the stats for the CS UAR-1 Enforcer and the CS UAR-2 Abolisher, along with a new toy, the QR-3 Guardian.

The growing trend for Palladium to reprint stats they've put elsewhere is also seen here. In the Glitter Boys of Free Quebec section, the Original Glitter Boy stats from the *Rifts RPG* are reprinted for "gamer convenience," along with the new Glitter Boy variants made by the Province. *Free Quebec* also provides some background information detailing the place of the Glitter Boy in Free Quebec and why the Coalition dislikes them. Another piece of reprinted information can be found in the section on Cyborgs, where, amongst the new 'Borg types, is a reprint of the NGR Gold Type 'Borg stats, renamed the FX-340C Slasher.

The chapters on Old Bones describe an interesting town in which to have adventures or to launch adventures from. The "revelation" that Old Bones is really a front for Free Quebec activities is rather anti-climactic, though. The shops detailed in the map section make for some fun shopping, but not much else. The Conspiracy Theory Generator added to this section is of limited use, though, as there's only so much dice rolling one can do before the combinations get tiresome.

Finally, the Scenario seeds, using the now familiar "Hook, Line and Sinker" Palladium technique, do sound interesting, as long as one is role-playing a Coalition War Campaign. All the scenario seeds are linked to the war between Free Quebec and the CS. So if you just want a generic adventure in Free Quebec, you're on your own.

In short, *Rifts: Free Quebec* is a typical *Rifts* Worldbook. Whether this is a good thing or a bad thing is entirely up to you. I know this writer won't use everything in it, but there's some stuff I can salvage for my future *Rifts* campaigns. Maybe you will too.

-- Rolland Therrien

The Atlantean Missile Crisis

"Poseidia will be among the first portions of Atlantis to rise again -- expect it in '68 and '69 -- not so far away."
-- Edgar Cayce, life reading 958-3 (June 28, 1940)

Give Edgar Cayce his props. There are a limited number of years in American history where the rising of [Atlantis](#)
would seem almost normal, even expected in a way, but 1968 was definitely that kind of year. It may have bombed as
prophecy, but as a game setting -- call it Reality Cayce -- it's a natural. And having thus paid brief obeisance to the
gods of plausibility, we can elaborate on this psychedelic alternate Earth, a **GURPS Technomancer** variant where it's
not the Bombs, but the Bahamas, that bring the magic back.

"The magician and the other so-called Gods of our legends.
Though Gods they were --
And as the elders of our time choose to remain blind
Let us rejoice and let us sing and dance and ring in the new
Hail Atlantis!
Way down below the ocean where I wanna be she may be . . .
My antediluvian baby, oh yeah yeah, yeah yeah yeah,
I wanna see you some day."
-- Donovan, "Atlantis" (1968)

On January 30, 1968, in obedience to ancient spells cast millennia ago upon the continent's destruction, the western
reaches of the Republic of Atlantis materialized where the Bahama Islands had previously basked in the Caribbean
sunlight. An island only slightly smaller than Britain now sat fifty miles off the coasts of Florida, Cuba, and Haiti,
glistening with towers and pyramids of solidified crystal. Its tall, perfectly formed, bronze-skinned inhabitants set
about mastering this new world as they had their last, with sorceries and super-science inextricably entwined in crystal
matrices and the mighty powers of mentalics.

The hippie, anti-war, and counterculture movements embraced Atlantis, supercharged by the seeming realization of the
utopian dreams of the 1960s. The vegetarian, "tuned in" Atlanteans' open acceptance of magic and drug use, their
eager attendance at rock concerts and antiwar rallies, and their open disdain of the United States went even farther to
cement the Republic's position in the vanguard of the progressive movement. Fidel Castro's embrace of Atlantean First
Philosopher Zaren may have been driven by power politics, but it delighted radicals and enraged official Washington.
But political theater turned deadly serious after the assassination of Martin Luther King in April. Students and (as the
FBI alleged) Atlantean agents provocateurs established an "Atlantean Commune" in San Francisco and Berkeley that
easily drove off the National Guard with magical attacks. Riots broke out across America, and radicals siezed power in
Baltimore, Boston, and Harlem (after Columbia University students came out in support of the rioters). Mayor Daley's
storm-trooper tactics preserved government control in Chicago, but killed hundreds and further polarized the nation. In
August, the riots began in Miami, and Atlantean sorcerors burned the city nearly to the ground before the Army finally
broke through. Right-wing vigilantes, especially in the South, did even more damage to the fabric of America by
rounding up "freaks" and "longhairs" and lynching them.

"[I]n Atlantis before destructive forces arose -- associated with communications, lighter-than-air machines,
radioactive forces."
-- Edgar Cayce, life reading 1023-2 (Oct. 17, 1935)

While America reeled under this insurrection, Atlantis and the United States rapidly militarized the Florida Straits.
Atlantean-Cuban cooperation paid off with the outbreak of Atlantean/Communist-backed revolutions in Haiti, the
Dominican Republic, and Puerto Rico. The Dominican Republic soon fell under Atlantean control, but Duvalier's
high-powered vodounist allies stalemated the rebellion, and the Puerto Rican revolutionary Armed Forces of National
Liberation (FALN) had only indifferent success against an overwhelmingly pro-American population with substantial
U.S. military stiffening. But, as Atlantis found itself involved in one guerrilla war, its sorcerous advisers in North
Vietnam enabled the desperate Tet Offensive to succeed, knocking the legs out of the American presence in Southeast

Asia and setting off sympathetic Communist revolts in Cambodia, Malaysia, Thailand, and the Philippines.

In Europe, the Atlanteans also gained strength as their Communist allies crushed the Prague Spring in Czechoslovakia and the students of Paris smashed Charles de Gaulle's government in May. By June, the occultist aristocrat Pierre Plantard de Saint-Clair had been elected President of the Sixth Republic, "le Republique Philisophique." Every nationalist, socialist, anti-American, radical movement in the world from the PLO to the IRA to the Japanese Red Army was adding (or reviving) an occultist wing and calling for Atlantean help -- and more often than not, getting it.

"Too many people are following the past. In this new space age, this is dangerous. The past is DEAD and those who are following the past are doomed to die and be like the past."
-- Sun Ra, 1973 liner notes to *Atlantis* (first recorded 1960)

The United States fought back, and although the loss of Vietnam was a blow to prestige and morale, it did enable the military to concentrate its attentions on the problem at hand. Every aspect of fringe physics from Townsend Brown's dielectric effect to the forgotten Tesla death-rays and particle-screens got a new, eager reading as Pentagon planners desperately tried to counter the Atlanteans' crystal-focus sonic weapons, contragravity vortex geometry, and sorcerous green and purple rays. As prototype after prototype scalar pulse-fighter or mercury-vortex flying wing rolled out of the secret labs, they joined the outgunned F-4 Phantoms and F-101 Voodoos in the "undeclared air war" over the Caribbean, squaring off against Atlantean vailxi and vimana craft of frightening maneuverability and deadly power. When the nuclear submarine *USS Scorpion* disappeared off the Azores, a shadowy sea war added its problems to American grand strategy.

"As for a description of the manner of construction of the [power] stone . . . in Yucatan there is the EMBLEM of same. Let's clarify this, for it may the more easily be found. For they will be brought to this America, these United States. A portion is to be carried, as we find, to the Pennsylvania State Museum. A portion is to be carried to the Washington preservations of such findings; or to Chicago."
-- Edgar Cayce, life reading 440-5 (Dec. 20, 1933)

While the Skunk Works and White Sands cranked out revolutionary aircraft and rockets, the Smithsonian and the University of Chicago launched their own crash program of occult and Atlantean research. Ancient hieroglyphic inscriptions, theosophical channelings, and Rosicrucian high magick -- no avenue could be overlooked in the government's desperation to close the "mystical gap" between Atlantis' sorceror-philosophers and "good old American know-how." The FBI's insistence on stringent loyalty and background investigations hampered recruitment of practicing magicians, and many American Indian shamans openly supported the Atlanteans in hopes of adding their reservations to the growing stretches of "Atlantean America." Eastern European and Cuban refugees, devout anti-Communists, could be fully trusted to work against the returned masters of sorcery, however. Under the direction of the University of Chicago's Mircea Eliade, the nucleus of MARPA (the Magical-Alternative Research Project Administration) came into being by late spring. Its first triumph was accidental -- a MARPA researcher, in Los Angeles to brief Democratic candidate Robert F. Kennedy on the Atlantean crisis, detected the mind-control spell on "zombie assassin" Sirhan Sirhan, saving the senator's life and exposing a major Atlantean double-agent ring in California. After Kennedy defeated Nixon in November, the grateful President-Elect made Eliade the brand-new Secretary of Magic and raised MARPA to a Cabinet-level agency equal to the FBI and the CIA. With Kennedy's inauguration in January 1969, although the Atlantean crisis has steadily worsened in real terms throughout the year, it looks like the tough, optimistic President may be able to reunite America and drive Atlantean Communism from its shores.

"We must conquer or be conquered! Are we not the master race?"
-- Atlantean Prime Minister Zaren (John Dall), in *Atlantis: The Lost Continent* (dir. George Pal, 1961)

The return of Atlantis has transformed at least the Caribbean basin and Bermuda Triangle into a "high-mana" zone, and the rest of the world into a "normal-mana" area with a few dead spots. Simultaneously, the sudden emergence into the psychic noosphere of Atlantis has awakened latent psis across the globe, and possibly even retroactively created such "fringe realities" as the Roswell crash or the Loch Ness Monster out of the collective unconscious. Finally, not only Atlantean superscience but the U.S. government's crash "hyperscience" programs (including, say, a possible

implementation of the Majestic-12 Roswell reverse-engineering program) allow for any kind of weirdtech from antigravity to battlesuits. In short, the game is wide open for characters of any type.

The campaigns can be of any type as well. PCs can be USAF pulse-jockeys fighting Atlantean plasma craft over Puerto Rico, radicals fighting to build their own magical utopia somewhere in America's cities, Atlantean agents warring against the "materialist" enemy, MJ-12/MARPA action teams (or, better yet, **Black Ops**) out to steal Atlantean crystal secrets, Green Beret *Special Ops* in a losing war in Vietnam or an ugly one in Haiti, or just "normal folks" suddenly caught up in a chaotic America and just trying to do what's right. Atlantis can be a utopian "pure" post-economic communist republic, a Platonic caste society, an inhuman hive-mind state, a totalitarian dictatorship, a fine-tuned fascist machine, a cynical Soviet-style monument to cruelty and decadence, a fanatical theosophist theocracy, or just about anything except a democracy, depending on the GM's notions of politics or drama. The future can see continued breakdown of the United States and a new civil war between "straights" and "freaks," a more conventional struggle against an alien enemy as more and more of the American radicals realize they've been duped, the sudden emergence of more wild cards from the Antarctic Space Nazis to the Nine Unknown Sages of Shangri-La, or anything else under the sun -- or, rather, under the sea.

The Charge of a Static World

or, "There's No Place Like Ohm"

All right, Pyramidians, this week may be a bit more disheveled than normal, because I'm currently in hour thirty-six of "Steven's Splitting Headache," the wacky live action game of pain and misery. If my words make no sense, don't blame me; blame the dark fetal form growing in my skull.

Anyway, last week *Pyramid* hosted a chat with Gareth-Michael Skarka, creator of the upcoming game *UnderWorld*. At one point in the interview he said that there wasn't going to be a metaplot, which met with resounding applause and cheers from the other chatters. At least in public, I seemed to be the only one there who saw the appeal of both approaches; I've enjoyed roleplaying games that were both dynamic and static.

So, since I spend more time arguing with myself than most other people, I felt it would be ginchy to look at both sides of the issue. This week I'll look at static game worlds, next week dynamic.

But first, some terminology. "Static" means staying the same; "dynamic" means changing. A couple folks in the chat room argued that there was a third category of "metaplot." I argued that "metaplot" (as a derogative) was really a term for a "dynamic" story that was "garbage." But I'll talk more about that next week.

Anyway, static. Like fairy tales, football, and family reunions. (See how I used the word "football?" This way I *could* be talking about popular sports in either country, and thus hopefully avoid offending our non-US readers. A wily editor am I, eh?) You can listen to a fairy tale, or watch a football game, or visit a family reunion, and be confident that the base conditions that make you enjoy (or not enjoy) these things will remain the same. A fairy tale will start out with "Once upon a time" and end with "and they all lived happily ever after." A football game will begin with a whistle and end with a score. A family reunion will begin with a pinch to the cheek and end with Uncle Morris vomiting in the punch bowl. (By the by, I'm talking about the modern perception of the fairy tale. I *know* about the ones where the kids get stuffed into ovens, eaten by witches, and other instructive metaphoric parables. "Don't confuse me with facts; my mind is made up.") Sure, along the way there can be many surprises within these events, but a football game will seldom end (for example) because one of the players is revealed to be the long-lost father of someone on the other team. Deep down, these events are comforting because of their rigidity.

So, too, is the static game world. You begin with a premise: a game of clones doing the Computer's bidding. A game with goblins in a Victorian England. A game of unspeakable horrors and the people who lose against them. And then you do something very special with this premise: Nothing. You make sure that premise stays the same, that world stays the same, and the elements that make that game special and appealing (or unappealing) stay the same.

Static is appealing because you know that, no matter what, you won't ever be placed in a position of feeling obliged to follow someone else's storyline or world developments. It won't ever be revealed, for example, that Cthulhu is devoured by Googoogachulu, a bigger, badder-of-buttock nemesis that just *happens* to have coincidentally been created by a new line editor. You can look through new supplements and additions to the static game, confident that, if you don't like it, you don't need to use it. *Forgotten Realms*, for *AD&D*, is relatively static; as such, if you don't like the *Al-Qadim* Arabian Nights-esque setting, or the *Kara-Tur* Asian-esque setting, or the *Spelljammer* Flying-Boats-In-Space-Bwah-Hah-Hah-esque setting, you do not need to buy them, and the world will go on (so to speak).

Another appeal of the static world is the fact that players (and GMs) can feel free to have adventures of tremendous scope and importance, without fear that their actions will be "invalidated" or rendered moot by some other supplement or world plot development. If a game book details some temple of chaos ruled by an insane despot, then he's gonna be there 'til he's taken care of by the players (or some other GM plot). If a GM wants to create an over-arching mastermind who's behind many of the plots in the game books, s/he can do such, secure in the knowledge that the game company won't reveal their own over-arching mastermind. The players can be (or become) the most important people in the game world, and the game world won't contradict that by showing off *their* own most important people in

the game world.

Finally, static game worlds are comfortable for many genres. From a fantasy world where the sleepy village of Middletown remains eternally constant, to a four-color superhero world where Colonial Superb fights an unending battle for peace, to a cliffhangers world set in a 1930's eternally on the brink of war, it's nice to know that the basic premise of some games will remain as constant as. . . well, a football game.

Of course, static worlds are not without their problems, many of which I'll try to address next week. But for now, I'll point out that static game worlds which are popular (read: sell well) seem to be rare; **Call of Cthulhu** and **Forgotten Realms** seem to be the only two I can conjure off-hand. I don't count the myriad of **GURPS** worlds, simply because it's easy to stay static with only one book; but I *am* deeply curious to see how **Transhuman Space**, with its six books in a static universe, does.

And next week I'll talk about dynamic worlds. In the interim, feel free (as ever) to discuss this in the newsgroups, the chat room, or drop me a [line](#).

* * *

I'd like to point out to everyone that, thanks to the tireless efforts of our all-powerful webmaster, the per-article voting is now at the bottom of each article. Now, originally I *was* going to concoct a story about how my headache is being caused by demons trying to claw their way out of my skull, and how they would escape *unless* you all voted "5." But I decided against that; after all, the point of moving the vote thingee was to give you, our readers, a better opportunity to reflect your thoughts and opinions, so we could know more accurately what works and what doesn't.

On the other hand,. *(wicked grin)* I don't have much evidence that there *aren't* demons in my skull. . .

But seriously, please vote.

Thanks.

-- Steven Marsh

* * *

Last week's answer: Flight from the Dark (Book one of the **Lone Wolf** series), Paragraph 1.

(Two stars) "9. It is illegal to be a Cyborg, Ghoul, Hobgoblin, Orc, Troll, or a Warrior of Chaos."

Murphy's Rules

Pyramid Review

Diablo II: The Awakening (for AD&D)

Published by [Wizards of the Coast](#)

Written By by Bruce R. Cordell and Mike Selinker

128 pages, $22.95

Diablo II: The Awakening is one of WOTC's new *Diablo II* cross over
supplements. Unlike the *Diablo II Adventure Game*, this supplement provides full
rules for incorporating the world of *Diablo* all the way into *AD&D 2nd Edition*
rules (No, they're not using the upcoming *3E* rules). The *Diablo* fans have been eagerly awaiting this book, both in
hopes of adding a little *Diablo* spice to their campaigns as well as the opportunity to catch a sneak peak at the
upcoming and much anticipated *Diablo II*.

The good news is that the sourcebook does a very good job of translating the world of *Diablo* into *D&D* terms. If you
are at all familiar with the computer game, then you know that *Diablo* is basically the ultimate dungeon crawl. Brave
adventurers delve deep into the infernal pits and twisted catacombs of the underground, all in the hopes of slaying
large quantities of monsters and bringing back very, very large sack loads of treasure (And maybe even completing a
quest or two along the way). Well, that's what this supplement is all about.

The book presents us with the five new character classes that will be available in the upcoming *Diablo II* PC game.
They include the Amazon, the Barbarian, the Paladin, the Sorcerer, and the Necromancer. The first thing one will
notice is that these characters are all very, very tough. The power level in a *Diablo* campaign is much, much higher
than in a normal *D&D* campaign (and the book is actually very forward about this). Although these characters are
termed 'kits' in the book, they are all truly more like entirely new classes, each with its own set of unique skills and
special abilities (termed proficiencies, although they're *much* better than any *D&D* proficiency I've yet to see).

Nonetheless, these characters are all very cool and exciting to play. As mentioned, each class has a set of abilities
unique to itself. Some of them are basically spells (or work as spells), while others are different proficiencies that are
all very neat. The vast majority of these abilities are combat related, as that is clearly the emphasis of the game. There
are over a hundred new spells, all of which are very dynamic and most of which are very different from your standard
D&D fare. The few *D&D* spells (There are about five of them) that actually made it into this supplement are even
reworked into *Diablo* terms, keeping the overall feel of it unique and much like the video game.

One of the most interesting aspects of the book is its equipment section. Their has been a little bit of hype about this
supplement somehow boasting over a million new magical items. "But how can that be? It's only 128 pages!" you ask.
The answer is both simple and inventive. The authors use what they term "Combinatorials." Basically, when you get a
magical item, you roll on a random table. Except instead of just rolling once for the item, you roll up to three times, for
both the root, the prefix, and the suffix. So you might roll a root of *Great helm*, a prefix of *Godly*, and a suffix of *of
the Colossus*. Then you'd have yourself a *Godly Great Helm of the Colossus*, which would grant you an AC of 4 on the
head, a +5 to overall AC (+6 vs. Missiles), and +30 hit points. The bonuses are all held within the prefixes and
suffixes. Being that these are rolled randomly, the results can be both pretty weird and pretty darn cool. Being that
there are over a million possibilities, each item you roll becomes fairly unique, since there's little chance of it being
rolled again.

The book also boasts over a hundred monsters, each taken straight from the *Diablo* world. Again they use a somewhat
similar formula for generating a lot of monsters in only a few pages. They basically take twenty-six monsters and

present them with four or more variations on the basic one. So instead of just a Magma Demon, you get a Magma Demon, a Blood Stone, a Hell Stone, and a Lava Lord. This has a couple of down sides to it. The first is that the detail level on each individual creature is very brief, limited to the stat chart and a brief paragraph or two. This is okay for basic creatures, but some of the more interesting ones (like the Dark Paladin, the Spider Magus, and Blood Lord, for example) suffer quite a bit for this. The second downside is that this technique strongly plays up the fodder aspect of the monsters. Each is basically just a set of stats with a short description and an attack method. But on the other hand, this is actually a very strong representation of the game. You take one monster graphic, give it four different colors, and each color a different number hit points and damage dice. In the end they all become fodder anyway. The book even gives tips on how to manage mass amounts of creatures using video game strategies.

So now you are asking yourself where all those other new features are that we heard about *Diablo II*. Where are the four towns, the all new quests, the multiple dungeons, and new NPCs? Well, it seems our friends over at Blizzard didn't want to spill all of the beans on their upcoming game. So the final section of the book is not a detailed map and quest set in *Diablo II*. It is instead the entire *Diablo I* game translated into pencil and paper.

While this may not sound to exciting at first (especially for those of you who've played it through umpteen million times), it is actually very good. The game is translated well, with full stats and descriptions on everything in the game (with the one exception that the map is set and not randomly generated). All of the quests from the original game have been included, and the authors have even made sure to put optional twists on each, so that there is something new in there even for those who've memorized the game.

Never fear though, because WOTC has promised us more *Diablo* material later on, which is not to mention the soon to be released ***Starcraft/Alternity*** cross over. Overall ***Diablo II: The Awakening*** is a very good book. It does an excellent job of translating a classic dungeon crawling video game into ***AD&D*** rules, providing DMs with not only a cool campaign world, but also an immense amount of new skills, spells, monsters, and items that will bring a unique (albeit powerful) twist to any campaign.

Art by Phillip Reed

Erahu (Homo Eridanius)

The Eridani, or Erahu as they call themselves, are a race of being that inhabit the twilight world of Nehoa'Eh circling the star 40 Eridani. Once a fierce warrior race, after the War of Madness they became a race of stoic idealists dedicated to protecting the younger races from the atrocities that had occurred when those other races learned too much too quickly.

The Erahu closely resemble humanity in build, possessing frames of comparable size and shape. They are standard humanoid stock in that they have 2 arms, 2 legs and 5 digits on each foot and hand. Physically Erahu approach the human norm of size and shape differing from the standard genetic human stock only in skin, hair, and eye color. The typical male stands between 5 1/2 feet to 6 1/2 feet tall and weighs in around 200 pounds while the female stands around 5 to 6 feet in the height and weighs about 150 pounds. Erahu skin tones generally range from a very light sandy gray to a dark charcoal gray with shades in between being the most common. Erahu eye color is universally a deep semi-luminescent red. Erahu hair grows into a natural widow's peak in front and is typically worn in a long braid down their back; the color of the hair ranges from steely gray to jet-black with rare cases of white. Male and female share genitalia similar to their human counterparts and have complex mating rituals, often considered highly erotic by other races. Erahu posses 5 digits on each limb ending in a nail similar to a human's.

The garb of choice among most of the Erahu population is functional trousers and vest for males and halter-top and short knee length trousers for females. Both sexes wear knee high soft leather boots and tie their hair back with ribbons.

They are native to a temperate 1.1-G world, with an average temperature of 80 degrees and a somewhat low-oxygen atmosphere at .80 pressure.

Advantages and Disadvantages

Erahu have DX +1 (10 points), HT +1 (10 points), and IQ +2 (20 points). Their genetically altered physiology gives them 12 levels of Fearlessness (24 points), 3 levels of Hard to Kill (15 points), and Disease-Resistance (5 points). Naturally occurring they have slow regeneration (10 points), Infravision (15 points), Light Sleeper (-5 points), Cyber Rejection (-10 points), Color Blindness (-10 points), Vampiric Dependency (-50 points), Social Stigma (Race of 'vampires' -5 points), and Extended Life Span (5 points).

It costs 34 points to be an Erahu.

Names

Erahu use a simple naming convention consisting of a personal name and the word *do* (translates *to*, *of*, or *from*) appended to the place of the individual's birth or the season of birth. Among nobles however this is slightly altered. Among nobles the place or time of birth is replaced with the name of the birth mother. Most Erahu names follow the normal pattern of the Erahu language, favoring the vowel sounds *ah* and *u* with hard *n* consonants. Some examples are; Nehala do'Nahale or the noble Erahn do'Ehnana.

Psychology

The Erahu could be best described as a race of warrior poets, an entire race dedicated to helping the younger races of the galaxy bypass the atrocities and mistakes of their galactic progenitors. Calm, collected, and given to be impulsiveness the Erahu people can make fast friends or a vicious enemy depending on how you strike them.

Erahu history from before the Time of Madness is sketchy at best. Many records were lost during the wars and times of upheaval. What is known, however, is that modern society today is much more peaceful than the previous society. The few records other races have of this time period mark the Erahu as fierce warriors that would fight to a bloody end no matter the cost to themselves; indeed this tendency seems to have almost brought an end to their race.

Now, though, the Erahu tend to act with kindness and fairness in their dealing with others, accepting another person's faults and failings as part of what makes them a unique individual. But this had to come at a high price.

Thousands of years ago when their world was still green and the new race of Erahu had not yet arisen, Erahu boasted a patriarchal warrior society. Men fought the wars, women cared for the babies and thought up new ways for men to fight wars. Now millennia later a gender reversal has come about. Women now act as their male counterparts did centuries earlier; one of the only true matriarchal societies has now arisen. The male population is rather stoic and chooses to follow orders rather than give, but some males are born with enough of the original Erahu lineage in their blood to be leaders. This tendency in males is rare, however, and now almost universally the women lead.

Ecology

The Erahu were originally descended from jungle canopy-dwelling primates that subsisted off of blood and small amounts of flesh rather than vegetation. Approximately 10,000 years ago the original Erahu society appeared with a TL of about 6. Records of an earlier society can not be found nor can any fossil evidence be found of an ancestor between the original primate and the pre-Madness Erahu.

Nehoa'Eh was once a lush world covered totally by rain forests; now it only has one small band of forest stretching the length of the planet around the equatorial region. The rest of the plant was scorched and burned by the invading fleets during the Time of Madness, approximately 7,000 years ago. This fortunately has changed and once where there was lush jungle (and then blasted earth) is now lush grass and prairie land. The environmental engineering done after that devastating war is today considered one of the greatest feats of terraforming ever.

The Erahu dietary requirements are very similar to that of the vampire legends of Earth, so much in fact that many humans will refuse to eat or socialize with Erahu. They require about 4 pints of blood a week and about 6 ounces of flesh, preferably raw. Most of this requirement is met by the consumption of a small animal called a meklik which is raised domestically for food.

