The book is useful for those who wish to expand the cleric and paladin classes, but doesn't do enough. For example, there are no new spell casting methods, such as those introduced in the old *Player's Option Spells and Magic* book. There are no new standard classes, just as in *Sword & Fist*. There are no new weapons or armor designed for these classes. Sure, the book isn't covering fighters, but these classes are still the front-runners of every combat they're involved in. In addition, the book doesn't give enough details on the role of religion in a fantasy setting, nor describe in detail the ordeals paladins must go through to gain their power.

Despite these problems, the book does offer lots of different options that can be plopped down into almost any campaign with some tinkering and if clerics and paladins play a large role in your campaign, the \$19.95 isn't so bad.

Pyramid Pick: Rune RPG

Rune RPG

*Old Runner: Your words mark you as a true Viking. You shall bear the mighty axe of **Rune**!*

New Runner: With honor I shall wield it!

Everybody: URGH! URGH! URGH! VIKINGS! URRRRRRGH!

-- The "Axe Ritual," recommended for changing gamemasters.

Horned helmets, rotating gamemasters, competitive play -- if shameless anachronism and offbeat game mechanics excite you, then **Rune** is your roleplaying game.

It is not, however, the roleplaying game you're used to seeing. In Robin D. Laws' words, "**Rune** cruelly smashes down the simple distinctions found in other RPGs, leaving them in a bloodied heap on the longhouse floor." That's no idle boast. This game gleefully tosses characterization, plot, and cooperative problem solving into the fjord, then rampages through the Underworld with bloody axes held high. Even hardened hack-and-slashers may be taken a bit aback.

Rune is cleverer than it pretends to be, though. The cooperative play element isn't really gone, for instance -- it's just been shifted to a different part of the game.

The basic system is derived from *Ars Magica*, also published by Atlas Games. Heroes have eight Characteristics -- Strength, Stamina, Dexterity, Quickness, Intelligence, Perception, Presence and Communication -- and a variety of primary and secondary Abilities. Most of the primary Abilities are fighting skills and other often-used tricks like "Dodge" or "Healer"; secondary Abilities include skiing, sleeping, leadership, and music. To succeed in a task, a player tries to beat a set Difficulty number by rolling a 10-sided die and adding it to the appropriate Characteristic and Ability.

The rules are both streamlined and heavily combat-oriented. Each weapon has initiative, attack, defense, and damage statistics, but the character sheet encourages adding up all the weapon and skill bonuses before play. During a fight, the player only has to look up a single number and add it to his roll. Non-combat skills receive less detail. If you have "singing" as a skill, the rules simply point out that you can uphold the proud Norse tradition of "hoarse and barbaric yowling."

The character creation system is fast and easy for any experienced roleplayer to learn. What it isn't is diverse. There are no character classes, and most players' character points will go into the Characteristics and Abilities most useful for combat. Most beginning **Rune** characters will be cookie-cutter screaming Viking warriors who differ only in favorite weapons and a unique skill or two.

This is quite intentional. **Rune** is based on a (mediocre) computer game, and Laws wanted to recreate the sense of starting a basic character and diversifying in play. Ragnar and Thorvald and Helga the Vikings all look the same at first, but there are many different abilities to develop as they start racking up victory points.

The victory point system is where the game starts getting unusual. **Rune** characters get victory points for everything -- hitting enemies, succeeding at skill rolls, rescuing hostages, getting treasure, whatever. They also lose victory points for taking damage or letting their fellow Vikings get killed. During each "encounter" (a set of short scenes run by a single GM), players keep track of their points, noting down the increases or decreases as they happen. At the end of the encounter, they add the total points gained to their overall victory point total, and can spend the points for increases in their Abilities or Divine Gifts.

Divine Gifts are special powers given to the characters by the Norse Gods. Using their Gifts, characters can raise their Characteristics, make their weapons fly into their hands, fire lightning bolts, or summon clouds of fog to hide themselves. The Gifts are both powerful and flexible -- players can buy new Gifts at any time, even in the middle of combat.

Then there's "death insurance." Before any encounter, a player may spend 25 victory points to save a copy of his character. If the character then gets killed, the player simply gets out the new copy and puts it into play. It's just like a computer game, and Laws spends a hilarious paragraph trying to justify the rule before writing, "Nah, screw it. This *is* exactly like saving your game on the computer. It makes absolutely no sense in the fictional reality of the setting, but it makes the game work better. So make good use of the rule, and try not to think about it too much."

That wisecracking tone is a crucial part of **Rune's** appeal. The game constantly mocks itself, lampooning the absurdities behind every hack-and-slash rule and cheesy bad-Viking-movie detail. Laws knows Vikings didn't wear horned helmets, and he knows you know it, but these Vikings wear horned helmets and are proud of it. They hack their way through linear stories without apology, and hate to leave the dungeon because "if they go home they'll have to take baths and listen to their nagging parents."

For all the jokes, though, the game isn't a parody. Laws puts his finger on the biggest flaw of hack-and-slash gaming -- namely, that gamemasters get tired of yet another dungeon long before their players do -- and presents a brilliant solution. In **Rune**, the action stays fresh because everyone does a little gamemastering and a lot of playing.

During a typical session of **Rune**, each player runs one or two encounters. Each encounter has one to five events in it, and each encounter is almost entirely self-contained. When Player A is done running his encounter, he simply hands over the narrative axe to Player B. When she's done, Player C runs his encounter, and so on. Each "runner" must design his encounter according to strict rules of engagement, and each runner gains victory points according to how viciously he can abuse the characters without actually killing them.

(What happens to Player B's character when she takes over the game? Well, one of the other players takes over the character and runs it as a "proxy." The proxy gets half the character's victory points at the end of the encounter, giving the proxy motivation to help the runner's character survive and prosper.)

The encounter design rules take up almost half the book, and provide step-by-step instructions for building monsters, placing traps and treasure, and filling maps with interesting terrain. Every die roll and situation has a cost, forcing the encounter's designer to balance risks and rewards. The system is both comprehensive and flexible -- there are plenty of pre-built foes and traps, but a good designer can present any situation with a few well-chosen die rolls.

Rotating the runner duties brings back the cooperative aspect of roleplaying. Every player shares the responsibility of leading the game, reducing the strain a single GM suffers. At the same time, the competition for victory points spurs each player to design the best scenarios they can and to play as well as they can in other runners' encounters.

Rune also opens up new possibilities in competitive roleplay. The player with the most victory points at the end of a session wins that session, and the player with the most wins at the end of a campaign wins that campaign. Leagues and tournaments are the logical next step, and **Rune** provides rules for both. As always, the tone is distinctly tongue-

in-cheek. The preferred league format is known as the Inexorable Death Trudge, and Laws writes that it "rewards your lunatic persistence in setting aside all other activities and family relationships to play *Rune* until you start to sound, look, and smell like an authentic Viking warrior."

The rules also encourage swapping encounters over the Internet, just as fans of computer games swap new adventures and modifications. Players win extra victory points for both designing and running great encounters, but there's no reason you can't run somebody else's encounter. (The sample adventure at the end of the book encourages new players to do just that.)

Rune isn't for everyone. Aspiring thespians and deep-thinking problem solvers will be distressed to learn that their skills are virtually useless in this game. Historical nitpickers will cringe at the idea of mecha-dwarves. And while *Rune* does its best to be inviting to new gamers, even the experienced roleplayers who tested the game with me were a little nervous about jumping in and running an encounter the first time they played. Running great encounters clearly takes a bit of practice.

If you can let your hair down and let yourself run a little wild, though, *Rune* is a howling good time. It's fast, it's furious, and there's always something new to do. And who doesn't want to get in touch with their inner screaming Viking?

Catherine Sforza

Countess of Forli (1462/63-1509)

by Joe G. Kushner

During the height of the Renaissance, few women mastered their own destiny. Even for a Noble, it required a strong will and the respect of those under you. Catherine Sforza had it all. Tall, slim, and blonde, she would be one of the women who ruled others. Born the bastard daughter of Galeazzo Maria Sforza in 1462, Catherine, also historically referred to as Caterina, was engaged to Girolamo Riaria, nephew of Pope Sisto IV, at the age of nine. In 1477, Catherine left for Rome after her father was murdered. Hardly a year later, Caterina gave birth to Bianca (b 1478), her first of six children.

Well-educated and always starving for more knowledge, she kept book recipes and prescriptions, networking with many noble women. Some of these recipes were dangerous poisons that Catherine mastered and put to good use throughout her life.

In 1484, she and her husband took possession of Castel Sant' Angelo in Rome but was forced to surrender it a mere 13 days afterwards. Still, for being seven months pregnant at the time, it was an impressive feat. When they left Rome, they journeyed to Romagna, and took up residence in Forli. Girolamo Riaria's weakness became exposed, failing as both a ruler and a soldier. Catherine produced justice. Riaria's failure as a ruler became almost too much, when in 1487 -- during revolts -- he failed to do anything, leaving Catherine in charge.

In 1488, the Orsi family murdered Riaria and imprisoned Catherine with her children. Escaping the Orsi family, she allied herself with Milan and Bologna and took her vengeance. This event transformed her into a tyrant who sought harsh revenge for any wrongdoings against her. Despite being an excellent military leader, not only tactically, but on the field (she was feared by her soldiers), she was more infamous for her cruelty. She earned names like "virago," "bastard," and "daughter of iniquity." The free town of Forli doesn't care however, as it flourishes, producing such talents as the painter Melozzo degli Ambrogi and his student Marco Palmezzano. In a time when anti-Semitism still thrived, she used her considerable influence to bring Jewish bankers to Forli.

During 1488, she loved Antonio Maria Ordelauffi, but the Pope Sisto IV exiled Ordelauffi away, granting Catherine domination of Forli and Imola in the name of her son, Ottaviano. So much did she love power, that she held those reins over her own son.

An infamous episode of her power thirst was illustrated when her children were held hostage, and those responsible demanded she surrender her castle. Even when the children were threatened with death, Catherine is said to have boasted that she could always have more and held onto power.

Being alone never seemed to sit well with Catherine though; in 1489 she seduced her nineteen-year-old brother-in-law, Giacomo Feo, taking him as a husband and giving birth to Bernardino in 1490. Feo followed her first husband into the grave, murdered in 1495. Some said her son instigated the murder. Part of Catherine's punishment for Ottaviano, was total loss

It is a rare day in the *GURPS Universe* that someone does not say something to the effect of "*GURPS* does not handle Supers very well" or "*GURPS* breaks down after 'x' number of points."

Why?

Most cite the fact that it was the intent of *GURPS* to simulate reality. The point-based system was designed around the idea of 25 character points being an average run-of-the-mill Joe, while 100 character points being a heroic individual. Thus, most campaigns give 100 points (or so) to the player characters, making them a cut above the rest. Once you reach very high point levels (there is no consensus as to what that point value is exactly), then the rules that were designed for lower point totals begin to break down.

And those that cite this are probably correct, at least to a point.

There are some problems with *GURPS* after you get up in the points. Combat becomes so deadly in *SUPERS* games that players dare not use that 12d6 impaling area-effect, continuous effect Hell-blast for fear of killing a few dozen innocent bystanders. One solution that was offered in the *Supers* book (and later in *Compendium I*) was Stun Points.

Stun Points were a sort of "cut the deadliness of combat way down" solution that came with some baggage of its own. For example, all persons are equally effected, making combat in the streets between thugs unrealistically comical -- what are we trying to save them from? It also does not provide what the Supers genre is screaming for: clear breaks between the average, the heroic, and the super-heroic.

But even in other games, campaigns can get a little cinematic without going to the Supers extreme. Without making the rules in one game different than the rules in another. In a game that claims to be Generic, how do you handle these disparities?

This article offers one possible solution to this dilemma. It involves three elements:

- **Stun:** A variation on how to calculate how many Stun Points the character has.
- **Combat:** A variation on how to use Stun Points in combat.
- **Scaling:** A variation on character point costs to scale things such that high-point characters are less likely to be abusive.

Calculating Stun Points

The first step is to modify the Stun Point calculation rules. As they currently stand, all characters get Stun equal to 5xHP. This is not very useful in the long run, as it applies equally to all; it probably makes more sense that Stun should scale with the concept of the character. And so, what is proposed is the following steps to calculating Stun for the character:

1. All players have a Health (HT) score that forms the base of Hit Points (HP). Optionally, you can use Strength (ST).
2. Players may buy up HP as per normal costs. Treat this as additional muscle mass. It can be purchased later as "intensive training." See below.
3. Stun Points (Stun) equals $HP \times Z$ where Z is calculated as follows:

Baseline +2.0

Advantages *

Combat Reflexes +0.6

Fit +0.2

Very Fit +0.4

Hard to Kill +0.1

High Pain Threshold +0.4

Disadvantages **

Combat Paralysis -0.6

Low Pain Threshold -0.4

Physical Attributes (ST, DX) ***

00 - 04 -0.4

05 - 08 -0.2

09 - 12 N/A

13 - 16 +0.2

17 - 20 +0.4

21+ +0.6

Combat Skills ****

None N/A

01-05 points +0.2

06-10 points +0.4

11-20 points +0.6

21-30 points +0.8

31+ points +1.0

- o *** Advantages:** Any other advantage that the GM feels should apply can be fit into this calculation. Examples might include Trained by Master for Martial Artists and Initiation for practitioners of ritual Magic. The Hard to Kill advantage provides +0.1 per level.
- o **** Disadvantages:** The GM is free to have disadvantages that can pull from the calculation.
- o ***** Attributes:** If the variant rule of $ST=HP$ is used, replace ST in this calculation with HT.
- o ****** Combat Skills:** This is the "hardened veteran" rule and may be dropped without much effect. These modifiers are here so that combat oriented characters do not have to have all of the physical advantages to take advantage of this scaling effect.

4. Players may purchase additional Stun as per normal costs. Treating Stun like Hit Points in Dungeons and Dragons(TM), they represent the ability to avoid major damage in combat.
5. Extra Hit Points and Extra Stun Points need to be carefully monitored. If the scaling rules (see below) are not being used, limits of +3 Hit Points and +15 Stun Points are very reasonable. If the scaling rules are being used,

these limits are no longer needed.

Stun in Combat

Stun, as defined in the standard *GURPS* rules, is treated like Hit Points -- only you have a lot more of them. They give examples as to how you can scale Stun and Hit Points to slide the realism meter one way or the other. This article offers another option.

1. When dealing damage in combat, all of the damage should be taken from Stun. All weapons and such deal damage as per normal.
2. When rolling the damage, however, treat all 6s rolled on the dice as though they do no Stun damage, but inflict 1 point of HP damage instead. Thus, each die does the following:

Die Damage Result

- 1: 1 Stun, 0 HP
 - 2: 2 Stun, 0 HP
 - 3: 3 Stun, 0 HP
 - 4: 4 Stun, 0 HP
 - 5: 5 Stun, 0 HP
 - 6: 0 Stun, 1 HP
3. Next, apply the multipliers for Cutting, Impaling and Bullet damage to both the Stun and the HP damage. Round all Stun damage up (1.1 = 2 Stun damage) and all HP damage down (1.9 = 1 HP damage).
 4. Whenever a critical hit is indicated, deal with it as normal (double damage, ignore DR, whatever the chart tells you).
 5. When Hit Points reach 0, treat this as per the normal rules for HP reaching -HP instead.
 6. When Stun reaches 0, the character is fighting to remain alert. Treat this as though the character was suffering from a continuous -1 from Shock. For every 5 full points of Stun below 0 the character is, they suffer an additional -1. This penalty applies to all rolls that Shock would normally effect.
 7. Damage accrued while the character has 0 or less Stun deals one HP damage per die inflicted in addition to the damage rolled (as pre #2) above.

Scaling the Game

One of the reasons that *GURPS* may begin to break down at high point values is that advantages are not scaled. Perhaps an explanation is needed. Attributes in *GURPS* are scaled. The scale is based upon the fact that the cost of an attribute is increased as the effect increases. From the *GURPS Basic Set*:

Lvl	Cost
1	-80
2	-70
3	-60
4	-50
5	-40
6	-30
7	-20
8	-15
9	-10
10	0
11	10

12	20
13	30
14	45
15	60
16	80
17	100
18	125
19	150
20	175

If we pay no attention to the odd cost of -15 character points for an attribute level of 8, we can see that the scale of *GURPS* is roughly linear for negative values, and scales up as you get into the positive values.

Let's look at this in a different light, as a function of the scale of the cost. Divide those values by 10. This then becomes our scale. If we continue to assume that a value of 10 is the normal level, then the scale can be applied as a modification of that standard. Witness:

Lvl	Scale
-9	-8
-8	-7
-7	-6
-6	-5
-5	-4
-4	-3
-3	-2
-2	-1.5
-1	-1
0	0
+1	1
+2	2
+3	3
+4	4.5
+5	6
+6	8
+7	10
+8	12.5
+9	15
+10	17.5

Now let us look at this chart as though the attributes -- DX for example -- were listed as having a cost of 10/level. Multiply that cost by the scale of the number of levels desired. Plus six (+6) levels has a scale of 8, resulting in a cost of (10x8=) 80 points for +6 levels of Dexterity.

Now, look at this as a guideline for costs in all things *GURPS*. Advantages represent the levels above the baseline of 0; disadvantages represent the levels below that same baseline. Because some costs in *GURPS* are not even, it is suggested that one of the following two scales be used as an alternative:

Lvl	Scale A	Scale B
-9	-9	-9
-8	-8	-8
-7	-7	-7
-6	-6	-6
-5	-5	-5
-4	-4	-4
-3	-3	-3
-2	-2	-2
-1	-1	-1
0	0	0
+1	1	1
+2	2	2
+3	3	4
+4	5	8
+5	7	12
+6	10	16
+7	13	20
+8	16	24
+9	19	28
+10	22	32

Scale A is for those that like the current cost of attributes, but do not want to deal with half-multipliers. Levels above +10 add 3 to the effective scale. Scale B is for those that feel the scale *GURPS* uses is a bit shallow and could use a little steeping of the grade. Levels above +10 add 4 to the scale. Once your scale is chosen, apply it to every advantage and disadvantage in the game. All of the examples below use Scale A.

- **Attributes:** With the exception of Strength (see *Compendium I*) use the chosen scale, assigning the base cost for each level of an attribute at 10 character points. For example, an attribute purchased at -3 levels (7) costs ($-3 \times 10 =$) -30 points, and one purchased at +6 levels (16) costs ($10 \times 10 =$) 100 points.
- **Disadvantages:** All disadvantages are considered as being negative values on the scale. As this side of the scale is linear, the costs for disadvantages are not effected.
- **Advantages:** All advantages are considered as being positive values on the scale. The scale modifies the cost of advantages that can be purchased in levels. So, for example, Alertness normally costs 5/level. When scaled, six (+6) levels of Alertness now costs ($10 \times 5 =$) 50 points.
- **Similar/Overlapping Advantages:** *Warning:* This rule will complicate calculating costs for advantages. All advantages that are overlapping or sub-sets of another should be carefully considered. For example: Acute senses. Acute senses are sub-sets of the Alertness advantage. Thus, if a character purchases six (+6) levels of Alertness as well as six (+6) levels of Acute Vision, then the character has purchased, in effect, +12 to Vision checks. This will need to be scaled in. First apply the cost of the more encompassing advantage; then, apply the scaled cost of the total bonus to the sub-set advantage minus the scaled cost of the effective bonus granted by the encompassing advantage:

Alertness +6: (5x10=) 50-points

Acute Vision +6: Effective bonus is +12, which would cost (2x28=) 56-points on its own. Since six levels of that are covered in Alertness +6, we subtract (2x10=) 20-points that constitute the cost of the cost of the first six (+6) levels, giving us a total cost of 36 points for Acute Vision +6 added to Alertness +6. Total cost of the two advantages is (50+36=) 86-points.

Other Sources

By using these three principles, you can accomplish several things. You can keep the combat rules the same, but vary the deadlines to the characters by the types of characters they make, and you can keep higher point characters in line by scaling the cost of advantages the same way that attributes are scaled. There are other things that you can do to help keep things in line or simply alter the feel of the game. Suggestions that have been bounced on the web by many include:

- *Gulliver* (<http://www.io.com/~tbone>) includes a rule for dropping the points gained for similar disadvantages. This is a very effective rule for keeping a character from getting more points for the overlapping effects of a series of disadvantages (such as bad sight, color blindness, etc.) than they would get for the entire removal of the effected area of the character (such as blindness). This set of rules has a lot of other things to offer as well. It is certainly worth a look or ten.
- Many people have suggested that Physical Skills should cost a maximum of 4-points per level. If this is established, it does have the effect of encouraging characters to spend points on skills more than super-attributes. The effectiveness of this left to the reader to determine.
- The ST -vs.- HT debate for establishing Fatigue and Hit Points can be settled via a compromise. Make Fatigue equal to $(ST+ST+HT)/3$ and make Hit Points equal to $(ST+HT+HT)/3$. The effective average is the same, but this makes neither attribute the end-all of the figured statistics. For those that wish, these formulae can be reversed . . .

And so on. *GURPS* is a very flexible system. With the right attitude, it can handle just about anything you want to throw at it.

Munchkins and Moons

(A baby mutant version of this column originally appeared over on the .roleplaying [discussion boards](#). Chad Underkoffler commented that, if I made my post the column for this week, he'd give me a 5 rating. Being a believer in listening to my audience [singular] -- and a slave to my ratings -- here we go.)

* * *

Monte Cook, writer of the new 3rd Edition *Dungeon Master's Guide* and the forthcoming *Return to the Temple of Elemental Evil* and *d20 Call of Cthulhu* (both of which I'm personally looking forward to), has his own website at www.montecook.com. (As an aside, I'm still cursing somewhat not getting stevenmarsh.com when I had the chance . . .)

Recently, Monte posted a column at <http://www.montecook.com/anrant.html> about munchkins and munchkinism. One of the arguments he makes is that what most people call "munchkins" they often mean "people who don't play the way I do," to the point that it's not particularly meaningful. And even if it *did* seem to refer to a specific style of play, there's nothing wrong with those styles of play.

(The column goes on to talk about other stuff; feel free to check it out!)

I personally disagree somewhat; while I know the definition of "munchkin" can be (and often is) overly broad in its strokes, I do have a personal definition that works for me.

A munchkin, in my mind, is a player who places his (or her) fun above everyone else's.

The thief character who stabs another PC in the back in the first five minutes of a new campaign? Munchkin.

The player who insists on arguing every rule, every decision, every action? Munchkin.

The player who wants to know what the name of the shopkeeper's horse is, an hour after everyone else's character has finished shopping and is bored? Munchkin.

Roleplaying is, at its core, a collaborative process; everyone is there (theoretically) to have fun. One player deciding -- against the wishes of everyone else -- to kill all that lives is just as munchkininess as a player deciding -- against the wishes of everyone else -- to try and spark a romantic roleplaying interest with all that lives. If you presume that the group has assembled solely for your personal amusement, you are a munchkin.

Contrariwise, if everyone has fun, it's not munchkinism. If all the players want to kill every living thing -- and the GM is not unwilling -- then it's not munchkinism; it's having fun. (I personally call it *Talisman*, but there you go . . .) If all the players want to sit around and write sonnets to each other and play out their characters' college lives in real time -- and, again, the GM is not unwilling -- then they're having fun. If I, as a player, tolerate your killing all beings, and you tolerate my sonnet writing -- and the GM's having fun -- then it's not munchkinism. It's compromise, and a core of most successful games.

Note that this doesn't presume you are placing your own fun subservient to the groups'; your own fun (in my mind) should be equal to everyone else's. (In that regard, I don't believe a roleplaying group is any different from any other relationship.) Now, if you *don't* like the way everyone else wants to play, and you keep quiet, stay in that group, and are miserable, then you're a fool. But if you go ahead and try to force everyone else to your way of playing . . . well, you can probably guess the word I'd use.

Many moons ago, I'd mentioned the calendar I used [for one of my campaigns](#), with its 28 day-months and full moons

on the first of each month.

Well, one of our readers (thanks, Mike!) sent in this link:

<http://sunearth.gsfc.nasa.gov/eclipse/phase/phasecat.html>

It covers five thousand years of lunar cycles, from -1999 B.C. to 3000 A.D. (including an astronomical year 0). It should be useful to any historical campaign. As Mike put it, "Your tax dollars at work!"

Of course, it's still not useful for our *Fading Suns* campaigns set in the year 5000 and beyond . . . stupid lazy NASA. But hopefully it'll help out some folks somewhere.

* * *

Just as a reminder to folks, we've had a few incidents over the past month or so of folks posting articles and columns to websites, mailing lists, and newsgroups. Now, I talked [a few months ago](#) about not sending articles to friends. I'm not sure if I explicitly said that you aren't supposed to send articles to strangers either. Please: don't send articles to strangers.

When everyone subscribed, they had to agree to certain things. We've tried to summarize the high points on those at our copyright FAQ (http://www.sjgames.com/pyramid/login/amgr/copyright_faq.html).

One of the things it says is, "At any rate, redistributing *Pyramid* material is strictly prohibited. If someone does it, we will terminate their subscription. So **please** don't. OK? This whole Web magazine thing is still an experiment, and having our material redistributed is one of the things that could sink it."

Regrettably, we've needed to do this a couple of times recently. We *really* don't like to, but between the original agreement when you came aboard, the FAQ, my reminders, and common sense, we like to think that we've done our best to keep you informed.

So . . . please, *please*, **please** don't forward articles to friends . . . *or* strangers.

(I guess I should say at this point not to forward articles to enemies, either . . . even if you really don't like the article or know it would cause them pain. Buy them a gift subscription, then forward the link to pain directly to them.)

Thanks!

I Scream, You Scream, We All Scream For Mandrakes

"FERD. I have this night digg'd up a mandrake.

CARD. Say you?

FERD. And I am grown mad with 't."

-- John Webster, *The Duchess of Malfi*, II:v:1-3

In roleplaying games, as in life generally, vegetables get little respect. However, just as they provide essential vitamins and minerals for a balanced diet, they can also add a healthy glow, or even a whole new dimension (or more than one) to a balanced game. Especially if, as with the much-maligned mandrake, they are Eldritch Angel-Spawned Demon Vegetable Beings From Beneath The Valley of the Templars. So, let us serve up a steaming helping of mandrakes, and dig in.

Let's begin with the facts -- after all, the mandrake (from the Greek, *mandragoras*) is a real plant. At least four of them, in fact, there being four species of the genus *Mandragora*, of which *Mandragora officinarum* is the primary. (The name "mandrake" has also been applied to the briony, American or white ginseng, and peony, among others.) Its root is often naturally forked, and can occasionally appear like a small man. One possible derivation for *mandragoras* is the Persian *mard amgya* or "man plant." (Pythagoras even called it "anthropomorphia.") It grows naturally in the Eastern Mediterranean, that hotbed of magic and mysticism, ranging from the lower slopes of the Venetian Alps to the Persian lowlands, and can be cultivated as far north as Britain. Mandrakes are of the order Solanaceae, along with henbane, belladonna, and tobacco -- magical company, all with powerful alkaloid chemistries. (One symptom of Solanaceae psychosis is the belief that one is changing into an animal; could the mystical [werewolves](#) and their [Benandanti](#) brethren depend on the mandrake for their transformative powers?) Mandrakes are no exception, being high (heh heh) in hyoscyamine, scopolamine, and atropine.

"[I]n that valley which encompasses the city on the north side, there is a certain place called Baaras, which produces a root of the same name with itself; its color is like to that of flame, and towards the evening it sends out a certain ray like lightning: it is not easily taken by such as would do it, but recedes from their hands, nor will yield itself to be taken quietly, until either the urine of a woman, or her menstrual blood, be poured upon it; nay, even then it is certain death to those that touch it, unless anyone take and hang the root itself down from his hand, and so carry it away. It may also be taken another way, without danger, which is this: they dig a trench quite round about it, till the hidden part of the root be very small, they then tie a dog to it, and when the dog tries hard to follow him that tied him, this root is easily plucked up, but the dog dies immediately."

-- Josephus, *The Jewish War*, VII:6

Which is why, among other reasons, the ancients began to take notice of it. As early as 900 B.C. or so, the aphrodisiac and fecundative powers of the mandrake appear in Genesis 30:14-16, where the barren Rachel dickers for mandrakes with Leah. (One Arabic term for mandrake is *abu ruhr*, the "father of life.") At the same time, the Assyrians were using it as a narcotic -- a possible derivation for *mandragoras* is a Sanskrit *mandras agora*, "sleep stuff." By the time of Dioscorides, around 45 A.D., there is documented mention of its use as a surgical anaesthetic. However, its supernatural existence continued to shadow its scientific one; around 300 B.C., Theophrastos swore that one could only harvest it after cutting three circles around it with a sword, and "dancing round the plant and saying many things possible about the mysteries of love." Josephus, apropos of nothing, just "happens" to include an obvious description of the mandrake harvest in *The Jewish War*, complete with "a certain ray like lightning." Let's dig further.

"It is gathered by strategem. Listen in what manner. The man who is to gather it must fly round about it; must take care he does not touch it. Then let him take a dog, bound. Let it be tied to it -- which has been close shut up and has fasted three days and let it be shown bread and called from afar -- the dog will draw it to him -- the root will break -- it will send forth a cry -- the dog will fall dead at the cry which he will hear. Such virtue this herb has but that no one may hear it or he must die and if the man heard it he would directly die. Therefore he must stop his ears, and take care that he hear not the cry, lest he die as the dog will do which shall hear the cry."

-- Philip de Thau, *Bestiary* (1121)

By the early medieval period, the dog, who appears in Josephus and Dioscorides (who mentions that a Roman name for the mandrake is *mala canina*, or "dog's evil") gets a specific cause of death. No longer is it just the mysterious emanations of the root, but a fearsome death-shriek, that kills the one who plucks the mandrake. In one of his glorious *Adventures in Unhistory*, Avram Davidson suggests that the cry has been transplanted, as it were, to the mandrake from the sufferer. An overdose of mandrake can be deadly poisonous or trigger psychotic dementia, while an underdose (of a patient on a medieval surgical table) will create yet more possibilities for shrieks. However, some of it must have come from the ever-closer association of the mandrake and the man -- the manlike mandrake's emergence from the ground is its birth-cry and death-rattle all in one.

"Give me to drink mandragora . . .

That I might sleep out this great gap of time

My Antony is away."

-- William Shakespeare, *Antony and Cleopatra*, I:v:6-9

From anthropo-, then, back to morphia. Between its sleep-inducing and hallucinogenic properties, the mandrake got yet another association with the supernatural. (Magic mushroom historian and fanatic John M. Allegro even claims that the true "mandrake" was the amanita or fly agaric mushroom, and derives all three from the same Sumerian root *nam tar agar*, "demon plant of the field.") Both sleep and hallucination appear in the Dutch mandrake legends; the mandrake in Holland was *pisdifje*, or "little brain thief," and in legend Dutch thieves could use mandrakes to make themselves invisible, unlock doors, and send everyone in a house into a deep sleep.

Which throws us hard on our next lexicographical tangle -- those powers are also the abilities of the "Hand of Glory," or in French, *main-de-gloire*, or *mandagloria*. And where do both mandrakes and hands of glory come from? Hanged thieves. That's right; the "hand of glory" is the left hand of a thief pickled in herbs (like, perhaps, mandrake). Meanwhile, the involuntary ejaculation and urination accompanying sudden death by hanging supposedly fertilized the ground beneath the gallows with -- of course -- mandrakes. The German *Galgenmännchen* ("little gallows man") is yet another evocative term for our plant for all seasons.

"Go and catch a falling star,

Get with child a mandrake root,

Tell me where all past years are,

Or who cleft the Devil's foot;

Teach me to hear mermaids singing."

-- John Donne

How much of this comes from the notion that sperm, itself, took the shape of tiny men? From tiny sperm-man, to tiny seed-man in ground, to larger man-root -- the connection seems obvious. But the fallen sperm, or blood, of a sacrifice has been creating forked plants ever since the divine thief Prometheus' "ichor" fell on Corcyra to make the crocus. (And what connection with Circe, who used mandrakes in her magic against Odysseus, hides in that collation of syllables?) The mandrake itself eventually came to life in German and French legend; after harvesting it, one must baptize it in wine, dress it in a tunic, and bathe it regularly. These tiny elves, the "maglores" in France and "alraunes" in Germany, would thence bring good luck and wealth to their keeper. (The Emperor Rudolf had a pair in Prague.) I leave others to speculate on the connection these tiny plant-people have with the ones who disport themselves in the occult botanical [Voynich Manuscript](#) -- discovered in the *Villa Mondragone*

Simpler, generally, to assume that the mandrake is a demon on Earth, as the Assyrians in fact did. That whole area seems skittish about the mandrakes -- the Arabs also call it *tufaq al-Shaitan*, the "devil's apple" or *baidh ul-djinn*, the "eggs of the djinn." The mandrake supposedly sprang from the leftover clay after God created man, and according to Helena Blavatsky, "in the secret catechism of the Druses, the sons of God create men by descending to earth and animating seven mandragoras." Those "sons of God," of course, are the [Enochian Nephilim](#), fallen angels "hanged" between heaven and earth, trapped in the morning dew -- which Pliny says enhances the powers of the mandrake.

"No curious Metaphysic can withhold

The heart from that mandragora she craves:

*Unreasonable, old as Earth is old,
The blind ecstatic miracle that saves.
Far off the pagan trumpeters of Pride
Call to the blood . . ."*

-- Rachel Annand Taylor, "The Night Obscure of the Soul"

Like ivy, then, the mandrake spreads roots and vines throughout the realm of High Weirdness. Does the True Mandrake spring from the seed of the Nephilim, those half-divine entities who terrorized the Fertile Crescent back in our mythical past? Or are the hallucinogenic mandrakes the true meaning of the thyrsus wand of [Dionysos](#) -- since a Syriac term for mandrake is "vine of the earth"? While we're briefly back on mandrake names, of course, that Germanic "alraune" begs for investigation, springing as it does from High German *alrune* -- "high runes" or "high secret." Or perhaps from the Arabic *albiruhan* ("mandrake"), which also spawned the Spanish *brujo* ("witch"). Tacitus describes the early Germans as having female witch-warriors called Aurinia, who sound like [Amazons](#) -- the "golden (*auri*) women." The Amazons, by the way, also lived in Thrace (Dioscorides refers to mandrakes as "Thracians"), and became the Sirens -- whose deadly cries echo with mandragoric power. Now that we've completely confused the origin of the True Mandrake, where did it go? Did the Templars discover it in the valley of Baaras, from Josephus' hints -- and bring it back and worship it (buried up to its neck in earth, perhaps) as [Baphomet?](#)

Perhaps the True Mandrake, bisociatively, is all of these things, the genetic seed-pod for Amazons, Nephilim, and [Spider Goddesses](#) (in German legend, unwatched alraunes turn into spiders), the mystic Baphomet, and the secret to the dream-warriors and Dionysian mystics alike. It can throw quite the tizzy into any game to drop a True Mandrake on your PCs, and let them fight off Amazons, Templars, Benandanti, werewolves, [Venusians](#) (the late Romans knew Venus as Mandragoritis, the "star of the mandrake"), djinn -- and the hungry servitors of [Iron Chef](#) Vegetarian. Simbalabim, and bon appetit.

Introduction

Any modern-day campaign, no matter the genre, may at some point have to deal with the Central Intelligence Agency, if for no other reason than the massive influence it has had on international relations in the last century. This, of course, goes double for a campaign involving politics, espionage and Really Big Secrets. The CIA's checkered history makes them the bugbear of choice for conspiracy theorists of countless stripes. Obviously, an organization so secretive and pervading makes an outstanding fictional villain, but the reality, as always, remains a bit more complicated. This article is an attempt to sort out the facts on hand about the CIA, and clear up some common errors and misperceptions about the "Clandestine Service." Inside you will find a fairly detailed timeline illuminating some of the high (and low) points of the Agency's history, an explanation of their internal structure and the various Directorates, information on designing and roleplaying CIA characters, and a list of references for further reading.

This essay tries to view the CIA through as mundane a lens as possible -- in other words, only the historical events accepted as fact by the most sober-minded of observers are treated as gospel, and any other speculation about the role of the CIA in the "Secret History" of the world is presented as only that, speculation. Whatever role the CIA may play in your own universe in political assassinations, manipulation of the world's financial markets, or suppression of That Which The World Is Not Ready To Know, remains for the individual GM to fill in. As always, fnoord.

Timeline

- 1941** President Roosevelt appoints General William "Wild Bill" Donovan as Director of the Office of the Coordinator of Information., the US's first modern foreign intelligence agency. In 1942, the agency is renamed the Office of Strategic Services (OSS), the predecessor of the CIA.
- 1945** Truman disbands the OSS on September 20th after the end of World War II.
- 1946** Truman changes his mind about the need for an intelligence coordinator as Cold War tensions increase. He forms the Central Intelligence Group, headed first by Admiral Sidney W. Souers, then by Lt. General Hoyt S. Vandenburg.
- 1947** On July 26, Truman establishes the Central Intelligence Agency. The first Director is Admiral Roscoe H. Hillenkoeter. (Sometimes Souers and Vandenburg are included on lists of former directors, which may throw off your count depending on the source you're using. This article stays with the convention of only counting the directors after the name change.)
- 1948** In perhaps the first effective use of covert action by the CIA, millions of dollars are secretly provided to the

Christian Democratic Party in Italy to assist them in defeating the Communists in the general election. (The CDP party is traditionally the party favored by the Mafia, and the supposed historical connection between them and the CIA is traced back to this activity.)

1950 Walter Bedell Smith appointed second Director.

The CIA assists Philippine president Ramon Magsaysay in putting down the Communist "Huk" rebellion.

1953 Allen W. Dulles appointed third Director.

In Iran, a CIA operation led by Kermit Roosevelt supported the forces of the Shah, Reza Pahlavi, in retaking control of the government after Prime Minister Mohammed Mossadeq attempted to nationalize the Iranian oil industry. The Shah would remain linked in his country's eyes with the US government, eventually leading to the student uprisings of the late 1970s.

MK-Ultra testing begins. The CIA tries to determine if LSD has any potential for use in covert operations by testing it on unwitting subjects, including military officers and prisoners. One recipient of a massive dose of LSD, Army scientist Frank Olson, commits suicide by jumping out of a window while tripping. The MK-Ultra paperwork would be mostly destroyed on the orders of Richard Helms in 1972, but limited documentation would still be uncovered by the Church Committee. It is believed by many that at the same time the CIA was experimenting with hallucinogens, they were also investigating other strange phenomena, such as psychic powers. It is certainly a matter of record that individuals within the CIA had strong interest in the subject; however, evidence that anything came from this research remains thin and largely unconvincing. It is, however, interesting speculation.

1954 The CIA strikes another blow for big business by assisting in the overthrow of Guatemalan president Jacobo Arbenz after he attempts to nationalize property owned by the United Fruit Co. Eisenhower sees this as a major victory over the insurgent forces of Communism, and the CIA's reputation for successful covert action after the successes of Iran and Guatemala is heavily inflated within the inner circles of Washington.

1959 The US Marines, in Haiti ostensibly to train local soldiers, support dictator Jean-Claude "Baby Doc" Duvalier in putting down a rebellion. The CIA allegedly takes advantage of his gratitude to get Haitian support in activities against Cuba.

1960 CIA pilot Francis Gary Powers' U-2 spy plane is shot down in Russia, and Powers is taken prisoner, publicly tried and imprisoned. (After seventeen months, he is traded back to the US in exchange for Russian spy Rudolph Abel.) The U-2 program had begun in 1955, using experimental planes for suborbital flyovers while taking films of missile sites and military units. These planes have a cover story of being used by NASA for atmospheric experiments, but the cameras recovered by the Russians from the wreckage give the lie to that story. The U-2 is later replaced by the Blackbird SR-71, and then by satellites.

1961 The new CIA headquarters at Langley, VA is built. See below for more details.

The Bay of Pigs invasion takes place. The CIA has been working on a plan to invade Cuba and unseat Castro since he rose to power in 1959 and overthrew Fulgencio Batista's dictatorship. Despite President Kennedy's misgivings, a force of Cuban exiles and mercenaries is assembled to attack Cuba, with the primary landing site at the Bay of Pigs on the southwestern coast. The invaders are overwhelmed by Cuban forces, at least partly due to a lack of promised air support from US forces, and are either slaughtered or imprisoned. The CIA is heavily criticized for underestimating the capabilities of Castro's army and overestimating the popular support another revolution would have. Kennedy himself also comes under fire for appearing indecisive in the face of the Communist threat.

John A. McCone is appointed fourth Director when Kennedy fires Allen Dulles. Kennedy is reportedly so angry with the CIA after the Bay of Pigs that he says privately he intends to break up the organization.

1962 CIA U-2 overflights reveal that the Soviets are building and arming missile sites in Cuba.

In response, Kennedy places a naval blockade on the island to keep Soviet vessels from delivering more missiles. After months of hovering at the brink of a global nuclear war, Khrushchev agrees to remove the missiles

in exchange for promises by the US never to invade Cuba, as well as concessions regarding US missiles in Turkey.

1963 President Kennedy is assassinated by Lee Harvey Oswald in Dallas. The reputed connections between Oswald, the CIA, the Mafia, and anti-Castro Cubans are far too enormous and convoluted to go into here, but a wealth of information of wildly varying quality is easily available. The Warren Commission, a seven-man committee assigned to investigate the assassination, includes Allen Dulles.

1964 The CIA supports the Chilean Christian Democrat Eduardo Frei in his election victory over Marxist Salvador Allende.

1965 William F. Raborn appointed fifth Director.

Indonesian President Sukarno increases his ties to the Communist party and China. The CIA supports Army Chief of Staff Suharto in his taking effective control of the government, and indirectly supports his ensuing bloody purge of communists.

1966 Richard Helms appointed sixth Director.

Leftist magazine Ramparts begins a series of exposes of CIA domestic activity, including the funding of the National Student Association in an attempt to "protect international student groups from being infiltrated by communists." Though perhaps not a direct violation of the CIA's charter, it is the first public awareness that the CIA may be operating domestically against radical groups.

1970 Allende finally elected to office in Chile. True to his word, he promptly nationalizes the copper industry without compensation. The CIA supports a series of military uprisings against Allende, leading eventually to Allende's suicide and the installation of Pinochet.

1971 E. Howard Hunt, formerly an officer in the Directorate of Operations, heads up a break-in at the offices of Dr. Lewis Fielding, psychiatrist to Daniel Ellsberg, who was accused of leaking the "Pentagon Papers." Though the CIA was apparently not directly involved in the break-in, Hunt was using CIA-issued false identification and camera. (The details of this operation were revealed in 1973 as part of the Watergate scandal.)

1972 Watergate. The break-in at DNC headquarters by members of the President's undercover "plumbers" involves two ex-CIA operatives, Hunt and James McCord, as well as several former Cuban assets. Nixon asks Helms to tell the FBI to stop investigating Watergate so as not to interfere with imaginary CIA activities. Helms refuses and is fired by Nixon on February 2, 1973. His replacement, James R. Schlesinger, also refuses to participate in the coverup. Schlesinger issues a directive to employees of the CIA to report directly to him any suspicions they may have of illegal activities within the Agency. The resulting report becomes known as "the Family Jewels."

1973 Schlesinger is replaced as Director by William E. Colby.

1974 Investigative reporter Seymour Hersh discovers the existence of the "family jewels" report and writes several exposes in the New York Times. According to the documents, the CIA has been intercepting mail to and from the Soviet Union since the early 1950s, in violation of federal statutes. Hersh also discovers the existence of the CIA Special Operations Group (also known as Operation CHAOS), which kept tabs on "domestic dissidents" and had in their possession files on thousands of Americans. He also exposes the MK-ULTRA project and the death of Frank Olson. The resulting scandal is enormous, and a presidential commission chaired by Nelson Rockefeller is impaneled by President Ford. At the same time, a special Senate subcommittee headed by Senator Frank Church is formed, and the Church Committee spends the next fifteen months investigating the reported abuses by the CIA.

1976 The Church Committee releases its final report to the public. Many of the most extreme charges are picked up by the press, including the long and wacky list of proposed plans to assassinate Castro. More damaging are the full revelations of the involvement of the CIA in the various coups and elections listed above, as well as the allegations of domestic spying. The CIA's public image takes a furious beating.

The Senate and House form Select Subcommittees on Intelligence, primarily in an attempt to avoid abuses like those uncovered by the Church Committee.

George H. Bush appointed ninth Director, with a mandate to restore the CIA's morale and facilitate coordination with the Select Subcommittees.

President Ford issues Executive Order 11905, officially forbidding "government officers from participating in attempts to kill foreign leaders."

1977 Stansfield Turner is appointed tenth Director.

1978 913 people die in the "Jonestown Massacre" in Guyana. Cult leader Reverend Jim Jones is linked to the CIA by columnist Jack Anderson in 1980.

1980 President Carter passes Intelligence Oversight Act, which formalizes the Senate Select Committee on Intelligence (SSCI) and the House Permanent Select Committee on Intelligence (HPSCI) as the formal oversight bodies for the CIA and directing them to receive copies of all intelligence generated by the CIA.

1981 William J. Casey appointed eleventh Director.

President Reagan secretly authorizes the funding and support of Nicaraguan revolutionaries, known as "Contras," against the neo-Marxist Sandanista government.

Reagan's Executive Order 12333 passes, establishing the new rules under which the DCI operates (and reconfirming the directives against carrying out foreign assassinations.)

1984 William Buckley, CIA Station Chief in Beirut, Lebanon, is kidnapped by Shiite terrorists. He dies in captivity in June, 1985.

Congress passes the Boland Amendment, banning US military aid to the Contras in Nicaragua. The National Security Council and William Casey begin searching for a way around this new law.

1985 An Iranian arms dealer who was a CIA asset informs the agency that if the US were to sell arms to Iran for its ongoing war with Iraq, the Iranian government would in return use its influence with Lebanon to get American hostages held there released. This begins the "Iran-Contra" affair, as the proceeds of the already secret deal to sell Iran arms through Israel would eventually be used by Oliver North and Richard Secord to fund the Contras in Nicaragua.

1987 William H. Webster appointed twelfth Director.

The Iran-Contra scandal becomes public, and the sensational trial of Oliver North fascinates the nation. William Casey, who was known to have been a fervent supporter of the Contras and was believed to have been a key player in the conspiracy, inconveniently dies from nervous-system lymphoma before testifying.

1991 Robert M. Gates appointed thirteenth Director.

1993 R. James Woolsey appointed fourteenth Director.

1994 CIA officer Aldrich Ames is caught and exposed as a spy for the Soviets, having provided them with vast amounts of information in exchange for over \$2.7 million. At least 10 CIA agents within the USSR were killed due to information provided by Ames. Ames pleads guilty and is sentenced to life in prison.

1995 John M. Deutch appointed fifteenth Director. He is later dismissed after admitting he has brought home over 17,000 pages of classified information on his home computer, which is also used by his children to surf the Internet. Deutch becomes the first CIA Director to be stripped of his Top-Secret clearance level.

1997 George Tenet becomes sixteenth Director.

1999 An American B-2 drops two bombs on the Chinese embassy in Belgrade during a NATO airstrike. The CIA had selected the target, and at first the bombing was blamed on out-of-date maps that showed a Yugoslav government building on the site. Later evidence, primarily uncovered by the London newspaper The Observer, suggests that the strike may actually have been intentional, designed to send a warning message that the US knew that the Chinese were providing clandestine assistance to the Yugoslavs. The CIA undergoes yet another round of second-guessing in the press.

The Organization

CIA officers have a saying: "Our failures are publicized. Our successes are not." The popularity of this maxim says a great deal about the institutional character of the Agency. Americans have a natural bias against the secretive, and tend to assume anything they're not being told about must be bad. The CIA has probably earned a lot of its bad press, but it is certainly a source of frustration to veteran agents that so little mitigating information about the things they do right can be released.

The organizational ethos of the CIA demands, "Never apologize, never explain." The agency came late to the idea that good public relations could be a benefit, as the work of Hoover marketing the FBI had shown throughout the middle of the century, and the CIA has had an antagonistic relationship with the press throughout most of its existence. When the excesses of programs like Operation CHAOS were revealed in the mid-1970s, the CIA stonewalled vigorously and released information so slowly and haphazardly that it was pretty much guaranteed that the public would assume there was even worse to hide.

The other relevant organizational trait of the CIA is an apparent casual regard for legal process. Obviously, the CIA's primary mandate involves breaking the laws of other countries on a regular basis, in order to perform effective espionage. It would be, perhaps, easy to understand how an institution like that would find it difficult to avoid taking the laws of its own country somewhat lightly.

The CIA is forbidden by mandate from "exercising law enforcement or police powers or undertaking internal security functions." This reflects Truman's postwar fears of a American covert agency like the Nazi intelligence agencies or (later) the KGB. This does not mean, however, that the CIA cannot operate within the United States, as some would claim, but that the target of investigation must always be foreign, no matter where they may operate. The CIA may, for example, bug a foreign embassy on US soil, or investigate a foreign-owned and managed corporation operating in the US. When dealing with US citizens or corporations, by law CIA agents must identify themselves as such. It is generally believed that the CIA has a less-than-stellar record of following this law.

The end of the Cold War left the CIA in an operational quandary. Though few seriously believed the need for an intelligence agency had by any stretch passed, many felt that cutbacks were appropriate. The CIA dug in and resisted cost-cutting and trimming of their bloated payrolls, trying to emphasize their effectiveness in counterterrorism and narcotics interdiction. Unfortunately, neither of these is precisely a strength of the agency, and both are handled with greater effectiveness by other institutions. The CIA remains a favorite target during cost-cutting debates in Congress, though so far it has passed through the "budget wars" with little effect.

The investigations after the Ames spy case in 1994 painted a public picture of the CIA that was even less flattering. The complete inability to catch a spy so obviously living beyond his means and with such incompetent cover led many outside analysts to criticize the agency for excessive bureaucracy, a tendency to phase less competent officers to the counterintelligence services to cover their inadequacies and an excessive concern among middle management with padding their successes by maintaining ineffective assets. The post-Ames Directors of the CIA (especially Tenet) have pledged yet another shake-up of the agency, but so far few are impressed.

Structure and Mission

The Director of Central Intelligence (DCI) has an a breathtakingly complicated job, of which running the CIA is only a part. The DCI is responsible for providing foreign intelligence to the President, his cabinet, and the National Security Council. This intelligence may come from many sources other than the CIA itself; this organization of sources that eventually report to the DCI is known as the "Intelligence Community." The Intelligence Community officially consists of the following organizations: CIA, FBI, National Security Agency (NSA), National Imagery and Mapping Agency (NIMA), Defense Intelligence Agency (DIA), National Reconnaissance Office (NRO), Department of Energy (DOE), Department of Treasury (DOT), Department of State, and the intelligence branches of the four branches of the military (Army, Navy, Air Force, and Marines).

It is the DCI's responsibility to coordinate the thirteen organizations above and receive intelligence from each of them, and then present that intelligence to the Executive Branch. In fact, the heads of each of these agencies meet regularly as the National Foreign Intelligence Board (NFIB), chaired by the DCI. It isn't in the scope of this article to explain or define all of the above agencies, but some of them may be dealt with in future pieces.

The DCI is appointed by the president and approved by the Senate. He is assisted by a Deputy Director of the CIA, also a presidential appointee, who also assists in coordinating the Intelligence Community.

The CIA itself is divided into four Directorates, each headed by a Deputy Director (DD), about which there is more below. There are seven other staff offices run by DDs: Public Affairs, Congressional Affairs, Comptroller, Special Assistant for Arms Control (which monitors other countries' compliance with strategic arms control treaties), National Intelligence Council (which produces economic estimates), Intelligence Community Staff, and Planning and Coordination. The General Counsel for the CIA is also equivalent to a DD in rank. Since 1990, the Inspector General of the CIA has technically had equal rank to the Director but remains out of the chain of command, due to his responsibilities for monitoring intelligence activities for legality.

The Directorate of Operations, also known as the Clandestine Service, is what the public thinks of as the "real" CIA, the home of spies and handlers. Officers of the DOO manage agents in countries all over the world (allies as well as enemies), collecting intelligence and performing covert operations. It is estimated that about 4,000 of the 22,000 employees of the CIA work for the DOO. Frequently DOO officers have covers as members of the State Department or a similar government post, since this allows them diplomatic immunity should they be exposed. Other officers have what is known as "commercial cover," or a cover identity as an employee of a private company. This is considered much riskier service.

It is important to differentiate here between officers and agents. In CIA parlance, an agent is a foreign national that has been recruited by the Agency to provide information covertly to the US. The term is never used to describe an actual American employee of the the CIA; in the field these are known as officers. This is probably the single most common error in fictional portrayals of the CIA.

The primary job of DOO officers is to recruit and manage agents, also sometimes called assets, who provide them with intelligence. Usually this involves bribes, though many agents are ideologically motivated. Officers use agents to acquire documents, record conversations, infiltrate buildings and disseminate information that the USA wants spread (either false information to other espionage agencies or propaganda to potential supporters.) DOO officers also oversee and occasionally perpetrate direct actions, such as physically stealing code keys or bugging embassies. The DOO also oversees counterterrorist and counterintelligence activities for the CIA (the latter function coordinated with the FBI), and provides assistance to the DEA and FBI in combating the international drug trade.

Next is the Directorate of Science and Technology (DS&T). This Directorate develops and distributes high-tech equipment to the agency, and monitors the development of science and technology in the private sector. They co-manage the entire fleet of intelligence satellites, along with the NRO and NIMA, and process the images gathered through the National Photographic Interpretation Center. Most of the US's surveillance satellites are built under the auspices of the DS&T's Office of Development and Engineering. DS&T also runs the SIGINT Operations office, monitoring radio transmissions and telemetry. The Office of Technical Services is famous for turning out state-of-the-art bugging devices disguised as a bewildering array of common household and personal devices, such as pens, lighters and batteries. The DS&T employs approximately 6,000 officers.

The Directorate of Intelligence represents the in-house analysis wing of the CIA, made up of foreign-policy experts, political scientists and military advisers charged with taking in the information gathered by the DOO and presenting the Executive Branch with their predictions and suggestions. There are at least a dozen specialized offices within the DOI, several dedicated to specific areas of the world and others devoted to the study of international trade, weapons research and social sciences. This branch is traditionally the most "open" within the CIA, with its analysts frequently publishing papers and attending symposia, and has a well-known rivalry with the "spooks" of the DOO. With only about 3,000 employees, it is the smallest of the four Directorates.

The last Directorate is Administration. The largest Directorate (9,000 employees), the DOA is responsible for all of the

"support services" required by the CIA, including finances, training, security, personnel, logistics and supply. The public communications offices are part of this directorate, as are the management of the Langley HQ (see below) and the remote training sites. The Financial Management office handles the laundering of money through banks and front businesses all over the world. DOA also is responsible for internal security, including background checks on employees and agents, polygraphs and debugging our own offices and embassies.

The CIA's main headquarters is an office complex in McLean, Virginia, called Langley after a smaller village that merged into McLean in the early 1900s. Located on wooded farmland near the Potomac River, it's a relatively small compound consisting primarily of two large office buildings, a domed 7,000-seat auditorium called "The Bubble," and a parking garage and several smaller outlying facilities. The area is fully fenced and patrolled by armed guards and dogs, but presents a low-key profile (and the local bus stops right at the main gate!). The "Old Building," which was the first and for some time the only building on the lot, is the location of the DCI's offices, as well as those of several other officials, the libraries, gym, two barber shops and the CIA's National Historical Collection, a museum of the Agency's history. Most of the "New Building" is given over to office space for the lower-level employees. Behind the New Building can be found the electrical substation, motor pool, helipad, emergency generators and the CIA's own post office. Behind the compound itself, just off the property, is a large commercial farm, where periodic escapes by razorback hogs bred there have frequently livened up the lives of guards along the CIA's perimeter.

The CIA's primary training facility is called Camp Peary, located near Williamsburg, VA on a 10,000-acre former WWII Naval training facility. Officially called the Special Training Center (STC), the CIA still does not officially acknowledge its existence, though it's something of an open secret. The DOO runs what is called the Basic Operations Course (BOC) here, which is required of all field officers before their first posting, and various advanced training programs like weapons and demolitions training, field surveillance, driving, infiltration and bugging. Agents of other intelligence services train here occasionally, primarily Military intelligence, although it is said that some programs are open to agents of our allies' intelligence services like the British SIS. The STC also serves as an auxiliary meeting/conference center to the sometimes undersized Langley facility.

The other major facility of the CIA is the Harvey Point Defense Testing facility, in Elizabeth City, NC. This location is considerably more secretive than Camp Peary, and little is known of the programs taught inside. It is generally accepted that "The Point" is the training site for the more paramilitary courses taught by the CIA, as opposed to Camp Peary's "sneaky skills." Harvey Point is where courses in high explosives, hostage rescue, sabotage and similar activities are taught. The base is also used for training by Navy SEALs and occasionally the Secret Service.

CIA Officers in GURPS

Unlike the FBI, there is no set package for officers of the CIA. There is simply far too wide a variety of operational backgrounds, and no uniform training programs that all officers take. Instead, a list of suggested skills for officer types is included below.

A typical CIA "case officer," or spy handler living abroad, would have a cover identity established for him by the Agency. As mentioned above, this is frequently as a member of the State Department or ambassadorial staff, in order to take advantage of the protections of diplomatic immunity should the agent be captured or exposed. This is the 10-pt. "Alternate Identity" listed on CI20, along with the 15-pt. "Legal Enforcement Powers" advantage from B21. Please note that CIA officers do not have the authority to arrest anyone or "kill with relative impunity," except when under direct Executive Order from the President to do so. The CIA itself is a 30-pt. Patron, but also attaches a Duty (Almost all the time), and for case officers a 10-point "Secret" as well. This nets to 15 points as an advantage.

Appropriate advantages for a case officer include: Alertness, Charisma (perhaps quite a lot!), Cultural Adaptability, Danger Sense, Empathy, Intuition, Night Vision, and Voice. Popular disadvantages might include: Gregarious, Lecherousness, and Overconfidence. Skills could include Acting, Bugging, Diplomacy, Electronics Operation, History (perhaps specializing in Political History), Intelligence Analysis, Savoir Faire, Sex Appeal, Shadowing, SIGINT Collection, Stealth, several appropriate languages, Area Knowledge (current and former postings) and sufficient professional skills to maintain his cover identity. Most officers are trained at the very least with pistols and some basic

self-defense skills as well.

Of course, there are numerous other jobs within the CIA, from paramilitary specialists to hardcore hackers, but these should be easy to generate for anyone familiar with the *GURPS* system.

by Greg DeAngelo

Grunting as he adjusts the heft of his lance, Liam pulls hard on the reigns and his mount turns sharply in reply, circling around to face their foe. The rapid, familiar beating of the roc's heart resonates strong and sure, and the knight's own heart swells with pride that his bird fights on, despite the terrible gash in its leg torn open by the angry beak of the rival gryphon. "Let drop your lance, and I will let you fly off, good sir knight," the challenging voice echoes across the clouds.

A huge golden feather drifts downward in a lazy spiral.

A kick of the spurs is Liam's only reply, and his roc gathers speed, swooping in a tight arc towards the charging gryphon. The quiet of the silent sky is broken by the battle cries of the flying mounts, 1000 feet above the clashing armies below.

The Royal Air Corps

Whether an integral part of the King's standing army or a honor bearing company of Royal Guardians, being part of a squadron of dashing, daring sky knights offers a new type of challenge. Having a PC with a flying mount is no longer unbalancing -- it's the norm!

The Mounts

Common fantastic mounts include the pegasus, the gryphon, and the roc. Pegasi are stable mounts, somewhat slower than their counterparts. They are the favorite among airborne archers. Winged horses are also prized by marines and assault teams -- not only for their ability to move easily on the ground but also because they are not easily spooked. Gryphon are fierce air-to-air fighters with a devastating array of natural weaponry. Heavy airborne cavalry and lance units are usually made up of flights of gryphon, the lion's body easily supporting the weight of the barding protecting the hawk's head. In contrast, the roc is small, fast, maneuverable, and deadly. These giant birds are favored by light lance, light cavalry, and scouts. The speed of the roc makes it highly valued as an interceptor; they are able to engage enemy knights before the bad guys get close enough to threaten stationary or vulnerable targets with ranged or magical attacks.

Mages, seers, and generals typically require much more stable mounts. Balloons powered by magical winds (see Brinni's Balloon, p. MIT108), flying carpets (p. MI83), and floating ships (p. MI85) can all be used, although such devices are susceptible to attack without a fighter escort.

The Pilots

The sky knights are part chivalrous defenders of the crown and part cocky, cinematic aviators. How far the player characters can swing in either direction depends on how the GM wants to work the setting into the campaign. Realistic

settings such as GURPS Fantasy's Yrth probably demand a more sober character, sworn to an order of flying knights. A more cinematic campaign is just begging for hot-shot Hollywood-style sky knights with "Top Gun" attitudes.

Fantastic sky knights share many characteristics of later aviators, but their skills are solidly based in medieval weaponry and armor. (See *GURPS Warriors* for a full treatment of the Aviator and Aristocratic Warrior/Knight character types.) Acute Vision, Combat Reflexes, Danger Sense, Absolute Direction, Charisma, and Reputation are all typical advantages. Sky knights, however, are often Overconfident, Intolerant (of ground forces), or Impulsive. If the campaign strays towards the cinematic, then Glory Hound, Loner, Stubbornness, and Bad Temper are fun choices for disadvantages. Depending on the campaign, an appropriate Code of Honor, Sense of Duty, Patron, or Enemy might be required.

Skills reflect the tech level of the period, and include trade skills (Armoury and Blacksmith) as well as combat skills (Lance and Bow). Social skills vary widely, ranging from Savoir Faire to Leadership. Don't forget Riding (Flying Mount), a Physical/Average skill but one that comes with a hefty -10 modifier. These are no "ordinary" riding creatures! (See p. B46.)

Whichever route the players and GM choose, there's plenty of action to be had in the skies. And on the ground.

Air Corps Bases

The sky knights do not fly in a vacuum. The typical air corps base is a bustling center of activity, a small city that is part fortification and part farm.

Defenses

In contrast to castles and walled cities, the air corps base is not designed to withstand a siege. Defenders will take to the sky rather than seek cover behind barricades of wood, stone, or earth. If the front lines of the campaign get too close to the base, mission critical personnel will simply be evacuated.

The nature of their missions places an emphasis on mobility in the air corps. Many times, the sky knights will not even be operating out of their home base. Temporary shelters can easily be erected; indeed, an air unit can be housed on the fly in any farming community with adequate stable space, ample feed, and cooperative locals. Of course, obtaining the cooperation of the locals in a war-torn region can be an adventure in itself.

The air corps base, therefore, is defended by restricting access to sensitive areas. In general, this means that the closer you get to the mounts, the tighter the security. Fences or light wooden walls control casual access to the base itself, with sturdier, patrolled walls closer to the stables. Ground forces equivalent to city guards will tightly patrol the areas near the stables, and may even be authorized to use deadly force upon discovering unauthorized personnel. It may be trivial for a thief or spy to sneak onto the base, but obtaining unauthorized access to the stables is another matter altogether.

(This type of limited access installation with layered defenses is discussed in the *Pyramid* article ["A Wall Sufficient to Defend."](#) That article also discusses aerial combat at traditional fantasy castles, and it is recommended reading for aspiring sky knights.)

Community

Even a modestly sized squadron will require significant amounts of feed for the mounts. This will necessitate a farming community, if supplies are not brought in from external sources. In addition, the base will house at least one blacksmith and one leatherworker to maintain horseshoes, saddles, and the like. If the sky knights do not possess armoury skills themselves, then several armorers will also be stationed at the base. Many times, especially at smaller bases, the knights and their squires will wear several hats, servicing their equipment and caring for their mounts between missions.

The community surrounding a medium or large base will doubtlessly include animal trainers, entertainers, and merchants, not to mention the spouses and family of the military personnel. No matter how small, all bases have an appropriately named tavern (The Belching Gryphon, Aces High, Cloud Nine). A large base can actually grow into a small city as wages and supplies are funneled into the base from royal coffers. As the sons of the farmers and tradespeople mature, the air base itself remains important to the city but may soon cease to be the sole reason the city exists.

Culture

From the bird seed merchant specializing in high-protein roc grain to the blacksmith's apprentice sweating out a horseshoe over a blackened anvil, everything at an air corps base exists to one end -- getting the pilots in the air as often as possible. All the attention is focused on the knights. The sky knights themselves exude a certain calm confidence; a combination of skill and talent and luck has landed them the opportunity of a lifetime.

Naturally, this pilot-dominated culture fosters a touch of an elitist attitude in the pilots themselves. Jealousy and resentment from traditional ground forces are not uncommon. During war time campaigns, scuffles and fights are frequent when sky knight squadrons are assigned to temporary positions near the front lines and are sharing tavern space and commandeered quarters with other knights. (Tavern-busting, street-sprawling fisticuffs between orders of knights may stretch the credibility of chivalry, but they're really much too fun to pass up in this setting.)

Even among pilots, fierce rivalry is not uncommon. Pilots strive to be the best, to be recognized as the First Wing in their squadron. Pilots of different mounts often tend to think of themselves as the "true" sky knights. This is especially endemic among roc pilots. Roc are smaller, faster, and more maneuverable; they are also more difficult to control than other flying mounts. Combat is usually closer and more intense on the back of a swooping roc. While gryphon and pegasus pilots are respected, they are often not viewed as having the Right Stuff. Well, at least not the same kind of Right Stuff as the roc jocks.

Placing The Pilots In The Campaign

Occurrence

Just how common are these flying forces, anyway? The answer to that question sets the tone of the campaign, and should be at least somewhat established before getting into the adventures. It is unlikely that every knight in the land possesses a flying mount. But if sufficient numbers exist, then airborne forces will play a key role in military campaigns, fortification design, and the like. If flying mounts are rare, then they will still play an important role as scouts and observers in combat-oriented games (and as honor guards and spies in settings with more courtly intrigue). If the flying mounts are *secret*, then the goal becomes accomplishing the above objectives while maintaining the secrecy.

Organization

A standing military airborne force is probably organized by type of mount. Pegasi, gryphon, and roc require different types of feed, tack, training, and barding. But at the same time, it is often advantageous to have the varying skills of the different mounts available by placing them at the same base.

To balance these concerns, mounts are separated into units. The smallest unit is the Flight, which consists of five to ten knights. A Squadron consists of three or four Flights (20 to 30 knights) and is typically made up of one type of mount. Squadrons are organized into Wings of 100 to 150 knights. If sufficient numbers exist, an Air Force can be created with several Wings.

The rank and title of the Flight, Squadron, Wing, and Air Force Commanders depend on the setting, of course. A Wing Commander may have less than 200 knights under her command, but could rank alongside a Duchess in military concerns (at least in Caithness). A good rule of thumb is to determine the appropriate rank for a commander of a

similar number of ground forces, and then adjust rank upwards by one.

The mid-sized air corps base can house two or three squadrons. Like taverns, squadron names are often colorful and telling. The 15th Air Cavalry Squadron goes by the "Corvairs." The 22nd Tactical Roc Fighter Squadron is better known as the "Double Deuce." The 23rd Air Surveillance Squadron is spoken of in hushed tones as "The Third Eye."

Adventure Seeds

The Red Wing Academy

"So, son, do you have what it takes to go against the best of the best?" Forty-eight weeks of the year, the skies above Mirror Lake are full of all manner of flying mounts and cocksure knights. These aerial combatants train, fly, and compete in conditions ranging from open sky to cloudbusting monsoons. The top pilots from each of the King's squadrons are hand-selected to attend this prestigious school. The trainers at the Red Wing Academy are the finest pilots in the kingdom, their equipment is unparalleled, and their mounts are legendary. Competition for the top score is fierce among the students, but by the end of the grueling twelve-week session, most knights are happy just to graduate.

Adventures at Mirror Lake involve lots and lots of flying. Get your sky knights into the air early and often. Gloss over training sessions, unless there's some intrigue brewing along those lines. (A rival pilot is attempting to gain the favor of instructors to tip the scoring in his favor, or maybe a potential love affair is blossoming with an attractive female teacher.) The PC's will get beat, handily, by the instructors - at least at first.

Safety is stressed from the very first briefing. The instructors emphasize the rules of the competition continuously. Weapons are blunted or wooden versions. Stables where the mounts are kept are secured around the clock. Mages are present to keep the safety equipment charged with mana and operating correctly. (Hint: test your ring of feather fall before you get bucked off your gryphon at 1500 feet.) All of these precautions can be circumvented, of course, by the unscrupulous rival to the PC knight, especially if the devious skunk is running a close second behind the hero in the standings for the Top Lance trophy.

And when the competition is over, the winners are given their choice of assignments. A rare few are invited to continue honing their skills by becoming instructors at the Red Wing Academy.

Scramble!

"Alert! Alert! Incoming bogies! To your mounts! To your mounts!" The peaceful slumber of the sky knights is suddenly interrupted by the squawking voice of a lookout or guard. The enemy is not just approaching -- the enemy is here! The nature of the enemy depends on the campaign, of course. Wyverns and dragons from the air, an approaching host of goblin wolf-riders, or a marauding band of human raiders are all good choices if the kingdom is not at war. Enemy troops, sky-mounted or not, are appropriate during wartime. A practice raid from friendly airborne troops is a great wake-up call in times of peace. (Try springing a surprise attack on the PC's while they're still getting their dice together and planning the toppings for the pizza.)

Take into account the amount of preparations for this sort of activity your players have made. If they have arranged for continuous surveillance from clairvoyant mages and a system of alarm, the enemy has been spotted with plenty of time to secure the gates and get the mounts airborne. If this is the first time the players have even considered an attack on the base, then perhaps they are awoken by the crash of catapults or ballistae as the perimeter fence is being breached!

In any case, time is of the essence. Quick, decisive action can mean the difference between routing the enemy, successfully implementing a fighting withdrawal, or confused chaos resulting in disaster.

Crossover Campaigns

Technomancer

Roc-mounted sky knights versus supersonic fighters? Even by equipping the sky knights with state-of-the-art weaponry, this is hardly a fair match. But the fantastic mounts have some advantages over their ultratech counterparts. Fantasy mounts are silent and present a much lower radar profile, perfect for reconnaissance teams or special forces. Their feed can be grown in any temperate climate, and their upkeep does not require electricity or modern equipment. This can be a huge advantage in areas where supplies are tight or unavailable. In addition, they are immune to the effects of an electromagnetic pulse. With the enemy's sophisticated radar equipment, maintenance facilities, ammunition supplies, and counterstrike ability in shambles, the non-electronic sky knights can swoop down in the aftermath of an EMP.

Swashbucklers

Put a squadron of roc and gryphon on a modified frigate, add a forge and some extra room for the mounts and their crews, load up with a six month's supply of grain, and what do you have? A medieval carrier, ready to strike fear into the hearts of every coastal city. Pirates would certainly prize the capture of a carrier, and if they could convince some of the sky knights to desert and join them, no ship would be safe from plunder. If you're picturing pitched duels on rolling decks, flashing blades on deck, in the rigging, and in the air, billowing sails against a backdrop of magical fireballs and lightning bolts, then you've just about got it. Add a touch of courtly intrigue in the form of letters of dispensation and a fair maiden or two (daughters of a rich noble, no doubt) to rescue, and you've got a swashbuckling, free-flying adventure to write home about.

Cliffhangers

A small team of sky knights on a long-term mission to recover several artifacts from locales inaccessible from the ground. Cave openings near the tops of active volcanoes. Floating castles. Hidden jungle clearings hundreds of miles from civilization. The temple complex atop the Cliffs of Insanity. Time is of course a factor, as is competition from rival kingdoms and mercenary aerial corps.

Other Flying Mounts

Shake up the campaign by introducing rival airborne armies attacking atop giant dragonflies. Or stone-throwing, club-wielding barbarian Pteranodon riders. Or upgrade your squadron to hippogriffs, keeping them carefully segregated from the flights of gryphon. Or didn't your knights know they don't mix well? Once you get airborne, the fun is just beginning.

Because after all, the sky's the limit.

El Santo: The Man, The Myth, The Mask

by Darren Watts

"In a world without rules, where wickedness reigns, appears a force for good in the form of a man with the power to defeat all that is evil. Santo, the Man in the Silver Mask, as vulnerable as any mortal, fights against beings from beyond the grave -- fantastic creatures that surge forth from the legends and overflowing imaginations of man and his fears. Always surrounded by beautiful women and intrepid allies, the Masked Man carries us into an unlikely world, defying the limits of reality . . . "

-- From the *Legend of Santo*, by El Hijo del Santo (translated by Darren Watts)

Pit your heroes against El Santo, the king of the Mexican masked wrestlers, or aid him in his never-ending battle against B-movie menaces! Below you'll find a brief history of Lucha Libre and a complete write-up of El Santo, the Man in the Silver Mask, suitable for *GURPS Atomic Horror* or any campaign with a taste for the extreme.

Lucha Libre and the Legend of El Santo

In 1933, a Mexican promoter named Salvador Lutteroth saw several exhibitions of professional wrestling while traveling in Texas. In some ways very similar to the modern melodramatic spectacle familiar to cable-viewers, wrestling then was already a fixed "exhibition" rather than a sport, with heroes, called "babyfaces," and villains, or "heels." Though wrestling in the USA wouldn't reach its heights of national popularity until television spread it across the nation in the 1950s, it was already a popular attraction live throughout the southwest. Lutteroth, who'd promoted boxing and races, brought the idea to Mexico City. He loved the broad, operatic action, and encouraged his heels, known in Mexico as *rudos*, to play to the crowd even more dramatically than the Americans, and the local fans ate it up. Crowds of tens of thousands would attend the weekly matches, screaming and cheering on their heroes. Lutteroth called it Lucha Libre, or "free fighting."

Lutteroth introduced ongoing storylines from week to week. Personalities were developed for the *rudos*, frequently representing the various afflictions the Mexican poor suffered from. Every week the "good guys" were menaced by *rudos* in the form of bullies and devils, tax collectors and Texas Rangers. The good guys, or *tecnicos* (so named because a hallmark of the heroic wrestlers was skill over strength, with an impressive array of complicated holds and acrobatic maneuvers allowing them to defeat the thuggish *rudos*), became national heroes and their fame spread across the country. And the greatest of all the *tecnicos* was El Santo.

El Santo was not the first masked wrestler; individual wrestlers had been hiding their identities as part of the ongoing drama since the earliest matches, most notably the villainous Murcielaga ("The Bat"). But El Santo was a hero, a *tecnico*. Born Rudolph Guzman Huerta somewhere around 1917, he was one of three wrestling brothers in the early 1940s. After limited success early on in his career, he drew inspiration from the Dumas novel *The Man In The Iron Mask* (and the 1939 movie, which was tremendously popular in Mexico) and developed a masked heroic persona. With his easily identifiable silver mask, flamboyant style and natural charm, El Santo became far and away the most popular wrestler in Mexico. He traveled across the nation, wrestling in large arenas and small-town fairs, always mixing with the people, never revealing his true face. He gave countless public speeches about fair play and courage, and stood with his brother *tecnicos* like El Rayo de Jalisco ("The Jalisco Thunderbolt"), Mil Mascaras ("The Man of A Thousand Masks") and El Demonio Azul ("The Blue Demon") as a sort of wrestling Justice League, battling the nefarious *rudos*.

It's difficult to explain to Americans the size of his cultural impact; perhaps the public persona of John Wayne comes closest. El Santo crossed generational and cultural boundaries, representing in the Mexican mind the greatest virtues of their national character. There were TV and radio specials, comic books, and, beginning in 1958, over fifty movies starring El Santo. In most of these he was portrayed as not only a wrestling champion, but an all-purpose patriotic crimefighter, taking time out from his busy schedule of matches to thwart mad scientists, vampires, mummies, werewolves, and mobsters. Though some are difficult to find today, many of these movies remain bizarre treasures,

with wild and woolly action sequences, wooden acting, improbable plots and ludicrous dialogue. (In many of the American dubbed versions of these, El Santo's name is changed to "Samson.") El Santo finally retired from active wrestling in 1982, unmasking on a television special and turning his mantle over to his son, El Hijo del Santo (who still wrestles today). El Santo died in 1984, but left a brilliant legacy.

El Santo in GURPS

"He's not only a wrestler, he's kind of a crimefighter."

-- Cop, in *Santo vs. the Zombies*

El Santo is described in **GURPS** terms below at the height of his career, in the late 1950s and early 1960s, when the best of his movies were released. El Santo can be used as a campy action hero battling the supernatural in any **Horror** or **Atomic Horror** campaign. (Although he frequently fights the undead of various stripes, frequently the zombies and mummies come from a scientific background, having been raised as an unholy army by a mad scientist of some sort using bizarre technology.) Certainly agents of the TSF from **Atomic Horror** should be entertainingly nonplused by a gigantic masked Mexican already on the scene pummeling aliens left and right when they arrive on the scene.

A campaign where the PCs are all masked wrestlers fighting crime and monsters can be a hoot; the popular *tecnicos* frequently guest-starred in each other's movies, and some of the best featured the unique team of El Santo, the suave Mil Mascaras, and the grouchy Blue Demon. It's important to capture the feel of these movies -- there is an easy camaraderie among the heroes reminiscent of the Rat Pack days of Sinatra, Martin, and Davis. The heroes drive great cars (El Santo has an excellent Aston-Martin in several movies, and a Bentley in several others), live in splendid mansions (frequently with secret cave headquarters beneath), and think nothing of entering a bar in three-piece suits and wrestling masks, ordering a drink and having the most beautiful women approach them . . . and neither does anyone else! The police who aren't corrupt in these movies (and not a few of them are) gladly welcome the assistance of these noble crimefighters. As for the villains, any horror types will do, heavy on the mad science, and keeping in mind that, much like the world of *Buffy the Vampire Slayer*, straightforward physical violence works remarkably well against the undead. A slightly beefed-up version of El Santo might fit well in a **Supers** campaign as well.

The other possible use for masked Mexican wrestlers is to spice up a more realistic campaign. It's frequently entertaining in the right sort of game to introduce a character who believes he's in another genre entirely, like the costumed superhero who used to appear on Hill Street Blues. Though the PCs in an *Illuminated* game may think The Masked Phantom is insane when he tries to tell them about the zombie menace he's battling, they'll have to struggle with the inevitable paranoid question, "What if he's right?"

El Santo (Rodolfo Guzman Huerta)

Born 1917 (?); died 1984.

Presented here in his early 40s, at the height of his popularity but slightly before most of his movies. Despite his advancing age, Santo remained a successful and popular wrestler well into his sixties. El Santo is never seen in public without his trademark silver mask, which covers his entire head and laces up the back. The eyeholes are teardrop-shaped. When he knows he'll be eating in public, he wears a special version of his mask with an open chin. When wrestling, he wears full leggings but leaves his massive chest bare, and wears a silver cape to and from the ring. Otherwise, he dresses in stylish suits or leisure wear.

Description: El Santo is the foremost Lucha Libre wrestler of his time. He never appears in public without his mask, despite the fact that his real name and identity are public knowledge. At different times he holds various championship belts, including the National Middleweight title throughout most of the 1950s, and the Tag-Team belt with his partner Gory Guerrero under the name of Pareja Atomica ("The Atomic Duo.") He has a son, born around 1955, but his mother remains unknown. Presumably she raised him, since the son's existence is not made public until the late 1970s.

Apart from his responsibilities as wrestling champion, the fictional El Santo is an unofficial aide to the local police of Mexico City and occasionally also the Army. Both will frequently turn to him when they are stumped by bizarre occurrences, reports of supernatural creatures, or threats by the occasional mad scientist (of which Mexico seems to have more than its fair share). El Santo also has a wide range of friends, any of whom may involve him in a strange adventure; it frequently seems that his entire social circle is made up of wrestlers, beautiful actresses and scientists!

El Santo maintains a cave beneath his mansion for his battles against evil, equipped with an impressive television system years ahead of its time that gives him a direct line to Police Headquarters.

El Santo has little use for tactical thinking most of the time; he tends to charge headlong into situations counting on his physical ability and resolute courage to see him through. He is always willing to face any menace, no matter how dire, if it threatens innocents.

Notes

- Friends and frequent partners Blue Demon and Mil Mascaras are not listed as Allies, since it seems likely to me that they are also PC types, and though they are prone to call on each other for assistance on occasion they still appear too infrequently to be Allies. El Hijo del Santo could be added as an Ally later, when Santo himself is in his sixties.
- El Santo has a remarkable facility for being on the scene when a mad scientist, evil mage, or vampire begins his reign of terror. Some GMs may wish to reflect this with levels of Luck or the like, but here he has been portrayed as a PC in a campaign universe with a high level of coincidence in general.
- All of the combat skills listed assume that Lucha Libre is real, and the fights are not scripted or choreographed, though a certain amount of "playing to the crowd" is expected. GMs wishing to use El Santo for some role in a high-realism campaign may wish to replace the bulk of his combat skills with, say, Stage Combat at a high level.

The Black Circle: Unholy Alliance (for Deadlands)

Published by [Pinnacle Entertainment Group](#)

Written by John Goff

\$20.00

The *Black Circle: Unholy Alliance*, written by John Goff for Pinnacle Entertainment Group, details three of the Weird West's major villains, their organizations, and the far reaching conspiracy that loosely ties the three together. Although set in Weird West, this sourcebook is not just for those who play *Deadlands*. Any game in need of a far-ranging conspiracy or a set of ready-made of villains will find useful material in this well written sourcebook. While most of this book is designed with gamemasters in mind, a section detailing Blood Magic for player character members of the Whatley clan provides advanced players with an intriguing new option for their games.

The members of the Unholy Alliance are the Black River and Bayou Vermillion Railroads, two of the major players in the *Great Rail Wars*, and the Whatley family, originally introduced in the *Doomtown* collectable card game and *Doomtown or Bust* supplement. More recently, the Whateleys have been major players in the latest three-part series of adventures by Pinnacle Entertainment Group (*Ghost Busters*, *Rain o' Terror*, and the forthcoming *Dead Presidents*). Neither the *Great Rail Wars* miniatures game nor any of the abovementioned supplements or adventures are necessary to understand or use *The Black Circle*, which is designed as a stand-alone supplement. Those already possessing these supplements will find both explanations for these villains' prior actions and a few surprises about their current motivations.

Each of the three groups is given equal space, and Marshals will find details about the major players as well as general information about their organization. While some of this material can be found in other supplements (Information about Bayou Vermillion's activities in New Orleans, for example, can be found in the *River o' Blood* boxed set.), repeated information is minimal and, in all cases, necessary to explain the current activities of each group. This repetition does have the advantage of making *The Black Circle* a one-stop source for Marshals searching for information about these groups. Finally, each section provides both the motivations (if not always the statistics) for the major players, and their modus operandi and resources available for dealing with inquisitive player characters.

Perhaps the strongest part of the sourcebook is the continental scope given to Bayou Vermillion, Black River, and the Whatley family. In prior supplements, which focused on places rather than organizations, each of the groups were examined piecemeal. *Doomtown or Bust*, for example, detailed the Whatley clan's activities in the town of Gomorra. *The Black Circle* introduces other branches of the Whatley clan, not all of whom are named Whatley, and their activities and bases of operations in New England, New Jersey, and Nevada in addition to updating the family's activities in Gomorra and Ghost Creek, California.

Players with the desire to create characters with a Lovecraftian flavor will love the new Blood Magic rules. This new Arcane Background, available to members of any branch of the Whatley family, gives players access to a dangerous, disturbing, and interesting selection of spells and abilities. The use of Blood Magic, however, does not come without a price. The more magic is used, the greater the chance the player character will give into his family's dark destiny. Marshals are recommended to weigh carefully whether or not they wish to allow players to have access to this material. This warning has more to do with the necessary inclusion of the Whatley clan as a major presence rather than an unbalancing power level.

It should also be noted that this book provides the first official information about the mysterious figure known only as

the Cackler, a lich more frightening than Stone from before the time of the Great Spirit War that locked the Reckoners away during the Middle Ages.

The book is not without its flaws. There are occasional printing oddities, causing letters to overlap in some of the headings. There is also one internal contradiction, although this does not effect anything on a practical level (The Reckoners are said to not care who wins the Rail Wars at one point and, at another, it states they have already chosen the one they want to win). This being said, these minor errors do not detract from the overall quality of the work.

With the upcoming release of *GURPS Deadlands* and *Deadlands d20*, this information is easily translatable into other systems. As such, is worth considering for those who play *GURPS*, *Castle Falkenstein*, *Deadlands*, *Space 1889*, and other systems set in a Steampunk setting. *Call of Cthulhu* players may also find material of use here, given the presence of the Whatley clan. Conversion rules for translating between *Deadlands* and *Call of Cthulhu* may be found in Pinnacle Entertainment Group's Dime Novel *Adios A-Migos*. Those not using the Weird West, Steampunk, or Lovecraftian settings may want to look carefully at the book before purchasing it. The villains, especially the Whatley clan, make excellent villains in any setting but the work converting them into a Space Opera or High Fantasy game would be substantial.

In short, *The Black Circle: Unholy Alliance* is an excellent purchase for gamemasters and players interested in creating characters with the Blood Magic Arcane Background. Non-Deadlands Steampunk gamemasters who want to include a horror or conspiracy feel to their game can find much that is useful in this supplement.

The Spear of the Lohgin (for d20)

Published by [Paradigm Concepts](#)

Written by Jarad Fennell

Illustrated by Manuel Aguiera, Paul Carrick,
Veronica Jones, Jim Pavelec and Derek Stevens

32 pages; \$9.99

The Spear of the Lohgin is the first release from Paradigm Concepts, one of the latest publisher to take advantage of the Open Gaming License and do scenarios for *d20*. This is the first part of a trilogy that Paradigm Concepts calls the Canceri Chronicles, and is designed for four to six characters of levels four through six.

Written by Jarad Fennell, this is done in the standard thirty-two-page format behind a cover by Brom. It may not be the most impressive of Brom paintings, but at least marks a sense of professional quality, and sets a nice tone for the adventure without giving anything away. Inside the layout is clear and competent, with only the occasional inconsistency. Unfortunately, the appearance of *The Spear of the Lohgin* has two main teething problems. First, the art is inconsistent. Second, the maps are terrible. These have been designed using ProFantasy Software's *Campaign Cartographer 2*, but not to the polished standard we have seen in other recent *d20* adventures. Here the maps suffer from being bitmapped, or have items that are arranged in fashion that is too regular a pattern upon the eye, or indeed suffer from both problems.

Nor is the writing entirely immune from problems. Some of the boxed flavor text designed to be read out to the players is . . . well, lacking a little in flavor. It also occasionally includes details that the players are not meant to hear, but rather discover in the course of that encounter. Thankfully, the DM can rectify this latter problem as the adventure progresses.

[SPOILER ALERT]

The setting for *The Spear of the Lohgin* is the nation of Malandir. Both it and its rival nation, Canceri, are former provinces of the Coryani Empire on Onara, the main continent of the lush world of Arcanis. A plague has recently struck the town of "New" Ashvan and the local Duke asks the party to visit the town and report back to him with the extent of the damage. Whilst there, bandits stage a raid and carry off a religious artefact. As agents of the Duke, the surviving townspeople look to the party for their help in recovering it.

The trail leads them deep into a blighted, disease-ridden swamp at the heart of which lies the ruined home of the Lohgin family, the former knight-protectors of New Ashvan. It quickly becomes apparent that priests of Neroth, the god of disease and the undead that is worshipped in neighboring Canceri. The artefact is actually the haft of the Spear of the Lohgin, the point of which is impaled upon a half-summoned demon, thus preventing it from entering this world.

[SPOILER OVER]

Although the plot of the adventure is the sort of thing we have seen before, it is handled most competently, if not without a little polish. One nice touch is that although Neroth is the god of disease and the undead, his worshippers are

not portrayed as being all-evil. One further aspect of the maps is that the one of the final encounter which takes place in the Lohgin family keep, does not look like a that of a dwelling. Instead it is laid out as if it were a simple dungeon. It is a pity that the map betrays what the text is describing.

Where this adventure is clever is in its construction. The author claims that *The Spear of the Lohgin* can be customized according to the needs of the DM and also be adapted to fit into any already existing campaigns. The adventure is constructed around encounters defined as either Hard or Soft Points. A Hard Point is a necessary encounter that advances the plot. A Soft Point is not-so-needed, but instead provides further information that adds color to the plot being built by the Hard Points. Soft Points are more flexible and thus more easily altered than Hard Points, allowing the DM to insert their own campaign elements. As the adventure progresses so do the number of Hard Points, leading to the final series of encounters that are all Hard.

Apart from the clever concept of Hard and Soft Points, *The Spear of the Lohgin* offers a reasonably well-written adventure with a dark flavor that comes primarily from the setting and its history. Although it can be played on its own, and an ending is provided for that, it works better if the DM is planning to run the sequel, *The Blood Reign of Nishanpur*. The ending provided for this ties the characters in the adventure setting with a reason to stay, as well as worthy rewards. Overall, this is a decent adventure that, given its teething problems, will require a small amount of work by the DM. One hopes that the sequel, *The Blood Reign of Nishanpur*, will not suffer from them too.

All Shook Up: Reality Quakes

"[F]or since the fathers fell asleep, all things continue as they were from the beginning of the creation . . . But the day of the Lord will come as a thief in the night; in the which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up. Nevertheless we . . . look for new heavens and a new earth . . ."

-- 2 Peter 3:4-13

And elsewhere in the New Testament, the usually-prolix John the Divine avers simply, "And I saw a new heaven and a new earth; for the first heaven and the first earth were passed away." That passage itself comes as kind of a coda to the Book of Revelation, often called the "Apocalypse of St. John," and when you start digging around in the Greek, you discover that "apocalypse" (*apo kalyptein*) in fact doesn't necessarily imply a catastrophe, only a "revelation," or more precisely, an "uncovering." And by golly, when you combine uncovering with [catastrophe](#), you've got something pretty gameable. This week and next, we'll uncover a possible mechanism for apocalypse, a little meta-seismological phenomenon I've dubbed a "reality quake."

"Let us begin, then, with a theory of history and time. Conceive if you will of a great mountain range, an Alps almost beyond the imagination of man, and let it represent the history of our world. . . . [T]he 'mountains' are not as immovable as one might suppose. I hold, in effect, that it is possible that from time to time an earthquake shakes the landscape. It obliterates some things, alters some; rearranges the rock under some of that little fringe of life which inhabits its crevices."

-- Vaughan Davies, in *Carthage Ascendant: The Book of Ash*, #2, by Mary Gentle

The clearest example I know of a reality quake appears in Mary Gentle's amazing 1700-plus-page novel, *The Book of Ash*, which appeared in four volumes in American paperback. A quick precis, then: The frame story of the novel concerns the medievalist Pierce Ratcliff, who is preparing a new translation of the source documents of the life of Ash, a female mercenary captain of the mid-15th century. As he translates the stories (which make up the bulk of the novel), it becomes apparent that Ash's career in the Duchy of Burgundy takes place in an alternate universe, in which Burgundy is the center of European resistance to a Visigothic-Carthaginian jihad directed by silicon intelligences, the Wild Machines. Ratcliff, meanwhile simultaneously discovers that the documents he's been translating have been slipping from "History" shelves in libraries to "Fiction," and artifacts (such as Ash's helmet) have begun vanishing from museums. Meanwhile, he's drawn into the discovery, outside modern Tunis, of archaeological remains of Ash's Carthage -- complete with their golems and steam engines. Apparently, something in Ash's struggle with the Wild Machines caused a reality quake (a "fracture," in Ratcliff's words) that buried her history and upthrust ours, leaving "lost Burgundy" nothing but a golden legend, and Ash a character from medieval romance.

So a reality quake, then, creates such an upheaval in the path of time that history itself is upthrust and overturned, leaving a new past in its wake. Much as an earthquake leaves breaks in the strata and fractures in the geology, or flings up material from deep in the earth onto the surface, a reality quake might leave breaks in civilization or fractures in the historical record, and fling up anomalous shards of other realities (call them "pragmaclasts") into our new/old past. Some zones of the past might be "eimically unstable" (my back-formation from "seismically" and from the Greek *eimi*, "reality"), prone to repeated shifts -- the Near East between, say, 3000 B.C. and 700 B.C., for example. After each shift, only the pragmaclasts remain, and the fossilized traces of previous realities lurk in our subconscious mind, our myths, and certain seemingly-archetypal yet puzzling myths. In a sense, any time-traveler who changes the past causes a reality quake, but (in the commonly understood versions of temporal physics), time "pastward" of his change remains unaffected. A true reality quake, on the other hand, changes the past as well; it might, in fact, *only* change the past, leaving history after the epicenter (eimicenter?) unaltered, but historians unaware that their past is now different.

"Examining the record of past research from the vantage of contemporary historiography, the historian of science may be tempted to exclaim that when paradigms change, the world itself changes with them. Led by a new paradigm, scientists adopt new instruments and look in new places. Even more important, during revolutions scientists see new and different things when looking with familiar instruments in places they have looked before . . . familiar objects are

seen in a different light and are joined by unfamiliar ones as well."

-- Thomas Kuhn, *The Structure of Scientific Revolutions*

Unless they look for the fractures correctly, and identify the pragmaclasts for what they are -- pieces of the previous reality -- rather than anomalous artifacts or clumsy forgeries. (Are the [Glozel fragments](#) and the [Voynich Manuscript](#) pragmaclasts? Why not?) Careful secret-historians can trace the lineaments of a reality quake's stress fracture by exploring the edges of [hollow history](#) -- in this case, not necessarily truly "hollow," since there *is* a reality underneath it, just one that wasn't there when it was actually happening. Hollow history that's explained by conspiracies or by Velikovskian amnesia doesn't necessarily indicate a reality quake, either, although it could -- leaving aside, for the nonce, issues of perception vs. objectivity. (The Velikovskian author Alfred de Grazia seems to have coined the useful term "quantavolution" to similarly gloss over the notion.) Perhaps Weird Science gadgets like "[Kirlian](#) tachyon eimic lidar" can detect eimic buildup in a sensitive area, or eimic residue from previous reality quakes in rocks, [Shakespeare manuscripts](#), or [crystal skulls](#).

This is the kind of thing that "reality archaeologists" like the heroes of Warren Ellis' *Planetary* or the agents of Warehouse 23 (or the Wheel of Ptah Lodge from *GURPS Cabal*) might discover, and quite a jolly High-Weirdness *GURPS Cliffhangers* or *GURPS Atomic Horror* campaign could center on seeking out "eimic subduction zones" where our current reality grows thin over the solid pragma of the "pre-ality." Any adventure into a [Mandevillian](#) zone of legend and half-history could be explained by a reality-quake; or by the first temblors of a new one, which would make quite the [nova](#) to throw into *GURPS Time Travel* games.

"So when he came opposite Palodes and there was neither wind nor wave, Thamus from the stern, looking towards the land, said the words as he had heard them [from the island], 'The Great God Pan is dead.' Even before the last word had left his lips there arose from the island a great cry of grief not of one person but of many, mingled with exclamations of dismay."

-- Plutarch, "De Defectu Oraculorum"

Not just history needs to change in a reality quake, of course. The laws of nature and physics can alter; perhaps the age of gods and magic existed in reality until some Ragnarok event changed the past, leaving only the myths and the wandering planets as signs of the upheaval. Pious Christian legend took the coincidental (?) timing of Plutarch's anecdote ("in the reign of Tiberius") as evidence that Christ's crucifixion had slain the old gods -- and perhaps, in line with Hermetic "prisca theologica," the resulting reality quake spread out, past and future, from 29 A.D. to plant the Biblical prophecies in their proper past, and to prefigure the story of Christ in that of Balder, Osiris, [Dionysos](#), and Tammuz. (The trouble that archaeologists have matching orthodox dating to the ruins of ancient Israel could be another sign of such a quake.) One good sign of reality quakes may be anomalous heavenly events -- the Bible records that the sun was blotted out during Christ's crucifixion.

"O insupportable! O heavy hour!

Methinks it should be now a huge eclipse

Of sun and moon, and that the affrighted globe

Should yawn at alteration."

-- William Shakespeare, *Othello*, V:ii

And indeed, we find a total solar eclipse visible above the Middle East right there, on November 24, 29 A.D. Said eclipse doesn't actually reach totality above Jerusalem, however, and November wasn't anywhere near Passover. There's a more convenient eclipse in April of 33 A.D., but that's a useless lunar eclipse. These, of course, might be "shockwaves" or "echoes" given off by the eimicenter's truly anomalous darkness -- or the disjunction between report and cosmology might be evidence of calendrical slipping along the eimic fault lines. Our old (eimically-sensitive?) friend Plutarch, as it turns out, observed his own total solar eclipse, most likely south of Athens on March 20, 71 A.D. -- but his record ("De facie lunae") says it occurred "after noon" when in fact it would have happened at 10:50 a.m. More slipping?

This is the kind of thing that disturbs Russian mathematician A.T. Fomenko, who has used ancient and medieval astronomical analysis (especially "correcting" dates assigned to Ptolemy's *Almagest*), combined with statistical

regression theory, to radically re-date and re-cast virtually everything in history before about 1500 A.D. In his "new chronology," what we think is "British" history is actually Byzantine-Russian history, since the British chroniclers re-copied both into their own mythic terms. Out of this stew comes an immense Russian empire, the "Megalion" (which Fomenko claims Western historians corrupted to "Mongol"), ruling Eurasia from Troy (alias Constantinople, alias Rome, alias London, alias Moscow) during a Golden Age under the double eagle. Perhaps the Sack of Troy, the Fourth Crusade, and the Norman Conquest all tell the same story, of a war in the highest reaches of reality between the Cossacks of Megalion and [King Arthur's](#) Knights Templar, a crusade that shook the veritable pillars of heaven. And perhaps Megalion is out there, somewhere, with [Atlantis](#), and [Amazonia](#), and [Bohemia](#), and Burgundy -- waiting for the tremors that signal earthquake weather. Waiting to come back.

Next Week: More variations than you can shake a stick at: potential fractures, possible eimic triggers, malign pragmaclastic entities, and yet more Prealities.

Murphy's Rules

Dork Tower!

Dork Tower!

Suspending Disbelief, Expelling Inconsistency

In the past couple of weeks, I've seen *Crouching Tiger, Hidden Dragon* on DVD. I've watched *O Brother, Where Art Thou?* in the budget theater (with a print so weathered it prompted my friend to ask, "Yeah, I was kind of wondering if the projectionist was showing the movie with his *butt*"). And I've learned of the upcoming *Batman* Special Edition DVD. (That's the 1966 version, by the by . . . and my personal favorite live-action Batman film.)

Anyway, this triple cinematic whammy helped to personally remind me of one of my media soapboxes . . . one that applies equally well to these three movies (and gaming, natch).

Internal consistency.

Now, a lot of folks tend to rate movies in terms of being believable or unbelievable (or realistic/unrealistic). But I personally don't need a movie to be believable, per se, provided it's *consistently* unbelievable. If a movie (or book, or comic, or whatever) tells me what kind of universe it's taking place in early on -- and it continues to play by those rules throughout -- then I'll pretty much follow it anywhere. But if it violates those rules (or it doesn't adequately explain its rules), then it'll generally blow the shocks on my suspension of disbelief, causing me to lose interest.

Thus the 1966 *Batman* movie establishes a universe where a man can run around dressed in spandex with a bomb (which looks like the old spherical-with-a-fuse-coming-out-top *Rocky & Bullwinkle*-esque explosive), unable to throw it in a river because ducklings are swimming by. (Because, y'know, this Batman is a HERO, and a hero wouldn't kill baby ducks just to get rid of a bomb.)

O Brother, Where Art Thou? crafts a world where railcar-riding prophets are just as likely to wander by as a one-eyed fast-talking John Goodman. And (*SPOILER ALERT*) it's a universe where we believe that a main character *could* have been turned into a toad by river-dwelling women. (*END SPOILER ALERT*)

And *Crouching Tiger, Hidden Dragon* takes place in a world where sufficiently trained masters can scale walls, run on water, and even *fly* silently. This is a world, too, where destiny is a tangible force, and years (even decades!) of events can unfold and converge over the course of a couple days.

Now, in comparison there are a jillion movies that aren't internally consistent. (For example, 80% of movies released in the summer.) As a few examples that spring to mind:

(*SPOILERS*)

- In *Blade*, the protagonist manages to kill about 18 billion vampires in the opening sequence without breaking a sweat. Then, later on, he seems to have trouble dealing with three vampires on a subway. (Maybe his secret weakness is subwaynite?)
- In *Batman Returns*, Batman (who, traditionally, has a code against killing . . . which is why he tends to do things the hard way instead of with a rifle from 100 yards) uses his car to set evil clowns on fire. It's a fine line between vigilant and sadistic . . . clown-burning pushes you towards the latter.
- In *Sneakers*, we have everyone terrified of this seemingly impenetrable conspiracy. ("You won't know who to believe, everything you know is wrong, etc., etc., etc.") The truth of the matter is depressingly mundane . . . "My God, soylent green has artificial flavor!" mundane.
- *The Matrix* describes a world where aliens are breeding humans to be batteries (?!), then putting them in a virtual reality world . . . a VR world at perhaps the only point in human history where conspiracy theories and questioning reality are commonplace. (Why not put everyone in a virtual Middle Ages? "Welcome to Obey or Die World! Any questions? Die!")

(END SPOILERS)

Now, in roleplaying this all becomes important because you don't necessarily need your world to be realistic . . . just internally consistent.

If your world is the sort that will allow long-lost brothers, conspiracies, or prophets, that should be made clear fairly early on . . . well before the climactic battle and denouement. (Don't do like *Mummy Returns*, and [SPOILER!] have your protagonist end up being a warrior of God, thanks to his mystic tattoo . [END SPOILER])

If you've permitted your heroes to dodge bullets, have innumerable "flesh wounds," and otherwise be impervious to bullets, don't suddenly kill one of them with a headshot. Don't have explosives be something that kills folks in one scene, then have them be something that propels folks away with a shock cushion of force.

It's okay to have an unbelievable world. It's *good* to have unbelievable worlds, in my opinion . . . the real world can kinda suck, and being able to escape it is a Good Thing. But just make sure your world is internally consistent. Once those cracks start appearing in your world, patching them can be almost impossible.

* * *

As long as I'm on a movie kick this week, I'll point out a game that was born last week in the heckish nightmare that is the [Pyramid chat room](#). You may want to try at home. Good for minutes of amusement!

With the most recent release of the *Indiana Jones Trilogy* on VHS (where the heck are those DVDs?!?), they changed the name of *Raiders of the Lost Ark* to *Indiana Jones and the Raiders of the Lost Ark*. Sure, it has the grace and style of a wounded possum trying to crawl its way across the remainder of the street, but at least it's got that intellectual property name in there, right?

Anyway, try plugging *Indiana Jones and the* onto other movie titles; see what results!

Ideally, in my mind, it should be something that evokes a sense of adventure and wonder, and hopefully sounds suitably pulp-y (even if the movie "IJat..." is appended to doesn't have anything to do with pulp).

Some examples:

- *Indiana Jones and the Seven Samurai*
- *Indiana Jones and the Legend of Bagger Vance*
- *Indiana Jones and the Clockwork Orange*
- *Indiana Jones and the 13th Warrior*
- *Indiana Jones and the Manchurian Candidate*
- *Indiana Jones and the Return of the Jedi*
("Ewoks. I hate these guys. ")
- *Indiana Jones and the Madness of King George*
- *Indiana Jones and the Hunt for Red October*
("Dad?!? Why did you defect? And become a Russian submarine commander?")
- *Indiana Jones and the Man of La Mancha*

Collect them all! Become inspired for your own pulp adventures! Start your own website! Watch it spiral out of control! Become sick of the whole thing! It's fun!

(Three stars) "The rebels are in the hills! They have outside support! They have photocopiers!"

by Dmitri Scull

There is a tendency in fantasy roleplaying games to make sweeping generalizations about the non-human cultures that exist in any given world. Elves speak Elvish, worship the Elven gods, live in forests (or occasionally beneath the sea or deep underground), hate orcs, dislike dwarves, and look down upon humanity. Dwarves speak Dwarvish, worship the Dwarven gods, live in big mountain strongholds or worked-out mines, hate orcs, dislike elves, and immerse themselves in metalsmithing. Orcs speak Orcish, worship the Orcish (or Goblinoid) gods, live in the places no one else wants, and hate everyone The list continues.

Humans, on the other hand, seem to be a Renaissance of culture; they often speak many languages (even if there is a common or trade language), they worship many pantheons and many gods, they live just about anywhere, and while most humans hate orcs and "monster-races," they have no real (racial) dislike of non-humans. They're even free to choose which weapons they wish to excel at, unlike the Elves with their bows or the Dwarves with their axes or the Halflings with their slings.

While there are some factors (that is, the gods) that *could* ensure that a single culture exists among an entire race, why are humans the only race without "racial gods?" If the gods maintain the status quo, why don't Humans speak Human, worship the Human gods, live in whatever spot their gods mandated, and hate the people their gods tell them to?

All in all, such single-culture races should tend to be restricted to minor races; usually those occupying remote areas, where they have never heard of other gods, never been exposed to other ways of living, and will only know (at best) a single culture from any other single race.

Developing the non-human races more fully will make them more realistic and more valuable to the campaign. The better developed existing races are, the less need there is for the large numbers of races that proliferate in fantasy campaigns. It will also create a transition from monolithic and predictable races to versatile and capable species. Perhaps, even, common and tired races can be made exotic and believable.

Language

Even when everything else is the same for two different cultures, if they are separated long enough, they will develop different languages. While they may be somewhat understandable to each other (depending on how long they have been separated), they are not likely to be able to converse easily with one another. Even if they maintained contact, local idiom and dialect will easily mark which culture the character is from.

The main exception to this is a religious language. Historically, Latin was the language of choice among diplomats because the Church worked to preserve it from linguistic drift. Even so, the Latin of the Church is not the Latin of the Romans.

The main reason that GMs use "racial languages" is simplicity; realistically, languages should be defined by culture, not merely by racial lines. Especially among tribal cultures, where each tribe is likely to speak its own language. If necessary to maintain the "racial language" concept for campaign reasons, it can easily be broadened by treating the different dialects as specialties, each defaulting to the other at varying levels based on geographical and cultural differences.

Religion

There's no reason why all elves or all dwarves have to worship the same gods. There's especially no reason why tribal races such as orcs should. Even if they do worship the same gods, it is unlikely that they would do so under the same names. Different cultures tend to have different gods -- tolerant cultures may have many different religions; some will also have philosophies that compete with the reverence the gods receive -- sometimes the philosophies dominate and gods are worshipped as an addendum to the philosophy.

Religion is an important facet of most cultures, as it tends to shape the values and ethics of the culture. Sometimes the reverse is true -- that the values and ethics of a culture determine which religions thrive -- but the two are almost inexorably linked. Most fantasy cultures are polytheistic, though few are true polytheists that worship all gods equally. Most devote themselves to one god or goddess in particular, and merely accept the existence of others.

Given the proliferation of polytheistic lists of deities that dominates fantasy roleplaying, simply converting the race to a different religion can change the entire culture and be a refreshing change. Monotheism isn't the best choice (unless they are adamant about it, or a theocracy), as many supposedly polytheistic races are given only one sample deity (usually the leader of the pantheon).

If polytheism is to be retained, consider looking closely at how the deities' powers are divided up. Rather than having gods whose portfolios follow no real theme or that just embody "important concepts," a simple creation myth describing the culture's purpose can add depth to even a simple pantheon. Consider the following: "The World created the People so that it could experience the breadth and depth of emotion. So that the People would not forget their task, the World created the Gods to look over each aspect of emotion." This pantheon could then be either small, with each god or goddess taking on the aspect of whole spheres of emotion. Or it could be huge, with a divinity for every subtle shade of love, hatred, or sorrow. Perhaps the culture is, as a rule, polytheists that hold no one emotion or god above the others, but there exist many cults and heresies that extort the values of living constantly in joy or love (or for a darker tone, hatred or vengeance).

There's no reason why the culture needs to have specific deities anyway. Many tribal cultures are pantheists, animists, or both. Even atheistic cultures are possible, but in a world where the gods can be seen and felt, there would have to exist a reason for the culture to turn away from its spirituality (perhaps the god or goddess of the culture was a tyrant, and the people managed to escape but can't trust in another deity for protection).

Geography

The land a people live in determines much about them. It determines how they get their food, where they get their water, and how they handle the weather. The most successful settlements tend to be near multiple types of terrain, or along rivers. Forest settlements must struggle to find grain staples, or make do with meat and berries (which cannot support large numbers). Underground settlements much quickly resort to mushroom farming or starve -- and it helps if they are fantasy mushroom farms as well, as even the best mushrooms aren't terribly nutritious, and don't work well as a staple in a diet.

Geography helps determine defenses as well, and what sort of threats (monsters, weather, hunger, and thirst) the culture has to contend with. These may bring about changes to the racial template; harsh climates will require or create a tendency to be good at Survival or Scrounging, swamps or ocean habitats will put emphasis on Swimming, and so forth. A particularly mutable race, such as orcs, might even change physically in response to its habitat.

Not all cultures are settled, either. Nomadic cultures, either in the wilderness or in civilized lands, are common in real life, but fairly rare in fantasy games. Wilderness nomads will often be herders, or will follow herds of game animals. They may gather crops as the travel as well -- those that follow set routes of travel will often plant fields to harvest on their return.

Nomads in civilized lands will often be seen as shiftless and not be trusted; usually, they will return this distrust to

outsiders in turn. Such a culture can often come into conflict over territory or property rights with locals, especially if they have widely different customs and laws.

Seafaring nomads lack a real historical counterpart, at least as a culture, but there is no reason that a culture of ship-based wanderers could not exist. Surviving on fishing, trade, and possibly raiding, the nomads would probably have the best ships and know more about the sea than their enemies, and could thus evade retribution for their actions.

Fantasy worlds and magic offer other interesting possibilities, such as aquatic cultures, cultures that live underground, or in active volcanoes. People who live high on glaciers or on solid clouds . . . anywhere an adventurer can go, there could possibly be an existing culture.

Pastimes and Customs

The customs of a culture are determined largely by geography; the geography dictates how much time is had for leisure, what materials are common, and which are rare. A region with little to serve as a surface for permanent writing is often home to illiterate cultures, even if the technology could support a printing press. The availability of metal (and the time allowed for experimenting in metalworking) determines whether the culture could have developed metal tools or steel. Some cultures may have substitutes that will still allow the Tech Level to rise even without metal (Shape Stone could easily create obsidian tools, if it the material is available).

Aside from technology, geography can determine other customs. In desert areas, water is held sacred, so spitting can be either a grave insult or a show of respect. Local plants (especially healing herbs) may be viewed as sacred, and finding them could mean luck. Offering the plant to someone of the opposite sex could even be a proposal of marriage.

War-like or hunting societies are often patriarchal; agrarian cultures are often matriarchal. Tribal societies that rely on participation from everyone are often both or neither. But this need not be the case for all societies, and the strictness of the rule often depends on how severe the local environment is; the more severe the climate, the more likely the rule will be enforced very strictly or not at all.

Of course, this supposes a mammalian race. Races that lay eggs (and thus danger to the female is less likely a direct danger to the child) may not necessarily follow the same rules -- insect races in particular are traditionally matriarchies.

Warlike cultures, ironically, are likely to have more equality in the sexes. This is due to the large number of widows and/or widowers who must protect the children after the warrior dies at a young age and the number of spouses who must hold off sieges while the warrior is fighting elsewhere. Cultures that have community property and communal raising of young would probably be exempt from this, however.

It is a good idea to know which crafts the culture excels at and which they use for trade. A simple change in cultural handicrafts can add depth to an otherwise "standard" race. While dwarves are typically renowned for making weapons and armor, a dwarven culture that makes clocks, timepieces, and other clockwork toys is decidedly different in scope - - they'd likely be less war-like, more patient, and might even gain a few levels of the fantasy game's dexterity.

Laws are another important facet of culture, one which is often simplified and ignored until it becomes a plot device. Especially if the setting is a single country or city, it is important to at least work out a basic code of laws and to have an idea how the judiciary for the area works. This need not be elaborate, just a simple list of what is allowed and what isn't, and what happens when something goes wrong. Tax law, in particular, usually has many silly little loopholes that can be used to relieve characters of excess cash that they might acquire, and if you write up guidelines ahead of time, they can't even accuse you of conspiring to keep them poor . . .

Friends and Enemies

Setting allies and enemies based on culture works a lot better than doing so by race. Even so, the people in the culture

will not usually make such distinctions. After all, if the only elves a culture has met are war-like savages that hunt your people down, they aren't likely to be too keen on meeting any elf, even if the elf is from a different culture.

This can be a good way to throw player characters for a loop. Civilized orcs, sinister dwarves, and elves who have forgotten their link to nature are all possible, and certainly not the same old race. This often means that the culture in question has different Racial Disadvantages from other cultures of that race, but it only makes sense that it would happen now and again.

Such changes in attitude often depend on both neighboring cultures and the basic values of the society. This may require a bit of extra history be written for the culture, but such development is desirable anyway, as it adds depth to the culture.

Multi-Racial Cultures

There's no reason why a culture has to only include a single race. While tribal and primitive cultures will normally only have a single race, more civilized nations (especially imperialist powers and conquerors) may include many races, even many cultures, under one nation. Many human cultures in fantasy realms include other races anyway, but there is no reason to restrict it to humans; there's even no reason to *include* humans . . .

This is the most important time to drop old stereotypes of the non-humans. An individual's cultural identity should come from the culture, not the species, of that individual. Numerous possibilities exist already, without having to do much in the way of inventing new cultures. A sylvan culture, with elves, fauns, dryads, centaurs, and other forest races is easy enough to envision, as is a warrior-nation of orcs, goblins, trolls, and similar races. You could even add in an unexpected race or two (such as a race of sylvan dwarves, or a band of war-like humans that joined the orcs) for variety.

Metropolitan areas are the most likely candidates for a multi-racial culture, but less diverse multi-racial cultures could exist anywhere, especially if one or more races are subjugated by another.

Drastic Changes

Sometimes a culture is a radical departure from what is expected. This can be due to many causes, but one of the most common is disaster. Famine, plague, war, and curses are powerful effects and can take quite the toll on the survivors. Such individuals, with their survivor mentality, may need to consume their dead to survive, may be fiercely territorial, callous, or driven by an intense hatred of that which caused them harm. Such a race may also be desperate to repopulate itself, and prone to rapid violence at the sign of any threat to their children.

Time can also cause divergence, especially if coupled with times of plenty. Decadence can set in, leading to corruption, arrogance, and vice. Such effects usually destroy cultures over time, but they can linger for generations before falling, and cause unbelievable harm to their neighbors. Such people, if faced with hardship, will react according to their now-corrupted goals of maintaining luxury, and may resort to murder, rape, slavery, and consorting with dark powers to survive.

Implementation

Prior to a campaign, this is no problem, but integrating these concepts into an existing campaign could take work. Done early, this is not a problem, especially if the characters have not had time to explore much of the world, but it can be introduced even into a long-standing campaign.

Existing race-languages could be easily revealed to be trade languages used by a specific race; perhaps maintained with help by the gods, while the actual tongues are kept secret. If only one such culture exists in the campaign so far, an adventurer speaking a new dialect of Dwarvish from "over the sea" could dispel the myth of race languages just as

easily.

Adding religions takes more work (or new cultures), but a messiah figure or prophet could appear, bearing news of the "new elvish god" or otherwise challenging the existing pantheon with a new idea. If the old gods don't strike down this prophet, that makes him somewhat more legitimate. Similarly, a secret cult (that existed all along) could suddenly be revealed; this can make a good adventure, especially if it appears to involve important public figures and has a sinister appearance (whether it is in reality sinister or not).

Geographical features can change; rivers do move and deserts do expand, glaciers descend on areas and volcanoes erupt, but most geography-altered cultures would have to be new; exotic locations such as the depths of the sea, deep under the earth, or among the clouds are less likely to have been explored, and more likely to shelter a "hidden" culture.

Implementing differing pastimes and customs between two cultures is easy among less detailed cultures (if the character's aren't there, they won't notice weird customs), harder in the characters' home region(s), although a rarely used custom (such as an almost dead one someone resurrects for a special occasion) could provide a bit of variety.

New friends and enemies is as easy as political maneuvering. Some forewarning can make for good adventuring (as the characters try to stop -- or start -- a war), but sudden, sweeping changes are just as realistic and can be quite dramatic. This can lead into conflicts of loyalty and other role-playing opportunities as well.

An old (single-race) culture can become cosmopolitan due to the annexation of another nation with a different race, a political alliance, or conquest. Mutation or magical experiments can also add a new race (or races) to a culture. Similarly, an influx of refugees from another nation (for whatever reason) can also add diversity.

Drastic changes imply disaster, either an actual world-shattering disaster or a dangerous tyrant assuming leadership. Preventing the debasement and destruction of their own culture is an excellent motive for role-playing, while survival remains the driving adversary in the campaign. Refugees fleeing the disaster can create upheavals and changes in the neighboring cultures as well; entire campaigns can easily be based around this singular event and its repercussions.

A little effort, a little time -- perhaps as little as a few jotted notes -- can turn the old "cookie-cutter" races with their "racial cultures" into as vibrant additions to the campaign as humanity.

As a final note, it takes little extrapolation to apply these guidelines to alien races in science-fiction as well. There's no reason for an alien race to have a universal culture, especially not one that once used STL travel to colonize. Adding a few disparate cultures to the common races multiplies the depth of the race and campaign without having to add whole new alien species. In the end, it is the suspension of disbelief that all fiction, roleplaying included, aims towards, and a little detail can go a long way towards this goal.

For a thousand years, from its rededication by an emperor to its conquest by the Ottoman Turks, Constantinopolis (Byzantium to the ancient Greeks, Istanbul to the Turks, and Constantinople to us Westerners) was *the* leading city of Europe: capital of empire, center of trade, and bastion of Christianity. It was a metropolis of as many as a million souls, decorated with the grandest churches in Christendom, the most lavish palace on the continent, and the greatest fortifications of any city in the world before or since. Constantinople can serve as the model for an imperial capital in your own fantasy game or, of course, appear in a Medieval historical game. Characters expecting a Classical polis or a high-powered version of a western Medieval town are in for a shock. The Byzantine empire was a unique society, drawing from its Classical heritage and Christian roots similar to those of the west, but it was very different from both.

Geography and Land Use

Constantinople lies on a peninsula at the northern mouth of the Sea of Marmara, where Europe meets Asia Minor. The roughly triangular peninsula has the Sea of Marmara to the south; the Golden Horn, an inlet, to the north, and Europe to the west. This position had enormous strategic value. In the heart of the wealthy, densely populated Greek-speaking world, it controlled land-based trade moving east and west and sea-borne trade moving north and south, and occupied a defensible position with only one face towards the land. At its height, Constantinople was a triangle almost three kilometers east to west and nearly four kilometers from north to south, but was never as densely populated as most other cities of the period.

The land in and around the city is unremarkable farmland. The immediate vicinity is mostly low hills with a few streams and low vegetation but no major rivers and little in the way of forest. Weather in the region is as pleasant as you would expect from the Mediterranean, but like the rest of Greece, earthquakes are frequent. Beyond the city walls, one could expect to find suburbs thinning to scattered houses and villages within sight of one another for a considerable distance, including luxurious villas belonging to the city's notables (including the imperial family).

History

Constantinople

The birth of Constantinople lies in an administrative reform.

In the late third century, the emperor Diocletian took bold steps to reinforce a failing imperial government. The empire was divided into halves, with mirror-image administrations (including "duplicate" emperors) over each half. Imperial power was no longer tied to Rome itself, so Diocletian's Eastern successor Constantine set out to find an appropriately situated place to establish his residence. That place turned out to be the ancient city of Byzantium (the name is Latinized; the Greek is closer to "Byzantion," after a legendary founder, Byzas). Once Constantine had decided on this site for his new home, he instituted a sweeping reconstruction. In 324, Constantine's renovations brought people and decoration from every corner of the empire. A new wall was built enclosing an area far larger than the older town, old monuments were completed or expanded, enormous public baths were built, and new streets and fora were laid out. Because of Constantine's lenient attitude towards Christianity, new Christian churches were built as well. In many ways, Constantinople was intended to be a second Rome even before the "second Rome" ideology became official Byzantine policy. Like Rome, Constantinople was built on seven hills (low hills, but hills nevertheless). The city had its own Senate, hand-picked by Constantine and allowing him even greater autocratic control than previous emperors. Constantine also arranged for the public distribution of grain imported from Egypt for 80,000 people, duplicating Rome's grain dole. The rebuilt city was officially dedicated on May 11, 330.

As the western empire slowly collapsed, the capital of the eastern half grew larger more important. Constantine's successors added a hundred-kilometer aqueduct leading to Thrace and the city's branching main street, the Mese. The most significant addition to the city during this period is the massive wall, built in a mere two years from 413 to 415 by Theodosius II. The walls nearly doubled the city's area, and by the middle of the century, lesser fortifications protected the city's previously unprotected seaward sides. The capital of the largest, richest country in the world (with the possible exception of China), Constantinople grew steadily during this period, reaching a population of perhaps as much as one million by the end of the fifth century. When the imperial throne in Rome became defunct in 476, it did

not cause undue excitement in Constantinople, since most of Italy remained under at least nominal Roman/Byzantine authority under Gothic subject kings, but it left Constantinople the most important city in the only European empire worthy of the name. Anastasius I's financial reforms at the end of the fifth century left the crown well-supplied with gold, paving the way for the reign of Justinian.

Justinian set the tone for later emperors and, in some ways, for law and government in Europe for centuries to come. He initiated massive legal reforms and established the heavily ceremonial tone of the Byzantine court. He also waged long, grueling wars in the east and Italy, and was responsible for much of the physical look of the city. On January 11, 532, politically motivated fans at the Hippodrome started an uprising, the Nika revolt, to protest imperial policies. Increasingly brutal attempts to suppress the revolt eventually succeeded, killing many rioters and leaving most of the city in ashes and rubble. While most smaller buildings were rebuilt privately, Justinian rebuilt the palace and major churches as well as a large reservoir. Public baths, a fixture of Classical city life, began to go out of fashion during this period, since more puritanical Christians viewed public nudity as shameful and the baths themselves as hotbeds of immorality.

The reign of Justinian marks the high point of Constantinople's history in terms of wealth, population, power, and artistic activity. Soon thereafter, the city began to decline. A series of plagues struck the empire through the sixth century. The largest struck in 542, and is said to have reduced the population of the city by half. Later in the sixth century, the empire became involved in an expensive and inconclusive series of wars with Persia lasting into the seventh century. Constantinople itself came under attack in 626 (the city is embarrassingly easy to reach by sea, so it was frequently besieged). The Theodosian wall withstood the attack marvelously, but the aqueduct was rendered inoperative. But this was only the beginning of the Byzantines' problems. Not long after a settlement with the Persians, the vigorous new religion of Islam burst out of Arabia, and the valuable Byzantine possessions in Syria and North Africa quickly fell to the Muslims, as did the tottering Persian empire. This was a powerful economic blow to the Byzantine empire, since Syria and Egypt were its primary grain-growing regions. Constantinople was besieged by Muslims in 674 and again in 717. Again, the walls withstood the siege, but there was little money to spend on maintenance, so many old constructions, like the Roman sewer system, began to fall out of use.

Even as a Byzantine-Muslim frontier stabilized near the modern southern Turkish border, one of the most serious theological battles in the history of Orthodoxy was starting. The emperor Leo III issued an order for the destruction of icons in 730, inaugurating iconoclasm. For the next century and a half, Byzantine society could be divided into two camps: iconoclasts, who supported the destruction of icons and images in general on the grounds that they were graven images prohibited by the Commandments; and iconophiles, who supported the use of icons as a focus for worship, justified by their place in the Orthodox tradition. Eventually, the iconophiles won as the conflict petered out, but little of artistic interest survives from this period, and many older artworks were defaced or destroyed outright. The empire was also beset by other economic and military problems, such as Slavic expansion into the Balkans and annual Muslim raids into Anatolia. Constantine V restored the aqueduct in 756, and other emperors reinforced the sea walls, but war, plague, and economic problems had taken their toll on the population. By the mid-ninth century, Constantinople probably held around 100,000 people, occupying a fraction of the city's area.

By the 10th century, the empire's domestic and foreign problems abated, leading to a revival of the empire. The Byzantines regained ground lost to the Slavs and new money began to flow into the city. One of the uses of that money was to build an auxiliary palace at Magnaura adorned with amazing automata, artificial animals which twittered and roared through ingenious use of hydraulics. The old palace fell into disuse, and the imperial family eventually moved to a new palace at Blachernae shortly before the Crusades. Originally outside the city wall, Manuel I Comnenus brought the palace inside by rebuilding the wall's northern section.

Despite the revival, the empire was never as large or as wealthy as it had been under Justinian, and after disastrous military defeats in 1057 by Normans in Italy and Turks in eastern Anatolia the empire began to shrink again. The decline was temporarily halted by the Crusades. In the 1090's, the emperor Alexius issued a call to the west for mercenaries to fight the heathen Turks and recover lost territory for the Christian (albeit Orthodox) Byzantine empire. His request was transformed in the west into a church-sanctioned mass movement to conquer the Holy Land. Without meaning to, Constantinople became a jumping-off point for armies heading to newly conquered Crusader kingdoms. Dazzled by the glories of Constantinople, travelers returned to the west with ideas and books preserved by the eastern

empire, and while the empire regained only a little ground as the result of the Crusaders' efforts, the westerners at least brought the Muslim expansion to a temporary halt.

For the empire, the Crusading period was brought to a tragic end by the Fourth Crusade. A Frankish Crusader army was drawn into a dispute over the imperial throne. The war ended with the Crusaders seizing Constantinople for themselves in 1204, doing untold damage and taking most of the city's carefully hoarded store of riches with them back to Western Europe. The Latin emperors, as the western rulers of Constantinople were called, were able to take control of parts of the empire, but the Greeks retained autonomy in small territories around Greece and Anatolia. The Latins reorganized their territory along feudal lines, completely dismantling the Byzantine administration, but ultimately their presence in Greece collapsed. In 1261, a Greek reconnaissance-in-force discovered that a largely deserted Constantinople had been left undefended, and they were able to recover it without a battle.

The decimated, Westernized remnants of the empire creaked along for two more centuries. By this time, it encompassed only parts of the Peloponnesus and Thrace and was hardly even a regional power, much less a major player on the world stage. Despite a flowering in Byzantine art and literature during this period, mostly depicting a sweet sadness, there was not enough money or manpower to do much new construction or even repair, so the city continued to crumble. Already a shadow of its former self, Constantinople continued to shrink as the Middle Ages waned. Fourteenth century travelers described a series of hamlets scattered around the ruins of a vast city.

The inevitable end came in 1453. The Turkish sultan Mehmet II demanded the complete military and political capitulation of Constantinople. The last emperors had been paying tribute to the Turks, but Constantine XI Palaeologus refused to surrender the sovereignty of the Romans. The Turks set siege to the city in one of the first major European uses of cannon. The walls were inadequately guarded, but the millennium-old Theodosian defenses withstood heavy bombardment for two months. At dawn of May 29th, a massive assault finally penetrated the walls. Reports are contradictory on small details, but the last emperor was not captured, and it seems likely that he died fighting.

The Turkish conquest had an effect on the city much like that of the Fourth Crusade, and after Mehmet took Constantinople as the capital of the Ottoman Empire, an increasing Turkish presence began to erase the older Byzantine city. The Theodosian walls and the Hippodrome were never rebuilt and the sultan's Grand Seraglio replaced the remnants of the Byzantine Grand Palace, but the Hagia Sophia has survived as a mosque.

Religion

Constantinople was a center of Orthodox Christianity, a conservative but more "ruggedly independent" religion which differs significantly from Catholicism in doctrine and organization. Those differences were expressed quite vehemently despite constant negotiation to reconcile eastern and western churches; at one famously disastrous conference, Catholic and Orthodox bishops ended up excommunicating each other. Whereas the West was dominated by the papacy, Orthodox clergy were less controlled by their leading figure, the bishop of Constantinople, usually called the patriarch. The church was still a political presence, but not an overbearing power as it was in the west. At any rate, the Byzantines were people who took their religion seriously and could get very exercised over doctrinal points which might appear incomprehensible to outsiders. For example, publically insisting that the human and divine natures of Christ were conjoined or comingled rather than united was criminal heresy. Open worship of pagan gods or preaching heretical beliefs could result in imprisonment or violence. Nevertheless, other Christians might bring their own priests with them so long as they don't try to convert anybody, there is a small Jewish community, and the city had at least one mosque as early as the tenth century.

The Byzantines had a strong monastic tradition, but Byzantine monasteries were less wealthy and powerful than their western counterparts. Each monastery was an independent institution, not a member of a larger order. Constantinople was home to a number of monasteries of all sizes, which could serve as temporary retreats for contemplation, lodging for travelers, and even prisons.

Arts, Sciences, and Education

The empire in general and Constantinople in particular had a much higher literacy rate than the rest of Europe. Children were usually taught to read by their parents and went on to secondary education offered by the state or the church. Constantinople also had a state-sponsored university specializing in law. As one might expect from a literate society, there are a lot of books. Individual books were extremely expensive, but small private libraries were not uncommon in the city, and the emperor, churches, and monasteries had their own collections. Ecclesiastical libraries had mostly religiously oriented texts, although some had small, restricted collections of secular books. Non-religious works would mostly be found in private and imperial libraries.

Those books included the most important works of Western literature to date, and then some. While the Byzantines didn't go in for innovation, they did have a stockpile of ancient literature, supplemented by encyclopedic collections of excerpts, huge volumes of religious commentary (biographies of saints were enormously popular), and a growing body of contemporary fiction. If a Classical work exists, it can be found in Constantinople, and probably in a choice of Latin or Greek. The hard part would be finding somebody who has the book in question and getting permission to read it. The Byzantines had an ambivalent attitude towards Classical science and literature because of its explicitly pagan content (although in a fantasy game, Classical "science" and Orthodox mysticism might combine in a hidden magical tradition with a complexity to rival the Qaballah).

Byzantine technology was as high as any in Europe and western Asia, although its uses may be questionable. For example, the Byzantines possessed complex hydraulic technology and primitive steam power, but it was used only for a handful of spectacular amusements like an artificial tree full of singing mechanical birds at the imperial palace. One area in which the stockpile of knowledge was more generally used was medicine. Byzantine doctors had extensive manuals on surgery and herbal medicine, and Byzantine medicine was as least as advanced as Muslim medicine for most periods.

Byzantine visual arts are full of religious motifs, and except during Iconoclasm, just about every home and shop had at least one icon somewhere, a portable painting or relief of a favorite religious figure used as a focus for worship. Byzantine painting is stylized, lacking perspective and background details and relying heavily on frontal views and a language of specific gestures and stances. Mosaic survived as a major art form, and the Byzantines excelled at producing blue and purple stained glass. Sadly, many performing arts were dead or dying for most of Byzantine history. Plays were performed at the Hippodrome, but were eventually banned in the seventh century. Aristocrats and the imperial entourage occasionally sponsored private performances, but most Byzantines would never see a play. Church music was almost entirely vocal music, although instruments were used in secular music.

Military, Police, and Public Services

The composition of the Byzantine army varied considerably from time to time. It usually had good heavy cavalry, acceptable infantry, and a sizable navy for as long as it was a significant power, and they had incendiary Greek fire. However, the Byzantines tried to avoid warfare and relied on their formidable diplomacy to persuade others to fight their wars for them, usually with considerable success. At any rate, military units are not likely to be found in the city itself. Nevertheless, an armed presence in the city was provided by the palace guard and a corps of night watchmen. Constantinople was one of the few Medieval cities to actually have prisons, albeit small ones.

Constantinople enjoyed other services found in modern cities. The government maintained fire brigades and several hospitals. Originally, hospitals were a cross between medical facilities and shelters for travelers and the poor, but in time they came to be simply places for care of the sick. Because Constantinople was a hub of trade and government, it was well prepared for visitors relative to most Medieval cities. If a traveler didn't have friends to stay with, he might find accommodation in private inns, monasteries, or free hostels supported by the government.

Clothing

The basic Byzantine garment is a long, loose tunic, typically worn belted and with a trouser-like undergarment, often accompanied by a cloak or robe, and sometimes supplemented with multiple layers of tunics. There are remarkably few basic garments, but there is a dizzying array of subtleties of color, material, number of layers, and so forth.

Particular colors or types of decoration (particularly gems) may indicate a specific office or position in society, and an outsider may never get the hang of it all. A foreigner may take it as a rule of thumb that the higher someone's position, the more layers and colors he will wear and the better material his clothes will be made from (for example, silk rather than wool and linen). Red and purple are imperial colors and should be avoided. Men are typically bare-headed, but women (particularly married women) may wear a turban-like head cloth. Footwear consists of low boots or high sandals for commoners (mostly white), slippers for clergy and officials (black or colored).

Food

The Byzantine diet was similar to diets elsewhere in Europe: lots of grain, supplemented by legumes, vegetables, meat, and cheese. However, the role of bread was somewhat less pronounced than in other societies. The Byzantines appear to have eaten more meat and cheese than other peoples, mostly mutton and sheep's-milk cheese, and a great deal of olive oil. The poor tended to replace meat with eggs.

Streets and Homes

Despite the city's Roman origin, the main streets of Constantinople did not conform to a square street grid. This is a little strange, since the city was heavily rebuilt in a single building episode and the low topography of the city presents no obstacles to a squared grid. The main street, the Mese, was paved and perhaps colonnaded for its entire length and lined with shops. Lesser streets were twisted and of varying width, and not necessarily paved.

Byzantine homes are less open than other Mediterranean homes, with small (and sometimes no) courtyards and few windows, with a greater reliance on lamps and candles for light. Roofs were typically flat or slightly peaked, covered with thatch or earthen tiles. In multi-storied homes, the ground was often used for shops and storage, with living quarters above. In its more populous stages, Constantinople also had blocks of apartment buildings. The eastern neighborhoods, closer to the palace and the Hagia Sophia, appear to have been somewhat wealthier than those to the west. Foreigners were assigned to small quarters around the city proper, or across the Golden Horn in the suburb of Galata.

What To See

Regardless of the visitor's feelings about Orthodoxy, the Byzantines themselves, or anything else connected to the eastern empire, the physical city never failed to impress. These are just the most notable of the city's landmarks.

The Wall

Unlike many Western cities, Constantinople did not have a citadel or other internal "last line of defense." Even the ancient acropolis had passed into disuse. However, the city did not need one. In addition to its eminently defensible geographic position, Constantinople was protected by the most massive defensive walls of any city in the world.

The wall was built in a slightly curving four kilometer line running north-south. It is made of alternating courses of brick and stone, giving it a banded appearance (a common look in Byzantine architecture). It's actually a series of defenses rather than a single wall: a ditch seven meters deep and eighteen across, then a two meter tall terrace, then an eight meter tall curtain wall (with towers a mere half-meter taller), another terrace about fourteen meters across, and a second wall twelve meters tall (towers about 20 meters tall). By 450, there were ninety-two towers along the inner wall. Most of the towers are pentagonal, presenting a pointed face to the enemy, but some are square or octagonal. Rather than arrow slits, the towers were furnished with larger embrasures sheltering small ballistae.

The wall was pierced by several sets of gates. Unlike most Byzantine fortifications, the gates appear to have been built on a straight axis. Each gate was flanked by a pair of towers on both the inner and outer walls. The gates varied in decoration from the grand Golden Gate to utterly utilitarian posterns, but all were equipped with wooden drawbridges.

Hagia Sophia

Constantinople has hundreds of churches and shrines, several of which would be impressive in any city, but their undisputed queen is the Hagia Sophia, the church of sacred wisdom. The Hagia Sophia, started in 532 and completed in 537, was by far the largest, grandest church ever attempted, and remained so until the construction of the largest Gothic cathedrals, the scope of which it inspired. The exterior is almost square (78 by 72 meters, if one ignores the entryway). The interior follows a three-aisled floor plan, with the center section about twice as wide and tall as the side aisles. The side aisles reach a height of about 17 meters and have a story of galleries over them, which communicate with the lower floor by stairways near the entrance on the west end. The center aisle is topped by a huge dome nearly fifteen meters deep, bringing the ceiling at its highest point to a height of about 56 meters. The dome rests on four large pillars at the points of a square and is pierced at its base by a series of small windows between the ribs of the dome, making it appear as though it is hanging from the sky rather than sitting on the pillars. The grand central dome is flanked by smaller hemispherical domes over the side aisles, and the semi-domes and the walls are set with a number of small windows. The building as a whole is extensively decorated with abstract patterns and mosaics of church fathers, saints, emperors, and biblical characters.

The Palace

The palace was never a single building, but rather a series of buildings, gardens, terraces, and walkways in a sort of walled palace district. Even this picture is deceptive, since the Byzantine emperors had at least three palaces scattered around the city. The original palace lay on a gently sloping piece of land in the eastern end of the city, immediately to the east of the Hippodrome and south of the Hagia Sophia and the Mese. The entrance to the complex was a vestibule building known as the Chalke, which opened off the Mese. The palace had a "public" section towards the northeastern end with a large courthouse called Tribunal or Delphax surrounded by meeting and dining rooms and a gold-domed throne room (the Chrystriklinos), and a "private" section called Daphne. The palace had its own artificial harbor, and considerable area was given over to barracks for the palace guards. This palace was abandoned by Alexius I, and was almost completely destroyed by the time of the Turkish invasion.

The Hippodrome

The Hippodrome was Constantinople's center for public events of all kinds, including plays (before they were banned), athletic events, public appearances by the emperor, and even court cases, but particularly chariot races. The Hippodrome was an elongated U shape, perhaps 450 meters long and 117.5 meters across the seats or 79.5 meters across the course. Seating has been estimated at 100,000. The open end, which held the entrance gates, pointed to the northeast. The center of the race course was occupied by a long spina, which was decorated with statues and obelisks, including a pharonic obelisk and a column dedicated to the oracle of Delphi around 390 BC. The seating section rose on tiers of vaults and was surmounted by a covered colonnaded passage. The open end had twelve gates, all of which could be opened simultaneously at the start of the race. The gates were topped by gilded statues of four horses, looted in the Fourth Crusade and taken to Venice's San Marco. The Hippodrome also had a private box (actually a two-story structure with seating above and a reception area below) for the emperor, the Kathisma, which had a passage connected directly to the palace. Horse races became less popular after the ninth century, and the Hippodrome was largely abandoned and in ruins by the time of the Turkish invasion.

What To Do

Foreigners might not find Constantinople as much fun as the large cities of the west. The Byzantine standard of behavior is to be quiet and still as much as possible, and people are encouraged to be more introspective than in the more freewheeling, democratic west. Certainly, the common people of Constantinople were uninhibited enough to make good-natured dirty jokes about Justinian's wife and and moon the Crusaders *en masse* during the Fourth Crusade, and there are still taverns, prostitutes, and gambling, but outsiders will still find them more reserved on average than people elsewhere. Contemplative games related to modern chess and checkers were popular amusements, although more boisterous dice games could also be found.

But what Constantinople lacks in exciting natives, it makes up for in exciting foreigners. It is, after all, capital of a multicultural empire, a site for major religious conferences, and a center of international trade. Adventurers will be able to find Egyptians, Syrians, Italians, Russians, Franks, Vikings, Slavs, and just about anybody else from Europe, North Africa, and western Asia. Italians, particularly from Pisa, Genoa, and [Venice](#), Russians, and Scandinavians (the Volga was a virtual highway from Scandinavia to the Black Sea) always traded in Constantinople, and Scandinavians served in the Byzantine military at least as early as the ninth century (most famously in the Varangian Guard, an axe-wielding imperial bodyguard) but western Europeans will be particularly common once the Crusades begin.

And even if the people aren't that much fun, Constantinople is the site of almost constant ceremonies and processions, so there will always be something to watch. Saints' days are accompanied by neighborhood or imperial feasts (sometimes accompanied by public distribution of food and wine), and the comings and goings of the imperial family, allies, clergy, and ambassadors are likely to be accompanied by processions. And, of course, there's the Hippodrome. Constantinople's race track is home to factions of hard-core fans, identified by colors: the Reds, Greens, Blues, and Whites. The factions were responsible for some riots (just as modern sports fans sometimes are), but could also be called on for help after disasters.

Constantinople In The Campaign

"Byzantine" has come to be synonymous with infinitely complex politics and intrigue, which is perhaps unfair. The imperial court was encrusted with layers of ceremony and niceties of behavior and language, but was probably no more conniving than any other large government. Nevertheless, players will probably expect convoluted intrigue, so you'd best give it to them. The details of courtly practices would take their own book (say, *The Book Of Ceremonies*, composed under the emperor Constantine Porphyrogenetos). Suffice it to say that the court is full of hidden factions, officials whose functions are obscure or have no relationship to their titles, and behavior verging on emperor-worship. Characters geared towards fighting won't find much to do in Constantinople unless the city is under attack or during the occasional riot, but they can certainly find employment in the Byzantine military. Merchants, on the other hand, will find that Constantinople is one of the best markets they can find. Even if you don't intend to run adventures in Constantinople itself, it makes a great base of operations and place to assemble a party of adventurers. Here are some other adventure ideas:

- **Hail Mary:** The PCs, knights of Charlemagne, discover that a particular sacred icon is a potent magical item. They have a complete physical description, but all they know about its whereabouts is that it hangs in a church in Constantinople. This presents them with three large tasks. First, finding a specific icon in Constantinople is very much a needle-in-a-haystack proposition, save that the stack is composed entirely of very similar needles. Second, they must ease a large, heavy, delicate wooden object out of a church where its rightful owner is unlikely to let it go. Third, the year is around 800 AD and Iconoclasm is full swing. They must find the icon and get it to safety before somebody destroys it.
- **Constantinople Underground:** Before the London Underground and the Paris catacombs, there were the sewers and waterworks of the cities of the Roman empire, with tunnels which could be tall enough for a man to walk erect in. And who knows what lurks in those tunnels, unused but perhaps not collapsed after the eighth century? A demon held back by the power of Christ and the saints? A forgotten monster of the Classical age, trapped under Byzantium since its ancient founding? Whatever it is, the PCs will probably have to stop it. Alternatively, perhaps the PCs can't stop it, but they *can* find a lost saint, sleeping in a tomb also lost somewhere under the city. Any adventure set under Constantinople should pass through one of the city's reservoirs. While some of them are simply deep, open pools, others are roofed, their covers held up by forests of pillars. If the water is deep enough for boating (which, for the purposes of adventure, it should be), the PCs will find themselves poling through a vast, dark, echoey underground lake, picking their way through an eerie landscape of decayed stone pillars.

Important Vocabulary

During the years in question, nobody uses the word "Byzantine." It was coined by 16th century scholars to distinguish

between the ancient and Medieval phases of the eastern Roman empire. The Byzantines call themselves Romans. Westerners call them Greeks. Their other neighbors (Turks, Slavs, etc.) always knew them as Romans and, being largely unconcerned with Rome itself, continue call them that. The city itself is usually called Constantinople, although some may occasionally say Byzantium and the Turks may call it Stambul. If the GM needs to come up with the name of a street, church, or monastery, pick a Greek name and attach the epithet *hagia* or *hagios* (meaning "blessed"). *Hagia/os* is the title used for saints; for example, in Greece, Saint Steven would be *Hagios Stephanos*.

Constantinople is just part of a large empire with a long, complex history, so if you're going to use it in a historical campaign or deal specifically with the imperial court, it may be a good idea to get a better picture of Byzantine history as a whole. These works may help.

Experienced gamers can be one of the most jaded audiences around. Sometimes their boredom is so evident that it makes the GM wonder why they bother. Conversely stereotyped adventures and overly linear plots can often put off new gamers. Today's generation is spoilt for choice when it comes to "listening to stories." Movies, novels, television all strive to find new and innovative ways to capture new viewers and keep the old. Why should roleplaying be any different?

I have three suggestions for ways to spice up your stories and grab your players by the imaginations to have them hungering for more. All of them are relatively easy to incorporate into an existing campaign.

Ontological Shock

The uneasy and unholy alliance stopped in the clearing, the hills loomed around the valley, imposing and silent. Malleus, Magus of House Verditis, subtly pointed his Talisman at the vampires and considered the words and gestures for the Ball of Abysmal Flame spell he had learnt for this occasion. His companions were equally nervous, bodyguards clutching weapons nervously, Magi rehearsing spells in their heads. It was apparent that the vampires had similar concerns. Their gaunt figures edged quietly out of the night, eyes darting. Bernard of House Tremere stepped forward; the beast that named itself Maximus mirrored the movement. Both of them gave of a sense of obstinate arrogance and assurance.

"As agreed, we have met in this place to join forces against the tide of darkness that threatens out land." Bernard's voice was confident and neutral.

Maximus grinned a toothy grin. "Yes, that is correct." His Latin was archaic, but understandable. "We have come to remove that threat."

"Then we agree to a peaceful alliance until this task is finished?"

"Yes, we agree." They shook hands, neither displaying the disgust or hatred they both felt.

Then the air shimmered and a booming voice emerged from the thin air between them. "Do not move or you will be destroyed!"

Oswulf, Malleus's bodyguard broke, he had barely taken a step when there was a flash of lightning and he collapsed unconscious. Malleus stood very still, and muttered the Latin of a spell under his breath.

Around them the air stopped shimmering and revealed fifteen knights in armor like he had never seen before. Each held what he could only think of as a crossbow-like device made

from shining metal.

One of the knights stepped forward. "I am Captain Janus of the United Systems Deeps Scout Service. We mean you no harm; we wish to join your alliance to destroy the K'kartarven that has invaded your world."

This is a slightly dramatized account of an actual scene in a game I ran with a friend. I ran a *Vampire: the Dark Ages* campaign, he ran an *Ars Magica* campaign. As they progressed we collaborated on the overarching plot and slowly revealed it to them. A powerful demon was destroying villages with its demonic familiars and raising an army to take over the world. Slowly the two groups of characters became aware of each other, slowly they sounded each other out and realized that the other side knew things they did not know. Eventually, after much tense negotiation, they decided to join forces against this threat.

That's when the Space Marines turned up. It turned out that an alien species had crashed a colony ship in the Black Hills and it was now trying to expand its influence. The Space Marines had chased it, shot it down and had now come down to clean up. They also wanted to join forces.

They never guessed. The players had absolutely no idea what was going to happen.

One of the most powerful tools you have to capture the attention of your players is their own preconceptions. If you tell them you are playing *Vampire the Dark Ages*, or *Ars Magica*, they expect certain things to happen, or be capable of happening. It's a historic setting, so technology will be primitive and they certainly don't expect starships to appear in the air above them.

In fact in the example above we shocked them twice. At first they did not know about the other group. Then they realized they were playing a *Vampire/Ars Magica* crossover and they built new expectations. Then we completely undermined them by revealing the truth as to what had been happening the whole time.

The important thing here is planning. If you suddenly spring something like this on your players, you make destroy their ability to suspend disbelief. You will face cries of "You just made this up to mess with us!" . . . which might be true, but if you have it planned you will have something to fall back on. In the *Vampire/Ars Magica* crossover we had a list of rumors that we delivered at the start of each session. Some were plainly true, some were distorted truth and many were false. We worked out the rumors between us, based on what each of the important groups were doing (the aliens and space marines were run by us as NPC groups). Then we would give these rumors to the characters to follow up.

There were rumors like, "A huge silver Dragon appeared over London for a few moments before disappearing; the Archbishop of York is claiming that it's an omen from God about the corruption of the city." Obviously, it was a spaceship that appeared over London. Or, "Strange knights were seen to appear out of thin air and strike down a dozen bandits attacking a small homestead. They fired lightning from their hands. The Bishop of Exeter claims they were angels helping the righteous. They disappeared again after the bandits were all knocked unconscious for the Baron's men." Two space marines decloaked and took out some bandits. The marines were later reprimanded by their superiors for breaching the no contact code.

And so on. When the players looked back the rumors they saw the whole story unfold before their eyes.

The idea here is to allow the players to assume they are playing in a certain type of game. Play up the traditional elements of that genre while carefully laying obscure clues about the actual game hidden underneath. In fact, the clues do not have to be all that subtle; most players will simply assume that they are relevant to the current game and interpret them as such. This is the power of the preconceptions of Genre.

An idea I am toying with currently is to take a group of experienced *Unknown Armies* players and ostensibly start a game based on that universe. There will be not Adepts or Avatars, but the characters will all know the truth about the Occult Underground. Or at least they think they do. In reality the characters are the pawns in the cosmic struggle between Heaven and Hell, and the game is actually *In Nomine*. One of the main features of the metaphysics of

Unknown Armies is the denial of any truth in the major organized monotheistic religions. The religions exist, and many occult people partake of them and possibly believe them to be true, but the "objective" reality of the game is not a Judeo-Christian one. Angels and Demons, in the *In Nomine* sense, do not exist.

Thus the preconceptions of the players that the game world is a relativistic place with little objective reality, little objective truth, no Heaven and Hell, will be entirely unfounded. Ontological shock. The make up of the universe is not as we thought it was.

Obviously Ontological Shock requires a lot of careful planning to effectively pull off without ruining the believability of a story. In general it is probably better to build a campaign with it in mind rather than implement it into an existing campaign, though this can also work.

If you are looking for a way to revitalize player interest in an existing game, or introduce a new story arch in an interesting way then the following techniques might be better suited to your purposes.

The Old Bait and Switch

This is similar to Ontological Shock, but much smaller in scope. The idea here is to take a well-established element of the current game and suddenly show the characters that their preconceptions about that element are completely wrong.

Perhaps an example is in order. I am currently running an *Ars Magica* campaign. Early in this campaign there was a knight associated with the magi; this knight was very ambitious, and he had a swarthy squire. The magi, breaking the oath they had sworn to, magically aided this knight to steal the Duke of Exeter's taxes, and then assault the Isle of Lundy (a practically impregnable stronghold) in the Bristol Channel. The sudden increase of wealth and the taking of the Isle of Lundy (and execution of the "rebellious" Lord DeMarisco who previously owned the island) put the knight in a place to appeal to the current King of England for the palatinate (franchise) of Cornwall. So in a relatively short period of time this knight has become an influential noble and he could not have done it without the magi's help. Or could he? To further incriminate themselves, the magi have been magically altering the Count Palatine of Corwall's ideals to better suit their own.

To make it clear for the non-*Ars Magica* players out there, magi of the Order of Hermes swear an oath not to interfere in the affairs of the mundane population (i.e. the Count). To do otherwise risks bringing the wrath of the rest of the mundane population of Europe (i.e. the Church, other Nobles, The King) upon the Order itself. So that magi have committed a series of crimes against their Order to get this man to be the influential noble that he now is.

Now, I plan to have them visit the Count to petition him for more money (he pays their way). When they go they will take a new bodyguard along with them. This bodyguard has "The Sight." In other words, he can see ghosts, spirits, and demons, even if they are disguised as something else (Hermetic magic cannot detect demons). He will accompany them into the presence of the Count and get very upset. When questioned he will claim, discretely, that the Count's squire is actually a demon in disguise.

Suddenly everything they knew about the count is thrown into doubt. Does the Count know that his squire is a demon? If he does is he a Diabolist? If he doesn't how can they protect/warn him?

Now I will admit that I had not planned this story from the beginning of the campaign. I was sitting down reviewing the game, looking at the Count wondering how to tie up this loose end. Basically I wanted to phase the Count out of the story and needed a way to do so that would be interesting and promote other stories.

Trouble Comes in Threes

All too often adventures can have a linear feel to them. They have a definite start middle and ending. There is nothing wrong with this, but every now and then a player will crave something more.

Life is rarely linear or simple. So why run your games that way? The idea here is to layer the problems the character must face over the top of each other. Force them to prioritize. Start out with one story event. Smiling Joe and his team of Hell Hounds have a meeting at 8pm with a big client. At 7:30 Smiling Joe finds out that his kid sister is missing. She never came home after school. Now Mr. Big has demanded to see Smiling Joe and the whole team in person. But Joe's mum is frantic, surely he can help find his sister?

And then you throw in the emergency call from a contact. "Yo Joe? I gots this letter for ya. It's real important like. Ya gots ta come and get it man, right now y'here. I can't hang in my apartment too long cause I am on the run from these badass dudes in black coats."

Suddenly poor Joe and his team have to be in three places at once. And Smiling Joe definitely isn't smiling anymore.

There are two important variations to this technique. Internal Consistency and Unrelated Chaos. The overwhelming stereotype in modern storytelling seems to be the Internal Consistency model. If the audience doesn't understand how all these disparate events are related now, they will by the end of the story. Movies, TV serials, Books, comics, they all do it. So you can too. In the example above the contact has stolen a valuable piece of information of a dead FBI agent. It shows the location of the Vampire hideout that Joe and his team has been tracking. The Black Coats are the FBI agents trying to get the file back. Joe's sister has been kidnapped by the vampires because Joe is getting to close and they need a deterrent. The meeting with Mr Big is an arms deal so that Joe and his team can get the guns they need to take out the Vampire nest.

This is the default setting. Most players will assume that everything ties in together, they just don't know how. It doesn't have to be this way.

Running three separate, unrelated, stories at once can be draining, but immensely rewarding. In the example above Mr Big has an important contract that will earn the group money and prestige. The kid sister has run away with her boyfriend and is in serious danger of becoming Vampire food and the letter the contact has is actually a clue to the location of Smiling Joe's arch nemesis the demon Chabrezal.

Smiling Joe and his team will have to prioritize. In a situation like this it's important that you play out the consequences of choices not taken. Assuming Joe and his team go after his sister Mr Big gets angry and spreads the word amongst other "business" people that Smiling Joe's team is unreliable. If they contact him later it's too late, the job is gone. And once they have rescued the sister they chase off after Chabrezal to find that he has already left, quite possibly after causing serious trouble for Joe and his team.

This is the Shafted Three Ways from Sunday scenario. Like life, there is no single right action. The characters and their players will have to carefully consider what their priorities are and act according to them and suffer the consequences.

There is a danger that they will split up. The way to deal with this is to present the problems as things the whole group is needed to deal with. So Mr. Big really meant it when he said he wanted the whole team. And the Vampire nest Joe's sister has been dragged into is well-fortified and looks to have four or five of the beasts, more than the two sent to investigate can handle alone. As for Chabrezal, we he would love to have one or two characters drop by for a chat . . .

If they *do* split up, make the other players watch and grimace as the characters in the spotlight struggle to contain the situation.

On a closing note, all of these techniques are best used sparingly. Run your game, as you normally would, then drop one of these in to keep the players guessing. Pretty soon you will have the hungering for more.

Pyramid Review

Tome And Blood (for Dungeons & Dragons)

Published by [Wizards of the Coast](#)

Written by Bruce R. Cordell and Skip Williams

96 b&w pages; \$19.95

Broken up into five chapters, *Tome And Blood* augments your options when playing a character that uses arcane magic in the new 3rd Edition of the *Dungeons & Dragons* game. In some ways, the theme of *Tome And Blood* could be everything old is new again. Chapter One, Arcane Lore, provides advice on how to create an "effective spellcaster." Some of this information is also useful for divine spellcasters, such as stat placement and feat selection. The advice goes a little beyond that found in the *Herobuilder's Guidebook*, but not much. Of more use is the section on Familiars, with lists options for small and giant sized spellcasters, as well as more powerful familiars, available to spellcasters who take the Improved Familiar feat.

Of more interest to me however, was the section on Organizations. In the days of 2nd edition, *The College of Wizardry*, by Bruce R. Cordell, introduced interesting ideas that have worked their way back to 3rd edition, including the Arcane Order itself, with its leader, Japheth Arcane updated to 3rd edition. There are other organizations such as the Bleak Academy, a guild of necromancers, the Servants of the Flame, Spellswords, and the Hollow, a mage's home. Each section has background information, membership roles, benefits, leadership notes, and where the headquarters is located. Several of the organizations have an NPC or two listed to give example of what type of spellcaster makes his home there. Several maps are also provided, including those for The Hollow and the Arcane Order.

Chapter two, feats, reprints eight feats from the *Forgotten Realms* campaign setting, but introduces sixteen additional ones. Perhaps more important than the new feats, though, are ways of using old feats. Take Improved Critical to augment your chance for a critical strike with a ray spell, or Point Blank Shot for a bonus with all rays and energy missiles within 30 feet. Among the new spells are Arcane Defense, which gives the caster a +2 on their saving throws against a chosen school, or Energy Admixture which allows a spellcaster to mix the damage up in a spell. A fireball, for instance, may have fire and acid, or fire and cold damage, instead of just fire damage. The drawback is it uses a spell slot four levels higher than the spell. There is a good attack and miscellaneous feats. Some, like the extra slot or extra spell, will help wizards and sorcerers even the odds against one another.

The real meat of this book is Chapter Three, Prestige Classes. There are fifteen prestige classes, and for once, there don't seem to be any that are recognizable as originating from another 3rd edition source. From 2nd edition? That's another story. For example, the Alienist was originally in *Spells and Magic*. This tribute to the Cthulhu Mythos is a spellcaster who knows that there are different realms with different inhabitants out there; as he gains powers in this class, he becomes more divorced from this reality as he aligns himself with the other worlds. In addition, there are two efforts to make the ultimate necromancer, the Palemaster and the True Necromancer. The former gains spells slowly, but gains special innate abilities to make up for it such as bonemail, the ability to animate dead, darkvision and summon undead. The latter becomes a more powerful spellcaster with unholy abilities such as a zone of desecration, which duplicates the Desecrate spell in a 20 foot radius, or the ultimate ability: to energy drain. Other old favorites include the updated Bladesinger, Elemental Savant (similar to the Elemental Specialist from the old *Tome of Magic*), and Mage of the Arcane Order, inspired from *College of Wizardry*. Some of the new takes are also interesting, such as the Acolyte of the Skin, a spellcaster who uses the living skin of a demon to gain power, or the Blood Magus, a mage who has come back from the dead and now uses blood to augment the way he casts his spells.

Chapter four, Tools of the Trade, is a hodgepodge of material. The section on mundane items includes the standard, lab, library, writing desk, lamp, scroll organization and other utilities, while the special items include glowpowder, healing salve, suregrip and flashpellets. Even here though, several of these items appeared in the *Forgotten Realms* campaign setting first, like the Disappearing Ink and the Scentbreaker. The section on magic items includes information on pricing magic items. Of more interest though, are the new magic items, broken up by category such as Rod, Staff, and Wondrous. Old favorites like the Golem Manual are updated, and new ones, like the Belt of Spell Resistance (21 SR) are introduced for the first time.

Chapter five, Spells, is not only new spells, but also information on weapon-like spells including how to use critical hits and sneak attacks. There are also details on creating new spells and casting spells that take longer than a single action. One of the most useful things in this chapter is the benchmark spells. These are spells that "demonstrate the maximum capability for their level and function." For example, the benchmark 5th level offensive spells are cloudkill, cone of cold, dominate person, and feeblemind. These spells allow the GM and player to look at the benchmark and decide if a new spell is too powerful or weak. The new spells are introduced in abbreviated format by level and alphabetical with a summary of what the spell does, as well as how permanency can be used with the new spells. Afterwards, the spells are listed alphabetically with full information provided. There is a lot of variety with spell damage types; for example, Acid Orb, Cold Orb, Electric Orb, Fire Orb, and Sonic Orb. Some old spells, such as Feign Death, Otiluke's Dispelling Screen, Mordenkainen's Private Sanctum, Choke, Ice Knife, Disguise Undead, Arcane Sight and others are updated to 3rd edition. These also act as benchmarks from the 2nd to 3rd edition. New spells include what might be called Animal Augmentation. These 2nd level spells all augment stats ranging from Eagle for an extra 1d4+1 for Charisma, to Fox, for an extra 1d4+1 to Intelligence, to Owl, for a 1d4+1 to Wisdom.

The book follows the same format as far as page layout and art to the previous Guidebooks, with two columns with art in top/bottom, one column or both. Wayne Reynolds, the interior artist, does a fantastic job of giving personality to the various prestige classes and illuminating how the new spells look. The editing might have been a little tighter though. For example: "Here follows several new prestige classes." "The construction and animation of a golem takes two months and costs quite a bit of money." Does that really need to be written out? Reading scores may be down, but come on, challenge us for pity's sake! One of the unusual things about these Guidebooks is that they follow no set pattern. They all have crunchy bits but don't follow the same organization. Not a bad thing in and of itself, but it might be nice to see some uniformity to their products.

Because of the material that can be found elsewhere, *Tome And Blood* is a great book if you don't own the new *Forgotten Realms* hardcover campaign setting, and is a good book if you do.

The Root of All Evil (for Kingdoms of Kalamar/Dungeons & Dragons)

Published by [Kenzer And Company](#)

Written by Andy Miller

Illustrated by Hung Vinh Mac, Storn Cook, Arnie Swekel, Brad McDevitt, Matt Mitchell, Eric Olson and Allan Ditzig

64 pages; \$12.99

The *Root of All Evil* is the first scenario from Kenzer And Company for their official *Dungeons & Dragons Third Edition* campaign setting, the *Kingdoms of Kalamar*. It is designed for a group of 1st-level characters, numbering between four and six, and should provide enough experience points to take the party through to third level. One glaring omission from either front or back cover is mention of the fact that this is the first part of a trilogy, which continues with *Forging Darkness* and is completed with *Coin's End*.

This is a 64-page book that combines a small amount of background material with the scenario itself. The book is well laid-out in a smaller typeface than is the norm for many *d20* releases. One aspect of the presentation that does jar is the use of a grey background to highlight the colour text that is read out to the players as the adventure progresses. This format is perhaps a little stale and putting the colour text in boxes might have been easier upon the eye.

The most notable thing about *The Root of All Evil* is its illustrations. The book uses what Kenzer And Company terms its "ImageQUEST Adventure Illustrator." The purpose of this is to illustrate key scenes from the adventure and provides twenty pictures to this end. These are not inserted into the middle of the book as stated, but are placed at the back, and perforated for easy removal. Throughout the actual adventure, mini-versions of the illustrations appear in the sidebar to indicate that a particular illustration should be shown to the players. Although new to the *d20* system, it is not a new idea, having previously been seen years ago in many of TSR's modules for first edition *AD&D*, plus previous *Kalamar* adventures from a few years ago. The illustrations themselves are of reasonable quality, but the actual player handouts are exceptionally good.

[SPOILER ALERT]

The adventure is set along the Reanaaria Bay area of Tellene (the *Kingdoms of Kalamar* setting), south of the Lands of Skarna. Entering the town of Haanex, the party find an employment opportunity with a wizard, Voeden. He wants them to find a meteor that is supposed to be made of the rare metal, mithral. Unfortunately, the spirits of the dead purportedly guard the only map to the crater's location.

Further, once they have the map and have found the crater, the story complicates as the characters discover that someone has been there first and are mining the meteor to create a powerful magical artefact, the Coin of Power. This coin is a tool of evil; when their employer discovers its existence, Voeden asks the party to work to destroy it. If they accept, this involves them in a trip back and forth across Reanaaria Bay to the city of Zoa, and then to the jungles of Reelio in the hope that they can locate the one man who knows how to destroy the Coin. This should take several good gaming sessions for the players to complete, while also giving the characters a wide tour of Reanaaria Bay.

[SPOILER ALERT ENDS]

This is the main advantage to *The Root of All Evil* -- it does provide enough material and story for several sessions of gaming, although the actual adventure itself is solid rather than spectacular. It also gives a good variety of environments to game in, from the urban and the rural, to the city, the ocean and the jungle.

The background material in *The Root of All Evil* details the city of Zoa and is accompanied by a rather pleasing map. The short gazetteer examines the city in general, before looking at each of its neighbourhoods. In particular, it concentrates upon the areas that the characters are likely to visit during the adventure, but there is enough information for the DM to cope if they want to go elsewhere. A set of extensive encounter tables for the city of Zoa and each of the adventure's other locations is also included.

Where *The Root of All Evil* lets its audience down is in not providing a stronger sense of the setting. Were it not for the place names this could be run in any other vanilla **D&D** setting. In one sense, this makes the adventure generic enough to be slotted into most DM's own campaigns, but in this regard it does have to compete with the large number of starting adventures for **d20**. Overall, this really is for the DM who wants to run their game using the *Kingdoms of Kalamar* setting; if this is the case, then they are at least getting value for money.

Hunter: The Reckoning Players Guide

Published by [White Wolf Publishing](#)

Written by Phillippe Boule, Carl Bowen, Ann Braidwood, Deid'Re M. Brooks, Ken Clieff, Tim Dedopulos, Michael Lee, Michael Mearls, Joshua Mosqueira, Sean Riley & Adam Tinworth

276 pages; \$25.95

White Wolf's Storyteller games tend to have a strange quirk for me. The base games (for me, anyways) are always playable and enjoyable. But once I've read the *Players Guide*, I often ask myself "how did I play the game before I got this?"

Hunter: the Reckoning's Players Guide starts off with the introduction of the two "lost" Vision creeds (Hunter's brand of splats). The Hermits have such a strong connection to the Messengers (the supernatural beings that bring the Hunters knowledge of the supernatural & tools to fight it) that they're crippled whenever they encounter any form of supernatural. When they're around supers or other hunters, they suffer from severe sensory overload.

The Waywards, on the other hand, are the most strident of the Hunters in terms of monster hunting. More aggressive than even the Avenger creed, they tend to view all supernaturals as 'the enemy' in a war, and they take no prisoners. This includes their fellow Hunters, as the introductory character fiction chillingly illuminates.

Following that, the book presents a new aspect to the game, giving rules to playing Bystanders.

Bystanders are Hunters stillborn by inaction. Like Hunters, they receive a calling from the Messengers. Unlike true Hunters, they find themselves paralyzed, unable to act on their new knowledge.

This portion of the book left me mildly confused. It's true that some people were complaining that *Hunter* didn't give them the chance to play unenhanced humans hunting the supernatural. My personal opinion is, of course, that such a game A) had already been released via *Hunters Hunted* and the various *Year of the Hunter* books, and B) could have been titled *Meat: the Grinding*. So, this information will more than satisfy their desires to play an unenhanced human. But will they still be following *Hunter* at this point?

Conversely, it seems likely the people who are going to buy the *Players Guide* for *Hunter* aren't going to be interested enough in playing a Bystander rather than getting 50 pages on playing Hunters. While a short (at 10 pages) section on Bystanders might have sufficed (much as similar sections have been published in *Vampire Players Guides* on playing Mortals), this much information would have been better served by being put into its own supplement. It wasn't a badly done section; I just would have preferred more information on playing Hunters, and the Bystander information to be put in its proper place.

The chapter on optional rules comes in very useful. There's a section on freeform edges (which sees *Hunter* join *Trinity* in *Mage*-izing its ruleset), and rules on how to handle level 5 edges. Let me say, it's very interesting. They emphasize that there are sacrifices that come with power for the *Hunters*; getting a level 5 edge, for example, requires serious sacrifices on the part of the character, and it drives home how twisted the mightiest Hunters become in their quest to destroy their foes. There are rules for alternate methods of increasing edges, including a method that requires

players to sacrifice their other abilities or attributes to increase their edges.

There's optional rules on character creation, including the ever popular "huge pool of Freebie points."

There's an extensive essay on True Faith, and how it does and doesn't work in the *Hunter* setting. It's an interesting look at the ability, and gets points for not just recycling rules that have been presented previously.

The information for playing Hunters is very useful. The Merits and Flaws delighted me. It seems as if the Merits and Flaws of previous games have been more or less templated off of the ones presented in the original *Vampire Players Guide*. There has been a sense of sameness about them in pretty much every *Players Guide* since; there would be a few original flaws, and the standards inserted in. *Hunter's* Merits & Flaws, however, are not the same old same old. They give opportunities to fill out Hunters as people, without the standard strangeness that pervades most M&F systems.

There are options to have bad teeth or bad breath, or just have poor online demeanor. There's no True Love merit, but you can be Lovestruck. The overall effect is that it feels like things that people can do & be; there's no "control city's police force" merit, or "doomed to a Dark Fate" flaw, but you can be homeless or an illegal immigrant (a homeless illegal immigrant, for example, has seven points in flaws right there, which is as many as you can take).

The book shines in this section because it drives home the Hunters ordinariness. In fact, that's the goal of the book as a whole: emphasize that Hunters are people who are faced with the supernatural. No Navy SEALs! No ex-CIA agents! Bricklayers! Dentists! Chauffers!

The section on backgrounds is a great look at what each of the backgrounds means, and how to use them in play. Each one gives examples of how a particular background can increase or decrease in play. It's a very useful section, and covers both the roleplaying and mechanical systems of Backgrounds.

The fourth chapter details more information on playing *Hunter*. There's information on changing your Creed, and how to emphasize the normality of a Hunter's pre-hunt life, contrasting it with their existence post-imbuing. I don't think I've ever seen a gamebook that actually had a section on faking your own death before, much less one with this much detail in it. It also has suggestions on using triggers for Hunter Edges, an optional rule from the main rulebook.

The book ends with the standard selection of essays on playing the game. There's also a section on playing child Hunters; it's an idea I don't really like, as playing a child character in the world of *Hunter* (or, for that matter, any *WoD* game) just seems unpleasant; even so, the book does do a good job of presenting it.

Another section details how Hunters will interact with the legal/penal system. This information is fairly important for a game like *Hunter*, if the GM wishes to carry the theme of responsibility on. A Hunter's actions have consequences just as surely as their inactions do, and information like this is very useful for GMs. There's even a section that gives options for continuing to play characters who've gone up the river.

Overall, I'm very pleased with the way the *Hunters Players Guide* turned out. The biggest flaw with it is the lack of an index; with the wide breadth of material that's covered, the Merits & Flaws, and the large number of new rules, it's a real strike against the book's usability. The information in here will be invaluable to helping *Hunter* players & GMs create characters for and play *Hunter*; if it were easier for them to find, it would be even better.

Aftershocks: Reality Quakes, Redux

"Plainly, we have to face the possibility now that reality did fracture in or about the beginning of the year 1477. Equally plainly, it is possible that fragments of that prior history have existed in ours, becoming gradually less and less 'real' as the universe moves on from the moment of fracture."

-- Pierce Ratcliff, in *Lost Burgundy: The Book of Ash, #4*, by Mary Gentle

[Last week's column](#) uncovered (or synthesized, or invented) the "reality quake," a delightfully unprovable phenomenon of vast bisociative potential. Such a convulsion overturns established history, upthrusting a new past which extends backward from the fracture point, or "eimicenter" (the linguistically picky can swap it out for "ontocenter," which is better Greek but less euphonious English) leaving only fragments of the previous reality ("pragmaclasts") visible "above ground." This week, a few more reality-penetrating tomographic pings to map the substrata of existence, and yet more fun and games for, well, fun and games. Let's see what else is shaking.

"You will understand soon. Terrible times are coming but everything will become clear. Now, you recall a catastrophic event -- the 'Crisis' -- that recently took place on this stratum? This crisis, we discovered, has resulted in the current threat to your reality. The continuum was radically altered at that time, but some holes remained, unseen, pockets of contradiction."

-- Yellow alien, in *Animal Man #12*, by Grant Morrison

By contrast to Mary Gentle's superb novel *Ash* (referenced last week), the traditional four-color superhero comic book presents reality quakes at their most common and (usually) least earth-shattering level. Seemingly blasé superheroes find themselves with new histories, powers, and arch-nemeses on an almost annual basis. This practice, "retconning" (from "retroactive continuity") doesn't often show up in supers games ("No, you've always been vulnerable to silver. Don't you remember?"), although it could in a psychological-horror supers game modeled on Grant Morrison's *Animal Man* or a more light-hearted romp based on Alan Moore's *Supreme*. However, retconning seems to be a fairly harmless practice in most four-color worlds. It might be that in such worlds superheroes act as kind of eimic shock-absorbers -- after all, the retcon waves seldom change who won World War Two, regardless of how many superheroes they remove from its battlefields.

You can take comics-style retconning into other reality-quake games, as well -- both personal reality-quakes ("No, this house has always been vacant.") and global ones. *Animal Man*, especially, provides not only a surreally menacing picture of the way that pragmaclasts (both people and items) can behave, but a deliberate tie-in to the greatest overt reality quake in comics history, the *Crisis on Infinite Earths*. Adapting a storyline of cosmic reality collisions -- or of time patrolmen unwittingly investigating the *Animal Man*-style aftershock of such a crisis -- to an Infinity, Inc. **GURPS Time Travel** game would be difficult, but the rewards of scope might be worth it.

*"The bay-trees in our country are all wither'd
And meteors fright the fixed stars of heaven;
The pale-faced moon looks bloody on the earth
And lean-look'd prophets whisper fearful change."*

-- William Shakespeare, *Richard II*, II:iv:8-12

A crisis on infinite alternate earths might wind up looking something like [Reality Sidewise](#), with Halley's Comet as its harbinger. Comets, of course, anciently signified disastrous changes, since they altered the perfect and permanent heavens. Such a reputation could, in fact, be the lingering result of a reality quake caused by a comet's disastrous passage through our previous history, or by a cometary impact. Velikovskians posit two major "quantavolutions" (perceptual reality quakes) that scramble recorded history in around 1450 B.C. and 686 B.C., caused by the dangerously close approach of the comet Venus. Could the Venusian [Mirror Realm](#) be the Preality born and then broken in the comet's passage? The [Tunguska event](#) (possibly a subliming comet impact) of 1908 might have triggered a reality quake -- could the whole unsettled, "alienated" condition of modernity simply be our global subconscious sensing that reality has been jarred loose?

Maybe Tunguska thrust us out of a steampunk (or [rocketpulp](#)) Preality, leaving only scientifiction -- and perhaps, somewhere, a warehouse full of eimically shielded ether-flyers. The timing is also suspiciously close to the Futurist Manifesto; could the Tunguska strike have shunted [Reality Futura](#) into a Preality now only dimly seen as UFOs and forgotten Italian paintings? Disaster certainly followed in the comet's wake. The records of comets might also indicate eimic fault lines, either with their appearance (1066, and one of the falls of Magellion?) or their failure to appear as predicted. The pages of Charles Fort are full of comets that defy their rightful periodicities -- has reality itself perturbed their orbits?

"Although earthquakes have often been associated with inexplicable past societal disasters, their impact has thought to be only secondary for two reasons: Inconclusive archaeological interpretation of excavated destruction, and misconceptions about patterns of seismicity. However, a better understanding of the irregularities of the time-space patterns of large earthquakes suggest that earthquakes (and associated tsunamis) have probably been responsible for some of the great and enigmatic catastrophes in ancient times. The most relevant aspect of seismicity is the episodic time-space clustering of earthquakes . . ."

-- Amos Nur, "The Collapse of Societies by Giant Earthquakes" (abstract)

Suspiciously tight [planetary alignments](#) might also cause reality quakes, instead of conventional earthquakes or [pole shifts](#), in a kind of ontological "Jupiter Effect." The Piri Reis Map and other alleged evidences of a historical pole shift might, in fact, be pragmaclasts. Or, of course, a reality quake might legitimately trigger other purely physical traumas. The massive wave of earthquakes that seems to coincide with the end of the Bronze Age in 1200 B.C. (another possible Velikovskian quantavolution date, and the beginning of the most reliably [hollow history](#)) could simply be the material tremors from an eimic fault-slip. Vulcanism, too, may either be symptomatic or causative of reality quakes -- the famous volcanic "year without a summer" in 1816 strikes me as very suspicious indeed, when you consider that Frankenstein's monster and the modern vampire both emerged from that dust cloud. A similar climatic "dolorous blow" struck in 535-536 A.D. that may have triggered the death of Arthur, the plague of Justinian, the migration of the Avars, the collapse of the Jin in China and Teotihuacan in Mexico, and the rise of Arabian messianism. According to M.G.L. Baillie, the culprit is a cometary impact (or possibly the Tauride meteors); according to David Keys' *Catastrophe*, it was an immense volcano in Java. Either way, it makes a suspiciously good eimic fracture zone for history.

"I understand how things could be left over. No process is perfect, the universe is large and complex, and what Ash and the Wild Machines did -- it's not surprising if some of the evidence of the first history wasn't expunged. Reality has its own weight. It's been gradually squeezing the anomalies out -- things becoming legendary, mythic, fictional."

-- Pierce Ratcliff, in *Lost Burgundy: The Book of Ash, #4*, by Mary Gentle

King Arthur is obviously the "Ash" of that 535 event; his eimic signature continues to radiate even fifteen centuries later. The Holy Grail, then, might simply be an incredibly powerful pragmaclast, a piece of the previous reality possessed of literally transcendental powers. Perhaps the Grail is simply the core of the comet that struck our previous reality; recall that to Wolfram, the Grail was the *lapis ex caelis*, the Stone Fallen From Heaven. As the actual proximate cause of the reality quake, the Grail-comet's eimic dosage might vastly increase the unreality (or unknowability, in a more Heisenbergian sense) in those who see it (or guard it, or drink from it). The power of a pragmaclast such as the Grail could wipe people from continuity, or give them superpowers, or awaken their magick, or simply make them very eimically-sensitive, able to see the echoes and ghosts of the forgotten history.

"It seems reasonable to suppose that the cuts [in the Encyclopedia of Tlön] obey the intent to set forth a world that is not too incompatible with the real world. The spread of Tlönian objects through various countries would complement the plan Almost immediately, reality 'caved in' at more than one point. The truth is, it wanted to cave in."

-- Jorge Luis Borges, "Tlön, Uqbar, Orbis Tertius"

And some of those echoes, and ghosts, and remnants, might not like being forgotten. They, too, might possess greater levels of eimic radiation -- with concomitant weird powers -- slowly decaying over time. (This, it suddenly occurs to me, is the best explanation for [faeries](#) that I've ever come up with -- it explains their archaism, their ties to poetry and legend, their creepy reality- and time-distorting powers, and their cringing need for human belief and company.) Couple such powers with the knowledge that reality quakes do occur, and the pragmaclastic entities might actually be

able to reverse the fracture, or at least set off another one just as good at the same fault line. The qliphoth, those shells of God's first creation, are the quintessential pragmaclasts, plotting to infect the new reality with eimic "radiation sickness." The Lemurians, or any of Madame Blavatsky's disturbing giant psychic shamblers, also make superb pragmaclastic species, as do the [sphinxes](#) I posited earlier. In his own alternate chronology, Isaac Newton gives 958 B.C. as the date when Oedipus kills the Sphinx of Thebes, a fine date for an eimicenter.

"There are mad and beautiful things beneath the skin of the world we know, that you only see when you look at things on a planetary scale. What if, underneath all that, there was an entire classic old superhero world? What if there were huge Jack Kirby temples underground built by old gods or new, and ghostly cowboys riding the highways of the West for justice, and superspies in natty suits and 360-degree-vision shades fighting cold wars in the dark, and strange laughing killers kept in old Lovecraftian asylums . . . what if you had a hundred years of superhero history just slowly leaking out . . . ?"

-- Warren Ellis, original proposal for *Planetary*

The greatest thing that reality quakes do for your game is open it up into a whole new dimension. You can put anything you like, from [influencing engines](#) to [griffins](#) to the [Iron Chef](#), underneath the strata of reality for your players to dig out. Or, to add familiarity along with surreality, previous campaigns can eimically "leak" into new ones, reintroducing villains and artifacts in a quasi-Moorcockian avalanche of archetype. Anywhere can be an eimic subduction zone, any legend can leave peculiar traces in the grimmest and grittiest reality -- perhaps the [Empire State Building](#) focuses eimic energies through [sacred geometry](#), and keeps Doc Savage's eyrie waiting for him on an unused floor in case a new temblor shakes him back into existence. Eimic fracture points can be places of mystery, dungeon [tunnels](#) to adventure, or bad places boiling with vengeful pragmaclastic Things That (literally) Should Not Be. The past isn't what it used to be, and it doesn't have to be like it was. Shake it up, baby.

Eggs, Milk, Bread, Visit the Dreaming . . .

I've received some criticisms in the past for the focus of both my column and many articles here in *Pyramid* towards GMs. Well, I'm willing to grant that point, to a certain extent. In my mind, though, it's because the GM has a fair bit more responsibility than the players. At the core, as a GM I need my players to:

- Show up.

Ideally, they will do at least half of the following:

- Bring their character sheets.
- Bring dice.
- Bring money for pizza.
- Avoid setting fire to myself and/or all my worldly belongings.

(As an aside, Dennis, I'm *so* sorry for that time I stupidly forgot my character sheets. Okay . . . those couple of times. All right . . . those many, many times. Getting me tattooed was a good idea.)

Now, my players *can* do lots more, if they want, but they don't have to. In comparison, if a GM doesn't do a bare minimum amount of work, then the evening's entertainment will probably consist of the adventure "Night of the Pointless Batches of 2d6 Zombies." And GMs tend to burn through a lot more material than players; an article with, say, more weapons or combat options for **Butt: The Kicking** will give players lots to tinker with for months, while an adventure or new critter is generally a one-use type of article. (Of course, GM advice articles and campaign settings have a bit longer shelf life . . . and GMs get to play with new weapons and combat options, too.)

On the other hand, there are scads more players than GMs. And, despite my comparative inexperience with being a player, I'm sure there are lots of potential articles out there that can be targeted towards players (would-be writers: hint, hint).

(As a side note, articles for players often tend to revolve around new toys, character classes, and abilities for PCs, which are notoriously difficult to balance, plus make cool/interesting/different enough. While there's always a demand for neat-o abilities, I'd also love to see some good player advice-type articles. And, of course, anything that "surprises us.")

Anyway, for those of you wanting a more player-centric column, here ya go.

One of the big semi-secrets of many GMs is that we often don't have a clue what to do for your characters. Oh, sure, we can sling evil temples, dinosaurs, and devilfish at you with a cackling abandon, but anything specifically targeted can be problematic. We can throw challenges at your characters, we can reward your characters, and we can mess with your characters (if you like that kind of thing . . . I'm a personal fan of the Lipton Cup of Angst school of play, myself). But we don't, intuitively, know what to *do* with your characters, individually.

So, tell us.

If you'd like a storyline where your character is framed for murdering a member of his religious order, jot it on a note and give it to your GM. If you want a romantic interest to pop up, let us know. If you want a long-lost sister to turn up so you can explore a familial storyline, tell us!

Of course, one of the problems I originally had with this idea (both as a player and a GM) is that it's nowhere near as exciting to have your GM do exactly what you tell him as having a surprising storyline just erupt. But there's a way around that, too.

Buckshot.

See, if you give your GM enough ideas of what you'd like to have happen for your character, then whatever option they end up choosing -- or modifying -- will probably be surprising.

As an example, here's a (changed, mutated, and culled from memories long since thought dead and buried) list that I would have given my GM during a *Vampire: The Dark Ages* campaign.

1. Alyse [my character] wouldn't mind exploring the Dreaming in an effort to gather scientific evidence.
2. Alyse faked her death to escape her past, but there are enough clues that intelligent enough antagonists could piece together what happened. (For that matter, so could *good* people . . . or perhaps those who simply wish to blackmail Alyse into doing her bidding.)
3. A romantic subplot could be interesting; perhaps a Stone Walker or kin?
4. If a significant enough opportunity to learn and do research would present itself, she'd probably jump at the chance. Maybe the Hermetics?
5. What if one of Alyse's inventions were used for a sinister purpose? Would she be blamed? Would she care?
6. If Alyse were exposed to a significant enough "proof" or example of a miracle, it might reaffirm her lagging faith in the church. Of course, what would happen if it wasn't the standard Christian church? Alyse, the heathen . . .
7. Alyse still has that "mysterious pale gentleman" in her background story (I've always presumed it was a vampire). What if he tracks her down? (Or what if her experimentation with Entropy magicks have a backlash that "coincidentally" draws him here?)
8. (. . . and so on)

So now my GM has a dozen or so story ideas, any of which can be used or modified into an adventure, subplot, or other opportunity. And, since I provided so many ideas, I *still* won't have much of a clue what's going on when one of these plots starts. Is the shady figure that just showed up the vampire from the past? A Hermetic mage? A new love interest?

Also note that when I give these lists to my GM, I try to offer a range of possibilities, from more-or-less fleshed out adventure ideas, to tiny snippets of ideas to make the GM think. Perhaps as important as the ideas on the list, though, are the meta-ideas therein. For example, the first item mentions that Alyse wouldn't mind exploring the Dreaming (in the World of Darkness, the realm of dreams [duh] and the fae). In that case, she probably wouldn't mind exploring other odd surreal realms, like the Umbra or France. Making extrapolations based on these lists is a good way to figure out what would be interesting to the player and/or character.

Even if you're not as interested in AngstVision Roleplaying, giving your GM lists of what you want to do can still be useful. If your character wants to be the best sword fighter in the realm, then the GM needs to know so he can introduce opportunities for this to (someday) be true . . . perhaps allowing him to introduce lesser fighters to compete against, royal competitions to enter, and so on. Likewise, if you want your character to learn the Big Secret of Crystal Mountain, then the GM needs to know that so he can drop the clues and prepare the adventures leading up to The Secret. (And, of course, giving him plenty of time to *create* the big Secret . . .) Even short- and medium-term goals are good things to put on these lists; telling your GM at the beginning of the adventure that you want to kidnap the crown price is *much* more likely to frustrate everyone than telling him at the end of the adventure for next time. And if you absolutely *hate* mystery adventures, this is a good opportunity to make that opinion known, too.

Players of the world: Tell your GM what kind of adventures you'd like! We're not mind readers, and the easiest way to make sure you get to play the kind of adventures or subplots you want is to make those possibilities known.

* * *

As an aside, I'd like to point out that the idea of internal consistency appears in this week's article "Sucking Them In." It also showed up in last week's Random Thought Table. I swear to the gawds, I'm not ripping anyone off! I've been ranting about IC for years . . . just ask my (sick & tired) friends. <*grin*>

* * *

As another aside, I'm pretty low on non-*d20* reviews currently. Game companies *are* releasing some other stuff currently, right? Tell the world about 'em, then!

As a third aside, John Kovalic is busy as all get-out currently, so we're skipping Murphy's Rules this week. (*Insert Joke About Murphy's Rules Being Appropriately Named Here.*)

Gustomancy: The Art of Eating

Gustomancers like to eat. Like their fellow adepts, this is more than a simple craving for tasty food; it's a spiritual obsession with the process of eating, digesting, and drawing nourishment from edible material. Many gustomancers are superb chefs; others are food critics, and others do nothing more than keep the frozen meal shelves at their local supermarket empty.

Because their magic involves the consumption of large amounts of food, many gustomancers are grossly overweight. However, this is not always the case. Gustomancers blessed with a high metabolism, or who spend most of their day at the gym, will not conform to this stereotype. In fact, the diet of a muscle-packed powerlifter is perfectly appropriate for the lifestyle of a gustomancer. It's not what you do with the calories that counts; it's getting them in in the first place that holds the magic. Gustomancers are known as gobblers in the Occult Underground.

Enjoy a hearty meal? Well, grab a spoon, the fun's just starting.

Gustomancy Blast Style: Gustomancers inflict damage through cramping their victim's digestive system. A minor blast feels like acute gas pains; a significant blast can rupture the stomach, kink an intestine, or induce crippling bouts of nausea. A major blast would literally cause a victim (or, several victims) to explode in a shower of methane and internal organs. Gustomancers can only target entities with a physical digestion system with this spell; ghosts, cars, and clockworks are unaffected, but zombies, animals, and bloodsucking specters are.

Generate a Minor Charge: Eat enough food to last a normal human a full day, at one sitting. In calorie terms, this amounts to around 2000 calories; in serving terms, this is roughly the same as eating three full meals. The food can be of any type, from raw steak to breakfast cereal to fast food, but it must be consumed all at once, without interruption. Nibbling away over the course of an afternoon is no good.

Generate a Significant Charge: Eat a similar amount as would be required to generate a minor charge, and in the same conditions, but this food must be of superlative quality, as would only be available at a gourmet restaurant. In addition, the meal must include all the normal side-options (fine wine, hors d'oeuvres, wafer-thin mints, etc.). Such a meal might cost in excess of \$300; alternately, it may be cooked by the gustomancer themselves for a mere \$100 in ingredients, but this would require a Gourmet Cooking skill roll in excess of 30%.

Generate a Major Charge: Eat a meal which has never been prepared before, or will never be prepared again. The easy combinations (like peanut butter and caviar chili, or narwhal steak) have all been done by gustomancers in ages past, but of course there's no way of knowing that without trying. Alternately, a dish prepared by a chef with a skill in excess of 80% who retires immediately after cooking it would qualify; if the chef ever cooks a gourmet meal again, the gustomancer immediately loses a major charge, or 10 significant charges if they do not hold a major charge.

Taboos: While gustomancers may have dietary restrictions (vegan, kosher, halal, or salt-free, for instance), diet

foodstuffs are anathema to them. Should a gustomancer ever eat food which has had any portion of its natural nutritive content removed, he or she immediately loses all stored charges. Note that gustomancers may still prepare food in a healthy manner by cooking with olive oil rather than butter, avoiding fatty spreads, and so on; they may just not take the 'easy option' of diet food.

In addition, underfed people, those with eating disorders (bulimia, anorexia) or dietary syndromes (kwashiorkor, lactose-intolerance) leech charges away from gustomancers by skin contact. Each such contact removes a minor charge from the gustomancer; when he or she has no more minor charges, a significant charge is lost instead, and so on. These charges are transferred directly to the leeching party as the same amount of nutrition they initially provided to the gustomancer. A gustomancer takes 5 Wound Points for every charge lost in this manner, but these points may be regained at a rate of 10 points per normal meal portion or 5 points per sugary drink. A gustomancer who is killed by wounds of this type dies of malnutrition! Gustomancers can never drain each other in this manner.

A gustomancer also loses one charge (starting with his or her highest) for every day in which they eat less than 4000 calories (six full meals).

Random Magick Domains: If it concerns food, can be eaten, or is capable of eating, a gustomancer can affect it. Even billboards carrying food ads can be targeted.

Starting Charges: A gustomancer starts with five minor charges, but a significant charge is only a gourmet restaurant away. A gobbler can accumulate 5-7 minor charges per week with little effort, but accumulating multiple significant charges will be tricky unless (a) they can prepare their own food, or (b) have enough status that they can get away with ordering a table-full of food at high-class restaurants without being asked to leave.

Becoming a big lard-butt:

Yup, if a gustomancer isn't careful, they'll have more than flabby thighs or a spare tyre to worry about. Every day that a gobbler exceeds normal consumption, he or she gains a point in a Body skill called Overweight. A character cannot gain more than 3 Overweight points per week. This skill can be applied as a threshold, at the GMs discretion, to any skill except Mind skills. In other words, if your roll for a skill falls under your Overweight total, it fails -- your physical state somehow got in the way. The Overweight skill tops out at 2/3 of the Body score. Each point of Overweight represents about 2-3% additional mass.

Overweight can be worked off; for every day of light exercise (1-2 hours), the Overweight skill can be dropped by 1 point. For every day of intensive exercise (2-3 hours), usually involving a personal trainer, Overweight drops by 2; however, a character may only perform such high-burn exercise once per week for every 15 points they have in Body, or twice per 15 points if they have a Body-related Obsession skill. All modifications to the Overweight skill are applied at the end of a week; barring magical effects, nobody gains or loses weight overnight.

Diets drop the Overweight total by 5 to 10 points a month -- any "cheating" during this month starts the month over from scratch. Starvation diets -- during which the dieter eats, literally, nothing -- drop Overweight by 5 points a week, but also inflict 1d10 Wound Points per day after the second, and drop the dieter's Body by 1d10 points per week. Half of the Body points lost in this way are lost permanently, the other half can be regained at a rate of 1 per week of normal eating (or overeating).

Gustomancy Minor Formula Skills

Savory Outlook

Cost: 1 minor charge

By using this spell, a gustomancer can change a single property of a portion of food to whatever he or she desires. A steak could be changed from rare to well done; a crumbed chicken breast could be changed to a crumbed pork chop.

Bloat

Cost: 1 minor charge

This is the gustomancer's minor blast spell.

Iron Stomach Lining

Cost: 2 minor charges

While this spell is in effect (it lasts until the end of the target's next meal), the target may flip-flop any rolls to resist the effects of a consumed substance, be it poison, hallucinogens, alcohol, or just throat-searing chili powder.

I'm Thin Inside

Cost: 2 minor charges, +1 per 10 minutes of operation

This spell allows the target to avoid any effects of being Overweight for its duration. The character physically shrinks; this, of course, has repercussions for clothing size or the state of any restraints currently affecting the character.

Fat Power

Cost: 3 minor charges

This spell allows a character to add his or her Overweight skill to one of their Body or Soul skills for one roll only. If you've ever seen a 350 lb. man long-jump like an Olympic athlete or sing like Pavarotti (hey... wait a minute), you will appreciate this spell's startling power.

Food Detective

Cost: 4 minor charges

By eating a small portion of the remains of a meal, the gustomancer can zero in on the current location and activities of any person(s) who originally ate it. This impression lasts a few seconds only, and can only be performed once per given meal. The morsels eaten can be no more than a shred of garnish or ketchup drip stuck to the inside of a fast-food container; the spell still works.

Gustomancy Significant Formula Skills

Eat This

Cost: 1 significant charge

This is the gustomancer's significant blast.

I Could Eat A Horse

Cost: 2 significant charges

You could also eat a car tyre. Or a handful of iron filings. The gobbler gains the ability to derive nutrition from any physical substance as if it were an equal weight of oatmeal porridge. This spell doesn't render the substance more malleable, but it makes it tasty (car tyres, according to gobblers, taste like licorice), and protects the consumer from any ill-effects associated with eating it. So: iron filings won't scratch the gustomancer's throat; a turpentine-paint cocktail won't poison them. This spell applies to the gobbler and a companion, if he or she wishes (hey, eating's a social pastime). For every extra significant charge expended, the gobbler can double the number of people it effects. Hence, for 2 additional charges, 8 people can chow down. Watching such a meal is an Unnatural-3 stress; participating is closer to level 5 or 7, depending on the 'foodstuff' being eaten. The substances eaten do not count towards accumulating charges.

Eat Your Heart Out

Cost: 3 significant charges

By casting this spell, the gustomancer 'eats' a target's appetite. He or she no longer feels hungry; in fact, eating any meal makes him or her feel bloated and unwell (-10 to all skills). This penalty lasts 24 hours, and is cumulative. If they don't eat, or eat too little, they begin starving, as detailed above. On the other hand, the gustomancer's appetite doubles; he or she must eat an additional person's worth of food every day, or suffer the penalties of starvation themselves. Extra food eaten as the result of this spell does not count towards accumulating charges. If the target can maintain a normal diet for a week, the spell ends.

Slim Jim

Cost: 4 significant charges

Who needs Weight Watchers? This spell lasts until the gustomancer next accumulates a charge, and triples the number of Overweight points lost through exercise or dieting. Even if the gustomancer does nothing but sit on their butt and watch TV, he or she will still shed 2 points of Overweight every week.

Appetite for Life

Cost: 5 significant charges

Powerful gustomancers can use stored fat to heal injuries. This spell can be cast on a receptive target or the gustomancer him- or herself; either way, the recipient of the spell must be able to eat, and must do so while the spell is in effect. For every dice roll of Overweight points that are burned, one target's can be completely healed of any damage suffered since their last meal. This spell may also be used to cure diseases or reverse poisons; the effects in such cases are left to the GMs discretion. If the results of a dice roll ever cause the gobbler to lose more Overweight points than he or she has, the excess is taken from their Body stat. If a gobbler casts this spell on him- or herself, the spell only requires minor charges rather than significant ones.

Gustomancy Major Effects

Completely alter (spoil, re-garnish, animate) all foodstuffs in a supermarket; render someone unable to ever eat again, or free them from the need for nourishment; raise someone from the dead by throwing a massive banquet and harvesting the vital energies thus released.

Sample Gustomancer: Bern Ridgeway

Bern was a quiet kid who lived with his parents in the Midwest until a tragic road accident claimed their lives when he was eight. He grew up lonely and unhappy under the sometime care of an aunt in Boulder. When Bern was eighteen, having dropped out of school, he took a job at the local diner, where he met Salvatore Pelli. Salvatore worked as a cook, but more importantly, he was a childless man from a long line of gustomancers, and he was looking for someone to pass his knowledge on to. Bern learned quickly, and when he had learned everything Salvatore knew, he set off looking for some way to put his arcane skills to use. Bern is now a consulting counsellor at a home for emotionally troubled teens, and heads the eating-disorder unit. In his capacity as a therapist, he often uses his ability to bleed nutrition into others to bring malnourished kids back from the brink of death without having to resort to drip feeds or force-feeding. Between his magickal skills and his ability to provide therapy, his unit has one of the highest success rates in the world. Bern is happy in his work, but has yet to learn to deal with the anxiety associated with releasing kids back into the destructive environments that created their disorders; this stress is the factor behind the failed and hardened notches in his Helplessness gauge. Bern's lifelong love is modern dance; he often teaches dancing techniques to his patients to assist their development of higher self-esteem.

Conspiromancy: The Power of Rumor

The human race is a funny thing. Most of the calamities, genocides, and mysterious events it experiences are terrifying enough on a mundane level, yet it insists on creating illogical and ethereal beliefs to explain them, some of which do little but add terror value to the event. Conspiromancy grew out of the paranoia and conspiracy mentality of the 1950s and 60s, and the media environment which has propagated it. Conspiromancy operates like a hybrid of Cryptomancy and Iconomancy; by harvesting the power generated by urban legends and rumors, the Conspiromancer gains the power to make them real. Conspiromancers are known as whisperers in the Occult Underground.

Whisperers gain charges by spreading ideas which may be true or untrue, but are not independently verifiable by their recipients. In other words, the people who are to believe in the idea (rumor, conspiracy theory, etc.) must not have the immediate means of discovering whether what they have just heard or read is true. "Immediate," in this case, means, "attainable within a few minutes;" in other words, a phone call or a moment's collected thought away. Spreading a rumor about a new political party is no good, unless the conpiromancer can also furnish an explanation as to why the event has not made the papers; starting a rumor that the Post Office is compiling a DNA database by culturing saliva

traces from envelope seams, with some paper-thin evidence to support this (like "anonymous testimonies" from postal employees), is far more powerful. Urban legends, of course, are the cash cows of the whisperer framework, and supermarket tabloids and forwarded e-mails are their bread and butter.

That's what I heard, anyway.

Blast Style: Conspirancers have a blast spell, all right, and it's a doozy. However, their blast formula spell (Black Book Bioweapon), while requiring significant charges to cast, only does minor-blast damage if the target makes a successful Mind roll to resist the effect.

Generate a Minor Charge: Start a rumor that is believed by more than a dozen people. As a general rule, anywhere between 10 and 75 percent of people exposed to a rumor will believe in it strongly enough to be useful in terms of supplying power for the charge; the exact percentage depends on the target group. The charge gained only lasts 24 hours, which is the rumor's effective life span as far as siphoning energy from the collective unconscious goes.

Generate a Significant Charge: Start a rumor that is believed by more than a hundred people, with the same parameters as those outlined for the minor charge. This charge only lasts a week. However, rumors generated within a "snowballing media" (such as e-mail or gossipy manicurists) may instead be used to deliver one minor charge per calendar month (for 2d10 months) instead of one significant charge straight away; these minor charges do not dissipate after 24 hours.

Generate a Major Charge: Start a rumor which has a literally global effect. The growth of central news agencies and the growing exposure of gullible members of the public to high concentrations of information have made this a more attainable goal, but generating a major charge should still be a major project involving a great deal of luck or forward planning. Major charges only last one month; however, they can be broken down into a steady "drip" of one significant charge per month for 2d10 months, or one minor charge per month for 2d100 months as detailed above.

Taboos: Have a rumor you started be conclusively debunked in the national media or subculture you started it in. Not only does this lose you all your charges, it also means that all conspirant magic worked anywhere in the world for the next 24 hours requires 1 extra charge, of whatever type, to cast. Sloppy or implausible conspirancers are often hunted down and iced by their own kind.

Random Magick Domains: While their formula spells have fairly physical effects, conspirancers can only affect people's perceptions, memories, and reactions with their random magick.

Starting Charges: A conspirancer starts off with six minor charges, and can easily gain three or four more per week, or a significant charge if they are willing to spend a whole week working full-time to set it up.

Conspirancy Minor Formula Skills

Well, Can You Disprove It?

Cost: 1 minor charge

After all, it might be true. When a conspirancer lays this spell on someone, the target has to roll three dice instead of two, and put together the worst possible result as their total, when making rolls to detect lies or notice deceptions. The effect lasts as many minutes as the sum of the dice the conspirancer rolled to cast the spell. This spell may be cast to 'prep' a target for Black Book Bioweapon (described below).

Aren't You . . .

Cost: 2 minor charges

. . . alive and flipping burgers in a golden arches in Idaho? By casting this spell, the adept can alter a target's appearance so that it almost, but not quite, matches the appearance of another person -- whom the caster must have a

photo of or be familiar with. The match isn't close enough to defeat close scrutiny, but it will fool far-off or cursory examination, or provide a "family resemblance."

Don't Accept Drinks from Strangers

Cost: 3 minor charges

After all, you never know what they might be slipping you. If an adept can dip his or her finger into a substance which is to be consumed and cast this spell, the substance gains strong sedative powers. Roll the dice; if the total is lower than the target's Body characteristic, he or she gains a shift equal to the sum of the two dice, rounded down to the nearest ten, for a period of an hour. If the roll is a match, or greater than the target's Body stat, they will gain a -20% shift every minute (that's 1% a round, if you need to break it down), until their penalty exceeds their Body stat, at which point they will pass out for an hour or so.

Asbestos Lining

Cost: 4 minor charges

It's all about making you bleed faster. Casting this spell on someone who is bleeding or wounded greatly increases the rate at which they are losing blood. Characters with minor wounds (cuts, nosebleeds, menstruation) begin losing a mugful of blood every minute (that's about 1 Wound Point every second round); characters with serious wounds (knife slashes, bullet wounds) lose slightly more (1 Wound Point every round). Nastier still, for an extra minor charge, the spell can be cast the round before a wound is inflicted; this lets adepts "prep" a target before laying a hurting on them, which really gets the gore flowing. The bleeding lasts until first aid is applied; rest, icepacks, and so on halve the rate of loss.

It's In The Tapwater

Cost: 5 minor charges

Or fresh air. Or fabric softener. Or your favorite brand of fast food. Or the radiation from your TV. When casting this spell, the conspiromancer must nominate a medium, such as one of those listed above, and a target. If the spell is successful, the conspiromancer becomes aware every time the target comes into contact with the medium, and may cast spells directly on the target at no penalty. The link lasts a week, or until a spell is sent through it, and must be cast in the presence of the target and medium. Countermeasures such as turning off the TV, avoiding fast food, drinking only boiled or bottled water, etc., are effective in postponing the effects of the spell, but do not break the link; in addition, the conspiromancer may keep the link active until the target makes his or her fateful slip-up by simply expending another 5 minor charges at the end of the week.

Conspiromancy Significant Formula Skills

Men In Black

Cost: 1 significant charge, plus 1 significant charge per agent created

And not the rapping kind, either. This spell causes uses the power of the collective unconscious to create simulacra which walk, talk, and pack heat just like the shadowy government agents they represent. These figures appear as nondescript men and women in dark suits, with earpiece communicators, Glock automatics, and whatever other equipment is appropriate for their presence -- if two or more agents are created, they will have a black sedan; four or more would have a panel-van, or maybe even a helicopter. The agents can only exist when witnesses to their existence are around; if no-one can see them, or pays attention to them, they disappear. Otherwise, they have standard stats for police officers (UA, pg.211), and will obey a single command-phrase given during their summoning -- "Shoot those guys," "Stop that car," or "Protect me" are some examples -- until they disappear (which will happen in ten minutes, if not before).

Just Because You're Paranoid

Cost: 2 significant charges

... doesn't mean they're not after you. For the next 24 hours, everyone the target encounters will act one grade worse towards him. People who used to like him now come across fairly cool; people who used to dislike him now bubble with rage when he approaches and will go out of their way to make his life difficult. This antipathy is fairly subtle; if those affected are questioned, they will brush off any mention of their altered behavior with words to the effect of "I'm just not in the mood for his crap today." Any initiatives on the part of the characters' new enemies will remain in character; in other words, an angry colleague might fire off a rant to the target's boss, a neighbor might engage in a yelling session over the back fence, and so on. Only a capo would be likely to tell one of his boys to "take care of dis little problem;" regular Joes, unless provoked, will not exceed what they consider to be justifiable levels of violence or aggression.

CIA Mind Control

Cost: 3 significant charges

Look what it did to Mark Chapman. More importantly, look what it did to John Lennon. This spell plants a powerful command into the target's subconscious, which can be activated at any time during the next year by a spoken phrase or visual cue of the caster's choice. The command may be of high complexity; the target will deal with any such complexities to the best of their abilities. For instance, a command such as "kill the President" would result in the target planning the hit, getting a weapon, buying a ticket to Washington, and so on. If the command is completely against the target's own interests, he or she may struggle against the urge by making a Mind roll; failure means that the target performs the actions required by the command, success means that the target can hold off the impulse to obey the command for 24 hours, and a matched success means that the target has thrown off the command and is once again in charge of their own actions.

Black Book Bioweapon

Cost: 4 significant charges

They say the Russians developed it. Or maybe it was the gays. Or it came from lab monkeys. Whatever the case, it's here, now, in the collective unconscious, and a conziromancer can make it hatch right out of your cells and turn your body to soup -- if you believe. When a target is hit with this spell, they have to make a Mind check. If they pass -- no problem. They take damage as if they'd been hit with a minor blast, and apart from a high fever and some joint pains, they'll be fine. If they fail their Mind check, they're in trouble. They take major-blast damage every day until they die, the spell is broken, or the conziromancer breaks taboo or ends the spell. Hospitalization allows each day's damage to be reduced through triage, but the victim will still lose 1 point from their Body stat each day, until the spell ends or they die. The disease, while completely noninfectious, looks like the worst kind of Technicolor bastard child of Ebola, AIDS, and cancer you could imagine.

We Have The Technology

Cost: 5 significant charges

Jet engines that run on water, handkerchiefs that stop bullets, laser guns -- this spell turns the conziromancer into a veritable catalogue of Hangar 18 goodies. The spell has to be cast separately for each machine whose operation is "modified," but apart from that, there are few parameters -- except that the effect must be presented in such a way that is plausible to any onlookers. If a conziromancer has been driving around in his Fiat all day, and now needs it to fly, he might choose to back the spell up by popping the hood, fiddling with the engine out of sight of his passengers, and then triumphantly explaining that he's "reset the hidden antigravity module" that "comes standard with all engines these days, but they don't want ordinary folk to know about it so the airlines can keep their monopoly." Justifications of this sort are what should stop conziromancers relying on this spell to grant outlandish powers to mundane items; remember that should anyone debunk the conziromancer's explanation of how the item does what it is doing -- say, by dismantling the engine afterwards, or pointing out some flaw in the conziromancer's reasoning -- the conziromancer loses all his or her charges, and any active spells he or she has up. Conversely, characters who suspect that the conziromancer is feeding them a line of bull, but keep quiet to benefit from the effects of this spell, should be

making checks on their Self and The Unnatural gauges -- self-deception coming, as it does, with a price tag.

Conspiromancy Major Effects

Add a new entry into the set of what most people in a given society consider as to be "incontrovertible fact;" create a real, permanent instance of an existing phenomenon (such as a flying saucer, stuffed with Greys bent on human experimentation).

Sample Conspiromancer: Orpheus Brown

People who know Orpheus claim that he got into chauffeuring just so he could have a captive audience to share his conspiracy theories with, but Orpheus himself claims that it was the other way around; that he got interested in the Truth after eavesdropping on some of the conversations he heard in the back of his limo, when various important passengers had a few too many drinks under their belts. Orph wasn't formally trained as an adept, and has little idea of the Occult Underground; his powers were awakened through a year-long correspondence with a hooded figure known only as 'King Daddy', who claimed to live in the sewers under the city. Orph's natural curiosity did the rest, and what he wasn't taught came naturally; he was soon a full-fledged conspiromancer, one of a mere handful across the country. He still receives occasional messages from his mentor, and his limo has carried King Daddy through the darkened streets on several occasions.

The Mapinguari

Pungent Monster of the Amazon

by Jason Morningstar

The Legend

In the sleepy river towns they call the thing mapinguari, but it has many names. The Canamari Indians say it is what remains of an evil shaman, punished by the gods for his arrogance and cruelty. Wide-eyed Brazilian rubber tappers swear they have seen men killed by the creature, their skulls cracked like eggs and brains sucked out. The hunters who work in the Tabajos basin speak of the monster in hushed tones, offering compelling details: it has a third eye in its chest, they say. Backward-facing feet. The head of a monkey. It travels with the white-lipped peccaries.

While many details vary, those who have encountered it agree on a few things. It is huge, for one, leaving colossal tracks unlike anything in the forest. It is covered with shaggy red hair, and has a soul-chilling, human-like cry. But above all, it stinks.

The mapinguari's stench is a palpable thing, nauseating at a great distance, something like commingled garlic, excrement, and rotting meat. The creatures are often described as being followed by clouds of flies. Strong men have been forced to flee from the odor of the monster alone, and others have found themselves dazed and sick for days after an encounter.

The Truth

While the tales are exciting (and an enterprising GM might decide that a few are not just imaginary embellishments), the truth is more prosaic. The mapinguari are Mylodons, giant ground sloths that, according to science, died off ten thousand years ago. An isolated population that survived global climate change and human predation is about to meet the twenty-first century headlong.

The mapinguari are nocturnal herbivores that prefer the relatively dry highlands to the marshy flood plain. Limited by nutritional dependence on plants found only in the Tabajos river basin, a 4,400 square mile area, they number perhaps 25 breeding pairs.. Human encroachment into their territory has escalated in recent years, and the mapinguari no longer have anywhere to hide. They are stressed and increasingly desperate. It is only a matter of time before they are discovered by science, for good or ill.

A male mapinguari stands over six feet high at the shoulder and weighs in excess of 400 pounds; the female is slightly smaller. They are indeed covered with shaggy, reddish-brown hair, and exude a potent stench from a stomach gland. Mapinguari are quite different from their distant cousins the tree sloths. They cannot climb, but they are quick, agile, and stealthy on the ground. They are also immensely strong -- one sign of their presence are trees that have been torn in half to gain access to the sap. They communicate with piercing cries that are startlingly human-like.

Although lacking keen eyesight and smell, the creatures have outstanding hearing, since the jaguar is a natural predator. In addition, mapinguari are excellent at stealthy movement (although their stench will alert anyone with a sense of smell to their general presence). They are shy, reclusive animals adept at avoiding contact in their forest homes.

Stalking the Giant Ground Sloth

Finding a mapinguari will be next to impossible under ordinary circumstances. Native Canamari hunters will have the

best chances, but these men will be reluctant to pursue an animal they view as either a deadly monster or evil spirit. They may even interfere with efforts to hunt the animals. Brazilian hunters and rubber tappers could be enlisted if the price was right, but there is no guarantee they will consider the job anything but a tourist excursion, and those who have seen the *bicho* (Portuguese for "beast") are unlikely to crave further contact. Knowledge of the area will help in the hunt, and tracking and naturalist skills are essential. Mappinguari are clever enough to avoid most simple traps, and are far too large to be caught in those set for other rainforest animals.

The lumbering creatures are not fighters, and will make every effort to avoid a confrontation. If they cannot escape, or must protect their young, they will lash out with their thick arms. The mappinguari's crude, backward-facing claws cannot be used to cut, but the paws are still dangerous weapons. Treat them as fists, with a small damage bonus due to the hard claws. The combination of fur and tough hide gives them some natural armor, but their reputation as bulletproof is, sadly, untrue.

Adventure Seeds

- Finding and capturing a mappinguari would effectively halt logging that threatens the Tabajos river basin. While this is good news for the ecosystem, it is exceedingly bad news for the forest products conglomerates. An expedition to find a living Mylodon will be carefully observed by certain parties, and steps may be taken to see that it does not succeed . . .
- Thomas Jefferson, a hopeful amateur paleontologist, urged Lewis and Clark to look for Mylodons on their journey to the Pacific Northwest. What if they had found some? In a Wild West setting, the peaceful animals could attract the attention of everyone from steampunk adventurers to Buffalo Bill Cody.
- Perhaps the Canamari are right -- the mappinguari *are* magical beings. Their powerful reek could be some combination of Odor, Panic, and Daze spells or an adaptation of the venom advantage. Are they guardians of some sacred site? What are they protecting? Are they, as legend insists, evil sorcerers? If so, what other powers might they have, and what do they want?
- What if the mappinguari are just *babies*? Perhaps, in the remotest corner of the Amazon, there are living Megatherium -- truly enormous ground sloths, 18-20 feet long and weighing up to four tons. These animals would behave far differently from their tiny offspring. Perhaps they are fiercely territorial and dangerously aggressive. But a dozen zoos are willing to pay any price for a live pair, and the race is on . . .
- Fur and other genetic material from long-dead Mylodons exists, and has even been mistaken as proof that they never died out. What if a twisted genius sought to recreate the giant ground sloth, either as part of an elaborate hoax or to modify them for his own purposes? When an army of chaingun-toting sloths holds the Brazilian parliament hostage and starts issuing demands, it is up to the PC's to sort things out . . .

GURPS Stats for the Mappinguari

ST 18, DX 10, IQ 6, HT 14.

Advantages: Acute Hearing +6; Alertness +3; Damage Resistance (DR1); Danger Sense; Light Fur (DR1); Penetrating Call.

Disadvantages: Appearance (Monstrous; Surrounded by dung flies); Bad Smell; Bestial; Cannot Climb; Delicate Metabolism; Edgy; Frightens Animals; No Fine Manipulators; Phobia (water, mild); Reputation (Among rainforest inhabitants, -3); Semi-upright; Shyness (Severe, -3).

Skills: Area Knowledge (Tabajos river basin)-13; Brawling-12; Camouflage-15; Lifting-19; Stealth-13; Survival (Rainforest)-13.

The mappinguari attacks with fists, with a 1 point damage bonus due to the hard claws. The combination of fur and tough hide gives them a DR of 2.

Scarred Lands Gazetteer: Ghelspad

Published by [Sword & Sorcery Studios](#)

Written by Stephen and Stewart Wieck

48 pages; \$8.95

I would have assumed that this would be a [Necromancer Games](#) production, because it fits the slogan of that company ("Third Edition rules, First Edition feel") perfectly.

Because if this book had been bigger, and come in a boxed set with another map and some transparent overlays (and had a more "fantasy middle ages Europe" feel), it could have been *Greyhawk*.

This is not necessarily meant in a good way (I was never a huge fan of the *Greyhawk* setting in my youth). It is an interesting look at the continent of Ghelspad, filling in the setting that's been dribbling out of Sword & Sorcery games in their *d20* supplements. But it's not quite as complete and fleshed out a setting as has come to be the standard.

It's presented as a series of in-character documents, including a Vigilant newsletter (the Vigilants are a Prestige Class from *Relics and Rituals* that's much more interesting in context. They're a group of magic spies . . . a fantasy MI-6 of sorts), an intelligence report to King Virduk (the setting bad guy), and an update to the Incarnates.

It's slightly jarring to read; it seems like every power group in Ghelspad has a monthly newsletter, but the in-character format is somewhat de rigeur at this point, so it can hardly be complained about. It isn't done badly by any means, and it makes perfect sense for the Vigilants to be keeping each other up to date on this stuff.

The flaw with this game is that, like my youthful experiences with *Greyhawk*, the level of detail was fairly small. Ghelspad is a fascinating place, but if you want to run a game in it, you'll need to do a fair bit of work. It also seems to be on the cusp of monumental things happening (the tyrant is ill, his wife is a schemer, etc).

This is normally a very good thing. Unfortunately, I can only imagine that, Sword & Sorcery being a part of White Wolf, there will be no small amount of metaplot running through the game books and expanding with new supplements. If this is the case, it will likely cause no small amount of consternation; no plot line, it's said, has ever survived contact with the players. They will likely be shredded by running into legions of DMs.

Of course, it's possible that that's a false extrapolation on my part, and all supplements to be released will be set around the date. The setting's "momentous events are on the horizon" atmosphere sounds like it would be fun to play,

The book is not listed as a *d20* sourcebook, which makes sense, as it doesn't have any rules material. For another company, it may have made it slip under the radar of some players or retailers, but with White Wolf publishing and marketing it, it shouldn't have any problems.

The world is described in terms of nations, locations, organizations, and the gods of Ghelspad (which are already familiar if you've read the *Creature Compendium* or *Relics & Rituals*).

The nations are a good mix, with a number of good guys (including a non-evil city-state of Necromancers) and bad, including Calastia, the expansionistic state that has conquered a number of its neighbors. Conspicuous in their absence are population numbers for the various cities and nations. Some more scholarly info, such as trade production and

economic information might have also been useful.

The locations are an interesting bunch. Strange, arcane locales have always been an important part of game settings for me. The Vale of the Mage from *Greyhawk*, The Battle of Bones from the *Forgotten Realms*, and France from *Torg* have always struck me as enchanting in their strangeness. Ghelspad has an assortment of such places. Many of them owe their existence to the Godwar which shaped the continent; there are seas of blood, poisoned by sleeping titans, and forests inhabited by foul titanspawn. One difficulty is that the map included with the book lacks any sort of coordinates. When familiarizing themselves with the product, new players and GMs will find themselves scanning through the map to locate places that interest them.

The organizations section is interesting. It presents several organizations, including the Vigils of Vesh (Ghelspad's superspies for good) and the Incarnates, who are kung fu druids. It all wraps up with a retelling of the gods of Ghelspad, an interesting bunch that fulfill the theistic requirements. They definitely don't come across as having been pasted together out of a bunch of convenient and fun deities.

The setting is an interesting one, giving a standard fantasy setting with a nice post-apocalyptic feel without the pervasive devastation that such settings tend to possess (*Dark Sun*, for example). The book isn't perfect. The illustrations don't seem comperable to, say, parent company White Wolf's regular standards, and the book could really use an index. There are some references made that don't seem to refer to anything else (Duke Traviak and his Black Dragoons are mentioned once, but no info is ever given on them again).

The book's largest flaw is the lack of any concrete data. None of the nations or cities have population numbers listed with them, although they do have population breakdowns. There's no discussion of, say, army sizes or trade goods. The cultures, upon examination, seem somewhat ill-defined and vague. And there's no calendar in the book, which is always a useful addition. I'm glad the map (a nice one, for sure) has a scale on it, but it has no legend. How tall *are* those mountains? Why are some forests dark green, and others lighter?

I can see why Sword & Sorcery wouldn't want to make the *Ghelspad Gazetteer* a major production on the level of, say, the new *Forgotten Realms* Hardcover. The *Creature Collection* and *Relics & Rituals* both succeeded on their own merits, and Ghelspad's setting was a nice addition, but nominal at best. I imagine there was really no way to gauge the market strength of Ghelspad without releasing a supplement such as this one.

The misfortune is that Ghelspad has been released in dubs & drabs. We've seen monsters and magical goods, but these 48 pages don't come close to giving the detail I want for the setting. Maybe they'll release Ghelspad as a full-sized setting, because while the *Gazetteer* has interesting ideas, they currently don't have the substance to rest on.

Supermegatopia: The Roleplaying Game

Published by [Nightshift Games](#)

Created by **The Brothers Grinn (Brian & Stuart Burke)**

48 pages; \$9.95

Supermegatopia is the latest release from Nightshift games and is based upon a slightly controversial [web site](#) by the same name. Nightshift games have never been a company to shy away from innovative ideas or possible controversy; this game pushes the boundaries of taste and playability, but seems to work.

Like the *UNsanctioned* game also published by Nightshift, *Supermegatopia* uses the Paradigm Shift rules set. Characters are given three main stats: Mind, Body, and Agility. Skills add points to one of these basic stats to give a value that is rolled on a d20. Roll that number or above and you succeed. In addition to skills, characters may purchase talents, which enhance natural skills and abilities, which are essentially super powers. Character generation is quick and relatively balanced. Combat is likewise fast and easy to run; though this is not surprising considering Paradigm Shift is a proven and true system. The book ends with a short, two-page, tongue-in-cheek adventure that is reminiscent of R. Talasorian's *Teenagers from Outer Space*. *Supermegatopia* is definitely designed for fast, "anything can and does happen" roleplaying.

Only 10 pages of the 48-page book are devoted to the game system. The system is more than adequate for the source material, and written in a concise (though irreverent) manner. d10s for initiative, 2d10s for skill rolls, with 2 as an automatic success and 20 as an automatic failure. Damage is rolled on d10s with accuracy modifiers, while armor provides a protection value that is subtracted from damage. Attacks are conducted with 2d10 plus or minus modifiers. Every character has a base THR (To Hit Roll) of 10. There is nothing here that hasn't been seen before in one a hundred other games. Experienced gamers will absorb the game system in just a few minutes, while new gamers should pick it up almost as easily. There might not be rules for every situation or permutation of every superpower, but this isn't *Champions* and makes no claims to simulate that level of "realism." Frankly, the game doesn't need it. As game systems go this one is pretty transparent, and far less distracting than most super heroic RPGs.

Much of the book consists of source material, disguised as a furry animal comic book. The game revolves around the city of Supermegatopia: a city overrun with superheroes, called rats with capes and Kiwis. The city is home to many heroes and villains, including the Goalie, The Justice Legion of Supermegatopia, Weasel Boy, and Dark Chipmunk. Each hero and villains is a tongue in cheek send up of conventional heroes & villains with a furry animal twist. Superman becomes the Mighty Might Hampster and Weasel boy assumes the position of Batman. Each protects the city in their own way but always as the comic heroes.

You might think that a furry animal book would be little more than a simple punfest and filled with childish jokes. Well, this isn't your average anthropomorphic animal book, and it isn't *Albedo* or *Teenage Mutant Ninja Turtles* by any stretch of the imagination. It's much deeper and much racier. There are hints of frontal nudity in the art and typical good girl costumes that leave little to the imagination. Characters insinuate acts that would make Mickey & Donald blush, but which are relatively tame compared to the content of the website. Crushed Kitty is a good example of the racier content of the web. The ex-stripper Dark Chipmunk who did make it into the RPG, and the comic strip included in this book continually mentions exposing her chest. In the context of the strip the references are a commentary on scanty supervillian costumes and their effect on fanboys.

The comedy often focuses on gender jokes and bodily humor, often about nudity. While some of the humor might be

NC-13 (as the back of the book warns), the majority is accessible to anyone familiar comics or the comic genre in general. The Mighty Mighty Hamster is a homage to Superman, while the inspiration for Wonder Wombat is obvious, especially when you see the art. Marvel superheroes are also parodied especially with S.W.O.R.D. and its one eyed leader Colonel Furry, Dick Furry. The art complements this and is best compared to good girl art with a furry twist. Characters are well depicted, often with little left to the imagination, again prompting an NC-13 warning, but very well drawn. The Brothers Grinn know their subject well and are obviously skilled artists. Likewise the writers also know what they are doing here, and blend just the right amount of tongue-in-cheek comedy with superheroic action to make the game fun and playable, not an easy accomplishment for a comedic game.

The book is intended to be a funny take on funny book superheroes, not a gritty, realistic portrayal of a dark future where vigilantes maim jaywalkers. There are plenty of heroes and villains included to quick start a game, as well as a two-page adventure. If you like your action tongue-in-cheek and your furry babes hot, then *Supermegatopia* is for you. But you had better be over thirteen to read it.

Murphy's Rules

by John Kovalic

Murphy's Rules

Murphy's Rules

Previously, We -- Um -- Did Stuff?

At the beginning of each adventure, I tend to ask my players what happened the previous session. I like to game weekly, so that not too much time passes between adventures.

Let me tell you: There is nothing as uncomfortable as the wall of silence and blank stares that accompanies when they don't remember.

"Umm . . ." they'll stammer, trying to dredge up anything. They'll remember interesting things that occurred two and three adventures ago, with no recollection of the previous adventure.

After a couple of times, I pretty much started structuring all my adventures in ongoing campaigns around the idea of getting them to remember them the next time. I try to do this in a variety of ways: handouts, plot twists, dramatic scenes, cliffhangers, interesting dialogues, and so on. The trick (as I saw it) wasn't to make them remember the whole adventure; rather, by giving them one thing to spark their memories, I'd hopefully give them a building block to reconstruct the whole previous session. That was the plan, anyway.

After a while, I noticed something interesting. Different players remembered different things. I'd plan the memorable hook to be a shocking revelation regarding a noble; one player would remember the in-character banter regarding fashions while the other would remember the penultimate combat, where they rolled too well and killed the Number Two Bad Guy before he could deliver his mini-soliloquy. I'd leave them stranded on a planet with a damaged spaceship; they'd remember the (off-the-cuff) rumor about dramatic price fluctuations on a neighboring world, and the fact that their pet disappeared.

Of course, sometimes they would remember what I expected them to. But almost as often, they wouldn't.

And having tried to generate memory jumpstarts for a few years, I've reached some conclusions (in no particular order):

- I still try to make at least one memorable scene per adventure. I find that it personally gives me a focus to build towards in my sessions; without having something to build towards, I can let my plots meander a bit.
- Of course, if the players go off the beaten path, I don't shoehorn them back onto track; nothing destroys the atmosphere more than using a cattle prod on your PCs (unless you're playing *Battle Cattle*, that is . . .).
- I also like having something physical to hand the players. Unfortunately, time constraints mean I usually *don't*, but having a map, character notes, a news item, or anything they can keep in a binder means they have a better shot of remembering. And it adds to the stack of information I can draw on in future adventures . . .
- Players will, collectively, remember different things than I intended. Sometimes scenes I planned as trivial (or didn't plan at all) will evolve into meaningful, important scenes. These unexpected developments are good, in my opinion, and are one of the reasons I love to roleplay. (Trivial aside: In *Raiders of the Lost Ark* [aka *Indiana Jones and the Saturday Night Fever*], the scene where Indy shoots the swordsman was unplanned; it was originally intended to be another extended combat. Harrison Ford was suffering from diarrhea that day and, in frustration, drew his gun and shot. Everyone loved it so much they left it in the movie. Personally, I think it's one of the most memorable scenes in the movie.)
- Players will, individually, remember different things than I intended. This should be expected, but can still be surprising. "We learned the King has a bastard daughter!" "Really? When?" Kind GMs can use this fact to deliver information to the player (or players) who will appreciate it; if only one player cares about the intrigues of the royal bloodline, why not let him intercept the letter detailing a court secret? Evil GMs will use this fact to give important clues to the character that won't remember. ("The Avatar of destruction must have a weakness! If only we knew!" "Wait . . . I remember this old guy talking. I think it was a prophecy . . . um . . .") Chaotic Neutral GMs will roll popcorn for initiative, invite ferrets into the gaming group, and play Steve Reich's *Piano Phase* as combat music.
- Finally, if your players don't remember previous sessions *too* often, it might be a sign that there's a problem. You may want to have a chat with your players and see what might be more memorable for them. (I feel like

this is where the *Cosmo* quiz would go . . . "Are You And Your Gaming Group Compatible?")

Well, it's summer con season again, and that means a few things regarding *Pyramid*.

First, Origins is this week; as such, Ken Hite's column is taking the week off. With any luck he'll be back next week. In the meantime, hopefully the oddness of a stinky slug will satisfy your weekly recommended dosage of Vitamin Weird.

Second, John's going to be Con mode through August, roaming from town to town like Kane in *Kung Fu* . . . only with a bit more autograph signing and a smidgen less butt kicking.

Finally, *Pyramid* needs to find itself a mysterious wealthy benefactor to send me to conventions. It doesn't even matter if it's ultimately revealed that you're an evil mastermind with a plan for world domination . . . just so long as I get to GenCon! <grin>

* * *

Since I haven't mentioned it in a while, please feel free to drop me a line in any of the myriad of ways available. I often hang out in the [chat room](#), I always read the Pyramid board on the [discussion group](#), and you can always drop me an email at pyramid@sjgames.com.

by John G. Wood

At the heart of the Discworld stands the ten-mile-high spire of Cori Celesti, home of the gods -- or at least all the gods that count. It is an inhospitable place for mortals; even if you manage to find somewhere to stand in the icy, near-vertical terrain you are likely to be frozen, electrified by the Aurora Corialis and buried in snow before being knocked off the peak by lightning bolts casually dropped from Dunmanifestin. The laws of narrative causality being what they are, you will then land within the wall of mountains keeping the Ice Giants prisoner at the foot the spire, disturbing their afternoon nap.

Move a little further away from Cori Celesti and life becomes more tolerable. Maybe it's the same thaumic flux that causes the Aurora; maybe it's the high mountain air; maybe it's the fact that the only alternative employment in the region is yok herding. Whatever the reason, there are more monasteries per square mile here than anywhere else on the Disc.

Of course, with dwarfs, trolls, humans, gods, and religion in close proximity it's not all serenity and contemplation . . .

*(Author's note: Like the campaign settings in **GURPS Discworld Also**, this article is not "canon." Although I have tried to make it consistent with previously published material, future chronicles may contradict it. You Have Been Warned.)*

Geography

Most trade into the region comes via the great river whose valley reaches almost to the Hub. According to Sir Richard de Camp of the Royal Ankh-Morpork Geographical Society, this is the Smarl -- the longest river on the Disc -- whose source he discovered on one of his many expeditions. The river forks, however, and to the celebrated Genuan explorer Antoine Seraglio it is the Vieux, the longest (and fattest) river, whose source he discovered. The locals have their own name for it, of course; most civilized people consider this irrelevant.

The great river valley divides the Hublands. Turnwise lie the Ramtops, stretching from the foothills of Cori Celesti almost to the Rim; Widdershins the sharp, high mountains blend into the Trollbones and gradually soften to form the Hubland Steppes, home of horse people and barbarian heroes. On the counterweight side the glaciers rule, making their way slowly to the sea where the great isthmus joins the continent.

The disc is thicker at the Hub than elsewhere, allegedly to make space for an internal layer of molten rock but more likely because there are no elephants underneath to stop it sagging. Vast quantities of octiron, gold and other important ores make the region an attractive prospect for dwarfs. Unfortunately there are also a lot of trolls, many of them igneous (or as humans would say, "well hard").

The People

Trolls

Trolls have been in the region longer than any other mortal race. Indeed, many people think that the mountains formed from the bodies of ancient trolls who settled down thousands of years ago and never woke. The Hub is ideal territory for them -- cold, mountainous and largely uninhabited. Because of the temperature they are, on average, no less intelligent than their human or dwarf neighbors.

Hubland troll society is stratified, and dominated by the old. As trolls age they tend to become more contemplative and move further up the mountains; there is intense competition for the highest, most exposed places, where an elder can keep his or her brain in peak conditions (the decision process involves candidates philosophically hitting each other with rocks). Because there is little room at the top, true sages tend to be loners. Acolytes group together in the troll equivalent of monasteries further down the mountain and send depositions in search of wisdom.

Younger trolls sometimes rebel. Most of these simply head for the plains, hoping for a life of freedom and the opportunity to reach the top of a smaller heap. Some, blessed with the appropriate coloration, become Yeti instead (see p. DW71).

Dwarfs

Dwarfs have been in the mountains almost as long as the trolls. The mines here are very traditional; Uberwald is regarded as too permissive by many. The rich veins of ore here have been so heavily mined that kingdoms are frequently breaking through into each other's tunnels, usually leading to some good-natured fighting over the territory.

Dwarfen literal-mindedness does not encourage philosophical contemplation -- mention a tree falling in the forest and they are likely to calculate how many pit props they currently need -- and they run very few monasteries. However, since they take things so seriously many dwarf societies have almost religious levels of ritual and discipline. The Battle Orders are the best known examples but there are many others, including societies concentrating on armory, engineering, subterranean cartography, and woodwork.

Humans

Existence here is harder for humans than for dwarfs or trolls but there are still many isolated human villages nestled in glacier-carved valleys, eking a living from land the typical Lancre peasant would describe as "bare rock." The life of a monk can seem pretty cushy to the inhabitants (especially in those villages which have to supply the food for their local monastery). As a result humans make up the bulk of the religious population.

Humans in the mountains are generally shorter than on the plains. Academics blame this on the lack of meat in their diet while country folk look disapproving and observe that "you know what they say about dwarfs." The locals are silent but it must be admitted that many of the women do have remarkably hairy chins.

Not-Yeti

Some explorers trapped outside in blizzards on the mountains caught glimpses of hairy humanoids shambling through the snow. Others found footprints vaguely resembling large, unshod human feet. When asked if these were the infamous mountain trolls, locals replied "no, not yeti" and a legend was born.

So many expeditions have failed to find and capture the not-yeti that they are considered a myth by most civilized people. However, they do exist; their closest relatives are found on the tropical island of Bhangbhangduc (or, in one case, in the library of Unseen University). They keep to themselves, so nobody knows how they feel about the climate and the lack of bananas.

Religion

Many orders have already been described in the chronicles, including the Balancing Monks, History Monks, Listening Monks, Yen Buddhists, and the Monks of Cool (possibly the authors of the Book of Going Forth Around Elevenish).

The only monks with headquarters reported outside the Hublands are the followers of the Way of Mrs. Cosmopolite; even they come from the mountains.

While some temples to the gods of Dunmanifestin exist in the region, opinion is divided over whether it is a good idea to attract their attention -- many monasteries are instead dedicated to the mental and physical improvement of their members, studiously ignoring the neighborhood deities. There are also small gods in the mountains (although not so many as in the desert), and a lucky few find worshippers to found a temple in their honor. Other orders are dedicated to an Idea which has seeped through from another reality thanks to the thaumic flux.

The upshot of this is that the GM can introduce a monastery built around almost any theme, although to keep things consistent it should be given a Himalayan slant. The Wanderer's Monastery Table can be used to flesh out some of the details.

Sample Monasteries

The New World Monks

A plains man now known simply as Leader became convinced that the Apocalypse was close at hand, and that the only place which would be safe was the Hub, since the Ice Giants were going to be leaving there to conquer the rest of the world. Leader formed a cult and led his chosen people into the mountains to prepare for The Day, creating a heavily-fortified temple stocked with long-lasting food as well as the weapons essential for keeping out those who weren't chosen. A network of abandoned dwarf tunnels beneath the building acted as an emergency glacier-proof shelter.

The New World monks are men, women and children of all ages -- families are encouraged to join as a group since their order will soon be repopulating the Disc. The outer circle members spend most of their time on the plains, leading ordinary lives, gathering supplies, recruiting new members, and trusting that there will be enough warning to get to the mountains before the end of the world. The inner circle devote themselves to the rituals of survivalism, checking and double-checking their weapons, reciting contingency plans, patrolling, and maintaining their temple ("The Compound") in perfect working order. They are dedicated men and women with short hair and multicolored robes (usually patchy green and brown) who regard anyone approaching their home with suspicion -- wanderers are likely to find themselves facing the wrong end of a loaded crossbow.

For more information see chapter 5 of *GURPS Y2K*. If the Apocalypse arrives, consider chapter 10 . . .

The Society for Crisnassen Cookery

Harri Crisnassen was one of the greatest dwarf chefs ever, able to do things to a rat or vermine that would make anyone's mouth (and eyes) water. He would also shave his head and beard "for hygiene's sake"; some of the younger, more impressionable dwarfs saw this behavior as a sign of his wisdom and became his disciples. Dressing in saffron aprons to protect their armor from fat stains, they learned his secret recipes and determined to spread his brand of Low Cuisine throughout the Disc.

There is now a branch of the Society in many traditional dwarf communities but the biggest growth has been in cities like Ankh-Morpork. The disciples are aggressive in marketing "Harri Crisnassen's World Famous Fried Rat," accosting people at docks, bars and mine entrances to press menus into their hands. Most people take the pamphlet just to get away.

The Society is not speciesist and has started catering for humans and trolls. There have even been some experiments blending cooking styles but these have been less successful -- the "chip butty" (small pieces of rock between two slices of buttered dwarf bread) was much admired but didn't sell.

Most dwarfs are only interested in tunnels as a means of getting at promising seams. The Society is concerned about

communication and the rapid transmission of recipes, orders, and ingredients; as a result it now runs the biggest network of tunnels under the Disc. People unused to bald, beardless dwarfs saw small, saffron-clad individuals appearing from holes in the ground and concocted a theory about Secret Masters running the world from their mountain fastness via the tunnels. Coincidentally, the top rank of the Crisnassen's, the dwarfs at the Hub entrusted with the secret recipes, are known as the secret masters, but they don't run the world. Yet.

Wanderers' Monastery Table

When stumbling into a new monastery, roll 2d for each of the following:

Eligibility

- 2-6 Male humans
- 7 Female humans
- 8 Any humans
- 9 No restrictions
- 10 Trolls
- 11 Dwarfs
- 12 Other (not-yeti, undead)

Costume

- 2-3 No rule
- 4 Armor
- 5 Black robes
- 6 White robes
- 7-8 Saffron robes
- 9 Other single-color robes
- 10 Multicolor robes
- 11 Nudity
- 12 Other (furs, Hawaiian shirts)

Hair

(ignore for trolls, add 2 for dwarfs)

- 2-5 Shaven
- 6 Tonsure
- 7 Other specific style (mohawk, dreadlocks)
- 8-10 Never cut
- 11+ No rule

Disciplines of Faith

- 2-3 None
- 4-5 Trivial (-1 point)
- 6-7 Minor (-5 points)

- 8-10 Major (-10 points)
- 11-12 Great (-15 points)

Size

(subtract 2 for trolls)

- 4 Tiny (<10)
- 5-6 Small (10-25)
- 7-8 Medium (25-50)
- 9-10 Large (50-100)
- 11-12 Immense (100+)

Hierarchy

(modifiers: Tiny -2, Small -1, Large +1, Immense +2)

- 4 Shared responsibility
- 5-6 Single leader
- 7-8 Small leading group
- 9-10 Simple hierarchy
- 11+ Complex hierarchy

Attitude to Violence

- 2-4 Total Non-Violence (-30 points)
- 5-6 Self-Defense Only (-15 points)
- 7-8 Cannot Kill (-15 points)
- 9-11 Use when appropriate
- 12 Violence cleanses the soul

Attitude to Outsiders

- 2 Locals banned
- 3-6 Everyone welcome
- 7-8 Foreigners must prove themselves
- 9-11 Local people only
- 12 None may enter

Special Abilities

- 2-6 None
- 7-8 Martial Art (varies)
- 9 Longevity (5 points)
- 10 Cloud men's minds (Daze knack, 2 power, 40 points)
- 11 Mind men's clouds (Clouds knack, 6 points)
- 12 Roll twice

Scenario Ideas

Because It's There

It began when Dirk d'Astard, black sheep of the Royal Ankh-Morpork Geographical Society, insulted earnest explorer Sir Edmund de Camp. It became a competition to see who could climb the greatest number of unconquered peaks by winter. Both men planned carefully; Edmund worked on husbanding his resources and cutting time between peaks, whilst Dirk considered ways to nobble his rival. Both assembled teams of bearers, picture box operators, medics, guards, translators, and all the other people needed for a major expedition, Dirk managing to slip some troublemakers into Edmund's party. The rivals were to meet the judges back at the Society on the night before Hogswatch, or forfeit the bet.

The race was on.

Characters

Sir Edmund de Camp

ST 11 [10], **DX** 12 [20], **IQ** 10 [-], **HT** 12 [20]

Speed 6, Move 6, Dodge 6

Advantages: Absolute Direction [5]; Fit [5]; Full Literacy [5]; Status 3 [10]; Wealthy [20].

Disadvantages: Enemy (rivals, 6 or less) [-5]; Glory Hound [-15]; No Sense of Humor [-10]; Obsession (prove himself as a great explorer) [-10].

Quirks: Loves a challenge; Proud.

Skills: Acrobatics-12 [4]; Area Knowledge (Ankh-Morpork)-9 [1/2]; Climbing-13 [4]; Heraldry-10 [1]; Hiking-13 [4]; Leadership-13 [8]; Riding (horse)-10 [1/2]; Shortsword-10 [1/2]; Shouting at Foreigners-9 [2]; Swimming-11 [1/2].

Languages: Ankhian-10 [0].

Edmund has always lived in the shadow of his famous uncle, Sir Richard de Camp, for whom he feels a mixture of pride and resentment. He is determined that some day he will be recognized as a great explorer in his own right rather than "Sir Richard's nephew." During the competition he intends to test his mettle by climbing the second highest mountain on the Disk, at grid reference K2.

Edmund concentrates on keeping himself in trim, rather than developing the skills he really needs. However, he has a knack for picking good hirelings and so far they have prevented his expeditions from failing, despite their employer's efforts to do everything himself. Edmund is regarded as a humorless bore by his fellows.

Dirk d'Astard

ST 10 [-], **DX** 11 [10], **IQ** 13 [30], **HT** 10 [-]

Speed 5.25, Move 5, Dodge 5

Advantages: Ally Group (hangers-on) [10]; Danger Sense [15]; Full Literacy [5]; Status 2 [5]; Wealthy [20].

Disadvantages: Compulsive Behavior (cheating) [-10]; Cowardice [-10]; Reputation (a cheat and a liar, -1) [-5]; Self-Centered [-10]; Unattractive [-5].

Quirks: Always follows the most complicated plans; Dislikes heights; Twirls moustache when nervous.

Skills: Area Knowledge (Ankh-Morpork)-13 [1]; Bard-12 [1/2]; Brawling-11 [1]; Carousing-11 [3 1/2]; Disguise-12 [1]; Fast-Talk-15 [4]; Gambling-12 [1]; Leadership-13 [2]; Lockpicking-12 [1]; Shadowing-12 [1]; Traps-14 [4].

Languages: Ankhian-13 [0].

Dirk is seen as a witty party animal by some of his contemporaries and as a disgrace to his class by most other nobles. Although highly intelligent he frequently gets himself into trouble by cheating, even when it would be easier to win honestly. Being a city man with little outdoor experience, he knows that his only chance of beating Edmund is to stop him getting home for Hogswatch. Dirk will have to climb some minor peaks to prove he was trying, and is not looking forward to it.

Involving the PCs

Ankh-Morpork-based PCs can be employed by either team (or, in the case of d'Astard's "moles", by both). The GM should decide the route taken by the teams - either by riverboat up the Smarl or by land to Lancre and then into the High Ramtops.

PCs at the Hub can take time off from their regular activities to help the visitors (people who do this are known as shirkas). Mountain survival skills are particularly useful for getting foreigners out of trouble.

"Monk, eh?"

The senior priests at the Great Temple of Buna asked themselves, how do you solve a problem like Trickiparka? The young, talented and devoted acolyte had joined the celibate, all-male monastery as a child and somehow managed to hide the fact that she was female -- until her teens. As she grew into a young woman other monks found their concentration faltering and it looked as if she would have to be expelled, for everyone else's sake. Then a message arrived from the god himself, hand-delivered by a not-yeti, saying that it was time to expand. A monk was to set out with a copy of the scriptures for the lands beyond the mountains and spread the word of Buna. Trickiparka was sent and life in the temple returned to normal.

Characters

Trickiparka

ST 10 [-], **DX** 10 [-], **IQ** 13 [30], **HT** 11 [10]

Speed 6, Move 6, Dodge 6

Advantages: Attractive [5]; Clerical Investment (Rank 1) [10]; Fearlessness +1 [2]; Fully Literate [5]; Imperturbable [10]; Manual Dexterity +1 [3]; Musical Ability +1 [2]; Patron (Buna) [25]; Single-Minded [5].

Disadvantages: Disciplines of Faith (Bunaism) [-10]; Duty (to Temple) [-10]; Oblivious [-3]; Pacifism (Self-defense only) [-15]; Youth [-2].

Quirks: Believes totally in her god; Speaks carefully and precisely; Staid.

Skills: Area Knowledge (Temple and Valley)-11 [1/2]; Bard-13 [4]; Calligraphy-12 [4]; Dancing (temple)-11 [4]; Law (Religious)-11 [1]; Meditation-12 [4]; Performance/Ritual-15 [8]; Singing-15 [4]; Theology-14 [6].

Languages: Ankhian-11 [1/2]; Gesture-14 [2]; Hublander-13 [0].

Trickiparka's parents raised her as a boy and sent her to the local temple for financial reasons, but the decision suited her well. She is puzzled by her selection for this important mission, feeling she still has too much to learn, but obeys the will of Buna. She misses the temple and is determined to keep up standards while away.

Bunaist practice requires her to spend several hours a day in meditation, to eat only vegetables and to follow strict rituals. She also spends a lot of her "free" time studying, leaving only two or three hours a day for travel.

Buna

ST 18 [50], **DX** 13 [30], **IQ** 9 [-10], **HT** 10/15 [25]

Speed 5.75, Move 4, Dodge 5

Advantages: Ally (Trickiparka, 15-) [5]; Ally Group (worshippers, medium group, 6-) [10]; Brachiator [5]; Double Jointed [5]; Enhanced Move (brachiating) [10]; Lightning Knack [16]; Long Arms [20]; Recognized Divinity [5]; Toughness +2 [25]; Two extra short arms (prehensile feet) [10]; Unaging [15]; Very Rapid Healing [15].

Psionic Powers: Telepathy power 8 (everyone)/16 (worshippers only) [60].

Disadvantages: Bad Temper [-10]; Bowlegged [-1]; Dependency (worship) [-10]; Hidebound [-10]; Mute [-25]; Overconfidence [-10]; Poor Grip [-5]; Reduced Move (running) [-5]; Self-Centered [-10]; Semi-Upright [-5]; Stubbornness [-5]; Unattractive [-5].

Quirks: Deliberately provokes people he doesn't like.

Psionic Skills: Emotion Sense-12 [10]; Telereceive-10 [6]; Telesend-10 [6].

Other Skills: Acrobatics-14 [8]; Area Knowledge (Hublands)-8 [1/2]; Brawling-14 [2]; Gesture-11 [1/2]; Intimidation-13 [6]; Staff-13 [4]; Survival (mountains)-8 [1].

Languages: Ankhian-7 [1/2]; Hublander-7 [1/2]; Orangutan-9 [-].

Buna knows the story of Om's rise to glory from his humble incarnation as a tortoise worshipped by a lone disciple. With several believers and a much more flexible body Buna is convinced that he can do even better. His temper and his inflated sense of his own abilities mean he often gets into fights. Trickiparka tries to rein him in (when she notices); as a god he ignores her.

Involving the PCs

For a confused quest campaign, the PCs could be companions Trickiparka and Buna pick up on their journey -- in a 100-point campaign one person could play the monk. Buna is a handy tool for the GM to get the party into trouble.

An established, relatively stationary PC group could encounter the pair attempting to "spread the word." Trickiparka is innocent, and socially inept; if she tries this in (say) Ankh-Morpork she is likely to need rescuing.

The Hall of the Mountain King

A mining team operating close to the base of Cori Celesti breaks through into a vast, abandoned complex of dwarf-made caverns and tunnels, equipped with some of the finest forges they have seen. The king believes this to be Sniffenheim, the ancient home of the dwarfs contracted to supply Blind Io's hammers. Of course, other mining teams are interested in the legendary veins of octiron rumored to be found in Sniffenheim. One secret order dedicated to the

preservation of the site wants to find out how the breach was made, get everyone out and seal it up again. They are even willing to resort to using outside agents . . .

A Ridge Too Far

Bored with the stability of life in the Agatean Empire, Emperor Cohen goes exploring. He discovers the tunnels leading from the Hunghung branch of Harri Crisnassen's. Usually his army won't venture beyond the wall for fear of the ghosts that lurk outside, but never before has the army been able to travel underground. Cohen decides to annex the Hub. The battle is more even than it seems. The Emperor has the manpower but can only send a few soldiers through the tunnels at a time. The dwarfs are definitely up for a fight, and the famous monastery of Shou Lin (which houses many Agatean refugees) acts as a rallying point for the martially inclined orders.

PCs can join in the fighting on either side, or help organize the evacuation of the resistance leaders.

The Rivals

A new monastery has opened up across the valley, and seems to be attracting acolytes at a rapid rate. Now monks are beginning to defect, breaking their existing vows. It's no longer a simple case of who is the serenest -- what is the secret of the new order? And how can they be stopped?

Rock of Ages

An ancient troll on one of the highest peaks has finally gone completely dormant and it is time to choose his successor. Unfortunately, he has left specific instructions spurning traditional methods -- the new sage must be the one who does the most to make the mountains safe for trolls in the next troll year. Ways to do this include attracting the patronage of a god, improving relations with dwarfs and humans, or wiping out the other races.

The Shade

A shadowy figure trained in Mysterious Mountain Ways has begun a vigilante campaign to clean up crime in the Shades of Ankh-Morpork -- by turning the perpetrators into messy red splotches. The Assassins' and Thieves' Guilds are up in arms; can the Watch (or other concerned citizens) stop the mystery killer before the body count hits triple figures? Will they have to go into the mountains to discover the source of his abilities?

Cool Aid

A group of society ladies in Ankh-Morpork hear about the poor living conditions of the Hubland people and organize a charity mission to save the benighted souls there, bringing decent food, proper religion and information on the correct way to farm. In their enthusiasm the ladies sweep up anyone too slow to get out of the way. Before they know it, the new recruits have a task, a uniform and are on their way to the hub.

Origins Awards Announced: Pyramid Wins Best Magazine

by Micah Jackson

Voted on by gaming industry veterans and average gamers alike, the [Origins Awards](#) are the highest honor in the hobby. Last night the annual awards were presented for the 27th time before a crowd of gaming's best and brightest. Dressed in a range of styles, from basic black tuxedo to basic black t-shirt, gaming's glitterati turned out to honor its own. Before the night was out, there would be some gasps of surprise, some well-fought battles, and some inevitable victories -- all things for which the adventure gaming hobby is justly famous.

Taking the reins of the show for the third time, [Cheapass Games](#) president James Earnest hosted with his usual quick wit and grace under pressure. A street juggler before he went into game design, he began with a feat of plate spinning that no other juggler performs. Staring into the bright spotlight, he performed another trick, that of guiding the crowd through the more than two-hour program, peppering the traditional award show language with one-liners.

All in all, the awards were surprisingly even this year. [Wizards of the Coast](#), riding the success of *Dungeons and Dragons 3e*, went home with the most Calliopes, four in all. Two other companies, however, were right on their heels. Cheapass Games and [Steve Jackson Games](#), both fan favorites, each earned three more Origins Awards to add to their extensive collections. [Looney Labs](#), makers of *Fluxx*, captured two of the awards, with a total of fifteen companies sharing the 23 awards.

Pyramid Magazine, after having been nominated many times over the years for Best Professional Gaming Periodical finally got its statuette. In the past it has lost to Hall of Fame inductee *Dragon Magazine* and more recently *Knights of the Dinner Table*. *Pyramid* was finally recognized as one of the gaming industry's premier voices, a fact its readers have known about since its inception. In accepting the award on behalf of the magazine, Suppressed Transmission Columnist Kenneth Hite said, "I'm just glad that a magazine I've been so proud to be a part of finally won something."

The biggest award of the night, Best Roleplaying Game, went to Wizards of the Coast's *Dungeons & Dragons 3e*, which surprised no one. This latest entry in the venerable franchise introduced the *d20 system* that, as an open system, ensured that fans would have plenty of supplementary material. Indeed, the winner of Best Roleplaying Adventure, *Death in Freeport* ([Green Ronin](#)), is a *d20* product. Steve Jackson Games took two other awards in the category, Best Roleplaying Supplement for *GURPS Steampunk* and Best Gaming Accessory for *The Munchkin's Guide to Powergaming*. The Academy recognized *D&D's Monster Manual* for Graphic Design.

Ever since the release of *Magic: The Gathering*, card gaming has become an increasingly important segment of gaming to fans and designers alike. This year the Calliope for Best Trading Card Game went to the *Sailor Moon Collectible Card Game* ([Dart Flipcards](#)). Best Traditional Card Game went home with Andy Looney from Looney Labs and his game *Chrononauts*. The Best Card Game Expansion or Supplement for 2000 was Cheapass Games' *Brawl: Club Foglio* according to the voters. Largely due to its Phil Foglio art, *Brawl: Club Foglio* walked away with a second award for Best Graphic Presentation.

Board Games were another category with a wide range of winners. *Axis and Allies: Europe* from industry giant [Avalon Hill](#) took the prize in the Best Historical Board Game category, while Cheapass Games wunderkind James Earnest picked up the statuette for *The Great Brain Robbery* as the Best Science Fiction or Fantasy Board Game. Looney Labs, a relative newcomer to the Origins Awards, walked away with the Calliope for Best Abstract Board Game for their entry -- *Icehouse: The Martian Chess Set*. John Tynes, a man known much more for his writing, won Best Graphic Design for his contribution, *The Hills Run Wild* ([Pagan Publishing](#)).

The Origins Awards were originally named for Avalon Hill founder Charles S. Roberts, so miniatures have been important to the Awards since the beginning. Riding the coattails of *Dungeons & Dragons 3e*, the best Science Fiction

or Fantasy Miniature went to The Beholder from Wizards of the Coast. **BattleTech** designer Jordan Weisman's new company [Wizkids](#) was honored by the Academy for its new collectible miniatures game, ***Mage Knight: Rebellion*** in the Science Fiction or Fantasy Miniatures Rules area. Shane Hensley of Pinnacle won in the Historical Rules category for ***Fields of Honor: The American War of Independence***.

Certain games and people are so influential to the gaming industry that they are honored by being inducted into the Adventure Gaming Hall of Fame. This year there were four new members -- two people and two games. For innovative world designs and lasting revolutions in the way people play RPGs, West End Games' ***Paranoia*** and White Wolf's ***Vampire: The Masquerade*** were justly included. World renowned German game designer Dr. Reiner Knizia earned his place in the Hall of Fame alongside fellow 2000 inductee Peter Adkison, the former President of Wizards of the Coast, who received a standing ovation as well as the coveted Calliope.

Last but certainly not least, beloved *Dork Tower* columnist John Kovalic accepted the Origins Award for Best Game Related Short work for "Matt and Gilly's Big Date" from *Dork Tower #11*. John, as always, was gracious in victory, thanking each of his fellow nominees by name.

With the awards distributed for another year, the Academy of Adventure Gaming Arts and Design headed out to reward itself with a festive reception. Soon they will be back and work doing what they do best -- representing the designers who make the best games of the year 2000, and every year.

Operation: Rabbit Chaos

By Alice Turov

"My family's wealth and resources are entirely at ARF's disposal, Dr. Jahn," said Francis, a rebellious teen who'd struggled to find his own voice. "**Hail anarchy!** How may I aid the cause?"

Dr. Jahn pulled out a gun and shot Francis in the head.

"You! Skull! Take Francis' resources and find out what's afoot with BILL."

"But my name's not . . ." Dr. Jahn waved the gun casually at the stammering man. "Yessir. Skull. BILL. Right. Hail anarchy. Gotta go."

Dr. Jon, President of the Business Institute for Longer Living, addressed his Chief Security Officer. "We have something big coming out of our Los Angeles office. Dr. Woo's research has finally reached fruition. We need to get it to San Francisco in two days for further development."

"That should be easy enough," said Skip. "Any complications?"

"One. ARF."

"Ah." Skip paused. "Does the company policy have nutbar insurance?"

"Operation: Rabbit Chaos" is a five-part scenario for *Car Wars*. Each part can be played individually (although part III will need to be improvised somewhat), or as part of a mini-campaign. A referee is not necessary, but can be useful.

Part I

Under the cover of night, BILL is attempting to bring the notes and samples to its research facilities in San Francisco. ARF believes it is in their best interests to intercept this super-secret cargo. As it turns out, they are correct.

For this scenario, each player designs one vehicle for \$15,000 or less. Place three clean sections of road down, however the BILL player desires. BILL places its vehicle down on the first section of road (wherever it wants), and declares its speed. ARF then places its vehicle down on the first section of road and declares its speed.

Play is as normal, except for placing new sections of road. Whenever both vehicles leave the last section of road, a new section is added. (It's dark and foggy, so visibility is limited to three road sections.) BILL has more accurate maps than ARF, and decides what style of road section is added and how it is oriented. ARF has its agents everywhere, however, ready to sabotage the highways at a moment's notice; as such, the ARF player decides whether or not the debris side is used.

BILL's object in this scenario is to kill the ARF vehicle, or escape. (BILL escapes by having three road sections between it and the ARF vehicle.) ARF's objective is to disable or destroy the BILL vehicle; the papers and samples therein are in a fireproof briefcase and can be retrieved easily. Neither player will know the others' vehicle design.

Part II

ARF may or may not acquire the notes. Regardless, BILL cannot allow those ARF agents to escape; they know too much.

This scenario begins with the ARF player constructing a contiguous 1350 square-foot base (six 15 square-foot

sections) where their current cell operations are stationed. The ARF player can also place up to 20 single-square debris counters on the map (no more than two adjacent to each other; there must be at least 15 feet between them). Each player has \$30,000 to design as many or as few cars as they would like.

The ARF vehicles start out stationary, placed wherever the ARF player wants. The BILL vehicles start out 225 feet away, moving whatever speeds that player chooses. The BILL player has 20 turns to get a vehicle driver to the base, inside it (doors are presumed to be available or easily made), outside it, and back off the map. One full turn must be spent inside the base . . . either to find and retrieve the plans, or to kill the cell leader. That driver must then make it 225 feet away from the base; ideally BILL will drive all of its vehicles more than 225 feet away from the base. After 20 turns ARF's reinforcements will have been alerted and return to base; any BILL vehicles still inside the 225 radius are presumed swarmed and destroyed by ARF members.

BILL wins if it gets a driver inside and outside the base -- and outside the edge of the map -- in 20 turns or less. ARF wins if it can repel all the BILL agents. Neither player knows the others' vehicle designs.

Part III

This scenario takes place immediately after the previous one. As such, any vehicles destroyed in the previous scenario are not used, and any damaged vehicles remain damaged. (If either side lost all of its vehicles in the previous scenario, the opposing side automatically wins this one. If both sides lost all of their vehicles, this scenario is skipped, and is considered a draw.)

ARF has gotten its vehicles up to speed, and is pursuing the BILL agents. (ARF's reinforcements are guarding the compound; besides, they wouldn't recognize the BILL vehicles anyway.) Predictably, the action has spilled onto the highways. BILL thought they would throw ARF off the trail by going the wrong way on the highway. They were wrong.

Place five clean, straight highway sections. BILL vehicles are placed first on the next-to-last section, traveling whatever speed that player wants. ARF agents are placed on the last section, again moving whatever speed the ARF player wants.

New sections are added once a previous section is emptied (or if there are less than three empty ones in front), at random as follows:

- 2d Road Type Added**
- 2 merge ramp
- 3 small right curve
- 4 large right curve
- 5 Straight debris road section
- 6-8 Straight clean road section
- 9 Straight debris road section
- 10 large left curve
- 11 small left curve
- 12 merge ramp

In addition, if doubles come up on this roll, there is another vehicle on the road. The BILL player chooses a car or cycle from the Sample Vehicles section (or any agreed-upon source). The ARF player determines its speed and places it on the edge of the new section, facing towards the players' vehicles. These vehicles aren't interested in autoduelling; they will follow the road in a straight line (turning as necessary to follow the road, but driving over debris or into vehicles) until they travel off the far edge.

ARF's objective is to kill the driver from the previous scenario. BILL's objective is to destroy or disable all of the ARF vehicles, or to have the driver from the previous scenario escape by having his vehicle (or a vehicle he's in) escape by distancing itself from ARF; if that vehicle can get five sections of road between it and all ARF agents, it will escape.

Unlike the previous scenario, both players get to see all the other players' vehicle designs (including their current state).

Part IV

As it turns out, BILL was working on an experimental retrovirus that will render the human body capable of withstanding tremendous damage, without suffering the traditional effects of incapacitating trauma. Dr. Woo's Pituitary-Adrenal Stimulant, if it proves effective, could change the face of the world.

ARF has either synthesized their own Woo-PAS retrovirus from notes stolen in Part I, or acquired a final sample from BILL's San Francisco labs while they were distracting BILL's other forces in Parts II and III.

In this scenario, ARF needs to escape the BILL agents with the sample. BILL needs to retrieve the sample.

The ARF player has \$40,000 to design as many (or few) cycles and trikes as he wants. The BILL player has \$40,000 to design cars; the amount spent must be divided equally between cars. Thus four cars must each cost \$10,000 (or less), two cars must cost \$20,000 each, etc. Designs *can* be different between cars, however.

The ARF player places his forces first along one edge of the map, and sets speeds. BILL places its forces next, putting them 500 feet away. Both players agree on the left and right boundaries of the map.

Once all forces are placed, ARF reveals which cyclist has The Canister. The canister has the retrovirus sample inside it. If need be, the canister can be thrown the same distance as a grenade (or less); if another cyclist is within that range, he can catch it automatically . . . *unless* there is another vehicle in between the thrower and the catcher. Then the catcher must make a skill roll. If it fails, it lands beyond the catcher on the ground; picking it up is an automatic action for a stopped vehicle. BILL agents cannot exit their vehicles or otherwise acquire or destroy the canister.

ARF wins this scenario if it gets an agent with the canister off the opposite side of the map. BILL wins if it stops all ARF agents. Neither side is aware of the other's vehicle designs.

Part V

"Stop stammering and speak, Skull!"

"Dr. Jahn, s--sir, we have some information regarding the Woo-PAS retrovirus. It seems that it has mutated; it still provides the heightened protection from physical form, but it inflicts its user with a measure of berzerker madness that seems, at this time, to be incurable."

"Hm. Interesting. And how have you learned this?"

"Well . . . there were some rabbits BILL was testing on."

"And have you acquired these rabbits?"

"Well, Dr. Jahn, sir, the latches on the cages we purchased turned out to be much trickier than we originally thought . . ."

ARF, ever-believers in the proverbial Plan B, were successful in infiltrating agents into the BILL San Francisco labs. Unfortunately, not everything went according to plan.

The rabbits escaped.

These mutated Woo-PAS infected rabbits are both a danger and a tremendous opportunity, depending on their fate.

By this point in the campaign, BILL and ARF are running low on available vehicles and skilled drivers.

Each player gets \$20,000 to design as many (or as few) vehicles as they want. Both players should agree on a map; at the very least it should include a building in the center (the lab the rabbits escaped from), and quite probably other buildings around there.

Players alternate placing vehicles, starting with BILL. If one player runs out of vehicles, the other places the rest of his. Speed is then randomly determined for each vehicle: 1dx10 mph. (The chaos of the situation has led to a lot of vehicular scrambling.)

Finally, each player places 10 rabbits, alternating one at a time; this time ARF goes first. Use pedestrian tokens (or make your own bunny tokens); for ease of play, each still takes up a full square. Because of the retrovirus' effects, each rabbit can take three hits of damage without any penalties; on the fourth hit the rabbit dies.

Woo-PAS infected rabbits all start out at 30 mph, and will not alter their speeds. Each time a rabbit has an option to move, it will move in the exact opposite direction of the nearest vehicle . . . even if this means hopping uselessly off the side of a building. (In the case of a rabbit being near two or more equidistant vehicles, roll randomly to see which vehicle he's fleeing from. Yes, this can mean running under the tires of another vehicle. Squish!)

ARF agents want to capture one of the rabbits; this mutated strain of virus could prove *very* useful in its global anarchy plans. To capture a rabbit, a driver must begin the turn adjacent to one, and its speed must be 0 mph (after deceleration). The rabbit will then freeze up. It will take 1 full second to grab the rabbit if on a cycle or trike, 2 full seconds if in a car. The driver now has the rabbit, and can drive off normally. If a vehicle containing a rabbit crashes or is otherwise taken out of commission, the rabbit takes one hit of damage, then bounds out of the vehicle to flee again. Targeting a rabbit is -5, but they are treated as pedestrians if struck by a vehicle.

The ARF player wins if it exits a map edge with a living rabbit. The BILL player wins if it manages to eliminate all the rabbits. If a rabbit manages to escape the side of the map (and isn't being carried by an ARF agent), *neither* player wins this scenario; ARF cannot control that rabbit's chaos (seriously limiting its usefulness), and BILL will have a possible bio-environmental nightmare on its hands.

Epilogue

If BILL wins more scenarios than ARF, it has managed to contain the Woo-PAS virus for its own purposes. Tampering in nature's domain will carry on as planned, and they will begin trying to work out the bugs of their experiment and develop a sellable product.

If ARF wins more scenarios than BILL, it will have what it believes to be a powerful tool in its goals of promoting global anarchy.

In the event of a tie, both sides are able to claim victory . . . BILL has the research at its disposal, but it also will have to deal with those pesky government phone calls once the Woo-PAS strain pops up in a town or two . . .

Regardless, it will quickly become apparent that the retrovirus does not work entirely as either side wants. Rather, regardless of whether it is sold as a stimulant or released in the wild, it will mutate into a variant of the common cold; humans who catch it will feel sick, but deny it and violently insist on going to work, school, or otherwise out in public as normal. Whichever side was able to claim victory *will* claim a small consolation, however, as they will be able to develop the specially formulated Wootang Elixir; this therapeutic citrus beverage will counteract the worse effects of the Woo-PAS cold strain.

Origins Report: Back in the Saddle Again

by Micah Jackson

(Editor's note: This is the follow-up to the [Origins Awards ceremony report](#), posted late in last week's issue. Check that one out if you haven't yet!)

COLUMBUS, OH -- Though thought of by most gamers as "the convention that is not Gen Con," Origins is trying hard to shake that reputation and to come into its own as a summer con in its own right. Last weekend (July 5-8) it showed the nearly ten thousand attendees what it had going for itself. We were mightily impressed. Origins has a lot in common with its older and bigger sister Con, but it is not only a copy.

Part of its problem had been that it moved to a different city each year. Recently the location has stabilized as Columbus, which like Milwaukee, is a decent sized midwestern city that is easy to get to (my plane ticket was less than bus fare), safe at night, and where the people are glad to see us coming. Unlike Milwaukee, Columbus gives Origins room to grow. The convention center is much larger than the current size of the Con. That might give the impression that Origins is sparsely attended, but it actually reveals that the Origins planning committee is actually planning, which is a very good thing.

Speaking of the Origins committee . . . The show is owned by the Game Manufacturers Association ([GAMA](#)), the industry trade organization. However, in recent years GAMA contracted the management of the show to Andon, which became part of Wizards of the Coast. Beginning next year, GAMA will again be managing Origins themselves. This is certainly something to watch out for, but given the attention the GAMA crew gave to the attendees (players and exhibitors alike) it should be a pleasure to see.

New And Notable

Companies like to release new products at conventions. This gives those releases a shot of buzz on the floor and brings people to the booth, stimulating sales. Traditionally, the Con for big releases was Gen Con, but there were several excellent new releases at Origins this year, another sign of Origins health and growing importance.

A few years ago, [Gold Rush Games](#) released *Sengoku: Chanbara Roleplaying in Feudal Japan*. The latest supplement for this game -- which was picked as the Best Historical Game of 1999 by AniMail Newsletter/[Central Park Media](#) -- is *Shinobi: Shadows of Nihon*. The Shinobi, known to most Americans as the ninja, are some of the most feared, and certainly most mysterious warriors in all of Japanese history.

This book describes their history, the philosophy, training, methods, equipment, everything you could possibly want to know about the shadow warriors. As Darren-Jon Ashmore and Mark Arsenaault, the authors, are both students of Japanese history, the book is as historically accurate as it is possible to be. However, they are also fans of the Chanbara, so the folklore and cinematic quality of the Shinobi are included as well. This combination of history and fantasy is what made *Sengoku* so good. It serves *Shinobi: Shadows of Nihon* just as well.

After the release of *Hunter: The Reckoning*, many people wondered whether [White Wolf](#) would find a new project worthy of their creativity and the gamer's dollar. Some thought that, having described all the major players in the World of Darkness, the White Wolf staff should just issue a memo, "Last one out, turn off the lights." But, at the same

Con which saw *Vampire: The Masquerade* inducted into the Academy of Adventure Gaming Hall of Fame, they squelched all that talk with the release of *Exalted*. That's right. No colon, no gerund. And that's not all that's surprising about this game. It's an epic game about the "second age": the time before the World of Darkness. If you imagine High Fantasy as done by Clark Ashton Smith you won't be far off. White Wolf is not far off, either. *Exalted* is beautiful, large, and about to make quite the splash in the world of gaming. Check it out.

Blast From The Past

If one were to suggest that Origins had a centerpiece other than the games, it would have to be the [Origins Awards](#). The names of the nominees and the winners have been printed [elsewhere](#). However, it needs to be said that all the fans who missed the awards presentation itself lost out on a wonderful opportunity. Rarely is there such a good chance to see the hobby's best writers, artists, and designers in the flesh, and see them rise to the occasion, or be embarrassed by their own success. And it's even more rare to see them do it while wearing ties! The awards presentation itself gets more entertaining every year as the Academy Committee develops a vision of itself, its awards, and the presentation. The biggest flaw in the awards show this year was that it was too far away. In the future, the Origins committee will do well to move it into a more central location. No one accidentally wandered by and discovered what a

wonderful thing they were missing. This is how people discover great games, and this is how people will discover the Origins Awards.

Another giant hit of every Origins that is present at no other show is the annual Smithee Awards. Named for the greatest maker of bad films ever, Allen Smithee (the pseudonym used by directors who are embarrassed by the movie), the Smithees are a celebration of all things dumb about the film business. Nominated films this tenth incarnation (which don't have to be from the last year) included such stinkers as *Demon Keeper* and *Murdercycle*.

Awards are given in 19 categories such as "Wanna Run That By Me Again," which is awarded to the film with the most incomprehensible dialogue, "Let's Up the Rating to 'R'," for the most pointless or confusing nude scene, and "Stupidest Looking Monster." The Smithee committee risks their VCRs and their sanity all year to choose the nominees and then screens the clips at Origins, allowing the attendees to vote for their favorites live. It's a hoot and a half, but be warned: it can last three hours and a half.

Heard On The Street

Rumors and speculation abound at conventions, some of which turn out to be true (making everyone say they knew it all along), and others which dissipate with time (leaving no one to admit they ever believed them). Here are some of the top ones from Origins 2001.

d20 seems to have legs. Last year, people thought that the "open source" nature of the project would flood the market with sub-standard products, thereby cheapening the value of *d20* and because of its connection to *Dungeons & Dragons*, the hobby as a whole. It certainly was true that many *d20* products came out since the release of the *Player's Handbook*. Interestingly, the distributors seem to have learned from the CCG mess and aren't automatically buying whatever comes out. As a result, the quality of what is available in the FLGSs is generally very good. And there certainly have been some excellent products that wouldn't have been possible without opening up *d20* to other developers. Origins Award winner *Death in Freeport*, ([Green Ronin Publishing](#)) as a dark fantasy title, would have been difficult more than a year ago, and [Avalanche Games'](#) scenario *Last Days of Constantinople*, set in historically accurate brothel in 1453, would have been impossible. The inevitable shakeout isn't over, but neither is it likely to be as painful as the one that punished those who had blind faith in CCGs.

Consensus on the floor was that [John Kovalic](#) is the "nicest man in gaming." He was frequently in his booth, signing autographs and graciously accepting the praise being heaped on his comics and other artwork. His take on gamers,

which pokes fun without being mean, is hilarious. Just seeing his latest t-shirt for Gilly the Perky Goth ("putting the romance back in necromancy") can restore one's flagging faith in the basic fun nature of gaming. He was sharing his booth with Phil and Kaja Foglio who weren't so much pushing their latest comic *Girl Genius* as they were watching helplessly as the first two issues flew off the shelves. If the industry isn't careful, the Origins Award for Best Game Related Short Work (won this year by "Matt and Gilly's Big Date" from *Dork Tower #11*) will become the de facto Best Graphic Storyline.

One final topic of discussion on the floor, a technical one, which doesn't concern most gamers directly, but surely affects the manufacturers' attitudes, was the changing of the guard in [Wizards of the Coast's](#) event management. For several years, Lisa Klingler has been the go-to woman for questions and problems experienced by exhibitors. This was her last Origins, and she will be leaving the company altogether after Gen Con. I'm certain that GAMA and WotC will find competent people to take over her job, but she will be missed by all who ever benefited from her sunny demeanor and willingness to help. And that list is long and distinguished indeed.

Dark Of The Night

Origins isn't the late-night hotbed that Gen Con can be. Still, there were several overnight events that make gaming cons what they are. Of course there was 24-hour-a-day gaming in the open gaming area. LARPs ran into the early part of the morning, with many participants. There was the traditional industry insider poker game, after which one person claimed to have won \$17 and one claimed to have taken home \$200. Apparently, this was magic money, since no one was admitting to having lost. The City of Columbus' summer movie series fortuitously featured *Raiders of the Lost Ark* on Sunday night, which many gamers enjoyed. Many of the hobby's most famous members were spotted together enjoying platters of sushi at a local restaurant. And, as always, there were many writers, artists, and developers eating and drinking together in the Big Bar on 2 plotting the future of the hobby.

By The Numbers

People seem to be interested in the little details that go to make up a convention. Well, here's some demographic information I got from Origins management about who comes to the con. 39% of the attendees are between 25-34 years old. 86% of all attendees have at least some college education, with 19% holding at least one advanced degree. Nearly half of all Origins attendees have annual household incomes greater than \$50,000. 93% own their own computers, and 94% say they have access to the Internet at home. Now, it is true that 82% of attendees are male, but even that is a significant increase in female attendance in recent years. Those of us who attend convention know that the stereotype that cons are populated only by 15-year-old *Magic: The Gathering* players are false. Now we have some evidence to use when dispelling those misunderstandings.

Coming Up

Origins will be returning to Columbus July 4-7, 2002. If you're upset with the crowds at Gen Con, think about coming to Origins instead. Or, better yet, come to both. They each their advantages, and as they separate themselves in time more in coming years (Origins is getting earlier) it will be easier to attend both shows. There will be some fabulous prices and special deals in effect for next year as GAMA tries to grow the show. Take advantage of them. I'll see you there.

Finally, like the song says, "One down, one to go. Another town and one more show." I will again be at Gen Con in Milwaukee August 2-5. If you're going to be there, look for me on the floor and say hello. In preparation for that show, I am again receiving e-mail at genconreport@hotmail.com. If you

have a question, a comment, or a coverage suggestion/request,
drop me a line. Until then, as always, may the dice go your way.

Gear Krieg: The Roleplaying Game

Published by [Dream Pod 9](#)

Written by James Maliszewski & Chris Steward

Illustrated by Kieran J. Yanner, John Wu, & Marc Ouellette

208 pages; \$32.95

Every once in a while you get a thematic trend in RPGs, and with the sixtieth anniversary of the USA's entry into World War II fast approaching, guess what? 2001's big theme is The Big One. Not since FASA's *Behind Enemy Lines* has there been a WWII RPG, but standby for an onslaught! Pinnacle has promised us *Weird Wars* -- World War II and horror for the d20 system; Pagan Publishing has *Godlike* in the works, a dark game that combines WWII and superheroes; and Steve Jackson Games have a whole line planned for *GURPS*, which will play it "straight." First out of the gate with a preemptive strike is Dream Pod 9 with their fourth RPG, a companion to their WWII and 'mecha' miniatures system, *Gear Krieg*.

Gear Krieg: The Roleplaying Game is described as the game of "two fistful pulp role playing in a world at war!" It is set in 1941, in the early part of the war prior to the Japanese attack on Pearl Harbor. The setting in the game is ours, but with a number of additions that give it the feel of the pulps and what it calls "Superscience!" For the main conflict between the Allied and Axis forces, this is the addition of machines known as walkers. These are essentially armored cars that come with both legs and wheels, and are thus capable of on- and off-road travel. The Nazis have found Walkers or "Panzerkampfers" highly effective in the new lightning war tactics employed in the Low Countries and Eastern Europe. Nikolai Tesla developed huge death rays that the French deployed in the failed Maginot Line. Scientists on both sides continue to develop applications from the ideas found in SuperScience!

Into this modern age arena come the players as the heroes cut from the pulp mode. They are the gallant individuals who take it upon themselves to fight the evil machinations of the forces opposed to democracy. Like other DP9 games, *Gear Krieg* uses the Silhouette game engine, with the character generation pitched at the Adventure or even Cinematic point levels. What changes have been made to reflect the pulp genre are merely cosmetic, such as the emergency dice rules seen in previous games renamed Daring Dice.

Despite the ease of creating a character, nowhere in the book does the game show you what a character should be like in the *Gear Krieg RPG*. After the book's opening color text, several archetypes are described and then pop up throughout the book in the various rules examples. But no stats are given for them, or any other NPC. Neither is there an example of character generation. Further, the game does little to define characters' places in the world. One suggestion is to have them operate as agents of the impotent League of Nations, perhaps as part of one of their Plenipotentiary Teams.

Problems abound in the layout of the book as well. After all, when the first dreaded reference to page 'XX' appears nine pages in, one's hackles tend to rise. While such errors are infrequent, they are common enough to be annoying. The first part of the book is devoted to a gazetteer of the world of 1941, but although an interesting and useful read, it is hampered by area maps that contain spelling mistakes. Further it is obvious that modern maps have been used: Pakistan and Bangladesh are present, French Indochina is called Vietnam, and the Dutch East Indies is called "Indonasia." It would have been nice to see more period maps used in their place.

Considering that *Gear Krieg* is a game about pulp action and Superscience!, there is very little about the latter in the

book. Apart from the walkers in the vehicle section there are only a few items detailed. Only one of those -- the rocket pack -- is not a weapon. There are rocket guns, laser rifles, radar pistols, electric guns, and sonic guns, none of which are illustrated. Described as far from everyday weapons, their inclusion has the feeling of being an afterthought. The equipment section is short, with a focus on the personal weaponry employed throughout WWII. Many guns are illustrated, but in a game where a character's choice of sidearm is down to favoritism, you have to wonder why that pulp mainstay, the Mauser Broom-handle pistol, was omitted.

A set of abstract rules is included for the GM to allow the use of vehicles in the game. These are a cut down version of the miniatures rules and are supported by a list of civilian vehicles, tanks, and walkers. Oddly, the only aircraft on that list is an autogyro. Since air travel can play a big part of the pulp genre, this is another omission, which could have been supported by additions to the abstract rules given. This is especially irksome, since the skills section includes the Aircraft Pilot skill.

The section for the GM is an improvement, with a good examination and discussion of the components that make up the pulp genre. These are then included in a set of tables that guide the GM through the random creation of an adventure. These work well, providing the bare bones onto which a GM can build their scenario. A special note is made of the game conventions, particularly the ubiquitous cliffhanger. An example adventure outline is generated using these tables to show them in action. The book is rounded out with "Wolf In Sheep's Clothing," a campaign outline. This details the major characters involved, numerous locations and the stages of the campaign through to its conclusion. It still leaves a lot of work for the GM to do, and many of *Gear Krieg's* omissions are not going to help that effort. In fact, the randomly generated adventure is actually of more use than the campaign outline. Despite the general usefulness of the GM's section, one has to wonder why no bibliography is included for their reference on either the pulp genre or any aspect of WWII.

Gear Krieg: The RPG is a game with a problem or few. The main are the glaring omissions: no character examples, no NPC details, no real adventure, and the relegation of the Superscience! element to the background. These shortcomings all serve to leave the reader with a feeling that it is still incomplete. Further, if the game is to follow the history of the War, then the opportunities for play may become increasingly limited. One option for any prospective GM may be to set their game a few years earlier, which may open up greater adventure possibilities. The number of problems with *Gear Krieg* means that a GM cannot pick this up and play without a considerable amount of effort. Equally, this also reduces the usefulness of the book to someone running the *Gear Krieg* miniatures game who wants to include roleplaying aspects. These problems could have been solved with a greater attention to detail and the addition of another forty pages. Yet I am sure that all this will be fixed in a companion or future supplement.

[Dangerous Places: Health, Safety and Archaeology](#)

Published by [Greenwood Publishing Group](#)

Edited by David A. Poirier and Kenneth L. Feder

Bergin & Garvey, Westport Connecticut, 2001

264 pages; \$22.00 softback

Archaeology is a prime adventuring career. In fiction and gaming, archaeologists discover powerful ancient artifacts, are blessed by long-entombed gods, keep evil empires from plundering the magic of the past, unearth monsters best left buried, and discover any number of things man was not meant to know. Yet for all that we gamers make use of archaeology, we really don't know that much about its real threats. At least not according to authors of *Dangerous Places: Health, Safety and Archaeology*, a collection of essays detailing the real threats that contemporary archaeologists face in the field. Several of the authors open their essays by pointing out that the layman's ideas of archaeological hazards are wrong, and then present legitimate dangers that would make even the most hardened *Cthulhu* investigator think twice about entering the field.

The book is split into two parts: "Biological Hazards," and "America's Colonial and Industrial Legacy."

Part One details biological hazards faced by North American archaeologists at the end of the 20th century. Anyone interested in using archaeology as a starting point for adventure from the Victorian era forward should find this section a handy reference and inspirational guide. While the data is geared towards the 1990s, the authors do a good job of explaining how these threats were discovered, how long they existed before discovery, and where you can expect to encounter them. It takes little work to backdate the information to any timeframe that had serious archaeological study.

Some chapters are more useful to gamers than others; the chapters on rabies and Lyme disease are interesting provide solid data (the discussion of rabies' behavioral symptoms is valuable), but the diseases are too commonplace and well understood for them to evoke much mystery. The closing chapters on Scourges of the Dead and Parasites balance this nicely, as they give quick, evocative lists of vectors, symptoms, and cures for diseases that can curse an expedition, force a doctor to strut his stuff, bedevil an archaeologist or give reason for government agents to close off an area. It also lists how long these threats can survive in dead environments (tombs, corpses, etc.), in case you ever need to know.

The other four chapters in Part One list an array of things that want archaeologists sick or dead. Two chapters, "The Fungus Among Us" and "Nasty Little Things: Molds, Fungi and Spores" are of obvious interest to *Cthulhu* keepers with a Mi-Go fixation, providing information on fungal infections for use as red herrings, double blinds, or factual verisimilitude. "Of Mice and Men" discusses the threats of rodent infestation, diseases, and the fact that mice and rats like to sleep in skeletal cavities . . . a fact sure to make the investigators jump at least once. Finally, "Histoplasmosis" gives the poop on archaeological mycosis. Did you know that Lord Carnarvon died of insidious pneumonia, likely caused by the bat and guano infested corridors on King Tutankhmen's tomb? At least, that's what the professionals *think* . . .

Part Two covers urban dangers good for any setting in the 20th and 21st century. Again, some of these are not very useful in a game setting -- "Get the Lead Out" contains more than you ever needed to know about lead contamination in the modern world -- but some are quite useful. For example, did you know that the key component of embalming fluids from the Civil War to 1910 was arsenic? Sometimes several pounds of it. Can any fan of Lovecraft not start

wondering whether or not that was a concentrated attempt to cull or destroy a ghoulish race run rampant in the killing fields of the Civil War? Or is it something worse?

One chapter, "Dig Fast, Die Young," discusses the threat of unexploded ordinance. While the advice is bland from a gamer perspective (no notes on how to defuse them, alas), the six pages of ordinance diagrams provide great handout-ready sketches. "Beneath City Streets" opens with an anecdote about archaeologists -- submerged to their calves in the tunnels under Boston -- taking a sample of the odd smelling water, only to have it dissolve the Styrofoam cup. Given the odd locales in which PCs find themselves, GMs shouldn't have problems putting them places best left avoided.

Part Two is most useful for Storyteller GMs as a useful guide to the pervasive nature of Vampiric control, the Wyrms' corruption of the environment, or the machinations of the Technocracy. It's full of things western culture has done when it should have known better, and the bitter aftermath of those decisions on the landscape. Some of these are downright scary, perfect for use as threatening battlefield conditions against raging Werewolves or crusading Magi (or suitably inhospitable lairs for solitary Kindred).

The greatest problem with *Dangerous Places* for gamers is that it isn't written with roleplaying in mind. The articles are aimed at professional archaeologists, but there's a lot here for the dedicated layman searching for inspiration of verisimilitude. If you're looking to diagnose the strange disease sweeping through Miskatonic's Central American dig, or the excuses FEMA agents will use when they cordon off an area in their HAZMAT suits, this book is an invaluable resource.

Four-World Pileup: Alternate Autoduels

"Some players may find themselves saying, 'That's not how they do it in Car Wars! Of course not.'"
-- Christopher J. Burke and Robert J. Garitta, *GURPS Autoduel*, 2nd Edition, p. 111

When it comes time to stand on the gas, throw in the brake, and send the world spinning into a hundred-mile-an-hour bootlegger reverse, there's nothing more fun than taking something fun somewhere -- or somewhen -- else. And nothing's more fun than car fights, unless it's automatic weapons fire. In honor, then, of the retooled *Car Wars*, here's four more arenas suitable for -- heck, specifically engineered for -- autoduelling. To play any of them may require tweaking the rules, making up new counters, and generally doing what all you gearshift gearheads want to do anyway. That, and car fights with automatic weapons.

*"Hey, hey, hey, I was born a rebel
Down in Dixie, on a Sunday morning.
With one foot on the brake, and one foot on the pedal,
I was born a rebel."*
-- Tom Petty, "Born A Rebel"

And you thought Kansas was bloody. The Confederacy wrenched Oklahoma away from the Union in the 1863 Peace of London, only to lose it in the 1917 Congress of Berlin resolving the Great War. With Germany distracted in a collapsing Russia, however, the C.S.A. took Oklahoma back during the Second Western War -- only to see a grossly corrupt referendum vote in a Republican governor with Union ties twenty years later. The Potomac Incident irradiated both Washington and Richmond, removed restraining federal oversight from many states, and forced the Great Powers to order both sides to keep the peace and remove all "heavy weapons" from Oklahoma. This left a pro-Union governor nominally in charge, depending on "contributed units" of the Kansas and Missouri National Guard to control a surly Reb population. And this "occupation" (or "restoration") drove every hothead in both republics to Oklahoma.

Because that's the other interesting thing about the state -- since both sides built highways there during the industrial era, it's the only place on the continent that the Confederate and Union interstate systems interlink. U.S. 77 and U.S. 66 drive south and southwest from Ft. Larned, Kansas and Ft. Crowder, Mo., bringing convoys of Union GEVs to reinforce Republican rule just as Southron truckers roll shipments of Maxim-guns up the M35 from Dallas and out M40 from Little Rock into "Little Dixie". Oklahoma City is a wide-open Casablanca (or Saigon) boiling with insurgents, 'bacco traffickers, gun-runners, spies, journalists, wildcat oilmen, and mercenaries -- all of whom arm their cars to the grilles. A thousand tiny skirmishes boil up on Oklahoma's wide highways as Fords and BMWs slug it out against Tuckers and Peugeots. Both sides know that to restore order is to invite war -- but allowing autoduel anarchy tilts them helplessly into it anyway. PCs in this *Alternate Earths-Autoduel* campaign can fly either American flag (or both) as conspirators, provocateurs, or wheelmen-for-hire. Or, they can take a military role as Confederate commando "advisers" or as U.S. Army special ops putting the pedal to the metal to drive old Dixie down.

*"Tonight I'll be on that hill 'cause I can't stop
I'll be on that hill with everything I got
Lives on the line where dreams are found and lost
I'll be there on time and I'll pay the cost
For wanting the things that can only be found
In the darkness on the edge of town."*
-- Bruce Springsteen, "Darkness on the Edge of Town"

Did you ever wonder where all the American mammoths went? Did you ever wonder who the First People of Choctaw -- and Mandan, and Zuni -- legend were, and why their successors all had to emerge from caves into a world empty of people? Did you ever wonder what happened to the Vikings? The Mound-Builders? The answer lies in the American ley-grid, which releases monsters -- horrible phantoms constructed of psychotectonic energy -- every millennium or so. America is the skull of the Earth, and the planet's nightmares materialize there. And when Eisenhower laid the interstate network down, he woke them up early.

This *Atomic Horror-Autoduel* crossover can stay covert, in a 1950s *Black Ops* mode as the Autoduelists in Black of Strike Force Corvair show up to secretly eradicate a nest of Wendigo or to crush a phantom incursion and blame it on "invaders from Mars." In a lower-powered game, the PCs can be the misunderstood teens whose drag-racin' ways are all that can save Green Valley from the Thing From The Interstate. Or the game can go full-bore as dark forces pour out of the heartland on a wave of Plymouth Furies and malevolent semi-trailers, and the forces of decency and humanity come to depend on road warriors armed with experimental weapons in Detroit's finest.

*"Well, these diamonds on my windshield
And these tears from heaven
Well, I'm pulling into town on the Interstate
I got a steel train in the rain
And the wind bites my cheek through the wing
And it's these late nights and this freeway flying
It always makes me sing."
-- Tom Waits, "Diamonds on My Windshield"*

After the Manafall, the U.S. was on top of the world. The manatech in Albuquerque just added another layer of American knowhow, and the physicists had proven that trying to set off another bomb someplace would destroy the world rather than give anybody else a magical edge. Unfortunately, the Soviets didn't always believe their scientists -- and come the 1990s, they desperately needed a magical edge. Whether it was an abortive launch against American soil, a desperate ploy by Communist hardliners, or just badly-maintained warheads and a hard freeze, the result was the same -- the Hellstorm smashed every atom of rational, civilized order on the planet and knocked everything back to the Bronze Age.

Well, almost everything. By 1991, Americans had more magic, and more manarads of exposure, per capita than any people in the world -- and maybe that was what let them keep the two things they loved more than anything else: their cars, and their guns. The whole population seems to have magically stabilized those two things, allowing them to remain functional when no other technology is. Of course, even in America, the Hellstorm hit hard; the Federal Government was particularly badly battered, and powerful mages set themselves up as sheriffs where other authority disintegrated. Some were selfless; working hard to protect their citizens from bandits, storms, chimerae, and other disasters. Others were -- well, evil magicians. In this *Technomancer-Autoduel* crossover, PCs can work to rebuild America and redevelop magical technology that will work in the new world. And, of course, they can fight immense magical duels while barreling down the highway firing Gatling-cannon rounds at each other in sorcerously-perfect 1956 Eldorados, 1965 Mustangs, and 2000 Prowlers.

*"Cadillac, Cadillac
Long and dark, shiny and black
Open up her engines, let 'em roar,
Tearin' down the highway like a big ol' dinosaur."
-- Bruce Springsteen, "Cadillac Ranch"*

Or, you can borrow a spare from Philip Jose Farmer, get a jumpstart from Roger Zelazny, and connect the whole set. A highway runs across, or along, or between Time. Yearposts dot the roadside, along with truck stops, diners, and the inevitable roadside attractions. ("SEE the World's Largest Pyramid of Skulls! Only 28 years ahead, at Exit 1403!") The rate at which years and miles correspond varies along the way, with years spread out in historically-congested areas and bunched together in the long, desert stretch back to the Cretaceous. Where the road forks, so does history -- if enough people use one fork, it becomes the main highway. If enough people avoid an exit, it degrades into a dirt road, and then disappears entirely. (I steal this idea cheerfully, and openly, from Zelazny's novel *Roadmarks*.) Wildcat civilization engineers often grade, pave, and sign new roads (and put in more gas stations) in the hopes of attracting traffic to a new continuum -- and devotees of the old history tend to oppose them violently.

Which is where the autoduelists come in, in this *Autoduel-Time Travel-Riverworld* crossover campaign. People who love cars and history a little too much, who make a habit of exploring the road less traveled, can sometimes take a

Moebius turn onto the Highway. Reincarnations of famous travelers, from Amelia Earhart to H.P. Lovecraft to Sir Richard Francis Burton drive the Highway as well, always looking to bolster their reputations and see what lies around the next bend. PCs can play bold-hearted gunslingers racing to stop the Autobahn-SS from blocking the London exit at Mile 1940 or defending their turf against marauding cycle gangs like Tengri's Angels or Wotan's Wanderers. They could be joyriders (or hitchhikers) out to cruise the highways of history, or agents of the enigmatic Highway Patrol (which itself fears the still-more mysterious Department of Transportation) keeping a lid on major moving violations. They might even be the staff (or at least the resident protection) of a bar like Marco's Venetian Taverna, roadside museum and gift shop such as Alexander's Coffin, or drive-in theater like the Globe-a-Rama. Dangerous curves ahead -- drive expansively.

First Hit's Free, Kid

We're running a few *Car Wars* and car-related articles this week (as you may have noticed), so I thought I'd mention my tangentially related *Car Wars* story, which may well be my first Steve Jackson Games story.

Back in 1987, when dinosaurs still roamed the earth and *ALF* seemed like a good idea, I was starting to branch out a bit in my gaming tastes. I'd picked up the *Marvel Super Heroes Game*, the *Indiana Jones Adventure Game* (yes, I know . . . hey, I was fourteen at the time! And that series still had some of the best cardboard cutouts! I wish I still had that biplane . . .), *Champions*, and a few other games I'm currently forgetting. But I'd never stumbled across Steve Jackson Games.

So in my Friendly Local Game Shop (which primarily stocked wargames, to give you an idea when this caveman tale takes place) the store owner -- who recognized us despite the fact that we only made it out there two or three times a year -- noticed some of the games I was poring over. And then he made a suggestion: *Mini Car Wars*.

For those of you who never saw it, *Mini Car Wars* was a pamphlet-sized version of *Car Wars*. It contained full-color cut-out paper counters and road sections, and a scaled-down version of the *Car Wars* rules, complete with sample vehicles and weapons.

"How much is it?" I asked, skeptical.

"Go ahead; take one," the storeowner said. "They're normally a dollar, but you're a good customer."

So, whistling merrily as we drove home, I couldn't help but think: "He's giving away a free game? Heh, heh, heh . . . sucker."

That week I got my mom to photocopy the counters. And I played a couple of times. And I enjoyed it.

The next week I made up some more counters and maps, with graph paper and colored pencils. And I still had fun.

The week after that I made up some more rules to add a bit more complexity and options. And I was still enjoying myself.

The week after that I'd wheedled my step-dad into taking me back to our game shop again, several months early. I walked out of the shop with a copy of *Car Wars Deluxe* and *Dueltrack*. My shop got \$30 or so it wouldn't have gained otherwise. And SJ Games gained a customer it didn't have before.

"Heh, heh, heh . . . sucker," indeed.

Mini Car Wars was the first "introductory" game I'd ever seen, designed as a minimal-to-no cost game starter set. But it hasn't been the last. In the past few years there have been several high-quality game introductions released.

Speaking as both a game fan and a recovering retailer, this is a Good Thing. I've said it before: there are more unique and quality games in print right now than any time previously. Unfortunately, it's a lot more difficult to determine if a game is going to be to your liking when you're flipping through it in the store . . . if you even know it exists. After all, games are meant to be *played*.

And that's what these handouts are designed to do. Sure, they may not contain the whole game world, all the rules, or all the little fiddly bits. But they are almost certainly more informative than reading the back of the cover, the advertisements, or hoping to find a reviewer you can trust.

Although my *Mini Car Wars* experience is from several years ago, I suspect the relatively recent surge in these freebies (or near-freebies) has surged, thanks to two things . . . ironically related.

First is the surge in the playable computer game demo. Beginning in embryonic form with shareware in the mid-to-late 80s, I suspect the computer trial download truly hit the center stage with *Castle Wolfenstein 3D* from the early 90s. It has now become commonplace -- indeed, almost expected -- to be able to try out new computer (and many console) games before buying them. Now there was no longer the scary prospect of buying a game sight unseen.

Second is the surge of the electronic format document in the past few years. Before PDFs became commonplace, there weren't many attractive ways to present documents. Postscript wasn't very portable, text wasn't very pretty, HTML wasn't very controllable, and TeX wasn't very intuitive. But having a commonplace means of presenting -- and printing -- a document in the form the creator originally envisioned opens up whole new worlds. Although not all handouts are exclusively PDFs, many are, and having an open format meant that these handouts were no longer limited to companies that could afford to publish attractive mini-products for free.

I'm personally delighted at the number of possibilities that exist for introducing folks to new games . . . both experienced gamers and new would-be players. After all, not everything is going to appeal to everyone, but if only one introductory game kit captures someone's imagination, then that's one new world of exciting possibilities, one new player in the fold, one more sale for stores, and one more bit of growth for the best darn hobby in the world.

This isn't meant to be a comprehensive list, but if I needed to burn my niece or nephew a CD with interesting possibilities, here are some I might choose:

Atlas Games

- *Rune* -- http://www.atlas-games.com/pdf_storage/rune_jumpstart.pdf
- *Ars Magica*, with two jump start kits -- "Promises, Promises" (http://www.atlas-games.com/pdf_storage/promises.pdf) and "Nigrasaxa" (http://www.atlas-games.com/pdf_storage/nigrasaxa.pdf)

Dream Pod 9

- *Heavy Gear Tactical System* -- http://www.dp9.com/Funhouse/PDFS/hg_demo.pdf

Gold Rush Games

- *Legacy of Zorro* -- They have a neat interactive Choose-Your-Own-Adventure-esque mini-tutorial available at <http://www.zorrorpg.com/demo.html>, although I'm not sure how I would format it for my hypothetical niece.

Holistic Design

- *Fading Suns* -- <http://www.fadingsuns.com/FSIntro2.pdf> (This product also exists as a physical product, but I've only ever seen it with the *Noble Armada* miniature ship battle game for *Fading Suns*)

MicroTactix Games

They have a lot of fun things available at <http://www.microtactix.com/new/fun.shtml>. Of particular note are:

- *Vyllage-on-the-Cheep* sample sets #1 and #2 (<http://groups.yahoo.com/group/mtmailbox/files/vcfree.pdf> and <http://groups.yahoo.com/group/mtmailbox/files/vcfree2.pdf>),
- *Vulture Gulch Steamcoach Cannon* (<http://groups.yahoo.com/group/mtmailbox/files/steamtnk.pdf>), and
- *Starbase Omega 3 Sample Set* (<http://groups.yahoo.com/group/mtmailbox/files/sbo3free.pdf>).

Although they aren't games by themselves, they are an easy and interesting introduction into the world of miniatures.)

Pelgrane Press

- *Dying Earth* -- <http://www.pelgranepress.com/qstart.htm> (This page requires JavaScript.)

Steve Jackson Games

- *GURPS* -- <http://www.sjgames.com/gurps/lite/gurpslit.pdf>

West End Games

- *DC Universe Roleplaying Game* -- "Batman vs. Killer Croc" (<http://www.westendgames.com/dcu/bkgame.pdf>), "Superman vs. Doomsday" (<http://www.westendgames.com/dcu/sdgame.pdf>), and "Wonder Woman & Superman" (<http://www.westendgames.com/dcu/wsgame.pdf>)

White Wolf

- *Vampire: The Masquerade* -- <http://www.white-wolf.com/Images/CompleteBooks/VampireRevisedQuickstart.pdf> (This one also exists as a physical booklet published by White Wolf)

Wizards of the Coast

- *Dungeons & Dragons* -- "Caves of Shadow" (<http://www.wizards.com/dnd/files/CavesofShadow.pdf>)

Hopefully my theoretical nephew or niece would walk away with such a CD, chuckling softly.

"Heh, heh, heh . . . sucker."

Speaking of freebies, tucked in the same box I dug up this week's *Mini Car Wars* I found a pamphlet that was a free mailing from when NBC was updating *Knight Rider*, showing all the equipment modifications and new features for the 1983 season. I'm hoping I never tried to import K.I.T.T. into the *Car Wars*, but it's entirely possible I did, then blotted the horrible memory. May the heavens have mercy on my soul.

Last week's answer: Intruder, Task Force Game #6. (As an aside, I was *very* surprised at the number of folks who got this one . . . it's over 20 years old.)

(*One star*) "The most popular programs are comedies and action/adventure shows. Typical of TV fare is *McDade*, an action-trucker series, one of the top shows in North America."

Car Wars Card Game Preview

by Philip Reed

We thought you might appreciate a sneak peek at "before and after" shots for a few of the cards from the upcoming new edition of the *Car Wars Card Game*. The redone card graphics by Alex Fernandez are cleaner yet visually more stylized and exciting . . . just like the upcoming *Car Wars* game (hint, hint).

The Auto Bomb Anxiety

by Steven Marsh

"Some bastards stole my car!" your friend says, her panic coming through even over the speakerphone.

"Calm down," one of you says, putting on a jacket, ". . .please . . . How long ago? Have you alerted the police?"

"Of course I have!" she sputtered. "I noticed it was missing about half an hour ago. I don't know what I'm going to do! I have to get to work!"

"Don't worry; one of us can give you a ride. I'm sure the police are doing all they . . ."

"Didn't she drive a blue '98 Mercury Sable?" someone else asks, watching the news while eating cold leftover lo-mein.

"Yes, that's it," she says. "Why?"

He finished chewing before continuing. "Well, what do you think the odds are that another blue '98 would explode in a chop shop on the south side?"

"My car!"

"The Auto Bomb Anxiety" is a modern-day adventure suitable for any number of investigators. It is designed for almost any U.S. city of suitable size; many details are left generic so that GMs can easily adapt it to their campaigns. Likewise no specific RPG system is detailed; it should hopefully be trivial to adapt it to a wide variety of games.

The Back Story

Fourteen years ago, Stokely Romero was found guilty in the murder of Stephanie Belan -- a prominent local business owner and state senator who was found dead in her car -- and the subsequent bombing of her downtown offices.

Fourteen months ago, DNA analysis of the original evidence proved that Stokely Romero was, in fact, innocent. He was released from prison with a hundred dollars, a coat, a plan, and the burning rage of justice denied.

Today, Stokely Romero's plan for vengeance begins to be realized.

The Plan

Fourteen years behind bars can snap a man; such is the case for Stokely. He plans to take his revenge on those he feels are responsible for his situation: the jury that convicted him.

To this end, he has rigged each juror's car (or other vehicle) with an incendiary device; should a bomb go off, the damage to life, limb, and property will be remarkable. Stokely plans on killing the two alternates first, one hour apart; since they went unused, and were thus insignificant in the grand scheme of things, they don't deserve to be part of his grandiose vision. But they still deserve bombs.

Every hour thereafter a bomb will explode, with each juror being targeted in alphabetical order. His goal is not to kill each juror per se; rather, he wants to create the real chance that they *may* be killed by his hand. If they escape (or aren't near their cars), so mote it be. But if fate is as callous towards them as it was towards him, then they will die.

And that is only the beginning of his plot . . .

Running the Adventure

The key to this adventure is to keep it fast-paced; the heroes should have little time to sit around thinking. To that end, the GM will need to make sure the adventure doesn't unfold in "real time" . . . in other words, if the next bomb is scheduled to go off in an hour, the players shouldn't be allowed the luxury to sit around for an hour thinking of plans.

This adventure is different from many, since it places the heroes in a situation where there are many crises to deal at once. They will have an easier time if they realize the (alphabetical) pattern, but should still need to juggle many balls at once.

Finally, this adventure is presumed to be action-heroic, with an eye towards movies like *Die Hard* and *L.A. Confidential*. As such, the tenets of those type of movies should be followed:

The heroes are smarter -- and luckier -- than anyone else. If heroes investigate a scene, they will uncover more information faster than traditional forces. If they intervene in a problem, more lives will be saved than if they didn't. If they interfere, things will generally work out better than if they hadn't. This primarily keeps the PCs from sitting at home eating nachos, hoping it all works out.

Time is dramatic, but doesn't seek to rook the heroes. If the good guys are getting ahead of schedule, there will be complications (like flat tires and traffic jams) that bring them into a more exciting pace.

Fortune favors the bold; as such, the GM should probably reward heroes who do *anything* rather than those who wait. This can be a difficult adventure if the heroes don't figure out a few fundamental facts; in typical action movie tradition, the heroes should get some hints from fate if they're floundering. (Of course, those who have *good* ideas should be equally rewarded . . .)

Getting the Heroes Involved

The opening fiction provides an easy way for the heroes to get involved: one of the heroes' friends was on the jury fourteen years ago as an alternate, and is the first scheduled to die. Fortunately for her (or him), an unscrupulous gentleman stole that car . . . and met his untimely demise -- along with many of his underworld friends -- in a warehouse designed to dismantle and sell cars for parts.

The GM can either skip directly to the *Law & Order*-esque explosion (and its ramifications), or give the heroes the chance to find the car. They have, at most, approximately 50 minutes . . . and not much in the way of leads.

Clues

If the heroes go to the remains of the stolen vehicle in the chop shop on the south side (or, more correctly, the remains of the chop shop), they find it offers little in the way of clues . . . but what it *does* offer may be invaluable. They may also get some leads to other avenues of inquiry. In ascending order of difficulty, some clues that can be gleaned are:

- **Easy:**
 - The bomb went off exactly at 9:00 a.m.
 - Ground zero for the blast was the car.
- **Moderate:**
 - Judging by the pattern of the explosion, in all likelihood the bomb was on the underside of the chassis.

- The bomb was a simple mechanical one, with a timer mechanism. There were no complicated electronics (like a transmitter or computer).
- **Difficult:**
 - If the heroes are lucky, a fragment of the timer mechanism can be found; there will be a partial serial number visible on it. Tracing that information will take a significant amount of time (at least two to three hours); if they persist, they will be able to track it to Mad Mike's Electronics downtown, in a purchase made a month ago. Although Mad Mike's will not know who purchased it (he paid cash), he *will* know that the man bought fifteen of the timers, and they will have (grainy) footage of him from their security cameras. This may aid the investigators later.
 - If the players are clairvoyant, they may think to contact the Department of Transportation. If they are thorough, they will be able to find a mole: Phillip Dyer. Phillip was bribed by Stokely to retrieve the registration records of his fourteen victims. Phillip will not volunteer this information, but can be over-bought, threatened, or arrested. These avenues will take varying degrees of precious time, at the GM's whim.

If the heroes don't investigate the scene, the police will be able to discern the first two facts relatively quickly.

Unless the heroes are very clever, they probably won't have much luck discerning that there even *is* a pattern, let alone what it is. The heroes' friend would not have been directly informed of Stokely's release, but Stokely's incorrect incarceration *did* make local and national news fourteen months ago when it happened. Depending on the specific characteristics of the NPC (and what other NPCs s/he might have), s/he might possibly make the connection earlier.

But they won't have long to wait for another lead.

Interstate Mayhem

At 10 p.m. exactly, Professor Charles Densmoore's car will explode on the interstate seven miles north of town, heading north. Along with taking Densmoore's life, it will significantly destroy a portion of the interstate, severely affecting traffic for months to come. Seven other cars will pile up, with two people injured (non-fatally).

The information that can be determined from that car is roughly similar to that above, only now the heroes should have another victim. If the PCs' friend is prompted, she will remember Densmoore (then a grad student) as the second alternate from that fateful jury duty fourteen years ago. (She may well need a photo of Densmoore to jog her memory . . . the means of acquiring which will be left to the players' imaginations.)

Sorting Pieces, Courses of Action

The heroes should hopefully have a suspect (Stokely Romero) and a loose pattern (jurors) by now. If not, the killings will continue in order until they figure it out; the police will piece it together around 1 p.m., and attempt some of these ideas . . . the loss of life will be incredible.

Perhaps the biggest challenge the heroes face is determining the (alphabetical) pattern Stokely is using. Fortunately, if the investigators use some quick thinking and common sense, they should be able to save lives and make the link. Other aspects, like how the heroes get the jury list, is left to the creativity of the players. As a starting point, several were interviewed by name in the local paper when Stokely was released fourteen months ago. This will take a while, but is better than nothing. From there some of the jurors will remember others' names (enough to get leads), but it will take a while. Probably the best idea is to get the information out of the judicial system . . . here's where those bureaucratic, legal, and political influences and favors will come in *very* handy.

Once the heroes know who the other jurors are, where they go from here is up to them. Here are some possibilities:

Call (or otherwise contact) the remaining jurors, explaining the problem. This is probably the best idea, and is the presumed one. Once the heroes know who they are, seven of the jurors will be easily tracked down and contacted

(including the first one alphabetically); those will easily be taken out of danger, and the authorities can deal with their bombed cars as appropriate. The other five are more difficult -- or impossible -- to contact; those are labeled as (COMPLICATION) below.

Of course, the actions the heroes take here will significantly influence the remainder of the adventure. If they aren't careful, some of the jurors may contact the media; the resultant complications and insanity that might result should be obvious.

If the authorities can disarm several of the bombs, they will be able to determine when they were timed to go off; as such, the heroes should hopefully be able to figure out the pattern (if they hadn't realized it already), and prioritize accordingly.

Alert the Media. *"Attention, city: If you served on the Stokely Romero jury fourteen years ago, or live near someone who served on that jury, be aware that you are in mortal danger of being blown to bits. Unfortunately, the police really cannot do anything to save you. Stay inside. Duck and cover. Have a nice day."*

Unless the heroes are *very* clever, alerting the media could well cause more damage and panic than fourteen bombs. Saying that a city is under full-scale terrorist attack is not a good way to keep the populace calm. Perhaps the best use of the media is to locate the few remaining jurors that the heroes are unable to contact through other means.

Visit the Jurors Individually. Unless the heroes know the pattern, it may be very difficult to just go out and start contacting people. Even if they *do* know the pattern, they only have an hour between bombs to get there in time.

Alert the Police (or Other Authorities). If the heroes aren't working closely with the police by this point, they should start. The authorities are probably going to have the best means of dealing with fourteen car bombs. If the heroes haven't thought of it first, the police will start calling jurors to try to get them out of harm's way, as above. Of course, they don't have "PC" stamped on their forehead, so they won't be as effective.

Alert Anyone on the Federal Level. Unfortunately, the federal government (and its resources like the Army and National Guard) is nothing if not slow; they are more than able to help, but there may be definite timeliness repercussions as requests slog through the appropriate bureaucracy.

The Jurors

Vickie Annis (Juror Number 7)

11:00 a.m.

An algebra teacher at Delta Middle School, Vickie (Miss Annis to her students) is finishing up her pre-lunch class at 10:30 a.m. If sufficiently convinced of credentials, office aids are more than willing to interrupt her; she should be relatively easy to convince. Her car is parked in a faculty parking area near the front of the school. Its bomb is scheduled to go off during the school's lunch period; as such, all the students will be in the cafeteria, near the center of the school and away from the blast. Property damage will be limited primarily to teachers' cars (which will be significant), and superficial damage to that side of the school. One janitor -- Stan Hale -- will receive minor damage and hearing loss from the explosion.

Blake Cardis (Juror Number 12)

Noon

Blake, an architect, is at lunch from 10:30 a.m. through noon. His officemates, if convinced, will supply his cell phone number. Blake, and the Mexican restaurant he's eating at, will be very grateful.

Javier ("Jay") Esposito (Juror Number 8)

1:00 p.m.

COMPLICATION

Jay is a legal courier for the law firm of Hewitt, Davis, & Davis. He was a wild-eyed enthusiastic 18-year-old when he served on the jury; now, at 32, he's still something of a wild man. He is responsible for driving papers and files all over town, and tends to drive like a maniac in the course of his job.

Fortunately, he has a cell phone, which would make him easy to contact. Unfortunately, he has a habit of forgetting that phone at the office. That's exactly what happened this time. If the law firm is sufficiently questioned (no small feat . . . the best chance is to be nice to the secretaries and law clerks), they will be able to find out Jay's general schedule for the day. This basically involves visiting another law firm, the police station, city hall, lunch, the courtroom, the copy shop, and other places downtown. The heroes may attempt to get one of these locales to stop him, but Jay is ruthlessly efficient in his job, and tends to dart in and out of his destinations. It will probably be necessary for the heroes to track him in the open city near one of his destinations; they will either have a description and license of his car from the DMV, or they can get that information from the law office. This may well result in an exciting car chase downtown.

If not found or interrupted, Jay's car will explode at 1:00 p.m. outside city hall, resulting in considerable danger to life, limb, and property.

Cindy Gathers (Juror Number 2)

2:00 p.m.

Cindy was married seven years ago, and moved a couple of states away. She never took her husband's name. Her degree in journalism has since paid off, and she's a successful reporter in her new city. Contacting her will not be a problem, though if measures are not taken to ensure her cooperation, she may well use the crisis to jumpstart a career as a television news reporter.

At 2:00 p.m., Cindy's car is in her newspaper's parking garage.

Adam Matthews (Juror Number 3)

3:00 p.m.

Adam Matthews, a dentist, and his wife Caitlin moved to the opposite side of the state; fortunately, he will still be in the state's DMV records. Caitlin, a mother and homemaker, will be more than willing to help keep her husband safe; she can warn her husband, alert her local authorities, or take any other reasonable actions.

If not found, the bomb will explode at 3:00 p.m. at Dr. Matthews' office.

Lance Orbs (Juror Number 6; Foreman)

4:00 p.m.

COMPLICATION

Since the trial, Lance Orbs has become a successful investment banker, and a prominent and powerful member of the city's society for many years. His address and place of work is relatively easy to figure out; his wife Jamie is more than willing to help. As far as she knows, he is out of town on a conference. She can even supply the investigators with his cell phone number.

Unfortunately, Lance chose the wrong day to continue his affair with longtime fling Amanda Sloan. He has turned his cell phone off, lied to friends and associates about his whereabouts, and generally disappeared off the face of the earth for the day. He is, in fact, at the world-famous five-star Oak Hotel downtown, using an assumed name for himself and his relation; his rigged automobile is parked at the hotel's underground parking garage.