Erahu are a long-lived race, usually living for about 160 standard years. Erahu young reach majority at the age of 25 and begin aging around 100.

Culture

One of the biggest distinguishing factors of Erahu culture over the rest of the known races is that the Erahu have a totally matriarchal culture. Women take on the traditional male roles of society, being the warriors, builders, and thinkers. Males tend to take a more effeminate role in caring for the young, being teachers, keeping the home and generally taking care of domestic needs and services.

This is by no means a cultural prejudice; in fact, males are encouraged to take part in other aspects of society. Rather, the majority of the male population still has some amount of the biologically manufactured subservience to authority that was engineered into the genetic super warriors of the Time of Madness. This causes the males to be somewhat submissive to the demands of those who assert themselves and it is a well-known fact that an Erahu female can be very assertive.

The Erahu are a culture steeped in ritual and tradition. One or both parents teach the young at home all skills necessary to make it in the world as unskilled labor. On reaching the age of majority, young Erahu have several choices of a future path. They may enter into military service, which will provide for them for life and teach hem to be the best soldiers possible. Alternatively, a young Erhau may choose further schooling. Higher learning has no cost other than keeping one's grades up. Failure to comply will result in expulsion from school and a life among the masses of unskilled laborers.

Politics

The Erahu choose to take an advisory position in galactic politics. Never actively pushing in any one direction, merely offering advice. Advice the younger races tend to wisely heed.

Little is known of Erahu internal politics other than a semi-feudal system is a work with nobles answering to an Empress-like figure known only as the Dark Lady. Apparently ageless, she guided the council of elder that governs the Erahu for apparently 5000 years at least. She is, in actuality, the scientist that created the super solider alteration program that changed Erahu males into super soldiers and came up with the forced vat grown process of growing new ones. In despair over the losses her people incurred and caused she became the only female to use the process. It transformed her into an ageless being.

Adventure Seeds

The Erahu

The Guardians of Yesterday: Mysterious warriors of the Erahu that guard the ancient city of Ne Nagada. The 'Silicon Valley' of the Erahu. They appear as females encased in a skintight shimmering veil of gray energy. They are silent and show no hint of fear. They carry no weapons other than shimmering swords and shields made of pure energy. They show no mercy towards intruders...Save one, the Dark Lady herself. What secrets of this race's dark past lie buried here, or perhaps are best left buried?

The Dark Fleet: Reports have filtered in of ships of Erahu design raiding convoys on the frontier. Survivors report boarding parties of entirely male composition that fight with inhuman strength and savagery. Who are these mysterious pirates? Are they privateers? Or are they relics of the past?

The Methuselah Factor: If the Dark Lady was made ageless by the genetic alteration process that created the super soldiers. What happened to this technology? Did other females ever use it? Was she a fluke or accident?

Pyramid Pick

Bastion of Faith (for AD&D)

Published by Wizards of the Coast

Written by Bruce R. Cordell

96 pages, $16.95

Bastion of Faith is the third product in a series that details one of the four core
character classes, the other two being *College of Wizardry* for mages and *Den of
Thieves* for rogues. This time around, the priest is given a home, patrons, friends
and allies that can aid his cause. The Bastion is the name for the Church of Heironeous and gives the DM enough
details to choke a horse.

Detailing not only the upper levels of power in the priesthood, *BoF* gives a summary of the different members of the
church. Some of these levels have places, it notes, that player characters might fit right in. One of the nice things about
the roster is that there are several 1st level characters with names that a GM can just scoop up and use as player
characters. Not a priest? That's fine. Thieves who worship Heironeous are called inquisitors, fighters are templars, and
mages are catechists. There are solid benefits to joining the church because the faithful gain spell-like abilities as they
rise in level. For example, a 7th level inquisitor may use the wizard spell Friends, and the priest spell Detect Lie. In
addition to the roster, there are fourteen full write ups that include history, personality, statistics, possessions, and
illustrations.

One of the interesting twists is the introduction of favors. A favor is paper money that the church gives out instead of
gold. These favors can be redeemed for spells such as Cure Blindness or Detect Magic. One favor is worth 10 gold
pieces. The church doesn't sell favors, but uses them to pay for any purchases it makes. Favors come in three styles,
psalm (1), prayer (10), and benediction (100). The favors add another touch that can be used in an everyday campaign
without overusing them.

The Bastion itself is described in detail with over seventy rooms. Some, like the Cells, have great little extras; a table is
rolled on to see what unique contents are in them. Some of these random items are great, like a magically animate
glass raven, or a living salamander that can answer a question once a day like an Augury spell. Of course, no Church
of Light would be complete without some horrible undead wandering their catacombs; *Bastion of Faith* may start off
small with skeletons, but ends big with a master vampire. Even better, though, is that there is a good reason why these
undead are here, though the Church hasn't figured it out yet.

The new spells in *Bastion of Faith* are broken up into three different categories. The first are the spells that Heironeous
grants, seventeen spells ranging from first to seventh level. The Glyphs are the most useful in that they have
subcategories. For example, there are six common types of Glyphs, five Glyphs that can be used with weapons, as well
as a dozen Restricted Glyphs and nine beneficial Glyphs. This book has illustrations of 35 Glyphs, and provides the
GM with a great visual tool. The Penitent Fragments, the lost part of the book of Penitence, has four new spells; all
seem like they might be useful in the pursuit of justice, but are they? The last are the Hextorian spells. My favorite
Hextor spell is Battlearms, which creates two or more extra arms for the caster to fight with. There are also
suggestions as to what other gods would grant these spells if the Bastion is not used in *Greyhawk*.

The Bastion owns several new types of magic items, as well as several unique ones. Candleholders, rarely seen as
magic items, have four new types. The unique battle axe Liberator and the mace Torrent are detailed, as well as
numerous types of holy trappings ranging from consecrated holy water to prayer beads of spell storing. Some of the

items are interesting in that they're not often used, like candleholders and the Everfull aspergillum, while others like the surplice of protection, offer practical magic that most characters can use.

Bastion of Faith can be tied into the previous books, **College of Wizardry** and **Den of Thieves** through use of the NPC's provided. In addition, there are several suggestions for using this product not only in **Greyhawk**, but discontinued settings like **Dark Sun** and **Birthright**. Only **Ravenloft** and **Mystara** seem left out of the list.

Heironeous and Hextor are both detailed in a **Faith and Avatars**-style. This includes their priesthood, holy days, specialty priests, and history. Many fans suspect that Eric Boyd, one of the core writers of the popular **F&A** series, is given credit for his design and editorial assistance for this work, and it shows in the quality of writing.

Mini-adventurers are great for starting GMs, or those who lack the time to make their own. **Bastion of Faith** has five adventurers that start off low, but can (with a little tweaking) accommodate many levels. The adventure "I'm on a Mission" is a great mid-level scenario with its own map that seems to involve only goblins, but any goblins who can hire ogre mercenaries are doing something right.

The format of **Bastion of Faith** is double-columned with dense text. Special sections are boxed off and colored in gray. Fans of **Greyhawk** will be pleased with the references to numerous **Greyhawk** products. It does a good job of showing that this product wasn't just pushed out the door. When you read about Heironeous, the author lays out the numerous products that Heironeous has been in previous to this book. The fact that this book costs the same as last year's **College of Wizardry** and is perfect-bound only adds to its value. The only thing that could've added to this product would be a full color detachable map. Bastion of Faith is a great product that GMs will use for months, if not years.

Pyramid Pick

Guardians of the Caerns (for Werewolf the Apocalypse)

Published by [White Wolf Publishing](#)

Written by Forest B. Marchinton, Deena McKinney, and Ethan Skemp

108 pages, $15.95

In the May 12, 2000 [Random Thought Table](#), Steven Marsh discussed the need for adventures where the PCs do not save the world. Instead, he suggests, it is occasionally nice to just let the characters (and players) experience what day-to-day life is like. Unfortunately, this has always been more of a challenge to the *Werewolf* GM than it should have been. While the basics of Garou society were discussed, many key questions were never answered. We've always known that the center of a werewolf's daily existence is his local caern, but what is that caern like? How many guardians does a typical caern have? What does it feel like to cross the bawn? How is living space apportioned at Shadow Lord caern? A Child of Gaia one? Are kinfolk allowed into the caern center? With this new volume, these (and many other) questions are finally answered. As the back promises, we no longer have to wonder about what it is that Garou do all day.

As usual, the book begins with a "Legends of the Garou" story, one that is of minimal interest. A small introductory section presents the format of the book along with some new caern types. Although rare, Caerns of Memory, Love, and Unity now exist, along with five others.

The rest of the book is split up into four chapters. The first, "Of Caerns, Sorrows, and Joys" is one of the best portions of the book. Centering on the general aspects of caern life, it discusses caern layout, economics, local relations, defenses, and spirits. Of especial interest here is the expanded material on geography. Although such caern areas as the shrines, the graveyards, and the living quarters have been described before, significantly more detail is included here.

The second chapter, "Tribal Lines," goes into details of what the caerns of a particular tribe are like. From the artificially ominous and menacing caerns of the Shadow Lords to the beautifully groomed and maintained lands of the Fianna, the book provides background detail and descriptions that will allow a GM to breathe life into even minor caerns. Additionally, the caerns, dens, and wallows of the other shapeshifting races are detailed.

The third chapter, "Digging In," is the last to deal with caerns in general. Divided into two parts, the chapter begins by detailing the officer positions of a typical sept. In addition to the familiar Warders and Gatekeepers, a host of minor offices are described, with special emphasis on allowing PCs to fulfill them. To one who is capable enough and ambitious enough, even the most coveted of positions is now attainable. In the latter part of the chapter, the Rite of Caern Building is discussed in great detail. From discovering the site, to gathering the Garou, to enacting the ritual, one of the most monumental rituals of the game is now fully described.

Finally, the fourth chapter does not deal with caerns at all. "Not of Garou and Kin Born" discusses one of the most fascinating elements of *Werewolf*: the metis Garou. In addition to a slew of new gifts, merits, and deformities, the life of a metis is described in great detail. Birth, adolescence, adulthood, and even death are very different for these werewolves. This chapter discusses their lifecycle (including the ever-present question: do metis go through first change?), their place in society, and their relationship to other Garou. Additionally, a fairly extensive "in-character" section discusses the attitudes of each tribe to their, and other peoples', metis. Some notes on roleplaying a metis and

bios of some renowned metis round out the chapter.

The artwork, much of it by Ron Spencer, Brian LeBlanc, and Joe Corroney, is up to White Wolf's usual standard: good to excellent. While the layout and organization is good, the book, as usual for White Wolf, suffers for lack of an index. Nonetheless, I found this to be one of the best, most useful, and most interesting publications for the *Werewolf* line. I highly recommend it.

-- Juliean Galak

Pyramid Review

Apocalypse (for CORPS)

Published by [BTRC](#)

Written by Ed Rice

**128 pages, $17.00 (hardcopy/paperback), $8.50 (.pdf format
from [HyperBooks Online](#), where you can also download a
free sample; or from [fatbrain.com](#))**

BTRC has received a fair amount of criticism for failing to adequately
support its *CORPS* universal role-playing system with campaign
supplements and worldbooks. *Apocalypse* is an interesting new setting for
CORPS, if not a great one.

Apocalypse is a *very* dark setting. It details an alternative history where the use of atomic weapons in World War II
allowed a host of supernatural horrors and extra-dimensional beings to invade -- and eventually conquer -- the earth.
In many ways, the ideas behind the setting of *Apocalypse* are reminiscent of Paladium's *Rifts* (and even *GURPS
Technomancer*), though *Apocalypse* doesn't appear to suffer as badly from *Rifts*'s mish-mash of magic, alien races,
high technology, and power gaming.

The first section of the book, the introduction and world background (22 pages), provides a detailed timeline, 1941 to
the present; an explanation of the supernatural event (the "Juxtaposition") that created earth's problems; and a
description of the various extra-dimensional races, undead monstrosities, and supernatural beings that now inhabit the
earth. While some of these races are a bit two-dimensional, several are well done and could be easily lifted into other
campaigns in need of new villainous races.

The next section (28 pages) details character generation in *Apocalypse* and paranormal abilities, including psionics,
necromancy, sorcery, ritual magic, and devotional magic (quasi-ritual magic that comes from serving the Eternals,
Apocalypse's angel/demon analogs). In all, over a score of new paranormal powers are included; many could be easily
adapted for other *CORPS* campaigns. This section also details many advantages, disadvantages, and skills specific to
this setting.

A complete description of the campaign setting (38 pages) follows. Sections include a description of daily life in
conquered earth (life in some areas is grim indeed); technology (roughly equivalent to that of World War II Europe);
and geography, politics, and culture, including maps of each continent. Enough detail is provided that it should be
possible to start an *Apocalypse* campaign in any region.

Next is a set of twelve non-player characters (9 pages, all with illustrations). Most are fairly disturbed individuals (as
seems the norm in the world of *Apocalypse*), but all are interesting, if slightly stereotypical. Each includes several
adventure hooks, so getting them involved in most campaigns should not be a problem.

The creatures chapter follows (7 pages), and includes eleven unique creatures, again, all with illustrations. Most of
these are simply mutated or giant versions of normal animals, so they are rather ho-hum.

Two sample adventures (18 pages) are also included; these add one pre-generated PC, two additional creatures, and
two more NPCs. The first adventure is primarily investigatory, and is designed to introduce a single player, using the
pre-generated character provided, to the setting. The adventure could be retooled -- with some effort -- to introduce an

entire party of PCs to the setting. It's unclear why the author didn't choose to do just that, since it seems more likely that an entire party would need to be introduced to the setting rather than just a single PC. The second adventure is fairly linear, and is designed to be used by an entire party.

The book wraps up with five pages of useful charts including a list of weapons, miscellaneous equipment, four vehicle descriptions, and a character sheet, although the character sheet is just a duplicate of the one found in the *CORPS* rulebook.

The book is well written and organized, though an index would have been helpful. The .pdf version of the book helps in this regard with extensive hyperlinking. There are few typos or editing mistakes, adhering to BTRC's usual high standards of editing. Presentation of the material is good: the covers (front and back) are adequate, but not outstanding, and the interior artwork is actually very good, though there is one "adult-oriented" picture that seems gratuitous.

Apocalypse could easily provide the basis for an extended campaign or a set of one-shot adventures. It could be adapted with relative ease to other game systems; universal ones like *GURPS* or the *Hero System* could easily be adapted for use in an *Apocalypse* campaign if desired.

All in all, *Apocalypse* provides a good, but not incredible setting for *CORPS* campaigns. If you like the idea of mixing magic and modern technology with "dark" overtones, you should check out *Apocalypse*. The .pdf version is definitely a bargain at $8.50, especially if you have access to a good quality printer. I'm glad to see *CORPS* finally receiving some of the support it deserves, and I hope that future *CORPS* releases are even better than this one.

-- Andrew Byers

Who Wants To Live Forever?

"Verily, I say unto you, There be some standing here, which shall not taste of death, until they see the Son of Man coming in His kingdom."
-- Matthew 16:28

But prior to the Second Coming, immortals race around lopping each others' heads off with katanas. Or ruling the world through compound interest. Or serving as moral lessons on the nature of Faith and Penitence. Or, most importantly, cropping up in roleplaying games. Herewith, then, a look at the most famous immortal in European legend, the Wandering Jew -- and, in the spirit of ecumenicism, a bunch of his aliases, avatars, and fellow-travelers. With their help (or opposition), he can turn up anywhere -- we already know immortals can turn up anywhen, of course. So follow the path back in time to 29 A.D., or at least to 1228, and let's get ready to ramble.

"Cartaphilus, a porter of the hall in Pilate's service, as Jesus was going out of the door, impiously struck Him on the back with his hand, and said in mockery, 'Go quicker, Jesus, go quicker; why do you tarry?' and Jesus, looking back on him with a severe countenance, said to him, 'I am going, and you shall tarry until I come again.'"
-- Matthew Paris, *Historia Major* (1256)

So, what's the deal with the Wandering Jew, then? First off, according to the 1228 *Chronicle of St. Albans,* his first-ever appearance in writing, he might very well be a Wandering Gentile; he's a Roman procurator's doorkeeper with a Greek name. (Also, of course, he's a tropical house-plant of the genus Tradescantia, but that's really pushing it, *Swamp Thing* parallels to one side.) And even if he was a Hellenized Jew, Matthew Paris goes on to quote the eminent "Bishop of Greater Armenia" as affirming that Cartaphilus was baptized by Ananias as "Joseph," which would make him a Wandering Christian. Confusing the issue even further, "Cartaphilus" means "most loved," which ties in with Jesus' implication (in John 21:22-23) that John, "the disciple whom Jesus loved," would also "tarry" until the Second Coming.

For a different kind of Wandering Gentile, he may also have been one of the legionaries (possibly named Lacedion) who scourged Christ before the crucifixion, or who diced for His clothing on Golgotha. Eventually, though, the most common version of the tale settled on a Jew, one Ahasuerus the shoemaker (and don't ask me what a Jew is doing with a variant of the Persian name Khsrish, since nobody knows) who mocked Christ when He paused near Ahasuerus' house carrying the cross. (Another Jewish potential Wanderer is the temple guardsman Malchus, whose ear Peter cut off at Gethsemane.) The Wandering Jew serves as an eyewitness to the historical truth, therefore, of the Gospel -- and the Wandering Jew's popularity in Protestant countries serves to contrast the Protestant doctrine of the "living Gospel" with the Catholic one of apostolic transmission. (One common element of the Wandering Jew story has Ahasuerus telling a skeptical Mohammed that he personally witnessed Christ's crucifixion, in contrast to Muslim belief that the Prophet Jesus was never executed.) Less pleasantly, some tales painted him as the rootless cosmopolitan vagrant of anti-Semitic legend -- not for nothing is one of the viler pieces of Nazi propaganda a film entitled *The Eternal Jew.* Mythology is a double-edged sword.

"Reviving, after a time, he siezed the hands of Agrippa, and said, 'Oh many and boundless thanks to you, learned Agrippa -- thou Prince of all the Magicians! I pray you receive this purse of costly jewels.' ... 'No! -- No!' exclaimed Cornelius Agrippa. 'Keep thy jewels, of whatever worth ... but tell me, I do implore thee, who thou art?'"
-- David Hoffman, *Chronicles of Cartaphilus, the Wandering Jew* (1853)

Thus as Cartaphilus, or Joseph, or Ahasuerus, or Malchus, the Wandering Jew began to appear in European tales and chronicles. In the earlier versions, he was mentioned as living in the [Mandevillian](#) East; in Greater Armenia, or with Prester John, or in Jerusalem. (In one version, he can't wander at all, and is condemned literally to tarry on the same spot in Jerusalem for all eternity.) The teller of the Jew's tale is often the "Armenian bishop," who bears a strong resemblance to another enigmatic well-traveled immortal, [le Comte de Saint-Germain](#). This tends to bolster the theory that the legend was imported from the Christian communities in the East around the time of the Crusades. An Italian legend of 'Giovanni Bottadio' (John God-Striker) shows up in Novara in 1267, and in Florence in 1415. In 1602, however, one 'Christoff Crutzer' of Leiden published *A Short Description and Hitory of A Jew Named Ahasuerus* as a

pamphlet describing the encounter of the Wandering Jew with the Lutheran bishop of Schleswig, Paul von Eitzen (sadly dead by 1598) in Hamburg in 1542. This began a whole series of reported sightings, both retroactive (most notably an encounter with Agrippa in Florence in 1525, but also in Madrid and Brussels in 1575 and Hamburg again in 1564) and current (Reval, Krakow, and Prague in 1602; Lübeck, Munich, and Paris in 1604). More than forty documented sightings followed, most notably by "a Turkish spy" in Paris (under the name of Paul Marrane) in 1644, in Stamford, England in 1658 (where he cured a man's tuberculosis), in Frankenstein (speaking of cursed wanderers) in 1678, Munich again in 1721, Brussels again in 1772 (under the name Isaac Lacquedem) and in London between 1818 and 1830.

"I pass, like night, from land to land;
I have strange power of speech;
The moment that his face I see
I know the man that must hear me;
To him my tale I teach."
-- Samuel Taylor Coleridge, *Rime of the Ancient Mariner*

By the 19th century, the Wandering Jew had gotten a makeover as the Gothic Wanderer Melmoth, still cursed by God, but far more romantic. The Byronic ethos of wandering rebellion played off the legend of Cain (cursed to roam the Earth) and Shelley's poem *Queen Mab* made the Wandering Jew the heroic embodiment of individualism. This, of course, fed off the Protestant conviction that the Wandering Jew's real role was to bear witness, which itself echoes the Jewish legend that the Prophet Elijah (or, in some versions, Enoch) wanders the world waiting to announce the coming of the Messiah.

Still more mythically, the Wandering Jew got tangled up with Herne the Wild Huntsman, who drives the devil's hounds across the sky (the legend this time naming him Hubert, and claiming that he refused Christ a drink from a trough, but told Him to drink from a hoofprint) and from thence to the Man in the Moon, exiled there for theft on the Sabbath outside the jurisdiction of Death. (The Moon, the Wild Hunt, and the Wandering Jew are all strongly correlated with storms.) A whole city outside Death's control, the City of Luz, shows up in some tales of legendary India -- but if an immortal leaves its gates, he dies instantly. Perhaps Luz is a suburb of Shangri-La, or the Lunar Embassy to Prester John. Mormon belief goes John "the beloved" two better with the story of the Three Nephites, who followed Christ on His ministry in America, and greeted Columbus on the beach. (There are people who identify Kulkulkan, Quetzalcoatl, and Viracocha as the Three Nephites, which is only slightly sillier than identifying them as Vikings, I suppose.) The Wandering Jew repaid the Mormons for their kindness by visiting Muddy Valley, Utah in 1870, the latest report of his appearance I've found.

" I am immortal and I am not alone."
-- Duncan MacLeod, opening narration, *Highlander: the Series* (first season)

Between all the various incarnations of the Wandering Jew, plus the Three Nephites, plus the Prophet Elijah, and Joseph of Arimathea (also identified as the "Joseph" baptized by Ananias, and kept immortal by the Holy Grail), and Cain, and Saint-Germain (and Flamel and Cagliostro and Münchausen, who share his legendary immortality), and Lazarus (whom a particularly unsavory legend insists that Christ brought back from the dead *permanently*), and Herod's wife Herodias (the Wandering Jew's girlfriend in many of the legends), and Marconi, there's a veritable plethora of immortals out there. But don't order yet, there's more Wandering Masters:

Aristeas

This legendary Greek poet (of the 9th, or 6th, century B.C.) wandered (both astrally and physically) through the lands of Hyperborea, Scythia, India, Aethiopia, and other realms of legend. He dropped dead in his home city of Proconnesus, but his body disappeared, only to reappear on the road to Cyzicus. Seven years later, he showed back up in Proconnesus and wrote an epic poem, the *Arimaspea,* about the land of the giants, only to vanish yet again. 340 years later still, he reappeared in Metapontum in Italy to insist that the locals erect a statue to him near Apollo's altar. He could still be wandering around as herald to Apollo, who may have granted him immortality.

Artephius

A famed Hermetic magician, Artephius wrote *De Vita Propaganda* (*On Propagating Life*) around 1150 at the age of 1,025. If he was actually the famed magus Apollonius of Tyana (as rumor has it), he was being modest by about a century. Like so many immortals, he used alchemy to prolong his existence.

Wei Po-Yang

A famous Taoist alchemist (fl. 142 A.D.) of the later Han dynasty, he tested his students by preparing a poison and killing a dog with it. He then took the poison himself, but only his loyal pupil Yu took the drug also. The rest left to report failure and prepare Wei Po-Yang's funeral, upon which Wei revived Yu and the dog with the True Medicine and departed for the West like the other Taoist immortals.

"But my choice and constant companions shall be a set of my own immortal brotherhood, among whom I would elect a dozen from the most ancient down to my own contemporaries. . . [We] would mutually communicate our observations and memorials through the course of time, remark the several gradations by which corruption steals into the world, and oppose it in every step, by giving perpetual warning and instruction to mankind . . ."
-- Jonathan Swift, *Gulliver's Travels*

Now that we've got the cast of characters straightened out, what's the story? Hey, what *isn't* the story? Immortals offer plenty of scope for roleplaying, both as guest stars and as player characters. So, until we get **GURPS Immortals**, here's a few possibilities. First, there's a legend that the Wandering Jew, the Flying Dutchman, and the Wild Huntsman meet once every century to revel in their wickedness -- which would make quite an **In Nomine** event, no doubt about it. Riffing on that, one could build a party of immortal PCs (including mayhap vampires, mummies, living statues, parrots, and what-have-you) meeting once a century to battle evil, or each other, or rival immortals -- and run from **GURPS Ice Age** to **GURPS New Sun** with it. Such a party (or its enemies) might be the nucleus of a secret society of **Illuminati**, which jealously (or prudently) guards the secret of immortality, whatever it is, like the Nine in Philip Jose Farmer's "Lord Grandrith" novels. The Elixir Vitae might lurk within **Warehouse 23**, or be accidentally re-invented by a white-coated Professor in **Atomic Horror** -- who (along with his lab assistants and their dog Sparky, with a nod to Wei Po-Yang) gets hurled into the Time War of The Immortal Masters! Who themselves, of course, might have been [alien Nordics](), or their genetically-engineered superhuman agents, all along. Against the Immortal Space-Demon Nazi Reptoids, then, our only hope is the primordial technomagic of the Seal of Solomon, abstracted from the ruined Temple by one Ahasuerus -- the Wandering Jew, who by continuing to live holds off the end of the world. L'chaim! To life!

Playing Dirty -- Chick Style

Ah, summertime. The smell of flowers wafts through the early evening air. It is the time of shorts, barbecues, swimming pools, and. . . gaming conventions. Gamers of all shapes and sizes come out of their dark lairs, sniff the fresh air, and trundle instinctively across vast distances toward their sacred, hotel-shaped gathering places. They travel in their cramped vehicles, smelling of stale Doritos and old sweat, driven by a deep internal force to gather in bizarre rituals involving weird invocations over arcane tomes and strange pieces of plastic loosely called "dice."