Unless the investigators have a better idea, the most promising avenue would be to question his secretary, Stacey McNair. She doesn't know where Lance is, but knows of Amanda and the affair; it will take a *lot* of convincing to make her reveal this. She also knows he has a taste for the finer things in life. Perhaps most promisingly, she knows the false name he tends to use: Reginald (Reggie) Finnigan. This should give the heroes enough to find him.

Unfortunately, Lance won't answer the hotel room's phone, or otherwise leave the hotel that day unprompted. The heroes will, in all likelihood, need to find him and his room in person and persuade him . . . quite possibly by booting down his door. (Dealing with the hotel and its personnel is left to the heroes.) Alternately, they can find his car without his knowledge and deal with the problem.

If not found, the bomb will go off at 4:00 p.m., causing phenomenal damage downtown and, in all likelihood, destroying a long-time cultural landmark of the city.

Tina Cooper (formerly Tina Pfeifer) (Juror Number 10)

**5:00 p.m.
COMPLICATION**

Since serving on the jury, Tina has fallen on serious misfortune. Shortly after the trial, she started seeing and then married Robert (Bob) Cooper, and took his name. It turns out Bob was not the most noble person in the world, to put it lightly. He verbally abused Tina even before the marriage; this abuse turned physical during the marriage. Bob now keeps Tina a virtual prisoner in her home. They don't have a phone (though Bob has a cell phone, so *he* can have contact with the outside world), and he doesn't allow her to have any of the more easily traceable aspects of modern life, like an Internet connection or bank account. (The driver's license information Stokely bought is over a decade old, but he was able to use it to track her down.)

The investigators will be able to find Tina by uncovering the public records of her marriage, then searching for Robert Cooper. Alternately, they should be able to find some family relations who know of her whereabouts; her brother Eric Pfeifer is still in the city, as is her mother Karen Pfeifer (a widower whose husband died four years ago).

Once her home is found, Tina will show the classic symptoms of Battered Wives' Syndrome; she will have a black eye ("I ran into a cabinet."), a nervous demeanor, and massive amounts of denial. It will be very difficult to persuade her that there is danger; after all, she doesn't even have a car anymore . . . Bob transports her wherever she needs to go. She knows he has a cell phone, but doesn't know the number. She does know the name of the company he works for, however, and the heroes should be able to track him through that.

The heroes should realize now (correctly) that Bob's car has been bombed. Bob is a construction worker, and is currently on-site at a new shopping center in the suburbs. At five o'clock, he will be getting in his car and heading home (having left work ten minutes early). The only casualty will be him, his car, and a lonely stretch of road back into town; this may well present a moral dilemma for morally gray heroes.

Alex Savory (Juror Number 1)

**6:00 p.m.
COMPLICATION**

Alex made his fortune as a dot-com millionaire. More importantly, he sold his investments before becoming a dot-com Ramen-eater, and has invested wisely. As such, he is *very* wealthy. Finding him will not be terribly difficult; he's on the golf course most of the day, but his people will be able to supply his cell phone number. After 4 p.m. he is at home.

Unfortunately, Alex has acquired a hobby since becoming a millionaire: Car collecting. He has forty-six different cars. Twelve are on display at an antique car show that is in town, another ten are being exhibited at another out-of-town show, three are on a semi-permanent loan to a local historic museum, two are on loan to friends, one is being driven by his wife Chelsea, one is with him when he goes driving (otherwise it's in his garage), and the other seventeen are

parked on his estates. Determining which one is rigged to explode will mostly be a matter of checking them all; which one is actually booby-trapped is left to the GM's whims.

If unfound, the bomb will explode at 6:00 p.m. Regardless of which car was chosen by Stokely, the loss of life will be minimal, but the property damage will be significant, expensive, and quite possibly irreplaceable.

Michael Smith (Juror Number 4)

7:00 p.m.

(MILD) COMPLICATION

The number of Michael Smiths in any standard phone book is bound to be oppressive. Worse, this Michael Smith in particular moved since he last renewed his license, and didn't update his information with the DMV.

The Michael Smith in question is the manager of an adult video store on the outskirts of town. He is at work from noon through 8:00 p.m. A couple of his neighbors know where he works, and he has some family in town that also would know of his whereabouts. Tracking him down will be the biggest problem; suitably persuasive people working together should be able to weed through all available Michael Smiths in an hour or two (as dramatically appropriate). Barring that, federal contacts like the IRS will know of his current address.

Donald Unger (Juror Number 5)

8:00 p.m.

Donald is at work from 8:00 a.m. through 5:00 p.m., and is at home in the suburbs after 6:00 p.m. His answering machine gives his work and cell phone numbers (he works as a CPA for a small firm). He is more than willing to believe his life is in danger, and will follow directions with utmost care. If the heroes cannot save his life, it is because fate just doesn't like Donald Unger.

Marla Washington (Juror Number 9)

9:00 p.m.

Marla Washington is a single mom who lives with her mother, Jemma. Jemma is a little hard of hearing, but is more than willing to help properly polite investigators. (Jemma can't leave the house because she's the child's primary babysitter during the day.) Marla works as a clerk at a grocery store from 8:00 a.m. until 6:00 p.m., and then drives straight home. The heroes should be able to intercept her at work or home without difficulty.

Huichun Yan (Juror Number 11)

10:00 p.m.

COMPLICATION

Yan is a Korean immigrant, and lives with his extended family. He speaks English, but the rest of his family does not (at least, not well enough). He currently works days as a computer programmer, and attends higher education classes at night at the local university. He is at work from 9:00 a.m. through 6:00 p.m., eats a quick meal from 6:30 p.m. through 7:00 p.m., and attends a class from 7:30 p.m. through 11:00 p.m. (with a fifteen minute break at 9:30 p.m.). How the heroes find him is left as an exercise for the players; the easiest means would be to get a Korean translator to speak with the family. Barring that, a search of the city's university records would be able to turn him up.

Romero Must Die

Depending on how well the investigators do, they may either have spare time to look for Stokely Romero, or they may be running around town putting out fires. Regardless, at 11:00 p.m. the fruition of Romero's plan will be realized.

In the past fourteen years, the offices where Stephanie Belan worked have since been rebuilt from the rubble left by her murderer (who was not, as it turns out, Stokely Romero). Those offices are now a thriving part of the revitalized downtown; Stokely Romero, as the capper to his mad vision, plans to destroy them . . . and himself, at the same time.

For the past two weeks, Stokely has worked as a maintenance man at those offices. In that time he has rigged the final part of his plan. Throughout this day of madness, he is either working at the three-story office building, or hiding there after it closes. If the heroes don't track him there by 11:00 p.m., Stokely will make an announcement from the roof with a bullhorn.

"Today the people of this city have been afraid to enter their cars. Afraid to walk the streets. Afraid to do the things they have always done. Good! Now you know how I feel. Now you know how I felt fourteen years ago, when I was wrongfully accused, and my life was destroyed.

"This is my final act of vengeance. You believed I killed people? You believe I destroyed this building? Fine . . . let it be true."

Stokely has carefully hidden bombs throughout most of the building. He is holding a dead man's trigger, which also connects to the C-4 vest he's wearing. If he dies, or otherwise lets go, he and the building will explode. Fortunately, downtown is fairly deserted around midnight; there is no real danger of innocent life lost (outside of the authorities, news crews, and heroes). But the damage to the city will be significant.

Stopping Stokely

It is probably up to the heroes to defeat Stokely. There are several possibilities.

Disarm the building. Provided they get him to talk, Stokely is more than willing to rant at length about injustices, lost years, bombs, and cars. Presuming they are sufficiently skilled, this should give the heroes more than enough time to sneak into the building and find the various bombs hidden throughout. There are, of course, fourteen bombs in the building (not counting those strapped to Stokely): five on the first and third floors, and four on the second. Unless the PCs are very clever, they will probably be unable to disarm Stokely. Fortunately, the damage will be significantly reduced with only one explosion to worry about.

Take him down. If he can be subdued while not allowing his hand to release the trigger, this might be possible . . . but it will probably be very difficult. Most likely the heroes will want to sneak into the building, as above. Although more dangerous than the first option, it's a little bit safer in some ways too, since it doesn't rely on an outside source keeping Stokely talking.

Talk him out of it. This will be very difficult, but it might be possible. Possibly the most promising avenue is pointing out that the person who originally committed the murder and bombing fourteen years ago is still free; Stokely may well have information that can put the real culprit behind bars. Pointing out that the real bomber has been living the life that Stokely should have had for the past fourteen years may well work. Other avenues might as well, but he mostly views his life as having been ruined, and wants to lash out.

Bluff him. Pointing out that no one will really care if he *does* blow up himself and this building may give him pause. "After all," the heroes might argue, "We didn't even know who you *were*! The bombing and your arrest were front page news fourteen years ago, but everyone's forgotten by now. In another fourteen years, no one will remember this." This probably won't be enough to stop him, but it might buy some time for other avenues to be pursued.

Resolution

Once Stokely is taken care of (one way or another), the heroes have essentially won. There are probably some loose ends to take care of, either in the form of subplots with the jurors (Tina Cooper, in particular), or finding who *really* committed the murder/bombing fourteen years ago.

Ideally the GM will be able to fade to black by pointing out that it's not even midnight yet . . . it's been a long day.

Adapting to Other Games

"The Auto Bomb Anxiety" should be suitable for a variety of genres and game systems. Here are some ideas:

- *In Nomine* Angels could be the heroes of the adventure; since Stokely is a mortal, detection of him through Symphony disturbances will be difficult. Demons may well try to intervene to allow Stokely's plan a maximum chance of success, or capitalize on the mayhem caused by his actions.
- Likewise the heroes could be low-to-mid-level Supers. In this case, unscrupulous super villains may try to throw the heroes off track by causing their own explosions or destruction.
- Finally, the adventure can be fairly easily adjusted forward or backward in time. Depending on the technology and the judicial system (the existence of cars and a jury are the most important elements for this story), it could easily fit into a near-future or cyberpunk game. Likewise it can fit anytime after cars become routinely available; it could be a good Pulp or *Atomic Horror* adventure, for example. Just change anachronistic references (like cell phones and DNA evidence) to something more appropriate.

Aristotle for the Medieval Magus

For *Ars Magica*

by Jeremiah Genest & Adam Bank

Aristotle, by Viatrix filia Boniface, Follower of Bonisagus

I never question the quaesitores. Nor should you, my pupil. Truly, Plato's writings show ingenuity, novelty of view, and a spirit of inquiry. But perfection in everything is perhaps a difficult thing, and more readily found in the blessed words of Aristotle.

Aristotle embodied the curious mind. He taught the world to cherish knowledge for its own sake. The practical application of "values" our Platonist brethren hold so dear is but one branch of human endeavor that Aristotle revealed to us. Through Aristotle, we can learn all the laws of nature and super nature; the components of the human mind and the body politic; the intricacies of poetics and rhetoric; and the very structure of logic and the universe.

Magi, monks, university magisters, and Popes alike look to Aristotle for all things, for centuries past and the years to come.

Logic

Logic, or "verbal reasoning," forms the basis of all understanding and inquiry, both mundane and magical. Verbal reasoning begins with "notions," or the words themselves. All individual notions belong to the following ten categories in order: substance, quantity, quality, relation, place, time, situation, condition, action, and passion.

Exempli grata: "A flower." First, inquire as to the notion's substance: "What is a flower?" Then, examine its quantity and quality: "How great is this flower?" Now relation: "What kind flower is this, how does it compare to others?" And so on.

Notions, when combined together, become propositions. Exempli grata -- a proposition that will become very important to you in time, I might add -- "This flower is vis." Propositions, not notions alone, express truth or falsehood. Let us hope, for the sake of the custo who plucked it for me, that our example proposition indeed possesses truth rather than falsity.

Now then, notions in combinations of propositions give rise to the syllogism, the basis of all rational speech and thought. To give the example my pater gave to me, and his mater gave to him, and back to our Order's own prime mover, Bonisagus himself: "All men are mortal; Socrates is a man; therefore, Socrates is mortal." This syllogism is true, because both propositions are true, and the conclusion derives logically from them.

"All men are mortal," alas. Perhaps, with our help, this proposition may some day become false instead of true.

Logic Against Plato

Religion and mysticism cannot satisfy the Aristotelian sense of wonder and curiosity. The first Greek sages, such as Anaximenes and Anaximander, philosophized on nature. The Pythagoreans reached beyond to mathematical and magical abstraction. Socrates and his progeny achieved a level of pure thought. For Aristotle, metaphysics concerns both the working of nature and the conditions of existence. Specifically, Aristotelian metaphysics deals with the fundamental state of existence.

Ask yourself, "what makes a thing exist? What things truly exist?" Plato answered: the Forms. The Forms exist as

universal elements of knowledge and existence. Other than the permanent Forms, only the constantly changing phenomena of perception exist.

Aristotle attacks Plato on three grounds.

First, the Theory of Forms cannot explain how matter changes. Matter moves, transforms, and eventually ceases to exist. The Forms, defined as permanent and unchangeable, therefore cannot be the source of change. Yet matter changes. Plato's Forms cannot be the foundation of existence, because they cannot carry out this fundamental function.

Second, the Theory of Forms cannot explain how we gain knowledge of a particular thing, like the color of this flower. To know something, one must possess knowledge of its substance. The Theory of Forms, however, places knowledge outside particular things. Knowledge would forever be "one step" away. "Emanations" may aid the mystic on the endless quest of enlightenment, but true philosophers reach answers to questions, the ends of investigations, and the knowledge of particulars. "This flower is red." Simple for Aristotle, impossible to Plato.

Third, the Theory of Forms cannot explain why particular objects exist at all. The Forms do not exist within particular objects, but particular objects somehow "partake" in their Forms. How can this flower's substance be separate from the flower itself? Plato answers with metaphors of "participation," but never adequately describes the relationship between the Form and the object. Once again, the permanent Form always lies "one step" away from the changing object. This so-called participation can never take place as Plato describes it.

Aristotle's Metaphysics

Existence is the passage from potentiality to actuality. Potential things become actual things through the process of cause and effect. Every actual object results from four causes: the material cause (the element out of which the object is created); the efficient cause (the means by which the object is created); the formal cause (the expression of the object); and the final cause (the end for which the object exists).

Exempli grata: this bronze statue, a gift from a friend of House Verditius. First, we begin with the obvious material cause, the raw material of the bronze, and the efficient cause, the sculptor himself. The formal cause is the idea of the completed statue, and the final cause is the idea of the completed statue as it urges the sculptor to sculpt. Although the final cause sublimates the formal cause, never confuse the two. The crucial final cause brings the bronze statue into objective existence. The final cause lies not in the mind of the sculptor, but in the statue itself. All of creation exists for a rational purpose. In a very true sense, everything in the universe has but one efficient cause. I refer of course to God, He of everlasting life and perfect blessedness, engaged in a never-ending contemplation of the universe He created. Despite our disdain for mystical nonsense, and our embrace of the study of the natural world, we Bonisagus are not so godless after all.

Natural Philosophy

There are two extreme states of existence: form without matter, and matter without form. Every object in universe lays somewhere in between, always moving toward one extreme or the other. Unlike the Platonists, I speak of actual movement, of the physics of motion.

Faerie communion? Embracing the Enigma? Awakening the heart-beast? These are distractions. Magic is movement. Movement is physics. Physics is Aristotle.

Movement makes time. Time is simply the observation of the motion of an object. If nothing ever moved, time would not exist. If no one ever watched something move, time would not exist. Time belongs to the Hermetic Art of Imáginem, in the form of the Eyes of the Past and variant spells. Time regards the perception of the eye, not the physics of the world. You cannot manipulate time. You can only make matter move.

Platonists and the Pythagoreans believe that all matter consists of jumbles of four geometrical atoms: tetrahedrons of Fire, cubes of Earth, octahedrons of Air, and icosahedrons of Water. Such a theory requires the existence of vacuum --

do you see why? But void, actual empty space, is impossible. "Just as every body is in place," wrote Aristotle, "every place has a body in it." Space is not a thing; it is the boundary between things. Space possesses neither matter nor form, and therefore cannot move. Thus, space lies beyond the purview of magic, making the study of regiones both fascinating and futile.

Now, then, combining all that we have so far discussed: causation, matter, form, and motion give rise to the universe, and logic permits the curious mind to examine it. Upon examination, the universe and all things in it present themselves in hierarchy. God crowns all hierarchies and provides the ultimate measure of all things, allowing the curious mind to construct the scale of being.

At the bottom of this scale lies inorganic matter, unorganized and soulless. Organization comes from life. To be "organized" means to possess internal organs. To be organized also means to possess a soul. Even the human soul equates to the organization of the human body.

Platonists divorce the soul from the body, as if you could examine a river without considering its riverbed or the lake that feeds it. Just as the rushing waters of a river give purpose to a riverbed, the soul gives purpose and meaning to the physical body. The soul presents the perfect expression of the body that contains it.

Ethics

All human activities and pursuits are means to particular ends. Like causes and effects, and all other things in the universe, human means and ends exist on a hierarchical scale. Just as God is the ultimate cause, all human endeavors culminate in an ultimate end, the final and best object of the pursuits of all mankind. This end, in a word, is happiness. The road to happiness, and the avoidance of unhappiness, embodies the entire study of ethics.

But what is happiness? Beginning with first principles: human happiness must comport with human nature. To appeal to our human nature, happiness must come from human experience. To originate in human experience, happiness must arise from activities that only humans, and no other species of life, engage in. Our final proposition: the one faculty unique to humanity is reason. Therefore, true happiness comes from living in accordance with the rigors of reason.

The faculty of appetite gives us our emotions and desires. The faculty of reason gives us the power to regulate our appetites. The proper, rational control of appetite forms the basis of moral virtue; improper control, either too much or too little, leads to vice. Just as either the excess or deficiency of gymnastic exercise is fatal to health, so to is excessive austerity and impulsive indulgence fatal to happiness.

There are many specific moral virtues, all carefully balanced between deficiency and excessive vices. Exempla grata: the virtue of modesty. Lack modesty, and one falls into the vice of shamelessness, but excessive modesty results in the vice of bashfulness. The crowning moral virtue, high-mindedness, an ideal self-respect, comes from the balance of all others, and enforces them once established. "Straight and narrow," indeed.

Aristotelian Moral Virtues as Personality Traits

Aristotle's theories of ethics provided the essential background for medieval notions of personality and behavior. The moral virtues can be used as character Personality Traits.

Vice of Deficiency	Virtuous Mean	Vice of Excess
Cowardice	Courage	Rashness
Insensibility	Temperance	Intemperance
Illiberality	Liberality	Prodigality
Pettiness	Munificence	Vulgarity

Humility	High-Mindedness	Vainglory
Apathy	Ambition	Hubris
Enervation	Good Temper	Irascibility
Ironical Depreciation	Sincerity	Boastfulness
Boorishness	Wittiness	Buffoonery
Shamelessness	Modesty	Bashfulness
Callousness	Just Resentment	Spitefulness

Commentary: Aristotle's Magic

In the mid-12th century, John of Toledo translated from Arabic the *Secretum Secretorum*, the "Secret of Secrets." The text contained letters allegedly written by Aristotle to Alexander the Great while the young emperor fought his Persian campaign. These letters contained Aristotle's esoteric secret teachings, given only to his intimate disciples.

The letters explained how to put philosophical understanding to practical use. One who understood the secrets of nature hidden therein could accomplish wonders. Couched in elusive, enigmatic terminology, this text captured the fancy and imagination of scholars throughout Europe.

The revealed knowledge of the *Secretum Secretorum* helped establish natural magic, an academic tradition of hedge magic whose practitioners hail from the universities and even the monasteries of the West (*Hedge Magic*, page 41).

Aristotle in the 13th Century

By 1278, most of Aristotle's entire corpus circulated throughout Western Europe, thanks to reconnection with the East and the diligent work of translators over a period of approximately 150 years. To the medieval scholar, for whom communication between centers of learning was rare and the modern notion of academic standards non-existent, the translator of a text became as important as the original author himself. While most Latin translations came from Greek texts, others came from Arabic, and even simple disagreements between translations of the same language led to widely different interpretations of the original works.

Before 1115, only the short *Categories* and *On Interpretations* were available in Latin translation by Boethius. Around 1150, James of Venice, while studying in Constantinople, translated Aristotle's *Posterior Analytics*, *Physics*, *On the Soul*, *Metaphysics*, and several minor texts. By 1200, others had translated works on ethics, natural philosophy, and logic. Around 1240, Robert Grosseteste translated the *Nicomachean Ethics* and *On the Heavens*. The Flemish translator William of Moerbeke rounded out the rest of the corpus between 1255 and 1278.

Eastern Learning in the Order

Soon after its founding, the Order of Hermes spread across Europe, giving magi the opportunity to access many Greek and Arabic texts lost to the Latin world. Covenants of the Iberian Tribunal, the Roman Tribunal and points further East obtain and translate many texts for their own study and for trade to the magi of the West. Beyond Plato and Aristotle, the commentaries and original work of Arabic philosophers interest many magi as new views on the cosmos and the fundamentals of magic.

Controversy

The rediscovery of Aristotle lead to an intellectual and religious crisis in the 13th century West, as university-taught Masters of Arts clashed with Church-taught theologians for the first time. In 1210, for example, theologians of Paris

campaigns against Aristotle's works on the nature of God, man, mortality, and the creation of the world. The provincial synod of Sens, led by archbishop Peter of Corbeil (once a university Master, now an official of the Church) banned the teaching of Aristotle on these subjects.

Concerns of forgery also plague this Aristotelian renaissance. Both the Order and the universities dispute the authenticity of many of the new books. Some regard the *Liber de Causis* of Proclus as a work of Aristotle, even though authorities such as Alain of Lille and William Moerbeke state otherwise. *De Mineralibus* and *De Sex Orincipiis* are two other examples of works that some attribute erroneously to Aristotle. The discovery of so many new sources meets with as much debate and uncertainty as enthusiasm.

The Aristotelian

Aristotelians are worldly, curious, questing students. To them, logic, mathematics, and magic are the means -- not the goal -- of understanding. Theory must be applied through experimentation and observation of the natural world and the stars above. Wisdom comes from close examination of the world around you and understanding how the principles of philosophy and magic apply to nature, the human mind, the human body, spirits, and angels.

Suggested Abilities: Artes Liberales, Disputatio, Folk Ken, Philosophiae, Medicine, Scribe Arabic, Scribe Greek, Theology

Suggested Arts: Aristotelians are often generalists.

Bjornaer: The tradition of our house gives us unique abilities to explore the natural world. What better avenue to study and classify of all the species of nature than to live among them?

Bonisagus: The Founder of our house used Aristotle's methods to achieve breakthroughs rivaling the feats of the ancient wizards. If we challenge the world with our curiosity and questioning, Bonisagus' legacy will continue.

Criamon: The Enigma hides in the essential nature of all things. Study the world and its workings, and the Enigma will surely reveal itself to you.

Ex Miscellenea: The first of our lineages were simple scholars. The magic, resources, and collected knowledge of the Order give us opportunities of learning they could only dream of.

Flambeau: The light of wisdom is the greatest advantage we can have over an opponent. The curious mind reveals the weaknesses of others.

Guernicus: Logical, ethical laws are obeyed, while unjust, unreasoned laws are ignored-or worse-reviled and deliberately defied. With careful study, we can learn the best balance of virtues that leads to a harmonious Order.

Jerbiton: Society and governments succeed or fail according to the principles first expressed by Aristotle's *Politica*. With our subtle, invisible hand, we can guide the kingdoms of Europe along the path of virtue.

Mercere: Our house wanders through town, path, and wilderness. The information we collect on the road can prove

invaluable in the laboratory.

Merinita: Arcadia shines like a mirror of our world. By studying the faerie, we can learn great secrets regarding the essential nature of the cosmos.

Tremere: Aristotle tells us that all things belong in a hierarchy. Our Founder structured our house on that principle, and one day the entire Order will appreciate his wisdom.

Tytalus: The entire universe, from the heavenly spheres to the humblest insect, consists of a single game, built by God and operating according to rational rules. We can become great gamblers by learning from the Master.

Verditius: Unlike spontaneous magic and the wild spells of the faeries, the crafting of enchantments follows rigid and regular rules. Aristotle has taught us many of these rules; let us strive to discover more.

Secret of Secrets

Aristotelians possess incredible powers of deduction and observation. They know the Secret of Secrets: how to learn new Magical Affinities.

First, you must pick what Affinity you wish to learn. You must possess a Knowledge that deals with the Affinity's subject. An Affinity with Ghosts, for example, would require Occult Lore. Next, you must spend a season researching the subject. During your research, you must spend a number of pawns of vis equal to the Virtue cost of the Affinity x 5. The vis must be of a Form or Technique that relates to the subject. Studying an Affinity with Ghosts requires 5 pawns of Mentem vis, for example.

At the end of the season, roll as stress die + Int + appropriate Knowledge + aura. Divide the total by the Virtue cost of the Affinity and add that many experience points to your score in the Affinity. If this is your first season studying the Affinity, your score in the Affinity before the roll is effectively 0. You can study a single Affinity a number of times equal to your score in the appropriate Knowledge.

Your Affinities allow you to work magic. You can purchase hedge magic Virtues, modified and discounted, explained below. You cannot work any magic, however, unless you first possess the appropriate Affinity at a positive score. Add your Affinity scores to any appropriate magic total.

Aristotelian Magic Virtues

You may purchase any of these Virtues during character creation. If your Saga contains Mystic Companions from *Hedge Magic*, you may take up to +8 Virtue points worth of Aristotelian Magic Virtues at no cost with the approval of the troupe and storyguide. Troupes and storyguides may also decide that that Charioteers can initiate these Virtues as well.

Affinities (varies): Same as Hermetic Magical Affinities, *ArM4* page 34. You cannot work magic without purchasing

an Affinity during character creation or learning one in play.

Vulgar Transformations (+1): You can perform transformations as the natural magicians do (***Hedge Magic***, page 41), as long as you have an Affinity related to the substance to transform.

Philosophic Transformations (+2): As per Philosophic Alchemy (The Mysteries). You must have an Affinity related to the substance transformed. You can also create longevity potions if you learn an Affinity in Longevity (+1).

Natural Enchantments (+2): You can create enchantments as natural magicians do (***Hedge Magic***, page 43) as long as you have an Affinity related to the effect instilled.

Astral Charms and Banes (+3): You must first learn an Affinity with Astrology (+1) before acquiring this Virtue. You can craft charms and banes as cunning folk do (***Hedge Magic***, page 37), with the following differences: because your charms and banes are based on astrology, your formula to craft a charm or bane is stress die + Int + Affinity with Astrology + Artes Liberales + aura. If you learn an Affinity with Curses (+2) you may add your Affinity score when crafting banes. If you learn an Affinity with Blessings (+2), you may add your Affinity score when crafting charms. Finally, you must use raw vis instead of wild vis when creating greater charms and banes.

Natural Spellcrafting (+3): You can create spell assemblages just as the natural magicians do (***Hedge Magic***, page 42) as long as you have an Affinity with the spell effect created. You cannot use a number of pawns of vis greater than your Affinity score when creating an assemblage.

Pre-Industrial Measurements in Gaming

by Brian Rogers

"Turning the corner, the passageway opens up before you. Your torches dance madly in the fetid breeze, and only Drunar's lantern gives steady illumination. As his beam plays back and forth you hear the skittering sounds of dozens of roaches fleeing the unexpected light, taking cover in the cracks of the distant fungus covered walls."

"Cool! How big is the room?"

"25 feet by 40 feet, with a 10 foot by 10 foot alcove 15 feet along the north wall."

Well that blew the imagery all to heck. It's a never-ending problem when mapping -- the game runs faster if the GM is clear on the dimensions, but too much precision drags players into meta-game discussions of length and width. One solution is using uncommon terms of measurement. We didn't standardize measurement until technology required it, and in doing so we eliminated or marginalized several day-to-day units of measure. Most fantasy worlds haven't reached those tech levels, so such measurements would still be commonplace, giving the GM a way to be specific without breaking the fourth wall.

The Body as a Ruler

Everyone knows that the foot originated in the measurement of, well, the human foot. Most of our other English measurements also originate in the human body; after all, it was the one thing people could depend on having with. The ones still in common use are the foot and the yard (the distance of a man's sternum to the tip of his fingers), but people developed many similar measurements for conversion to a fantasy setting.

First, lets tackle the ones in limited use today: the hand and the fathom. The hand is the distance from a man's thumb to his pinkie across his palm, measuring about 4 inches. It survives today only among horse lovers, and that's where it would be most in a fantasy game -- horses run from 14.2 to 20 hands at the withers (from hoof to shoulder), with ponies traditionally being anything smaller and draft horses being anything larger. With that as a scale, you can impress players with 19-hand-high Orkish war horses or dainty 12-hand-high Elvish mounts. The fathom, still in use a nautical depth, originally meant the distance between fingertips with arms outstretched (the word comes from Anglo-Saxon for embrace). Logically, this makes a fathom equal to two yards, or six feet.

Two more are the digit and the span. A digit's width is the base of a man's pointer finger, and a span is the distance between thumb and fingertip with the fingers outstretched. While they might not seem useful they fill some gaps, specifically in replacing the inch. The inch is not a bodily measurement -- the word 'inch' is Latin for 'a twelfth,' developed as a convenient division of the foot -- and we may discard it to stick with strict body measurement. In that case, the digit replaces the inch, as the two are close in length (actually, the digit is three quarters of an inch).

Finally, there's the pace and the mile (yes, the mile is a bodily measurement -- bear with me). The pace is the distance of two steps, which works out to being slightly over 5 feet. The word 'mile' comes, again, from Latin: Romans measured distance based on the paces of their marching legions, and a thousand paces was a milia passuum. This was shorted to milia, which became the English mile. So why isn't our mile 5000 feet? Well, "slightly over" adds up when multiplied by a thousand, which is why our mile is 5,280 feet.

Non-bodily Distances

While the body works for many measurements, there are some things it can't do. For adventurers, this means using two new measurements: the reach and the pole. Both of these require agreed upon standards, but both are handy concepts

for the average dungeon delver.

A reach is traditionally the distance between a man's upstretched hand and his feet, standardized at 8 feet. Conveniently, that's the length of weapons like the halberd & long spear ("reach" weapons in *D&D*), so many adventurers have a reach comparison on hand. A pole is a standardized at 10 feet. Most likely a carpenter's tool, it is easily available for heroes seeking long sticks to poke ahead for traps.

(It should be noted that these did not exist in our world. While there is an uncommon measure called a "pole," it is synonymous with a rod, measuring 5.5 yards and used when calculating acreage. Given the gaming histories of "rods" and "10-foot poles," it felt comfortable redefining the pole and ignoring the rod entirely.)

Weighty Matters

While the body isn't useful as a measurement of mass, there are plenty of uncommon terms out there. In fact, there are several standards for mass, making the issue of how much something weighs a confusing process. Without the body as a baseline, Europe developed a variety of measurement systems, two of which took hold in England -- the Troy system (for precious metals and medicines) and the Avoirdupois system (used for large goods, such as wagons of grain). The latter is the basis for the current English system, but the Troy scale was acknowledged as being more accurate, especially for small weights; this article borrows from the Avoirdupois system for larger weights and the Troy system for smaller ones.

(Again, a small note: while these systems both use pound and ounce as measures, they ascribe different masses to them. An Avoirdupois ounce is 10% smaller than the Troy ounce, but has 16 ounces in a pound rather than 12 -- making the Avoirdupois pound 20% larger. In addition, apothecaries modified the Troy weights, producing yet more measurements. For simplicity's sake we're not paying much attention to the actual weights, instead going for the medieval feel for the terms.)

When dealing with things heavier than a pound, you can use the English system's stone and quarter. Without the body as a baseline people used commonplace objects for comparisons: the stone is based on the weight of a large stone, standardized at 14 pounds. A quarter is equal to two stones, or one fourth of a hundredweight. (Contrary to logic, a hundredweight is 112 pounds. The American system ignores stone and quarter, setting the hundredweight at 100 pounds -- it's therefore less useful for our purposes.) These terms can be casually applied to any large weight, such as people or piles of treasure.

When dealing with smaller masses, we have a variety of terms measured against common objects. The smallest is the grain, equal to one grain of wheat or barley. Twelve of those made up a carat, which was the weight of a small bean. Two carats was a pennyweight, or the weight of a common coin. There were 20 pennyweights in an ounce.

Another unit of mass was the mark, set at 12 pennyweights, or 24 carats. If you're curious, the mark was a standard gold coin. Since gold was mixed with other metals to make it hard enough to use as currency, the purity of the coin was measured in how many carats out of the 24 were actually gold -- a coin that was 3/4 gold was identified as 18 carats. If the GM wants to deal with differing masses for coins, having a large gold piece weigh twelve times as much as a small copper penny is a good place to start.

Apothecaries added two more useful terms: the scruple and the dram. The scruple was set at 20 grains, and the dram at 3 scruples. Scruple is a Latin word for "small stone," while dram is most likely based on the Greek coin drachma, giving the GM a third coin-based measurement.

Measurements in Game

All of this may be interesting, but what practical value does it have for gaming? Non-standard measurements emphasize primitive tech levels, as the characters are limited by what they can touch, reach, walk or compare against when making judgements.

Bodily measurements are very easy for people to eyeball or determine by taking a few steps or laying their hand on something. The digit, hand and span give everyday terms for 1, 4, and 8 inches, likely divisions for merchants. The pace, slightly more than 5 feet, can represent a *D&D* grid square, a *Fantasy HERO* hex or two *GURPS* hexes, letting the GM give distances in game without multiples of feet (or worse, hexes or squares). At two yards, the *Fantasy HERO* hex is more accurately a fathom, but people may balk at using a measurement for depth when describing distance. The pole and reach are based on things adventurers have on hand, making them almost as useful as the body in the adventuring environment.

Systems of mass have a direct impact on commerce, and therefore on travel. Communities become trading centers only when they have reliable and rigorously enforced measurements. Guilds push for such rigorous standard, while individual guild members skirt the system for their own benefit. The term "baker's dozen" for 13 stems from bakers ensuring their they met the strict weight quotas -- the penalty for missing quotas being far worse than the loss of profit in giving extra goods to customers. If the rules were that stringent for bakers, they're likely worse for things adventurers deal in, such as precious metals or spell components. As Matt Riggsby pointed out in his article on food "[Guess Who's Coming To Dinner?: Food in Roleplaying Games](#)" (*Pyramid* 2/23/01), there were no cookbooks before standardized measurement. If cooking was difficult, imagine the trouble in preparing potions! Then make that an order of magnitude worse if wizards are possessive of their secrets.

Cities without enforced standards are places where merchants prey on the unwary, and can be good places to separate the PCs from extra cash. This might give them a new group of enemies to revenge themselves upon, provide a reason for moving on, or both. Of course, such cities will have poor reputations among travelling merchants, giving connected heroes some forewarning.

Measuring Adventure Hooks

- **Does the Polymorph potion need Viennese or Parisian drams?:** The PCs recover an alchemical text, then have to steal a rival college's measurement standards to make use of it. Using the book without the proper measurements can create any number of adventure-generating mishaps as magic goes awry.
- **The Long Yard of the Law:** The characters are hired to enforce standards against the wishes of the local merchants. In addition to exposing the cons and protecting the unwary buyers, the PC's will have to deal with the guild's legbreakers or bribes while pursuing their task. The guild might have legitimate complaints -- the Lord making the pound heavier but keeping prices constant -- which makes separating desperate merchants from the truly guilty much harder.
- **Confiscated for not meeting standards!?:** The PCs bring the haul from the ancient tomb into town and are promptly arrested for using gold that doesn't meet new purity standards. It doesn't matter that the coins were minted there a century ago, a magistrate has his eyes on the gold and is using the standards as a means to take it. The PCs have to get out of town to avoid a jail sentence or whipping, then contrive how to get their money back.

Slaves Only to Death

A 19th Century Deadworld for the *All Flesh Must Be Eaten*

by Dylan Craig

It started with slave ships. Of course, they'd been illegal for years. Britain had outlawed the Atlantic slave trade in the thirties; but, enterprise will out, and the ships just grew leaner, faster, and better at dumping their cargoes at the first sight of a British man-of-war. I understand it was a lucrative trade, back then; plenty of respectable patricians had a 'blackbird' or two hidden deep in their account ledgers, providing a little side income for a rainy day.

*My friends in the clergy say that it all came down to sin; that the desperate pleading of thousands of oppressed souls and the inhuman cruelty of the men who transported them, moved almighty God himself to reach out His vengeful hand. Myself? Well, **semper novus ex Africa**, as they say. I don't know whether it was heathen witchcraft or some undiscovered tropical disease that started the whole affair. Whatever the case, it was a freighter named the **Charon** that brought it to our shores.*

*The **Charon** ran aground in Cuba. Apparently, she'd been adrift for days, her crew wiped out to a man -- but details are, of course, fairly sketchy given what followed. We used to keep a keen eye on Cuba, even then, and on a clear day in Miami, they say you could see Havana burning. Our navy was loading up to sail over there and investigate, but the whole thing was pretty delicate with the Spanish refusing to allow any foreign warship within visual range of the Cuban coast. Folks were predicting that it would end up with us at war with the Spanish -- and about time too -- when Miami started to burn, too. Whatever Cuba had "caught," it seemed we had it too. Well, Miami's not as isolated as Havana, and the news of what exactly had happened spread pretty quickly. The walking dead were loose, and wiping out every living human they could find.*

*Well, as it turned out, not **every** human. Blacks were pretty safe, so long as they didn't make any sudden moves or raise a weapon against the undead. But Indians, whites, Chinese, mulattos -- well, they were fair game, and though it was a hard fight, we lost Miami pretty quickly. The army was being mobilized, and was setting up to retake Florida, when the Zombies attacked to the north and west, and another of those damn slaveships sailed into Boston harbor, casual as you please, with a living crew and an undead cargo. We almost lost Boston; as it was, a lot of people died before the last Zombie was laid low.*

What can I say? We weren't ready for war against the living dead. We were just getting the upper hand in our land squabble with Mexico, so we had plenty of soldiers and materials, but the experienced troopers were down in Texas, and the green recruits we had on the East coast were more likely to curl into a ball and start crying when they saw a Zombie than to give fire like they'd been taught. We lost city after city; Atlanta burned for days while we tried to break through the encircling hordes and free the civilians trapped inside. In the end, all we found were more Zombies. We held the line at Washington, and the Texans did their bit to hold the Zombies a hundred or so miles from Austin; in the interior, the Apaches and Sioux did some of our work for us, dropping rockfalls on the Zombie columns and putting bullets into the big Zombies they call Spitters, like our sharpshooters have learned to do now. But by and large, we lost the South. Britain, France, and Germany were falling over themselves to help us -- in exchange for land grants or money, of course -- but pretty soon they were

finding slaveships trying to get to their own coastlines too. Those Brits know how to run a navy, and they sent dozens of those hulks to the bottom of the Atlantic, but one or two must have gotten through because pretty soon, the Zombies were turning up on their side of the table as well.

Has it been two years? It's hard to believe. Some people say the tide is turning; the British military government under Wellington is boasting that Edinburgh will be liberated by Christmas. Their Boer mercenary allies in South Africa took Cape Town last month; with the port back in operation, the plan is to ship Sikh reinforcements by the thousand to the European theater, and that ought to change things around a bit. As for us; well, we're holding steady. Had to move the seat of government up to Philadelphia, of course, but it doesn't seem to have slowed things down much. President Finchley's reelection motto was 'Take it Back!', and you see those words everywhere these days; on buttons, stitched into flags, and on posters.

Take it back? Sounds good to me. But I wonder if it will be that simple. You see, some of the slaves that made it out of the South -- and there aren't many, let me tell you; they run a tight ship down there -- have terrifying stories to tell. The Zombies didn't do any liberating when they took over; the slaves have to work twice as hard now, and if they drop dead in the fields, well, they'll be back on their feet in a few hours. The cotton and produce all goes to New Orleans, where ships with living crews -- the same degenerate pirates and corsairs who crewed the Boston ship -- take the cargo on board, for sale on the black market. Prices for commodities like that are high these days, the world situation being what it is. Now, those ships shouldn't be getting past our naval blockade, but they do; perhaps the number of ships who've been overrun by Zombies swimming alongside and climbing up onto the decks has given our Navy captains a strong taste for discretion.

The slaves also say every third person in New Orleans is alive, and they aren't just talking about other slaves. Who are these folks? Why are they in league with the Zombies? Who is at the top, calling the shots? And where -- tell me, where -- is all the money going?

Yes, it started with slave ships. But what scares me is where it will end.

Zombie Notes

- In the case of the *Eyes* vulnerability, attacks aimed specifically at the eye region are at between -6 and -8 to hit. However, any attack hitting the head region has a 1 in 4 chance of hitting the eyes.
- The *Guts* vulnerability requires an Attack roll at -2 to exploit.
- *Flammable Blood* is treated exactly like *Acid Blood*. The blood bursts into flame when exposed to substances other than the zombie's own tissues.

Zombie Creation

The cadavers of persons who died in bondage always rise to as *the Vengeful*, irrespective of cause of death. All others rise as the kind of Zombie that had the most active hand in slaying them.

Story Ideas

- **The Underground Railroad:** The characters are slaves on a Southern plantation, who cannot bear the cruel rulership of the Zombies and their human associates any longer. There are a few brave souls whose specialty is ferrying escaped slaves North, but the price will be high, and fearsome obstacles stand between the characters and their freedom. With slave-catchers close on their heels, and slaving undead to all sides, the characters have only one option; go forward or die.
- **Quarantine:** Australia, India, and Her Majesty's other Eastern possessions are among the few lands on earth which have been spared exposure to the Zombie attacks. Now, a slave-ship packed with the groaning dead has been seen rounding Cape Horn en route to the island chains of the Eastern Pacific. Should these areas become infected, all of Asia could follow. Several US Navy ships have set sail from San Francisco to meet and sink the

slaver, but with thousands of miles of ocean to be covered, and countless islands offering shelter to the quarry, it is indeed a daunting task.

- **Mardi Dead:** The strange goings-on in New Orleans can be ignored no longer. Disguised as smugglers, the characters must enter the City of the Dead to investigate (and, if possible, eliminate) the cabal of pirates who are colluding with the Zombie hordes. In the course of this investigation, the characters encounter the Zombie Queen herself, a powerful necromancer from a secret African kingdom. Deathless and quite insane, she will not rest until every drop of slave blood has been washed away by a hundred drops from the veins of the oppressors. The Queen has something special planned for Mardi Gras; will the characters choose to return to safety, their mission fulfilled, or will they stay on to try and foil her schemes?

Rappan Athuk, The Dungeon of Graves: The Upper Levels (for d20)

Written by Bill Webb and Clark Peterson

Published by [Necromancer Games](#)

40 pg; \$9.99

The *d20* system added numerous elements to the *Dungeons & Dragons* game that promote roleplaying over roll-playing, such as a wider range of non-combative skills, the addition of feats, and the ability to customize characters with non-class skills. Now *D&D* gamers can play a paladin with a roguish past (and accompanying skills) or a wizard who is an expert with a sword. Paradoxically, the same rules revision has brought about a return to the unapologetic "dungeon crawl," that most sacred of Munchkin adventures. The editors at Wizards said that "one of the goals of 3rd Edition is to take the D&D game 'back to the dungeon' (*Dungeon* #83, p. 168)." *The Sunless Citadel* and *The Forge of Fury*, the first two official *Dungeons & Dragons* adventures from Wizards of the Coast, certainly bear that philosophy out. But not until *Rappan Athuk: The Dungeon of Graves* has the 3rd Edition dungeon crawl been embraced with such glee.

*"Why is the dungeon there? No one knows. Why do the monsters usually fight rather than talk? We aren't really sure. Why are there 16 trolls in a cave with a **jug of alchemy**? No one cares. What do all of the monsters eat? We don't know that either (although adventurer probably tops the menu). And we don't have to know these things. This isn't an ecology experiment; it's a dungeon—the quintessential setting for pure sword-and-sorcery adventuring!"*
--from the Introduction

Rappan Athuk is, not surprisingly, a dungeon crawl in its purest (or basest) form. There is little logic, rhyme or reason to it, although there is a fair amount of cunning. Just as the Introduction promises, it's a dungeon and the authors make no apologies for this fact.

"THIRD EDITION RULES, FIRST EDITION FEEL." So reads the slogan of Necromancer Games. In most ways they live up to this claim, but in some minor ways they fall sadly short. The most obvious structural similarity is the way they use a combination letter-numeral designation for the series (in the case of *The Upper Levels* this is R1) in the upper left corner of the cover. This is a nice throw-back to the first edition modules and will prove useful as an easy way to keep numerous adventure products organized, once Necromancer has produced enough modules for this to matter. Wizards of the Coast could take a hint from this. WotC's core *D&D* adventures would be more easily identifiable as such if they still used the series designations.

Unfortunately, Necromancer has not adopted the First Edition tradition of printing maps on the inside cover of the module. Instead they put them in the center of the book, which isn't a terrible place for them, but it isn't exactly convenient either. A shrink-wrapped module with a detached cover would have been a nice touch of nostalgia as well, although opinions may vary widely as to whether these were ever a good idea or not. The artwork is considerably better than in the modules ancestors but the maps are actually worse. They are poorly drawn, too small and they don't include a grid . . . a strange oversight for a system that stresses maps and figures as much as *d20* does.

(SPOILER ALERT!)

The adventure is actually organized less like a First Edition module and more like the original *Diablo* computer game . . . but with a lot more traps. There is a vertical descent of rooms and corridors beneath an old mausoleum, with each

lower level generally tougher than the last. Much like *Diablo*, experienced adventurers can take a passage from the Ground Level to Level 3 or another from Level 1 straight to Level 9 (do not pass Go, do not collect 200 gold pieces). This will be useful for high level adventurers who want to start *Rappan Athuk* at a more challenging level, once all three products in the series are available. Until then, be wary of players who try to force their ways into the Middle and Lower levels. A vicious DM might slip in a few extra death traps at those points of egress; however, the players won't necessarily notice a difference.

Survival in *Rappan Athuk* is not a sure thing by any stretch of the imagination. Before even entering the dungeon the players will encounter an Instant Death Trap that would make Grimtooth proud. Furthermore, Level 1 centers around an utterly disgusting original creature, "The Dung Monster," which is not only exactly what it sounds like but is also quite deadly and effectively indestructible . . . on Level 1!

If the pun can be excused, it is downhill for the adventurers from there. The subsequent levels sporadically increase in complexity and lethality; the module unfortunately suffers from an a case of schizophrenia in its encounter ratings. Level 2 is made up of mostly CR6 encounters with several lower than that and one — the boss -- much higher (CR11). Level 3, which is called "Beware of Purple Worms" (this is really not much of a spoiler; the entrance to the level features a carving that says, "beware of purple worms"), contains encounters that range from CR1 to CR12. Similarly, Level 3A bottoms out at CR1/2 and peaks at CR13, while Level 4 is mostly CR5-6 with a couple of CR7s and one CR9. This disparity can either cause powerful groups to lose their minds to ennui fighting dire rats or weaker groups to become food for worms very quickly.

For the most part, Rappan Athuk lives up to Necromancer's unapologetic claims of pure Crawl. However, a few clever background stories and the occasional insidious plot do worm their ways into the mix. The purple worm level even includes elements of "an ecology experiment" in the form of rules for how killing too many of one type of monster will affect the level's food chain. While the authors should be suitably flogged for allowing such fluff into their Crawl, these pesky plot elements do little to derail the adventure.

(END SPOILER ALERT)

Online support for *Rappan Athuk* is excellent, if a bit quirky. For instance, the title page of the module promises a bonus download for "veterans" (read: old school *AD&D* players) who can identify the "main male monster associated with the phrase: 'Encounter R2-47.'" Without spoiling the answer (Necromancer Games does this itself on their website, for the sake of younger players and those without eidetic memories), the source is a very old but infamous 1st Edition *AD&D* module. Odds are that only gamers who DMed the module in question, or who re-read old modules for the sake of nostalgia, will have a chance of answering the question (note that the password is case sensitive). Still, it is a clever and somewhat refreshing approach and since Necromancer has provided the answer, no one is left out.

Both the secret and the standard downloads are high quality Adobe files that definitely add to the game. With a total of 25 pages combined, these downloads significantly increase the value of this product, which, at \$9.99 for 48 pages, is a bargain already. The standard download includes a map and a series of wilderness encounters, in case the DM wants to make her players work at finding the Dungeon of Graves, rather than just transport them there. The bonus download is a fairly straightforward combat encounter with some excellent flavor text and background information consistent with the original encounter that inspired its password.

On the whole, *Rappan Athuk* is an entertaining adventure supplement that munchkins and dungeon-crawlers will enjoy time and again (as most of the encounters re-spawn, return visits can continue indefinitely). Game Masters who like to work modules into the storylines of existing campaigns will be hard-pressed to do so with this adventure; it is far more suited to one-shots and nights of gratuitous violence than extended stories and roleplaying.

In terms of bang-for-the-buck, *Rappan Athuk* is a worthy buy. Realizing its true potential, however, may require some patience. It is clear that the Necromancer's R-Series isn't as suited for *Dungeons & Dragons* as it is for Kenzer & Company's upcoming *Hackmaster, 4th Edition*. With what will likely prove to be some very simple conversions, the Hack-factor for *Rappan Athuk* in Hackmaster should be through the roof. Hoody-frickin'-hoo!

Return to the Temple of Elemental Evil (for Dungeons & Dragons)

Published by [Wizards of the Coast](#)

Written by Monte Cook

Illustrated by Brom & David Roach

192 b&w pages, 16 page color map insert; \$29.95

As part of their twenty-fifth anniversary, TSR revisited some of its first edition *AD&D* and *Basic D&D* adventures with the silver-covered *Return to . . .* modules, notably *Return to White Plume Mountain* and *Return to The Keep on the Borderlands*. Each of these revised, expanded, and explained the originals, even adding depth, enabling those who had played them the first time around to enjoy them once again. Of course, these were for second edition *AD&D*, so DMs wanting to run them using the Third Edition will have a certain amount of work to adapt them across. Now WotC have got in on the concept and released a complete Third Edition campaign with *Return to the Temple of Elemental Evil*.

Written by Monte Cook, *Return to the Temple of Elemental Evil* is based upon *The Temple of Elemental Evil* campaign book by Gary Gygax and Frank Mentzer, itself an oddity among TSR's 1st Edition campaign books. Almost all of these compilations were collections of classic module series. Thus the A series was compiled as A1-4, *Aerie of the Slave Lords*, and the G, D and Q series was rereleased as GDQ1-7, *Queen of the Spiders*. Gygax's Dungeon Module T1, *The Village of Hommlet* first appeared in 1979. An introductory scenario designed as the first of two modules, its sequel, T2, *The Temple of Elemental Evil* never appeared; instead in 1985, T1 was expanded into *T1-4 The Temple of Elemental Evil*, a campaign adventure intended to take characters from first to eighth level.

Return to the Temple of Elemental Evil (RttToEE), designed to take characters from fourth through to fourteenth level, is a 192-page book well laid out in black and white. The Brom cover is decent and gives nothing away about the contents. David Roach solely illustrates the interior, giving it a uniform look reminiscent of many First Edition books, although his smaller pieces are better than those used to illustrate full pages. Like T1-4, the maps have been put together in an insert at the back of the book. Here though they are not in black and white, but rendered in gorgeous color and detail by Todd Gamble. Throughout, boxed sidebars provide supplementary information and suggest ways in which that particular section of the campaign can be enhanced or expanded upon. Usefully, each of the sidebars is included in the book's table of contents.

The setting for *RttToEE* is the World of Greyhawk, between Veluna and the Duchy of Ulek, and centred upon the village of Hommlet. Twenty-five years ago a great darkness arose to threaten the area, operating from the Temple of Elemental Evil and very near the village. The forces of good banded together to defeat their evil opponents at the Battle of Emridy Meadows and were thought vanquished. Some nine years later, attempts were made to restore the broken Temple, but through the efforts of small bands of adventurers these were thwarted and the evil finally put a stop to. It is these later events that were chronicled through playing T1 and T1-4. Now fifteen years later, the peaceful village of Hommlet has grown in prosperity and worked hard to put the village's dark history behind it. Yet just as it did before, the evils behind the Temple is stirring and working to reclaim what is theirs.

The first major aspect that *RttToEE* expands is the background, explaining the force behind the Temple and the extent of its influence. This is the dark god Tharizdun, a deity so destructive that all of the other gods banded together to

imprison him away from the Prime Material Plane. Excised from history, Tharizdun has been working for aeons to free himself and has acquired a small cult dedicated to his aims. For centuries members of this secret cult have been hiding behind a religion known as Elemental Evil, which has worked its way into other dark faiths, notably those of the demon-spider queen Lolth, the demon, Zuggtmoy and even the old one, Iuz. In this way *Return to the Temple of Elemental Evil* is connected to the events of other classic Greyhawk adventures - GDQ1-7, *Queen of the Spiders* and WG4, *The Forgotten Temple of Tharizdun*.

The whole of the campaign is made up of eight chapters divided into three parts. The first part describes Hommllet and the surrounding area in three chapters. These revisit the village, its evil counterpart of Nulb, and the Temple's outpost of the Moathouse, as well as the ruined Temple of Elemental Evil. All of this is a revised update of the locations in T1 and T1-4, although the extensive dungeons below the Temple are all destroyed bar a few levels that are only being made accessible through the restorative efforts of the Elemental Evil's faithful.

In retracing the steps of the original adventurers, the party discovers clues to another temple to the southwest in the Lortmil Mountains. Described over the next three chapters, this is the Temple of All-Consumption: a large complex within the water filled crater of an extinct volcano. Running completely through the crater ridge are the Crater Ridge Mines, which contain four smaller temples, each devoted to one of the elements: air, earth, fire, and water. At the center of the crater are the Outer Fane and the Inner Fane, the very home to the leaders of the cult worshipping Tharizdun. The final two chapters leads the characters back to the Temple of Elemental Evil and the recently opened dungeons below it. Here with any luck, they can put an end to the cult's plans to unleash the elemental evil forces that would weaken the prison walls holding Tharizdun.

RttToEE is rounded out with four appendices. The first details the campaign's new magical items, artefacts and monsters, including four new swords each keyed to a particular element and a new creature in the form of the Half-Elemental. This comes about as the result of a union between a mortal creature and an elemental, or from the direct infusion of elemental power into a mortal at their birth. The second appendix explains the worship of Tharizdun and introduces the new domains of Force and Madness, as well as the prestige class for the deity's most elite worshippers, the Doomdreamer. All of the stats of the campaign's NPCs and major monsters are given in the third appendix, although minor creatures encountered have just their hit points given in the location description, with further reference to the *Monster Manual* a necessity. The final appendix gives a short explanation of the two handouts provided with the campaign.

Where there may be a problem with *RttToEE* is in getting the party to the starting point of Hommllet to begin the campaign. Several suggestions are given, but they are not particularly strong ones and the DM should instead devise one of their own, especially if they want to weave *RttToEE* into their own campaign. Of course, with a big campaign like this a fair amount of effort is required to run it successfully, but this should not put off the DM as it is far from excessive and the course of the campaign is quite linear.

What you have in *Return to the Temple of Elemental Evil* is a large and detailed dungeon bash, which is no surprise given its heritage. Indeed for a dungeon bash, this is very much an improvement upon the original T1 and T1-4. Yet in its construction it does resemble the onionskin model exemplified by many of Chaosium's *Call of Cthulhu* campaign packs. That is no bad thing for what is a well-written and solid adventure that will offer months of heroic gaming against a dark and evil foe to any group of players. For the DM it offers all that, and greater value for money than many of Wizard of the Coast's most recent releases.

The Great Rail Wars Miniatures Battle Game

Published by [Pinnacle Entertainment Group](#)

Written by **Shane Hensley**

144 pages; \$25.00

The Great Rail Wars Miniature Battles Game, written by Pinnacle Entertainment Group's Shane Hensley, is the second edition rules for the popular miniatures branch of the *Deadlands* line. Players deploy enforcers from the Bayou Vermillion, Black River, Dixie Rails, Iron Dragon, Union Blue, and Wasatch Railroads or the forthcoming Army of Lost Angels, the Mexican Army, and Indian forces, and fight over treasure and territory in the Weird West. The miniatures for these forces are available in both boxed sets and as individual units, although the latter will only be available at a future date via the Pinnacle web site. The rules are easily understood and play well. While proofreading errors will make some of the more advanced material, especially the spell lists, difficult to navigate, these rules are sound and enjoyable.

The Great Rail Wars allows you to command both posses of troops (five figures each) or single figures in battles set in Pinnacle's *Weird West* setting. Those unfamiliar with this setting will find a brief but solid introduction in the first portion of the rulebook with more than enough information to play the game. In brief, the technology level is a blending of the Civil War and World War One through the use of steampunk technology. In addition, magic has returned to the world, and the creatures of nightmare with it. The individual armies vary in their use of technology and magic, allowing each army to maintain its own unique flavor. Wasatch, for example, depends heavily upon mad science while Union Blue and Dixie Rails use line units from the Federal and Confederate armies. Black River and Bayou Vermillion are heavily magical while Iron Dragon fields martial artists from the Far East.

The mechanics of the game are simple without being simplistic. For any given task, the player attempts to roll a 4 or an 8, depending on whether or not the range is short or long or the task is easy or difficult. These tasks and ranges are modified by such variables as cover, terrain, the weather, and the condition of the individual unit. In this way, players can use the battlefield strategically without getting bogged down in needlessly complicated tables. Indeed, the rules shy away from micromanaging the players, depending on them to fairly arbitrate among themselves and disclose when a unit is somehow different from the miniature representing it (for example, the miniature is holding a shotgun while the unit is armed with rifles). For those who find that they need assistance or further direction, a list of Accumulated Rulings is being assembled on the *Great Rail Wars* e-mail list and the list members have proven themselves willing to help and give advice.

The major weakness of the book comes in its proofreading. Several errors have slipped into the final product. Most of these are found in the spell lists, where the symbol for a particular class of spellcaster is missing. These minor errors, however, can be figured out with some diligent work on the part of a gamer. Less easy to work out is the mislabeling of the Nosferatu posse as a single figure, the absence of Bounty Point costs for fielding mounted units (10 or 5 for a single figure) and which groups may be mounted, the absence of rules for the hindrance Yeller ("The troop subtracts -2 from its Guts checks"), and a handful of others. Again, these are being compiled online and Pinnacle has a good record of posting errata promptly on their website. That being said, there are a surprising number of these lapses in the book.

The miniatures are good quality and come with little or occasional flashing (extra metal from the casting process) and are easy to paint. Experienced painters will also find much to interest them. The figures are roughly 30mm, making them similar in size to the Games Workshop and Wizards of the Coast lines, and stand roughly a head taller than the

Wargames Foundry line of Old West figures. Pictures of most of the miniatures are available both at the Pinnacle Web Site and at this reviewer's own site (<http://home.att.net/~mmdeforrest/deadlands/main.htm>). In addition to these figures, Pinnacle is introducing a line of vehicles from the game to accompany their vehicles supplement, *Derailed!* Players of games in similar genres (*GURPS Steampunk* and *Castle Falkenstein*, for example) may find some miniatures that they can use in these settings.

All in all, the *Great Rail Wars Miniatures Battle Game* is an enjoyable game and one I would highly recommend. The errors and absences in the text itself are disappointing but, if you are reading this, you should be able to access the errata online. Those uninterested in miniatures will not find much of interest in the rules but may find miniatures to their liking among the figures being produced to support the game.

Fiddly Bits: The Next Generation

Yes, it's the ratings bomb that is the Misc Fiddly Bits Column! Get your 2s ready, and enjoy! My only hope is Elizabeth McCoy, who promised me a 5 if I ran my "Generic *d20* Review" . . . I'm clearly a ratings slave.

* * *

It's been a busy two weeks around here, with happenings both good and bad. For those of you expecting some sort of comment last week, I apologize. We'd been planning a car-themed issue for a while, and it happened to fall on the same week as Big News around here.

Anyway, SJ Games restructured recently, as I'm sure many of you know. (I'd never *seen* so many people in the chat rooms as that Friday night . . .) And, in an ironic nutshell, the Bad News represented, in one fell swoop, everything I love and respect about SJ Games.

Bad Things happen to companies all the time. It is much less common for the president of the company to make the news available immediately, straight from his mouth. Even less common is it for a president to make himself available for two hours that evening, chatting with concerned friends, customers, and well-wishers. But this is a similar level of communication and honesty I respected ten years ago, when similar Bad Things happened, and the Secret Service showed a level of professionalism and intelligence normally reserved for people with names like Shemp.

I asked Steve one time if we were a big company with a small number of employees, or a small company with a lot of employees. He said the latter, and I tend to agree. And it's the family we all form -- employees, retailers, customers, and fans -- that I love. I'm deeply saddened that some good, hard-working people needed to leave the fold, but hopefully it will enable us to continue serving you all some of the best games in the biz.

And, more importantly, it'll enable us to stick around for another 10 years, when a giant government-controlled cybernetic tank is currently scheduled to plow through SJ Games' headquarters.

* * *

Pyramid's still here, and we're fine. We're breaking in a new webmaster on the mag (hi, Sage!), so things might be a bit different during the transition period. But we're not expecting any real changes.

However, for the next month or two I'm going to be busier than a bee. For longtime RTT readers (both of you), you'll remember that this time last year I was on my way to the [World Yo-Yo Contest](#) as part of my Day Job. Well, same story, different year. I'll be the scorer and general impartial lackey to those proceedings; on the off-hand chance you're a gamer and a yo-yo player in Orlando, you may want to stop by and say "Hi."

After that, two of the employees (including my boss) at the Day Job are going on two-week vacations. This wouldn't be problematic if we had more than three employees. We don't. As a result I'll be chained to a desk for those weeks, with a jar of Tang, a crate of Cocoa Puffs, and Freecell to keep me sane. Shortly after that, I'll be going to [Dragon*Con](#). (Again, if you're going to be there, keep an eye out for me!)

As a result, I'd please ask patience for those of you needing email correspondence, questions answered, and the like. If you need immediate feedback on anything, I should still be hanging out in the *Pyramid* [chat rooms](#), but it may not be until later in the evening (like. after 7 p.m. EST) for a month or two.

* * *

On the same evening as the Bad News two weeks ago, we received the bittersweet Good News . . . namely that *Pyramid* had won the [Origins Award](#) for Best Professional Magazine for 2000.

At the moment I read that, a steroid-laced peacock kicked down my door, plucked a piece of plumage, and literally knocked me over with selfsame feather. Clearly working for the Illuminati has some advantages.

I've said it before. There are more excellent products out there now in the gaming world than any time previously. And the diversity in those products is incredible.

In the Professional Magazine category this year we had two great comics, with [Dork Tower](#) and [Knights of the Dinner Table](#). *KotDT* won last year, and **everybody** loves *Dork Tower* (as witnessed by that comic's own well-deserved Best Gaming-Related Short Work for "Matt and Gilly's Big Date"). So losing to either Jolly Blackburn's or John Kovalic's wit and grace would not have been shocking or disappointing.

Then we have [Dragon Magazine](#), which is the oldest and still one of the best paper mags. Since *3rd Edition D&D* they've had (in my opinion) a renaissance, delivering great material every month. And the fact they supply another outlet for Ken Hite's and John Kovalic's geniuses is another plus. So if I were a betting man with an extra fifty to risk, Dave Gross' excellent magazine would have been my personal wager.

And then there's the dark horse (and, really, everyone loves a dark horse) of [Games Unplugged](#). Although the new kid on the block, they're still the only independent paper magazine I've seen at my local game shops for a *loooong* time, and for that I respect them and their crew.

And that's not even counting the folks who *weren't* nominated! *Dungeon Magazine*, in particular, has been (in my mind) brilliant of late . . . I subscribed for three years based on the strength of one issue! And the rules allowed other online publications to compete, too; [RPG.net](#) and [Gaming Outpost](#) both had excellent years in 2000.

So, in my opinion, it would've been really tough to have a *wrong* decision for this year . . . unless they did something silly like declare no one the winner or give the award to *Titanic* or something. But *Pyramid* won, and a peacock kicked my butt. And for that (*Pyramid* winning, not the peacock thing), I'm very grateful to all our fans that voted for us. As I've said before, we can't exist without you all.

I'm also thankful to everyone who works so dang hard making *Pyramid* as good as it is. There are the web programmers, like forerunners Jackie Hamilton and Keith Johnson, and current magi Mark Cogan and Sage Weber, that make sure we look great. Clearly any of these folks could have both made jillions of dollars working for MegaGloboInfoTeque, but instead they put their blood, sweat, and tears into the SJ Games' website in general and *Pyramid* specifically.

Then we have our regular contributors, Ken Hite and John Kovalic. As I said to them in a recent email, " My gratitude cannot be expressed in ASCII." Although these giants can (and do) make lots more money in other places, they stay with us . . . partly because we're all a family here, but mostly because I've offered to wash their cars if and when we meet. I currently owe each 16,917 car washes. Thank you.

We also have the contributors, both our other columnists we featured in 2000, and our irregular group of writers. The excellence of some of the material I get to cull from astounds me at times; it's always a delight to read through each batch of submissions . . . and a pain to choose the best ones.

Finally, we have the crew who've made *Pyramid* what it is up to this point. Scott Haring, in particular, launched the web version of this magazine, and helped define what our spirit would be; no one had done a weekly on-line subscription gaming magazine before, and the challenges (and opportunities) were considerable.

To paraphrase, if we appear great it's because we stand on the shoulders of giants. To those who've gone before us, thank you.

Oh, and I've thanked you all, the readers, right? (*rereads*) Yep. Thanks again. (And if I've forgotten anyone, it's because I'm still giggly as a schoolgirl . . . thank you, too.)

And keep that peacock away from me!

* * *

Finally, for those of you who don't hang around the chat rooms, here's something that happens when I eat too much Ben & Jerry's "From Russia With Buzz" coffee ice cream.

Pyramid Review

Generic d20 Adventure

Published by Generic Company

Written by Some Guy

32 pages; \$8.95

Generic Adventure is the latest offering from Generic Company. It is designed for characters levels 1 through 20, and requires the *Player's Handbook* to play. It features a dungeon crawl, and several new monsters. It has a couple of interesting twists, but is otherwise not dissimilar to other dungeon crawls. The art has nothing to speak for or against it, and the text is relatively well-written, with some mistakes. A full page is taken up by the OGL. The cover is moderately attractive, but doesn't have much to do with the inside contents. The price is a bit high, and the margins are a bit big, but online support from Generic Company makes it a good deal. If further offerings from this company are of the same quality, I will have a similar urge to buy it as I did this one.

Clearly I need help. (As an aside, if you're writing *d20* reviews, please try to keep them from sounding like this. It makes me cry. Focus on what sets the adventure apart from others. If the answer to that question is "nothing," maybe you should wait and review a couple adventures from the company at the same time . . .)

* * *

As an aside, Ken Hite and John Kovalic are still knee-deep in Con season, and are thus taking the week off. And with GenCon around the corner, they may well take some additional time off over the next month or so, too. And that's one to grow on.

Last week's answer: GURPS Autoduel, 2nd Edition, p. 14. (It probably also appears in other editions or elsewhere, but that's where I found it.)

(Two stars) "SA: A to give one of your Lion Clan Disks +3A until the end of turn."

Designer's Notes: GURPS Spirits

by Stephen Kenson

GURPS Spirits started off on a pretty solid foundation. There was no need to create rules for spirits or spirit-based magic, they already existed in *GURPS Voodoo*, with the spirit rules expanded slightly in *GURPS Undead*. The trick was to take that foundation and build upon it, taking the systems originally designed for ghosts and Voodoo loa and applying them to spirits of all kinds throughout human myth and legend.

Right from the start, the book had something of a split personality. On the one hand, it was about spirits: how to model them using the *GURPS* rules, and how to use them as both player characters and NPCs. On the other hand, it was about how mortal player characters interacted with spirits, particularly having spirit servants and calling upon spiritual power, as defined by the ritual magic rules. It quickly became obvious that if *Spirits* was going to fulfill both these goals, some limits had to be imposed to keep the book from expanding far beyond its projected size.

One of those limits was dropping sample spirits from the spirit template chapter. With so many templates (a lucky 13, each with many variations), there wasn't room to provide a fully developed example of each type of spirit. *GURPS Cabal* helps address this, offering a number of different spirits created using the *Spirits* guidelines. Here are several other examples, based on the templates in *Spirits*.

Sample Angel: Aluriel (610 points)

Ageless. When materialized: 6', 160 lbs., a beautiful feminine figure with flowing golden hair and white feathered wings, dressed in a shimmering white robe.

ST: 14 [0] **IQ:** 15 [10] **Fatigue:** 24
DX: 15 [10] **HT:** 14 [0] **Senses:** 16
Speed: 7.25 **Move:** 7 **Will:** 17 **Dodge:** 7

Advantages: Angel [551]; Extra Fatigue +10 [30]

Disadvantages: Fanaticism [-15]; Intolerance (of Evil in all its forms) [-5]; Truthfulness [-5]; Unnatural Feature (glowing halo and wings) [-5].

Quirks: Considers herself "a healer, not a fighter", but fights better than most mortals; Understands that suffering is a part of God's plan; Attributes her healing to a higher power ("it is not done by me, but through me"); Is always amazed by humanity's capacity for both goodness and evil; Innocent and unconcerned about worldly matters.

Skills: Bard-14 [1]; Brawling-16 [2]; Broadsword-15 [2]; Exorcism-15 [4]; Flight-15 [2]; Intimidation-15 [2]; Occultism-14 [1]; Theology-17 [2]*.

*Includes racial bonus.

Languages: Latin (native)-15 [0]; English-15 [2] (or other standard campaign language).

Spells (1 point each, except where noted. Includes +3 for Power Investiture): Awaken-15; Beast Soother-15; Cook-15; Counterspell-15; Create Fire-15; Create Food-15; Cure Disease-15; Dispel Magic-15; Flaming Weapon-15; Heat-15; Ignite Fire-15; Lend Health-15; Lend Strength-15; Major Healing-15; Minor Healing-15; Regeneration-14; Restoration-14; Seek Food-15; Sense Emotion-15; Sense Foes-15; Shape Fire-15; Sense Life-15; Sterilize-15; Test Food-15; Truthsayer-15, Ward-15.

Equipment: holy broadsword (cut 2d+3, imp 1d+4)

Description: Aluriel is an angel in service to Raphael, the archangel of healing. Her duties are generally those of an angel of mercy: sent to aid the injured and the sick, and also to shepherd the dying to their rightful place in Heaven. But there are times when her duties require her to protect the innocent and the pious from the forces of Hell, which is when she calls upon her holy sword and her power to shroud it in purifying flame. Aluriel feels deeply for the plight of mortals, although she doesn't quite understand their capacity for cruelty and evil. She exists to ease suffering and offer succor, but she acknowledges that suffering is sometimes part of God's plan. Her desire to heal and end suffering does not extend to the forces of Hell, and Aluriel fiercely protects her charges against them when necessary. She hates and pities the undead and considers ending their unnatural existence a mercy.

Aluriel is suitable as a patron or an occasional ally in a *GURPS Fantasy* campaign where angels intervene to aid the pious. She can be used as a player character in a campaign involving powerful spirits like angels and demons; with a few adjustments she can be a player character in a *GURPS In Nomine* campaign.

Sample Animal Spirit: Old-Tooth (575 points)

Ageless. In material form: 20 feet long and 2,000 lbs, a large bull crocodile.

ST: 28 [165] **IQ:** 10 [0] **Fatigue:** 28

DX: 12 [0] **HT:** 14/22 [45] **Senses:** 16 (hearing 18, taste and smell 19)

Speed: 6.5 **Move:** 4 (land)/7 (water) **Will:** 14 **Dodge:** 6

Advantages: Acute Hearing +2 [4]; Acute Taste and Smell +3 [6]; Alertness +6 [30]; Amphibious [10]; Damage Resistance 2 [6]; Damage Resistance +2 (Limitation: except on stomach -15%) [5]; Enhanced Move (Swimming, Move 7) +20% [2]; Extra Fatigue +14 [42]; Extra Hit Points +8 [40]; Four Legs [5]; Nictating Membrane x 1 [10]; Night Vision [10]; Passive Defense 2 [50]; Passive Defense +1 (Limitation: except on stomach -15%) [22]; Peripheral Vision [15]; Sharp Teeth [5]; Spirit Form [100]; Striker (Reach 1) [10]; Strong Will +4 [12]; Subsonic Speech [20].

Disadvantages: Attentive [-1]; Cold-Blooded [-5]; Color Blindness [-10]; Gluttony [-5]; Hidebound [-5]; Hideous [-20]; Horizontal [-10]; Inconvenient Size [-10]; Innumerate [-5]; No Fine Manipulators [-30]; Obdurate [-10]; Poverty (Dead Broke) [-25]; Reduced Move (Land; Move 4) -2 [-10]; Short Arms [-10]; Sleepy (50%) [-10].

Quirks: Likes to be told he's handsome, angered when people say he's ugly; Dislikes being awakened without a *very* good reason; Picky eater, likes eating chicken and duck best of all; Insists on knowing a person's name and where they're from before eating them; Proud [-5].

Skills: Animal Handling (Crocodiles)- 11/16 [6]; Area Knowledge (the Swamp)-14 [8]; Brawling-15 [8]; Naturalist-11 [6]; Stealth-13 [4]; Survival (Swamp)-13 [8].

Description: Old-Tooth is a crocodile spirit that lives in an expansive swamp he calls home. He spends most of his time in the spirit world, sleeping, occasionally rousing himself to wander around looking for something to eat. He usually eats only spirit prey but he's been known to materialize to devour a particularly succulent water fowl he comes across, or an intruder in his domain. He always appears and talks with intruders first before eating them, since he likes to know where his meal is coming from. He's intelligent, but not overly interested in anything other than food and a long nap.

Old-Tooth receives worship and sacrifices from a local tribe, but he's otherwise relatively indifferent to them. Their shaman has to promise him a great feast to get the old spirit to do much of anything, but he can be persuaded through sacrifices and flattery to use his powers on others' behalf. The regular attention also helps sustain Old-Tooth so he has no worries about fading away, unless something happens to his tribe.

Old-Tooth is suitable for use in any fantasy campaign with a suitable environment. He could also easily show up in a *GURPS Egypt* setting as a Nile crocodile spirit (perhaps cared for by priests) or in a modern-day *GURPS Voodoo* campaign as an alligator spirit living in a Louisiana swamp with a Cajun community as his "tribe".

Sample Ascended Spirit: Sir Tam Ekul (337 points)

Apparent age 58. 5'9", apparent weight 150 lbs. A distinguished older man with salt-and-pepper hair and a neatly trimmed beard, wearing a military-style uniform with a cloak and a serene expression on his face.

ST: 11 [10] **IQ:** 14 [45] **Fatigue:** 20
DX: 14 [45] **HT:** 12 [20] **Senses:** 14
Speed: 6.5 **Move:** 6 **Will:** 16 **Dodge:** 6

Advantages: Ascended Spirit [115]; Charisma +1 [5]; Extra Fatigue +8 [24]; Reputation +2 (among Star-Knights) [5]; Strong Will +2 [8]; Trained by a Master [40].

Disadvantages: Code of Honor (Imperial: attack only in self defense; never use your powers to cause harm; uphold the law; protect the weak) [-15]; Enemy (the Dark Knights; 6 or less) [-20]; Sense of Duty (to the Knights of the Empire) [0, included in Ascended Spirit template].

Quirks: Talks in riddles to get pupils to think; Appears at inopportune times and places; Wistful about his time as a physical being; Insists that "some things never change" [-4].

Skills: Acrobatics-14 [4]; Armory (Force Sword)-14 [2]; Blind Fighting 14 [8]; Fast-Draw (Force Sword)-16 [4]; Jumping-14 [1]; Katana (Force Sword)-18 [24]; Meditation-14 [8]; Teaching-15 [4]; Theology (Star-Knight)-14 [4].

Description: Tam Ekul was an honored member of the Star-Knights, the mystical champions of peace and justice throughout the Galactic Empire. He was known as one of the Knights' great masters. When he was struck down through treachery by one of his own students, Sir Ekul's enlightenment was great enough for him to transcend the material plane altogether, becoming a being of pure spirit. He has taken his place among the ascended masters of the Knights, and continues his role of teaching new generations of apprentices the psychic arts they will need to overcome the forces of evil in the galaxy.

Tam Ekul is designed as a mentor for a character (or group of characters) in a cinematic *GURPS Space* campaign featuring psionic powers and martial arts. With a little adjustment (mostly involving his choice of weapon skills) he'd make a suitable spirit mentor for warrior or martial artist characters from nearly any campaign setting.

Sample Demon: Sinthia (566 points)

Ageless. 5'8" 120 lbs, a beautiful woman with long, dark hair and tiny horns on her forehead, dressed provocatively.

ST: 12 [0] **IQ:** 13 [30] **Fatigue:** 12
DX: 13 [20] **HT:** 13 [0] **Senses:** 13
Speed: 6.5 **Move:** 6 **Will:** 14 **Dodge:** 6

Advantages: Succubus [516]; Strong Will +1 [4]

Disadvantages: Dread (religious symbols) [-10]; Sadism [-15]

Quirks: Likes her lovers strong and forceful, at first; Likes corrupting religious people most of all; Lets people buy her drinks, then nurses them; Drinks often but never eats [-4].

Skills: Acting-13 [2]; Brawling-13 [1]; Carousing-13 [2]; Courtesan-14 [4]; Erotic Art-17 [4]*; Interrogation-13 [2]; Sex Appeal-16 [4]**; Shapeshift-17 [0]***; Slight of Hand-12 [2]; Snake Charming-14 [4].

* Includes racial bonus

** Includes Voice.

*** Free from racial package

Languages: English-13 [0]

Innate Spells: Stealth Strength-22 [0, from racial package]

Description: Sinthia is a succubus originally summoned to serve a mortal master. He got careless one day and Sinthia is now on her own, free to do as she pleases, and she enjoys being in the physical world too much to want to leave, especially when there are *so* many people that want her special attention. She's taken a job working as a stripper in an expensive nightclub and she's known for wearing live snakes in her act (and little or nothing else). She chooses her "boyfriends" carefully to avoid arousing too much suspicion, although occasionally an unattached man from out of town will disappear and his body will turn up in an alley somewhere.

Sinthia is suitable for a modern occult or horror campaign like *GURPS Voodoo*. To use her in the *Technomancer* setting, simply substitute the Technomancer succubus package (p. TM64) for the one given in *Spirits*. She can easily fit into most any other setting, from the Old West to medieval fantasy to cyberpunk with a slight adjustment to her background.

Sample Djinn: Khanjar the Mighty (650 points)

Ageless. 10' tall, 2,000 lbs., an ugly humanoid figure wearing iron armbands, with a bald head and eyes like fire.

ST: 20 [0] **IQ:** 12 [10] **Fatigue:** 25
DX: 14 [0] **HT:** 16 [20] **Senses:** 15
Speed: 7.5 **Move:** 7 (14 in air form) **Will:** 14 **Dodge:** 10

Advantages: Djinn [600]; Extra Fatigue +5 [15]; Strong Will +2 [8]

Disadvantages: Involuntary Duty (to the holder of the lamp, all the time) [-20]

Quirks: Long-winded, especially about his own powers; Unfailingly polite, even when he threatens; Likes to wrestle to demonstrate his great strength; Dislikes servitude but appreciates praise and recognition for his work; Tends to forget about mortal limitations like breathing and sleeping.

Skills: Brawling-14 [1]; Broadsword-14 [2]; Carousing-16 [2]; Flight-14 [2]; Interrogation-12 [2]; Intimidation-13 [4]; Occultism-12 [2]; Wrestling-15 [4].

Languages: Arabic-12 [0]

Spells: (one point each for skill 12 unless specified otherwise, includes Magery bonus) Clean, Create Air, Destroy Air, Fear, Find Weakness, Illusion Disguise, Illusion Shell, Purify Air, Rejoin, Repair, Restore, Sense Emotion, Sense Foes, Shape Air, Simple Illusion, Weaken, Windstorm, Whirlwind.

Description: Despite his impressive title, Khanjar the Mighty is actually a lesser djinn, bound centuries ago to a brass lamp he inhabits. He is forced to obey the holder of the lamp, a situation that does not meet with his approval, although he carries out his duties to the best of his ability, as a matter of pride. Khanjar does not hesitate to boast about his powers or his greatness, and he always makes it clear to his master that he will wreck vengeance upon him if he ever escapes servitude.

Khanjar is suitable as an NPC for a *GURPS Arabian Nights* campaign or fantasy campaign with an Arabian flavor (like the Islamic nations of Yrth). He could also show up in a *Supers* game if his lamp falls into the possession of a world-be hero or villain.

Sample Elemental: Ember (304 points)

Ageless. 5' tall, 80 lbs., a vaguely female humanoid shape made up of fire.

ST: 9 [-10] **IQ:** 12 [20] **Fatigue:** 13
DX: 14 [45] **HT:** 12 [20] **Senses:** 12
Speed: 6.5 **Move:** 6 **Will:** 13 **Dodge:** 6

Advantages: Extra Fatigue +4 [12]; Fire Elemental [235]; Strong Will +1 [4]

Disadvantages: Involuntary Duty (to her master, all the time) [-20]

Quirks: Enjoys burning certain woods like humans enjoy smoking (particularly apple and hickory); Thinks humans regard fire too much as a tool; Tends toward excessive force to get the job done [-3].

Skills: Brawling-13 [1]; Breathe Fire-14 [0]

Languages: English-12 [0]

Description: Ember is a fire elemental in service to a wizard, who conjured her with a female form that pleased him and named her. Ember doesn't really think of herself as female, but has gotten used to the idea over time. Her master has treated her well for the most part and allows her to burn things from time to time, although not quite as often as Ember would like. She's intrigued by the physical world with an almost childlike curiosity, but has begun to understand that physical creatures don't share her resistance to or love for fire. Ember is a suitable NPC for any sort of fantasy campaign. For campaigns using *GURPS Magic*, make her a magical elemental according to the guidelines in *Spirits*.

The Ritual Magic Switcheroo

Announcer [whispers]: We're here at the Ministry of Serendipity, where we've switched their regular mana-based magic for ritual magic. Let's see if anyone notices . . .

The other major component of *Spirits*, apart from the spirits themselves, is an expansion of the ritual magic rules first published in *GURPS Voodoo*. *Spirits* focuses solely on ritual magic that involves contacting spiritual beings (other sorts of ritual magic await treatment in *GURPS Ritual Magic*), but it still provides a complete alternate system of magic for *GURPS*.

Ritual magic makes an interesting substitution for mana-based magic in a number of settings, since it's generally more subtle, mysterious, and closer to various cultures' historical beliefs about magic. Consider the possibilities of substituting or adding ritual magic to some existing *GURPS* settings:

Alternate Earths

Several of the worlds described in *Alternate Earths 1 & 2* could easily become fantasy worlds with the addition of ritual magic and spirits. Roma Aeterna from *Alternate Earths 1* could become an interesting steampunk & sorcery combo with Roman magicians as well as Chinese sorcerers and Incan shamans. Likewise, Ezcalli could feature Aztec priests with magical powers (and bloodthirsty patron spirits) along with Native American and Mongol shamans. Imagine cross-time travelers visiting Reich-5 and discovering that the Nazis' legendary mystical experiments have borne terrible fruit. Perhaps a cross-time alliance with Yrth or Merlin is called for to combat the menace?

Alternate Earths 2 offers Ming-3, the perfect setting for Chinese alchemists and sorcerers to work their magic behind the scenes, dealing with the denizens of the August Spirits Courts. There's also Midgard, where Viking *vitki* and *sidhr* can use shamanic techniques and runes to perform feats of magic. Of course, adding ritual magic to either Cornwallis or Aeolus could provide an interesting Illuminated conspiracy behind the political troubles on either of those worlds (particularly if one borrows ideas from *Voodoo* or *Cabal* for the world's mystical history).

Historical Settings

Virtually any historical worldbook for *GURPS* can be turned into a historical fantasy with the addition of ritual magic. The ritual magic system resembles historical beliefs about magic more than the "fireballs and lightning bolts" style of the mana magic system, so it fits easily into almost any setting. *Arabian Nights*, *Aztecs*, *China*, *Egypt* and *Imperial Rome* are a few examples of worldbooks where ritual magic creates a historical fantasy setting. Just change the names of the various paths and rituals to something suitably atmospheric for the setting, and off you go.

GURPS Old West, features a scaled-down version of the ritual magic rules for Indian shamanism, making *Spirits* a great resource for expanding the powers of Indian shamans (and maybe adding in some European magicians and Chinese sorcerers to rub-elbows with them in your own version of the Weird West). A historical campaign based on the setting from *Voodoo* could take place in the Old West, with Lodge magicians backing the expansionist American government, working against Indian shamans and Chinese sorcerers (as well as their spirit allies).

Ritual magic also fits in well with the Victorian era of *Steampunk* since the Victorian Age saw a renaissance of ritual magic and occultism with groups like the Hermetic Order of the Golden Dawn. *GURPS Castle Falkenstein* uses a version of the ritual magic rules, adapted for that world's unique form of magic. GMs could easily substitute the ritual magic rules (as well as the faerie and spirits) from *Spirits*, if desired.

Cyberworld and Cthulhupunk

Fantasy/cyberpunk fusions tend toward the spectacular, with fireball-throwing mages and rampant monsters, but ritual magic can work just as well in a cyberpunk setting, either for a "secret" magical campaign or a balance between tech and magic. The *Cyberworld* setting is practically tailor-made for adding in some secret occult elements: the NERCC's ban on occult organizations and certain religions in the U.S. may be because there really *is* a "Satanic conspiracy," or at least the ProGov wants to limit the ability of magicians to operate openly. *Spirits* also talks about the possibilities of "net shamans," who might appear at the cutting-edge of *Cyberworld* technology.

The match is even more natural (or *unnatural* . . .) when you add *GURPS Cthulhupunk* to the mix. Ritual magic works well with the feel and style of the Mythos stories. The Mythos spells and rituals from *Cthulhupunk* can simply be extensions of the ritual magic system, perhaps even part of a specialized and secretive path of their own.

Fantasy (Yrth)

The world of Yrth is aimed at classical swords and sorcery fantasy, but substituting ritual magic for mana-based magic creates a world more akin to Katherine Kurtz's *Deryni* novels or Judith Tarr's *The Hound and the Falcon* books. Magic is a subtle, yet still pervasive, force. Priests in both Christian and Islamic lands offer blessings to the faithful and protect them against the forces of evil. Hermetic wizards descended from Middle Age occultists vie for power and knowledge in Meglos and elsewhere, while the Northern Barbarians (and perhaps even the orcs) have their shamans, and who knows what spirits (or magic) can be found in Sahud or beyond the Fence of God, in the land of the Djinn?

Of course, ritual magic can be pretty spectacular at times, too. With three levels of Ritual Adept and five of Ritual Aptitude (which conveniently cost the same as three levels of Magery), a ritual magician can almost rival a mage in terms of speed (casting rituals in 1d seconds), plus a magician isn't dependent on mana and ritual magic has no fatigue cost! This means ritual magic can also be an effective *rival* of mana-based magic as well as a substitute. Perhaps the religious mystics of Yrth tap into spiritual power while wizards wield magic based on mana, creating a distinction between clerical and arcane magic.

Technomancer

Ritual magic significantly changes the feel of the *Technomancer* setting, since ritual magic is less given to mass production (unless the GM wants to develop a ritual parallel to the industrial enchantment system in *Technomancer*). Still, imagine the potential of a modern world much like our own where effectively ritual magic was widely known, and you can create urban fantasies more like Sean Stewart's *Night Watch* or Emma Bull's *War for the Oaks* than Poul Anderson's *Operation Chaos* or Harry Turtledove's *Case of the Toxic Spell Dump* (which *Technomancer* more closely

resembles). Imagine taking the "secret history" of *Voodoo* or *Cabal* and making it (or at least *some* of it) public knowledge.

How will the world change to deal with the existence of spirits and their powers? Only you can say for sure. Have fun with it!

Summer Conventions At The Crossroads

by Scott D. Haring

It's that time of year again. We wait 11 months for a big, national blowout of a game convention, and then we get two -- four weeks apart.

Who planned *that*?

For the first time in quite a while, I'm missing both Origins and GenCon. Which is too bad -- I always have a good time, even as I return both footsore and sleep-deprived. I figure that's a good thing, especially if the time can be spent hanging around with gamers, seeing old friends, and playing lots of great games.

I don't want to spend too much of the column waxing nostalgic, but it might be appropriate in this case. Both of these conventions are going to see major changes in the next couple of years.

This is going to be the last Origins run by the current Wizards of the Coast events staff. The Game Manufacturers Association (GAMA) has owned the show for years, but has always contracted out actual event management, first to a series of fan groups (back in the different-city-every-year days), and then to a professional company called Andon that had established itself by running a series of successful game conventions in the Midwest. Later, WotC bought Andon and absorbed them into their events division, and with it, the contract to run Origins.

But no more. Wizards of the Coast has pulled out of the deal, and this will be their last Origins. Several of the top hands that helped run previous shows have already left the company. That, coupled with what could easily be perceived as a "what the heck -- we're outta here, anyway" attitude by WotC, could mean that this year's Origins might be a little, uh, disorganized. I mean, moreso than usual.

(It suddenly occurred to me that writing this on the first day of the show, with no word from Columbus as to how things are going, might not be the brightest thing to do. Especially since none of you are going to read this until well after the show is over, and the word will already be out as to whether the con was successful or not. Oh, well. I live for danger . . .)

Next year, GAMA runs Origins itself. Mark Simmons, who has cut his teeth on the GAMA Trade Show and made quite a success of it, becomes the man with the plan. He's added staff -- including one of those ex-WotC events guys -- and the GAMA budget has exploded. Simmons and his people are good, but running Origins is going to be a big, big step up from what they've been doing up to now. I have a lot of confidence in their abilities, and I have no doubt that down the road, Origins is going to continue to grow and become an even greater show -- I just hope things go OK in 2002, that crucial first year when the new team finds out all the things that can go wrong that they hadn't thought about.

But I'm excited about their plans. The new Origins management has made a real commitment to a year-round online presence, and their plans include online convention and event registration, online event proposals, downloadable pre-reg and program books -- the whole nine yards. If it all works, it's going to be very sweet.

And at the rate things are going, Origins has a chance -- a very good chance -- of eclipsing GenCon as the premiere, must-go-to convention of the summer. Because while Origins is showing all the signs of busting out and getting huge, some disturbing snippets of news show me that GenCon is fraying a bit at the edges.

For example, the extremely popular GenCon day care facility has been canceled this year. Liability issues, I hear. Even with all the waivers, disclaimers, and licenses in the world, Hasbro decided that they would be too tempting a target for lawsuits in case the slightest thing went wrong. And you know, they could very well be right. But it still doesn't bode well.

The game auctions at both GenCon and Origins were nearly canceled this year. Actually, they *were* canceled -- very

quietly. Nobody made an announcement or anything, they just didn't appear in the pre-reg books or on the website or anything. Some auction fans noticed and raised a stink, though, and enough of them volunteered to help run them that they got added back to the schedule.

And it's important to note that Wizards of the Coast has a number of years left on their contract to run Origins -- they just decided to pull out, and pretty much dared GAMA to do something about it. (Negotiations toward a settlement, I hear, are ongoing.) Add it all together, and it sounds an awful lot like Hasbro isn't all that interested in being in the convention business.

There's no need to panic just yet. This year's GenCon should be a blast, as usual. You should definitely go, if you can swing it. And institutional inertia being what it is, next year's show should be more of the same. But GenCon 2002 is the last one scheduled for Milwaukee, and that's a very interesting fact.

Milwaukee has been too small for GenCon for years. The new, improved Midwest Express Center was built primarily because of GenCon -- or so the folks at TSR bragged. But the convention center was only the half of it. Hotel rooms within walking distance of the convention center are near-impossible to come by, not because there aren't any good hotels -- there are plenty -- but because the GenCon demand is so high. Faced with this fact, and confident at the time that GenCon would continue to get bigger and bigger, Wizards of the Coast allowed their deal with Milwaukee to expire several years ago, and signed a contract to move GenCon to Indianapolis starting in 2003.

By all accounts, Indianapolis is a great site for a show like GenCon. Great facility, great amenities, plenty of hotel rooms. But if -- I'm saying "if," mind you, because it's purest speculation -- if Hasbro continues to work toward disentangling itself from the convention business, wouldn't the break between Milwaukee and Indianapolis be the perfect time to just pull the plug? Indianapolis wouldn't be happy, but it's easier to pull out of a deal that hasn't started up yet than one that is ongoing. And as their dealings with Origins shows, a big corporation like Hasbro is going to do what it wants to do, and problems with contracts and such are just another cost of doing business.

And that would be that. Because aside from Wizards of the Coast, nobody has the size, the staff, or the budget to take on a 20,000-plus attendance game convention. Only a trade organization -- like GAMA -- could possibly take over, and they've made it clear that their priority lies with growing Origins.

And let's face it -- GenCon is a bit of a dinosaur. It's fun, sure, and it's a great point of pride for Wizards of the Coast, but do they really *need* it? I doubt they're losing money on the deal (Hasbro might have shut them down already if they were), but is it enough of a cash cow to justify the costs? Not to mention the two-week disruption back at the home office, as no work gets done by anybody because they're either getting ready for GenCon, *at* GenCon, or recovering from GenCon.

I hope I'm wrong. I hope this is just idle speculation. I hope to have a great time in Milwaukee next year and Indianapolis in 2003. But I won't be surprised if I don't. Meanwhile, look for me next year for sure in Columbus . . .

I, Virus

A Non-Mythos Creature for Modern-Day *Call of Cthulhu*

by J. Edward Tremlett

This article presents a modern-day, non-Mythos threat for Investigators to deal with. It is a manmade, mind-stealing virus that leaps from victim to victim seeking a better way to reproduce itself. Such a threat could be suitable for any modern-day *Call of Cthulhu* campaign, and would work very well in campaigns set in Pagan Publishing's *Delta Green* setting.

As written, the threat presented in this article has no direct basis in the Mythos. However, at least one possibility for Mythos content is given under "Story Ideas," at the end of the article. Keepers should feel free to use or discard the possibility as best suits their own needs.

The Gaumont Virus

Developed by mistake in early 2000, the Gaumont Virus (gaw-MON) was unleashed on an unsuspecting world when its creator, for whom it was posthumously named, was infected by his own creation. Since then it has popped up from time to time -- running its course for a short season, being contained or destroyed, and then reappearing somewhere else at a later date.

The virus has the amazing and horrifying potential to gain sentience from its very first infection. When it attacks the neural tissue of an organism and rewrites the DNA of those cells, it impresses its own viral instincts upon the mind of the host-body. This creates an amalgamation of a human's memories and skills, and a virus' basic instincts and desire for survival and propagation. It also gives the body greater strength and stamina in order to protect its cargo.

When the virus leaves one host-body for another -- entailing the death of the previous host -- it retains the memories and skills that it stole before, and adds them to what it learns from the new host. In this way it grows in stolen experience, knowledge and skill, creating a very dangerous, intelligent adversary.

The virus' collective intelligence has the potential for immortality, but its hosts have a limited lifespan once infected. The host can last for three days in many cases, and five or six at most. All that's left behind upon the egress of the virus is a gruesome corpse with brains the consistency of oatmeal.

History of the Gaumont Virus

The Virus was created in late 1999 by Dr. Humbert Gaumont, a French scientist working at Pandor Biochemical in Dubuque, Iowa.

Dr. Gaumont was brought from Blanchemical, a small, French biochemical outfit, to Pandor in early 1999 to help them with Project Panacea. What Gaumont was doing for Blanchemical is still largely unknown. However, given the scandal that erupted when the French firm was caught selling biotoxins to Iraq in June of 2000, one can make some educated guesses.

Project Panacea was a health worker's dream come true. The outline promised a cure-all for viral infections by creating the base for a universal countervirus. As envisioned, the countervirus could be programmed with a victim's original DNA, and then introduced to the victim's body to reprogram infected cells with their normal, pre-infection DNA sequences. In theory this would both cure the patient and flush out hostile virii.

The practical application of such a far-reaching thing was still rather far off, of course, and all of Pandor's attempts to engineer their universal countervirus had failed. But such a concept had more than enough merit behind it, a great deal of practical need in the here and now and the distinct possibility of making Pandor very rich. So research on the countervirus continued.

Unfortunately for Pandor, Dr. Gaumont was more interested in his own perverse amusement than any scientific progress or humanitarian concern. He had gone into the medical profession to act out his deranged fantasies on living, helpless victims, and his brilliance in biochemical engineering was sadly misused to these ends. His former employers at Blanchemical -- who'd enjoyed his services since 1996 -- either didn't care about this problem, or encouraged it.

Shortly after Gaumont's arrival at Pandor, and installment into Project Panacea, he discovered that he'd created a retrovirus that could turn neural matter into inert, semi-liquid glop in minutes. This had the effect of creating a rather gruesome mess, as the brains tended to spill out of the test animals' heads. Such a sight excited Gaumont to no end, and he spent many months in late 1999 and early 2000 "experimenting" with this new toy.

His mania for the visible aftermath of his virus took its toll. He was constantly and recklessly tinkering with the recipe to produce faster and more gruesome effects, and he eventually lost track of the exact biochemical effects his toy was creating. He also lost any real sight of what kind of thing he was developing in the process of "continuing research."

On March 24th, 2000, around 10 a.m., Dr. Gaumont accidentally infected himself. He was in the containment room, pulling a sample of the virus from its sample container using a syringe, but was not wearing his protective clothing. As far as the security cameras could tell, he lost his balance and squirted himself in the face with a syringe of his latest, improved batch.

A twelve-day manhunt ensued, involving not only the Dubuque Police Department but also the Center for Disease Control and Prevention (CDC) and the US Army Medical Research Institute of Infectious Disease (USAMRIID). By the time it was over, Dr. Gaumont was dead, and one of his superiors at Pandor -- Dr. Meredith Baxter -- had been infected just before he collapsed.

USAMRIID placed Baxter in "The Slammer" back at their HQ in Ft. Detrick, Maryland, and observed her closely for the four days leading up to her gruesome death. All scientific information that they, the CDC, and the National Security Agency (NSA) have on the Gaumont Virus come from both this period of observation, and the experimentation with her remains.

The world at large has no idea that the Gaumont Virus exists. The CDC quarantined Pandor, and imposed a news blackout to "avoid panic." A few conspiracy researchers have made a great deal of noise about what they might have been hiding, but so far no one's come close to the truth. Pandor has since been investigated into Chapter Eleven bankruptcy, and all its questionable files are in "administrative limbo."

Of the various alphabet soup agencies, only the NSA know of the Gaumont Virus. The CDC operates with the tacit understanding that should they come across a Strain, they should impose a quarantine, let USAMRIID come in to handle it and collect samples, and then inform the NSA. Meanwhile, the NSA is on the lookout for any hostile powers' attempts to engineer such a virus, and is presumably informing USAMRIID of what they have discovered -- which either hasn't been much, or has been on too high of a need-to-know basis for them to know.

USAMRIID's Scientific Notes on the Gaumont Virus

The Gaumont Virus is a genetically-engineered retrovirus: a microscopic, manmade organism containing genetic material designed to rewrite the DNA of the cells it targets, with the eventual end of reproducing itself in those cells.

It is transmitted through the skin, burrowing down into the bloodstream and cycling to the brain. It affects the neural matter of warm-blooded creatures, and its incubation rate is almost instantaneous, with humans showing the full range of symptoms within minutes of being exposed. In small animals the symptomology is pronounced even faster.

A single Gaumont Virus is 0.3 microns in length, and shaped like a short arrow, with legs instead of feathers at the blunt end. The "legs" are its receptors, by which it bonds to the neural cells. The genetic material is kept in the "arrowhead," and travels down the length of the "shaft" to the cell once its receptors have bonded with the membrane.

Once inside the neural cell, the genetic material enters its nucleus and overrides its normal functions. The most obvious change is in the chemicals it secretes to carry electrical impulses along, known as neurotransmitters. It also stimulates the neural cells -- which normally do not replicate themselves at all -- to turn on their more complex generative processes and begin manufacturing virii.

The infected cells are programmed to create two new kinds of neurotransmitters. The first impresses the virus' instincts upon the host-body's thought processes and biology, causing the body's voluntary muscles to bulk up at an abnormal rate and raising the body's temperature above normal. It also hyper-stimulates all natural defenses and healing processes, after "convincing" them that the virus is no threat, of course. The second new neurotransmitter encourages the neural cells to start secreting both of these abnormal neurotransmitters, whether they've been infected by individual virii or not. This creates a cascade reaction that soon has the entire brain acting in accordance with the virus' desires.

Most virii follow a preprogrammed biological cycle that they cannot deviate from -- one that has infected cells churn out new copies of the virus like a rapid photocopy machine, until they burst open and release their poison seeds to infect other cells. The Gaumont Virus, on the other hand, is able to slow down the rate of viral reproduction in the infected cells. There is a limit to the virus' ability to deny its biological destiny, and there will come a time when it can no longer keep from replicating itself to the degree that it should. The death of the host-body will follow soon after this occurs.

The virus can cause the increased production of itself at any time before it absolutely has to, which is usually how it spreads itself from host to host. When it makes the decision to do so, it will send the signal to produce as many copies of itself as is possible. Somehow, the information that it has learned from this host-body is stored in these new copies of the virus via electrochemical means, and will be passed onto the new host-body along with the genetic material.

In the process of making itself en masse, the virus causes the cell walls of the neural material to dissolve. This turns a significant amount of the host-body's brain matter to very runny, slightly acidic goo. The caustic, coral slop eats through the membranes by the nasal cavity, and drips out into the throat.

All the virus has to do then is expectorate a gout of those virus-saturated, liquid brains onto any animal or human nearby. It can do this until the host-body's ability to control its voluntary muscles dissolves. The destruction of the brain's autonomic centers follows soon after, and then it's all over for the previous host.

In its current state, the virus is strictly anaerobic. Even if secured in liquid or solid brain matter it will survive in the harsh environment outside of a warm, stable body for no more than 24 hours. If contained in an anaerobic environment -- such as a vacuum-packed vial -- it can go into an eternal state of dormancy.

All strains that USAMARIID know of come from the samples they took from Ms. Baxter's corpse, and have been appropriately labeled as the Baxter Strain -- a Level 4 biohazard.

Game Mechanics

For the purposes of this article, the term "Strain" is used to refer to a single, linear vector: the current host, and the sum of who it's absorbed so far. Every time the Strain infects a new victim, it undergoes an Iteration, and may go through several Iterations before anyone can deal with it. Worse, if the virus manages to infect more than one person, there will be other Strains running about, increasing the threat: such Strains are referred to as Parallel Strains.

The Gaumont Virus can only be transmitted through the blood or skin. It cannot be inhaled. Anyone ingesting it can make a CONx3 roll to have the stuff be engulfed and dissolved by digestive fluids.

An Investigator who gets it on her skin or in her bloodstream will suffer a POT 20 infection. If the Investigator resists

it on the resistance table, she's fine, but she will have to roll every round that she has the slop on or in her. One failing roll means she's infected.

Seen in that light, injection into the bloodstream is the most sure-fire way of infection. Keepers who want to give a stricken Investigator a chance could say that it's out of their system in 24 minus CON hours, with a resistance roll made every five minutes. However, it might be more honest to just say the Investigator's a goner the moment it hits the brain.

Once successfully infected, a victim has her memories subsumed into the virus' collective intelligence. The virus gains the host's Skills, INT and EDU, raising them up to the current host's level if her levels were higher than its previous levels, or retaining the Strain's previous, stolen levels if they were less. The host-body takes on the POW of the virus, no matter how high or low her own was; the virus' POW is equal to the first victim it took, plus 1.

For example: the first host seized by a sample of the virus has a Dodge of 40%, a Chemistry of 01%, an INT of 14, POW of 14 and an EDU of 10. The virus absorbs these memories and skills, gains of POW of 15, and continues on its merry way. The next host that Strain seizes has a Dodge of 10%, a Chemistry of 50%, an INT of 13, POW of 18 and an EDU of 18. When the virus takes control, it will now have a Dodge of 40%, a Chemistry of 50%, an INT of 14 and an EDU of 18. However, its POW remains at 15, and will always remain at 15.

The absorption of the host-body's mental properties also gives the virus some sense of its emotional sensibilities, which it is usually free to ignore or use as it deems fit. However, there is a chance that the strongest feelings of the host-body might survive the infection and color the virus' actions -- making it refrain from harming loved ones, or wanting to do certain, needless things as it goes along.

In order to see if this happens, roll the host-body's POW against the POW of the virus upon infection. If the virus succeeds, it has no compunction to follow any of the body's emotional dictates. If the host-body triumphs, the Keeper should pick a few nuances and desires for the virus to manifest at inopportune moments.

Less than an hour after initial infection, the body's voluntary muscles start to swell up like balloons, and the host body's natural defenses and healing processes go into hyperdrive to maintain a stable environment for the virus. Increase the host-body's STR and CON by 1 for each hour that goes by past the first, up to a maximum gain of 8. Increase the host-body's SIZ by 1 after four hours have gone by, and then 1 more after the body's maximum acceleration is reached at the eighth hour. APP goes down by 1 every time SIZ increases in this fashion, as the skin reddens and stretches, creating a puffy, grotesque look.

At any time, the Virus can send the signal to increase the infected cells' production of itself. In five rounds' time it will be ready to make an Expectorant Attack, which it makes at 80%, once per round. It will spit, cough and hack up liquefied lumps of infected brain on anything within hand to hand combat range, and anything which has the mess get onto their bare skin must make a resistance roll as outlined above.

Once the Virus is able to make an Expectorant Attack, it can do so only for three rounds. By the third round, the parts of the brain that control the voluntary muscles have also turned to mush, and the host-body will fall down in a heap. The autonomic parts of the brain will go next, and then the host-body will cease to function. The slop of its neural material will be infectious for 24 hours, and then burn out.

The host cannot exist for long in its hyperaccelerated state, as the body will be too weakened by the strains put upon it and the virus' urge to reproduce can barely be held back. It has one day of life for every four points in CON that body has after its maximum increase. After that point, it can only hold on for a number of hours equal to its new CON divided by four. Once the time is up, a full-scale replication will take place, and the host-body will die as its neural cells dissolve into gray paste.

Playing the Virus

Psychologically speaking, the virus is an odd sort of creature, but it is still very understandable in its action. It responds

to stimuli based on race memory and instinct that have been tempered by the skills and memories it gains with each new host. It is constantly reevaluating its plans based on that new information.

The virus is a rational and careful thing, but is capable of extreme savagery and callousness if it's trapped or under attack. Each strain recognizes its uniqueness, and, given its extreme need to survive, will do whatever it feels it has to in order to secure its propagation.

Time is a major concern to the virus. Each host body only has so much, so it never spends so much as a moment on anything nonessential. Hygiene, manners, food, and courtesy go by the wayside in favor of speed and economy of action.

It tends to be conscientious about disposing of former host bodies, but not to the point of wasting time. It'll make do with stuffing someone into a trash can rather than digging a grave or arranging for an acid bath. Of course, if a good opportunity for a more air-tight disposal presents itself, it will take full advantage.

The virus was designed to be transmitted through the skin, but if given the choice it would very much like to upgrade itself to airborne status. To this end, the Baxter Strain seems to be intent on absorbing other scientists into itself to achieve this goal.

Story Ideas:

These are some suggestions on how to use the Gaumont Virus in your campaign, or amusing tricks to employ while doing so.

Multivirus

Usually, when the virus passes itself on, it infects only one person at a time. Its goal is always to spread itself out more than that, of course, but caution usually keeps it from attacking more than one potential host unless it has to.

But what happens if it infects more than one person while passing itself on? What happens if it infects one person, and then some poor, passing fellow comes by and touches the former host's brains with a bare hand? And what happens if some deranged scientist decides to inject samples into several victims at once? You will then have two or more Parallel Strains running around in the area, and it can only get worse from there.

The first Iteration of these Strains will have the old memories they shared, plus the new memories of whatever host bodies they've taken. If they're not aware of one another's existence, it's more than likely they'll discover one another as they're sure to cross paths while fulfilling their previous goals. Past that Iteration, it may become less likely, as the absorption of newer minds causes each separate Strain to develop different ideas based on what they learn.

When Strains meet, there's a good chance they'll cooperate, as they are working towards the same purpose. But there's also a chance they might argue over which Strain is better-suited to reproduce itself, and try to destroy one another if they can't come to a suitable agreement. This can lead to some rather amusing existential arguments which will resolve themselves gruesomely.

And I Will Remember You

If the Investigators ever cross swords with a Strain of the virus, but fail to destroy it -- which could be possible if the 'Multivirus' scenario happens without them knowing of it -- it will return to try and do away with them. This isn't so much out of malice as its need to survive: anyone who knows what it is, and what it does, is a risk to its future propagation. They'd do the same thing if their roles were reversed, or so it thinks . . .

Have it split town, wait a few Scenarios, and then have it come back to try and kill them in some sneaky and underhanded way. If it's made the right connections, it might have grabbed someone who can arrange an assassin's

services to do the job for it, too. ("My employer has a message . . . he says to cover your mouth when you sneeze . . .")

You're the Victim

Best employed with your best player, this entails having one of the Investigators becoming infected by the virus, and not having any of the other Investigators -- or their players! -- know that something's up. This works best when the virus has gone through several Iterations already, and has absorbed a great deal of forethought, cunning and subtlety. The player will portray the character as she normally would, but she should be ready to follow your lead.

Pulling off this sort of ploy is pretty tricky in character: the gross physical changes that go on will be difficult to conceal, so the virus will have to be very, very careful. It will also be pretty out of character, too. If you're the sort of Keeper who's constantly taking players out of earshot for brief, secret conferences, showing some players pictures that other players don't get to see just yet, or passing notes here and there, then you can fit your instructions into this framework. With any luck, no one will suspect that anything's awry until it's too late.

If you don't do those sorts of things, however, your sudden spate of passing notes to one player is bound to be noticed. You'll have to find some other way to handle it, like meeting the player in private sometime during the week to discuss plans, or handing her a crib sheet of amusing things to do and working out a series of code words to let her know when to do what.

The other problem with this ploy is that, sooner or later, the virus will use its proximity to these pesky humans to do away with them. Some groups of players don't mind that sort of thing, and consider such in character backstabbing while mind-controlled or impersonated to be part of the paranoia-inducing fun of *Call of Cthulhu*. On the other hand, some groups *do* mind -- a lot. Keep that in mind before unleashing this trick on your players: if you don't think they can handle it, or wouldn't enjoy the bloody denouement, then don't do it.

The Mythos Connection: Serpent People

As far as any human agency knows, the Gaumont Virus was developed by a demented scientist who'd stumbled on the formula by accident. But did mere chance guide Dr. Gaumont's hands, or was there something more at work? Was this ultimately the work of an ancient and sinister threat to Humanity which was waiting for such a chance to strike?

Consider the Serpent People: there are more than a few of these ancient creatures waking up from suspended animation of late. It's no secret that they dislike the jumped-up monkeys who've taken their world away from them, and they would love to see humanity gone, or reduced to the level of cattle once again. But there are so few of them, and so many of us, so how can such a genocidal aim be fulfilled but through sneaky and underhanded methods?

This is where the Serpent People's advanced understanding of poisons comes in. Among their many achievements were a plethora of toxins, virii and other such things, most of which are not known to us even in the present day. Is it possible that Gaumont was influenced to create this virus by one of their number, perhaps disguised as someone Dr. Gaumont knew? And was he pushed to "invent" what was really an age-old recipe of theirs, updated for modern living?

Such a thought might sound overly conspiratorial, but one should remember that the Gaumont Virus is only effective against warm-blooded creatures, and not reptilian lifeforms like the Serpent People. It would make a perfect doomsday weapon for them, then, especially if it went airborne. Presumably they have more samples, which could be why the virus keeps popping up . . .

The Baxter Strain -- 2nd Iteration Gaumont Virus

The samples of the Gaumont Virus that USAMRIID has start with the following stats and skills. Of course, there may be other Strains out there, and Keepers are free to design them.

POW: 16

INT: 17

EDU: 21

Attacks: Expectorant Attack 80%; Fist/Punch 60%; Kick 75%

Relevant Skills: Biochemistry 90%, Biology 85%, Botany 25%, Chemistry 85%, Climb 75%, Conceal 50%, Computer Use 60%, Disguise 40%, Dodge 60%, Hide 30%, Library Use 60%, Medicine 45%, Other Languages: English 90%, French 100%, German 60%, Latin 80%, Pharmacy 90%, Sneak 60%, Spot Hidden 50%

Personality Quirks: Derives enjoyment from seeing animals suffer (Dr. Gaumont); Unwillingness to hurt young girls or put them in danger (Dr. Baxter)

Shared Illuminati

by Brian Joughin

There can be no doubt: *Deluxe Illuminati* is one of the classic games of strategy, subterfuge, politicking, and backstabbing. This variant of the game for four or more players throws a wrench in the works by forcing players to share Illuminati.

Object

This game is similar to *Deluxe* (or *Classic*) *Illuminati*, and works for four or more players. Each player, however, shares partial control of two different Illuminati, with one other player each. When one Illuminatus' conspiracy has fulfilled a winning condition, both players sharing control of that conspiracy win the game.

Setup

An Illuminatus is dealt between each sequentially seated pair of players. This Illuminatus is shared by the two players. If the UFOs are one of the Illuminati in play, the two players on either side of it, who will share control of it over the course of the game, should walk away and jointly decide on its special winning condition. Each Illuminatus has one turn's income placed on it, as normal. Roll dice for each Illuminatus. The highest roll determines the Illuminatus that will go first. As in the normal game, play will proceed counterclockwise by Illuminatus. Shared control requires that play order by player be a little different.

Play

A turn refers to the following basic sequence:

1. The player to the right of an Illuminatus takes an Illuminatus First Action, defined below.
2. The player to the left of the same Illuminatus takes an Illuminatus Second Action, defined below.
3. The dice are passed to the player on the right side of the next Illuminatus to the right.

To illustrate, imagine Alan, Bob, Craig, and Darla are playing Shared Illuminati, and are seated counterclockwise in that order. If The Society of Assassins is between Alan and Bob, The Bavarian Illuminati is between Bob and Craig, The Network is between Craig and Darla, and The UFOs is between Darla and Alan, then the sequence of actions for one round would be as follows:

1. Alan takes an Illuminatus First Action for The UFOs.
2. Darla takes an Illuminatus Second Action for The UFOs.
3. Bob takes an Illuminatus First Action for The Society of Assassins.
4. Alan takes an Illuminatus Second Action for The Society of Assassins.
5. Craig takes an Illuminatus First Action for The Bavarian Illuminati.
6. Bob takes an Illuminatus Second Action for The Bavarian Illuminati.
7. Darla takes an Illuminatus First Action for The Network.
8. Craig takes an Illuminatus Second Action for The Network.

Do note that a given player will **not** be taking two actions consecutively, but will take the first action for one Illuminatus, and the second action for the next Illuminatus, with two actions by other players between them. Theoretically, this makes a player think twice about doing something not to the benefit of one of his Illuminati in an attempt to benefit the second.

Also note that when a card mentions a turn or player's turn, it should be read as an Illuminatus turn in this variant.

Illuminatus First Actions

During an Illuminatus First Action, every player is the controller of the Illuminatus on his or her left. No player has any access to the Illuminatus on his or her right. A player may not use the special cards or abilities of the conspiracy on his or her right, nor may they examine the money or hidden special cards of the conspiracy on his or her right. The player performing the Illuminatus First Action does the following:

1. Take the income of all groups in the conspiracy as normal.
2. Draw a card. If it is a special card, place it face down without showing it to the other controller of the active Illuminatus. Either controller may use or examine that special, but only while they control the conspiracy possessing it.
3. Perform one action and any number of free actions OR place 2 MB on the Illuminatus and proceed immediately to the Illuminatus Second Action.

Illuminatus Second Actions

During an Illuminatus Second Action, every player is the controller of the Illuminatus on his or her right. No player has any access to the Illuminatus on his or her left. A player may not use the special cards or abilities of the conspiracy on his or her left, nor may they examine the money or hidden special cards of the conspiracy on his or her left. The player performing the Illuminatus Second Action does the following:

1. Perform one action and any number of free actions OR put 3 MB on the Illuminatus and end the turn immediately.
2. Perform up to two free money moves only after the nonfree action has been taken, and not if the option to take 3 MB was chosen.

Restrictions

1. No player may use one conspiracy which he shares control of to attack his or her other conspiracy, nor may he or she donate or trade groups, money, or special cards between his Illuminati. This is not quite as restrictive as it may sound, because if such an exchange or attack is to the benefit of the active conspiracy, the conspiracy's **other** controller is free to take it, having no stock in the second conspiracy involved.
2. The target number of an attack may never be raised to greater than 10 or to less than 1 by any player. Without this control, players may (particularly in endgame) decide to spend all of a group's money to make an attack target number arbitrarily large or small in order to prevent his partner from using that funding during the next half-turn.
3. Each group may only participate in one attack per Illuminatus turn. This means that if on an Illuminatus First Action, the Net uses its transferable power to aid an attack, it may not also do so on the corresponding Illuminatus Second Action, despite the fact that another player is in control. The UFOs are, of course, exempt from this restriction.
4. Likewise, any group that has a special ability which may only be activated once per turn, such as the Bavarian Illuminati, may only use that ability once per Illuminatus turn.
5. The special abilities of the Gnomes of Zurich and the Bermuda Triangle, which are normally activated at the end of a turn, may only be activated at the end of an Illuminatus Second Action.

The new Third Edition of *Dungeons & Dragons* brought with it many changes, one of which was the return of both Demons and Devils to the game. Present of course, in *AD&D* 1st Ed -- including both Orcus and Asmodeus, for reasons of political correctness, they were either excised or renamed for 2nd Ed. Which meant one more reason for some to treasure their First Edition hardbacks. Late in the history of the second edition, they began to creep back in, particularly via the *Planescape* campaign setting. In the *Third Edition* the new *Monster Manual* details just nine devils, fiends known as Baatezu, from the Lawful Evil plane of Baator, ranging from the lowly Lemure with a Challenge Rating of one, to the mighty Pit Fiend with its rating of sixteen.

For several publishers of *d20* adventures and supplements, the Baatezu have been popular choices for new monsters to include in their releases, but Green Ronin Publishing have gone several steps further than that. Best known for their *D&D* trilogy of Lovecraft-themed adventures set in the pirate city of Freeport (including the Origins award winning *Death in Freeport*), and built upon the limited range of devils to be found within the *Monster Manual* to publish *Legions of Hell -- Book of Fiends: Volume One*.

The author, Chris Pramas, is no stranger to Hell, having written the *Guide to Hell* for *AD&D 2nd Ed* for WotC in 1999. He draws upon that, as well as other *AD&D* books for this sourcebook, including the original *Monster Manual*, *Monster Manual II*, and *Planes of Law*. All of these *AD&D* sources are listed in the fifth appendix's Bibliography, alongside the list of general sources. A professional touch is the ISBN being provided for every title given in the appendix for anyone who wishes to read further.

This 64-page book contains forty-five entries describing not the actual Lords of the Nine Circles of Hell, but a variety of their minions, from lowly servants and guardians to the nobility and Fallen Celestials. Each receives a whole page, sometimes two, in what is a well-presented, well-laid out book. Every entry is illustrated in sepia tones, and each piece captures the feel of the devil it depicts exceedingly well. What makes the art stand out further is the fact that it is done by five different artists whose styles complement each other's rather well. One niggle that catches the eye is that the occasional piece by Toren Atkinson has clearly been printed in reverse, but then I could just be being picky. Although the cover clearly states that the *Player's Handbook* is required to use this book, the *DMG* is just as much a necessity.

Legions of Hell begins with an introduction to Hell, its layout, and the nature of each of the nine circles and their individual rulers. It describes in general how and why Devils come to the Prime (as the Prime Material Plane is known), the basic qualities of Baatezu, and advises that each of the infernal species described therein is actually the weakest of its type. DMs should therefore customise them according to their campaign's needs, as even the lowliest of devils can advance to the ranks of the nobility. It is also suggested that the more individual minions be equipped with suitable magical items and artefacts.

The entries are arranged alphabetically, but at the lowest end we have the Knocker with a Challenge Rating of 1/2 and

at the other, Iblis, Duke of Pride, with a Rating of 24. Along the way you have Antaia, the Witch Queen; Balan, Master of the Infernal Hunt and his Huntsman; The Faceless, a society of cutthroat assassins that is paid in souls; Kroteo and Nekhet, sibling guards of the realm of the Egyptian god Set, who makes his home on the Fifth Circle; Soulsniffers, which scour Hell for renegade souls; Vierhanders, jesters to the infernal nobility; and Vuall, Duke of Pleasure. The entry for each Devil is given stats in the now familiar Monster Manual format, before describing in detail its history and place in the hierarchy of Hell, any items it is known to wield and its tactics in combat. Some like Antaia, who is worshipped by witches, suggest whole campaigns without even touching upon the possibilities that *Legions of Hell* itself should suggest. Any DM with this in hand should be thinking of ideas of their own for campaigns against the minions of Hell or indeed involving the infighting between them.

Legions of Hell is made complete by with five appendices. The fourth provides a Challenge Rating for all of the entries in the book, and the fifth is the Bibliography. The first gives three new Prestige classes that can be used to create powerful mortal servants of the infernal. These are Balan's Jackal; the Mountebank, servants of the Lich Fiend, Jalie Squarefoot; and the Plaguelord, servant of Nergal, the Fetid Prince. Each new class is accompanied by a sample ready for play. The second appendix details a template, that of the Fallen Celestial, which is applied to an existing creature. Despite Fallen not actually being amongst the Infernal, they have found a place -- sometimes one of power -- within the Nine Circles. This appendix also examines their position within the Hell. The third appendix not only looks briefly at the opposition, the Angelic Choir, but also lists those that have fallen from those heights to Hell.

This sourcebook is packed with useful information that the DM can use to create or enhance their own campaigns. By concentrating upon just one type of creature (though this being Volume One, there is more to come), Green Ronin gives us a very cohesive collection, far more so than other recent books of monsters. Nor is *Legions of Hell* solely applicable to *D&D*. There are several horror RPGs which could make use of this more traditional view of Hell. Not only does this represent excellent value for money, but it is also a darn good sourcebook should the DM (or GM) want to add a little of the infernal to their game.

First Colony: The City of Haven Sourcebook (for Blue Planet)

Written by Greg Benage, Brian Breedlove, Catten Ely, *et al*

Published by [Fantasy Flight](#) (Biohazard Games)

126 pages, B&W hardcover; \$23.95

The folks over at Fantasy Flight have delivered another excellent edition to the *Blue Planet* line with *First Colony*. This book gives us all of the details (and this being a *Blue Planet* book, we mean *all* the details) on Poseidon's first colony of Haven. This book continues Fantasy Flight's track record of very well-written books that are extremely rich in detail.

The book's production values are the same as its predecessor, *Fluid Mechanics*. It is 126 black-and-white pages with a full color hardcover. The cover art is incredible (giving us a truly vivid image of the Haven cityscape), and the interior artwork is of the same style and quality as the previous books (though it does seem that there might be just a *tad* more art in this one than the previous ones). The cover price, again, is a bit steep for 126 pages, but when buying a *Blue Planet* book, one pays for quality, not quantity.

The book dives into it in the usual fashion, starting with a map of the outlying area and a synopsis and brief description of the major communities in the outlying area. Here we're talking about Argos Island, the home of Haven and many other smaller settlements. Though not too much is given on the surrounding areas, it is certainly enough for GMs to work with in creating scenarios and looking for places to insert their own concoctions.

An overview of the town is then given, which is followed up by a look at Haven's history and an overview of its culture. The town is divided into nine primary areas, and they run the full gamut, from the high class homes of the Terraces, to the high profile offices of the Central Business District, to the crime-infested back alleys of the Warehouse District. The descriptions of each section talk about its history, its population and culture, its civic make-up, and an overview of the area. These will likely answer any of the questions one wants to know about the major areas of town. The detail level is high, but not so much as to stifle the creative freedom of GMs and players.

Some of the history of Haven was covered in the core books, but this material is revisited in greater detail here, this time focusing on (naturally) Haven and its people. The story is well-told, and it's certainly an engaging background that is ripe for plot and story development by GMs. This material not only does a great job of filling in the mundane details, but it also gives the reader a strong feeling for the people and the culture of Haven and how they have developed.

The book then breaks it down with a look at politics, commerce, culture, and crime. This is important information, which really fills in all the nitty gritty of day to day life -- the meat that GMs are really going to need the most, as their players adventure throughout the city and get into all the many things that players are prone to get into (which is a lot). The Haven political scene is a twisted and dangerous one. In it one finds the mayor, the city council, the GEO, and the movers and shakers from the Incorporate world. Details are given on how things gets done, who gets them done, and just what kinds of things all these people are scheming for. Profiles are also given here for John Bishop, the colonial administrator (aka the GEO top dog on Poseidon) and mayor Jason Blaire -- neither being someone you want to mess with.

The details provided on Haven Commerce are all useful, down-to-Earth (er, Poseidon) kind of things like transportation, retail, financing, manufacturing, health care, and space travel. This is all mundane, everyday material, but it's just the kind of stuff that GMs so often need to fill in the details of their campaigns and give them a real, organic feel. Although this section is very thorough, it does have the effect of leaving you wanting more (which is a good thing, though).

Culture in the city of Haven is a diverse and sometimes crazy thing. The people of this town have their own tastes in everything -- their own art, their own holidays, their own music, and many other things. A solid overview of the culture is provided, as well as a look at several points of interest, like the Greenhouse, Colonial Park, and Haven Coliseum. Whenever your players want a night on the town or whenever you need to give a character or a locale a splash of color, this is the section to turn to.

Crime is something that is most likely going to figure heavily into most campaigns, and this section does a fair job of setting the scene. There are certain areas that are left less detailed, but the *Frontier Justice* sourcebook is bound to fill in whatever this book misses. The overview here focuses on crime in Haven -- what crimes are illegal, what crimes are taken seriously, what crimes are being committed, and details on those committing the crimes and hunting the criminals. Profiles are given here of GEO marshal Peter Church and Vladimir Gorchoff, the head of Poseidon's notorious Gorchoff crime family.

Throughout these sections one will find gray boxed areas that provide extra setting details. There are two primary types: locale profiles and adventure seeds. The locale profiles provide details on some very interesting places in Haven -- just the kind of places the PCs end up at -- and they only make one wish that more details were given. The adventure seeds are done just as there were in the core books, providing a lot of great ideas for adventuring in Haven. Additionally, they give a fair amount of extra details about people and places in Haven that PCs might get the chance to interact with (whether while on these specific adventures or not).

Overall, these first three chapters are written in the same incredible amount of detail of the previous *Blue Planet* books, and they are more than worth the read. There is a veritable treasure trove of material here, and most GMs and players are going to have a great time playing with it.

The adventure section is more of a mixed bag. First, let's say that for the most part these adventures are pretty decent. But they do suffer from one big, huge drawback -- they take up fifty pages of the book. And this is what we would have to call the book's one major flaw. There's nothing wrong with publishing adventure material, and there's nothing wrong with sticking some of it into a sourcebook. But the fact of the matter is that the majority of the material in these fifty pages will only be used once or twice. So fifty pages of what could have been further detail on the huge city of Haven is spent on (what are likely to be) one-shot adventures. This is bound to let a few readers down.

The adventures themselves present a very dynamic batch of episodes that most players will have fun playing. PCs are called upon to do a variety of tasks, from investigating, to manipulating NPCs, to going on treasure hunts. There is a lot of emphasis on roleplaying and character interaction, although there is certainly some room for high-paced action. There is a bit of variation in the writing styles of these adventures, which some may find annoying, but it's certainly nothing that will be hindering at all.

Despite the drawback of having a large portion of the book taken up by adventure material, this is still an excellent sourcebook. Fantasy Flight Publishing continues its tradition of well-thought-out, well-written, and highly detailed source material. For *Blue Planet* GMs wishing to make use of Haven as a setting, this book is an absolute must.

The Hunt For Red Mercury

"Behold a great Mystery which I reveal to you without an enigma; this is the secret of the two mercuries which contain the two tinctures. Keep them separately, and do not confound their species, for fear they should beget a monstrous Lineage."

-- *The Six Keys of Eudoxus*

Ahh, alchemy. There's practically no better field to plow for weird imagery, disturbing symbolism, cool powers, and muttering delusional con-men twitching in the final stages of heavy-metal poisoning. It's a shame it's gone. Except that it isn't; just as we learn from our [ultraterrestrial](#) friends the Grey faeries, myths don't die, they just mutate. Once, alchemists delved deep into forbidden Satanic learning; now, they delve deep into forbidden Soviet learning. Where the alchemist was once a beady-eyed wizard with a cryptical tome in Arabic, he's a beady-eyed physicist with a cryptical tome in Russian. The central concepts -- a paranatural science hidden in the laws of nature, the shadowy evasion of the laws of Man, the promise of unimaginable wealth and power -- all these remain in the modern myth of the techno-chemist. At their center, however, remains the quest, the search for a mysterious substance that bisociates as it eludes -- is it a weapon, a wonder, or a hoax? Follow the trail, then, of the modern Elixir Vitae, the elixir of power known to the modern alchemical underground as Red Mercury.

"I don't want to sound melodramatic, but red mercury is real and it is terrifying. I think it is part of a terrorist weapon that potentially spells the end of organized society."

-- Sam Cohen, former RAND Corp. nuclear weapons adviser

The central legend of Red Mercury holds that Soviet nuclear research spawned this mysterious substance in 1965 in a cyclotron in Dubna, near Moscow. Specifics, of course, vary; the most common version indicates that the experiment had been designed to create implosive fusion, and in some variants, Red Mercury remains the key to clean, plentiful fusion power, suppressed by the Usual Suspects who keep the Dean Drive, the Keely Motor, and the Water Engine from us. More often, however, Red Mercury is an immensely powerful explosive, either a chemical explosive more powerful by weight than any other ("a grenade can sink a battleship; a baseball can destroy a city block"), a key ingredient in "suitcase" nuclear weapons production, or the code name ("red" taken from its Soviet origins) for a brand-new nuclear material more potent than uranium-235 or plutonium-239. Red mercury is also supposed to provide an ultra-stealthy Stealth coating, sonar-proof submarines, enhance infrared sensors, coat money to make it counterfeit-proof, and so forth and so on. It's a floor wax, it's a dessert topping, it's a deadly nuclear material!

"There were an enormous amount of speculations and rumours about red mercury, about mercury fulminate, none of these have any scientific basis in terms of causing the fire. Red mercury may very well exist, in fact red mercury does exist, the contentious issue is whether it plays any role in the nuclear arms sphere. There is no doubt that red mercury exists, I can refer you to the original chemical articles on this particular form of mercury, and there have certainly been a number of unexplained deaths in people who've allegedly been linked to the red mercury industry, not least of which was Alan Kidger."

-- Dr. David J. Klatzow, testifying before the South African Truth and Reconciliation Commission on June 1, 1998

And in fact, it is deadly, whether it exists or not. There have been at least 25 documented attempts to sell Red Mercury on the international arms market; involving such delightful people as the Bulgarian, Libyan, North Korean, and South African security services. For a while in 1992 and 1993, Russian vice president Aleksandr Rutskoi announced high-level investigations into Red Mercury export licenses apparently sold to Kremlin insiders (specifically the Ekaterinburg firm Promekologiya), indicating that the Russian mafia has, at the very least, used Red Mercury as a cover for other smuggling activities. This murky world of mafiosi, arms dealers, and spies converged with deadly force in South Africa. Alan Kidger, sales manager for South Africa's Thor Chemicals, Ltd. (according to documents discovered in Iraq in 1992, a possible supplier of Red Mercury) wound up sawn in pieces in the back of his BMW in 1991; unknown parties bludgeoned South African chemical engineer Wynand van Wyk to death in Cape Town two years later. (Two arms dealers and a military intelligence officer have also died in potentially related incidents.) Intriguingly, Kidger died two months after Thor Chemicals sold over two tons of "yellow mercuric oxide" to a South African Defense

Forces shell company known (and I swear this is true, *Call of Cthulhu* fans) as "Delta G Scientific." This stuff just writes itself some days.

"This is the unicorn of modern science. You can put your hand on a Kalashnikov, you can touch plutonium. With red mercury, there just doesn't seem to be anything there. Call it red mercury, call it a Big Mac. I call it a scam."

-- Vic Hogsnett, Los Alamos analyst

So, really, what's going on? The "official" chemical formula for Red Mercury is $\text{Hg}_2\text{Sb}_2\text{O}_7$, mercury antimony oxide; enhanced with either radioactive lutetium or (less probably) californium, it might emit enough neutrons to fool a geiger counter or a desperate Iraqi general for a while. John Hassard, a lecturer in nuclear physics at Imperial College, has even theorized that a "lattice" of mercury and antimony atoms might be able to contain plutonium for a much more efficient implosion. There is also a "red oil" (actually an exothermic tri-n-butyl phosphate) that forms on nuclear waste tanks and can (as in the Tomsk-7 accident in 1993) cause them to explode. The actual confiscated "Red Mercury" smuggled by various lowlives ranges all over the periodic table, from pure mercury (tinted with cochineal, brick dust, or nail polish), depleted nuclear reactor fuel, chloride of mercury, mercuric iodide, mercuric oxide, and mercuric cyanate. Some of these compounds have uses in nuclear engineering; mercuric cyanate is a fairly powerful explosive rocket fuel in its own right. Journalist Craig Copetas theorizes that Red Mercury is actually mercury-antimony waste powder used to cool a Soviet plutonium breeder reactor. The powder is known as "redistilled mercury," or "red. mercury" for short. The US Department of Energy is even more cynical. A DOE 1992 report began with this snarky recipe: "Take a bogus material, give it an enigmatic name, exaggerate its physical properties and intended uses, mix in some human greed and intrigue, and voila: one half-baked scam." But for our purposes, it's more fun to take the same ingredients and produce a fresh-roasted adventure.

"Others have taught that the White Mercury is the bath of the Moon, and that the Red Mercury is the bath of the Sun. But there are none who have been willing to show distinctly to the Sons of Science by what means they may get these two mercuries. If you apprehend me well, you have the point already cleared up to you. The Lunaria is the White Mercury, the most sharp Vinegar is the Red Mercury; but the better to determine these two mercuries, feed them with flesh of their own species -- the blood of innocents whose throats are cut; that is to say, the spirits of the bodies are the Bath where the Sun and Moon go to wash themselves."

-- *The Six Keys of Eudoxus*

And that's the kind of remix that we call alchemy. It's intriguing, in light of Vic Hogsnett's metaphor above, that the unicorn was one of the medieval alchemists' symbols for mercury. Mercury played a central role in alchemy, both Eastern and Western. In China, the great alchemists quested after the "true cinnabar medicine," cinnabar being mercury sulfide, the most common ore of mercury (and another frequent substance traded as "Red Mercury" by unscrupulous Siberian dealers). In the West, mercury and sulfur were the only two earthly elements, from which all other metals were constructed. Mercury's changeable liquid nature, and its mythological connection with the trickster god of language, magic, theft, and transformation, gave it a crucial symbolic role in almost all stages of conventional Western alchemical practice. It begins as the Prime Materia (a distinction sometimes shared with our old pal antimony, the alchemical "wolf of metals"), is a repeated ingredient in purification, and sometimes becomes the final Stone: the Elixir Vitae, Red Elixir, or Philosopher's Mercury. The Philosopher's Mercury has become the Physicist's Mercury with barely a ripple, possibly connecting at the point in 1941 when physicists Sherr and Bainbridge successfully used fast neutrons to transmute mercury to gold. Red Mercury is also called "2020", allegedly from its density (20.20) in grams per cubic centimeter. In that context, it's interesting to note that 20, kabbalistically, can mean either "golden" or "black liquid"; mercury itself (KSPYTh) is 570, the same as "Moloch," "earthquake," or "gate." Demons, explosions, and gateways -- yep, that's Red Mercury all over.

"Thus in January 1996, Ptah instructed me in Luxor about the deactivation of the Amen-Ra crystal computers under Thebes, which still held many soul hologrammes captured, by the red mercury, Heku magick etc.."

-- Ananda, *Shemsu Hor: The Hall of Records*

And you can drizzle Red Mercury all over your game (just as someone drizzled black mercury liquid all over Alan Kidger's exsanguinated body). It can be a prime McGuffin for a gritty game of espionage, a vital ingredient in the Warehouse 23 medicine chest, the "mystery substance" that allows some Steampunk genius to develop nuclear

explosives or etheric transformers, or the key to Illuminated technology controlled by the Men In Black or the UFOs. It's already shown up in reports of UFO combat, in fact, since the SADF allegedly shot down a UFO over Lesotho on September 15, 1995 using a revolutionary Thor-2 MASER developed at (wait for it) Thor Chemicals Ltd. Could Red Mercury be the key to Majestic-12's dangerous covert war against our alien masters? Could U-859, sunk in the Straits of Malacca in 1944 with 33 tons of mercury on board, have been carrying Red Mercury to [Hitler's Antarctic base](#) to fuel the Nazi flying saucer fleet there? Heck, why stop there? According to the *Cairo Times*, at least one enterprising Egyptian smuggler tried to sell Red Mercury as "demon food" -- could that be the source of the Red King of alchemical legend? Or does Eudoxus' prescription, to feed Red Mercury "the blood of innocents whose throats are cut" tie our alchemical bisociate compound rather to a [Red Jack?](#) Does the Elixir Vitae spawn a monstrous Lineage indeed, bringing forth demonic life into the bloodstream of its unfortunate consumer? Could Red Mercury tear open the doors of spacetime, imploding dimensions themselves in a technomantic Hellstorm of hypergoetic proportions? There's only one way to find out -- hunt down some Red Mercury, and set off your game with a bang.

Oh, the Humanity

We'd been escorted into the Vampire Prince's lair. Through the underground tunnels, past the security checkpoints, deep below the living city we traveled. We were being granted a great "honor" to visit the lair of the vampires, since we were lowly humans. Oh, sure, we had some powerful tricks up our sleeves, but we were essentially normal mortals. No doubt there would be tense negotiations with these undead vipers; could a mutually satisfactory resolution be reached to the crises facing the city?

The GM says, "Okay; you're standing before the Vampire Prince. He seems to be waiting for you to act. What do you do?"

I say, "I need to go to the bathroom."

He says, "Well, go ahead; it's down the hall."

I say, "No; my character. I say, 'I need to go to the bathroom.' To the Prince. I mean, we'd been wandering under the catacombs of the city for a couple hours, right? And this is the first time we've had a chance to stop, as best I can tell. I need to go to the bathroom."

"What are you trying to pull?"

After a bit of wrangling, I managed to assure the GM that, indeed, my character merely wished to relieve himself. So, heavily guarded, our vampire guards struggled to find me a place to do such. After all, they wouldn't have a proper restroom; it's a scientific fact that the walking dead do not need to pee, and as such their lairs would not have those facilities.

In one gesture, I (as a player) managed to do two things.

One, I gave the other player the first "real" interaction with the Prince. He was somewhat shy as a player, and would usually allow other players to speak first (and, often, exclusively). But when coaxed he was a *good* player, and the scene was made more interesting after that because he was put on the spot in a very natural way. But that's not what this column's about.

Two, I helped remind everyone that my character is human; for the integrity of the scene and action I felt it was important to emphasize that. After all, if the only difference between humans and the walking dead is the dress code, then neither faction is terribly interesting. And sometimes the simplest actions are what "being human" is all about.

Despite what William Shatner may proclaim whilst surrounded by Styrofoam rocks, being human is *not* just about the quality of mercy, the bravery of man against impossible odds, and the power of love. Being human is about plucking hairs that grow in strange places. It's trying to keep yourself from inappropriately laughing at a funeral. It's about forgetting where your keys are, right as you need to head out the door. It's about finding them in your *other* pocket, five minutes later.

Perhaps my favorite scene illustrating humanity's ability to erupt, even when we don't want it to, is from the movie *The English Patient*. In that scene Kristin Scott Thomas (played by Kristin Scott Thomas) had just broken up with Ralph Fiennes (played by John Steed) while the two of them were under the bleachers of a movie theater. After the confrontation was over, Kristin -- teary-eyed and emotionally wrought -- walks away from Fiennes while looking back at him . . . and conks her head on one of the bleacher's support beams. Clutching her hurt head, she manages to stagger away, doubly whimpering from the emotional and physical impact of the scene.

(Actually, it's probably my favorite scene from the whole movie, and certainly one of the only ones I can remember with any clarity. I seem to recall a lot of sand . . . and a CGI mummy. Or maybe I'm thinking of a different film.)

Anyway, it's the little things we do (or don't do) as people that make us human. And it's when those things aren't present -- or are different -- that help separate the inhuman from us.

For example, when we played *Changeling*, one of our characters (a beautiful Sidhe noble) had an Appearance attribute of six. We were having a hard time wrapping our minds around what that would look like (since the highest human rating is five), until I made a realization. Imagine the most beautiful Hollywood celebrity you can. Now try to recall photos of that person which have appeared in the tabloids. No matter how beautiful that person is, there will be photos where he is unattractive. He might look strange in a bathing suit, he might be looking exhausted or drunk as he walks down the street in the middle of the night, or he might be trying to keep the photographer from taking pictures of his family. There will be photos of the person in inappropriate poses, mouth open at a weird angle, hands outstretched in an odd gesture, and just generally begging to have silly captions added.

There *are* no photos like that for someone with an unearthly appearance. That photo of the person sneaking out of a convenience store with three pints of Ben & Jerry's? It's a gorgeous person perfectly holding a paper bag, looking nobly irked. The picture of them in the rain? He looks great, like a romantic painting on film. And so on.

Beings with other inhumanly high levels of attributes are the same way.

An inhumanly strong being has *no* pause when opening up an old, stuck jar. It opens like a well-oiled closet door.

An inhumanly dexterous being *never* trips, loses his footing, clips his toe on the corner of the bed, and so on.

An inhumanly intelligent person can think as fast as he can speak; he doesn't pause to collect his thoughts, say, "Um, er," or the like. At a press conference, this person could point at a questioner, immediately reply with 100% accuracy, and point to someone else. There would *never* be an instance where someone could question him about the factuality of a quote . . . he is *always* correct.

And so on.

Inhumanity means not human; being human means sometimes doing some stupid, illogical, or random things. If you want your elves to be something other than pointy-eared long-lived humans, give them some inhuman quirks. Not sneezing, for example. Or answering truthfully when asked, "How are you?" Or needing to trim their earlobes.

And if you want to emphasize your own humanity, do human things every so often. Contrariwise, if you want to emphasize your own lack of (or declining) humanity, fail to do human things. People take whiffs of something awful smelling (like spoiled milk), express disgust, then offer it to someone else to smell. People say "Ow!" and curse when they take some minor (often self-inflicted) damage. People walk away with pens when they borrow them from stores.

And people often need to go to the bathroom . . . often at inopportune times.

Last week's answer: Legend of the Five Rings Diskwars: Ancestral Home of the Lion

(*Five stars*) "Whose fingerprint is that on the champagne bottle lying on the floor? Are any prints other than the owner's found on the empty cash box in the closet? And do these prints match those of any of the seven guests invited to the showing?"

Designer's Notes: GURPS Screampunk

by Jo Ramsay

"More Swooning, and Less Regurgitation!"

From the outset, *GURPS Screampunk* was intended to be an unholy mixture of gothic horror and steampunk. Mixing genres has a lot in common with cooking; when it works, the results look spectacular and taste great! When it doesn't, you can add more spices and turn it into a curry ("What if we added characters from childrens' TV series?"), and if it fails spectacularly then there's always the option of calling out for a pizza (in gaming terms, this probably means playing *Star Trek* instead). To string the metaphor out, if the mix works, then the individual "taste" of each of the ingredients is detectable in the results, and they subtly enhance each other, creating a much more exotic dish than either alone.

I looked hard at the themes behind the component genres, cutting them back to basics and trying to work out which pieces were most compatible, or most incompatible. What is it that gives steampunk/gothic horror its distinctive "feel"? Do they share any assumptions? Are they set in the same world/country/time period? Do the themes coincide on any level?

In this case, they are both based on literatures from similar periods. The overlap isn't perfect, because the classic period for gothic novels was 1750-1820, whereas steampunk isn't really a genre (or even subgenre) but the Victorian idiom is rooted in the 1838-1910 period. Having said that, the cinematic GM is free to pick and mix elements from all over the 18th-19th century, turning them into one glorious melodramatic whole! There is precedent.

Gothic horror is a genre so well known and understood that almost everything about it has become a cliché. This might be a bad thing if the aim was to win prizes for originality, but for roleplaying it is a gift. A major communication barrier in setting up a successful game is in both players and GM sharing an understanding about the nature and assumptions behind the game world. Any GM who has ever tried to run a game in a particularly exotic or unusual backdrop with players who weren't interested in absorbing pages of game-history will be familiar with the problem. Traditionally, the solution is to introduce the players/PCs to the game world slowly, one small piece at a time.

A Victorian game is set in a world that is both like and unlike our own. But the classic plots, characters, and atmosphere of gothic horror are so familiar that players have a head start in understanding "in their bones" what the game is all about, without needing to do extra research (i.e. work). One of the objects of screampunk was to break down gothic horror into sets of common themes, locations, plots, and NPCs, to help GMs to put together scenarios that hit all the *right* clichés. But what about the steampunk? There's no real conflict between the genres in terms of atmosphere or theme, because steampunk stories can just as easily be dark and gloomy as they can be optimistic. Gothic steampunk is therefore a darkly painted vision . . .

Invariably, with such a tight word-limit, there were fragments of stillborn text-boxes that were excised before their time. The paragraph below, about the nefarious ways in which experimenters acquired human corpses, was prompted by the death fetish that infuses a lot of gothic work. Much of this stems from the "graveyard poets" who wrote morbid, lyrical verse about the futility of life towards the end of the 18th century.

Invasion of the Body Snatchers

From renaissance times, dissection of cadavers became a regular feature of medical schools. Legal ways to acquire corpses involved paupers selling their physical remains to medical schools before they died, and the acquisition of the corpses of criminals who had either been sentenced to capital punishment or died in prison. There were never enough corpses to meet demand, and eager researchers traditionally paid various unsavory characters to visit cemeteries and abscond with the bodies of the recently deceased. In the late 18th century, public anatomy lectures became very

popular, and the demand for bodies in good condition rose. Grave robbing was a profitable and widespread phenomenon -- to combat this, people added extra security features and traps to their tombs, as well as employing security guards in graveyards.

The laws of demand and supply meant that in the case of some poor people, they were literally worth more dead than alive, and criminals moved in to take advantage of them. The most notorious body snatchers of all were Burke and Hare, who became procurers for Edinburgh's medical school. They murdered people (carefully, to keep the bodies in good condition) and sold corpses to the local medical schools on a no questions asked basis. At least 16 people were killed before they were apprehended, in 1829.

The gothic fascination with death meant that grave robbing became firmly established in fiction of the time, either directly (as in Robert Louis Stevenson's "The Body Snatchers"), or implied as a way for an inventor to acquire human parts (as in Mary Shelley's "Frankenstein.")

Scientific Societies from the Victorian World

To give characters more real world grounding, scientific societies of the time were also discussed. The Royal Society and the SPR made it into the final cut. The two institutions below ended up in the great recycling bin in the sky because they are limited to professional engineers, whereas any interested members of the public could feasibly attend the ones that ended up in the book.

The Institute of Civil Engineers

Founded to raise standards of education among engineers, the ICE was (and is) a learned society that only allowed membership to professionals (as opposed to any interested member of the public). It quickly built up a library, and catered to members with technical meetings, journals, and regular transactions, as well as being involved in the development of standards. Practitioners gathered to discuss "best practice" and to investigate civil engineering projects that had failed in interesting and educational ways. Initially, the society was not a great success, but its fortunes improved when Thomas Telford, the Scottish engineer who built the Menai Bridge, and a man of many influential contacts, was able to secure a royal charter. By the end of the Victorian era, the Institution had become a wealthy organization, maintaining a plush headquarters in London that included conference rooms that could hold 600 people.

The International Telegraph Union

The first telegraph message was sent by Samuel Morse in 1844 between Baltimore and Washington -- less than ten years later, the technology was available to the general public. At this time, different countries used their own systems and telegraph codes, so the lines could not cross national boundaries without being decoded, transcribed, and formally handed over at frontiers. It became obvious that interconnection agreements between countries were required. On 17th May, 1865, the first International Telegraph Convention was signed by 20 participating European countries after long and arduous debates. It laid down rules for standardized equipment to *guarantee* interconnection, and standard tariff and accounting rules. An International Telegraph Union (ITU) was set up to allow amendments to the convention to be discussed and agreed upon. The ITU was an international forum, holding conferences across the globe where experts from many states could meet and discuss common issues. During the 20th century, it evolved into the most prominent telecommunication standards body in the world.

Character Types

As well as the classic hero and villain types, there are a host of minor figures, familiar through countless novels and films, who "belong" in gothic stories. After all, where would the genre be without the pale innocent heroine, the sinister servant, the debauched aristocrat, or the vengeful scientist? Others were added to better support the industrial and scientific side of steampunk. Originally I considered using templates to present the supporting cast, but this was quickly dropped for two reasons.

1. They take up valuable space.
2. *GURPS Steampunk* already includes templates for many of the common Victorian character types.

Instead, the NPC stereotypes had a much shorter format, with a brief description, suggested advantages and disadvantages, and a typical quote. This one was cut for space, and because we weren't entirely sure whether it was too English an idiom. In cases like this where there is already a relevant template in *GURPS Steampunk*, it has been referenced. But there should be enough information in the text for readers who don't own *GS* to fill in the blanks themselves.

The Corrupt Industrialist

He may be a multi-millionaire but the corrupt industrialist is morally bankrupt. He uses and abuses the men who work his factories, and cares for nothing except the bottom line, and his own excesses. He has no breeding, no gentility, and no understanding of *noblesse oblige* -- in short, despite his business success, he is no gentleman and will likely never be accepted by decent society.

Template: Captain of Industry (p. STM32)

Customization Notes: Disadvantages include Reputation (nouveau riche), Sadism, Enemy (business rivals) and Megalomania, and common quirks are "Speaks with a strong regional accent", and "no fashion sense." Skills include Intimidation and Accounting. Other than this, the Captain of Industry template fits very closely. As a gothic villain, he may also have Unnatural Feature, or a Disturbing Voice.

Most likely to say: *"Where there's muck, there's brass!"* (in a Yorkshire accent)

Plot Seeds

At the end of the day, someone has to bring the plot elements, locations, ideas, and characters together, and the hope with plot seeds is that they provide quick examples of how the elements of screampunk may be combined. Again, space was tight, and this seed was cut for space.

Plot Seed: The Dead Man's Hand

Hook: One or more characters receives telegrams from friends or business contacts in Scotland, with unusual footnotes appended to them. Telegrams may be from different people, but the footnotes are all in the same style, either purporting to be from someone known to be dead, or referring to events that happen after the note has been received. In each case, the sender knows nothing about the footnote. Messages in the newspapers indicate that at least one other person has received similar footnotes, and is looking for other people in the same situation.

Background: Thomas Blandell, a criminal mastermind, plots to intercept the main London-Newcastle telegraph line, so as to send false information to Scotland Yard. This will allow him to carry out a series of increasingly daring thefts, including that of official information that he will sell to the French! Unfortunately, skilled telegraph operators can easily recognize each other by their "fists," which makes it difficult to effect a substitution, or "tap" messages partway along the line.

One of the telegraph operators from a remote station was kidnapped and blackmailed into agreeing to substitute messages. Unfortunately, he turned out to be a drunk who had to be quickly dispatched before he revealed the plan to his drinking friends. Desperate not to lose track of his plan, Blandell arranged for a disreputable surgeon friend to transplant one of the man's hands onto Pine, a minion who believed he was getting "new fingerprints." The surgeon swore that this experimental procedure would result in the hands being "as good as if they were still attached to the original owner", and was well rewarded for his pains. The transplant took very well, and as hoped, the right hand's new possessor had inherited the previous owner's skill at telegraphy. And, of course, his "fist."

Pine was able to substitute himself for the dead operator, having excused his absence on a grandmother's funeral, and began to intercept messages. However, the hand is having a dreadful effect on his mental state. He suffers terrible

nightmares, and hallucinations, as well as memory lapses in which he has become convinced that he goes on murderous rampages. In addition, the hand adds footnotes to telegrams of its own accord, some of which actually point obliquely to Blandell as his murderer.

The writer of the newspaper advert is a private detective whose client has shown him the odd footnotes. He is curious to investigate, but needs more information . . .

Feed the Tree

by Jo Ramsay

Introduction

This is an old-fashioned ghost story, heavily influenced by M R James. It would work as a one-shot for a group of PCs who share some friends, or are willing to spend a few weeks helping a young woman to decorate her house for bed and board, and a small fee.

For an explanation of the Iron Ref rules and a list of the secret ingredients, please see the [Introduction](#).

Plot Hook

One of the PCs gets a phone call from an old school friend, Elizabeth. She swaps anecdotes about college and family, before informing him excitedly that she has just inherited a large old house from her great-aunt! "Oak Arbor Cottage" is a bit run down, and she wondered if the character would like to spend a couple of weeks helping her to redecorate and catch up on old times. It could be a quiet holiday, as the local countryside is very beautiful, and she'd be more than happy to cover any travel expenses. It'd be fun! If the PC wants to bring any friends, that's fine too, and she'd love to meet them.

Elizabeth sounds a little too keen. Her voice has a breathless quality, either of excitement, or of trembling desperation. If pressed, she admits that she finds the place a bit spooky on her own, and would really like to have some people around. She doesn't give any details, only mentioning that she's been having bad dreams, and that she had a nasty argument with the cleaning lady about one of the bedrooms that has been preying on her. If the PC is still reluctant, Elizabeth begs him, trying hard to conceal her sobs on the other end of the line. Whatever she saw or dreamed, it has left her terrified of being alone.

Events Unfold

The journey is uneventful, and the group are able to finally reach the small village of Shady Springs, an old rural settlement that is being overtaken by the forces of progress. The local pub is in the process of being turned into a smart bar and a couple of fast food joints have recently opened. Genuine locals are cautious of strangers, but can be coaxed into remembrances of Elizabeth's great-aunt (the old cottage's previous owner) who was well-liked in the area. Oak Arbor Cottage itself has an unlucky reputation; PCs may be able to winkle out the old story that a woman once committed suicide there.

The final stage of the trip is via car or cab down narrow country roads. The sun is just beginning to set when Oak

Arbor Cottage comes into view, set into an acre of garden, with high walls and a long driveway. The house itself is tall and menacing, casting long dark shadows onto the wooden front porch; the main building is built in a different style to the two wings and is clearly much older. Lights are on in the downstairs windows, and Elizabeth herself comes out to meet her guests when she hears the car arriving. She looks much as the PC who knew her remembered, allowing for the passage of time, but has dark rings under her eyes that speak volumes about lack of sleep. An older man with reddish hair also helps PCs with their bags, and Elizabeth introduces him as her cousin Rick who was able to come down at short notice the previous day. Rick is a large, jolly fellow who laughs at his own jokes, and gives the group a quick tour of the house. The main section is at least 200 years old, and the two side-wings were added at later dates. It's been in the same family since the late 19th century, and there are still boxes of papers and old effects in the cellars. Rick pauses briefly outside one door, jerking a thumb as he comments that this was the old locked room that the cleaning woman made such a fuss about it. It's also the room he is sleeping in. The group are assigned rooms in the right wing. The decor is fussy and old fashioned, with prints and trinkets that an old lady might have chosen, but the beds are well-aired and seem comfortable. After people have installed themselves in bedrooms, it is time for dinner.

It's The Lady's Room

Elizabeth is happy to have old friends around and becomes quite chatty as the food and wine are passed around. She admits that her dreams had been troubled lately, filled with images of creeping and squeaking things. If anyone asks about the locked room, she explains that when she first arrived to sort out her great-aunt's possessions, one bedroom was locked. It was when she asked the cleaning lady to open it that the woman stormed out of the house, saying that "it's the lady's room and should be left to her." Elizabeth cleaned it up herself; it had evidently not been touched in a very long time but must have once been a woman's boudoir. She had slept there for a couple of nights, but not very soundly, and was relieved to surrender it to Rick when he arrived. He, needless to say, slept like a log the previous night.

After dinner, as people are sitting out on the porch and chatting, there is a scream from the kitchen. As characters enter, they see Elizabeth with her hand across her mouth, staring wildly at a dark object on the floor. It is a piece of chocolate -- with a group of large wriggling leggy spiders clustered across it. The woman is as pale as a sheet, and very shaken. She found them in the pantry as she was clearing up, and as she accepts a shot of brandy, she peers up at characters wanly and whispers that the spiders were **huge**, and that they weren't in there before. She demands that characters kill all of the spiders, and will not enter the kitchen again until she is assured that this is done.

The pantry is a food storage cupboard; there aren't any obvious holes in the door but there are cracks in the wall and it's possible that something might have got in under the door. There are no spiders inside it currently.

Timescales

Elizabeth's nightmares get steadily worse over the next couple of nights. If she is persuaded to move back into the lady's room, then she also takes to sleepwalking, ending up in the garden outside. Any female PCs also experience bad dreams, characterised by the feeling of insectoid creatures crawling over and inside her. If one of the women sleeps inside that room at any time after the third night, then her time has run out -- see "A night to forget."

Investigations

1. Finding out more about the history of the house.

Possible avenues include asking the cleaning woman (who turns up punctually every day at 11am), searching through the old boxes in the cellar, paying a visit to the local church or graveyard, asking around in Shady Springs to find a local historian, or any other viable method of research in such a remote location.

The infamous suicide was Elizabeth Larson, a young bride who was found hanged from one of the garden oaks in 1863, when she heard that her husband had been killed in the civil war. Apparently she also smothered her young baby

daughter, burying the child somewhere on the grounds before killing herself.

The locked boudoir had once been Elizabeth's, but it was locked long after her death. In fact, two other women had died in the same bedroom, both of whom had previously been in good health. In neither case were suspicious circumstances involved. One fell through the window, stabbing herself on a glass shard, and the other had an unexpected heart attack. The deaths occurred before the new wings were built, and the bedroom was considered so unlucky that it was then locked up.

If characters search the "locked" bedroom carefully, they may find an old family bible that is hidden under a loose floorboard. It belonged to Elizabeth Larson, and tucked inside the pages are yellowed letters between herself and her husband. The last few letters were obviously never sent, and speak plaintively about how she is trying to love the new baby, and she wishes that he would hurry home, and that she tied a yellow ribbon onto the tree, and doesn't he remember that he swore he would come back for her?

2. Spiders?

It's a country house. There are spiders, but they are small and harmless. There may be larger creatures in the trees outside, and the blasted oak in particular has huge cobwebs in its remaining branches. It is (or was) the largest tree in the garden, but was hit by lightning many years ago. Fanciful characters (or those with good hearing) may hear rustling inside it, as of creatures moving around.

This Way Out

Characters can avert the coming crisis in several ways. Destroying the blasted oak and its roots will reveal the tiny bones of a newborn baby, buried with a bible -- giving these a Christian burial will appease local spirits. Persuading Elizabeth to sell up, move out, or demolish the house will also destroy the ghost's link with her and the building. But if none of these things happen, move swiftly on to the next paragraph.

A Night To Forget

Three days later, the weather turns dark and stormy. Rain lashes down against the windows in rivulets of tears, and dusk comes early. If PCs have been making efforts to uncover the mysteries of the house, both Elizabeth and Rick are much cheered -- the findings might have been dark and dismal, but at least they are among friends. And who really believes in local superstitions anyway? Drink flows freely at dinner and after a late night of chatting, cards, and board games, everyone retires to bed.

But on this night, no-one sleeps soundly.

At 3am, a piercing scream shatters the silent house. It is a sound of primal animal terror, as of a soul in Hell, and it is coming from Elizabeth's room. Then, as suddenly as it began, the cry is cut short. Characters all arrive at the room together, and when the door is opened, a flock of small velvety bats flutters out in a panicked rush, filling the corridor outside. Along the ground, spiders scuttle out of the bedroom as well. The bedroom itself is dark, and a prone figure lies half on and half off the bed. When a light is turned on, terrified bats flutter madly as they search for an exit, becoming entangled in hair and clothes, and large spiders stream toward the shadows. Elizabeth herself is quite dead, and quite naked, clutching only an old yellow ribbon in her left hand.

From out of the window, the old blasted oak glows eerily in the moonlight. The young soldier has returned yet again to claim his bride.

Planet of the GenCon Report: Wednesday

MILWAUKEE -- Gather 'round the fire everybody. We're all friends here by now. You remember me. I'm your old pal, Micah. I appear at this time each year to lead you deep into the adventure that is GenCon. Whether you're on the floor yourself, too busy playing games 24 hours a day to make it, or forced to work a regular job like one of those "adults" we keep hearing so much about, I'll be your guide.

As I'm sure you know, we're closing in on the end of the line for GenCon in Milwaukee. Come 2003, I'll be reporting from Indianapolis instead. And that's not all. Origins, the other big gaming con, is coming up fast and giving this old war-horse a run for its money. So, GenCon management can be expected to be working awfully hard this year to make sure people have a good time, and plan to return. I'm not saying that means they'll be giving away free Pez, but you never can tell.

And don't forget that convention management is not the only bunch with a reputation on the line. Game companies come to Milwaukee with their newest designs, just hoping to catch a breakout hit, or at least enough sales to keep it together another year. And the gamers themselves, thousands upon thousands of them, are all looking to get over on their opponents. All I can say is, don't tap on the glass. They get aggressive.

New and Notable

Last year the game on everybody's shopping list was *Dungeons and Dragons 3e*. There isn't such an obvious hit this year, but there will be plenty of new products to keep this column running. White Wolf will have two big ones, *Exalted*, which bowed at Origins, and *Adventure*, a pulp action game, new at this show. Our own Steve Jackson Games will be showing *Frag* and *Munchkin* for the first time. And I'm certain that there's an entrepreneurial gamer in his or her garage right now putting the finishing touches on something that we'd never expect. You'll read about them all here.

Blast from the Past

There are a lot of traditions surrounding GenCon. The Thursday night party hosted by WotC, the late night LARPS, the Klingons with Coke bottle glasses. But one such tradition has sadly ended. Kid's Place, the child-care program that I praised in this very column last year, and which went a long way toward making convention attendance a possibility for families, will not be present this year. Rumors abound, but no solid information is forthcoming about whether or not it will be back. In any case, adults and children alike will miss it.

Also between last GenCon and this one, FASA Corp, justly famous for such great games as BattleTech, Shadowrun, and so many others, shut its doors. They always had a giant mural above their booth, which could be seen throughout the floor. This year, there will be only cinder blocks where it once hung. Will FASA co-founder Jordan Weisman's new company, WizKids (*Mage Knight: Rebellion*), step up to fill the void?

Seen Around Town

Hey, what's that? A gaming industry professional -- with time enough to game? That's right, my friends. This is the place where we report all the amazing and unlikely things spotted around the convention. One thing I plan to see this year is the special, invitation only, designers demonstration game of White Wolf's new release, *Adventure: The Storytelling Game of Pulp Action*. The average gamer won't get to see this session, personally led by former Black Hand master Storyteller, Ray Davis. But you're not an average gamer. You read *Pyramid*. Look for the report of this game in Saturday's issue of GenCon Report.

Heard on the Street

A popular T-shirt at GenCons past reads, "Don't tell me about your character." Well, with all these games going on, there just have to be some good stories, both true and fictional, floating around. I'll gather the best ones together and bring them to you, with just the right mix of skepticism and suspension of disbelief that makes our hobby so much fun.

Dark of the Night

Truth to tell, this is the most dangerous section of GenCon report to research each day. With gaming and partying going on 24 hours a day, I'm often hard pressed to get the story written and sent to *Pyramid* before passing out long enough to do it all again the next day. But you didn't come here for my whining. I'm strong and dedicated to my craft. I'll be in all the usual hangouts, the Hyatt's second floor bar, the LARP wing, the Secret LocationTM, anyplace where the action continues after the weak (or lucky) are already in bed.

And it should be worth it. Among other late-night classics, the Munchausen invitational continues for a second year, this time featuring Guests of Honor Baron and Baroness Phil and Kaja Foglio (you guess which is which), Lord Mubday himself, John Kovalic, and as always, Doc Cross.

By The Numbers

Origins attendance figures were down quite a bit this year. Will that trend continue, and take a significant bite out of the now traditional 25,000 attendees at this "granddaddy of all gaming cons?" Or will it be able to hang on? We'll try to pry the results from the brains of convention managers and report them in this space.

Well, so much for the tale of the tape. Thursday morning the convention gets underway in earnest, and we'll all get a look at what GenCon is like in the 21st century. I'll be around the dealer's room, the gaming halls, and local taverns throughout. If you're at the show, stop me to say "hi" or to tell me your convention story if you think it would make a good read for the other *Pyramidians*. If you couldn't make it this year, don't worry. Check in every morning to read the latest from GenCon. And come in Monday evening under the *Pyramid* for the GenCon Wrap-Up chat. As always, I'm taking story suggestions, requests, and comments at genconreport@hotmail.com. And remember, be they the humble six-sider, the ubiquitous twenty-sider, or the mighty Zocchihedron -- may the dice go your way.

Fort Sumter Syndrome

A Sci-Fi Recipe by Sandy Antunes

Setting

Welcome to the future. Trading companies like The Lighthouse Authority (TLA) make good money in their role as go-betweens for such desirable commodities as spices, chocolate, crops -- just about anything.

For an explanation of the Iron Ref rules and a list of the secret ingredients, please see the [Introduction](#).

The Crisis

Historically, Fort Sumter protected the waterways into Charleston, South Carolina. While in Union hands, it was the site of the first US Civil War battle. The Confederates took it and then, in the year 1863, held it over a 22 month siege that reduced it to rubble. Restored as a historical monument in the 20th century, it was purchased in the 21st century by TLA for use as a minor trade station with access to southern farmlands.

Like all TLA ports, it emphasizes quaint charm, minor defensive strength, and low cost. With a minimal staff of 16, it relies on mutual need and a nice bank of repeating railguns for survival. Ah, the advantages of rebuilding Confederate forts with 21st century technology.

Unfortunately, Fort Sumter/Lighthouse Outpost #37 faces its latest crisis. Its crew has triggered the Emergency Lock Out and is not responding to calls.

[Alternative settings: Anywhere you can stick a trading station!]

The Starting Point

The characters arrive just outside of Lighthouse Outpost #37, with the explicit goal of finding out why the trade station is shut down. Likely they are the advance team sent by TLA to fact-find. Or (if the GM wishes), they are freelance opportunists who heard about the shutdown, competitors, grunts hired by the lost item shippers, or simply 'tourists in the wrong place at the wrong time'.

TLA wants this post reopened, so by midnight it is sending in a full strike team and replacement crew. So the characters have until midnight to do what they can to save TLA some money (or make some themselves).

Arrival At Fort Sumter

The Outpost does not respond to any communications hails. The automatic broadcast on the station's main channel simply repeats: "This Lighthouse is temporarily closed. Please try again tomorrow."

There are two visiting cargo vessels harbored at the Outpost, plus 2 of the 4 Outpost excursion boats are moored at the company dock.

Everything else seems normal, save that no people (employees or clients) are outside the building, and the lighthouse on top is covered in filth -- bird droppings or something similar. The rest is ship-shape, and even the lawnmowing robots are still operating.

Experienced eyes will note that the gates and blast doors are closed. Also, the heavy weapons are armed, track any incoming visitor, and seem ready to fire. Oops. This *is* the fort that once survived 22 months of Civil War blockage, they do have a reputation to uphold.

Entrance therefore can be achieved by:

- a. Knowing the emergency entrance passcodes, provided only to TLA employees sent specifically for this mission. Any such codes are valid only for a short time window, currently "5pm-6pm". This means they will have to waste valuable time (and daylight) if they wish to wait;
- b. Surviving at least 4 minutes of railgun fire while parachuting in, boating in, or speed-swimming in. Then, breaking through armored doors or gunproof windows to enter the buildings;
- c. Being enough of a closet history buff to know of some undocumented 'secret entrance', at the GM's discretion;
- d. Cleverly thinking of sneaking in underground, past the guns and up its sewers. This will trip outpost sensors, so they can expect any base security staff to be on alert. It also means a surprise encounter with 3 lurking sharks. Plus, anyone who swims in the harbor will start feeling a little strange (read **Strange Experience One**).

Strange Experience One: Art Attack

"You feel especially well rested, for no particular reason. In fact, you are suddenly overcome with a strong desire to drop what you were doing and . . ."

(roll on table or choose according to character's nature):

1. Compose a song
2. Begin writing that novel you always wanted to write
3. Create bold new culinary dishes
4. Write sensitive, insightful poetry
5. Create tiny, intricate machines of great precision and cleverness
6. (other artistic urge, GM's discretion)

This urge passes after they complete one work, but the desire to do more such work still remains a small part of their thoughts.

Strange Experience Two: Dying For Chocolate

Anyone who drinks, swims or showers at the base will get the "Art Attack" syndrome, and repeated exposure just makes it more severe. Eventually, one drops everything except the basics of survival (food, drink, sleep) in order to monomaniacally pursue one's artistic pursuits. Everything except 'create' is a distraction.

Being away from the base's water supply results in 'detoxifying', and after one day normal thinking returns. There is slight amnesia about the 'creative period' but characters do retain the memories of joy and artistic creation.

(Note that the Art Attack effect just provides dedication and a focus on craftsmanship. Whether the art is *good* is your call!)

Inside!

Depending on how they entered, any room can be their starting point. Oddly, they will not encounter any violent threats, and can simply move through the base to gather information.

Subterranean:

- A. Backup generator, backup water supply, and backup communications. Not currently in use.
- B. Ammo dump, Supplies, and Storage. Nothing of note, all seems ship-shape.

Ground Level:

- C. Command and Communications.

This controls most trade-related station functions, including communications and lock-down in case of emergency or attack. And, surprise surprise, it seems someone has triggered the "Emergency Lock Out" panel. See **Killing The Emergency** for more details.

- D. Security Zone.

This area is **Locked!** (It's also a bit of a red herring; there is no real information or need to enter here.) Consider this the gratuitous combat sequence. If the characters try to enter, you can make this as easy (pick the lock) or difficult (twenty defense drones and laser cannons) as you wish. Other than being able to lock down the base (which has already been done using the civilian controls), there is nothing useful to do here.

- E. Warehouse.

Storage of trade goods, in sealed containers. None show any signs of tampering, opening, or malice.

Second Floor:

- F. Living quarters.

Here's where you can have fun. The Outpost had a staff of 16, plus 7 visiting ship crew. All have undergone STRANGE EXPERIENCE TWO. As a result, only 9 people are at the base. The rest have gone into Charleston itself in pursuit of their own personal vision. (As a result, the Charleston group are 'sobering up' and will return in a day or so). See "THE CREW" for individual details.

Top:

- G. The Lighthouse.

This working lighthouse is a single tiny room with the big rotating light bulb, and a few hundred bats. It is literally stinking with guano, and anyone entering is quickly mobbed by dozens of tiny, frightened bats.

Harbor:

- H. Trade ship one.

This ship is only partially unloaded. There is clear evidence that a loading unit caught fire at some point. Two of the containers are burned and split, spilling their contents. One contains grains and rice; the other contains chocolate -- technically, unprocessed cocoa beans. This mess has been scattered about, as if birds have pecked at it.

I. Trade ship two.

This ship is empty, apparently having unloaded its cargo already. There is no sign of the crew in residence, which is unusual -- usually a skeleton crew is left after an unloading for security reasons.

The Crew

Only 9 individuals remain at the outpost, the rest being in Charleston. All are totally in the thrall of the "Art Attack" condition, manifesting as:

- Outpost Captain and Security Chief: mad poets, both
- Outpost Comm Officer, Med Office, and Machine Operator: erotic sensualists
- Ship #2 crewmember: impressionist painter
- Warehouse operator: watchmaker
- The Cook: deep thinker
- Trade Liaison: dead of unknown causes (GM note: likely just a stroke)

The Log Book

The log book exists in three places. There is an electronic copy in the outpost systems. Both the Captain and the Security Chief have a paper copy, which they are using as scrap paper for writing their poems (on the back). The latest log entries read:

Friday Report: We have been invaded by bats! A roost of them have set up in the Lighthouse. Our Cook hypothesizes they were driven from the mountains due to feeding problems. Who cares! Trade is up.

Saturday Report: I don't know which I hate more -- the damn tourists or the annoying bats. Business as usual, plus I've assigned a cleanup crew for the Lighthouse by COB Sunday.

Sunday Report: A new ship docked, and suffered a minor mishap. We will finish loading it tomorrow. This delays our other clean-up.

Monday Report: Slow day, slow day. I wish this work would go away.

Tuesday Report: The base, on yet off. I hear no call for work. Instead, let the machines rule the work world, and my spirits soar in realms of ethereal bliss!

(no further entries)

Killing The Emergency

One simply turns off the Emergency panel and turns on the communication and door controls, and the station is back in operation. Consider this a simple task for any tech, moderately difficult for others.

Once they deactivate the Emergency Lock Out, an TLA followup crew can move in and re-occupy the base, move the existing personnel to the hospital, and resume trade operations. See **The Real Story** to see why this is an inadequate solution.

The Real Story

The sudden flock of mysterious bats appeared only a few days earlier and immediately roosted in the Lighthouse. Maintenance robots were not well suited to removing them, so the Captain decided to have the crew handle it "when

they got a chance".

However, the bats managed to get into the damaged cargo ship and eat the raw chocolate. This, processed by their unique metabolism, results in bat guano (bat droppings) that have strongly psychotropic and hallucinogenic properties. And these droppings, falling into the harbor water, have contaminated the drinking supply for the base. This resulted in "Dying for Chocolate" for all the crew.

If the cargo is cleaned up or the bats are eliminated, the problem will not repeat. If the backup water supply is turned on, the base is "safe". The remaining guano in the harbor water will, about a day after any cleanup, become diluted enough to be safe. As the contaminant does not show up in tests, it is unlikely to be discovered by any followup teams or medical crews.

End Game

There are three likely endings.

- **Clueless.** "Turn the base back on, wait for replacement crew, go home." This doesn't really solve the problem -- unless the bat dropping issue is tackled, the problem will just repeat.
- **Loyal.** To really solve the problem, the characters need to activate the backup water supply, clean up the loose chocolate, and (optionally) get rid of the bats.
- **Smart.** Why did the crew go wacko? Assuming the characters deduced the contaminant, they have now discovered a new and nigh-undetectable drug that makes people ignore distractions and really focus on their own personal muse.

That raises a question of loyalty. Do you inform TLA of the Art Attack drug? Sell the idea? Bury it? Go into business for yourself? Capture the bats? Hide the evidence?

"A disaster.

To realize the true find.

To best act.

This is the true test of character."

- TLA Aphorism -

Bitter Water, Sweet Magic

by Chad Underkoffler

Introduction

Elat Aqaba, a player in occult circles, contacts the PCs to investigate something supernatural. The fee offered is substantial. Aqaba is known to be **old**, wealthy, honest, and discreet.

For an explanation of the Iron Ref rules and a list of the secret ingredients, please see the [Introduction](#).

Aqaba (see description below) arranges a private meeting with the PCs. In a Stilted, flat voice, he speaks:

"Man known to Aqaba dead. Zhang Li. Taoist alchemist. Beaten, slashed in empty room last week. Aqaba want to discover if either these responsible." (*Aqaba hands the PCs two folders: yellow and blue.*) "When talk to them, codephrase 'bitter water.' Aqaba give half payment now, with expenses." (*Aqaba indicates a box sitting on the table. In addition to the money, there's a cellphone and a debit card for \$8,000, with a sticky note reading "PIN 1836."*) "Call Aqaba daily to update. If need reach Aqaba, voicemail programmed. If discover anything, call Aqaba. Questions?"

Aqaba won't reveal more than he has known the suspects for a long time. (Though things phrased as commands may force him to; see below).

Investigation

The suspects are powerful magi, 100+ years old, and difficult to locate. Their defenses jam supernatural information-gathering. The folders include a picture of the suspect with date on the back, as well as basic background information. (For a less travel-intensive game, the suspects can be located in one large city. For extra intrigue, a PC may have had dealings with a suspect in the past.)

The PCs may investigate the suspects in any order. If the PCs don't report in daily, Aqaba calls for a status report. He won't volunteer information to the PCs unless they unwittingly phrase it as a direct command.

THE YELLOW FOLDER: James O'Grady

Folder Information: Photo dated 1981. Emigrated from Ireland in 1855. Screever (pavement artist working in chalks). Sorcerer and runist of skill. Smoker. Disliked Zhang-- and all Chinese. Last known location: Central Park, New York City.

The best way to find O'Grady is to walk around Central Park, studying the pavement. The PCs will eventually find an

intricate chalked design incorporating runic elements. For those with occult senses, they detect that the artwork draws magic and ghosts. Sitting near the pattern is a nondescript man, fiddling with colored chalks and holding out his hat. He claims to be the artist, James O'Grady; unfortunately, he doesn't match the picture, nor does he respond to the phrase "bitter water." He is O'Grady's apprentice. If followed surreptitiously, he leads the PCs to O'Grady's home. If threatened, he immediately scuffs a chalk pattern near his feet, and defends himself with meager physical and magical abilities.

If summoned, O'Grady appears within ten minutes, demanding an explanation. After hearing the code-phrase, he'll ask, "Is there a message from Aqaba? We're not due to meet for another eight months." When told of Zhang's murder, he'll say "Good." He wistfully denies having anything to do with it. He admits to being part of a group with Zhang, but refuses to elaborate. He likes Varady (though he's unaware of the wizard's secret) and despised Zhang. If questioned about Aqaba, he's dismissive -- as if Aqaba were unimportant. His alibi is that he's been working on an extremely difficult sigil in the basement. He may brag about its intended purpose (left as GM's option; it should be big and involve ghosts -- an ectoplasm containment grid would be appropriate.) He has an address and phone number for Varady's shop in DC, but won't give that to the PCs without inducement.

Go to Shadowbat Attack, below.

THE BLUE FOLDER: Estragon Varady

Folder Information: Photo dated 1971. Born in Philadelphia, PA, in 1823. Wizard of the mind. Bookdealer; dislikes telephones. Dealt respectfully with Zhang. Last known location: Washington, DC.

Estragon Varady deals with real-deal occult books; indeed, he's known for it in the right circles. He has a little bookshop in Georgetown; discovering its location is a mild challenge, because Grimoire Books doesn't advertise. Talking to locals in the occult subculture helps, as will wandering around Georgetown looking for doors that fade in and out of reality, glimmering will o' the wisps, or strange sigils on the sidewalk.

When found, the sign on the door gives the hours of operation as nightly from 6 pm until 3 am. Varady is never seen entering or leaving the place, and it is too small to have an apartment. (He teleports.) Varady's answering service gives the shop's hours and location, and can set up special appointments or take messages.

Varady's shop is remarkably empty -- there are only a dozen scattered books around the single room; indeed, it looks more art gallery than bookstore. Varady is erudite, charming, and friendly. When presented with the codephrase, he smiles and says, "Yes? What does the maitre'd of our little lunching club desire?"

If told, he appears shocked that Zhang is dead -- "I just had dinner with him two months ago!" His alibi is that he was with a customer -- his appointment book (and indeed, the customer) backs this up. He admits to being part of a social club with Zhang and others (all dead). He liked Zhang and is offended by O'Grady's bigotry. He is amused by Aqaba for some reason.

The Bitter Water Tontine

- Magnas Coloradas (called "Red Sleeves" due to what happened to his clothes in battle) was a striking, 6' 6" giant Apache chief. He united the Apache nation after the murder of Apache men, women, and children for the Mexican bounty on their scalps. Mangas and his 400 warriors avenged the treachery through slaughter. Taken by betrayal, he was interrogated by General JR West and killed under mysterious circumstances on January 17, 1863. An Army surgeon cut off the head, boiled it, and sent the skull to a phrenologist.
- A cabal of 11 magi based in New York got hold of the skull later that year, and summoned the great chief's spirit for interrogation, believing Magnas to have had mystical powers. Under duress, the ghost spoke of a hidden Medicine Jug, filled with magic xocoatl, that he had taken during a Mexican raid. The cabal went West to steal

the Jug. In taking the Jug from its guardians, 6 of the cabal were killed. The 5 remaining members decided to enter a tontine, leaving the administration and care of the Jug with the golem servant of one of their dead comrades.

- A *tontine* is an annuity shared by subscribers to common fund with the benefit of survivorship: the share of each survivor increases as the other subscribers die, until at last the whole goes to the last survivor. The commands of the Bitter Water Tontine to Aqaba were:
 1. Protect the xocoatl;
 2. Protect yourself;
 3. Only we who are here are allowed to drink the xocoatl;
 4. We must all drink on the same day;
 5. Summon us when it is time to drink again;
 6. Guard the sanctity of the tontine: if one of we magi is killed through the acts or agency of another magi, the murderer must be destroyed.
- The tontine has met once per decade since 1836, summoned by Aqaba, to drink and "socialize." These dinner parties were tense affairs, with the members on guard against each other as they grew in strength and years.

Xocoatl ("bitter water")

Mundane chocolate is made from cacao beans and contains *theobromine*, Greek for "food of the gods." The Aztecs prepared a chocolate beverage made from fermented dried beans, vanilla, chilies, herbs, and maize. Used as a ceremonial drink, xocoatl was also touted for its spiritual and aphrodisiacal qualities.

The xocoatl in the Medicine Jug is potent, formulated out of an extinct species of cacao. When drunk, it confers longevity (though not youthfulness or true immortality; the magicians had to make other arrangements) and a mild, permanent increase in supernatural power. In addition, it either enhances a specific ability of the imbiber, or ameliorates one of his deficits; e.g., it has granted Aqaba free will, reduced the disabilities of Varady's condition, and enhanced O'Grady's hand-eye coordination to superhuman levels. Unfortunately, one dose per decade is effectual; additional doses are wasted.

Shadowbats

Matte black, featureless bat-shapes of solid shadow. They lack mouths, but their wings are razor-sharp. Three solid hits and a good stomp causes them to burst into flame. Their master can see through their nonexistent eyes. There should be 9 shadowbats per PC; adjust this number as necessary.

Shadowbat Attack

If the suspect is the first investigation, a sudden flock of mysterious bats -- shadowbats -- appear and attack, having finally wormed in through the suspect's defenses. The shadowbats focus on the suspect.

- If he is secretly the shadowbats' master (see below), he'll survive the attack;
- If he is not, he'll die without PC intervention. If the PCs save his life, he'll reveal all about the tontine.
- If killed, his last words are "tontine" and "xocoatl."

The shadowbats flee upon the death of the suspect or when half of their number are destroyed.

If the suspect is the second investigation and/or informed about the shadowbat attack on the first suspect, he will either tell the PCs:

- Nothing (he is not the master and the other suspect is alive);
- All about the tontine, then demand to speak with Aqaba (if he is not the master and the other suspect is dead); or
- To prepare for death (if he is the master).

Then, the shadowbats boil out of the darkened corners, hungry for blood. The shadowbats' master, if not already present, appears out of nowhere and joins the fray.

NPCs

Elat Aqaba, *Free-willed Golem*: Tall, large, swarthy. Dresses exceedingly well. Sharp-eyed PCs may notice that his tongue is gray, mottled with black. This is his *chem*, the animating tablet inscribed with the Hebrew word for truth, *emet*. His voice is stilted and flat. He has the best protection -- both magical and mundane -- that money can buy. May respond without thinking to requests phrased as direct commands ("Tell me about Varady . . .").

James O'Grady, *Screever Sorcerer*: Tall, wavy white hair with muttonchops, gray eyes. Nimble fingers. He is a master of magic dealing with spirits and emotions, usually but not always focused through chalk runes. Susceptible to flattery.

Estragon Varady, *Wizard and Secret Vampire*: Elegant, stout, with salt and pepper hair, brown eyes. Amazing smile. Gourmand. Incredible with magic of the mind, encompassing what is termed psionic abilities with a decidedly Jungian, archetypal slant. Became a vampire in 1977, keeps it quiet. Repeated doses of the xocoatl have ameliorated many of the disadvantages of his condition.

Who Is The Shadowbats' Master And Why?

- **Aqaba**: Poor phrasing of commands forced him to drink the xocoatl (before midnight on that long ago 1863 night) without binding him to the restriction against murder. Each dose has increased his free will; he believes by consuming the rest of the xocoatl alone, he will become truly alive. He has used the PCs to track down the last two tontine members.
- **O'Grady**: He's a power-hungry bastard hell-bent on using the xocoatl and his giant chalk sigils to crack open the doorway between life and death. Why? Godlike power. He never liked Zhang, and Varady was in the way.
- **Varady**: Zhang discovered his condition and was going to tell Aqaba, claiming that Varady's undead state eliminated him from the tontine-- after all, one must die to become a vampire. Varady believes the entire potion will cure his vampirism.

Aftermath

The events of this scenario end the tontine. This could leave the Medicine Jug up for grabs.

For GMs worried about the effects of the xocoatl in PC hands, keep in mind that the effects can be mild -- the magi needed a dozen doses to get to their power level, only one dose per decade is effective; and once word gets out about the xocoatl, everyone will be gunning for it.

Beyond Sylvan War Lore

Six New GURPS Martial Arts Styles for Elves

By Neal Byles

GURPS Martial Arts introduced roleplayers to the idea that Elves would likely develop their own martial arts styles. With their reputations for mastery of the sword and bow, Code of Honor to live elegantly in all things, and effectively limitless amount of time for training and leisure, Elves could not be more ideally suited to do just that. To the elegant, ageless Elves, combat is far more than just battle. It is art.

Sylvan War Lore was originally developed with this aesthetic in mind. It proved to be so effective that it was eventually taught to other Sylvan races -- Fauns, Leprechauns and the like, in order to help defend against human and Orc depredations. However, while Sylvan War Lore is the most common Elven martial art, it is not the only one, nor was it the first. For millennia Elves have kept their most powerful and elegant fighting styles secret even from other Sylvans.

In addition to the standard Skills and Maneuvers associated with each Elven style, certain spells are frequently used by certain styles. The prerequisites for spells common to a style are assumed and not mentioned individually.

Note also that non-Elves, even Sylvans, are never taught any of these styles. Even Half-Elves only rarely earn the right to study them, and then only as a reward for great deeds or if particularly high potential is detected, which can be represented by a fairly costly Unusual Background (20 points). If any non-Elves were to demonstrate knowledge of any of these styles, at best they would be hunted down, captured and magically "deprogrammed;" at worst they would become the targets of the Cloud Shadows.

These are but six of the Elven styles developed by the Fae-folk over the centuries. From the swashbuckling Blade Dancers to the stealthy Cloud Shadows, from the serene and deadly Bow Singers to the pacifistic masters of the Way of the Tree, from the primal Wolf Runners to the chivalric Eternal Defenders, the true Elven Masters are feared by all of Nature's enemies. In most cases the Combat Art is every bit as important to the Elven martial artist as the Combat Skill, as required by their racial Code of Honor. The cinematic advantage Trained by a Master is available for all of these styles, GM permitting. Cross training in more than one style is not common but does occur among the older masters, where the styles are compatible.

BLADE DANCING

14/22 POINTS

The Blade Dancers are the most flamboyant of the Elven martial artists. Traditionally, Blade Dancers are flighty even by Elven standards -- Dwarves typically can't stand them -- taking very little save their fencing seriously at all. Blade Dancers are often given to outrageous acts of daredevilry and are usually quite noticeable by their elegant dress. Armor is worn lightly, if at all. Elven Silversilk is the coveted protection of all Blade Dancers.

Fencing is the heart of Blade Dancing. The skill is learned with a primary focus on the Elven longsword but the Elven smallsword is also taught (see New Weapons, below). The most common practice of Blade Dancing is a two-handed style with longsword in the dominant hand and smallsword in the off-hand; the latter is usually used defensively. However, some individuals prefer saving the off-hand for a cloak, buckler, the Elven equivalent of the Main-Gauche or nothing at all. If available, the Weapon Master (Fencing) advantage is open to Blade Dancers.

As the name implies, dancing is also an integral part of the Blade Dancer's training. A fight just isn't a fight without some sense of choreography to it, even if the opponent is less than cooperative. For this reason anyone with Style Familiarity: Blade Dancing who is faced with such an artist gets an additional +1 to defend against their attacks.

Unfortunately the only beings likely to be familiar with Blade Dancing are other Blade Dancers. On the rare occasions that two Blade Dancers meet in mortal combat -- an Elf against a Dark Elf, for instance -- the fight can easily reach epic lengths, as both parties will tend to get lost in the beauty of the dance. Not surprisingly, many Blade Dancers are also Bards and musicians. Luck, Daredevil and Ambidexterity are common advantages.

Movement spells, especially Wallwalking and Blink, are favorites among Blade Dancers, as are spells that will enhance their grace, such as Dexterity, Balance and Ambidexterity. Legends abound of Dancing Masters who use advanced Sound spells and even Illusions to provide their own soundtracks and lightshows.

Primary Skills: Acrobatics; Dancing; Fencing; Fencing Art; Savoir Faire

Secondary Skills: Fast Draw (Sword); Fast Talk; Jumping; Tactics

Optional Skills: Brawling; Buckler; Cloak; Main-Gauche; Musical Instrument; Poetry; Singing; Stealth

Maneuvers: Close Combat (Fencing); Corps-a-Corps; Feint (Fencing); Fleche; Hit Location (Fencing); Lunge; Off-Hand Fighting (Fencing or Main-Gauche); Riposte; Stop Hit

Cinematic Skills: Light Walk

Cinematic Maneuvers: Dual-Weapon Attack (Fencing); Enhanced Parry (Fencing)

CLOUD SHADOWS

12/23 POINTS

The Cloud Shadows are the spies, scouts, and sometimes assassins of the Elves. It is a rare style favored by the Dark Elves although not exclusively so. An Elf would have to have a very good reason to employ the deadlier skills of this Art, however. These reasons are usually tied to the protection of important Elven secrets or to their racial Sense of Duty to Nature.

Cloud Shadows are deadly combatants when they are seen, but some would argue that their mission has failed when open combat occurs. Through the use of Stealth, Invisibility Art, the Invisibility spell, and the clever employment of Sound and Illusion spells, there are few living creatures capable of avoiding detection as well as the masters of this style.

While Cloud Shadows are quite adept at unarmed combat, theirs is primarily a weapon art. The most common choices of primary weapons are the short sword or knife and the short bow, with fencing weapons and throwing knives following closely behind. The Weapon Master Advantage, both the general and specific forms, is common to the masters of this art.

Sound, Light/Darkness, and Body Control spells are a must for Cloud Shadows. Illusion, Air, Communication/Empathy, and Mind Control spells are also common. Assassin Cloud Shadows almost always learn the Deathtouch spell as well, which is deadly when used in conjunction with the Hand of Death skill.

Primary Skills: Brawling; Camouflage; Climbing; Jumping; Stealth; Wrestling; any two Weapon Skills

Secondary Skills: Acrobatics; Survival (Woodland); Swimming; other Weapon Skills

Optional Skills: Breath Control; Escape; Hypnotism

Maneuvers: Feint (Weapon or Brawling); Ground Fighting; Hit Location (Weapon or Brawling); Riposte

Cinematic Skills: Blind Fighting; Breaking Blow; Hand of Death; Invisibility Art; Light Walk; Mental Strength; Power Blow; Pressure Points; Pressure Secrets

Cinematic Maneuvers: Binding; Roll with the Blow

BOW SINGING

6/26 POINTS

Next to Sylvan War Lore, this is the most common style for Elves to learn and is largely responsible for the Elves' reputation as experts with the bow. The masters of this art are truly fearsome with the Elven longbow -- in fact, it was the Bow Singing Masters who first developed the secret to creating this fantastic weapon (see "Medieval and Fantasy Missile Weapons" by Dan Howard for details on the Elven longbow). The Weapon Master (Bow) Advantage is

essential to this style in campaigns in which it is allowed.

While singing isn't as integral to the Bow Singer style as dancing is to the Blade Dancers, it is still a common skill. Many Bow Singers use song to focus their concentration on their art. The sound of the Elves' ethereal voices singing gentle, melodious tunes, along with the harmony of an arrow in flight have been the last sound ever heard by many an unfortunate Orc. These artists often perform Singing and Meditation as one single action.

Bow Singers sometimes study their weapon to the exclusion of all others, taking a Major Vow to use no other weapon, but this is not required. Some of the style's practitioners have learned to use their bows to parry missile weapons, although this can only be accomplished when there is no arrow nocked in their own bows. They are also capable of using their bows to parry melee weapons but few Bow Singers will risk damaging their beloved weapons this way. Rather they have perfected the art of avoiding attacks altogether. The masters of the style have also learned the legendary trick of nocking and firing two arrows at once; this is reflected in the Dual-Weapon Attack cinematic maneuver and takes an extra round to ready. Fast drawing two arrows at a time is at -2.

Bow Singers almost always learn the Dexterity and the Hawk Vision spells. Singers with a mind toward defense often learn Shield and Missile Shield as well. Elemental spells are also commonly studied toward the end of learning Fiery Missiles, Lightning Missiles and/or Icy Missiles to use on their arrows and Shape Stone/Metal to make arrowheads. All Bow Singers are required to learn Shape Plant to make their own bows and arrows. This spell is absolutely necessary, along with master-level skill in Armoury (Bowyer/Fletcher), in order to fashion an Elven longbow.

Primary Skills: Armoury (Bowyer/Fletcher); Bow; Fast Draw (Arrow); Meditation; Stealth

Secondary Skills: Brawling; Camouflage; Parry Missile Weapons (Bow); Survival (Woodland); Tactics (Ranged Combat)

Optional Skills: Musical Instrument (usually stringed); Singing; other Weapon Skills

Maneuvers: Hit Location (Bow)

Cinematic Skills: Blind Fighting (Bow only); Pressure Points (Bow only); Pressure Secrets (Bow only); Zen Archery

Cinematic Maneuvers: Dual-Weapon Attack (Arrow); Enhanced Dodge

THE WAY OF THE TREE

7/37 POINTS

The disciples of the Way of the Tree are perhaps the most rare Elven martial artists of all. Only true adherents to the style's ultra-pacifistic philosophy are ever taught this style. However, the masters of this art are nearly impossible to defeat when forced to defend themselves or Nature.

Disciples of the Way of the Tree must learn their Philosophy at IQ level or higher. As the name implies, this philosophy holds the tree as the ultimate example of how to live, especially as life pertains to violence. The tree lives its life aiding the life cycle and, most importantly, doing no harm. It is steadfast and resilient and always protects all that it shelters. Followers of the Way must take the Disadvantages Major Vow: Use No Weapons, Pacifism: Self-Defense Only and Pacifism: Cannot Kill, as well as the Code of Honor: Protect All Innocents (-5). The pacifism practiced by the Way is very nearly Total Non-Violence. Its practitioners will defend themselves and other innocents and most assuredly the Nature they are sworn to protect, but neither will they kill nor cause any lasting (i.e. crippling) harm to their enemies. Plant Empathy is almost universal among disciples and Animal Empathy is common, but neither is required.

The Way of the Tree is one of the few Elven styles that does not teach the relevant Art skill (in this case Judo Art) as part of its requirement. This is because the philosophy of the Way considers it unseemly to make art out of any act of violence, no matter how non-lethal.

All followers of the Way of the Tree learn extensively from the Plant College of magic and often the Animal College as well. Body Control, Mind Control, and Healing magic are also common, both to aid in non-damaging combat and to repair any damage they may inadvertently cause. Air, Water, and Earth spells are standard areas of study but disciples of the Way are loath to learn any Fire spells, with the exception of Extinguish Fire. While such Elves will learn Ignite

Fire as the necessary prerequisite, they will not cast the spell once it is learned. Most disciples rely on Water spells for the same purpose. Exceptionally noble disciples have attempted to learn Resist Fire and Flameturning to help protect their forests but few are able to stomach learning all of the necessary prerequisites.

Primary Skills: Judo; Philosophy; Meditation; Naturalist

Secondary Skills: Botany; Camouflage; Climbing; Stealth;

Optional Skills: Any Medical or other natural Science skills; Musical Instrument; Singing

Maneuvers: Arm/Wrist Lock; Breakfall; Disarming

Cinematic Skills: Blinding Touch; Mental Strength; Pressure Points; Pressure Secrets; Push; Yin-Yang Healing (or its equivalent)

Cinematic Maneuvers: Enhanced Dodge; Enhanced Parry (Judo); Hand Clap Parry; Roll with the Blow; Sticking

THE FOREST RUNNERS

17/23 POINTS

Sometimes called the Wolf Runners or the Fae Beasts, the Forest Runners have used an intimate knowledge and understanding of animals to develop one of the deadliest styles of all the Elven martial arts. All of its practitioners either have or develop the Animal Empathy advantage, and many have the Beastkin Advantage as well. The Minor Vow of Vegetarianism is common but not required (except of the Beastkin).

Other Elves often look upon Forest Runners with a mixture of confusion, envy, and pity. These Elves seek elegance in the perfect communion with nature, particularly the animals, an interpretation that is not often shared by their kin. Their Sense of Duty to Nature is taken extremely seriously, even by Elven standards, and they can sometimes become quite feral in their pursuit of natural synergy. The Forest Runners tend to be minimalists when it comes to clothing and fashion and will never wear any armor beyond furs or light leather, and only rarely those. Moreover it is uncommon for Forest Runners to use weapons at all and even then they usually restrict themselves to stone axes, knives or spears (Major or Minor Vow, respectively). The Weapon Master Advantage is obviously inappropriate for this style. The disadvantages Primitive and Technophobia are common, as is Claustrophobia.

Obviously Animal magic is integral to the Forest Runner style with Shapeshifting spells considered to be the height of mastery. A common practice among Runners is to use the Partial Shapeshifting spell (p. G11) to assume predatory teeth and claws while engaged in combat. True lycanthropy is typically viewed as a blessing of the Eternal among the more fanatic Forest Runners. As all of the Runners' skills and maneuvers were derived from studying and emulating various animals, most of them may be utilized even in full animal shapes, at the discretion of the GM. Healing, Sound, Plant and Elemental (Air and Water) spells are also common.

Primary Skills: Jumping; Karate; Karate Art; Running; Stealth; Survival (Woodland)

Secondary Skills: Acrobatics; Camouflage; Climbing; Tracking

Optional Skills: Animal Handling; Musical Instrument (usually percussive); Singing; Veterinary

Maneuvers: Cat Stance; Feint (Karate); Ground Fighting (Karate); Hit Location (Karate); Jab; Jump Kick; Kicking; Riposte (Karate); Spin Kick; Sweeping Kick; Neck Snap

Cinematic Skills: Blind Fighting; Light Walk; Power Blow; Flying Leap

Cinematic Maneuvers: Acrobatic Kick; Springing Attack

ETERNAL DEFENDERS

11/25 POINTS

The Defenders of the Eternal is the closest thing to a religious and chivalric order that the Elves have produced. They are the self-proclaimed protectors of Life, Nature, the Eternal (see p. F36-37) and everything Sylvan. Dark Elves often name themselves Defenders and pursue mastery of this art, creating a marked schism in interpretation of the philosophy of the style.

The Defender style centers on the Fae Knife (see New Weapons, below), a light, pointed, hand-and-a-half sword similar to the Katana but with a straight, two-edged blade. The Fae Knife uses the Katana skill and like the Katana it

may be used interchangeably one- or two-handedly (at +1 to damage for two-handed use) with Parry at 1/2 skill when used one-handed and 2/3 skill when used two-handed. The Weapon Master (Katana) advantage is available to Defenders where appropriate.

The Defenders follow a Code of Honor, the tenets of which are: own no more than you can carry; never refuse a worthy request for help; defend Nature at all costs; always protect the innocent and those weaker than yourself; and never put personal feelings or honor over the welfare of others. Obviously, the Dark Elf version of this Code is selective in its interpretation, only including Sylvans in the "innocent/weaker" and request for aid categories. This Code is worth -15 points (-10 for Dark Elves). Fanaticism and Megalomania are not uncommon disadvantages for Defenders, as is Pacifism: Cannot Harm Innocents.

The standard practice of the style is to fight with the Fae Knife alone, although dual-weapon variations do exist. While the shield is not a native tool for Elves, it has been adopted by many of the Fae-folk for its defensive capabilities and is sometimes used by Eternal Defenders. Defenders may or may not wear armor as a matter of personal preference. Light mail (see "Ancient and Fantasy Armor Revisited" by Dave Steele for stats on light mail), usually enhanced with Fortify, Deflect and Lighten spells, is popular and Silversilk (similarly enchanted) is sometimes bestowed upon the Masters of highest status and reputation. The bow is one of the few weapons that Defenders will learn in addition to the Fae Knife but they only use them when necessary.

Eternal Defenders often recognize that the best way to defend the Sylvan lands, especially from human encroachment, is through diplomacy not warfare. As such many Defenders are trained diplomats and bards and some even study human politics. Defenders are often charismatic and generally have excellent reputations among Sylvans.

Typical spell choices for Defenders are Protection, Body Control, Mind Control, Communication/Empathy, Healing and Movement spells. The various Nature Colleges (Animal, Plant and Elemental) are also common, as are most battle magic spells.

Primary Skills: Breath Control; Katana (Fae Knife); Katana Art (Fae Knife); Meditation; Philosophy; Savoir Faire

Secondary Skills: Acrobatics; Body Language; Diplomacy; Parry Missile Weapons; Tactics

Optional Skills: Bard; Bow; Brawling; Politics; Shield; Stealth; Wrestling

Maneuvers: Feint (Katana); Hit Location (Katana); Lunge; Riposte; Stop Hit

Cinematic Skills: Blind Fighting; Body Control; Flying Leap; Immovable Stance; Light Walk; Mental Strength; Power Blow (Katana only)

Cinematic Maneuvers: Enhanced Parry (Katana); Whirlwind Attack

New Weapons

There are several weapons that are unique to Elves and especially Elven martial artists. Note that stats for the Elven longbow are reprinted for convenience from the article "Medieval and Fantasy Missile Weapons" by Dan Howard, which should be consulted for a complete description. Note also that Elves never make these weapons at less than Fine quality; these stats reflect this. Elven longbows can't be made by non-Elves, and average or cheap knock-offs of Elven blades should reduce all damages by 1. Very fine quality Elven blades should add 1 to the values below (see B74 for more about weapon quality). Prices are estimated for beginning Wealth purposes only as Elves never sell these weapons.

Play by Mail Roleplaying: Beating the Clock

by Geoff Page

"Next, ask yourself, do you really want to run a PBeM? Spend long thankless nights sifting through moves and answering questions, and roll dice all alone in your cold dark room.¹"

Most, if not all, of the roleplaying games available today haven't been designed with the intention of being played through mail. (By "mail" we are including all types of message based roleplaying including post, e-mail, and messages submitted on web sites.) However, an ever increasing number of people are doing just that. Forcing so-called face-to-face roleplaying games to the play by mail (PBM) format often leads to games that flounder -- there are distinct differences between the two styles of play. These distinctions have already lead to some novel ideas and sage advice for gamemastering online, as noted in References, below. By elaborating on the two largest problems facing PBM games, namely the pacing of game time and the lack of chronology in game posts, hopefully this article will prepare the budding gamemaster for the endeavor of bringing his or her own game online.

Contrasting the PBM Format

At first, it may seem that bringing a face-to-face roleplaying game to the PBM format would require little modification of how the game is played. Simply conduct play normally, except write what you would usually say. In fact this is typically how things are done; one needs only look at the high attrition rate of most PBM games (many of which only last a few turns) to realize that this isn't the best way to go about it.

There are two reasons why this naive approach doesn't work. First there is a much longer time delay between communicate. Around the kitchen table it's easy to rattle off a barrage of questions to the gamemaster and other players, which if you were to individually pose in a series of e-mails (that can only reasonably be responded to every couple days) could literally take weeks. Second there is the added complication that the players receive and respond to messages haphazardly. A player may have wanted to interject to a post that was just received, only to realize that other posts have already made the issue moot.

In dealing with the first problem, the time delay between moves, most people have taken to shunning situations that require rapid player input, in particular combat. This explains the high percentage of story-telling and so-called free-form PBM games. This has the unacceptable ramification of eliminating some of the most enjoyable aspects of roleplaying! Attempts to remedy the problem, such as compacting many moves together, often lead to the players feeling left out of the decision making process for their characters.

As to the second point, the lack of chronology in game posts, little has been said in the past although Matt Rollefson has done a good job of stating the problem in his article.

"Unfortunately, some players will typically receive messages later than others. These players may well feel left out of the game, as they see messages they wish to reply to fly by, followed immediately by responses by other players.²"

Most games operate under the premise that moves occur in the order they are posted (it takes too much time to backtrack). This is a problem in two respects. It not only eliminates input from certain players (Matt's point), but is also unrealistic. A character shouldn't sit idle simply because the player wasn't able to post fast enough!

Dealing with Time

Since there are two aspects to the time problem, keeping the whole game moving along at a reasonable pace and dealing with the progression of time during individual turns, it's advantageous to address each separately. The general idea is that it will be necessary to plan ahead and structure the turn process if you want to keep your game from

floundering.

Planning your Scenario

Without fail, most people bite off more than they can chew. How long do you want your game to run? How much game time does your scenario require? Divide these numbers for most games, and you'll often get an unreasonable result for the PBM format. Each turn can only encompass so much game time. Extravagant campaign ideas should be divided into tractable scenarios that can be completed in three to six month blocks of real time. Demanding more is demanding too much from your players and yourself. Here's an algorithm to determine the pacing of your scenario.

1. Divide your scenario concept into a series of scenes, and write down how much game time each scene should encompass.
2. Determine the amount of real time you would like to spend on the scenario.
3. Give each scene a numeric value to designate its relative importance. For instance, give the first scene a rating of 1, if the next scene is twice as important give it a 2 or if it's less important give it 0.5 or 0.75.
4. Add up the weights just determined and divide by the number of days you want to spend in real time. This number is the number of days (in real time) you should spend on the scene.
5. Check to make sure the number is reasonable. Can you really get through each scene comfortably by sending mail back and forth?

Example

For a concrete example consider the following scenario which is to take place in 4 scenes, encompass 5 days of game time, and be played out in 3 months (see table below). Adding up the weights given to each of the four scenes gives 8.5. Since the scenario is to be completed in three months of real time, or 90 days, this reveals that 1 game day should be resolved every 11 days.

To determine if this value is reasonable, consider each scene individually. The first scene, in which the players are ambushed, needs to be resolved in about 11 days of real time. This would only allow the interchange of a few precious e-mails between the players and gamemasters. The next scene, in which the players will most likely contact the local authorities and eventually accept the challenge of rescuing the kidnapped child, is budgeted for only 5 days -- probably only 1 message could be relayed during this time from each player. Although these values are feasible, it would certainly lead to a sparse game permitting only brief interaction. A more comfortable pace would be to play out this scenario in six months, as opposed to three, which illustrates the essential point of message based roleplaying: Be aware of how much time it will take and plan accordingly!

Scene	Game Time	Weight	Description
0	1-2 weeks	0.0	The players meet along a road to a major city. How they meet isn't played out in the game, they begin the game together.
1	5-30 minutes	1.0	The characters are ambushed by a group of bandits, and a child, traveling in the group the party has joined, is kidnapped.
2	2 hours	0.5	The characters contact the local authorities with the parents of the child to report the crime, but are given the run around. The parents hire the characters to find their child.
3	3-5 days	2.0	The players explore whatever options they can muster (no need to determine them here) and eventually discover the location of the kidnappers hideout and formulate a plan.
4	1 day	5.0	The characters execute their plan and (hopefully) rescue the child, bringing the scenario to a climatic ending.

This generic fantasy scenario is broken up into five scenes, only the latter four of which are actually played out.

Structuring the Turn

After taking steps to ensure that your game is feasible, in that it won't take an enumerable amount of time to complete, it's necessary to deal with the turns themselves. Imagine the following situation, common to most PBM games today.

The turn begins by sending out a prompt and allotting a certain amount of time to complete it. The players, who are unable to coordinate their moves, begin to specify actions for their characters. Often these actions will be contradictory given the actions of other players. There is also the problem of players receiving posts at different times, simply because everybody isn't reading their e-mail in unison, which is compounded by certain players (even you, at times) being away from the game for extended periods.

All and all, this leads to a very chaotic turn . . . not at all what you need if you're trying to move the game along. The solution is to organize the actions of the characters as soon as possible. Right after the prompt for the turn is received, the players should send in a summary of what they want to do for the duration of the turn. With judicious creative liberty, the gamemaster then edits the proposed turns and sends back a summary of what the character will be doing, trying to keep intact the spirit of the turn as much as possible.

You might object that editing a player's turn will hamper his or her enjoyment of the game. By adhering to the spirit of what the player wanted to accomplish most of this criticism is avoided. More important, however, is that this leads to a much more realistic game. First, each character will provide equal input toward the development of the plot. Second, in a realistic situation characters shouldn't be able to do whatever they want. Possible actions are constrained by everything else that's going on in the turn -- naturally!

Given the desire to screen moves before they become official, here is the structure of a typical turn lasting two weeks.

- **Day 1.** The prompt for the turn is sent out stating how much game time will be resolved in the following two weeks.
- **Day 3.** The players respond with very brief turn proposals, stating what they want to accomplish and as many contingency plans as possible.
- **Day 5.** The gamemaster sends out the "official" turn outline, stating what will be accomplished, by who, and when during the turn. In essence the gamemaster will orchestrate the proposed moves of the players together, eliminating inconsistencies.
- **Days 6-14.** The details of the turn are elaborated upon.

Note, in particular, that all the conclusions of the turn are determined very early (in the example, by day 5). If there was a combat taking place, this would mean that the players would know the gross outcome early in the turn. (This is needed, since the entire turn is being done at once; actions early in the turn need to have known conclusions so the rest of the turn can proceed.) What isn't known however, is the specific details on how a particular conclusion is reached. These details, such as what damage is taken, would be worked out after the turn summary is completed (days 6-14 above). As usual, the devil is in the details. Most of the work remains to be done in this last step.

Conclusion

Making the transition from face-to-face to message based play is feasible, regardless of the game system, as long as attention is paid to time. Time is a problem in two respects. First, you need to make sure that your scenario can be completed in a reasonable amount of time, which mainly requires a clear idea of what you want to do and a realistic schedule. Second, is the lack of chronology within the turn itself. The solution here is to orchestrate the move early, so that all the players begin with a clear idea of what they are trying to accomplish.

Understanding why so many games have failed in the past is important for the future of PBM roleplaying. It is hoped

that the advice presented here will give you the resources to bring your game to a fruitful completion. With the popularity of e-mail, and a growing number of people too busy to meet for face-to-face gaming, PBM professes to be an increasingly popular method to roleplay. You too are encouraged to try your hand at this uniquely rewarding method of play.

Galaxy Guide (for Heroes Unlimited)

Published by [Palladium Books](#)

Written by **Wayne Breuax Jr.**

224 b&w pages; \$20.95

Aliens Unlimited introduced scores of alien races and numerous plots to augment *Heroes Unlimited*. The *Galaxy Guide* follows the same pattern, but expands on the organizations first mentioned in *Aliens Unlimited*, while leaving plenty of room for future expansion.

There are all too brief details on the Atorians, FAR (Federation of Allied Races), TMC (Thissera-Micean Cooperative), and the TGE (Tagoniglomerate). The Atorians, a matriarchal society, have a vast history and almost limitless power at their disposal. The other groups are collections of races with various agendas and styles that enable the GM to run anything from a political campaign, to a mercenary style setting. More details would have been nice though. For example, while the FAR, TGE, and TMC have their own sections with armor and arms, each illustrated, the Atorians do not. Still, this does mean that future books like *The Guide to Imperial Space* and the *Andromeda Galaxy Sourcebook* will have their work cut out for them.

The book covers several planets in the Milky Way Galaxy. The planet listings are alphabetical and include the destroyed Assin, the former home of the Lassinike mineral aliens; and Toogarth, the home for the booming -- and conquering -- Toogarth empire. If the planet houses a new alien species not covered in *Aliens Unlimited*, then that race is given game stats, and an illustration alongside it.

Besides planets, there are more monsters to throw at players. The *Predator*-like Riathenor, first introduced in *Aliens Unlimited*, receives a complete make over with more background information, and different breeds of Riathenors. The standard creature is roughly human-sized, depending on its host, but the Heretshi are quadrupeds, powerfully built with a dangerous animal intelligence. The Dagotte Leader Riathenor is a commander of the monsters, whose status is not in title only. These Dagotte's possess much greater powers. Another branch of Riathenor is the Kilm'aktro, the Giant Riathenor. These monsters have giant hosts instead of humanoid sized ones and this grants them increased strength and size with a loss of speed and intelligence.

Other monsters include the Asterpoids, massive creatures with a stone-like exterior, and Void Whales, creatures who were once thought of as only legend but have been spotted recently.

In addition to races, planets, and monsters, there is a massive section of new equipment. There are new rules for bionics, robotics, and genetic engineering. There are new rail guns, missiles, and a section for miscellaneous equipment.

What type of *Galaxy Guide* would be complete without rules for space travel? For those GMs of *Heroes Unlimited* who want rules for different types of travel, ranging from Slower Than Light to Point to Point Travel, and everything in between, there are rules and general ideas on how to incorporate this material into your own campaign. Those not satisfied with those rules can create their own ships with the sections on Spacecraft Construction that cover funding, basic designs, propulsion, weapons, armor, and extra equipment. Each section includes costs and the different stages available. For example, under armor, there is light, medium, heavy, and battleship. There are several examples for each type of ship.

My favorite part of the book though is Alien Education, Skills & Knowledge. Unlike other Palladium Games where

characters have classes which dictate their skills, *Heroes Unlimited* starts characters off with skill packages that represent what they did prior to becoming a super-hero. These alien skills are much more geared towards a heroic scale with cyberjacker, bounty hunter, information broker, mercenary, combat athlete, mechanic, pilot, fighter pilot, pirate, infantry, scientists, special operative, officer, weapons technician, xeno-biologists, and xeno-robotics. Each section has a listing of skills and bonuses, as well as a brief description of what the skill package represents. There are several new skills, and expanded notes on old skills like medicine and healing, where the level of technology is more improved than on the default earth setting.

There are new rules for cyberjacking, or linking a living mind to a computer. It's a lengthy section but still can't cover it all, hence the reference to the *Rifter #2* where the concept first originated.

The rules for Space Survival include zero atmosphere, vacuum, suffocation, depressurization, zero gravity, and advanced space combat.

The book ends with some new super abilities and some new spells. The new abilities are at home in a stellar campaign with space flight, space native, which enables the character to survive the void of space, alter physical structure void, which turns the character into a living human space field among others. The spells are also space-based, like area gravity field, which generates Earth strength gravity in a thirty foot radius, or protection form radiation, which shields the caster and up to two others from the harmful effect of radiation.

My only problem with this book is it's stuck in the middle of the Palladium rules. There are two settings for the Palladium rules, the ultra-powerful tech M.D.C. (mega damage capacity), and the modern day S.D.C. (structural damage capacity). Many of the conversion notes are minimal, and there are some problems that can result if some of the races use the much higher M.D.C. from *Rifts, Phase World*, and others are stuck with the S.D.C. of standard *Heroes Unlimited*. Those using *Rifts* will have to use *Skrapers* or *Heroes Unlimited 2nd Edition* to do more complete conversions. In some aspects, the *Galaxy Guide* and the setting it hints at may be better just chucking the *Heroes Unlimited* rules and going with the more grandiose M.D.C. Unfortunately there are ties to numerous *Heroes Unlimited* books, including *Villains Unlimited*, which would prevent an easy integrate of the M.D.C. rules.

The book boasts some great art. The cover by Wayne Breaux Jr. is one of the best pieces he's done, and his interior artwork, always more fitting for the high tech settings, really shines here with several individual illustrations of the various Riathenors and numerous vehicles. Kent Burles continues to amaze me with his ability to hop from fantasy to science fiction in the blink of an eye. His illustrations give the book a great sense of scale. Most of his illustrations are the example ships and they give the *Galaxy Guide* a grand scope with vast vistas in the background of the travelling alien ships.

The book will greatly expand the rules for a space-based campaign. The setting, first introduced in *Aliens Unlimited*, is a bit more flushed out, but will still require some work by the GM. Those not playing using the Palladium system may want to hold off buying the book because despite numerous aliens, planets, and monsters, there are a lot of new rules added to the *Heroes Unlimited* system. For 224 pages, the \$20.95 is money well spent.

* * *

Reviewer's Note: To get the most out of this book, the following Palladium books are recommended:

- *Rifter #2:* Cyberjacking rules.
- *Rifter #14:* Atorian Empire expansion with more races and information.
- *Villains Unlimited:* Toograth
- *Aliens Unlimited:* Much of the expanded information in *Galaxy Guide* is originally mentioned here.

Midnight's Terror (for Kingdoms of Kalamar)

Published by [Kenzer And Company](#)

Written by David Johansson, Steve Johansson, Brian Jelke, Jolly R. Blackburn, David S. Kenzer, David Berent

Illustrated by William O'Connor & Allan Ditzig; Mark Mueller, Rebecca Tudor, Steve Johansson & Bob Burke

\$15.99

The third scenario to be set in the official *Dungeons & Dragons* 3rd Edition campaign world of the *Kingdoms of Kalamar* is *Midnight's Terror*. This is not part of the trilogy for beginning characters involving the *Coin of Power*, but is instead designed for a party of four to eight characters of either sixth to eighth level (as suggested upon the back cover) or eighth to tenth level (as given in the introduction inside). Prospective DMs thus need to check the challenge rating of the NPCs and encounters within this adventure, though given that these do go as high as CR 14, I would suggest that the book's introduction is correct. It is important to note that *Midnight's Terror* is also a reprint of a previous adventure from Kenzer And Co., *The Secret Temple of Adajy*, which was originally published in 1997. *Midnight's Terror* is the official *3rd Edition* translation of that adventure.

The book is nicely laid out, with the occasional information box placed in the sidebar. As with other adventures for the *Kingdoms of Kalamar*, this scenario is not illustrated within the text of the adventure. Instead it uses Kenzer and Company's ImageQUEST Adventure Illustrator. This has small thumbnail pictures placed in the sidebars and keyed to particular points in the adventure. Each refers to the thumbnail's full sized version to be found at the back of the book and is intended to be shown to the players at the appropriate time. Allan Ditzig draws each of the twenty-five illustrations, which lack the cartoon feel seen in other *Kingdoms of Kalamar* scenarios. Instead they have a dusty, gritty feel to them that befits the adventure's desert setting. The cartography again suffers from being slightly too cramped in places and perhaps the use of lighter shades might have made the maps easier to read.

The adventure begins in the City-State of Thygasha on the Eastern side of Reanaaria Bay, at the Northern end of the Arajyd Hills and on the edge of the Khydoban Desert. The city is an important religious centre for a number of different faiths, some of which oppose each other. It is also the commercial origin of 'Silver Sand.' Found naturally in the Khydoban Desert, Silver Sand is actually a heavier grain of normal sand that has powerful hallucinogenic properties. Both Church of the Silver Mist (church of the god of restful nights, dreams, and aspirations) and The Temple of Sleepless Nights (church of the god of fear and nightmares) value Silver Sand for its ability to impart dreams. Both religions are an important presence within the city, and for this reason as well as the availability of the Silver Sand, Thygasha is known as the City of Dreams. Indeed, one of *Midnight Terror's* several appendices is given over to suggested dreams and nightmares that the player characters could have whilst in or near the city.

Recently rumors have surfaced that a second source of Silver Sand has been located deep in the desert. This is of great interest to numerous forces, but primarily the Plaza Five, a group of merchants that hold a monopoly over the drug within the city. Parties of adventurers have failed to return from the desert, bar single survivors with tales of the wealth to be found, fuelling the rumors. Likewise the local prince has sent scouting parties into the desert, but these have failed to return.

A second reason for the city to be a hotbed of rumors is the re-appearance of an ancient evil artefact, the Orb of Midnight, the Lesser Half of which is known to have been hidden away for millennia to keep it from falling into the

wrong hands. The Temple of Sleepless Nights wants to restore the two halves for their own ends, but neither the Church of the Silver Mist or The Inevitable Order of Time want it falling into their clutches, though the latter only wish to restore the current balance between the two.

Midnight's Terror is not so much an adventure, as a situation that the players can be drawn or dropped into. The fractious faiths within the city are all interested in obtaining the Orb of Midnight and would be prepared to hire the party to recover it. Likewise others may just be interested in the new source of Silver Sand, or the players may be interested in it and the potential wealth it represents for themselves rather than for others.

Plenty of opportunity for roleplay and battle are provided within the pages of this adventure. It takes the party from city of Thygasha out into the surrounding hills and deserts to two dungeons, the first small, and the second much larger. For each of the major locations several suggested encounters are given before the party even reaches them. Several of these encounters should be fun for the DM to run, with the *Incredible Hulk*-like Kobold (a personal favorite, and probably a favorite of any fan of *Knights of the Dinner Table*). In a sense, *Midnight's Terror* is a mini-campaign providing quite a few sessions of play for the interested party, and that really is the adventure's problem. The DM will need to work hard to get the characters involved to begin with, weaving the background into their own campaigns. Effort is also needed to continue their motivation to get from one location to another, but once there, they will find plenty of play as a reward.

Besides providing a short gazetteer of the city of Thygasha, *Midnight's Terror* gives the DM extra information in its appendices. These include the aforementioned dreams and nightmare to be used in conjunction with the city, but also details of two new spells and several magical items. For the DM without a copy of the *Kingdoms of Kalamar Campaign Sourcebook*, there is a decent glossary and an excerpt from the book about The Fellowship of Terror, the clergy and faith of The Temple of Sleepless Nights. This information is useful in that it allows a DM to run *Midnight's Terror* in their own game, but the scenario itself makes heavier use of its setting than the previous adventures released from Kenzer And Co. for *Third Edition D&D*.

Midnight's Terror is of lesser use to the DM who does not run a *Kingdoms of Kalamar* campaign. Yet if they are, then this will be suitable for later in their game after they have run the *Coin of Power* trilogy. Though needing some work upon the DM's part, this is a flexible, flavorsome adventure that should reward their tailoring of it to their players.

Ninja Burger: The Roleplaying Game

Published by [9th Level Games](#)

32 b&w pages; \$5.95

Ninja: Silent in the night, able to blend perfectly into the shadows and penetrate the toughest security systems. The ultimate in . . . fast food delivery?

Ninja Burger: The RPG is based on the popular website www.ninjaburger.com, a fictional website for a fast-food company that employs ninjas as delivery people. In it, you play as the employees of a Ninja Burger franchise, trained from birth in the arts of stealth, martial arts, and delivering hamburgers in thirty minutes or less. *Ninja Burger* uses 9th Level's "BEER Engine," as seen in *Kobolds Ate My Baby!*, and is an extremely simple system meant for quick 'beer-and-pretzels' games. As such, *Ninja Burger* is more of a complex boardgame than an RPG.

Character generation is quick and random, with four stats: Strength, Agility, Ki, and Extraneous, all determined with a 3d6. The usage of Strength and Agility is obvious, with Ki reflecting a Ninja's intelligence, knowledge, and general centeredness with the universe, and Extraneous being used for anything that the other three stats don't handle. One also randomly rolls for an Ancestral Clan, which modifies your Ninja's stats slightly, and for your Ninja's skill masteries. Lastly, all ninjas have access to Ninja Magic and Ninja Pockets. Ninja Magic is your standard cinematic array of tricks, and Ninja Pockets allow you to pull random items out of your Ninja's pockets.

The feature of this game that provides some of the most amusement is the option to perform multiple actions during a turn. However, you must declare **all** of your actions before you roll dice, and if your rolls make later actions stupid or nonsensical . . . well, that's life. You may attempt a skill roll in order to try and stop taking unwise actions, sparing your ninja failure and loss of honor when your attempt to pull a weapon from your pocket and attack a security guard instead has you attacking with a tasty Ninja Burger Meal.

However, you are not alone in your quest to deliver greasy, fatty food to highly secure installations. Opposing the glorious world-wide reign of Ninja Burger is their mortal enemies: Samuari Burger ("Our Way, Right Away!"), Otaku Bell, and the nefarious Lo Cal clan, servants of the incredibly evil and incredibly health-conscious overlord, Lo Cal. Add to this the Oni Oni Parcel Service, Human Resource Managers, and the most fearful of foes, the Customer, and it is easy to see why Ninja Burger employees are so highly trained.

While not deep by any means, the *Ninja Burger RPG* is quite fun and manages to be humorous without becoming grating. While the game itself is very light, the premise can carry a lengthy campaign with a little work. Much of the humor is from the incongruity -- ninja delivering burgers to Area 51, for example -- as well as the array of optional "house rules" in the game. For example, if your ninja rolls two 1's on any roll of two dice, he becomes Snake Eyes (from the *G.I. Joe* cartoon). This saves you from whatever situation you might have been in, provides you the coolest ninja costume and weapons, but also prevents you from speaking until someone else assumes the mantle of Snake Eyes. Also, in a *Paranoia*-like twist, each clan often has a secret mission to accomplish during each delivery, often forcing players to work at cross-purposes.

The book itself is simply laid out, with few typographical errors and a smattering of generic ninja art, with a couple of four-panel comic strips. It's mostly text, so that despite the fluffy content of the game and the few pages, the book is complete and does not skimp on important points. The main criticism that could be made is the game isn't much of an RPG -- it's a light tactical board game as written. You aren't expected to get too attached to your characters, and not unlike *Paranoia* easy provisions are made for the player who gets his ninja killed to jump right back into the game. Still, the concept is generic and easily portable and enough information is included that one could expand this into a

full-blown campaign if desired. Even as is, it's good clean fun in black pajamas, and a great game to pull out as a break or a change of pace, and hard to resist at a mere \$6. "You WILL experience the Ninja Burger difference!"

Best Laid Plans

As I write this, I'm a couple of hours away from riding to Orlando for the World Yo-Yo Contest (as foretold in previous columns), as part of my continuing commitment not to be fired from my Day Job.

I haven't been to bed yet, although I was *supposed* to go a handful of hours ago. Hopefully I'll finish this column in time to wrap up the mag before I need to go.

That's the plan currently.

But plans have a way of going awry; if this one does, I'll fall back on Plan B.

Planning is, in a nutshell, why I don't really have much interest in playing *Shadowrun*, or other cyberpunk games.

See, in all the cyberpunk sessions and adventures I've seen, the game session revolves around a mission of sorts. The heroes are given their goals ahead of time, and they have time to plan it. Although this idea is pretty straightforward, it's also more or less the antithesis of most other roleplaying game scenarios.

In most other games, the heroes have adventures thrust upon them. This can be mild, like in a fantasy game where the adventurers wander into the Temple Shir-Li, preparing for nothing more than having 2d12 random alphabetical monsters thrown at them. Sure, they can plan what supplies they take, but in general planning for one dungeon is the same as another, and doesn't take much time. Or the adventure can allow *no* planning, like in most supers games, where it's not unusual for the heroes to have brightly clad trouble fall from the sky directly in front of them. Regardless, the characters (and players) don't really have much time -- or need -- to plan.

This isn't the case with the cyberpunk games I've seen. In these, the adventurers know in advance what they're expected to do, usually with a lot of available planning time (both in game and out) and access to considerable resources, like blueprints for the building where the adventure takes place, dossiers on the major characters and their abilities, and so on. Sure, in typical cyberpunk fashion Mr. Johnson hasn't been entirely forthcoming -- and thus the adventure doesn't go entirely as planned -- but the heroes generally have a lot more information than other genres.

As such, whenever I watched my friends play in their *Shadowrun* campaign, I'd actually be watching them plan.

And plan.

And plan.

Plan A generally consisted of fighting into (or out of) the location.

Plan B generally consisted of sneaking into (or out of) the location.

The *real* planning would begin with Plan C, and progress forward. Thus fighting their way out was always an option, but it was usually the last option. They'd generally stop when they reached plan H or so . . . meaning they'd have six fully formed plans and contingencies, with "Let's try to get out of here!" and "Let's shoot our way out of here!" as fall-backs.

So in a session that would last six hours, five hours and forty-eight minutes would be devoted to planning, and the actual adventure would take twelve minutes. At least that's how it seemed to me. It might have been thirteen minutes. Anyway, the point is that there wasn't much actual roleplaying, per se, so much as sitting around, postulating what might happen. By the time the actual adventure was ready to start, it generally went off without a hitch, since there were contingencies and sub-plans to account for most situations. Sure, there would be the occasional triple-cross and completely unforeseeable problem . . . but that's what Plans A and B were for.

Yes, I know that planning is, in theory, roleplaying. In practice I'm not sure I count it, simply because most of the in-

game planning I've both experienced and done in roleplaying games has been more or less out of character . . . it's the *players* who are sitting around, preparing down to the last detail.

Anyway, there's absolutely nothing wrong with this style of gaming; it's a simulationist treatment of the subject, and perfectly logical. If you have two days to plan breaking into EvilBigCo, you're going to come up with something better than, "Get 'em!" And in the Real World, groups spend hours, days, or months planning intricate operations, crimes, and scenarios (both actual and hypothetical). But I personally don't have much interest in determining what to do in Plan F if the guard in the elevator has heavy armor, thus negating the possibility of a quiet snipe.

Having said that, I also don't mind running (or playing) the occasional planning adventure; it *is* fun to see a carefully orchestrated plan come together . . . or fall apart. And I've always wanted to extend some of the same principles of the cyberpunk planning adventure to other genres. What would a standard fantasy dungeon crawl adventure be like if the heroes had the exact blueprints of the dungeon ahead of time, complete with secret rooms, traps, and the like . . . only without knowing any of the occupants? (Maybe the plans are a couple decades old.) What if the heroes in a Supers campaign have exact information on the abilities -- and weaknesses -- of a new villainous team (preferably one much stronger than the PCs)? What would an adventure in a high magic/power world, like *Mage* or *In Nomine*, look like if the heroes knew an exact timetable of their target's actions beforehand (thanks to temporal magic, precognition, or other trickery)?

Anyway, constant planning isn't my cup of tea, and I might be interested in playing in a *Shadowrun* game if I can be convinced that wouldn't be the focus. (In particular I think playing a gonzo photojournalist would be a blast.) But that doesn't mean I can't take the principles that allow such planning and use it in my own games.

Now if you'll excuse me, my plans are falling apart, and I need to depart. For those of you who need to get in contact with me, I should be back Monday.

At least, that's my plan.

* * *

Originally I was going to do a special drawn edition of Random Thought Table for this week, since I thought that 1) it might be kinda neat, and 2) it might be faster than writing a column. I was wrong on both counts, for roughly the same reason: I have the artistic talent of a wounded water buffalo clutching a Sharpie in its shattered hoof.

But that's never stopped me in the past from subjecting my mistakes unto others, and I don't see why now should be any different.

I hope you enjoy . . . but it wouldn't surprise me in the slightest if you don't.

Sleep deprivation and art seldom mix.

Iron Ref 2: Electric Boogaloo

Three competitors. Three minds of the roleplaying world, each representing a different gaming genre, have accepted the Iron Ref challenge.

Three secret ingredients. Selected by a special guest, three ingredients -- plot elements, story pieces, or other oddities -- are selected for the challengers to incorporate into their concoctions.

2000 words. Each competitor has two thousand words -- and no more -- to devise a generic scenario in their genre incorporating all three secret ingredients.

24 hours. And they have one day to work their magic.

Who shall emerge, victorious, as the Iron Ref?

* * *

Our challengers, and their respective genres, are:

Jo Ramsay, writer of fine *In Nomine* material and evil genius behind the upcoming *GURPS Screampunk*, will be representing the **Horror** genre.

Sandy Antunes, mastermind behind [RPG.net](http://www.rpg.net) and Knower of Things Scientific, will be representing the **Sci Fi** genre.

Chad Underkoffler, frequent *Pyramid* contributor and known conspirator for the *Unknown Armies RPG*, will be representing the (Modern) **Fantasy** genre.

* * *

The secret ingredients have again been smuggled out of an underground lab by **Kenneth Hite**, the wizard behind [Suppressed Transmission](#), and creator of more roleplaying material than we can stake a schtick at. And we *still* think he's the best there is at supplying secret ingredients.

Stop reading if you don't want to know the secret ingredients!

This competition's secret ingredients are:

Fiddly Bits

The second Iron Ref competition was held from 10 AM Wednesday July 25th, EST until 10 AM Thursday July 26th, EST. This was primarily done because one of our competitors (let's call her "Jo") lives in England, which appearantly uses a different means of telling time than Florida. So, it seems, does Texas . . . although it's not as weird as England's time frame. Anyway, our standard midnight-to-midnight system wouldn't have worked as well, so we adjusted things accordingly. No one seemed to mind.

This is our second Iron Ref competition. Our first one was from February 2, 2001, and is at <http://www.sjgames.com/pyramid/login/article.cgi?2082>.

- The year 1863
- A sudden flock of mysterious bats
- Chocolate

Weird Prisons as Campaign Settings

or

"You Can Check Out Anytime You Like, But You Can Never Leave."

by Royce Easton Day

Raina pushed her way through the thick tangle of spiny underbrush that covered the floor of the dark woods. Until three days ago the brush prevented her and the other children from casually walking into the woods that surrounded the Monastery. Until three days ago she could never hear things in her mind, push things with her mind. Until three days ago her tiny world made sense.

Raina focused her will and shoved more of the spiny brush out of the way with a mere thought. She'd been travelling for hours now, and there was no sign that the woods would ever end. The trees above her formed a thick canopy, blocking much of the view forward.

She made her way a few more feet. Ahead, the woods finally began to part. There was a clearing ahead. Open ground. Escape!

Raina. *Brother Martin's voice came from out of nowhere. Raina, please stop.*

Raina pushed the last bit of dangerous brush out of the way. Ahead was clear ground, past that a long, winding, flowing body of water. A river, Raina recalled from her lessons. She ran out into the open . . .

. . . straight into Brother Martin's arms. Two Guardians took hold of her shoulders, forcing her to the ground.

"Raina, why did you run away?" Brother Martin looked down on her with no anger in his face, just pity.

"Why?" Raina cried. "Why shouldn't I? What does Monastery do with the children that grow up? Why are there woods surrounding everything? Why can I push things with my mind? Why can't I leave? Why can't I remember how I got here?"

"So many questions," Brother Martin said sadly. The Guardians forced her to her feet and began to march her along a path that opened up in front of the black-robed monk. "Don't worry, young Raina. Soon you won't have any more questions in your head to worry over."

Prisons are a common theme in books, movies, and roleplaying games. The reasons are obvious: An isolated setting where the protagonists are automatically set against their (wrongful, one hopes) oppressors is an easy way to create a cauldron of dramatic possibilities.

But sometimes things aren't so obvious. The "prison" may look like a pleasant seaside resort or a fantastic pocket universe. The protagonists may have no idea how they got there, or who they are. Perhaps they have no idea they're in a prison at all!

Trapping the characters in a weird setting, whether it's a true prison or just an enclosed area, with only a limited knowledge of their surroundings, will provide the PCS with a significant challenge as they try and figure out the rules of their world. If they're lucky, they'll be able to find their way out. If they're very lucky, they'll figure out how they got there in the first place . . .

Awareness

One of the first questions the GM must answer when setting up a Weird Prisons campaign is how much the PCs know about their situation. A group of modern characters who suddenly find themselves dumped into [The Hole](#) will react very differently than a group of low-tech farmers who suddenly figure out their pleasant little valley is really a huge section of a life support module onboard an ancient starship.

We're where?

The easiest option from the GM's point of view. The characters know they're trapped somewhere, even if it is unfamiliar or very odd environment. Perhaps they've been teleported by a wizard into a pocket dimension, which may have radically different physical laws. Or maybe they're just stuck in a maze filled with traps, and must find their way out. Often the PCS may be suffering from a short period of memory loss, especially if their captors don't wish them to have any clues about how to find the exit to their prison.

Forgotten

Most often used for settings that aren't actually prisons, just structures so old and vast that a person might not know what the word "outside" means. Generations of people have lived and died here, until the memory of their home's construction has been forgotten, or lost in the realm of myth. Discovering where they are might be a slow process of deduction from clues scattered around their environment, or a sudden, shining revelation as they tumble down the rabbit hole into the airlock leading to the rest of the ship. Classic examples include the generation starship from Robert A. Heinlien's *Orphans of the Sky* and the titanic, mad-house Alpha Complex of West End Games' *Paranoia!*

Everything You Know is Wrong

Similar to the Forgotten option, except that The Truth hasn't been lost, it's been deliberately hidden by the forces controlling the prison. This option is especially appropriate when combined with the Disguised setting and the Experimentation reason. Though certainly dramatic, the Everything You Know is Wrong option is difficult to pull off without making it seem like an arbitrary GM fiat. Players are best tipped off about their world by finding odd little discrepancies between what they see and what they "know" they should be seeing. For example, in the film *Dark City*, the protagonist only gradually notices that the sun never seems to rise, and that no one seems to be able to remember how to get to Shell Beach.

Settings

What the prison looks like is going to establish much of the ambiance. Is it obvious that they can't leave, or does it just seem like the situation is conspiring against them? Are the characters trapped in a huge city, filled with winding streets that never seem to lead outward, or are they in a small and quiet monastery surrounded by thick, impassable woods?

Isolated

It's obvious that the characters are trapped wherever they are, but there isn't much they can do about it (yet, anyway). Typical isolated facilities are such things as the stereotypical monster-filled dungeon a fantasy villain might toss them into, a small seaside village guarded by malicious weather balloons ala *The Prisoner*, or perhaps a gigantic airship that never lands, and the control room is locked off . . .

Disguised

A more typical setting for a "Forgotten" or "Everything You Know is Wrong" campaign is a prison that no one knows is a prison. The important thing to remember in this setting is that initially the characters don't realize that they can't leave. As the PCs attempt to get out they should find more and more inexplicable obstacles in their path, from misplaced street signs to corridors that seem to loop in on themselves. As they encounter even greater frustrations, they may finally realize that someone is deliberately preventing them from leaving.

Guards & Warders

Every prison has guards, even if they just let their subjects wander about while they watch on hidden cameras. If the characters know they're in a prison, the guards should be fairly obvious, even if their uniforms are identical, neatly-pressed suits. The guards in a disguised prison will be harder to spot. Are those pale men on the corner just waiting for a bus, or watching for the PCs' next move?

Reasons

Unless the GM wishes to be really malicious, he should give the PCs a chance to figure out why they're where they are. Typical reasons include:

Imprisonment

Rightfully or wrongfully, guilty or innocent, the PCs have been imprisoned for a crime. They may face just incarceration, or perhaps experimentation in their prison's many corridors or torturous traps. The important distinction is they have a fair idea of where they are. Or course they may not remember how they got there, or who put them there, or where exactly "there" is . . .

Accident

Whatever the prison is, the PCs are there entirely by accident, either by chance or because they were born there. Perhaps they were exploring and stumbled across the prison, or accidentally activated long inert machinery that transported them there. If the prison is disguised, or forgotten, the inmates may take some convincing that they're actually imprisoned in the first place. And if there are warders around, they may not take kindly to the PCs disrupting the situation.

Experimentation

Sometimes a prison isn't there to merely hold inmates, it's part of a bizarre psychological experiment. Perhaps the prison has a veneer of normality, in order to keep the prisoners from noticing subtle changes in the environment. Or perhaps the entire complex is a gigantic rat's maze, and heaven help the subject who doesn't figure out how to get to the cheese.

Entertainment

The PCs aren't imprisoned for punishment or science, they're there for the amusement of the masses, or perhaps to satisfy the twisted desires of a madman. Such prisons will probably feature ingenious deathtraps and lethal puzzles, as the PCs attempt to traverse its confines and try and find a way out. But they'd better be entertaining along the way, for low ratings will mean the death of the show, and themselves.

Goals

Unless the PCs actually enjoy being trapped in their environment, a campaign set in a weird prison will have at least one of the following goals.

Get the answers!

Why are they here? Who sent them there? Who built the prison and why? All of these are questions that are likely to be asked by the PCs. Depending on how long the GM and the players want to drag out the campaign the answers may be dribbled out over several sessions as they discover the rules of their environment, or come in a rush as they dramatically confront the prison's operators.

Spread the truth!

Once the PCs learn what's going on, the next logical step is to spread the word. If the prison is disguised or forgotten this may be harder than it looks. Few people will want to believe that they're trapped, especially if there are legends that outside the confines of their prison is a wasteland. On the other hand if it's obvious that the prison is a prison, the hard part might be keeping the revelation from the guards, especially if the characters are getting ready to make a mass escape attempt.

Get out!

This is the ultimate goal of Weird Prison campaign. Whether the PCs wish to just escape on their own, or break out the entire prison population is up to them. Depending on the circumstances (perhaps the generation ship they're trapped on is headed for a crash landing and must be evacuated), they may have little choice in the matter.

If the GM wants to put an ironic twist on the whole campaign, he should keep the ending of *The Prisoner* in mind. Remember, just because the PCs have left the prison grounds, it doesn't mean that they've truly escaped . . .

Example Settings

The Factory

Work, work, work . . . Work a sixteen hour shift on the assembly line, catch a quick meal and few hours sleep, then start the shift all over again. The Factory is an enormous structure, with the ceilings lost in darkness above, and the miles long assembly line lit by dim, naked bulbs hanging overhead. The noise of the machine presses, drills, and hydraulics is overwhelming, allowing little chance for conversation. Parts come in through a hatch at one end of the line, and the completed units exit at another. Food comes from the cafeteria, served by blank faced chefs who never bother with idle conversation. You catch your winks in the bunkroom, and most of the time you're too tired to chatter.

The characters know they've been working on the line for quite a while now. Gradually some might become aware that they can't quite remember how they got there, or what on earth they're assembling. But there isn't much time to investigate things outside of sleeping hours, and they have to be careful. The Factory itself never shuts down, and sometimes they can catch a glimpse of shadows walking along the catwalks up above.

The Monastery in the Woods

The Monastery of St. Jerome Emiliani is a gentle place. The old stone buildings sit in a cleared field in the center of a thick forest. Warm and comfortable dormitories house the ranks of orphaned children, who are watched over with gentle care by Brother Martin and his helpers. The children there were abandoned by their parents, or so they are told, and left to the Monastery to be raised and schooled.

The children are also watched over by Brother Martin's Guardians, large monks who don't speak a great deal and spend much of the time patrolling the border of the woods. Which seems strange, since the woods are so full of brambles and

prickly bushes that walking through them is almost impossible.

When a child physically matures, their time at the Monastery is limited. No one is quite sure what happens to them, but they all leave very soon. Sometimes they leave even earlier, usually because they're sick, often complaining of headaches, or voices in their heads. Sometimes they're obviously menaced by demons, as the area around them grows inexplicably cold or hot, or objects fly by themselves off the tables and shelves.

And no one leaves on their own. The woods are far too dangerous to try and walk through. Sometimes a child tries to run away, but Brother Martin and the Guardians always bring them back. Most don't try, however, for the ones that come back always have blank expressions on their faces, and don't remember their old friends very well, even though they insist they're very happy now.

The Maze

The city of Caledonia is a model of modern Victorian efficiency. Those newfangled electric lights insure that the streets are busy twenty-four hours a day, without the risk of explosion the old gas models had. The steam-powered factories churn out enormous quantities of goods. Mechanical constables patrol the streets, insuring the rabble keep in line. Food and other goods not produced by the city can be ordered through catalogs and delivered straight to the corner store, or sometimes even to one's home, via the marvelous pneumatic tube system.

Like any modern city however, the street system leaves something to be desired. The towering, five story tall brick buildings overhang a series of winding streets and alleyways that would give Daedalus fits. Sensible folk stick to their own neighborhoods, rather than risk getting lost, depending on the Underground for transport to the factories or the museums and concert halls at the center of town. Many people have attempted to produce maps to help alleviate the confusion, but those cartographers inevitably go out of business quickly, often before they're able to print anything. Sometimes their businesses are even burned to the ground by those frightful anarchists.

Even more rarely a madman sometimes makes his way to the city square, claiming he's tried to find his way out of the city, only to discover the streets bend back onto themselves. Ridiculous nonsense, of course. Fortunately the constables take care of those poor disturbed fellows, escorting them to Bedlam, along with other folk who try to breach the walls around High Hill, where the gentry, the industrialists, and the Lord Mayor live, watching over their fellow citizens with a benevolent eye.

Children of the Village

Ever wonder where Number Two gets his army of Watchers and white-helmeted goons to watch over the citizens of The Village? The episode "The Girl Who Was Death" gives a hint, showing Number Six telling a tale to the children housed in the Village Orphanage. Ever wonder what kind of jobs those kids could look forward to when they grow up? After all, only a person raised in the Village itself could possibly be trusted with guarding the place!

This is a chance to do a more lighthearted Weird Prisons campaign. Being the guards means the PCs have slightly more power than the prisoners. But being in The Village probably means they're as clueless as Number Six when comes to figuring out what's really going on in Number Two's head. And after the events of "Fallout" will they be able to function in the Real World after The Village falls apart?

* * *

The two fallen trees had crushed the Guardians, but Brother Martin had jumped safely out of the way-- almost. The oak's thick trunk lay across his crushed legs, trapping him underneath. Raina felt a weird sensation, not quite horror, not quite glee, as she looked at her handiwork.

"Young Raina-- you can't-- leave," Brother Martin gasped.

She shook her head. "I'm going. You can't stop me."

"You don't understand-- God has made you different." The black robed monk's face twisted in pain. "If you are-- discovered-- you'll be hunted down-- like a dog. You're safe in the-- monastery."

*"I don't want to be safe, I want to be free." Raina turned away and started walking towards the river. **Don't worry, Brother**, she thought towards him. **I'll return someday. My friends are still in the Monastery, and I will not leave them there forever.***

Inspirations

Books

- *Orphans of the Sky*, Robert A. Heinlein. One of the first science-fiction novels to explore the idea of a generation ship whose crew has forgotten they're onboard a ship.
- *The House of Stairs*, William Sleator. A group of teenagers are trapped in a huge structure that seems to consist of nothing except stairs and platforms. A creepy and downbeat young adult novel.

Games

- *Flight 13*, W. G. Armintrout. A passenger jet must make an emergency landing in Austin, TX. Or at least a place that looks like Austin, TX . . .
- *GURPS The Prisoner*, David Ladyman. Steve Jackson Games' adaptation of the classic 60's TV series.
- *Paranoia!*, Greg Costigyan, others. Alpha Complex is home, The Computer is your friend, and Outside (whatever that is) is filled with Commie mutant traitors. West End's classic game of insane computers, trigger happy clones, and lunatic bureaucracy.

Film

- *Cube*. Several people wake up inside a building consisting of thousands of identical, booby-trapped rooms, with no food, no water, and few clues on how to get out.
- *Dark City*. An amnesiac man awakens in a Noir-styled city where it's always night, he's been accused of a murder he doesn't remember committing, and Strangers are hunting him.
- *The Matrix*. Though it fails the Second Law of Thermodynamics, The Matrix is a good movie for a very cinematic take on the Everything You Know is Wrong campaign.
- *The Truman Show*. A man is raised from birth believing he lives in a pleasant suburban community, when actually he's trapped inside a giant TV studio as part of the ultimate "reality" TV series.

Television

- *Dungeons & Dragons*. Six modern kids are stuck trying to find an exit from a familiar looking fantasy universe.
- *Land of the Lost*. A father and his two kids are sucked into a pocket universe/zoo filled with dinosaurs, lizard-like humanoids, super-science, and lost civilizations. The original 70's series had a few episodes written by such well-known science fictions authors such as David Gerrold and Larry Niven. The 90's remake has better special effects, and far worse plots and characters.
- *Nowhere Man*. Thomas Veil took one photograph, and now a shadowy government organization has taken away his entire life. Though more of an Illuminati style show, Nowhere Man is a good example of how villains might control the environment around the PCs.
- *Star Trek* episode "For the World is Hollow and I Have Touched the Sky." Kirk and company discover a generation ship that has forgotten its purpose, and is on a collision course with an inhabited world.
- *The Prisoner*. The man known as Number Six never stops trying to leave the idyllic, inescapable Village. Episodes are now available in VHS and DVD format.

The Starlost. A farmer (2001's Keir Dullea) discovers his community is just one of a vast number of isolated habitats onboard a runaway starship. While it's hard to classify this show as "recommended," it is the only example of an episodic series set on a generation ship to date. Awful scripts, acting, special effects, plus a non-existent budget doomed this Canadian series from the start. Later adapted into a novel *Phoenix Without Ashes* by Harlan Ellison, who initially backed the television project.

Shadow World Master Atlas, Third Edition (for Rolemaster)

Published by [Eidolon Studio](#)

Written by Terry Kevin Amthor

222 b/w pages (plus 8 color map pages); \$30.00

The Shadow World, once the background world for ICE's fantasy game *Rolemaster*, has found a home with one of its creators, Terry K. Amthor. His one-man company Eidolon Studio has already published three regional sourcebooks with completely new material, and now he has revisited the introduction to this world of high fantasy, the *Shadow World Master Atlas*.

For those who are unacquainted with it, Kulthea -- the Shadow World -- is a planet of many continents and a myriad of cultures, ranging from primitive tribes to civilizations on the verge of the industrial stage. While these cultures are often isolated from each other by oceans, mountains or magical barriers, there are some organizations whose power and ambitions span the globe. The most prominent of these are the Loremasters, benevolent mages who prefer giving advice to more direct ways of interference; the Dragonlords, an evil cabal of powerful shapechangers; and the Navigators, a guild of journey guides whose services include instantaneous teleportation for those who can afford it. The inhabitants of the world are standard issue (humans, dwarves, elves and some oddballs), but the strength and charm of this setting derives less from the originality of its ingredients and more from their unique treatment: in spite of its traditional fantasy trappings, Kulthea's nearest relatives are science fantasy settings like Tekumel or Jorune. The forces behind magic and other supernatural events may not be understood by anyone, but they are not unexplainable per se.

In its previous incarnations, the *Atlas* struck me as one of the weaker efforts of the line and I was anxious to see whether the third edition would hold up to the high expectations kindled by the three sourcebooks mentioned above. As with those books, the 222 pages of the Atlas are spiral bound, but this is the only clear sign of its small press origin; the interior appearance of the book benefits greatly from the author's day job as designer and layout artist. Some of the illustrations are culled from old ICE books, but most are manipulated photographs and 3D renderings. While the rendered images do not work all that well for me (part of the problem might be printing out color images in black and white), the photos are well done and give a lot atmosphere. The poster map of Kulthea from the earlier editions is appended in the form of 8 separate color printouts, which appears as something of a stop-gap measure to me.

The book starts off with explanations about the game terms used in the book and system conversion notes. While I question the wisdom of putting them up front -- not the most evocative invitation to a world of fantasy - they are certainly useful, especially since *Rolemaster* is not exactly the most popular of rule systems. The description of the world itself begins from a far way away, with the Kulthean star system and the moons as the topic of the second chapter, "The Heavens." This approach emphasizes the feeling that Kulthea is part of our own universe, a place where the laws of nature might have been expanded a bit, but are not superseded completely by the laws of legend. (Or the laws of the dungeoncrawl.) Since two of the five moons are home to the most powerful gods, they actually have a lot of import on everyday life. Orhan, the largest moon, is the paradise like realm of the Lords of Orhan, whereas Charon is riddled with gates to darker dimensions.

A short overview of weather and climate leads into Part Four: The Lands, wherein all continents on the western hemisphere are given a short overview. Although only few places get more than a broad glance, I came across a lot of intriguing ideas. Some of the old material from the ICE *Shadow World* books was also incorporated here, but for the most part, this is all new information, even including a first outlook about what awaits on the mysterious eastern

hemisphere.

The next chapters form something of a naturalist (or in some parts, an unnaturalist) guide to Kulthea. Animals, monsters, demons, herbs, plants, gods . . . even gems and metals are described in a nice mixture of real world info and fantasy. The Kaeden, an artificially created race of horrible insectmen, are my personal favorite of the many beasties compiled here, but what I like best is that the emphasis is on presenting a coherent picture of a world and not on creating a menagerie of freakish things to throw at your players. An example of this is the chapter on demons (some of whom are, admittedly, more than a little freakish) that also deals with cosmology and the Six Pales, home planes of the most frequently summoned demons.

This attention to atmospheric detail is also apparent in the chapter about magic, where, along with "natural" phenomena caused by Kultheas inherent essence, the manifestation of magic spells are discussed -- the appearance of defensive magic differs from that of a flying spell, and both might differ from one mage to the other. This chapter should be required reading for *Rolemaster* players, but it will also be useful for everybody else.

The most outstanding part of the *Atlas* is the History of the World, recounting the most important events from thousands of years, with increased detail towards the present year of 6054 Third Era -- a whole three pages are devoted to the year 6053. While this is not an easy read, it is an entertaining and rewarding one, providing you with lots of story hooks and potential campaign settings. A chapter on organizations and persons of note concludes the book, followed by appendices that include linguistic notes (along with short vocabularies), some rule notes and an index.

For everyone who is looking for a new world background, this is a very worthwhile purchase. Kulthea provides a stage for you that is full of depth and detail, but it is open enough for you to weave stories around and about the general frame. And, thanks to the fact that it was created by only one author, it avoids the design-by-committee ills that sometimes seem to crop up in the *Forgotten Realms* or the *World of Darkness*. Transition to other rule systems should not be a big hurdle -- there are conversion notes, and the best parts of the book are free of rules, anyway.

It is not recommended if you only want to add some ideas to an existing campaign of yours -- as noted above, the way the ideas are tied together is what makes this book shine, and anything taken away from the background will lose in the transition. Those who already have one of the former editions of the *Master Atlas* have to consider whether the new creatures and races, the geography overview and the updated history justify spending \$30 for the book.

In conclusion, the *Shadow World Master Atlas* is a wonderful introduction into a fantasy background that differs significantly from both the normal pseudo medieval fare and from exotic worlds like *Glorantha*, *Talislanta*, or *Tekumel*. If you have enough of elves, wizards and dragons then it will not differ enough to make you come back, however.

The Dark Side Sourcebook (for the Star Wars RPG)

Published by [Wizards of the Coast](#)

Designed by Bill Slavicsek, J.D. Wiker, and Cory Herndon

Illustrated by Jon Foster, Lee Bermejo, Dan Brereton, Tommy Lee Edwards, Doug Alexander Gregory, Ashley Wood, and Lucasfilm Ltd.

Edited by Brian Campbell and Michelle Carter

160 color page hardcover; \$29.95

Bad guys have more fun. You know it, I know it, and both Lucasfilm and Wizards of the Coast know it too. They're obviously a little nervous about this fact, and that means the *Dark Side Sourcebook* for the *Star Wars RPG* isn't everything it could have been. However, there's enough in this book to please all but the most demanding Sith Lords.

Like most of WotC's supplements, this book gives center stage to new abilities. After sketching out the history of the Dark Side in a couple of pages, Chapter Two devotes 25 pages to new skills, powers, and prestige classes. Most of these are Force-based skills -- characters can use alchemical concoctions to enhance equipment or mutate creatures, turn hordes of minions into their personal puppet show, drain Force and knowledge from others, and transfer their life essence to other bodies. New Feats include the ability to blast everyone around you with pure hatred, a Rage that makes Wookiees look even-tempered, and proficiencies in the deadly Sith Sword.

One of the nice features of the *Star Wars* system is that these abilities are theoretically accessible to almost any Force-sensitive character. An ethically flexible Jedi can study the darker arts if he is willing to pay the price. The powers themselves are limited by the fact that they require a minimum number of Dark Side points to be used. (Most of them also give a Dark Side point when they are used, greasing the character's slide into evil.) The *Star Wars* designers have struck a fine balance between temptation and damnation here. "Go ahead and dabble in the Dark Side," they seem to say, "but don't think you're going to get cool powers cheap. You'll have to do some nasty things, and we bet you're not as good at controlling yourself as you think you are."

Chapter Three picks up this theme and discusses the tricky job of gamemastering Dark Side player characters. It's a solid section of GM advice, but it's here that the themes of the book cross wires with the typical gamer. The resulting text doesn't ruin the book, but it does sound a little strange.

Here's where we get to what you and I both know. We know that most roleplaying games are all about killing people and taking their stuff. The average group of players loves to rampage through dungeons (Death Stars) slaying monsters (blasting storm troopers) and rescuing princesses (rescuing princesses). We also know that Luke is a goody two-shoes and that Darth Vader -- not Anakin Skywalker -- is the coolest guy in the galaxy. Therefore, we can conclude that while blasting your way through stormtroopers to overthrow the Empire is fun, it's even more fun to wear a black suit of armor and blow up Alderaan. Even the most lawfully good gaming group is occasionally going to want to let its hair down, roll up a bunch of Sith Lords, and crush that puny Rebellion once and for all.

Needless to say, this prospect terrifies Lucasfilm and Wizards of the Coast. Not only is it directly contrary to all the

stated themes of *Star Wars*, but the idea of "encouraging evil" must give the legal staff and publicity flacks nightmares. *Dungeons and Dragons* may have brought back the demons, but it certainly isn't encouraging gamers to play Asmodeus and Orcus. At the same time, the designers must know that a "*Dark Side* is only for gamemasters" book would sacrifice sales, spawn hoots of derision, and still be untrue to *Star Wars*. (The whole point of the Dark Side is that it tempts even the best heroes.)

So the designers have compromised. Yes, you're encouraged to run a Dark Side campaign, but only if the villains get theirs in the end. "Every dark side campaign has two possible endings," they write. "The heroes can turn away from the dark side and find redemption, or they can meet their nemesis in a final battle and go out in a blaze of glory." Victory for the bad guys is not an option in the *Star Wars* universe.

It's a reasonable decision, and the advice on how to bring a *Dark Side* campaign to a rousing close is useful, but it's hard not to hear the voice of Ned Flanders in the designers' insistence that evil must always get its comeuppance.

After negotiating this tricky subject, the book spends most of the rest of pages detailing the many villains of the *Star Wars* universe. The coverage is impressive -- every evil force-user from the comics, novels, and movies seems to get at least a few paragraphs. There's also a wide selection of creatures, generic Dark Side character templates, and some welcome details about the early conflicts of the Old Republic and the Sith Empire.

All this information makes *The Dark Side Sourcebook* extremely useful for gamemasters, whether they are creating antagonists or tempting player characters. It is well designed and colorfully illustrated -- but also just a little bit disappointing. The designers present useful rules, but they dance away from the joy of playing the villain. Are a few evil laughs and mustache twirls really so much to ask?

Where Did I Leave My Wonderful Toys?

Last week I was at the 2001 World Yo-Yo Contest, serving as scorer and registration guru. During this time I had my IBM WorkPad z50, which (in theory) can keep up with the entirety of *Pyramid*.

I say "in theory" because the z50 is an odd duck in the world of computing. Released in 1999, it was designed to be a bridge between the palmtops made by Palm, and the bulky laptops of a "real" computer. It runs entirely off battery-saved memory, so it has no moving parts; as such, batteries can last 8-10 hours depending. It has a keyboard that's 95% the size of a laptop's. It has a modem for Internet and email access, and a word processor for writing.

And it failed miserably in the marketplace. It turns out that the z50 was far too big for those who wanted to use it for Palm-type organizing, and not powerful enough for those who needed a full-sized laptop. Really, it was only truly suitable for those who wanted to do light Internet work while on the road, and maybe write a word processing document or two.

In other words, it was pretty close to ideal for my purposes. At least, it was once they discontinued it, and started clearing them out of warehouses for \$300 or so each (instead of the \$900-1000 they wanted originally).

So anyway, in theory I can use this laptop to run the magazine. In practice doing such (in a hotel, stuck behind a registration table for 12 hours at a time, using a \$10 phone card) is very problematic. But between it and the \$1-per-4-minutes terminal in the lobby I was able to keep up with my email and newsgroups, and do some minor editing on the mag. But I wasn't able to get much done until I got home.

Which, by way of meandering preamble, brings me to this week's topic.

In many games, movies, and comics, the heroes are defined by their toys.

In the movies, Luke has his lightsaber, Han has his Millennium Falcon, and Bond has his gadgets and the blessing of the British government.

In the comics, Iron Man has his suit of powered armor, Batman has his utility belt, Green Lantern has his power ring, and the Incredible Hulk has his tattered purple shorts that always seem to fit him (or *don't* fit him, which explains why he's so ticked off all the time. "Hulk wedgied! RAARRRGGGHH!").

And PCs have their gear. Be it the armored giants of a Mecha campaign, the magic tomes of a fantasy game, or the super decked-out vehicles of an *Autoduel* campaign, sometimes our heroes are as much what they have as what they do.

So one of the most interesting things for me -- both as a player and a GM -- is to take those things away. This is usually temporary, of course . . . it's not good karma to strip a character of their stuff permanently if the player doesn't want to. But very often removing the heroes from their gear is a great way to emphasize that heroism is core to the person, not the equipment.

Luke needed to enter the viper's den of Jabba's palace without his lightsaber. Han loaned the Falcon to Lando. Bond gave up his job in *License to Kill*. And various superheroes lose their gizmos every other month. (You think they'd have toddler-restraint cords on their stuff . . .)

And, in all these situations, the heroes prevailed over their gearlessness. In some situations (like Luke's) the heroes even *facilitated* the removal of their equipment, to give them a strategic advantage later. Regardless, in all these situations the heroes were able to prove that they were more than their stuff. In fact, the lack of equipment might encourage a level of creativity in the players they might otherwise not exhibit.

For example, in *Fading Suns* most players will eventually end up with devices called shields, which are energy

barriers that stop sufficiently damaging attacks (not unlike the devices in *Dune*). In one game our group played in, we were on the swamp world of Severus. The GM thought it would be interesting to attack us with giant wasp-like insects. We ultimately learned that these creatures were attracted to -- and enraged by -- the frequency of the shields we wore. In other words, if we didn't turn off the shields, these beasts would constantly attack us.

Fading Suns is a fairly lethal system; without those shields, we were quite vulnerable. As such, an otherwise standard adventure was raised to a truly memorable level simply by removing one of our toys. And, near the adventure's climax, we had the idea to turn on one of the shields and plant it near the bad guy. Then we ran and hid. Lovely, sweet, enraged nature took care of the rest.

The trick with these kinds of adventures is to make sure it seems organic, and doesn't feel like you've taken away their stuff for no reason. Taking away the heroes' cyberarmor because it's No Cyberarmor Day on the planet isn't very sporting; but building an underwater adventure where the heroes can't wear their cyberarmor is perfectly fine. And, of course, the villains are constantly plotting to take away those wonderful toys from the heroes . . .

You may want to scale down the adventure so that it's a more appropriate challenge for the gear-less heroes. Then again, you can keep the challenge the same, making for a [very difficult adventure](#).

Finally, if you're looking for a way to put the twist on this old formula, have the heroes make up new characters *without* equipment . . . just random Schmoes. Then have them stumble across the heroes' equipment, with the idea that they need to use those items to figure out what happened to -- and save -- the heroes. This can be an interesting possibility to show how items *can* make the heroes. How would a random person use Iron Man's armor or Captain America's shield? What if -- through mistake or design -- a normal citizen were to get Bond's resources and authorization? Could a normal Rebellion pilot use the Millennium Falcon to save the galaxy's greatest heroes? And, since the players wouldn't be playing the standard heroes, the possibility for heroic sacrifice is that much greater . . .

In all, it's the unusual circumstances where the heroes' first instinct is to turn to their equipment. And sometimes the most memorable adventures are those where they can't.

* * *

On the car trip back from Orlando, I came up with a new car trip game that can be played by people with too much time on their hands who desperately want to keep from nodding off . . . like, say, people on car trips coming back from Orlando.

Anyway, come up with an initial actor and a movie role. Then name another actor to replace him or her. The actor should, ideally, be as amusing or incongruous as possible.

- "*Escape From New York* starring John Denver as Snake Plissken!"

The next player needs to come up with a movie that actor was in, and find another actor to replace the actor in that role. (The character is really only necessary for the first "link," so you know who's being replaced.) Again, the goal is amusement. Thus the next links in the chain might be:

- "*Oh, God!* starring Sean Connery!"
- "Billy Bob Thornton **is** James Bond in *Dr. No!*"
- "*Sling Blade*, starring Jim Carrey!"
- "*Ace Ventura: Pet Detective*, featuring the physical comedy of Orson Welles!"
- "*Transformers: The Movie* . . . starring James Stewart as the voice of Unicron!"
- "*Mr. Smith Goes to Washington*, starring the lovable Anthony Perkins!"
- "*Psycho II* . . . the evil never dies. With John Candy!"
- "*Planes, Trains, and Automobiles*, starring comic genius Jean Claude Van Damme!"

And so on. Sell the movie; make the other players anticipate the crossover. Of course, after each one of these (ideally) you'll probably be quoting a scene of that movie in the style of the new actor. (Menacing giant evil planet dialogue in

the style of Jimmy Stewart is a blast!) At least that's what *we* did . . . in between lots of laughing.

Repeat until everyone gets bored. Or, ideally, just *before* everyone gets bored . . . then find a way to wrap it back to the first actor. If you're looking for a way to cross genders, you might try to find a way to work in questionably gendered actors, cross-dressers, and movies involving cross-dressing.

(I wouldn't at all be surprised to learn this game exists elsewhere. But I've never seen it, and it kept us occupied for four hours. Then again, so does yarn . . .)

By the by, in the Day Job, two people in my office are going on vacation for two weeks. I'm not one of them. And we only have three folks who work in the office. As such, I'm going to be chained to a desk for two weeks, and may thus be more difficult to get in touch with. And after that I'm going to DragonCon. So basically August's a botch for speedy contact. I'll try to do what I can, but if I take a bit longer than normal to get in touch, it's not because I don't love you. Honest.

Last week's answer: Mage: The Sorcerers Crusade, p. 152.

(*Two stars*) "The librarian, Lucius, had been motivated by unseen forces to wander the world for five years, searching for arcane knowledge. Upon his return, he began to search for clues to this 'missing time' -- and promptly vanished."

Knock, Knock: The Ratcliffe Highway Murders

"It is really wonderful and most interesting to pursue the successive steps of this monster, and to notice the absolute certainty with which the silent hieroglyphics of the case betray to us the whole process and movements of the bloody drama, not less surely and fully than if we had been ourselves hidden in Marr's shop, or had looked down from the heavens of mercy upon this hell-kite that knew not what mercy meant."

-- Thomas de Quincey, "On Murder Considered as One of the Fine Arts" (1854 Postscript)

An intriguing 77 years before [Jack the Ripper](#) held the East End in a paroxysm of horror, another killer, also likely never caught, beat Red Jack's record a mile or so farther south along the murderous ley lines running under London's Ratcliffe Highway. The Ratcliffe Highway murders, according to opiated genius Thomas de Quincey, were "the sublimest and most entire in their excellence that ever were committed," and the nationwide panic they evoked helped create the first modern police force. What else they created, and who (or what) created them, remains to be seen. So, in honor of the Gothick goodness of the brand-new **GURPS Screampunk**, let's knock some ideas around.

"The Dwelling House of Mr. Timothy Marr, 29, Ratcliff Highway, Man's Mercer, was entered this morning between the hours of Twelve and Two o'Clock, by some persons unknown, when the said Mr. Marr, Mrs. Celia Marr, his wife, Timothy their Infant Child in the cradle, and James Biggs, a servant lad, were all of them most inhumanly and barbarously Murdered!!"

-- Handbill printed by the Churchwardens of St. George in the East, Dec. 8, 1811

But first, the murders. On the early morning of December 8, 1811, housemaid Margaret Jewell returned to Timothy Marr's draper's shop at 29 Ratcliffe Highway from an unsuccessful errand. Unable to raise the house by knocking, she summoned help from the neighbors. Breaking in, they discovered Marr, his wife, his infant son, and the apprentice James Gowen dead and scattered about the shop with crushed skulls and slashed throats. A carpenter's maul discovered on the premises proved to be the murder weapon; although a matching ripping chisel also turned up in the Marrs' shop, only a knife or razor could have severed the throats of the family. The savagery of the murders, and the detail of the baby's needless death, created a furor; the parish wardens, the River Police, and even the Home Office posted rewards for information.

In the midst of this tumult, on December 19, the murderer struck again, this time at a public house just off the Ratcliffe Highway, the King's Arms at 81 New Gravel Lane. Again, a young woman escaped (incredibly, by sleeping through the whole affair) while the rest of the house died -- the innkeepers John and Elizabeth Williamson, and their maid Bridget Harrington. Again, the killer smashed the skulls and slashed the throats of the victims (from left to right, like Jack the Ripper 77 years later); again, he left his club (a chisel-crowbar) and took his razor away. The Williamsons' lodger, John Turner, escaped by knotting sheets together and lowering himself out the window. Again, the murderer was interrupted by poundings at the door; again, he fled out of the back of the house. He had killed seven people in twelve nights, and only Turner's eyewitness description ("a tall man in a Flushing coat") and the maul connected him at all with the material world.

"We think it our duty to inform you that from what appeared in Evidence previously to the death of Williams, together with what has appeared on a very full Examination this morning, that Williams was the perpetrator of the late murders in this neighbourhood; and we have also to add that we have every reason to hope that he alone was concerned."

-- Shadwell district magistrate report to the Home Secretary, Dec. 27, 1811

The day of the Williamsons' murder, the authorities belatedly discovered an owner's mark on the maul, the initials "J.P." Soon, the watch traced the maul and chisels to the tool-chest of German sailor John Peterson, who had left them at the Pear Tree Inn in nearby Wapping. As part of the general roundup of Irish and other undesirables, the magistrates questioned John Williams, a lodger at the Pear Tree, on December 24. Like many of the other suspects, Williams owned a bloody shirt (or one recently washed) and as a sailor had few ties to the neighborhood. After extremely dubious testimony against Williams by other lodgers, the magistrates (desperate for any progress) decided he was the key figure in the crimes. Before he could be arraigned, much less tried, however, Williams was found hanged in his cell on December 27. With a sigh of relief, the authorities considered his apparent suicide a transparent confession. On

New Years' Eve, Williams' body was paraded through the streets and then buried at the crossroads with a stake through his heart -- the traditional disposal of a suicide. The hangman drove in the stake with the very maul that had killed the Marr family.

"The particular outrage that has excited such feelings of horror and detestation in the Metropolis, and the perpetrators of which have escaped detection, is still wrapped up in mystery."

-- speech in Parliament of Prime Minister Spencer Perceval, Jan. 18, 1812

Mystery author P.D. James demonstrates fairly conclusively, in her history of the case (*The Maul and the Pear Tree*, with T.A. Critchley), that Williams was arrested, held, and investigated on the flimsiest of evidence. Not only did he have an alibi for the Williamson murder, the bloody shirt the authorities seemed to believe conclusive could not have been worn during the crime -- it was in the laundry on one of the nights, and not bloodied enough on the other. A government informant found a bloody knife hidden in the Pear Tree and claimed a share of the reward money despite only his word linking the blade to Williams. James and Critchley finger one William Ablass, a tall sailor of brutish temperament who had served with Williams; they allege that the witnesses blackened Williams' name after his death to split the reward, and that Ablass bribed the jailer and strangled Williams as an irrefutable frame-job. However, one is still left with the uncomfortable fact that the Ratcliffe Highway killings ended with Williams' death.

"At length, in [1811], Mr. Williams made his debut on the stage of Ratcliffe Highway, and executed those unparalleled murders which have procured for him such a brilliant and undying reputation Now it will be remembered, that in the first of these murders (that of the Marrs), the same incident (of a knocking at the door) soon after the work of extermination was complete, did actually occur, which the genius of Shakespeare has invented; and all good judges, and the most eminent dilettanti, acknowledged the felicity of Shakespeare's suggestion, as soon as it was actually realized."

-- Thomas de Quincey, "On the Knocking at the Gate in *Macbeth*"

The similarities don't stop with the two murder scenes. As de Quincey points out, they also have some intriguing parallels with Shakespeare's depiction of the [murder of Duncan](#) in *Macbeth*. Interestingly enough, on the very nights the murders occurred, de Quincey's fellow opium-addict, Samuel Taylor Coleridge, was earning the price of his next fix by lecturing on Shakespeare's plays -- including *Macbeth*. Could some opium- (or [mandragora](#)?) spawned murder-creature have taken the imagery from Coleridge's nigh-shamanic prose and re-created these sanguinary horrors? Or was there some other actor, deep within the Royal Society descended from John Dee, who saw the need to re-create the dramaturgickal magic of *Macbeth* on the Ratcliffe Highway? That year, 1811, George III finally went completely mad, leaving George IV as Prince Regent. As if in response, the Luddites began breaking machinery, the harvest failed, and disorders gripped the nation. Could occult dramaturges have used the *Macbeth* royal murder-ritual (perhaps amplified by its sequel on the [Twelfth Night](#)) to fend off the catastrophic [King Lear](#) ritual result of the royal madness, with its invasion from France, and the destruction of Britain? Prime Minister Perceval, who might have known (or discovered) the truth, died the next year, assassinated by a "lone madman."

"Down the Ratcliffe Highway, or our notion of it, faint ghosts, old stains and patterns blotch the woodchip. George's-in-the-East, that great, dead battery of a Hawksmoor church, part of his stifling symbol-net, his Tesla grid of terror and magnificence.

Timothy Marr, the draper and his wife, their infant child and their apprentice died near here.

Dispatched with maul and ripping chisel in the small hours of the nineteenth century.

Convenient atrocity, necessitating the origination of a police force, one much imitated since throughout the Western World.

Those things that breed in this idea space have their consequence, heavy as churches, they themselves the fossil dreams of architects."

-- Alan Moore, *The Moon and Serpent Grand Egyptian Theater of Marvels*

So, if the Ratcliffe Highway murders were dramaturgickal ritual, why choose Ratcliffe Highway? The word itself, evocative as it is of [Eliot's](#) "Rat's Alley, where the dead men lost their bones," actually comes from Red Cliff, referring to the stretch of the Thames at the Highway's end -- Execution Dock. Here, pirates (such as Captain William Kidd, executed there in 1701) hung in chains to be drowned by the incoming tide, human sacrifices to the god of the sea. In

1645, around the time builders exhumed an ornate sarcophagus from the dockland, a woman gave birth to the hideous Ratcliffe Monster. Well after the murders, a ghostly innkeeper (or vicar) haunted the Ratcliffe Highway, a true "ghost road" -- or ley line. Perhaps unsurprisingly to *From Hell* [sacred-geometry](#) fans, Williams' burial crossroads, the intersection of Cannon and Cable Streets, lies directly beneath Nicholas Hawksmoor's imposingly sorcerous church of St. George in the East. (Marr, it seems, died on the ground upon which Hawksmoor had wanted to build that church.) Mention of Hawksmoor, and of magickal church architecture, brings up the Freemasons, those "brothers" to the corsairs hung at the end of the Highway. Masonic ritual, of course, refers to the simultaneous death by hammer-blow to the head and knife slit throat meted out to those who have transgressed the Mysteries. (The third ceremonial Masonic death, of course, is hanging -- as meted out to John Williams.) The maul remains a key symbol of the Master Mark third-degree Mason; the crossroads burial evokes voodoo rituals to Legba -- and precautions against vampires.

"One fact, however, was striking, and fell in with the impression of his natural tiger character -- that his face wore at all times a bloodless ghastly pallor. 'You might imagine,' said my informant, 'that in his veins circulated not red life-blood . . . but a green sap that welled from no human heart.' His eyes seemed frozen and glazed, as if their light were all converged upon some victim lurking in the far background . . . [T]he oiliness and snaky insinuation of his demeanour counteracted the repulsiveness of his face, and amongst inexperienced young women won for him a very favourable reception."

-- Thomas de Quincey, "On Murder Considered as One of the Fine Arts" (1854 Postscript)

So what if Williams was actually the killer -- but he wasn't actually "John Williams"? Was Williams' "natural tiger character" that of the murder-loving [manticore](#)? Alternately, De Quincey's description, and the stake driven through Williams' heart, make us think of vampires; but his glazed, glowing eyes and "snaky insinuation" also evoke the Reptoids who (as conspiracy theorists warn us) secretly rule Britain, breeding into the royal family. Could the Prince Regent have demanded a royal sacrifice to mark his accession to the throne, leaving it to the secret community of Unseelie serpent-folk who had dwelt in Ratcliffe since Sir Walter Raleigh returned there from his expedition to the jungles of Guiana and [El Dorado](#)? Could the unholy birth of the Ratcliffe Monster of 1645 have been the first spawning of the Reptoid lineage that would ensnare all of England in its coils? Could Perceval's murder have been necessary, to secure the throne that the [Influencing Engine](#) had cleared by destroying the mind of the True King? Did Shakespeare and Hawksmoor jointly pave the way for the serpent-lords' ascension, with a Masonic maul beating a coronation march? Knock, enter, and find out.

Akrasia: Thief of Time (for d20)

Published by [Eden Studios](#)

Written by David Chart

Illustrated by Allen Douglas & Kieran Yanner

32 pages; \$8.95

Eden Studios, best known for the *Zombie RPG, All Flesh Must Be Eaten*, and the modern day alien conspiracy RPG, *Conspiracy X*, follow in the footsteps of Atlas Games and their Penumbra line by creating their own imprint under which to publish their own *d20* books. The first Odyssey title is *Akrasia: Thief of Time*, written by British author, David Chart.

Akrasia: Thief of Time describes itself as being not a scenario, but a vignette sourcebook, for characters of second through twelfth levels. The sourcebook aspect is an examination of the goddess Akrasia and her faith. The vignettes are a series of five individuals, plots and situations associated with the worship of Akrasia. These are designed to be inserted or woven into an existing campaign, or just plain played in between longer sessions of a DM's game.

The goddess Akrasia is known as the Thief of Time, Goddess of Distraction, and the Delayer, among many other titles. When the gods divided the world between them, she was napping and so arrived late at the meeting. By this time there was nothing left. Upon reflection Akrasia saw that was something still left untaken, and so choose to become the goddess of failure and lost opportunity. Later, while working with the god of time, she successfully distracted him to steal from his hourglass and became the Thief of Time. As written, Akrasia is almost an afterthought or footnote among any pantheon of gods, and thus is easily written into most *d20* games that do have a pantheon of several or more gods.

Her worshippers appear to be harmless, but they are rather a malign influence upon society, being Chaotic Evil. Commonly, they seek to undermine the efforts of others, commonly by providing enjoyable distractions -- good food, fine wines, song, and entertainment. Other faithful work to prevent the completion of major projects by wrapping them up in bureaucratic red tape or endless debate and discussion. They and their goddess are opposed to both hard work and discipline, so even the strenuous application of Akrasia's tenets actually goes against those tenets! It is not unusual to find her worshippers to be victims of the very weakness of will and conviction that they themselves spread. Some do actually do make the effort and find themselves no longer believing in Akrasia after having completing some major task.

[SPOILER ALERT!]

The first vignette in *Akrasia: Thief of Time* is "The Sheltering Shrine." For characters of second to fourth levels, this takes place as the party finds themselves sheltering at a near-abandoned temple to Akrasia. This adventure is quite simple and can be slotted into a game at a moment's notice. The second vignette is actually a description of an NPC, Yaraemon the Bard, known for his highly diverting harp performances, but secretly a worshipper of Akrasia. He can be encountered anywhere and at any time in the player's careers, as the vignette gives three increasingly powerful versions of Yaraemon, which can be selected according to the current level of the party.

"The Way Inn" is the third vignette, and also the name of a popular inn. An Akrasia worshipper, who keeps this secret from the locals, runs it and thus prevents little from being done in the village. For characters of sixth to eighth levels,

this is not an easy plot to unravel, as it will be difficult to raise the interest of the villagers, distracted as they are by the services offered at the inn.

The situation in the fourth vignette, "Until The Rain Comes," is potentially more dangerous. Riverton sits astride a river, and the town has recently been subject to damaging floods. To prevent this from happening again, it has been proposed that embankments be built to control the floodwaters. Unfortunately, devotees of Akrasia are surreptitiously preventing this work from being begun. One method is bureaucracy; another is endless debate, often on pointless trivia. As with the previous vignette, getting to the bottom of this will be difficult because of the lack of really tangible acts upon the part of the Akrasia cultists.

The last vignette is the toughest, being designed characters of levels seven through ten. It details an actual temple to Akrasia, The Temple of Pleasant Delights. The objective here would be to destroy the facility, but a frontal assault would be most fraught. More successful would be actually turning the strictures of Akrasia's faith against her worshippers!

Each of the five vignettes comes with one or more hooks that the DM can use to get the players involved. He is also provided with details in each vignette of how it connects to the others in the book. The five make use of the background given on Akrasia and the game information provided in the appendix. This includes a new Prestige Class, the Distractor, who are the most dedicated of the followers of the Thief of Time. A sample NPC is also described, Litarra the Halfling, who has links throughout the vignettes, and like Yaraemon the Bard from the second vignette, is given three increasingly powerful sets of stats, so that she can be used whatever the party's level.

[END SPOILER ALERT]

The appendix also contains details of a new domain particular to Akrasia (Distraction), as well as seven new spells and four new magical items. One amusing magical item is that of Red Tape, which when bound around a document, forces a person to not only read it carefully, but fill it in if required to! Akrasia also has several magical creatures associated to her and these are included in the appendix as well. It is a pity though, that only the last vignette makes any real use of these creatures.

Akrasia: Thief of Time is an attractive and cleverly written supplement that can fit into almost any campaign with a large pantheon of gods. The goddess and her worshippers are well thought out and the information is put to good use in each of the vignettes. As structured through these intermittent vignettes, the book has more shelf life than an ordinary scenario. Further, the way in which Akrasia's faithful actually work (or not!) means more roleplay than swordplay will be needed to sift through the distractions to stop them. This means that players with a preference for combat will be disappointed, not to say frustrated at having a Chaotic Evil enemy whose actions tend towards the subtle and the intangible. The referee may need to take some care in how they present the cultists, but the book does give advice on this also.

This is an impressive start for a new line of ***d20*** books, with none of the teething errors seen in similar first time releases. What makes ***Akrasia: Thief of Time*** really stand out from the rest are the ideas behind the goddess and their application.

The Temple of the Serpent Queen

An Adventure for the *Exalted* RPG

by Stephen Kenson

The *Exalted* roleplaying game from [White Wolf Games Studio](#) is set in a world of epic fantasy adventure. The players take the roles of the Solar Exalted, champions of the gods, chosen to help save the world. They are faced with many enemies, from the Dragon-Blooded who rule the Realm to strange creatures from the Wyld, the unformed chaos at the edge of Creation. To aid them, they have many magical powers, making them heroes of epic stature.

"The Temple of the Serpent Queen" is an introductory adventure for *Exalted*, involving the peril of a small village and a threat only the power of the Exalted can confront, since it originates with one of their own. The Exalted characters come upon a place plagued by raids from a barbarian tribe from the depths of the Wyld. The source of the raids is one of the Lunar Exalted, exiled from the world for centuries and now bent on revenge. After fending off the raids, the heroes must brave the madness of the Wyld to put an end to the threat once and for all. Players and storytellers should be familiar with the rules and information from the *Exalted* rulebook before playing this adventure. Exalted characters from all Solar Castes are useful in this adventure.

Scene One: Unwelcome Arrival

The adventure assumes the player characters are already acquainted and part of a Circle of Solar Exalted. The Storyteller can play out the first meeting of the characters as part of their Prelude, or just assume they already know each other. Alternately, they might meet for the first time in the village of Naramar, although that will require some adjustment of the events in this scene. Since the forces of Fate often take a hand in the world of *Exalted* it's not that unusual for a group of Solar Exalted to happen to meet in a place where they're most needed.

The characters are traveling through the far reaches of the Threshold (most likely somewhere in the southeast, although the adventure could take place almost anywhere the Storyteller would like). Fatigued from their long journey, they come upon a village that offers the possibility of rest, shelter, warm food, and human company, although they must also be careful about revealing their true nature, since agents of the Realm are everywhere.

The village is called Naramar, a humble collection of buildings clustered around a crossroads, with an inn, a central well, and a town square, along with a number of outlying farms and homesteads. The village has no walls surrounding it, and that's a problem for the inhabitants, since there are some signs of damage to the place. Some of the buildings seem to be in disrepair and astute characters (with an Awareness roll, difficulty +1) notice that the damage suggests the place has been raided fairly recently. If the characters take this as reason to pass Naramar by, you can skip right on to Scene Two, or remind them that they have a duty to do what they can to help others. Characters with a high Compassion Virtue should feel compelled to find out more about what has happened in the village (and characters may be required to fail a Compassion roll to ignore the villagers' plight).

The village inn doesn't have a name, it's just "the inn" to the locals. There are a few folk gathered in the common room when the characters arrive, and they take immediate notice of strangers in their midst. Even the innkeeper, a woman named Orchid, is wary toward them, and her face is heavily lined with worry. The villagers treat the characters with cool courtesy, but they're clearly none too fond of strangers. Any overt displays of weapons or armor make the villagers even more nervous, while displays of Exalted powers frighten them (and most likely cause them to flee).

Assuming the characters don't immediately terrify or provoke the villagers, Orchid sees to their needs, overcharging them a bit and saying "times are hard" if the characters complain about the prices. A successful Socialize roll can convince Orchid to mention that Naramar has suffered from barbarians raids recently. They've fought off two already and they're concerned that another may be coming soon. She says the characters shouldn't linger, if they're smart.

A tall, broad-shouldered villager interrupts Orchid's talk with the characters. If the Exalted seem threatening, he steps forward even sooner. His name is Brill, the town smith, and he demands to know who the characters are and what they're doing in Naramar. He's clearly had a little too much to drink and is spoiling for a fight, since tensions are so high in the town. Orchid tells Brill to back off, but he tries to provoke the characters into a fight with insults and insinuations. How they choose to handle it is up to them, but Brill is just an ordinary (albeit fairly strong) mortal, no match for one of the Solar Exalted. If the characters handle him gracefully, without hurting him too much, they earn some respect from the people of Naramar. If they just kill him, the villagers are more likely to be afraid of them, and less likely to ask the characters for help.

Brill (an extra): Base Initiative: 4, 4 dice in any relevant dice pools, Attack: 4, Damage: 4B, Defense: 4, Soak: 3B, Valor 2, Willpower: 4, Health Levels: -1, -3, Incapacitated.

Typical Villager: Base Initiative: 2, 2 dice in any relevant dice pools, Attack: 2, Damage: 2B, Defense: 2, Soak: 2B, Valor 1, Willpower: 3, Health Levels: -1, -3, Incapacitated.

Scene Two: The Attack

Shortly after the Circle arrives in Naramar, the Wyld barbarians attack the village. The attack can begin at any suitably dramatic moment: while the characters are talking with Orchid, while they're sparring with Brill, or just after they've beaten him. If it looks like one of the character is likely to finish Brill, it may be wise to have the attack happen before the final blow falls (although you can always allow the characters to follow through and suffer the consequences of their actions).

There should be roughly three times the Circle's number in barbarians plus their number in snake men. They are all wearing armor of leather and overlapping bronze scales, carrying spears and axes. Their bodies are entirely hairless, and their exposed skin is tattooed in various mottled patterns of blue, green, and black. Some of them wear masks made to look like various snakes or reptiles. They attack wildly, shouting and hissing, killing and destroying everything in their path. The villagers are trying to mount a defense, but it's clear they're seriously outmatched by the barbarians, who are deliberately toying with their victims, taking their time.

If the characters don't rush outside to see what's going on, several barbarians come crashing through the front door and window of the inn and attack immediately.

Early in the fight one of the barbarians' masks should get knocked or torn off, revealing a smooth, scaly head with snake-like eyes and a fanged mouth with a forked tongue. After their true nature is revealed, the snake men cast aside their masks and also use their bite attacks against the Exalted.

Although the barbarians greatly outnumber the Circle, they're all just extras, and this initial fight should be an opportunity for the Exalted to kick some butt and show off their various Charms and abilities. They will have to put some effort into avoiding the barbarians' attacks, but each of the Exalted's attacks that hit should take down one of their opponents. Encourage the players to make up cool stunts and give them the chance to put their characters through their paces. When more than two-thirds of the barbarians have been incapacitated, the remainder retreat as quickly as they can. The characters can pursue and finish them off or just let them go. If the barbarians prove too much for the Exalted to handle, you can have some of the villagers join in the battle on the Exalted's side, but they shouldn't need any help.

Wyld Barbarians (extras): Base Initiative: 5, all relevant combat dice pools 5, Attack: 5 (spear or axe), Damage: 5L, Defense: 5, Soak: 5B/2L, Valor 3, Willpower 5, Health Levels: -1, -3, Incapacitated.

Snake Men (extras): Base Initiative: 5, all relevant combat dice pools 5. Attack: 5 (weapon or bite), Damage: 5L or 4L bite plus poison (roll Stamina + Resistance, difficulty 2, success: 1L damage, failure: 4L damage, -2 penalty for 4 hours), Defense: 5, Soak: 5B/3L, Valor 3, Willpower 5, Health Levels: -1, -3, Incapacitated.

Scene Three: A Call for Help

If the Exalted drive off the barbarian raiders, they'll be regarded as heroes in Naramar. If they were restrained and civil in Scene One, the villagers treat them like royalty. If they were harsh or frightened the locals, then they're treated more like angry and capricious gods, with villagers fawning over them and begging for their mercy for not recognizing their greatness when they first appeared. Now is a great time to give the players some ego-stroking or show up some of their mistakes in Scene One, if they made any, through the villagers' reactions.

They quickly meet Kano, the older headman of Naramar, who thanks them profusely and asks them to be his guests. A feast is quickly prepared in the characters' honor and during the festivities, Kano asks the Exalted if they will help to rid Naramar of the barbarian raiders once and for all. If the characters seem reluctant, the villagers will offer them whatever they can, although it's clear they don't have much in the way of material wealth. If they seem willing, Kano tells them that the barbarians come out of the Wyld no more than a day's travel from Naramar. There are stories of ancient ruins in the Wyld lands there, part of a temple or the like from the First Age, but lost to the sight of man for centuries by the encroachment of the Wyld on the world. No mere mortals could venture into the Wyld and return, but then the Exalted are not mere mortals, are they?

Play out the interactions with the villagers for as long as they're interesting and give the players the opportunity to bask in the glory of their deeds before they set off again. If the players seem reluctant to help the villagers, the people of Naramar will weep and plead with them. If they are so hard-hearted as to ignore such desperate pleas (and they all manage to fail the necessary Compassion rolls), let them go on their way, only to hear how Naramar was destroyed only a day or two after they left, with all of its people slaughtered. Perhaps the Circle can do a better job protecting the *next* village the barbarians threaten.

Scene Four: Taking Action

How this scene unfolds depends on what the Circle decides to do next. They may choose to stay in Naramar, gathering information and making preparations or they may set out immediately for the Wyld lands and the ruins that Kano told them about.

If the Circle stays in Naramar, they can help train the village's small militia, fortify the village, and prepare other defenses against future attacks. The barbarians attack again in a day or two, with at least as many as in the first attack (more, if you felt the first combat proved too easy for the Exalted). Snake men assassins may also try and attack the player characters in a vulnerable moment (say, sneaking into their rooms while they are asleep) in order to remove Naramar's newfound protectors. Eventually, it should become clear that the Exalted have to take the battle to the barbarians if they want to ensure that the attacks will stop.

If the characters head off to the Wyld lands, the villagers offer them whatever supplies they can. The day or so it takes to reach the edge of the Wyld lands is a good opportunity for another encounter, if the Storyteller wants. Perhaps some barbarians come across the characters, or they meet up with some strange creature from the Wyld. A local spirit may cause trouble for the Circle along their way. See the **Antagonists** chapter of **Exalted** for ideas regarding additional encounters.

Scene Five: Into the Wyld

The Circle must travel for over a day through the thick woods and jungle to find the lair of the serpent barbarians. The Storyteller can require Survival rolls to follow the tracks through the heavy jungle undergrowth, but it's not difficult, since the barbarians have made no effort to conceal signs of their passage.

The jungle is alive with all manner of creatures, mostly snakes and various reptiles, along with monkeys, a profusion of birds, insects, and even some great cats. The Circle may have to deal with poisonous snakes in the underbrush or a mischievous monkey stealing something from them and scampering away. There may also be jungle spirits abroad, if the Storyteller wants the Circle to encounter one. Perhaps the mischievous monkey is more than it appears.

The further the heroes travel, the stranger the jungle becomes. They are walking into an area influenced by the Wyld, and everything that lives here is tainted by its chaos. The plants gradually become different colors and shapes, some of them growing suspended in midair, others throwing off clouds of sparkling, sweet pollen (which may be poisonous or cause hallucinations). Some plants have sharp, razor-edged leaves as hard as bronze (which the Exalted may recognize as the tips of some barbarian weapons) and grow fruits and flowers of metallic colors.

The jungle creatures are also affected by the Wyld energies. Snakes may have multiple heads, capable of spitting acidic venom, or shining scales that can mesmerize their prey. Apes may have multiple limbs or lizard-like heads with fanged jaws while tigers may have the power to melt into mist, blend with the jungle foliage, or grow to truly fearsome size. Consult the **Antagonists** chapter of **Exalted** for ideas of Wyld mutations to add to the jungle beasts, but give the Circle a fair chance to avoid danger using their Abilities and Charms.

Other events Storytellers can throw into the scene to stress the alien strangeness of the Wyld include:

- Visions and hallucinations, particularly relating to important people and events from the characters' pasts. This offers an opportunity for some character development and showing off some of the characters' Preludes to the group. If you haven't run a Prelude with the players, now is a good opportunity to allow them to flesh out their characters a bit more.
- Wooden or plant items carried by the characters may begin to sprout leaves or even flowers while leather and sinew items may begin to drip blood in a most disturbing fashion. A sword can transform into a metallic serpent that slithers away into the underbrush, while a thrown dagger might take root and become a strange, silvery flower with steel-hard petals that shoots needle-like darts. Take care not to deprive the Exalted of too much of their equipment, since it might make the following scenes too difficult.
- The characters' eye, hair, or skin color may begin to change, the first signs of a Wyld pox. The effect is temporary (unless they Circle spends many more days in the Wyld area), but the players shouldn't necessarily know that.
- The characters hear strange sounds or voices, they feel phantom touches brush against them, and even smell exotic scents or taste flavors in the air as the Wyld assaults their senses.

Scene Six: The Chasm of Mists

After traveling for over a day through the jungle, the Circle reaches the edge of a great chasm, spanned by a narrow rope bridge. The chasm is about forty feet across and filled with thick, roiling mists. It stretches out to either side for quite some distance; it would take the characters a while to try and find another place to cross it (although if they want to, let them try). On the far side of the chasm stands an ancient ruin like Kano told them about back in Naramar. It is a walled compound around a crumbling step-pyramid, the whole of it covered in vines and mosses. Lights flicker from within the walls and a strange sort of hissing chant echoes through the courtyard.

Let the players decide how they want to get across the chasm (charms like Monkey Leap Technique allow them to actually jump across). Crossing the rope bridge doesn't require a roll, and it can support all of the characters at once, although it sways considerably (feel free to roll some dice when the Circle crosses the bridge, just to make the players worry). When the Circle (individually or as a group) is about half way across the chasm, a massive, scaly head at the end of a long, sinuous neck, rises up out of the mists with a terrible roar!

It is a mist serpent, a creature of the Wyld charged by the Serpent Queen with protecting the ruin, and it attacks the Exalted immediately. It begins by breathing a cloud of noxious gas that can engulf an area two yards across. Its attacks may also damage the rope bridge, forcing the Exalted to make Dexterity + Athletics rolls to avoid falling into the chasm. A fall does 12L damage and armor soak does not protect against it. The serpent can only use its breath attack every third combat turn, it tries to bite the rest of the time.

Mist Serpent: Base Initiative: 6, Strength 14, Dexterity 3, Stamina 12, Attack: 9, Damage: 14L, Noxious Breath: Attack: 8, Damage: Poison (difficulty 2, 1L/5L, -2 penalty), Soak: 12B/6L, Health Levels: -0, -0, -0, -1, -1, -1, -1, -2, -2, -2, -2, -4, -4, Incap.

Three combat rounds after the mist serpent attacks, characters who make a Perception + Awareness roll can see barbarians manning the walls of the ruin. Ten barbarians begin hurling javelins at the heroes (Attack: 5, Damage: 5L), but they're at +1 difficulty to hit due to the range. The flying javelins should complicate the fight with the serpent a bit and add some excitement.

Scene Seven: The Queen of Serpents

Getting inside the walls surrounding the ruin isn't easy; they're manned by barbarians with javelins and spears and the heavy stone walls are almost twenty feet high, with a stout (recently added) wooden gate on the side facing the chasm. Treat the gate as having a Soak of 5B/5L and eight health levels before it breaks. The stone walls have 12B/12L soak and ten health levels. Reducing either to zero health levels smashes it. Alternately, a massive feat of strength (Strength + Athletics roll, difficulty 6) can force the gate open.

Within are twice the Circle's number in barbarians and their number in snake men (minus any they might have slain on their way in). There is a raised altar at the top of the step pyramid with two of the snake men flanking it and an almost nude woman sprawled out across it. The barbarians immediately attack the Circle, fighting fiercely to defend their sacred temple.

The woman atop the altar is not what she appears. As soon as one of the Exalted tries to "rescue" her, or the fight turns against the barbarians, she rises up and tears off her skin like dry paper, revealing dark, scaled flesh underneath. Her legs burst out into long serpentine coils and she retrieves her weapons from where they are hidden behind the altar. She is Maha-Nagah, the Serpent Queen, one of the Lunar Exalted and the leader of the barbarian tribe. She either attacks her "rescuer" from surprise (most likely using her poisonous bite) or rallies her troops and leads a renewed attack against the Exalted.

Wyld Barbarians (extras): Base Initiative: 5, all relevant combat dice pools 5, Attack: 5 (spear or axe), Damage: 5L, Defense: 5, Soak: 5B/2L, Valor 3, Willpower 5, Health Levels: -1, -3, Incapacitated.

Snake Men (extras): Base Initiative: 5, all relevant combat dice pools 5. Attack: 5 (weapon or bite), Damage: 5L or 4L bite plus poison (roll Stamina + Resistance, difficulty 2, success: 1L damage, failure: 4L damage, -2 penalty for 4 hours), Defense: 5, Soak: 5B/3L, Valor 3, Willpower 5, Health Levels: -1, -3, Incapacitated.

Maha-Nagah, Queen of Serpents (Lunar Exalted)

Caste: Changing Moon

Nature: Judge

Attributes: Strength 4, Dexterity 5, Stamina 4, Charisma 2, Manipulation 2, Appearance 4, Perception 4, Intelligence 3, Wits 3

Abilities: Archery 3 (Game +2), Awareness 3, Bureaucracy 2, Craft (Carving) 3, Dodge 4, Endurance 5, Lore 5, Martial Arts 4, Medicine 2 (Herbal Remedies), Melee 3 (Swords +1), Performance 3, Presence 4, Resistance 4, Ride 1, Socialize 3 (Seduction +2), Stealth 2, Survival 3 (Wyld +1)

Virtues: Compassion 2, Conviction 4, Temperance 2, Valor 3

Backgrounds: Allies 1, Backing 4, Followers 5, Manse 4, Resources 3

Charms: Maha-Nagah has Dexterity charms that allow her to add dice to her Archery and Martial Arts attacks, at a cost of 1 mote per die (no more than doubler her normal dice pool), and a reflexive Strength charm that increases the damage of her attacks (at a cost of 1 mote per die). She can increase her initiative by up to +5 by spending Essence (1 mote per +1). For 10 motes she can "shed her skin" and transform into any human appearance or into a large snake (with a snake's Physical Attributes). This lasts until she spends Peripheral Essence.

For 10 motes and 1 Willpower she can "shed her skin" (ripping it off) and assume the form of a scaly creature with the lower body of a snake and the upper body of a woman. In this form she gains +2 to all of her Physical Attributes, double her normal soak values, a bite attack, plus her punches do lethal damage and she can grapple a character with her tail while still taking other actions.

Base Initiative: 8 (10 in snake-woman form)

Attacks: (*snake-woman form only)

*Bite: Speed +3, Attack 12, Damage 6L plus poison difficulty 3, 2L/6L, -2 penalty, Defense 0

Punch: Speed 0, Attack 9 (11), Damage 4B (6L), Defense 9 (11)

*Grapple: Speed -1, Attack 10, Damage 8B. The grappled character can choose to inflict Strength +2 damage on Maha-Nagah or try to break free by rolling Dexterity + Martial Arts or Brawl.

Sword: Speed +3, Attack 10 (12), Damage: 6L (8L), Defense: 10 (12)

Bow: Attack: 8 (10), Damage: 6L plus poison difficulty 2, 11/4L, -2 penalty. Note that bow damage does not increase when Maha-Nagah changes form.

Dodge Pool: 9/11, **Soak:** 4B/2L (6B/3L, 12B/6L)

Willpower: 7, **Health Levels:** -0/-1/-1/-1/-1/-1/-1/-2/-2/-2/-2/-2/-2/-4/Incap

Essence: 5, **Personal Essence:** 19, **Peripheral Essence:** 50

Maha-Nagah has lived in exile in the Wyld for a very long time and her sanity is all but gone. She lives for the opportunity for vengeance against the world that wronged her, and the presence of the Solar Exalted only feeds her cold rage. She can't be bargained with unless her enemies clearly have the upper hand, and even then she is treacherous and sly. She'll try to escape if and when it's clear that the Exalted have her outmatched, but she's a powerful adversary with many charms and abilities at her disposal, and she's not inclined to give up easily. She considers the barbarians her children (in fact, many of them are) and they will gladly fight to the death for her.

Epilogue

Once the heroes have defeated or driven off Maha-Nagah and her barbarian followers, they can explore the ruins and find some of the treasures the Serpent Queen gathered there: enough gold, silver, and jade (mostly First Age coins and jewelry) sufficient to maintain the characters as if they were all Resources 3 for six months (with enough left over to make a princely gift to the village of Naramar, if they wish), plus any wonders the Storyteller may wish to include for the characters (see Chapter Nine of **Exalted** for details). At the least a few charms and talismans should be present (like a good luck charm or walkaway). An orichalcum or moonsilver hearthstone amulet is also a possibility.

The Circle's journey back to Naramar should be fairly uneventful (the Storyteller may choose to have it happen "off stage" and just segue back to the village). Of course, it can be run as an additional short adventure, especially if the Exalted become lost in the Wyld (see below). Their return to the village is greeted with great jubilation and the people of Naramar offer the Exalted their profound thanks for their aid. The characters have the opportunity to counter some of the notions about the Solar Exalted put about by the Dragon-Blooded and the Immaculate Order, and they can be sure that tales of their deeds will spread to the ears of anyone who reaches this part of the world.

Further Adventures

The events in this adventure can lead into future adventures if used as part of an ongoing **Exalted** chronicle:

- The Circle may find it more difficult to leave the Wyld than it was to enter. Time and space often behave strangely on the edges of Creation, so the Exalted might leave the ruined temple and become lost in the jungle, only to reemerge some distance away from where they entered, perhaps even on the other side of the world or in some other Wyld domain claimed by one of the Lunar Exalted or the Fair Folk.
- The ruins inhabited by the Serpent Queen and her followers may be as extensive as the Storyteller wishes, and may hold many secrets of the First Age. The Circle could spend another adventure (or more) exploring the depths of the ruins. Perhaps the Serpent Queen was guarding something like the tomb of a Solar from the First Age (maybe even a previous incarnation of one of the characters!). Such a tomb would be protected by elaborate traps and guardian demons intended to keep the reborn Solars from ever reaching it.
- If Maha-Nagah survived her encounter with the Circle, she swears vengeance against them and eventually gathers new followers to strike at them. If she was slain, then she may have a brother or sister Lunar Exalted who finds out about her death and takes up the cause of avenging her, causing trouble for the Circle in the future.
- Once word of their deeds spreads, the Circle may find themselves beset with pleas for aid and assistance from

people dealing with barbarian raids, the Fair Folk, hostile spirits, and other dangers. Plus the Dragon-Blooded may heard about the heroes' deeds and send agents of the Wyld Hunt to search for them.

Using *Temple of the Serpent Queen* with *Dungeons & Dragons*

It's a fairly simple matter to adapt **Temple of the Serpent Queen** for use with *Dungeons & Dragons, Third Edition*. The adventure is suitable for a party of 7th level characters, since they're supposed to be more capable than most of their opponents, except for the Serpent Queen. Unless the Dungeon Master is also using the *Exalted* setting, ignore the references to the Exalted; Maha-Nagah is just an intelligent monster, like a demon or some sort of were-creature. Likewise ignore references to the Wyld; the ruined temple lies in an isolated area believed to be cursed, perhaps subject to some wild magic (for those using the *Forgotten Realms* campaign setting).

Wyld Barbarians: Medium humanoid (6 ft. tall); HD 1d8; hp 8; Init +0; Spd 30 ft.; AC 13 (+3 studded leather armor); Atk +2 melee (1d8, battleaxe or shortspear) or +1 ranged (1d6, javelin); AL CE; SV Fort +1, Ref +1, Will +0; Str 13, Dex 10, Con 11, Int 8, Wis 9, Cha 9.

Special Abilities: **Improved Grab (Ex):** If Maha-Nagah strikes an opponent with her tail she can constrict them.

Constrict (Ex): Maha-Nagah deals 3d6+2 damage with a successful grapple check against Medium-size or smaller creatures. The constricted creature must succeed at a Fortitude save (DC 19) or lose consciousness for as long as it remains in her coils and for 2d4 rounds thereafter. **Poison (Ex):** Bite, Fortitude save (DC 19) initial and secondary damage 1d8 temporary Constitution. **Spell-like Abilities:** *bull's strength, cat's grace, change self* (into human-like form) up to three times per day as a 10th level sorcerer.

Possessions: Masterwork longsword, masterwork longbow and quiver of 20 arrows.

Using *Temple of the Serpent Queen* with other RPGs

This adventure adapts fairly easily to most other fantasy roleplaying games. For *GURPS Fantasy* campaigns, the Serpent Queen's temple may lie on one of the Ring Islands or along the border of the Great Forest and the Great Desert. Some of her followers may be reptile men. For Asian fantasy RPGs like *Legends of the Five Rings* and *Sengoku*, the Serpent Queen may be a powerful naga, spirit, or similar creature threatening a village on the outskirts of the civilized world. With some modifications, the adventure is even usable with the *Deadlands* "weird west" RPG.

Make Maha-Nagah and her followers corrupt Indians living in an isolated desert canyon and threatening nearby towns, more like rattlers than vipers. A posse can be just as surprised when the sweet young thing they thought they was rescuin' turns out to be the boss of all the one's they's fightin'. The same modifications would allow the adventure to work for the wild west of the *Castle Falkenstein* world.

Won't You Have a Brownie?

Brownies: A Fun New Fantasy Race For *GURPS*

by Andrew J. Shelden

Since time immemorial people have seen little folk in their homes and in the woods: Gnomes, Leprechauns, and more. In the misty hills of Scotland there dwelt the Brownie. Small and quick, sometimes hairy, sometimes brown, always helpful, Brownies were found in the homes and barns of Scottish farmsteads. They would come out at night and tidy up, helping with chores and so on. But if the humans dared criticize their work, they would make nasty mischief, like destroying crops, making livestock ill, or fouling food stores. Legends hold that Brownies are a happy folk, cheerful and helpful, and that they love children. They love to play with kids, tell them stories, and teach them to make garlands of wildflowers. The only gifts they would accept would be gifts of food and ale (as they would sometimes help with any brewing going on nearby). It would never do for a human to pay undue attention to his Brownie helper, or give gifts other than edibles, because the Brownie might take offense. An offended Brownie might just abandon his human neighbors, or might bring down the wrath of the Faerie folk on the offending humans and their livestock, but they would never harm a child, nor allow one to come to harm at the hands of a human. What happens when a ticked-off Brownie moves out of his farm-home? He goes to the woods.

During the late 19th and early 20th centuries, like all of the Wee folk, Brownie legends were sanitized and romanticized, with the initial insult being Palmer Cox's *The Brownies* (first published in the magazine "St. Nicholas" in 1883, the art of the pre-Raphaelite Brotherhood, including Dante Gabriel Rossetti and Edward Burne-Jones, and finally culminating in the 1930s with the book *Jolly Old Santa Claus* written by somebody known only as "Sparky," complete with whimsical paintings of Santa Claus and his merry goof-offs, the Brownies, by painter George Heinke. Much of their nature has been "cleaned up" to make them less frightening to (human) children. These were further sanitized in a recent reprint, but that's a different matter altogether.

Brownies are tiny humanoids of an extremely magical nature. They are capricious and playful, and always ready to party. Brownies can be a blast to play, and make intriguing NPCs. Like Leprechauns and other "faerie folk," Brownies are prone to playing practical jokes, some of which can be extremely destructive -- even deadly -- without actual malicious intent . . . which could make a forest -- or even a farm -- full of Brownies a dangerous obstacle for the unwary.

To determine height, take the normal for ST (after racial modifiers, double it and read feet for inches. They can be of any build found in humanity, but due to their small size, weight is negligible -- 6-10 pounds. Brownie hair is wiry and unmanageable in many cases. It can be blond, brunette or red, with brown being the norm. Many Brownie males wear full beards. Their hair and beards usually turn white or silver in their advanced years. Baldness is not uncommon among the older males. Traditionally, males and females wear their hair long -- shoulder length or more for the men and sometimes down to the floor for women. Their eyes are usually brown or blue.

Brownie dress is usually flannel shirts of white, red or green, brown trousers held up with suspenders and soft leather shoes in Elven styles. Particularly in colder areas, Brownies are frequently seen in long stocking-caps which match their shirts. Brownie women dress in similar fashion to their men, with the primary differences being long skirts rather than trousers and close-fitting knit caps. Since they mostly live in colder climes, Brownies generally keep their heads covered when outside.

Advantages and Disadvantages

Brownies have ST -4 (-30 points), DX +2 (20 points) and IQ +2 (20 points). They have the advantages Longevity (5 points) and Magical Aptitude (15 points). Brownie disadvantages are Decreased Hit Points -2 (-10 points), Inconvenient Size (-15 points) and Compulsive Behavior/Tidying (-10) All Brownies have a Racially Learned Skill in

any craft -- e.g. Woodworking, Clock making, Sewing, Brewing, etc. -- at IQ +2 (6 points), and have the Racial Skill Bonus +1 for Engineering or Design skills (4 points). All Brownies have the Quirks Fond of Children (-1) and Practical Joker (-1).

It costs 2 points to play a Brownie.

In addition, any Brownie may take up to two spells as though they were racially innate, provided that they are not Mental/Very Hard spells, they do not require Magery 2 or 3, and no spell has a higher energy cost than 3. As with any innate spells, the GM may declare any spell or group of spells "off limits," for either the entire race of Brownies or for an individual in order to protect the balance of the campaign.

These spells are bought at skill level 13 or the Brownie's IQ, whichever is higher. Brownies are not required to have spells, but if spells are not purchased at initial character generation, they cannot be added later. All other rules of racially innate spells apply.

Brownies are a merry folk, far more out-going than their reticent cousins, the Leprechauns. They are, as a race, hard workers and hard players. They work at their tidying (or, in the woods, their craft -- generally toy making or gadget designing) for hours on end, then party hard until they drop.

Brownies are sort of reverse Gremlins in that they are magical beings which are benefactors of technology unless crossed, in which case they can be very destructive to machinery). This magic-technology paradox cannot be explained except by saying that Brownies love tinkering with and designing gadgets. Their spells often lean toward assisting in this tinkering. They tend not to enchant their creations; but carvers might have Shape Wood, for example.

Brownies are not by nature gifted merchants. They will sell their wares to any one who passes by and offers money, but are just as frequently known to simply give their creations away, particularly to children of any race. "Big Folk" who live near Brownie lands often venture into the woods specifically to see if they can find a Brownie and receive a gift. Many give baskets of bread, cheese, ale and meats to leave. Humans living near Brownie lands have been known to leave gifts of food near the edge of the forest in the evening and return the next day to find a toy for their child, or a set of hand-crafted wooden bowls, a new broom or some other helpful household items. Because of this, Brownies rarely have need to hunt or seek out food of any sort. Most humans in near Brownie lands know not to overdo with gifts of food and ale, lest they lose their helpers.

Despite their deeply magical nature, Brownies rarely actually study magic, and Brownie wizards are extremely rare. Like Leprechauns, Brownies are frequently born knowing some small spells and have them mastered before they reach puberty. They can learn spells later in the usual manner, but they are generally uninterested in doing so. If asked, a Brownie will share his magical knowledge with another Brownie, but they are usually unwilling to give up time from either their work or play, so asking is infrequent. Work *is* play to the Brownie, who takes great pride in his accomplishments. No human has anything bad to say about the Brownie's work (even if he thinks the Brownie won't hear) because the consequences of such criticism can be trivial (broken eggs) devastating (lost crops, sick cattle or chickens), and even deadly (sabotaged plowing or other equipment) depending on the severity of the insult.