Why do they come? Why do these strange creatures venture out of their dens into the harsh sunlight? They're looking to meet new people, have wacky con adventures and seek out the holiest of gaming rituals: the one shot. Sometimes, in the midst of feverishly practicing this ritual, the gamer suddenly looks up over the table and sees someone almost but not quite entirely un-gamer-shaped. After getting over the initial shock, complete with the heart palpitations and the sweaty palms, he embraces this new situation, and he thinks, "But. . . she might. . . she might. . . be a gamer. . . "

The woman gamer, after making the same pilgrimage across the same obscene distances to have the same convention experiences, is looking at her character sheet and thinking, "Man, I'm the cleric *again*?." At the same time, she's cognizant that the guy across the table is thinking romantic thoughts about her and the food court pizza. Maybe even at the same time.

Never fear! While the pizza might be a greasy yet unavoidable reality, playing the typecast female character written down on the lowly character sheet is not. Ladies, here is a chance that shouldn't be passed up, since the one shot doesn't come every day! It's a blessing in disguise -- or at least in a chainmail bikini. It's time to let loose, get crazy, and give the GM and the players a run for their money. Who says that girls always play nice and obsess about story, story, story?

Who says girls can't play just as dirty as the boys?

The following are some hints on fun things to try during a game to make it an entertaining experience for everyone. The USDA does not recommend using (or abusing) the advice during a normal daily campaign. It can be hazardous to your health, have been shown to cause cancer to gerbils, and are the leading source of alien abductions. You've been warned.

Show Your Destructive Side

The story is very important. You're almost positive there is one, and it has something to do with the game you're playing. But how badly do you want to hear yet another sob story about a creature that is menacing the town, or another deep moral dilemma to be solved? Haven't you played this before? Do you really care?

There's a reason your character has a big sword strapped to her back, and it's not because it matches her earrings. It's time to kill some monsters and loot some dungeons. Don't be afraid to hire retainers to help carry the treasure out to the nearby towns. And if some of them die in the process, that's okay -- they're just retainers. They're kind of like popcorn, but chewier.

Argue about the rules! Maximize your killing potential! Take no prisoners -- literally! Trash the dungeon, loot the castle, and kill all the small crunchy monsters in your way. Hey, if the guys can go through a scenario and cleave everything that moves, so can you.

Buddy Up With the Villain

Sure he's big. He probably has big, mossy green teeth. You really should be afraid of him, and you're trying. Really, you're trying. But even the giant gooey slime monster could use a little bit of advice from the most practically minded

member of the party, especially if he's trying to take over the world. After all, the bad guy has a decent stronghold, legions of followers, and large caches of weapons. Otherwise, he wouldn't be the bad guy, and wouldn't be worth being killed by anyone, let alone a group of adventuring heroes.

But once in a while, it's hard not to see both sides of an argument. If this guy has all these followers, how bad could he really be? Maybe it's just a bad PR job! Maybe he had a bad childhood! Maybe he just needs some love! So he's killed a few people, so what. How many of his people has your adventuring group killed? Just as many!

Get your adventuring group to get them to see both sides of the story. Convince them to join the villain in trashing the local towns. Help him build dungeons designed to kill other wandering parties of adventurers. Offer advice for a better set of traps. Learn to love black leather.

Uses for a 7" Stiletto Heel

Ever wonder why fantasy art depicts women wearing towering, 7" stiletto heels? Think it has something to do with sex appeal? Think again! The stiletto heel is an amazing invention. It's not just a shoe; it's a handy-dandy, multi-purpose tool. Clearly, women invented it for women -- and not just as a torture device. Don't let your heroine be without them!

Think about the following: if you suddenly need to build a shelf, you don't need to go into town to get a hammer. The point of the heel is conveniently nail-sized. And if one heel breaks, you have another to replace it. Convenience! Or, what if you need to pry open a door, and are in search of a quick pry bar? Why, here's this seven-inch lever right here on your foot. Just shove into opening, pull, and voila!

And that's not all. For just $20 at Payless ShoeSource, you can make sure that you're never completely unarmed. It's amazing what a good heel to the head will do. That sucker will go right through the skull if hit at the right angle. Heck, if you're playing *Rolemaster*, there might even be a chart for it.

If you really want the guys to cringe, when in battle, go it hand-to-hand. Ask the GM for the hit location chart. Ask if you can do a called shot. Grin. Ask if it does extra damage.

Accessorize With Those Heels!

It's not just heels that are incredibly useful. It's the entire outfit. It's amazing what a creative player can hide in her bodice. And who is going to search a proper woman's bodice? Certainly no chivalrous man! You could outfit an entire army in those skirts.

The overly complicated and uncomfortable underwear the female character is forced to endure is both a curse and a blessing. While it might be itchy and confining, a woman can be literally bristling with weapons, complete with guns down the brassiere, knives in the garter, and poisons in the jewelry. And those articles of clothing are multi-purpose.

The garter can turn into an instant sling for those times when the woman is lost in the woods and needs a sling to kill a rabbit for dinner. It can also be used to stealthily toss rocks at guards to distract, annoy, and bean them on the head.

Hosiery can be used as a mask in pulling a heist, a rope to dangle from as one crosses between buildings on a tether during a daring escape, a garrote for killing political prisoners, and an emergency fan belt in a car engine.

The brassiere is convenient for smuggling documents and weapons while providing plenty of support during a hard day of adventuring. It can be used to hold water from a cool stream, or piles of hors d'oeuvres while sneaking out of a state dinner. Make sure it's well padded! No one wants her (or his!) chain bikini top to pinch.

Say Just the Right Thing

A woman's offhand comment can be as deadly as any weapon or magic spell, and used with just as devastating an

effect. Sometimes, it can be more so. A little bit of charm, a well-placed quip, and the men will be on their knees. It just takes a little bit of fast thinking. Here are some hints:

- **Go for the ego.** As the well-oiled warrior puffs himself up and exclaims with much pomp and circumstance, "I am Mustafa of Hokkaido Prefecture, son in the long line of great warrior-chefs, grandson to the head pastry chef of the Emperor," yawn and file your fingernails. Look bored. Tell him you've been to Hokkaido. Explain that you don't care for dainty spices.
- **Go for the bravado.** When faced with a particularly nasty and evil menace, listen closely as he reveals his master plan to take over the world. When he's done, offer some advice to improve it. Smile. Tell him that it's a very nice master plan, and you're very proud that he could think it up all by himself.
- **Go for the equipment.** Look over your weapon sheet. Explain how you really like the little knife you've been given, because it's very good for flaying skin without injuring the organs underneath. Say how easy it is to extract a confession from a prisoner using just this knife. Mention how, on consideration, you think it would work well combined with a red-hot poker. Ask if anyone is carrying a poker in his or her inventory, and if so, ask if they will trade with you.

Imaginative Body Decorations!

A few imaginative body decorations can really spice up any gaming event. A good tattoo, even temporary ones, can be an endless font of fascination and disturbing visual imagery for the session. Why stop at making elaborate costumes and carrying around swords, when you can go one step further and alter your appearance just enough to leave a permanent impression? Everyone is doing the Renaissance, and there's no reason why you shouldn't, too.

Get a temporary tattoo of a spider around your right eye. When asked, tell people you serve Lloth. Say you heard about Lloth at a local feminist gathering, and it sounded good to you. Mention offhand that you think the blood sacrifice of the men is a pretty good idea. Tell them that where you're from, everyone is doing it. Ask them if they want to play *D&D*.

Give your character fangs. Better yet, wear fangs yourself to the gaming session. Grin at the other players. Gain special style points for wearing them to *Werewolf*.

Now, these are just a few hints to get you going in the right direction. Remember: these are just for fun. Overuse can lead to armed mobs, rioting in the streets, being banned from Napster, and sudden indulgence in an unlimited number of pixie sticks. And we all know what kind of havoc gamers under the influence of pixie sticks can cause. Right. Say it with me now: "Horrors beyond imagining." Think before you act, and remember the children.

If you do choose to use these suggestions in your normal weekly campaign, remind your GM to breathe slowly and imagine his happy place. Remember: when you're at a convention, you can run and hide. But when you game with your friends, they know where you live. And if you get abducted by aliens, well, you were warned.

*(Emily Dresner claims that she would **never** try any of these things. She's a dedicated story-oriented roleplayer who would never stoop to childish pranks. Honestly.*

Special thanks to Genevieve Cogman, Jo Hart and Beth McCoy for the inspiration, hints, and ideas.)

Murphy's Rules

Murphy's Rules

Considering the "Ick" in Dynamic

I was sitting in one of my favorite restaurants, enjoying a plate of ribs alfredo while desperately trying to think about the column on dynamic campaign worlds my headachy brain promised last week, when the answer hit me.

Static campaign worlds defy realism.

I realized this thinking about one of the longest campaigns I've been in to date: A *Vampire: The Dark Ages* campaign set in Wales that ran from about 850 AD to 1348 AD. And in that time, which many folks think of as a relatively static period of history, there were incredible, world-shaking (or at least country-shaking) changes occurring almost constantly. Antipopes. A mini ice age. Vikings. Norman invasions. Wars between Wales and England. Crusades. England at war with France. England booted out of the church. Mongol hordes in Europe. Dick Clark born. Plagues.

Admittedly 500 years is a pretty wide swathe to draw events from, but I hope the general point isn't lost: history is constantly happening. The world is always changing, whether we want it to or not.

Compare the world of 1990 with the world of 2000: A failed hard-line coup in Russia. The reunification of Germany. U.S. military actions against Iraq. NATO and UN actions in Europe. Worldwide economic recessions; U.S. economic growth. Human genome project; widespread DNA testing. Cloning. Global warming. Antibiotic-resistant bacteria. The dawn of the information age. Y2K fears.

Given how different the world of 1990 is from the world of 2000, how realistic is it to presume that a game world that came out in 1990 should be the same in 2000?

Dynamic game worlds give players and GMs a chance to have fun in a world that, while different from our own, will progress and evolve like a real world would (or could). A real world is going to evolve and change, regardless of the players actions (or inaction); sometimes the world changes because of one person's (or a group of people's) actions, but not very often. And, frankly, even in a cinematic world, the PCs aren't always going to be the most important people in the world.

Let's take *Star Trek VI* (and, yeah, there's a spoiler, but it's nothing you can't glean from the trailer). Kirk and the gang, having saved the world a few jillion times, have nothing to do with the Klingons attempting to sue for peace. No, that initiative comes from one of their moons blowing up. It's a big deal, and has nothing to do with the PCs.

A dynamic world gives new experiences and ideas for players (and GMs) to react to. One of the highlights (as a player) in the Dark Ages campaign I mentioned was the beginning session "state of the world" announcements: "Okay; it's 1101. Word gets to you that England has a new king, Henry I, you hear about a civil war in Bohemia, and a radical new device has been introduced to Europe. . . it's called the 'fork.'" In addition to creating ideas for plot threads for adventures, these announcements gave characters a chance to make their thoughts known on topics, and provide new elements to drop into conversations: "This plan of yours is as ludicrous and ungodly as. . . the fork!"

Many GMs have a problem with game worlds telling them how their worlds should evolve. But, in honesty, I'm not sure how much choice game companies have. If you were to ask ten GMs to advance our own world by ten years, you'd probably end up with ten different visions. By having a communal universe for gamers to experience, you can be sure that everyone's "on the same page;" the Grand Interstellar War started at the same time for everyone, the Betrayal of Fuzzykins was initiated by the same sinister organization, the Plague Magique started in the same secluded province and spread like wildfire.

Now, over in the chat rooms, I talked about this very topic with a few folks, and they had some interesting points:

- "Metaplot" worlds sometimes seem like writers who'd rather write about their kewl NPCs than write a novel.
- Dynamic worlds make it difficult to create meaningful stories, since the actions of the PCs can be overshadowed by the actions of off-screen NPCs.

- Dynamic worlds don't provide support in case the world deviates substantially from the "official" world.
- The metaplots of dynamic worlds don't allow for possibilities of player involvement.

Let's look at this one by one:

"Metaplot" worlds sometimes seem like writers who'd rather write about their kewl NPCs than write a novel.

To be honest, so does history, sometimes. Objectively read, the history of 1980's America feels a *lot* like someone who really liked Ronald Reagan, and wanted to give lots of chances for him to be a kewl NPC. The actions of William Wallace seem larger than life, and feel like a writer striving to give him a chance to shine. And, really, is there much difference between:

"Seeking to bring about Ragnarok, Methuselah Bobo calls a Blood Feud against Tribal Elder Chim-Chim, betraying an ancient pact and bringing vampyres and werewoofs into conflict in Chicago."

and

"Seeking land and global might, Adolf Hitler invades Poland, breaking a treaty and provoking Neville Chamberlain and Édouard Daladier into declaring war, ultimately bringing all of Europe into war."

Dynamic worlds make it difficult to create meaningful stories, since the actions of the PCs can be overshadowed by the actions of off-screen NPCs.

Well, using World War II as a prolonged example, are the stories of *Indiana Jones & the Last Crusade*, *The English Patient*, and *Casablanca* somehow less meaningful because of the actions of Hitler, Churchill, FDR and Stalin? Would those stories have worked in static "non-WWII" universes? Just because there's a Plague Magique doesn't mean that every story about the Plague Magique needs to revolve around people dying of it or people finding a cure for it.

Dynamic worlds don't provide support in case the world deviates substantially from the "official" world.

Well, neither do static worlds. If, as a GM, you run a ***Paranoia*** campaign where the clones finally blow up The Computer, you're on your own about that. Likewise, "what happens next" is just as problematic for a campaign world that stops the Plague Magique as a Cliffhanger world where the PCs sneak into Hitler's bunker and shoot him. . . there *is* no ***Hitler Done Got Blowed Up*** sourcebook. (As an aside, hats off to White Wolf for its ***Aberrant: Year One*** adventure book, where significant sidebars are devoted to what happens if the events of the adventures don't work out like they do in "official" continuity.)

The metaplots of dynamic worlds don't allow for possibilities of player involvement.

Again, that depends. Not every WWII story needs to be *Saving Private Ryan*. But given the lack of popularity (or, more correctly, marketability) of adventures nowadays, today's dynamic worlds don't hold the hands of GMs who wish to involve the players.

In that ***Dark Ages*** campaign, the source material said that one of the Vampiric Clans would be put on trial in 1199. So guess which PC group brought the charges, served as witnesses, and brought about that history (and endured the consequences)? While certainly not all metaplots can have direct player involvement, just because a metaplot doesn't specifically say, "A band of adventurers brought word to Tribal Elder Chim-Chim about the impending conflict in Chicago" doesn't mean it couldn't happen that way. Likewise, in *Star Trek VI*, even though the Enterprise don't have *direct* involvement in the Klingon peace accord, they still have important front row seats throughout the entire thing.

Okay; having said all that, I will point out that dynamic worlds definitely have their share of problems. For one thing, they're easy to mess up; in games, like in novels, players (and readers) will trust creators up to a point, and then no more. One ill-advised development, twist, or metaplot can bring the whole thing crashing down. *Highlander* and its premise were popular; *Highlander 2* and its sci-fi revelations left many fans of *Highlander* wincing. When DC Comics killed Superman, they were met with great success; when Marvel revealed Spider-Man was a clone, they were met with torch-wielding peasants.

In addition, it takes good creators to pull off "realistic" dynamic worlds. One of my troubles with the modern ***Vampire*** game is that, after five hundred years or so of nothing-terribly-interesting happening in vampiric society, about six earth-shaking things have occurred in the past six years. Likewise, as dynamic as the 1990's may have been, they were still believable and organic; President Clinton did not once turn into MegaClinton, all left-handed people did not suddenly burst into flames, and it has yet to be revealed that televisions are sentient aliens intent on conquering the earth. While a good creator can take an unlikely premise like a time-travelling phone booth and make it believable, a lesser creator can take something as natural as an international conflict and make it seem forced, unrealistic, and lame. Fortunately, there's nothing that says you *have* to use a plot thread presented by a game company.

Dynamic worlds have the problem of accessibility; I know that the idea of trying to jump into, say, ***Deadlands*** is daunting to some folks, since there's been a few years of story, development, and plot, and many people are afraid they won't understand what's going on. White Wolf has done a good job of making new editions relatively self-standing; ironically, though, this can create other problems -- many fans of ***Mage 1st Edition*** are perplexed and disgruntled with the campaign world as presented in ***2nd Edition Revised***.

Finally, in a timed campaign world, it's very easy to outrun your source material. The "official" ***Dark Ages*** game begins in 1196; even starting in 850 AD we outran most of the established plots pretty quickly. ***Fading Suns*** is set in 4999 AD (as of ***2nd Edition***), with rumors that something big may (or may not) happen in the year 5000 AD. Unfortunately, our gaming group quickly outran the source material, and it's now March of 5000. We're just hoping we don't "remember" something big that happened a few months ago when new source material comes out. . .

Done correctly, a dynamic campaign world can feel as rich and exciting as any "real" history. Done poorly, it can feel like a Discordian three-ring circus, burning tents and rampaging elephants overshadowing any players' attempts to feel important.

So which do I prefer? As I said last week, I like both. I think there's a place for the never-ending timeless battle against the *(begin ominous "look behind you!" music)* evil cultists *(end ominous music)*, and a place for a super-hero world that realistically introduces metahumans tomorrow and attempts to logically build a dynamic world from that.

But looking at which games sell the most, it seems that a lot of folks are willing to support creators' ideas of dynamic universes. . . until they mess it up.

-- Steven Marsh

Last week's answer: ***Talisman City*** (1989 edition)

(Four stars) And when it begins to move its antennae and swivel its optical telescopes, I know that it is seeing the whole great universe for the first time, and I know it is alive. And I am proud of it.

by Justin Bacon

Art by Dan Smith

All roleplaying systems have a method of resolving action. Most use dice to check against a numerical value in one fashion or another to determine the success or failure of those actions. Few systems, however, provide any framework for interpreting those successes and failures.

This lack is surprising. The roleplaying experience relies entirely on the ability of the Game Master and players to communicate the reality of a fictional world and the characters therein as believably as possible. The real world, and the vast majority of worlds of fiction, do not exist in a binary fashion -- when Conan swings his sword he does not "hit" or "miss," he "swings his mighty blade and with thews of steel crushes the skull of his hapless captor" or "brings his sword about in a massive sweep, narrowly missing his hastily retreating opponent."

Yet, beyond some mumbling of how a "higher margin of success means the character has had a greater success than if he had succeeded by a slimmer margin," roleplaying systems on the whole do not provide any intuitive clues for the GM to describe the outcome of a resolved action to his players.

This article attempts to rectify this lack by providing a meta-system -- a system which can be applied to many different systems. In this case, any system which uses more than a single die for action resolution. It is not an attempt to "lock" GMs or players into an unalterable scheme of description, however. The system is designed to provide more than the crudest outlines of exactly how success was achieved, but it attempts to supplement, not usurp, the creativity of the play group.

Overview

Before looking into what this new system consists of, let us first look at what is provided by the action resolution systems typically found in most current games.

Any action resolution mechanic must provide, at a minimum, two degrees: a success and a failure for any action attempted under its auspices. Many of these systems, whether they acknowledge it or not, also contain a simple evaluation of how "well" or "badly" the success or failure of the action was. This takes the form of a "margin of success" or a "margin of failure." In short, the greater the difference between the number you wanted to roll and the number you did roll the better the success or the worse the failure. If, for example, you needed to roll at least a 10 on 3d6 to succeed and you roll a 16, the GM would conclude that your character easily succeeded at what he was attempting to do. On the other hand, if you rolled exactly a 10, he

might make your success much more slim -- instead of clearing the
canyon with room to spare, the character's foot hits right on the edge
and he teeters for a moment on the edge of balance before, finally,
stumbling forward.

And this is where the vast majority of resolution systems stop -- which is good in itself, but incredibly limiting. The GM is left with a vast void to fill in describing the outcome of actions. When confronted with a system which doesn't even possess a margin of success, the GM is left with the arduous task of attempting to reconstruct a Picasso painting from a black and white sketch -- and even with a margin of success you've barely established a grayscale.

What's missing? In short, the GM knows that you succeeded or failed -- and the margin by which you did so -- but *why* did you succeed or fail? What form did that success or failure take? If you succeeded exceptionally, why? If you failed marginally, why? Should a marginal failure ever be catastrophic? Marginal success be akin to slight failure?

The system proposed in this article fixes these problems by giving the GM a wider grasp of what effects lead to the success or failure of the PC. Beyond the simple margin of success involved, implementing this system will tell the GM a great deal of information on any number of topics on which he wishes to seek more guidance: How much time was required to accomplish the action? Was it bad luck or a lack of skill that caused a failure? Even a simple hit location system is provided for games without them -- without adding a single die roll!

The only proviso to this system is that the resolution mechanic of the system in question must use more than one die. A GM using a percentile system should use 2d10 for percentile dice (instead of a single d100). A GM using a single die system will not be able to use the system found in this article without modification to his resolution mechanic. GM's whose resolution mechanic uses different types of dice (a d20 and a d6 together, for example) may also need to make a few modifications to the system in this article before it functions smoothly.

In short, each die roll is assigned a different quality. To keep track of the different dice, each die should be a different color or have some other form of easy identification mark. Making the decisions after rolling about which die represents which quality doesn't help the GM at all.

After assigning desired qualities to the dice of his resolution mechanic, the GM then analyzes each roll. The die which is "best" (for success) or "worst" (for failure) had the most influence on the outcome.

For example, if the die which has been assigned the quality of "Time Required" is rolled with the best result, then the action took very little time. If, on the other hand, it was a comparatively poor result, then the action took more time. Quickly might be "an hour" for fixing a car, of course, and a long amount of time might only amount to a couple of minutes instead of a few seconds when picking a lock.

The GM should never feel bound to the results of the dice in describing what happened, nor should the players attempt to point to this system and "force" desired outcomes. The system is designed to be a guideline to feed the creative

impulses, not a straitjacket to strangle them with.

Qualities

Time Required. This quality is used to determine the amount of time an action takes to complete. For example, a good roll on this die will indicate that the action took less time for the character to perform. A bad roll on this die will indicate that the action took more time. Of course, the exact amount of time in question is a factor of what type of action is taking place.

Outside Influences. This quality is used to determine whether or not outside influences (i.e., things beyond the character's control and/or experience) had the greatest or least effect on the outcome.
Example: A character is attempting to pick a lock and succeeds, rolling very high on the outside influences die. The GM says, "Well, some day you're hoping you'll run into a challenge -- but this isn't it. A clear example of why government contractors should never be hired, the lock clicks open almost immediately." If, on the other hand, he had had a marginal failure and rolled poorly on the outside influences die, the GM might have said, "Although you do your best, this lock is tough. Clearly a custom-made job, the tumblers have disguised trips and keep slipping off your pick. You might be able to crack it eventually, but you'll have to start over from ground zero."

Knowledge. The knowledge quality addresses that little memory bank everyone carries around with them -- high influence from the knowledge die would suggest that either the character possesses some little piece of knowledge that makes the difference (success) or lacks a piece of knowledge that would help them (failure).
Example: To return to our lockpicking example, above, a character succeeds with the knowledge die having the largest effect on that outcome. The GM might say, "Normally this lock would have been more than adequate security for this type of facility, but you just spent three weeks practicing on a lock off the same assembly line. Within seconds the door swings open."

Skill. This one is probably one of the most obvious of the qualities -- it refers to the skill of the character and the impact it had on the outcome. If the skill roll was highly beneficial, it means that the character was performing at the best of his ability (even if he still subsequently failed). If the skill roll was extremely poor, it indicates that the character wasn't doing his best (even if he proceeded to succeed at the action).
Example: Rozel, a character involved in a fencing match attempts to strike his opponent, Benalt, and manages to succeed, although his skill roll is rather low. The GM shakes his head, "Rozel feints to the left and manages to draw Benalt's block, but then doesn't come back far enough to right. Only because Benalt's foot slips does your blade manage to slash across his arm." On the other hand, if the skill die had been higher, the GM might have said, "Rozel feints expertly to the left and Benalt moves to respond, only to be caught completely off-guard as the tip of your saber loops under his blade and tears a bloody gash into his arm."

Luck. Sometimes the biggest reason a character succeeds is because he has gotten lucky. If the most influential die result turns out to be on the luck die the GM should have the resolution of the action come about because of something completely out of the character's control.
Example: In a science fiction game, Laatzu, a fighter pilot, is attempting to blast one of the evil Bengai's out of known space with his lasers. He fails, largely due to the poor roll on the die assigned the luck quality. "Laatzu loops his ship in behind the Bengai Tiger Scout and lets loose two searing bolts of death . . . only to meet with disappointment as his expertly placed shots strike an unnoticed piece of space debris."

Style. Unlike the qualities discussed so far, the style quality doesn't attempt to shed light on how or why something succeeded or failed -- but how the success or failure took place. It asks the question, "Just how good did that look?"
Example: Billy the Gangster attempts to leap over a stack of boxes, coming out of a rolling somersault, and fire two shots at some anonymous mug taking shots at his pals on the other side of the warehouse. He rolls a success, despite the abysmal result on the die assigned to style. The GM smirks, "Billy takes a couple of loping steps and leaps over the stack of boxes . . . knocking the top two over, stumbling, and falling flat on his back. His pistol slips out of his hand as he lands and skitters across the floor, sending him after it in a wild crawl. Snapping it up he manages to squeeze off a couple of shots and fill the mug full of lead just before he gets a face full of lead from the shotgun pointed at his head." On the other hand, Sarah, an acrobat, is trying to walk across a beam. Her action resolution roll is a failure, but

her style die is high. "Sarah is crossing the beam when suddenly she feels her balance slip. As she falls off she pushes a little bit with her leg and manages to land gracefully on the floor after a flip instead of falling flat on her butt."

Power. Sometimes people succeed just because they put more power into the attempt, or fail because they didn't. This quality is particularly useful in combat situations.
Example: Conan attacks an NPC with his sword and rolls a success with a particularly beneficial result on his power die. The GM grimaces, "Conan brings his mighty blade around. Although the guard raises his sword to parry it is completely ineffectual as your mighty arms push his blade out of the way and crush his skull." Alternatively, you might have Gabrielle, a thief with an attitude, throw her dagger at a hapless orc, failing to do any damage with a particularly ineffectual score on her power die. "Your graceful throw is perfectly accurate, but glances ineffectually off the hard leather encircling the orc's chest."

Finesse. This quality reflects on the precision with which a given action was taken, and its impact on success. For example, a poor roll on this die would show clumsiness, while a positive roll on this die would grace and perfection.
Example: The Wizard, a hacker in a *Cyberpunk* game, is trying to get past some Black ICE which is preventing him from reading the data files he needs to reveal a corporation's corruption. Rolling a marginal failure on attack he has a particularly poor result on his finesse die. "Getting a little overconfident, huh?" says the Game Master. "The ICE swallows those simple macros with ease. You're going to have to have to bring out the big guns if you expect to get past this guy." Later on he gets a stunning success with a high finesse roll, "Nice work. That blackie was pretty effective, and usually your progs would have had some problems, but by slipping past his I/O channels and hitting his processor directly you take him out, smiling in satisfaction as his data-scream of death reverberates through your skull."

Hit Location. Using a system similar to that described above for qualities, a simple hit location system can be added to any multi-dice combat resolution (although it probably means removing the normal qualities from combat resolution).

Possible Combinations	
2 dice	Head/Torso, Limbs
3 dice	Head, Torso, Limbs
3 dice	Head/Torso, Arms, Legs
4 dice	Head, Torso, Arms, Legs
5 dice	Head/Torso, Left Arm, Right Arm, Left Leg, Right Leg

Essentially you assign to each die in the resolution a different hit location. In the case of a successful attack, whichever die was most influential on the outcome (usually the highest roll, although in some systems the lowest) is the location of the hit.

This system, like most hit location systems, works best for humanoid creatures -- although it can be easily adapted to non-humanoids.

Although the examples list different possibilities based on the number of dice typically used in the resolution, it's just as easy to show the likelihood of hitting each location by -- for example -- having a single die for "head" and two dice each for "torso" and "limbs."

If the GM wishes to add damage bonuses based on this hit location system he may, or he can simply use it as a descriptive aid like the other qualities.

Examples of Application

This system is incredibly easy to implement and use, but it does require the GM to make a few up-front choices about what he wants in the way of help. No resolution system to my knowledge uses exactly eight dice for action resolution -- and even if they do a GM will easily find himself getting continually confused about which die represents which quality ("Green… green is… err… ahhh…") which removes the whole advantage of having the system in place. So the question becomes which qualities the GM thinks will serve his campaign best, and will help him the most.

To help towards that end, here are a few examples of putting the system into effect using existing systems on the market.

Feng Shui

Feng Shui, the game of Hong Kong Action movies, uses a resolution mechanic of rolling 2d6 -- one positive, one negative -- to get an action total. A GM decides that the two most appropriate qualities for this type of game would be Style and Luck and he assigns one to each die. He further decides that due to the peculiarity of the system he'll let his players choose which die (positive or negative) will represent Style and Luck before each roll.

Example of Use: Marcia, a Karate Cop, has her back against a wall in an underground garage as some big bruiser blasts holes out of the concrete from around the corner. She decides the concrete's taken enough punishment for her sake, and tries to roll out from behind her cover and plant a few big holes in the guy taking potshots at her. She easily succeeds, with a low roll on Luck (which she chose to put on her negative die) and a high roll on Style (which she chose to put on her positive die). Rolling out from behind her cover perfectly she catches the muscle-bound clod completely unawares as her .45 takes out some important sections of his chest, "twirling the gun around her finger as she pulls off each shot."

GURPS

A GM designing a fantasy campaign decides to use *GURPS* from Steve Jackson Games with its 3d6 resolution mechanic as his game system of choice. Knowing his own weaknesses in description (he usually found himself focusing on how skilled the action was and little else) he decides to emphasize some other areas, choosing the qualities of Time Required, Outside Influences, and Knowledge for his three dice.

Example of Use: Dreyldor, a lithe female elf with a body to kill for, decides to try seducing the king for her own sinister purposes while the Queen is out of town. She fails, rolling high on her Knowledge die, but low on her Time Required and Outside Influences dice. "You've worked on kings before and know exactly what a man like this is feeling," the GM says, "But it simply takes you too much time. On the day before the Queen is to return he lets you steal a kiss, but nothing more, and once she returns you have no hope of succeeding."

Champions (Power, Finesse, Style)

Champions, the premiere game of superhero roleplaying, uses a 3d6 mechanic. A GM running this system decides that he'll choose the qualities of Power, Finesse, and Style because he feels the combination will bring about good descriptions for a superhero campaign.

Example of Use: An asteroid is flying towards a doomed Earth. Chuck decides he wants his character, the Living Reactor, to stop it by flying up and pushing it out of the way. He rolls a mediocre Style die, a poor Power die, and a great Finesse die -- succeeding. The GM smiles, "The Living Reactor launches himself into space and straight towards the asteroid, but the asteroid's mass is just too much and it continues on inexorably. You think for a moment and then remember something about vector mathematics from high school physics -- you were studying it just before your homemade reactor blew up in your basement, giving you amazing powers beyond the ken of mortal man, but I digress . . . You're not able to stop the meteor, but you are able to alter its course so that it will harmlessly pass by the Earth."

FUDGE (Outside Influences, Skill, Knowledge, Luck)

FUDGE, the *Freeform Universal Do-it-yourself Game Engine*, designed by Steffan O'Sullivan and published by Grey Ghost Games, uses an interesting mechanic of 4dF ("F" for Fudge Dice) which is functionally equivalent to 4d3-8. One GM using the system for science fiction decides to take advantage of this large number of dice to have a more holistic selection of qualities -- Outside Influences, Skill, Knowledge, and Luck.

Example of Use: Rawthlar, a ferocious cat-creature from the planet of Purrtend, whips out his blaster and tries to blow a few holes in an offensive Lizardman from the planet Hisstery as the ship they're in begins to fall apart. He fails despite his decent rolls on the skill and knowledge dice due to a poor showing on his luck and outside influences dice. The GM describes his attempts as such: "Rawthlar, although being one of the better shots this side of the Andromeda

Cluster, has the unfortunate luck to be standing on a deckplate as it suddenly lurches to one side. Your shot goes wild and the Lizardman hisses in grim pleasure."

Example of Use: Later, after dispatching of the Lizardman through other means, Rawthlar commandeers a shuttle and is now attempting to pilot it out of the shuttlebay before the spaceship blows itself to pieces. The GM requests a roll against his piloting skill and gets back a success with great results on the luck die and the skill die. "As the shuttle lifts slowly off the pad the support beams of the shuttlebay begin to collapse. You bring the engines on-line in a horrible, mechanical growl and the shuttle speeds forward. Doing an amazing roll to avoid being crushed by one of the heavy beams you bring the shuttle out through the bay doors just as the bay collapses behind you. Seconds later a horrendous explosion consumes the remnants of the dying ship. You made it out just in time."

FUDGE (Style, Skill)

Another GM using *FUDGE* for horror decides he doesn't want to juggle that many qualities, so he only uses two -- style and skill -- assigning two dice to each.

Example of Use: Benedict, a Catholic priest with an edge, has been cornered by undead hordes in the basement of the old mansion. His player, Joe, decides that escape is now the better part of valor and says, "Benedict pushes over the stack of dusty crates into the path of the zombies, simultaneously dropping a grenade at his feet, smashing the sunken window behind him and crawling out as quickly possible." The GM rolls his eyes, "Only trying three things at once tonight, Joe? Sure you wouldn't like to try three dozen? Roll against your Dex, plus triple action penalties for the round." Much to the GM's discomfort Joe is as lucky tonight with the dice as always, rolling his two style dice exceptionally well, one of his skill dice fairly well and the other with average results. "Not bad, huh?" Joe chuckles. The GM rolls his eyes, "As the zombies close in, dripping ichor, Benedict drops to a crouch, performs a perfect spin-kick on the stack of boxes, knocking them into the first line of zombies who promptly fall over. Without a second glance he finishes the spin, simultaneously loosening one of the grenades on his belt, removing the pin, and letting it drop. No sooner has it hit the ground then he springs up through the window, smashing it, and coming out on the grassy lawn in a perfectly committed somersault. Coming to his feet and into a run he easily gives himself plenty of distance before the basement becomes a raging inferno behind him."

Adaptations

There are a number of simple modifications and adaptations of the basic concept found in this system. The Hit Locations system described earlier is one possibility. This section of the article will try to point out a few more of these -- even if complete mechanics for each of the adaptations is occasionally left up to the GM's discretion, creativity, and personal needs.

Resolution Methods

Many games have different resolution systems depending on what type of action is being attempted or the circumstances under which the attempt is made. The most obvious and common of these is the distinction made between "normal" skill resolution and "combat" skill resolution.

Even when the two systems of resolution are practically or entirely identical in game terms the descriptive needs of the GM may alter drastically between, for example, combat and non-combat situations. The simplest adaptation of the systems in this article is to simply use different qualities at different times.

For example, a GM may feel that in non-combat situations he will be most aided by the qualities of Time Required, Outside Influences, and Finesse. On the other hand he might find Skill, Style, and Luck to be more useful for combat situations.

This modification is as easy as simply using those qualities at those times in which you will feel they will be most useful.

Damage

Many systems on the market today continue to follow the example of **D&D** and use a separate dice roll to determine the damage done by a weapon. In several cases multiple dice are used and it therefore becomes easy to create a list of "damage qualities" which would help you describe not only the severity of damage, but the type of damage done.

Character Schticks

Not all characters are the same -- and in several genres (particularly the pulp and superhero ones) each "type" of character is possessed of a very distinct, personal style. Superman, for example, behaves and operates in one manner, while Batman behaves and operates in a quite different manner. This system can be easily adapted to such situations.

Instead of having one set of universal qualities which all characters use, let each player decide on a "character schtick" -- a set of qualities which he feels would best result in the type of descriptions he feel would be appropriate to his character. The GM, of course, would set schticks for NPCs as he so desired.

For example, in a game set in 1920s Chicago, your typical mob thug might have the qualities of Power and Luck. Al Capone, on the other hand, would have Style and Finesse. Elliot Ness might want Skill and Luck.

Character Generation

Although this no longer true of many systems, there are still several systems out there that use dice for parts of or the entire character creation process. If you wanted to give even greater control to the dice during character creation it would certainly be a relatively easy task to create a list of qualities for any attributes or statistics which you roll for during character creation.

For example, when rolling 3d6 for Strength in **AD&D** you could have three different qualities: Muscle Mass, Power, and Physique. Although these would have little or no effect on actual gameplay, they would -- just like the qualities for skill resolution described above -- be hints as to how your character is strong, not just how strong he is.

Dice Pools

Dice pools, used in many popular games such as West End Games' **Star Wars** and the **World of Darkness** games from White Wolf Games, are a mechanic under which -- instead of raising a number you roll against as you increase your character's skill -- you increase the number of dice which are rolled against a stationary target number as your character's skill increases. Clearly the basic system described in this article does not work with such systems: you can't assign a set of qualities to the dice if the number of dice is constantly in flux depending on what is being resolved. There are three ways, however, to alter this system to make it usable in games which employ dice pools.

First, and simplest, is to simply choose two qualities. Have two specially marked dice -- each representing one of the two qualities -- and make sure these are included in any role. On any die roll in which only one die is involved, ignore the qualities.

Second, you can expand this concept by having a laundry list of qualities. The first might be Skill, the second Style, the third Finesse, the fourth Outside Influences, and the fifth Power. If three dice were rolled you would use the Skill, Style, and Finesse dice. If five were rolled you would use Skill, Style, Finesse, Outside Influences, and Power.

Finally, you can create a "quality pool" from which players may select the qualities they want. Combining the second option above with variable choice you can either limit the choice to pre-campaign (like Character Schticks), or let the players decide on each roll which qualities they want. The only problem with this latter potential is that it can sometimes bog down the session as players deliberate over which qualities to pick ("Let's see, do I want power and finesse -- or finesse and style -- or…?").

Conclusion

The system is incredibly versatile and very effective as a tool that almost any Game Master can use effectively as an aid to his game. That being said, it is important to realize that this tool is not for everyone. Those who have no difficulty describing the results of action resolution will have no use for this system. There will be those who simply don't find the system to be particularly helpful. Finally, I have found no way of adapting this system or some variant of it to resolution systems involving only a single die.

However, for those GMs who can use this system, and who find it useful, I think that it can be safely said that you will find your campaigns improved, and not lessened, for its inclusion so long as you remember that this is merely a system of guidelines, and not absolutes.

Helen Dixon, Meddling Kid

A Character for Unknown Armies

by Chad Underkoffler

Art by Zach Howard, Colored by Philip Reed

Summary: Helen Dixon is a child of great wealth. Her mother is a world-famous journalist. Her father is a genius at playing the market, and parlayed a modest trust fund into a tremendous financial empire; unfortunately, he's a drunkard. Helen was born to a life of privilege, with two silver spoons in her mouth. She has access to places most teenagers don't, and people in positions of power are willing to tolerate her presence due to her parent's position and power.

She cut her baby teeth while watching reruns of *The Twilight Zone*. Her favorite *Sesame Street* character was the Count. She stopped watching *Scooby Doo* because all of the monsters ended up being people in bad rubber masks. She read all of the *Nancy Drew* books by the time she was 8, and all of the *Sherlock Holmes* stories by 13. When the *X-Files* premiered on TV, she rejoiced. She drops snide postcards in the mail to James Randi.

Now 16, she spends her free time looking for the Unnatural in her home city. She's a spoiled brat with an allowance bigger than the average taxpayer's income, and she'll spare no expense to find out what she wants to know. Unfortunately, this means that a number of frauds, clueless cabalists, and even a couple of clued-in sorts have used Helen as a gravy train.

Personality: Velma and Fox Mulder have a kid, who's a cross between Encyclopedia Brown and Veruca Salt.

Obsession: Find scientific proof of the paranormal, at any cost.

Passions

Rage: Being treated like "just a kid" or "just a girl."
Fear: (Helpless) She's scared of cockroaches.
Noble: Helen champions any form of investigative work, from journalism to research chemistry to space exploration to police work to people who chase UFOs. "The truth is out there, so go look for it!"

Wound Points: 40

Stats

Body: 40 (Skinny)
Speed: 50 (F) (Jumpy)
Mind: 45 (Insightful)
Soul: 55 (Quirky)

Skills

Body Skills: General Athletics 35%, Struggle 15%.
Speed Skills: Drive 15%, Dodge 25%, Sneak 25%, Photography 15%.
Mind Skills: General Education 35%, Sleuthing (Notice) 40%, **Weird Science 20%**.
Soul Skills: Charm 20%, Lie 15%, Hunches 35%, Wheedle Cash from Parents 15%.

Weird Science: This skill covers all the fringe sorts of things you'd see on shows like *In Search Of. . .*, *The Unexplained*, or *The X-Files*. From "Chariots of the Gods" to Zener cards, from pyramid power to rains of stones, from chupacabras to the Loch Ness Monster, Helen digs it.

Madness Meter (H/F)

Violence	= 1H/0F
The Unnatural	= 3H/1F
Helplessness	= 1H/1F
Isolation	= 1H/0F
Self	= 1H/0F

Pick One

- **High Road:** Helen is generous with her time and money, always ready to help out an unfortunate, even if it means a delay in her personal quest for "the Truth." She's a dyed-in-the-wool do-gooder.
- **Middle Road:** Helen can be thoughtlessly cruel in the manner of those to the manor born. "If they have no bread, let them eat cake." She does have a good heart, and will make amends if she realizes that she offended someone, but that's still secondary to her quest.
- **Low Road:** Helen uses her wealth as a weapon, and believes that everyone has a price. She's willing to do almost *anything* to get proof of the Occult. . . and she's already done quite a bit of disturbing things. But heaven help those who she believes cheat her: she's got Daddy's lawyers on her speed dial.

Supporting Cast: Helen Dixon, Meddling Kid

Possessions: An expensive camera with all the extras, a brand new sports car, a canister of pepper-spray, a fingerprint kit, a bunch of detective-type stuff, a journal for notes, a pack of Zener cards, a copy of *The Collected Works of Charles Fort*.

Connections: Helen's mother is a famous journalist of some repute, so Helen has a few "family friend" news-industry contacts. She's been almost the sole support for a local palm reader named Katja Gregorakis, who is somewhat clued-in to the workings of the Occult Underground.

Adventure Seeds

- Helen has found out that something odd is going down in town and she's set out to track it down. She zeroes in on the PCs, and begins stealthily following them around, taking notes, snapping pictures, etc. If any of the characters display paranormal powers, she'll be in for the long haul.
- One of Helen's dad's drinking buddies named Ron Olson is a dipsomancer of some power. She's been nosing about, trying to get proof that he has "psychic abilities." Last night, she came upon him in a back-alley, levitating a dumpster out of the way so he could urinate behind it. As she started snapping pictures, Ron caught sight of her, wiggled his fingers at her, and *(poof)* she was gone. Helen's vanished! Helen's parents think she's been kidnapped, or worse, since the police found her purse and wallet in a seedy part of town. In actuality, Helen was teleported across country, to the PCs' hometown. She hasn't called her parents because, well, mom's in Kenya, and dad's passed out in the den. Besides, she's grown up enough to get back home on her own. All she has is a $100 bill she keeps in her shoe, and her camera. Heck, she might decide to hang around the PC's town

till mom gets back from Africa. . .

- Helen's hot on the trail of a black magician named Snake who claims to be able to summon demons. He's a clueless fool out for Helen's money, but she doesn't know that. Unfortunately, Snake's on a course for a head-on collision with Satan's Chosen Temple and Rebecca DeGhoule for horning in on her demonic summoning gig, and Helen will be trapped at ground zero along with the hapless confidence man.

Filler

Well, if you're reading this then I've probably been kidnapped by an evil cult. Drat.

See, when I signed up for this gig, I knew the day would come when there would be those who would seek to disrupt the flow of a normal magazine by dragging me away, kicking and screaming and dropping my Pez. And I knew that those who would seek to do this would be evil cultists. Don't ask me why; lucky guess, really.

So I prepared this filler column MONTHS/YEARS/DECADES (DELETE TWO) ago, in the hopes that, although I may be gone for now, at least you'll have some words of wisdom to cheer you up. I guarantee this column isn't topical, but hopefully you'll find it amusing. And, with any luck, you'll be sympathetic to my plight as cult-victim (which shouldn't be difficult, so long as I haven't tried to defend static or dynamic worlds in the past few weeks or anything stupid like that).

Anyway, over in the newsgroups several months ago (back when I was a fledgling at this gig, without the INSERT NUMBER OF MONTHS BEFORE KIDNAPPED BY CULTISTS months of experience), in the midst of an otherwise normal post, Scott Slemmons asked me to "Sing us a song! Something Gilbert-and-Sullivan-esque!" Always looking to give our loyal *Pyramid* audience what they want, I set out to fulfil this request, and twenty minutes later concocted this:

> I am the very model of a modern gaming editor.
> At times I feel like prey and other times I act like predator.
> Each month I am required to mold sixty thousand words, and yet
> Unerringly I err each week with typos that I didn't get.
>
> I have two walls of games which I have partaken of sporadically.
> My collections would be smaller if I'd taken up philately.
> But stamp collecting's not as fun because you can't eat bags of chips
> while cries of "Roll for damage!" trip excitedly from off your lips.
>
> The slushpile is my biggest foe; each time I turn around I see
> another ten submissions blink their beady little eyes at me.
> At full time, editing would be a challenge; as it is
> I've given up eating meals in lieu of photosynthesis.
>
> But all in all it's a great job, and hope I'm doing well with it,
> combining vision, detail, and my knowledge with a smidge of wit.
> With me the way I am I'm sure I'll never be a senator
> But I'm the very model of a modern gaming editor.

My abilities to come up with these kind of parodies on the fly has frightened people in the past. Perhaps I'll subject you to more of these some time. And the *really* sharp-eyed among you have probably already discovered my love of anagrams, more of which I may inflict upon you.

Anyway, don't worry about me; I'm sure I'll escape from the cultists before you know it. And if I don't, there's a dozen more emergency filler columns to take this one's place (though the webmaster may need to change references of MAULED BY MONGEESE to STILL KIDNAPPED BY CULTISTS).

Yessirree, just so long as I wasn't kidnapped the week before DragonCon, everything should be just fine.

-- Steven Marsh

* * *

Last week's answer: **Traveller: The New Era**, p. 77.

(Three stars) "Solanagen-based aliens from another subspace domain accessed our space to abduct people for experiments."

* * *

(We have read the MAULED BY MONGEESE filler column, and we hope Steven returns very, very soon.)

Pyramid Review

Elevator to the Netherworld (for Feng Shui)

Published by **Atlas Games**

Written by Tim Dedopulous, Bryant Durrell, David Eber, Geoff Grabowski, Mike Lee, Mike Mearls, Chris Pramas, Greg Stolze, Tim Toner

128 pages, $19.95

Beneath the violent and blood-stained world of the *Feng Shui RPG* lies the vague and equally violent Netherworld. A twisting maze of endless caverns and tunnels, packed with rejects and rebels, the Netherworld is a haven where refugees from the Secret War can come and get their teeth kicked in by a whole new population of freedom fighters.

In *Feng Shui*, those who possess the sources of mystical chi power determine the fate and flow of history. Attune yourself to enough Feng Shui sites, and the world warps into a shape most pleasing to you. The only place safe from the changing tides of history is the Netherworld, a place unaffected by these critical shifts. Once you've traveled the Netherworld, you change, too. Unlike the rest of Earth, you will always recall who you are in the fluid world order, and what needs to be done to put things "right" again. . . or at least, what you think should be right.

Everything is connected in (and to) the Netherworld, with tunnels linking gates from one time period to another. Those with Shaping power can call just about anything from the smoky gray nothingness: food, housing, weapons, companionship. Up and down are relative terms, and points on the compass are nothing but happy memories. It's populated by the cast-off peoples of a thousand different worlds that now, thanks to time travel, never existed. The "Inner Kingdom" is a blessing and a curse, giving people a second chance for success or failure when everything else has collapsed.

Since it's such a quirky place, adventures there can be tricky. This book tries to put things, as much as they can be put, in their proper place. Powers like the Four Monarchs, exiled rulers of a destroyed timeline, have forces and fortresses waiting to take back what they see as theirs. The futuristic and oppressive Buro runs a Biomass Reprocessing Center, feeding what they won't experiment on to the abominations they create. And in the center of it all: everyone's garbage. Literally. A context of sorts is provided for all this high weirdness, should the player characters live long enough to see the big picture.

The first part of the sourcebook takes a look at the big guns, those figures from the most stable timelines or those who have carved out the biggest piece of pie in the Inner Kingdom. The Monarchs, the Ascended and the Eaters of the Lotus are all dug in like hungry ticks. Then the little details that make the Netherworld truly come alive get the business: the television station, the entertainment and housing facilities, and the home turf for underdogs of the Secret War like the Dragons. By the end of the book, nothing fits into a neat little category, and giant infants and football fields full of writhing tentacles round out the page count.

Elevator to the Netherworld is a functional sourcebook, and it does its job. The Netherworld is a maddening place, so refereeing players through its labyrinthine depths is no walk in the park. If you want to know how this other world and its weird physics work, the book has you covered. You get descriptions of the players and the part they play in the Inner Kingdom. GMs have had lots of practical questions about how the Inner Kingdom operates, and this clears up a

lot. The whole thing reads a little like a road map, though, and is only a little more exciting.

If your gaming group wants to take on the Monarchs, this book tells the GM who they are, what their domain is like and the problems the Monarchs will throw in your players' way, but not much more. It's staid and lifeless, like an appendix to an unfinished rulebook. There are no adventure seeds, no in-depth discussions of the plans of the Eaters of the Lotus, no challenging suggestions for dropping the party in the middle of fascinating court intrigues.

Everything gets mentioned, but few things are explained in any depth. The bad guys' evil plots are thinly laid out in the vaguest terms. There are some named characters (the ones with the names are the ones that put up a good fight, while the nameless ones are cannon fodder), some fairly nifty new critters and a few keen toys to play with, but it mostly ties up loose ends without providing new material.

The art, which seems rather spare, is similarly uninspiring. Some good, some bad, most of it pictures of the architecture. We hardly ever get to see sketches of the colorful characters described in the text, and some of them scream for visuals. It mostly reinforces the feeling that this is a travelogue, and someone has already done all the sightseeing for you.

There are a few diamonds in the rough along this road. The Unexpected Deliverance Society is an extremely convenient deus ex machina, ready to spring inmates of every stripe from prisons across the Netherworld -- and the mechanics for them are a simple little joy. The Jammers' tree-house home in the Silent Jungle is a wonderful mix of high-tech toys and wilderness survival skills just waiting for some explosions to top things off.

Those bits are hard to come by on this superficial trip, though, and players are going to have to make their own fun. It's good to have the butt-kickingest game in the industry back on the market, but the buyer has to do all the kicking, because *Elevator to the Netherworld* just isn't pulling its weight.

-- Andy Vetromile

Pyramid Review

The Dungeon of Death (for AD&D)

Published by [Wizards of the Coast](#)

Written by Jason Carl

32 pages, $9.95

This is the latest in the series of **Dungeon Crawl** scenarios set in **AD&D**'s
Forgotten Realms. The idea behind the **Dungeon Crawl** series is to provide stand-
alone adventures harking back to the good old days of delving into a monster's lair,
killing everything in sight, and making off with the loot. While all are set in the **Forgotten Realms**, they are also
designed to be easy to transplant into other campaigns with a minimum of effort. Though this adventure is loosely
connected to events in the **Hellgate Keep** scenario, it easily stands on its on.

The production value is very good, like most of the recent Wizard releases. Where other companies of late seem to be
using larger typefaces and bigger margins, Wizards has moved in the opposite direction, allowing them to put more
information into smaller books while keeping the price down. The maps are clean and easy to read, the text is well-
edited with no glaring typos, and the few pieces of art are relevant to the story and not mere filler.

The **Dungeon of Death** provides the party with an abandoned dwarven mining complex, long since taken over by evil.
The plot, such as there is, involves the evil inhabitants attempting to lure adventurers into investigating the complex so
they can have their way with them. While it is nothing terribly new or inventive, it works as a default motivation if the
DM doesn't have time to come up with something better. One of the nice things about the **Dungeon Crawl** series is
that the adventures are designed to be so generic that it is easy to assign new motivations to the villains without having
to rewrite the scenario.