Brownies are peaceful and generally non-violent. They abhor war, but are not willing to be over-run. They will defend themselves, their families and homes, and any innocent -- particularly children -- against attack. Their weapons are tiny versions of the missile weapons found among the "Big Folk" in their given Tech Level. They do not envenom their weapons except with paralytic or narcotic agents. Brownie combat is a sight to behold; they rarely show themselves, preferring to fire their weapons from ingeniously concealed bunkers in trees, rocks, and hillsides. Brownies generally welcome any race into their homeland with open arms but Orcs, Goblins, Minotaurs, Ogres and Trolls are not tolerated and will be driven off if the Brownies can manage it.

Brownies work in any medium; their skills and spells generally focus on one type of craft, giving Brownie creations exceptional quality and durability. They have no art except their work, which can be of great beauty and frequently of great function.

Brownies love music and dancing. Unfortunately, they do not tend to be skilled musicians. They turn to their cousins,

the Leprechauns, and other sylvan folk for their music, often dancing the night away in the presence of Fauns who might live nearby.

Brownie names are often based on Elvish naming practices found in their region, sometimes taking names symbolic of their work on a particular farm. (No self respecting Brownie would call himself, say, Sparky unless he lived in a smithy . . . and probably not even then.)

Most Brownies learn to read and write. They don't keep extensive historical records, however, and they don't generally read or invent stories. Their desire for literacy seems to stem from the need to take notes on their tinkering so they can resume in the morning where they left off the night before, regardless of the magnitude of their hang-overs.

Brownie religion is a form of Mana/Nature Worship. They do not seem to have a named god per se, but rather appear to hold mana in high reverence. There are no known Brownie priests; each individual communes directly with their god.

Ecology

"Domestic" Brownies can be found in virtually any cool, moist clime where there are farmers and children. A woodland people, "Wild" Brownies can be found in virtually any forest. They do, however, prefer cooler climes and mountain terrain, where ancient oaks, evergreen trees and winter snows abound. Brownies have no idea from whence they came. The suggestions that apply to Leprechauns are valid here as well: some think Brownies are the result of a cross between Halflings and Faerie Folk, but Brownies, like Leprechauns, have been known for millennia before anyone even knew what a Halfling was.

Brownie diet is rather similar to the tastes found in whatever Big Folk live in their region, largely due to the fact that the Big Folk bring food to exchange for crafts. Brownies do not generally hunt or farm, nor do they tend flocks (except the "Domestic" Brownies who help with their human's chickens, sheep, or cattle.)

Brownies are very family oriented, and most have a strong Sense of Duty to their families. It is easy to see why. Brownie couples mate for life, and generally only produce two or three children during their 30-40 year reproductive years. Children are the greatest treasures of the Brownies, and many a Brownie has fallen protecting children -- regardless of race. Brownies reach adolescence at 18 and are considered adult at 30. They begin aging around their 65th year, but do so far more slowly than humans. Most are active well into their second century and the average life expectancy is around 220.

Culture

"Domestic" Brownies live in abandoned rat holes or in the hay lofts of barns. "Wild" Brownies build their forest homes into whatever natural shelter is available. It is not uncommon to see a Brownie's front door over a knot-hole in a hollow tree or atop an abandoned fox borrow. Inside, the homes are tidy and quaint echoes of rustic human or Elven dwellings. Occasionally an eccentric Brownie will build a miniature castle, complete with tiny hewn stone blocks, a working drawbridge and four- or five-foot towers. These castles are rarely designed for defensive purposes, but are rather the expression of the builder's innate stone and masonry skills and spells.

The community unit in Brownie culture is the tribe. They have no leaders, and what little rule making goes on is decided by tribal consent. Brownies tend to be too busy for such trivial things as governing. They prefer to tinker and leave the ruling to the Elves or other sylvan authority-types. They don't require a lot of governing, however, and participate only to the extent of sending gadgets or other creations to the liege lord as tribute. They are, as a people, almost useless on a battle-field, owing to their small size, but some are employed as perimeter guards or forest sentinels.

Brownies who misbehave are dealt with by the entire community. Criminal behavior is not tolerated, and wrongdoers are usually banished to a low- or no-mana area for periods not exceeding two years. Only the most serious offenders

are sent to the local Big Folk lord, and in those cases the Brownies accept whatever fate is assigned to them by their ruler.

Brownies have a well-developed sense of community and family. In the woods, their homes are frequently clustered in tiny "neighborhoods" of six or eight families, with each neighborhood occupying about an acre. Brownies tend to like virgin forests; there are no known Brownie cities.

There are two festivals annually which require the presence of all Brownies in any given forest: Midsummer's Eve, when they gather at the "faerie mounds" to party with Leprechauns and the Faerie Folk 'til sun-up, and the Winter Solstice. The Brownies call the latter the "Festival of the Bonfire," and, as the name implies, they light numerous massive piles of wood in snow-covered clearings. Leprechauns and Fauns are invited to this winter party, as are other sylvan folk, but one usually will find only Fauns and an occasional Elf or Ellyl cavorting with the Brownies in the cold night air.

"Domestic" and "Wild" Brownies are generally too busy with their tinkering to go gallivanting about outside their farms or sylvan woods, but on rare occasions one might venture out -- to visit a favorite or ill child of the Big Folk, or even to explore the world. Explorers are rarely seen again in the Brownie community. The reasons for this are unknown, and the return of a wayward Brownie is cause for a week-long celebration for the entire tribe. The Brownies that do venture out soon find that they can either be heroes or stepped upon by the Big Folk, and usually wind up standing up for the innocent in some far-off land.

Brownie women generally remain in their homes, working on their crafts and tending the next generation of Brownies. Big Folk who actually see Brownie women outside the confines of their farmhouses or sylvan woods are one in a million.

Politics

Brownies are among the more friendly of the sylvan races, but tend to stay put. When they meet others, it is usually the others who come to the Brownies, and the Brownies cheerfully welcome most with open arms. They get along well with Dwarves and Gnomes, and of course, all the sylvan peoples are welcome in Brownie lands. Halflings often venture into the woods with gifts of food to exchange for crafts and wind up partying the night away with the Brownies. The coarser races, Goblins, Kobolds and Gargoyles, are objects of distrust and the Brownies will generally hide from them or torment them into leaving. This frustrates Goblins greatly, for they would love to have mercantile access to the wonderful gadgets of the Brownies. Brownies enjoy humans as individuals, but prefer not to have them settle in the woods. Brownies believe that when one human comes, the rest cannot be far behind. Orcs, Minotaurs, Ogres and Trolls are the only true enemies of the Brownies, but contact is mercifully rare.

They're quirky, they're lively, they're fun. For an added element of whimsy, try a Brownie for your next fantasy adventure -- as a sniper or a scout or comic relief. As a GM, you could pepper your woodland campaign with mischievous Brownies to hinder or help your players. And to keep the campaign all neat and tidy

Equipment: Sir Thomas More has little characteristic equipment, except perhaps for the pens and papers which mark the professional scholar and administrator. He bears the signet seal for the kingdom of England, and in time will wear the golden S-chain of office. His clothing is fine but simple: he dresses nicely only because fine dress is expected of someone in his position, and he is otherwise somewhat careless of his appearance. Unbeknownst to everyone, underneath his finery he has worn a hair shirt since age 18, and his skin is irritated and lacerated because of it. He will almost always be encountered with a silent retainer: either his secretary, John Harris, or his manservant, John à Wood.

* * *

This portrait represents Thomas More circa 1526, when he is near the height of his career. He is an excellent lawyer, orator, administrator, and diplomat. He is in the service of King Henry VIII, and has been knighted five years

previously. He holds a number of important administrative posts: functionally, he controls access to the King. His book *Utopia* has made him famous throughout Europe, and he enjoys a special reputation amongst the citizenry of London. He is popular, witty, celebrated; loved by the King and at home in the social whirl of a courtier's life. More has just moved his large household into a beautiful new home in Chelsea, and seems to have all that a man could wish for. His only sadness is the fact that he is almost constantly travelling about in the presence of the King, which does not leave him as much time with his family as he would like. He is also concerned about the radical ideas of a German monk named Martin Luther . . .

Note that the above portrait does not include any Contact advantages. More knew so many people that this is impossible to simulate in *GURPS* terms: the GM should assume that More can get in touch with anyone he pleases.

Biography

Sir Thomas More offers a study in contrasts and cultivated ambiguity, much like a Renaissance masque. He was a Londoner born and bred, and apart from a few brief diplomatic trips to France and the Low Countries, never left England. He was born on February 7, 1477, the eldest son of John More, a lawyer who would later be knighted and serve as a judge on the King's Bench. The young Thomas received one of the finest educations money could buy, and served as a page in the household of John Morton, archbishop of Canterbury, chancellor of England, and future cardinal. Even in such illustrious surroundings he distinguished himself by his wit and intelligence. At age 14 he went on to study at Oxford for two years, and then began legal training at age 16. At age 24 he was admitted to the bar, and went on to a distinguished legal career.

At the same time as More pursued his professional training, he quietly cultivated two other aspects of his life. He was deeply interested in new humanistic learning that was spreading throughout Europe, and counted a number of Europe's leading minds as friends, particularly Desiderius Erasmus, whom he met in 1499. Under their influence, More became an accomplished writer, poet, and translator. More was also deeply interested in religious matters, and during his early legal career lived informally in a house of Carthusian monks in London from 1501 to 1504. He proved not to have a religious vocation, although maintained elements of monastic discipline for the rest of his life.

After deciding on a career in the world, More began a steady rise to the top. He continued his legal practice, served as a Minister of Parliament, and was nominated as Under-Sheriff of London, where he came into contact with some of the members of the unsavory side of London. As a lawyer he developed a reputation for fairness and incorruptibility, and was known to urge his clients to settle their matters without litigation, or if they would not, to pursue a course of litigation that would be the least expensive. Needless to say, this made him very popular. More served on two diplomatic missions on behalf of London merchants to Flanders and Calais, and his success impressed both King Henry VIII and Cardinal Wolsey. During this phase of his life, More married, first to Jane Colt in 1505, with whom he had four children, next to Alice Middleton, a wealthy widow, after Jane's death in 1511. More had a large household, and was deeply devoted to his family. He strove to have them all educated according to Christian humanist principles, and was unusual in his pioneering insistence on education for women. Because of this, his eldest daughter Margaret obtained a reputation as the smartest woman in England. At this time, More also completed a number of writings, including *Utopia*, his most famous work. He was also fascinated by animals, and had quite a menagerie in his house at all times.

In 1517 More was reluctantly persuaded to enter the service of King Henry VIII, who was interested in attracting the best and brightest individuals into royal service. More became in turn Privy Counselor, Master of Requests, a knight, Under Treasurer, Speaker of the House of Commons, Chancellor of the Duchy of Lancaster, and High Steward of both Oxford and Cambridge. The above portrait represents More at this phase of his life. He is at the peak of his career: an excellent orator, administrator, and diplomat. He is constantly in the presence of the King or traveling about England with him: the two men are friends, and the King often has discussions with Sir Thomas on learned matters. If anyone wants to see the king, they have to go through More. More's only regrets are an inability to spend as much time with his family as he wants, and a worry about the spread of the ideas of Martin Luther, against whom he wrote a pamphlet in 1523.

Matters begin to change in More's life after this point. He goes on to greater honors, being made Lord Chancellor

(effectively the second-in-command of the kingdom) in 1529. But darker clouds cross his skies: he begins an all-out war on Protestantism in 1528, and is enmeshed in the King's attempts to secure a divorce in 1527. More quietly opposed the divorce, and Henry in time found that the only way to succeed was to break off relations with the Pope, and have Parliament declare him head of the church of England in 1531. More resigned the Lord Chancellorship in the next year and maintained silence when asked to take the Oath of Supremacy in 1534. For this he was imprisoned for fifteen months, sentenced to death on trumped-up charges, and beheaded as a traitor in 1535. His last words were, "I die the King's good servant, but God's first."

Encountered

Sir Thomas More is a paradox, a man caught between two eras in history. On the one hand, he was one of the leading lights of the Renaissance. On the other hand, he was deeply devoted to the medieval order. He was openly skeptical of many Christian practices and superstitions, but deeply devoted to the church and its customs. He was an accomplished scholar, but also a consummate lawyer with a distinguished practical career. He was an open, happy humanist, but also a bitter, scatological hater of protestants. Later in life, he was a man who torn between duty to his king and devotion to his family. And in the end, he was torn between his loyalty to his King and country, and loyalty to his church and conscience.

Thomas More is a natural conservative, a man driven entirely by his Sense of Duty to all the things which he thinks constitute the Established Order: chiefly law and faith. GM's should play him as urbane, pious, witty, and humorous: he will be excellent company for anyone who encounters him. Like most of the people of his time, he also has a strong scatological streak, and is fond of rude jokes and humor. But beneath all this there is another More: pious, private, and deep, who fasts constantly, prays much, and scourges himself. Think of him as a Medieval man in Renaissance clothing, and always remember that beneath the courtier's finery, he wears a hair shirt.

What If?

Turning Points

There are several turning points in More's life where he might have developed out differently. He could have resisted his father's desire that he become a lawyer, and instead devoted himself to the "new learning." In such a world, More's fame would rest on his literary output, which would have been greater. Chances are he would end up wandering Europe like Erasmus, and might have spent the last of his days fleeing the wrath of Henry on the Continent. More also could have remained in the monastery. In such a scenario he would probably have gained some distinction as a preacher and spiritual writer. He would also probably have been a more vocal opponent of the Act of Supremacy, and would have ended up executed in the same way as his friend Bishop John Fisher.

Protestant More

It is possible to imagine More siding with the King on the matter of the Act of Supremacy. In this case he would have been able to remain Lord Chancellor, and would have acted to build up the Church in England. His considerable writing skills would have served well in a propaganda war to defend Henry, his organizational skills would help local control of the Church, and his diplomatic skills would have helped defend Henry's actions before the courts of Europe. More would thus have filled the role of someone like Thomas Cranmer, but given his innate conservatism would have

put his learned stamp on the nascent Church of England, and possibly give it a more medieval Catholic flavor and less Renaissance Protestant character.

Illuminated More

The real Thomas More had absolutely no interest in occult matters. However, he did translate some of the works of the Christian Cabalist Pico Della Mirandola, and many of his friends were in contact with the noted Renaissance occultist Cornelius Agrippa. In an alternate universe, it is possible to imagine Thomas More as a magician of some kind; indeed, his learning would make him a natural "court wizard." The GM could give him some levels of Magery and a number of appropriate spells. Given More's high IQ, he would be a very formidable sorcerer.

"Saint" Thomas More

Thomas More was beatified by the Roman Catholic Church in 1886, and canonized in 1935. These honors reflect his heroic sanctity and his martyr's death. The real Thomas More displayed great piety, but nothing in the way of miracles during his life. A GM interested in alternate history who has strong religious component to his game could make an alternate More into a saint of the legendary order, with all the attendant miracles (see GURPs Religion). Such living sanctity may not have prevented his execution, but it surely would have slowed it.

Explorer More

More's greatest literary work, *Utopia*, is an elaborate description of a technologically-advanced ideal society ruled entirely by the tenets of reason. It started the genre of utopian fiction, and defies easy categorization even today: was it meant to be a systematic treatise, or a sly satire? The work presents itself as an encounter in Antwerp between a fictionalized More and one "Raphael Hythlodæus", a Portuguese traveler and companion to Amerigo Vespucci who has just returned from five years of living on the island of Utopia, a quasi-Communist society somewhere "under the line of the equator." The work was very popular in Europe in its day, and adventurers in a campaign might be interested in seeking out Thomas More to discover the real secret of Utopia. Was there such a place? And, given the absence of Raphael Hythlodæus, would he be interested in accompanying them on a voyage to find the island?

Save Thomas More!

Thomas More is a very popular figure, particularly given his recent popularization in Robert Bolt's play *A Man for All Seasons*. Time travelers from the future might just decide to try and embark on a mission to change history and preserve him from execution. What effect this would have on history, or even whether More himself would be willing to accept it, is up to the GM. Alternatively, someone from the future could try and replace More. This would give them unequalled access to King Henry VIII during a critical time in English history.

In any of these scenarios, it should be noted that More was 58 and in poor health when he was executed. It is very probable that his poor health at the end was due to stress and mistreatment in the Tower. His father was nearly 80 and in good health and active up until his death. Any alternate version of More should take into account the fact that, barring stress or beheading, he would probably have lived as long or longer than his father did.

Appendix Z: Desk of Many Things

Random Office Contents

by Matt Riggsby

Some of the most annoying questions players ask are about detail, particularly details the GM regards as irrelevant. It's tempting to hand-wave questions about niggling detail with "It's not important," but that's usually an unsatisfying response. The GM may also attempt to come up with something on the spur of the moment, but there's always the possibility of your mind going blank at the wrong moment. These problems are particularly annoying if there's a lot of potential information being hand-waved, as when players go through a briefcase, a desk, or a filing cabinet. The lists below are meant to assist GMs in coming up with the contents of such things, as well as anywhere else PCs are likely to find stacks of papers or other large chunks of disorganized information.

These lists are written to describe probable contents of a modern desk or office, but they can be used in almost any setting. In high-tech games, paperless offices may be the standard (although if modern computerized offices are any indication, that day may be far, far off). In such settings, documents will be stored electronically, so characters must gain access to a worker's computer in order to rifle through their virtual desk. Low-tech desks are likely to contain documents which carry the same kinds of information, but they will rarely have a readily recognizable form. Almost everything will be in the form of a descriptive letter, complete with elaborate salutations and perhaps paragraphs of small talk and minor news items. For example, a receipt would be a letter acknowledging the receipt of money in return for described goods, not, as with modern receipts, a simple slip of paper indicating date, a list of code numbers or names, and a column of costs with a total at the bottom. Therefore, it won't be immediately obvious just what any given piece of paper is; characters will have to do some reading.

The lists below can be consulted whenever PCs rifle through a stack of papers. They provide several general categories into which items may fall and a number of examples of what the specific item might be. The GM may pick randomly on an item-by-item basis ("You pick up . . . hmm . . . an office phone list.") or use the lists to quickly and plausibly compose the entire contents of a desk drawer or briefcase in advance. Obviously, choosing completely randomly would yield some implausible results. For example, an accounting clerk would probably have stacks of ledgers and receipts, but very few blueprints. When picking randomly, the GM should be prepared to ignore some results and try again.

- A. **Rough notes/scribble:** A piece of paper with lots of writing on it (doodles, columns of sums, fragmentary sentences, lots of circles, arrows, and underlining), but no clear meaning. It may have the phone number for the nearest Chinese take-out place or the Evil Overlord's ATM code, but only the person who wrote it is likely to know what it's about.

- B. **Creative work:** A work produced in the owner's organization, requiring some sort of creative input or original work. Any of these items (and, indeed, most of the items listed for other categories) may either be in the process of being created or on the desk of a supervisor or reviewer for approval or revision.
 - Photos/drawn art
 - Manuscript
 - Contract
 - Blueprint/map
 - Computer program
 - Page layout (pamphlet, poster, article)
 - Press release/customer or supplier advisory

- C. **Task Reference:** A reference that helps the owner do his job. This can be anything from a technical reference to a brief written sales pitch.
- Map
 - Directory
 - Glossary
 - Schedule/timeline
 - Style sheet
 - Script/task checklist
- D. **Communication:** A document sending information from one person to another, usually a request for something or an acknowledgement.
- Receipt
 - Invoice
 - Purchase order form
 - Application
 - Confirmation
 - Field report
 - Meeting minutes
 - Bid/grant proposal
- E. **Records:** A brief record of activity or financial transactions. Usually, records will be found in batches (that is, a list of checks written, not a single document recording a single check written).
- Debit/credit ledger
 - Activity log
 - Check register
 - Attendance log
 - Cargo/passenger manifest
 - Case history
 - Equipment or vehicle use/maintenance log
- F. **Large printed material:** A finished, professionally published document, usually published outside the organization.
- Advertisement
 - Product catalog
 - Reference book (dictionary, technical manual, atlas)
 - Management/advice book (Sun Tzu, *How To Win Friends and Influence People*)
 - Magazine
 - Newspaper
- G. **Internal Document:** A document concerning the operation of the organization, not necessarily the owner's own job tasks.
- Personnel/policy manual
 - Phone/address list
 - New hire/dismissal/personnel move notice
 - Memo on facilities use/scheduling

H. Personal Items

- Snacks
- Recorded entertainment/player (CD, tape, etc.)
- Books
- Drinks
- Spare clothing
- Favorite mug/cup
- Souvenir (picture, toy, statuette)

I. **Office supplies:** The raw materials of bureaucracy change over time. Low-tech offices have a different set of supplies than modern offices; if future offices are paperless, most office supplies are likely to vanish.

Low-Tech Office

- Writing surfaces: paper (true paper, papyrus, rice paper, and other vegetable papers), parchment (vellum, other treated animal skins), lightly waxed boards, flattened clay
- Writing implements (charcoal sticks, quill and/or brush for paper and parchment, stylus for wax boards and clay)
- Ink (bottled or in a dry stick; may be several different colors)
- Inkwell or ink stone and water bottle (for dry ink)
- Pumice stone (for erasing and preparing parchment)
- Ruler/straight edge
- Sealing wax
- Seal
- String
- Blotting paper/sand shaker (to dry wet ink)
- Knife (probably a tiny one, like a modern X-Acto knife)

Modern Office

- Pens/pencils
- Markers (opaque and highlighter)
- Tape/stapler and staples/paperclips/rubber bands
- Hole punch
- Scissors
- Loose paper (lined or unlined)
- Pads (legal pads, Post-Its)
- Envelopes
- Pushpins
- Glue
- Stick-on labels
- Batteries
- Postage stamps
- Computer disks
- Blank forms

Gear Krieg Wargaming Companion

Gamers like blowing the crud out of stuff with giant walking tanks.

Somewhere in the corner of our collective soul, there is a spot that yearns for giant clanking metal behemoths armed to the teeth with weapons of mass destruction. If there is such a place, it is probably right next to the part that makes shooting Nazis so satisfying. *Gear Krieg*, Dream Pod 9's war game of pulp super-science should have delivered both. It didn't. I wanted to bestride the battlefield like a colossus, every panzer in sight meat for my guns. It was not to be. The "gears" (the walking tanks or panzer mechs) in the rulebook were early war models (the book only covered up until 1941) and like their real life counterparts in the tank world, they were slow, under-armed, and unreliable.

The *Gear Krieg Wargaming Companion* advances the time-line to 1943 and the gears are most definitely in the house. The newer gears -- the General Jackson, the Donner, the Uller, and the Wagsworth, among others -- are all faster, more powerful and more heavily armed than their early war brethren. These boys can take most light and medium tanks in a toe to toe fight and still go places they can't. Gears still need support from the dull old tanks and infantry, but they're not the joke they used to be.

The vehicles and equipment section is a mixture of mid-war equipment and weird science. Tank fanciers get stats for the M4 Sherman and the deadly Tiger tank as well as some cool super science vehicles. The Russians get super-heavy tanks armed with ray guns, while the Americans get the Tucker APC, an armored sports car. The British get tanks with infra-red searchlights and the Italians get . . . well the Italians get dodgy tin cans on legs . . . but it's the thought that counts, right?

One of the reasons the *Gear Krieg* main rule book felt so bare were that the infantry rules were very sparse and there were no rules for artillery, which Stalin called "The God of War." These areas are covered, and there are a bunch of other rules covering combat engineering, minefields, chemical, and biological weapons. These are all things that you would get with an ordinary vanilla WW2 game and I can't help asking "Why weren't they in the main book?" But if the main rulebook was bare, the *Companion* is an embarrassment of riches. There are rules for everything here. The campaign and scenario rules in particular are very elegant allowing players to bid against each other to inflict difficulties like ammo shortages, friendly fire and cowardice on the opposition.

All of this is well and good, but it's not much different from what you'd find in a normal historical rules set. However, it is in the weird stuff that the *Companion* really shines. In addition to the Ray Gun tanks, walkers and other craziness, there are also rocket packs, radio-controlled bombs, combat drugs and best of all, brain-washed Nazi zombies! How can you not love a game that has hordes of Nazi zombies? The rules for heroes cover everything from Nazi Ubermenchen to two-fisted good guys like Sergeant Rock. But be careful, heroes are very powerful and it is advised to use them sparingly to prevent them from taking over the game.

The *Wargaming Companion* is 110 pages of softback book absolutely packed with ideas for the *Gear Krieg* gamer. It takes the original game -- which had some great ideas but poor execution -- and turns it into a fully fledged wargame that'll do whatever you want it to. Illustrated in black and white, the DP9 crew are moving in the right direction in

using more Photoshopped pictures rather than the amateurish pencil sketches that marred the original. All in all, it's a good product that a ***Gear Krieg*** player will get a lot of play value from. My only complaints are that the researchers still seem to be watching Saving Private Ryan for ideas -- the Sticky Bomb was not a jury rigged device, but a real life anti-tank weapon mass produced by the British at the start of the war. The book also lacks a bibliography, something it shares with all the ***Gear Krieg*** books, which seems very odd given the games pseudo-historical background. That said, this book has an awful lot to offer. You may want to hold off introducing all the new rules at once, as some of them are quite complicated and can slow the game to a crawl. If you're only an occasional ***Gear Krieg*** player, it may not be worth your while picking up the ***Companion***, but if you're a fan of the game and would like to expand it, it's worth invading Poland for.

Jedi Knights CCG

Published by [Decipher, Inc.](#)

Designed by Tom Lischke et. al.

Illustrated by Dan Burns et. al.

Starter Deck 60 cards, rule book, \$11.95

Booster Pack 11 cards, \$3.29

Jedi Knights is the new collectible card game from Decipher, Inc. based in the *Star Wars* universe around the time of Episode IV, A New Hope. Each game is a battle in space and on the surfaces of four different planets, climaxing in an epic Final Conflict. The game features simultaneous turns within a looping structure that will force many players to keep one hand on the rule book for their first few games. Fans of complex card games and the *Star Wars* movies will find *Jedi Knights* an enjoyable challenge.

Most notable among *Jedi Knights'* features is the card art which is entirely computer generated. Some of the cards depict scenes from the movies while others are shots that never happened on film. Most of the art is satisfactory to excellent, especially for Darth Vader and the Storm Troopers who benefit from the bright and shiny details available with a computer. While the aliens look very nice as well, many humans, such as Obi-Wan Kenobi and Grand Moff Tarkin, look a little like the famous actors, but more like their weird uncles.

Jedi Knights has a fairly typical rarity scheme. There are 154 cards in the premiere set. 50 are rare and the rest are split between common, uncommon, and fixed. As a matter of CCG course, the rare cards are the most powerful and a deck containing more rare cards has an advantage over a deck with fewer. A booster pack contains one rare and ten more cards divided between common and uncommon. Each player uses a deck of at least 40 cards, with a limit of five of any individual card. This can make purchasing all of those commons in the booster packs somewhat painful.

Two or four players take up the sides of the Rebel Alliance and the Empire. Many of the game's cards are playable by only one side or the other. However, there are also neutral cards, such as Jawas and Tusken Raiders, which may be used by either side.

Players must not only decide if they will fight for the glory of the Light or Dark Sides; they must also choose one of four Themes. Each Theme makes certain cards easier to bring into play. Your Theme also controls the size of your starting hand as well as creating a reserve set of cards that appear at specific points in the game. Finally, each Theme has a Hero card that can reappear even after being defeated. This allows a player to be sure that Darth Vader will show up in nearly every battle if she is playing the Darth Vader Theme. The other themes in the premiere set of Jedi Knights are Han Solo, Luke Skywalker, and Grand Moff Tarkin.

Each turn, players will choose one Force card from a deck of Force cards numbered one through eight. The higher number goes first in each phase of the turn, but will receive fewer Credits for the turn and will draw fewer cards at the end. Credits allow a player to bring cards into play, with the more powerful cards costing more. Each Force card is usable only once, so players must decide if they require initiative, Credits, or more cards in their hands when deciding on a Force number.

Next, players take turns deploying cards from their hands on to the planet, or in space around the planet. They continue until both sides have run out of Credits or do not wish to play further cards.

Then the Starship violence commences. Players fire Starship weapons in an effort to score some easy kills. If any ships survive, players compare the numerical Power rating of the main ships in the battle, and the lower side loses its ships. Several different Starship battles can take place in one turn, depending on how the ships team up with one another. Any ship that did not participate in a battle can Blockade characters on the ground. This prevents that character from taking an action this turn. Thus, Starships participate only indirectly in the control of the planet.

Once players are done shooting themselves out of the sky, they can take blasters to one another on the planet's surface. Character battles are conducted in the same manner as Starship battles, with weapon fire then a Power rating comparison.

All throughout the fight, players can use Event cards to tip the scales in their favor. These cards affect everything from the number of credits they have available, to the chance a gun will hit, to the number of cards they can draw.

If this is the second turn at a planet, the side with the highest combined character Power rating will win the planet. If the winner takes the first three planets, the game is over and he has won. If not, won planets will provide extra Credits used in the Final Conflict. The turn ends with players drawing the number of cards specified by their Force cards and starting all over again at a new planet.

This describes the first six turns of the game; however, the seventh leads to the Final Conflict. Throughout the game, any card not destroyed during a battle is set aside under a player's Theme card. In the Final Conflict, a player may play cards not only from her hand, but also from her Theme pile. The winner is the last side standing after the Final Conflict.

Jedi Knights turn structure resembles a computer program with subroutines looping inside of loops. Remembering where you are in a loop and whose turn it is to initiate a loop takes some practice. Anyone experienced with the original *Star Wars CCG* from Decipher will find this game less complicated; however, *Jedi Knights* is still relatively intricate by card game standards.

Yet it is this complexity that provides many of the strategic opportunities in the game. A player may decide to give up a planet he feels he can not win in an effort to conserve cards for a future battle. Players must decide how many star ships to commit to a battle given that they only indirectly help the warriors on the ground. Of course, who to shoot and when to shoot them is always an issue.

Perhaps more than any other card game based on a motion picture, *Jedi Knights* does a delightful job of feeling like a movie. It contains several smaller battles that lead up to one giant fight at the end which features the successful characters from earlier in the game. Although you may be at a loss to explain why Urur the Tusken Raider shows up on Hoth armed with Luke Skywalker's blaster to help defend Yoda from a TIE fighter pilot.

Doomstones: Heart of Chaos (For Warhammer Fantasy Roleplay)

Published by [Hogshead Publishing](#)

Written by Robin D. Laws

Illustrated by Ralph Horsley, Ian Cooke & Danny Willis

\$18.95

Since taking up the reins of *Warhammer Fantasy Roleplay*, the game's fans have been waiting for Hogshead Publishing to release three books. The first of these is *Realms of Sorcery*, the expansion of *WFRP*'s magic system, first promised at the time of the game's initial release in 1986 and due out soon. The second is *Empire in Chaos*, the culmination of the epic *The Enemy Within* campaign first released as *Empire in Flames* and currently awaiting revision. The third is the final part of the *Doomstones Trilogy*. Fans then should rejoice, because Hogshead Publishing have now released that third and final part with *Doomstones: Heart of Chaos*, and it has been written by Robin Laws no less.

The *Doomstones* series have had something of a tortuous history. Originally published as scenarios for *AD&D*, Flame publications reworked them for *WFRP* as *Fire in the Mountains* and *Blood In Darkness, Death Rock and Dwarf Wars*. Under the Hogshead banner these have become *Fire and Blood* and *Wars and Death*. A more complete examination and discussion of the series can be found in issue #17 of the unofficial *WFRP* magazine *Warpstone*.

[SPOILER ALERT!]

The series takes place in the Yetzin Valley in the region of the Border Princes with the characters learning of four ancient crystals of power created by Dwarven engineers long ago and each keyed to one of the four elements. Spurred on by the possibilities of these items, the players first find the crystal of Fire and attune themselves to its awesome capabilities, followed by the crystals of Earth, Air, and Water. By the end of *Wars and Death* all four crystals have been found and attuned to the players, when they suddenly leap from their grasps and fuse into one. Then things begin to go just ever so slightly wrong for the characters, starting with visions that suggest that putting these crystals together was a really, really bad idea. What were they expecting? They're not called Doomstones for nothing.

Heart of Chaos is a fantastic looking book, clearly written and laid out, but not without the occasional typographical error. These are mostly spelling mistakes, although one table appears either to have been misplaced, not cross-referenced, or needed to be printed twice. Also, the dreaded "pXX" also makes several appearances, but thankfully this is only in the one chapter and actually refers to information within that chapter. Both the "pXX's" and the misplaced table do make their respective chapters awkward to run. These problems aside, this is a very nice-looking book, illustrated solely throughout by Ralph Horsley. His art reflects *Warhammer*'s grim and perilous feel often with a humorous touch, as well as illustrating many key moments in the adventure. Together with Ian Cooke, Ralph Horsley also provides *Heart of Chaos* with cartography that is both clear and attractive.

The adventure opens with a reprint of the last few pages found in the current edition of *Wars and Death*, which Hogshead has considerately included for those that own the Flame Publications editions of the adventures rather than their own. As the players come round from their visions -- which have been keyed to both the pre-generated characters found in the earlier books and to the player's own through their highest stats -- they find themselves in a

severe downpour, in the knowledge that they have done something really bad, and that the Chaos god of change Tzeentch is involved. (Did I mention that they are called Doomstones?)

Brief respite can be found at Urdevar, a collection of hovels whose inhabitants eke a pitiful existence from the scratchings of a played-out silver mine. Here they will find that the malign effect of the crystal will cause trouble wherever they go and as society in Urdevar breaks down, it receives more visitors in the form of Imperial Agents, members of the Order of Coldfire Knights. Ruthless in their pursuit of chaos and other threats to the Empire, they have learnt of the Crystal of Power and the threat it represents. Unfortunately, they know more about the crystal than the characters do. Finding this out alerts the knights and sets up a chase that lasts until the finale of the adventure.

With Urdevar in chaos, the players must again brave the elements to locate someone more knowledgeable about the crystals. That someone is a dwarf involved in the construction of the crystals, and considering that he is now over 4000 years old, is grumpy as hell. His information sends them to the original construction site, after they have been chased by Coldfire Knights, tobogganed down off the mountain in a hut and found themselves with a worshipful retinue of Beastman followers. That's right, Chaos Beastmen just love the stench of Chaos that the players just happen to be sweating.... And they think the party are champions of Chaos too.

The construction site is long abandoned, but guarded by members of a Dwarven order dedicated to keeping the four crystals apart. The Brotherhood Of Memory is a second group to be set upon the party's trail. Woe betide the characters if both the Brotherhood and the Cold Fire Knights decide to team up, but since this is a *Warhammer* adventure, that will never happen, right? The ghosts of those who built the crystals haunt the complex, still arguing over whose fault it was that construction went wrong. They hold the key to what actually went so wrong, but are too blinded by grudges to see it. With the intervention of the players, they should be able to work whose fault it was.

This still leaves the party with the problem of how to destroy the crystal and it's something that their creators do not have the solution to. A Beastman ally suggests that the answers might lie in a secret colony of chaos cultists. As unpalatable as this might be, this is the only way to learn the secret thoughts of Tzeentch and the party must ingratiate themselves into the cult. This can be a decidedly messy business and means interacting with a quite hideously unsavoury bunch of individuals! Learning what they need is a challenging task to roleplay, and although an easier solution is provided, it is potentially far more damaging to the players.

After immersing themselves in the mire of a chaos cult, the group has an opportunity for respite (including a hot bath) in the penultimate encounter, before their destiny beckons once more. The encounter also gives them the means of getting them to the hole in the sky where the Crystal must go to for it to be destroyed and the Old World saved -- a Dwarven built airship! Riding the airship to this destination is the exhilarating finale to *Heart of Chaos* and the characters must succeed whilst being chased by Daemons of Tzeentch, Dwarf-piloted gyrocopters and a chaotic storm... all hell-bent on preventing their success.

And thus, the Old World is saved, at least for another four thousand years. If the players survive, it is possible that they will have gained a Beastman mutation, a handful of insanity points, and even a whispering tumor, but at least they will have saved the world. That would be in the Hollywood ending to *Heart of Chaos*, which would be fitting as it is a cinematic adventure, but *Heart of Chaos* is also a *Warhammer* scenario, so alternative endings are also included. In the actual *Warhammer* ending, they succeed and pay the price for attuning themselves to the crystals. "The Third Way" is the other suggested ending, which is altogether a far happier affair. Sequels and Disasters are also discussed, with one price of failure being a post-apocalyptic future for the Old World.

[END SPOILER ALERT]

Heart of Chaos is designed for characters in their second or third career. It presents them with a tough challenge that is reminiscent (and nearly as deadly) as many a classic Call of Cthulhu campaign. It is also a very linear adventure, but when a Chaos god wants to bring about the end of the world, neither he nor prophecy leaves much room for choice. There is good advice for the referee who has not run a linear adventure before, and *Heart of Chaos* also gives advice and suggestions on how to run each chapter and scene. All of the NPCs are presented in loving detail and referees should relish the chance to roleplay every one of them, just as much as the players should enjoy (and sometimes recoil in horror from) interacting with them.

Heart of Chaos benefits greatly from having a fresh eye cast upon *WFRP* and the *Doomstones trilogy*. Robin D. Laws has created a rousing, hell for leather, roller coaster ride of a climax to the series. The *Warhammer* world has always been described as one that is both grim and perilous, and for the players this will be an adventure that is more perilous and more grim than they will have ever played before. Although this may be a career-ending adventure for them, this is not one that they are likely to forget in a hurry. For the *WFRP* GM, this the chance to really dish out all that peril and grimness with legitimate relish. Enjoy.

Advantaging Your Press

I was recently the guy in charge of registration at the 2001 World Yo-Yo Contest, which meant sitting behind a desk and helping people sign up for the contest.

Nickelodeon was on hand to tape the event, and they were filming a segment about a newbie participating in this contest. I was a part of this sketch, playing the guy in charge of registration. I sat behind a desk and helped said person sign up for the contest.

I was very convincing, I must say . . . if I don't get an Ace award, it's clearly because the entire system is rigged.

Anyway, that event reiterated in my mind one of the fiddly points I like to drive home in more modern (and many sci-fi) settings: The media is powerful, weird, and -- in many ways -- inscrutable.

For the few minutes of actual video they shot of me, they tied up my booth for about 20-30 minutes, were entering the "staff-only" booth to get a better shot, and just generally did things that normal folks aren't allowed to do. And we let them. Because, hey, they're the media.

So here (in no discernable order) are a few random thoughts regarding the gaming prospects of the media.

1. The media can go where other folks normally can't.

Consider that you wanted to talk to, say, the president of the city's largest bank. The odds aren't so good, depending on how busy the president is, his mood, and the like.

But if you're a reporter from the City Daily Sentinel Star Globe, suddenly your odds are much better. Whether you're doing a report on the City's Most Powerful People or an investigation into irregularities with the bank, you'll probably get to speak to him (even though it may take a while and you might need to jump through hoops). This might help explain why Superman's secret identity of Clark Kent is a reporter; his reporter guise allows him to get information that would be unavailable even to one who can bend iron bars in his bare hands.

Of course, the larcenous among us already realize the potential of the press' power to go where others cannot; all you really need to do to speak with important people or go interesting places is to have it *appear* that you're part of the press. (Of course, in most settings you'll need credentials, passes, and other validating methods. But heroes are often clever in coming up with ways of acquiring such . . . for a good cause, naturally.) And this ability can be used for evil as well; in the movie *Air Force One*, for example, the bad guys use forged press credentials to sneak aboard . . . well, I won't give it away. But it's an airplane -- an important one.

And don't forget that heroes, by their natures, are often "important people." As such, the press will usually want to talk to *them*. Remember that someone doesn't need to be a movie star or powerful figure to attract the eyes -- or thorns -- of the media. The news is full of incidents every day involving otherwise normal people who spark the media's (and public's) imagination. Given how heroes are usually doing things much more exciting than your standard 15-minuter, they should be naturals for the press.

(And, of course, to combine the two: People may *claim* to be with the press to get near the heroes for their own purposes . . .)

2. The media is (theoretically) after the truth; the truth is unknowable.

Yes, I personally subscribe to the theory that, if there *is* an absolute truth, it's beyond our mortal eyes to discern it. We're stuck with our own human perceptions and biases, and try to sort out our own views on reality. (It was easy for me to run *Mage* . . .)

What does this mean for a roleplaying game? Well, simply that any story probably has (at least) two sides, and the press may well try to present those sides. For every story about a hero who manages to subdue a terrorist at the last possible moment, there could be another story about how traffic and commerce were adversely affected for hours as authorities sought to disarm the terrorist's bomb. Or the terrorist's story about how he pleaded to give up, but the hero kept hitting him and hitting him regardless. (Yes, bad guys occasionally lie.) The media could choose any -- or all -- of these avenues to explore. The more grandiose the adventure, the more paid experts that will crawl out of the ground with 30-second sound clips commenting on some aspect of that adventure.

In this way, the PCs may become victims of their own successes. If the heroes save the city again for the jilionth time, the press may not be that interested in covering it as a normal story. Instead, they might take alternate -- even accusatory -- angles. How much property damage was done in this latest battle? Why weren't the heroes or authorities able to take a more proactive approach in stopping the incident? Why do costumed freaks keep attacking this city? And so on.

3. The media has its own views and ways of doing things.

The press is not above creative licensing, reenactments (where they may not tell the audience they're doing such), photo manipulation, and other questionable tactics. Certainly not *all* -- or even most -- members of the press does such, but enough does that it's not terribly surprising when it does happen.

Combine this with the fact that the press may not know the full truth (as discussed above), and you have the potential for intentionally or accidentally reporting a wildly inaccurate view of what really happened.

When the press does it intentionally, it is normally modifying a story so that it's simpler, more compact, or otherwise more pat. If your campaign is heavily steeped in conspiracy theories and other weirdness, said theories will generally not receive any media play outside of mimeographed newsletter. It's *always* the work of lone nuts. If your story involves heavy financial or geopolitical sophistication, it will probably be simplified to the point of being unrecognizable.

When the press doesn't have the full story, what it *does* know can lead to amusing, damaging, or weird results. For example, much of the action of the movie *Goldeneye* isn't public knowledge. What is visible -- and thus might make headlines -- is the scene where James Bond is driving a tank through Russian streets. Who knows what those headlines would read? Who would they interview? What explanation would result? "Madman Steals Russian Tank?" "Russian Military Denies Out-Of-Control Military Action?" "Incredible Frog Boy Escapes Russian Prison?"

For this view, consider whatever the public effects of your private adventures are, then consider how the press would react to them. In *Call of Cthulhu*, for example, the only visible effect might be some mysterious deaths aboard a train, or the destruction of an old temple. In a Cyberpunk game, the only mention of the heroes' actions might be a corporation issuing a statement regarding an aberration in future earnings ("caused by the obliteration of the secret Googlechip Project by gun-wielding 'runners" will *not* be mentioned . . .).

The press is a wonderful thing, and I'm glad to live in an era where the potential for information and reporting is stronger than ever before. But that power and potential also means that they're perfect for many roleplaying situations.

Like infiltrating the den of intrigue and adventure that is the World Yo-Yo Contest . . .

* * *

As an aside, I feel humbled to point out that I had as many people recognize my name and accomplishments with *Pyramid* at the World Yo-Yo Contest as I did at last year's Dragon*Con . . . which is to say that I have two fans between the two events. (Of course, at the Yo-Yo Contest I wasn't sprawled across an SJ Games table wailing, "You know . . . Steven Marsh? *Pyramid*? Me?!?" until Steve was forced to taser me into the Goth-Stor-It. So this is clearly a step in the right direction.)

"I'm your huckleberry." -- Doc Holliday, *Tombstone*

Genre: "Spaghetti" Westerns, plus Psychic Powers (possible spins include Supers, Horror, or SF).

Style: Action, Drama.

Themes: Divided Loyalties, Man vs. Nature, Man vs. Man, Order vs. Chaos

Campaign Setting & Background Information

This campaign is intended to take its cues from the highly iconic and universal field of Western movies. This is the Wild West of *Silverado*, *High Plains Drifter*, *Unforgiven*, and the *Good, the Bad, and the Ugly*, with a dollop of Orson Scott Card's *Tales of Alvin Maker* for leavening and a dash of Zorro for zest. It is not intended to serve as a rigorous Alternate History, and no attempt is made here to slot it into a timeline. For this Western Campaign, the "history" is scenery and symbol for the archetypal stories brought to life within it. The date is 186-; the American Civil War could still be raging, or could be long over; precise dates of introduction of a particular revolver are unimportant, while the fact that a character's daddy taught him to use that Colt Dragoon is paramount.

What Everyone Knows

There had always been rumors of folks with gifts and talents beyond that of the norm. In other days they were called shamans, seers, or witches. Today they're called "huckleberries." In late Eighteenth Century slang, "huckleberry" was used often as an adjective -- it had a host of meanings: "sweet/darling," "a negligible thing or person," and a "special man for the job" or "the desired or suitable person" for a task. It was also used in gambling circles: one could "bet a huckleberry to a persimmon," which meant placing a small bet. However, huckleberry is being used here to signify something unique -- from the phrase "the only huckleberry on the bush" -- discussing the wondrous nature of their strange gifts.

Huckleberries started showing up about fifteen years ago. They have demonstrable supernatural abilities that are currently unable to be explained by science. It has become obvious, however, that these strange powers are directed by conscious will and thought, and act only through the agency of a human mind.

These talents include:

- **The Sight:** The most common gift is that of Second Sight. This includes most forms of extrasensory perception. Someone with the Sight can see auras, get flashes of the future, dowse a well, read the past of an object, see and communicate with ghosts, track a person by one of their possessions, speak prophecy, and see far places in time and space. People with the Sight are generally accepted, if not respected. (Few people in their right mind would gamble with them, though.)
- **The Touch:** The second most common talent is that of Laying on of Hands. A person with the Touch can seal wounds closed, fuse broken bones, reach into a person and remove bullets (or organs), calm fears, take away or grant pains of mind and body, and can physically touch ghosts and astral beings, even if there's no ectoplasm around (see below). People with the Touch are sought out and honored.
- **Mind Over Matter aka "The Mustard":** Even more extraordinary than the Sight or the Touch is that of Mind Over Matter. It takes its slang term from a Biblical verse:

And Jesus said unto them, "Because of your unbelief: for verily I say unto you, if ye have faith as a grain of mustard seed, ye shall say unto this mountain: 'Remove hence to yonder place;' and it shall remove; and nothing shall be impossible unto you"

-- Matthew 17:20.

Someone who has the Mustard can walk on broken legs, sit motionless for long periods, move small things through the power of his will alone, go without food, water, or air three times longer as the average man, take six bullets in the chest and remain standing, lift heavy burdens with ease, cause fires to spark or water to freeze, ignore extremes of temperature or pressure, perform strenuous hard labor for three straight days, resist extreme pain, or even levitate themselves in the air. Folks are a bit scared of people with the Mustard, but this is often obviated somewhat by how useful such talented people can be in building, ranching, mining, and such. Overall, folks are wary of those with a strong gift for Mind Over Matter.

- **The Tongue of Fire aka "Witching":** The most rare huckleberry talent is that of full mental communication. The possessor of the Tongue of Fire can read and send thoughts and emotions in people, ghosts, and animals; manufacture or eliminate memories at will; create overpowering illusions that exist only in the onlookers' minds; send their soul away from their body by "astral projection," use another living creature's senses as their own; enter and manipulate another's dreams; and even control people from afar like puppets on a string. Folks don't cotton much to people with the Tongue of Fire; it's too hard to trust that those huckleberries aren't witchin' them when their backs are turned. People with the Tongue of Fire are feared and hounded.

One out of every thousand souls has a powerful enough talent to invoke at will; close to one out of every hundred thousand has two fully controllable gifts; the chance of having three strong abilities is one in a million -- and there's only been one verified case (see below, Audrey Miller). Some mildly blasphemous sorts claim that the only Person to have four gifts died over eighteen hundred years ago on a Cross. Religious folk tend to either class the special talents of a 'berry as curse or blessing.

Some havoc has ensued -- but much less than one might expect in most of the country. The impact on most people's lives is minimal -- perhaps Uncle Claude's a better dowser, or they have another reason to hate Leticia Buncombe from down the lane. But city dwellers have been getting mighty skittish -- all those people together, some of those folks are bound to be huckleberries. You get too many of them in one place and everybody's gonna get stained when the juice starts flying

That's why the authorities Back East have started cracking down hard: some states favor registration, others force conscription into the state militias, still others choose imprisonment . . . or execution. The West calls even more loudly because of these things. In addition to the draw of wide open spaces and chance for a fresh start, some folk are tempted by the lure of learning hidden Indian teachings of power -- the redskins are known to be masters of the Sight. Others believe in the stories of a safe-harbor called Haven. Still others flee the tyranny of other minds yammering at them in close quarters at all hours of the day and night. Numerous 'berries make for the frontier, in order to live free.

People like the so-called "Huckleberry Queen" Audrey Miller -- a soiled dove who's probably the most powerful 'berry West of the Mississippi. The Hopfrog Kid -- whose temper is as quick as his hog leg. Ghost Hawk -- the powerful Indian medicine man who defends his tribe and his way of life from the invading white man. Heartbreaker Jack -- a former Confederate officer on the run, and hunted by former allies and enemies alike. Folks like these huckleberries are playing out their personal stories on the range.

What Everyone Doesn't Know

- **Origins of Huckleberries:** Here are some options offered to select from. Mix and match at whim:
 1. **Volcano/Solar Flare:** The combination of a volcanic eruption in 1830 and increased sporadic sunspot activity in the decades since, have increased the level of beginning mutation worldwide, along with some spectacular sunsets. Do these mutations breed true? This option could be the structure for a nascent pulp or superheroic world, much along the lines of Philip Jose Farmer's *Wold Newton* stories.
 2. **An Open Door:** When the Fox Sisters communicated with the spirits of the dead in 1848, a long-closed doorway opened into the astral plane. Now the barriers between thought and form are ever weakening; soon the world may be threatened with an invasion of monsters from their darkest nightmares. This option could lead to stories based on psychological horror made flesh, as images and archetypes from the hidden

subconscious burst forth into waking life, or to sorties dealing with the power and terror of the human soul.

3. **Alien Experimentation:** Secretly, aliens are breeding for mental powers. Is it for use as soldiers? Weapons? Successors? Food? Entertainment? This option can lead full-bore into science fiction of the most outrageous sort, with possible spins from Earth-based rebellion against the hidden Alien Masters to defending the borders of the Interstellar Union of the High Frontier.
- **Ghosts:** The spirits of the dead that communicate with Sighted mediums, aren't. Even they don't realize this. Ghosts are not the actual souls of the departed; they are complex astral structures formed out of a psychic residue "broadcast" from other people's memories, fears, or expectations of them. This can explain the often-abrupt personality changes that people seem to undergo after death; the drunkard becomes a saint of temperance, for example. An exception may be those gifted with the Tongue of Fire who are out gallivanting around through astral projection when their body dies. They are essentially free spirits until the passage of time grinds them down the level of other ghosts; this erosion process takes around forty days.
- **The Mayor of Argent Valley (see below, NPCs & Their Goals):** David Bridgetower is a patriot, a businessman, a sonuvabitch, a megalomaniac, and a secret huckleberry. He's twigged on a technique that allows him to borrow the strength and gifts of willing followers through Witching. He's got big plans, unbridled ambition, and a rattlesnake's mind behind an affable exterior.
- **Huckleberry Haven:** Haven hasn't actually been built yet (see below, Items & Locations).

NPCs & Their Goals

- **The Huckleberry Queen (Audrey Miller), Soiled Dove Powerhouse:** Born a half-breed, in civilized Kentucky, Audrey Miller discovered herself the match for many men as she grew older -- and that was before even taking into her account the three potent gifts of the Sight, the Touch, and the Tongue of Fire. She fled West to escape not just the tyranny of that state against huckleberries, but also the strictness of social mores. Self-interest is her motivating force; all aspects of her life -- including her indulgence in charity -- spring from that motivation. Notably, she claims not to be particularly interested in the concept of Haven as laid out by Reverend Simnul -- she finds his idea of a society a bit too blue-nosed and restrictive. Audrey is proprietress of a dance hall known as "The Huckleberry Queen" (see below, Items & Locations).
- **David Bridgetower, Politician and Entrepreneur:** Former Union colonel, this black sheep of a moneyed Eastern family has come to the wilderness to fulfill his desire for power over others. With his hidden Tongue of Fire, he easily gained control of a small cow town named Argent Valley. He is ruthless in his efforts to increase the range of land and people under his dominion; however, he does legitimately care for those he sees as under his "charge."
- **Ghost Hawk, Wielder of Big Medicine:** Indian Medicine Man, gifted with both the Sight and the Tongue of Fire. He is deeply committed to defending his people from the white man, but his heart is drawn strongly to the half-breed huckleberry Audrey Miller -- he has seen a Vision of them holding hands across a river of blood. He despises the Hopfrog Kid, both because he is white and because he is his rival for Audrey's attentions, but respects the man's strong spiritual gifts.
- **The Hopfrog Kid (Nathan Lang), Mustard Gunslinger:** When the bandit Black Matthias gunned down his father and brother in the streets of Hopfrog Butte, twelve-year-old Nathan was left alone in the world. Dedicating himself to the art of the quick-draw, he became one of the deadliest shots in the West. It took six years (and the emergence of his gift of the Mustard) before he found and gunned down Black Matthias in the street like the dog he was. Now, the Hopfrog Kid drifts from place to place, a gun for hire -- though he finds himself ever circling back to Hopfrog Butte and the waiting arms of the Huckleberry Queen.
- **Heartbreaker Jack:** The true name of this former Confederate officer is clouded in a blood-red fog. What is known is that Jack is a huckleberry with a Talent for the Touch and a hunger for the flesh of other men. He been a mercenary, a bandit, and even served one short-lived stretch as the Sheriff of a mining town. Meticulous in dress and appearance, he is kind to children and animals. However, any adult that crosses him risks loss of a vital organ, removed by Jack's huckleberry Touch, and prepared in the finest French style of cuisine.
- **Professor Anthony Vita, Snake-Oil Scientist:** Anthony Vita was a small-time medicine showman, eking out a living selling Kickapoo Silver Patent Medicine Remedy when he witnessed a Sighted huckleberry divining the future. As the beads of ectoplasm sweated down the 'berry's forehead, an idea was born. "Professor" Vita has

formulated a patent medicine of his own -- "Professor Vita's Patented Latency Enhancer and Strengtheners," which incorporates the mysterious slime in its manufacture (see below, Items & Locations). While this snake oil is presented as an oral medicine, Vita has become addicted to injections of pure ectoplasm, as well as the temporary and mild expression of all four gifts it evokes. He must constantly seek out new money for his coffers, audiences for his shows, and sources of ectoplasm for his vats. He has a small handful of performers that also serve as henchmen for his nefarious schemes.

Other NPCs for use in your Psi, Psi West Campaign:

- *Buffalo Pete* -- Sighted Black Bounty Hunter.
- *Fanshaw* -- Cowboy known as "the Horse Witch" for his skill at talking with animals.
- *Beulah Jamison* -- White female Bostonian and sharp-dressed Riverboat Gambler.
- *John Leaping Wolf* -- Indian Agent and Temperance Crusader.
- *Krieger Mason* -- Foolhardy but capable Texas Ranger.
- *Maria Luisa McGee* -- Irish-Mexican Rancher, with a powerful talent of Mind Over Matter.
- *Saul & Sara Ross* -- Mercenary Couple, their guns sold to the highest bidder.
- *Reverend Tobias Simnul* -- Visionary (not in the 'berry sense) Preacher, "founder" of Haven.
- *Claude Tournette* -- French-Canadian Bandit Chief and Tactical Genius
- *Jedediah Warner* -- Crazy Old Coot, erstwhile Chuck Wagon Cook.

Items & Locations

- **Ectoplasm:** A translucent greenish slime that seems to condense out of the air like fog when there's a lot of psychic activity happening. If a seer with the Sight is trying to see what the weather will be like next week, she might start sweating little drops of it; if a cowboy with the Mustard is lifting a calf out of a mud pit, streamers of the goo will form between the two of them. When the use of the talent stops, it quickly evaporates away. It can be kept indefinitely in an airtight container, however.
- **"Professor Vita's Patented Latency Enhancer and Strengtheners":** Patent medicine composed of rum, water, huckleberry juice, fermented cactus juice, and (a small amount of) ectoplasm. Hyped as a sovereign cure for all ills, the Latency and Strengtheners is also purposed to help the imbibers develop and express his hidden psychic gifts. Interestingly enough, while it may aid latent 'berries in accessing their talents, it tends to have a dulling effect on emergent gifts.
- **Argent Valley:** A humble cow town, quickly growing increasingly more civilized under the watchful eye of Mayor David Bridgetower. In the scant year of his tenure, Argent Valley has gone from a mere flyspeck on the map to a serious contender for the county seat, and then capital of the territory. Currently, Argent Valley is not on any rail lines, but there is talk of advancing a spur, both because of Argent Valley's silver mining operations as well as their position on one of the major cattle drive trails. Argent Valley boasts a public school, a doctor, an opera house, and an amazing general store.
- **Hopfrog Butte:** Little more than the crossing of two roads, Hopfrog Butte boasts only three things of interest: The Huckleberry Queen Dance Hall; Isaac Slotmeyer, a Jewish blacksmith; and the largest sheep-shearing station in the territory. Also the home of Nathan Lang, aka the Hopfrog Kid, and Audrey Miller, the Huckleberry Queen.
- **The Huckleberry Queen Dance Hall:** A saloon/"sporting house" where entertainments involving verifiable huckleberry gals are available for the discerning and generous gentleman. The whiskey is better than the swill normally served in such places, and the food is even better. The women are friendly, the gambling is fair, and the music is loud. The Huckleberry Queen employs three bouncers and two bartenders, of which one will have the Tongue and one will have the Mustard. Interestingly, male huckleberries are stood a free drink (one per night), and there are rumors of other "perks" that are offered gratis.
- **Haven:** Reverend Simnul has gathered a small band of true believers around him, dedicated to the idea of a city of the gifted. A city based on the Golden Rule, where neighbors help out one another, where the community's staple goods are help in common. However, none of the locations these disciples have discovered thus far seem safe enough -- from general discovery, from roving bandits, from the harsh elements. Currently, "Haven" is a tent city in the foothills midway between Hopfrog Butte, Argent Valley, and the encampment of Ghost Hawk's

tribe. They've been hunting and gathering in the area to support themselves, and supplementing that with goods and staples supplied or purchased with funds donated by Reverend Simnul's secret benefactors.

- **Pandora Canyon:** People go in, but don't come out. Huckleberries sleeping within seven miles of it have horrible nightmares. Rumored to be haunted by ghosts, controlled by a huckleberry tribe of Indians, and/or the lair of a bandit gang. May be the secret command post for the aliens among us, examining the results of their genetic meddling, or the hidden prison of the hidden Huckleberry King -- the rumored man blessed with all four gifts, driven mad by his power.

Events & NPC Intersections

Some events and issues over which NPCs could clash:

- **Love Triangle:** Audrey Miller, Ghost Hawk, and the Hopfrog Kid, with Maria Luisa McGee carrying a torch for Nathan.
- **Buried Confederate Gold:** Heartbreaker left it under McGee's farm, Jedediah Warner's heard rumors of it, and Beulah Jamison's discovered clues to its existence.
- **Showdown and Throwdown!:** Krieger Mason has finally tracked down the Rosses to the mouth of Pandora Canyon. So has Buffalo Pete. Unfortunately, Claude Tournette and his half-dozen thugs have been scouting out Pandora Canyon as a new hideout. Hijinks and hot lead ensue!

Possible Story Arcs

Story arcs -- continuing threads that weave throughout a campaign -- help a game stand out in a player's memory. Here are three story arcs to possibly incorporate into your Psi, Psi West Campaign:

- **Bringing the Iron Horse to Argent Valley:** Every action that Mayor Bridgetower takes should be calculated to help bring a railroad to the town or -- taking a long-range view -- in securing Argent Valley's position as county seat.
- **Old Cowboys Fade Away:** A Tongue of Fire-blessed PC (or NPC ally of one or more of the PCs) dies after a few adventures; luckily, he was projecting himself astrally at the moment of demise (by stray shot, burning building, or rattlesnake/scorpion venom). Over the course of the rest of the campaign, this "ghost" should slowly find his personality worn away and replaced by other people's impressions of what he was like. The "ghost" could find all the skills, memories, and abilities that he doesn't use fading away, only to be replaced with skills, memories, and abilities he never had.
- **Building Haven:** The PCs are introduced to Reverend Simnul early in the campaign are either convinced of his vision or are hired to help create his dream of Haven in reality. This can be a fascinating skeleton of sub-creation for a campaign: dealing with Mayor Bridgetower, Ghost Hawk and his tribe, and the wilderness itself will be adventure in spades.

Genre Advice

The goal genre here is intended to borrow from both the highly charged emotional Spaghetti Westerns (e.g. *The Good, the Bad, and the Ugly*) and the iconic, stylized nature of more mainstream Westerns (e.g. *Silverado*). Characters should be constructed with complex personalities around an archetypical seed core -- the weary gunslinger, the smooth gambler, the competent cowboy, the hard-as-nails marshal -- of their role in society. These archetypes should not have their morality "by definition" -- an archetype like "the Strong-Jawed Hero" would end up limiting a player's exploration of the character.

Spins

Depending upon choices made in developing a campaign, Psi, Psi West can take on a patina of Supers, Horror, or even science fiction, especially in terms of Alternate History. Personally, the author's favorite spin is more along the lines of an iconic, fairy-tale Old West in which internal struggles are played out in the form of on-stage action. The watchwords for any Psi, Psi West campaign are simplicity and honesty. If things are simple and honest, the action of the campaign keeps clicking along.

Style Advice

- **Action:** Violence should be raw, explosive, and stylized: clean hits and clean kills, whether from a huckleberry talent or a bullet. Saloon brawls are de rigeur. Action can be large (using the Mustard to collapse a mineshaft, stampeding cattle, a night chase by a lynch mob) or small (a high-stakes poker game, a one-on-one showdown on Main Street, using the Mustard to open a jail cell lock). Keep things moving.
- **Drama:** Just as the camera takes long panoramic shots exploring the landscape in a Western movie, Psi, Psi West game sessions should have its own sweeping and emotional close-ups of each character's personality. For roleplaying and dramatic purposes, these interior explorations can be expressed into action or events in the real world: personify the alcoholic sheriff's past by pulling in an old drinking buddy, confront the bandit's selfishness by raising a "ghost" from his subconscious of someone he feels responsible for, or explore the soiled dove's spoiled childhood by the arrival of her aged family butler. Juxtaposition of a character's goals against another character's allows fascinating examinations of personality and morals.

Theme Advice

A Psi, Psi West Campaign lends itself to a number of richly dramatic themes:

- **Man vs. Man:** At its core, this is the most basic concept. Blondie vs. Angel Eyes; the Lone Ranger vs. Black Bart; Jim & Artie against Miguelito Loveless. For a real treat, oppose people on the same "side": think of stories that have Jim West and the Lone Ranger working at cross-purposes; or a treasure that both Angel Eyes and Black Bart wish to get their hands on.
- **Man vs. Nature:** Pioneering. Survival. Interacting with the natural world. Surviving its challenges. Anything from Grizzly Adams to the Donner Party is fair game here.
- **Order vs. Chaos:** The primal conflict. Justice vs. Greed. Civilization vs. Frontier. Steam Diggers vs. John Henry. For extra amusement, look for match-ups to turn on their head: Civilization (Order) vs. Frontier (Chaos) seems obvious . . . but what would Civilization (Chaos) vs. Frontier (Order) look like? Perhaps a world where the Law of the West is pure, generous, and unsullied, but the Laws of the City are money-grasping, corrupting, and stifling.
- **Divided Loyalties:** Complex and rewarding stories can come out of placing characters in untenable positions. Forced to choose between their family, their beliefs, their history, their friends, their desire to live . . . The choices faced by Will Munny (Clint Eastwood) in *Unforgiven* and Paden (Kevin Kline) in *Silverado* are exemplary for this theme. Watch them!

Opportunities & Pitfalls

With the highly iconic nature of the Western, there are opportunities for increased drama, characterization, wonder, and freedom, all centered around the basic familiarity of the genre. Even those unfamiliar with the history or detail of the period have a general idea of the tropes and characters that roam through the West through cultural osmosis. This is a great strength for a Psi, Psi West campaign, especially as the historical details are relatively unimportant (as presented here).

The addition of psychic powers adds a hook to draw interest for those players who would rather give the genre a pass. Exploration of the meaning and scope of said powers in a reasonable extrapolation of actual Western thought -- especially as regards religious thought, running the gamut from Christianity to Native American beliefs -- could be quite interesting and rewarding. However, the huckleberry gifts should be reflections of a character's personality (much

as gun selection can be, see below); if they become simply tools or weapons to beat up other characters wit, much of the dramatic and emotional potential for the setting will be lost.

Keep a close eye on tone. If the tone is too heroic, you've got superheroes in Stetsons and chaps. Too horrific, you end up with *Deadlands*, Part Deux. Too much science fiction, and the archetypal nature of the genre can become lost in the wild hypotheses and funky gizmos. Of course, you may want to spin your Psi, Psi West Campaign in that manner. Go for it, and caveat lector!

Guns. A character's selection of firearm is an important facet of their personality, and should not be overlooked. The fact that Malachi Johnson (Danny Glover) uses a Henry rifle in *Silverado* is an important aspect of his relationship with his father. The way in which Tuco (Eli Wallach) scratch-builds himself a proper pistol in *The Good, the Bad, and the Ugly* demonstrates vividly the hidden brains that this rough, unwashed bandit possesses.

Hammer & Anvil

A Scenario for the Classic *OGRE* Map

by Alvin Helms

([Click here](#) for the accompanying map to this scenario!)

This scenario might also be called "Kill the Ogre," for it is the counterpoint to the traditional "Kill the Command Post" scenario. It depicts an attempt by mixed forces to ambush and destroy an Ogre by making use of the Ogre's well-known appetite for Command Posts.

The scenario derives its name from a classic military maneuver, in which an advancing enemy is allowed to pass a screen of concealed forces, then is confronted with a main force. The enemy's retreat is cut off by the emergence of the concealed forces, and it may, with luck, be crushed between the two.

"Hammer & Anvil" may be played with nothing more than the units and rules available in *Deluxe OGRE* and *Deluxe G.E.V.*

1.0 Basic Scenario Setup

In the "Hammer & Anvil" scenario, the long map edges (*01** and 15***) are impassable to anything but Infantry. The map might therefore represent a pass through a steep-walled valley, with the only route of escape to the south (***22*), through the clear area. The northern edge (***01*) only leads deeper into enemy territory.

The ambushing forces consist of:

- 1 Command Post (decoy)
- 12 Infantry squads
- 16 Armor Units (no stationary Howitzers)

The target is a lone Ogre Mk III.

1.1 Initial Placement of Forces

The specific placement of units is very important in the "Hammer & Anvil" scenario, and the first turn consists only of placement, not movement (*see 5.0 Strategy*).

1.11 Setting the Bait

The ambushing player begins by placing his Command Post anywhere within the area shaded blue in the map illustration. He must then select one of his Armor Units (of any type) and place it anywhere within the same area. This ends his placement turn, and these are the only units visible to the Ogre before his placement.

1.12 Responding to the Bait

The Ogre's player must now place his Ogre anywhere within the diamond of hexes shaded red in the map illustration. He may then fire any or all of its weapons at either or both of the targets visible to him, provided they are in range.

1.2 Springing the Trap

After the Ogre has fired, the rest of the ambushing player's other forces come out of concealment by entering along the map edges, with the following constraints:

At least one third of the ambusher's Armor must enter through the northern edges of the map (*hexes 0102 through 0107, hexes 1502 through 1507, and any hex in the **01 or **02 range*).

All remaining Armor must be divided equally between the southeast and southwest edges (*hexes 0109 through 0122 and hexes 1509 through 1522*).

NOTE: *The Victory Point value of any unit(s) used as Bait is not included in the total of the forces when dividing between northern and southern armor groups.*

All Infantry must enter with the southern Armor, along the SE and SW edges of the map.

None of the ambusher's units may enter through the southern edge of the map. (*The available entry hexes are colored yellow in the map illustration.*)

No more than one Armor unit (or three Infantry squads, grouped into a platoon) may enter through each hex. If stacking is permitted, it may only be done *after* entering the map.

NOTE: *These units are executing movement, coming from hiding places just beyond the edges of the map. Therefore, a Heavy Tank entering at hex 0112 could move as far as 0311 in this turn.*

Once all the ambusher's units have finished their movement (including the Bait unit, if it survived), the ambusher may attack with any units in range of the Ogre. GEVs may then take their second movement phase.

Thereafter, it is the Ogre player's turn, and all play proceeds normally.

2.0 Objectives and Victory Conditions

The game ends when the Ogre is destroyed or when the Ogre exits the map -- which he may do along its southern edge only, going back the way he came.

The ambusher's objective is to destroy the Ogre with a minimum of casualties. For the Ogre, the objective is to escape -- and to destroy as many of its attackers as possible. All normal Victory Points apply (2 per Infantry Squad, 6 per Armor Unit, etc.), and are used to calculate the following Victory Conditions:

Ogre destroyed and 60% or more of the ambusher's forces survive:	<i>Complete Ambush Victory</i>
Ogre destroyed and 40% or more of the ambusher's forces survive:	<i>Ambush Victory</i>
Ogre destroyed and 20% or more of the ambusher's forces survive:	<i>Marginal Ambush Victory</i>
Ogre destroyed but less than 20% of ambusher's forces survive:	<i>Draw</i>
Ogre escapes but destroys less than 25% of ambusher's forces:	<i>Draw</i>
Ogre escapes and destroys at least 25% of ambusher's forces:	<i>Marginal Ogre Victory</i>
Ogre escapes and destroys at least 50% of ambusher's forces:	<i>Ogre Victory</i>
Ogre escapes and destroys at least 75% of ambusher's forces:	<i>Complete Ogre Victory</i>

2.1 Special Victory Rule: Rewarding Spite

If the Ogre destroys the Command Post decoy, he is awarded the value of two Armor Units (12 Victory Points). This is added to the ambusher's V.P. total when calculating the percentage destroyed by the Ogre, but it is *not* included in calculating the ambusher's survival total. The bonus may therefore break a Draw or upgrade an Ogre Victory, but will not otherwise affect the outcome.

2.2 What If . . . ?

It is not likely, but it *is* possible for the Ogre to become immobilized, yet destroy all its attackers. Should this happen, consider it a Draw -- unless the Ogre also destroyed the Command Post decoy, in which case it is a Marginal Ogre Victory.

3.0 Advanced Scenario

Play is identical to the Basic Scenario, except:

The ambusher's forces consist of:

- 1 Command Post (decoy)
- 18 Infantry squads
- 24 Armor Units (no stationary Howitzers)

The target is a lone Ogre Mk V.

4.0 Optional Rules

These variations will add some spice to "Hammer & Anvil."

4.1 The Secret Weapon

The ambusher may exchange two of his Armor Units for a Howitzer, which his combat engineers have concealed within one of the map's 17 craters. He must choose the crater during his Initial Placement, but its position is not revealed until the trap is sprung (*see 1.2*). Once revealed, the Howitzer fires along with the ambusher's other units.

The concealed Howitzer derives some protection from the crater: Because it is inside a crater, it may not be overrun, and the shelter gives it a Defense rating of 2, rather than the usual 1.

NOTE: To avoid mistrust between players, the ambusher should record the Howitzer's location beforehand, by writing the hex's number on a slip of paper. The slip should be left in plain sight, face down or folded, and should not be touched by either player until after the Ogre has been placed.

4.11 Waiting for the Shot

If the Ogre is not within range of the Howitzer at the end of the Initial Placement, the ambusher need not reveal it yet. It may remain concealed until the Ogre comes within its range, and be revealed during the ambusher's movement phase.

4.12 The TOP SECRET Weapon

The ambusher may instead exchange FOUR Armor Units for an Emplaced Howitzer with Point Defense (*Attack 6*,

Range 6 hexes/12", Defense 5 + 1 for the crater).

4.2 More Bait for the Hook

The ambusher may choose to roll a die to determine the number of "bait" units (see 1.11) that were necessary to lure the Ogre in. Regardless of the number, *all* of the "bait" units must be placed in the northern end of the map (*along the **07 line of hexes or above*). As in the standard rules, the Victory Point value of the Bait is not counted with the total when dividing between northern & southern armor groups.

When using this rule, the Ogre player may follow his placement with a Move -- so long as no part of it takes the Ogre southward -- followed as normal by firing.

5.0 Strategy

The placement phase of "Hammer & Anvil" is more important than one might realize. Although the Ogre's only objective is to escape, it *must* engage the enemy to get more than a draw. Yet the longer it stays, the greater its chances of never leaving-- for it faces more firepower than in "Kill the Command Post." The forces and starting positions of each side have been planned to offer each side roughly equal chances of success, assuming each player places and moves wisely . . .

5.1 Ambush Strategy

Use only GEVs in the northern Armor group. The Ogre will most likely bolt southward, and the northern units will need to move fast to catch it. (And if it doesn't run, it'll be trying to remove the northern Armor first -- so you'll need the speed to avoid it until reinforcements arrive from the south.)

It is vital to slow the Ogre's movement, so target only its tread units at first. Once it has been slowed, you may remove the weapons in order of priority.

Remember that you *must* destroy the Ogre to win, but the survival of your own forces is secondary. If necessary, sacrifice units by placing them in the Ogre's path, in order to take out tread units in overrun combat.

5.2 Ogre Strategy

There are two basic approaches: Cautious and Bold.

In the Cautious approach, the Ogre (perhaps smelling something fishy) ignores the Bait and places in the bottom half of the Kill Zone. Immediately run straight for the southern border. Make no diversions, and pick off ambushers as they come near you. If you make it to the border with at least two movement points left, wait around and pick off some more.

In the Bold approach the Ogre *takes* the Bait, placing at the sides or northern edge of the Kill Zone and charging to the attack. If enough damage can be done to the ambushers quickly, they may lack the firepower to prevent escape. When using the Bold approach, make certain that you destroy the Command Post.

Cthulhu-Fu

Martial Arts in *Call of Cthulhu*

by Shane Ivey

The martial arts rules in *Call of Cthulhu* have always been cursory, and with good reason. *Call of Cthulhu* isn't *Feng Shui*. It's a game of mystery and horror, better suited to bespectacled intellectuals than Jackie Chan wannabes. And in 1920s-era *Call of Cthulhu*, martial arts are rare in Western civilization to begin with; of the oriental martial arts, only judo had any following among white Americans. But with modern-day *Call of Cthulhu*, martial arts become more prominent: every sort of martial arts training is commonplace, and they become more and more useful for investigators - especially given the severe consequences that can attend simply shooting every cultist in sight. In *Delta Green*, they're inevitable.

The fact is, fights happen. Sure, the really gruesome horrors are far beyond the ken and caliber of even the hardest Marine, but the nasty cultists that worship those horrors are not. The players are sometimes going to welcome that small relief against the eldritch terrors waiting to blast their sanity to gibbering bits. And in *Delta Green*, most agents are either cops or spies who ought to have some training in taking the human terrors on.

With that in mind, these rules are meant to expand unarmed combat in *Call of Cthulhu*, the martial arts skill in particular, making it a little more flexible, flavorful, and interesting, and hopefully even helping the Keeper and players to portray hand-to-hand fights with a little more verisimilitude.

(And Keeper, don't worry. We all know that big 2D6 kick still won't do jack against the shoggoth in the basement.)

Martial Arts Effects

There are numerous martial arts subskills, each representing a distinct style of unarmed combat training (see below). You should treat martial arts like any skill group, such as languages or crafts or art: there are many distinct skills which fall under the same category (Martial Arts (karate), Martial Arts (judo), Martial Arts (aikido), and so on), and each must be developed separately.

Each subskill, or style, offers advantages in a few of the following skills. The effect of martial arts varies with the attack or skill being performed.

Fist/Punch, Kick, or Head Butt: If the attack roll is also a successful martial arts skill roll, the base damage of the unarmed attack is doubled (i.e., a punch attack does 2D3 rather than 1D3). If an unarmed parry roll is also a successful martial arts skill roll, the parry will affect a melee weapon attack.

Grapple: The martial arts skill can be used in place of the character's STR vs. STR resistance roll when attempting to maintain or escape from a hold. When used to harm the target, if the grapple roll is also a successful martial arts skill roll, the base damage is doubled to 2D6. Alternately, the martial arts skill rating can be used in place of the character's grapple skill rating, with the same limitations as for Fist/Punch, Kick, or Head Butt.

Dodge: If the dodge roll is also a successful martial arts skill roll, the character can take a melee attack action in the same round as the dodge. (The character still cannot launch a ranged attack and dodge in the same round.)

Weapon Skill (varies with style): The martial arts skill can be used in place of the character's attack and parry skill with a designated weapon. The chance of an impale is not affected, and the character cannot obtain an experience check in the weapon skill if the martial arts skill rating is used instead. Note that this effect only applies to melee weapons, not to unarmed attack skills.

Non-Weapon Skill (varies with style): The martial arts skill can be used in place of the the character's normal rating with the designated skill. The character cannot obtain an experience check in the in the skill if the martial arts skill rating is used instead.

Martial Arts Styles and Skills

Aikido Dodge Grapple Weapon: Knife	Boxing Fist/Punch Dodge Head Butt	Capoeira Kick Dodge Skill: Jump
Filipino Kali Fist/Punch Kick Weapon: Knife	Jiu-Jitsu Grapple Dodge Weapon: Knife	Judo Grapple Dodge Fist/Punch
Karate Fist/Punch Kick Head Butt	Kendo Fist/Punch Kick Weapon: Sword	Kickboxing Fist/Punch Dodge Fist
Kung Fu Fist/Punch Kick Weapon: Club	Savate Fist/Punch Dodge Kick	Special Forces Training Fist/Punch Grapple Weapon: Knife

Example: Agent Marlow has Martial Arts (aikido) at 62%, Grapple at 69%, Dodge at 50%, and Knife skill at base. Using his Martial Arts (aikido) skill, he can make knife attacks or parries at 62% (but his chance of an impale remains 5%, from his 25% skill). If his grapple attack roll is also a successful martial arts roll, he can inflict double damage with a successful grapple attack. And he can use his martial arts skill to always have a 62% chance of escaping a grapple hold, even against an opponent of much higher Strength. Because his martial arts skill is higher than his dodge skill, any time he makes a successful dodge he can still launch a melee attack in the same round. However, his high aikido skill gives him no advantage in launching punches, kicks, or head butts.

But What About [insert your favorite style here]?

Obviously, the chart above is not meant to be comprehensive. If you want to have a character be an expert in some other form of martial arts, feel free to make it up on the spot based on the most prominent characteristics of the style. To keep things more or less balanced, restrict the effects to three distinct skills, as in the styles above. Give it a name, pick three skills, and you're set.

A Word About Damage

Because hands and feet simply lack the deadly penetrating power of knives and crowbars, This article recommends using the "subdual attack" rules in *Call of Cthulhu* as the default for unarmed attacks, but with a twist: any "special success" unarmed attack (i.e., an attack which would be an impale with an impaling weapon) inflicts full damage, not subdual damage. This allows for the crippling and killing trauma that *can* be done hand to hand, without ensuring that every fistfight leaves a character in traction, or every foot is as good as a .45.

Of course, it won't bother that shoggoth much either way. But won't you breathe a little easier when that security guard

takes you on?

Magic Handbook (for the DC Universe RPG)

Written by Fred Jandt, Scott McCullar, Jim Spivey, and Nikola Vrtis

Published by [West End Games](#)

128 pages; \$17.00

Magic has always been a strange duck in the Supers genre.

Sure, magic has been a constant presence in the comics; Dr. Fate & the Spectre were present in the 1940s, Zatanna hung out with the JLA, and Dr. Strange has always been available as an occult consultant for Marvel's assembled heroes.

But they've never quite fit in. Laser helmet wielding villains, galactic planet eaters, and wheelchair bound telepathic visionaries are all "standard" enough, but magicians tend to be somewhat outside of the standard super heroic box.

In superhero RPGs, magic is usually given a cursory treatment in the main book, and gets a big 'ol supplement later on. The 1980s *Marvel Superheroes Game* had its *Realms of Magic* supplement, which was an outstanding sourcebook on mysticism. Mayfair's *DC Heroes* had the excellent *Magic* sourcebook by Daniel Greenberg.

Now, West End Games has produced a supplement for their *DC Universe RPG* called, simply enough, *The Magic Handbook*. Like its predecessor, it expands on the use and role of magic in the DC Universe. But it's got a bit of a flaw. Due to a licensing quirk, WEG doesn't have the rights to cover the Vertigo line of comics. That means that this sourcebook doesn't cover, say, John Constantine, Swamp Thing, or The Sandman. This is an inconvenience, but thankfully it doesn't render the book useless (unless, of course, you're only looking for stats for John Constantine, Swamp Thing, or The Sandman).

The book starts out by detailing mechanical ways you can use magic in a DCU game. There are three ways: characters use magic, characters are "empowered" by magic, and characters use magic items. The first 30 pages are concerned with the creation of magic-using characters. The Magic Manipulation power from the base game is expanded into Wizardry and Sorcery. Wizardry is the heroic brand of magic use, and Sorcery is the villainous version, because it's harder to use Wizardry if you've got Hero points, and harder to use Sorcery if you've got Villain points. Wizardry has a slightly higher learning curve; Sorcerers get powers earlier (Magic Blast is acquired at 3D for Sorcerers, 5D for Wizards), but that's because they're just up to no good.

There's also a variety of magical enhancements and limitations for characters and powers. Curiously, there were a few places where non-cannonical examples were used instead of DC Universe ones. Magical Transformation uses "Kris's character," who must exclaim "Groovy!" to gain his super strength. Now, but isn't there already a superhero who has a really cool Magical Transformation, triggered by a magical word? Lightning bolts & inter-religious acronyms? You know who I mean. World's mightiest mortal? If you're going to get the license, you might as well use it, eh?

The following chapter gives specifics to creating spells. In this chapter there were some unrecognized power limitations; it's presumed they are from some of the other sourcebooks referenced, but if so it probably would have been appropriate to have the non-basic rules ones refer back to the book of their origin. Later on, there's a chapter which gives rules for constructing supernatural characters. There are packages for Jinni, werewolves, vampires, and members of the mystical Homo Magi race, among others.

The book is primarily concerned with magical Locations & characters. Locations are organized in alphabetical order, with a few of their related signature characters included in that section. Heaven and Hell are included, and give packages for playing Angelic and Demonic characters of various types.

There are a few strange selections. The entire Marvel family is included with the Rock of Eternity, which isn't totally illogical as their stats get a bit of a tweak with the rules included in this book (the Legion of Superheroes Marvel Family member is omitted). But Raven and Trigon get not a mention in the Azarath entry, and I wouldn't mind seeing how they're built in the latest rules incarnation.

Some details aren't quite consistent; Amethyst's character stats says "these characteristics are for Amethyst before she merged with Gemworld," but the character history mentions no merging with Gemworld.

It is interesting to note that the DC Universe has somehow managed to merge the Judeo-Christian-Islamic God with their cosmology, including the vast panoply of other deities. Apparently, the "capital G" God is The Presence (I swear, you miss *one* issue, you miss everything). There are a number of interesting developments that spring from this particular revelation, including how The Spectre's original mission as "The Wrath of God" was made obsolete "in the wake of the birth and passion of Jesus Christ, who brought to the world a more compassionate way of living." I don't know the full background of the DCU's revision of The Spectre, but it's certainly interesting to see it listed in an RPG. I don't recall seeing a character who's been rewritten to reflect religious dogma before.

The chapter on characters is fairly exhaustive, covering characters from Arrakhat to Zatara. There's a good section on Dr. Fate, looking at iterations of the character throughout his history.

The book suffers from a lack of referencing to its original source material. The original Magic supplement for DCH was intensely footnoted, referring back to the original material it was referencing. This book lacks any such references. It's not something that's normally expected of a comic book RPG supplement, but footnoting can be very useful, for both die-hard fans and occasional readers alike.

The book presents a very thorough overview of the magic-wielders of the *DC Universe*, as thorough as the authors could be under the restraints of their license. It is the last word on magic within the *DC Universe*, so if you want to include magic and magicians in a *DCU* game beyond the basic Magic Manipulation power, this is the place to go.

History of the World Game

Published by [Avalon Hill](#)

Designed by Steve Kendall and Gary Dicken

Boxed set; \$44.00

History of the World is Avalon Hill's latest deluxe remake of one of their older classics. Like their recent rereleases of *Cosmic Encounter*, *Acquire*, and *Diplomacy*, they've streamlined the rules and replaced the cardboard chits with high-quality plastic pieces.

History of the World is a cousin to world-conquest games like *Risk*. The object of the game is to have the most number of points at the end of the game. Points are earned by occupying and conquering territories, and building cities and monuments.

There are several unique features in *History of the World* that separate it from more traditional conquer-the-world boardgames. As its title implies, the game spans thousands of years. The entirety of the game lasts seven turns, each of which represents an "Epoch" of several hundred years. At the beginning of each Epoch, players draw cards indicating the empire they will play on their turn. So, at the beginning of the game, players compete with the Sumerians and Egyptians, progress to the Ming Dynasty, Greeks, and Romans in the mid-game, and finish with the United States and Britain colonizing the world. In an interesting twist, players in last place always get to draw Empire Cards first, giving them the opportunity to pass weaker empires (like the Aztecs, the Guptas, or the Netherlands) to the leaders.

There is no movement in the game. Once your empire is placed on the board, and expands by conquering nearby territories, that empire is never touched again. While it still earns points as long as it survives, it will slowly be devoured by future empires, big and small. Players can try to guarantee their old empires survival by building forts or keeping them contained within well-defended borders. But even the most well-fortified empire will crumble in time.

Additionally, players are dealt ten event cards, which range from disasters and revolts to elite troops and minor empires. Using these cards at the right time is a key strategy in the game.

The game mechanics are very simple, and clearly explained in the rulebook. Attackers roll two dice to the defender's one. The highest single die wins the combat. Defenders roll an additional die in rough terrain; forts and event cards can further modify the dice. In a welcome change from the last edition, ties destroy both attacker and defender, which helps speed the game along.

Speed, however, is still the game's greatest weakness. *History of the World* is a long game. A full, six-player game can last 4-5 hours, though experienced players can cut this time down by an hour or so. While Avalon Hill has done their best to quicken the pace of the game by streamlining the rules (they've eliminated sea combat, and lands can now only contain a single army), it's not a game that you can easily play in a night after work. Gaming groups with indecisive players, or ones that need to carefully calculate their points each turn, be warned! In its favor, *History of the World* is a well-balanced game. Even players who get all their forces eliminated can rest assured that they'll be back the next turn in greater force, and have a plenty of opportunity to gain ground.

The game can be played with four or less players, but it loses some of its charm. The board does not fill up as quickly, as several empires go missing, and players may find they have no one to attack on their turn.

Like all of Hasbro's recent releases, the components are marvelous. Each Epoch has its own set of plastic army pieces

(700 in total!), so the Minoans from Epoch I are easily distinguishable from the Mongols of Epoch III, and the British from Epoch VII. Forts, cities, capitals, and monuments also have gorgeous plastic renditions. The mounted board is colorful and easy to read, and the cards and markers are made from sturdy stock.

History of the World is a good addition to the growing Hasbro/Avalon Hill family. It's simple enough that gamers only familiar with Risk or Axis & Allies can get the hang of it right away. Its unique take on conquest is clever, and it even proves educational to people with a passing interest in the empires of the world.

Earthdawn: Second Edition

Published by [Living Room Games](#)

352 page softcover; \$30.00

FASA published the original *Earthdawn* game in 1993, and it developed a dedicated core of players who admired its well thought out world and intelligent mechanics. When FASA ended the line, a group of these players purchased the rights to publish new materials for the game: an uncommon act of devotion meant to save their favorite game setting from extinction. After producing two other well-received supplements for the game, Living Room Games has finally released a *Second Edition* of the main rules.

At first glance the book is an impressive piece of work for such a small game company; the interior art is good, the layout is clean, if simple, and the text is easy to read. It isn't until one looks closer that minor complaints arise. Living Room Games makes extensive use of the original artwork, while adding new art throughout the book. While each individual piece is good, the new artwork's cleaner comic book style never meshes with the darker, more evocative, original art. The color plates from the first edition are not included, a perfectly understandable business decision, but I do miss them. The main artistic improvement is the new cover -- it isn't inspired, but at least it looks like the cover to a fantasy game (with the obligatory cheesecake female in a Princess Leia on Tattooine outfit), something the first edition cover never managed. Like the art, much of the text is taken directly from the earlier edition. Again, this is a good business decision as the original edition text was successful in drawing the reader into *Earthdawn*'s unique environment. Unfortunately, this could turn off older players, making rules changes hard to find and making the product feel more like a second printing than a second edition. Finally, there are a few editorial mistakes, including the dread "Page XX." Despite these minor complaints, the book is well laid out and intelligently written.

The book makes no great changes to Barsaive, the default setting, and admirably explains this vibrant world. Barsaive is a model of world building, giving perfectly logical reasons for traditional fantasy monsters to lurk side by side with Lovecraftian Horrors in vast underground complexes filled with traps and treasure. If dungeons aren't your style, the player characters are meant to be heroes both reclaiming their world from a magical apocalypse and stopping wars between the Dwarvish kingdom, the tainted Elvish empire, the Orkish homeland and Troll raiders with the airborne longships. Looking for politics? Merchant companies struggle against one another for trade routes and political factions strive for control as the shadow of a slave-driven empire looms to the south, planning their conquest of all of Barsaive. Gamers would be hard pressed to exhaust the promise of the setting in a decade of playing. The *Second Edition* updates the background data to incorporate previous campaign supplements from both FASA and Living Room Games. I have two complaints about this: first, doing so acts as a spoiler to newcomers who might want to play those supplements, and second these changes are not always followed through in the text reprinted from first edition, leading to examples of play that include major NPCs now long dead.

Mechanically, *Earthdawn* is based around a flexible universal mechanic. Everything is rated in Steps, and each step has dice associated with it. Those dice will, on average, roll the step number (giving players a good gauge of their ability), but are open-ended high, and re-rolls can produce incredible successes. The number rolled is compared to the action's difficulty, with a table providing a degree of success if necessary. Combat has several steps, but easily handles armor defeating hits and knockdowns, with logical rules for mounted and unarmed combat, disarming, going inside a shield and other maneuvers. The magic system is as complex as combat, but just as logical and versatile, giving spell-casting characters plenty of options.

Like the world, the mechanics directly justify fantasy gaming norms. For example, the player characters are all Adepts -- heroes following a single profession through a regularly defined progression of levels and possessing degrees of skill that normal people simply cannot reach. All of the things that *AD&D* players debated are built directly into the

world. An Adept's powers come from devotion to a life-philosophy, called a Discipline, and the more they embody that Discipline the more powerful they become. Rather than evading the need for game-balancing mechanics, the world and mechanics support one another. The new edition doesn't have many rules changes, but they are all improvements: an expansion of the sparse skills system is well done and long overdue, some of the disciplines have their powers reorganized or modified to improve play balance, the new rules make it harder for characters to learn additional disciplines, and so on. The book also includes rules that once appeared only in sourcebooks, making the *Second Edition* a more useful reference than the first.

Despite all of the well-deserved praise I can heap on the game's setting and mechanics, I fear that this new edition may be too little, too late. When *Earthdawn* first appeared in 1993, the bloom had come off the rose of *AD&D* 2nd edition and the market was more receptive to a new take on heroic fantasy with mechanics that fixed many of *AD&D*'s sacred cows. *Earthdawn Second Edition* is entering an entirely different marketplace, in direct competition with a streamlined, improved, and aggressively marketed *Dungeons & Dragons*. Players picking it up for the first time will wonder why they didn't just market the world as a *d20* supplement, while core veteran players are already starting the "All Rules Changes Are Bad" argument on discussion boards. The rules changes are not great enough or essential enough to attract veteran players, and the book is coming out in the wake of the *D&D* Juggernaut.

Still, if you are looking for a well thought-out world for heroic fantasy of any flavor and are looking for something slightly different than the ubiquitous *d20* mechanics, *Earthdawn Second Edition* is an excellent choice. The rulebook is a value at \$30, it contains everything you need to play, and any errors it has are relatively minor. There is already a sizable amount of support material, and if Living Room Games continues their current trend, the future releases will be of impressive quality. It's obvious that they love the game, and after reading the *Second Edition* rulebook it's easy to understand why.

After-Action Report: My *Unknown Armies* Game

"Ken, your big city frightens me. I want to go back home to my jumped-up lumber port."

-- John Tynes

It's time once more for a brief sidestep into the specific, the nitty-gritty of campaign design, this time courtesy of my own now-completed *Unknown Armies* campaign. (I'll try to keep the *UA*-specific material down to a bare minimum, for people who aren't up on the setting. But see [my Pyramid Pick](#), if you're curious.) Consider this an example of [urban fantasy](#), an exercise in [illumination](#), and another [cheap excuse](#) to tell war stories. Hopefully, though, a look into my own GMing brain will help provide an example of Applied Suppressed Transmission-style Secret History, recast in urban concrete for your examination.

My *Unknown Armies* game ran an illuminated 23 months, from July of 1999 to June of 2001. Seven players and I met every Monday night for about four hours at a stretch to rebuild the magical infrastructure of Chicago. The players determined their "narrative structure" -- who they were, and why they all hang out together -- and decided to play the Occult Establishment, rather than the Plucky Rebels, Fearless Monster-Hunters, or Accidentally-Involved Normals. Based on their decision, I worked up the "Auriga Society"; the secret society which has, for over a century, been working to Ascend the city of Chicago as the New Jerusalem, the Holy City, the Shining City On A Hill. Then, I wrote up a basic player knowledge handout, which you can read [here](#), and we got down to it. By the way, the [Hotel Inter-Continental](#) is a real place, as were 99% of the locations in the game. And, in an example of the kind of disturbing synchronicity that haunted the whole campaign, I selected it before I knew about the [King Arthur Court](#) banquet room.

"But for the purposes of my work, especially plotting it, and outlining it, it's real valuable to think: 'Nothing is a coincidence. Everything contains a message. There are no random events, no coincidences. And whatever someone really means, it's not what they just said . . . Even when I'm dealing with real history, I can arrange our perspective on it and emphasize some bits and kind of shadow out other bits, so it seems that real history illustrates my point, that it really is arranged with some structure in mind, rather than just all tumbling around like gravel down a hillside.'"

-- Tim Powers, *Locus* interview (March, 1998)

I began my initial design for the game on an airplane in February of 1999. Looking at my first campaign design sheet, I seem to have started on the assumption that the Invisible Clergy and the Olympian Gods were the same thing, and that Chicago (the city of Hephaistos) would be dueling other cities, and that Hephaistos and Zeus were warring for Chicago itself. Once the players picked their storyline, though, I decided to junk the front-row presence of the gods, and got into the nitty-gritty of urban history research. As I began sifting through the books, I began to notice some patterns developing; the game became about Chicago's history intersecting with its future. A few examples of how my research tweaked the game, and vice versa:

- **The Hancock Building:** The ultimate expression of Chicago's modernist International-Style aesthetic, and a ready-made Dark Tower. It's the World's Largest Trapezohedron (for that Lovecraftian touch), rising on the site of Anton LaVey's birthplace. I put the Hancock under the control of the Death-Goddess, the Avatar of the Crone. Eventually, she became the main villain of the game, I think because she had that whole Maleficent vibe going for her.
- **Neo-Situationist International:** If the players were Order, they needed Chaos to oppose them. While researching Chicago occultists, I discovered a number of references to Chicago as "the new Babylon" -- which was coincidentally, it turns out, a project of the political-artistic movement Situationism. (This was just a Google search on "New Babylon" that hit [pay dirt](#).) I couldn't have invented a better archenemy for the old-school Auriga Society, and it let me do a lot of Grant Morrison-style riffs to counterpoint my Alan Moore-style urban [sacred geometry](#). The PCs hated the NSI so much, though, that they smashed them to pieces before all the Really Wack Stuff got to happen -- but them's the breaks.
- **John Wellborn Root:** One of the greatest early Chicago architects; I originally intended him to be the great Founding Father and hero of the PCs. While running the game's setup, I discovered that he had died mysteriously while re-designing the Chicago World's Fair of 1893 to conform with "Egyptian principles."

(Daniel Burnham took over, and designed it in faultless neo-Classical style, instead.) This is the kind of thing that sometimes makes even me nervous -- but it gave me the key mechanic by which the Auriga Society had tried to Ascend Chicago; sacred architecture in the World's Fairs. Intriguingly, Root's son, John Wellborn Root Jr., put a statue of Ceres on top of the Board of Trade building (for 30 years the tallest building in Chicago), which let me add the other aspects of the Goddess to the game and complement the Hancock's Crone.

- **Charles Tyson Yerkes:** The man who built Chicago's elevated network had to leave town in 1899 ahead of an indictment for massive corruption. He made a great "mysterious renegade" for the game, given my decision to make the El tracks essentially ley lines. When I found out he fled to London -- where he consolidated and designed the London Underground! -- I decided he'd defected to British cliomancer Angela Forsythe, and the British occultists became another enemy. (I also discovered that a special El car used to ferry corpses to local funeral homes, at night, along what's now the Brown Line. From that seed, I developed the Black Line, a magical El line that ran into the Land of the Dead.)
- **Whitechapel Club of Chicago:** I'd already decided that "John Doyle Stephensen" would be [Jack the Ripper](#). I discovered, however, that there was a group of Ripperologists called the Chicago Whitechapel Society active in the 1890s -- suddenly, I decided that the Ripper had brought something *important* with him to Chicago, and started the Chicago-London feud I'd already worked Yerkes into. I tied the Ripper connection into [H.H. Holmes](#): I figured the Auriga Society must have built his Murder Castle as a kind of "toxic waste dump" for Chicago's evil ley energies.
- **Samuel Insull:** Founder of Chicago's Commonwealth Edison company, he was Edison's London accountant until he suddenly moved to America in 1892. He built the Chicago Civic Opera House, had a stripper wife ("Little Venus") who hated him (making him a great Hephaistos avatar), and generally tied into a lot of archetypal themes. Apparently, he kept Edison's books in code, and brought them with him to Chicago -- after Yerkes left, he took over a number of Yerkes' transit lines. More grist for my London vs. Chicago mill.
- **Noah's Ark:** From Tim Powers' *Declare* (and later research) I learned that a mad Chaldean Archbishop climbed Mt. Ararat in 1888 and found Noah's Ark there -- which he tried to raise funds to bring to the World's Parliament of Religions at (wait for it) the 1893 Chicago World's Fair! It was the work of a moment to decide that he secretly brought the Ark here, where the Auriga Society used its timbers to make the first Ferris Wheel (of Fortune, for Tarot fans). This made a great major artifact for the PCs to discover.

"Make no little plans; they have no magic to stir men's blood, and probably themselves will not be realized. Make big plans: aim high in hope and work, remembering that a noble, logical diagram, once recorded, will never die, but long after we are gone will be a living thing, asserting itself with ever growing insistency. Remember that our sons and grandsons are going to do things that would stagger us. Let your watch-word be order and your beacon beauty."

-- Daniel Burnham, 1909 *Plan For Chicago*

Those are only a few of the amazingly cool things I discovered just reading Chicago history books. Anything, I've mentioned before, is weird if you look at it right. The key is to have a backstory so that you narrow down your embarrassments of riches. Between sacred architecture, the London-Chicago occult war, the Triple Goddess, and the Neo-Situationists, I had a hook on which to hang any historical fact I could find. Once one player picked the Avatar of the True King as his character, my new story arc came built in with Frazerian "sacred king" goodness (a la *Last Call* -- this was a very Tim Powers game). Rather than use the World's Fairs, the renewed Auriga Society would make their True King first the King of Chicago, and then the King of America. This also helped keep the game centered on the players.

They immediately took to the theme of history vs. destiny; almost all the players picked characters with historical family ties to Chicago's occult power structure. Interweaving their fictional families and my fictional weirdness with the real Chicago aristocracy was easily done: from the bizarre murder of Marshall Field III to Colonel McCormick's habit of stealing stones from famous buildings, I had plenty of weird material. And since the PCs' lineages held important revelations about their own present, I could count on the players to write half my background for me. (It helps that I have great players -- but that always helps.) You haven't lived as a GM until a player has asked "I want to run a character who's under his grandfather's blood curse, but doesn't know it -- is that okay?"

Of course, letting the players co-create runs its own risks -- after I revealed that the "orphaned" True King was actually (secretly) John Wellborn Root IV, he rejected Root's "Egyptian principles" and wrecked a whole subplot

centering on "Little Egypt" (both a region of southern Illinois, and a stripper at that ever-wonderful 1893 World's Fair), Memphis, Tennessee, and the blues. On the other hand, one PC wanted to build an [Influencing Engine](#) (before the player knew what one was), which let me tie in more sacred geometry (he found a Babbage Engine working on ley magic), and strengthened the nascent London-Chicago war (because Angela Forsythe still had the Influencing Mills that Yerkes had stolen back). The British connection also let me work in the [Monster of Glamis](#) as the True King of Britain, and let the PCs use [Shakespearean dramaturgy](#) to overthrow him (in a ritual staging of *Richard II* in London's Hyde Park -- also the name of a neighborhood in Chicago).

Which is a good general theme of any deeply weird game -- play what you know. I don't actually know an awful lot about Capone and gangland Chicago, so I underplayed that -- I know a lot about architecture, so I played up Frank Lloyd Wright (another Hephaistos figure, cursed by fire) and Daniel Burnham (in my game a powerful ley magician, and in real life a Swedenborgian who talked with angels). My players kept up like champions, and really did a lot of the fictional development themselves; they didn't drown in the backstory, because they helped create it. Since I had a very busy Chicago, I didn't have to force the players to interact with something they found boring, or bring back a villain they killed off too fast -- I had three or four more waiting in the wings. Eventually, collaboratively, we found the Real Enemies: Angela Forsythe and the London cliomancers and the Death-Goddess in the Hancock Building (who I decided was Forsythe's agent in America, to provide thematic unity), and through an amazing web of time-travel, sacred geometry, and shamanism, the PCs defeated them.

Chicago Ascended on schedule, January 1, 2000. Maybe you noticed.

Do Or Do Not: Um, I've Only Plotted For 'Do'

My favorite musing with *Star Wars: Episode I* (outside of the one about "experience the *Phantom Menace* at Taco Bell") is that the entire movie -- indeed, the entire movie *series* -- is dependent on the heroes being . . . well, dumb and lazy.

(Yeah, there are spoilers about *Episode I*. The movie's old news now. *Episode II: Beyond Thunderclone* will be here before we know it.)

In particular, at one point Obi-Wan and Qui-Gon need to buy an engine part. Now, Qui-Gon specifically tries to use his Jedi Mind Trick™ to get flying merchant Watto to accept Republic credits. But Watto is a Toydarian, and thus immune to such mind games (possibly because of his midi-chlorian count <*bwah-hah-hah!*>).

Now, in the movie, the "only" way for the Jedi Knights to get the part they need is to endure a long, preordained chario--er, *pod* race. And, in so doing, they get the part they need . . . and a boy who is prophesied to restore balance to the Force (probably by, y'know, killing all the Jedi; I hear Governor Tarkin has a plan for restoring balance to Alderaan, too . . .).

That was one of the points where the movie made me go, "Huh?"

I admit that I'm biased (*see also: obsessed*), but I tend to view many things in terms of how well they would work in a roleplaying situation. And, with just about every roleplaying group I've ever been with, those scenes would have played out as follows:

GM: "Watto has the part you need, but he won't accept Republic credits. Looks like you'll need to pod race to get the money."

PLAYER: "I use my powers to make him accept them!"

GM: "Uhhh . . . he's immune. Looks like it's time to pod race."

PLAYER: "I ask him to tell me the name of the richest person he knows who *isn't* a Toydarian."

GM: "Uhhh . . . he knows Jabba the Hutt. And, um, that's all. The pod race will be starting soon . . ."

PLAYER: "I ask Anakin who else has money."

GM: "Er, Anakin doesn't know anyone. Podracepodracepodrace . . ."

PLAYER: "Hey, wait! There's a pod race starting, right?"

GM: "YES!"

PLAYER: "Great! I systematically use my Jedi Mind Trick on *everyone* in the stadium, trying to swindle enough money to buy that part. I'm more than willing to reimburse them with double that amount in Republic credits, and I'll even throw in a slightly used Gungan. I'll start with the gamblers; by definition they *have* to have money, right?"

GM: [*long pause*] "I hate you."

In short, the more railroaded the players feel, the more they might resent it, and the more they may fight tooth and nail to avoid it. Likewise, the more crucial an entire story is on one plot point or development, the more likely the players are -- by design or accident -- to miss or short circuit that point entirely.

As an example, one time Kathryn had taken the reins as GM of our *Fading Suns* campaign for a one-shot adventure.

And the beginning of the adventure basically went like this:

GM: "Your ship's computers detect an interesting anomaly in space."

PLAYER: "We report it to the Emperor."

GM: "The Emperor tells you that he is investigating the matter, and you are not to proceed further."

PLAYER: "Okay; is there anything else going on around the palace?"

GM: "Um . . . nope. The Emperor seemed curiously adamant about not investigating that space disturbance."

PLAYER: "That's fine; we've taken an oath to him, so we won't investigate."

GM: "It's probably *really interesting* . . ."

PLAYER: "So there's nothing going on at the palace then?"

GM: "Nope. Nothing. There *is* that space anomaly, however . . ."

PLAYER: "Huh. I guess we'll go watch the pod races, then."

GM: *[long pause]* "I hate you."

(No, we weren't being malicious; we were being clueless.)

Eventually Kathryn manages to guide us back on-track, and we end up investigating the anomaly. (It turns out it was important to the plot . . . who knew?) After the adventure, our exasperated GM says, "I think that's the absolute *first* time that you all have ever *NOT* investigated something that someone *specifically* told you not to!"

"Well," I said, "that was the first time that 'someone' was the Emperor; we've taken an oath to obey him. All those other random schmoes who've told us not to investigate, we *had* to investigate . . . to return intelligence back to the Emperor."

And Kathryn kicked herself, having not considered that.

I receive many adventures for consideration at *Pyramid*, and a lot of them have a universal problem: No contingency plan. Otherwise brilliant and worthwhile adventures, with interesting and excellent scenes, have no plans for what happens if the heroes don't end up in those scenes. There will be an NPC the adventurers need to talk to, or a location they need to visit, or a clue they need to figure out; otherwise the adventure screeches to a halt. If such a keystone exists, then the odds are not insignificant that the party will crash the entire adventure.

Even worse, sometimes these adventures rely on something completely improbable. Like the *Episode I* pod race setup, they demand that the party do something in an unintelligent, uncharacteristic, or foolhardy manner. "When the heroes falsely accuse Old Man Peters, they will get the clue to *real* killer . . ." they might say. Or "When the adventurers surrender to the slavers, they will be escorted inside the hidden city . . ." (Most players would rather die than surrender, I've found.)

Tip to would-be writers: Almost universally, I will reject an adventure with this problem.

Here, then, are tips that should make writing your adventures a bit smoother, whether or not you intend to submit them for publication:

Always ask yourself, "What if they don't?" What if they don't talk to that person, go to that place, or defeat that enemy? At the extreme, what will happen if they don't partake of the adventure at all?

Consider having a timetable, or consider having a timeless adventure. A timetable is invaluable for many adventures; knowing what and when the Bad Guys hope to accomplish (in ideal circumstances) will enable you to answer the "What if they don't?" question very easily. Of course, you'll also need to have contingency plans for the bad guys, so they can have other options if the heroes meddle.

Barring a timetable, the "timeless" adventure is a perennial favorite. Epitomized by the dungeon crawl, these adventures are those where nothing would happen if the heroes just packed up and went home. The goblins would stay in their subterranean lair, waiting for adventurers; the derelict space station will remain unexplored; the lost city of Atlantis will remain lost. Of course, these type of adventures have their own problems, but at least they won't completely derail if the party fails to do one thing.

Consider what the heroes might try. Although it's impossible to plan for *every* action, it's usually possible to prepare for general paths of action. If the heroes choose an investigative route, you may have a list of clues they could gain. If they choose the forceful approach, you may list the opposition they face (and whether or how the heroes can win or escape). If you present enough options, a GM should be able to extrapolate. ("Okay; they're trying to bluff their way in. Well, that's similar to fighting their way in, and they'll face the same opponents . . . hmm.")

Don't rely on lynchpins. If you have a cool scene you want to subject the adventurers to, make *sure* it's foolproof that they arrive there. But, to be honest, you may want to consider the wisdom of having such a central scene in the first place.

Hopefully this advice will help both would-be adventure writers for *Pyramid* and those GMs who want to make scenarios for the comfort of their own home. And, maybe if you're lucky, eat right and get exercise, you'll avoid the Phantom Menace.

I'd mentioned it on the message boards, but I *am* still working on my *Exalted* review. Seeing as how it's 400+ pages in an itty-bitty font, it's taking a mite longer than I thought. Hopefully by next week.

Speaking of next week, I'll be (fates willing) at [Dragon*Con](#) next week. So I'll be out for a few days, having fun. And if you happen to have a couple of unused passes to get a poor editor in free, send 'em my way! <*grin*>

Weather In Gaming

by James Jones

I. Introduction

*"Under the greenwood tree
Who loves to lie with me
And turn his merry note
Unto the sweet bird's throat
Come hither, come hither, come hither:
Here shall he see
No enemy
But winter and rough weather."
-- As You Like It, William Shakespeare*

As anyone who spends much time outside knows, the weather can make or break outdoor activities. This article is all about using weather successfully -- and realistically -- in your game. Weather doesn't have to follow realistic patterns, of course, and many times a GM needs a particular kind of weather. But when you want to have some random weather, it's good to know what makes sense for a given climate and season, and that is the focus of this article.

This article also focusing on Earth climates and weather, simply because those are the only ones we know about -- so far -- that apply to habitable places. Most fictional worlds conform closely enough to Earthly climates that the descriptions here should apply to them as well. For example, if you want your Elf Kingdom to be set in a sequoia forest, you might check the climate map of Earth, below, see that northern California is along the border of the B1 and C1 climate types, and use weather appropriate to those types. Putting the forest on the western margin of a continent (or eastern side if your fictional world spins the opposite direction) would just add that much more realism to the game world.

II. Climate and Worldbuilding

*"Everybody talks about the weather, but nobody does anything about it."
-- Charles Dudley Warner*

To understand weather, it's important first to understand climate: the average pattern of temperature and precipitation in a region. These patterns are fairly consistent from year to year, although there are notable and memorable exceptions. Examples include the Dust Bowl, caused by low precipitation levels across much of the U.S. Midwest for an entire decade; or the Maunder Minimum, a period of reduced solar output that took place from 1645-1715, which reduced temperatures worldwide.

The causes of climate are complex enough that even climatologists don't entirely understand them, but the basics are easy enough to comprehend. Much of the science follows logically from a few basic facts. First, air becomes less dense as it heats up, so cool air tends to fall relative to warm air. Second, the water-carrying capacity of air increases with temperature. Third, the rotation of the Earth causes winds to be deflected due to the Coriolis effect. Finally, for complex reasons, there is a so-called sub-tropical high at around 30 degrees of latitude, and a temperate low at around 60 degrees, in both hemispheres.

The result of all of this is that in general, there are three climate regimes in each hemisphere: the tropical zone, which extends from the equator to about 30 degrees latitude; the temperate zone, which extends from 30 degrees to 60 degrees; and the polar zone, which extends from 60 degrees to the poles. The prevailing winds in the tropical zone flow towards the equator, since the hot equator is a low-pressure region and is straddled by the sub-tropical highs. The

rotation of the Earth deflects these winds in an easterly direction, causing the trade winds. In the temperate zone, the winds flow from the subtropical high to the temperate low -- i.e., toward the poles -- and again the Earth's rotation deflects them, this time in a westerly direction. Finally, in the polar zone, the cold poles are high-pressure regions, and winds blow from there towards the temperate low. The rotational deflection is lessened with distance from the equator, so winds near the poles tend to be more along a north-south axis than those near the equator. The equatorial region itself is a zone of calm, without strong winds or violent weather, but the boundaries between the other major wind regimes -- especially around the subtropical low -- are birthing places for extreme weather such as hurricanes.

Complicating this picture are the effects of land and seasonal migration of the thermal equator. The thermal equator is determined approximately by where the sun is directly overhead, and since the earth is tilted on its axis, this region moves with the seasons. It only coincides with the equator during the equinoxes, migrating north to the Tropic of Cancer in June and south to the Tropic of Capricorn in December. As a result, the subtropical high and temperate low regions are also shifted, affecting the global circulation of air. The more axial tilt a world has, the more its thermal equator will migrate with the seasons.

Since water changes temperature far more slowly than land, winds tend to blow from the cooler (higher-pressure) sea towards the warmer (lower-pressure) land in hot times, with the reverse happening at cold times. On a small scale, this mechanism causes gentle sea and land breezes along coastlines, with the hot time occurring during the day and the cold time at night. On a large scale, the mechanism results in the annual pattern of wind and weather known as the monsoon. The most significant monsoon occurs along the Asian coastline, stretching from the Kamchatka peninsula in Russia south through China, the Koreas and Japan, through Southeast Asia and northern Australia, and then west into India and even Africa. In a world of your own creation, it should require a very large landmass on the scale of Asia to create a monsoon that has a large enough effect to dominate climate over a large area.

When building a world for a game, specifying the local climate for various points of interest can help in a variety of ways: first, it adds a realistic flavor to the game; second, it can help determine the agriculture and general way of life of the natives of the region; and finally, if you use the method detailed in this article, you will need to know the local climate in order to generate random daily weather.

III. Weather in the Game

"One of the brightest gems in the New England weather is the dazzling uncertainty of it."

-- Mark Twain

If you're building a world from scratch, the guidelines from the previous section should help you to develop a climate map similar to the Earth map below. The next step is to develop the details for particular regions of interest. The details consist of an annual weather pattern. The pattern should reflect seasonal variation, but how much detail to include with this is up to the GM: at the least, most places will have four distinct seasons and should have a different weather pattern for each. Very detail-oriented GMs might use monthly weather patterns or might use a system that smoothly varies the weather pattern from one point in time to the next. However you choose to do it, though, the result should be that on any given day, you know the weather pattern for the region of interest.

A weather pattern should consist of:

1. **Precipitation Rate:** A number which you must roll at or below on 3d in order for it to rain or snow. The higher the number, the greater the likelihood of rain.
2. **Precipitation Strength:** The average amount of rain that falls on a rainy day, in inches. It will be used only on rainy days, and will be modified by another roll on 3d.
3. **Mean Temperature:** The average daily temperature. Mean temperature is defined to be the average of the high and low temperatures for the day.
4. **Storm Modifier:** This value describes the limits of storm strength, and usually is between -2 and +2.

Other things to know about the region of interest include:

1. **Elevation:** Higher elevations tend to reduce temperatures and increase the daily temperature variation.
2. **Season:** For the purposes of this article, summer includes July, August, and September; fall includes October, November, and December; winter includes January, February, and March; and spring includes April, May, and June.

Generating the weather for a given day results from answering a series of questions:

Does it rain or not?

Roll 3d. On an 11 or less, check for rain normally by rolling 3d and comparing to the precipitation rate. On a 12 or above, today's result is the same as yesterday's: if there was rain yesterday, there is rain today as well, and vice versa. (If you did not determine the weather for the previous day, check for precipitation normally.)

How much does it rain?

Roll 1d to determine the multiplier for precipitation strength according to the rain volume table. Then roll 1d and consult the rain distribution table to determine how long the rain lasts.

Rain Volume Table

Roll Result

- 1-3 Light Rain (half average volume)
- 4-5 Moderate Rain (average volume)
- 6 Heavy Rain/Storm (roll 3d on Storm Table, below, using the storm modifier)

Storm Table

Roll Result

- 5 or less 5 x Rain and Minor Storm
- 6-13 2 x Rain and Minor Storm
- 14 2 x Rain and Major Storm
- 15 5 x Rain and Minor Storm
- 16 5 x Rain and Major Storm
- 17 10 x Rain and Minor Storm
- 18 or more 10 x Rain and Major Storm

Minor Storm: Winds are gusty but not dangerously strong: hurricanes, for example, are impossible, and no tornadoes are formed. Light hail will fall on a roll of 6 or less on 3d if the temperature is above freezing. Make a lightning roll (see Weather Effects, below) only once during the entire storm.

Major Storm: Winds may be dangerous; add +5 to the Wind Roll, below. Light hail will fall on a roll of 10 or less on 3d; if the roll is 6 or less, hail is Damaging instead (see Hail, below). Make a lightning roll (see Weather Effects, below) once per hour during the storm.

Rain Distribution Table

Roll Result

- 1-3 Less than 4 hours.
- 4-5 Between 4 and 12 hours.

6 Between 12 and 24 hours.

If the precipitation for the day is concentrated in a short period of time, it will be a more intense rain. Example: Precipitation Strength is 0.2, and a 4 is rolled indicating a rain of normal strength (0.2 inches). If this is spread over an entire day, it results in only drizzle; if it all occurs in only 3 hours, the result is a light rain. Long duration rains are often scattered showers rather than a constant, very light drizzle.

Rain is really snow if the temperature is below 32°F. Fresh snowfall is about 1/3 as dense as rain, so each inch of precipitation that falls as snow produces 3 inches of snow. Keep this in mind when temperature is determined.

How cloudy is it?

The amount of cloud cover can vary greatly over a period of a day, and such variations are beyond the level of detail of this model. But some sort of average cloud cover can be useful to know and also determines how greatly the temperature varies over the day. If precipitation has occurred, the cloudiness roll is modified by the rain distribution: less than 4 hours, no modifier; between 4 and 12 hours, +2 to the roll; between 12 and 24 hours, automatically Overcast (don't bother to roll).

Cloud Cover

Roll Cloud Cover

3-6 Clear

7-8 Scattered

9-10 Partly Cloudy (Scattered for Types B1 and F)

11-13 Cloudy (Partly Cloudy for Types B1 and F)

14-16 Overcast (Cloudy for Types B1 and F)

17-18 Overcast

Cloud Cover	Description	Temp Variation	Humidity
Clear	No clouds, or very thin cloud cover	30°F	-1 level
Scattered	Light fluffy clouds cover about 1/4 of the sky	25°F	normal
Partly Cloudy	Clouds cover about half the sky	20°F	normal
Cloudy	Clouds cover about 3/4 of the sky	15°F	normal
Overcast	Sky visible through scattered breaks, if at all	10°F	+1 level

What is the day's average temperature?

Roll 3d and consult the following table:

Roll	Continental Marine Modifier		
-3 or less	-25°F	-15°F	-8 on next roll.
-2 to 0	-20°F	-10°F	-8 on next roll.
1-2	-15°F	-10°F	-8 on next roll.
3-4	-10°F	-5°F	-8 on next roll.
5-6	-5°F	-5°F	-4 on next roll.
7-8	-5°F	+0°F	-4 on next roll.
9-12	+0°F	+0°F	None
13-14	+5°F	+0°F	+4 on next roll.
15-16	+5°F	+5°F	+4 on next roll.

17-18	+10°F	+5°F	+8 on next roll.
19-20	+15°F	+10°F	+8 on next roll.
21-23	+20°F	+10°F	+8 on next roll.
24 or more	+25°F	+15°F	+8 on next roll.

Continental: Includes types A3, B2, C2, D2, E and F2.

Marine: Includes types A1, A2, B1, C1, D1 and F1.

Note that a particular small region may be considered Marine even if it is technically in a different climate type, if it borders a large body of water. An ocean or very large lake (on the order of a Great Lake) is required to cause this effect.

How humid is it?

The humidity is determined by the Precipitation Rate. If the Rate is 5 or less, humidity is Dry; if 6 or 7, Moderate; if 8 to 10, Humid; and if above 10, Very Humid. If the average temperature for the day exceeds 100°F, reduce humidity by one level for that day only.

What are the high and low temperatures?

The temperature variation for a day is based on several factors: elevation, humidity, cloud cover, and the direction of the sun's rays. Base variation is determined by cloud cover, using the table above. Adjust this figure as follows:

- For elevations above 10,000 feet, add 10°F.
- In the summer, add 5°F; in the winter, subtract 5°F. No adjustment necessary in spring and fall.
- Adjust for humidity: Dry, add 5°F; Moderate, no adjustment; Humid, subtract 5°F; and Very Humid, subtract 10°F.
- If variation is below 5°F, increase it to 5°F.

The variation gives the difference between the high and low for the day, with the average mid-way between them. So the high temperature is the average temperature plus half the variation; the low is the average temperature minus half the variation. If it is important to know the temperature at arbitrary times during the day, assume that the low occurs just before sunrise, the average occurs around noon, and the high occurs in late afternoon. If overnight temperatures are needed, roll for the next day's temperatures and assume that the temperature changes steadily from the current day's high to the next day's low.

How windy is it?

Roll 3d, add the Storm Modifiers and a +5 if there is a Major Storm, and consult the table:

Roll Result

- 7- Calm (3 mph or less)
- 8-12 Breeze (4 to 12 mph)
- 13-14 Strong breeze (13 to 30 mph)
- 15-17 Gale (31 to 55 mph)
- 18-20 Storm (56 to 75 mph)
- 21+ Hurricane (over 75 mph)

Is there any extreme weather?

Extreme weather is caused by high winds or heavy precipitation, and often both together. The rolls already made are sufficient to determine whether a storm has occurred.

GM's prerogative

The GM should consider this model a guideline, not a straitjacket. The model described here is a good general system that produces realistic ranges of effects, but it cannot pretend to cover the entire range of weather possible anywhere. For example, a GM running a game in San Francisco should keep in mind that humid ocean air often becomes fog during the evening chill and rule accordingly, even though the model does not explicitly handle this condition.

Examples

Precip Check: 8

Precip Strength: 0.3 inches

Mean Temperature: 70°F

Climate Type: B2

Humidity: Moderate

Season: Summer

Storm Modifier: +2

Day 1: First, check for rain. This is the first day determining weather for this location, so we simply roll against the precipitation check and get an 8, indicating that there is rain today. The precipitation strength roll is a 5, which indicates normal rain volume of 0.3 inches. The precipitation distribution roll is a 4, so the rain falls over a period of 4 to 12 hours. Since it is raining, the cloud cover roll gets a +2 modifier. The roll itself is a 10, modified to 12, which results in Cloudy conditions, giving a base temperature variation of 15°F and no humidity modifier. The temperature roll comes up 13, which gives us +5°F in a continental climate for a daily average of 75°F and a +4 on the next day's roll. Humidity is moderate, and this is unchanged by temperature. The actual temperature variation is +5°F because of the summer, for a total of 20°F, so the high is 85°F and the low is 65°F. The wind roll is a 9, modified to 11 by the Storm Modifier, so the result is a Breeze.

Day 2: Rolling 3d, we get a 12, which means that the precipitation result for today is the same as it was yesterday. It rained yesterday, so it does again today. The precipitation strength roll is a 6, which indicates heavy rain or a storm, and the precipitation distribution roll is a 1, so the rain falls over a period of 4 hours or less. Since a storm was indicated, we need to roll on the Storm Table. The result is a 12, modified by the +2 Storm Modifier to give a 14. This results in double precipitation strength (total of 0.6 inches) and a Major Storm. The distribution roll is a 2, indicating a storm lasting under 4 hours. The Cloud Cover roll is an 8, which gives Scattered Clouds and a base temperature variation of 25°F. The temperature roll is a 12, but yesterday's roll gave a +4 modifier for today, so the result is a 16, which results in a +5°F and another +4 on the next day's roll. So average temperature is 75°F. Humidity remains moderate. The final temperature variation is +5°F because of the summer, for a total of 30°F, so the high is 90°F and the low is 60°F. The wind roll is 11, modified to 13 by the Storm Modifier and to 18 by the fact of a Major Storm, so the result is a Storm, with 56 to 75 mph winds.

IV. Climate Types

"Olympus, where they say there is an abode of the gods, ever unchanging: it is neither shaken by winds nor ever wet with rain, nor does snow come near it, but clear weather spreads cloudless about it, and a white radiance stretches above it."

-- *The Odyssey*, Homer

To simplify the job of determining the local climate, we use the Miller classification system, which breaks down any place on Earth into one of 12 categories. Each category is described below in some detail, including information on typical and extreme temperature and rainfall patterns, their usual geographic locations, and the stereotypical **GURPS**

terrain type for that climate. Reference the included climatic map of the Earth for a more detailed breakdown of where the climate types tend to appear. The Miller system classifies each place on Earth first and most broadly by its temperature and then on a finer level by its rainfall pattern. The breakpoint of 43°F appears several times in the definitions; that is the temperature below which plant growth is arrested, so growing seasons can only include periods of time when the temperature is above that point.

- A** Hot (annual mean temperature at least 70°F)
- B** Warm-temperate (no monthly mean temperature below 43°F)
- C** Cool-temperate (one to five months with mean temperature below 43°F)
- D** Cold (six or more months with mean temp. below 43°F)
- E** Arctic (no month with mean temp. above 50°F)
- F** Desert (less than 10" annual rainfall)
- G** Mountain (used as a modifier to primary climate type, and indicates that high terrain is an important factor in local climate)

Type A Climates

The hot A climate type is subclassed into three main rainfall patterns: A1, equatorial, in which there is a double rainfall maximum; A2, tropical marine, in which there is no pronounced dry season; and A3, tropical continental, in which there is a pronounced dry season. Each of the three has a monsoon subtype in which the primary climate is dominated by monsoonal effects at certain times of the year. Type A climates typically fall within 30° of the equator, with the A1 subtype occupying the most equatorial regions within 5° of the equator, and the A2 and A3 subtypes elsewhere. The A3 subtype is the most common of the A types on Earth.

The mean temperature of most type A climates is 75-85°F during the summer. Subtype A1 has almost no seasonal variation at all, whereas both A2 and A3 subtypes will often dip to the 60-80°F range in the winter. Extreme temperatures for all subtypes are usually from 50 to 90°F.

A1 (Equatorial)

Definition: Double rainfall maximum.

Precipitation: There are two wet seasons (around April and October), and two dry seasons (usually July and December). However, even the dry seasons are pretty wet in most cases. The wet seasons have a precipitation rate of 9

to 12, while the dry seasons are 6 to 10. On the extreme dry end (which is very rare), the rate might be as low as 4 or 5, while on the extreme wet end, the rate might be 16 or 17. Average precipitation strength can be from 0.2 to 1 inch, and remains fairly consistent throughout the year.

Terrain Types: Jungle.

Storm Modifiers: Usually -2.

A2 (Tropical Marine)

Definition: Winter gets at least 20% as much precipitation as summer.

Precipitation: The year is partitioned into a winter dry season and a summer wet season. The dry season should have a precipitation rate between 6 and 10, while the wet season should have a rate between 7 and 12. The driest areas are quite desert-like and may have a precipitation rate of 3 during the dry season and only 7 or 8 during the wet, while the wettest areas have substantial rain year round with a rate around 10 during the dry season and 14 and up during the wet. Precipitation strength can be from 0.2 to 1 inch and is highest during the wet season.

Terrain Types: Jungle.

Storm Modifiers: -2 or -1.

A3 (Tropical Continental)

Definition: Winter gets less than 20% as much precipitation as summer.

Precipitation: The winter is very dry, with a precipitation rate of 7 or lower; conversely, the summer is quite wet, with a rate between 9 and 12. The driest areas are quite desert-like and may have a precipitation rate of 3 during the winter and only 7 or 8 otherwise, while the wettest areas have a rate of 8 or 9 during the winter and 14 and up otherwise. Precipitation strength is strongly seasonal, often 0.1 to 0.2 inches during the winter dry season and 0.3 to 1 inch otherwise.

Terrain Types: Jungle, Plains.

Storm Modifiers: -2 to 0.

Type B Climates

The warm B climate type is subclassed into two main rainfall patterns: B1, Western continental margin, in which rain only falls in the winter; and B2, Eastern continental margin, in which rain falls at all seasons. Only the B2 type has a monsoon subtype. Type B climates typically fall between 30° and 40° latitude, but warm ocean currents can extend the type B climate to over 50°.

Most type B climates experience summer temperatures of 70-80°F with extremes of 55-90°F, and winter temperatures of 43-55°F with extremes of 35-60°F.

B1 (Western Continental)

Definition: Winter gets at least 50% more precipitation than summer.

Precipitation: The summer is the dry season in a B1 climate, with a precipitation rate of 7 or lower, and never above 9. The winter usually has a precipitation rate of 9 or 10, with extremes ranging from 6 to 12. Precipitation strength is 0.1 to 0.5 inches and is highest during the winter.

Terrain Types: Plains.

Storm Modifiers: -2 or -1.

B2 (Eastern Continental)

Definition: Winter gets less than 50% more precipitation than summer.

Precipitation: Rain is usually evenly distributed in a B2 climate, with a precipitation rate of 8 or 9 in every month. Precipitation strength is 0.1 to 0.5 inches and varies little throughout the year. However, the B2 subtype is sometimes found adjacent to A2 or A3 types, in which case there may be a winter dry season. In this case, use precipitation rates and strengths similar to those found in A2 and A3 climates.

Terrain Types: Woodlands.

Storm Modifiers: 0 to +2.

Type C and D Climates

The cool and cold (C and D) climate types are each subclassed into two main rainfall patterns: continental (C1 and D1), in which rain falls at all seasons; and marine (C2 and D2), in which there is a summer rain maximum. Both marine subtypes may experience monsoons. The latitude band stretching from 40° to 50° is made up mostly of type C temperatures, while type D climates may be found from 50° to 65°. Naturally, these latitude bands are only rough guidelines: type C climates may be found as near to the equator as 30° and as close to the poles as 60°, while type D climates can be found at 45° or 75°.

Temperatures in type C climates run from 60-80°F in the summer and 25-40°F in the winter. The summer extremes are from 50-90°F, and winter extremes are from 10-40°F. In type D climates, summers are usually from 50-65°F, with extremes ranging from 50-75°F. Winters, however, are quite dependent on the subtype: the marine subtype D1 experiences winters in the 5 to 25°F range, with extremes from -5 to 40°F. The continental subtype D2, however, has much more severe winters in the -25 to 5°F range, with extremes as low as -55°F and as high as 30°F.

C1 (Marine)

Definition: Winter gets more precipitation than summer.

Precipitation: Along the C1/2 boundary, rainfall is evenly distributed throughout the year, with a rate of 8 or 9. More coastal C1 regions have a stronger winter rainy season, in which the rate usually rises to 9 or 10, while the summer dry season has a rate of between 6 and 8. Precipitation strength remains between 0.2 and 0.4 inches year round.

Terrain Types: Woodlands.

Storm Modifiers: -2 or -1.

C2 (Continental)

Definition: Summer gets more precipitation than winter.

Precipitation: Along the C1/2 boundary, rainfall is evenly distributed throughout the year, with a rate of 8 or 9. More continental C2 regions have a stronger summer rainy season, in which the rate usually rises to 9 or 10, while the winter dry season has a rate of between 7 and 10. Precipitation strength is between 0.1 and 0.5 inches and is highest in the summer.

Terrain Types: Woodlands, Plains.

Storm Modifiers: -1 to +1.

D1 (Marine)

Definition: Winter gets at least 75% as much precipitation as summer.

Precipitation: There is usually a slight winter rainy season, in which the precipitation rate is between 10 and 12 (with extremes of 9 to 17), and a summer dry season in which the rate falls to 9 or 10 (with extremes of 8 to 11). Precipitation strength is 0.1 to 0.4 inches and remains constant throughout the year.

Terrain Types: Woodlands.

Storm Modifiers: -2 or -1.

D2 (Continental)

Definition: Winter gets less than 75% as much precipitation as summer.

Precipitation: Summer is a distinct rainy season, but the major difference between the rainy and dry seasons is precipitation strength, which is often under 0.1 inches in the winter but runs from 0.1 to 0.3 inches during the summer. The precipitation rate is usually a 9 or 10 all year, with more variation in the winter (extremes from 5 to 17) than the summer (extremes from 9 to 11).

Terrain Types: Woodlands, Arctic.

Storm Modifiers: -1 to +1.

Type E Climate

The arctic E climate type has no subclasses and no monsoon subtype. This type is typically found at latitudes from 70° to the poles, although it is possible to find type E as close to the equator as 50°.

Temperatures for type E climates are chilly even in the summer, peaking at 35-50°F (extremes 25-50°F), and bitterly cold in the winter, where the *typical* average is from -30 to 0°F, and the extremes run from -55 to 20°F.

Precipitation: Arctic regions are invariably dry, some even falling below the 10"/year breakpoint that defines a desert. The precipitation rate is usually an 8 or 9, but extremes can be as low as 6 or as high as 11. Precipitation strength is 0.05 to 0.2 inches. Coastal regions get the most precipitation. If there is a precipitation peak, it occurs during the fall.

Terrain Types: Arctic.

Storm Modifiers: -2 to 0.

Type F Climates

The desert F climate type is subclassed into two subtypes, distinguished by rainfall and latitude. The hot F1 subtype straddles the Tropics of Cancer and Capricorn in belts around the entire globe. In fact the primary cause of F1 deserts is latitude: the sub-tropical high in the 30° latitude band keeps water-laden winds out. The mid-latitude F2 subtype, however, is more often associated with the rain shadow of a mountain range or simply being distant from a source of water.

Temperatures for type F climates are determined almost entirely by latitude and elevation, with little humidity or nearby sources of water to complicate the situation. The hotter F1 deserts experience temperatures of 90-110°F in the

summer and 70-90°F in the winter, while F2 deserts may experience temperatures similar to F1 or may be much colder: from -50°F in the winter to 50°F in the summer.

Precipitation: The precipitation rate for both F1 and F2 subtypes is between 4 and 7 all year, although isolated regions may have short rainy seasons in which the rate rises as high as 11. Precipitation strength is 0.05 to 0.2 inches.

Terrain Types: Desert.

Storm Modifiers: -1 to +1.

Type G Climates

The mountainous type G climate is not properly its own type, but rather a modifier on other types (thus Cali, Colombia, on a mountaintop in the Amazonian basin, would be classified as an A1[G]). The effects of high altitude include both decreased temperature and a change in total rainfall. The pattern of rainfall, however, is usual similar in mountains as in the lower surrounding areas. The effect of altitude on temperature is more consistent. A good rule of thumb is that every 300 feet of elevation causes a 1°F decrease in average temperature. As a result, a very high mountain can have a climate similar to that found at the poles.

Terrain Types: Mountains.

V. Weather Effects

"Not snow, no, nor rain, nor heat, nor night keeps them from accomplishing their appointed courses with all speed."
-- Herodotus

Cold

Use the rules from p. CII133 and p. B130 for the effects of cold.

Heat

Our bodies cool off by perspiring; the perspiration carries heat away by evaporating. In very humid conditions, however, evaporation is not as efficient and, as a result, our bodies cannot cool off as easily. This increases the effective temperature on hot, humid days. Whenever the temperature is at least 70°F, use the table below to determine effective temperature before applying the rules on p. B130. Note that for PCs that do not use the evaporation of water to keep cool, humidity has no effect.

Humidity Level

Temp	Dry	Moderate	Humid	Very Humid
70	69	75	76	76
75	71	76	78	80
80	75	79	83	90
85	79	82	88	106
90	83	87	94	117
95	88	91	101	126
100	92	97	107	135
105	97	102	114	144
110	102	107	120	152

115	106	112	126	159
120	111	118	132	166
125	115	122	138	173
130	119	127	144	179
135	122	131	149	185

Rain

Even gentle rain generally reduces visibility to a mile or less. Also see the sidebars on p. B187-188 and p. VE151 for more rules on how rain affects travel.

Flooding and mudslides are natural hazards that may occur after heavy rains. Whether they actually occur is dependent on the local conditions: areas with many waterways and low elevations are most at risk from flooding, while steep hillsides with little vegetation are most at risk from mudslides. Deep mud is a travel hazard and should be treated as Very Bad Terrain using the rules on p. B188 or those on p. VE153 for vehicular movement.

Snow/Ice

Use the rules for arctic hazards on p. CII133-135 for the effects of snow and ice; also see the sidebar on p. B188 for the strength of various thicknesses of ice.

Wind

The effects of wind on sailing ships are given on p. VE158-159. But wind can have other game effects as well. Up to a Strong Breeze, these effects are mostly a nuisance (papers may be blown away, parachutists will be blown off course, etc.). Stronger winds, though, can make it difficult to move or act at all. Reduce Speed and all physical skills by 1 for each full 20 mph over 30 mph of wind speed.

Lightning

Lightning can start fires and can also damage characters directly. Check once during a minor storm, or once per hour during a major storm, to see whether any character has been struck by lightning. The roll should be against 15 in a flat area with no shelter, 16 in most places, and 17 if there is excellent shelter available. During a lightning storm, characters should be allowed to roll once vs. Survival to take shelter in the safest available location; improve the effective shelter by one level on a success (so no improvement is possible if excellent shelter is already available). If the roll is missed, a random character is struck by lightning.

A lightning strike should be treated as a lethal electric shock using the rules on p. CII139. Lightning does 1d to 3d of damage, but GMs should realize that a 3d lightning bolt would almost certainly stop the heart of a normal human. A lightning strike typically contains between 1,000 and 10,000 MW-s of energy, far too much for most Draw Power or Conduct Power spells to handle.

Thunder

Lightning causes a thunderclap as the ionized air dissipates violently. Nearby thunder sounds like sharp cracks and can be deafening; faraway thunder has a rumbling sound and is not generally loud enough to mask other noises. Thunder can give a general bonus of up to +3 to Stealth rolls depending on its frequency and volume, or it may be used to mask individual sounds such as gunshots. Any character may make an IQ roll to predict when a thunderclap will arrive after a flash of lightning (the rule of thumb is that the distance to the lightning flash in miles is equal to the delay between flash and thunder in seconds, times five). The thunderclap gives up to a -5 penalty to Hearing rolls (depending on intensity) if it is correctly timed.

Hail

Hail is created when freezing rain is blown repeatedly back up into the cloud layer by strong updrafts. The frozen droplets continue to add layers of ice until they are too heavy to continue the process, at which point they fall to earth. Hail is unusual, and is most often associated with strong winds, thunderstorms, and temperatures *above* freezing. Small hailstones are only a nuisance (make a Will roll each turn to concentrate while being pelted by hail, as per p. M37), but larger ones can damage characters and their possessions; each turn in a damaging hailstorm, roll 3d. On a 6 or less, the character is hit and takes 1d damage to the head.

The Long Arm of the Law

Police Weapons in *GURPS*

by Hans-Christian Vortisch

The player characters will come into contact with enforcers of the law in many adventures set in the 20th-century. Any action-thriller or detective story requires them.

It may also be that the characters are in fact members of the law enforcement community themselves. [FBI](#) agents instantly come to mind, prominent in the public eye through such shows as *Twin Peaks* or *The X-Files*. The *Call of Cthulhu* supplement *Delta Green* has shown that there is a wealth of agencies, both American and foreign, to be used as parent agencies for PCs and NPCs.

Officers of the law are usually armed. It will be interesting to know which weapons are in service, regardless if these are for issue to the PCs or used against them by NPC coppers.

The FBI's Inventory

"Brand new issue. More accurate and efficient. Smith & Wesson 10mm Model 1076, all stainless steel. It's a beautiful weapon Coop, and it's all yours."

-- FBI Deputy Director Gordon Cole, 1990 (from *Twin Peaks*, Episode 25: "On the Wings of Love")

To illustrate the changes that advancing technology and differing environments had on law enforcement armaments in the USA, the issue weapons of the [FBI](#) are examined here in some detail. Similar developments occurred with other federal agencies, local police forces and, to a lesser extent, law enforcement agencies abroad.

When the [Bureau of Investigation](#) was founded in 1908, its agents were unarmed. They were not allowed to make armed arrests, but could carry privately owned weapons "for self-defense". During the gangster era in the late 1920s, early 1930s, these did include handguns, sawn-off shotguns and Auto-Ordnance Model 1921 Tommy guns.

After the Kansas City Massacre in 1934, the year before the agency was renamed the [Federal Bureau of Investigation](#), it was decided to arm its agents. The original issue weapon was the .32 LC Colt Police Positive revolver (use Colt Official Police in .32-20 WCF), a small, easily concealed weapon with mediocre performance. In 1937, it was superseded by the .38 Special Colt Official Police, which remained standard issue until 1984. In the same year, the .357 Magnum S&W Magnum revolver (p. HT110) was adopted for agents working violent crime. The .38 Special S&W Model 13 Military & Police revolver (p. HT110) was adopted in 1982 and used until the widespread adoption of semi-automatic pistols in the early 1990s. The first self-loading pistol was the .38 Super Colt Super Auto (a variant of the Colt Government, p. HT108, with Shots 9+1), originally obtained in small numbers in 1938 to counter the "bullet-proof" vests of contemporary gangsters. It remained in service until 1958.

In 1981, the SWAT units received the 9x19mm FN-Browning HP-35 pistol (p. HT108), and this was also the sidearm of the Hostage Rescue Team when founded in 1983. After the Miami Massacre of 1987, which had shown the limits of .38 Special revolvers, the first larger batches of 9x19mm semi-automatic pistols were purchased in 1988: the 9x19mm SIG-Sauer P226 and 9x19mm S&W Model 5946. Most went to the HRT and the regional SWAT agents. In 1989, the new 10x25mm S&W Model 1076 pistol was adopted, designed to the FBI's specifications and intended to replace all other handguns then in service. It turned out to be a total failure, the entire order of some 12,000 guns was returned in the early 1990s. The FBI first purchased more SIG-Sauer P226 pistols and then, in 1992, adopted its slightly more compact cousin, the 9x19mm SIG-Sauer P228. Female agents with small hands could choose the slim-line 9x19mm SIG-Sauer P225 with single-stack magazine (use P228 with Shots 8+1).

Undercover agents had a choice of small revolvers (all adopted during the 1970s), among them the .38 Special S&W Model 10 Military & Police with 2" barrel (p. HT110), .38 Special S&W Model 38 Bodyguard Airweight (p. SO100) and .38 Special S&W Model 60 Chief's Special Stainless. From January 1998, the FBI started to issue the .40 S&W Glock 22 pistol (p. HT109), with the slightly smaller .40 S&W Glock 23 (use Glock 22 with Shots 13+1) for those who preferred it. The ultra-compact .40 S&W [Glock 27](#) was authorized as concealed backup. Since early 2000, selected other .40 S&W pistols have been authorized for carry, such as the H&K USP Compact (a smaller variant of the USP, p. HT109, with Shots 12+1) and SIG-Sauer P229 (p. HT109). The HRT had adopted the .45 ACP Les Baer SRP Bureau pistol in 1995, a heavily customized Colt Government-copy (p. HT108 with Acc 3, Wt 3.0, Shots 14+1). Members of the regional SWAT teams received the .45 ACP Springfield Bureau Model since 1998, another Colt Government-copy (p. HT108 with Acc 3, Shots 8+1).

Heavier Weapons

"The firing of a machine gun is a sobering experience."

-- Dale Cooper, at the FBI Academy in Quantico, 1977 (from *The Autobiography of FBI Special Agent Dale Cooper*)

Long arms of the early days included the .45 ACP Auto-Ordnance Model 1921 Thompson submachine gun (pp. HT115-116), the .30 Remington Model 81A semi-automatic rifle, various models of the .30-06 Colt BAR and 12-gauge pump-action shotguns (use Winchester Model 1897, p. HT124). Many of these weapons continued to stay in service until the 1980s. In 1989, the 9x19mm H&K MP5SFA2 and MP5SFA3 semi-automatic carbines (otherwise as MP5A2 and MP5A3, pp. HT116, SO105-106) were adopted for standard issue to field agents. In addition, the 12-gauge SGT Tactical Response Model 90102 FBI shotgun was introduced.

When the regional SWAT teams were formed beginning in 1973, the 5.56x45mm Colt M16A1 assault rifle (p. HT115) was introduced. In the 1980s, the main weapons of the HRT and SWAT agents were various models of the 9x19mm H&K MP5 submachine gun, including the MP5A3 and the sound-suppressed MP5SD3. In the 1990s, they used the 10x25mm H&K MP5/10A3 submachine gun, full-auto variants of both the 5.56x45mm Colt M16A2 assault rifle and [Colt M4](#) assault carbine (p. SO101), plus 7.62x51mm H&K G3A3 assault rifles (p. HT115). Sniper rifles included variations on the 7.62x51mm Remington Model 700 (p. SO101) and the .50 BMG Barrett Model 82A1 (p. HT115).

Selected Police Inventories in the 20th-century

A number of agencies from all over the world with their inventories at specific times. Two popular eras were selected: the 1920s and the 1990s, the latter being mostly valid for today as well.

Police Officer, Metropolitan Police, London, England, 1920s

Although the bobbies of the Metropolitan Police (Scotland Yard) were unarmed except for a truncheon, the detectives, Royal body guards, and mounted police officers received a .32 ACP Webley & Scott Police Model pocket pistol. In emergencies, 14-gauge Greener-Martini Police Gun Mk III single-shot shotguns could be issued (use Martini-Henry rifle, p. HT124, with Dam 4d-2, Acc 5, 1/2D 25, Max 150).

Police Officer, *Preussische Schutzpolizei*, Berlin, Germany, 1920s

All officers of the Prussian police were issued the SG98/05 (use shortsword), a small sword which could be fixed as a bayonet on the issue rifle. In addition, a telescoping steel baton (use ASP) and a rubber nightstick (use small club) were available. Mounted police had a cavalry saber. The standard handgun was the 9x19mm DWM-Luger P08 pistol (p. HT108), but *Kriminalpolizei* detectives usually carried a smaller weapon such as the .32 ACP Sauer M13 (use Walther PP with Shots 7+1). Heavy weapons included the 9x19mm Bergmann MP18/I submachine gun (issued to one in twenty officers, p. HT115), 7.92x57mm Mauser Kar98a bolt-action rifle (use Gew98, p. HT114, sometimes with 4x scope) and 7.92x57mm DWM-Maxim MG08 water-cooled machine gun (two issued as part of armored car armament, pp. HT117-118). The rural police (*Landjäger*) was similar armed, except for the automatic weapons. Similar arms

were used in all German states.

Police Officer, Royal Canadian Mounted Police, Canada, 1920s

The Mounties used the .455 S&W Colt New Service revolver between 1905-1954 (use Webley No 1 Mk VI, p. HT124), and after WWI replaced the unreliable .303 S&W Ross Mk I bolt-action rifle with the .303 S&W Lee-Enfield Mk I bolt-action rifle (see SMLE No 1 Mk III, p. HT114). Some .45 ACP Auto-Ordnance Model 1921 submachine guns (pp. HT115-116) were also in service.

Texas Ranger, Texas State Police, Texas, 1920s

Each Ranger was issued a .45 ACP Colt Government pistol (p. HT108) and a .30-30 Winchester Model 1894 lever-action carbine (p. HT114). Other popular weapons, often purchased privately, were the 7.65x21mm DWM-Luger American Eagle pistol (commercial Parabellum, p. HT108), .38 Super Auto Colt Government pistol (p. HT108 with Shots 9+1), .45 Long Colt M1873 S&W revolver (p. HT110), .45 ACP Auto-Ordnance Model 1921 Thompson submachine gun (pp. HT115-116), .35 Remington Model 8A semi-automatic carbine, .30-06 Colt BAR automatic rifle and 12-gauge Winchester Model 1897 pump-action shotgun (pp. HT111-112).

Special Agent, U.S. Drug Enforcement Agency, USA, 1990s

Between 1992-1998, the issue sidearm was the 9x19mm SIG-Sauer P228 pistol. In late 1998, the .40 S&W Glock 22 pistol (p. HT109) was adopted as new standard handgun. However, since 2000, agents could replace the Glock with one of a number of .40 S&W caliber guns, including the H&K USP Compact (use USP, p. HT109, with Shots 12+1), SIG-Sauer P226, or SIG-Sauer P229 (p. HT109), if they wanted. Other guns available included the 9x19mm Colt CAR-15 Model 635 submachine gun (replaced by the .40 S&W [H&K UMP](#) from 2001), 5.56x45mm [H&K HK53A5N](#) assault carbine and 12-gauge Remington Model 870P pump-action shotgun (p. HT112).

The DEA agents of the drug war in South America fielded 5.56x45mm [Colt CAR-15A2 Model 723](#) assault carbines, 7.62x51mm Saco M60 machine guns (p. HT119) and 40x46mmSR Colt M79 grenade launchers (p. HT121).

Police Officer, Grenzschutzgruppe 9, Bundesgrenzschutz, Germany, 1990s

The standard sidearm of the GSG9 anti-terror unit of the German border guards was the 9x19mm H&K P7 pistol (p. HT109) from 1980-1993, then replaced by the 9x19mm Glock P9 (German designation for the Glock 17, p. HT109). Long arms included the 9x19mm H&K MP5A3, MP5SD3 and [MP5K](#) submachine guns (pp. HT116, SO105-106), 5.56x45mm SIG G37 assault carbine (German designation for the [SIG SG551 SWAT](#)), 7.62x51mm [H&K G8](#) automatic rifle, 7.62x51mm H&K PSG1 sniper rifle (p. HT115), 7.62x51mm Mauser 66SP sniper rifle, 12-gauge H&K HK502 shotgun (use Benelli M1 Super 90) and 40x46mmSR H&K MZP1 grenade launcher (use "Granatpistole", p. HT121). The Mauser rifle was replaced from 1997 by the .300 Winchester Magnum ERMA SR-100 (use [Accuracy International AWM](#)). For emergencies the 67mm MBB Armbrust light antitank weapon was in the inventory (use M72 LAW, p. HT122).

Military Police Officer, Gruppo Interventio Speciale, Carabinieri, Italy, 1990s

GIS was a SpecOps unit with a law enforcement mission, including hostage rescue and operations against the Mafia. Firearms included the 9x19mm Beretta M-92SB pistol (pp. HT108-109), .357 Magnum S&W Model 28 Highway Patrolman revolver (p. HT110), 9x19mm Beretta M-93R machine pistol (pp. HT108-109), 9x19mm [Beretta PM-12S](#) submachine gun, 9x19mm H&K MP5A5 submachine gun and MP5SD3 suppressed submachine gun (pp. HT116, SO105-106), 5.56x45mm Beretta SC-70/90 assault rifle (use Colt M16A1, p. HT115), 7.62x51mm H&K PSG1 sniper rifle (p. HT115), 7.62x51mm Mauser 86SR sniper rifle (use Mauser 66SP with Shots 9+1), .50 BMG Barrett Model 82A1 sniper rifle (p. HT115), 12-gauge Franchi SPAS-15 shotgun (use SPAS-12, p. HT112, with 6-round box magazine) and 37x112mmRB Enfield ARWEN-37 grenade launcher.

Police Officer, Los Angeles Police Department, Los Angeles, USA, 1990s

The standard patrol weapons were the 9x19mm Beretta Model 92F pistol (pp. HT108-109) and the 12-gauge Remington Model 870P shotgun (p. HT112). Since 1997, sergeants and supervisors also got a 5.56x45mm Colt M16A1 rifle (p. HT115 with RoF 3~) converted to semi-automatic fire only.

The LAPD SWAT issued a customized .45 ACP Colt M1911A1 pistol (p. HT108 with Acc 3, Shots 8+1), the 9x19mm H&K MP5A4N submachine gun (pp. HT116, SO105-106) fitted with Sure-Fire light, 5.56x45mm [Colt CAR-15A2 Model 723](#) assault carbine, 7.62x51mm H&K PSG1 sniper rifle (p. HT115), 7.62x51mm Remington Model 700 sniper rifle (p. SO100), .50 BMG Barrett Model 82A1 sniper rifle (p. HT115) and 12-gauge Benelli M1 Super 90 shotgun.

Police Officer, OMON, *Militsiya*, Russia, 1990s

OMON were SWAT-type units under command of the Russian Ministry of Internal Affairs (p. SO39). Standard sidearms were the 9x18mm Izhmekh PM Makarov (p. SO98) and the 9x21mm [Tzniitochmash P-9 Gyurza](#). The 12.3x50mmR Tzniitochmash U-94 UDAR multi-purpose revolver and a number of compact machine pistols were in the inventory, including the 5.45x18mm [KBP OTs-23 Drotik](#), and even a few obsolete 9x18mm Izhmekh APS Stechkin (*Special Ops*, 1st ed., p. 104). The primary weapon of tactical teams was the 5.45x39mm Izhmash AKS-74U assault carbine (p. SO100), which was in the process of being replaced by the 9x39mm [KBP OTs-14 Groza](#) weapon system. Other long arms included the 9x39mm [Tzniitochmash ASS Val](#) suppressed assault rifle, 9x39mm [Tzniitochmash VSS Vintorez](#) suppressed sniper rifle, 7.62x54mmR Izhmash SVD *Dragunov* sniper rifle (p. SO100) and 7.62x54mmR [KBP SVU](#) sniper rifle, as well as the 85mm Kovrov RPG-7V rocket launcher (p. HT122).

Police Officer, Emergency Service Unit, New York Police Department, New York, 1990s

Each member of this SWAT-type unit was armed with a 9x19mm Glock 19 pistol (p. HT108). In a five-men entry team, the "point-man" additionally carried a 12-gauge Ithaca Model 37DS pump-action shotgun (use Remington Model 870, p. HT124) with five spare rounds strapped to the stock. He was followed by the "body bunker" with a large ballistic shield and 9x19mm Beretta Model 92D pistol (p. HT108) with muzzle-mounted Sure-Fire flashlight. The team leader and the "omni-man" had an 9x19mm H&K MP5A5N submachine gun (pp. HT116, SO105-106), fitted with Sure-Fire light. The "rear security" carried a 5.56x45mm Ruger Mini-14 semi-automatic rifle.

A counter-sniper team consisted of two men, the marksman with a modified 7.62x51mm Remington Model 700 rifle (p. SO101) and the observer/spotter with a Ruger Mini-14 rifle, both also carrying a Glock 19.

Weapon Descriptions

Batons

ASP F21, USA, 1983 (Holdout 0)

Armament Systems and Procedures produced one of the most widely used batons in service with American and foreign law enforcement, based on the *Teleskopschlagstock* developed in Germany in the 1920s and known to martial artists as *tokushu keibo* (p. CII30). It was a three-section, telescoping, spring-loaded baton that measured 21" when extended, but only 7.75" when collapsed. The ASP baton could thus be carried relatively inconspicuously, but when being extended by a sudden flick of the wrist, offered the power and reach of a full-size truncheon. The F21 was a medium size, both longer and shorter models were available. The F21 Airweight weighed only 0.6 lbs. A small mirror (\$10) could be clipped to the tip, to allow peering around corners etc.

Special Weapons

Bodyguard LE-10 Cop-Top, USA, 1980s (Holdout +1)

This was a pepper spray using Oleoresin Capsicum (OC), an inflammatory agent extracted from red pepper. OC is far more effective than the various chemical agents, taking effect after 1-3 seconds as opposed to 3-10 seconds for CN or 8-20 seconds for CS tear gas. In addition, it is more effective in cold weather and against animals and people on drugs or emotionally disturbed. A one-second spray of OC to the face means the victim must roll under HT+2 (-2 each successive dose) or immediately be rendered Blind (p. B27) and Stunned (p. B99) for 20-HT seconds. After this time the target is still at -4 to Vision and DX rolls until the effects are shaken off (a HT roll every 5 minutes; recovery usually takes 30-60 minutes). The spray can be Blocked or Dodged, but not Parried. PD from armor does not apply, but PD from shields does. Sealed armor or gas masks protect from the effects entirely. The agent was available in spray cans of various sizes, the Cop-Top being small enough to be worn on the belt. Such devices were used worldwide, including with the FBI, the LAPD and NYPD.

The Bodyguard Rescue Spray contained a disinfecting anti-inflammatory agent, relieving from the effects of pepper spray and tear gas (halve period of effectiveness); Wt 0.15 lbs, Cost \$7, 10 doses.

Tasertron TE-86, USA, 1986 (Holdout -1)

Based on the original Thomas A. Swift's Electric Rifle (TASER) of 1970 (p. HT100), this device fired two darts from a sealed plastic cartridge (the TE-86 held two cartridges). The darts did almost no damage, but transmitted a high voltage, low ampere electric current via two trailing wires, which would stun the target if he failed a Will-4 roll (tasers proved notoriously ineffective against goal-oriented individuals like martial artists). He would remain incapacitated for as long as the trigger button was pressed; the manufacturer suggested 5-10 seconds. The 7.2V Ni-Cad battery would be drained after about 100 seconds. After the current was switched off, the victim would recover in 1-30 minutes. The current would take effect through 2" of clothing or armor, and the darts didn't need to penetrate. Tasers have no negative effect on pacemakers.