The actual dungeon in this case involves traps. A *lot* of traps. Unlike **Tomb of Death** . . . er, **Horrors**, the traps in this
case are all mechanical, and most can be circumvented if the party is cautious and clever. Since many adventurers tend
to be neither, the party is likely to get a bit bloody before they figure things out and slow down. As such, the module
could work very well for a DM looking to teach his hot-headed party the value of prudence.

The author obviously put some thought into the dungeon. Unlike the original adventures where 20 bugbears lived in a
10x10 room next door to a couple of carrion crawlers, the inhabitants and environment of the Dungeon of Death
reflects its history and current condition. Best yet, most traps and rooms have a brief explanation of what the original
builders had in mind when they constructed the place.

One unusual element is the Shadow Curse that affects the entire complex. Without wanting to give too much away,
suffice to say that everyone entering the dungeon (except the current occupants, of course) suffers an increasing
penalty the longer they stay within. While the Curse does provide something of a unique flavor to the adventure, the
module as written can be quite difficult enough with the addition of this sort of time limit. On the other hand, the DM
can either easily dispense with the Curse as it does not figure into the plot, or use it as a means to balance the party's
ability against that of the opposition.

The main foes in the Dungeon of Death are demons. The canon fodder are all varieties of Least Tanar'ri (Dretch,
Manes, and Rutterkin), with a few Lesser and one Greater thrown into the mix. The adventure says it is for 3-6
characters of levels 7-9, which actually seems a little high given that the vast majority of the foes within only have 2-3
HD. If the DM decides to remove the Shadow Curse, he should make sure he either ups the level of opposition or runs

the party through it at a lower level or they are going to storm through here like Sherman on his way to Atlanta.

While there is nothing amazingly original or innovative here, **Dungeon of Death** provides a solid, well-constructed dungeon delve adventure where the key to success lies more in caution and planning than on strength and fireballs. For ten dollars, it is money well spent.

-- Andrew Ross

[?]

by Hans-Christian Vortisch

This article deals with a number of small arms issued to special operations units around the year 2000, to update and expand the list found in *GURPS Special Ops* (and, to a lesser extent, *High-Tech*). Many of these weapons are completely new developments, while some are mere improvements of older weapons.

Pistols

Heckler & Koch P11, 7.62x36mm, Germany, 1976 (Holdout -2)
An underwater weapon developed for combat divers, similar in intention to the Soviet 4.5x39mm Tzniitochmash SPP-1 (p. SO99). It fires special darts from a pre-loaded 5-round, 5-barreled pepperbox-style cylinder via electric ignition. Two 9V batteries are located in the grip. After firing all five shots the complete cylinder has to be replaced by a new one (and the used one returned to the factory for reloading). The P11 can be used submerged to a range of some 15 yards. Outside of the water, it has an effective range of 30 yards, with a low firing signature (-4 to hear). Dam is impaling. The P11 was adopted by German Kampfschwimmer (combat diver) units as well as amphibious assets of both the KSK and GSG9. In addition, it was supplied to the naval commando units of Denmark (Frømandskorpset), France (COFUSCO), Israel (Kommando Yami), Italy (COMSUBIN), the Netherlands (SBS), Norway (Jæger), the United Kingdom (SBS) and the USA (SEALs).

Tzniitochmash P-9 *Gurza*, 9x21mm Gurza, Russia, 1994 (Holdout -1)
The *Gurza* (snake) is a SpecOps weapon firing armor-piercing ammunition intended to be used against opponents wearing body armor. It is one of the first Russian pistols using a synthetic frame. The P-9 is in service with Russian SpecOps units and is apparently the standard sidearm of the MVD OMON.

Glock 27, 10x21mm (.40 S&W), Austria, 1995 (Holdout +1)
This is a sub-compact version of the Glock 22 (p. HT109), with a corresponding shorter barrel and grip, which makes it very concealable. It has a 9-round magazine, but will also take the 13-round (AWt 0.6) and 15-round (AWt 0.65) magazines of its larger cousins (Glock 22, 23, 24 and 35), although of course those will make it harder to conceal. The Glock 27 is currently used as off-duty and backup gun by the FBI.

The Glock 26 is practically identical, but chambered for the 9x19mm Parabellum round; Dam 2d+1, Wt 1.6, Shots 10. A variant of the Glock 26 is issued by the Swedish Air Force together with a B&T sound suppressor as an aircrew self-defense weapon.

Fabrique Nationale *Five-seveN*, 5.7x28mm FN, Belgium, 1997 (Holdout -1)
This double-action-only pistol was designed as a companion to the P90 personal defense weapon (p. HT116). It fires the same round, which has good penetration. A mounting rail beneath the barrel will accept a flashlight or targeting laser (+0.25 lbs.).

Izhmash MR-443 *Grach*, 9x19mm Parabellum, Russia, 1999 (Holdout -1)
This weapon is the most serious contender to become the new Russian Army sidearm, replacing the 9x18mm Izhmash

PM and PMM-12 pistols designed by Makarov. It is a conventional pistol chambered for the 9mm Parabellum round, using a double-action system based on the Browning. In contrast to many of the latest handgun designs, it has a steel frame.

Shotguns

Benelli M4 *Super 90*, 18.5x76mmR (12-gauge 3" Magnum), Italy, 1996 (Holdout -5 with stock collapsed)
The latest in a line of basically similar semi-automatic shotguns, which are very popular with SpecOps and law enforcement units. The M4 can fire both standard 2.75" shot shells or the longer 3" Magnum shells (Dam 5d, Shots 6+1, Rcl -3). It has a collapsible stock and a mount for optical sights such as the Aimpoint M68 Close Combat Optic (CCO) red dot collimator (SS 10, +1.5 lbs.). A compact version with short barrel and folding stock is available (Shots 5+1, Holdout -4, $1,050). The M4 *Super 90* was selected by the U.S. military to replace the 12-gauge Mossberg M590 and older pump-action shotguns as the M1014 for the year 2000.

Submachine Guns

KBP OTs-23 *Drotik*, 5.45x18mm MPTs, Russia, 1997 (Holdout -1)
This machine pistol fires the 5.45x18mm round of the Izhmash PSM pistol, which is low-powered but has good penetration. It was designed by Igor Stechkin, inventor of the 9x18mm APS machine pistol of the 1950s. The *Drotik* (javelin) can fire 3-round limited bursts at a cyclic rate of 1,700 shots per minute. The low recoil of the round and an integral muzzle compensator keep it controllable (RS -1 in burst fire). After penetration a bullet multiplier of 0.5 applies. The gun was adopted by Russian internal security troops.

Heckler & Koch UMP, 11.43x23mm (.45ACP), Germany, 1999 (Holdout -4 with stock folded)
The *Universelle Maschinenpistole* (universal submachine gun) in .45ACP is the first example of the new submachine gun generation by Heckler & Koch. It was designed specifically for American police SWAT units. It is a light, simple blowback weapon with most components made of synthetics. The UMP has a folding stock and integral mounting rails for a vertical foregrip (reduce Rcl to -1 if fitted), targeting laser, flashlight and optical sight. A Swiss B&T sound suppressor can be clipped on in no time at all (Dam 2d+, +1.0 lbs., $700, Hearing -7).

The UMP is also available in 10x21mm (.40S&W); Dam 2d+1+, 1/2D 160, Max 1,900, Wt 5.7, AWt 1.2, Shots 30, ST 10, Rcl -1.

Heckler & Koch NBW, 4.6x30mm Royal Ordnance, Germany, 2000 (Holdout -2)
Nahbereichswaffe means "close-quarter weapon" and is the German term for the type of firearm called a Personal Defense Weapon in English. This weapon will soon enter production, to take the place of the 9x19mm MP5K. It looks like a large black plastic pistol, with the magazine in the grip. It is a fully ambidextrous gas-loading weapon based on the G36 rifle (see below). Beneath the barrel is a folding foregrip for two-handed firing. An extended 40-round magazine is available, but sticks well out of the grip (AWt 0.9, Holdout -3). Although it is easily overlooked at first sight, there is also a retractable stock for aimed shots (+3 Acc, using Rifle skill). However, normal use would be with the stock retracted, using the foregrip. The NBW has only small iron sights, but on the rear of the receiver is a mounting rail for optical sights. The standard sight is a very small self-illuminated electronic collimating sight made by Hensoldt. It provides rapid target acquisition with both eyes open (already figured into SS and Wt) and adds +3 Acc to negate darkness penalties.

Rifles

Heckler & Koch HK53A3, 5.56x45mm NATO, Germany, 1970 (Holdout -4 with stock retracted)
This assault carbine is a very compact version of the 5.56x45mm HK33A2 assault rifle, which itself is only a smaller variant of the 7.62x51mm G3A3 rifle (p. HT115). It has a telescoping stock like the

MP5A3 submachine gun. It is possible to have it with a fixed stock (HK53A2; Wt 7.25, Holdout -5) or a stockless butt cap (HK53A1; Wt 6.7, Rcl -2). Originally available with 25-round (AWt 1.2) and 40-round (AWt 2.0) magazines, H&K have since changed production to a 30-round magazine. The C-MAG double drum magazine holding 100 rounds is also available for this weapon (AWt 5.0, -2 Holdout). Since 1982 it can be bought with a 3-round-burst setting in addition to single shots and full auto (the designation then changing to HK53A5). It is often found with a flashlight mounted under the muzzle for close-quarter combat. The HK53A5 was adopted by a number of elite units, among them the Danish Frømandskorpset, the Mexican *Zorro* special forces, the Norwegian Jæger, the Senegalese marine commandos, the Mobile Security Division (MSD) teams of the U.S. State Department's Diplomatic Security Service (DSS), and some German SWAT units.

(In *GURPS Special Ops* it is wrongly called a variant of the MP5 (p. SO106). The stats also seem to be rather off.)

Heckler & Koch G8, 7.62x51mm NATO, Germany, 1982 (Holdout -7)

A heavy automatic rifle developed from the HK21A1 machine gun (p. HT120). Classified as a sniper support rifle, it has a match-grade quick-change barrel, a bipod and a Hensoldt 4X scope (+2 Acc). The standard feed device is the 20-round magazine of the G3 rifle, but a 50-round drum magazine is available (AWt 4.3). By installing an adapter, it can use disintegrating belts of the 7.62x51mm Rheinmetall MG3 or other NATO machine guns instead (AWt 6.6 for a 100-round belt). The G8 is capable of precision single shots, 3-round controlled bursts and full automatic fire. The weapon is used by all German military SpecOps units (*Fernspäher*, *Kampfschwimmer* and KSK), as well as the German border police, GSG9 and some SWAT units.

Colt M4, 5.56x45mm NATO, USA, 1986 (Holdout -5)

The Colt M4 (CAR-15A2 Model 720) assault carbine with its short barrel and telescopic stock is the linear descendent of the M177E2 *Commando* (CAR-15A1 Model 629) dating to 1967 (p. HT115). Like the full-size M16A2, it is incapable of full automatic fire, but will fire 3-round limited bursts instead. The barrel will mount the 40x46mmR Colt M203A1 underbarrel grenade launcher (p. HT121) or the 12-gauge KAC *Master Key S* underbarrel shotgun (a cut-down Remington Model 870, p. HT112, Shots 3+1). In 1986 the M4 was adopted as a service weapon for vehicle crews, radio operators, forward observers, etc. by the U.S. Marines, but not until 1994 by the U.S. Army.

Basically similar carbines capable of full automatic fire at RoF 15* (e.g. the CAR-15A2 Model 723) had been in use with the U.S. Navy SEALs and U.S. Army 1[st] SFOD-Delta since the mid-1980s, until they were replaced by the M4A1 (below). SpecOps units in France, Greece, Guatemala, Kuwait, Mexico, Sri Lanka, Thailand, Turkey, the United Arab Emirates and others have also adopted full auto variants, as did some American SWAT units like those of the LAPD, the DEA and the U.S. Marshals Service. Semi-automatic versions (RoF 3~) have been likewise popular with U.S. law enforcement units in recent years.

Diemaco of Canada produce a licensed full auto copy of the M4 as the C8 (CAR-15A2 Model 725), which was adopted by the Canadian, Danish and Dutch military and the Royal Canadian Mounted Police.

The M4A1 (CAR-15A3 Model 927) of 1994 is intended for SpecOps personnel only. Unlike the M4, it can fire full automatic instead of 3-round bursts and in addition its carrying handle can be removed as on the M16A3, to allow the easy installation of optical sights; RoF 15*. Optronics used with the M4A1 include the AN/PVS-4 image-intensifying night sight (+2 Acc, +3.3 lbs.), AN/PAS-13 thermal imaging sight (+2 Acc, +4.5 lbs.), AN/PAQ-4C IR-targeting laser (U.S. Army, +0.25 lbs.), AN/PEQ-2 IR-targeting laser/illuminator (U.S. Navy, +0.7 lbs.), ACOG reflex sight (SS 8, +0.5 lbs.), ACOG 4X scope (+2 Acc, +0.6 lbs.) and the Aimpoint M68 Close Combat Optic (CCO) red dot sight (SS

8, +1.5 lbs.). A quick-detachable sound suppressor by KAC is in service with U.S. SpecOps units (Dam 3d, +1.0 lbs., -1 Holdout, Hearing -5). The M4A1 has been adopted by all U.S. SpecOps units, and the export version Model 977 has been bought by the Israeli Sayeret Mat'kal and some French military SpecOps units such as the Pathfinders of the 2e RÉP and the RAID antiterrorist unit of the French national police.

Since 1997 the aircrews of SOCOM, including the pilots of AFSOC and Delta Force, use the M4K. Hand-built by KAC from M4A1s, it is a further shortened M4A1, heavily modified for the specialized needs of an aircrew survival weapon. It has no carrying handle, using flip-up front and rear sights instead. It can mount all optical sights as above. All protrusions like the case deflector and the forward-assist handle were removed, to streamline the gun for fast exit from a crashed aircraft. It has a new, simpler telescoping stock and an integral rudimentary sound suppressor (Hearing -3), which is good for a limited number of shots only; Dam 3d, SS 10, Acc 7, 1/2D 200, Max 1,500, Wt 6.5, RoF 10*, Holdout -4.

All of these CAR-15 variants can take the 100-round C-MAG double drum magazine (AWt 5.0), which was adopted by a number of SpecOps units, including the French marines and naval commandos, the U.S. Navy SEALs and the Hostage Rescue Team of the FBI.

Tzniitochmash ASS *Val*, 9x39mm SP-6, Russia, 1988 (Holdout -5 with stock folded)
This assault rifle is based on the Kalashnikov action. The *Val* (shaft) is a silenced weapon with built-in sound suppressor, firing a 9mm round with low muzzle velocity, but good armor penetration. It has a folding stock.

The VSS *Vintorez* (thread-cutter) is the sniper rifle variant of the ASS. It has a wooden skeleton stock like the SVD and a mount for a 4X telescope (+2 Acc, +1.3 lbs.) or night vision sight (+2 Acc, +2.9 lbs.). Like the ASS, it is selective fire. It usually feeds from a 10-round magazine, but can use the 20-round magazine of the ASS (and vice-versa). Stats of the VSS are as follows: Dam 2d(2)+, SS 12, Acc 11+2, 1/2D 200, Max 2,000, Wt 6.5 (w/o scope), AWt 0.8, RoF 10*, Shots 10, ST 9, Rcl -1, Holdout -6.

Both weapons have been adopted by the SpecOps units of the Russian Ministry of the Internal Affairs by 1994 at the latest, and probably also by Army and Navy units.

NORINCO Type 89, 5.8x42mm Type 89, People's Republic of China, 1990 (Holdout -5)
The new Chinese service rifle is a bullpup design and seems to be inspired by the French 5.56x45mm GIAT FA-MAS rifle. It has a similar large carrying handle and a special pistol grip. The Type 89 is chambered for an unique round and offers 3-round bursts in addition to semi- and full-automatic fire. It can mount the 40x46mmR Type 89 underbarrel grenade launcher, which is a copy of the Colt M203 (p. HT121) and uses interchangeable grenades. There are also carbine, sniper rifle and squad automatic weapon versions of this gun. It is in service with elite units of the Chinese Army, notably those stationed in Hong Kong since 1997.

Accuracy International AW, 7.62x51mm NATO, UK, 1993 (Holdout -8)
In 1986 the British Army adopted the L96A1 (commercial designation PM) as its standard sniper rifle, replacing the Enfield L42A1. It is a modern bolt-action sniper rifle with synthetic stock, floating barrel, detachable 10-round magazine, folding bipod and Hensoldt 6X telescopic sight.

An improved, if basically similar model known as the AW became available in 1993. Developed in cooperation with the Swedish Army, it features a Hensoldt 10X scope and a new barrel with muzzle brake. The AW was adopted by Australia, Belgium, Ireland, Italy, Latvia, the Netherlands, New Zealand, Oman, Spain and Sweden (as Psg90). The Swedes also issue APDS rounds (Dam 9d(2), 1/2D 1,500).

A further development, the AWM, is chambered for the 8.6x70mm (.338 Lapua Magnum) cartridge. It is slightly longer and has a 4-round magazine, but otherwise similar to the AW. It was adopted by Dutch and Italian SpecOps units; Dam 9d+1, SS 15, Acc 12+3, 1/2D 1,500, Max 5,500, Wt 17.5, AWt 0.7, RoF 1/2, Shots 4, ST 13B, Rcl -3, Holdout -8.

The AWM-F was developed for the German KSK units. Adopted as the G22 in 1997, it is chambered for the 7.62x66mmB (.300 Winchester Magnum) round, has a folding stock and a variable 3-12X scope; Dam 8d+1, SS 15,

Acc 12+3, 1/2D 1,300, Max 5,000, Wt 15.8, AWt 0.7, RoF 1/2, Shots 5, ST 12B, Rcl -2, Holdout -7 with stock folded.

Izhmash AK-105, 5.45x39mm M-74, Russia, 1993 (Holdout -4 with stock folded)
One of the latest Kalashnikov weapons is an assault carbine adopted to replace the 5.45x39mm AKS-74U (p. SO100) with Russian *Spetsnaz*, helicopter pilots, tank crews etc. It has a shortened barrel and a folding stock. The magazines are identical with those of the AK-74 series. (Despite the official adoption it is unclear if it is actually in service.)

The almost identical AK-102 in 5.56x45mm NATO is offered for export; Dam 4d.

Colt M16A3, 5.56x45mm NATO, USA, 1994 (Holdout -6)
The standard full-size rifle of U.S. SpecOps units, commercial designation AR-15A3 Model 901. It differs from the common service rifle, the M16A2 (AR-15A2 Model 645), in the provision of the same detachable carrying handle/rear sight with integral optics mount as the M4A1 (see above). Also, it fires full auto instead of 3-round limited bursts. The M16A4 is identical except for its 3-round burst limiter.

KBP OTs-14 *Groza*, 9x39mm SP-4, Russia, 1994 (Holdout -4)
A new modular design fielded by internal security troops of the Russian MVD. The *Groza* (thunderstorm) uses components of the 5.45x39mm Izhmash AKS-74U carbine, but is a compact bullpup-configuration weapon chambered for the 9x39mm cartridge. The basic version has a carrying handle and a vertical frontgrip like the Steyr AUG for better control. It is often found with a 4X telescopic sight (+2 Acc, +0.8 lbs.).

A sound suppressor can be readily fitted; Dam 2d(2)+, 1/2D 200, Max 1,500, Wt 8.4, Holdout -5, Hearing -5.

Alternatively, the rifle can integrate a modified 40mm BP-30 underbarrel grenade launcher, which uses the same trigger as the rifle; Dam 1d+2 [3d], SS 10, Acc 5, Min 50, Max 440, Wt 10.2 (rifle + launcher), AWt 0.5, RoF 1/4, Shots 1, ST 11, Rcl -1, Holdout -5. HE and smoke grenades are used, which are not interchangeable with those used by Western designs patterned on the 40x46mmR Colt M79.

The same weapon chambered for the old 7.62x39mm M-43 cartridge was adopted in 1998 by Russian airborne (including *Spetsnaz*) and combat engineer troops. It is slightly longer and employs the magazine of the AK-47 series; Dam 5d+1, SS 11, Acc 7, 1/2D 400, Max 3,000, Wt 8.6, AWt 1.9, RoF 12*, Shots 30, ST 10, Rcl -1, Holdout -5.

With sound suppressor: Dam 3d, 1/2D 200, Max 2,000, Wt 9.9, Holdout -6.

With grenade launcher: see above, Wt 11.2, Holdout -6.

KBP SVU (OTs-03AS), 7.62x54mmR Mosin-Nagant, Russia, 1994 (Holdout -6)
A sniper rifle developed from the 7.62x54mmR Izhmash SVD (p. SO100). It is of bullpup configuration, but uses the same action, 10-round magazine and 4X telescopic sight as the SVD. However, it is capable of full automatic fire for emergencies! In addition, it has an integral sound suppressor (Hearing -5). The SVU was adopted by SpecOps units of the Russian MVD.

SIG SG551-SWAT, 5.56x45mm NATO, Switzerland, 1994 (Holdout -4 with stock folded)
This is a special carbine version of the SG550 assault rifle (used by the Swiss Army as the Stgw 90). It has a folding stock and 3-round burst option. The magazines are made from translucent plastic and can be clipped together side-by-side, to speed up reloading (-1 sec). The steel components are stainless and coated with plastic, while other parts are made of corrosion-resistant synthetics for use in maritime or tropical environments. It has a scope mount, popular sights including a Hensoldt 6X scope (+2 Acc, +1.0 lbs.) or the ACOG 3.5X red dot sight (SS 9, +1 Acc, +0.6 lbs.). The SG551-SWAT was adopted by the German GSG9 as the G37, and also by the French naval commandos and GIGN.

Heckler & Koch G36, 5.56x45mm NATO, Germany, 1996 (Holdout -5 with stock folded)
The new assault rifle of the German *Bundeswehr* is a conventional gas-loading rifle with folding stock, replacing the 7.62x51mm H&K G3A3 and G3A4. Widespread usage of synthetic materials keep it light and rugged. The magazines are made from translucent plastic and can be clipped together side-by-side, to speed up reloading (-1 sec). Its unique

features are its twin optical sights: a non-magnifying red dot sight is used for snapshots at short ranges (SS 10, +3 Acc in darkness only). Beneath this is an integral 3X telescopic sight for aimed shots at longer distances (SS 12, +1 Acc). An electronic image-intensifier for use at night can be attached in front of the telescope, negating darkness penalties (+2.6 lbs.). Only the scope can be used when the night sight attachment is fitted.

The G36E was adopted by Spain in 1998. It differs in having a simple 1.5X sight instead of the twin optics; SS 11, Acc 12, Wt 8.3.

The G36K assault carbine used by the KSK has a shortened barrel and mounting rails for both a flashlight and a targeting laser in addition to the optical sights; Dam 4d+2, SS 8/10, Acc 8/8+1, 1/2D 300, Max 2.000, Wt 9.6 (incl. laser and light), Holdout -4 with stock folded.

The MG36 squad automatic weapon is almost identical to the G36, but has a heavy barrel and folding bipod. It is usually issued with a 100-round C-MAG double drum magazine, but can of course also use the 30-round magazine; Wt 13.9, AWt 5.0, ST 10B.

Barrett M107, 12.7x99mm Browning (.50 BMG), USA, 1999 (Holdout -9)
This is a bullpup-configuration anti-material/sniper rifle based on the company's commercial Model 95. It uses a bolt-action and is more accurate than the old Model 82A1 (p. HT115). Features include a factory-fitted Swarovski 10X scope, a folding bipod, and a very effective muzzlebrake. It is usually issued with APEI ammunition: 11d(2) plus 1d-4 [2d]. The rifle was adopted by the U.S. Army in 1999 as the M107.

Alliant-Heckler & Koch OICW, 20x28mm and 5.56x45mm NATO, USA, 2006, (Holdout -7)
The Objective Individual Combat Weapon is the U.S. military's key infantry weapon for the next decades, replacing the 40x46mmR Colt M203 grenade launcher and some 5.56x45mm Colt M4 carbines and 5.56x45mm Colt M16A2 and M16A4 assault rifles with front-line troops. The SABR design selected in 1998 was developed by an international consortium headed by Alliant and including Contraves-Brashear of the USA, Octec of the UK and H&K and Dynamit-Nobel of Germany. It will be manufactured by the U.S. subsidiary of H&K. The fully ambidextrous system consists of a semi-automatic 20mm grenade launcher, a detachable, underbarrel 5.56mm carbine for close defense and the most sophisticated fire control system ever developed for a small arm.

The semi-automatic grenade launcher with its very short barrel is built in bullpup configuration and feeds from a 6-round plastic magazine behind the pistol grip. The 20x28mm HE grenade has four fuse modes: airburst, impact, delayed impact and "window". The airburst mode is especially important, as it allows the attack of foes behind cover. The grenade explodes 1 yard above the ground, the shooter being able to select the distance at which it explodes. In impact mode it works like the old 40x46mmR grenades. The delayed impact mode is used to shoot through light doors etc, exploding immediately behind the obstacle. The "window" mode is used to shoot inside rooms, the grenade detonating 1.5 yards behind the window. Each grenade weighs 0.2 lbs. and will cost about $25. With an accessory pistol grip, the grenade launcher can be used as a stand-alone weapon; SS 12, Wt 7.0 (w/o sight), Holdout -5. The grenade has a minimum range of 30 yards.

The underbarrel weapon is a medium-barreled 5.56x45mm assault carbine based on the H&K G36 rifle (see above). It takes all M16-type magazines and the M9 multi-purpose bayonet. Fire modes include single shots and 2-round limited bursts. The weapon can be used on its own, with an accessory pistol grip. It then lacks a shoulder stock, but makes a compact and light self-defense weapon; SS 10, Wt 5.1 (w/o sight), ST 10, Rcl -2, Holdout -4.

The Fire Control System on top of the weapon includes a red dot collimator with 3X magnification (+1 Acc), a video channel with 6X magnification (+2 Acc), a sensor package to measure air temperature, crosswind velocity, weapon angles etc, a laser rangefinder (not a targeting laser!) and a ballistic computer, which computes flight path and moves the aiming reticle accordingly. The video channel includes a thermal imager and video motion tracker. The thermal imager completely negates all darkness penalties, and has limited detection abilities in smoke, fog and through thin walls. The video tracker automatically tracks all moving objects in the scope, allowing quick engagement of multiple targets (same technique as on fighter aircraft!). The camera can be used to send the images to the soldier's HUD or via radio to upper echelons. The shooter chooses the grenade mode, lases the target for range, the grenades are programmed by an induction ring in the chamber, the computer displays the new aiming point, and the grenadier can

fire the weapon (with +4 to Guns/TL8 (Grenade Launcher) skill), all within 1 second. The sight is responsible for about $7,500 of the unit cost.

The forearm of the carbine has attachment points for targeting lasers and white light flashlights. The gun is scheduled to enter service in about 2006, although prototypes are already in pre-production. The designation is certain to change.

Machine Guns

Saco M60E3, 7.62x51mm NATO, USA, 1983
Contrary to the euphemistic description on p. HT119, the M60 did in fact leave quite a lot to be desired. Thus a product-improved version was developed, the M60E3. It features a second pistol grip under the barrel, a detachable, light bipod and a simplified feeder and barrel change system. The gun is delivered with a long and a short barrel. Stats with short barrel: Dam 6d+2, SS 15, Acc 9, 1/2D 900, Max 4,000, Wt 25.0. It can be mounted on the M122 tripod (15.0 lbs.) and various vehicle mounts. The M60E3 entered service with the U.S. Marine Corps in 1985, and was also adopted by the U.S. Navy (including the SEALs). The U.S. Navy partially replaced it by the M60E4 in 1994 (Wt 29.1), while the Marines selected the FNMI M240G instead, a variant of the FN MAG (p. HT120). The U.S. Army Rangers and Special Forces use the M240B.

General Electric GAU-19/A, 12.7x99mm Browning (.50 BMG), USA, 1991
The latest addition to the minigun family. Originally known as the GECAL50 and available for production since 1983, it was put into full production after its adoption by the U.S. Air Force in 1990 as door gun on SpecOps helicopters (specifically, the Sikorsky MH-60G Pave Hawk, p. SO82). It has three rotating barrels and two selectable firing rates, either RoF 16 or 33. The power requirement is 3 kW at RoF 33. It can fire 10-round controlled bursts or full automatic. The GAU-19/A feeds from linked belts or unlinked ammunition tanks, depending on installation. It is not found on a tripod. On the pintle mounts in the cabin doors of the MH-60G it feeds from a 750-round belt in the rear of the cabin. Apart from standard ball/tracer mix, the gun will usually fire APEI-T ammunition; Dam 12d(2) plus 1d-4 [2d]. APDS-T rounds are available since 1994; Dam 16d(2), 1/2D 2,000. The current manufacturer is General Dynamics.

FNMI M249E4 SPW, 5.56x45mm NATO, USA, 1995 (Holdout -5 with stock retracted)
A modified variant of the M249E3 SAW (better known as the FN MINIMI-Para), which is the improved paratrooper's version of the M249E1 SAW or MINIMI (p. HT120). The M249E4 Special Purpose Weapon was designed by FNMI, FN of Belgium's U.S. subsidiary, for special warfare units of the U.S. military. It has a shortened barrel and the M5 telescoping stock to make it more compact. The troublesome magazine feeder was removed, so that it can only use belts. An optical sight mount was included, and the forearm was fitted with mounting rails for various accessories, including a light bipod, a foregrip and a targeting laser device.

Rocket Launchers

Talley M141 BDM, 83mm, USA, 1996 (Holdout -5)
Military units tasked with urban combat missions have a requirement for a weapon with good performance against concrete and brick fortifications. The U.S. Army Rangers and Navy SEALs have used the Swedish 84mm FFV M3 MAAWS (a variant of the Carl Gustav Grg48, p. HT122) for this, while the Marines adopted the 83mm McDonnell Douglas MK153 MOD 0 SMAW (pp. SO103-104). However, both weapons are rather heavy, and the Army began to look for a disposable single-shot weapon. The M141 was classified in 1996 as the Army's new Bunker Defeat Munition. It combines a disposable launching tube with the 83mm MK118-0 HEDP warhead of the MK153-0 SMAW, which will breach 8 inches of reinforced concrete. Minimum range is 15 yards, but a longer safety distance is advisable.

Notes

Damage: Some of the guns have an armor divisor of (2). This is usually because the standard bullet that the gun in question fires has superior armor penetration against body armor (flexible armor and light metal plates). The rounds are not necessarily as effective against heavier armor such as ceramic plates or vehicular plating.

RoF: Weapons marked with two asterixes (**) are capable of limited bursts. These consist of a preset number of rounds (see descriptions). Up to three bursts can be fired per second. Add +3 to the effective skill of the shooter when determining the number of hits in a burst. Note that in burst mode the shooter cannot hose down his target.

Wt: Loaded weight of the gun, in pounds. Wt of the GAU-19/A is given without ammunition, as it depends on the installation.

AWt: The weight of the standard ammunition container. Optional magazines are listed in the descriptions.

Cost: Cost with one empty magazine, unloaded, including any sighting devices as per description. Weapons marked with an asterix (*) don't have optical sights included in their costs, although they are usually used with such!

What's It Worth?

(All right, ten seconds to go. Cue audience. Cue Wick. And in five. . . four. . . three. . . two. . . one. . .)

"Welcome back to *Players Assume the Craziest Things!* And here's your host, Joooooooohn Wick!!!"

Thank you. Thank you. If I could think of something funny to say, you'd all be laughing now.

(cue laugh track)

Well, we've reached the end of another season. It's time to take one last look at those wacky players and the silly things they assume. So far, we've talked about starting on an level playing field, experience points, character death and even character perceptions. But this last one. . . whew. You may want to send the kiddies to bed early tonight, because tonight, we've got such a whopper, the censors are sweating thirty-sided dice.

Tonight, we've got three films, all based on a theme. The first at-home audience member to call in with that theme wins a special one-year supply of Eat-a-Sheet, the world's only edible character sheet.

Well, let's get on with the first film. It comes to us from a Jefferson Carter of St. Paul/Minneapolis. He calls it "Bait and Switch." Let's take a look.

(cut to Carter tape)

Here we have a group of freelance superheroes operating in Twin Cities area. These happy fellows (and one lady) hire out to the highest bidders, adopting the "If the money's right, we're there for the fight" attitude.

Well, that all works well and good until they're hired by a lawyer representing an individual who wishes to remain anonymous. "My client's son recently died from an overdose," the lawyer says. "He'd like to see the people responsible brought to justice. *You* can go where the police can't go. You can do what they can't. He needs you and he's willing to compensate for your services."

That's when he hands over a check -- from the attorney's law firm -- for $50,000.

"The next check will be double," the lawyer says, "if the criminals are convicted."

The heroes agree. The operation goes smooth, and the bad guys captured before you can say "unstable molecules." The case gets picked up by the same legal firm that hired the players and the jury deliberations last about as long as a Tyson fight. The players receive a hundred thousand dollar check and they spend it on danger room renovations.

So, what's the catch?

The man who hired the players doesn't have a son. His name is Hunter Rose. He's one of the crime lords of the city.

The criminals were competitors. Now, thanks to the players, Mr. Rose controls *all* cocaine on the west side of Minneapolis.

Those wacky players. Well, I guess what they never knew never hurt them.

Player Assumption #1: They're always doing the right thing.

* * *

Girlfriend: "Are you watching this?"

Boyfriend: "Not really."

Girlfriend: "That means I can change the channel."

<click>

* * *

(insert obligatory, repetitive and redundant Danny Elfman "bouncy, yet creepy" theme)

"Hello, kiddies! Your old pal the Wick Keeper here with another *deadliciously* demonic tale. This one I call. . . *Bug Hunt*."

(credit placard reads:)

<div style="text-align:center">

based on a short story originally appearing in
SHADIS MAGAZINE
written by John Wick
published by Alderac Entertainment Group

</div>

It's a sci-fi scenario that opens in the middle of things. The players wake up in cryo-chambers to the sound of claxon alarms, screams and ripping flesh; a splash of blood on their faces. They open their eyes and see spiders the size of cows moving like lightning through the room. A couple chambers are filled with a thick, web-like substance. If you listen carefully -- through the screaming claxons and the screaming bodies -- you can hear muffled voices begging for help.

The players fight their way out of the room. They fight their way to their weapons. They fight their way to the bridge and find out where they are. It's a small planet with a smaller research station. . . sending out an SOS. That's usually when the players figure out what's missing: their memories. Obviously, they're a rescue team here to answer that SOS. Right?

Wrong. When they get to the research station -- more spiders waiting for them outside -- they find out the truth. They're not a rescue team, they're mercenaries sent to steal secrets from the research center. . . at any cost.

Every corpse in the research station? That's their work.

Mercenaries. Merciless. Murder, murder, murder.

Turns out the researchers were finding ways to communicate with the spiders. The creatures are powerful psychics, and research shows ingesting spider milk is a powerful psychic stimulant in humans. That's what the players are here to steal.

Unfortunately, two things went wrong after the mission. The first was a group of spiders who snuck on board while they carried out their dirty deeds. The second problem? The players' employers don't want them coming back. Their ship was designed to detonate when it escaped the atmosphere -- only the spider serum would survive the explosion.

Of course, now that things have gone wrong, the research station sensors indicate another ship is on its way. A cleaning crew.

Can the players find a way to communicate with the spiders and save themselves from a band of bloodthirsty killers?

A group not a whole lot unlike themselves. . .

Player Assumption #2: The players are the protagonists.

* * *

Girlfriend: Yuch. Spiders.

Boyfriend: You've got the clicker.

Girlfriend: Yeah. Right.

The Starbucks Theatre Presents. . .
The Blair Witch Rip-Off
With your host, John Wick

Open on a group of players (three humans, one demi-human and one half-breed) in the woods. It's dark. They ran out of supplies a week ago. They have no flint, they have no steel. The NPC they hired (the guy with the Hunting and Survival Skills) took off two weeks ago. . . with all the gold, food and fresh water he could carry. He also got away with the magical whutzzit the king's gonna pay 'em ten billion gold pieces for. Apparently, the NPC wanted the reward more than they did.

How did this happen? The players treated the NPC like. . . well, like most players treat NPCs: a pile of bantha poo-doo. So, he left 'em. Alone in the dark.

They don't even know how to find true north.

And while they're out in the woods, the Ranger saved the kingdom, married the king's daughter and stand in line to inherit the throne.

Hey, wait a second. . . was that *Dueling Banjos. . .?*

Player Assumption #3: The world revolves around us.

* * *

Girlfriend: Isn't there anything *good on TV?*

Boyfriend: There's always the Playboy Channel. . .

Girlfriend: You had *to say that, didn't you?*

<click>

* * *

It's a sin we're all guilty of, not just silly players. We all believe we're the hero in a story told for our own pleasure. Like Neal Peart wrote, "We're only immortal for a limited time."

Players assume their characters are the protagonists. They assume the story revolves around them. They assume that everything the Game master tells them is true. They assume everything they know is fact. They assume everyone in the whole wide world is there for their amusement.

Players assume they will win in the end. After all, the books they read (schlock fantasy), the TV they watch (*Star Trek*), the movies they watch (*ID4*) all have happy endings. The hero defeats the bad guy, gets the girl and lives happily ever after.

And most importantly, the hero never -- *ever* -- dies.

Like in *Braveheart*. Or *Gladiator*. Or *The 13th Warrior*.

Or *The Usual Suspects*. Or *A Tale of Two Cities*.

Being a hero doesn't mean you live to see the end of the story. Ask Moses about that.

Being a hero doesn't mean you're always there when the villain goes down. Ask William Wallace about that. (The movie version, that is.)

Being a hero means you're willing to make sacrifices when they need to be made. Being a hero means you're willing to give up everything -- family, friends, loved ones, even life itself -- to make sure justice sees the light of day.

I read an interview with Wolfgang Peterson -- the director of *The Perfect Storm*. I was hoping he'd tell a certain kind of story. I think I'm gonna get my wish. He said [paraphrasing here], "It's a big story about a little struggle." The *13th Warrior* was like that for me. No saving the world. Just thirteen men standing against thirteen thousand, all to save a bunch of people too vain to save themselves.

Frank Miller's *300* has the same kind of energy. Three hundred Spartans standing against three hundred thousand Persians, their deaths buying time for the rest of Greece to get its act together.

So, what's all this amount to?

There's no such thing as a free lunch. (I'm showing my stripes.)

I've GM'd for groups who thought having big guns made them heroes. I introduced them to guys with *bigger* guns. They weren't heroes. They were Swiss cheese in seconds.

I've GM'd for groups who thought having big spellbooks made them heroes. I introduced them to guys who *didn't need* spellbooks. Frogs, every last one of them.

You want to be a hero? It takes more than 100 points, a cool name and witty banter. Just because you assume you're the hero doesn't make it necessarily so.

That's a title you've got to earn.

Small postscript

All right, enough fun for GMs. Next month, an entirely new direction for the column. Next month, *Playing Dirty: The Player's POV*.

See you then.

Of Copper Scrolls and Golden Troves

"Item 1: In the fortress which is in the Vale of Achor, forty cubits under the steps entering to the east: a money chest and its contents, of a weight of seventeen talents."
-- The Copper Scroll

People often tiresomely and pointlessly aver that truth is stranger than fiction. For most truths, and most fiction, this is no great surprise. What you don't hear as often, but which bears repeating in the context of genre-driven roleplaying game scenarios, is that truth is often even more clichéd than fiction. If the Copper Scroll had shown up in your **Dungeons & Dragons** game, rather than in Cave 3 of the Qumran "library" complex near the Dead Sea, you'd have thrown it out as the product of a lazy game writer. But no: in Real Life, there's a coded series of clues to a fabulous lost treasure, with direct relevance to two great and mighty religions, that has evaded searchers for almost two millennia. And it's carved in copper, and sitting in a museum in Amman, Jordan, slowly deteriorating. Waiting for you to rescue it for the cause of imagination once more.

" Item 37: In the stubble field of the Shaveh, facing southwest, in an underground passage looking north, buried at twenty-four cubits: 67 talents."
-- The Copper Scroll

The Copper Scroll actually turned up five years after the Dead Sea Scrolls began appearing, on March 20, 1952. This was one of the few scrolls discovered in situ by actual archaeologists, but its uniqueness didn't end there. Where all 800 of the other Dead Sea Scroll fragments were on parchment or leather, the Copper Scroll was laboriously incised (or punched) into (wait for it) a sheet of 99 percent pure copper. Its script and language differ from the other Qumran documents, being closer to Mishnaic Hebrew (implying a copy from a different source). And, unlike the other Scrolls, this was no theological treatise but a mechanical, almost routine, list of 64 locations with the treasure buried at each. The archaeologists only found this out in 1956, since the Scroll had snapped in two and oxidized into a ball; any attempt to unroll it would destroy it. The Manchester College of Technology managed to cut it into (23!) strips and then reassemble the entire copper sheet to almost its original 30 x 240 centimeter span.

The sheer amount of treasure (4,625 talents of gold and silver, or around 90 tons of precious metal) led some scholars to dismiss the Copper Scroll as a legendary or ritual work, discussing the "concealment of the treasures" as metaphorical progress. However, the tedious, dry tone of the Scroll itself (which matches in form actual treasure inventories from the island of Delos), along with the immense labor of the carving, argue rather that the Copper Scroll is just what it looks like: an inventory of treasure caches. And in 1st century A.D. Judaea, there was only one institution that would have that much money and a need to hide it -- the Temple of Jerusalem, where the priests were watching the entire countryside get ready to revolt against Rome.

Annoyingly, I wasn't able to find a complete English translation of the Copper Scroll, much less the Dead Sea Scrolls themselves, online; I like Geza Vermes' *The Complete Dead Sea Scrolls in English*, should you wish to pore further into these murky textual waters.

" Item 12: In the court of [unreadable], nine cubits under the southern corner: gold and silver vessels for tithe, sprinkling basins, cups, sacrificial bowls, libations vessels; in all, six hundred and nine."
-- The Copper Scroll

Although will we or nill we, we shall have to paddle around in them briefly when dealing with the Copper Scroll, if only to answer the question of what those Dead Sea Scrolls are that the Copper Scroll so emphatically isn't. In 1947 (the year of an entirely different discovery in an entirely different desert outside Roswell, New Mexico), a Bedouin throwing rocks heard the smash of pottery inside a cave near the village of Qumran. Pottery meant pay dirt to Bedouins, because archaeologists always wanted the stuff; the pots in the caves, it turned out, held some of the oldest Biblical manuscripts known -- along with 800 or so fragments of religious rules, commentary, poetry, and some fairly eye-opening heretical lore. The Dead Sea Scrolls, as the collection got tagged, immediately vanished into the care of an elite body of religious scholars who allowed almost no access even to copies of the Scrolls, and published very little

in the way of translation. From this slow, carefully controlled dribble came much of the conventional wisdom about the Scrolls -- that they were the products of an ascetic, holy community known as the Essenes, who lived in a quasi-monastic retreat nearby and held beliefs akin to early Christianity. This interpretation, however, was damaged (if not fatally undermined) by the release of all the Scrolls in 1991, when UCLA (among other institutions impatient at the stonewalling and selfishness of the official Scrolls team) made a photostatic copy of them freely available to all researchers. The cat was out of the bag, and the Scrolls became fair game for competing scholarship -- and competing pseudoscholarship, of course. So, bisociatively enough, the Scrolls could be anything from the Secret Works of Christ to Jewish theocratic commentary to the Atlantean Gospels. And the Essenes might have been more like the Michigan or Montana Militias than their pre-1991 press indicated.

Many of the Scrolls paint a fairly alarming apocalyptic picture of the End of Days, when the "Teacher of Righteousness" will be opposed by the "Wicked Priest" and tumult shall erupt throughout the land on the physical and the spiritual levels. Admittedly, this description wasn't too inaccurate, as Judaea was about to erupt in a gigantic, many-sided revolution that would end in the destruction of the Second Temple and the Jewish monarchy. To which the holy Essenes might well have said, "No loss." The vast majority of the Temple priesthood, according to something called the Damascus Document (discovered among yet another collection of scrolls, this one from the Geniza marketplace-cum-seminary in Cairo by way of Cambridge University), is actually held fast in "the nets of Belial." Only the true priesthood of the line of Zadok (rather than Levi) was safe from the Evil One and his Wicked Priest (it all sounds much more impressive in 1st-century Hebrew). Some scholars describe some fragmentary Dead Sea Scrolls as part of the "Zadokite tradition" (possibly cognate with the "Sadducees" of the Bible) detailed by the Damascus Document. The connection between Montana and Qumran can seem pretty eerie when you're reading the more exciteable scrolls. Of course, the widely variant character of the Dead Sea Scrolls inclines me to the notion that the Qumran caves held the library of Jerusalem, removed for storage during the rebellion of 68 A.D. This would explain why the ascetic Essenes, so often tagged as the holy men who wrote the Dead Sea Scrolls, seem so much like the "Builders of the Enclosure" (or as we'd put it today, "cultists in their compound" or "terrorists in their training camp") railed against by some of the other Scrolls themselves. All of this will have a nice "old-home week" feel for *Time Travel* campaigns flung hither and yon through the bloody past of the Holy Land by the constant release of death energies near places of power.

" Item Three: In the Great Cistern which is in the Court of Peristyle, in the spout in its floor, concealed in a hole in front of the upper opening: nine hundred talents."
-- The Copper Scroll

Other campaigns, of course, will center on treasure hunting, which is, of course, the natural thing to do when provided such a handy treasure tour guide as the Copper Scroll. The mightiest of the Copper Scroll-driven delvers is the former Baptist minister (and apparently now a convert to Judaism) Vendyl Jones. He's not an archaeologist, nor does he have a permanent dig permit from the Israeli department of antiquities, but somehow wanders the land with top-quality image and geophysical sensing equipment scouring the Copper Scroll for directions to the treasures of the Temple. To his credit, he seems to be genuinely interested in said treasure for its spiritual content, and he's found a jar that contains (quite possibly) anointing oil used in the Temple where he claims the Copper Scroll told him to dig. On the other hand, one jar (and a pile of pink powder he claims is ancient perfume) is pretty thin takings given the sumptuousness of the Copper Scroll's promises. Jones has also seen a "blue aura" inside some of the shafts where he's dug, and he finds the word "blue" in the Scroll as well; he helpfully points out that blue glows are also associated with the Incas and the Pyramids of Egypt, which surely have some bearing on things, because they have some bearing on everything involving half-crazed archaeologists.

" Item 64: In a pit adjoining on the north, in a hole opening northward, and buried at its mouth: a copy of this document, with an explanation and their measurements, and an inventory of each and every thing."
-- The Copper Scroll

Perhaps the code requires a second piece; the "copy of this document, with an explanation" promised in Item 64 of the Copper Scroll. It was, of course, this key (called the Silver Scroll by our boy Vendyl Jones) that the Templars found while digging beneath the Temple in the 12th century, and which they could decipher just sufficiently to become filthy rich and secretly control Europe and build all those cathedrals. The great thing about dragging the Templars in here, of

course, is that you can hide their "twin" of the Copper Scroll with any of the great troves of myth: the Oak Island Money Pit, the Rennes-la-Chateau documents, the Lost Dutchman Mine, the Amber Room, or (broken in grand "rod of seven parts" tradition) in all of them for proper *Cliffhangers* style treasure hunting. (And tie it into the whole "magical twin" archetype of Gog and Magog, speaking of apocalypses.) What the treasure actually is when all is said and found, of course, depends on your game. There's the Ark, the Holy Grail, the severed prophetic head of John the Baptist or Orpheus, a crashed "Star of Bethlehem" UFO, or the rest of the usual suspects, plus (of course) the tons and tons of gold and silver.

Or -- the textual analysis of the Copper Scroll seems to indicate the "diary" of a secret band traveling on many excursions by circuitous routes to bury a vast treasure a fraction at a time at certain (ritually? magically? geophysically?) significant points. Is the Copper Scroll a giant misdirection, and the real "treasure" comes from the route indicated on some map of Jerusalem and its environs, charting out a blue-limned ley figure that reveals The Secret? Is the Copper Scroll itself the map, a schematic circuit diagram for an experiential treasure achievable by meditation on its surface (a surface carved in the copper of Venus, goddess of mirrors and nasty-minded ultraterrestrials)? Given that the Temple in Jerusalem and the "Essene" compound near Qumran both show signs of sacred geometry in their construction (as, of course, does the crypto-Templar castle of Rosslyn in Scotland), perhaps it's just such transcendental topology behind it all, carved in copper by men who knew Christ.

Appendix Z: Incomprehensible Legal Boilerplate of the Future!

by Steven Marsh

Let's face it; people don't fear lawyers anywhere *near* enough.

In the far-flung science fantasy world of **Fading Suns**, this lack of fear is perhaps emphasized; what does a player have to fear from a mere Reeve, when they have access to blaster rifles, grenades, and wireblades?

The law.

It may not cook your internal organs from the inside out, but the law can be just as effective in ruining your life.

To that end, here is the *Incomprehensible Legal Boilerplate of the Future!* Shrunk down to a 10 point font with half-inch margins or so, this boilerplate should fit nicely on a half-sheet of paper. Although designed for **Fading Suns**, it should be adaptable for any science fiction universe where lawyers still exist; simply replace references of Reeves to whatever they're called. It's especially appropriate for worlds where confusion is the norm, like **Paranoia**.

The *ILBotF!* is perhaps most effective when a relatively straight-forward contract is put on the front; "The undersigned agrees to purchase one (1) Rampart Tree Mink," or "The undersigned agrees that they have received aid, in the form of information, from the Vao." Include spots for the PCs to sign, spots for relevant NPCs to sign, and spots for two NPCs to sign, and you're set. For added legal paranoia, include things like, "Please print the True Name of undersigned," or "Please list city of birth for verification purposes." Use a highlighter to emphasize "important" pieces. Be creative. Be feared.

This document has been prepared in association and adjudication with professional precision on behalf of the Reeves Guild or one of its direct Guild associates (as outlined in Provision MT84-1773 of the Guild Associates Classification Refinement Code) for sole and exclusive use by the authorized cosigned and/or possessor indicated or otherwise noted on the opposite side (with presumed inclusions and exclusions automatically outlined as detailed in MT87-4412).

Any other uses not covered by the document itself, these inclusions/exclusions, or other explicitly authorized post-document preparation modifications is expressly forbidden, and will render the document null and void. This nullification is not automatic, however, and must be approved by a Reeve Mandate; explicit non-usage of a Reeve Mandate does not indicate compliance, but rather a temporal transference of exclusivity rights. Any Reeve Mandate may be retroactively applied, rendering non-authorized ruling usages, as well as any resultant agreements, decisions, and adjudication, null and void. There are no non-judgements that are exempt from these conditions, though certain specific and implicit non-judgements may be retro-non-de-retroactively reinstated to legitimacy after a ruling of Council or Mandate, depending on the nature of the re-reversal necessary (see MT44-1180 for a specific outline of the classification or reclassification necessary).

You may be entitled to certain rights not explicitly stated, implicitly implied, or contractually inferred, depending on applicable adjudicating court, location of document's notarization (or legal document verification in the event of a non-notarizable contract), venue of claim, or other conditions (see ME30-4294 for a more complete list of possible non-stated circumstances). If other rights are applicable, these rights will be limited to the extent the contract is legally able, to a minimum term of the least applicable time allowed and a maximum term of thirty days, or greater if applicable rights cannot be legally adjudicated without express implication of greater inferred rights (see MT55-2231 for the expanded concise listing of these applicable exemption limitation enactors). Regardless, it falls to the holder of these additional rights to exercise them, and neither the associated Reeve, Reeve Council, or other direct Reeve associates (c.f. MT84-1773) will be held liable for failure to explicitly inform the holder of their additional rights, unless the additional rights specifically and directly apply to the statement of additional right; regardless, failure to inform the holder of these rights will not nullify the remainder of the agreement not affected by the post-preparation inclusion of excluded rights.

A full text of applicable contract terms and conditions are available upon request and approved completion of form MF72-0001.