Tasers like this have been in widespread service with American police forces (including the LAPD and NYPD) since the late 1970s and early 1980s, but are illegal for civilians in many U.S. states and abroad.

Pistols

Webley & Scott Police Model, 7.65x17mmSR (.32 ACP), Great Britain, 1906 (Holdout +1)

A small pocket pistol, designed for concealed carry. It was widely used as a police weapon in the British Empire after being adopted by the London Metropolitan Police in 1911, including in Adelaide (Australia), Cairo (Egypt), Dublin (Ireland) and Manchester (England). Production ceased in 1939.

Walther PP, 7.65x17mmSR (.32 ACP), Germany, 1929 (Holdout +1)

The Walther *Polizeipistole* was probably the most widespread police weapon in Europe between the 1930s and 1980s (when more powerful weapons took over). This design was the first successful double-action self-loading handgun, besides being compact and an overall neat weapon. Most European police forces issued it as a holster weapon to uniformed officers, including in Austria, Bulgaria, Denmark, France, Germany (designated the P22 from the late 1950s), Great Britain and Sweden, and many non-European countries such as Iran, Peru and Turkey, as well as most of Africa. After WWII it was used by the British SAS as a backup/undercover gun (called the L47A1) and issued to the Royal bodyguards (1960-1974). Production ceased in 1999. It was license-made in France, Hungary and Turkey, and copied by all and sundry.

While it was available in several other calibers such as .22 LR (Dam 1d+1-, Shots 10+1, 1929-1994), .25 ACP (Dam 1d-, Shots 8+1, 1929-1933), .380 ACP (Dam 2d, Shots 7+1, 1929-1999) and 9x18mm Ultra (Dam 2d+1, Shots 7+1, 1973-1979), none of these were as popular.

The smaller *Polizeipistole, Kriminal* (PPK) introduced in 1931 is described on p. HT108.

SIG-Sauer P226, 9x19mm Parabellum, Germany/Switzerland, 1983 (Holdout -1)

Based on the earlier P220 and P225, and originally developed for the U.S. military's competition for the M9 sidearm, this high-quality pistol became very popular with law enforcement agencies. Although more expensive than its competitors (the main reason why it lost out to the Beretta Model 92F with the U.S. military and to the Glock guns with many police forces), it featured exceptional reliability and good accuracy. An optional 20-round magazine was available, this was especially popular with the British SAS.

The P226 was adopted as the standard sidearm of the Arizona State Troopers, the U.S. Navy SEALs, the New Zealand military and the FBI. It was also in service with the Irish Rangers, the Israeli *Sayeret Mat'kal* and the British SAS (there known as the L105A1), and the SWAT teams of Washington D.C. and other American municipal police departments, of the Royal Canadian Mounted Police, the German Frankfurt/Main police department and the Argentine and Spanish federal police. It can be seen in the hands of Special Agent Fox Mulder in *The X-Files* and bank robber Neil McCauley in *Heat*.

In 1995, it became available in .357 SIG (Dam 3d-2, Shots 13+1) and in 1998 in .40 S&W (Dam 2d+, Shots 13+1). The .357 SIG version was adopted by the Texas Rangers, the .40 S&W model was authorized for carry by the DEA and FBI in 2000.

In 1989, the P228 appeared, a slightly smaller version with shorter barrel and grip; Dam 2d+1, Wt 2.1, AWt 0.5, Shots 13+1, Holdout 0. It had a reduced magazine capacity, but could use the larger magazines of the P226.

The P228 was adopted in 1992 as the M11 by the U.S. Army for military police, flight crews, etc. Many U.S. law enforcement agencies followed suit in the early 1990s, including the DEA, FBI, Secret Service, Bureau of Alcohol, Tobacco and Firearms, the Diplomatic Security Service, the Federal Sky Marshals, and the Internal Revenue Service, as well as some police departments. The French GIGN acquired some, the British SAS adopted it as the L107A1, and it was used by police units in Germany and Switzerland.

Manufacture of the P228 ceased in 1997 in favor for the almost identical P229 (p. HT109). Some agencies replaced their P228s around that time with the P229 in .40 S&W or .357 SIG caliber, e.g. the Secret Service took it in .357 SIG.

Smith & Wesson Model 5906, 9x19mm Parabellum, USA, 1989 (Holdout -1)

A member of the third-generation of S&W pistols (based, ultimately, on the Model 59 of 1971), the stainless steel Model 5906 catered for those departments requiring a medium-priced high-capacity 9x19mm gun. The Model 5946 was double-action only, but otherwise identical.

It was not very successful outside North America, but the U.S. Capitol Police, the Georgia State Police, the departments of Atlanta and Honolulu, and the Royal Canadian Mounted Police did adopt it, among others. It has also been used by agents of the Bureau of Indian Affairs.

The 10x25mm S&W Model 1076 (1989) belonged to the same series; Malf 16, Dam 3d-2+, 1/2D 200, Max 2,200, Wt 2.8, AWt 0.5, Shots 9+1, ST 10, Rcl -2. It was only adopted by the FBI, which issued it with four 9-round, two 11-round (AWt 0.55) and one 15-round (AWt 0.7) magazine per agent. It was removed from service because of its unreliability. Production ceased in 1993.

Revolvers

Colt Official Police, 9x29mmR (.38 Special), USA, 1927 (Holdout -1)

A no-thrills double-action service weapon, available in a number of calibers, including .22 LR (Dam 1d+1-, 1930-

1946), .32-20 WCF (Dam 1d+2-, 1927-1942) and .41 LC (Dam 1d+2+, 1927-1930). It was the official service handgun of the FBI for many years, and also issued by many other police agencies. Production ceased in 1969.

Smith & Wesson Model 36 Chief's Special, 9x29mmR (.38 Special), USA, 1950 (Holdout +1)

A double-action pocket revolver built on the smallest frame available from S&W, this gun was intended for detectives and supervisors, as well as other people carrying their gun concealed. It had a "snubnose" 2" barrel. Manufacture ceased in 1999.

The weapon was widely adopted by police forces in the Western world, including in Canada, Japan and Europe. It was the first issue sidearm of the German GSG9, until replaced in the late 1970s by more powerful weapons. The Model 36 was issued by the U.S. Air Force Office of Special Investigations (OSI).

A number of variants were created, such as the Model 37 Chief's Special Airweight (1952, Wt 1.0), Model 60 Chief's Special Stainless (1965-1996), and Model 60 Chief's Special Stainless Magnum (1996). The latter was chambered for the .357 Magnum round; Dam 3d-2, 1/2D 150, Max 2,000, Wt 1.4, AWt 0.18, ST 11, Rcl -3, Cost \$500.

Tzniitochmash U-94 UDAR, 12.3x50mmR (32-gauge), Russia, 1994 (Holdout 0)

UDAR is a Russian acronym used for any self-defense device discharging an irritant aerosol. This weapon, however, was much more flexible. It was a compact double-action revolver, specifically developed for law enforcement. A range of ammunition types was available, including solid ball, an APDS armor-piercing round (Dam 1d+2(2)), a buckshot shell (Dam 1d+2, +1 to hit), a plastic baton (Dam 1d+2(0.5)+, 1/2D 15), a paintball round (Dam 1d-3(0.5), 1/2D 15) and an irritant round, which sprayed a liquid chemical agent from the muzzle (effects as tear gas, p. B132, Max 5, +1 to hit). The weapon was adopted by the Russian Ministry of the Interior (MVD).

(As an aside, the aerosol cartridges were of very simple construction, and could easily be hand-loaded (Armoury/TL7) with other liquids -- DMSO, holy water, or magical elixirs being some of the possibilities.)

Shotguns

Ithaca Auto & Burglar, 15.6x63mmR (20-gauge), USA, 1922 (Holdout -2)

Essentially a factory-made sawn-off shotgun, this double-barreled weapon had short barrels, no shoulder stock and a pistol grip. It was aimed at the police market, but also offered commercially. A vintage advertisement stated: "*Detective Harry Loose first introduced the banks in and around Chicago to use it, then its use spread to sheriffs, police departments, paymasters, watchmen, express messengers, and it's a wonderful home protector.*" Of course, the weapon was also employed by those on the other side of the law, e.g. by the infamous John Dillinger. Production ceased in 1934.

Benelli M1 Super 90, 18.5x76mmR (12-gauge), Italy, 1984 (Holdout -6)

A recoil-operated semi-automatic shotgun, famous for reliability and fast handling. It featured a full stock with pistol grip. The Benelli would chamber both normal 2.75" shells and the longer 3" Magnum loads (Dam 4d+2, Shots 6+1). Most were sold with Ghost Ring open sights (SS 11, Acc 6, +\$75). It was widely adopted by police units, including SWAT units of the LAPD, Detroit PD and Pennsylvania State Police. Other users were the *Ya'ma'm* anti-terror unit of the Israeli border guards and the British SAS.

The M1 Super 90 Entry (1992) had a short 14" barrel; SS 11, Acc 4, 1/2D 20, Wt 7.5, AWt 0.85, Shots 5+1, Holdout -5, Cost \$800/\$920.

In 1989, the M3 Super 90 was added to the line. It could optionally be fired in the pump-action mode (RoF 2~), for example if low-powered specialty munition was used; Wt 8.5, Cost \$900/1,075. It was adopted by the Australian

Federal Police, the French Marines, the Honolulu PD and the SWAT team in Munich, Germany.

The M3T (1990) had a folding stock; Wt 8.8, Holdout -5, Cost \$1,000/1,200.

SGT Tactical Response Model 90102, 18.5x76mmR (12-gauge), USA, 1991 (Holdout -6)

Scattergun Technologies produce a range of customized shotguns by modifying off-the-shelf Remington weapons. This model adopted by the FBI was based on the Model 870 pump-action shotgun (p. HT112) with 18" barrel, and could fire both normal 2.75" shells and the longer 3" Magnum loads (Dam 4d+2). It was fitted with a Sure-Fire flashlight under the muzzle, a Ghost Ring open sight and a spare rounds holder on the left side of the receiver for six shells. Discontinued in 1999.

The U.S. Border Patrol adopted the Model 90121, which had a shorter 14" barrel, larger magazine and no lamp; SS 11, 1/2D 20, Wt 9.0, AWt 1.0, Shots 6+1, Cost \$605/\$695, Holdout -5.

Submachine Guns

Haenel MP28/II, 9x19mm Parabellum, Germany, 1928 (Holdout -5)

By 1928 Hugo Schmeisser had redesigned his MP18/I (p. HT118). The main difference was the provision of a selector, allowing single shots and full automatic fire. Only box magazines were used, taking 20 (AWt 1.0), 32 or 50 (AWt 2.3) rounds. It was offered in a number of calibers, including 7.63x25mm Mauser (Dam 3d-1-, AWt 1.4, RoF 10*), 7.65x21mm Parabellum (Dam 3d-1-, AWt 1.4, RoF 9*) and .45 ACP (2d+1+, AWt 1.8, Shots 25, RoF 8*). Haenel produced only about 400, main production taking place in Belgium, where it was licensed to Pieper-Bayard. Production ceased in 1938.

In 1929 it was adopted in 7.65x21mm Parabellum by the Portuguese police and in 1934 in 9x19mm Parabellum by the Belgian Army. It was exported to China and a number of South American countries, notably Bolivia. The MP28/II was adopted by the German police and in the late 1930s also by the military police of the *Waffen-SS*. It was extensively used during the Spanish Civil War and copied in small numbers in Spain in 9x23mm Largo (same stats).

George Lanchester of Sterling Armaments (England) made some cosmetic changes, and this version was adopted in 1941 by the Royal Navy as the Lanchester Mk I (Wt 11.9, AWt 2.3, Shots 50, RoF 10*). The Mk I* was capable of burst fire only. The Lanchester Mk I* was also made in India.

Colt CAR-15 Model 635, 9x19mm Parabellum, USA, 1988 (Holdout -5)

In the 1980s, Colt brought out a submachine gun aimed at the law enforcement market. Essentially, it was a 9x19mm version of their [CAR-15](#) series of assault carbines (p. HT115), with a telescoping stock being standard. The similarity with the M16-family means that only a -1 penalty applies if unfamiliar with this particular model. Intended to compete against the H&K MP5-series, it was never able to replace the German design.

Nevertheless, it was adopted by the Drug Enforcement Agency, the U.S. Marshals Service, the U.S. Department of Energy Special Reaction Teams, the USMC Fleet Antiterrorist Security Team (FAST) companies, the state police of Connecticut and Michigan, and SWAT units of the Atlanta, Miami and Washington D.C. police departments.

Heckler & Koch MP5/10A3, 10x25mm Auto, Germany, 1992 (Holdout -4)

A variant of the popular MP5-series (pp. HT116, SO105-106), chambered for the powerful 10x25mm Auto cartridge. It used straight, clear plastic magazines and featured either a fixed plastic stock (A2) or a retractable stock (A3). The MP5/10 was offered with several trigger configurations, the standard gun fired single shots, full-automatic and 2-round limited bursts. Some 1,400 of these guns were adopted in 1994 by the FBI for SWAT and HRT units (both types of stocks). Those for field agents were incapable of full-automatic fire. One accessory offered was the KAC sound

suppressor, which could be attached without modification; stats when fitted were Wt 9.0, Holdout -5, Hearing -5.

The more common MP5/40A3 (1992) was identical, but chambered for the .40 S&W cartridge; Dam 2d+1+, 1/2D 160, Max 1,900, Wt 7.6, AWt 1.3, ST 10, Rcl -1. It was adopted by SWAT teams of the Arizona State Troopers, the Tucson PD and the Capitol Police, among others.

Production of both lines ceased in 1999 in favor for the [UMP](#).

Rifles

Remington Model 8A, 9x49mm (.35 Remington), USA, 1906 (Holdout -6)

This was one of the earliest self-loading rifles to see production, and another one of John Browning's inventions. It was available in a number of calibers, including .25 Remington (Dam 4d-1) and .30 Remington (Dam 5d). Its fixed internal box magazine was loaded from 5-round stripper clips, and the Peace Officers Equipment Co. offered a number of "police only" magazine extensions for 10, 15 or 20 rounds. It was a takedown weapon that could be broken down into two halves for easy stowage (Holdout -4). The Model 8 was available in several grades (A, C-F), which added various grades of expensive woodwork and engraving. Five thousand were made in Belgium by Fabrique Nationale.

The weapon was popular with U.S. police in the 1920s and 1930s, and such weapons were used by former Texas Ranger Frank Hamer and his posse to kill Bonnie & Clyde.

In 1936, it was replaced in production by the Model 81A Woodsmaster, which was basically identical. Production of the line ceased in 1950.

Ruger Mini-14, 5.56x45mm NATO, USA, 1973 (Holdout -6)

A semi-automatic rifle based on the action of the 7.62x51mm Springfield M14 rifle (pp. AH25, HT114). Magazines took 5 (AWt 0.25), 10 (AWt 0.47), 20 (standard until 1994, from then on for police only), 30 (AWt 1.3) or 50 (AWt 2.2) rounds. Many aftermarket accessories were available, such as a folding stock (+\$125, Holdout -5). The Mini-14 was sold in large numbers both to civilians and the police, including to the Royal Ulster Constabulary in Northern Ireland, the U.S. Border Patrol, U.S. Customs, and many prison and police services, including the NYPD, Texas Rangers and state police forces in Arizona, Georgia, Maine and New Jersey. Export customers included the Jordanian police and UAE customs police. It was license-made in France as the Humbert AMD for the *Police Nationale*. Stainless steel models (+\$50, available since 1978) were a standard weapon of *The A-Team*.

The AC-556 (1983) was a selective fire version offering single shots, full automatic and 3-round limited bursts; RoF 12**. It was also made in carbine format: The AC-556K had a short barrel and folding stock; Dam 4d, Wt 7.8, Holdout -4.

The Mini-Thirty (1987) was chambered for the Russian 7.62x39mm cartridge; Dam 5d+1, Wt 7.5, AWt 1.1, ST 10, Rcl -2.

Mauser 66SP, 7.62x51mm NATO, Germany, 1976 (Holdout -7)

A purpose-made sniper rifle based on Mauser's commercial Model 66, featuring the earlier weapon's short bolt-action. It had a select wooden stock with thumbhole grip and an integral magazine. The standard sight was a Zeiss Diavari 1.5-6x telescope, but other brands and various night sights could also be fitted. Production ceased in 1993.

The Mauser 66SP was the standard sniper rifle of the German police until first eclipsed by the H&K PSG1 in the 1980s, and later phased out in favor of more modern bolt-action rifles. It was popular with Israeli, Italian and Spanish police and military special ops units, and exported a dozen other countries.

Machine Guns

Colt-Browning R75 BAR, 7.62x63mm (.30-06 Springfield), USA, 1924 (Holdout -7)

In the 1920s, Colt introduced a modified variant of the military M1918 Browning Automatic Rifle (pp. AH25, HT118). The R75 was made to a better finish and featured a bipod and quick-change barrel, both lacking from the M1918. It was intended for commercial sales to police departments and civilians. Sales were slow, however, since the market for these guns was small and the military released many surplus M1918s for sale, which were available much cheaper. Both the Texas Rangers and the U.S. Border Patrol acquired such weapons.

Colt made a second try with the R80 Monitor in 1933. This was better suited for police use, with a shortened barrel, Cutts muzzle compensator and forward pistol grip like the Tommy gun; Dam 7d, Wt 17.9, Holdout -6. Some were acquired by the FBI and a few police departments, but it faded from the scene like its predecessor, only a few hundred having been made.

Criminals such as Clyde Barrow converted their BARs (usually stolen from National Guard armories) to a similar configuration by shortening the barrel. Barrow carried it concealed under his custom-tailored jacket, and even acquired some Fast-Draw skill with it!

Grenade Launchers

Enfield ARWEN-37, 37x112mmRB, Great Britain, 1984 (Holdout -6)

The Anti-Riot Weapon, ENfield, was a grenade launcher firing less-than-lethal munitions. It had a 5-round open cylinder revolving action, foregrip and adjustable stock. The weapon was loaded from a loading gate, but the spent cases were automatically ejected. In addition to a plastic baton, there were a tear gas munition (6-yard radius, effects as per p. B132), a smoke round (6-yard radius) and a barricade penetrator, which could penetrate an auto windshield or 0.5" of plywood, and then release a cloud of tear gas (Dam 1d++, 5-yard radius). For all rounds, a safety distance of 20 yards was advisable to minimize casualties, and hits to the head should be avoided. The gun was adopted by the British military as the L76A1, and by SWAT units in England, Canada and the USA, and even in the former East Germany!

Notes

Damage: Follows the rules in *GURPS High-Tech*, 3rd edition.

RoF: Weapons marked with two asterixes (**) are capable of limited bursts. These consist of a preset number of rounds (see descriptions). Up to three bursts can be fired per second. Add +3 to the effective skill of the shooter when determining the number of hits in a burst. Note that in burst mode the shooter cannot hose down his target.

Wt: Loaded weight of the gun, in pounds.

AWt: The weight of the standard ammunition container. Optional magazines are listed in the descriptions.

Cost: Cost with one empty magazine, unloaded, including any sighting devices as per description.

The Body Control Psionic Power For *GURPS*

by Stéphane Thériault

Some people feel that the Healing power in *GURPS Psionics* is too limited. There are many examples in stories of those characters who could control not somebody else's mind or body, but his own body. For example, there was an episode of the *Bionic Woman* where someone was able to manipulate his body's functions to climb an electrified fence without any damage. So this inspired the question: What could somebody do if he could control every cell of his body individually? The answer is, pretty amazing things.

This article presents optional rules that revisit the Healing psionic powers, to change its focus from mostly healing to a more complete Body Control power. This power includes all the Healing abilities, but introduces many new abilities having to do with controlling one's own body. Metabolism Control is now the center piece of the power, and every new ability -- except for Body Monitoring and Psychic Surgery -- needs it as a prerequisite.

Most of the new abilities are suitable for normal psionic campaigns. The last two ones, Body Overdrive and Berserker Trance, should only be available in high-power cinematic games.

BODY CONTROL POWER (5 points per level)

Except for Healing, Sense Aura, and Psychic Surgery, all abilities described below can only be used on the psi himself.

Adrenaline Rush

*n/a

Prerequisite: Pain Control-15 and Strengthen

Metabolism-12

This ability gives the psi the Hyper-Strength and Combat Reflexes advantages for (Power) seconds at a cost of 1 fatigue per second. At Power 10, he also gains the High Pain Threshold advantage. Finally, at Power 20, he gets the Hyper-Reflexes advantage (cumulative with the first Combat Reflexes).

Body Monitoring *1

This skill allows a psi to monitor exactly the functioning of his own body. On a successful roll, he knows exactly what is his blood pressure, heart rhythm, body temperature, etc. He can also identify external organisms in his system. If he does a medical intervention on himself, or is able to talk to someone who's doing an intervention on him, this gives the psi a +3 on the Diagnosis rolls.

Special Enhancement: can be used on someone else; +50%

Death Control

*n/a

Prerequisite: Metabolism Control-12 and Healing-

12

Whenever the psi fail a HT roll to stay alive, he rolls immediately against his Death Control skill, at a -1 penalty for each full HT hit points he is missing. If the roll succeeds, he falls into a coma for (Power) minutes; after which, someone must make a Surgery-5 or Psychic Surgery roll, or use unnatural healing methods like magical or psionic, to keep him alive. If the roll fails, or no roll is made at all, he will die without ever waking up. If the roll succeeds, he is stabilized and will be able to recuperate normally. The psi will become scarred permanently, however, and lose one level of appearance. If he goes below -5xHT, he will need Power 20+ to just even try a roll, and the roll is at -5. No

roll can be made if the psi reaches -10 x HT.

While in the coma, the psi is still vulnerable to any kind of damage. Every time he takes additional damage, he will have to make a new roll. If he succeeds, the trance starts anew.

The life-saving roll at the end of the trance may only be attempted once.

If using magical or psionic healing instead of Surgery, the roll is considered a normal use of the appropriate healing method, but the first four hit points given are used by the body to stabilize its condition. All points after the first four raises Hit Points normally. If less than four points are given, they won't have any effect and the psi will die.

Enhanced (Sense) *n/a

Prerequisite: Metabolism Control-12

This is actually four different abilities. Possible senses are Vision, Hearing, Smell/Taste and Vision. The first three options give the psi Acute (Sense) +(Power/2). The last one gives Sensitive Touch. Duration is (Power) seconds.

Healing *3

As described in P15.

Healing Trance

Prerequisite: Metabolism Control-12 and Healing-

***n/a**

12

On a successful roll, the psi will go into a healing trance identical to deep sleep; after each (24/Power) hour of trance, he can make a HT roll to regain one HP. This is in addition to all other forms of healing, natural or not. This sleep does not, however, make him recover any fatigue. The Autotrance advantage adds its bonus to the skill roll.

Life Extension *n/a

Prerequisite: Metabolism Control-14

As described in P15.

Metabolism Control *1

As in the description in P15. If the optional Bleeding rules (B130) are used, a successful roll at -1 per 5 hit points lost will completely stop any bleeding. Finally, the psi can make his body more resistant to poison; a successful roll gives him a +1 per 5 full levels of power to his HT roll to resist poison.

Pain Control *n/a

Prerequisite: Metabolism Control-12

Everytime he takes damage, roll versus skill. On a successful roll, penalties due to damage is reduced by 1 for each level of power possessed.

Psychic Surgery *2

The psi knows instinctively how to fix any wound. A successful roll gives him a bonus of (Power/5) to any First Aid, Physician, and Surgery roll. With a sufficient power level, he can make surgeries without any equipment! This power can be used on the psi personally or on others.

If many races are present in the game's world, the psi must specialize in a given type, as explained in the Medical Skills section header on p. B56.

Sense Aura *1

As described in P16.

Strengthen Metabolism *n/a

Prerequisite: Metabolism Control-18

For a short period of time, the psi can modify the internal structure of his body to reinforce some specific trait at the cost of others. He can raise one of ST, HT, DX, or DR by 2, with a penalty of -1 to the other three, for each 10 full levels of Body Control Power. Cost is two fatigues, lost after the effect is over. The change is good for (Power/4) seconds. Note that negative DR simply means that the body is so fragile that any wound received cause additional internal damage.

Special Enhancement: The psi can concentrate the effect on one particular part of his body: head, torso, one arm, or one leg. He can get double raises for the same penalty. The penalty itself still applies to all the body. For example, a psi could raise his right arm ST by 4 at the cost of two fatigues and -1 to DX, HT and DR to his whole body. +20%.

Suspended Animation *n/a

Prerequisite: Metabolism Control-12

Allows the psi to fall into Suspended Animation (as for the spell on p. M50) for a maximum of (Power square) months at a time. The psi can, however, choose the duration of the trance, or determine certain conditions that will awake him before time. Roll is at -1 for each of these conditions.

Cinematic Abilities

These abilities are extremely powerful and are only suitable for cinematic campaigns.

Body Overdrive (M/VH) *n/a

**Prerequisite: Metabolism Control-20, Strengthen
Metabolism-20, Enhanced Senses-20, and Power-20**

This ability puts the psi's body in overdrive -- literally. For each 20 levels of Power, he gains one level of Altered Time Rate and the Enhanced Time Sense advantage for (Power) seconds. However, because almost all of his body resources are concentrated into making him go faster, it becomes more fragile. HT is reduced by 1, and he gain the Low Pain Threshold and DR-1 disadvantages for the duration of the effect. Effects are cumulative with current advantages/disadvantages (i.e. if the psi has High Pain Threshold he loses it; if he doesn't have it or Low Pain Threshold, he gains Low Pain Threshold; and if he already has Low Pain Threshold, its penalties are doubled. Same for DR). When the effect wears off, his fatigue drops to 0, and he passes out from exhaustion.

Berserker Trance (M/VH) *n/a

**Prerequisite: Body Overdrive-20, Adrenaline
Rush-20**

This ability allows the psi to enter a voluntary state of communion with the "inner Essence of the Warrior" that sleeps inside each of us. He effectively become Berserk (p. B31), but with the following bonus: he gets all the advantages of Body Overdrive without any of the disadvantages, DR +1, and all the effects of the Adrenaline Rush ability. The trance lasts for a maximum of (Power) seconds. When it wears off, his fatigue drops to 0, he loses 1 HT for each two seconds spent in the Berserker trance (round up), and he passes out.

The Autotrance advantage adds its bonus to this skill roll.

Special Enhancement: The psi always remembers who his allies are, even in the Berserk trance, and will never attack them. Special prerequisites: Will or Mental Strength at 15+, Vision roll at 15+. +50%.

Special Enhancement: Reduced Damage +20%. For each level of this enhancement, the damage the psi takes when the trance wears off is reduced by 1.

Special Enhancement: Somebody dear to the psi can try to stop his trance by trying to appease him. Make a reaction roll, at +3 if the person is especially dear to the psi (like a wife or a child), +2 if that person has the Empathy advantage. Charisma and Voice are the only other advantages/disadvantages that affect this reaction roll. On a good or better reaction, the psi snaps out of his trance. +30%.

The Witchfire Trilogy, Part Two: Shadow of the Exile (for d20)

Published by [Privateer Press](#)

Written by Matt Staroscik

Illustrated by Brian Snoddy and Matt Wilson

64 pages; \$9.95

Shadow of the Exile is the second part of the *Witchfire* trilogy of adventures set in Privateer Press' campaign world of the Iron Kingdoms. Designed for a small party of third through fifth level characters, the adventure continues on the action from *The Longest Night*. What separates the Iron Kingdoms from other more standard flavored *d20* backgrounds is its dark and grimy mixture of technology and magic, which includes steam power, guns, and large lumbering robots known as Steamjacks.

(SPOILER ALERT!)

The trilogy centres on the trade city of Corvis in the kingdom of Cygnar. In *The Longest Night*, the party travelled to Corvis, where they were asked by Father Dumas to investigate a spate of grave robberies. This led them onto the vengeful plans of a young sorceress, who happens to be Father Dumas' niece. A decade earlier, Alexia Ciannor's mother and her coven had been executed for witchcraft as part of the former King Vinter Raelthorne IV's inquisition. Though Vinter has been deposed by his brother Leto and is now thought dead, Alexia desired revenge upon both those behind the executions and the city of Corvis itself. Part of this involved stealing Witchfire, an ancient greatsword of immense power, and then raising an army of undead to bring down upon Corvis on the night of its favorite festival, known as the Longest Night.

Shadow of the Exile takes up the story a few days after the events of *The Longest Night*. Alexia has survived to continue her plans, which her uncle has divined to involve traveling deep into the bayou northeast of Corvis to the Temple of Cyriss, where it is thought she will be able to completely resurrect her mother. The easiest method of reaching the temple is by traveling on a steam-driven paddleboat. The journey will not only be plagued by inhabitants of the bayou, but also forces of the inquisition that killed Alexia's mother and now want Witchfire for themselves. Thankfully, the locals can at least be counted upon to be reasonable.

Known as the Clockwork Goddess, the worship of Cyriss has grown with the rise of technology and her temple is a large mechanical construct that can only be truly fathomed her clergy. Chasing through the clockwork building after Alexia upon the heels of the inquisition is not a little tortuous and some players may find it tedious. That said, the technology of the temple should be incomprehensible to the characters, as they will not have seen its like before. Passage is eased as both Alexia and the inquisition have worn down the clerics and servitor constructs of Cyriss as they go, but this does mean that the clerics are in no mood to talk. The final scene in the core of the temple against Alexia is straight out of *The Phantom Menace* and begins the set up for last part of the trilogy, *The Sleeping Legion*.

Having escaped the temple the party make their way back to Corvis, where much has changed. Vinter Raelthorne has returned to reclaim his throne, fully restore the inquisition and has brought with him a strange new ally that will feature in *The Sleeping Legion*. Already the inquisition has been moving against any sorcerer in Corvis. Having stopped Alexia and acquired Witchfire, the party is asked to undertake a comparatively simple rescue mission and thus bring

Shadow of the Exile to a close.

As with *The Longest Night*, *Shadow of the Exile* is another attractive book, blessed with the brooding art of Brian Snoddy and Matt Wilson. It is slightly scratchier than before, but otherwise when combined with the tight layout and choice of typeface used, works hard to evoke the dark and gritty feel of the Iron Kingdoms. Matt Staroscik's writing lightly alleviates this with its occasional touch of humor. This is not an adventure with a lot of treasure, though there are several interesting items to be found. Plus the players do end up with Witchfire, although the author advises that it isn't a toy. This is apt as it is almost as dangerous as Stormbringer!

(END SPOILER ALERT)

Besides the adventure, *Shadow of the Exile* builds upon the information we know about the Iron Kingdoms. It provides a history of the area and a gazetteer of the various small nations that they comprise. This is welcome material and will of great use to any player wanting to tie their elf, dwarf or human character into the setting. The information on areas outside of the Iron Kingdoms should prove useful for the last part of the trilogy. The appendices cover the NPCs, several new monsters -- all of which feel suited to the setting rather than as an excuse for it or to sell the book -- as well as firearms. These are necessary as it is possible for the party to get hold of some in this adventure, although it would have been nice to see some sample illustrations.

As the middle part of the trilogy, *Shadow of the Exile* echoes the tone of *The Empire Strikes Back* with its lack of a real ending. It is a tough adventure for small parties, but if a DM is looking for another adventure within the Iron Kingdoms to give them more experience, Privateer Press is selling *Fool's Errand*, a E-Venture from their website, which complements the trilogy and can be run between *The Longest Night* and *Shadow of the Exile*. *Shadow of the Exile* continues the story begun in *The Longest Night* to the same standard, breathing more life into the Iron Kingdoms and still leaving the gamer looking for more.

Adventure! RPG

Published by [White Wolf Publishing, Inc.](#)

Developed by **Andrew Bates, Bruce Baugh, and Greg Stolze**

272 B&W pages; \$25.95

There's one thing I'd like to get straight about *Adventure!* before I get started. While it is a White Wolf game, it isn't a World of Darkness game. That's something I hope a lot of people keep in mind when they see *Adventure!* on their local game store's shelves. The World of Darkness manages to produce more than a few irrational reactions from people. *Adventure!* doesn't deserve to be viewed through that same cruel lens.

Adventure! is the third game in White Wolf's *Aeon Trinity* trilogy of RPGs. The first was the SF game *Trinity*, released in 1997 and set in the future of 2110. Two years later, it was followed by the contemporary superhero game *Aberrant*, which detailed a world altered by the presence of godlike super beings.

And now, *Adventure!* flashes back to the early days of the century, with two fisted heroes and mysterious mesmerists fighting devious criminal masterminds. *Adventure!* is set in 1924, with its primary focus being the Aeon Society for Gentlemen, a club for adventurers founded by Max Mercer that's been mentioned in dribs and drabs ever since *Trinity* was first released.

The first half of the book details the world of *Adventure!*, regaling the reader with the tales of the great accident at Hammersmith labs (similar to the detonation of the Galatea in *Aberrant*, it is "the moment everything changed" for the *Adventure!* setting), the founding of the Aeon Society, and detailing the allies and adversaries of the Aeon Society.

There are a trio of fiction pieces which detail the adventures of the Aeon Society. The first is written by comic scribe Warren Ellis, and the other two are by Greg Stolze. They do a good job of making the *Adventure!* world and its characters come alive.

The world of *Adventure!* is covered in fairly good detail, from its towering metropolises to its dark, dank jungles. The world is detailed country by country, detailing current events (as of the game's start date of 1924) and recent history. It also gives a lot of fun little adventure hooks, such as lost pyramids and cities, strange mechanical beasts operating in city sewers, and mysterious monsters. Some of these are presented in a section following the setting info, and others are in sidebars inside it. If stories about how *Adventure!*'s lack of support beyond the first book are true, I'm going to be disappointed. I'm sure that I'd like to have seen more of the game world, such as the gorilla who is asking for membership in the Aeon society.

The rules sections are the Storyteller system in its *Trinity/Aberrant* setting. Skills are now attached to attributes, although you can still match any attribute to any skill. Instead of variable difficulties, all rolls are difficulty 7, with task difficulties determined by the number of 7s you have to roll. Character generation, like in *Aberrant*, asks players to create their PCs as people first, and then takes them through their heroic awakening.

The energy that powers heroes in *Adventure!* is called Inspiration. Inspiration is found as one of three types: Intuitive, Reflective, and Destructive. Each of them has a different game effect. Each hero is awaked in a different vein (yes, yes, you could call them Splats, but they're definitely broader than the standard splat). The three types are daredevils, mesmerists, and stalwarts. Daredevils are heroic, capable of extraordinary feats. Mesmerists have strange mental

powers, and stalwarts are capable of feats beyond those of mortal men.

The special abilities of the heroes of *Adventure!* are called Knacks, and each type has knacks unique to them. The Knacks were great, and I can myself having a lot of fun with them in game. They also seem to refer to a few of the great heroes of the genre, leading me to wonder how easy it will be to simulate Doc Savage or the Shadow. Inspired heroes can also buy enhancements for their backgrounds; a character with Retainers 5, for example, can enhance their Retainers background to have a Legion of troops following them. A character with Resources 5 can have Wealth Beyond Avarice.

The Super Science section gives you rules to construct your own super-gadgets. The game allows for heroes to construct their own super gadgets, or to begin play with them. The only problem I have is that while there are some samples of gadget creation, there isn't a convenient section with a list of handy gadgets. I would have liked to have seen some of those, but I can imagine they would have been cut for space. I also couldn't quite figure out how you'd go about building a Rocketeer-type rocket pack, even though it is pictured on at least one occasion. Chapters Six & Seven of the rules section cover the game's systems and roleplaying in *Adventure!*, and they do a good job with both newbies and experienced roleplayers.

The chapter on Heroes and Villains lists the members of the Aeon Society. This section isn't bad, although I could have done without the photos. The villains are a fun bunch, running from distaff mad scientists to reincarnated Pharaohs to Tsarist crime lords.

Adventure! also uses a handy little Mook mechanic, giving Mook level characters three health levels, one die to roll in combat situations, and they get taken down instantly with 4 or more successes on a combat roll.

I enjoyed *Adventure!* quite a bit. I'm no Pulp crusader, threatening the livelihoods of store clerks who aren't up on their Terry and the Pirates trivia, but I've enjoyed other games in the genre, and I think *Adventure!* is probably one of the best of them I've seen. *Adventure!* manages to do two jobs very well. It is a great pulp game on its own merits, with mechanics that ring true for the pulp setting. *Adventure!* also works as part of the *Aeon Trinity* of roleplaying games, giving us looks at how the world started on its divergent path, and at the origins of a few of *Aberrant's* interesting cast of characters.

Eastern Territory (for Palladium Fantasy RPG)

Published by [Palladium Books](#)

Written by Steve Edwards (with Kevin Siembieda)

224 pages; \$20.95 U.S.

If you are a fan of the *Palladium Fantasy RPG* then you have undoubtedly been awaiting the release of *Eastern Territory* for some time. Palladium promised us the book a while ago, but it seemed to have hit quite a few snags in seeing print. Well, at long last the book is here, and *Palladium FRPGers* now have the source material available to make good use of that hotbed of activity known as the Eastern Territory.

The book is done in the gazetteer format that has more or less become the standard with most *Palladium FRPG* books. The book starts with an overview of the whole area, then goes through it by sub-region, and ends with a dab of monsters and magic items. The folks at Palladium have become quite adept at this style of development, and they provide another dynamic mix of places in this book, which should prove useful to most gaming groups up and down the scale.

The Eastern Territory is presented as a booming land, with lots of opportunity for adventure and little homogenous order. The nations of the Eastern Territory are bound together by a loose agreement called the Charter of Dominion, which is primarily a formal agreement on such things as trade and defense.

Most importantly, the charter outlines who within the region is recognized as a separate political entity (basically, if you sign it, then you're recognized), and it unifies these entities to a manageable enough degree to deal with foreign powers. The most important things the charter does is establish a common currency standard and establish the Merchants Guild, which pretty much runs trade within the Eastern Territory. There are provisions for a military, but the military currently established isn't much to speak of (those of some independent city-states are much more impressive).

Once one goes beyond that, the Eastern Territory is basically a collection of city-states and small kingdoms, each with their own culture and individuality. There is a very healthy variety provided -- from small towns to large and important cities -- and most gaming groups should find the locales pretty handy. There are powerful city-states such as Llor, Haven, Wisdom, and the infernal Kaash, as well as small settlements such as Sweet Creek and Greenbough.

There are a couple of particular highlights. One is the dwarven city of Northolme. This place shows us the inner workings of a true dwarven settlement, complete with maps of the entire underground expanse. We also get the secret village of Glade, which is located in no other place than within the boughs of the Tree of Life, a true Millennium Tree (an incredibly powerful and enormous mystical tree, originally presented in the *Rifts* series). Full stats are presented for the tree, and it is given a background with a nice dramatic twist.

Palladium has been doing a good job of making their books more ripe for quick adventure building, and *Eastern Territories* is no exception. There are innumerable places in the text where it reads something like, "'So and so' would be willing to hire a group of adventurers to solve this mystery . . ." In short, there are dozens of ready made situations and adventures waiting to be taken up; all the GM needs to do is tie his adventurers in and get started. The book also presents a lot more than just numbered maps. These towns and cities are full of people, and plenty of NPCs for all locations, from small to large, are presented, making them even more readily useful for adventurers.

There is source material presented too. There are a few magic items and monsters; there aren't as many as in some

other books, but they should still be handy, especially if adventuring in this area of the world. A few O.C.C.s are presented -- the Master Collector and the Holy Paladin of Rurga -- which should be useful to some. The big piece of source material is the new race -- the danzi. These elusive beings are said to be among the truly ancient races, and they were even present back as far as the Age of Chaos and were directly involved in the defeat of Netosa, one of the vile Old Ones. They suffered greatly in that conflict and in many others since, and the danzi have thus become a rather reclusive people. Most don't even know they exist, even those living right next to them.

The danzi are presented as a pretty tribal and "Earthy" type of people, who place a lot of value in courage, honor, and a more traditional (e.g. lacking in technology) lifestyle. One of their most noted trademarks is their tattoo magic. This is not exactly like the tattoo magic presented in some of the *Rifts* books. Instead of drawing off P.P.E., these tattoos siphon one's own hit points for fuel. Given that these are tattoos for warriors, most of them have combat related effects. The overall development on this section is pretty strong, although this reviewer can see the use of hit points to power the tattoos as problematic; the danzi don't have that many more hit points than other races to burn (thus, combat can become a short endeavor for the danzi tattoo warrior).

The book is also a considerable value. In a day when some publishers are charging \$19.95 for a 96-page book, seeing Palladium offer a 224-page book for \$20.95 is certainly welcome. I mean, this book really does pack it in. The layout may not be as snappy as a Wizards of the Coast release, but the wealth of material really makes it a good buy (and to be fair, the book's artwork, though not a break from the Palladium standard, is definitely solid).

On the whole, the development of the book is pretty fair. It lacks the creativity and "kewlness" of the recent work of Bill Coffin and Kevin Siembieda and there are a few points of minor inconsistencies (for example, the danzi shaman are said to *never* sell their tattoos to others without a *good* reason, and later there is an NPC presented who sells them to anyone with deep enough pockets), but there is still plenty of material to play with in this book. At the very least, it's worth it for the material on the Millennium Tree and the danzi. There isn't enough here to recommend the book to non-Palladium fans, but for those playing this game the book is a welcome addition.

I Never Metaphor I Didn't Like

I was putting together a jigsaw puzzle with a friend the other day, and I had a realization:

I tend to believe my campaigns -- especially a lot of the good ones -- resemble jigsaw puzzles.

And then I had a realization:

It's a good thing that I wasn't making a ham sandwich instead. I mean, obviously my subconscious mind was so desperate for material, it was grabbing at any straws it could for column topics; this week could well have been about how the really good campaigns are *just* like ham sandwiches. (And then I'd need to explain to myself why I was making a ham sandwich, seeing as how I'd given up ham over a year ago . . . But I digress.)

Anyway, where was I? (*Quick reread.*) Oh, right. Jigsaw puzzles. Campaigns.

See, all my good campaigns start out with a huge heap of various pieces. But there's always an "edge" -- an immediate (and fairly easy) goal to achieve. (Yes, some jigsaw puzzle folks consider it cheating to start with the edge. I think they're nuts.) This edge helps accomplish several things. It gives both GM and players an early sense of accomplishment, it defines a boundary of what is (and isn't) possible in a strange new campaign, and it gives vague hints as to what lies inside the edges, without giving much away.

As a concrete example, my first Supers campaign first consisted of the heroes escaping from a mysterious prison. Then they needed to unravel some of the mysteries behind that prison. This took about three adventures, and whetted everyone's appetite for what was to come.

Once the frame is established, it's usually up to the players to decide what's next. They can sift through the campaign's pieces and find some that look interesting -- or easy -- to put together. (In those formative days, I don't even need to *know* what all the pieces look like! As the GM, all I need to do is make sure any pieces I introduce or change are consistent, and fit with the previous pieces.)

Ideally, the players have the option to work on different batches of pieces, either through their own subplots and goals, or through solo adventures. And, also ideally, those batches of pieces will fit together, both with what's already been established and with the other players' pieces.

Again, to draw from that Supers example, I ran a series of solo adventures for all the players. They all seemed to be unrelated . . . until they had their next group adventure. Midway through they were able to piece together that their adventures were all tied together -- except for one player's, whose adventure seemed like it was related at first, but was actually a red herring. (Good jigsaw puzzles have lots of red herrings.)

After a while, a good jigsaw feels very familiar. Sure, there may be wide patches of puzzle left to do, and there are plenty of surprises left, but on the whole you're comfortable enough with the structure to partake of the campaign in a leisurely fashion.

Then, near the end of the puzzle's life, there are really only a few unexplored areas left. But, really, this can carry its own sort of excitement. Knowing that you're the near-master of all you survey (or at least, the scope of the puzzle/world) is really pretty neat. By this point there are generally either the uninteresting parts left ("Sigh. I guess we'll see what the evil but boring wizard cult in the badlands are up to.") or the parts that are too difficult ("Ummm . . . do we feel bad enough to go after the Nation of Deathlords yet?"). But, with perseverance and dedication (and a long enough campaign timeline) even the grandest challenges can finally be exhausted.

Ideally, once the puzzle is done, there's a moment to zoom back and admire the result. Continuing the metaphor, this might be in or out of the game. Within the game it might be a [final adventure](#) that ties up the campaign. Outside of the game it might be realizing that you've told all the stories you can tell with that campaign, and reminiscing about the

good times everyone had. In the Supers campaign, I had a final adventure that tied up every loose end we could think of; the possibility was left for sequels if we wanted, but we'd all pretty much agreed that the original campaign world was done.

And then it comes time to tear the puzzle apart. This can be as simple as starting a new game (either inside or outside of the same world), or as complex as [destroying or otherwise radically altering the world](#). In the Supers world we shifted the focus, from a government team with strongly defined ideology, to a corporate team where the morality was by definition a lot more gray. (With jigsaws, is also the time when you go to the store and buy a new puzzle.)

At least, the jigsaw puzzle metaphor works for *me*.

But it may not be right for everyone. Ultimately, the point of this column is to point out that finding a metaphor for your gaming style may be helpful. It certainly was useful for me. I'm starting to formulate a new campaign now, and knowing what I'm like means I can both work towards my style (making sure I have a strong enough framework at the beginning, for example), and can tweak that style so I don't become cliched (possibly by, say, having the campaign deviate greatly from that initial framework). If you stumble across an idea that works, you can provide yourself with food for thought.

And while you're looking for metaphors, you'll probably have lots of tasty ham sandwiches in the interim.

* * *

By the by, Kenneth Hite is currently moving his entire library . . . a gargantuan task I fail to envy. Hopefully he'll be back soon with more columny strangeness.

And, as previously foretold, I'm at Dragon*Con this weekend (hopefully; I'm writing this ahead of time, and it's not impossible that I might in fact be [stuck on the side of the road](#)). So if you don't hear back from me in a timely manner, now you have at least two theories as to why.

And, since I haven't mentioned it in a while, if you have questions, comments, complaints, or compliments, please feel free to drop me a line. You can catch my eyes either [by email](#), over in the [Pyramid message boards](#), or in the [chat room](#). (I usually hang out there most evenings. But not for a few days, 'cause, y'know, I'm at Dragon*Con.)

The Lieutenant and the Emblazoned Champion

Two Archetypes for the *Unknown Armies RPG*

by Dylan Craig

The Lieutenant

Il duce's most trusted goodfella. The ace's wingman. The warrior's shield-bearer. Who is that figure standing alongside every holder of power? Why, it's the Lieutenant. Loyal, intelligent, and reliable, the Lieutenant is an asset on all counts to the one lucky enough to command their services. But one important feature sets the Lieutenant apart from other, similar, Archetypes: ambition. history is full of aspiring figures who turned on their masters; Lieutenants whose careers begin to outshine their boss' reign might just turn out to be the wielders of the knife which ends it.

In game terms, the Lieutenant cannot exist alone; she must be an associate of an avatar of another Archetype. A Lieutenant may only associate with one avatar at a time, although if this person dies or disappears, the Lieutenant is free to pick another avatar to work alongside -- irrespective of which Archetype that avatar embodies. For instance, a Lieutenant working alongside an avatar of the Masterless Man could transfer her allegiances to another Masterless Man, an avatar of the Necessary Servant, or any other avatar she felt capable of serving, once her original patron was out of the picture. Any restrictions on avatar choice should be as a result of the Lieutenant's personality; hence, a Lieutenant with a basically philanthropic outlook would have a hard time justifying an allegiance to a Dark Stalker, and would no doubt have to deal with the Self checks that would result, but there's nothing in the Lieutenant avatar itself to prevent it.

When chosen, a patron must have an avatar skill at least 10 points higher than her associate's Avatar: The Lieutenant skill. The process of offering service is outlined below. If the patron accepts, then from that point on, every point that the patron gains in their avatar skill is mirrored by a corresponding increase in their Lieutenant's avatar skill. In addition, the Lieutenant can draw on the patron's channels as if they were her own. The Lieutenant is subject to all the constraints, taboos, and benefits of their patron's Archetype as well as their own, and uses their Avatar: The Lieutenant skill as if it were an avatar skill of the same type as their patron's. If a patron loses points in her skill, the Lieutenant's skill doesn't drop; similarly, if the Lieutenant's behavior conflicts with her assumed Archetype, the patron's avatar skill doesn't suffer. The only direct relationship is the increase detailed above. The only time that a Lieutenant can operate against constraints of her assumed Archetype with impunity is when it comes to their role as an assistant; Lieutenants never lose avatar points for obeying orders, even if they are Lieutenants of a free-willed Archetype's avatar.

All fine and well. The complication occurs when, or if, the Lieutenant's avatar skill ever reaches a point where it is within ten points of her patron's. At this point, the Lieutenant must choose between remaining loyal, in which case her avatar skill drops to 10 points below their patron's again, or deposing, killing, or otherwise permanently removing their patron from the equation, in which case she assumes her patron's avatar skill and leaves the path of the Lieutenant forever. Note that Lieutenants inherit their patron's avatar skill level even if it was lower than their own at the point of betrayal. On the positive side, a Lieutenant is always aware of the relative avatar skill levels of herself and her patron; Lieutenants may limit their own skill increases so that the 10% cap is maintained, "out of respect to the boss," although they are powerless to prevent a drop in their patron's avatar skill from breaking this barrier.

A Lieutenant who serves a Godwalker has it somewhat easier. She don't have to worry about the 10% cap anymore, and if her patron ever achieves ascension, and her own Avatar: The Lieutenant skill exceeds 91%, she ascends to the Clergy alongside them, as the new Archetype of the Lieutenant. The character of the Archetype is set by the overall tone of the term of service of the avatar who last ascended to the role. Hence, a Lieutenant whose style of assistance involved slavish obedience to her patron would make for a very different Archetype to one who was treated as an equal.

Taboos: The Lieutenant cannot act against her patron's interests. All orders must be obeyed to the letter; however, unless directly specified, the Lieutenant may decide for herself how exactly to achieve a goal set by their patron. If a Lieutenant is ever ordered to do something in a manner which would break the taboos of their patron's Archetype, and loses points in her own avatar skill as a result, their patron loses twice as many points for giving the order. Any direct confrontation of the patron (such as an attack) immediately causes the Lieutenant's avatar skill to drop to zero.

Symbols: The tall candle, the shield, the practice of carrying another's weapons, and the forearm-grip handshake are all symbols of the close bond formed between a Lieutenant and her patron, as is a position on someone's right hand.

Significant Avatars in history: Macbeth provides one of the most well-known examples of the double-sided power of the Lieutenant, a man whose progress along the path of the Archetype of the True King (and a little help from the witches) led him to murder King Duncan and take his place, with disastrous results when he proved incapable of sustaining the demands of the role.

Channels

1-50%: A Lieutenant gains the ability to impress a potential patron with her competence. Any roll to convince someone to take on the Lieutenant's services may be flip-flopped; if the roll could already be flip-flopped as the result of some other effect, then the roll can be made on three dice instead of two, and the best possible result assembled from the result. Furthermore, the patron may not dismiss or be coerced into dismissing the Lieutenant unless they are proved disloyal (which in turn, could only happen if the Lieutenant had acted against her own avatar and lost points as a result).

51%-70%: A Lieutenant always knows when her patron wishes her presence, and gets a vague idea of their location (down to a few square miles) and basic mood when such a summons is issued.

71%-90%: A Lieutenant may reroll any one skill check, and take the best result, per mission in the pursuit of a direct order issued by her patron. This ability can be held in reserve until it is needed, but cannot be used more than once in a day.

91%+: As well as drawing on her patron's channels, a Lieutenant with this level of power may also draw on their skills. Any time that a Lieutenant fails a skill roll where her patron would have succeeded, she may immediately reroll the dice. If the result falls between her skill level and her patron's again, it is counted as a success.

Example: Sharon is an avatar of the Lieutenant whose patron, Grizzled Luiz, is an avatar of the Executioner. When their association begins, Sharon has an Avatar: The Lieutenant skill of 31%, and Luiz has an Avatar: The Executioner skill of 61%. As a result of their association, Sharon is able to draw on the first channel of the Executioner Archetype, and flip-flop her combat rolls against any target who has been named by a figure of authority for Luiz (Luiz doesn't get to nominate the targets himself; Sharon has to accept the limitations of his Archetype in this regard). After their first successful joint hit, Luiz' Avatar: The Executioner skill rises by 2%, to 63%. This results in a corresponding increase of 2% for Sharon, on top of any Experience Points she wants to spend. Sharon won't be able to channel the second level powers of the Executioner (the deaths-head stare) until her Avatar: The Lieutenant skill reaches 51%, even though Luiz can. A few dozen hits later, Luiz starts to act against his type, and his Avatar: The Executioner skill drops from 81% to 75%. This puts it only 4% away from Sharon's Avatar: The Lieutenant skill of 71%. Sharon now faces a tricky decision: either she accepts a drop in skill level to 65%, and lose access her 71%-90% channels, or she cooks up a plan to whack Luiz and take over his Avatar: The Executioner skill of 75%.

The Emblazoned Champion

Since the earliest times, warriors and crusaders have buckled on some significant piece of uniform, equipment, or ornamentation before going into battle. Thus inspired and protected, some went on to achieve superhuman successes -- whether against mundane foes or the minions of an opposing champion. This power is still available to those who would walk the path of the Emblazoned Champion today, although the tabard and silk ribbon have been exchanged for

tights and a mask, and the awed crowds of unwashed serfs now crowd the signing tables at comics conventions instead of lining the muddy fields of honor.

Anyone who follows a strict code of behavior and wears an identifying uniform while doing so may channel the power of this Avatar. However, if the uniform itself is fairly common (such as a police officer or fireman's uniform), it must include some distinctive feature which sets the wearer aside from others who wear the same uniform. This item is usually somewhat incongruous; masks are powerful items because they single out their wearer while simultaneously rendering them anonymous. Other appropriate items would be armbands, hoods, facial markings, piercings, or tattoos, unusual equipment ("A bellhop with a sword?"), and so on. If the costume itself is fantastical, these restrictions do not apply, as the wearer is sufficiently distinctive without requiring additional symbols of identification. Whatever the case, those who channel this Avatar may only do so while in costume or bearing (wielding, displaying) their totemic identifiers. At all other times, the powers bestowed by their Avatar channels are closed to them, although they still register as an Avatar for the purposes of astral sight or scrying, and still gain any passive or peripheral benefits of such status.

The second vital quantity for Avatars of this Archetype is a Code. A Code must be somehow based on a character's obsessions to achieve or allow the degree of devotion that Emblazoned Champions must represent. A Code might take the form of a long-term goal ("Bring chaos to the East Side"), required responses to certain phenomena ("Apprehend criminals whenever they are encountered"), abstract constructions ("Be just in all that you do"), or (as is usual) a mixture of these types. An Avatar's Code may grow in complexity as she increases in power, but it may never be disobeyed while in uniform. Just as an Emblazoned Champion gains none of their powers when "off duty," she suffers none of the burdens of their role. Disobedience to the Code renders a Champion powerless in a similar way to an adept who breaks a magickal taboo; the effect can be reversed, but only by devoting effort to their Code and to ritual actions designed to regenerate their power.

In fact, the similarity between adepts and Champions goes a step further. Because the Archetype demands and rewards action rather than simple obeisance from those who channel it, its Avatars must accumulate and spend "charges" much as their magickal counterparts do. These charges are also divided into minor, significant, and major charges. Some of the powers granted by a Champion's channels (which are called focused powers) require the expenditure of charges; others (which are called intrinsic powers) simply require that the Avatar possess one or more charges of a certain level, and operate more or less permanently. All powers are considered to be focused, unless they are upgraded to intrinsic status, as detailed below.

Avatars of the Emblazoned Champion who are also adepts can use the charges gained through these action to fuel their spells, but may not use magickal charges to fuel their Avatar powers. The activities which accumulate these charges are the same for all Champions, and are as follows:

Minor Charge: Further the standing of your Code in society. Lawful Champions might take steps to apprehend a fugitive or do a good deed; malicious Champions might spend an evening stalking a victim, perform a criminal act, or place another's life in jeopardy.

Significant Charge: As above, but the action must be opposed by opponents who do not subscribe to your Code. These opponents must outnumber you and any allies you have; the charge is only gained if you overcome their resistance and succeed in your intentions.

Major Charge: As above, except that the opponents you and any allies face must include another Avatar of the Emblazoned Champion who follows a different Code to you, and you must overcome this person single-handed, without any assistance.

Symbols: Surcoats, heraldic devices, masks, titles of rank (such as 'Captain' or 'Doctor'), and bright colors are all symbols of the Emblazoned Hero.

Taboos: While Emblazoned Champions do not lose charges for disobedience to their Code while out of costume, periods of inactivity weaken their connection to the Archetype. An Avatar who spends more than a few days out of costume will lose points in his Avatar skill. If this causes them to lose access to a particular channel, they cannot use

any of the powers that they were granted through that channel until they regain access to that channel. In this case, they also lose any charges that they no longer have powers of the appropriate level to use.

Suspected Avatars in History: Roland ("Orlando Furioso" -- Roland the Furious), who held the pass at Roncesvalles against the Moorish armies; Sergeant Alvin York, who performed a similar (and more successful) defense against the Germans in World War 2, and several other war heroes are the most clear candidates for being Avatars of the Emblazoned Hero.

Channels

1%-50%: Select 1 minor power from the list below. This power may not be made intrinsic, and can only be used by spending charges in the normal way.

51%-70%: Select 1 significant power from the list below, or gain a new minor power and upgrade an existing minor power.

71%-90%: Select 2 new significant powers, or two upgrades to your existing powers. Also, nominate a particular group, nation, or organization as enemies; you gain an extra significant charge whenever you defeat representatives of this group in pursuit of the goals of your Code.

91%+: As above, but all damage inflicted on you by members of this group is reduced by one grade; firearm-type attacks are thus treated as melee-type attacks, and melee-type attacks never cause more than 1 point of damage. In addition, every time you gain a charge through furthering the standing of your Code, you gain another charge of the next lowest grade for free.

Powers

A list of the most well-known powers available to Emblazoned Heroes is detailed below. GMs and players are likely to want to expand this list; inspiration is as close as the nearest copy of a superhero RPG. It is crucial to remember, though, that this is, after all, an *Unknown Armies* game; because avatars of this Archetype are drawn from people who were dressing up in superhero costumes and following bizarre codes before they started to manifest any powers, the PCs are as likely to meet Captain Golden Arches and her sidekick, Pederast Man, as they are to encounter a more standard lycra-tights-do-gooder.

Energy Projection (minor): Choose an energy form (heat, cold, telekinesis). Maximum range of 15 meters; if used offensively, does damage like a melee attack. Can also be used to levitate light objects (less than 10 kilograms). Manipulation or delicate work is handled using your Avatar: Emblazoned Hero skill or some other appropriate skill (such as Juggling or Welding), whichever is higher. Energy blasts can only be dodged if the target's Dodge skill is higher than your Avatar: Emblazoned Hero skill, and even then only on a successful Dodge roll.

Gadgeteer (minor): You may create minor gizmos using the Mechanomancy rules as a template, rolling on your Avatar: Emblazoned Hero skill to determine success. If you already have an appropriate skill for building such items, you may flip-flop it every time your Gadgeteer power is activated. Alternately, if you are already a Mechanomancer or have the ability to flip-flop gadget-building rolls, you can now roll three dice for such tasks, and put together the best result possible whenever this power is in effect.

Toughness (minor): Every time you activate your Toughness power, you gain 10 Wound Points, which last ten minutes. At the end of the ten minutes, you lose these points, so if a fight leaves you badly injured, it would be a good idea to seek medical help before the reserves of endurance provided by this power run out, leaving you dead on your feet.

Leap (minor): You gain the ability to leap massive distances. Every time this power is activated, make a Body roll. If successful, you travel ten meters, plus a number of meters equal to the sum of the dice. If you fail, you only travel as many meters as the lower of the two dice. In either case, halve the distance if you are jumping straight up or didn't take

a run-up. In-flight acrobatics and treacherous landings are handled using your Avatar: Emblazoned Hero skill or an appropriate Speed skill (such as General Athletics), whichever is higher.

Enhanced Skill (minor): Every time this power is triggered, you gain a +10 shift to all rolls on the Skill you nominated when you chose this power. The bonuses are cumulative, and last one minute.

Flight (significant): Allows speeds of up to 100 kph, plus your Speed attribute. Aerial maneuvers are handled using your Avatar: Emblazoned Hero skill or some other appropriate skill (such as Acrobatics), whichever is higher. You can fly for as many minutes as your Body attribute before having to touch down and spend another charge.

Mind Control (significant): Handle using the rules for similar adept spells; generally, you have to roll higher than your target's Mind (or Soul) and under your Avatar: Emblazoned Hero skill (or another appropriate skill such as Hypnosis, whichever is higher) in order to succeed, with shifts of -10, -20, and -30 for trying to simultaneously affect successively larger groups of people.

Invulnerability (significant): Like Toughness, Invulnerability grants a reserve of Wound Points, but these are treated as a "buffer," and don't disappear after ten minutes. Also, each use of the power grants 20 Wound Points instead of 10.

Enhanced Attribute (significant): Every time this power is triggered, you gain a cumulative +10 shift to all rolls on the Attribute you nominated when you chose this power. The bonuses are cumulative, and last one minute.

Upgrades

Powers may be bundled with upgrades when they are first selected, or upgraded at a later stage when a new channel is attained. In either case, each upgrade increases the level of charge required for the use of the power by one level, so that a minor power with a single upgrade functions like a significant power, and requires significant charges.

Intrinsic: All the powers listed above are listed in their focused form. Selecting this upgrade means that you don't need to spend a charge of the appropriate type to power the skill; you can use it as often as you like (within reason), as long as you're carrying a charge of that level.

Enhanced Effect: Kicks the output of the power through the roof. Gadgeteers may now create significant artifacts; Energy Projection does firearm-style damage or levitates up to 500 kilograms; the maximum distance of a Leap and the maximum speed of Flight are multiplied by five; enhanced skills or attributes get a +30 shift, Toughness becomes Invulnerability, and Invulnerability becomes literal invulnerability. Mind Control rolls against a single target may be flip-flopped (or rolled on 3 dice if they could already be flip-flopped), and the power can be used against small groups (as many targets as the first digit of your Avatar: Emblazoned Hero skill) with no negative shift.

Enhanced Duration/Mastery: Easy enough. Any power with a duration now has five times that duration; any instant/once-off-type power (Gadgeteer, Energy Projection, Leap) can be used twice in the time it would usually take to do it once -- hence, two leaps or energy bolts per round, or two gizmos in the time it would take to build one.

Restriction: Not an "upgrade" as such, but a feature of a power which serves to limit its effectiveness and thus brings it down a notch in terms of the type of charge needed to make it happen. This restriction prevents the power from working at all, and should occur in about 50% of cases. Suitable examples might be: unable to use the power in daylight/at night, unable to use the power on living matter, and so on. Alternately, any restriction which mimics another upgrade, but in reverse (restricted effect, restricted duration etc.), is fair enough. Such a restriction must be in effect constantly; if the use powers with restricted mastery (which take twice as long to accomplish) are interrupted in midstream, they fail and any charges spent on powering them are used up.

Epic Fantasy Campaigns On Low Magic Worlds

by Brent Knowles

An epic fantasy campaign must involve the players, must make them care about their characters, and must enthrall them with a moving story. A gamemaster should not overwhelm the players with magical artifacts, nor constantly confuse them with newly designed monsters. Players will get more out of a solidly designed campaign with a rich story.

Magic-heavy campaigns have a tendency to rely too much on "things" and not enough on the story, meaning that the only way players are interested in the campaign is if they continue to get new items and hoards of gold (a.k.a. a Monty Hall campaign). Eventually the campaign becomes unbalanced and the players stop having fun. A story-heavy campaign, on the other hand, can keep the campaign world fresh. A gamemaster may safely introduce new story elements into a campaign without overbalancing the game; the same cannot be said for adding new magical items. This article is a brief summary of techniques that may be used to run a low-magic, story-heavy campaign.

First, the GM must establish the low-magic world, explaining its eccentricities, and its uniqueness. Then the gamemaster develops the overall story, deciding on a Hero, the Hero's Companions, and a Villain. Next the prepared GM will decide the frequency and power of magical items. This article includes a few suggestions for making "unique" magic items that will grow as the characters advance in power. Finally, the GM must learn how to carry the story, supplying the appropriate twists and turns to make the story believable and interesting. With these techniques and a little imagination, any GM will be able to create epic campaigns.

The World: Where Has The Magic Gone?

This is the first question that needs to be answered in any low-magic campaign. The answer chosen here will determine the nature and the rules of the campaign world. Did magic-draining creatures swarm the lands, destroying wizards and devouring artifacts? Did a Hero of long ago tear the heart of magic from the world, banishing all sorcerers, good or evil? Maybe the world has never known magic.

In a world once heavy in the magical arts, there might be rare magical items scattered throughout the land, ranging from potions of healing to the most powerful of artifacts. Few know how to make new magical items, thus making those items that exist more valuable. Perhaps in this world the use of magic -- and hence the possession of magical items -- is illegal, punishable by death. This sort of society would force magic onto the black market.

In a low-magic world, magical items should never be randomly determined; the gamemaster should always place them with forethought. A potion of healing on the third level of a dungeon? Why? Perhaps a true Priestess had made her way there, only to meet with death at the hands of a mysterious beast -- the potion laid to rest with her. When the players do find magical items they will be careful to preserve them until they are needed. If the properties of the item have been well planned out, its use will almost be predetermined.

The Hero

As roleplaying is a group event, seldom is it that a campaign revolves around a single individual, although this is most often the case with the fantasy literature from which roleplaying evolved. However, a campaign that does concentrate on an individual as the protagonist allows the GM an opportunity to "write" an epic story, one full of emotion and excitement. Not only will the player playing the Hero enjoy herself more, but so will the other characters, as they find their roles and their lives intertwined with that of the Hero. The campaign, when played through to its conclusion, will be a thing of beauty and one your players will never forget.

There is no True Way to start a campaign, but a proven technique, in fiction and in fantasy roleplaying, is to start the

players in the action, right after a major, life changing moment has occurred. The Hero's family has been murdered, her kingdom sacked, or the Hero begins a long quest to find the secret about her past. The odds are stacked against the Hero.

Such a scenario gives a player something to work up from. In the beginning, the Hero merely seeks revenge, or knowledge of her family, or some other clearly defined ambition. As the campaign progresses she realizes that particular persons, organizations, or creatures are against her, or are performing the Great Evil. She must assemble a trustworthy crew of comrades -- warriors and priests, rogues and wizards -- who will help her to overthrow the Great Evil.

The Hero's life should be the central focus of the campaign. This is not to say that the GM should write all the adventures to be exclusively tailored to the Hero. At times the gamemaster will need to write sub-quests involving the other characters. These may be stand-alone adventures, with or without relation to the main plot.

The Companions and Side-Adventures

(or, Other Classes and the Hero)

Having one character as the central protagonist is great in novels and can be used effectively in campaigns as well. The key thing to note is that the other players want to have fun as well, and want to feel involved in the campaign. The easiest way to do this is to side them with the Hero against the Villain. Make the entire party despise or fear the Villain (or at least be extremely curious as to the true motivations of the Villain).

Perhaps a Ranger joins the Hero's cause and helps her thwart one of the Villain's plans. The Ranger intends to return to his forest grove after one adventure. However, on his return he discovers the forest burning and now the party must help him save it. They may even discover that the Villain's minions were behind the fire, taking revenge for the Ranger's involvement against them. Now, regardless of his like or dislike of the Hero, the Ranger shares a common enemy with her.

In a group setting it is difficult to focus on just one character to be the Hero. The GM should give all party members individual adventures appropriate to what they enjoy, but keeping in mind that the larger framework involves the Hero and the Hero's story. The rest of the party is the supporting cast for the Hero's story. Fighters may follow the Hero for glory, thieves for the potential loot. Due to special considerations inherent in a low-magic world, mages and priests need "unique" reasons to journey with a Hero.

The Mage

Behind the flaps of a blue tent, the Hero meets with a man known simply as the Seer. The Hero asks, "I seek the way to the Gnarled Grove. What words have you to guide me?"

The Seer, a wizened old man half-hidden in the folds of a black velvet robe, speaks quietly, making the Hero lean forward to hear the words: "Seek first the Forest Wizard, in the hills to the North of Thesan. He you must trust to find the true Way."

"A wizard?" the Hero makes no attempt to hide her disgust, "I carry no great liking of them!"

"To open the Way you must abandon your old notions and accept the Wizard, as both companion and friend. Else your family's death means nothing and the Way is lost . . ."

Thus a wizard can be introduced to the group, overriding any campaign-created restrictions that might make other characters reluctant to travel with one who holds sway over the arcane arts. They may not want to have a wizard join them, but they will accept him, if it seems to be the only route to victory. Still the player playing a mage must understand that this class has certain restrictions in a low-magic campaign.

It should be exceedingly difficult for mages in the low-magic campaign to learn new magical spells. Certain powerful spells should require the wizard to embark on dangerous adventures to learn them. That said though, the magic available to the mage (even that of the lowest levels) should have a greater impact than magic in a standard campaign.

Example: A band of brigands intercepts the party while travelling through a narrow canyon. The party is surrounded and outnumbered two to one. But as luck would have it, Relonar, the party mage had found a scroll of Sleep several weeks back after the party defeated Baron Mitchel. Relonar had copied the scroll into his spell book, but until this moment hadn't needed to use it.

Relonar, nervous about whether the spell will work, casts it. Three of the men fall to the ground and the others panic, never having seen such a display of magic before. They leave their comrades behind as they flee.

In a standard fantasy campaign the magic would have been just another part of a typical combat encounter, much as swinging a sword or firing an arrow is. In a low-magic campaign, magic use of any kind should put at least a measure of fear into the hearts of those who see it. Imagine the above encounter from the point of view of the brigands: they find a group of wanderers (easy pickings!) and then the guy in a funny red robe mutters some words and waves his hand about. BAM! Three of the group lie in the dust, and those who didn't fall have no idea whether their comrades are alive or dead. They don't plan to wait and find out.

The growing need for the magician in the party to learn new spells would easily lead the party through a series of adventures, supplementing the quests undertaken by the Hero, and those of the other party members.

How can a mage join the Hero?

- The mage is considered necessary for either an immediate quest the Hero is embarking upon or for the campaign in general.
- The Hero witnesses an attempted execution of a wizard and intervenes, thus gaining the loyalty of the wizard and the responsibility to protect him.
- The mage joins the party under disguise, pretending to be another character class and only reveals his powers when the party is in mortal danger.

Priests and Druids

In the low magic world, priests and other "miracle workers" should be given the same powers as in a normal campaign. The only difference is that spell casting clerics should be looked upon as somehow different from the average clergy (which should have little or no spell casting ability). To some in the cleric's church they might be considered as avatars, saints, or blessed individuals. To others they might seem a threat to the traditional power structure of the church and thus considered expendable.

Either way a cleric will most likely be an outcast from the rest of society (much like a mage) and quite possibly an outlaw, hunted by the traditional church.

How can a cleric join the Hero?

- A boyhood friend entered the clergy a couple years ago and hasn't been heard from until he stumbles upon the Hero's door, badly beaten and exhausted. During his time with the church, his powers were revealed and he was pronounced a warlock. He barely escaped with his life, and the church is hunting for him now.
- One way to get enchanted weapons may be to have a cleric bless them. The party might seek out one such Holy Man. Upon seeing the party, the Holy Man has a vision, and realizes his true place is with the Hero.

The Villain (and minions)

There are a couple tactics to use in introducing enemies to the party. In the beginning keep it strictly to humans and maybe minor humanoids (goblins, orcs, and so on). Again, the back story will determine what is appropriate. In a

duchy where non-humans have not been seen for centuries, it will be unlikely to stumble across even goblins. The return of such creatures would reveal a great evil at work.

Secondly, don't shy away from having the party meet creatures far too powerful for them to beat in combat -- if it serves the story. What if, when the party is low in power, they run into a troll? Keep combat down to a few rounds and then have the troll retreat, the Villain calling him elsewhere. This will not only display the power of the Villain, but also her apparent disregard for the threat the party presents to her. It also makes the player's realize that combat won't be the only way to "defeat" powerful adversaries in your campaign.

When the party can't defeat certain creatures in standard combat, introduce other opportunities to interact with them. A necessary passage through the dangerous Forests of Ever might require tricking a band of ettins into escorting the party to safety. An all-out battle would result in the deaths of the entire party, whereas trickery might keep the party alive and further their own interests.

If you have one major Villain in the campaign, make him (or her) powerful. Have the party quake at the thought of ever meeting her in combat -- yet they know that one day they must. Have the party walk through villages massacred by the Villain's armies, meet families torn apart by the Villain, and learn of the terrible evils planned by the Villain. Gradually as the campaign grows let the party have small victories -- at a cost. The party has just stopped the train of supplies leading to the Villain's main army? Have the Villain strike back with an attack against the family of a party member.

Also, if appropriate to your campaign, make the Villain's character sympathetic, so that one or two of the players might feel sorry for the Villain. They might learn of the Villain's past and the cruel circumstances of fate that forged her into the monster she now is. The sympathy should not interfere with the party's goal of stopping her, but it might add an emotional undercurrent to the final combat.

A word about fairness: if the players are to be restricted in the amount of magic items they have, and the spells they have access to, then so should the monsters, NPCs, and Villains that the party encounters. Your players will quickly become angry if it seems every other person in the world has access to "rare" magical items and spells except for themselves.

Evolving Magical Items

Magic items should be rare, for both the players and the non-player characters. When the party is relatively new, even finding a healing potion could be considered a major haul. Yet such a heavy restriction limits the sense of wonder the players might have, in regards to discovering new and exciting items. One way to handle this is to introduce one or two items to the party that improve as the characters gain levels.

Perhaps the Hero is a fighter and receives a hereditary shield once he reaches second level. To begin with, the item appears normal, even though the party wizard detects "hidden" enchantments upon it. As the Hero gains levels though, the shield becomes more powerful, its enchantments finally revealed.

The rate of increase that the item receives abilities should be balanced by the gamemaster, and should be specific to the campaign. The gamemaster also has to decide if only the character that received the item can benefit from the enchantments, or if others may wield the item as well.

Some tips to keep in mind when using magic items in a low-magic campaign:

- Make magic items useful to advance the story, not just to aid the party in combat. Perhaps the potion of invisibility is the only good way to sneak into the castle, or the potion of speed necessary to win a footrace against an "impossible to beat" monster.
- If you introduce powerful magical items into the campaign make sure that they have charges and/or a duration for their special abilities. You might give a fighter a long sword with powerful combat abilities, but limit the sword such that there is a 10% chance each battle that it will shatter.

Suspense and Twists

The whole nature of a campaign of this sort is to slowly reveal the world . . . both its magical content and its story. The Villain need not be introduced until the Hero has risen in power. Perhaps there is a false Villain, and it later turns out that the true Villain is someone else, someone completely unexpected. Unveil the interesting details of the world like a suspense novel, and make the players want to come back for more. For example, instead of throwing every 'interesting' monster at the players in the first few sessions, start with a staple of human and humanoid creatures. Only as the players rediscover the lost magical areas of the world will they encounter the more nightmarish monsters.

A low-magic campaign gives the gamemaster the opportunity to slowly unveil the magical workings of the world. The very fact that the world has little magic speaks volumes about the world's political and social infrastructure. Hundreds of adventures might be spawned from the simple premise of a low-magic world. Nations may war with each other for the few artifacts that remain in the world, governments may topple when priests use their abilities to challenge dictatorships, and wizards might return to the world, bent on gaining revenge for eons of exile.

A major problem with a campaign based upon one character (like the Hero) is that the character might not survive. Perhaps the young Hero's party is overwhelmed by a band of ogres and thanks to some bad dice rolls the Hero is slain. The gamemaster might "force" the party to resurrect the Hero, or have a helpful Healer come wandering by to help, or fudge rolls to keep the hero from dying. But these are just a few options. Maybe it turns out that the Hero was not the True Hero that the legendary seers foresaw. Perhaps the death of this Hero allows a new Hero to finish the quest. Maybe it is now up to the rest of the party to carry on the Hero's quest.

Conclusion

What would compel a GM to run a low-magic world such as this? Perhaps, the current campaign is stale, the players have fought every creature in all the source material (and memorized their statistics), or everyone just wants to try something different. Now it is time to focus on the world and the story. Use the monsters and magical items to heighten the story . . . not to carry it.

This kind of campaign won't appeal to every adventuring group. Those who constantly need to discover powerful items and fight thousands of monsters probably won't enjoy a low-magic campaign. But any player who thrives on a good story and great character development will love a well ran campaign of this sort.

The major emphasis of this type of campaign is story. A good campaign world should feel alive to the players, much as the words of Tolkien made his world live for his readers. Spawn your adventures from your world and make the players feel like they both influence the world and that it influences them.

Adventuring Hooks

- The Hero works for the Council of Non-Magic and must stop a crazy priest from resurrecting the Eight Gods of Magic. Eventually the Hero realizes that the crazy priest is right -- it is necessary to resurrect the gods to defeat an even greater evil that will soon threaten the land.
- In a world where magic has never been known, a Gate opens and a wizard arrives. He has fled from a world overrun by evil. He has come to this new world to warn its people and prepare them for an evil they fear to understand. An evil birthed by magic, an evil that can only be defeated in turn by the same magic that created it.

Allergy: A New Disadvantage for GURPS

by Andrew J. Sheldon

Tired of the same old disadvantages for your PCs? Is your world populated with Bad Tempered Paranoids with Combat Paralysis? Are you weary of playing pathetically old (or ridiculously young) "warriors" whose Stubbornness and Stuttering make them the pariah of every campaign? How about that Fat Eunuch with Gigantism you tried to pass off as a wizard?

Try these optional rules for allergies. Lots of folks have them, and you can be very creative with both the allergen and the response. You GMs could have lots of fun tormenting the PCs. Your everyday mold allergy can be a serious disadvantage . . . if you're trying to sneak out of a cave filled with sleeping Orcs and their stinky sweaty clothes, all just waiting to send your nose into sneezing fits! Or you're allergic to the fragrance they put in perfumes and hair spray. Just as you're about to kick your Sex Appeal into action with the heiress, to get her to spill the combination of the wall safe . . . you get a whiff of her perfume! Your face begins to swell, your nose starts gushing, and your eyes run like you've been slicing onions!

Sounds so much more interesting that your typical Berserker PC with Dwarfism and Megalomania, doesn't it?

Allergy

Variable

You are allergic to something. Allergies come in all shapes and sizes. They are limited only by your imagination and playability in the eyes of the GM. They may include: Bee-sting/insect venom, fruit/nectar/nuts (specify fruit/nuts or family of fruits), chocolate, pollen, wool, dust, mold, dogs, cats (usually cat dander), horses, synthetic fibers, natural fibers, certain kinds of wood, mutton, alcohol, mana, metals, plastics, hair spray, fragrances (colognes, perfumes, etc.) And so on. It is an extremely rare condition but some people are actually allergic to light. Other "rare" types of allergies: strong magnetic fields, certain types of radiation or other energy waves. (GMs, handle this with care).

Effects can vary widely, so be creative. Possibilities include: sneezing, itching, swelling, hives, boils, loss of voice, stroke, blindness, deafness, loss of muscle control, loss of sphincter control, vomiting, rash, impotence, gastro-intestinal distress, cardio-pulmonary distress, anaphylactic shock and more. The more severe the reaction, the greater the point bonus.

The severity of the reaction determines the basic point bonus and the HT roll to resist. The four different levels of Allergy are Minuscule, Minor, Major, and Severe.

Minuscule: You have a minuscule but annoying reaction on contact or ingestion or inhalation with the reactant (e.g. eating chocolate makes you sneeze). You are at no HT modifier to resist. Effects last for 2d turns. *-1 point.*

Minor: You have a minor reaction to the allergen. Examples include mild rash, limited nerve inflammation (it hurts to touch the affected area), prolonged sneezing, headache, or minor swelling. You are at -1 HT to resist. If you miss your HT roll and a limb is affected, any use of that limb is reduced. For arms and hands, any action requiring a DX or skill roll will be at -2. If a leg is affected, Move and Dodge are reduced by 2. Facial reactions reduce vision rolls by 2, or may even hamper your ability to speak clearly. Others may be put-off by your swollen and puffy face, so expect a -1 Reaction from people meeting you for the first time. Effects last for 1d minutes. *-5 points.*

Major: You have a major reaction to the allergen. Examples include gastro-intestinal discomfort (bad, painful gas and bloating), minor nerve inflammation (it hurts to use the affected body part), hives, or major swelling. You are at -2 HT

to resist, and are -4 on DX and skill rolls and -3 Move/Dodge while under its effects. Facial effects could include complete closure of one or both eyes (resulting in temporary blindness!). Any visible hives or swelling will induce a -2 reaction from people meeting you for the first time, and -1 from people who already know you. Bad gas will also get you a -2 reaction! Effects last for 2d minutes. *-15 points.*

Severe: You have a severe, life-threatening reaction, like cardio-vascular or gastro-intestinal distress, anaphylactic shock, or major nerve inflammation (it hurts to live). You are at -5 HT to resist. If you fail your roll HT roll by more than 3 you will fall unconscious. You will die in 3d minutes unless you get medical attention. If you fail by 2 or less, you will be at -6 for *every* action you take, and your Move will be reduced to 1 for 3d minutes! Even if you make the roll, you will be at -2 for all DX and skill rolls for 3d turns. *-15 points in TL7+, -20 for TL6.*

Note: in TL7 and above, medicines exist to counter the effects of even the least severe allergies (e.g. bee sting kits, antihistamines, etc.). Above TL8, it's GMs discretion whether to even allow allergies as disadvantages or not due to advances in genetics and medicine.

Rapid Healing will cut in half the duration of all allergic reactions. Immunity to Disease will not. In fact, Immunity to Disease will increase the severity of your reaction, since allergic reactions are an immune system response! Immunity to Disease bumps your reactions to the next highest level of allergy. If you take Severe Allergy and Immunity to Disease, you'll be rolling at -10 HT to resist, and if you fail at all, you're dead in 3d seconds barring immediate medical attention available only at TL7+.

A Critical Miss on your HT roll bumps up the severity of your reaction by one level for that incident only. For those with Severe Allergy, a Critical Miss means death.

If your GM will allow it, you may add further realism by the use of modifiers. Modifiers would not be available for minuscule or minor allergies, but fully applicable to major and severe ones.

Modifiers

- If the substance is very common, the disadvantage is worth an additional *-5 points.*
- If the substance is uncommon, take no additional points.
- If the substance is rare, *+5 points.*
- If it is possible to avoid contact (e.g. not eating the Salmon Mousse), *+5 points.*

Examples:

- Gorgor the Terrible, human tank, is allergic to spider venom. Major Allergy (Spider Venom): -10 points. Spiders are common; you can find them anywhere, anytime, providing an additional -5 point bonus. If bitten, the venom will cause Gorgor's skin to swell and get extremely tender in the affected area. He would lose his effectiveness with his greatsword. Spiders are usually very small and hard to see. Gorgor might not even notice one is inside his plate mail until it's too late. Total value for Gorgor's Major Allergy: Spider Venom: -15 points. (This particular allergy might go well with Arachnophobia . . .)
- Karl "The Glove" San Giacomo, bag man for the Carpeccione family, is very allergic to peaches. Severe Allergy (Peaches): -15 points for TL7 (Death unless treated). Peaches are uncommon -- you can only find them in certain temperate zones at certain times of the year, subject to GMs approval -- no additional bonus, but when you see them, you don't have to eat them (unless you really really love them, like Karl, in which case make a Will roll). Ingestion causes instant constriction of Karl's air passages and blood vessels (anaphylactic shock), for which his TL7 doctor has provided an inhaler . . . if he can get to it quickly enough. Total points for Karl's Severe Allergy (Peaches) is -10 points for TL7 (Death or medication). If Karl lived in TL6 or less, it would be Death by Peaches: -15 points. In any case, Karl would be smart to just avoid the fruit. Of course, if he didn't know there was peach nectar in that fruit punch at "Boss Man" Carpeccione's daughter's wedding

It is possible to be allergic to several different substances, or to a family of substances. Each allergy must be bought separately. Allergies can only be "bought off" in TL8+, by either medicine or genetic tampering (once again, subject to

GM's discretion).

So try an allergy for your next character. It'll add a further touch of realism and variety to your campaign and make role-playing a lot more fun. So, take a box of tissues with you. Happy Gaming, and Gesundheit!

Little Fears RPG

Published by [Key 20 Publishing](#)

Written by Jason L. Blair

Illustrated by Andrew Baker, Dimitrios "Jim" Denaxas, Hive, Julie Hoverson, Veronica V. Jones, Bradley K. McDevitt, Nick Wilson & Kieran J. Yanner

144-page 7.5" x 9.5" Soft cover; \$20

Key 20 Publishing's first game is not one for the timid or for those that are easily offended. In setting out to provide a rationale for the disappearance of thousands of children each day in the USA, it deals with the taboo subjects of child abuse, pedophilia, and cannibalism. If these issues are too strong for your sensibilities, then *Little Fears* is not the game for you, and understandably so. You need read no further.

Their unsavory nature notwithstanding, *Little Fears* approaches these topics with a great deal of care. It is clear from both the writing within the game, and from his own Designer's Notes at the end of *Little Fears*, that the author is as equally disturbed as we should be by such inhuman acts.

Little Fears is a game about childhood. Not the childhood seen through the rose-tinted memories held in adulthood, but a game in which all of those unknowns -- the ones you were afraid of and can now rationalize and laugh off -- are real. There are things out there that go bump in the night, and they are out to get you. These are the monsters from Closetland that have been forgotten by almost every rational adult. This is the basic premise of *Little Fears, the Roleplaying Game of Childhood Terror*.

Physically *Little Fears* is an ominously dark little book in an odd format. The writing, laid out against a shadowy background, is generally clear and easy to read, but not without the occasional error. The art is dominated by eerie double page spreads that are reminiscent of the work of Dave McKean. Elsewhere the smaller illustrations try to follow this style, but are not as spooky. A good part of the interior art is too obvious and does not fit the general style of the book. As an aside, the game is perhaps a little over priced for what you get.

In *Little Fears* the characters are ordinary children between the ages of six and twelve. Each day they face the irrational fears to which an adult would apply a far more rational explanation. Such fears manifest from just one place -- Closetland. These monsters do not necessarily come out at night, though they do prefer the shadows, nor do they appear straight out of the closet in your bedroom, though this their preferred means of entry into this world. Although some monsters work to their own ends, most serve the Demagogue, the ruler of Closetland, who is a product of -- and the source of -- childhood fear.

A child is extremely unlikely to face the Demagogue, confronting instead the Seven Kings and their minions. The Kings stand beside the Demagogue, and each governs one aspect of the fears that children are subject to. These are in essence the seven deadly sins, so that we have The Bogeyman, King of Greed; Titania, King of Pride; Rael-Schol, King of Envy; Lamashu, King of Wrath, wife to the Demagogue and mother of Kabaelza, the King of Sloth; Baba Yaga, King of Gluttony; and the Defiler, King of Lust. Many of these are familiar and should perhaps be used to draw the characters into the game, before exposing them to the other Kings. An additional figure, Branxis the Enslaver, who is the Demagogue's right-hand man and sees to the construction of Closetland, brings this pantheon to a total of nine,

and gives us a childhood version of the nine circles of hell.

Each of the Kings (bar the Defiler, who works alone) has their minions and monsters, which they can send to cause fear in our children. This can be a direct manifestation, or something as simple as a tap on the window or noises behind the walls of your home. Worse still, they can take over and influence the behavior of adults and other children to cause more doubt, fear, and uncertainty. Besides a few of the more "normal" monsters such as vampires (which strangely turn to stone upon destruction) and werewolves, there are no statistics given for Closetland monsters. In keeping with a game that has children confronting and overcoming their fears, it is child's own fear score that provides any necessary statistic for the monster itself.

Creating a character is a relatively simple affair; each player has six points to spend on improving the six stats of Smarts, Muscle, Hands, Feet, and Spirit, each rated from one to five, and starting at a base of two. Positive qualities (such as Favorite Child, Bookworm and Horror Buff) are purchased, while negative qualities (Bed Wetter, Class Clown, and Whiny) give more points to spend. At the same time, the character sheet, which looks like a crumpled sheet of paper, asks a number of important questions: what you do and don't like, favorite possession, what you do when you are scared, what you are scared of, and so on. These are important as they help define the child and are revisited in the GM's section on running the game. There are no skills within the game; instead both GM and player decide what their character might know as necessary.

Children also have three virtues -- Soul, Innocence, and Fear -- which range from zero to ten. Soul begins at ten and can be lost through the Darkening, an encroaching tainting of the child's soul, but gained through personal acts of faith, which can be religious if the child believes this to be important. Innocence is determined by age; a child has less as they grow older, invariably losing all by the time that they are thirteen. At this point you are Blind to the fear and effect of Closetland. It can also be lost through traumatic acts, worse if it is the child that commits such acts. Fear begins at zero and can be gained through failed Fear rolls or possession by a King or its minions. Like Soul, it can be lost through acts of faith. Lose too much Soul or gain too much Fear and the child is in terrible trouble, and quite possibly lost to Closetland itself.

The mechanics of *Little Fears* are very simple, using a few d6. The basic Quiz means rolling under the appropriate stat on one die. Opposed rolls are called Tests, and to succeed you roll above an opponent's stat rather than your own. If a Quality has any bearing on the situation, than an extra die is also rolled, with the best score being kept if the Quality is positive, the worst if it is negative. Should the die rolls result in the same scores, they are re-rolled until there is a definite result. Adults have the same range of stats scores, but always roll two dice and take the best. The rules on combat are an extension of the Quizzes and Tests, and outside of simple childhood games, are very deadly.

Almost like a junior version of *Call of Cthulhu*, checks against each child's Fear will come often. These are rolled as a Quiz against the Spirit stat and failures usually lead to a roll on the "Don't Be Such A Chicken" table. Since this is one of the few tables in the game, it should have been printed at the book's end for easy reference. The table is really only a guideline, and often a Quality (such as Screamer) or the circumstances will dictate the child's response.

A child may have access to what is known as "Hand-Me-Downs," items of a mystical nature that might aid them in their overcoming the fears and monsters of the Demagogue. As almost unseen allies, they might have the Divine Host, but they cannot actually confront a monster from Closetland. The Hand-Me-Downs do feel out of place, because *Little Fears* is game in which children overcome their fears through their own efforts, even if that effort is through faith and the protection that it might manifest, such as your favorite blanket being able to smother or entangle a monster, or a ritual that gives you protection.

Little Fears contains one clear piece of advice among many -- know your players and know their limits as well as your own. The themes of this game are strong and there is no reason to upset your players through this game. If you are to include some of the stronger taboos in a game, it is better to keep them off screen, rather than forcing them brutally upon your players. Of course *Little Fears* need not be played in this "True Horror" style. Instead it offers "Faery Tales" (Brothers Grimm) and "Scary Stories" (children versus traditional monsters) as credible alternatives, but its genius works best in the True Horror style. This is certainly the style for the three scenario outlines and one expanded outline that *Little Fears* includes.

Despite the cleverness of *Little Fears* and the maturity of its writing, there remains just one question: Are child abuse and pedophilia suitable subjects for a game? In attempting an answer, I find myself in two minds. My primary -- and gut -- reaction, as both a normal adult and a parent of an eight-year-old daughter, is to say, quite bluntly, no. Yet from an artistic standpoint, Jason Blair cannot be condemned entirely out of hand. *Little Fears* does not treat these subjects lightly and I cannot help but applaud his careful handling and approach. There still remains in the game the potential for it be both misunderstood and controversial. Further I suspect that it may become the type of game that is owned for the kudos of owning it, rather than to be played.

The taboos aside, *Little Fears* still remains a disturbing game that asks us to examine something fundamental to every one of us -- our childhood. It contains elegant mechanics and some clever ideas. For these alone, it is worth looking at, but because it asks both player and GM to examine the uncomfortable, potential buyers really need to ask themselves whether they are prepared to deal with these themes as part of a game.

Weep: Six Scenarios of Woe and Ruin (for Unknown Armies)

Published by [Atlas Games](#)

Written Rick Neal, James Palmer, Greg Stolze, John Tynes, and Chad Underkoffler

176 pages (perfect bound, softcover), \$22.95

Atlas Games has finally released its long-delayed supplement for *Unknown Armies*, *Weep*, which is a collection of six scenarios. *Weep* compares favorably with *Unknown Armies'* previous book of scenarios, *One Shots*, but unlike the adventures in *One Shots*, those found in this collection are probably best suited for ongoing campaigns.

Note that spoilers about the specific scenarios follow, so read on at your own risk.

The book opens with a so-so short story by Greg Stolze that is filled with a bit too much gamespeak and has no real resolution. The first scenario in *Weep* is written by the inimitable John Tynes, but it is less of a complete scenario and more of a module that could be plugged into a lull in an ongoing adventure. I was a little disappointed that they included this piece because it had been previously published in Game Trade magazine (Vol. 1 #4), which is a fairly obscure publication, I suppose, so I guess I can't fault them too much for including it.

Next up is Rick Neal's scenario about a gathering of high-powered Avatars of The Merchant (adepts who can trade for anything, including years off your life, your sight, etc., and who can generally get their hands on anything you can possibly imagine -- for a price). The scenario seems like it would probably be best suited for an ongoing campaign, and would be the perfect way to have the PCs acquire something that they have been seeking for some time. It includes a number of very interesting NPCs (one or two of which might be a little over the top for some *Unknown Armies* campaigns) that could be used in almost any campaign, even if the scenario itself isn't used whole cloth.

The third scenario is "Drink to That," written by Greg Stolze, and is a short quasi-sequel to "Bill in Three Parts," the introductory adventure included in the main *UA* book. Like Tynes' scenario above, this scenario is short, punchy, and filled with high weirdness, rather than gritty street-level action. It doesn't include any game mechanics, but it doesn't really require any. It looks like it would also be fun to slip this into an ongoing campaign in piece parts, though the ending seems to fall apart just a tad.

The fourth scenario, and longest by far in the book, is "The Green Glass Grail" by Chad Underkoffler. This is a convoluted scenario with lots of moving parts, and I'd recommend it only to an experienced GM who's very familiar with the material as presented. It includes gobs of NPCs, each pursuing their own interests. The scenario includes a handy checklist/worksheet that would be a good way to organize the adventure, due to the sheer number of options for the GM. If this scenario has a failing, it's that it might be **too** ambitious, providing almost too many options. Some GMs may prefer this approach, while others might feel overwhelmed. In any case, it's a fun scenario with lots of "crunchy bits" (new rituals, artifacts and NPCs) and is one of the best in the book.

The next scenario is another short one by Greg Stolze, and concerns a bigfoot sighting in a small town. The scenario is interesting because it introduces a new campaign narrative structure -- Mystery Hunting -- that could be used for anything from *Scooby Doo* to the *X-Files*. It also presents the relationships among all the NPCs used in the scenario in an interesting (and eminently stealable) tabular fashion. I should note that there are no actual supernatural occurrences in the scenario, other than what the PCs may bring with them, which may be either a welcome change or a disappointment for the PCs.

The final scenario, "Garden Full of Weeds," by James Palmer, is the real gem of the book. The adventure concerns an urban slum that is experiencing an extremely high level of infant mortality and other weirdness. As the PCs investigate, they will discover layer after layer of horror and villainy. There are some truly memorable NPCs and scenes in the scenario, and it will take a *very* thorough team of investigators to uncover what's causing all the problems. As with almost all of James Palmer's work, this adventure is extremely well written and engaging and is almost worth the price of the book all by itself.

The book has very few to no typos, and is well written and organized. Like the last few *Unknown Armies* books, the interior font is fairly large, and I wonder if Atlas couldn't have printed this book with slightly smaller font and commensurately lower page count, but the layout of the book isn't bad. Cover and interior art are bland and inoffensive, but are nothing to write home about. Weep also includes a number of weird photographs taken by John Tynes, as is the norm for the *Unknown Armies* series. Many of the photos in Weep are of a freakish, evil-looking doll that was enjoyably disturbing.

If you are looking for additional material for your ongoing *Unknown Armies* campaign, Weep is a good buy, as there are some real gems here. If you're a casual reader, or someone looking for a *Unknown Armies* scenario to run at a convention or as a one-shot for new players, you'd probably want to pick up *One Shots* instead.

* * *

Note: In the interest of full disclosure, I should mention that I helped playtest an early version of Chad Underkoffler's scenario that looked almost nothing like the published version.

Vast, Cool, and Alternate: Four More Wars of the Worlds

"At any rate, whether we expect another invasion or not, our views of the human future must be greatly modified by these events. We have learned now that we cannot regard this planet as being fenced in and a secure abiding place for Man; we can never anticipate the unseen good or evil that may come upon us suddenly out of space."

-- H.G. Wells, *The War of the Worlds*

With *The War of the Worlds*, H.G. Wells did more than simply create for all time the paradigmatic "alien invasion" story. He was also commenting on history, and on certain assumptions made by his fellow Europeans about their inevitable place on top of it. Any balance of power can come unbalanced, any conquerors can find themselves conquered, any empire can vanish overnight -- and all it takes is a spark. Admittedly, in the case of Wells' British Empire, it took a spark on the surface of Mars -- but historical doom never comes from where you're looking. In these four alternates, historical doom comes in the shape of Wells' Martians, complete with advanced weapons and infantile immune systems -- and leaves the Earth changed.

"Astounded by the unexpected assault of unknown people, whom they considered demons rather than men, they gave no thought to defending themselves."

-- Nicolaus Federmann, *History of the Indians*

Bartholomaeus Welser never regretted spending the extra money on astrologers. As head of Augsburg's largest banking house (and Germany's second largest), he had the money, and he needed the news that only the stars and planets could give him. So by 1538, when the Martians landed in England, his experts had told him years before that the mysterious lights spelled the greatest disaster Europe had ever seen. Bartholomaeus and the family fortune were on the first ships out of Europe, on their way to the Welsers' Venezuela colony. Welser (and his own personal conquistador, Federmann) came to a modus vivendi with Cortez in Mexico and Pizarro in Peru; the three kept order in New Spain as the refugee armada swarmed in, bearing news of Europe's destruction, the unstoppable Black Smoke, and the burning of Paris, Seville, and Rome. Even after the Martians died, Europe fell to the heathen Turk; if Christendom would survive, it must conquer this lush, alien New World.

This *GURPS Swashbucklers-Aztecs* crossover can play as "straight" alternate history from here on in; there's plenty for a party of PC conquistadors to do maintaining order, exploring the rivers and jungles, and building a permanent civilization. GMs may want to play up the metaphor inherent in the setting, with the conquistadors' metal armor, bizarre vehicles, and killing black smoke neatly paralleling the Martians' in Europe. (The European tendency to fever in the jungles makes another interesting parallel.) The setting leaves plenty of room for magic, as Renaissance occultism (*Cabal* style) intersects with Aztec death-magics and Amazon shamanism, in a kind of **Voodoo: The Shadow War: 1550** milieu. Finally, there's always the possibility that a bold party of brigands might sail back to a prostrated Europe and steal one of the Martians' alchemical Walking War Machines

"It is impossible to form a conjecture of the amount of the enemy's loss in this action; but, from all reports, it is very considerable The number of dead on the field is very large Such an advantage could not have been acquired without material loss on our side; but it certainly has not been of a magnitude to distress the army, or to cripple its operations."

-- Arthur Wellesley, the Duke of Wellington, Jul 24, 1812

There are those who say that the Battle of Waterloo was won on the red sands of Mars. Arthur Wellesley, the Duke of Wellington, is not one of them. Certainly the Martian invasion, coming as it did in 1812 at the height of the Napoleonic Wars, scorched the heart out of Napoleon's Empire, and left it a shattered ruin. But when Napoleon's mad energy and brilliance rallied the prostrate army of France for one last strike at the hated foe, Wellington had to stop him alone -- Austria, Prussia, and Russia had all fallen beneath the Martian onslaught. After Waterloo, Wellington stayed on, rebuilding Europe with his own "thin red line" all that stood between the survivors and complete desolation. Even after

20 years as Prime Minister, the Iron Duke still labors to keep Europe peaceful, and orderly, and recovering -- and if that means the British Army has to put down every riot from Barcelona to Budapest, so be it. Give 'em a whiff of Black Smoke and send in the Walkers, that's the cure for the Fever of 1848.

This dystopian *GURPS Steampunk* setting reverses Wells geopolitically: we have met the Martians and they are us. Rather than serving as the nemesis to British pride, the Martian invasion made Britain master of the Continent by default, and left Faraday, Brunel and the other mad steampunk geniuses of the Industrial Revolution the means to perpetuate the Empire. PCs can be elite Walking Foot units of Wellington's army, or desperate Chartist (or European) rebels against London's overwhelming might. GMs with an even larger scope in mind might see Wellington and Polk butt heads over the Oregon Question, and launch an ironclad invasion of America with a British amphibious landing just outside Grover's Mill, New Jersey . . .

"I went at once to the White House. Mr. Seward and Mr. Chase, with Mr. Stanton, were already there, had read the telegram, and were discussing the intelligence in much alarm. Each inquired what had been, and what could be done, to meet and check this formidable monster, which in a single brief visit had made such devastation, and would, herself uninjured, repeat her destructive visit with still greater havoc, probably, while we were in council."

-- Gideon Welles, Secretary of the Navy (1861-1869)

In 1862, the Martians landed at Gettysburg, Pennsylvania. And at Hampton Roads, Virginia. And Paducah, Kentucky. All along the border between the warring states, the terrible tripods of the angry red planet rained down death upon blue and gray alike. After two disastrous months, however, some unknown miasma of Earth's atmosphere killed the invaders, leaving the battlefields littered with abandoned War Machines, Cylinder-Ships, and Heat-Ray Cannon. By summer of 1863, it seems apparent that the War Between the States will resume the instant that one side feels it can strike and win a decisive blow. U.S. Secretary of the Navy Gideon Welles feverishly drives his team of geniuses -- Dahlgren, Eads, and Ericsson -- to reverse-engineer the Martian technology before Josiah Gorgas and his Confederate brain trust can do the same. America -- and perhaps the world -- belongs to the side who masters the Martian way fastest with the mostest.

This setting begins as a standard *GURPS Steampunk-Old West-Mecha* game of Martian tripod combat and weird science. PCs can be elite units of either side, working to steal prototypes, invent new terrors, and foil raiders. Scientific and military agents of the great European Powers, too, will be sniffing around both the Union and Confederate depots, stirring up trouble to prevent a reunited America armed with Martian technology -- ideal opponents (or protagonists) of an *Espionage* game. For another development, mix in some *Deadlands* -- perhaps it wasn't the common cold, but the first emergence of the Reckoners, that killed the Martians. And can Martians become Harrowed, and rise again?

"We need not fail."

-- Sumner Welles, Undersecretary of State (1937-1943)

What Orson Welles might have broadcast on Halloween night, 1938, no one will ever know, because he died when the Martians destroyed New York City. Virtually the entire government died when they destroyed Washington; in all the confusion of the invasion, it took several weeks for Undersecretary of State Sumner Welles to get sworn in as the President of the devastated United States. On top of the Depression, the massive destruction of nearly every American city east of the Mississippi left America broken and impotent in the face of Nazi aggression. Only Welles' foresight kept even a trickle of research funding going, as Goddard and Fermi and Tesla worked to discover the principles behind the invaders' amazing weaponry. When the Nazis landed "to assist the white race of America" in 1945, the Grover's Mill Project had barely completed a few prototypes -- one of which, however, was the space-cylinder. Cylinder commander Robert Heinlein, USN, evacuated President Welles and the core of the Project in that cylinder barely hours ahead of the Luftwaffe bombers -- on a desperate mission to establish an American refuge in the technological storehouses of Mars! Germ warfare finished off the Martians' dying civilization, and the Project settled in for research -- and revenge.

This is a *GURPS Atomic Horror-Alternate Earths* campaign frame pitting a tiny band of American space-heroes against a Nazi-occupied Earth. It can begin with the PCs as cylinder-pilots, secretly buzzing German aerodromes, monitoring their nuclear tests, abducting their scientists, and (perhaps) bringing some red-blooded American women

to Mars to help perpetuate the colony there. From there, the campaign can progress to linkups with the American Resistance, feature guerrilla space-raids pitting the rag-tag American rebels against the might of the Nazi Empire's burgeoning space fleet, and end with a final showdown as America launches a new War of the Worlds to liberate Earth, and to open space to all mankind!

Lifestyles Of The Fictional and Famous

All right, Pyramidkateers, just as a warning: I'm currently very sick, it's currently late, and I haven't been able to sleep it off because of a sore throat. So if this column is less coherent than normal, don't blame me; blame the tiny beings attacking my cells.

Anyway, I was at DragonCon this past weekend, and had a very good time. I played in my second-ever live action game, heard a live performance of Terry Pratchett's "Guards! Guards!", overloaded on DVDs at the "three for \$25" booth, walked about seventy-seven jillion miles, and bought my first Renaissance clothing (thus beginning my journey down the dark path . . . verily).

And I got to meet a bunch of celebrities.

Some were cool, some were neat, some were nice, some were none of these things.

I imagine we all have people we would love to meet. In the information age, it's more possible than ever to glean tantalizing bits about those we admire and respect (with some notable reclusive exceptions). And, at least in my experience, most of the times we *do* meet these kind of folks, it's not what we expect.

Because, at the core, people are people. Some have more quirks than others, some are physically different from what we had thought ("You're shorter in person!"), and some people we weren't expecting to like -- or didn't even know! -- you become a fan of *because* you met them. (I can't count the number of times I've met creative-types whose work I wasn't familiar with, and because I met them I became hooked.)

Of course, there's ripe potential here for roleplaying.

Because, with few exceptions, every campaign setting has celebrities. These can be local celebrities, like the noble lords of old, current local politicians, or famous people who live in the area. (I understand it's relatively common to spot famous folks in New York or Los Angeles.) Or they can be nationally (or greater!) people, either whom the characters have gone to see, or have come to see the characters.

Here are a few examples, taken from both real life and my gaming.

- Don't take it for granted that you'll meet someone, just because you're in close proximity. I went to Florida State University for five years (yes, the five-year plan . . . I changed majors on year four), yet ran into National Champion football coach Bobby Bowden exactly once: when my friend and I were cutting across a sports field to get to one of the (few) parking lots on campus. We passed him as he was walking the other way. I turned to my friend and said, "Wasn't that?" She said, "I think it was . . ." Unfortunately, our options for verification consisted of sprinting after and/or tackling him, which didn't seem like the best idea.

To extend this to gaming, consider that even if, say, the heroes *are* members of the Space Ace Flying Squadron, this doesn't necessarily mean they'll have met the famous Mauve Baron. Or if the heroes are members of the world-saving superheroic set, they may still suffer from hero worship when they meet Sobrehumano.

- I have met McGruff the Crime Dog . . . which might have had more impact if I wasn't a high school senior at the time. (I have a non-gaming-related essay about this experience I might post on my website, if there's demand.) Suffice it to say I was underwhelmed. But it was primarily ceremonial. In the gaming world, such gestures might manifest in receiving (many) keys to the city, a ritualistic "marriage to the queen of the fair," or other more or less meaningless meetings. These can be as meaningful or meaningless as the characters (and players) want.
- In the *Aberrant* campaign I ran, I had an unparalleled opportunity to play with the idea of celebrities, both fictional (since the game world revolves around wildly famous super-powered beings) and real (since the game takes place in 2008). I let the players meet all the major fictional players in order to more fully immerse them into the plots of that universe. And then, to help emphasize the celebrity nature of the PCs, I had several

celebrities want to meet the *heroes*. In particular I had the heroes meet the vice-president (who wanted to ask a character's help in the upcoming election), and a real-world celebrity who supports the NRA (who wanted to ask a gun-using hero's help to promote that organization). In most of these circumstances I tried to play up *both* the celebrity and human natures of these encounters; how do you react when you run into a childhood idol in the bathroom?

Of course, for most of these encounters to work you need to emphasize the worldview of celebrities to the players ahead of time. Getting to meet Duke Bobbins isn't going to have any impact if they've never heard of him. But if they've heard continual rumors that he's a blood-thirsty tyrant, then an encounter with him where he's (seemingly) warm and open will be more off-putting. Obviously if you're using real-world celebrities in your fictional games you don't need to do as much foreshadowing, nor do you need to do much if the character is an established part of the game universe. (You don't need to explain Batman or Emperor Alexius Hawkwood in a *DC Universe* or *Fading Suns* game . . . though you *would* need to explain Batman in a *Fading Suns* game or vice-versa.)

In all, getting to meet people you ordinarily wouldn't is always a thrill -- in both the real and fictional worlds. Playing up that excitement is a great way to put butterflies in both players' and characters' stomachs.

* * *

My current schedule says I'm going to try tackling the slushpile -- and my email inbox -- this weekend. If you've been waiting patiently for me to get back to you, I appreciate it; hopefully you'll hear from me soon.

And if you've been waiting, but not patiently, I don't blame you at all.

If you have immediate questions, I'll try to be in the chat rooms this weekend.

(As an aside, if this illness continues, this schedule may go to heck. I'll try to post updates in the *Pyramid* newsgroups.)

* * *

John Kovalic has sworn that he will return next week. Let's hope so . . . we miss him. Come home, John! Hugs! Hugs!

(And I still want to meet John one of these days . . . ah, the joys and perils of telecommuting.)

* * *

Now if you'll excuse me, I'm going to pass out. (Hopefully I'll be able to sleep with this dang sore throat. Grf.)

Armor Damage in GURPS

by Peter V. Dell'Orto

GURPS fans have been blessed by a system that allows you to break shields, shatter weapons, cripple limbs, but even after you reduce your foe's weapons and shield to flinders and his body to -10xHT his armor is still fine.

Until now. The following rules are an extension of the rules for Armor Enchantment in *GURPS Magic* on p. M46. These rules expand upon those rules, and include further optional rules you can add on to bring this system to the level of grittiness you need for a campaign. This system does require some bookkeeping by GMs and players alike, but not really that much more than the Damage to Shields rules (p. B120) require. These rules add some extra realism to combat as well; armor wears out, requiring repairs and eventual replacement.

Armor Damage

Armor can only withstand a limited amount of destruction -- referred to as Maximum Penetrations -- before it is no longer capable of protection. Armor can take $(DR+1)*5$ penetrations before becoming useless as protection. For example, Reinforced Heavy Leather (DR 3) can take $(3+1)*5=20$ penetrations before becoming useless. For armor with split DR, such as chainmail, use the highest DR to calculate the Maximum Penetrations. A penetration is defined as any hit that does damage greater than DR. Blows that do less than or equal to DR do not count as penetrations. Armor divisors do lower the amount of damage needed to cause a penetration, but do not cause additional penetration to the armor. Penetrations are tracked on a per- location basis if using the Hit Location chart; if you use Basic Combat, calculate penetrations based on the torso and count all penetrations as being against the torso armor.

Note that some ultra-tech weapons (Flamers, sonic weapons, etc.) already do armor damage -- the effects should be combined if these rules are used as well. Magic can damage armor as well. As a rule, spells which cause damage reduced normally by armor DR (such as Fireball, Ice Dagger) will inflict penetrations like any other attack, while spells which bypass armor's protection (Dehydrate, Deathtouch) will inflict no penetrations. Some magic can be used to directly attack armor. For example, Shape Metal or Reshape can be used to shape armor completely off a location. Ruin inflicts PD and DR loss per p. M59, which will reduce the Maximum Penetrations by 5 per minute. Shatter and Disintegrate will succeed if the damage inflicted is greater than the Maximum Penetrations of the armor, and destroy that location's armor completely. If they fail, no damage is inflicted. The Weaken spell will inflict 1d6 penetrations per casting. And so on -- a GM's judgment is needed to cover the myriad of magic attacks that can damage armor.

As per *GURPS Magic*, *Fortify* and *Deflect* wear out as well and a little more rapidly. Regardless of any non- magical armor repair, magical armor will become non-magical after 5 times the *base DR* penetrations (0 base DR would get 5 penetrations). Chainmail would survive 15 penetrations before becoming non-magical, a leather jacket only 5. Both armors would need 5 more penetrations (At base DR, not DR + Fortify, which is gone when the spell is broken) before becoming useless as armor. While base DR is used to calculate the number of penetrations the enchantment can sustain, *actual DR* (including Fortify) is used to determine *if* armor has been penetrated. Fortify +5 Heavy Plate (DR 12) may take only 35 penetrations before becoming non- magical, and 40 penetrations before being ruined as armor, but it would take 35 attacks each doing at least 13 damage followed by 5 doing at least 8 each to do this! If the armor is destroyed as armor *before* an enchantment wears off (say, Light Leather with Deflect +5 cast on it), the enchantment is considered destroyed when the armor is destroyed. Magic such as the *Repair* spell will repair the enchantments on a damage suit of armor as well as fixing the mundane damages.

When calculating penetrations, only *that individual layer of armor counts*. If you are wearing a steel breastplate (DR 5) over Fortify +1 light leather (DR 2), you must take 8 points of damage for the light leather to be penetrated, but only 6 damage for the breastplate to be penetrated. *Exception*: Chainmail and its accompanying Cloth Armor should be treated as one layer for both simplicity and to prevent chainmail from rapidly losing the benefit of its cloth padding.

At no point in this process is PD or DR reduced (but see the various Optional Rules, below). *Sealed* armor is

considered unsealed after it takes 10% of its Maximum Penetrations. Most high-tech sealed armor will have limited self-sealing capabilities; a single penetration is not enough to cause the armor to become unsealed. Note that this is cumulative with the unsealing effects of Flamers.

And yes, if an attack does Blow Through, excess damage is applied to the back of the armor piece. Truly destructive attacks can easily cause double penetrations. This is called an "exit wound."

Armor Repair

Damaged armor can be repaired. This requires appropriate skill (12+ in Armoury, or Leatherworking for leather armor) and materials (ranging from a needle, thread, and cloth patches to a full forge or machine shop). The cost to repair is 5% of the original cost plus the penetrations suffered vs. Maximum Penetrations, expressed as a percentage. After taking more than half of its possible penetrations, the cost is 20% of the original cost plus the percentage taken -- the armor is very badly damaged and needs a full rebuild. Cost assumes you are paying a professional to do the work -- if you do it yourself, cost of repair is halved (the cost is for materials expended). Note that after a certain point, armor can become so damage replacement is cheaper than repair. A *Repair* spell (p. M60) can be cast as well -- any armor having taken more than half of its Maximum Penetrations should be considered to have missing parts and give a penalty to skill. A penalty to cast the spell is a good justification for a hireling wizard to charge extra, if a GM so chooses. After all, the caster is taking an extra risk of failure or critical failure because of the damage taken.

Ultra Tech repair methods can also affect the cost of armor repair, at the GMs option. If armor is made from Living Metal (p. UT18) or Bioplas (p. UT17) it will slowly repair itself -- Living Metal at 1 penetration/hour and Bioplas at 1 penetration/6 hours. If the materials used in the armor are rare or the technology to repair it is expensive, the cost may increase. This applies to low tech and fantasy armor as well -- perhaps even higher skills (15+ or even 20+) are need to repair armors made from rare or magical materials. Cost will escalate as well -- but note that the base system already scales to make more expensive armor more expensive to fix. Armor that has been decorated (see optional rules, below), or armor of higher or lower quality, uses its increased (or for Cheap, reduced) cost to determine cost of repairs.

Example of armor repair: A heavy plate corselet costs \$2300. It can suffer 40 penetrations and has taken 13. 13 is 32.5% of 40. The cost to repair the armor is $\$115 + \$747.50 = \$862.50$. Plate is durable, but expensive! Had that same suit taken 21 penetrations, the cost would have been $\$460 + \$1207.50 = \$1667.50$. Once the armor has taken more than 32 penetrations, it is actually cheaper to buy a new suit and scrap the old one for metal value (say, 5-10% of original cost). Of course, to get 32 penetration on this corselet requires 32 attacks doing 8 points of damage or more.

Wear, Tear, and Decoration

General wear and tear can damage armor. Armor that is not properly maintained (one hour a week by a skilled craftsman -- see Armor Repair, above) will suffer damage -- effectively, suffering the equivalent of penetrations. Armor that is being actively worn, or is just neglected, will suffer the equivalent of 1 penetration every two months unless it is being actively maintained. This represents accumulated wear on straps, minor breaks and tears, nicks, cuts, and scrapes of all kinds that eventually wear down the armor and require repairs. Penetrations suffered in this manner are treated normally for purposes of enchantment, repair, and optional rules such as DR reduction (see below).

GMs wishing to avoid the bookkeeping of penetrations but who wish to keep track of armor damage can use the wear and tear rule to keep PCs caring for their armor. After any battle in which a character was injured at least once, the armor can be assessed 1d6 penetrations. Modify this roll by -1 or -2 for a small skirmish or melee or by +1 (large battle) to +3 (desperate, huge battle). Penetrations can be assessed on a per-suit or per-location basis. After a Mass Combat, Armor Damage can be assessed normally (after determining the results on the Damage Table) or this simplified system can be used: apply any penalties to survival as a plus to the number of penetrations suffered.

Armor Decoration: Armor may be finely decorated, with precious metals, jewels, or just exceptionally fine construction. Well-decorated armor will cost more to purchase and to repair. Armor decoration is available in *fine* quality (4x cost) and *Very Fine* (20x cost, or more). These modifiers will multiply with those of armor quality. At a

GM's option, *fine* decorations may give a +1 to reaction rolls and *very fine* decorations a +2. Naturally, decorated armor uses its *decorated* cost to determine cost of repairs . . .

Optional Rules

The following are optional rules that can be added onto the above system. Some of that add even more bookkeeping, and can change the dynamics of combat. All of them have been playtested, but a GM should exercise some caution before using them -- especially the PD reduction rules.

- *Average Split DR*: For armor types with different levels of protections against different attack types, average the DR and round down. For example, Chainmail with Cloth padding provides DR 4 against cutting or crushing attacks and DR 2 against impaling attacks $4 (\text{cut}) + 4 (\text{crush}) + 2 (\text{imp})/3 = 3.33$ rounded down to 3. Chainmail can therefore take $(3+1)*5=20$ penetrations. This tends to reduce the amount of damage it takes to destroy most "split DR" armors. GMs seeking more variation can multiply by the unrounded number, only rounding off the final number of penetrations -- for example, Chainmail could absorb up to $3.33 * 5 = 16.65$ or 17 penetrations.
- *Fragile Armor*: While the armor damage systems works for most armor types, GMs may decide that certain armor types are especially fragile -- for example, Wood Slat or Cane Armor, or exotic types such as Antillian Glass Armor (see *GURPS Conan* p. 20). Armor determined to be so vulnerable will suffer double or triple penetrations from some or all attack types -- or, in the case of the glass armor, destroyed after a single penetration. Alternately, some armors can be damage normally but harder or easier to repair; simply double or half the cost to repair, respectively. Mail, for example, is fairly easy to repair -- replacing lost links is easier than replacing damaged scales or hammering gashes out of plate -- and can easily justify half repair cost. Some armors, such as the Straw Overcoat, can probably be repaired for free with access to appropriate materials.
- *Multiple Penetrations*: Under the base system, all weapons inflict penetrations equally well. GMs may feel that attacks from ultra-tech blasters or vicious axe swings should inflict more penetrations than a laser beam or arrow point.

Treat every full multiple of the DR that penetrates armor as an additional penetration. Damage Type multipliers other than Impaling are counted before determining total penetrations. For example, a suit of Reinforced Heavy Leather (DR 3) hit for 7 base cut (7-3 for DR, +50% for cut = 6) would suffer two penetrations. Had the blow only done 6 base cut (total damage 5) only one penetration would be inflicted. This allows large cutting or crushing attacks to tear large rents in armor, while focused impaling attacks still stave only small holes.

Another option is to rule that attacks that do more than 6d of damage do one penetration per 6d of base damage, if any penetrations are made. For example, a TL 9 Heavy Blaster (6dx3 damage) does 3 penetrations per hit, so long as 1 hit is done past DR. A GM can raise or lower the bar for certain weapons (say, Blasters or Flamers), all weapons (perhaps 3d?), or require that at least 1 hit get past DR for each penetration.

A further option is to make every 10 points of damage that exceeds DR count as a penetration, allowing for those high-damage attacks to fry armor as fast as it fries the wearer. Not that this option effectively makes all armor Ablative (*GURPS Vehicles* p.22).

- *Cap Maximum Penetrations*: Most TL 9+ armor have enough DR to make its destruction unlikely. A DR 80 Cybersuit will take 405 penetrations before becoming useless as armor. At that point, the wearer has taken at least 405 points of damage, making this (probably) irrelevant. A simple fix is to cap Maximum Penetrations -- any DR above 10 or 15 (for example) will not contribute to calculating Maximum Penetrations. This will lower the amount of penetrations needed to destroy a given piece of armor without making it any more vulnerable to penetration in the first place. The Maximum Penetrations Cap rule is recommended as the default for campaigns featuring TL6+ armor.
- *Blunt Penetrations*: Under the basic rules, blunt weapons can inflict penetrations -- minor tears, small punctures from spikes or flanges, deformation of the armor that does structural damage. However, some GMs may find this simplistic -- not all crushing attacks that injure the wearer will damage the armor -- or find the idea of a non-penetrating "penetration" unrealistic. Under this optional rule, non-bullet crushing attacks do not inflict penetrations. Instead, a penetration is inflicted for every "6" rolled on a crushing attack that penetrates DR. For

example, DR 7 plate is hit for 3d of damage from a maul, with rolls of 6, 6, and 2. The wearer takes 7 points of damage, and the armor takes (1+1+0) 2 penetrations. This represents severe deformation of the armor that both does structural damage and requires repairs to keep the armor functional.

- *DR Is Reduced By Damage:* After a given piece of armor has suffered 10 penetrations, its DR is reduced by 1. Further penetrations do not reduce it any further. There is no minimum DR, since DR 1 armor will be destroyed after 10 penetrations, making this a non- issue.

Another option is to reduce DR by -1 for every 10 penetrations taken. Minimum DR is 1, although most armor will be destroyed before this point is reached.

A GM can also choose to base it as a flat percentage so DR declines as penetrations accumulate. Note that percentage systems mean that heavy armor rapidly loses DR while light armor stay fully functional until destroyed.

Ablative Armor, which loses 1 DR for every 10 hits that penetrates the armor, should suffer from *both* rules if a DR reducing optional rule is used, making it very vulnerable to repeated penetrations. Most Ablative Armor will reach 0 DR before it reaches its Maximum Penetrations, though, so the extra bookkeeping might not be worth it.

Armor that has had its DR reduced by damage is treated as "Cheap" (*Editor's note: See "Chainmail . . . Why Bother?", coming next week*) for purposes of sale value (but *not* for weight or repair cost) by the GM. This can lead to PCs "dumpster diving" in the hopes of purchasing high-quality armor on the cheap, or unscrupulous merchants selling cheap armor as good armor.

- *PD Is Reduced By Damage:* After a given piece of armor has suffered 10 penetrations, its PD is reduced by 1. Minimum PD is 0 -- armor can easily become unable to deflect blows effectively while still providing some DR. Torn and crumpled and holed armor can catch weapons that pristine armor would let glance off. Further penetrations do not reduce it any further. Armor that has had its PD reduced by damage is treated as "Cheap" (see above).

Percentage based PD reduction is also possible. Instead of reducing PD after a flat number of penetrations, PD is -1 for every 20% of Maximum Penetrations sustained. There is no minimum PD -- After 20% damage, even the heaviest armor can lose all PD while retaining some DR. On the downside, the lightest armors (light leather and cloth) lose all of their PD after two penetrations.

If DR reduction is also being used, PD can be reduced proportionally to DR per *GURPS Vehicles*, p. VE24.

- *Penetrations Cause Permanent Damage:* Once armor has been damaged past a certain point it is often a write-off. The rules already reflect this, but in some circumstances armor may be repaired anyway. Post-apocalypse survivors, stranded time travelers, adventures with unique and irreplaceable armor, may not have the option of buying new armor to replace old. Once armor has taken 80% or more of its Maximum Penetrations and been repaired, it loses 10% of its Maximum Penetrations. Heavy Plate (40 penetrations) would drop to 36 Maximum Penetrations after taking 32 or more penetrations and being repaired. This is applied only *after* repairs -- it would still take 40 penetrations to utterly ruin the plate in the example, but only 36 the *next* time. If the PD and or DR is reduced by damage due to other optional rules, use the original penetrations number to determine the actual PD. Note that accumulated damage can easily mean that the PD and/or DR of the armor is lowered permanently. This becomes a slippery slope -- the armor will be hit and penetrated more often, and less and less penetrations will be needed to cause further reductions.

Note that the *Repair* spell will eliminate such permanent damage; some high tech armors (especially those made of super- science materials like Living Metal) would be unlikely to suffer permanent damage.

- *Critical Hits and Penetrations:* GMs may wish to add armor damaging effects to the Critical Hit table -- or simply add such effects to existing rolls. For example, while Bypass All Armor criticals would inflict no penetrations (or inflict 1d6, representing a natural hit to a weak seam, sundering the armor -- GM's option), Double or Triple Normal Damage criticals could cause double or triple penetrations. Another option is to replace

some Critical Hit Table entries with "Armor damage inflicted -- target's armor takes 1d6 penetrations."

- *Field Repairs:* PCs in a jam may need to fix their own armor, without access to the proper tools for the job. A lot of GM judgment is required on this -- without at least a hammer, never mind a forge and so on, you just are not going to be able to repair your steel breastplate. A good rule of thumb is that a skilled craftsperson (12+ in the appropriate skill - Armoury, or Leatherworking for leather armor) can repair 5% of the original Maximum Penetrations per point the skill roll is made by, to a maximum of 95% repaired. All penalties should be taken into account when determining the margin of success. Inadequate tools can make the difference between being able to do a passable job and doing a good job. GMs judgment is required to determine if a second attempt can be made. In some cases it should be obvious that you can start over (rip out the stitches you put in the Cloth Armor and start over) and when you can't (You've hammered out the rent in the helm as best you could, but deforming it again to try again will hurt more than it helps). The amount of time for repairs can vary -- an armorer can repair Skill/2 penetrations per hour with the proper tools, minimum 1 hour.

Messing With the Medium:

Taking Advantage Of The Unique Storytelling Elements Of Gaming

by Darren Watts

One of the dangers of GM-ing a long-term campaign is falling into a storytelling rut. Even if the details of your plots change, it's easy to slip into a pattern of repeating the way the story is told. An excellent way of livening up a game in danger of turning into a flat replay of the same old story structures is to take a step back and look at gaming in general, and your game in particular, as a unique medium for storytelling. Use the conventions and elements of gaming itself to make both you and your players see things in a whole new light.

For example, back in my college days I was running a weekly superhero game for four or five of my friends. I'd been tapped for a plot that week, and was idly thinking that it was time to bring back the team's rival villain group with some new master plot. I was tossing around a couple of story ideas when another friend of mine, Tim, dropped by. He mentioned that he'd done some gaming before and was curious about checking out our group, but wasn't able to commit to a regular weekly game for more than a month or so. A fiendish thought seized me, and I asked Tim if he wanted to help me really mess with my players' minds. Tim was all for it, so we created a character for him.

That week, I introduced Tim to my group as though he was looking to join the campaign full-time. A couple of my players knew him distantly, and he seemed like a nice guy, so they were all for it. Tim got right into character, both in the game as a young mentalist super-in-training and out of game as a friendly newbie. He was unsure of what was going on but game to give it a try. My players adopted Tim quickly- Jeff gave him some dice of his own, Marcy and Dan helped him learn the rules system, he joined us for our post-game pizzas. Tim's character acquitted himself fairly well for three sessions, helping the heroes save the world from one threat or another. Tim himself was truly Emmy-worthy in his performance, and I had to bite my cheeks to keep from laughing when he would apologize to everyone for slowing down a fight scene while he fumbled with his character's powers.

Then, in the fourth session, we dropped the hammer. Just as the villains were staging their assault on the heroes' base, suddenly Tim dropped all pretense and became a savagely effective character, ambushing a couple of players and sabotaging their base. As my players' collective jaws hit the carpet, Tim announced that all along he had been part of the villain group and went off on a rambling monologue about the personal injustices that he was going to revenge himself for, on the world in general and the PCs in particular. Then he laughingly threw the team into a deathtrap and left with his pals, the villains. My players stared at each other for a long minute after he was finished, then, one by one, burst out into hysterical laughter. They couldn't believe how thoroughly they'd been taken. Jeff even stood up, walked over and clapped Tim on the back, shaking his hand. Then he demanded his dice back.

Of course, the heroes eventually escaped the deathtrap and stomped on the villains, taking particular pleasure in taking Tim down. But they never forgot that adventure, always adopting a hushed tone when they talked about "The Betrayal." What made it doubly powerful for them, of course, was the underscoring of Tim's character joining the team by the act of Tim joining the gaming group. Only the unique format of a roleplaying game allows for that connection between the real world and the fictional, strengthening both roles. Tim was such a nice guy, and seemed so inarguably well-meaning, that his character was accepted into the team whole-heartedly. His obvious "innocence" overpowered any sense of concern or mistrust players might feel when faced with a new character and a notoriously tricky GM. Obviously, it takes a pretty special player to pull this off, but with the right group it made a wonderful story that was retold to others for years.

Another storytelling element that is unique to gaming is the sense of certainty a player has about his own character, if nothing else in the game world. After all, she created the character, didn't she? The player is the final authority on who the character is, what she was like before the game, how she feels about what happens around her.

Except when she isn't, of course. In a more recent superhero game, the team was gathered at their regular monthly

meeting when a strange purple ray washed over them, knocking them out. They awoke on a strange planet, where they were informed by the odd amphibian scientist who greeted them that they had been teleported across the galaxy to help his race of kindly frog-people battle a strange alien shadow-menace that was destroying their planet. The frog-people, natch, had no super-heroes of their own, but legends of the famous heroes of Earth had spread even to this backwater of the Milky Way. So the frog-scientist had used his experimental teleporter to bring them here, and he was very sorry about the inconvenience, but would the heroes mind saving his planet, please?

With their egos thus boosted ("Hey! We're famous even on Planet Q!"), the heroes gave a stern lecture to Dr. Frog about the importance of asking permission first, then flew out the window to battle the hideous shadow-menace. Said menace turned out to be pretty tough, though, and a couple of the heroes' powers weren't working quite right. Then, unexpectedly, one of the heroes was blasted out of the sky by a "lucky" shot and died.

Well, what had started as a happy romp among the stars had just been wrenched into something completely different. The players commiserated with the player of the dead PC, and angrily started to wonder just what the heck was going on here. Then the scientist of the group, doing a quick autopsy on the body, discovered that the dead body on the slab wasn't the heroine at all, but a surgically-altered frog-person made up to look like her and using cybernetics to mimic her powers. The scientist's player, Ben, then turned to me as everyone absorbed this bit of information. "I do a scan of myself, too. Am I human?"

Bingo! In fact, the players were not playing the mighty Defenders of Justice, but frog-people soldiers, who had been brainwashed into thinking they were the Defenders. The weird purple effect hadn't been a transporter at all, but a brainscan-recording, made so the individual memories of the heroes could be implanted into volunteers from the army in order that the legendary courage and indomitability of the indeed-famous Defenders could be used as a weapon against the enemy. After digesting that info, and after some wonderful role-playing moments by my long-suffering players, the team decided that even though the brainwashing had now failed, they were going in again anyways. In the name of the heroes they once thought they were, they'd save their beleaguered planet. And they did, and my players loved the opportunity to heroically rise to the occasion.

Many ideas for messing around with the structure of the game for the enjoyment of the players can come from other media- TV, movies, comics or novels. Some of these hoary old plot twists can be given new life when injected into the medium of gaming. For example, with the enthusiastic assistance of most of my players, we did an adventure that was a "Star Trek"-like dream sequence of Alex, the one player who was "in the dark" about the story in advance. As a series of horrible events happened in his own life (his wife was nearly killed, then captured by his main enemy, who he was certain was dead), the players around him subtly began to play their characters with slight "continuity errors." The inveterate pipe-smoker lit a cigarette. The loving family man callously dismissed a potential threat to his own wife and children as "unlikely." A character insisted that Alex was misremembering the events of a story from a few weeks ago, and Alex, puzzled, eventually gave in and agreed that his (correct) memories must be flawed. When the story reached its horrifying climax, we abruptly shifted to Alex's character strapped to a surgical table with electrodes protruding from his shaved head and the master villain leaning into his face and cackling. The look on his face as understanding dawned was absolutely worth all of the effort we had all put into coordinating the story. Alex admitted he'd never had more fun as a player, and couldn't believe the lengths to which we had gone to bamboozle him. Just because your players have seen something a hundred times on the small screen, don't underestimate its power to affect in a game when the players are least expecting it.

A caveat before you try this at home- this sort of manipulation isn't everybody's cup of tea. Try to be sure before running a story where one player is "left out" like this that everyone involved is likely to enjoy themselves. Not everyone will take a story where everybody knows what's going on but them in the spirit of fun with which it's intended, just as not everybody can appreciate a practical joke. And never do something like this in a spirit of anything but fun. That is the point, right?

Call of Cthulhu: Great Cthulhu Miniature

Manufactured by [RAFM](#)

Sculpted by Bob Murch

Price: \$49.95

Here we have the chief baddie of the whole Cthulhu Mythos: tentacled head, sagging belly, ragged, decaying wings. He's just as H.P. Lovecraft saw him (the poor devil). In 25mm scale, Cthulhu stands about 5 1/2 inches tall, from the defiled ground beneath his claws to the top of his obscenely buboed head. The top point of his wings is more than an inch higher.

The set comes with detailed (and humorous) instructions, beginning "Congratulations! You have obtained a miniature representation of the mighty Cthulhu himself. Your heirs will probably never know what became of you but they will find this monstrous artifact among your pitiful remains . . ." A very clear line drawing shows how the 13 (!) pieces fit together. Very generous use of epoxy is recommended in the instructions, and they're right . . . this is a *heavy* piece.

In fact, when it's done, it's so big and spiky that you could easily disable an intruder with it, though you'd have to straighten the wings and touch up the paint afterward. And, even if you're not planning to hit someone with it, this piece *requires* a base, but since we assume you bought it with display in mind, this is not a problem. You won't summon this Cthulhu in an evening, or in two. Just preparing the pieces for assembly will take several hours, if you do it right. There are a lot of mold lines to be carefully dealt with (or, if you prefer, covered with gloppy glue; the surface texture of the piece makes that a perfectly good alternative). Mine also had a lot of slaggy flash that had to be removed before the pieces (especially the torso, feet and legs) would fit together at all. And the fit of some of the major pieces (top and bottom head; front and back torso) was pretty casual, with huge gaps no matter how I positioned things. More epoxy! Shovel it in there! Buy another tube!

The head and body feature a number of holes that go all the way *through* the metal. There are different ways to deal with this. You can just leave them there! Or you can cover the bottoms of the holes, on the inside of the piece, with epoxy (More epoxy!), and paint them up as deep blisters or cavities. The long clawed arms just cry out to be posed, but they're too thick to bend safely Ð a drawback of most non-lead alloys. Kitbashers will need a Dremel tool or the like, with a cutting wheel, to make any serious posing changes. Even the claws are too thick to be bent without tools . . . which is a shame, as they look just perfect to wrap around a hapless investigator. However, the fit of the head to the body is loose enough that you can easily tilt the head up and down . . . or, with a bit more work, have it looking to the side.

The detail is good, with all the veins, warts, wens, blisters, and nameless lumps and scabs that you'd expect from old Sucker-Face. It responds well to drybrushing. The casting was not nearly as clean as I'd like; I had to resort to a rotary drill to clean out some of the flash, because my little knife wasn't doing the job. Still and all, it's a great miniature. When you put it together -- assuming that hours of close Cthulhoid contemplation haven't driven you around the bend -- you'll have a museum-quality monstrosity as well as a backup home-defense weapon. Cthulhu would approve.

Like a Spanish Guitar

by Elizabeth McCoy

There is a legend, about a lonely man and an enchanted guitar, and how he plays in clubs and alone through the night

...

The man calls himself Jack. No last name, no middle initials. Just Jack. He's a musician who plays for the dingier dives, though he's been known to turn up at private, ritzy parties, or anywhere in between. He has people who don't like him much, but no enemies; he knows people who will do him a favor now and then, but no one really calls him "friend." He can sing well, but he is best known as a *superb* guitarist. He's best with the sad songs, but can catch everyone in a bawdy ballad if that's requested. Strangely, he refuses to use any instrument other than the one he calls Sarai, an exquisite, 12-stringed guitar that never seems to go out of tune. Further, it never seems to pick up a scratch that can't be polished out, nor stains that don't fade in time.

Naturally, the guitar called Sarai is no natural instrument.

Jack and Sarai may be some campaign color, the target of an assignment, or PCs may simply witness one of the events below personally and be moved to investigate out of greed, curiosity, or sympathy.

If anyone investigates Jack and Sarai, there are certain stories and details that will come up:

- Jack will do anything to keep Sarai from being damaged -- including taking a knife-wound to the chest during a barroom brawl.
- Some people claim that, during some brawls, they've seen the guitar literally *twist* in Jack's hands, protecting him from injury.
- Some of Jack's "enemies" claim that they've seen the guitar bruise when struck with a fist, or bleed when cut by a knife. (They rarely admit to having done so themselves, of course, but that's the most likely way that they'd have been close enough to see this.)
- Jack never goes anywhere without Sarai nearby -- though it's said that he once left the guitar somewhere, and wound up running into a burning building to retrieve it.
- Many people who claim "special sensitivities" hear a woman's voice in counterpoint to Jack's, or accompanying him in song-choruses.
- Anyone who's managed to lay a finger on Sarai remark at the smooth, silken texture of it -- and that it's always a little warmer than they expected. Of course, Jack never lets the guitar get too cold; he claims temperature stresses would damage "her" tone.
- And most recently, there are stories of the woman . . .

While Jack mostly plays existing melodies, he will sometimes be drawn to perform some that he's composed himself. These are always sad or, at best, bittersweet melodies. He's most likely to agree to play "one of them tunes" around midnight. And that's when the weirdest effects happen: the woman's voice harmonizing with the guitar or Jack's own singing; the way the strings look like tears running down the guitar's neck; the scent of perfume in the air . . .

Jack's been playing one of "them tunes" a fair amount, though, one where he sings wordlessly to the guitar -- and when he does so at midnight, some people say that instead of an instrument in his arms, there's a woman singing with him. ("A real looker, too, naked as anything.") But at the end of the performance, he holds a guitar.

And he weeps.

* * *

This setting could be Modern Fantasy, traditional Fantasy (though Sarai might become a lyre or harp), *very* high tech, or *In Nomine*.

Fantasy

Jack has always been a musician, but he used to play at only the best venues. Indeed, he was a Music Mage (see "[The Play's the Thing](#)"), skilled with the Sound College as well as Meta-Spells to allow him to divine the enchantments upon an item. He also knew a little Enchantment of his own.

He took it upon himself to find the truth of some rumors about a powerful mage, working his way into the parties and social circles . . . and he fell in love with the mage's daughter, Sarai.

Needless to say, Things Went Wrong, and the vengeful mage enchanted the "traitorous" Sarai, turning her into a musical instrument . . .

Modern Fantasy

It's always unwise to meddle with magic you don't understand, even for the girlfriend you adore. Jack had always had a "feeling" for the supernatural, as had Sarah (his beloved). So they were excited when they performed the musical spell, thinking that joining their souls with their instruments was *metaphorical* -- but at the final passage, Jack sneezed, and Sarah didn't. Now Sarah's body lies comatose in a hospital, her soul trapped within the guitar . . .

Ultra-Tech

Sufficiently advanced technology is indistinguishable from an evil curse. Saree was a high-tech thief, a cat-burglar of great skill, as well as Jack's musical back-up. Jack was an up-and-coming musician, dreaming of making it big. They were on a circuit (playing more to mining colonies who would do just about anything to get some "real entertainment" than in the fancy venues they hoped to achieve), when Saree absently picked an old spacer's pocket -- and found the coordinates to a Precursor site, right on that very planet.

It was easy to get in -- perhaps too easy, but the door-locks seemed to respond to Jack's perfect pitch as they surely would have not responded to an old spacer's croak. The pair found their way into a store-room, containing all manner of mysterious instruments. One, very like a guitar, caught Saree's eye and she reached out to take it from its niche. The protective nanites, however, were not as easy to disarm as the door locks had been. Jack stole away with his transformed lover and alerted the authorities, hoping that the strange markings inscribed upon Saree's new form (identical to the ones on the instrument she tried to steal) would hold some clue when translated . . .

In Nomine

Jaakan was a demon, an Impudite -- closest Band to humanity -- serving the Prince of Dark Humor, Kobal. His job was to make lovely, witty songs that poked fun at all humanity (or at least Heaven) held dear, infecting human minds with haunting tunes and sick, twisted words. "Poisoning Pigeons in the Park" didn't come *near* to what Jaakan hoped to accomplish.

But somewhere along the way, he fell in love with a human, a fellow musician he'd jammed with a time or two, to preserve his cover. And it was real love, not the usual love of an Impudite for humanity, which is more akin to the love of a cat for songbirds.. And real love is very, very dangerous for a demon.

Kobal found out about it, and he seized the pair. He gave his Servitor demon one chance to live: he would change the mortal woman into a living artifact, a guitar of superb work and tone, and he would let Jaakan go.

Now, humans are not so easy to enchant against their will as demons (and especially Princes) like to claim. Kobal knew this, and he made sure to tell them both that if Sarah were not willing to give up her existence as a woman and most of her sapience, he would simply kill Jaakan. The Prince was sure that the enchantment would fail, that Sarah

would be unable to sacrifice herself for a Hell-spawned demon, and he would be able to destroy Jaakan after letting the Impudite see that his "beloved" had betrayed him. Then, the demon lord planned, he would explain to Sarah how love can make demons redeem, and leave her to go through life with the guilt . . . Yes, that would be Funny.

The enchantment worked, and the woman became a guitar, unaging, always healing, beautiful among instruments as her voice had been beautiful among humans. As if it had been his plan all along (and for a five-second plan, it was pretty damned good), Kobal wrapped a further enchantment around Sarah's new form: the first part of it that if any of the Servitors of Eli, Archangel of Creation (whose ranks are full of artifact experts, and musical experts), ever played the guitar, it would be destroyed. The second part of it . . .

* * *

As can be expected, the curse upon the guitar-woman can be lifted if the player -- Jack -- finds the correct theme, the perfect melody to unlock the woman within. It might be a tune that someone else has lucked onto, it might be one never before played. Jack doesn't know, and he *must* find out, if he's ever to be re-united with the woman he loves.

Crouching Wizard, Smashing Hammer (for Rune RPG)

Published by [Atlas Games](#)

Written by Chris Aylott

Illustrated by Scott Reeves & Human Head Studios

32-page saddle stitched soft cover; \$5.00

Let me begin by saying that *Crouching Wizard, Smashing Hammer* is a great title. Not quite as good as Marcus L. Rowland's *Call of Cthulhu* scenario, *On the Trail of the Loathsome Slime*, but inspired nonetheless. It is, in fact, the first release for Atlas Games' Viking roleplaying game, *Rune*. Based upon the computer game of the same name from Human Head Studios and designed by Robin D. Laws, *Rune* put many concepts -- like competitive play, points scoring, and sessions having a winner -- back into roleplaying after years of games telling you to take them out.

Actually, *Crouching Wizard, Smashing Hammer* is the first scenario for *Rune* and comes in rather an odd format, or rather an odd format for an adventure that is not for *Dungeons & Dragons Third Edition*. It makes use of the format pioneered by AEG for their *Adventure Booster* series. Using this format means that Atlas Games have kept the price down and have very much made *Crouching Wizard, Smashing Hammer* into an impulse purchase. In fact, the adventure is double the length of the standard *d20 Adventure Booster* at 32-pages and is still more than reasonably priced at that length.

Crouching Wizard, Smashing Hammer adheres to the big, bold style and layout as seen in the adventure provided in the *Rune* rulebook "The Stolen Rune." It is well organized, and makes use of boxed text marked with icons to indicate when it should be read out to the players . . . or, since this is *Rune*, pillagers. Icons also indicate what the designer has spent points on in designing the adventure's three encounters. *Crouching Wizard, Smashing Hammer* is not heavily illustrated, but the few pieces are of decent quality, having been supplied by Human Head Studios from their concept art for *Halls of Valhalla*, the expansion to the *Rune* computer game. The adventure's maps are drawn by Scott Reeves in an intentionally rough style, but are all still all clear and easy to use.

[SPOILER ALERT!]

The plot to *Crouching Wizard, Smashing Hammer* is quite simple. Indeed, it does not need to be complicated; after all, it is catering Viking warriors, and who needs confused Vikings? It is a cold night in Midguard and the Pillagers are revelling at a feast given by Alberic, the chief of their village. The festivities are interrupted when the door to the long house is thrown open to the elements and the infamously evil Red Wizard stalks in, demanding to take advantage of the well known generosity of table of all Vikings and Chief Alberic in particular. When the chief inquires as to his guest's business, the evil Red Wizard cackles and demands the fealty of the village! This being a Viking adventure, mayhem naturally ensues...

Crouching Wizard, Smashing Hammer is broken down into three encounters, which gives room for the person running the adventure to insert encounters of their own or other players to run encounters they may also have created. Ideally this adventure is suited to having one or two encounters inserted between those already given. The first in *Crouching Wizard, Smashing Hammer* takes place in the pillagers' home village and is their first encounter with the evil Red Wizard. Having delivered his ultimatum, the evil Red Wizard unleashes Ice Wights upon the feasters and

disappears after the fight. Ice Wights are described as a "chilling new foe" for the game and are the animated corpses of Viking warriors who died in the cold snow of winter.

Our heroes being heroes (and if they are not, then they are definitely in the wrong game), decide to travel to the evil Red Wizard's tower on Gruignir Mountain, after of course, taking up the opportunity to boast of how they will take his head. This journey is the subject of the second encounter. It introduces a second new monster -- the fearsome MechaDwarf, which is oppressing the town of Lutethorsk after the inhabitants rose up against the rule of the evil Red Wizard. Hopefully, after the pillagers have aided the townspeople against their oppressors, they can finally reach Gruignir Mountain in the third and final encounter. Reaching the tower entails a long climb, a run in with a thankfully not hungry man-eating giant -- also called Gruignir and a potential ally -- before the pillagers can reach their objective and storm the headquarters of the evil Red Wizard.

[END SPOILER ALERT!]

Besides providing the *Rune* narrator with two new monsters (the Ice Wight and MechaDwarf), what *Crouching Wizard, Smashing Hammer* really gives the buyer and his group of players an evening's worth of entertainment for a great price. Further, it is all but ready to run upon purchase -- the experienced *Rune* referee should be able to prepare this adventure in less than an hour. *Crouching Wizard, Smashing Hammer* is an absolute must-have buy for the *Rune* RPG, and hopefully, Atlas Games will give us more of its ilk, as well as more extended adventures.

Oh, and did I mention that the title is really great?

Chainmail -- Why Bother?

Optional Rules for Misunderstood Armor

by Dan Howard

Introduction

During the playtest for *GURPS Low-Tech* there was a great deal of discussion and disagreement regarding chainmail and how to represent it accurately using *GURPS* mechanics. The reason for the differences of opinion was due to the wide variations of historical examples, the inconsistency in naming the various styles of chainmail, and the inaccuracy of "chainmail" as represented in the *Basic Set* (see p.B210).

Only two points were agreed upon: that the *Basic Set* chainmail was too heavy, and that standard chainmail offered less protection vs impaling and crushing attacks than it did vs cutting. In the *Basic Set* chainmail is just as effective against crushing attacks as it is against cutting. This is universally acknowledged to be untrue -- chainmail offered poor resistance to crushing blows. In *Low-Tech* the only concession permitted was the inclusion of padded cloth in its weight on p. B210. This effectively reduced the weight of unlayered chainmail from 25 lbs. down to 19 lbs. When compared to historical evidence, however, even this weight is far too high. And chainmail still falsely offers good protection against crushing damage.

The other major problem with *GURPS* chainmail is that most evidence seems to suggest that it offered better protection than scale armor. In *GURPS* this is reversed; plate provides the best protection followed by scale, and then chainmail. The difficulty is that there doesn't seem to have been many experiments comparing the various types of damage (cut, cr, imp) to various armor types -- namely chainmail and scale. Did scale offer better protection against arrows? Did chainmail provide better protection against sword cuts?

Chainmail was certainly easier to maintain and repair than scale. It was also a fraction of its weight. This makes it perfect for layering with other armor types (see Layering Armor below).

This exercise is an attempt to break down chainmail into the individual factors contributing to its defence capability and then approximate these using *GURPS* mechanics. It will show the full spectrum of the main types and manufacturing methods of chainmail. Armed with this, a gamer should be able to pull a sample out of a museum catalogue, or examine a mailed warrior in a painting or sculpture, and develop a reasonably realistic *GURPS* model with these optional rules.

Mail (*Maille*)

Standard mail consists of metal rings, each one linked through four others, two in the row above it and two below. The resultant mesh gives a strong, flexible armor that provides excellent protection against most cutting blows. As there were only the interlinking rings to give it form, mail suffered little from wear and could be repaired even when badly damaged. Note that 'mail' is the correct medieval term, probably derived through the French *maille* and Italian *maglia*, from the Latin *macula* meaning the mesh of a net. "chainmail" was not coined until the 18th century.

Mail was relatively easy to make with a minimum of tools. There was no need for large steel plates, so it could be made from small off-cuts. It was flexible, and it 'breathed' well compared to more rigid armors, so was less uncomfortable to wear, and more suitable for warmer climates.

The disadvantages of mail over other cuirasses were that its manufacture was an extremely long and tedious process, its high surface area meant that it rusted quickly, it was susceptible to impaling and crushing blows, and all the weight

of mail was born by the shoulders rather than being evenly distributed over the body like rigid armor. A method of relieving the shoulders of some of the burden was to wear a tightly drawn belt around the waist. This distributed some of the weight onto the hips, but it also introduced extra points of contact on the body, which was not desirable.

Mail did not offer the best protection when worn snugly against the body. It worked best when it hung loosely, moving freely during combat, with a degree of slack that partially cushioned the force of an incoming blow. Historical examples sometimes show extra reinforcing or bunching of links in spots that were in direct contact with the body, i.e. the shoulders and waist, to compensate for the lack of slack in these areas. The loose fit also enabled women to wear mail with no more difficulty than men, and individual tailoring was minimized.

Constructing Mail

Mail manufacture was a long and tedious exercise, but relatively easy and the basic techniques could be learned in less than an hour. Apprentices were often given monotonous tasks such as creating the rings and assembling the easier body sections. There were a few specialised tools involved, but all of them were fairly light and portable. A mail workshop could be set up in the field with little difficulty -- especially if pre-fabricated wire was part of the baggage.

Drawing Wire

Before assembly of the mail could be started, the armorer needed wire of the appropriate thickness or "gauge." This was usually created by pulling a rod through progressively smaller holes in a draw-plate. Wire could also be fashioned by beating small pieces into shape or by cutting thin strips off a larger steel plate. Manufacturing wire was a fairly laborious process, but relatively easy. Most blacksmiths would have had little trouble (Armory 10+, or Blacksmith 10+). No skill roll is required, but wire drawing is difficult to perform without the correct equipment. Wire drawing usually takes about three hours per pound.

Forming Links

The wire was wound into a spring-like coil around a long cylinder -- called a "winding rod" or "mandrel." This was then chiseled or sawn along its length to produce individual links with offset ends. Sometimes the links were individually nipped, enabling the ends of each link to overlap in the process. A hand-held press called a "swage" was then sometimes used to slightly flatten the links and prepare them for joining (giving each link a slightly rectangular cross-section). A hammer and anvil could also be used for this process. In Islamic countries the swage was sometimes used to stamp a decorative design onto the ring. Forming links was both easy and tedious. It was often delegated to apprentices and no skill roll is required. It takes about two hours per pound. Improvised tools will increase production time by +50%.

Joining Links

Mail was formed by joining the rings together, usually into a standard four-link arrangement. Each ring was connected to four other rings, two above and two below, so that the rows were staggered. This was a very time-consuming process; an average of 10,000-12,000 rings were needed to complete one mail shirt! Again, no skill roll is required although inexperience would increase production time. An Armory skill of less than 12 would increase the production time by +25% per point. For example, an apprentice with a skill of 10 would take +50% longer to finish the job.

There were three main methods of joining links: butting, riveting, and welding. *Low-Tech* states that it takes five hours/pound to create mail (p. LT44). This assumes that two people (possibly an armorer and his apprentice) are working together to draw the wire, form the links, and assemble them together into a finished article of standard light mail (see below). It takes approximately the same amount of time to draw the wire and form the links as it does to join the links together, so one person working by himself will take twice as long (10 hours/pound). Factors such as improvised tools, heavier wire gauges, higher concentrations of links, and advanced joining techniques, will also increase production time.

Butted mail: Butting involves simply pressing the links closed in a circle, and relying on the strength of the metal to keep them together. Thicker wire (see Double mail below) was often used to reduce the likelihood of links coming apart, or "unbutting." This method only really requires two pairs of pliers or tongs and improvising these will only increase production time by about +25%. Historically this type of armor was fairly uncommon. It was used most often in Persia, India, Asia, and Japan.

Riveted mail: Each link was inserted into the mail suit and riveted closed. It seems to have been a very time-consuming method, but the overwhelming number of historical examples are of riveted mail. There is no doubt that armorers used specialised tools to speed up the process, but these tools and techniques have largely been lost. Some historians and modern armorers have attempted to recreate the traditional techniques.

Once the ring was formed and pressed, the overlapping ends were pierced, either with a hammer and punch, or a special pair of tongs. The ring was then inserted into the mail suit, and secured with a sliver of steel or bronze through the pierced hole. This was then riveted by a second pair of tongs with recesses in the jaws. It is possible that the piercing and riveting was done all in one step using a single tool. This would have helped to reduce production time. Riveting is a fairly simple process and requires no skill roll. It takes +25% longer to rivet links than it does to simply butt them together. There are a few specialized tools required for this method and improvising these will increase production time by a further +50%.

Welded mail: The most preferable, albeit time-consuming, method of joining links. It was extremely rare for these links to come apart as a result of a single blow and, as such, provided the best protection possible against impaling attacks. The links were heated up and forge-welded, one at a time, on an anvil. Half of the links were welded before inserting them into the armor, and the other half afterwards. It was a delicate process and required the skills of an experienced armorer (Armory 14+). Welding links is the most demanding of joining techniques and doubles production time. This process was impossible to perform without a small anvil, a simple forge with hand bellows, and light smithing tools. These tools cannot be improvised, but would be fairly easy to transport.

Some types of mail combined rows of riveted rings with rows of pre-welded, or punched rings. This would have reduced assembly time as only half of the links would need to be joined once they had been inserted into the mail suit. Treat this type as riveted mail. Overall, production time would have been about the same. The second stage, forming the links, would have taken longer, but the last stage, actually assembling the links into mail, would have been quicker. Some sort of "mass production" method for producing pre-fabricated rings would therefore have been beneficial.

Finishing

When the suit was completed it was likely to have been "oil quenched" to temper it and give some degree of rust-proofing. Sometimes the armor was "blackened" to further improve rust resistance. This involved coating the armor with "dirty" or used oil (e.g. linseed or olive oil) and burning it off. A more effective method was to boil the armor in a pot of oil until the oil "cooked" into the steel, and then burning off the excess. The result was a glossy black finish.

Decoration

The structure of mail limits its potential for decoration. The lack of any flat surfaces restrict the use of techniques such as embossing and engraving. Although, as stated above, some Islamic armorers embossed designs onto links. Even more intricate designs could be painstakingly engraved onto individual rings (verses from the Koran, for example). This would greatly increase production time (at least 2-3 times) and the final cost would be much higher. In most cases, however, decoration of mail seems to have been mainly limited to using bronze or copper rings as decorative rows along the edges of the armor. Gilting was sometimes performed, coating the links with a thin layer of gold plate. Japanese armorers lacquered mail links in different colours -- although black seems to have been most common. This method was time-consuming, but afforded excellent rust protection. Lacquering had an added advantage: it greatly reduced the noise the armor produced and cut down on glare and reflections. Because of this, lacquered armor would be ideal for those requiring stealth, such as thieves.