This document has been prepared by representative Reeve agent ___**WEBSTER TAMLITON**___ (encoded Keyprint identification signature **QL22yM641hUzL4wWMthOFlVwe871AsRqw**). This document bears encoded signature Keyprint identification **Ut53rTT58H7u7sfT4DddauYY832dCCXfd**. It has been modified 0 time(s) prior to implementation and 0 time(s) after enactment.

Adventure Ideas

- In the middle of an unrelated mission, The PCs are summoned to appear in court because of a contract they signed some time ago. Of course it would be inconvenient to attend, but do they want to risk angering whoever is bringing suit, or perhaps even the Reeves? Or do the players throw money at the Reeves guild to make the problem go away (or at least buy more time)?
- If all documents use the same boilerplate, then it might be possible for documents to become mixed up, resulting in all kinds of adventure possibilities.
- In a universe that has both lawyers and demons, what if the contracts of the denizens of the void happen to use the same boilerplate? Or could an experienced lawyer possibly negotiate a better deal from the powers of darkness than the PCs (or demon-dealing NPCs) could do on their own?

Pyramid Pick

Diskwars: Dragonkin Army Set and Farrenghast's Undead Revised Editions

Published by [Fantasy Flight Publishing Inc.](#)

Designed by Tom Jolly & Christian T Petersen

Boxed set with 7 sheets of disks, 1 sheet of components, and 1 rules sheet; $9.95

I was intrigued by *Diskwars* when I first I heard of the game. Was it Pogs, a wargame, a CCG or an RPG? Now that I actually have two of the eight army sets I accurately say that it is a combination of all four, yet different enough from them to be unique. The army set boxes each contain 8 perforated sheets of glossy full color cardboard which you punch your disks out of, and a huge double-sided sheet of rules. Each set is complete and ready to play as is, and takes only moments to punch the disks out of the perforated card holding them.

The disks are sturdy, difficult to bend and survive a level two allergy test (meaning it is difficult to sneeze your playing area clean of pieces). The pieces are full color with a semi-gloss finish that doesn't interfere with players reading the disk. The art is very good -- sort of a cross between Silver Age comics and Phil Folio's style -- and of consistently high quality. I was surprised that six or seven different artists drew the two sets of disks I have, as the styles are remarkably similar. For the most part the size of the art is about half the surface area of a *Magic: the Gathering card*, but there are the occasional oversized disk such as Marizyak The Hydra, which is about the same size. Given the size of the disks, the artists did an admirable job of conveying the essential identity of their object, opting for a more comic/cartoon feel over the art house portrait-style of *Magic: The Gathering*.

The disks themselves come it three flavors: massive land disks, component disks, and creatures. The components are all referenced in the rules sheet and are used during play, with spell disks having to be purchased with your army points before play starts. Land disks are huge, and serve only as staging areas; otherwise they have no effect of play. The bulk (and most interesting part) of any army are the creature disks. Each disk contains a few numbers distributed around their circumference. These represent the creature's attack, defense and toughness, movement and wounds. Attack corresponds to the amount of damage a creature can inflict upon an enemy; defense, the amount of damage a creature inflicts upon an attacker; and toughness, the amount of damage a creature can take before suffering a wound. Creatures with more than one wound can suffer a like amount of damage before being destroyed, while all others have but one wound. These figures are important during play and are very similar to the game mechanics used to resolve a *Magic: The Gathering* battle.

Much of the game shows it roots from *Magic*, but is uniquely different in that it adds a tactical aspect that CCGs lack; you can move your pieces around the table and your actual troop deployment determines whether you can intercept/block enemy units, not simply whether you have them in your hand or not. Spells can be cast from spell-using troops (indicated upon their disks) and have range, duration, effect (generally damage) and Level. Spells are cast during the activation segment and are purchased before play commences. In a familiar blast from the past, 1st level spellcasters can only cast 1st level spells while 2nd and 3rd levels can cast lower level spells as well as those of their

own level. Only one spell can be cast per spellcaster and the spell disks are discarded after use, so it is important to protect your wizards while allowing them to use those expensive spells you purchased for them. On the other hand, swarming a magic user with smaller, cheaper creatures is also a viable tactic. All the spells have ranges and getting your troops within combat range can be daunting; then again, Magic-using creatures are the most intimidating troops of any wargame. One important consideration is the fact that your spellbook (stack of available spells) will become depleted as you use each spell and then discard it; you need to strike a balance between having too few spells available and too many. As each spell is roughly the same point cost as a creature disk this can be a decisive decision which can win or lose the battle before your troops even take the field. Having a variety of powerful spells is all well and good, unless your opponent gives your magician the bum's rush by swarming him with cheap troops before he cast those hoarded spells.

Movement has a direct bearing on close combat. Each creature disk has a movement value that determines how far you move. Most wargames interpret this number as a distance in inches or centimeters; *Diskwars*, however, uses the number to indicate flips of the disk. A move of two means you flip the disk end for end twice, a move of three indicates you flip it three times and so on and so on. It is quite refreshing not to have to measure anything, and moving disks is reminiscent of marching green plastic army men as a child. Once movement is finished any disk which is overlapping another is considered to be attacking the disk below it. There is a very well-diagramed section of the rule sheet that deals with multiple overlaps, and it is nice to see the level of thought that has been put into the rules. Creatures have an attack, defense and toughness value. Attackers subtract this form the defender's toughness, and defenders subtract their defense value from the attacker's toughness. If either value exceeds the target's toughness a wound is scored. There are a number of abilities such as first blow and swashbuckler that modify basic combat to make it more interesting.

There is very little information about the world the game is based in, and I hope that Fantasy Flight Games corrects this as the world looks like it has the potential to be a full-fledged RPG. There are eight army boxes: Dragonkin, Farrenghast's Undead, Knights of Falladir, Lotharia Elves, Orcs of The Broken Plain, Dwarves of The Red Anvil, The Uthuk Yllan, and Acolytes of Timorran. We don't learn much about the other armies, and frankly we don't know that much about the army that comes with each box, either; there simply isn't any source material to speak of. On the other hand, an Orc is an Orc is an Orc (unless it's a Tynes or Pramis Orc, but that's a whole other story). Suffice it to say that the races are self-explanatory, and they have to be.

Diskwars tries very hard to be a miniatures wargame only without the pounds of lead, and does so admirably. If you like wargames but dislike hauling around thirty kilograms of lead figures or paying hundreds of dollars for said figures, then this could be the game for you. Likewise *Diskwars* is non-collectable, so the acquisition curve that makes CCGs like *Pokemon* and *Magic* so expensive doesn't apply. *Diskwars* is fast, easily picked up and inexpensive. I don't know if it's the wave of the future but it's a heck of a fun ripple.

Pyramid Pick

Battle Cry

Published by [Avalon Hill](#)

Designed by Richard Borg

Boxed set, $44.95

Battle Cry is the first truly-original boardgame published by Avalon Hill since they were bought by Hasbro two years ago. In fact, it was under development at the old Avalon Hill under the name *Command & Colors*. Apparently, Hasbro liked the game enough to include it in its initial wave of game releases, which is a boon for gamers.

Battle Cry is a Civil War game for two players, but it cleverly avoids the dryness of most historical games. The components are gorgeous -- each piece is molded in plastic, and cardboard tiles are sturdy and punch out without the help of a matte knife. More importantly, the game is fast-paced (games can be finished in a half-hour), as simple as a game of *Risk*, and lots of fun.

Battle Cry is purely a tactical game -- there's no strategic level at all. The game includes fifteen scenarios based on historical battles. The scenarios range from the well-known (Bull Run, Gettysburg) to less recognizable ones such as New Hope Church or Brawner's Farm. They don't have to be played in any order, though it's fun to run through them all and see "who won the war."

One of *Battle Cry*'s best features is the inclusion of over forty terrain tiles to customize each battlefield. Shiloh will be covered in forests and woodlands, while generals at Murfreesboro have to contend with a winding river. Lots of terrain types are included, such as orchards, fences, and hills, which lets gamers easily customize their own scenarios. This adds tremendous variety to the game; each battle forces you to make decisions based on the terrain, or face certain defeat.

Actual gameplay is refreshingly simple. The object is always to capture six of your opponent's flags. Capturing flags basically boils down to destroying an enemy unit. There are four units in the game -- infantry, cavalry, artillery, and generals. As you'd expect, each unit has its strengths and weaknesses. Infantry is slow but sure, cavalry fast, artillery can pound enemies from a distance, and generals motivate their troops for a nice combat bonus. The only "statistics" you need to worry about is how far they move (usually one hex) and how many combat dice they roll.

Combat is fast, with few situational modifiers to bog down the pace of the game. If a unit attacks, you roll a number of special combat dice, with different faces. If you roll three infantry, you kill three infantry. If you were firing at cavalry, well, you're out of luck. If you roll a flag, the enemy is forced to retreat a hex. After a few minutes of playing, it becomes very intuitive. You may have to check the rulebook to see how a type of terrain interacts in combat, but since there is usually only a few types of terrain in a given battle, you'll rarely have to refer to the rules after the initial setup. And nothing is more pleasurable than putting your artillery on a hill and bombarding the enemy off the board.

What makes *Battle Cry* especially interesting is its unique system of activating pieces. To do anything in the game, you must play a card. Cards let you issue orders to a limited amount of units in one of three areas of the board: center, left flank, and right flank. There are also special event cards mixed in, which lets you use special tactics such as utilizing sharpshooters to assassinate a general, calling for reinforcements, using hit and run tactics with your cavalry, or even building impregnable fieldworks.

The card system creates some tense moments. The enemy may be pushing hard on your left flank, but you'll be unable to counter because you lack the right cards. While this may be unrealistic, it's a lot of fun. There are lots of decisions

to be made on your turn. Will you devise a careful plan to distract the enemy until you've drawn a proper counteroffensive? Or will you expend a precious card to withdraw your weaker units onto the hills, sacrificing a chance at attacking?

The cards also handicap battles in a historical way. Since Union leadership was generally poor, Union players will often find themselves playing with fewer cards than the Confederates. This means they'll have fewer options, and be forced to rely on more conservative tactics utilizing their often-larger forces. Despite the North and South having identical units in the game, this gives the experience of playing each side truly distinct.

Battle Cry's simplicity means that grognards who cut their teeth on past Avalon Hill games, like the *Great Campaigns of the American Civil War* series, will probably find themselves unsatisfied. It's not a historical simulation, any more than *Axis & Allies* is a detailed WWII simulation. Factors such as fatigue, morale, and unit training are simply not present. The battlefields are approximations of the real counterparts, and a particular strategy that worked in real life might not be possible. But *Battle Cry* isn't meant to reflect those things -- it's meant to be a fast battle game with a historical flavor.

Luck plays an integral part of *Battle Cry*, which is a bonus for some gamers, but despised by others. Sometimes you'll be stuck with a lousy hand of cards and bad dice rolls. No matter how good your strategy is, you're going to lose fast in this situation. Fortunately, this doesn't happen that often. Most of the time the battles are even, and there's not a clear winner until the very end.

There are several annoying typos in some of the scenarios. They range from the humorous (the battle of "Chickamunga") to the confusing -- some scenarios mistakenly include more pieces or terrain tiles than are included with the game. More scenarios would have been nice as well, given the amazing modularity of the game board. Hopefully, Hasbro will put some new ones on their website, along with the errata.

Overall, though, the game is real winner. Even people who wouldn't normally sit down and play a historical game might find themselves cheering their haggard infantry on and having a blast. Hopefully, Hasbro and Avalon Hill will continue the trend of making strategy games with high-quality components, lots of replay value, and solid gameplay.

Pyramid Pick

The Starfarers of Catan

Published by KOSMOS

Distributed by [Mayfair Games](#)

Written by Klaus Teuber

Boxed Set, $75

Unlike its predecessors, *Settlers of Catan* or *Seafarers of Catan*, *Starfarers of Catan* takes our intrepid players into the wilds of outer space where no one can hear you trade, even in German.

If you did not already know, *Starfarers* (or "Asterisk Drivers" as the AltaVista language translator likes to call it) is printed entirely in German, with the exception of the word "Carbon" which is spelled identically in both languages. Well, it's a good thing for us English-speakers that the lovely people at Mayfair Games hired translators to go through and reproduce every word in English. It gives the game a sort of "foreign movie" aspect for the first couple of sessions, as you'll reference the English manual, go back to the German book to look at the pictures, and then back to the English book to realize you're not looking at the right picture in the German book and in fact need to look at the other German book. . . but it's worth the effort.

The translations include a stapled sheaf of German-English playing card translations (each German card is typed out next to its English counterpart) and two stapled paper booklets reprinting the Almanac and Game Overview, sans images. The German versions of these booklets are included as well.

Other than during the initial rules reading, these pages come in quite handy whenever a card is drawn -- you need them to hunt down its equivalent section in the paper sheaf and locate the English translation. This takes up a lot of time, especially since most of the cards are essentially the same text, with the exception of a few choice words, so I've provided a shortcut recommendation (besides waiting for the English version of the game) towards the end of this review.

Parts? You'll get them. Lots of them. Four 6-inch Victorian-style spaceships that rattle, to which you can clip Ship Cannons (blue guns), Boosters (yellow pieces) and Freight Rings (the half-rings, which snap on amazingly well) to display your spaceship's abilities for all to see. This mothership represents every single spaceship in your fleet, so there isn't any confusion.

Instead of rolling a die, the mothership contains four plastic pebbles, one blue, yellow, red, and black -- combinations of which determine all of your transports' speed for this turn. If a black pebble appears, an event occurs and your neighbor must draw from the event card pile. I'll explain this later on.

The other pieces are transporters (spaceships), trading posts, colonies, and spaceport rings (to place around colonies). When using a transporter, you either leave it as it is or place it on top of a colony or trading post. For scale, the spaceport ring is a little larger than an American quarter.

The little gray rings represent Fame rings, and are placed on the tip of each spaceship. Fame rings are gained through

successful interaction with an encounter card.

The game board is a large, foldout map (22 inches by 33 inches) of the entire Catan galaxy. (Yes, Catan galaxy. Seems that every location in Catan is named Catan. Makes it really easy when you have to ask for directions, "Yeah, just turn left at Catan and when you go past the Catan, it's another 2 miles till you reach Catan.") In the spirit of the Catan games, the board has hexagonal movement lines, leading to clusters of three planets or alien trading outposts.

There are a number of planets to one end of the board, and this is where the players begin with pre-set colonies. The planets are numbered and as with the other Catan games, rolling the planet's number on two dice means the planet has produced a resource and all nearby colonies acquire one of those resources. The numbers are from 2 through 12, so a 6 planet is more likely to produce than a 3 planet. Unlike *Settlers*, there is no city building -- starports only mean that transports can be produced at that colony -- so each player only receives one resource per planet per nearby colony. Also, there is no thief, but there is still a penalty when a 7 is rolled -- resources must be sent back to Earth as tribute.

Resources consist of Fuel, Ore, Trade Goods, Carbon (Carbon in English too!), and Wheat. They can be used to create Colony and Trade Ships, Starports, Ships Cannons, Freight Rings, and Boosters. Three of any resource can be traded to the bank for one of any resource, but Trade Goods are two for one.

Exploration is somewhat like *Seafarers of Catan*; travel through space to reach planets, but this time the astrologers have looked ahead and mapped out the planetary locations and what resources they produce. The players are simply ignorant of what number the planets produce their resources on until they skim the planetary atmosphere. Sometimes the planet may be covered in ice or house a pirate lair, making it uninhabitable unless the player has the appropriate number of freight rings or guns available. Once hospitable, the planet's number is determined randomly from a chip draw.

Not only are there planets, but there are aliens to trade with. For each trading outpost at each alien planet, the player gets a special card to enhance his abilities: better resource production, ship upgrades, trading options, or additional fame.

I mentioned the best part of this game earlier, but it bears repeating: the Encounter Cards. Most cards are random logic puzzles. Another player reads the card aloud and asks the leading question. Based on the response, the appropriate part of the card is read. This can even lead to a combat encounter, but might include a gift of resources, fame, or even a wormhole transport to the other end of the board. Combat encounters answered a question I had: What's the point of upgrading the mothership other than for moving around or transporting items? Well, the encountered ship is represented by one of the other players (to the left, right or across), so it forces each players to "keep up with the Joneses." Excellent concept.

As with the other Catan games, the point of Spacefarers is to be the first to accumulate a set number of victory points. Victory points are acquired by defeating pirate lairs, restoring ice planets, gaining fame, becoming friends with aliens, upgrading the mothership, and producing colonies and starports.

I would have like to see some other elements with the game, like inter-player combat. The only interaction with the other players is competition for planetary colony and trade sites, building the better ship, and trading resources with one another. I'd like to be able to blast the competition out of the stars. (This was easily remedied by adding the following optional rule: If two transport ships end the turn in the same phase, the current player may initiate combat. Compare a mothership roll plus combat status of both players. Winning player has choice of taking a random resource from losing player or simply destroying the ship. Since two transport ships cannot reside at the same spot, losing ships that survive should be moved away one intersection, direction determined by the winner.)

The other problem with the game has to do with the plastic container trays. They're great. They sort everything perfectly. They're excellent bays, except that the encounter card tray fits the encounter cards so perfectly that you need a shoehorn to get them out of the tray. After enough of this treatment, the cards will begin to wear. If Mayfair reproduces this game, they should make a small, thumb-sized dip on one side of the encounter card pit to solve this problem. I'm planning on cutting a divot into the plastic myself.

I've been informed by those who own the game that the massive amounts of planetary chit-flipping can wear out the edges of the cardboard chits, causing them to lose their random aspect from those who are "in the know". A quick fix is to place the appropriate chits into separate cups and draw them from these cups as needed.

A good solution to the German card lookup process is to reproduce the card statements on card-sized slips of paper, purchase (or raid your dust-gathering *Magic* collection for) a number of plastic card sheathes, and put the appropriate card in with the appropriate translation. Well, it doesn't necessarily have to be the appropriate card, seeing as how it's in German, you're not going to be reading it, and you only need the card for the back design.

For the really sick and twisted, an alteration to the game could include playing a separate game of combined *Seafarers* and *Settlers of Catan* for each of the starting planets to determine colony positions at the start of the game, creating a month-long campaign (if you play every day of the month).

In conclusion, at a whopping $75, *Starfarers of Catan* is quite expensive, but you're paying for quality. Unlike other games that I've paid $45 dollars for and received a mere thin oak-tag like board and card chit pieces that could have maybe cost $15, the plastic pieces and exceedingly high production quality more than make up for the high cover price. Heck, the motherships can double as baby rattles if you're Daddy Warbucks.

The game is tons of fun, and like all of the Catan series of games has a high repetition factor and its own unique flavor -- the rules are easy enough to learn and the game is quite challenging and tactical.

(Special thanks to Ken Cooney for letting me borrow his copy of the game for reviewing purposes.)

by Max Lybbert

Art colored by [Phil Reed](#)

Charlie entered the small room. Clean-shaven and modestly dressed, about ten other young men waited inside. Jeff, who had put him up to this came in, paid admission for the two of them, and silently showed Charlie to his seat. The unnatural silence made Charlie wonder if he was allowed to talk. Afraid of ridicule, he kept quiet and waited for the room to darken. A kind, fatherly face appeared on the large TV in the room, and Charlie began his first look into what some might consider a cult. . . .

As a story element, it's hard to beat a good cult. Fanatics who oppose the players' group at every turn, fight covertly, resort to brainwashing, and continually rant about conspiracies have a special place in roleplaying. The leader does a great job representing evil incarnate (generally by taking a "normal" or "wholesome" quality to the extreme), and the PCs are the only ones able to oppose him and his irrational followers.

A Few Important Concepts

In popular use, "cult" is reserved for (a) non-mainstream "cult followings" (like roleplaying games), or (b) fanatic religious groups. In this article, we will use the word in a broader sense to include any fringe group that encourages fanaticism, often exploiting members. Of course, while not all cults are violent, politically charged, or destructive, antagonistic cults almost have to be.

Above all, it must be remembered that cult members usually do not consider themselves such. They may feel unjustly singled out or persecuted, but probably feel that their "beliefs" are humanity's only hope. Some consider they have been given a divine charge to protect mankind, or encourage progress. Members are normal people, and may include college-age students, local officials, or anyone from the main population. Cult leaders may be respected in their community, and as such dealing with them will emphasize tact over direct attacks. Players who uncaringly kill cult members or leaders should be tried in court for murder or face similar consequences.

Before creating a cult for any game system, their place in the campaign must be determined. In a *Call of Cthulhu*-type horror campaign the cult may be only a minor antagonist--with the demon they worship representing a more powerful enemy. In such a campaign, the cult would serve not only as an opponent, but also as a living reference (and possibly the group would need to be infiltrated, or a protected artifact "acquired") for intelligence

gathering on the Big Guy in preparation for the final battle.

In *Torg* or fantasy-style campaigns, where certain locales are closely tied to plot development, cults (unwittingly?) could serve to protect an area from "contamination," or the site's unusual traits (i.e. whatever led the adventuring party to the area) could be directly tied to cult teachings.

A *Car Wars*-type future could see cults financially exploiting the masses as an attempt to return to normalcy (players would then need to determine if such exploitation is justified, especially if the cult can deliver on its promises). Cult leaders could also be involved in attempts to research magic, overthrow the government, or use occult means to get results.

In other campaigns a cult could compete with players for the possession of a specific item, a la *Indiana Jones*. In this case, creation of the item is just as important as the creation of the cult; both should fit seamlessly in the time period as well as the campaign.

A well-designed cult even has a place in a *Traveller*-style campaign setting. See Isaac Asimov's *Nightfall* for ideas.

Creation

After determining the campaign purpose of a specific cult, the GM must then determine any main teachings. Recent religious cults have included groups intent on beginning wars in key locations to "hasten the end of the world." Others have divided into twelve tribes, fashioned after Israel's wandering in the desert as recorded in Exodus. Branch Davidians believed David Koresh was a reincarnated Savior, and the Heaven's Gate cult believed that their suicide would allow them to board a spaceship and free them of problems here on Earth. Cults may also be paramilitary groups who are upset about past discrimination and want to fight the current system as revenge.

Beliefs revolving around the general evil of mankind (the "us vs. them" mentality), unavoidable catastrophes, or an unusual link between the leader and whatever gods believed in, are common. Information is often controlled, and leaders commonly resort to brainwashing. Individuality is often stifled "for the good of the group." Any beliefs that justify such exploitation can be used.

The GM should determine social structure, including recruitment and advancement. While some cults are physically isolated from the rest of society, this is not a hard and fast rule. Cult members may have "secret identities," able to function normally in regular city life, but harboring radical views. Sympathizers, such as local celebrities, while not members, may help such groups to seem more legitimate.

What forms of information control are used, how leaders maintain control and handle dissidents, existence and composition of security forces, and any ties to other groups/people (allies or opponents) should be decided. Key members could include the local police chief--effectively stifling any serious investigation into their practices, for instance. Carrying things one step further, the mayor's son may turn up dead; causing him to hire a group of private investigators (the PCs), who eventually uncover Things Man Was Not Meant to Know.

A brief history, detailing the group's origins and recent activities will make this much easier. Now is also a good time to settle on a name.

The formal organization must also be taken care of, with special emphasis placed on the leader. Unlike the (usually) sincere followers, cult leaders may or may not believe their own teachings. It is common, however, for a second-rate con man to begin a cult mainly as a means to exploit his followers, but eventually convince himself of even his most outlandish claims.

Other important cronies should be named and created. It is also necessary to detail the relationships among the upper brass. Failure to address succession can create several splinter groups upon the death of the cult founder, or important commanders could join together in a mutiny attempt.

Entering Play

Once the workings have been determined, it is necessary to introduce your adventuring group to the fanatics. Possible adventure seeds are only limited by the GM's imagination.

- As cults work heavily on recruitment, the party (or important NPCs related to the party) may be considered valuable potential members, or hired for a special job.
- A new "youth club" may require unusual amounts of teenagers' time, causing poor academic performance by new recruits (who also form extremely exclusive cliques), which leads a concerned parent to contact the adventurers.
- An unsolved crime could be linked to the group, or the cult may try to frame the party.
- Searching for an unusual item may cause the heroes to contact the cult -- only to be taken hostage. A mage (or cleric) may decide to investigate the location of a recent mass-suicide following up on a rumor about a powerful artifact's whereabouts.

Any direct dealings with important leaders should leave adventurers unsettled. Remember, as the leaders are greatly charismatic, they should be rather impressive to meet. Characters should need to remind themselves about the danger these impressive people pose to others. GMs who give the feeling that everyone understands the threat these people are to others is neglecting an interesting facet of story development.

Cults also have an uncanny way of repeatedly returning. Defeat of a cult should not be final. Sympathizers (whose numbers often swell and who become increasingly violent in direct proportion to time elapsed since the event) may develop vendettas against the PCs, and lead to whole new adventures.

Every cult needs its own place under the sun, though, in all likelihood not too obviously seen. Properly created, conflict with such groups will provide a welcome relief from hack-and-slash or other stale campaign genres, without upsetting campaign balance or requiring unnecessary cataclysms every few years.

by Owen S. Kerr

Art colored by [Phil Reed](#)

Many RPGs have rules for acquiring followers, retainers, hirelings, and/or stooges, with the various AD&D incarnations among the most notable. These rules usually detail the Who, What, Where, and When aspects: Who is eligible to gain followers? What kinds of retainers are available? Where do they come from? When do people start following my character around?

Aspects that are often missing usually include the Why and the How: Why are all these people following the PC in the first place? How in the world is the PC supposed to keep them happy and subordinate? Many systems explain the Why with charts and tables that assure the player that it's perfectly natural, when one kills enough critters and builds some suitable architecture, for scads of adherents, lackeys, camp-followers, and hangers-on to come swarming out of the woodwork. These same rules very rarely touch on the How questions. They assume that the process for keeping the NPC followers happy is the same as the process by which these NPCs were gained: killing bigger, meaner and nastier things with too many legs and big, sharp, nasty teeth; exploring deeper, darker and more-imposing architecture; and gathering more and better treasures.

What the bulk of the various and sundry rules ignores is the social aspect of being a cult-of-personality leader. Here are a few guidelines for any PC interested in having an atypical group of followers, or for GMs who want to add some spice to the average cult leader.