Maintaining Mail

Although mail was very easy to repair, it was highly susceptible to rust, and techniques had to be developed to help prevent deterioration. As previously mentioned, mail can be "blackened," gilded, or lacquered at the time of construction to improve rust resistance -- although it didn't stop rusting completely. A common method of removing rust from mail was to put it into a barrel with some sand (and sometimes vinegar or urine). The barrel was sealed and rolled along the ground. The sand scrubbed the rust off the links. If kept in good repair and maintained regularly, the same suit of mail can be used by many generations of warriors.

Rust-Proofing

Mail must be regularly maintained each month or it will deteriorate. If the optional [Armor Damage Rules](#) are being used, a normal suit of mail will gain 1 penetration every two months if it is not maintained. After 20 months of neglect, it will be reduced to 'cheap' quality (losing -1DR) and eventually be completely useless. Rust-proofing a piece of armor will reduce the amount of maintenance required.

Blackening will reduce the amount of deterioration to a third (i.e. 1 penetration point for every 6 months of neglect). +20% to cost and production time.

Gilting reduces deterioration to 1 point every 3 years. It is counted as 'very fine' decoration and the armorer needs Jeweller 12+ to perform this process. Gilded armor costs 5x (gold plate is expensive) and production time is doubled.

Lacquering reduces deterioration to 1 point every 5 years. It is counted as 'fine' decoration. 3x cost and production time. Lacquering wears off over time and needs to be reapplied (once every 3 years). If not, the armor will deteriorate an extra point every time a lacquer coating was missed (1 point every three years).

Keeping a suit of armor permanently coated with oil and stored in a cool, dry environment will totally prevent deterioration. This is not practical for armor that is worn regularly though. Plate armor was sometimes coated on the inside with asphaltum (similar to roofing tar) as a tough, flexible waterproof coating. If worn regularly, armor is more at risk from rusting out from the inside due to sweat and condensation than it is from the outside.

Armor Quality

Cheap armor: Just as with weapons, armor can be of varying quality. If an armorer used inferior materials, or cut a few corners during manufacture, the end result will be a little shoddy. 'Cheap' armor would be useful for mass-produced items that needed to be manufactured quickly and cheaply.

If an armorer wanted to make 'cheap' armor, its manufacture time and cost is 75% of normal. Subtract -1 from all DRs (minimum 1). For example (see Mail Types below): 'cheap' riveted double mail would take 94 hrs to produce and cost \$630. DR reduces to 5/2/3. If the optional [Armor Damage Rules](#) are being used, then the armor becomes more susceptible to damage. An optional rule is to keep the DR the same but increase the weight by +20%. This is a reflection of the use of poorer quality materials in its construction. Remember not to add padding until after the final weight and price have been determined. All metal armor (scale, plate, etc.) can have a 'cheap' version. As stated above (see Rust-Proofing), this could also be applied to any armor that was permitted to accumulate a significant amount of rust, i.e. any armor that was not properly maintained would eventually become 'cheap'.

Merchants might sometimes attempt to pass cheap armor off as good quality armor and charge full price. A successful skill roll vs Armory, Blacksmith, or Merchant would enable the PCs to tell the difference (default rolls are appropriate).

Fine armor: Compendium II (sidebar p.CII43) allows for superior armor to weigh 10% less. Add +25% to cost and manufacture time.

Very fine armor weighs 20% less. Cost and manufacture time is doubled. It is extremely rare and only a master armorer (Armory 20+) could attempt to make it.

Ring Size and Spacing

Rings could vary greatly in size. The greater the diameter of the ring, the thicker the gauge of wire that could be used, or the more links that could be joined to the central link. As far as GURPS mechanics are concerned, only the very extremes of diameter and thickness would produce any variation in the amount of protection afforded. Low-Tech distinguishes between various wire thicknesses by including an entry for double mail (p.LT98). This allows for mail links weighing twice that of standard mail. Thus standard, or light mail, is on the bottom end of the scale.

Protection

Butted mail was extremely susceptible to impaling blows. The links often came open during this sort of attack, allowing the missile to punch through without slowing significantly. This drawback is reflected in the reduced PD and DR of chainmail in the Basic Set (see p.B210). Riveted mail, however, protected reasonably well against impaling attacks, and welded mail was even better again. The existing rules for chainmail do not take this into account.

All mail was susceptible to crushing blows -- only the padding beneath it prevented serious damage to the receiver of such an attack. Standard light mail only provides PD1, DR2 against crushing attacks, and most of this is due to the padding underneath. Without padding, light mail only provides PD0, DR1 against crushing attacks and is pretty much useless.

Here is the new standard "chainmail" entry for a mail shirt (sometimes called a byrnie). It protects areas 9-11, 17-18. PD and DR includes padded cloth worn underneath, but the weight does not. This is necessary to enable the various types listed below to be calculated properly.

Light mail shirt, butted: PD3 (cut), PD1 (cr./imp.); DR4 (cut) DR2, (cr./imp.); 10 lbs.

Construction time is $10 \times 5 = 50$ hours.

Basic Set and **Low-Tech** both list the cost of "chainmail" at \$230. This includes padded cloth so the base cost is only \$200. When looking at the manufacture time and the cost of raw materials, this price is far too cheap. Historically, a suit of mail often cost more than a good warhorse. Realistic armor prices will be the subject of a later article. For now this price will be used for the light mail shirt mentioned above and multipliers will be applied for modifications to this basic design.

Here is a list of new weights for different hit locations:

Light mail shirt, butted (areas 9-11, 17-18): 10 lbs.; \$200.

Light mail coif, butted (areas 3-4, 5): 2 lbs.; \$50.

Light mail sleeves, butted (areas 6, 8): 5 lbs.; \$50.

Light mail leggings, butted (areas 12-14): 8 lbs.; \$90.

Light mail gauntlets, butted (area 7): 1 lb.; \$45.

Light mail sabatons, butted (areas 15-16): 2 lbs.; \$45.

Modifying

Mail can be modified in two ways: linking method, and manufacturing style. Both of these can be combined to improve the protection provided by mail. A table laying out various combinations can be found below.

Linking

This determines how easy it is for the individual links to open up, thus governing how effective the mail is against impaling attacks.

Butted: This should be considered the basic technique for joining links and this method is used to determine the stats of standard light mail. It provides little protection against impaling attacks. If the optional [Armor Damage Rules](#) are being used then butted mail counts for two penetrations of the armor for every impaling attack that gets through. Fortunately butted mail is easy to repair and takes half the repair time normally required. Repair cost is also halved.

Riveted: A small rivet often prevented the links from coming apart when hit with a missile. It adds +1PD (imp.) and +1DR (imp.) Weight is the same; Cost is 2x.

Welded: The best method of joining links. TL4+ types of mail almost always used this method, which provides the best mail defence against impaling attacks. Welding adds +1PD (imp.) and +2DR (imp.) Weight is the same; Cost is 3x.

Style

Advanced mail manufacturing techniques can improve its defence capability. Only one style can be utilised at a time. You can't, for example, combine bar mail with fine-mesh thus doubly improving its PD and DR.

Light Mail: Should be considered the 'standard' type of mail. The links are on the lower end of the thickness scale and have a similar outside diameter to other types listed here. Reducing the diameter of the links would increase the total number of links required. In game terms there would be no effect until the links were quite small. The result of this would be Fine-Mesh mail -- see below.

Augmented Mail (p.LT98): Flexible leather strips are woven vertically through the mail to improve its protection. It offers +1DR (cut/cr.); Weight 120%; Cost 120%. The augmentation is performed after the mail is completed.

Bar Mail: Similar to augmented mail except that thin metal splints are added instead of leather strips. Hand and foot protection cannot be made from this. It provides +2DR (cut) and +1DR (cr./imp.); Weight 180%; Cost 180%.

Double Mail (p.LT98): The wire used in making these links is twice the weight of light mail (about 40% thicker). It provides +1PD (all attacks); +2DR (cut) and +1DR (cr./imp.); Weight 2x; Cost 2x. These stats can also be used for mail that utilises light rings of the standard diameter, but twice as many of them -- the resulting mesh has smaller gaps.

Triple Mail: Extremely rare. The wire used for these links weighs three times that of light mail. Because of this, the inside diameter is relatively small -- individual links do not move as freely through each other and flexibility is compromised. Despite this, it provides excellent defence, but is extremely cumbersome to wear. Hand and foot protection cannot be made from triple mail. It is the heaviest armor available, adding +1PD and +2DR against all attacks; Weight 3x; Cost 250%.

Combined Mail: Combines small steel plates with mail for greatly improved protection. This is by far the most effective type of mail armor and was used in both Europe and Japan. It was preferred in Japan over their traditional lamellar armor, which was laced together with silk. Low-Tech calls this Laminated steel (see p.LT115). Hand and foot protection cannot be made from combined mail. It adds +1PD and +2DR against all attacks; Weight 2x; Cost 3x. These links were always fairly heavy and should be treated as double mail.

Fine-Mesh Mail (p.CII43 sidebar): Small rings linked closely together result in a fine mesh with the consistency of heavy cloth. While not found much in Europe until the Renaissance, there is evidence to suggest that fine-mesh was utilised in both the Roman and Islamic worlds. Mail with links of diameters as small as 3mm have been found at archaeological sites. The rings are very small and each one must be individually welded (they cannot be butted or riveted). Fine-mesh provides PD3 (cut./imp.), PD1 (cr.); DR3 (cut./imp.), DR1 (cr.); Weight is the same; Cost 9x; Production time 9x (45 hours/pound).

Note that this is the only mail that provides full protection without any sort of padding, and is ideal for wearing under

clothing. Therefore, if fine-mesh were layered with padded cloth or leather, the DRs would combine. However, mail is notorious for staining and tearing clothing, so a protective layer of cloth (PDO; DR0; Cost \$10; Weight 1 lb.) is recommended. Sometimes the fine-mesh could be purchased already sewn onto a cloth or soft leather shirt.

Note also that this supercedes the entries in *Low-Tech* for armored shirt and reinforced coif. Both of these items are made from fine-mesh mail -- use the above stats. Fine-mesh is excellent for concealment and gives +3 to any Holdout roll (see p.LT98). Wearing padding underneath would decrease the Holdout bonus to +1.

Padding

Mail is next to useless if no padding is worn underneath. Remember to add padded cloth underneath all mail except fine-mesh to determine actual weight and price. A padded shirt is often called an aketon or arming doublet. The latter was a later innovation (early 15th century) and was equipped with points to attach mail gussets and pieces of armor. *Basic Set* and *Low-Tech* both give it a weight of 6 lbs. There doesn't seem to be any historical evidence to suggest that this sort of armor, whether layered felt or quilted cloth, weighed any more than about 4 lbs. Modern reconstructions support this. Quilted gambesons may have weighed 6 lbs., but they reached down to the knees (see Hauberks, below).

If your GM agrees, then the weight of padded cloth (areas 9-11, 17-18) should be reduced to 4 lbs. Using double mail as an example, the total weight of this, including padded cloth, would be 24 lbs. It would seem that the authors of *Basic Set* used a sample of this type of armor to determine the weight of "chainmail" (see p.B210). This explains the discrepancy between this weight and the numerous museum samples, which are generally much lighter.

Mail Types

Here is a breakdown of the described mail types including layered padded cloth (where required).

Torso (Areas 9-11, 17-18) Description	PD (cut/cr/imp)	DR (cut/cr/imp)	Weight (lbs)	Cost	Production Time
Light Mail shirt, Butted	3/1/1	4/2/2	14	\$230	50 hrs
Light Mail shirt, Riveted	3/1/2	4/2/3	14	\$430	63 hrs
Light Mail shirt, Welded	3/1/2	4/2/4	14	\$630	100 hrs
Augmented Mail shirt, Butted	3/1/1	5/3/2	16	\$270	60 hrs
Augmented Mail shirt, Riveted	3/1/2	5/3/3	16	\$510	75 hrs
Augmented Mail shirt, Welded	3/1/2	5/3/4	16	\$750	120 hrs
Bar Mail shirt, Butted	3/1/1	6/3/3	22	\$390	90 hrs
Bar Mail shirt, Riveted	3/1/2	6/3/4	22	\$750	113 hrs
Bar Mail shirt, Welded	3/1/2	6/3/5	22	\$1110	180 hrs
Double Mail shirt, Butted	4/2/2	6/3/3	24	\$430	100 hrs
Double Mail shirt, Riveted	4/2/3	6/3/4	24	\$830	125 hrs
Double Mail shirt, Welded	4/2/3	6/3/5	24	\$1230	200 hrs
Triple Mail shirt, Butted	4/2/2	6/4/4	34	\$530	150 hrs
Triple Mail shirt, Riveted	4/2/3	6/4/5	34	\$1030	188 hrs
Triple Mail shirt, Welded	4/2/3	6/4/6	34	\$1530	300 hrs
Combined Mail shirt, Butted	4/2/2	6/4/4	24	\$630	125 hrs

Combined Mail shirt, Riveted	4/2/3	6/4/5	24	\$1230	157 hrs
Combined Mail shirt, Welded	4/2/3	6/4/6	24	\$1830	250 hrs
Fine-Mesh Mail shirt, Welded (No padded cloth)	3/1/3	3/1/3	10	\$1800	450 hrs

The above system might seem complicated, but the actual amount of book-keeping involved is only slightly more than that which GURPS already requires of mail, and is far more realistic and adaptable.

Layering Armor

Low-Tech states that any armor can be worn over any other, subject to GM approval (see p.LT114). The reduced weights listed above make mail a very favourable option when layered with other types of armor. Butted light mail worn under a plate corselet gives PD 4 and DR 10/8/8 and only weighs 48 lbs. The catch is that massive amounts of armor are bulky and hamper movement:

For every point by which the DR of the inner layers (every layer but the outermost layer) exceeds 3, reduce the wearer's effective DX by -1. (see p.LT114).

In the case of mail the DR varies. To solve this simply average the three DRs.

Butted light mail: $(4 + 2 + 2)/3 = 8/3 = 2.67$. Because it does not exceed 3 there is no DX reduction. If Butted augmented mail was layered instead, the average DR would be 3.33 and so a DX penalty of -1 would be applied to the wearer.

Optional Extras

Blunt trauma: Often when a mail-cladded defender was struck with an impaling or cutting weapon, even though the mail prevented the attack from piercing the skin, the impact of the blow often left severe bruising or cracked bones. GURPS already has blunt trauma damage for Kevlar vests (see p.B211) and the same rule can be applied to mail with a small modification:

When all of the damage in a cutting or impaling attack is absorbed by the armor, any rolls of 6 on any damage dice result in one point of crushing damage per 6 rolled being applied to the wearer.

For example, a warrior wearing combined mail is cut with a sword doing 2d-1 damage. The attacker rolls a 6 and a 1 (total 7), which results in 6 points of damage. This is totally absorbed by the armor but, because a 6 was rolled, the defender takes 1 point of crushing damage. This rule could be applied to all flexible armor types such as scale and padded cloth. Suddenly that hail of Halfling shortbow arrows, which was once considered only a nuisance, now becomes much more deadly.

Hauberks: The mail shirt is extended into a long skirt that falls down to the knees (protecting areas 9-11, 12-14, 17-18). It is split either up the sides for infantry, or front and back for cavalry. All types of mail can be hauberks. Manufacturing a hauberk adds +50% to the cost, weight, and production time of a mail shirt. This type of protection leaves the shins exposed, however, and any attack that hits the legs will strike the exposed part on a roll of 4-6. Hauberks can be made from any flexible armor type. Cloth hauberks are normally called gambesons.

Edged mail: European mail was smooth -- designed to deflect weapons by rolling them off the wearer. In some cultures, such as China, mail could be fashioned with edges and protruding pieces designed to catch an enemy's sword, thus preventing him from parrying the defender's counterstrike. This armor could also cause 1 point of cutting damage to anyone who brushed against it and may cut the wearer if he attempted to dress or undress too quickly. No armor can be layered over the top of this, but armor may be layered underneath (see Layering Armor, above).

This modification can be done to any type of mail. Cost and production time is doubled; PD (cut) is reduced by -1. However, it stands a chance of causing the attacker's weapon to get stuck in the links. If the defender gets a critical success on his Defense roll against a cutting attack, the attacker's weapon is automatically stuck as per p.B96 (sidebar) for 1 turn. Note: this happens instead of the normal rule that requires the attacker to roll on the Critical Miss Table (see p.B110). Each round afterwards, the attacker must make a Weapons roll. Success results in his weapon coming free (unlike the rules on p.B96, it causes no damage). A critical failure also results in the weapon coming free, but the attacker must then roll on the Critical Miss Table (see p.B202).

Other Materials

Bronze: Although bronze is difficult to draw into wire, it was occasionally used for making mail. Bronze mail is +20% heavier than an equivalent piece of steel mail. Cost is 80% and manufacture time remains unchanged.

High-tech steel alloys add +1 to all DRs but have no effect on weight. Cost is doubled. In a fantasy setting this could be equivalent to something like Dwarven steel if they had superior metallurgical skills.

Talking About It

On Tuesday morning it was no longer normal to greet people with "Hello." Instead it was: "Have you heard?"

My conversation with my boss Tuesday morning consisted of:

Me: "Have you heard?"

Him: "Have *you* heard?"

It soon became apparent that, indeed, we had heard.

Wednesday morning greetings were replaced with, "Have you heard anything new?"

My personal Wednesday was taken up waiting at the Blood Mobile. Although my friend and I were there when it opened at 11 AM, many others were there before us. Three hours of waiting in line later they informed us that 1) They had all the blood they needed, and 2) they really had all the blood they could *handle* at the time. They said they'd call those of us on the list that didn't get a chance to give. We left. (In hindsight I'm grateful; I hadn't even considered that, days before, I was sick. It certainly didn't feel like days before. It felt like grade school feels now.)

While waiting in line, we all knew *why* we were waiting in line. But none of us could really talk about it. Certainly we chatted, but it was always in careful terms. "I've heard they were armed with knives and box cutters." "I hear they're worried another one might collapse." "My friend was visiting there just last June." "They haven't released any numbers yet, but they're saying thousands if not tens of thousands."

Even now, almost three days later, I'm really not able to talk about it. I've spoken with friends and relatives about implications, effects, worries, and feelings . . . but not *it*. Everything but it.

There are times that exist solely by the shock, and the inability to formulate adequate words.

- December 7th.
- November 22nd.

And, now, September 11th.

They say life imitates art, and vice versa. If so, then I feel we -- instinctively -- know that *not* talking directly has a power, an awe and reflective demeanor.

This is something writers, filmmakers, and other artists know; we don't need to see it, hear it, or be told it to be affected. A shadow, a hint, and things unsaid have a great power. We don't need to be told about the monster, the horror, the gut-wrenching agony. We know about it.

The unspoken dialog in *Remains of the Day* is gut-wrenching. By the end I was desperate for the protagonists to talk to each other, yelling -- silently -- at the screen for them to communicate.

T.S. Eliot's *The Hollow Men* continues to fill me with dread, even though it doesn't *say* much of anything directly.

My father was never judgmental regarding my career path . . . or seeming lack thereof. My first published work in *Shadis* appeared the week my father died. I gave him a copy at his funeral. I'd never had a chance to mention that I was, at that point, a published writer.

Numbers are, at their core, meaningless to us. We hear them, and we know logically that they represent horrible facts. But unless we experience them directly, or have some connection to the events, they don't grip us.

- 20,000 people died in India from an earthquake on January 26th this year.
- 40,000 people died in car accidents in the US last year.
- 100,000 Iraqis died in the Gulf War.
- 27,000,000 Russians died in World War II.

Facts are, on the whole, equally unreal.

A day before the Rev. Dr. Martin Luther King, Jr., was shot, he was informed of the potential for harm against him. According to the Rev. Andrew Young, he was not worried, since King felt he had "reached the peak of fulfillment with his non-violent movement." King was 39 at the time of his death.

Two months later, an assassin walked up to presidential hopeful Robert Kennedy and shot him. Kennedy had just excited his supporters after the California primary by saying, "On to Chicago! Let's win there!"

It was a leaky joint in a solid rocket booster that caused the explosion of the space shuttle *Challenger* on January 28th, 1986, killing the seven crewmembers aboard.

It's the feelings -- those in our hearts, our minds, and our souls -- that are the most real. And, usually, the most hushed.

It's why so many of our parents and grandparents are so quiet. The Great Depression and World War II provided more than their opportunities to remain in silence.

We know what frightens us. We know what makes us cry. We know what makes us stare in disbelief at an empty skyline.

But words aren't enough to convey it.

The Art Of Vestiomancy

(Or, Why A Wizard Should Wear Funny Robes And A Pointy Hat)

A Prestige Class for d20

by Jody Macgregor

Vestiomancy is a unique means of spell-casting. Vestiomancers (also known as 'weaver wizards') sew sigils; representations of spells, directly onto their robes -- effectively wearing their spellbooks. They are reliant on accoutrements in general, requiring their staves and conical hats to be at their most efficient.

Wizards are most commonly vestiomancers, though sorcerers and even bards may join the class. As NPCs, vestiomancers are often eccentric, subscribing as they do to a very localised form of spellcasting. Most vestiomancers remain attached to the College of Vestiomancy described below, even if in an unofficial capacity.

Vestiomancer

Hit die: d4

9	+4	+3	+3	+6	Hidden Sigil	+1 level of existing class
10	+5	+3	+3	+7	Circle Founding	+1 level of existing class

Requirements

Spellcasting: Ability to cast 3rd level arcane magic.

Craft (sewing): 8 ranks

Feats: Craft Wondrous Item

Special: Must have graduated from the College of Vestiomancy, reaching Investiture. It is up to the DM to determine exactly how long this takes.

Class Skills

Skill Points at Each Level: 4 + Int modifier.

The vestiomancer's class skills are: Alchemy (Int), Concentration (Con), Craft (Int), Forgery (Int), Knowledge (Int), Profession (Wis), Scry (Int), Speak Language, Spellcraft (Int), Use Magic Device (Cha, exclusive skill).

Class Features

Weapon and Armor Proficiency: Vestiomancers gain no proficiency in any weapon or armor. Note that armor check penalties for armor heavier than leather apply to the skills Balance, Climb, Escape Artist, Hide, Jump, Move Silently, Pick Pocket, and Tumble.

Spells: A vestiomancer casts arcane spells. When a new level of vestiomancer is gained, the character gains new spells per day as if gaining a level of a normal spellcasting class. If the character was multiclass, the player must choose which class to advance. Other class abilities, like a wizard's bonus feats, are not gained.

Vestments: The robes, staff and hat of the vestiomancer, each of which radiates a low-level aura to Detect Magic and similar effects, though the multiple magic types involved confuse such spells.

Robes: Vestiomantic robes are covered in sigils, runes and pictograms which represent spells. To prepare their spells, vestiomancers must be wearing their robes. While robed, they also gain a free spell slot of each level they can cast. With a Spellcraft check (DC 15) a vestiomancer can read another's robes and get a rough estimate of caster level and spell specialization.

Specialist wizards who become vestiomancers can prepare a second robe to change their specialization. They must make the decision when gaining a level of vestiomancer and the effect is permanent. The wizard may either choose to change specialization (or choose to move from universal to specialized), or choose to not be specialized anymore. Any spells previously known but now denied to the wizard can no longer be cast.

Staff: Vestiomancers carry a staff, given to them as part of their vestments after the ceremony of Investiture. When vestiomancers are given their staff, they must choose one of the following metamagic feats to be imbued in it; Enlarge Spell, Extend Spell or Silent Spell. Once per day, a spell cast by the vestiomancer can be treated as though cast with the relevant feat, but takes up only its normal level spell-slot. At 4th, 6th and 8th level, the staff's use per day is increased by one. At 4th level, the staff gains another feat from the above list. At 6th level the Empower Spell and Maximize Spell feats are added to the list, and another feat is gained. At 8th level, the Quicken Spell feat is added, and a final feat is gained.

Hat: When vestiomancers put on their conical hats, they enter spellcasting mode, like a sword fighter donning a scabbard or a gunslinger putting on a holster. The hats give them a +4 bonus to all Concentration checks. They also make a good place to hide small objects, such as potions or flasks of booze.

Hidden Sigil: Vestiomancers can hide sigils inside their robes, but casting the spells woven there work differently. At 3rd level and every 2nd level thereafter, the vestiomancer chooses one of the following spells to hide:

Darkvision, Fly, Invisibility, Levitate, Protection from (Alignment), Protection from Arrows, Protection from Elements, See Invisibility.

The vestiomancer must have access to the spell, but does not need to have previously learnt the spell. Each Hidden Sigil may be cast once per day with no preparation or components, and does not consume a spell slot. The spell is cast at the level of the vestiomancer, and the casting time is instantaneous (though only one may be cast per round). Spells may be taken as Hidden Sigils more than once.

Circle Founding: At 10th level a vestiomancer has earned enough respect to create a new circle. A circle is a group of vestiomancers with similar views and goals who work together for the benefit of all. Founding your own circle effectively lets a vestiomancer attract a group of likeminded and powerful spellcasters who can be given orders and called on for aid. See the section below for some examples of circles.

The College Of Vestiomancy

The College of Vestiomancy is situated in a generic fantasy city near you. Wizards from far and wide flock there to study this unique form of spellcasting from its masters. The College itself researches magic as a means of furthering

knowledge, and tries to play little part in society, but individual graduates may prefer the acquisition of power over knowledge. The College frowns on this but is powerless to stop it.

On the College grounds are separate lecture halls for each school of magic, a well-stocked library, a craft hall, a thick-walled building for the practical examinations and a research facility (also thick-walled).

Roughly central to the library and lecture halls is the Tower of History. Here, the history of the land is presented in the form of a series of tapestries adorning the walls. It is the privilege of the highest-ranking vestiomancers to weave the newest tapestries as events unfold, and to maintain the older sections. Some parts have been lost due to theft and fire, so this is not a complete history that a layperson could understand. Also, vestiomancers sometimes encode symbolic images into the art, the meaning of which only those with inside knowledge can decode.

At the top of the Tower of History is the Tapestry of Many Sigils. All the known magical sigils are woven into it, and it is by study of this, or copies of certain portions of it, that vestiomancers learn new spells.

Rumours

- In a locked vault below the Tower of History all the future tapestries are stored. Senior vestiomancers, sworn to secrecy, don't weave the tapestries. They merely remove the next one from the vault and hang it on the wall. If someone could get access to the vault, they would know the future.
- Changes made in the historical tapestries over the years have caused history itself to change.
- In a secret room there are tapestries showing bizarre scenes that act as portals to faraway lands.

Studying Vestiomancy

Students must be sponsored by a senior vestiomancer. Sponsors are technically responsible for the actions of their protégés, but many wizards have sponsored too many to bother paying much attention to them. Study is a long and arduous process. At first students are taught mundane crafts that are necessary once they learn vestiomantic magic, although many students don't see it that way ("Knit one, pearl one, waste your life," as the younger students say). This also builds up the patience and manual dexterity required in vestiomancy. More experienced spellcasters may be rushed through the process and attend only a few lectures before applying to be examined, a process involving several written and practical tests. If you want to roll dice for this kind of thing, a Knowledge (arcane) check at DC 20 is required to pass.

After examinations, a graduation ceremony called Investiture is held. The successful students are awarded their staves and hats, and either sent out into the world or offered positions at the college as teachers or in a research capacity. Invested vestiomancers may also join a circle, a kind of magical fraternity. Each circle has different entrance requirements and traditions, holding infrequent meetings, reunions and so on. Some circles function almost like secret societies, gaining privileges in the outside world for their members, and acting as repositories for secret knowledge.

Famous Circles

The Circle of the Seven Stars: An exclusive circle for vestiomancers who pass examination in the highest percentile. They are governed by a council of seven (rather than the normal council of one), and council membership is very elitist. They are rumoured to hoard sigils that other circles, and the College, is unaware of. Their symbol is a circle made of seven stars, worn on an amulet, or inscribed onto staff or hat, as are all circle symbols.

The Circle of Extraordinary Gentlemen: The members of this circle are notorious drunkards and braggarts, who convene together irregularly to drink and swap tall stories. Many of the members are wanderers who consider College life to be stuffy and dull. Their symbol is a tankard of ale.

The Circle of the Rose and Thorn: A very secretive circle, with rumoured ties to the underworld. They claim that a conspiracy of supernatural beings secretly rules society. Some of the members wish to destroy these entities while

others wish to join them. Their symbol is a rose with a drop of blood on its thorn.

The Royal Circle: Foster relationships with the people, normally rich people. They encourage the belief that wizards are a necessary business acquisition or fashion accessory, for all the top merchants and nobles. Their symbol is a crown.

The Circle of Hunters: Hunt rogue wizards and other threats to the Colleges. They provide weaponry, mercenary henchmen and information to their members. Their symbol is an eagle's claw, normally engraved on the staff.

History Of The College

Gregor Quidam, an eccentric wizard and passionate basket-weaver, invented vestiomancy by accident after misreading references to magical robes in several ancient texts and attempting to replicate them. His discovery would have been forgotten on his death, had he not performed an important service for Lord Sohensoe. Legend says that Quidam wove a spell to destroy the nobleman's enemies, but modern sources claim that he merely effected a cure for his Lord's syphilis. Sohensoe had the College built for Quidam in gratitude, and the basket-weaver dedicated it to his own form of spellcasting. He showed a remarkable flair for organization, finding and training various hedge wizards and promising youngsters, codifying sigils into the Tapestry, and turning an actual profit before his untimely death. Some say that Quidam vanished into one of the tapestries in the Tower of History. Other sources suggest that he died of a social disease brought about by an excess of good living.

Rules Of The College

Fighting between vestiomancers is not allowed, outside of formalized duelling. Duels are also practiced as a sport, but real duels are often lethal. The two duelling vestiomancers cast spells, not at each other, but at the area around them. In sport, the object is to knock the opponent off his feet, or out of a designated area (wind and earthshaking spells are common). In battle, the object is death, or at least humiliation. Duelling is the only way that one vestiomancer may kill another without being declared rogue and becoming a target of the circle of hunters.

Vestiomancers have a strict set of laws that forbid things such as the destruction of knowledge, harming tapestries, killing other vestiomancers outside of a duel, and misusing their powers. Misuse covers magical creation of gold, as well as trafficking with demons and the undead, and stealing the livelihoods of others by doing their work for them. Working as a court wizard, or divining the future of stock for a merchant is technically illegal, but is overlooked in almost all cases. A vestiomancer should also never refuse aid to a mundane cloth-weaver out of a sense of solidarity, but this is more a matter of honour than law and is safely ignored. The punishment for the other crimes is death, normally dealt out by the circle of hunters. Even in the case of rogue vestiomancers, killing outside of a duel is illegal.

The Coldest War:

The Antarctic Rim in *GURPS Technomancer*

by Loki Carbis

"I watched the sky a long time, concluding that such beauty was reserved for distant, dangerous places, and that nature has good reason for exacting her own special sacrifices from those determined to witness them."

-- Alone by Admiral Richard E. Byrd

Unlike its more peaceful analog in our own world, the Antarctic Rim in *GURPS Technomancer* is among the most dangerous and hard-fought of territories in the world. The major reason for this is the Zhukov Hellstorm, the larger and more powerful cousin of the Trinity Hellstorm. But unlike Trinity, Zhukov is not located within the territory of any one nation.

Antarctic History

Before 1949, not much attention was paid to the region. But the ready access to magical energies provided by the Zhukov detonation inspired the interests of many nations. Argentina, Chile, Australia, New Zealand, France, Norway, the Soviet Union, the United Kingdom and the United States all had interests in the area -- mostly scientific research bases or territorial claims. After Zhukov, these nations were joined by several others, including South Africa, China and Japan.

In the pre-Zhukov days of Antarctic exploration and science, a somewhat utopian spirit prevailed. All were visitors, and all were tacitly encouraged to leave petty nationalism above the 60th Parallel. Post-Zhukov, this attitude was replaced by a vastly more pragmatic and world-weary outlook. Antarctica had become a strategically vital possession, and all other nations were to be treated with suspicion at best -- hostility at worst. The arrival of the Chinese on the continent in 1950 raised the stakes even higher, as all three superpowers got into the act.

In 1957, in conjunction with International Geophysical Year, the Antarctic Treaty was signed. It promised a military and industrial free zone, with strict anti-pollution and anti-armament legislation. On the other hand, it also included the controversial "mutual defense" provisions that required all signatory nations to assist their fellows in keeping non-signatory nations out of Antarctica. Signatory nations included the USA, the UK, the USSR, Poland, France, both Germanies, Norway, Japan, Australia, South Africa and Chile. Notable non-signatories included China, New Zealand and Argentina. By 1965, the treaty was being routinely violated, as magical and industrial research converged, although the official story was that magical research of any sort was not covered by the treaty (which was true to the letter, if not the spirit, of the agreement).

In retrospect, the Antarctic Treaty seems to have exacerbated rather than relieved political stresses on the southernmost continent. Petty territorial disputes and a complete lockdown on scientific research exchange (due mostly to the increasingly blurry line between science and magic) contributed to the ill-feeling. More and more, Antarctic settlements became a series of heavily-armed military city-states, none really trusting the others. The Japanese government was the sole exception to this policy, with the Syowa Base having only the most minimal of defenses, and an open-door policy to everyone (although cynics on all sides claimed that this was merely an effort to steal knowledge, particularly magical knowledge, from anyone who had it). But the quick fall of the base to the attacks of the Killer Penguins in 1984 just gave hawks everywhere another reason to crow over the doves.

It is now commonly accepted that the Killer Penguins were aware of the Treaty, and exploited its weaknesses in their campaign to conquer all Antarctica. Aside from Soviet bases attacked in retribution, only non-signatory nations were targeted by the birds until 1983. By the time that Treaty signatory bases were being attacked by the Penguins, they had been sufficiently divided and made suspicious of each other that a cooperative response was nigh impossible (the

evacuation of the Syowa base is one of the very few examples of this paranoia being overcome).

Antarctic Conditions

The climactic conditions in Antarctica are possibly the most extreme in the world. Average winter temperatures range from -40F to -94F in the interior of continent, while the coastal regions range from +5F to -26F. In the summer months, the interior ranges from +5F to -31C, and the coast between +41F and -23F. (Full rules for the effects of such temperatures may be found on pp. B130 and CII133-135).

The other major climactic factor is the wind. Katabatic winds can gust up 320kph in coastal regions, and higher still near the Zhukov Hellstorm. The winds in the interior are not so severe, but the risk of getting caught in a blizzard or a whiteout is very real at all times.

The Aurora Australis is a common enough sight in the skies below 40 degrees South Latitude. Its presence depends on the interaction of solar activity, fluctuations in the earth's magnetic field and variations in the intensity of the Zhukov Hellstorm. It can reasonably be seen anywhere in the area discussed in this article, but is most common in the areas around the south magnetic pole and Zhukov Hellstorm. When it is visible in the sky, all spell casting is at +1 to skill and power -- but the effects of all backfires are rolled at +3. These effects are both doubled if the spell caster is actually on the Antarctic Ice-Cap. Curiously, the Killer Penguins seem immune to both these effects.

Political Entities in the Antarctic

Argentine Territories

It should be noted that all current Argentinean possessions were formerly claimed by the United Kingdom (and in some instances, Chile as well). These territories were all captured at the time of the Falkland invasion in 1982. These territories include South Georgia, the South Orkney Islands and the South Sandwich Islands, all of which are heavily defended by Argentinean forces. Although no one believes that the United Kingdom will allow their capture forever, the Argentinean high command is quite confident that it can hold them in the event of a counter-attack -- barring American intervention. A lot of Argentina's foreign policy objectives are thus aimed at isolating Britain from potential allies, and keeping her actual allies busy elsewhere.

Chilean Territories

See *Disputed Territories*, below.

Australasian Territories

Existing in an uneasy tension with the United States -- the nations are friends, but no longer allies, Australasia holds numerous territories, including the Auckland Islands, the Balleny Islands, Campbell Island, Heard Island, Macquarie Island and Scott Island. Of these, Macquarie Island is the site of a major naval and air force base, and the focus of much top secret military research, with Heard and the Ballenys also well garrisoned. The more northerly Aucklands and Campbells are open to tourists, while Scott Island has been declared a national park, and is closed to all human landings, except in emergencies.

French and Norwegian Territories

Although these islands are nominally under the control of France (and Norway, in the case of Bouvetoya), their extensive use by NATO forces means that they are de facto possessions of the United States. This includes Ile Amsterdam, Bouvetoya, Iles Crozet, Iles Kerguelen and Ile Saint-Paul. Peter I Island, the most inward-lying of the Norwegian possessions, fell to Killer Penguin attacks in 1987, and has been held despite repeated efforts to reclaim it.

There is some ill-feeling on the islands about the assumption of power by the American military, occasionally leading to minor acts of sabotage.

Japanese Territory

The McDonald Islands are among the most heavily settled of all the Antarctic Rim territories. Since the purchase of these islands, Japanese government and industry have spared no expense in utilizing them. In addition to a thriving magical college, the McDonald Islands boast the world's most advanced superconductivity research laboratories, extensive whaling bases (technically illegal under the terms of the sale, but no one seems to be in a hurry to do anything about it), and even a tourist resort. Permanent population is about 1200 people, plus between one thousand and three thousand transients, with the numbers peaking in the summer months. Usually about half of them are spell-casters.

The chief settlement of the McDonald Islands, a port named Mizuho, is a well-known place for clandestine meetings and a haven for spies. It is sometimes referred to as the "Casablanca of the Antarctic" and with good reason. Under the relaxed gaze of the security forces, pretty much anything not involving violence, however criminal, is tolerated (unless it would harm Japan or Japanese interests).

South African Territory

The previous territories and bases on the Antarctic continent claimed by South Africa have been lost to the Argentines (who then lost them in turn to the Killer Penguins). Now, only the bases on Prince Edward Island and Marion Island remain. Both bases are heavily defended against incursions, and are the centers of magical research by the South African government. Despite the provisions of anti-apartheid that were written into the Antarctic Treaty, all publicly known South African mages to date have been of Caucasian descent. Even in the paranoid Antarctic, South Africa is seen as unusually isolationist.

Utopian Territory

A multi-ethnic utopian band calling itself the Human Liberation Front during the British-Argentine conflict of the 1980's seized the former British territory of Shag rocks. Extensive use of stone-shaping magicks has greatly expanded the original islands, which were simply a series of desolate rock outcroppings. When it was revealed, in 1996, that the leader of the movement, and President for life of Utopia Island was Richard Byrd, the result was massive public outcry. Byrd's views on retaking Antarctica were well known, and it was widely believed that he might foolishly trigger a war between the Killer Penguins and humanity. So far, however, he seems content to wait and gather his strengths. No one doubts that he has a plan, but so far, no one knows what it is.

Disputed Territories

Argentina, Chile and Britain all lay claim to the South Shetland Islands, just off the Antarctic Peninsula. Already overcrowded, the islands have been the site of fierce guerilla warfare between Argentina and Chile ever since the Falklands War of 1982. Although Argentina holds more territory than Chile, the Chileans are a long way from being defeated. With the aid of their Uruguayan allies (and the more covert assistance of both Brazil and the United Kingdom), the Chilean forces are planning a major counter-offensive for next summer.

In addition, the westernmost island of the chain is the home to bases belonging to the Soviet Union and China. Thus far, the island has been left alone by the battling South American nations, but inevitably, one or both of the two bases will become involved in the war, complicating an already volatile situation.

Penguin Politics

Although it is generally accepted that the Killer Penguins share a hive-mind, it is somewhat less well-known that the

hive-mind is not a single monolithic consciousness. Each of the seven species of penguin present in Antarctica has a separate hive-mind -- but these are all psi-linked, and tend to act as one. There is an internal politics among the hive-mind, largely aligning into two factions. The Chinstrap and Adelie Penguins form one faction, while the King and Emperor Penguins are the other. The Rockhoppers are usually neutral in these internal conflicts, leaving the balance of power lying with the Macaroni and Gentoo Penguins. In practice, this means that most decisions will be made by the Macaroni Penguin consciousness, the most magically powerful of the seven. GM's may choose to individualize the seven species -- details may be found below. Each description mentions only the differences from the standard Killer Penguin template on p. T65-66.

Adelie Penguin

120 points

Absolute Direction, and 2 levels of Temperature Tolerance. It is possible that the Adelie Penguins -- who are physically more numerous and more powerful than the Chinstrap Penguins who dominate them, possess a Hive Mentality. If so, lower racial point cost by 20 points.

Chinstrap Penguin

103 points

Chinstrap Penguins are notoriously the most aggressive of all the Penguin breeds. They all gain Combat Reflexes, but suffer from Bad Temper and Bloodlust. They also gain a -2 reaction from other Penguins as a result. (large group, all the time).

Emperor Penguin

172 points

The largest of the Antarctic penguins, Emperor Penguins gain +1 to both ST and HT. In addition, they have five levels of Extra Fatigue, Night Vision, Oxygen Storage and one level of Pressure Support.

Gentoo Penguin

123 points

The smallest of the Killer Penguins, Gentoo have one level of Super Swimming, but lose one level of ST. They are also less dependent on Mana than other Killer Penguins -- reduce the frequency of its requirement to Daily.

Macaroni Penguin

136 points

The Macaroni Penguins are the most magically talented of all the Penguins. They have +1 to IQ and Magery 3 and receive Weird Magic +1 as a racially-learned skill. They also suffer from two levels of Magic Susceptibility and the disadvantage of Edgy. In addition, their yellow feathers are well-known to humans and Penguins alike as potent mana organs.

King Penguin

137 points

Almost identical to Emperor Penguins, King Penguins also gain +1 to HT. In addition, they also have three levels of Extra Fatigue and Night Vision. Suffering from something of an inferiority complex, the King Penguins compensate with Extreme Fanaticism.

Rockhopper Penguin

119 points

The best swimmers, and the most independent of all the species. Rockhoppers gain a Racial Bonus of +2 to Swimming skill, and do not have the Fanaticism that characterizes other Penguins. They are still largely hostile to humans, but would be the most willing of the species to break from the Mindsharing commune. Their access to the Mindshare is limited to Racial Memory, at a range of touch only.

Roleplaying in the Antarctic

It's very easy to just portray Antarctica as a very cold, very lonely place. To do so is to miss much of the potential of the frozen continent. Antarctica is almost completely untouched by human beings -- even the few settlements that were ever made have been largely reclaimed by the elements. Antarctica is a land of strange and eerie beauty, particularly in the vicinity of the Zhukov Firestorm.

Be sure to play up the featurelessness of the all-white surrounds, the extreme cold and constant howling of the wind. The fear that killer Penguins could be hiding anywhere -- even in plain sight -- should be played on. Antarctica is almost physically unbearable, and the experience of visiting there should be almost that to the characters. At the same time, Antarctic sunsets are unlike those anywhere else in the world (excepting the Arctic, of course), and the aurora Australis appears to be almost a living thing as it writhes and undulates. The beauty of the place is undeniable and you should try to communicate this mixture of extraordinary splendor and unparalleled danger to the players as much as possible.

Adventure Seeds

A Ridge Too Far: a plane carrying dignitaries or other important people has gone down somewhere in the Antarctic, and the PC's are given the mission of recovering it. This will require an overland trek to the crash site, evading both Killer Penguins and hostile governments, and then a wait for rescue once the magical beacon is lit. Of course, the rescuers aren't the only ones who can see the beacon -- the characters could easily find themselves besieged by the Killer Penguins.

Birds of a Feather: A team of magic-using infiltrators is sent to Antarctica to study and report on factions within the Penguin Hivemind. This will require shape-shifting magicks and a very unusual undercover role. And assuming the mission succeeds, the characters will probably be sent back the following summer to foment discord and distrust among the penguins.

We're off to see the Wizard: whatever faction the characters represent has need of the services of Richard Byrd -- but approaching him isn't easy. This is basically a dungeon-crawl, *Technomancer*-style. Byrd's island is large and well-defended, and he has a corps of fanatically loyal followers. And if the PC's get past all of that, they still have to get him to agree to help.

Ice-Cold Fusion: the Killer Penguins have located the secret necronium reactor in an abandoned base. While the political fallout back home is dealt with, the other Antarctic Treaty nations put together a multinational expeditionary force to get to the site and magically render it safe before the Killer Penguins either blow it up, or worse still, figure out how to use it. Tensions between different nation's representatives will make this even more difficult to resolve -- and does any nation involved *not* have a hidden agenda? Alternately, this could be run with the PC's being one of several competing national teams, a la Matt Reilly's "Ice Station."

The Big Cold One: this is it! The Pentagon has decided to reclaim Antarctica. Naturally, the information has leaked out, and now everyone's trying to get in on the act. As well as American (and allied NATO) forces, the Argentinesans, the Australasians, the Chinese, the Russians and the South Africans are all mounting their own assaults. Chile is ominously silent on the matter, and the Human Liberation Front is threatening to fight against anyone who sets foot on their island. No one's heard from Byrd yet, but he's certain to get involved in this at some point, although on whose side is another matter entirely. And is there any real chance that the Killer Penguins will take this lying down?

Timeline of Events

- 1945** The Trinity Event. Magic begins to work.
- 1947** Australia builds research base on Heard Island. South Africa builds base on Prince Edward Island.
- 1948** Australia builds research base on Macquarie Island.
- 1949** Soviet nuclear bomb test in Antarctica produces second Hellstorm. Following this event, the South African government is quick to build its first Antarctic base.
- 1950** United Kingdom builds base on Gough Island. China and Japan build Antarctic bases. Other governments expand pre-existing bases in the wake of the Zhukov Event.
- 1952** The first mutant penguins are captured and experimented upon by Soviet scientists. In the long run, all are dissected. South Africa builds a second Antarctic base.
- 1955** While on a mission to Antarctica, Richard Byrd's party is lost during a blizzard. Later investigations determine that the blizzard was magically created, and the Russians are blamed (wrongly) for the incident.
- 1956** The first penguins are taught Russian. To the amazement of researchers, within a week penguins all over Antarctica are speaking the language. China builds two more Antarctic bases.
- 1957** International Geophysical Year dominated by studies of Hellstorm-related phenomena, especially Antarctica Hellstorm. The Antarctica Treaty, hailed by politicians of all signatory nations as a triumph of goodwill, is seen by most non-signatory nations as a self-serving and hypocritical document.
- 1958** Vivian Fuchs-Edmund Hillary Antarctica expedition massacred by Killer Penguins.
- 1960** Over the next five years, several Antarctic bases are lost to mysteriously sudden blizzards. Although there is much finger-pointing and laying of blame between the various Antarctic nations, the true culprits are the Killer Penguins.
- 1966** Dissection experiments conclusively prove the existence of Penguin hive-mind.
- 1972** Killer Penguins observed building igloos and communities.
- 1980** South African bases overrun by unidentified forces.
- 1981** Killer Penguins attack a small Soviet base, capturing several military grimoires.
- 1982** Argentina invades and captures the Falkland Islands, and all other British Antarctic territories with the exception of Gough Island and Shag Rocks. Shag Rocks is claimed by a utopian movement and declares itself to be an independent state.
- 1983** France begins airstrip construction on offshore islands near Dumont D'Urville base, killing large numbers of wildlife, including several penguins. Argentina openly claims captured South African bases. Later that year, Killer Penguin attacks hit several French bases in retaliation. Dumont D'Urville, the only French base in the mainland, is overrun and destroyed.
- 1984** Killer penguins attack poorly defended Syowa Base (Japan). Joint effort by the ANZUS treaty nations (Australia, New Zealand and United States) evacuates base to Macdonald Island, which is abandoned to the penguins. The Japanese build "temporary" facilities under the watchful eyes of ANZUS.
- 1985** Killer penguins observed using magic; building igloos. French intelligence agents bomb the Greenpeace ship Rainbow Warrior in Auckland harbour, New Zealand. The ship sinks, but swift reacting Auckland police mages prevent loss of life.
- 1986** In the wake of the Rainbow Warrior bombing, relations between New Zealand and NATO pact countries sour. A Chilean scientific expedition captures a number of Killer Penguins and removes them to Chile for study. Much to their amazement, one of them claims to be Richard Byrd. Scrying proves the claim, and he is returned to his human form, although he is no older for his time as a Penguin.
- 1987** Australia sells Macdonald Island to Japan. Construction of a permanent Japanese base begins at once.
- 1988** Byrd finally returns to the United States, where he becomes a passionate advocate of retaking Antarctica.
- 1990** Penguins begin to attack Antarctic stations.
- 1991** The last non-Soviet human settlements are abandoned or fall to penguin attacks. Byrd drops out of the public

eye. He is believed retired by the public, but the US government is aware that he has gone underground, although not why.

- 1992** Penguins overrun Ice Station Zhukov, thus completing the conquest of Antarctica. Australia and New Zealand combine into one nation. The new Australasian Commonwealth now includes the North and South Islands of New Zealand as its seventh and eighth states.
- 1993** Norwegian base on Peter I Island falls to Killer Penguin attack.
- 1995** Penguins announce Antarctic Socialist Collective.
- 1996** Richard Byrd makes his first public appearance in years, declaring himself President for Life of Utopia Island.
- 1997** Penguin attack on Campbell Island base repelled by Australasian forces.

Appendix Z: The Space Opera Name Generator

by P.D. Magnus

One of the great charms of running a campaign in many space opera universes is that characters can have exotic, even extravagant names. This can be a challenge for the GM, however, if she freezes up when the players ask the name of some incidental NPC. It won't do to call the shady merchant in the alien bazaar by a stultifying moniker like Bob Smith.

The table below can be used for just such instances. Roll or pick a name from the table once, twice, or three times, string the results together, and you have a name. You don't even have to re-roll if you get the same name twice -- Na'am Na'am is as good a name for an alien barber as any. Almost any combination of names from the table will make a good character name.

Although the table is designed to give names with a cinematic, science fiction sound, it can be used in any campaign which allows for exotic names. A name can also be inspiration for fleshing out NPC's; when "the woman from the cantina" becomes Curia Adivan, it might suggest a woman formerly rich, now fallen on hard times.

Weird War II: Blood on the Rhine (for d20)

Published by [Pinnacle Entertainment Group](#)

Written by John R. Hopley, with additional material from Shane Lacy Hensley and Rob Lusk

Illustrated by Chris Appel, Michael Colasante, and Richard Pollard

Edited by Shane Hensley and Jackie Unger

192 page softcover; black and white illustrations; \$25.00

Weird Wars II: Blood on the Rhine is one of the first entries in a new generation of *d20* books, one that tries to stretch the rules of *d20* into a new game that works from different set of heroic assumptions. Surprisingly, it's not the rules that trip up the product, but the limitations of marketing to *Dungeons and Dragons* fans.

If you're familiar with Pinnacle's *Deadlands* and *Deadlands: Hell on Earth* games, you have a pretty good idea of the approach Pinnacle is taking to *Weird War II*. Pinnacle specializes in taking a historical setting, adding magic and some alternate history twists, then spicing things up with a saucy attitude. *Weird War II* follows the same approach, but with more real history and a slightly more serious tone.

The game is set in June 1944, shortly after D-Day. As far as the world and the player characters know, World War II has progressed exactly as it did in our world. (The first couple of chapters provide an excellent summary of the events and important historical figures involved in the war.) The Allies are advancing through Europe, and Hitler is throwing everything the Third Reich has into stopping them. What the world doesn't know is that "everything" includes black magic, zombie soldiers, and "wehrwolves," and that Hitler's occult minions may be just enough to turn the tide of war back in his favor.

That's an intriguing concept, but where the game shines is its translation of the *d20* system into the World War II setting. There are five basic character classes available: grunts, officers, medics, resistance fighters, and scouts. Prestige classes include commandos, snipers, and several classes of spellcasting secret agents. There are some strong similarities to the basic *D&D* character classes -- grunts are a lot like fighters, of course, and medics have more in common with clerics than anybody else -- but the classes have been adjusted to fit the game. Supernatural abilities have been stripped out of the basic classes, while skills and feats have been rewritten to fit a modern world and a military command structure.

There are a lot of good ideas and subtle touches. Rank is handled as a feat during initial character creation or when a character makes a jump from enlisted grunt to officer. This makes it easy to set up the basic divisions of private, non-commissioned officer, and officer. Once characters begin play, however, promotions are handled by making promotion rolls after successful adventures, allowing the characters to advance gradually through the ranks.

Pinnacle has also tackled one of the biggest problems facing many fantasy games in modern settings: how do you simulate the deadly effects of guns when high-level characters have so many hit points? Their solution involves several small fixes. Guns are given fairly high damage dice and good critical threat ranges. The Dead Eye feat allows characters to add their level to ranged attack damage, automatic weapons fire makes it easy to put a lot of lead in the air, and the Sniper prestige class uses coup de grace attacks to simulate deadly shots. Vehicles have armor, and

weapons have penetration values that measure their ability to cut through armor. High-level *Weird War II* characters will shrug off grazes and near-misses, but they can still be dropped by a sniper shot, and small arms fire is virtually useless against an armored vehicle.

Despite these changes -- not to mention a comprehensive equipment lists that covers every significant weapon of the European theatre after D-Day -- the rules are less complicated than you might expect. This is where one of the strengths of the *d20* system becomes noticeable. The basics of character creation and combat are handled in a sentence each (basically, "this works the same as in the *Player's Handbook*"). The book only explains what's different, freeing up 10-20 pages for the designers to fill with more world-specific material.

This ability to simply refer to other rules proves especially useful when dealing with magic. *Blood of the Rhine* uses different rules for magic than *Dungeons and Dragons*. The spellcasting classes has fewer spells available than their *D&D* counterparts, and each spell has a significant chance of failure. However, the spells themselves are all the same. The magic chapter is compressed to a few pages of rules and two charts listing exactly which spells are available to the spellcasting classes. When you consider how long the spells chapter is in the *Player's Handbook*, it becomes clear that *Blood on the Rhine* would be a 256 page book -- and more expensive -- if it were a standalone system.

Despite using many of the same spells, *Blood on the Rhine* gives its magic system a unique feel. After a couple of chilling pages about Hitler's actual obsession with the occult, the designers extend his beliefs into a rune-based system of magic. Each of the available D&D spells are connected to one or more runes from the Futhark alphabet, and knowledge of the spells is tied to knowledge of the component runes. The designers also give attention to magical Nazi artifacts, including at least one relic -- the Blood Flag -- that the historical Nazis believed had magical properties.

There are several other twists lurking in the game, from "Nazi orcs" to that staple of spooky war stories, the haunted vehicle that can guide and protect the soldiers within it. The fantasy elements of the game only occupy about 30 pages of the book, though, and that poses an unusual problem: there isn't that much weirdness in *Weird Wars II*.

The basic character classes are all ordinary soldiers, and much of the book focuses on historical weapons and equipment. Unlike *Deadlands*, the timeline is not alternate history -- it's barely secret history, since the only thing that's really different is that the Nazis' kooky occultism works. So what we have here is a robust set of *d20* rules for World War II roleplaying with a fantasy element tacked on. The fantasy is interesting, but (with the exception of the haunted vehicles, which are unusual and fun) there's nothing here that's more interesting than a straight-up historical game would be.

It's hard to shake the feeling that the Weird part of *Weird Wars II* is there simply to give the *Dungeons and Dragons* players a reason to buy the product. If so, that suggests an uncomfortable future for *d20*. One thing this product proves is that the *d20* engine is robust enough to be adapted to a very different setting -- but if every new setting has to have magic and orcs troweled onto it, what's the point?

Pyramid Review

Archangel RPG

Written by David Baxter

187 pages; \$18.00 as book, or \$10 as CD-ROM

Archangel: The Story of God and His Angels, written by David Baxter for Visionary Games, is a Christian roleplaying game set during the fictional "prophet war." It is a secret war, occurring in a 400-year window of time in which, according to the author, the Bible remains silent. God has empowered both angels and human prophets with powers to fight the fallen angels and their followers, until the coming of the Messiah.

It is obvious that the author has carefully researched the source material, especially the history and culture of the time. While his additions to history are imaginative, and intriguing, they are well grounded in history. The religious elements are as carefully designed, and in keeping with events chronicled in the Bible. As a Christian myself, I found nothing to offend me, and was pleased with the respect that the author handled the material.

A short story starts the book, and serves to introduce the reader to the setting. It reads just like a retelling of the climax of an adventure, but without the game mechanics. It is useful in explaining, by example, what the players can expect from the game.

Following the story is 11 pages of history and culture, including a map of the area and a list of languages. After that follows a description of the various types of supernatural beings and the various types of human characters, in a plain English, no game statistics way. Again, the author is wisely easing the reader into the game setting, letting the flavor of the world sink in before presenting the rules.

Most of the rest of the book is composed of the rules to the game, starting with Character Creation. It is a class-based system, and only believers and skeptics have classes defined, ruling out evil characters. The character classes supplied are:

- **Champion Angel:** "A Holy Warrior For God."
- **Avenging Angel:** Not built for combat, but able to, if necessary, carry out God's will directly, whether it be blessing, or vengeance.
- **Prophet:** a travelling spokesman for God, with the ability to channel God's Power at great personal cost.
- **Apostles:** lead by example, and while they are blessed with considerable power, they must live their lives following a strict code.
- **Believers:** rely on their skills and abilities, because they don't have any powers. Believers are allowed higher starting skills as a result, and are of interest to both sides of the Prophet War, as both sides get power from their followers.

Skeptics are the treasures that both sides are fighting over. They rely completely on themselves (while even Believers have their Faith) and their skills. They, as a character class, offer the most opportunity for character growth and roleplaying depth. They can, according to the book, remain in denial about many supernatural actions, but once a Skeptic sees a Prophet call upon God's Power, he will have seen something he cannot deny. This can be a very dramatic moment, especially if the players are willing to roleplay the scene completely.

The rules system is fairly detailed, requiring charts not only for character creation, but also for combat. In fact, the last 14 pages of the book (except for the character sheet) are reference tables. The only dice needed are 2 ten sided dice,

and a 20 sided die. While the system is certainly not rules light, as is popular, it certainly is not another Rolemaster, and has fewer rules to learn than the *d20* system.

Completing the book is an example adventure session, with all the rules uses included for example. This section illuminates the previous rules section masterfully, and at 11 pages, doesn't seem to miss many of the rules. I would love to see more core rules systems provide a section like this.

The only place the book struggles is in presentation. The Table of Contents starts to go wrong at Creating a Character - p. 48 (actually page 47), and by its end places the character sheet on p. 195, 8 pages after the end of the book. The index suffers from many errors also. There are two paragraphs printed twice on page 25. The art is excellent, and does as much as the examples and the story does to get the feeling of the setting across. The layout, while simple compared to today's standards, works well, and looks quite professional.

Archangel is a clever idea, developed with skill and passion by someone who believes in it on many levels. The book appears to be a first attempt by Visionary Games at a roleplaying game, and it excels, especially at its cost. If you are a Christian or just like the idea of Angels fighting Demons in the ultimate version of Good versus Evil this is for you. If you have an adverse reaction to Christianity or evangelism this book is certainly not for you, as the writer states up front that he hopes that his book creates interest in the Bible. The setting has Christianity as its main theme, and is mildly evangelistic in places. As a Christian as well as a reviewer, I see it as the most credible entry in the Christian RPG category, and await follow-up material.

Black Death

Published by [BTRC](#)

Written by Greg Porter

\$9.95

There are few board games whose subject is disease. Death, destruction and willful mayhem at a variety of different scales, yes. Disease itself -- no. Which is all perfectly fine, because a game about disease would be really rather sick, would it not? But if I were to tell you that Greg Porter -- the creator of *Black Death* the game in which, ". . . Your friends can play the exciting role of bubonic plague, typhoid, cholera or any real or imagined disease of your choosing in a fun-filled attempt to depopulate 14th Century Europe!" -- also wrote *Macho Women With Guns*, then I doubt that you would be surprised. Of course, there have been other disease-themed games, such as B&B's *Plague* -- set in the English seaside town of Weymouth at the time of the 1348 outbreak of the bubonic plague, but of course, you do not get to be that disease!

Black Death is a little game, but played on a big scale. The format is just like a *Dungeons & Dragons* scenario, with the map on the inside of a stiff card cover. Inside are four pages of rules, the counters on thin card, twenty event cards, and a range of new-city templates. Using these, *Black Death* can be updated from the 1348 outbreak of the bubonic plague to the 1665 outbreak for a bonus game. A single six-sided die is required to play, but is not supplied, as the provided components all fit into an A4-sized plastic envelope.

The game begins with each player determining the virulence and mortality ratings for their disease. These must add up to six, but ratings of one in either factor are not recommended. The disease should then be named and described. A variety of real diseases are rated, from the humble syphilis to the decidedly deadly pneumonic plague, but describing your own probably requires a decidedly perverse imagination! Then they get to choose from the range of vibrantly coloured counters to represent their malady.

They also draw a single card from the small deck. These simulate a historical event or condition that can affect play. This can be Bad Weather! which reduces movement, Smugglers! which makes getting your disease into a region far easier and Mutation! which can be played to alter the virulence or mortality rating of a disease by a step of one point. All of the cards are fully explained on the back of the rules sheet and more cards are received after a disease has wiped out first ten and then twenty million people. Finally before actual play begins, two disease counters are put down by each player on the Eastern and Southern edges of the board as their miasma's point of entry into Europe.

Play takes place across a map of Europe, the Near East, and North Africa (Tunis); the most Westerly point is Reykjavik, and Stockholm and Helsinki in the North. Cities and regions are depicted as boxes, with major ones such as Paris or Constantinople, having their greater populations represented with more than one box. There can be only one disease counter in a single box. Traditional routes of communication and travel between various cities are represented as straight lines. Less traveled or more difficult routes are a hindrance to the transmission of a disease and these are marked with a minus number. Diseases begin on the Southern and Eastern edges of the board, ready to follow a route in from either Asia or Africa.

Each turn consists of several phases. Turn order changes every round, but is determined by a die roll on the first turn. Subsequently, players go in order of ascending body count achieved so far. On their turn, a player rolls one die to determine the number of chances their disease has to infect and another for movement points. To infect a region, which must be an adjacent box within a city or linked to another city via a communication line, a roll must be made under the disease's virulence factor. Travel penalties, slums, and temperature also alter the virulence factor for this roll, as will attempting to infect another disease. Since only one counter can occupy each box, movement can be difficult, but is eased by being able to move any counter, including those of other players. That said, a counter can be only

moved one box per player phase and must also pay the extra cost of the poor travel routes. The mortality phase involves rolling on the DRT, or "Death Results Table." The roll is compared against the mortality rating of the disease to obtain a fraction, which is the number of counters removed from the map. The disease's body count goes up by the amount. The result might also be a catastrophic kill, which destroys one region if a city has more than one box, removing it from play; or it might be "cure" in which case there are no kills and a sixth of their counters are removed from the map.

Victory is achieved through gaining a certain body count, which lowers as the number of players involved (up to a maximum of six) increases. It is not really effective as a two-player game, with four or more being better. Pleasingly, there are the historical references throughout the rules, explaining in particular the reasoning behind the event cards. Although it is probably too fiddly for "beer and pretzels," *Black Death* is a fun game, though let down by the slightly flimsy components.

Murphy's Rules

by John Kovalic

Murphy's Rules

Murphy's Rules

It's All About the Benjamins

"[F]ew in public affairs act from a mere view of the good of their country, whatever they may pretend; and, tho' their actings bring real good to their country, yet men primarily considered that their own and their country's interest was united, and did not act from a principle of benevolence."

-- Benjamin Franklin, *Autobiography*

Every great nation boasts a wizard at its founding. Israel has King Solomon, Britain has Merlin the Wise, Egypt has Imhotep. For Americans, Ben Franklin has always been our founding wizard -- Renaissance man for an Enlightenment nation, scientist, publisher, statesman, comedian, inventor, and sage. Protean and Promethean, Benjamin Franklin exemplifies change, progress, and technology like a proper Hermetic deity should. However, wizards live on the boundaries; their shapeshifting souls reach back to the dread in the dark even if (perhaps especially if) they snatch lightning from heaven. So cast Poor Richard's runes with me, and let's bisociate the bifocaled conspirator on the hundred-dollar bill.

"I have look'd near, long, and narrowly at a person who has been, and is, the Father of all this shameful business. Neither my reading, experience, nor imagination can furnish me with the Idea of a mind more corrupt, nor that labors with more cunning, and systematic constancy to carry that depravity into execution [H]e who is the father and prompter of all this business will not hesitate at the utmost extremity of wickedness, to spread and maintain that corruption by which alone his influence and objects can be long supported."

-- letter of Arthur Lee to Sam Adams (May 22 1779)

To begin with, there's one school of thought which holds that Franklin really belongs on the hundred-pound note instead. Could Benjamin Franklin have actually been a British "mole" or double agent? In *Code Number 72: Ben Franklin: Patriot or Spy?* USF history professor Cecil B. Currey sets forth a strong circumstantial case against Ben Franklin, revealing him as (at the least) a shady operator with many illicit ties to George III's government throughout the Revolutionary period. While colonial agent in London, Franklin served as the linchpin of a series of land-speculation deals involving almost the entire British cabinet. One of his partners, Edward Bancroft, became Franklin's confidential secretary in Paris -- and a double agent for the British spymaster William Eden. Other American embassy staff members on the British payroll included their official courier, Joseph Hynson, fellow-ambassador (and eventual traitor himself) Silas Deane's secretary William Carmichael, fellow-ambassador Arthur Lee's secretary John Thornton, and another of Franklin's speculator friends, Samuel Wharton.

Throughout the entire period of the war, Franklin defended all of these men from accusations (primarily from Lee) of their divided allegiance, and consorted with the British intelligence service's chief of station in Paris, one Paul Wentworth (another land speculator). Franklin even went so far as to accuse Lee of paranoia, and referring in letters and conversation to Lee's "descent into insanity." Franklin's "gaslighting" of Lee eventually succeeded, and Lee did, in fact, become famously bitter and paranoid, suspicious of old friend and Franklin foe alike.

"Like you, Sir, I am one of those men who cannot be kept down without risk; those who, because they have done great things, wield shame as powerful men wield authority. Whatever others may try, Sir, I can, like you, call upon the world to judge; and although the good I have done may be forgotten, and that I wish to do prevented, I shall have posterity to avenge me."

-- letter of Franz Anton Mesmer to Benjamin Franklin (Aug. 20 1784)

This mastery of psychological warfare masked as political infighting is only to be expected from America's foremost observer of the human condition -- and its foremost expert on mesmeric science. Franklin served on the investigating committee that debunked Mesmer's "animal magnetism" for the French Academy -- despite having designed some of Mesmer's equipment for him, and being a Masonic lodge brother to the Austrian illuminist. (Franklin also became Grand Master of the Illuminated Order of the Nine Sisters in 1779, after having been Grand Master of Pennsylvania Freemasonry since 1734.) Franklin's designs can also be seen in the [Influencing Engine](#), and the madman Matthews even identified one of Franklin's speculation partners (and another of Eden's agents), Sir William Pulteney as part of the Air-Loom Conspiracy. Between Mesmer's experiments on hypnosis, and Franklin's own work with electrical

stimulation of the brain, could the Philadelphia genius have developed a primitive mind-control device, and used it to drive Lee crazy?

"[T]he exquisite sense of classical design, charmingly reproduced by the Lord Le Despenser at West Wycombe, whimsical and puzzling as it may sometimes be in its imagery, is as evident below the earth as above it."

-- Benjamin Franklin, letter of 1773

Or did he rely on the older methods of mind-control and insanity, harnessed by the ancient [cults of Dionysos](#), as restored in the "Order of Friars of St. Francis of Medmenham," better known as the Hell-Fire Club? The Hell-Fire Club alternated infiltrating much of British political life with meeting in underground grottos for orgies and decadent revelry of all kinds. And Franklin had been a member of this group, it seems likely, since 1772, when he first stayed as a house-guest with its founder Sir Francis Dashwood, the Baron Le Despenser. Dashwood was a rich young nobleman, a prominent anti-Catholic (and later anti-religious) writer, a legendary rake, and a Druid after the fashion of Stonehenge excavator William Stukeley. Dashwood, to tie a few more strands together, was also a fellow-Mason, and as Postmaster-General of England (and thus in a position to intercept and read mail), responsible for internal espionage. An interesting 1778 diary entry by one John Norris seems to indicate that Franklin and Dashwood communicated with each other by coded heliograph messages -- whether as fellow Dionysiac cultists or as spy and spymaster remaining delightfully vague. Dashwood painted scenes of Dionysos and Ariadne on the ceiling of his house at West Wycombe, and built one wing as an exact duplicate of a temple to Bacchus.

"Get what you can, and what you get hold; 'tis the Stone that will turn all your lead into gold,' as Poor Richard says. And when you have the Philosopher's Stone sure you will no longer complain of Bad Times, or The Difficulty of paying Taxes."

-- Benjamin Franklin, *The Way to Wealth*

Dashwood also invested in Franklin's land schemes, which mostly centered around a stretch of land in western Pennsylvania, eastern Kentucky, and modern West Virginia that the investors called "Vandalia." This stretch, perhaps not coincidentally, is also one of the most heavily UFO- and [ultraterrestrial](#)-infested regions of America, from the West Virginia Mothman to the Hopkinsville, Kentucky goblins. The area of western Pennsylvania that Franklin's (treasonous? Masonic? Dionysian?) combine had their eye on had long been home to the Moravian Brotherhood of Ephrata, a mystical Rosicrucian group founded by the kabbalistic scholar Christian Knorr von Rosenroth. (Meanwhile, Dashwood reportedly founded his Order under the glow of 'an everlasting Rosicrucian lamp.' A primitive electric light?)

Did the geomantic Druid eye of Francis Dashwood, and the electromagnetic Leyden-jars of Benjamin Franklin, sense the same thing the kabbalistic Moravians did about the western Alleghenies? Another conclave of Rosicrucians, the Chapter of Perfection under Johannes Kelpius, settled in 1694 on Wissahickon Creek, now part of Philadelphia's Fairmount Park (and the site of a March 30, 1999, UFO sighting). Two of the leading Perfectionists, Conrad Beissel and Michael Wohlfarth, befriended the youthful Franklin when he moved to Philadelphia from Boston in 1725. In Massachusetts, Franklin might have met the American alchemists Samuel Danforth (who, in 1773, wrote to offer Franklin a piece of the Philosopher's Stone), or laid the foundation for later work with the alchemically-minded president of Yale, Ezra Stiles. Could Franklin's famous kite and lightning (in Wissahickon Creek, perhaps?) have covered up a far more significant [Philadelphia Experiment](#) in 1752? Could Franklin's work with geomantic sorcery and Rosicrucian alchemy have driven him to plot a revolution in America, paving the way for a Masonic Republic? Could Franklin have played a dangerous triple game, serving not only America and Britain but the ancient cause of [Arcadian occult empire?](#)

"Workmen have dug up the remains of ten bodies hidden beneath the former London home of Benjamin Franklin, the founding father of American independence. The remains of four adults and six children were discovered during the £1.9 million restoration of Franklin's home at 36 Craven Street, close to Trafalgar Square. Researchers believe that there could be more bodies buried beneath the basement kitchens. Initial estimates are that the bones are about 200 years old and were buried at the time Franklin was living in the house, which was his home from 1757 to 1762, and from 1764 to 1775."

-- London *Sunday Times*, Feb 11, 1998

Or could Franklin have had a still deeper secret, beneath even the (Satanic?) rites of "St. Francis." In 1998, while restoring Franklin's London house, workmen uncovered ten sets of human bones, all showing signs of knife and saw marks, and at least one [trepanned skull](#) (more mind-control residue?). The coroner eventually decided that the bones had been cadavers for medical experiments and teaching (the husband of Franklin's mistress was a surgeon) which means that Franklin, at the very least, connived at grave-robbing. Given the electrical experiments and grave-robbing, could Johann Dippel (the erstwhile [Baron Frankenstein](#)) be far behind? Could he have somehow "body-jumped" into the eerily-similar Ben *Franklin* during his death -- and Franklin's Masonic ascension in 1734? Or, given how much of Franklin's early life we primarily know from his own *Autobiography*, "Franklin" may even have been a cover identity for the mysterious "Cosmopolitan" who appeared to 17th-century American alchemist George Starkey -- Franklin was certainly a cosmopolitan, and one at home with cover identities from "Poor Richard" to "Isaac Bickerstaff" to "Moses" to (perhaps) "Agent No. 72." The bodies might then be alchemical raw materials, perhaps the "blood of innocents" needed for the ["red mercury"](#) of Eudoxus.

Or perhaps they were lunch. Franklin went to England in 1757. He spent almost the entire rest of his life abroad, and even the ten widely-spaced years he spent back in America were full of travel, dislocation, and (perhaps-convenient) illness. In some important ways, he ceased to be an American after 1757 -- perhaps he ceased to be human, too. Both Bancroft and Wentworth had interests in the Reptoid-haunted [jungles of Guiana](#) (where Bancroft had done much travel and naturalist research), as well as the ultraterrestrial nexi of Pennsylvania. On the trip to London, Franklin busied himself charting the Gulf Stream, leaning out over the side of the ship at night as it passed through the Bermuda Triangle. Could something have made the substitution there, of a rakehell and orgiast for "Poor Richard"; of a corrupt ambassador for the man who wrote that "honesty is the best policy," of a Reptoid conspirator-magus for America's greatest scientist? Benjamin Franklin's papers, conveniently, have largely vanished -- and the British government attempted, in 1807, to prevent the publication of the remainder. Perhaps somewhere in a cave in western Pennsylvania, or in a hidden shrine to Rosicrucian Bacchus, or in the secret archives of the Royal Society, there's a copy of the *Poor Reptoid's Almanack* that will sort it all out. Or maybe the truth has vanished, after all, like a flash of lightning.

Fiddly Bits: The Legend Reborn

Yes, it's time for the column-subject you love to give 2s to! **Odds 'n' ends!**

* * *

In my column ["Do Or Do Not: Um, I've Only Plotted For 'Do'"](#) a few weeks ago, I described what can go wrong when you only plan for one course of action the characters can take.

One of our readers, Gabriel, sent me this anecdote:

Here's an annoying story of one game I once GMed.

It had started off as your typical set of *AD&D* dungeon crawl adventures, and was progressing quite well.

Until someone lent me a *Spelljammer* box set which I decide to set into the campaign.

So, I created a simple dungeon that went:

- Enter
- Kill some monsters
- Get spelljamming star ship
- Explore universe etc.

And this would have been fine except that when the party saw the ship, they decide to set fire to it to drive out any monsters that might be onboard.

This was something I was not prepared for.

I never played *Spelljammer* again.

Ever.

This is one of the funniest stories I'd ever heard.

To paraphrase *Clerks*, "This game would be great if it weren't for the players."

* * *

I've been slogging through many of the fiddly parts of *Pyramid* over the past week (trying to burn off lots of nervous energy). So my email inbox has gone from about 400 to 40 currently. The slushpile has been about 90% read and decided on; now I just need to write lots and lots of letters (both acceptance and rejection). Hopefully I'll get a chance to do that soon. Thanks for your patience, all.

* * *

For would-be contributors, I would ask that you submit any other questions you may have in a separate email. I've been getting a fair number of articles that have other questions tucked in the beginning (inquiring about other articles' status, query letters, or payment issues). Please don't; often I don't even *look* at an article before moving it to a slushpile, so any pressing questions you might have wouldn't be read for possibly several weeks.

* * *

As reminders to contributors:

- Please don't send an article as an attachment if at all possible. I may well eventually decide that I'll automatically reject any articles submitted as attachments. I won't, currently, but it doesn't make my life any easier. If there's a reason you need to send something as an attachment, you may want to drop me a line first. I'm not an ogre!
- I *have* started rejecting submissions that come as multiple articles in one email. These literally gum up the entire system; I do all my sorting work in my email program, moving article emails from Slushpile to Temp Accepted to Accepted to 010921 (or whatever that week's folder name is) to Paid, all as appropriate. Now, if I have an email with three articles all in one, I'm stuck. I can't divide the submissions; I have a hard time keeping track of what's been accepted, rejected, used, and paid. And in general it's bad. So if you have four submissions, please send me four emails.
- If you're a review writer, please contribute all the information that's in a standard review at the top. Book name, publisher, writer, illustrator and editor if you'd like, and book size (number of pages) and cost. (If you want to be really nice to me, putting the publisher's website somewhere is great, too.) That'll save me the trouble of needing to track it down. As much as I try, I don't own *every* book that's out there!
- **Please** include all contact information with your submission. If I accept your article, but you don't include how I can pay you, that will (obviously) slow down your compensation greatly.

* * *

I've gotten a couple of queries from would-be contributors about what we're looking for. I never like to answer that question, since if I say I'm looking for *Foo: The Bar* support, I'm afraid I'll get 10 mediocre *Foo: The Bar* articles (which I'll reject) instead of 10 good non-*Foo: The Bar* articles (which I might well accept).

Having said that, I'd point out that we're *very* low (read: none) on pretty much all features, except for Supporting Cast. So if you have any Warehouse 23, Terra Incognita, or the like, feel free to contribute.

I'd also point out that I'm declaring Appendix Z officially open for submissions. Appendix Z is a forum for short (ideally 1000 words or less), generic features that might be of interest to (ideally) multiple games.

Finally, I have a real dearth of science fiction submissions. So if you have anything neat in that genre, you may want to send it along.

* * *

For the original rant, see my column last year around this time (["Kibbles & Bits"](#)). But, in a nutshell, *please please pretty please call me "Steven."*

Any variation on "Steven" *really* bugs me . . . and when over half of my email has been wrong lately, I know it's time to remind folks.

Thanks!

* * *

And, as ever, if you want to share your thoughts on *Pyramid* (or anything else, really), feel free to contact me. I'm probably fastest to contact on the chat rooms (I'm there most evenings after 4 PM EST), but I always read the [sjgames.pyramid](#) discussion group, and my [email](#).

(Oh, and wish me luck! I'm starting my first gaming session in nine months on Saturday! Hopefully it's something you don't forget, like falling off a bike . . .)

(Two stars) "Jackalope: Small, fierce rabbit with antler. May attack in mating season. Mostly harmless, unless undead."

Plato in the Middle Ages

For Ars Magica

Jeremiah Genest & Adam Bank

To understand the great teachings of Socrates' apprentice and why we as magi must look to him in all things, we must first understand how Plato himself came to knowledge. Just three years into Plato's apprenticeship, Plato witnessed the execution of his master, the wisest of men, who willingly drank hemlock when commanded to-however unjustly-by the august body to which he pledged unending loyalty, the courts of the people of Athens.

Who killed Plato's master, the one we call Socrates? The court of Athens handed him a death sentence. His supposed crime? The corruption of youth and the denouncing of religion. This Bishopric now levels these same charges against me for taking you away from your vulgar parents. (No amount of noble blood can purge the vulgarity I speak of, boy!) I am as innocent of these crimes as Socrates. I follow humbly in his footsteps, celebrating God. That blustering bishop would be served well by the lesson of Socrates' execution, if not for the deluding lies of the Church.

At his trial, Socrates declared, "I believe in my familiar spirit, how much more then must I believe in the gods, who are the great spirits of the universe? I believe more in God than do any of my accusers." Many years hence, you shall declaim the same. The sages of Socrates' time believed in a Divine that permeated all nature, in the Invisible that governed the Visible. This bound philosophy to religion, magic to worship, because pagan high priest and philosopher held the same truths sacred, and followed the same mysteries. Today, churchmen say Socrates deserved his punishment, and magi should be treated likewise. As you learn, this legacy of misunderstanding will pass to you.

Imagine the serene spectacle, and how it nested in Plato's heart as the most beautiful and holy mystery, his first great initiation: Socrates, dying for the sake of truth, spending his last hour of life conversing with his apprentices about the immortality of the soul. Later in life, Plato mastered all the sciences and philosophies, but he ever remained the filius of Socrates. When Plato penned his Dialogues, he attributed the treasures of his own thoughts to the mouth of his master.

Plato received from Socrates the great impulse, the active male principle of his life, his faith in justice and truth. This impulse drove Plato to travel the world in pursuit of the mysteries, of the sources of Socrates' own wisdom. In Egypt he trained under the wizard-priests of that land, the ancestors of our Order, and achieved the third stage of the initiation of Isis, conferring upon him perfect intellectual clarity and dominion of the intellect over soul and body.

There he learned of Pythagoras, pater of Socrates, greatest sage and magus of Greece, who in his time achieved the highest stage of Isis' initiation, a direct vision of divine truth, and with it the power to work his will upon the Earth. (Our esteemed brethren of the House of Bonisagus hold that Pythagoras was thus the first of our lineage to fully awaken the Gift). Plato journeyed to Italy to join the circle of Pythagoreans there. He paid an enormous price for one of the master's manuscripts. From all these sources sprang Plato's own wisdom, corpus of teachings, and magic.

On returning to Athens, Plato founded his school, and named it the Academy. While dedicated to Socrates' goal of spreading Truth, he could not openly teach that which the priests of Egypt and the Pythagoreans conspired to conceal. Thus we can find the mysteries within the Dialogues, dissembled and ciphered, written as legends, myths, and parables. With the Dialogues, Plato furtively taught mystery to the youths of Athens (Aristotle among them), who otherwise drowned in the superficial artistry of the sophists and the empty rhetoric of the orators-both of which, alas, remain with us today in the guise of the solicitor.

The mysteries are easily found in the Dialogues by those with the mind to look. The Theory of Forms correlates to Pythagoras' sacred numerology. The mystery of the migration and evolution of the Soul suffuses Plato's entire corpus, though nowhere does it appear so clearly as in the *Phaedo*, and in the Legend of Er in the last book of the *Republic*. In Plato's hands the Sacred Tetrad, the source of Pythagorean magic, took on the guise of the Good, the Beautiful, and the

True.

In every Dialogue, Plato seeks to answer the most important question ever asked: "How do you live a good life?" Plato's thoughts resound with concerns of ethics, moral wisdom, and values. Platonists do not pursue knowledge for the sake of knowledge, or waste time with esoteric trivia. Plato's works contain an urgency and immediate application absent from the teachings of Aristotle and House Bonisagus, Aristotle's greatest proponents in our Order. No wonder, then, why many members of the House Guernicus hunt and devour any work of Plato they can find in their search for law to guide the Order.

Many of the Dialogues begin on the same path, each reflecting the all-important question of the good life. A conversant in the dialogue seeks to define some grand notion, such as virtue, justice, or tyranny, by parading before Socrates a swarm of examples. To which Socrates invariably replies, "tell me not of differing things, but speak of the one quality that unites them, that makes them examples of the notion you seek." This is the first step on the path to the Theory of Forms. In time you will learn that all we see around us are mere examples, only shadows of the Forms that bring meaning to a world in total flux.

What do I mean by a world of flux? As you learn magic, when you cast your first spells, you will learn that the sturdiest oak, the firmest earth, and even the heartiest of flesh will melt and mold at your command. All matter lies in constant flux and impermanence. The world of crude matter is false. It does not exist. Only the Forms are real, fixed and eternal. Only the Forms can be truly known; all else we ever speak is flawed opinion. I will teach you how to create, understand, control, change, and even destroy an object's connection to its Form.

You tremble? Perhaps you fear for your soul. Put all such fears aside, for neither the greatest archmage nor I can even blemish it. Plato gave us and even the Church our understanding of the immortal soul. The soul is kindred to the Forms. In time, you will use the purest element of your soul, the intellect, what some might call the Gift, to unlock the secrets of the world of Being. I will show you the Demiurge, he who binds Becoming to Being. I will teach you his language, the mystery that makes the Demiurge the servant of the Gifted.

We begin our lives with souls burdened with the weights of Becoming. You will shed your burden, by wisdom and Twilight if you succeed, or by death should you fail . . .

Commentary: Plato's Magic

"And this corporeal element, my friend, is heavy and weighty and earthy, and is that element of sight by which a soul is dragged down again into the visible world, because the soul is afraid of the invisible and of the world below-prowling about tombs and sepulchers, near which, as they tell us, are seen certain ghostly apparitions of souls which have not departed sure, but are cloyed with sight and therefore visible."

--Socrates (as attributed by Plato in the *Phaedo*)

The branch of Platonic theory prevalent in Middle Ages began in Egypt in the 2nd Century. ("Neoplatonism" is a modern label; Neoplatonists considered themselves simply Platonists.) Adopting spirituality and mysticism from the religions of the ancient Orient, these Platonists rebelled against the spread of Christianity in the Greek world, seeking to revitalize their pagan roots with new theories and practices of magic. This rivalry followed Western magicians through the millennium and into the Middle Ages, when many members the Order of Hermes take up the feud.

The Descent of the Universe from Light to Darkness

Platonic magic begins with the philosophy of idealism, the rejection of the material world for the primacy of the spirit. The soul, being an immaterial spirit, does not originate in the material world, but above it. The soul, all truth, and all magic come from the Infinite, Absolute, and One God.

Being Infinite, God exceeds all things finite, including mortal thought and understanding. This makes the study of God and magic a mystery. The language used to describe the indescribable sounds pithy and almost nonsensical to the

uninitiated. God, for example, is not a Being, or a Mind, but the Over-Being, and the Over-Mind.

Being Absolute and One, God is good, and God's goodness emanates like the light of the sun. From this light shines all of Creation in a series of steps. Each step down, or emanation, leads away from God, and the God's goodness becomes increasingly diffuse and degraded as if one stepped slowly away from a light into darkness.

The primary emanation of God is Nous (NOOS), the Intellect, called an image of God and the world of Ideas. This first step down from the One houses various archetypes of human knowledge and material things. Platonists in the Order of Hermes identify the realm of Forms with the Nous.

From Nous emanates the second step down from the One, called the World-Soul. From the World-Soul, in turn, emanates the Forces. The Forces include individual human souls, and, according to one clutch of Criamon magi, the Hermetic Techniques, making the World-Soul an as yet unexplored realm of Techniques.

Many steps lead away from the Forces of the World-Soul and eventually to Matter, the material world. This farthest step away from the light of the One does not actually exist. The material world subsists only as darkness, as the complete absence of God. Thus, devoid of God's pure light, Matter is the source of all evil. Some Flambeau magi seize upon this metaphor with frightening, occasionally distorted enthusiasm.

The Ascent of the Magician from Darkness into Light

Humanity, composed of both body and soul, shares in the light of God and the darkness of Matter. Magicians, therefore, can return to the light of God by purging the darkness of Matter from their thoughts, actions, and (upon the eventuality of death or perhaps Final Twilight), their being.

The path to God, the answer to the question of the good life, is the pursuit of knowledge and the renouncing of material-based sensation and opinions. Knowledge is a belief, grounded in logic and wisdom, concerning true things, such as Platonic Forms, God, and magic. Everything else, everything related to the material world, is godless, degraded opinion and vulgar sensation.

To take the first step up toward God, the philosopher must withdraw from the world of sensation by a process of purification. Once achieved, the philosopher can truly contemplate upon the indwelling intellect, the soul, and its source, the World-Soul. After fully understanding the inner-world, the philosopher then steps up to the study of the Nous, the outer Intellect.

To reach the final step, however, God must accept the magician. God reveals Himself by sending a special light into the soul of the chosen, allowing the philosopher to see and understand the One. The philosopher's mind enters an ecstatic, passive trance, allowing union of mortal and God. This union brings forth supreme happiness, and those who attain it are philosopher-saints, confirmed in grace.

Upon union, the philosopher becomes a spiritual being, a man of God, a prophet, and worker of wonders. The philosopher-saint commands the forces of nature and the demons of the supernatural, with a vision that extends into the past and future. For Hermetic Platonists, the Gift of the magus is that special light given to the philosopher by God.

The practical path of the magician begins with asceticism, the thinning out of the veil of matter which stands between the soul and the spiritual world. Practicing asceticism, the magician can learn to properly meditate. After mastering meditation, spiritual perfection comes from the consultation of oracles, the pursuit of divination, and ritual sacrifice to sundry higher powers of the spirit world. To the superior gods, these sacrifices are bloodless, but the lesser powers demanded blood.

The History of Neoplatonism

Plotinus (circa 205-270 AD), a native of Lycopolis in Egypt, became the first author of the Platonic revival. At the age of 28, Plotinus attended the lectures of Ammonius Saccas, a porter on the docks of Alexandria, the mysterious

revivalist of mystic Platonism who never wrote a single text. Tutor of Emperors, Plotinus studied and taught in Mesopotamia, Persia, and Rome, before retiring with his disciples to Campania in 263. There, Porphyry (circa 233-303 AD) edited Plotinus' fifty-four treatises on philosophy into six groups of nine each, collectively called the Enneads. Porphyry, after studying in Athens, came to Rome and devoted himself to Plotinus, whom he revered, along with Pythagoras, as thaumaturgoi, "wonder-workers," or powerful magicians. Porphyry wrote on the practice of magic of the soul and the defense of the old pagan ways.

Iamblichus of Syria (mid 3rd century - circa 330 AD), student of Porphyry, refined the metaphysical doctrines of Platonism, emphasizing the importance of practicing magic to achieve salvation. The One, wrote Iamblichus, itself emanates from the unknowable "Absolutely First." Plotinus' Nous contains two halves, the Intellectual and the Intelligible. Both halves are divided into triads, the super-terrestrial gods. Beneath these six gods, subordinate terrestrial gods form a huge, ordered pantheon: 360 celestial gods, 72 orders of sub-celestial gods, and 42 orders of natural gods. The demigod heroes of old, and the ancestral philosopher-saints such as Pythagoras and Plotinus, also took their place in this "modernized" Greco-Roman mythos intended to compete with the growing popularity of Christianity.

Proclus (410-485 AD), born in Constantinople, first studied Aristotelian theory in Alexandria, and around the year 430 traveled to Athens to join the Athenian school of Platonists founded by Plutarch the Great. Proclus applied Aristotelian logic to Platonic metaphysics and magical theories. Emanation, wrote Proclus, consists of three subordinate stages, the original, emergence from the original, and the return to the original. The emanations of the perfect One down to corrupt Matter form a serial chain of logical steps. Through theurgy (see *The Mysteries*, pp. 113-141), the soul of the magician traces back these steps and earns the reward of reincarnation. By the 13th century, most of Proclus' work became readily available in Latin translation.

After Proclus, however, Christianity quickly won over the Empire. In 529 AD, the age of Platonism came to an end when Emperor Justinian ordered the closing of Athens' schools of philosophy. Damascius, last leader of Plato's school, found exile in Persia, accompanied by Simplicus. The mid-6th century saw a brief return of Platonism to Alexandria through the writings of John Philoponus and Olympiodorus. Like Simplicus, however, they wrote as commentators, not originators of new ideas. With their conversion to Christianity in the late 6th century, the direct lineage of Plato died.

Plato's European Legacy

Later Christian writers found they shared much in common with Platonists when Christianity sought converts in the North and West. Pagan religions generally worship and rejoice in the natural world and spirits of nature. The Christian notions of the immortal soul, angels, and omnipotent God, on the other hand, share much of Plato's idealism. To bolster their arguments for a perfect, spiritual world superior to the natural world and its sins, many Christian theologians borrowed heavily from the well-ordered discourses of the Platonists. Ardent Christians such as Saint Augustine readily excised the magical aspects of Platonism, and their philosophies paralleled the original doctrine of Plato's Dialogues closer than Plotinus' or Proclus', but others embraced the mysticism of Plato's descendants.

Plato in the 13th Century

The West lost Plato's Dialogues as it lost the Roman Empire. After Justinian closed the Athenian schools in 529, however, a group of philosophers settled in Syria, carrying the works of Plato and Aristotle with them. The Dialogues' painful journey back to Christian Europe took six centuries, as scholars translated them into Syriac, then Arabic and Hebrew, when they re-entered through Moorish Spain in Latin translation, along with the later commentaries. At the same time, many philosophical works inspired by Proclus appeared, either written anonymously or misattributed to authors such as Aristotle.

The Timaeus appeared in Western Europe centuries before any of the other Dialogues. Chalcidius, a 4th century Christian scholar, translated the Timaeus into Latin, and authored a commentary that accompanied the Dialogue for the next thousand years. The Timaeus' discussion of the creation of the world, and Chalcidius' commentary on incorporating its metaphysics into the Christian framework, captured the imagination of many priests, philosophers,

and magicians alike.

Plato also found many indirect channels into Christian thought. The corpus of Dionysus appealed to many Christian mystics. The famed Roman orator Cicero (106-43 BC) provided another important conduit of Greek thought, translating, commentating, and composing original texts in Latin. Saint Augustine borrowed from Cicero, Plato, and the later Platonists when writing his influential works.

In the later 12th century Henricus Aristippus translated the *Phaedo* and the *Meno*, but for the most part Plato's own writings remained inaccessible to the mortal West. The Order of Hermes' far-ranging influence, however, has brought many Platonic texts into Gifted hands.

The Platonist

Platonists seek enlightenment from within. They prefer solitude, seclusion, and study. Unlike Aristotelians, Platonists favor mental exercise over physical experience and experimentation. They consider mental purity to be the goal of learning and magic. Involvement in mundane affairs or political intrigue is a waste of time better spent teaching or searching for inner understanding. Platonists believe the greatest things in life are learning, teaching, close friendship, and the carriage of true justice.

Suggested Mystae Virtues: Magical Imagination +1, Oneiromancy +2, Parhedros +2, Thaumaturgy +4, Theurgy +1

Suggested Hermetic Virtues: Affinity with (Vim) +3, Deft Art (Mentem) +1, Life-Linked Spontaneous Magic +3, Special Circumstances (while meditating) +1

Suggested General Virtues: Clear Thinker +1, Immunity (varies), Inspirational +1, Intuition +2, Mentor +2, Purifying Touch (varies), Strong Personality +1

Suggested Flaws: Blatant Gift -1, Magic Addiction -3, Noncombatant -2, Reclusive -1, Social Handicap -1, Susceptibility to Divine Power -4, Twilight Points -1, Twilight Prone -2

Suggested Abilities: Artes Liberales, Concentration, Hermetic Law, Philosophiae, Theology

Suggested Arts: Creo, Imagonem, Mentem, Vim

Suggested Spells: Theurgical spells, oneiromantic spells and divinatory spells such as Eyes of the Future (InIm 30), and Sense the Shadows of the Spheres (InVi 10)

Bjornaer: Our heartbeats are our hermitages. Let us withdraw from the mortal world, discard our human shells, and contemplate Truth in its purest form.

Bonisagus: Our House's Founder followed two great callings: theory and teaching. In the serenity of the laboratory and the covenant, away from impurity of mundane concerns, we can develop and pass on his legacy.

Criamon: The Enigma lies within the human mind. If we pursue the theory and the lore of the first mathematicians, we can enter a realm of pure thought and glimpse the Enigma that dwells there.

Ex Miscellenea: Pythagoras was the first known ascetic magician in the West. Like him, we descend from the early mad magicians, those dwellers on the fringes of society who could see the entire cosmos in their minds' eyes.

Flambeau: Our house should focus on the fire within our minds--our intellect, courage, and wisdom. Without these things, how can we ever achieve greatness?

Geurnicus: Plato is the source of all civilized law. We must be forever wary of those who seek to impose vice and tyranny on the Order.

Jerbiton: Plato showed which arts were worthy of pursuit, and which were vulgar and base. As patron of the mundanes, our house should further the truly noble--the seven liberal arts and philosophy--and spurn the vulgar--the arts of war and the tyranny of the so-called "noble" estate.

Mercere: Plato sought wisdom in Egypt, Pythagoras quested in Persia. All great thinkers were first great travelers.

Merinita: The surface chaos of the faeries masks a greater truth. Faeries are incarnations of the primal forces of thought and love that await us deep within Arcadia.

Tremere: Despite what others may say, members of our house are not tyrants. A tyrant rules by force and greed. Our house recognizes only the true authority of wisdom and intellect, embodied in the art of Certamen.

Tytalus: Friendly rivalry lies at the heart of education. Like Plato's students, however, our house must remember only to engage in rivalries that lead to virtue, not folly.

Verditius: The members of our house who sell enchantments for material gain should be ashamed! Our craft brings the geometry and harmony of the celestial realm into the terrestrial world; it should be a source of good, not greed.

Nous

By pursuing a life of contemplation and tranquility, Platonists acquire a Nous score. Nous measures your direct connection with the magic realm through spiritual and mental purity.

Nous allows you to perform magic. You may purchase various hedge magic Virtues, modified and discounted, explained below. However, because your magical abilities come directly from your Nous score, any magic roll (including any Magic Resistance) you make that is greater than your current Nous x 5 automatically fails.

Additionally, subtract your current Nous score from your aging rolls, and add Nous to all Perception-based rolls (magical or mundane) and totals and all natural magic resistance rolls.

You must uphold the principles of Platonism to maintain your Nous score. If you lie, participate in trade, or work violence upon any living, mortal creature, you may lose levels of Nous, determined by the troupe or storyguide. Most importantly, although you can vote at Tribunals, you cannot deliberately engage in political intrigues, Hermetic or mundane. Examples include:

1 level: Using animal products. Scheming at a Tribunal. Telling a lie.

3 levels: Bargaining for material gain. Conducting intrigue at a mundane noble's court. Acquiring possession of land.

All levels: Killing another human being.

Nous increases through experience points. With the approval of your troupe or storyguide, you may put 1 point of story experience per story in Nous if you acted in accordance with the ideals of Platonism during the story. Whenever you spend a season studying or teaching Arcane or Academic Knowledges, you earn 1 experience point in Nous.

Platonic Magic Virtues

You may purchase any of these Virtues during character creation. If your Saga contains Mystic Companions from Hedge Magic, you may take up to +8 Virtue points worth of Platonic Magic Virtues at no cost (such points do not count toward your +10 Virtue limit and are not balanced by Flaws) with the approval of the troupe and storyguide. Rumors persist of Platonist secret societies that can also initiate these and even stranger powers.

Transcendence (+3): You can transcend as the ascetics do, substituting your Nous score for Purity (**Hedge Magic** page 52).

Greater Transcendence (+1): You must first purchase Transcendence. You can share the effects of transcendence with other people by adding +3 per person to your Ease Factor. By making a transcendence roll of +24, you can enter the microcosm of someone you touch. The target need not be asleep, and you return to the mundane world whenever the target falls asleep or wakes up (whichever comes first). By rolling +27, you can enter the magic or faerie realm. Returning requires another roll.

Daemon Summoning (+2): You can summon ghosts, hero daemons, or lesser angel daemons using the same mechanics as spirit masters do, substituting Legend Lore for Summoning (**Hedge Magic** page 45).

Magic Circles (+1): You may draw circles of protection, following the same mechanics as spirit masters do, substituting Artes Liberales for Summoning. You do not need to purchase Daemon Summoning to purchase this Virtue.

Incantation (+3): You can perform spells by chanting the names of angels, gods, and heroes. Follow the same mechanics for Name Magic (**Kabbalah** page 110), but substitute Speak Latin for Speak Hebrew and Legend Lore for Name Magic.

Looks That Kill

Optional Advantages and Disadvantages for *GURPS*

by Dmitri Scull

Numerous fantasy races and creatures have supernatural appearances; either they are so incredibly beautiful that no mortal could compare, or their appearance is enough to turn men into stone. Others can kill or maim with but a gaze. Representing these abilities is problematic at best with existing rules; what follows is a collection of advantages (and a single disadvantage) that can represent these appearance-based effects.

In addition, a further advantage, the Sonic Attack advantage, is included because its effects closely mirror the effects of some appearance attacks. This advantage is for races such as sirens or banshees, who can kill or charm with their voice; this often works well when combined with a matching appearance.

Note that while Immaculate Appearance and Soilproofing may seem to be best used for "silly" campaigns, such as a *GURPS IOU* game, do not underestimate their impact in making a fae or angelic race seem truly beyond mortal ken.

Appearance, Exceedingly Beautiful/Handsome

50 points

The character's appearance goes beyond the normal heights of mortal appearance; this is the beauty of the scions of the gods. In a non-hostile situation, members of the opposite sex (or rather, those attracted to the character's sex) will always be favorable; in less ideal situations, the character receives a +10 bonus to reaction rolls. Further, members of the opposite sex must make a Will roll to be able to directly harm the character (although less scrupulous individuals may harm the character while attempting to -- or as part of -- possessing the character). Members of the same sex (or those not attracted to the character's gender) react to the character at +10, unless they have reason to dislike the character, in which case they react at -10.

This is normally a racial advantage; however, with GM permission, this may be taken by individuals from races where the average racial appearance is Beautiful/Handsome or better.

Appearance, Unearthly Beautiful/Handsome

80 points

The character's appearance rivals that of the gods themselves. Members of the opposite sex (or rather, those attracted to the character's gender) always react favorably, even in hostile situations; they must also make a Will roll at -4 to harm the character (although less savory individuals may harm the character while attempting to possess the character - or as part of that possession). Members of the same sex (or those who are not attracted to the character's gender) will always react favorably to the character in non-hostile situations; if they have reason to dislike the character, the reaction will always be negative. Even characters of the same gender (provided they have no reason to dislike the character) have to make a Will roll to do direct harm to the character.

This is normally a racial advantage; however, with GM permission, this may be taken by individuals from races where the average racial appearance is Very Beautiful/Handsome or better.

Gaze Attack

40 points

The character's gaze causes harm to all that meet it; the victim must make a HT roll or suffer 1d damage from the

attack. Victims strike at -3 if attacking while trying to avoid meeting the gaze of their opponent. There is a downside - if you meet your own gaze in a mirror, you suffer the effects of your own gaze.

Special enhancement: You are at +5 HT to resist your reflection. +25%. If you are immune to your reflection, this is worth +50%.

Special enhancement: There is no HT roll to avoid damage. +50%.

Special enhancement: Rather than do damage, your gaze puts victims to sleep if the HT roll is failed. +0%.

Special enhancement: Rather than do damage, your gaze charms victims if a Will roll (rather than the normal HT roll) is failed, making them subject to your commands as long as they are in your presence, and for five minutes afterward (although they will take no obviously suicidal actions). +10%.

Special enhancement: Rather than do damage, your gaze elicits a specific emotional response (such as hate, fear, or depression) if a Will roll (rather than the normal HT roll) is failed. The victim is subject to the emotion as long as they are in your presence, and for five minutes thereafter. +0%.

Special enhancement: Rather than do damage, your gaze turns victims to stone or slays them outright. +100%.

Special enhancement: For each extra die of damage done, or -2 to the HT roll. +25%.

Special limitation: Your reflection does not carry the attack; you are immune to your reflection, but so is everyone else. -10%. Attacking someone by looking at their reflection is done at -2 to attack.

Special limitation: Victims must be within 100 feet for your gaze to work. -25%.

Special limitation: You are at -5 HT to resist your reflection. -25%. You receive no HT roll to resist your reflection. -50%.

Special limitation: Charmed victims will only obey a single command. -10%.

Hazardous Visage

60 points

This is similar to a gaze attack, but it is the character's appearance which causes damage rather than merely meeting his or her gaze. Victims must make a HT roll or suffer 1d damage if they see you. As do you if you see yourself in a mirror.

Special enhancement: You are at +5 HT to resist your reflection. +25%. You are immune to your reflection. +50%.

Special enhancement: There is no HT roll to avoid damage. +50%.

Special enhancement: Rather than do damage, your visage puts victims to sleep. +0%.

Special enhancement: Rather than do damage, your appearance charms victims if a Will roll (rather than the normal HT roll) is failed, making them subject to your commands as long as they are in your presence, and for five minutes afterward (although they will take no obviously suicidal actions). +10%.

Special enhancement: Rather than do damage, your gaze elicits a specific emotional response (such as hate, fear, or depression) if a Will roll (rather than the normal HT roll) is failed. The victim is subject to the emotion as long as they are in your presence, and for five minutes thereafter. +0%.

Special enhancement: Rather than do damage, your visage turns victims to stone or slays them outright. +100%.

Special enhancement: For each extra die of damage done, or -2 to the HT roll. +25%.

Special limitation: Your reflection does not carry the attack; you are immune to your reflection, but so is everyone else. -10%. Attacking someone by looking at their reflection is done at -2 to attack.

Special limitation: Victims must be within 100 feet for your appearance to be dangerous. -25%.

Special limitation: You are at -5 HT to resist your reflection. -25%. You receive no HT roll to resist your reflection. -50%.

Special limitation: Charmed victims will only obey a single command. -10%.

Immaculate Appearance

5 points

No matter what the character does, his or her appearance is flawless; at least regarding his or her body; clothes and anything carried are another matter entirely. But this does mean that the character's hair, nails, and skin are in perfect condition. This does not prevent the growth of unwanted hair, but will moderate such growth so that it remains even.

Soilproofing

10 points

Anything the character carries (including clothing) is protected from the elements; no dirt, water, or other things of that sort will cause harm to the items or their appearance. This even applies if the character falls into mud or water; all that he or she carries will remain clean and dry. This will not prevent the character from becoming disheveled (although it will keep the character clean and dry); for that, take the Immaculate Appearance advantage.

Special limitation: The soilproofing only applies to dirt (keeping the character's stuff clean, but not dry) or water (keeping it dry, but not clean). -25%

Sonic Attack

60 points

The character can make a sonic attack; a scream, wail, or song that causes harm to all that hear it; the victim must make a HT roll or suffer 1d damage from the attack. The character is immune to his or her own sonic attack.

Special enhancement: There is no HT roll to avoid damage. +50%.

Special enhancement: Rather than do damage, your sonic attack puts victims to sleep. +0%.

Special enhancement: Rather than do damage, your sonic attack deafens victims for 1d minutes. +0%.

Special enhancement: Rather than do damage, your voice charms victims if a Will roll (rather than the normal HT roll) is failed, making them subject to your commands as long as they are in your presence, and for five minutes afterward (although they will take no obviously suicidal actions). +10%.

Special enhancement: Rather than do damage, your voice elicits a specific emotional response (such as hate, fear, or depression) if a Will roll (rather than the normal HT roll) is failed. The victim is subject to the emotion as long as they are in your presence, and for five minutes thereafter. +0%.

Special enhancement: Rather than do damage, your voice slays victims outright. +100%.

Special enhancement: For each extra die of damage done, or -2 to the HT roll. +25%.

Special limitation: Charmed victims will only obey a single command. -10%.

Glowing

Variable

The character glows; whether due to natural phosphorescence, innate nature, or supernatural taint. If the character glows so faintly that it is only noticeable in pitch darkness, this is a quirk, worth -1 point. If the character glows as brightly as a torch (visible at night or in twilight), this is worth -5 points. If the character is as bright as a bonfire (visible in any reduced light), this is worth -10 points. If the character is as bright as a beacon (glowing even in sunlight, and bright at night), this is worth -15 points. If the character otherwise could pass as "normal," this is worth an additional -5 points, unless bought as a quirk. Characters who glow find it nearly impossible to hide; those at the -5 level have a -3 to Stealth, those at -10 have a -6. Characters with Glowing at the -15 level cannot hide at all, unless covered. At night or twilight, archers have a +1 bonus to hit a Glowing character per -5 points of the base disadvantage. Note that characters with Body of Fire or a similar Advantage already glow and do not get points for this.

The Gold Standard

by Eric Lofgren

It seems the lot of every adventuring party to carry around bags upon bags of gold coins and trinkets to pay for everything from a drink at the local tavern to an enchanted sword and a very fine set of polished plate armor. While this is romantic, and does play to everyone's senses of adventure and treasure hunting, is it really practical for intrepid heroes to wander about carrying bags of gold? After all, gold is heavy in comparison to other metals used in coins, such as silver or nickel, and relatively rare. What is a poor DM, trying to build an adventure at least partially grounded in reality, to do? Historically, many other forms of payment existed as alternatives to masses of gold, but somewhere in the mists of history they seem to have been lost. And is gold really all that bad to begin with?

Exploring the problems of gold a bit further, especially weight, as fantasy worlds tend to have an abundance of resources anyway, let us assume for a moment that the gold coins have a diameter of about 2cm, the approximate diameter of one of the new U.S. gold covered dollar coins, and a thickness of 1mm, again roughly the size of the U.S. coin. Now, as we accept only the finest in gold currency for our mighty heroes, the coin is made out of 100% real, genuine gold. The final rough weight of a single gold coin is 6.25 ounces, meaning 5 of these beautiful coins weigh two pounds. With a weight allowance of a full 40 pounds entirely for the carrying of gold, our hypothetical heroes can lug about 100 gold coins, in the world of fantasy not a whole heck of a lot, maybe enough to buy a good sturdy long sword and some leather armor. But what about the real world? As a test of our wondrous monetary standard, let's examine the last time Europe had a really stable, unified currency: Rome.

The Roman Empire had created a fairly stable and standardized monetary system before it collapsed, at which time the entire monetary system of Europe was thrown into chaos, and barter became fashionable once again. Since most fantasy is based off of medieval England, we shall examine what our gold will buy in a Roman colony on the British Isles in AD 1. The purchase of an attractive female slave would set the party back 240 gold coins, taking her out of the financial picture, and the more modest general slave will only cost 60 gold, dwindling the party's cash reserves rather severely. But our heroes, being on the side of justice and right, don't feel the need to expand their ranks the easy way, so what will just the absolute essentials of travel cost? Two pounds of pork will only set us back a single gold coin, and the wine to wash it down with will cost another. A pound of good wool to stop the chain mail from chaffing will only cost 7, and a replacement pair of shoes will cost another 3 coins. This all sounds very reasonable you say, it sounds like the gold standard is working quite nicely. That's all well and good, but what about the finer things in life and adventuring? What happens when you want to buy magic armor of protection and a war galley? Or how about just ordering a slice of pork, not the entire pig? Smaller coins -- like copper or silver -- can handle the small ticket items, but the stuff of heroes begin to break the gold coin system down. After all, just how much will all of this weigh?

Fine, white silk would cost our party a tidy 480 gold coins, or a full 192 pounds worth, for only one pound of silk in return. A fine suit of armor, as it would have to be custom fit for the wearer, would similarly cost a great deal of money and crush your party under the weight of gold. So would the greatsword you bought, most likely made by smiths in mainland Europe, like the Celts. Obviously, if we are pursuing reality, or at least a close proximity, the purchase of supplies for true adventurers calls for some other form of payment. However, gold is always a helpful standby for smaller items, or places where, for one reason or another, everything is done in cold, hard currency, such as the black market.

Choosing some solid currency with greater value, like precious stones, could for the moment solve the problem, but these kinds of stones are very rare, and more than a little bit of overkill if all you want is a room for the night. However, the Romans (and others) did something that worked well then, and still works well now: they opened their checkbooks. Archeological evidence indicates that the ancient Sumerians possessed stone cylinders with unique seals on them, different for each person. These cylinders were primitive debt cards, allowing the user to buy the item and pay at a later date, or refer it to some other institution. There is also evidence that Jewish merchants within the Roman Empire had an entire network of banks that would accept notes of credit, similar to the modern day checking systems, allowing business to be conducted entirely without cash changing hands until someone went to the bank. But how does

one take these examples and slip them into a story? What if my character is out in the middle of the frontier, not near a major port city where banking can take place?

The most obvious solution presents itself if the game you are playing in is technologically advanced enough to have printing presses, the party can simply use paper money put out by the local government and the problem is solved. Assuming you can't take the nice, easy, straight road to currency sanity, let's look at some other options. The first, and especially useful early in the game or story, would be barter, either for goods or services. For example, in many campaigns it's common to find a spell scroll that no one needs, or arrows that no one wants. Perhaps an innkeeper would be interested, depending on how common magic (or archery) is within your world. Players could seek creative ways to get what they want, perhaps trading a bard their tale for some supplies, or clear out outlaws from the nearby forest in exchange for lodging in a farm house for a few days. Barter, especially for a well-balanced party, can provide many opportunities that go beyond just earning a day's wages. These missions may expand into sub-quests, and chances for experience or deepening the plot of an adventure. And it works; if the players are more interested in a compelling story than treasure, an entire adventure can be played out in freeform subplots. For example, a hero could book passage on a pirate ship and sail off to glory and yes, a share of gold . . . without money of any sort changing hands beforehand. In this example, martial characters could provide strength of arm, while a magic-wielding hero could provide useful spells (like wind control).

Perhaps another way to make your way through the world without having to lug about a knapsack full of coins, especially for writers of pure fiction or those playing free-form RPGs, is the simple good name of your characters and their associates. Characters that enjoy membership in large guilds have their own reputation as upstanding public citizens, or the patronage of someone with the gold to back their bills, can and did frequently offer letters of credit, or someone's "mark," in exchange for goods and services. Once these slips of paper, sometimes bearing a seal and sometimes merely a signature and amount, were distributed, they became legal tender and were commonly exchanged and sold until they made their way back to the original author. Characters with very high reputations, royal or noble patronage or who are members of whatever powerful organizations exist in your realm, can almost entirely rely on payment against their good name or the name of their sponsors. Of course, some limits would have to be placed on this method of spending to prevent characters from living beyond their means. The threat of having the sponsorship of whomever is paying the final bill is usually effective, especially if that patron provides some other kind of support throughout the story. Going even farther, groups such as Guilds or clans could potentially produce their own forms of currency once the printing press has been established, or the guild is willing to produce a great deal of them the old fashioned (or enchanted) way. The Italian city of Florence had very heavy guild influences in it, and similar cities in your realm could produce letters of credit that, through common use, became almost the established currency of the city.

Each of these ways of a party paying its way through adventure provides drawbacks and strengths. Gold has been, and very likely always will be, viewed as a standard of wealth, and it nearly ubiquitous in RPGs. Barter is cheap, and allows for both character and plot development in the guise of earning a meal, but it can only go so far. And finally letters of credit and notes against the writer's good name provide an easy means of paying for anything along the trip but they rely on the party having a good reputation and presumably deep-pocketed backers behind the scenes willing to foot the bill. DMs and writers looking for a new, more realistic or simply different way of having their mighty band pay for that one sword sitting in the shop window, would be advised to consider an alternative to gold, than think about what it would do to the mechanics of the story. And always keep the law of unintended consequences in mind when playing with the economy.

U.S. Patent No. 1

Published by [Cheapass Games](#)

Designed by James Ernest and Falko Goettsch

Boxed game; \$7.00

Like a couple of their more recent releases, Cheapass Games' *U.S. Patent No. 1* is slightly less, well, cheapass than their usual releases. Gone is the simple white envelope, replaced by a sturdy cardboard box of about the same size. The card components are of good quality, printed in a single color, and as usual, you have to provide many of the basic items of play -- in this case, a token and counter for each player, three six-sided dice, and enough poker chips, counters, or play money to simulate about \$20 per player.

But Cheapass isn't selling cool components and flashy art -- they're selling solid game design. And *U.S. Patent No. 1* is another example. Each player has invented time travel in their own time (a concept that quickly become meaningless once time travel is at your disposal), and races to be the first in line when the U.S. Patent Office opens for business on July 30, 1790 -- thus getting the coveted U.S. Patent No. 1 and cornering the market.

There are nine time periods, from 1790 up to 2168, that can be your home base. You travel up and down the timeline from there, trying to assemble a complete time machine and have it at the patent office when your number is called. At the same time, you're trying to stop everybody else from doing the same thing. That's where the weapons come in.

Each time machine has four components, and you must have them all -- in working order -- on your time machine when your number is called. Chassis determines your speed, Weapons allow you to attack other time machines, Shields protect you from those same attacks, and Power determines how good the other three cards on your machine can be. Each card is rated on a scale of 1 to 12. With a Power of 12 (plus the 5 all time machines get to start), you can at best have 17 points to spend on the other three features -- not nearly enough. This is the major strategic puzzle in *U.S. Patent No. 1* -- customizing your machine's features to your needs at any particular point in the game. Components get switched out, discarded, bought, found, stolen, and even shot off all the time, so flexibility in your strategy is not only possible, but essential.

Which is the most important component? I wish I knew. It seems every time I play, I run into a situation where the thing I need the most is my weakest component. If you can arrange it so that happens less often to you than to the other players, your chances of victory will go up. I think you can skimp a little bit on your Chassis, since with a board only nine time periods in length, the maximum speed you need is 8 (and even a very low-cost Chassis can do that, with a good die roll). Since beginning the game in one of the middle time periods is a slight advantage, those players begin the game with a little less money. Personally, I'd rather have the extra cash and take the set-up disadvantage -- after the first couple of turns, starting position no longer has any bearing on things. But that's just me.

In combat, the attacker gets to add two dice to the value of his Weapon, while the defender only adds one die to his Shield -- so to have a fair chance, your Shield needs to be worth 3 or 4 points more than the Weapon you're facing. That would imply that the Shield is the most important component. But sometimes, especially if there are a lot of perfectly good replacement components laying around in the various time periods, it's better to just pick up a new card instead of spending a lot of points on protecting the ones you already have. It's just another sneaky bit of strategy from a company (and designer) that specializes in "simple" little games that are far from simple to figure out.

The rules are short and clear, the art is appropriate (and entirely raided from the public domain -- they don't call this

place "Cheapass" for nothing), and the cards are sturdy. Many of the components have cute names, too (an 8-point Chassis named "Foglio's Racing Dirigible" is a shout-out to Ernest's friend Phil Foglio, for example). *U.S. Patent No. I* is light-hearted, entertaining, and enough of a strategic challenge to make you want to play it more than once. A lot more.

Mortal Coils (for Call of Cthulhu)

Published by [Pagan Publishing](#)

Written by Michael Cisco, John H. Crowe III, Dennis Detwiler, Jeff Moeller, Rebecca Strong, and John Tynes

Illustrated by Toren Atkinson, Dennis Detwiler, and Heather Hudson

208-page perfect bound soft cover; \$20.95

Mortal Coils was the next release for *Call of Cthulhu* from Pagan Publishing after *Delta Green* and the "ghoulicious" *The Realm of Shadows*. It is, apart from the reprints of scenarios from early issues of their magazine *The Unspeakable Oath*, the only anthology that Pagan Publishing has released. There are eight scenarios altogether. All but two are set in the USA, with the earliest in 1900 and the latest in 1929. Although separate from each other, all are thematically linked -- each story is concerned with the players saving or investigating the loss of some poor soul's "mortal coil."

Considering the usual quality of Pagan Publishing's books, my expectations for *Mortal Coils* were certainly high. In terms of appearance and layout, it certainly does not disappoint. It looks dark and foreboding, with some really quite lovely artwork. Dennis Detwiler does much of the interior art, and stating that his are the best illustrations in *Mortal Coils* should in no way make light of the work by either Toren Atkinson or Heather Hudson.

[SPOILER ALERT!]

The book opens with "Vigilante Justice" by John H. Crowe III. This is set in turn-of-the-century rural Kentucky, but can be adjusted up until 1920. The daughter of one of the player characters has gone missing, which makes for very personal involvement. It breaks with the standard *Call of Cthulhu* scenario in that it requires more legwork than bookwork. Both their local knowledge and their local acquaintances will also prove important to solving this mystery. Although this is very much a one-off adventure, it would work well if played as part of the origins of a female investigator character who grew up to oppose Mythos machinations in the twenties.

The second adventure, "A Murder of Crows," is also by John H. Crowe III and takes us into the familiar territory of missing academics or students. Two brothers have gone missing in Louisiana while researching a lost Indian tribe. Clues lead to an isolated community on the edge of the swamps, but neither brother is there. Of course, this is the type of adventure that we have seen before, but the new twists on old ideas -- especially as they are the kind of dark twists that we have come to expect from Pagan Publishing -- do serve to make this a more interesting adventure. Although it can take place at anytime during the twenties, elements within the scenario do suggest that it takes place earlier in the decade rather than the latter.

We return to rural Kentucky for Jeff Moeller's "Nightcap," after a young man goes missing, leaving behind a strange crystal bottle full of an even stranger liquid. This is for more experienced players and requires a little knowledge of Dreamlands. "God of the Mountain," by Michael Cisco, like the "A Murder of Crows" before it, has the investigators on the trail of another brace of academics, but this time into darkest Peru. Why has nothing been heard from the pair, who are visiting a recently discovered Inca city? This is perhaps the most difficult to run adventure within *Mortal Coils*, but not because of the writing. Rather that it relies heavily upon the Keeper to build and instill a sense of foreboding and build the atmosphere for the players.

Jeff Moeller's second adventure, "Common Courtesy" is only loosely Mythos related. The oddness here comes in the players deciding whether or not they should prevent millennia old funeral rites. Although these involve human sacrifice, the participants are (for a change) mostly willing! Likewise, Rebecca Strong's "We Have Met The Enemy" places the players in a moral quandary -- how far will they go to stop a summoning? Why was an investigator's uncle tortured and if they failed to get anything out of him before he died, what sort of mess has he left his niece or nephew?

Although "We Have Met The Enemy" itself does not take the investigators to India, the two articles from issue #16/17 of *The Unspeakable Oath* ("The Deceivers" by David Perry and A. Scott Glancy -- an examination of the Thuggee cult and "Dhanurvidya, Varman and Avarna", Michael J. Varhola's article on Indian arms and armor) might be useful references for running this scenario.

More traditional is John Tynes' "Dream Factory." Easily the best of the anthology, the players must find a Hollywood starlet who has disappeared on the eve of her success. This has heavy noir elements and one can see the influence of films such as *Barton Fink* and *The Player* in this scenario. Elements within this adventure appear later in the more modern context of Pagan Publishing's *Delta Green: Countdown* supplement.

It is aimed at more experienced Keepers, as the adventure is driven by the actions of the NPCs rather than by given events. The plot is also quite complex and more adult in its themes, though this is to be expected from Pagan Publishing. Like other adventures in the anthology, this one is restricted in terms of the timeframe in which it can be run, but in this case, even more so... Specifically "Dream Factory" takes place towards the end of the "silent era" in 1926, and really could not be run outside of that.

The final adventure, "Mysteria Matris Oblitae," by Dennis Detwiller, takes a scientific team to the revolutionary Mexico of 1929. Mexico City University is sent a photograph of a bizarre creature shot and killed in the jungle near the town of Tula. The main method of getting characters involved in this adventure is via scientific inquiry and may not lend itself to readily involving the more traditional type of *Call of Cthulhu* investigator. Unless the keeper uses "Mysteria Matris Oblitae" as an introductory scenario, then it really only works as a one-off adventure.

[END SPOILER ALERT]

Mortal Coils has only one weakness, and that is its lack of flexibility. Not all of the scenarios can be easily incorporated into an existing campaign and most are very time specific; in other words, few could be updated to the modern era. Of course, it should be pointed out that most are not written with this intent in mind. Yet this is a minor detraction from a book full of well-crafted material, which is definitely for the mature gamer, both in terms of some disturbing ideas and art.

Mortal Coils is an anthology for keepers looking for ideas or who want an adventure to run for their players that is just that little bit different and stronger in tone.

Evil (for d20)

Published by [AEG](#)

Writing by **A.A. Acevedo, J.D. Douglass, Noah Dudley, Peter Flanagan, Chris Hussey, Mike Leader, Mike Mearls, Jim Pinto and Ree Soesbee**

128 pages; \$19.95

Prepare for a walk on the Dark Side.

Fantasy RPGs nearly all promote the idea that PCs will enter a world where Evil reigns supreme, and are to incarnate the only heroes strong enough and Good enough to bring peace and light back to the world. Of course, every experienced GM knows it's hard to find good heroes. Even when the players don't openly declare they're just playing cold-blooded mercenary killers, they're playing Paladins who act more like cold-blooded mercenary killers. A GM might look at them and wonder why they don't just roll up a party of bad guys.

Well, now, with AEG's *Evil*, they can.

Evil attempts to be a comprehensive guide to Villainous Roleplaying in the *d20* system, for both players and GMs, with new feats, new prestige classes, new spells, new monsters, and a lot of tips for running Evil campaigns. It even includes a disclaimer, warning not to perform any of the evil acts described within the book itself. The book is divided into two major sections: "The Evil that Men Do," which centers around Evil characters, and "Mercy is for the Weak," which focuses on Evil campaigns. Consider these parts like the *Player's Handbook* and *GM's Handbook* for Evil, respectively.

"The Evil that Men Do" starts out with some philosophical attempts at defining exactly what is Evil; here, some essays from AEG's previous product, *Dungeons*, are reused, but they make sense in this book. This first section does a rather good job of explaining a villain's psychology in a logical manner (some villains believe they're actually heroes, while others embrace their Evil), and will most likely help roleplayers looking for inspiration in playing evil characters well.

Then comes a section on Fiends, summoning them and bargaining with them. This section starts with the psychology of Demons, Devils, and the rumor of the existence of Daemons (a.k.a. the Yugoloths, which are meant to return in the *Manual of the Planes*). Then comes the gains (and costs) of dealing with Fiends: Bargains, Servitude Contracts (either side), and Infernal Pacts. Infernal Pacts are a set of feats available to characters with Infernal Pacts, granting powers somewhat beyond normal feats, such as Darkvision, Flight, Wealth, etc. New rules are given to handle Demon Summoning and deal-making, including a new Prestige Class -- the Demon Summoner -- and a few new spells for summoning Fiends.

After a short run-over of Evil Religions (including a handful of new Evil gods for any setting and new Prestige Domains, such as Blood, Corruption and Lust), we're given archetypes for roleplaying some more traditional Evil characters, such as the Brute, the Insecure tyrant, the Loyal lieutenant and the Machiavellian Manipulator. The Background of Evil non-humans is given a brush-over before skills and feats are given a better look: Old skills are shown new uses (such as crafting shoddy goods with Craft), and new skills are introduced, such as Bully, uses Strength to persuade people, rather than Charisma (thus giving a new option for players wanting to use their low charisma Half-Orc to push other people around). The new Feats emphasize villains' actions, such as Bribery (a bonus

to Diplomacy when bribing people), Living Shield (using hostages to protect yourself) and Tyrant (like Leader, but with a body of followers cowed into obedience).

After a section of new spells, we have the two other Prestige Classes of this book, the Blood Archer and the Bargainer. These are more or less forgettable, unless you can find a real use for them.

The second part of the book, "Mercy is for the Weak," is dedicated to creating and running Evil campaigns. Strong tips are given to encourage Team roleplaying, even among parties of sinister villains. Roleplaying cool, memorable villains is encouraged over simply catering to old stereotypes and senseless carnage. Also, the intervention of heroes is repeatedly mentioned; just as Heroic PCs arrive to spoil Evil NPC plots, it is suggested to the GM that Heroic NPCs should often try to spoil Evil PC plots.

Evil followers (called Lackeys) are covered, with the caveat that expecting NPCs to do a PCs job generally leads the classic result of having one's Lackeys fail miserably. Lairs are covered in depth, as are evil organizations, complete with some examples. There are adventure hooks for evil parties of levels Low to High, and new monsters, which mostly include Good creatures . . . the ones most likely to fight Evil parties. New artifacts are also given, which include interesting backgrounds suitable for launching adventures from.

The book ends with a sample Evil campaign setting: Suras Sans, the City of Dusk -- a festering cancer of a city placed right on the border between the lands of the living and the dark worlds of the Shadow Lands. It is a city of Evil and Darkness, where Good characters can find no place. In short, a haven (such as it is) for villains of all kinds and races (though Humans dominate at 50%), where opportunities for profit and peril both await the intrepid villain.

The book, while it contains some interesting tips for roleplaying evil characters, suffers somewhat in its gaming content: The Blood Archer and Bargainer Prestige Classes seemed somewhat odd for a book about generic villainy. Maybe something more like a Black Knight for fallen Paladins and Fighters, or a Master of Deception for evil Illusionists would have been better suited.

The book's organization also leaves a bit to be desired; the various book sections seem to be confused as to whether or not they're aiming at PCs or NPCs. The classification of entries isn't as well settled; the Demon Summoning Prestige Class, for example, should probably be with the other Prestige Classes, with Demon Summoning being covered separately.

In spite of these flaws, *Evil* does have some good elements for gamers interested in the challenge of Evil characters and campaigns. If they believe they can handle the Darkness . . .

Wanted: Replacement Dennis

As I hinted last week, I GMed my first game of 2001 last Saturday. And it went, all told, pretty well.

Since most of us in the gaming group were new to each other, I'm structuring this game as a three-part mini-series, with an option to continue on to an ongoing series afterwards. That way, if we all hate each other, there's no shame in breaking up the group after three sessions, *and* we will have a complete storyline.

So I planned out the first adventure, we met, and everyone seemed to have a pretty good time. In fact, there was only one *bitty* problem.

I'd planned the adventure for my old group.

I'm convinced that, consciously or sub-, many of us GMs tend to get used to creating adventures geared towards our current groups. This is usually good; in long-running groups, you can tailor special and significant adventures to your players. In return, they get used to your idiosyncrasies as a GM.

Of course, this only works if you're still with the same group.

So when the heroes in the first adventure decide to antagonize the barbarians investigating the army they've infiltrated - - hoping both forces would go to battle and help take each other out, and also providing an opportunity to destroy some incriminating papers -- this was unexpected.

Certainly Dennis, my old player who moved away (<sniffle>) wouldn't have done that. But, of course, none of my new players are Dennis. And it's not fair to expect them to be. These new players can (and will) add a new mix to the game . . . but only if I let them, instead of trying to "replace" another player.

Interestingly, even though one of my players was in my old group, she found herself acting differently than we both expected . . . even going along with the barbarian plan. "It must be the new group," we concluded.

(And as an aside, Dennis is also part of a group that loves to [plan things out to the smallest detail](#) . . . even though he doesn't do that in our groups.)

So I started thinking back. I've been in groups where we, collectively, felt compelled to craft detailed backgrounds and campaign information. I've been in groups that didn't believe in background so much as a contemplative chatty angst-fest. That same group became more dynamic and "pulp-y" with the addition of one new player. I've been in some groups where one player was great; I've been in other groups where that same player was not-so-good.

I've arranged some groups with my favorite players, and they just didn't "click." I've had other groups that I was sure would fail, and provided wonderful gaming opportunities. I've seen fire, and I've seen rain . . . er, sorry.

So, anyway, for those of you seeking to fill out the ranks of your gaming group with new blood, just make sure you're not saddling them with old expectations. Each player is unique, and each play *group* is unique. But that doesn't mean it can't be fun.

* * *

And I *promise* I'll get that *Exalted* review to you all next week. This has been a longer-than-expected week, but next week should be better.

* * *

Ken Hite is still trying to get his schedule back on track. Hopefully he'll be back real soon.

In the interim, I'd like to point out that, since we had a bit more room than usual, we're running a longer adventure than normal (The *Conspiracy X* adventure "Blood And Madness"). Although I'm always interested in your opinions, I'm particularly interested in your thoughts on these longer pieces. Do you want to see more (with another tiny article or two each week)? None? Would you rather we split them into two parts? (We'll be doing a couple of those over the next few months . . .) Feel free to write me with your opinions at pyramid@sjgames.com, or start up a thread over in the [sjgames.pyramid discussion boards](#).

Blood And Madness

An adventure for *Conspiracy X*

by Stephen Hunt

Chapter One: Introduction

While this is an adventure set in Washington DC, it is easily transplanted to any location. The only area particularly keyed to the Washington area is the Capitol Hill office of Senator Michael Smith. His private residence can easily be located anywhere, and investigators needing to interview Senator Smith could do so just as easily at a regional office maintained by the Senator.

Plot Synopsis

Senator Michael Smith is a well thought of politician, who is tipped by many political commentators for bigger and better things.

Publicly, he is well known for his support of genetic research programs, campaigning stridently for greater freedom in the field in order to bring the benefits of scientific breakthroughs to mankind.

Privately, Smith is adept in the ways of magic, and his scientific pursuits are closely allied with such powers. He foresees great potential in the bonding of science and magic.

On his private estate, Smith plays host to a complex owned by Gentek Inc., a prime mover in the world of genetic research. Ostensibly, this is just a records office but for Smith, it is the means by which he is able to experiment.

Smith has recently imported a collection of plant bulbs from Gentek's Eastern European office. The plant that grows from these bulbs is, in fact, a beautiful woman designed to entrance her victims and then draw their blood from their bodies. In sorcery, blood is power, and Smith needs such blood for his ceremonies. The Totemtanz, or Death Dancer, can do this for him. Blood can also be used to feed the young saplings. Totemtanz attacks her victims using ribbons, which are actually part of her body. These extend from her wrists, and as she weaves her dance around her victim, they both cut and drink the victim's blood at the same time. They are razor sharp but composed purely of organic material.

Her first victim is the man who delivered the crate; an Eastern European sailor named Radostin Popov. Totemtanz kills him on Smith's instructions. If you kill the messenger, there is no way for him to pass his message on to another, unless of course dead men can tell tales . . .

Information Gathering

Both police and criminal contacts may prove useful during the adventure. Police or scientific contacts can be used to authenticate the credentials of either the coroner or the police officers involved in the case. In both instances, they show up as clean and good in their respective fields, an expert in the case of the coroner. Criminal contacts will also lead the party to Ramirez, a gentleman of low repute who has had a run-in with people that he wishes he hadn't.

Timescale

The party is in no great rush to reach the end of the adventure. The police are mystified by the murder, and miss any link to the Senator. Totemtanz is more subtle about her other targets, picking up vagrants and disposing of them in the

greenhouse at the estate. If the party are struggling, then Sgt. Herman will contact them again and notify them of vagrants disappearing. Staking out the seedy side of town will lead to spotting Totemtanz leading a vagrant into a black limo. Following that will lead to the Senator's estate. If you do have to use this method, penalize the players by having a second Totemtanz hatched and ready to feed when the players reach the adventure's conclusion.

Chapter Two: A Beginning . . .

Hooks

Coroner's Report

The Aegis group's wranglers send them a folder, either delivered in person or through the HERMES computers. The folder that is submitted details the death of a mysterious man, an immigrant, and suggests a gangland connection.

Alternatively, the players may have a connection with the coroner's office. Whatever happens, both the crime report and coroner's report are made available to the Cell (see handouts 1 and 2).

Newspaper Monitoring

If the players actively pursue information by checking the newspapers on a regular basis, reward them by letting them find the following clipping:

A man's body was found severely mutilated in downtown Washington DC this morning.

The body, as yet unidentified, was discovered by police in an alleyway off Roosevelt Avenue. Police state that the body was disfigured by literally hundreds of cut wounds. It is not yet known what kind of knife was used to inflict such wounds.

The body was discovered at half past midnight and, although a number of people were in the vicinity at the time, police have admitted they have few leads to go on.

Independent witnesses state that a gang called The Watchers had been sighted in the area at the time, although police are refusing to link the murder to any gangland activity.

A police spokesman said that a murder investigation was underway, and that any witnesses to the crime should contact Sgt. Michael Herman on 555-431-2212 at the South Washington precinct.

TERMINAL 18843/23/23/094 (SOUTH WASHINGTON POLICE PRECINCT)

TO: MAIN POLICE DATABASE AND FBI OFFICES, WASHINGTON DC

Crime: Homicide

Suspects: None at present

Reporting Officer: Sgt. Michael Herman, South Precinct

Officer's Statement: Responding to a call of a disturbance in an alleyway off Roosevelt Avenue at 00.30, we discovered a body -- or what was left of it.

The body was that of a male Caucasian, age indeterminate, who was covered with a huge number of cuts and scars, but no obvious quantity of blood.

There was no obvious sign of a perpetrator, so we called in the forensic squad. I left my partner, Officer Jude Patron, with the body, and proceeded to start on house-to-house questioning.

Nobody saw anything, heard anything, or knew anything. By the time I had got done with the first few places, the forensics had arrived and as Jude met up with me, I saw a few street punks stood off to one side, watching. I went over to them and started to ask a few questions but they drifted off. One of them, probably around the youngest, said just one thing to me.

He said: "It's the bad juju, the streets claiming their own."

He also said something in what I think was German, but I wasn't sure. They left before I could get them to make a statement. I have been unable to track them down since. Each wore black leather jackets, with red T-shirts. On the back of the jackets was the word Watchers.

FORENSIC REPORT RELATING TO PREVIOUS CASE

FROM TERMINAL 22J1B, CORONER'S OFFICE

LOGIN AND PASSWORD FOR Dr. JUDITH MANSFIELD

Forensic Report

Subject: John Doe

Inspecting coroner: Dr. Judith Mansfield

Cause of death: Multiple lacerations, exsanguination

The victim was male, aged between 30 and 35 years, and Caucasian. Brown, dirty hair, gray eyes. The victim was a large man, standing around 6 foot 1 inches and muscular -- looks like he was a laborer of some description. Blood type O Negative. He may be of Eastern European extraction. Among his possessions was a piece of notepaper with the name of a ship -- the Nikolai -- and port 23, NYC written on it. Having checked with the shipping register, this was registered at a port along the Black Sea.

The victim was killed by a combination of the vast number of cuts he had suffered, all very thin and with no trace of metal in the wounds, and the massive blood loss associated with that number of wounds, around 400 or so.

However, there was little in the way of blood on the body or at the scene of the crime. It

appears to have been removed in some fashion. But I know of no weapon which could cut a man and remove his blood at the same time. Conclusion: the blood must have been removed very shortly before the assault with the unknown edged weapon. The timing must have been very close, as there is no discernible evidence to show that the wounds were inflicted post mortem.

Most of the wounds were very shallow, none exceeding three inches in depth.

There appears to be little sign that the victim struggled, and no major disturbance at the scene. There were no signs of skin underneath the victim's fingernails nor were there excessive levels of lactic acid in the body.

Finding it difficult to believe that someone could endure such an assault and not put up a fight, I carried out a full range of drug and toxicology tests on his blood, but could only find evidence of alcohol, at a level of 40ml. He may have been drunk, but not enough to matter.

Other personal effects included \$20 in cash, a set of unmarked keys, a business card for McGillicuddy's Bar and a cheap watch.

Conclusion: Victim was killed by a combination of blood loss and the shock suffered from in excess of 400 lacerations. No evidence found to assist in identifying the killer.

Chapter Three: Tracing The Killer

Straight away, there are several leads for the party to pursue. First of all, there are the policemen to question and the coroner's office could provide a few leads. McGillicuddy's Bar is worth checking out, and the players may be intrigued by the Watchers.

The Police

Tracking down Sgt. Herman and Officer Patron is a simple task. They operate out of the South Washington precinct and are best tackled at Rudy's Bar after their shift. If the party ask at the precinct, they are told that Rudy's is usually the best place to catch them, as they are out on patrol most of the time.

Once questioned, the two will exchange uneasy glances before starting to talk. If given a reasonable story as to why the party members are investigating, then they will open up a little. Sgt. Herman will do the bulk of the talking, while Officer Patron will continue to shift awkwardly in his seat.

Sgt Herman will be quite frank about matters. He's been on the job for a good few years and while he has not seen anything like this before, he seems quite affable, talking openly about the fact that you cannot write everything in a report.

As he says, "Yeah, it was weird. But hey, what can you write in a report? Jeez, that body struck a chill down my spine the minute I saw it. No blood. None. Not a drop, not an ounce. Nuttin'. I had more blood on my clothes, cause I'd cut myself shaving that morning. But on him? Zip.

"I'm used to folks not talkin' when a murder happens, but there was something different 'bout everyone I questioned. Sure, there were a few whose reflex response was to clam up, but I honestly believe nobody saw -- or maybe nobody remembered -- what happened . . . "

When pressed as to what he means by "nobody remembered," he says that some of the people he spoke to seemed to be not quite there, like they were spaced on drugs or something, and those that were like that were the ones closest to

the murder site. Not anything he could prove or anything he could write in a report without thinking his superiors would want to know why the hell he was putting unfounded suspicions in an official report, but that's the way it felt.

As for the Watchers, Herman is familiar with all of the gangs who operate in and around his patrol area, but he's never come across the Watchers before or since. That seems to be the thing that concerns him the most -- strangers on his patch, though one or two of his colleagues have also reported seeing the gang in different areas.

Officer Patron is far more uncertain when it comes to speaking. He's a rookie, has only been on the job for the last year and a half, and defers to Herman every chance he gets.

What he does say, eventually, when Herman is distracted talking, is in a whisper to the nearest player . . . or maybe no-one in particular. All he says is, "There was this woman. I . . . I saw her . . . down the end of the alley . . . and then she was gone. Just like that. I never saw her again . . . but I hope I do . . . one day."

If brought up on what he has just said, Officer Patron denies he said anything, says the investigator must be hearing things, and shuts up, before excusing himself and heading for the bar.

While he is there, Herman confides that Patron has not been the same since the murder. "Ordinarily, the kid's at the heart of the party, but lately . . . he's just not been the same."

The Coroner's Office

While the policemen were quite willing to talk freely, Dr. Mansfield is far more reluctant. Players will need to tug a string or two to get her to talk, or show that they are in an official investigatory body to convince her to open up.

Having come across as stern prior to being convinced, when she opens up, Dr. Mansfield gives more the air of a studious professional who has just been overworked. She can be slightly flippant, and if anyone comments on her tiredness, she'll snap back "Welcome to Washington DC, murder capital of the US of A. No rest for a coroner."

She is genuinely mystified by the condition of the body, most particularly by the absence of any fragments inside the wound. She estimates that the whole attack was over within 30 seconds, and she is not convinced that the blood was withdrawn prior to the wounds being inflicted. The body was completely drained of blood, and no matter how much she searched the murder site, there was not a trace to be found. She also confirms that the body was not moved to the location it was found in. Again, like Sgt. Herman, Dr. Mansfield is troubled by the case, and has not released the body for burial yet. She has cited the fact that the body is unidentified as yet as one reason, but will admit that she is calling in one of her old teachers to come and take a look, a blood specialist by the name of Dr. Newcombe. He will not arrive for four days, however, so the body is on ice until then.

She concludes by saying: "Look, I wish I had time to look into this case more, but hey, here we get a couple bodies a day coming through -- let alone all the reports of vagrants going missing you get in a city like this. Sometimes I get a body and by the time I see it, rats have had their way with it for weeks. I see a lot of things which ain't pretty. I see a lot of things I wish I didn't. Sure, this is weird, but so's the human race for all the horrible ways it manages to come up with for doing harm to one another."

Note: Dr. Newcombe's arrival is not relevant to the case. All it means is that the body will be in the morgue for four days, should players devise a way to get a look at it by nefarious means. Dr. Mansfield is very reluctant to show the players the body herself, as it is evidence, and will only do so by direct order from a superior. If the party try to contact Dr. Newcombe separately, he will be unavailable. His credentials, if checked, prove to be impeccable. He is a senior resident at a major hospital in Detroit, but is presently away on a conference.

The Body

The body is a gruesome sight indeed, with lacerations from top to toe, the body is in a terrible state, and matches up with the post mortem description. The face is also heavily lacerated, and identification will be difficult. If Dr. Mansfield is showing them the body, she is hopeful that an ID can be made with dental records or fingerprints. Anybody with the appropriate expertise and the opportunity can carry out an examination of the body and find the same results as Dr. Mansfield, unless they can succeed in a Df4 test in Medical or Biology, in which case they find a tiny sliver of material inside one of the deeper wounds. The material appears to be cloth but, as the investigator touches it, the material draws a tiny line of blood across a finger -- it's sharp in some way, and needs further examination in an appropriately equipped lab. Dr. Mansfield would be happy to examine it, if the players trust her.

Such further examination reveals, after one research breakthrough, that the material is organic, composed of plant material. Two further breakthroughs reveal that the material is thick towards the center portion, but is monomolecular on the edges, providing a startlingly sharp cutting edge. Two further breakthroughs reveal that the plant material appears to be mixed with some kind of animal DNA.

The Ship

The Nikolai is docked in New York, and should players make the journey to visit it, they will find it largely deserted. The Nikolai has already dispersed its cargo by the time the party arrives, along with most of its crew. The captain is away settling accounts, so it is down to his second, Vladimir Kinder, to do the talking. He cannot confirm or deny the whereabouts of the crew; they are all on a two-week leave, with one week remaining.

However, while snooping about the ship, the manifest can be discovered, containing the last cargo's information. The cargo consisted of botanical samples from a company in Bucharest named Gentek Inc, all packed in the native earth of the area. The final destination of the cargo was listed as the Gentek storage facility in the grounds of Milwaukee Senator Michael Smith's Washington residence. Senator Smith, as is easily discovered, is outspoken on the subject of allowing more genetic research within the USA. He is also a member of the Gentek board. Both Senator Michael Smith and Gentek Inc can be looked up on HERMES to provide some clues.

A roster of crew is available, but it will take some time to work through the full crew list. Vladimir offers to do the job for the investigators and notify them of his results in a day or two. He cannot do it any faster, he says, because "It can take that long to drag one man from a bar, let alone the whole crew!"

Kinder may come across as being quite cagey. However, he is as concerned as anyone about the possibility of one of his crew being a possible murder victim. He will honestly endeavor to find out which crew member has gone missing, and in two days will inform the Cell that the crew is all accounted for, apart from Radostin Popov, who has sailed with the Nikolai on more than a dozen voyages and was one of the unloading team.

Popov is a Bulgarian, who is single and childless. If pressed upon identification, Kinder will admit that Popov was something of a loner and did not take part in the Nikolai crew's legendary drinking expeditions. For that reason, he was often given delivery jobs at the end of voyages, to ensure that goods did arrive as requested. He was to oversee the delivery of several crates to a customer in Washington D.C. Reluctantly, Kinder will admit this is Gentek Inc., but only if convinced that the party are genuine investigators. If they cannot produce the credentials, the players will have to concoct a really convincing argument.

HERMES report on Gentek Inc.

+++++++ GENTEK INC. ++++++

Gentek is a research company, specializing in genetic technology (unsurprisingly). The company has no American facilities, but has long petitioned for greater freedom in the rules governing genetic research within the United States.

The company holds two major holdings overseas, in Budapest and Atlanticos, Mexico. A records office is based at the home of Senator Michael Smith in Washington DC.

The company has lodged financial figures with the US Tax Office, registering a turnover of \$30m/year. Records show it has personnel of 480, 300 of which are located in the Budapest office, 10 in Washington, and the remaining 170 based in Mexico.

Hermes report on Senator Michael Smith

+++++++ Senator Michael Smith ++++++

Michael Smith, Senator for Milwaukee

Married, no children

Age: 54

Wife's Name: Alyssa

Born: Athens, Georgia

Educated: DuPont Academy For Young People, DuPont, District of Columbia then Harvard, majoring in political science.

Mr. Smith has held the post of senator for the last 18 years, having been elected on a Republican ticket following the death of the state's previous senator, Jack Marginson, of a heart attack. (NOTE: FBI files show no wrongdoing, CIA files from the time impenetrable to the J. Edgar Hoover effect.)

Smith has long campaigned on behalf of the genetic research industry, and is closely allied to public health interests in that regard. Smith is also on the board of Gentek Inc, an American-owned company that is based overseas due to the stringent rules on genetic research within the US borders.

Smith is an oddity in the Senate in that AEGIS cannot forward any salacious material on the Senator. He does not frequent the local call-girl circuit, and has long been admired by certain quarters for the strongly moral image that he portrays. However, he has never

aspired to becoming presidential material, and perhaps lacks the charisma required for sound bites.

Behind the scenes, he is known as a quiet man, but with a talent for ruthless negotiating when it comes to things that are important to him. Were it to be known, the vote on instituting the current genetic research control measures was very close, and it was only because of some presidential deal-making that Smith's side was defeated. He appears to have taken the defeat in good grace, however, and has shown no signs of recrimination, choosing instead to continue to campaign.

McGillicuddy's Bar

A boozy Irish-American bar, this is a dark, smoky place, even when it is broad daylight outside. The owner is one Jack McGillicuddy, who bears no fools and will refuse to acknowledge that his bar was the center of any illegal activity. He does, however, remember seeing: "A big Russky guy? Yeah I remember him. Well, hell, the whole bar would, given the doll he had on his arm."

When questioned further, McGillicuddy will say that the "doll" was "a stunner, looked like a dancer or somthin'. I mean, she was *beautiful*. And those eyes . . . y'know, I don't know if I'll ever see that lady again, but I hope I do . . . one day."

Anyone else questioned about the bar will say much the same. But everyone who was in that night remembers her, and ends the same way saying they hope they will see her again " . . . one day".

Any greater description than this is hard to come by. Whenever people mention her, they become distracted. She is generally described as a blonde, and quite short, but no details specific enough to form identification can be garnered. Most people around the bar can provide a much more vivid description of the man who left with her. He was definitely a sizeable chap, around 32 years old, Caucasian, brown dirty hair and gray eyes, around six-foot one inches and very muscular.

McGillicuddy says the couple, who weren't too close by appearances, left around midnight -- hey, it was a private party, ok?

The Crime Scene

Roosevelt Avenue is around five minutes' walk from McGillicuddy's Bar, and the crime scene is at the top end of an alleyway running onto the street. The area has been searched by police and there is still police tape hanging from the walls at the end of the street. It has been torn through by now, and life is continuing on. Still, a search of the scene will turn up (with a Df3 Forensics test, or a Df4 Perception test) a scar in the brickwork at the side of the alley. The scar is around three inches deep, running for a foot in length, and would not have been noticed at first because it is in the shadow of a dumpster. Further examination will reveal a short scrap of material . . . just the same as was found on the body (or not, if the players were unable to examine it). Again, handled with bare fingers it will cut a player's hand and will need further examination in a properly equipped lab.

Tracking Down The Watchers

The Watchers is a new gang within the DC area. Finding them is not easy. In fact, if a character cannot call on a criminal contact -- or perhaps a media or police contact -- they will have no chance at all, for now. Even then, it will take a Df3 Influence test to come up with the goods. Still, they may succeed in finding out something. A successful test will provide the following information.

Peculiarly, the Watchers do not appear to have any particular territory, but are more of a nomadic gang, traveling freely through a number of different neighborhoods. As far as anyone knows, there has only been one gang fight involving the Watchers, when the White Sharks tried to take them down. The result -- the White Sharks do not exist any more. Near as anyone can reckon, the Watchers number just a dozen members at most -- and no-one's sure where any of them came from. They just kind of appeared a few months ago. If anyone has any criminal contacts, then they point out one gangland figure, a Boneshaker by the name of Ramirez had a bad experience that he is only too happy to talk about. <address provided, on the other side of DC>

Ramirez

Strung out on more than just dope, Ramirez is wide-eyed and staring. This could easily be written off as simply drugs, but, with any Df1 Psychology or Df4 Perception test, anyone can tell that it is fear that is driving Ramirez, not any kind of chemical.

Ramirez will tell the party that he was just about to mug a tourist at the Washington Monument when, out of nowhere, The Watchers appeared. He started to run...

"But one of 'em caught me. Big guy, breath smelled like honey. Anyhow, he grabs me, lifts me up so's my feet's danglin' and starts shoutin' 'Where is she? Where is she?'. I mean, hell man, I don't know what's going down and I tell him jus' so. But he keeps shoutin'. So here's me, pinned up against the monument and sayin' 'I don' know, I don' know'.

"Then I look round, and I see this woman. Like a dancer. Beautiful, man. Beautiful. Hell, next thing I know it's mornin' and I'm wakin' up cold and shivin' in the park. Cuts all over me, but I's alive. Cuts heal but I still don' know what happened. All I know is that woman had the most beautiful eyes I've ever seen. I don' know if I'll ever see her again, but I hope I do . . . one day."

Ramirez knows nothing more. No matter what methods the players use to extract more information, they will be unsuccessful.

Senator Michael Smith

Senator Smith will only be too happy to meet anyone to discuss genetic research -- but only at his office on Capitol Hill, not at his private residence. That is located on the outer edge of town, as part of a large personal estate.

Anyone investigating Senator Smith will discover that most of his money was originally inherited, his father and his grandfather having built up a substantial fortune through the railroads. Senator Smith has, in his time, transferred most of that fortune into investment in various scientific ventures. Firstly, his interest was in virus research. Secondly, he invested heavily in anti-toxicological programs. Lately, his interests have turned towards genetics, and his money is heavily invested in Gentek Inc.

Senator Smith speaks quietly, but earnestly, as if every word he says has been carefully weighed and considered. He gets emotional about topics which are close to his heart, but does not express that emotion well . . . more he starts to stutter over words, not one to become a high-flyer in politics.

In meeting the players, Senator Smith will reveal as little as possible about his own involvements, but will happily detail the "restrictive" laws practiced in the US which, in his words, "force honest and sincere genetic research programs abroad to carry on their work in less advanced facilities, thus slowing up their work for years."

Asked why he has such a beef about genetics, Smith will conjure up a suitably political speech about it being the future of the world, and important for the safety of future generations. "How else can we fight genetic diseases if we are forced to carry out research with one hand tied behind our backs?"

If anyone raises the murder with Senator Smith, he will clam up, close up, deny he has any knowledge, and conclude the interview as quickly as possible.

Similarly, if anyone asks what was bound for Senator Smith's estate and the Gentek holding there, he says that is in the hands of the Gentek team based there, and not his concern. He merely lets the land to them for their complex, but he adds that he assumes it is merely items to be documented and forwarded to the Mexican complex. It is not the first time that items have been passed through the estate to be recorded. Smith's statistics are detailed at the end of the adventure.

Chapter Four: Opening The Casket

By this stage, the player's leads should have narrowed down to two distinct areas. One, tracking down the Watchers. Two, investigating the Gentek labs on Senator Smith's estate. Senator Smith's Washington office may also prove an area the players wish to investigate but, even if they should gain entry after hours and search through his files, there is nothing there to incriminate him.

Tracking down the Watchers will prove impossible -- for now. Senator Smith's estate, then, awaits.

The Estate

The Senator's estate is located on the outer edges of Washington, backed up against some low hills. Security, on surveillance, is actually quite high, but is undone by the picturesque location. The slope of the hill running down to the rear wall is such that it is actually reasonably simple to scale the wall at the back. As long as the property is approached at night, that should ensure the characters are not spotted before they are in the grounds.

There are three major buildings within the complex, a guardhouse by the gate, occupied by two security guards, who are generally bored with the humdrum of doing a job where nothing ever happens. The main house is the largest of the buildings within the complex, but on the east side of the area, a long, narrow greenhouse is located, the contents of which cannot be viewed from outside, due to heavy plastic shrouds which have been erected throughout. What can be seen is that 24 hours a day, bright UV lighting is on through the whole building.

The Supernatural

The Senator's estate may not be ideal for security, but it is a Locus of Seepage Level 2 (with 6 Seepage Points). Even non-sensitives get a feeling of being watched or a creepy sensation at the back of their neck. Sensitives get flashes of strange, clawed creatures attacking innocents. The nature of the site is definitely malevolent.

Guards

Two security guards are located in the gatehouse, with two more in an office underneath the main building, in an underground parking area, and four more patrolling the grounds in pairs. These guys are not top end of the range security specialists. A few doughnuts too many have been consumed, and a lot of nights without worrying about any danger of a break-in have done their work. Unless the players are really careless, they should be able to effect entry into any building they wish without fear of being disturbed.

The main building is unlocked. The occupants are either overconfident in their guards' abilities or blithely ignorant of any threat. The greenhouse is a different matter. The place is securely locked and to enter unobtrusively, players will have to match their skills against a lock of Df3 to effect entry. A security camera is also in place inside, but only a bad luck roll will lead to players being spotted.

If a Bad Luck roll comes up, the guards will see "something" and send a couple of guys over to check it out.

The Greenhouse

Entering the greenhouse will lead the players to the cause of the "vampire" attack. Gentek Inc. has its records office in the front of the greenhouse. The greenhouse is active, and it is growing vampires. Only one of the organic vampires has been grown thus far, and she goes by the name of Totemtanz, German for Death Dancer.

Totemtanz killed the sailor who had overseen the delivery of goods to Gentek Inc. Several of the crates lie just beyond the front office, before the main greenhouse area itself. Inside are traces of dirt, which delivery records show contained not just dirt from the Gentek lab in Yugoslavia, but plant bulbs -- samples -- which have been genetically altered.

Inside The Greenhouse

The Greenhouse is a riot of growth and color. Picking their way down the aisles, the players see the lightest growth is at the near end of the building and the densest towards the rear. Venturing further down the rows, the plants become much larger and, at around the halfway point, large pods can be seen around the base of the plants. Soon after, the pods appear to be taking shape. The pods can be seen to be forming definite shapes of hands, feet, arms, faces . . .

At about this point, the players in the greenhouse (they may have separated, after all) hear the door behind them open again. Turning back, they will find a stunningly beautiful woman standing there.

Attacks: Kick, Punch as normal. Can do a kick-punch-kick move with Martial Arts skill level 3

Ribbons: Attack with skill level 3 and do damage of Wn (Str), can also drain blood entirely from a person in five rounds after a successful Mesmerism, as long as Totemtanz is undisturbed.

Weakness: All fire-based damage suffered by Totemtanz is doubled.

Weedkiller is also surprisingly effective, doing Fw3 damage every time she is hit with a substantial spray of it.

Totemtanz is returning from a night of hunting, and standing behind her, eyes bright with her beauty, is a vagrant. Totemtanz, seeing the players, curses and flicks her wrist in the direction of the vagrant. From her wrist extends a ribbon -- just like the type used by gymnasts -- but this one is deadly. The vagrant's throat slits open and, as the blood begins to gush, Totemtanz pushes his body over onto some of the younger plants.