1. Be Exotic

Let's face it. How many of us, if given the choice, would give up everything we own, our lives and families, to follow a charismatic cult leader, if that leader was, in fact, someone we knew from elementary school? Familiarity does breed contempt, and contempt from a follower is something that your future cult leaders need to avoid at all costs. Come from a strange land, culture, background, or (if possible) all three. If you're as common as dirt, make something up. In a fantasy campaign, hire a good (if unscrupulous) bardic type to elaborate upon your spurious humble beginnings. Playing in a Renaissance campaign? Historically, aliases and false identities were laughably common and easily obtained. In a modern or post-modern setting, fake ID, cosmetic surgery, and computer hacking can create volumes of material that says your character is whoever he wants to be.

An archetype for the exotic, enigmatic leader is from Robert A. Heinlein's *Stranger in a Strange Land*, Valentine Michael Smith. Smith, for those unfamiliar with the work, is a human who was raised by Martians. Upon his return to Earth, he became a notable cult leader, mainly by unwittingly following Steps #2, #4, and #7, below. (Also Step #11, but we'll get to that. . .)

2. Be Larger Than Life

Worshippers and followers want to be part of something bigger than themselves, something heroic, something grand. If you feel that you can consistently be that thing, you've taken your first steps toward godhead (or cult-leaderhood, at least). Cults of personality thrive on those aspects of the celebrated leader that are different from, and somehow better than, the norm. This can be difficult in a typical fantasy campaign, as miracles and magic are commonplace. Priests healing the faithful, and notable warriors slaying scores of foes are both mainstays of the genre. Now, a fighter healing the sick and curing the lame, or a scrawny mage slaying the Dark Hordes in hand-to-hand combat - that's noteworthy.

Harmless and extravagant eccentricities are another hallmark of the bigger-better-faster-more lifestyle so typical of a charismatic cult leader. For example, the most popular bard in the kingdom (an Elvish lad named Frezh-leagh) is known for giving horses away to people who catch his fancy. He goes through a lot of horses that way, but he's also gaining fame and notoriety. Think big (or at least odd) and bold. So, eat what you want to eat, wear what you want to wear, be loud, be pious, be holy, be profane, but do it in the biggest and most public way possible. Your goal is to have your name on the lips and in the thoughts and conversations of everyone in the area.

3. Reward Your Followers

Always a good idea, and a requisite for this endeavor. Your inner circle of devotees has to be convinced that everything that is good in their lives flows from your benevolence. Make your middle name "A River To My People." Money, power, glory, sexual partners; your character provides anything they desire. Rewards don't necessarily have to be material, but a well-timed gift or a share of the profits is rarely taken amiss. Make these gifts as personal as possible; let the reward reflect your understanding of the individual. Even monetary gifts can be personalized, if you know enough about the person; instead of a flat $2000.00, make it "Tomas, here's some money so you can buy your wife that refrigerator I hear she wants." This gives your core group the impression that you know and care about them as individuals, whether this is the case or not. Personalized gifts, designed to press all of the right buttons, are your best tool in keeping everyone in line and marching in the same direction.

4. Bad Publicity Is Still Publicity. . .

Persecution from the Establishment is a goal that your character, as a thoughtful and intelligent cult leader, should pursue. Vicious, hateful maltreatment by the Powers That Be and the unwashed masses is one of the catalysts that can turn a lunatic-fringe cult into a national movement or a multi-national religion. Rebellious youth and those that feel that the Establishment is keeping them down will flock to your banner like... well, like sheep; angry and disaffected sheep with a great deal of energy. This energy is a valuable commodity to the leader, and can be constructively channeled in many ways.

Consider the example of Hitler. (A bad example in many ways, but a good example of a leader who used personal charisma and a keen understanding of What People Want To Hear to his extreme advantage.) His persecution by the German government was grist for his rhetorical mill, allowing him to write his manifesto, *Mein Kampf*, while in prison. He capitalized on this setback by using his arrest and imprisonment to establish credibility with those sections of the German public that he wanted in his camp.

With an established following, bad press can also be the proof to your true believers and other conspiracy theorists that your cause is just and right. After all, the (Government/Church/King/Grand High Poobah) wouldn't have devoted so

much time and effort to discredit your cause if they weren't afraid that the Truth might come out. . .

5. . . .But Get Good Press When Possible.

There is no substitute for popularity. The adoration of the unwashed masses is what it's about, after all. To this end, What You Do isn't as important as What You Are Seen To Be Doing. If you stop the Crimson Hordes in their attempt to take the capital, make sure everyone knows that it was you. Take as much credit as possible, ideally more. On the other hand, one must be careful to be humble and self-effacing in the public eye. Pride is one of the few sins that the general public has a hard time forgiving, while a talented and successful individual is never more popular than when he presents an "Aw, shucks; 'tweren't nothin'" facade. Practice looking humble and abashed, in front of a mirror if necessary. Get your speechwriters (You do have speechwriters, yes? Well, go and get some!) to have a few words ready at all times, with lots of bits that make it look like you're ineffectually trying to spread a lot of the glory around. ("While I did slay the dragon, I never could have done it without the hard work and effort of, uh, of. . . my trusty blacksmith, Leopold! Stand up and take a bow, Leo! If you hadn't, uh. . . made me those, um. . . cleats! You made those cleats! Yes! Without 'em, I wouldn't have been able to climb the dragon's side and snap its neck like a twig! Way to go, Leo!") So get out there, stop those uncontrollable floods, heal all of those lepers, kiss those babies, defeat the enemy, and smile, smile, smile.

Important Note: In case it needs to be said, propaganda is Good Press. If the PC ever gains a measure of control over any media source, the presses (or equivalent) should churn nonstop.

6. It's Lonely At The Top (Keeping Yourself Separate)

Any true cult leader should keep himself separate and above the adoring masses. Part of this is just good theatre: gods-on-earth do not belch (or otherwise eructate), pick their nostrils, eat, sleep, or, as Sean Connery (The Man Who Would Be King) found out, bleed. Security is another important consideration; if only a select few know your eating, sleeping, and bedroom habits, you can maintain an area in which you can let your metaphorical hair down, occasionally. Keeping separate from the common herd lets you more easily control your public image, as well as minimize the effects of any social faux pas that may occur.

This is not to say that a cult leader shouldn't have friends. Your inner circle is your most important resource. Know their strengths and weaknesses; find out their deepest secrets, darkest fears, and sincerest dreams (both to sidestep blackmail attempts and for your own information); guard their secrets as if they were your own; and entrust them with your unswerving loyalty. Make them part of the great joke that you all play upon humanity. Ensure their happiness, and they will move heaven and earth to satisfy your every whim.

7. Pick A Cause And Stick With It

Ideology is an important aspect of any group, even if the mission statement boils down to "Kill monsters and take their treasure." The people that choose to follow the character will adhere, more or less, to his code. . . or rather, what they perceive that code to be. It is important, therefore, to have a good working knowledge of the notable or publicized actions of the character over the last few game years. If the character's personal belief system is that of non-aggression, but his most noteworthy endeavor is besting the Warlord of the Grey Marches in hand-to-hand combat, plan on the possibility that many of his followers will be rather militant.

The character's choice of causes should not be whimsical. Decisions made during the conception and birth of a new movement will have far-reaching consequences. The people that chose to remain with the group will do so based on their understanding of the beliefs of the leader and of the other group members. Historically, some leaders have found that they were no longer in control of the group of which they were nominally in charge. "They are my people; I am their leader; and I am hurrying to catch up with them."

A word on scapegoats: historically, groups have a tendency to stick together if they have someone to love (i.e. your

character) and someone to hate (the scapegoat group). Some of these groups can be a function of the existing social structure or religion (see #8, below); others are simply old grudges. On many levels, a scapegoat is simply an enemy that is too weak to injure you. Choose your enemies wisely, as there will certainly be many unknown to you.

8. Assimilate Other Belief Systems

One of the best routes to adoration by the masses is to claim to be part of the existing religious structure. Your character's success in this endeavor depends mainly upon the social structure of the culture, and the religious dogmas currently in favor. Professing celestial parentage is the standard practice, though the idea's increasing popularity renders it unworkable in many circumstances. One variation on this theme is to assert that the character is the reincarnation (or first incarnation) of a mythical leader. This works within a secular framework, as well. See the example of Yuri Otrepiev, one of several pretenders to the throne of the Tsar after the death of Ivan "the Terrible" IV. Yuri claimed to be Dmitry, the youngest son of Ivan. The real Dmitry had died ten years previously, but the pretender claimed that he had been spirited away to Poland, and called upon all true Russians to aid him in ousting the usurper. He enjoyed great, if short-lived, success. In trying to play his Polish and Russian supporters against each other, he proved a fickle and inconstant ally to both, and the Russian nobility had him killed. It is interesting to note that, though his body was burned and the ashes fired from a cannon pointing west (toward Poland), the common people for a time persevered in their belief in his legitimacy.

Assimilation is a tricky step, in that one must be cautious of taking on more of the myth than is necessary or prudent. If the Elder Scrolls say that there will come one who will deliver the faithful from bondage, fine. If He Who Will Deliver Us is missing his right arm, left eye, and has no feet, you just may want to seriously reconsider taking on this role. Oracles and prophecies are notorious for ascribing various unhealthy practices to the Chosen One. Play the role correctly, walk the tightrope of dogma and pragmatism, and you'll have a powerful tool: the political and social might of an established religion or ideology. Make a mistake, and the acolytes will be cleaning your brains off the temple walls with a sponge.

9. Make Friends With Those Stronger Than You

This is a step that is often overlooked or made subordinate to #8. All cult leaders are going to make enemies. It's a fact, and one that's impossible to avoid. In being popular, your PC becomes a political force, and there will always be people that resent the fact that you have some measure of influence with other people over which they have no control. The trick is to ally your PC with stronger political and social forces, preferably those that either have no interest in your sphere of influence, or those that have a vested interest in keeping your constituency happy. If you are starting the Cult of the Golden Cowpoke, make sure the Cattlemen's Association knows that the herds will be in Kansas City on time. If you let them know that the cowboys are happier with you around, and that you would personally be happier with a bigger house, better booze, more women, etc., you may be looking at the start of a beautiful friendship.

On the other hand, monolithic organizations are perfect examples of the tiger that you can ride, but only with utmost care. Hang on tight (but don't pinch), phrase demands in the form of polite and humble requests, avoid the use of spurs, and you just might be able to walk away if you have to. Remember the reason that you chose to align yourself with these people: they're stronger than you are. They generally have greater resources, more people, and a vested interest in protecting the status quo. Provoke them at your peril.

10. Never Forget Where You Come From

Or, at least, where you pretend to have come from. If you have the advantages of being born a poor shepherd, raised by mountain lions, suckled by a moose, or whatever, remember those humble beginnings. Keep your mental feet firmly planted, no matter how much you seem to be the scattered mystic. Know your business, and mind it well. Remember that those that raised you up can always bring you down. A corollary is that secrets are most easily kept if only one member of the group is still breathing. (While I don't condone killing off everyone that knows your secrets, I do understand the pragmatic psychology behind the idea, and why the practice is so common.) Either bind your friends to

you with hoops of steel and gold, or make plans for every contingency.

Always keep in mind that you are mortal, and that all of the people that follow your banner are (with the exception of a few fantasy campaigns) mortal, too. You all have hopes, dreams, needs, wants, and fears. Never make the mistake of buying into your own hype. In the spotlight, do that voodoo that you do so well, but when the crowds are gone, schedule some time to be yourself. If you don't let the power go to your head, you stand a better chance of keeping it attached to your body.

The Unspoken Rule

11. Die As A Martyr, Or Don't Die At All

This one is important, though not actually part of being a leader and having a cult. After all, if you're dead, you don't have a great deal of personal influence. The death of a PC is always a possibility in an RPG, and most games have a vast number of methods by which the body and soul may be separated. If your cult leader has any control over the method and timing of his passing, exercise that control to the utmost. If he doesn't, make certain that the core group of disciples has a well-rehearsed story about the "real" circumstances of their leader's demise, whether it involves ascending to the heavens on a pillar of light, strange women carrying the body to the Land of the Utmost West, or being carried away by a tornado. Make the fable easy to remember, emotionally stirring or evocative, and make sure they all know it backwards and forwards. This is your last chance at historical immortality (if not the physical kind), so don't screw it up.

Plot Seeds

The Last Temptation of Jhary

The PCs hear news of a new religious movement sweeping the area. The local governor hires the party (covertly?) to investigate the charismatic and popular leader of the movement. The nouveau messiah can be as truly pious or sincerely mercenary as you like, but he's been following all the rules, and can be a powerful ally or a dangerous foe. This seed is particularly ironic in an *In Nomine* campaign.

I Suppose You're All Wondering Why I Asked You Here. . .

A player character has, through accident or effort, acquired a modest group of followers. A friendly NPC (with a nefarious hidden agenda) offers to assist in the care and feeding of the new entourage. His methodology is remarkably similar to the ideas presented above, and he eventually handles all of the party's public relations. At a crucial moment in the campaign, the NPC hatches his plot, and the party is caught in a war of clashing ideologies. The PC must choose between losing his following or the possibility that the rest of the party could die for his cause.

1: WARNING -- Security Clearance Ultraviolet

Knowledge or possession of the contents of this document by any citizen of security clearance VIOLET or lower constitutes an offence and is punishable by instant death or a year hard labor in the Hot Fun mines, which ever comes sooner. Don't do. It is just not worth it.

2: GM Introduction

The boring bit first. This is a short *Paranoia* adventure designed for a party of six or more RED level Troubleshooters.

Right, now that's out of the way. Something is destroying the Computer's bots in the depths of BLR sector below the food vats. The destructions all have something in common -- the bots were dissected with almost clinical precision. Obviously something has to be done about this, and quietly (since it is not wise to alarm the citizens), so the Computer has decided to bring together a team of crack Troubleshooters who are to find and remove this thing.

Of course, this being *Paranoia*, it would be too much to ask if the Troubleshooters knew exactly what they were going up against, and really that would only alarm them. So the cover for the mission is a mandatory camping holiday in the depths of BLR sector. And to make things more exciting for the Troubleshooters, they are going to be disguised as bots. Aren't they the lucky ones?

So what's the skinny?

Well, several week cycles ago an explosion at the BLR R&D facility lead to the escape of a highly experimental

stealth Warbot called M1M/K-04E. M1M/K-04E is the first in a new series of bots that are capable both of repairing any damage but also of taking on the appearance of any object made of metal, be it other bots, tools, or whatever. Unfortunately, this lack of coherent form gave the M1M/K-04E a serious identity crisis and sent it quietly round the bend. Now it is alone, confused, and very very hungry.

It is true to say that the guys from BLR R&D want M1M/K-04E back but since they didn't tell the Computer that M1M/K-04E had escaped in the first place; TON-I-BLR-4, deputy head of R&D has launched a covert and highly illegal recovery operation of his own.

TON-I-BLR-4
As deputy head of R&D Directorate TON-I is the consummate politician, which is surprising, considering he smiles far too much for his own good, and pauses for about 10 seconds after each word he speaks. Of yes, his ears stick out way too much as well.

Weapons: ROYGBIV Laser Pistol: 7
Important Skills: Bureaucracy 16, Motivation 10

3: Troubleshooters Introduction

The day starts out for the Troubleshooters just like any other, with them watching a mandatory re-run of the Teela O'Malley show in the BLR sector ready room, when suddenly a message tube arrives labelled with the Troubleshooters squad number on it. Inside this message tube is their call to arms. In the grand tradition of *Paranoia* silly props, hand your players a piece of red card and tell them that this is the mission briefing. If anyone quibbles tell them that under Computer directive 956-117-9146A-44 all mission briefing are now being delivered on paper the color of their security clearance and written in ink of the appropriate color. Or to put it another way, written in red on a red background.

So they can't read their orders, huh? Well not reading orders is Treason, isn't it? And we all know what the Computer does with traitors, don't we children? Don't forget to remind them of this fact, and also don't forget that asking the computer for clarification is also treason.

In actually, the mission briefing simply says, "Stay at your current location. A Vulture Squad will be along to escort you to the briefing room." Of course the Troubleshooters don't know this. One of the things that generally happens to Troubleshooters who don't turn up for mission briefings is that a Vulture Squad is dispatched to award tardy slips the hard way. And, lo, what comes marching through the ready room door but five fully armed Vulture Squad Goons fingering the triggers of their slug throwers in a meaningful manner. Hopefully the Troubleshooters ought to come to the wrong conclusion from a standing start.

Vulture Squad Goons
Weapons: Slug Thrower (12)
Armor: Reflec (L4)

4: The Mission Briefing

When the ashes have cleared and the clone replacements have arrived, the Vulture Squad marches the Troubleshooters off to the briefing room within HPD&MC's Bureau of Fidelity Procurement. The room itself is very scary, with integrated floor and ceiling shower drains as well as a frightening array of wall mounted torture equipment and gardening accessories. In the center of the room are a number of steel chairs with integrated arm and leg manacles. The Goons will efficiently strap the Troubleshooters into these chairs before leaving them all alone in the room, except for a looped tape that says "confess, confess, you know it makes sense, confess . . ."

Leave them there in that state for a while until the Troubleshooters are good and nervous, then have Integrator. . . err. . . *Briefing Officer* AGN-I-ANT-2 enter the room. She is an extremely severe-looking clone who is wearing clear plastic

overalls over her Indigo uniform and a pair of those full length gloves that vets wear. She glowers at the Troubleshooters for a second and then picks up a small flame-thrower and absentmindedly starts shooting huge gouts of flame across the room. As she does so she says:

"Thank you, citizens, for coming here today. Our Friend the Computer has noticed that you are all starting to look a little peaky, so it has decreed that you should undertake a mandatory three day cycle camping holiday in this very sector. Isn't that kind of our Friend the Computer?"

Anyone who doesn't express proper respect at this point gets a blast of 10,000 volts through the metal chair. Did we forget to mention that the chair is wired to the mains? After any clone replacements have been carried out, AGN-I continues:

"You will, of course, be provided with the state of the art camping equipment appropriate to your security clearance, as well as fun new outfits to enhance the whole experience. Now are their any questions?"

She will wait exactly one picosecond before plunging on.

"No? Good. Then all it remains for me to say is have a safe time."

Then she leaves the room. Shortly afterwards the Vulture Squad goons enter once more and march the Troubleshooters off to their point of departure.

AGN-I-ANT-2
Fidelity Procurement specialist and part time briefing officer.
Mutant Power: Electroshock
Armor: Kevlar
Weapons: Energy Pistol: 5
Important Skills: Interrogation 13, Intimidate 10, Psychescan 8

5: A Camping We Will Go

After yet another forced march, the Troubleshooters finally enter a large room above the main food vats of BLR Sector. Inside this cavernous space awaits three Blue clearance clones from R&D and three large crates. The first, and by far the largest, is marked *Camping Pleasure Enhancing Outfits*, the medium-sized crate is neatly stenciled *R&D Equipment*, and the smallest is labelled *Camping Equipment*. Cowering behind the three crates is a Totebot that is terrified beyond belief, for it has a damn good idea what is coming. This Totebot is here basically to serve no other function that to carry the squad's equipment and die in as spectacular a way as possible. Think of this bot as the *Paranoia* equivalent of the red-shirted security officers from a certain 1960's Science Fiction series.

As soon as the Troubleshooters appear, the R&D men get up and make ready to leave, stopping long enough to hand the kit list to one of the Troubleshooters. The R&D guys are not terribly pleased at acting as gofers for PLC and may even exact some measure of revenge by pointing to one of the Troubleshooters and saying, "Yup, he looks like a Funbot, all right," or something similar. The Vulture Squad goons will not leave until the clones have gathered all their equipment, donned their disguises, and entered the Liftbot.

5.1: Camping Pleasure Enhancing Outfits

This is the crate that contains the Bot disguises. Up until the moment they open the crate, keep the Troubleshooters in the dark as to what is in here. In fact, since the bot costumes are in smaller cardboard boxes marked simply Type A, Type B and (perversely) Type Z, they won't know what they get until they open the boxes for themselves. Since no one has appointed a mission leader (and feel free to remind Troubleshooters of this fact) the fairest means of dishing out the disguises is to get some scraps of paper, mark them A, B, and Z, and let the players pick one each. Really Cruel GMs may (of course) load the scraps of paper in any way he chooses, so that you could, for example, end up with a squad of Funbots.

A couple of more things to note before you let them loose. All the disguises have small sound generators built into them which make ridiculously silly noises every time the clones move. The Jackobot makes a sort of "psst" noise, the Scrubbot a "flumph" noise, and the Funbot goes "tad-da-da." You should once again encourage your players to make these noises, and if they get it right the effect can be very. . . err. . . musical.

Also, since the disguises are based on fire suits, they are heavy; after wearing one for a while it will become stifling inside. This means that not only is movement reduced, but the clones will also become very tired very quickly. In game terms, Endurance rolls are required for every hour the clone wears the disguise and any sudden movements will be heavily penalized.

5.1.1 Type A -- The Jackobot Disguise

This is your basic silver suit with bits of tubing stuck on at all angles. The suit has built-in rubber manipulators instead of hands that, while looking the business, are totally impractical and mean the wearer just can't grip anything properly while wearing this disguise. From around the suit's waist dangle a number of fake rubber tools of various shapes and sizes, as well as an oilcan that contrives to leak oil at every opportunity.

5.1.2 Type B -- The Scrubot disguise

This is also fundamentally a silver suit, made to look like a bipedal scrubot by the liberal addition of various cleaning implements. For example, instead of manipulators the disguise sports a mop for the left hand and a plunger for the right. The head of the disguise is nozzle-shaped and will squirt water whenever the wearer raises their arms above their shoulders.

5.1.3 Type Z -- The Funbot Disguise

Of the three disguises, this one is truly the most ludicrous; the silver suit has been painted in cheery red stripes, making the wearer look something like an artificial candy cane. The head of the funbot is the most human of the three, except that it sports a huge false moustache, and googley eyes that flop up and down on long springs so that the they get caught up around the wearer's feet. The Funbot disguise also comes with a silly hat that squirts foam, a twirling bow tie, and huge foam rubber silver and red clown shoes. These shoes will make walking a real struggle and running totally impossible. If the wearer has to make any sudden movements, a hard Dexterity roll is required to avoid embarassment.

5.2: R&D Equipment

The second largest crate contains a number of smaller boxes, all marked up with cryptic titles.

5.2.1: TX345-7b Clone Mortality Collar -- One for each clone.

The TX345-7b Clone Mortality Collar is R&D's latest effort to help speed up clone replacement. These devices, which look a lot like dog collars, fit around the clone's neck and use a built in blood monitor to detect when the wearer has expired or has suffered a fatal injury. This information is relayed back to the clone banks, thus speeding up replacement time. Well, that is the theory. The TX345-7b *does* have a nasty habit of sending back spurious signals when in areas of high electromagnetic interference, like, say, most of Alpha Complex. GM's should roll a d100 once every hour of game time; on a roll of 95 or higher the TX345-7b has falsely reported the Clone's death and a replacement will arrive shortly afterwards. Unless the original clone is already dead by the time the replacement arrives, then once the two clones comes within a 100 meters of each other the TX345-7b worn by both clones will malfunction and explode with 8P force.

5.2.2: MK-IX-Wilderness Protection System -- one for the party.

This is soon-to-be standard equipment on all expeditions to the Great Outdoors. This device is a one-meter-square cube of black plastic that stands on four legs of adjustable height. On top of the black box is a small radar dish that is designed to pick up intruders. Once an intruder is acquired, the black cube will then fire a number of synthi-banana skins into the path of the oncoming foe, thereby incapacitating them. Unfortunately, the radar is sensitive to anything behind it as well as in front of it, so that Troubleshooters will also find themselves coming under a fusillade of these plastic yellow skins.

5.3: Camping Equipment

Inside this crate are the following:

4 x Single Clone Tube Tents.
6 x Hand Lasers
6 x Monochrome Hand Laser Barrels
3 x Laser Rifles
3 x Multicolor Laser Rifle Barrels (miss marked as red)
1 x EMP Grenade (miss labelled as smoke)
1 x Bicycle
3 x Comm III
2 x Multicorder
451 x Wooden Chopsticks
1 x wetsuit
2 x parachutes

6: Sub Basement 4

Once the Troubleshooters have donned their disguises and loaded their equipment aboard the Totebot, the mission. . . err. . . *holiday* can finally begin. The Green Vulture Squad goons will hustle the Troubleshooters into a massive circular lift and lock the door behind them. Suddenly, everyone is in free fall as the lift plummets towards Sub-Basement 4. Try to convey the horror of a lift going out of control as the Liftbot screams madly over and over again, "Time to die."

Finally, after the lift shudders to a halt and everyone picks themselves off the ceiling, the door slides open and the Troubleshooters see the nightmare that is Sub-Basement 4.

For years this mammoth cavern, which stretches for kilometers in all directions, has been used as a dumping ground for everything imaginable. . . and some things that come right out of the imagination of Hieronimus Bosche.

Light is provided by the many florescent lights built into the pillars that support the ceiling, while the ground is covered in a semi-solid crust of psychedelic guano. This foul mutagentic stuff has been leaking from the food vats above for countless decades and is now many meters thick. Embedded in the kaleidoscopic goop are forests of strange three-meter-high pipes that have been discarded down here by one of the other BLR Service Groups.

Wandering through this hideous, dangerous landscape are a number of absolutely colossal scrubots. These immense bots, each the size of a three story house, have the unenviable task of trying to keep the food from building up too much using their ultra-high hydrochloric acid pressure hoses. Under normal circumstances these lumbering hulks will ignore the Troubleshooters; however, should the squad somehow wander into the path of the high-pressure jets of corrosive liquid -- well, that is just too bad.

Give the Troubleshooters a few minutes to get used to this fetid place before Friend Computer checks in on the Comm

Unit and demands an immediate update of how things are going. Once everyone is happy and well-adjusted to the Computer's satisfaction, it will suggest that where the Troubleshooters are standing will make an ideal camping ground, and will order them to make camp and have fun.

Just setting up the camp itself is going to be fun, since anything that weighs over 10kg will start to sink slowly into the multicolored swamp. This lack of solid foundations adds a new terror to camping: drowning. There are a couple of locations where a safe non-sinking camp site could be established; these spots include on top of the forest of pipes that stick up out of the ground, and in the wake of one of the mammoth Scrubots.