If only one player has ventured into the greenhouse, she will approach confidently and attempt to mesmerize him. If she succeeds, she will feed from him, draining his blood in five rounds. Give the player the chance to break free of the mesmerism every round.

If Totemtanz is killed, the players can venture further into the greenhouse, where they will find the plants at the very back are almost full-grown, with full figures identical to Totemtanz growing there, but which have not yet detached themselves from the plant. The only way to dispose of these plants permanently is to torch the place. A search of the location will find some fuel drums -- it seems Gentek were prepared in case the vampires became out of control -- and the greenhouse can easily be set light to, although this will provoke a chorus of shrieking from the unborn vampires which will be horrible to the ears.

Consequences

If the players headed for the house first, then they will not yet have experienced the after-effects of destroying the warehouse but if (when) they do, they will find guards rushing to try and put the fire out. A good oil fire will be hard for the guards to put out, but if the players are seen, the guards will open fire at them before tackling the blaze. The number of guards running over will be limited, though. There will only be two. No guards come from the gate area and

none move from the house.

Strangely, there is no sign of any other kind of retribution coming, be it from the house or from any police who should have been called. This may well give the players the chance to enter the house, but either way they tackle the house, before or after the fire, they will find the front door standing open.

Enter The Watchers

Just inside the front door of the house, the players will find two sleeping guards. They are lying on the floor, deep in an unnatural slumber. The bottom floor of the house is deserted, as the players quickly discover, but on the staircase they find the body of one of the members of the Watchers, the gang whose presence in Washington lately is a mystery.

The body is that of a young man, with no visible signs as to what killed him. If his body is moved, it is found to be incredibly light, weighing no more than a stone -- almost as if he was nothing more than a husk.

On the top floor landing, a second body is found, again a Watcher with no visible injuries. The sounds of fighting can be heard from behind a large door off the landing, across from which a third body is pinned to the wall with a steel spike, again a dead Watcher.

Senator Smith's Chamber

The fighting is taking place between the two remaining members of the Watchers and Senator Smith. But Senator Smith is not the man the players met in his office, nor are the Watchers the punk youths that have been previously described.

The room, which appears to be a large laboratory, with a pentagram on a raised dais in the center of the room and numerous computer screens and sensors scattered around, is lit by clashing red and white lights.

The Watchers are both radiating white light, with large pairs of wings emerging from their backs. They look like angels.

Across from them, Senator Smith's now-fiendish face is lit by fiery light, and his hands have metamorphosed into ferocious claws. As the players watch, he slashes the nearest member of the Watchers, who is hurled backwards with a ragged slash across his stomach. He lands and does not move. At the same time, the remaining member slashes the Senator's side with a short blade. Barely reacting, the Senator plants a hefty kick into the Watcher's midriff and sends him flying back into the bank of computers with a loud crash. Turning to the players, the Senator's devilish face snarls, and spits out "What do you want?"

Attacks: Martial Arts 3, a variety of minor moves as the GM sees fit, plus a selection of two move combos such as kick-punch, grab-throw, dodge-block, etc. Claws do Wn(Str-1) damage, skill of 3.

Senator Smith is older than he looks. Back around the early part of the 20th century, a young Michael Smith was a biologist dabbling in the occult. Magic was something that he found came easily to him, and he was soon on the path to becoming an Incarnate: Devil. He never lost his interests in science and, enjoying the financial benefits his powers were bringing him, he started to fund a variety of projects. His current project is one he has been keen on ever since the discovery of the DNA sequence. He believes he can grow an army which he can use to back any move for power he cares to make, either blatantly, or subtly by using the Totemtanz creature's seductive powers on the right figures in power. He does not want to risk this goal by a fight with the players, and will use 3SP to try and make his escape.

To get away, he must spend three turns inside the pentagram, although he can still engage players in combat during this time. He will try and put the players down rather than kill them, just looking to buy himself time to get away. To stop him, the players must either get him out of the pentagram, which is around eight feet across, or kill him. Wounding him will not stop him; he will ignore the wounds knowing he can heal himself at his destination, which is his residence in Milwaukee.

There are only two outcomes here. Either the investigators kill the Senator, or he gets away. He is not going to be around long enough to kill the heroes.

Chapter Five: Aftermath

Assuming the players are still alive, they can check the remaining bodies of the Watchers. The one with the slashed stomach is dead. The remaining one has disappeared, leaving a few feathers behind. None of the other bodies now have wings, and all are incredibly light.

If there has been a fire, then emergency services will be along in another ten minutes or so, leaving the players little time to pick themselves up and make their escape.

The sleeping security guards come round with no memory of what has taken place, while the Senator, if he has escaped, will remain an opponent for another day.

Designer's Notes: Proteus

by Francis K. Lalumiere

"And Proteus began at once with his old tricks, first changing himself into a lion with a great mane. Then suddenly he became a dragon, a leopard, a wild boar; the next moment he turned into running water, and then, finally, he was a tree."

--Homer, *The Odyssey*, Book IV

I designed the basic mechanics of *Proteus* while waiting in line for the *Back to the Future* ride at Universal Studios, in California.

Seriously.

For some time I had been toying with the idea of playing a game with dice for pieces and the rules of chess for movement, but I had never sat down to figure out how such a game might actually work. I don't really like chess; I find the frame of the game too restrictive (and I don't mean the edges of the chessboard, here), but I'm fascinated by the movement possibilities of chess pieces. As a result, I oftentimes contemplate chess, but I rarely play it. I had tried my share of chess variants, but somehow I felt that my "dice chess" idea would create something interestingly different. If I could only figure out how to play the game.

Things stayed pretty much status quo for about two years. My subconscious might have been polishing up some concepts, but I didn't consciously work on the game until I found myself stuck in line at Universal Studios. I'll try to make a long story short . . . I was alone in Los Angeles on business, and I found myself with a free afternoon -- the temptation of the Universal Studios demon was too great to resist. So I went. At some point I ended up trapped in line at the *Back to the Future* ride, and since I had no one to talk to and hadn't brought a book (water rides oblige), I thought it might be worth my while to start laying down the foundations for my dice-chess game. In any case, it would be a lot more productive than staring at the Hawaiian shirt in front of me for an hour. By the time I got on the ride, I already had a very good idea of the inner workings of the game. And when I stepped out of my rigged Delorean (great ride, by the way), I couldn't wait to get back to my hotel room and write everything down. I used the rest of my in-line waiting sessions to run a few mental tests and do some basic math.

At the end of the day, I drove back to the hotel with my head full of sketches and design notes. I knew that my game, like chess, would be a two-player game and that players would alternate turns (I know this sounds very basic, but at some point you do need to give that stuff consideration). I also knew that each player would start with eight dice, that the dice would show a different chess piece on each face, that the goal of the game involved capturing several pieces (as opposed to neutralizing *one* particular target), and that a player would perform two actions on his turn: move a die and rotate a die (to change the identity of that piece) one step at a time. Most importantly (hey, we all have our fixations), I also had a name for the game -- Proteus, the Greek god of ever-changing form.

I thought I would stay up all night but, much to my surprise, I was content with simply jotting down what I had devised during the day and going to bed. All right, I'll be honest; I had some problems falling asleep. Morpheus was always bumped by Proteus who thought some of his needs still had to be addressed.

And he was right.

First of all, I didn't know how you were supposed to win the game. I had a vague notion related to taking out as many of the opposing pieces as possible, but somehow that felt wrong. Also, I still hadn't found a balancing mechanism that would prevent powermongers from rotating all of their dice up to queens. There was one most delicate matter: I didn't know what to do with the king. Since I was dedicated to the disappearance of the checkmate concept from *Proteus*, was it still worth it to keep the king in there?

I eventually managed to fall asleep, without having resolved anything. I did try to refine and complement my notes on

the flight back, the next morning, but somehow I didn't make much progress until I got home. Then, in one evening, I solved practically all of my problems.

For the sequence in which the chess pieces would appear on the faces of the die, I chose to adhere to the traditional chess value sequence, with one exception: I placed the bishop in front of the knight, because I felt it would open up the game faster. That gave me pawn, bishop, knight, rook and queen. Still no idea about the king. However, it became obvious pretty quickly that a player would have to move a die and then rotate a *different* die; infiltrating the enemy camp as a bishop and immediately transforming into a knight smelled of overpowered tactics. Interestingly enough, the questions of game balance and victory conditions were solved at the same time, and with the same gimmick. Back then I was playing the game with standard six-sided dice, remembering that the 6 was the queen, 5 the rook, 4 the knight, 3 the bishop and 2 the pawn (1 could be the king, but I felt queasy about that). I thought it might be fun to win a game of *Proteus* by having the most points, with each piece being worth a certain number of points. In assigning point values to the pieces -- with my endless originality, I chose the number of dots that represented each piece -- I discovered that such a scheme would automatically balance the game, because the stronger pieces were worth more points when they were captured by the opponent. I had done it!

Or so I thought.

I moved on to the problem of the king. Since a game of *Proteus* was won by having the most points, there was little incentive to keep the king in the game. Without his vital quality, the rules of movement make the king into a limping queen, and that's nowhere near appealing given the morphing nature of game pieces in *Proteus*. Plus, where would the king fit in the die sequence? I could simply have thrown the king away, but here was an opportunity to inject another new concept into the game. So instead of eliminating the king, I would replace it. After considering different ideas for a while, I chose the simplest one: the new piece would not move at all, but would also be impossible to take. I named that piece the fortress.

With these problems apparently resolved, I could sit down and play a few "real" games against myself. Everything was going rather smoothly. The game was simple, played fast, yet retained its possibilities for deep strategy. And then I hit a brick wall with an evening dress and a crown.

The queen.

Because of the mathematical progression of the value of pieces, and because of the similar progression of their respective powers, the game was exquisitely balanced -- except for the queen. The problem laid in the power of the queen being much greater than its point value. Between a rook and a queen, the difference in power is immense; yet the different in point value was only one. That couldn't work. One solution was to raise the point value of the queen. But that didn't appeal to me because it implied assigning the queen some ridiculous value, say, 12 points. This meant that a player capturing a queen would probably win, and I wanted to avoid that like the plague. I therefore chose the only alternative, which was to make the queen less powerful. But instead of toying around with its movement and capturing rules, I thought it better to curse the queen with a weakness. I had the idea of making the square directly behind the queen vulnerable to attacks (much in the same way the queen herself can be taken on her square), but I couldn't help feeling that the right solution couldn't be that easy, or that elegant: one could capture the queen by stepping on her gown. So I played some more games and, surprisingly, the queen seemed to behave. I was delighted with the fortress, and overall *Proteus* worked. It was time to take the game out for a spin.

I took *Proteus* to the local game store where I always went, and a couple of friends expressed interest in the game. We played over and over again, and I kept thinking that some obvious flaw would blow up in my face; but no such thing happened. Back home, I put *Proteus* to the test with a few more friends, and the game still held up. We did try to increase the number of pieces each player starts with (up to 12), but we only succeeded in creating quite a mess of a traffic jam, with games that would take more than an hour. And I was determined to keep play time to 30 minutes or less. We also experimented with fewer pieces for each player, but the game quickly became boring and predictable. Eight seemed to be just the right choice.

At that time I had just finished translating both *Illuminati* and *Tile Chess* into French for Steve Jackson Games, so it was an easy matter for me to tell Steve -- between emails, as it were -- about *Proteus*. He was immediately interested,

asking for only one change: that the fortress become the pyramid. I should have thought about that myself. And before I knew it, my game was on the list of upcoming Steve Jackson Games titles.

Then I started to worry.

You see, I hadn't really planned on selling *Proteus* to anyone; I was really just playing around with the game for my own enjoyment. But now it was going to be out there, and I realized it had to be as good as I could make it. While I didn't think anything needed to be changed in the game itself, I thought the door was wide open for a series of intriguing variations on the basic rules.

So I set out to have *Proteus* itself morph into half a dozen different forms, much like its components could do on the battlefield. I designed a handful of variants and thoroughly tested them all with my (very patient) wife Stephanie. Four of them ended up in the finished game: Trade-Off, Russian Roulette, Wall Street, and Polarity. That's five if you count the two different setups for Wall Street. Steve suggested an additional variant, which we ended up calling Warhorses -- for a total of six variants. But where did the other ones go? Right here.

Random Setup

This was the shortest-lived of the variants I came up with. Rolling your dice to see what pieces you would start with was the dumbest idea this side of the sun, and it only survived for about half a setup phase -- I realized pretty quickly there was no way I could make this work. Still, the concept of rolling pieces (because they *are* dice, after all) fascinated me, and that eventually became the Russian Roulette variant.

Pyramid

The idea here was that pieces could only capture opposing pieces that were of equal or higher value. So a pawn could capture everything (except the pyramid, but that's a given), and a queen could only capture other queens. (Can you see the pyramid pattern? You're quick.) This didn't work because no player wanted to upgrade to stronger pieces. So what if you have a knight? I'll just stay with bishops and the only thing you'll catch is a cold.

I tried playing the Inverted Pyramid (capture downwards) but it only succeeded in destroying the effectiveness of the weaker pieces and handing a flak jacket to the stronger ones.

Pyramid didn't evolve into anything else; it got buried in the back yard.

Black & White

Whenever you capture a piece, its point value is the standard one if it was captured on a black square, but is whatever's on the bottom face (or 7 minus top face) if it was captured on a white square.

Pretty inventive, right? This is one I actually sent to Steve, but in the end it was not included with the rest because it didn't really add all that much to the strategy. Plus, the configuration of the Proteus dice would be different from that of regular six-siders in order to facilitate the upgrade/downgrade procedure, and that would throw the point balance out of whack.

There were other variant possibilities, but most of them involved a complicated set of special rules, and I didn't want to burden *Proteus* with unnecessary weight. There was only one problem left to solve, and that involved my asking Steve for a favor: I wanted to dedicate the game to one of my oldest friends, whom I've known since we were both nine years old (I was 28 last time I checked), and with whom I've shared a universe of close games, hot matches, and gaming disputes. I gave Steve two versions of the dedication, and they ended up going with the short one. Here's how the longest one read:

"This game is dedicated to my dear friend Alexandre "Le Brown" Boivin, who started bugging me about designing my own game 12 years ago and who hasn't stopped since. I'm as happy to see my first game published as I am to finally shut him up. :)"

Unfortunately, we ran out of space.

And speaking of running out of space, here's a fun little variant suggested by Steve right after he played his first game of Proteus. It didn't make it on the rulesheet, but since there's no limit on electrons (yet), here we go:

Dictatorship

This is played with regular chess pieces and two Proteus dice. Each turn, roll the two dice. You must move one of the two pieces showing on your dice (pyramid=king). If you can't make a legal move with one of the indicated pieces, you don't move.

If this is too hard, roll three dice to give yourself more options. Or play with a handicap: the stronger player gets only two dice, and the weaker player gets three.

Should you develop your own *Proteus* variants, I would be delighted to see them! Feel free to email them to me at promeneur_solitaire@yahoo.com. We might even compile the best ones and post them on the official *Proteus* homepage, at <http://www.sjgames.com/proteus/>.

My next game? I do have an idea in the back of my head. I'm trying to arrange a trip to Bush Gardens to sort it out.

History

Filippo Leonardi is a thief with long-term plans for himself. His mother was the cook in the home of a master goldsmith, who never acknowledged the boy as his. Young Filippo showed a great aptitude for metalwork and building machines, but couldn't find any craftsmen willing to take him as an apprentice. There was someone who saw potential in Filippo's talents, though: a thief named Tremonte talked young Leonardi into joining him, and the two managed several successful burglaries.

But Tremonte was caught and hanged when he tried to sell a distinctive jewelled goblet the two had filched. Leonardi got away, but learned a valuable lesson. He saw that a thief, no matter how skilled, would always be a social outcast. To become truly successful, Leonardi would have to become respectable.

Leonardi carried out some daring and profitable robberies, then approached a struggling silversmith in a remote provincial town. In exchange for a huge bribe, the smith agreed to skip the usual term of apprenticeship, and certified Leonardi as a master craftsman. Master Leonardi set up a small shop in a bustling city, to all appearances a successful young clockmaker and silversmith.

His success isn't due to his skill as a metalworker. He does adequate work, and can create ingenious clockwork gadgets. But the real secret of Leonardi's business success is low overhead: all the silver and gold he uses is stolen. By night, Leonardi conducts carefully-planned robberies of wealthy households (often houses he has visited plying his daytime trade). The loot gets melted down in his workshop and transformed into items which he sells at a very

competitive price.

Motivations

Leonardi has two main goals in life. The first is to increase his wealth and standing in the community. He hopes someday to hire his own apprentices, both promising young metalworkers and skilled thieves. Then Leonardi can quit doing his own work entirely . . . the thieves will get loot for him, the apprentice smiths will turn it into merchandise, and Mr. Leonardi can live comfortably as a leading citizen, respected by all.

His second goal is to protect the secret of his double life. Leonardi has a ruthless streak, and is perfectly willing to kill anyone who might expose him or interfere with his plans.

Encountered

Leonardi can be encountered at any point in his career, as an ally, a contact, a patron, or an enemy. It's especially interesting if he starts as one and winds up in quite another role.

In his youth, Leonardi is an adventurer much like most player characters. Before he sets up his shop he doesn't have a Secret, but he is Struggling. He could be a starting character in a fantasy or historical campaign. As an NPC, Leonardi could be the expert thief brought in to help a band of warriors steal something important, or a rival trying to get some treasure sought by the PCs.

Once he's established himself as a respectable craftsman, Leonardi can be a valuable contact. He's well-connected in both the city's business circles and its underworld, and can provide lots of useful information. His mechanical skills and inventiveness also make him a good supplier of unique weapons and custom-built gadgets. In a somewhat more cinematic campaign, Leonardi could be the "Q Division" for a group of adventurers (in which case he should have the Gadgeteer advantage). Though he's officially retired, he might be willing to tackle one last job if the rewards were big enough.

In later life, as his wealth increases and he becomes both a leading citizen and the boss of the city's underworld, Leonardi can be a powerful patron for a group of struggling young adventurers, or a cunning mastermind foe. He might lose some of his agility after he stops doing his own jobs, and could acquire Dependents if he starts a family. He gains an Ally Group in the form of his apprentices, and his wealth increases to Comfortable or even Wealthy. An older Leonardi would have a better Merchant skill, some Savoir-Faire, and perhaps a level of Status.

On a job, Leonardi is a consummate professional. He tries to plan for every possibility, and he hates it when impulsive comrades endanger the group. In combat he prefers to hang back where it's safe and take down his enemies with crossbow shots, but he can defend himself surprisingly well with a knife or a crowbar used as a mace. His habit of making sure all defeated enemies are dead can be quite upsetting.

Other Times and Places

Leonardi can turn up in almost any game world. He works best in worlds with large cities and at least a Roman Empire level of technology. In later periods he certainly will prefer black powder weapons or modern guns to his crossbow. After about 1950 or so, "Phil the Mechanic" replaces Blacksmith and Holdout with Security Systems and Forgery. With the Gadgeteer advantage, more Wealth and a bigger Ally Group, the shadowy Mechanic can be a good adversary for pulp crimebusters or Golden Age-style superheroes. Turn his Crossbow into Beam Weapons (either laser or blaster) for a futuristic or cyberpunk Leonardi.

Pyramid Review

Maiden Voyage (for d20)

Published by [Atlas Games](#)

Written by Chad Brouillard

Illustrated by David Interdonato, Scott Reeves & Steven Saunders

40 duo-tone pages; \$9.95

Maiden Voyage is the fifth adventure in Atlas Games' Penumbra line of *d20* books. As the title suggests, it concerns a sailing trip, a subject common to many fantasy scenarios and seen most recently in the *Adventure Keep* series from AEG and the *Instant Lairs & Adventures* series from Fantasy Flight Games. In examining *Maiden Voyage*, an adventure designed for first to third level characters, we will of course be comparing it with these other adventures and other Penumbra titles.

Behind the pleasing David Interdonato cover, *Maiden Voyage* is an attractive looking book. Whereas previous Penumbra titles have used sepia, green or grey in their two colour interiors, this one, in keeping with its theme, opts for a deep, stormy blue. As with other *d20* books, the Penumbra line clearly marks its Open Game License content by placing it into boxes. With *Maiden Voyage*, Atlas Games goes one step further and puts a sea grey background behind the contents of the Open Game License content boxes. While attractive to look at, this has the unfortunate affect that -- when combined with a reduced text size -- makes this content very difficult to read. Indeed, I had to hold *Maiden Voyage* rather close to my eyes; even then I had to strain myself to read the text. Any referee wanting to run this adventure is going to find that actually using this information during play far more disruptive to the flow of the game, when it should have been useful.

[SPOILER ALERT!]

Maiden Voyage is designed to be run as part of almost any campaign. It details a sea voyage between two distant ports, with the characters serving as extra security aboard the good ship, the Albers. Unfortunately the trip is a doomed one, or at least potentially so. Once every thirty years, the long forgotten and malign sea god, Krakas, Lord of the Maelstrom, brings about a curse following a rare eclipse and blood red moon. A lost vessel rises from the depths and sends its undead crew to board a nearby ship. These are the Sea Scourges, servants of Krakas, who seek to board the other ship, kill the crew, and have them take their place in the depths for another thirty years. Thus the Sea Scourges can escape from their oblivion. As the eclipse takes place and the moon reddens, it is the Albers that the Sea Scourges have in their sights.

At the beginning of the adventure, neither the crew nor the players are aware of the dangers to come. Yet life aboard is far from happy. Sailors are a superstitious lot and the presence of a woman aboard -- the captain's companion -- leaves them uneasy. In addition, the ship is carrying a prisoner bound for their destination, where he will be arrested for crimes unmentionable. Vincenz has been placed in an alchemically induced sleep for the entire trip, but should he awake (which surely won't happen, will it?), he is sure to take advantage of the crew's growing fear and paranoia.

As with the previous Penumbra title, *In The Belly Of The Beast*, this adventure is set within an enclosed environment. Primarily the story is driven by events rather than by situation; to support this, it would have been nice if a timetable had been included to help the referee run *Maiden Voyage*, but none is provided. There is some advice upon how to handle the crew and NPCs, but this adventure is clearly not intended for the novice referee to run as their first scenario. It presents a fair mix of roleplaying -- through interaction with the ship's crew as events aboard make them

increasingly fractious -- and combat, as the final encounters has the Sea Scourges come to claim the Albers.

To support *Maiden Voyage*, the referee is provided with full details of the god, Krakas, and a new monster template that can be applied to those who become Sea Scourges. This information can easily be used beyond the confines of this adventure. Indeed, if the party prevent the Sea Scourges from taking the ship, then the cycle of the curse is broken and they will have earned the ire of the malign sea god, Krakas.

There have been plenty of entries in the sea voyage adventure category for *Dungeons & Dragons* and *d20*, but this is a surprisingly good example. With careful handling, *Maiden Voyage* is a refrigerator full of chilling atmosphere that just calls for the referee to dim the lights, put out the candles, and slip on a CD of suitable music turned down low. *Maiden Voyage* is also flexible as to what game system you run it under. Certainly the god Krakas could easily be slipped into other settings or even replaced by a similar deity from such settings. For example, in the Old World of *Warhammer Fantasy Roleplay*, Krakas could be replaced by Stromfels, Lord of Predators, from *Marienburg: Sold Down The River*. Despite being for low-level characters, the closed environment of *Maiden Voyage* makes it easier than many other scenarios to scale to characters of higher levels.

[END SPOILER ALERT]

As far as comparisons go with other Penumbra scenarios, *Maiden Voyage* is perhaps not quite as good as the more recent releases *In The Belly Of The Beast* and *The Tide Of Years*. Yet it is a good scenario in itself and represents one of the better sea set adventures available.

The Last Exodus RPG

Published by [Synister Creative Systems](#)

Written by Rev. Sean Jaffe with Joshua "Pidge" Jaffe, T.S. Luikart, Spencer Lease, and Dan McAuliffe

Edited by Gareth-Michael Skarka

Art Direction by Frank B. Fallon and Peter Johnson

196 pages; \$15.00

The Last Exodus is a new game from Synister Creative Systems, publishers of the Underworld RPG. Last Exodus is a biblically-based (among other sources) Rapture/Final Judgment setting, similar to other games such as *Armageddon* and *The End*, detailing the final days of the world, and the agents of Heaven and Hell that are locked in battle over the final outcome.

While similar to other apocalyptic settings, *Last Exodus* gets points for a cosmology that clearly draws from several different mythologies and belief systems, most notably Judeo-Christian theology, Zoroastrianism, and a smattering of Eastern philosophies. While it sometimes feels a little *too* inclusive -- all of the usual (Greek, Norse, etc.) ancient pantheons are shoehorned in, along with the undead, fae creatures and aliens as well -- it's nice to see an apocalyptic RPG inspired by more than just one book of the Bible.

Unfortunately, this is also one of the weak spots in *Last Exodus*. There is background -- lots of background. Heaping buckets of it. While the basic concepts are simple enough, there are so many details about people, factions, and locations that an initial read-through can be a bit disorienting. It's so full of people, places, and things that it sometimes reads like a collection of notes from the authors' personal campaign. While a rich setting is always preferable to one without detail, the way the book is laid out could make comprehension difficult at times, with each chapter introducing more facts without creating a world that the reader can wrap his or her mind around. It's always difficult to create a world, and even more so to communicate that world to others.

Without getting too deep into background, there are two factions (not surprisingly), one serving Ahura Mazda (God) and one backing Ahriman (Satan). A nice touch is that Ahriman (also known as the Godhead) was created by angels as part of a scheme to re-create Ahura Mazda when it seemed that he was no longer in touch with his chosen. As a result, all evil done in the name of God can actually be attributed to Ahriman acting as a twisted parody of the true God. Another nice touch is the link between Earth and Eden (the physical representation of both Heaven and Hell). Eden is linked physically to Earth, so stretches of the planet correspond to heavenly territories and vice versa. Apparently the Luxor hotel in Las Vegas is a direct gate to hellish territory . . . not surprising, considering that it's a giant black pyramid in the desert that shoots a tremendous beam of white light into the night sky.

The overall visual style and presentation of the book is quite good, especially for Synister's sophomore effort. In addition to a striking full color photo cover (which was originally more risqué -- that is, until retailers objected) the interior of the book is all glossy stock with a striking layout appropriate to the modern sensibility of the game. Interior art ranges from excellent to barely passable, and while good when taken as a whole, it ranges wildly in tone from gritty urban realism to cartoonish anime. The varying tone of the art direction sometimes makes the atmosphere of the game

seem unclear; is it a "dark and gritty" setting, or a "high adventure" one? Or both? Tone is critically important to gaming, and nothing sets it like interior illustration.

The rules system follows the "rules light" trend in game design, with one twist being that random numbers are determined by pulls from a deck of cards, rather than dice. Success determination comes down to the oft-used system of a statistic plus a skill (if applicable) and a random number being added to determine a final success number which is then compared against a set difficulty. Character generation is a point-based affair with an advantage and disadvantage system. One nice touch here is that a player takes positive and negative traits for both their form on Earth and their form in the Eden realm. Disadvantages for the character's form in one realm give bonus points to the opposite form, and vice-versa.

Last Exodus takes an everything-and-the-kitchen-sink approach to its setting; plots are big, characters are capital "H" heroes, and the fate of mankind and its chance to move to a higher realm are all at stake in the game's metaplot. While not necessarily breaking all that much new ground, it is refreshing to see a game that attempts to tackle serious issues without getting bogged down in some of the morose concepts that have hamstrung other "post-modern" game worlds. The game is clearly influenced by the authors' desire to improve the world around them (as attested by their postscripts), and it's refreshing to see a setting that doesn't confuse coolness with callousness.

At fifteen dollars, *Last Exodus* is an excellent value considering that it is almost two hundred pages, larger than the average game book and full glossy stock. It's worth picking up either to serve as a full campaign setting, or simply for the wealth of ideas that are crammed between its covers.

Reality (And Other Dangers Of Modern Living)

Last week two things happened.

- I ran an article set (ostensibly) in Washington, D.C. A couple of readers who were Washington, D.C. residents commented that they were disappointed the setting didn't accurately reflect the locale (street names that don't exist and the like).
- I ran an article dealing with the weight of gold coins, which was wildly inaccurate in some of its premises, to say the least. Sorry, all. I'd love to blame it on the fact that lately I've been headachy, overworked, and out of sorts since the events of September 11th. But I missed some basic stuff there, it was all my fault, and you certainly don't want to deal with *my* Lewis Carrollian grasp on reality if we ever meet in reality. Hopefully, in spite of the errors, some of you saw a neat idea or two you can steal for your own campaign (like medieval checking accounts). But, like I said, I'm sorry.

(I also tend to apologize when I think I'm wrong. Lots of women like that. I also *don't* apologize when I don't think I'm wrong. Lots of women don't like that.)

Which leads me to my topic today. (No, not women.) Namely, why I find it nearly impossible to run any game set in modern day, or near-science fiction (at least of the "hard" variety).

In any modern or near-modern setting, the GM and players are (in essence) simulating reality. Anything a character wants to do that's "mundane" is expected to operate roughly as the *player* thinks it would. Unfortunately, in a group with multiple players, they are probably going to have more collected mundane experience than the GM does individually. And, really, there are a million trivial details that (depending on how much your players care about such things) can take them out of the game. Here are just a few I've run into in my experiences:

- The heroes want to take a cab from the airport in Atlanta to downtown. How long does it take to get there?
- How long does it take for police to respond to the scene of a crime? How long does it take to get a search warrant? What can a search warrant cover?
- Can cell phones be traced? If so, how long does it take?
- How much damage can your standard CD-ROM take? How readable is "partial" data from a damaged CD-ROM?
- What effect does electrical damage have on the human body? Does it matter if it's AC or DC?
- How many people are likely to be at a standard hockey game? How long does a standard hockey game last?
- How long does it take radio signals to get to and from Jupiter?

And so on. (And I'm not even counting the times I've had problems with *non*-players, like the heated argument I got with my physicist friend over the impossibility of my gadgeteer NPC's infra-red contact lenses.)

Of course, such challenges in maintaining realism exist in other historical campaigns, too. I shudder to think how many hours were spent in our *Dark Ages* campaign trying to determine how many days' travel it was by horse/boat/foot from London to every other city in England and Wales. But given how many details there are to keep track of in a standard modern game, I generally find the challenges overwhelming. It's much easier to keep everyone equally in the dark in, say, a generic fantasy world ("Umm . . . it's like Europe-ish, sometime between 800 and 1400 A.D.") or space opera ("Travel between worlds is dramatically fuzzy, there are laser blasters, sentient computers, and audible explosions in space."). After all, in a hazy generic fantasy world you can say something like, "The nation of Zhool has but one law: Trial by chickens!" and the plot may progress. But "trial by chickens" isn't valid in 49 states and most nations, so you'll need to know something logical to say if your heroes run <pun>afoul</pun> of the law.

(As an aside, when my friend Kathryn was GMing *In Nomine* for us, she managed to create a challenge for my hacker character, despite not knowing too much about computers. She basically detailed a "denial of service" attack against my character's computer interests . . . about six months before the first DOS attack made the news. Hmm . . . I wonder if she has an alibi?)

(As another aside, by far the most difficult campaign I've ever tried to run was the *Torg* game from a few years ago. I set it in 1990, the year the game originally began. Unfortunately, no one could keep straight what was and wasn't possible in 1990. How common were CDs? CD-ROMs? Cell phones? SUVs? DNA testing? What was the geo-political state in 1990? And so on. I suspect the difficulties in keeping those facts straight would have eventually proven difficult, if I hadn't horribly destroyed the campaign beforehand through my own stupidity.)

Of course, there *are* some methods to help -- or at least mitigate -- the problems of a modern game. And I'll discuss some of those that I've found in the next week or two.

Exalted RPG

Published by [White Wolf Game Studio](#)

Developed by Robert Hatch and Geoffrey C. Grabowski

352 pages; \$29.95

First things first:

Exalted has many types and factions of beings that are called Exalted.

In *Exalted*, you play one of the Solar Exalted.

This fact is vital and so trivial, but *not* knowing that makes reading the first 95 pages or so *very* difficult. Unlike previous White Wolf games, where you know going into it that you'll be playing a vampire, werewolf, or mage -- complete with some preconceived notions of what those types of beings do -- you go into *Exalted* not having the foggiest idea what the Exalted are. And while they do a good job explaining all the various types of Exalted, they don't specifically tell you until page 96 that you are playing one of the Solar Exalted . . . especially if you're reading the Limited Edition without the back cover blurb that makes this point a bit clearer.

So now you know. May the first 95 pages go easier.

Exalted is White Wolf's new roleplaying game set in the Second Age, the time after the golden era of the First Age but before the (potential) future of the World of Darkness.

It is a time of chaos. The Scarlet Empress -- the powerful woman who ruled The Realm for almost 800 years -- disappeared five years ago. The Realm now seems to be collapsing, with petty squabbling among noble houses -- ruled by Dragon-Blooded Exalted -- distracting each other while their society seems in danger of collapsing around them.

It is a time of danger. The lands are beset by all manner of strife: the walking dead, barbarians, the fae, various other Exalted, and the growing potential and turmoil of civil war are all possibilities.

It is a time of heroes. The Solar Exalted (remember them?), after having been more or less eliminated centuries ago, are now returning in numbers. And with these most powerful of Exalted come the possibility of changing the world . . . for good or ill.

Exalted is an epic fantasy game. This is not a game of the band of mercenaries wandering through a dungeon, killing orcs and counting gold pieces. This is a game where the camera zooms out, and there is an enemy army, 500 men deep, waiting for the heroes on the other side of the ridge.

Exalted draws much of its inspiration from Eastern themes and myth cycles, as well as western books and anime. It seems to be, at its core, a high-action game; to put it in perspective, while its bibliography lists *Crouching Tiger, Hidden Dragon* as an inspiration, it calls it ". . . long on dialogue and somewhat short on action." This certainly doesn't mean *Exalted* can't be used for character-driven adventures. But the scope of the game makes it likely that such chronicles will be sweeping and grandiose; think *Star Wars*.

Even the map of *Exalted* is both epic and Asian. The world seems to be flat, with poles corresponding to the five elements: Water (west), Air (north), Wood (east), Fire (south), and Earth (the center). The central island of the world is

The Realm, the remaining secure stronghold of the bureaucratic empire founded by the Scarlet Empress. Near each of the poles, the land resembles the element their pole represents. Thus the lands to the south are desert, the west consists of islands, the north is icy and inhospitable, and the east is heavily wooded and devoid of large cities.

The action of *Exalted* revolves around . . . well, the Exalted. Beings with powers far beyond those of mere mortals, the Exalted fall into several categories. The power of the Dragon-Blooded Exalted is passed through the blood; they primarily belong to the eleven noble houses that strive to gain control of The Realm. Their elemental-based powers makes them generally direct but strong. The Lunar Exalted are creatures of the Wyld. Enemies of the realm, they consist of shapeshifters and animalistic hunters. The Sidereal Exalted are mysterious and inscrutable, with strange fate and probability-altering powers and an agenda all their own. Many of them personally *remember* the First Age. The Abyssal Exalted have only appeared recently, and seem to be masters of death, necromancy, and the afterlife.

And the Solar Exalted are the epitome of light and power. During the First Age they ruled with wisdom and enlightenment. But they were cursed, betrayed, and destroyed during that era, only to resurface recently. Their essences are reincarnated into people, who generally undergo a traumatic event and then "exalt" into their more powerful form.

If it seems like there's a lot to absorb here, you're right. One of *Exalted's* greatest strengths is also a weakness; the world detailed is complex, huge, and rife with potential. Practically each page of the setting chapter (the Introduction and Chapter One, consisting of the first 83 pages) provides adventure or character ideas. Unfortunately, this potential is often overwhelming; there is *so* much to keep track of. There are five lands, eleven noble houses, five castes of Solar Exalted, religions, beliefs, and hordes of enemies (sometimes literally!). It can be overwhelming.

But if it works, it can also be extremely satisfying. Unlike, say, *Star Wars*, where the factions are pretty easily discernable, the possible intrigues, adventures, and strange bedfellows of *Exalted* can make for some complex adventures.

Exalted uses the Storyteller system, mostly as presented in the *Trinity* line but with some tweaks. If you like the system in their other games, you'll probably like it in *Exalted*. If you don't like it elsewhere, you almost certainly won't like it here. Among rules changes, most affecting is the fact that *any* roll of 10 on a 10-sided die counts as two successes, instead of a possibility of rerolling. As a result, many successes are possible, as are incredibly dramatic and heroic action; it's not uncommon for six dice to roll six or more successes. Probably most interesting is the idea of Stunts, where players get additional dice for actions depending on if and how well they describe actions. (Thus if the player comes up with something that makes everyone go, "Whoa! Cool!", then they'll get three extra dice.) This encourages players to be creative and descriptive in detailing *exactly* how they're attacking the enemy, crouching in the shadows, or fast-talk an angry mob. It's an interesting idea, but one that could be abused by the wrong players.

Most of the Solar Exalted's powers derive from Charms, simple abilities that the Solar Exalted can spend some of their energies on to achieve affects. Each of these charms is based on an ability. Thus one might have an Endurance Charm of "Armored Scout's Invigoration" or "Ox-Body Technique." All of the charms are vividly named and go a long way towards suiting the genre; you're not using your Thrown Weapon Super Power, you're using the Cascade of Cutting Terror. Charms often have perquisites of other Charms, with powers increasing from those that bend reality to those that actively defy it. In all, although there are incredible combat powers available, over two-thirds of the Charms are non-combat related, encouraging diversity. (As if names and abilities like the "Letter-Within-A-Letter Technique" for a Linguistics Charm wasn't enough . . .)

In all, about 200 pages (Chapters Two through Seven) are devoted to character creation, rules, abilities, and storytelling. Although it seems excessive, it also seems *meaty*; although there will almost certainly be more and new abilities in upcoming books, there are more than enough options presented here that a character-creating player should feel he has plenty of options. (Although Storyteller fans should note that Merits and Flaws are not present.)

Chapter Eight is devoted to Antagonists, and its fifty pages present a broad though not-terribly-deep overview of the forces that will most likely oppose the heroes, complete with examples of sample antagonists. Although it should be enough to get most GMs started, this section is one of the weaker ones. This is probably mostly because of the previously mentioned large number of potential antagonists; each potential threat can only get a few pages of

background and stats. Clearly there is much room here for each antagonist to receive additional material in upcoming books.

The last chapter details gear in *Exalted*, both mundane and magical. Although the normal equipment is fairly well described, the magical equipment is sparse, and probably meant only to whet the appetite for future goodies.

Exalted is an attractive package; it's an affordable hardcover with interesting artwork and layout. The book is also *packed*, which is again good and bad. While it feels like as much information as possible was squeezed in, it also means that the small font and efficient spacing may be difficult to read. (The Introduction, in particular, is hard on the eyes.) The art is generally pleasing; almost all of it is in an anime style, and there is enough variety to keep it from getting repetitive.

Exalted is not, however, perfect. First the game is fairly complex; combat is involved, and will probably slow things down the first few times it is attempted. There are also many omissions and mistakes. Although White Wolf has released an errata file (including, for example, a scale for its map . . . one inch equals a whopping 800 miles), there are probably going to be other questions and clarifications groups will need. Also (as mentioned) there's the daunting nature of the game's scope. The world itself is large; trying to come up with a reason for characters from the North and South poles to meet -- a total of about 8,000 miles -- is *very* challenging, and it's hard to wrap the mind around the fact that characters need to sail over 2000 miles to get from the western edge of the Realm to the islands of the West. Finally, the copyediting is *very* sloppy in places, particularly the Introduction and Chapter One. Although nothing seems to directly affect gameplay, there are still enough mistakes to disrupt the flow of the reader.

Still, the game does what it sets out to do: Create a world that's both believable and rich as it is action-packed, "anime," and epic. Thus you may speak of "the mysterious warrior from the South." While in most games that would be bologna for "made up origin I didn't have time to make," in *Exalted* that means he's from the land of Elemental Fire, probably lived in or near a desert, is almost definitely superstitious, comes from a patriarchal society, and so on. It's epic, but it's *real* at the same time. And if that interests you, you will probably like the world of *Exalted*.

Because now is the time of danger. And chaos. And heroes.

The Other Green Glass Grail

"Some traditions hold that the Grail originated as a jewel -- an emerald -- from the crown of the Light-Bringer, Lucifer, the Angel of the Morning, which fell from heaven during the war between the angels."

-- John Matthews, *At the Table of the Grail*

Believe it or not, there's a green glass Grail that isn't born in [Atlanta, Georgia](#), but in the fiery depths of outer space. It brings heresy, witchcraft, and perfection in its wake, and it's just the kind of thing you can use to give your game that certain sparkle. The sparkle and flash of green glass, spinning and whirling through outer space, on its rendezvous with a secret lineage of Templar supermen. Let's watch the impact.

*"Upon a deep green Achmardi
She bore the pride of Paradise,
Root and branch, beyond all price.
That was a thing men call the Grail,
Which makes all earthly glory pale."*

-- Wolfram von Eschenbach, *Parzival*, Book V

Wolfram von Eschenbach would have known all about Templar secrets, because he was one. It's to his poem *Parzival* that we owe the notion of the Templars as sacred guardians of the Grail, "who give not their names" but whose "lineage is recorded on the base of the Grail." He describes the Grail, in this passage, as a luminous object with a connection to fertility ("root and branch"), gemstones ("beyond all price"), and the color green (although he's careful to identify the green thing as the silken Achamardi cloth upon which the Grail is borne). Elsewhere, he calls the Grail the *lapsit exilis*, often parsed as Wolfram-code (he loved puns and multilingual codes of all kinds) for *lapis ex caelis*, the "stone from heaven." The mysterious sorcerer Flegetanis, who put Wolfram on the Grail scent, had "read the name of the Grail in the stars" -- another connection to fallen stones from heaven. All this, however, Wolfram presents very obliquely; he may not have wanted to vanish in a mysterious fire like his contemporary, the great Grail poet Chretien de Troyes, did, in 1188.

"A damsel came in with these squires, holding between her two hands a grail. She was beautiful, gracious, splendidly garbed, and as she entered with the grail in her hands, there was such a brilliant light that the candles lost their brightness, just as the stars do when the moon or sun rises."

-- Chretien de Troyes, *Perceval*

Chretien doesn't mention the smargard nature of the Grail, but he repeatedly emphasizes the Grail's light-bringing (Luciferian?) powers, and its connections to plenty and fertility (tied up with green, growing things). He also brings in other imagery that author Dame Flavia Anderson decided, in her wonderful, sedately mad book *The Ancient Secret: Fire From the Sun* refers to the Grail as a glass sphere to focus the rays of the sun (aha!) and light the sacred fire in Druidic fanes. She makes much of the Grail's connection to Glastonbury (Get it? *Glasstonbury?*), and uncovers much exciting Celtic glass lore. The "glass tower" and other elements do indeed recur in Grail myth, and the connections she draws between magical Grail rings and the myth of Prometheus (who, apparently, invented the finger ring shortly after stealing the fire from heaven) bear further pondering, no doubt. Her big score is to point out that *exilis* means "slender", or *grele* in French. And *grele* is another French word for crystal, or hailstone (in other words, a crystal fallen from heaven)! One last green glass Grail gloss: after the sack of Caesarea in 1101, the Genoese mercenaries in the crusading army of King Baldwin of Flanders (part of the Merovingian Grail lineage, say those whose business it is to say such things) brought a hexagonal green chalice (of a glass so fine as to resemble emerald) back to Genoa, claiming that it was, in fact, the Holy Grail!

"This remarkable material, which is . . . clear and yellowish-green in colour, has the qualities of a gemstone. It was discovered by the Egyptian Survey Expedition under Mr P.A. Clayton in 1932, and was thoroughly investigated by Dr L.J. Spencer [in 1934] . . . Reporting the findings of his expedition, Dr Spencer said that he had not been able to trace the Libyan glass to any source; no fragments of meteorites or indications of meteorite craters could be found in the area of its distribution. He said: 'It seemed easier to assume that it had simply fallen from the sky.'"

-- Kenneth Oakley, "Dating the Libyan Desert Silica-Glass," *Nature*, no. 170 (1952)

So, let's dig around the Middle East for more green glass from the sky. And wouldn't you know, there it is, right in the middle of the Libyan Desert in Egypt, an enormous layer of its shards stretching across a hundred miles of landscape. Pieces of this green glass turn up in Egyptian tombs and jewelry dating back to pre-dynastic and possibly even Neolithic times. It intriguingly hints, to me, anyway, at the legendary Emerald Tablets of the Egyptian hypermagus Hermes Trismegistos, or the Emerald Throne of Solomon. (Another throne-stone, the Scottish -- Templar-Merovingian -- Stone of Scone, may also be a meteorite.) I also find intriguing parallels to the "umbilicus, made of emerald and gems cemented together" worshiped in the shrine of Ammon at the Siwa Oasis -- deep in the Libyan Desert. (An umbilicus, or navel, would be shaped like a bowl, cup -- or Grail.) It might be an extremely bizarre breed of tektite, or glass created by meteoric impact, as it has some points of similarity with tektites in Wabar in Arabia (or, as we know it, Ubar -- or [Irem](#)). It also has some similarities with trinitite, the green silica glass created by the atom bomb tests in New Mexico -- another "fire from heaven," certainly. [Ancient astronaut](#) atom bombs aside, geologists really don't know what to make of it; it doesn't resemble any known type of fulgurite (lightning-glass) and every other tektite around is either brown or black. Except, wouldn't you know it, one other type of green glass from the sky.

"One school of thought, supported by Bouska, holds that moldavites are a product of the impact of a huge meteorite or comet that hit the earth at the site of what is now called the Ries crater."

-- Robert Simmons and Kathy Warner, *Moldavite: Starborn Stone of Transformation*

That would be moldavite, named after the Moldau River valley in the Czech Republic, now known as the Vltava valley. These [beautiful green crystals](#) are most commonly considered ejecta from the Ries meteor impact, several hundred miles west in northern Bavaria. This theory rests on the commonality between moldavite's chemical composition and the soil of the Ries area, and on the fact that the Czech moldavite fields and the Ries crater are both roughly 14.6 million years old, give or take. However, not all scientists buy it; some believe that the moldavites are ejecta from Lunar volcanoes, remnants of an interplanetary asteroid collision, or even sublimed silica from a disintegrating bolide similar to the Tunguska event. The Moldau River runs through [Prague](#), that center of occult wonder and madness, and the moldavite distribution area is almost exactly the center of the Hallstatt culture -- the first Celts, which is to say, the first Grail culture.

"Both lists agree in attributing to the heretics of the Ries three groups of errors later associated with the heresy of the Free Spirit: the beliefs that they could become one with God, that they could dispense with the ministrations of the Church, and that they could violate without sin the moral law. Foremost was their claim that it is possible for man to become deified: 'man is able to become God.'"

-- Robert E. Lerner, *The Heresy of the Free Spirit in the Later Middle Ages*

Meanwhile, back in the Ries crater, the meteor left the valley so fertile that the prosperous little town of Nördlingen grew up there in the crater. Nördlingen had a church of St. George (famously green and fertility-related himself), a strong city wall, and the oldest horse races in Germany (spawned from ancient Celtic horse-worship traditions?), all of which are still around today. No longer around today are the "Heretics of the Free Spirit," or "Friends of God," a dissociated group of late 13th-century mystics. Among the Free Spirit membership were the shadowy Henry of Nördlingen, some knights of the Teutonic Order (the recipients of Templar wisdom after the persecutions), a nun named Margaret Ebner (who testified to amazing psychic powers, including telepathy and clairvoyance, and another mystic visionary named Rulman Merswin, who wrote the intriguingly-titled "Book of the Nine Rocks." Rocks? From space? Another intriguing mystic, Marguerite Porete (a Flemish nun with Free Spirit links), wrote the *Mirror of Simple Souls*, which had a huge underground readership. [Mirrors](#), glass, lenses -- it's all too wonderfully convenient. Almost as convenient as the belief in a perfect man, capable of doing anything -- healed to physical power and total youth, just like the Grail Knights -- in the fertile fields where a green stone fell from the heavens. Do the perfected men of the Free Spirit stretch back to the Celtic Daoine Sidhe -- or forward to Kal-El of Krypton?

"I will give you the richest sword that was ever forged, whereby the head of St. John was cut off.' . . . Then the King draweth it forth of the scabbard, and the sword came forth thereof all bloody, for it was the hour of noon. And he made hold it before Messire Gawain until the hour was past, and thereafter the sword becometh as clear as an emerald and as green."

-- *Perlesvaus*

Put it all together; the green stone falls from heaven. Maybe Prometheus took it from the ancient astronauts, perhaps it fell from the ["Crystal City"](#) on the Moon, or perhaps the green crystals are prismaclasts from a mighty primordial [reality quake](#). Perhaps it contains genetic engineering nanites, or a hologram-driven computer, or the [Green Ray](#) of Tibet, or the magic energies of Lucifer himself. The Egyptians and the Moldavites, each with a green energy source, each with legendary magic and fertility backing them up. The emerald umbilicus of Siwa confirms Alexander the Great's divinity, and he remains invincible in battle. The emerald sword does the same for Gawain -- and perhaps, for Arthur. The two bloodlines founded by the green glass entities sometimes conspire to rule the world, but more often they go to war -- the "Danaoi" against Ramesses, Arthur against the "Saracens," the Crusaders against the Green Glass God of Caesarea, Templars vs. Assassins, each guarding their green glass grail against all odds, waiting for the Grail Superman, the Once and Fisher King, the Green God to emerge and lead them to glory.

Frogmen of Helton

An Atomic Horror Adventure

by Jon Mollison

"Frogmen of Helton" is a short adventure written in the spirit of *GURPS Atomic Horror*. It is set in the rural bayous and swamps of southern Louisiana, but could be adapted to fit into any horror campaign by simply changing the place names and technology level. It requires a bit more work than most adventures as no statistics have been included. This is done to make it easier for GMs to tailor the challenge to their players.

Background

The mid-1950s were the last of the golden years for the good old boys club. Federal intervention in state affairs allowed the petty officials of small rural towns great latitude in law enforcement and it would be another decade before the hippies and minorities challenged societies norms. The threat of invasion from "The Commies" kept the military-industrial complex running at top speed with little environmental oversight. This lack of concern for the earth's ecosystems combined with the zest for pursuing recent discoveries in medicine would combine to form a horror unimaginable to the residents of one sleepy town far out in the swamps of southern Louisiana.

New discoveries in the functioning of the human brain had led the chemical engineers of Chemfix industries down a long blind alley before they abandoned a project aimed at curing certain types of mental retardation. In experiments on lab animals their formulas behaved in erratic and unpredictable ways, so the company decided to dump the project . . . literally. Late one spring night two men stopped an unmarked truck along a back country road deep within the swamps south of New Orleans. There they unloaded their noxious cargo -- a dozen metal drums filled with X-Gen-405. After throwing some branches and muck onto the barrels, the two men drove away, never to think of that evening again.

Over the next few weeks the barrels began to leak into the waters of the Helton swamps. Most of the creatures that came into contact with the viscous green goo became violently sick and died shortly thereafter. But one particular frog didn't die immediately. It began to grow. And grow. More frightening was the fact that as it did so it developed a crude cunning. More terrifying still was the fact that this particular frog was preparing to lay a new clutch of eggs when it began its terrible mutation.

Had anyone seen the tadpoles that hatched from these eggs a few weeks later they would not have recognized the long black eels that emerged. These tadpoles grew to adulthood in the normal time, which meant that in the space of one summer the swamps outside Helton developed a small colony of frogmen.

These frogmen and their mother kept a close watch on the humans that traveled through the swamp. Their cunning primitive minds were horrified at the treatment their underdeveloped frog cousins received at the hands of adolescent boys out shining for frogs. Like many kids with easy access to a swamp, the young boys from Helton would carry flashlights out into the swamps and use them to surprise frogs. For some reason frogs -- so difficult to grab in daylight -- freeze when a bright light is shined at them, not moving even when picked up. By then it's too late, and the young boys would do what young boys do to captured frogs. While growing, the frogmen developed a pathological hatred for all humans.

Helton

In the mid-1950s Helton was a small fishing town on one of the many bayous which led ships out to the deep, fertile waters of the Gulf of Mexico. Just about everyone in town was connected with the fishing industry in one way or another. Like most small towns, its chief entertainment were bowling, sittin' shirtless on the porch, drinking Budweiser

beer, and the high school football team. Its crime rate is low, justifying only a sheriff and two deputies. And for the last four decades it has remained relatively untouched by events in the outside world.

The Frogmen

The frogmen are vaguely humanoid. The frogmen have thick glistening skin that is mottled dark green, black, and brown -- the perfect camouflage for the swamps around Helton. They are the same height and weight as a typical man, but they stand much lower, due to their terribly stooped shoulders. Lacking a neck, their heads protrude from their upper chest, and are dominated by a large toothless mouth that splits it almost in half and two great yellow bulging eyes with thin vertical slits for pupils. Their arms are long and thin and hang down to the ground, almost ape-like, ending in four-fingered hands with long sharp fingers. A yellowish pot belly gives way to massive bent legs that shamle forward in an awkward walk until the frogman springs. These thick legs and wide, flat feet can propel frogmen forward several yards to land with a heavy thump.

Though cunning, the frogmen are still animals. They wear no clothing and use no tools, though they do have one particular island deep in the bayou that serves as lair where they drag their victims for dinner.

The frogmen attack in three different ways. Their deceptively thin arms end in sharp cutting claws. They have retained a long (6') thick tongue which packs a light slap and can grab light objects (under 5 lbs). The slap does no damage, but the slime it leaves acts on humans as a mild contact-based hallucinogen. Humans slapped by this tongue will begin to behave as though drunk, becoming woozy and disoriented.

The frogmen can be killed just like any other animal, though they rarely stray from their favored habitat; this makes it difficult to surprise them. They do have one weakness -- light. Like all frogs, a bright light shined into their face on a dark night will freeze them where they stand. The frogman will stop and drop its long arms to the ground and do nothing until it is attacked or the light is turned off.

The original frogman, frogmom, is built like her prodigy, only much larger. Even stoop shouldered, she stands half again as tall as a man. She also has a bright neon green slash of skin running down the length of her back. She can leap 10' across and 8' straight up in the air, and her tongue packs a legitimate punch, though it contains no venom. She is also the only frog in the swamp who will not freeze when shined by a bright light.

First Victims

It's late at night on a mid-August Friday. At this time of year the southern air is still hot and humid, even this late at night. Three young boys -- freckled ten-year-old Timmy Rutherford, his blonde best friend Jeremy Andrews, and his little brother Steve -- are out shining frogs when the frogs strike back. The boys are overcome by silent dark shadows, and are killed before they can even think to cry out for help. The frogmen drag the small bodies back to their island retreat. After a lifetime of surviving on tiny bugs, snakes, and the occasional alligator, the frogmen find the young boys irresistibly delicious. After the short meal the frogmen separate out to find more delicious humans.

Second Victim

Shirley Devereaux is *not* supposed to be out late walking alone with Jereboim Taylor. Though Jereboim is a bright, hard working man he made one "mistake" in his life -- he was born with black skin. Shirley's father, Duke, would skin them both alive if he ever found out, figuratively in her case and literally in Jereboim's case. But Shirley is madly in love with Jereboim's gentle nature and strong arms, and her father doesn't know, so what's to worry about on such a beautiful summer night?

The two love birds are lost deep in each other's eyes as they wander the back roads of Lafourche County, which causes them to wander right into the path of the hunting frogmen. After the initial shock of surprise, Jereboim manages to fight off the assailants, but not before he is badly cut and bruised, and Shirley is carried, screaming, off into the dark

depths of the swamp.

Introduction

The characters are enjoying a relaxing evening at Thabeaux (Tiebows), a small road side bar and restaurant. Thabeaux, a great bald black man, serves the best blackened catfish and Cajun shrimp this side of Lake Pontchartrain, and the enthusiasm of the small blues band in one corner more than makes up for their lack of talent. The overhead fans stir the thick smoke-filled air but provides no relief from the oppressive heat. It's a little after midnight and the place is packed with folks from all around Lafourche County, rocking to the high energy sounds of the band, when the screen door bangs open and somebody screams a little too loudly.

The band stops and the only sound that can be heard is the creaking of the overhead fans. Then the bloody figure standing in the door frame stumbles into the light. He is a young black man, dripping wet and bloody. He lurches forward a few steps and gasps, "Shirley . . . too many . . . please . . . I tried, but there . . . we were out walking . . ." At his point a large man wearing a shoestring tie, snakeskin boots, and sheriff's hat steps forward and demands to know, "What in the name of all things holy is a-goin' on here?" The young black man takes a deep ragged breath and spills his story.

"Shirley and I were out walking when we were attacked by . . . something. A few of 'em, actually. Suddenly they were everywhere, punchin', grabbin', and bitin'. I fought 'em as best I could, but there were too many, so I ran. I think Shirley is still alive out there. Please, we have to go out after her."

The Sheriff pauses and somebody asks, "Well, Duke?"

The Sheriff asks the young man, "Do you mean to tell me that you were out with my daughter tonight and now something bad has happened to her?" The young man nods sheepishly. So the Sheriff pries him for information. (The players, of course, can interject questions here to gain some of this, though the pace should be kept brisk and confusing.)

- *When did it happen?* "I don't . . . don't know. About 10-15 minutes ago, maybe more." (It's been 30 minutes.)
- *Where was it?* "Old Fen lane, out past the old tire piles."
- *What did they look like?* Jereboim gives a short rambling rant about tall, slimy, green skinned monkeys with googly eyes and claws.

"All right, here's what we're gonna do," growls the Sheriff. "Cooter, arrest this . . . suspect. He's obviously been smoking something a bit harsher than tobacco. Everyone who hasn't had more'n two beers follow me; we're goin' out after her. Everybody else stay here and enjoy yourselves; tomorrow is soon enough to know more."

If the investigators look closely they see that Jereboim is not soaking wet, he only has patches of wet clothing and his skin is only wet around his bruises and cuts. His cuts are long rows of three shallow scratches. Jereboim's eyes are bloodshot and his pupils dilated. He seems to be disoriented, but this could be due to shock.

Heroes who join the posse will have to hurry to get to the site of the attack before the posse obscures the tracks of Shirley, Jereboim, and . . . others. It appears as though four, maybe five, man-sized creatures with great three-toed feet jumped from the waters next to the road and disappeared where they came from. Tracking through the swamp is impossible. After an hour of stumbling around, two bloodhounds and a couple of flat bottomed rafts arrive. But even the bloodhounds can't track Shirley's scent for more than a few hundred yards. (After the swamp became chest high the frogmen found it easier to submerge and this masks any scent that would have remained.)

The Next Day

If the PCs immediately head back to town to try and protect Jereboim from the vagaries of southern small town justice, they will be stymied by a hulk of a deputy (Cooter), who knows better than to allow strangers access to a suspected

murderer. The only way to see Jereboim before his trial will be to wait for the morning. Then they must convince his lawyer, Claude LaFollete, a dapper southern gentleman in his late sixties, that they can be of some assistance. Claude LaFollette, knowing the kind of hatred directed towards his client, will be hesitant at first. Should the characters provide him with any evidence to support his case or agree to testify at Jereboim's trial, LaFollette will acquiesce.

The characters will follow LaFollette across the street to the small white jail where they must wait in the front office with the on duty deputy. The deputy, Lyle, is a fat and sweaty man with hair that is black, greasy, and combed over an obvious bald spot. When he smiles he reveals a random assortment of teeth, and breath that could choke a cow. For some reason this slug in pants fancies himself quite the ladies man and will make the wait exceedingly difficult for any female characters.

After a short private interview with his client, LaFollette calls the characters into the cell room. Jereboim is sitting on a low cot in the large cell opposite the entry door. The characters notice after Lyle locks the cell door behind them is that Jereboim looks far worse than he did the night before. They can see fresh bruises on his arms and one eye is swollen shut. LaFollette directs the characters to sit quietly out of the way and say nothing. He softly tells Jereboim to tell the characters what really happened last night. Jereboim, trusting his councilor completely, tells a much more coherent version of the attack and his getaway, though his swollen jaw makes his speech slurred and indistinct.

The characters are then free to ask Jereboim any questions they can think of, and Jereboim will answer as honestly as he can. He suspects that the frogmen are some kind of swamp spirits, but his beliefs as a Baptist compell him to think that isn't the case. If asked how he got the new bruises he looks at the questioning character as if that character was an idiot and says sarcastically, "Ah musht've fell down the shtairs."

After Lyle lets LaFollette and the characters out of the cell, the lawyer returns to his office to begin building his case. Before he leaves the characters, he looks at them appraisingly and -- if the characters were intelligent and kind during the questioning -- mentions that they might wish to speak with Doc Branson, the physician who tended to Jereboim last night.

Doc Branson, the town physician, has an office downtown next to the ice cream parlor, and the characters feel a welcome blast of cool conditioned air as they enter the waiting room. A prim redheaded receptionist eyes them warily. When they ask to see Branson she disappears for a moment. "You'll have to wait until lunch time," she informs them. The Characters may decide to talk to some townies at this point, But most people in town are suspicious of outsiders; it will take some smooth-talking on the part of the characters to get any information from them. Those locals who do talk will have nothing but spiteful things to say about Jereboim and how he shouldn'ta been messin' around with good ol' Duke's daughter and he'll get what comin' t' him . . . etc. If the characters approach any of the few African-Americans brave enough to venture into town on a day like today, then they will no information at all. They know that everyone on the street is eyeing them especially close. The one person who will offer some helpful advice is a small white boy who rides his scooter right up to the characters and says, "You should go talk to Jereboim's mama. She lives out Bayberry road and is powerful nice," before his own mother grabs his ear, scowls at the characters, and drags him off muttering about talking to strangers.

When the characters manage to track Branson down at the Easy Street cafe they find a surprisingly young man eating his black beans and rice and reading the *Saturday Evening Post*. Branson is a dyed-in-the-wool Brooklynite who escaped down here where it's always warm just last year. After introductions, he apologizes for taking so long to examine Jereboim last night, but he wasn't informed until three a.m. He then explains that he found numerous bruises and scratches on Jereboim's back, arms, legs, and chest. He remarks casually that there are actually two types of bruises, a darker and firmer set on top of a much lighter set of bruises. In an offhand voice he wonders allowed how two sets of bruises would have gotten there, while fixing a hard look at the characters. Oh, yes, he mentions that one set of bruises -- the first set -- each had a thick wet fluid around them, too thick to be water. It was almost like saliva, but there was far too much for it to be that. Also, the scratches occurred in sets of three, almost like those of a large dog. "But who would set a dog on a poor nice black boy like Jereboim?" Then, having finished his apple cobbler, he abruptly excuses himself, explaining that he has appointments to keep, leaves a nice fat tip and leaves. But not before giving the characters a long quizzical look that seems to say, "The ball's in your court now, what are you going to do?"

The characters can find Jereboim's family out at the Taylor homestead, a three-mile hike north of town. The homestead is a small run down house with an even more rundown chicken coop. The chickens and a pig scatter as the characters approach the house. Just before reaching the porch three young children bang out the front door and come to a screeching halt. "Momma! They's visitors!" they scream as they dash past the characters. Eustice Taylor is a large woman whose eyes radiate joy, even through the redness and dried tears belie her true feelings. She offers the characters dinner, although she hasn't much to share. Like everyone else, Eustice is reticent at first and must be convinced of the character's good intentions before speaking freely. She brags about what a fine, bright boy Jereboim is, and how she warned him not to have any truck with that girl, but he was always headstrong. She has nothing terribly useful to say, and frequently has to turn away to hide her tears. It is obvious that she fears for her son's life and, if the characters win her over, she begs them to do everything they can to help. She is prayin' to the Lord to deliver them all, but knows a little help from down here is needed.

On the way out they see a wizened old black man in a wrinkled black suit with a can and straw hat leaning against the front gate. He winks as they approach, and moves to the side to let them out. "I know what those things were," he states in a thick Cajun accent. "Ah've seen them a few time, out there," he nods to the swamp across the road. "They are the spirits of long dead brothers. See, Helton used to have quite the reputation among the Klansmen as being a right nice place to live. And now the Lord has sent them to us for vengeance. That's why that girl got taken and Jereboim was spared." He smiles a toothless grin and hobbles back up to the house.

Back in Town

The sun is setting as the characters return to town, and the first thing they see is a large crowd gathered outside the front steps of the jail. There must be fifty men, burly fishermen, fat businessmen, and even a few women shouting at two figures in the doorway of the jailhouse. As the characters approach, they hear the shouts for justice, protection of the women and children, and cries of "Murderer!" If they continue to approach they see that many in the crowd have bats, shovels, and the odd shotgun. They also see that the two figures are LaFollette, Jereboim's lawyer, and the slovenly deputy from early in the day, Lyle. Lyle nervously fingers a shotgun and constantly looks around for help as the gentle lawyer pleads with the crowd. It seems that the mothers of three local schoolboys haven't seen them since the day before and now the crowd wants to know what Jereboim did with those poor children. The characters can try to reason or intimidate the crowd into dispersing.

Whatever action the characters take a few moments later a bright red Ford Mustang screeches to a halt at the edge of the crowd, and a teenage boy with a flat top leans out asking if anyone has seen the Sheriff. The Sheriff had been sitting quietly in the Easy Street cafe, watching and enjoying the show outside the jailhouse; he immediately comes out. The crowd hushes and the characters hear the teen explain that he saw Jimmy Duggan's caddy parked way out on Deepwater road. This is unusual, because Jimmy would never leave his car in that condition.

At this the lynch mob erupts with hushed whispers: "Jimmy Duggan," "I knew that boy was no good," "I'll bet it was that punk," "Didn't Jimmy have a thing for Shirley?" and "Maybe that kid in jail didn't . . ." It would seem that Jimmy Dudgeon and Shirley were once an item, but that Shirley's father put a stop to it -- although everyone suspecting Shirley had been sneaking around with Jimmy, anyway. The theory erupts among the townsfolk that Jimmy attacked Jereboim and Shirley last night, and maybe Jereboim did such damage to that thug that he couldn't make it back to his car and died in the swamp.

If the characters race to the scene, they will find the story to be partially true. By now it is almost dark and the character's car lights illuminate the scene. A bright new Cadillac convertible with red racing stripes sits quietly by the side of the road, its hazards flashing away. The Cadillac sits at a skewed angle as there is a jack propping up the front passenger side fender. Two tires lay next to the car among scattered lugnuts and a still shining flashlight. The ground is covered by long wide tracks, a few of which are quite deep, but most are as thick as the prints left by some kind of boots. Careful investigation will reveal a crushed pack of cigarettes a few yards from the road and a tire iron dripping with a thick fluid that appears black in the night and green under the light of the head lamps. Obviously the car has only been here a short while (the flashlight is lit and there is a still burning cigarette in the ashtray). At this point the Sheriff screeches up in his patrol car, and he and Cooter jump out. Sheriff Duke immediately starts hollering at the

characters for interfering with an investigation, and begins to stomp towards the nearest character when a large black shape knocks him to the ground. The characters have just enough time to see a short, hunched figure with green skin, long dangling arms, and bulging yellow eyes land next to the Sheriff before the swamp around them erupts with the things.

At this point a number of frogmen attack the heroes and the deputy. Though Cooter manages to get four rounds off from his pistol, he and the Sheriff are knocked unconscious by the powerful kicks of the frogmen. The characters should manage to defeat this initial assault. The frogmen don't want a fair fight and retreat into the swamp as soon as three of their number are killed.

At this point the investigators have two basic choices: they can immediately pursue the fleeing frogmen or they can return to town to round up a posse. If they return to town then they won't be believed, and since the sheriff specifically warned the lynch mob not to go out to the abandoned car, no one will follow and the characters will have to go back and try to follow the now cold trail.

If the characters immediately pursue the frogmen, they find the going easier here than last night. They can splash through the shallow muck for a mile or so into the swamp before they lose the sound of the frogmen at a large, deep pool. If they try to go around the pool they will find it difficult, but not impossible. Their journey through the swamp will be punctuated by frogmen ambushes. The frogmen will leap out of quiet waters or drop from high in the trees. Now that they are in their element the frogmen will attempt to grapple the characters and drag them into the water to drown, if possible. The GM should make an effort to crank up the tension, describing every tiny sound and splash that might make the characters (and players) jump. Also, don't forget that smart players will at least have picked up Jimmy's flashlight to stun the frogmen as they attack. After each ambush a few more frogmen should be dispatched until only a few remain.

Suddenly, the characters spot a dim glow ahead and to the right. If they investigate they find a dozen or so 55-gallon drums half buried in the muck. The barrels are unmarked, save for one near the bottom which has the address of Chemfix attached to a label on its bottom. (No one at the plant realized this.) The glow comes from a hot green fluid that dribbles into the swamp and floats away from the barrels leaving a pale greenish trail to follow.

The trail leads to the small island that the frogmen call home. Here the frogmen make their final stand. The running fight with the frogmen turns into a stand up battle to the death.

This fight takes place on and around a small barren island that has a pile of the remains of Shirley, three young boys, a drifter, and the half-eaten corpse of a leather jacket clad youth with greased hair and a heart tattoo on his left bicep.

After the last of the frogmen are dispatched the adventure should be left to the discretion of individual GMs. If the characters have barely broken a sweat knocking off the frogmen (by clever use of the flashlights, for example), then frogmom should definitely show up to avenge the death of her clutch. Frogmom isn't just bigger than her children, she is smarter. She will engage in hand-to-hand at the closest opportunity to counteract the threat of guns, and will pick the weakest members of the group to attack first. She will repeatedly retreat into the deep waters of the swamp to prepare a new ambush. Finally, she is immune to being shined, but will freeze the first time characters try this tactic to lure them into a false sense of security.

Alternatively, frogmom could be the basis of another adventure in the swamps, especially if that nice man back at the Taylor farm learns how to control her . . .

Running Frogmen of Helton

This adventure is mostly true to the spirit of the Atomic Horror movies of the fifties -- with one major difference. It deals with the very volatile subject of race relations. Few movies at that time, of *any* genre, were willing to tackle such a touchy subject. The adventure as written does what most movies of the day would have done -- it handles the issue of race fairly delicately. GMs running this adventure should be well aware of the prejudices that players might bring to the table, and handle the politics of race accordingly. A good rule of thumb is that if you think something might be too

controversial, then it is. Err on the side of caution and everyone should have a great time.

And for crying out loud, don't let your players see the title of the adventure or you'll ruin the suspense!

The Future Isn't What It Used To Be

A GM's Guide to Creating Unique Cyberpunk Worlds

by Michael McGee

Street-smart hackers with laptops, vat-grown ninjas, neon lights and big cities -- the cyberpunk genre's managed to garner a few well-worn cliches in the 20 or so years it's been around. It's almost a law that it be an urban adventure, that it involve the illegal underground and mega-corporations, and that computer hackers and chrome-plated nihilism are necessities. As a result, many GMs and players might be turned off by the setting, thinking that it's got nothing new to offer.

But just as the fantasy setting can be reinvigorated when its trappings are reexamined, so too, can cyberpunk be given new life by rethinking a few things about it.

What Is Cyberpunk?

The definition of cyberpunk varies from individual to individual, so logically a cyberpunk setting should have equally as much variance. The general uniformity among cyberpunk settings might suggest that this is not the case, or it might simply say that some writers and GMs don't stop to answer this first question.

To some, cyberpunk is about the triumph of style over substance. To others, it might mean the rise of high technology set against the decay of society. To others still, it might signify a rebelliousness against The Man, whose powers are increased exponentially by the technology of the future. Many more GMs and players will have their own definition, and defining this up front can save a lot of hassles.

A good idea is to make sure you and your players are in synch about the type of game this is going to be. If you go in expecting to play a rebellious, anti-authoritarian hacker character and your GM's geared the setting towards a bunch of corporate enforcers, there will be strains. Like any other game, communication outside the sessions helps tremendously when trying to craft a memorable experience.

The March Of Time

Most cyberpunk settings assume that it's roughly forty to fifty years in the future, and that technologies like virtual reality, neural-connected computers, cybernetics, genetics, cloning and whatnot are commonplace. While this is the "default" mode, there's nothing stopping the GM from picking a different time frame.

Ten to fifteen years in the future lets the GM have more "realistic" technologies, which are easier to plan for, while the social decay that haunts most (but not necessarily all) cyberpunk settings can be just beginning, avoiding the feeling of "the war's already been lost" that permeates so much cyberpunk fiction. Neal Stephenson's novel *Snow Crash* is a good example of a near-future cyberpunk novel, in which suburbia stands in for the corporate machine, and the best way to experience the Metaverse is through goggles and stereo headphones.

Likewise, setting it really far in the future -- 100 years or more -- lets the GM take cyberpunk into territory unknown, and surprise his or her players with things they never might expect. A good example of a far-flung future with way-out-there tech is *Transmetropolitan* by Warren Ellis & Darick Robertson, a comic with braitaped nanoclouds, biogenetic cellphones in pill form, and buy-bomb ads that play during your dreams. *Transhuman Space*, the upcoming RPG by Steve Jackson Games, also features a lot of advanced technology in a post-human era.

Choosing either direction can have its ups and downs for a gaming group. Far into the future, humanity's concepts of

morality, politics, religion, economics, and society might be incomprehensible to present-day roleplayers, so make sure you've got a thick packet of "how these people think" information for your players to digest. And closer to our own time means that it'll function rather more like a modern day campaign -- which can be tricky if you're unprepared.

Social Development

Social decay, collapse, and destruction is a staple of cyberpunk, but it doesn't necessarily have to be. People find reasons to rebel even when everything around them is going swimmingly, so a bunch of take-no-guff street punks running around in a utopic environment is possible (not to mention potentially funny -- see *Setting the Tone*, below.) Rebelliousness itself seems wedded to the genre, but rebellion takes many forms, all of which can be radically different than the standard "I have a weird haircut and a gun, so let's hack into something" motif. Ghandi was a rebel, and he didn't need an electrolaser.

Even if society has a lot of problems, they don't have to be the same ones seen before. A city in which everyone has a gauss-powered pistol could be replaced by one in which even owning a Swiss Army knife will get you thrown in jail. Ruthlessness at the workplace can take many forms -- a corporate lifer who is unable to escape his job isn't necessarily worse off than a freelancer who has to fight for whatever scraps of work the big corporations give out, or a small businessman fighting to stay afloat in a monolithic consumer culture. Corporations themselves might not even be around -- a simple stock market collapse can send most of them down for the count. And a shattered economy can kill the "universal credit" cold, forcing everyone into a barter situation.

Working these details out ahead of time will add immeasurably to your game world. There is a tendency in games to treat money as just another number on the page, instead of something tangible -- the barter scenario would force players to think more carefully about their finances, since several million dollars in gold is a real pain to lug around when you're on the run. Removing the corporations deprives PCs of a relatively guilt-free target, so having a good stable of adversaries -- or not concentrating as much on confrontation -- may be preferable. And obviously, the PCs won't be happy if they can't lug their favorite guns around . . .

Setting The Tone

Similar to Social Development, above, but not quite the same. Social Development covers the world, but the tone of the game determines how we see it.

Again, this is another area in which player input is helpful. Some players might revel in the dark, seamy grit of an urban-level campaign, where the PCs dodge the cops, the corporate enforcers, rival gangs, and the occasional Threat to Our Way of Life. Others might prefer the same setting, but a different tone -- more hopeful for example, or perhaps less lethal than the quick-kill credo of many cyberpunk games. Cyberpunk as a genre is ripe for parody, and a suitably off-kilter group of players could have a ball making fun of hacker culture, cyberpunk icons, and the fact that it never seems to stop raining in the movie *Blade Runner*. And still others might want to keep the setting but try a new genre within it -- the regimen of a military operation, for example, or the intrigue of an espionage campaign, or perhaps a group of superheroes who've gotten way in over their heads.

Enhancement Technology

It's a staple of cyberpunk that you can walk into a body enhancement clinic with a lot of money, and walk out with a motherlode of wired reflexes, dermal plating, and eyeballs that can get free HBO. It's not necessarily that simple; enhancement technology can be banned from the player's paws for any number of reasons, from supply shortages to reliability problems to ironclad and effective laws.

Even if enhancement technology is allowed, it might not necessarily be what the players want. Market forces in a cyberpunk world could dictate that the implants that get made are the ones everyone can use -- such as the Neurobauhn XB-600 Addiction Suppression Neuro-Implant, or the HaXX0rCorp Direct-to-Bloodstream Amphetamine

Delivery System (for programmers and game designers, and called ADS for more reasons than one) or even something simpler like the R&C Eyeball HUD, which displays the time, date, and today's important memos on your eyeball. Players trying to procure the Killzemall CH-500 Nipple Cannons or the LoganTech Knuckle Claws might be out of luck, unless of course they sign up for military service and get the U.S. Army Cortex Bomb as well.

Limiting easy-to-get cybernetic enhancement to stuff that doesn't grant bonuses or new abilities takes some of the violent edge off cyberpunk, and forcing players into the Army to get "the fun stuff" deprives them on the anarchistic element as well. Consequently, this is recommended for games that won't concentrate much on violence, and top-drawer roleplayers will be essential -- or alternately, the campaign could have the violence of a typical cyberpunk game without the enhancements, making skill and strategy the buzzwords of choice.

Cyberspace

One thing a programmer can tell you is that a Nintendo-64-esque environment isn't a very accurate simulation of how hacking in VR would be like. Movies haven't helped this much, since the temptation to make VR seem somewhat real - or at least understandable -- is necessary to reach audiences.

Realistically, however, a VR environment that's set up like a normal office would be the equivalent of a GUI -- something to ease computer use amongst people who aren't heavily into the guts of programming. Instead, too often, this environment is used by the advanced hacker, when really, the true VR hacker would take advantage of the fact that cyberspace doesn't have to function like normal space.

"Folded space" VR, in which everything in the environment is optimized for the task at hand, would probably be the environment of choice for the future's hackers, much like command-line setups are used by programmers and hackers of today. The command line is arcane and it isn't pretty, but it is faster than clicking on the "break into First National Bank" icon.

This would serve to separate the true hackers from the casual VR users, yet still have a vast amount of people using the system. Adapting to a virtual environment in which the laws of physics are mere suggestions would take a lot of getting used to for anyone, and it'd be unlikely that you could log in, hack, log off . . . and still have full motor control right away.

If you're using a pre-established cyberpunk game system, heavy modification of the way things work might be necessary. Players, as a rule, hate arbitrary house rules, so make sure they understand where you're coming from. And if you're building a new system from the ground up, make it relatively easy to understand in game terms -- the characters might be geniuses at sifting through arcane terms and commands, but the players might not be.

Systems that use advantages and disadvantages could give hackers certain perks, like the ability to adjust to normal space or folded VR very quickly, or an immunity to any pressures that folded VR could place on the brain. Skills will probably require a specialized version of the typical computer subset (Operation, Programming, Hacking) to differentiate it from their cousins outside the machine.

And of course, no one says that cyberspace has to be this advanced at all (see *The March of Time*, above.) The virtual universe could be limited to goggles and headphones, or worse, not be developed at all -- everyone could still have to use keyboards and monitors. Again, Neal Stephenson's *Snow Crash* gives us a good example of the low-tech virtual landscape with the Metaverse, which, even though it uses a primitive setup, still simulates the freedom of a virtual landscape well -- the climactic race between the hero and the villain is a virtual motorbike race at millions of miles per hour.

Putting It All Together

One of the most-overlooked features of a good game world is consistency; good settings have a consistent tone and feel, and not-so-good ones feel slightly hodgepodge. Above all, make sure that all the technology, social forces, major

factions at play, environments, and characters mesh together very well. If you manage this, even the most cliché-ridden environment will be engaging for your players, so imagine how involved they'll be if you mix things up a bit.

If the game only has one GM -- i.e. you -- you've got it somewhat easy, since you're defining the whole world outside of the player character's actions, and the only thing you need to worry about is making it all fit together. A "consensus world" -- with multiple GMs, perhaps -- will be obviously trickier, since you'll need to establish some ground rules on how the world works, and make them flexible enough to allow individual creativity, yet clear enough to avoid straying off the beaten path.

But above all else -- don't be afraid to change things if they don't turn out as well as you'd hoped. If innovation was a bad thing, no one would be gaming -- or cyberpunking -- in the first place.

Be Careless What You Wish For

Curses In *In Nomine*

by Jo Ramsay

"I hate you," Annette spat at the phone as she slammed the receiver down. All the thoughts in her mind were of how much she detested her step-mother, or "Bitch Queen" as Annette affectionately called her. Now she had thrown out all of Annette's old books, and still had the temerity to tell her that she would probably go to Hell for swearing and blasphemy when the girl lost her temper again over the phone.

"I hate you. I wish you were dead. And I wish you would go to Hell, where you belong!" She closed her eyes for a moment, fairly shaking with rage and impotence.

In the street outside, the traffic hummed, but the room was suddenly very, very quiet. Then someone else coughed from inside the room.

Annette's eyes blinked wide. A man was suddenly sitting in her spare armchair, with a clipboard and a sheaf of notes.

"It's Annette Cordwell, isn't it?" he asked pleasantly. "Take a seat. I'm delighted to be able to fit you in today; as you may know, we have a very busy schedule."

"What? Who? How did you . . . ?"

"Please sit down, and I'd deeply appreciate it if you could keep the questions to a minimum. You wanted someone to suffer a terrifying and inescapable doom?"

She shrugged, totally lost.

"I'll need their full name. Come on now, be a good girl and we'll get through the paperwork quickly. You wanted someone to suffer so badly that you got a line straight through to the infernal regions, and so here I am. Curses are my business, you see. So what's the name?"

She told him.

"Ah yes. You're not the first to mention her. So would you like illness? Lost pets? Cuckolding? Seduction of siblings? Parents? Children? Tooth rot? Plague of lawyers? Nightmares? . . . "

He ticked off boxes on a checklist as she either nodded or shook her head dumbly, continuing through a long list of potential evils. Finally he nodded and jumped to his feet, offering a hand to shake.

"Wait," she said nervously. "If you're a demon, aren't you going to ask me to pay for this, or sign in blood, or something?"

"My sweet," the demon grinned. "Nice little girls who are going to Heaven don't wish for their stepmothers to never have another quiet night's sleep in their life. So you could say that you paid for my services when you summoned me. I'll be along to collect in . . . hmm . . . 18 years, three months, and 2.5 hours precisely. Good day."

He tucked the little clipboard under one arm, and walked out of the front door, kicking the cat on the way out.

What is a Curse?

A curse is a purely malicious wish for evil things to happen to an enemy. In the most notorious curses of all, the malediction is passed down in the blood from generation to generation of innocents, or can drag a man's soul screaming to Hell for eternity. As a punishment, they are time-honored and effective. As such, curses have always been popular with demons and ethereals alike. Curses for their enemies, as well as love potions for their lust-objects, have also been one of the first requests that budding sorcerers have traditionally made of summoned spirits.

Curses in *In Nomine* fall into three main types. Some curses are temporary, whether they draw the attention of evil spirits, or strike the victim down with a plague of bad luck (a traditional hex). Any demon or mortal who knows the rare Songs of Malediction (see below) can issue this type of curse. There are curses that strike generations, in which a demon or ethereal personally plots revenge on generation after generation of the misbegotten mortal who offended him. And there are personal curses that are invoked by a Superior, or a powerful ethereal god, which can involve any amount of strange effects for the hapless victim.

A fourth category includes curses that aren't strictly curses at all. If clairvoyance runs in a family line, that isn't necessarily because an ancestor called down the wrath of Heaven or Hell and was specifically cursed with the Sight. Humans have shown an admirable ability to explain any number of misfortunes or strange events as "it's a curse."

Although it is possible to curse an ethereal or celestial, and most divine curses do concern rebellious angels, it is more common for malevolent curses to be enacted against humans who have offended inhuman entities or mortal sorcerers.

What Curses Can't Do

Free will is an important concept in the game. Unless your *In Nomine* game is very dark, no mortal can ever be born damned, and no man can lose his soul to Hell unless he deliberately chooses to hand it over, either through binding himself as a Soldier of Hell, or through his own actions. This doesn't mean that demons can't tell someone that he is doomed, so he might as well throw away conventional morality and live that life of debauched serial murder that he always dreamed about. It also doesn't mean that demons can't attempt to corrupt everything a hated mortal owns or loved. After all, a demon's life can be dreadfully harsh, and the poor things need all the entertainment they can get.

Demonic Curses

A demon's life is never easy. Between being bullied by Princes, threatened by angels, teased by ethereals, dragged howling to the corporeal plane by wannabe sorcerers, and rained on by the weather, the tensions of modern living can really get to an Infernal. Against many of these problems, there is no recourse except to hide or grovel. Most demons can't outgun a pack of Malakim (even if they were fool enough to want to) or take on a group of ethereals on their home turf. They learn to take out their frustration on creatures weaker than themselves and plot silently against the day when their tormentors fall into their power.

But sometimes, it happens that even such a weak and foolish creature as a mere mortal should thwart the will of one of Hell's minions. Hell may have no fury like a woman scorned, but Earth has no fury like a tricked demon, and revenge is as certain as it is cruel. It is in cases like these that demons turn to curses. Cases where the demon has come to hate a specific mortal so much that any price is worth paying, if only the treacherous gutbag can be made to suffer, and to cower before the might of the Inferno. At the reception chambers of the Prince of Fate, those who dare beg for a curse to be placed on an enemy are not turned away. Kronos is, naturally, the master of curses. He is the Prince of Fate, and that includes all manners of dooms, evil omens, and fatalistic prophecies. He and his Demon of Curses, Maraxion, maintain an open door policy, with the approval of Asmodeus. Cursing mortals is considered to be a fine and worthwhile occupation for otherwise idle demons, and keeps them into mischief.

MARAXION, DEMON OF CURSES

Djinn Baron of Fate

Corporeal Forces - 4 Strength 8 Agility 8

Ethereal Forces - 4 Intelligence 6 Precision 10

Celestial Forces - 6 Will 12 Perception 12

Suggested Word Forces: 8

Vessel: Human Male/4, Charisma +1

Skills: Dodge/3, Driving/2, Fast-Talk/5, Fighting/4, Lying/6, Seduction/3

Songs: Anathema/6, Attraction (Ethereal/3), Malediction (all/6), Numinous Corpus (Acid/4, Tongue/5), Shields (all/4)

Attunements: Djinn of Fate, Impudite of Fate, Fated Future, Inescapable Doom, Baron of the Book of Days (16th century)

Special Ability: He knows automatically when a mortal has spent all his Essence out of sheer spite in the attempt to curse a fellow, and may spend 8 Essence to appear instantly at his side.

Special Servitor Attunement: "Inescapable Doom" - The user may spend 3 Essence to curse an object (commonly a coin, or piece of paper). If the person whose name is specified in the curse accepts the object of his own free will, he becomes unable to resist any demonic powers, and the user of the attunement may locate him at any time as if he were attuned to the victim. A celestially aware creature may detect the cursed item as if it were a relic/0

Description: Maraxion is a flamboyant demon with no trace of social conscience, who delights in watching mortals drag each other into the pit. He works closely with Hatiphaz, the Demon of Sorcery (*Corporeal Player's Guide*, p. 72.), but takes a more laid back, populist approach. Cursing people is likely to incline a sorcerer's soul toward Hell, so the Djinn rarely has to waste time enticing mortals to use their powers for the dark side. He is a patron also of malice and hatred, and of gleeful condemnation of others, and uses his natural powers of persuasion to encourage these sentiments in those who he approaches.

Kronos (and many demons of Fate) find his relaxed approach to be painfully unprofessional, but no one can argue that the Demon of Curses is an effective worker. If he has a flaw, it is that he is fundamentally lazy and prefers to be reactive, waiting to be begged for curses.

As well as allowing his name and summoning rituals to be bandied freely around the corporeal plane, for use by any sorcerer who can draw a vaguely round summoning circle and has a malicious bent, Maraxion and his minions sell their services to other demons in Hell. It has been a popular service.

The Sepulchre of Inescapable Doom

The Demon of Curses' beachhead in Shal Mari is a jet black building, adorned with neon signs proclaiming that curses can be bought, sold, and traded within. Yes, it's gaudy. Yes, it's completely unnecessary, but Maraxion is a rampant self-publicist and likes the notion of himself as the Malison Supremo. The interior is dark and forbidding, forcing the image of grand and terrible dooms into a supplicant's mind through careful use of light, incense, organ music, and traditional cursing implements displayed on the walls. There is also a bar, which has proven to be a nice little earner, being popular with trend-setting demons despite the almost palpable miasma of doom, gloom, and despair.

As a curse peddler, Maraxion is in competition with any number of Lilim (who are more than willing to hire themselves out to go and torment any mortal of the client's choice, for a price) or Shedim (who don't require much encouragement). But there is a certain status in having a curse upon one's foes laid competently by a demon of Fate, and the Inescapable Doom's staff insist that satisfaction will be guaranteed.

Curses purchased here usually involve the Songs of Malediction, although more specialized dooms can be custom

designed, if the price is right. As usual, it is never possible to alter a mortal's fate or destiny simply by singing a Song, and demonic minions of Fate are often left to do the actual legwork.

New Songs

These two Songs are restricted to infernal use only.

Malediction

(Secret Song, available only to Servitors of Kronos)

This is the Song which demons of Fate use to curse those who are unfortunate enough to draw their ire. It is only taught to demons who hold the rank of Knight or above, partly to keep it rare, but also because a user can expect to be on any number of angelic hit-lists if he is careless with the power. The Corporeal Song is used to intimidate a victim with the singer's supernaturally keen power and knowledge. It is a slow and subtle curse, knowing in advance when one will die, and is favored alongside nastier measures. The Ethereal version, known also as the Song of Hexes, can be used in combat.

The Celestial Song of Malediction is particularly well-loved by demons, and when it has been used in an area, word gets around the local infernal population very quickly. Every passing demon is encouraged to try his luck on the hapless mortal, and demons often vie with each other as to who can come up with the most creative affliction for the victim. Although increased demonic activity is likely to draw angelic attention, the fact that most of the demons have no personal motive for targeting the same victim can make the root cause difficult to track down.

Corporeal -- Both singer and victim sense the precise time and date on which the victim will die, barring celestial interference.

Ethereal -- The victim of this song suffers a run of terrible bad luck for a number of days equal to the check digit (CD). Effectively, all rolls are made at a penalty of -1. If the victim spends Essence during this period to improve mundane contests, then instead of adding a bonus to his rolls, each point has the opposite effect.

Celestial -- One of the most feared weapons in Kronos' armory, this Song brands the victim with a celestial brand for CD weeks. This mark is sensed automatically by any demon within line of sight and with a successful Perception roll by anyone else. It is equivalent to having a target pinned to the victim's back saying "Kick me!" It is a point of pride for any passing demon to torment the marked man. Fate and the Game actively encourage Servitors to do so.

Essence Requirement: 5; the Corporeal version only requires 1 Essence.

Degree of Disturbance: no disturbance for the Corporeal Song, other versions have a disturbance of the check digit plus the performer's total Forces.

Song of Anathema

(Infernal Only)

This rarely used song is the infernal analogue to the Song of Witness (*Liber Canticorum*, p. 80). It is reserved for powerful, vengeful demons, who desire to devote many years of their time to inflicting retribution upon not only a hapless mortal who has thwarted them, but on his descendents as well. The singer swears a dreadful oath in which he calls out the precise punishment that will be visited on his victim. Both the demon and his victim sense the new bond between them, and appropriate effects such as discordant music, thunderclouds, sulphurous fumes, and breaking mirrors accompany a successful song. The demon himself is then responsible for acting on his oath and enforcing the curse, but he will be forever able to locate the cursed man on a successful perception roll, as if he were a Djinn. However, if any cursed person (which may include the original victim or any descendents who were included in the curse) dies and escapes Hell, the demon takes the same number of points of dissonance as he originally spent Essence for this Song.

Since fulfilling a curse can be demanding of a demon's time, servitors are supposed to ask permission from their Princes before performing a Song of Anathema. Since most demons who know it are sufficiently powerful or Distincted to be allowed to manage their own time, this is often waived in practice. What is more common, when a mortal had deeply offended a demon who knows this Song, is that he will grab a lesser demon, force it to learn the Song, and then to sing it and carry out the curse on the furious one's behalf.

This Song is treated as a Celestial Song for game purposes.

Essence Requirement: 10 Degree of Disturbance: the check digit plus the singer's total forces.

Ethereal Curses

Ethereals curse mortals out of hubris and spite, much as demons do. Even the nature of the curses is often similar. Traditionally, the victim is informed of his impending doom and then the ethereal or its lackeys set about realizing the threat. Although they do not have knowledge of the Songs of Malediction, many ethereals who are associated with malice or bad luck can simulate a hex quite effectively, or even produce more exotic effects such as turning victims into appropriate farmyard animals.

Since Uriel's Crusade, this type of curse has become more and more rare. It is almost guaranteed to draw angelic attention -- of the fiery sword variety -- and even the most malicious or vengeful ethereals are inclined to think that it isn't worth the effort.

A Sorcerer's Curse

Sorcerers in *In Nomine* work through rituals, summoning and binding both demons and ethereal spirits to their will. In practice, there are no rituals for "pure" cursing. If a sorcerer believes he is carrying out a successful hexing ritual, he will have effectively summoned some evil spirit to perform the curse. The more usual routine is for the sorcerer to summon a suitable entity and send it off to afflict the victim in its own way. It is well known that demons and demonlings are unlikely to complain about being given this duty -- or at least, not as much as they whine about almost anything else.

Angelic Curses

Although there are stories of mortals who have been cursed by God or by angels, these have always proved to be natural human paranoid attempts to explain their own bad luck. The most effective and the most common curse pronounced by Heaven happens when an angel is made Outcast, and sent to wander the Earth without rest or respite for eternity, or until he repents and seeks the light again. Many legendary cursed "mortals," such as the Flying Dutchman or the Wandering Jew, are Outcast angels or Renegade demons, in perpetual exile from their home planes.

But there are some mortals who could reasonably claim to have been cursed by Heaven. Children of the Grigori, who often have strange abilities running through their family line, are sometimes taught about their ancestors who once incurred the wrath of God.

Lifting a Curse

There are some curses that cannot be lifted by any means short of a Divine Intervention. A family with celestial or ethereal ancestors carries a spiritual taint far beyond the level at which even mortal genetic engineering could remove the bad blood.

For lesser curses, there are some standard means by which the affliction can be removed.

- A. If the curse was a one-off punishment, then the symptoms may be curable by either natural or supernatural means, and that will be an end to the matter. More often though, this isn't enough. Usual approaches would be to find and kill the person who laid the curse, or force them to retract it (if possible,) or to locate and destroy the demons or spirits who have been ordered to carry the curse out.
- B. Maraxion's "inescapable dooms" are both easier and more difficult to lift. A would-be rescuer must find the item used to lay the curse, and return it to a servant of Hell, who must take it willingly. If the item has been destroyed, then life gets more difficult; refer to plan A.
- C. If a curse was personally created by a powerful ethereal or a demon Prince, then an Archangel could lift it. This might be painful for the curse's victim, or even dangerous. More devout angels feel that months of prayer and purification certainly can't hurt a petitioner, if this is the chance they want to take.

Grave Robbers From Outer Space Card Game

Published by [Z-Man Games](#)

Written by Stephen Tassie

Illustrated by Steve Bryant and Jason Millet

120 cards; \$19.95

Everyone loves a B-movie: Alien invasions, giant ants, mad scientists, and mind-controlled zombies after your brains, let alone porcine acting and laughable special effects. Of course, not every B-movie is really bad, but for every *Them!* and *The Day The Earth Stood Still*, there has to be a *Plan 9 From Outer Space*, *Flight to Mars*, *The Giant Claw*, or *Robot Monster*. The genre is wonderfully celebrated in *GURPS Atomic Horror*, whose second edition was recently released, and in the *It Came From the Late, Late, Late Show* RPG trilogy from Stellar Games. Taking the genre out of RPGs and into a soda and popcorn game is Z-Man Games, with *Grave Robbers From Outer Space, A Sci-Fi/Horror B-Movie Card Game*.

Grave Robbers From Outer Space is designed for two to six players, who are directors attempting to shoot their low budget stinker and damn the plot! They bring out Character, Prop, and Location cards from their hand into play to create a movie, and throw Creature cards at the movies of their opponents in an attempt to destroy that movie. SFX cards can aid or hinder such attacks, as well as having plenty of other effects. At the end of the game, players tote up the value of the cards they currently have in their movie; the highest wins the game.

Grave Robbers From Outer Space is comprised of 120 color cards, wonderfully illustrated and a small rules leaflet. The cards are color-coded into five types: blue for Characters, red for Creatures, orange for Props, green for Locations, and yellow for SFX. Character cards have a Defense Score to which the Prop and Location cards each add a bonus. These three types of card form the basic movie. Creatures have an Attack Score used against the total Defense Score of a movie. Most cards also have Traits (smart, dumb, young, old, male, female, weapon, alien, supernatural, psycho killer, monster, large, zombie, vehicle, gun), instructions that directly affect play and an appropriate quote. Thus:

The Character card for Skippy The Wonder Dog has a Defense Score of 4, the Trait of Smart and the card instructions that he "May not use Props." His quote is: "What's that Skippy? Billy's torso is down the well?" The Location Card, The Basement adds +2 to a movie's Defense Score (but actually subtracts one if the movie is attacked by a Psycho Killer) and can only be added to a movie that already has a Location card in play; its quote is, "Hmm, I wonder what's down here?" The Holy Relics Prop card only adds to the Defense Score against supernatural attacks and has the quote, "Holy water, silver bullets, crucifix . . . this thing's got everything. It's like God's Swiss army knife!" Of course, the quote for the Zombies From Hell Creature card (Traits: Supernatural, Zombie) can only be, "Brains . . . Brains!" The SFX card Production Value improves the Defense Score of a female character by +2 until she dies and is explained by its quote, "It's the cleavage. Monsters are distracted by cleavage."

I could go on quoting from the cards, as they really are a highlight of the game, but I shall instead suggest that players watch out for the running gag across the cards about poor Billy and the tentacles. Z-Man Games have also posted samples of the cards on their [website](#).

At the bottom of each card is a Title placed upside down, such as "Witches," "Bloodthirsty," "Rampage," "Return," "Virgin," and "Sorority." Six cards are drawn before play begins and the Titles are used to form the title of the movie that each player is trying to film. So from the example given, the players might create the movie title, "Return

Rampage of the Bloodthirsty Virgin Sorority Witches." At the end of the game, if any of these titles cards are in a player's hand, then they score them extra points.

Actual play begins with each player receiving a hand of six cards. From these they play all of their Character cards onto the table -- this is their beginning cast for their movie. Once the players have put down all of their Character cards, proper turns begin. Turns consist of drawing from the large deck to refill the hand back up to six and then playing cards. These can be as many Character cards as the player may have, one new Prop card per character in a movie and a Location card. There can only be one Location per Movie, and a player can put down a new Location card in any Movie on the table. This can be beneficial because some Location cards have a negative Defense Score.

Attacks are made by playing Creature cards against the Movies of other players and if the Attack Score of a Creature is equal to or greater than the Movie's Defense Score (a combination of the scores on the Location, Character and Prop cards in play), then it is successful and a single character from the Movie is discarded. SFX cards can boost both Attack and Defense Scores; prevent cards from being played and even remove certain types of character from play. They can be played not just by those involved in the attack and defense, but by any player who wants to effect the outcome. In general, SFX cards can be played at any time and the design of the cards is such that they do not conflict with the basic rules. Once a Creature makes a successful attack, it too, goes into the discard pile. Actions can be repeated as often as the player wants and in any order. Likewise, attacks can be made as often as a player has Creature cards. As each card is played from the hand, it is suggested that its title be read out, adding to the atmosphere of the game.

The game ends once one of the two Roll the Credits cards have been played or the deck has been exhausted. At that point, each player totals the Defense Score of their Movie and adds any bonuses for Title cards from the Movie decided upon at the beginning of the game. The highest score wins that hand if playing multiple games, or the game if just a single session. One question about scoring that remains unanswered is if all of the Location cards played on a Movie during the game contribute to the score at the end of the game.

Each game lasts about forty minutes to hour, depending upon the number of players. It works better the more players you have, as this increases the interaction between players, but one problem is that once a player has had the cast of their movie removed from play, they are very reliant upon what they draw from the deck. This can leave them stuck, unable to build a Movie because they have drawn no Character cards; unless they have several characters to play at once, they are potentially weak until they can properly protect them from attack. Conversely in smaller games, players without characters in their Movie leaves the other players with fewer opponents to attack. Players can discard their hands and refresh them completely at the beginning of their next turn. Although this offsets these problems, there have been games where it has taken more than a turn to completely refresh the hand so that it is playable once again.

Grave Robbers From Outer Space really is a game for lovers of the B-movie genre, especially the horror kind. This game is definitely orientated slightly more to horror than it is to science fiction, but that still leaves room for the other B-movie games that Z-Man have promised us in this series. It is fun, it is cheesy and the cards are a delight -- I guarantee that they will have you laughing.

Dead Presidents (for Deadlands RPG)

Published by [Pinnacle Entertainment Group](#)

Written by Christopher McGlothlin

\$15.00

Dead Presidents is the high-powered, exciting, setting-changing conclusion to Pinnacle Entertainment Group's 2001 adventure trilogy. Following the events of *Ghost Busters* and *Rain o' Terror*, *Dead Presidents* takes the player characters on a continent-wide trek to face some of the most powerful figures in the Deadlands campaign setting. Beginning in Gomorra, the players will travel "Back East" to Richmond, stopping at several points along the way. The adventure contains all that you need to play the adventure, although Marshals with access to *Back East: The South* and a handful of other sourcebooks will find their gaming experience enhanced. *Dead Presidents* represents Pinnacle Entertainment Group's first dual-stat adventure, with gaming information for both their home system and Wizard of the Coast's *d20* open license system.

[SPOILER WARNING: The following review contains some information that may reveal more about the *Deadlands* setting than players generally know.]

The plot of *Dead Presidents* makes radical changes to the *Deadlands* setting. The player characters will be facing, directly and indirectly, the Jefferson Davis doppelganger and eventually kill him. Along the way, they will face Bayou Vermillion bokkors, witness the death of Robert E. Lee, rescue Varnia Davis from the Nightwatchers, and meet the Southern Sentinel. While facing these encounters, the players will have an unlikely ally -- Reverend Grimme, in the form of a team of Guardian Angels. While these Guardians remain in the shadows for most of the adventure, they can provide some assistance for posses who, through the accident of the dice, find themselves over their heads. In the end, however, the posse must face the considerable challenges of this adventure on their own. As such, Marshals should take the 5-Grit/8th-12th level recommendation seriously.

This being said, the adventure is exciting and well written. The investigative sections of the adventure leave Marshals a great deal of leeway, allowing them to tailor the adventure to the strengths and weaknesses of their individual posses. Because the flow of the adventure is very linear in its construction, Marshals will need to be careful to not leave players feeling like they are being railroaded. While this is a real risk, the linear structure, when played well, should leave the posse feeling hunted by forces significantly more powerful than themselves.

The game isn't all combat encounters. McGlothlin's knowledge of Civil War-era Southern culture adds a lot to the encounters with non-player characters. His knowledge of and respect for the major figures of the Confederacy adds a lot to the flavor of the adventure.

The adventure does have some minor flaws. Most noticeably, *Dead Presidents*, as the third part of a three-part adventure, flows awkwardly from *Ghost Busters* and *Rain o' Terror*. Grimme falls from the major catalyst of events to a mere opportunist. While there are interesting roleplaying opportunities made available by this change if the posse has become suspicious of Grimme's motives in these prior adventures, this shift is still jarring. In addition, there are some minor proofreading errors in the text -- most noticeably when the text indicates that there is a telegram handout for the players at the end of the book when none exists. Finally, while not a flaw, *Dead Presidents* does not significantly expand players or Marshals knowledge of any locations in the *Deadlands* setting. This is unsurprising, given that most of the events take place in locations already detailed in *Back East: The South, Doomtowntown or Bust!*, and *Bloody Old Muddy*.

[END SPOILER ALERT]

Dead Presidents does provide **d20** Marshals with three pages of new information (8 harrowed powers, the stats for clockwork torpedoes, vapor cannons, and a sample submersible). While perhaps not enough to make the adventure worth buying solely for the new information, they do provide benchmarks for converting the information in ***The Book of the Dead*** and the ***Mad Science*** sourcebooks.

Dead Presidents is an exciting adventure that is well worth the \$15 if your posse is ready. Marshals will need to do some work to tailor the events to their posses, but nothing more than is usual for a prepared adventure. Those who purchase gaming supplements for playing or reading will not be disappointed with the story.

Faking It In The Real World

Back in 6th grade, my Honors Civics class had a segment in it on economics. One of the assignments we had was to pretend we were running a fast food restaurant, and try to guess what percentage of each dollar earned went to things like producing the product, paying the employees, insurance, advertising, and so on.

Since my parents were both in insurance at the time, I of course knew that insurance was the most powerful force in the universe. And so I browbeat my group into setting insurance at, like, 30% of each dollar.

In actuality, the percentage of each dollar devoted to insurance was along the lines of 3-4%. In comparison, our group devoted about 10% of each dollar towards actually making the product, when the percentage was actually around 30-40%. We theorized that the only way our restaurant continued to remain open was because our insurance was so good, we could pay off all the victims of our cost-cutting measures on our food. We also named our establishment "Roachburgers." Our motto was: "It's 100% meat . . . we just won't say what *kind* of meat."

(On the other hand, one of the other groups had a cost breakdown that totaled to 113%. So I like to believe I at least "got it" a bit more than them.)

Anyway, the point of this little anecdote is to illustrate that, as mentioned [last week](#), understanding all aspects of reality necessary for a modern campaign can be very difficult.

Fortunately, there are some avenues groups can take to help things along.

"I am like unto a deity. Roll 4d6." Over on the message boards Chad Underkoffler referred to this as "the butter knife rule." As he puts it, "If the GM says there's no such thing as a butter knife in his game world, then, by gum, there ain't any. That's said up front, and everybody agrees to it." I've always viewed it as God Mode . . . if I say something is (or isn't) impossible, then that's the way it is.

I also tend to view this as one of the least satisfying of solutions. Almost any roleplaying game is, at its core, a simulation of a reality. The more seams there are, the more unexplained oddities, the more things don't coincide with the way the other players believe they're supposed to work -- in short, the more mistakes -- the less that reality works. Soon you're in a bizarre nonsensical world that makes as much sense as many computer RPGS . . . kill the wolf, find it's carrying a longsword and a pile of gold coins. Run the wrong way down the dungeon, clip past a wall, and discover you're running *on top* of the dungeon. And so on.

God Mode is also difficult if you use more than one GM for a campaign. You may have decided that there are no butter knives in your campaign world, since you don't know Jack about butter knives, and one of your other GMs may have a Doctorate in Butterknifology. Once you hand control to him, you may discover that entire gangs, cults, and nations have arisen to further the goals of the hitherto unknown butter knife. This may be problematic.

On the other hand, there are situations where God Mode can be very useful. In fast-paced campaigns any such mistakes can be easily swept away by the breakneck pace. "Okay; the flight from New York to London takes three hours. Suddenly you realize there's a tentacled monster devouring Big Ben! You see the British police pull their guns and start shooting at it!" If everyone's having a good enough time, they may well not notice (or care) if there are mistakes.

Pool your knowledge. Don't drown in the deep end. As a GM, you almost by default can't know as much about reality as the sum total of your players' knowledge (unless, say, you're GMing for your kids exclusively . . . and even then, how many Pokémon can *you* name?). So if one of your players is a lawyer, and you're not, you may want to draw on him for legal issues that crop up in the campaign. ("Okay; the police arrive and arrest you all for breaking and entering. Um . . . Scott? Wanna fill us in here on what happens next?")

This can be great for the trivial bits that don't really matter. If an adventure is set in San Francisco, and a player has

been there (and the GM hasn't), then tapping them either before or during the adventure can help improve the game for everyone.

Unfortunately, this approach has its problems, too. The most obvious one is that GMs can't plan adventures ahead of time . . . at least, not without spoiling elements of the game. ("Hey, Scott? Hypothetically, if someone were to plant evidence in your character's house, how specific a search warrants would the police need to investigate?") Probably the best way around this is to get *lots* of options from your players, then mix and match them. If you ask your lawyer friend about ten possible bad scenarios, then make some kind of amalgam . . . an amalgam that has some basis in reality.

Make like McCartney and wing it. If none of the players have any idea about a certain location, then it's perfectly acceptable to make up something that sounds good to everyone involved. For example, if no one's ever been to an emergency room, and it's necessary for some of the action to take place there, then you can rely on episodes of *ER* as your guide.

The biggest problem with this is that any future knowledge may greatly affect past adventures, or require some hand-waving. For example, if you all (incorrectly) guess that flying from New York to London takes five hours, then if you discover the actual time later, you'll either need to retro-change everyone's memories of how long it *really* took, come up with a reason why the trip took less time, or just never mention it again. Some groups aren't bothered by letting it slide; others are. (The latter tend to be folks who try to come up with reasons why the *Enterprise* crew seemed to forget about shuttlecrafts in early episodes of *Star Trek*, when the logical answer is that Roddenberry hadn't made them up yet.)

This method also has the problem that you often can't share your idea of what sounds good ahead of time. If your plot calls for transporting \$100,000,000 in \$100 bills, and you guess it would fit in a briefcase, your players may not believe that. You may need to do a soft-shuffle quickly to come up with another explanation.

Research. (Ugh.) When all else fails, it's usually possible to research. The Internet era has made this much easier, but given the minutia that can fill an average adventure, you can get bogged down if you try to get *everything* right. And now matter how much you read about New York, you still may not be as knowledgeable as someone who has learned the information first-hand.

Research seems to work best as a complement to "Winging it." Our *Aberrant* game was based in Chicago, specifically picked because no one had ever been there, nor knew much about it. So I bought two copies of the *Frommer's Guide to Chicago* . . . one for me, and one for the players. That way we all had the same basic information. It worked surprisingly well. I also tend to accumulate a lot of "how-to" and "writer's aid" books. (For example, the [Howdunit](#) series has been especially useful for me in comprehending semi-believable criminal, police, and judicial systems.) In this way I can absorb enough trivia to make my sessions believable.

Research also works well for specific adventure elements. If you can structure your plot such that it doesn't really matter how many time zones away Sydney, Australia is from Chicago, you may want to do that. But if your plot *does* depend on that information, then definitively researching it can help.

Our world, but different. *Aberrant* also had another advantage in that it was set in the year 2008, in a slightly futuristic world. In this way we could do a *lot* more hand-waving. Did we say the judicial system took twice as long as it should? That's because the courts are more clogged in the future. Did we say it took half as long? That's because the courts are bigger and more efficient in the future. And so on.

This method is almost the best case scenario for "God Mode," but it can also feel like a cop-out. After all, what's the point of playing in a modern game if it's not *really* a modern game? But if everyone's agreeable, it can be very useful to wave your hands and say, "Yet another way this reality is different from ours . . ."

(I also have one other method, but I think I'll save that one for another column . . .)

In actual play, a combination of all of these methods is usually the best bet. You may tap your friend's knowledge of

the airline system for one part, come to a consensus about how many people it would take to flip over a car in another part, do some book research on early Catholic martyrs for another part, and respond with "because I say so" when someone asks why the police are carrying Uzis instead of standard issue police revolvers in the finale.

In all, I've found that there are many possible pitfalls and traps to planning modern games. But given how varied, interesting, and rich our world is, it's usually worth it to try to make it as real as it can be. Just so long as it's fun.

* * *

I keep seeing trailers for the upcoming movie *Thirteen Ghosts*. And I keep wanting to add ". . . of Scooby-Doo" on the end. Clearly my 80s cartoon nostalgia taints my brain, even today.

* * *

And speaking of ghosts, the evil Schedule Monsters have spirited (!) away Ken Hite again. He should be back next week; he has an escape plan that's so crazy, it just might work . . .

In the interim, we hope you'll enjoy the second week of our Halloween crossovers, as we show you how to add a bit of fear to your *In Nomine* game. Last week we had the *Atomic Horror* adventure, and we have two more weeks of goodies for you.

And hopefully we'll have something . . . *special* . . . starting next week.

See you then.

"They Shall Not Pass!"

The Spanish Civil War For *GURPS Cliffhangers*

by Michele Armellini

Introduction

The Spanish Civil War (1936-1939) is rather obscure to many, today. Spaniards often seem to think of it as a sort of natural disaster with long-lasting consequences. Others just see it as a prologue to World War Two.

But at the time, it was considered as an epic struggle, defining the chances of democracies to fight off rampant totalitarian regimes. To Spaniards, it was their own business and, depending on the side they chose, either the last crusade against godless nihilists, or the people's fight for freedom and justice. To European nations, it was either an opportunity to expand their own political influence or a revolutionary hotbed that had to be contained. And to volunteers from all over the world, it was a chance to stand and fight for what they believed in. So passions are still running high, 65 years later.

This war is, therefore, an especially intriguing and passionate background for the kind of black-and-white heroic roleplaying that's the true mark of *GURPS Cliffhangers* adventures. The time frame is right, too.

Make no mistake: Like in any other war setting, a truly realistic treatment of playing characters as average privates would be boring: they'd live for months in muddy trenches and bug-infested shelters, worrying about the awful food, the weather, and the enemy snipers; and they'd probably die on their first action. But a *Cliffhangers* adventure by definition will portray special situations, ranging from the unusual to the cinematic.

And, anyway, the Spanish Civil War offers several unexpected, quaint, or outright spectacular elements that make it stand out from WWI-style gritty carnage and even from WWII-style standardized warfare. It had infantry assaults but also the first mass armored attacks; it had cavalry charges but these could be supported by biplane fighters on strafing missions; it had extremely colorful uniforms, armored trains, home-made armored trucks, street fighting, guerrillas, mass bombardments, and the first carpet-bombing of cities. It had half-hearted draftees and all-volunteer units; from abroad, it attracted mercenaries, spirited volunteers, and expeditionary forces; it had paramilitary bodies, citizen militias, *dinamiteros* and militiawomen. All over Europe, it spawned spies, arms dealers, envoys, refugees and assassins. At sea, it had blockades, merchant ships loaded with materiel and "unidentified" submarines trying to sink them. It provided more than a fair share of infighting, on both sides. It was probably the last war in which infantry units went to battle with their flags unfurled.

In short, it has a great roleplaying potential.

Historical Summary

This is just a cursory glance, but you can find some good primers in the bibliography, below.

In 1931 the old monarchy was replaced by a shaky republic. The electorate was unused to the ways of democracy, and extremist ideas were widespread. On the one hand, there were the rich, great landowners, which -- strongly backed by the Catholic Church -- supported the old ways, both because it was in their interest and because they sincerely believed in traditional values such as God, Family, and Country. The army was unsurprisingly conservative. On the other hand there was the mass of poor landless peasants, as well as miners and workers. Their living conditions were terrible, and they were growing estranged from their fathers' religion and increasingly attracted by new ideals of social justice. The middle ground was thin, made up by small landowners, a tiny urban middle class, and the intermediate

ranks in the army, the clergy, and the state bureaucracy. In the end, these middle classes were scared off to the right.

The last few years before 1936 saw a repressive rightist government, a military coup attempt, abortive Anarchist insurrections and popular upheavals, and general unrest. With the 1936 general elections, a center-left government came to power. Very moderate reforms were attempted, but while they were too little for the left, the right would take none of those. Timid governmental decrees simply went unheeded in the countryside where the local powers were conservative, which drove peasants to exasperation. All political parties had already begun stocking weapons and organizing militias. Political murders became commonplace. The government was accused of being unable to maintain peace and order.

When the top-ranking generals saw that not only the new government was encroaching on their privileges, but also granting great autonomy to the independentists such as the Catalans and Basques, they decided to step in. The uprising was a military coup, which was immediately successful in the colonies. On the mainland, it was successful where the conservatives had some popular support (such as in Navarre), but failed in the great industrial cities. Time was on the government's side, but Nazis and Fascists immediately helped out the rebels: the first airlift in history carried Moroccan units on the mainland.

The first stage of the war was the time of the "*¡No pasarán!*" ("They shall not pass!") war cry. The disorganized, poorly equipped, and untrained popular militias tried to stop the victorious professional army units. The Nationalists aimed for Madrid, and reached the capital's outskirts by November, 1936, somewhat running out of steam by then.

The battles for Madrid then raged until about March, 1937. They featured vicious street fighting in the suburbs, full-fledged mechanized-warfare attempts at cutting the city supply lines, and bombardments. But Madrid was never taken until the end of the war. At this time, foreign aid was flowing in: full Italian Fascist Militia divisions, German Condor Legion specialists with their 88s, PzKfw Is and Stukas, as well as Soviet T-26 and BT-5 tanks and advisers for the other side. The International Brigades saw their first engagements in the defense of the capital.

Throughout 1937 and 1938, both sides tried to gain the initiative, attacking away from Madrid. A constant of these actions was that the Nationalists, under Franco's cautious leadership, focused all their strength on the objective at hand, carrying out limited offensives; their early campaigns after Madrid were against the Basque and Asturian enclave, with their factories and mines, attacking and capturing in turn the cities of Bilbao, Santander, Gijón. On the other hand the Republican offensives (at Brunete and towards Saragossa in 1937, in a bitter winter fighting around Teruel, and in a last-ditch combat crossing of the Ebro river in the second half of 1938) were beaten back. Franco made a point of recapturing lost ground. He never was in a hurry to end the war; instead, he exploited the war's duration to carry out a radical cleansing in the areas he subsequently occupied. His policy as to the "enemy hearts" wasn't to win them over, but to rip them off. Also, as he deviously reinforced his own power base within the Nationalists, the Republic was weakened by its internal self-destructive strife, such as the fight against the POUM party in Catalonia.

By June, 1938, Catalonia had been cut off from the rest of the Republican-held territory; after the battle of the Ebro, the Nationalists launched a Christmas offensive and by January, 1939, all of Catalonia had fallen. Another internal struggle on the Republican side followed, but Franco would accept only unconditional surrender. The war ended on April 1st, 1939; a long, bloody dictatorship began.

Character Involvement

So how do Cliffhangers characters get involved in the SCW? There are several possibilities. The most appealing solution is probably "But there's a war over there!"

1. "*This land is our land.*" The characters are created on purpose for the SCW, maybe a one-shot adventure or a specific campaign; or they end up in the Peninsula and the GM has long-term plans to keep them there. This option gives the maximum freedom as to character types, and it's ideal for Spanish characters. On the other hand, existing Cliffhangers characters may be foreigners and have no reason for a long-term involvement, and players might be interested in a short war adventure, but not in a military campaign.
2. "*Your fight is our fight.*" The characters already exist and are foreigners, but they either decide they'll volunteer

for the war, or they otherwise become deeply involved. Several character types are possible. Additionally, the characters have to be seriously motivated, or under orders by their superiors in an expeditionary force.

3. *"But there's a war over there!"* This is probably the best choice for a limited but interesting SCW experience. The party has its own reasons to visit a city or region in Spain, which has nothing to do with the war . . . but they'll be involved nevertheless. The characters may be Spaniards or foreigners, and most character types are suitable for this option, barring privates and militiamen.
4. *"A guy from Spain."* You may meet agitators, spies, arms dealers in Paris, New York, or the PCs' home city. The GM may test his players' wishes. If, as their PCs hear the desperate pleas for help by the NPC propagandist, the players have nothing for their GM but blank stares, this encounter will develop just into an old-fashioned local pulp with a bit of Spanish flavor, and no trip to Spain will take place.
5. *"I was young and foolish."* If a US campaign takes place several years later, any character having a liberal leaning may have attended pro-Republican rallies, and he might have been a donor. This might have earned him an FBI file and possibly a crypto-communist label, and God help him when the witch hunts begin. American and British veterans of the International Brigades also had a bad Reputation in certain circles (or an embarrassing Secret) for some time. This might be a starting point.

Adventure Seeds And Character Types

An incredible variety of character types might get involved in the SCW. Depending on what they are and why they are there, different adventure seeds are immediately obvious.

- **Cloak and Dagger in the '30s.** At the beginning of the war, emissaries of the least equipped factions (especially the Anarchists) combed the European arms markets, desperately buying WWI junk, and were often cheated by unscrupulous middlemen. Envoys, diplomats and propagandists tried to whip up support, either on secret missions or through public (and often tumultuous) rallies. Refugees hid in France from the assassins hunting them. All promising adventure seeds!
- **Any Exotic Cliffhangers Adventure Set in Spain.** Unattached adventurers might be traveling through war-torn Spain for reasons of their own (see option 3, above). However, as civilians with no official status, they might face difficulties. They could be forced back at checkpoints, have their car requisitioned, be suspected of spying, and even be pressed into military service! If they avoid such pitfalls, they may go on with their own agenda.
- **Neutrals in the War.** The heroes may be journalists, military attachés, diplomatic personnel, Red Cross envoys, and the like. These may move through one side's occupied territories, having more or less effective safe-conducts and passes. Often, frontline areas will still be off-limits. Their task will range from reporting about the war, to gathering intelligence data, to carrying out a specific mission.
- **Persecution.** As Spain was split up between the two sides, anybody could be trapped deep within the opponents' territory. The "limpieza" (cleansing) was a bloody affair on both sides. In extreme cases, you could be put to death because you weren't wearing workman's overalls, or, conversely, because it was known you didn't go to Mass. So it would be a challenging adventure to travel through the enemy rear areas and cross the front lines.
- **War and Politics.** Both the "neutrals" and anyone in the military can get involved, willingly or not, in the internecine strife on both sides. Among the Nationalists, these were handled in a subtler way, while on the Republican side they sometimes erupted in a "civil war within the civil war." Creating the right background for such an adventure is rewarding but difficult, unless you read some of the sources, below.
- **Straight Military Adventure.** As said above, the SCW offers a wide range of possible warfare events: from WWI-style trench raiding to mechanized strikes, and anything in between. See the following section.

And Your Uniform Looks Like This: . . .

The great boon of the SCW is the incredible variety of troop types. Of course you may have your ordinary drafted peasant boy. But you can have much more intriguing characters, too, including several types of foreigners:

- **Nothing New on the Andalusian Front.** This is the "realistic treatment" described in the Introduction, above. Any beleaguered, under-equipped infantry will fit the bill. Only for those who really love realism. Note that interesting elements could be added if the unit includes royalist Carlists, fanatical Falangists, Basque nationalists,

hard-line Communists . . .

- **Columna (your name here).** The early Republican militias are always interesting. Their "columns" were haphazardly equipped, colorfully if scantily uniformed, and led with more enthusiasm than competence. Anybody having army experience was by definition liable to be secretly siding with the rebellious generals. These units will include militiawomen, fanatics of all left-leaning stripes, Anarchist columns were officers are elected and orders voted . . . They are ideally suited for really chaotic ambushes against advancing army units, and for urban guerrilla.
- **Dogs of War.** The Republicans hired foreign pilots, and some of them were just mercenaries. They also employed paid tank drivers, mechanics, etc. Their attitudes will be opportunistic, and interesting contrasts can arise with the idealists in their units. As they provided cutting-edge expertise, their adventures will involve high-tech warfare.
- **Kill the Infidels!** The Nationalists employed Moroccan units. These provided cheap but eager cannon fodder and a warrior-like attitude, as well as, probably, the best cavalry in the war. They were notorious for massacring prisoners, raping and looting, so roleplaying them wouldn't be easy; but, somewhat understandably, they saw the enemy as worthless infidels and legitimate war prey.
- **For the Ideal.** Both sides had foreign volunteers; most were for the Republic. They chose when to come, but couldn't choose when to go. The volunteers for the Nationalists went into the Spanish Foreign Legion (most noticeable was the 15th Irish Bandera); on the Republican side, they served mainly with the famous International Brigades, but also in other foreign units. These all tended to be seen as crack units, so they can be roleplayed as they fight in tough spots.
- **We're on Our Own.** Guerrillas, snipers, special-ops teams, and *dinamiteros* may have great freedom of choice as to the means for accomplishing their mission, possibly behind the lines. Special-ops are a good way of involving PCs in battle, without having them chafe under orders. The Columna de Hierro (Iron Column) had its own night-action unit called the "Hijos de la Noche" (Sons of the Night). From among the Asturian miners came another SCW specialty, the *dinamiteros*, who, armed with demolition charges, spearheaded assaults against buildings and even tanks.
- **Just a Job Abroad.** Italian, German, and Portuguese soldiers were sent in by their own nations; Russian advisers also came. They were subject to their own nation's priorities. roleplayers can try on the uniform of half-starved Italian militiamen who send the money home while cursing the day they volunteered, fanatical Nazis or Fascist officers, German professionals who're there just to field-test new aircraft and tanks, or Stalinist agents whom everybody described as champions of duplicity.

Sample Characters

Jordi Martínez, Local Anarchist Leader

ST 10 DX 11 IQ 12 HT 10

Advantages: Charisma +2, Patron (FAI, reasonably powerful organization providing equipment, on 9 or less), Reputation +2 (Fearless people's champion, Anarchists and leftists) Sensitive, Strong Will +1

Disadvantages: Enemy (Police, on 6 or less), Fanaticism (Anarchy), Impulsiveness, Intolerance (exploiters), Reputation -3 (Anarchist scum, occasionally recognized, class enemies), Struggling

Skills: Area Knowledge (Barcelona)-12, Bard-16, Brawling-12, Guns (pistol)-13, Leadership-15, Philosophy (anarchy)-13, Politics-11, Professional Skill (Printer)-14, Streetwise-12, Tactics (urban guerrilla)-11, Writing-12

Quirks: Expansive; Francophile; Prolix Speaker.

Like many Anarchist leaders, Jordi is charismatic and relies on consensus. He's also a clever propagandist and speaker. He has access to his employer's printing works, which he exploits to print Anarchist propaganda. He has taken part in past riots and upheavals, gaining experience and nurturing his fanaticism; he'll easily adapt now, since he already sees the relationships between classes as a war.

Luis Castells, Nationalist Cavalry Officer

ST 10 DX 12 IQ 10 HT 11

Advantages: Acute Vision +2, Military Rank 4, Patron (UME, small group, on 6 or less), Status 2, Wealthy

Disadvantages: Bloodlust, Edgy, Fanaticism (Patriotism), Sense of Duty (to the Army and military traditions), Stubbornness

Quirks: Staid; Often frowns.

Skills: Dancing-12, English-9, Fencing-12, Guns (pistol)-14, Guns (rifle)-13, Leadership-11, Literature (Spanish)-10, Riding-15, Savoir-Faire-11, Tactics-9

Luis is a representative of the upper officer class; from a high-status family, he's a staunch patriot but his concept of Spain is outdated. He's narrow-minded and fiercely opposes changes. He's presentable in high society and flashy on horseback, but he's a poor tactician and modern warfare will come as a surprise to him. Being a member of the Union Militar Española, i.e. the rightist organization of officers, he's in on the coup, too.

A SCW Subplot/Introductory Adventure

Take a main plot that can be summarized as "Find the Item." It is a classic theme not only for *GURPS Cliffhangers*, but also for *GURPS Cabal*, *Horror*, *Espionage* etc.; such an adventure is easily procured or written. Then set the adventure in Spain, in July, 1936, and add the following subplot. It will make for a good introductory adventure for the SCW.

The Item is small (book-sized?). Clues point out that it is kept at a Benedictine monastery on the Tibidabo hill overlooking Barcelona. As the party arrives there, they discover evidence that the Opposition (defined in your main plot) is on their heels; they are after the Item, too.

Thanks to their Contacts (or the GM) the adventurers have a local contact: Carlos Castells, a rich, old Catalan businessman. He's courteously old-fashioned as the nobleman he is not, and he insists the PCs be his guests at his downtown mansion. He arranges a meeting with the Abbot for the following morning. At dinner, a formal affair, the guests meet his son and daughter: Luis, a stiff-necked cavalry officer, and Cristina, a dark, haughty beauty (romantic distraction if needed). Over dinner, they'll talk politics; the old man is aware of the hardships of the lower classes and seems a humane employer, but he just can't stand Anarchist destructive ideas. The son is less tolerant, and says, "Traitors should be hanged!" Sensitive characters will understand the waiter dislikes Luis.

The following morning, the meeting with the Abbot is unsuccessful; no matter what wiles the PCs may employ, he's backed by other monks and won't budge. If the PCs are polite, have suitable academic credentials, and insist that they just want to examine the Item, the most they can get with a Good reaction is that the Abbot promises he'll consider their request. As they leave the monastery, the PCs will see a mob of some ten baton-wielding thugs in blue shirts knocking the daylights out of a couple of youths, while others are running away, and the bystanders have mixed (but cautious) reactions. This is a turning point. If the party slips away, they'll have a more difficult time with Anarchists later. If they try to call in the police, this will take a lot of time, and the thugs will get away leaving two badly wounded and unconscious bodies behind. If the PCs intervene, they are involved in the fight. If they use guns, one or two of the thugs also have revolvers. Unless the PCs really blow it, chances are this unexpected attack will make the muggers flee, without too much bloodshed. One of the youths carefully looks at the faces of his saviors as he thanks them and helps the other to stumble away; he'll refuse any further help by the party. Behind, they leave a few badly printed leaflets, containing Anarchist ramblings against private property and exploitation. If the players seem not to grasp the social implications, or if no character speaks Spanish, have a friendly English-speaking bystander comment upon the event.

In the afternoon, the PCs may get involved in anything having to do with the main plot (including possibly an attack or diversion sponsored by the Opposition), or in further research about the Item; but in the end they meet Guardia Civil men wearing the outdated bicorn hat who take them to their barracks "for a few questions" (make sure the players don't attempt something foolish). The PCs wait for a while in a smelly room together with a beaten man (some more background if you wish), then they are individually questioned by an officer. He says they have been identified, but doesn't seem 100% sure. He wants to know how they became involved with a "peaceful demonstration" by Falange party members and whether they know anything about the "Anarchist subversives who caused the disturbance"; however, he's clearly curious about the reasons of the party presence here. He's got Interrogation-14, and anything a PC blurts out about the Item will eventually be reported to the Opposition.

If the party did not actually fight against the Falange goons, they'll be released. If they did, but the fight did not cause severe injuries, it will take a Good reaction roll. Otherwise, they are "temporarily detained." The same will happen if they try to bribe the officer, who takes offense and throws them all in a holding cell together with several tough guys (time for a sideshow brawl). Even if the party is released, any guns are confiscated. Early in the morning the PCs are awakened by rifle and MG fire. If they slept in their beds, Don Carlos will plead for them to remain in the mansion while he sends someone to gather information; but it will turn out only the oldest servants are present, and Luis isn't there, either. If they are in the barracks, a young Cabo (corporal), together with two other Civiles, will nervously bring out a few prisoners. Shots are then heard. After a worrisome wait, the same three guards return. But the nearest prisoner goes berserk and attacks the Civiles, promptly imitated by others. The PCs should be able to take the opportunity; the guards are armed with unwieldy bolt-action rifles while the cell and corridor are cramped. The barracks is manned by about 20 men, but as the prisoners storm out, it is assaulted from the outside, too. The surviving Civiles are lined up against the courtyard wall, near the bodies of the executed prisoners, to shoot them; the PCs may get involved in this, or not. They might also retrieve guns (either their own from a storing room, or rifles).

One way or another, the party should be free to roam through a city in the throes of the attempted coup. Their intention should be to reach the monastery and try to get the Item. But this won't be so easy. The main streets are blocked by barricades, roadblocks, and on-going firefights between army units and improvised militias. If the party takes to the back alleys, make it tough for them with Orienteering rolls (failure results in a dead end) and snipers. They see a church on fire (which should encourage them to reach the monastery!). There will be chaotic urban warfare scenes, with eerily empty streets suddenly bursting with badly-aimed fire, unseen snipers taking down scurrying civilians, howitzer fire randomly falling on popular neighborhoods and platoons of soldiers running around aimlessly, while ominous explosions can be heard in the distance. Nobody the PCs question seems to know a thing, but wild rumors abound.

In the end, they stumble into an Anarchist ambush. At the last moment, the militiamen hold their fire, but they capture the party. The unit's commander is Jordi, who will thoroughly question these foreigners. If the PCs helped the young Anarchists, Jordi sends for someone, and after a while one of the two youths shows up and identifies the PCs, which thaws Jordi's attitude; if they did not help, Jordi will be suspicious.

If Jordi becomes friendly, he releases the party, but without guns; they'll be given a scribbled, generic safe-conduct that Jordi ceremoniously stamps in red ink with block letters: FAI (Federación Anarquista Iberica; he will be annoyed if the PCs laugh when they see the stamp is a carved potato, and he launches into a political harangue). If Jordi has no reason to be friendly, the PCs will be detained for a longer time, and in the end they are released without guns, safe-conducts, nor personal belongings. While they are detained, they'll see a firing squad executing two officers and a priest. Make another reaction roll; on a Poor or worse result, Jordi will have a militiawoman shadowing the party, just to keep tabs on them (Shadowing-10, Area Knowledge (Barcelona)-12).

What happened during this encounter will determine whether the PCs arrive at the monastery before it is attacked, or not. If they do, unfortunately the frightened monks won't let them in; but they will be present as an angry crowd starts gathering, and as a group of Anarchists arrives with a beam, which they use to ram down the gate. So they should have more time to devise a strategy (see below). If the PCs arrive late, the mob is already roaming through the monastery, mistreating the monks and throwing furniture and books in the cloister for a big bonfire. This should be a scene of madness and chaos, with excited vandals throwing out things that closely resemble the precious Item.

The PCs are now unarmed and have to figure out a non-combat way to save the Item. It might be already in the pile, or still where it is normally stored, or the Abbot may have had time to hide it, together with other valuables, in a secret chamber (which has to be discovered). The party might try the following methods (in parentheses, Skills and Advantages they should be using to improve their chances -- most of the options will require knowledge of Spanish too!).

- Create a distraction to scare away or attract elsewhere the crowd or at least most of it. (Tactics)
- Call in an enemy force. (Fast-Talk, Contacts)
- Plead with the leaders for this monastery to be transformed in a "people's museum." (Bard, Charisma, Voice)
- Sneak into the monastery, find the Item in its hiding place quickly, and spirit it away. (Stealth, Acting, Architecture, Holdout, Intuition)
- Show the safe-conduct and bluff their way in, saying they are on a mission on Jordi's behalf to retrieve the Item (Fast-Talk, Acting, Charisma). This is a bad idea if they have been shadowed here by Jordi's observer; see above.
- Anything else your players may dream of, possibly a combination of the above if the party is large. Try to reward roleplay and ingenious solutions.

Even if they fail, the Item can survive the bonfire if the Abbot managed to hide it. But it will be in the monastery. The problem is, the Opposition is now aware of its location, and if it isn't safely in the PCs' hands by midnight, they will send someone in to retrieve it!

At this point, you can ad-lib. Whoever has the Item now, they might want to leave Barcelona and possibly Spain, too. Or if your players are having a good time in the SCW, just go on! If an Opposition team has the Item, let the party hunt them through war-torn Spain or through boiling Barcelona. If the party has the Item, they'll be hunted in turn. Don Carlos is going to face a firing squad in a few days, while Cristina is being detained in a filthy prison; both could make use of some help. Luis has fled the city and, unbeknown to the PCs, has contacted and informed the Opposition; he might become their tool if he can reach the Nationalist forces in Saragossa. Jordi may avail himself of any military expertise the PCs might be willing to provide, but he won't like it if he discovers they have abused the safe-conduct he gave them!

Historical Sources

These are just general introductory works in English. When it comes to the SCW, there is no such thing as an "unbiased" book. Hereinafter, L stands for left-leaning, R for right-leaning.

- *The Spanish Civil War*, Gabriele Ranzato (L). A booklet containing all main facts.
- *A Concise History of the Spanish Civil War*, Paul Preston (LL), a quick read explaining the reasons of the war.
- *The Spanish Civil War*, Hugh Thomas (R). The classic (bulky) study, containing a few minor mistakes as to military history.
- *The Spanish Civil War*, Antony Beevor (RR), for another (anti-Communist) point of view.
- *Spanish Republic and the Civil War, 1931-1939*, Gabriel Jackson (L), focusing on the Republic.

Fictional Sources

Remember they are just that -- fiction.

- *The Fifth Column -- and Four Stories of the Spanish Civil War*, Ernest Hemingway. More useful for mind-sets than for actual facts, but invaluable as a source for besieged Madrid.
- *For Whom the Bell Tolls*, Ernest Hemingway. Needs no presentation.
- *Homage to Catalonia*, George Orwell. Very useful for the brutish trench warfare setting; also for the internecine fights within the Republican side, but don't take this part as gospel.

The Spider's Dungeon

by Steven Marsh

The Premise

"The Spider's Dungeon" is a Fantasy/Horror crossover adventure seed for any number of adventurers (although it shouldn't be difficult to adapt the basic idea to other genres and campaigns). It is designed for any non-traditional Fantasy setting, like a political *Vampire: The Dark Ages* game, an exploratory *Mage: The Sorcerers Crusade* campaign, a world-spanning *Exalted* saga, or an atmospheric Horror-tainted *Earthdawn* game.

The heroes begin in a tavern. An old man comes up to them with a map, and an incredible tale. It is imperative that they find the Orb of Ovnok. This device, having lain dormant for ages, has been discovered by the forces of darkness in a nearby dungeon. It falls to the heroes to enter the catacombs, thwart the evil ones, and reclaim the Orb. Then it will fall to them to either protect it, or return it to the old man. Though the challenges are extensive, the heroes should be able to overcome them and emerge triumphant.

The next adventure, the King's champion meets the heroes at their tavern with an awful problem: the beautiful princess of the land has been kidnapped by the forces of darkness, and taken to a long-abandoned tower! It will fall to the heroes to rescue her from the evil wizard who has spirited her away, intent on using her for his dark rituals.

And so on. Each adventure, the tavern will be awash with petitioners -- one at a time -- with a problem that threatens the entire land. And it will fall to the heroes to explore the dungeon, tower, catacomb, or castle the problem directs them to.

And all will be right with the world, until the heroes notice something.

The weather hasn't changed.

It's always a beautiful temperate day, with a shining sun and a cloudless sky. In short, the weather is perfect for adventuring, and has been for as long as they can remember.

At this point (or before!) the heroes might start to get suspicious. The world doesn't seem to present the same challenges it did previously. Political rivals aren't plotting against them. The call of far-off lands no longer beacons. The previous omnipresent threat of Horror-taint doesn't seem as prevalent (except, of course, in the dungeons they explore). It seems a perfect world for the would-be adventurer.

In fact, if the heroes try to leave, the world will seem to discourage it. Or, at least, it won't seem to make a difference. Throughout the land, the forces of good in need of champions will know which tavern to stop at, seeking the help of heroes. For that matter, there will be no shortage of taverns . . . all of them similar enough to be comforting.

Eventually the heroes will escape (see below) . . . and wake up.

There, in the maw of a Trap, they will discover that their entire collective experiences -- from when the old man first came to them regarding the Orb -- have been a figment. Instead, they have been motionless, sharing a figment world of mundane challenges, designed specifically to keep them docile and unquestioning. Starving, surrounded with their own filth, and gnawed by vermin (or the trap itself), it will fall to the heroes to escape, and fight their way out.

What Really Happened

The true story depends on what kind of campaign the heroes are normally a part of. In a political campaign they may

have been lured into the dungeon of a rival, who sprang the Trap on them. In an exploratory game they may have stumbled across the Trap in any environment they might normally have been exploring (far-off lands, hidden caerns, mystic realms, or the like). In a campaign with horrific elements, they might have attracted the attention of Something Man Was Not Meant To Know That Likes To Play With Its Food.

Regardless, the adventure begins *En Medias Res* (although the heroes don't know it); they have already sprung the Trap, and are dealing with the consequences.

The Trap

The Trap is designed to make those in it as docile and unquestioning as possible. To that end it creates a figment world, based off the experiences, thoughts, and memories of those in the trap. It is, however, not very creative, relying on permutations of standard ideas and stories to keep those within "entertained." Thus it can only create what would be described as "dungeon crawls," with simple goals and little interaction. (In actuality it probably doesn't even need to create *that* . . . standard dreams of sex and money would be enough to keep most of the Trap's victims occupied. But the heroes are made of sterner stuff than that.)

The exact nature of the Trap is left up to the GM, and should be consistent with the existing campaign world. Some possibilities include:

- **Magical.** The Trap is a spell or device that links the minds of those within. It cannot kill the party by itself, but it can slowly starve them and leave them exposed to their enemies and the elements. Once the party escapes, they will not need to worry about the Trap anymore, but whatever set it is likely to be waiting in the wings.
- **Organic.** The Trap is actually a creature that has attached itself to the party. It may either be devouring them physically (perhaps by slowly digesting their bodies), or mentally, maybe by feeding off their thoughts or savoring the anguish of their attempts to escape. Regardless, once they break free of the figment world they will need to fight or escape the entity.
- **Spiritual.** The Trap is a side effect of having traveled to (or been trapped in) some other plane, extradimensional space, or dream realm. Once they escape the figment world they may not be in any other immediate danger, but they may need to find their way home.

Both in and out of game, the Trap is willing and able to do whatever is necessary to "hook" the PCs. If the adventurers are only interested in tracking down tomes of arcane lore, then there will be rumors of ones with the Orb/Princess/whatever . . . rumors which will prove true, even though the tomes will be meaningless. If one of the heroes isn't interested unless he discovers more facts regarding his long-lost father, then it will hint that he might find that information in the dungeon . . . and generate those "facts" again as a reward. (Of course, these facts will probably be based on the heroes' own beliefs or suspicions; the Trap is unable to fabricate truly interesting resolutions.)

The Figment World

Out of game, "The Spider's Dungeon" is a wonderful chance to introduce more traditional "dungeon crawls" to fantasy games that otherwise wouldn't be able to support them. Although this adventure will eventually turn very ugly, before then it can be a nice change of pace for all involved. It will fall to the GM to determine how much fun everyone is (or isn't) having, so he can pace the adventure's revelation. Some groups might like several figment world adventures (the idea of sending Vlad the Eighth Generation Angry One through more "traditional" hack 'n' slash fantasy challenges can be appealing), while other groups may grow bored quickly. The GM will need to be careful; the goal is *not* to present a series of boring scenarios to the players, but to offer straightforward challenges to them when they are normally expecting something else.

Regardless of how much fun everyone is having, the GM will need to eventually pull the rug out from under the players. This, too, will require finesse and empathy on the part of the GM. Players may react poorly to learn that the last month's worth of adventures haven't "counted." The GM would do well to try to make sure other opportunities for lasting effects present themselves. For example, any PC interactions with each other will "matter," and be real, even if

their environments weren't. Likewise they may be able to glean insight into themselves, their own thoughts and desires, and each other, drawing satisfaction from that. (If nothing else, any experience points received in the figment world are retained.)

In game, the figment world should be "fun" (more actually, "challenging" . . . although the distinction for many heroes is elusive) while being consistent with the campaign, albeit in an uncreative way. Thus whatever monsters or adversaries are prevalent will remain such in the figment world. The figment world won't create goblins, demons, or zombies where none exist, but if they *do* exist, it won't be afraid to use them, even if logically it wouldn't make sense. For example, you can have your 10' x 10' room with 27 orcs standing around (waiting to be attacked) or a dragon in the middle of a dungeon with passageways too narrow for it to ever have gotten in there. Attempts to discern history of items, locations, or people will be overly broad and somewhat boring: "Long ago, the Temple of Parool was devoted to goodness and light. But then it came under attack from the forces of darkness, led by the dreaded Zalrakark . . ." Earth-shattering quests and adventures will fail to have any repercussions once completed. This is the time to dig up and modify those decades-old adventures you have sitting around.

Discovering The Trap

How the party discovers the Trap will, again, vary from group to group, and should be adjusted accordingly. The fact that the universe seems to be handing them challenges completely unlike what they are used to should be a clue. So should their inability to meaningfully advance their own subplots, researches, and intrigues; any attempts will be unsatisfied and boring, and ultimately lead to the "dungeon crawl." ("After a week of research, you are unable to discover any illicit deeds by Viceroy Fang. In frustration you return to your favorite tavern, where you catch the eye of an old man who seems to be waiting for you . . .")

Attempts to flee the figment world's attempts at keeping the heroes occupied will be met with passive resistance. Journeying to other lands merely transports the dungeons/towers/caves to those new lands. Refusing to go on a quest simply means the figment world creates another one, hoping that one will spark the victims' interest more.

The Trap will be most easily discovered if the hero does something uncategorically out of character or illogical (like slapping a respected authority figure, going to sleep in front of a raging dragon, or drinking lava). The figment world can only respond to things the way the hero might expect them to; without any solid basis in reality, those actions cannot have responses. Thus the authority figure wouldn't notice being slapped, the dragon waits for the hero to wake up, and the lava is warm and soothing.

Escaping The Trap

Once they are aware of it, the heroes will probably try to escape the Trap. (Of course, good roleplayers might have fun with the idea that they don't *want* to leave the Trap . . . especially if the "real" world is particularly difficult, painful, or miserable for the victim.)

How, exactly, the heroes escape is again up to the GM; here are some possibilities.

- **Discovery:** The simple act of discovering that reality is not what it seems may be enough to shock them out of it. Although not terribly satisfying, this method can be useful if the players have had a difficult time seeing through the ruse.
- **Completion:** It's also possible that finishing a certain number of quests or adventures will tear the Trap; it may simply have run out of ideas. Again, this solution is less than satisfying, but it's also good if the players haven't figured out what's going on.
- **Investigation:** William Poundstone's advice for making sure you were in the real world -- as opposed to a dream -- was to keep a book of limericks. If you were ever unsure of your state, turn to a random unread limerick; if it made sense, you were in the real world (since it's difficult to make up a good limerick on the spot, let alone in a dream). Although it seems ludicrous, something like this might work. The heroes might simply seek a situation or object where they couldn't possibly know ahead of time what was going to happen, and do it. Of course, it

falls to the heroes to figure something out (though a sadistic GM might send the heroes on a quest for the Tome of Enlightenment . . . only to discover it's a book of nonsensical limericks!).

- **Willpower:** If a hero is sufficiently strong-minded, he might be able to simply exit the faux reality through sheer force of will. (He may even be able to force himself *back* into it!) At most only one hero should be able to do this . . . it will fall to him, then, to try to save his compatriots.
- **Pain:** The Trap will go out of its way to keep from seriously harming or killing anyone in the figment world; otherwise it would need to fabricate another world for that dead person, which would tax its resources. The heroes may notice this, and discover that sufficient pain in the figment world can snap them out of it.
- **Death in the Waking World:** The heroes *are* trapped in the real world, and what happens there will have an effect on the figment world. If they can't work a way out themselves, then, they may be stuck until one of the party is digested, devoured by rats, or slain by their trapper. (Ideally this would be an NPC, since having a hero die off-camera this way is seldom satisfying.) The effect in the faux world would be immediate as that person died, quite possibly without a seeming reason.
- **Suicide:** Possibly the epitome of the Pain option, attempting to kill oneself in the figment world may well "pop" a hero out of it and into the real world. Of course that would require some cautionary prompting by the GM ("Are you *sure* you want to do that?"), possibly creating a good roleplaying scene. And it's up to the GM to see what effect that would have . . .

Back in the Real World

The "climax" of the adventure should, ideally, be the beginning of the horrific part. The heroes will emerge again in the real world. A dramatically appropriate amount of time will have passed (enough to make life *very* difficult). Disoriented, starving, and digested/gnawed/wounded, they need to defeat either the Trap (if it is alive) or whoever placed the Trap.

And things might be worse . . . they may need to escape wherever the trap *was*. (Particularly sadistic GMs may want to put it in the climactic room of the first "Orb of Ovnok" adventure, making that the only "real" dungeon, and meaning they would need to fight their way out in such a weakened condition.)

Running "The Spider's Dungeon," and Variations

This adventure should only be attempted if the GM is feeling particularly brave, and he believes the players will have fun. Although it plays with one of the major presumptions of players (that the world the GM presents is "real"), it can also feel like wasted time. *Know your players*, and don't make them feel you've violated the GM trust. It's a *very* fine line between interest and frustrated boredom. It is much better to play it safe than to risk boring your friends.

The theme of this game ranges from optimism in the beginning, to confusion as the nature of the world unfolds, to panic and helplessness as the trap is sprung. The heroes will be in a situation they may not feel comfortable in at peak performance, let alone having been through hell (or at least a dungeon crawl). Ideally the players will emerge from this feeling like they have taken on the worst that *two* worlds can offer, and escaped it.

Of course, evil GMs might make the heroes wonder if their victory wasn't *too* easy . . . once you know you've left reality, you can never be sure you've returned.

As a variation, perhaps time in the figment world *is* a paradise (of sorts) to the right characters. (This is especially true if the Trap doesn't directly harm those within it.) If the Trap could be controlled, it might be a tempting place to visit . . . or place others (voluntarily or otherwise).

Demystifying The Computer

Optional Rules for *GURPS* Computers

by Michael J. Daumen

Though *GURPS* campaigns can range far into the future, in game terms they have progressed little since the advent of the personal computers of the late 1900s. Existing rules simulate a wide variety of computing devices with only a few variables: weight, volume, power, cost, and Complexity. All *GURPS* computers use today's technology; however, computers didn't work that way in the past, and they won't always do so in the future. *GURPS Steampunk* addresses machines that might have existed a century ago, offering some variations to traditional models. But the computers of tomorrow have been given little attention.

Alternate technologies for computers have many applications in modern-day and futuristic *GURPS* settings. Cutting-edge processors may power the advanced labs of a supers campaign, or be the target of corporate or government espionage. They may be the prerequisite for the self-aware AIs of the cyberpunk genre. A starfaring civilization relies on computers for astrogation and the storage of a galaxy of scientific knowledge. The future even holds a place for the analytical engines of *GURPS Steampunk* on planets that have regressed from galactic technology (as in *Traveller's* Long Night), or have developed along alternate scientific paths.

GURPS rules assume that a computer is electronic -- data is stored and manipulated through electrical control of binary switches and gates. In the last fifty years, successive generations of computers have become smaller, faster, and cheaper. But there are physical and chemical limits to the size and speed of microchips; as the twenty-first century begins these barriers are in sight. Advanced technology books in the *GURPS* system do not address the fundamental limits of current machines or the options available tomorrow.

The other major disadvantage of electronic computers is their vulnerability to electromagnetic interference, whether from a nuclear explosion or eavesdropping. In our world, most people use computers without this concern, but in some *GURPS* futures (especially those involving space combat and post-apocalyptic radiation) it is an important consideration. Current rules allow computers to be hardened against pulse damage at an increase in weight and cost. Machines from both the past and the future have varying degrees of protection from this problem.

GMs who want personal or vehicular computers with more detail can follow the design process outlined below. There are no new variables to add, just a description of the technology used to make computations.

1. **Select designing TL.** Computers as most readers know them were envisioned in the mid-19th Century and attained familiar forms in the late 20th Century. However, mechanical calculators have existed for centuries. TL determines which technologies are available, and affects the Complexity of the computers that use them. Mechanical Computers can be built in any period, but reach their peak at TL5 and are outperformed by later technology. Vacuum tubes appear in TL6 and obsolete by TL7. Optical computers are perfected in TL8 and quantum devices in TL10. Neither advanced technology becomes obsolete at higher TLs.
2. **Select computer size.** The weight, cost, volume, and power requirements of computers restrict their uses in vehicles and campaigns. Most of the sizes and specifications in Table 1 are "standard" sizes from G:VE61. The Tiny and Megaframe sizes appear in G:STM85; the latter is too unwieldy at high TLs! Many *GURPS* rulebooks have figures which differ slightly; consider this table as a guideline when confronted with inconsistencies. Once a GM knows a computer's size and TL, its Complexity is easily calculated.

Table 1: Computer Parameters

Size	Weight (lbs.)	Volume (cf)	Cost (\$)	Power (kW)	Complexity
<i>Tiny / Tablet</i>	2	0.04	\$500	neg.*	TL-7

<i>Personal / Briefcase</i>	10	0.1	\$1,000	neg.*	TL-6
<i>Miniframe</i>	50	0.8	\$15,000	neg.*	TL-5
<i>Microframe</i>	400	4	\$40,000	0.1	TL-4
<i>Mainframe</i>	500	10	\$200,000	1	TL-3
<i>Macroframe</i>	2,000	80	\$2,000,000	10	TL-2
<i>Megaframe**</i>	25,000	500	\$12,500,000	100	TL-1

* Can runs independently on power cells (see p. S65)

** Unavailable after (early) TL7. Cannot be built with optical or quantum technology.

3. **Select computing technology.** The specifications in Table 1 are based on electronic computers used in the present day. Table 2 shows how other technologies will affect the specifications of the computer. Alternate technologies have certain features built in to their computers.

By TL7, the two primitive technologies are totally supplanted by electronic machines. This "early" obsolescence cuts off the cost and size benefits of designing machines at higher-than-minimum TLs. Mechanical computers built after TL6 and vacuum tube computers built after early TL7 are no better than their ancestors -- they are merely historical curiosities. In other circumstances, halve (or quarter) the cost, volume and weight of computers built at one (or two) TLs higher than a technology's minimum TL.

GMs who desire even more detail can represent the wide variety of electronic computers by splitting TL7 into "early" (transistors), "middle" (integrated circuitry), and "late" (microchips) TL7. Multiply the parameters of early TL7 devices by 1.25 and late TL7 devices by 0.75 to reflect these developments.

Table 2: Computing Method

	Mechanical	Vacuum Tube	Optical	Quantum
Weight Multiplier	x5	x2	x2	x0.5
Volume Multiplier	x5	x5	x1.5	x0.5
Power Multiplier	x10	x4	x1	x7.5
Cost Multiplier	x0.1	x0.75	x7.5	x12
Features	Dedicated**; Hardened	Dedicated; Hardened	EMP Resistant***	EMP Resistant***
Minimum TL	5*	6	8	10
Maximum TL	6	early 7	none	none

* TL5 is optimum technology; see GURPS: Steampunk for mechanical devices at lower TLs.

** If not dedicated, reduce Complexity by 2.

*** Resistant to pulse damage but not TEMPEST interception (but can be for double weight, volume & cost)

4. **Select terminals and special features.** Computers be additionally made Compact, Dumb or Genius, Dedicated, or High Capacity (as outlined on p. VE61). Any computer made at TL6- is Dedicated at no change in stats; otherwise reduce Complexity by 2. Electronic computers can be hardened per the normal rules.

The addition and use of terminals is unchanged -- see p. VE62.

5. **Complete description.** The only additional piece of information necessary to record is the designing technology. A useful format is:

[TL] Name: [features] [technology] [size], weight, volume, power, cost, Complexity.

It is not necessary to record negligible power requirements. If a TL6- machine is not dedicated, note this in parenthesis after the Complexity.

Example: A GM wants to create wrist-mounted computers for scientific use. The base size is Tiny/Tablet and the designing TL is 10. A design using optical technology would cost \$500 times cost multiplier (7.5) and divided by 1/4

for two increases in TL (\$937.50), weigh 1 lb., and have a complexity of (10-7=) 3. While its components will withstand the radiation from a nuclear blast, the handcomputers will still be subject to remote surveillance.

TL10 Wristcomp: Optical Tiny/Tablet, 1lb., 0.02cf, \$937.50, Complexity 3.

It's a bit more work to convert *GURPS Space* or *GURPS Traveller* ship modules. Replace the given computer system with its counterpart, then recompute cost, weight, and volume. Ignore hull space changes of less than 0.25 -- round up or down to the nearest half-space.

Example: The captain of the *Melisande* needs to replace his ship's combat-damaged TL8 mainframe. Unfortunately, his hasty retreat has brought him to a TL6 planet. Rather than staying stranded, he decides to replace the old electronic system with a vacuum tube clunker. To run his astrogation program of Complexity 3 he opts for a vacuum tube macroframe computer with genius capability. It will weigh 4,000 lbs., take up 400 cf of space, and cost \$10.5 million of his high-tech cargo. The modification increases the weight of the small bridge from 2.9 to 4.5 tons and the hull spaces to 1.5. He can take some consolation that his system is still hardened with no extra cost. Complexity will be TL6 - 2 (for macroframe size) - 2 (he wants to run multiple programs, so takes the penalty for an undedicated system) + 1 (for the genius option) = 3, enough to run his hyperspace calculations and one other program. While the repairs are proceeding he'll have to hire native programmers for new software, and add tubewatching duties to the crew schedule!

TL6 Astro-calculator: Genius vacuum tube mainframe, 2Tns, 400cf, \$10,500,000, 40kW, Complexity 3 (not dedicated).

The computer technologies envisioned by this article are explained below:

- *Mechanical computers* have existed since the abacus. The mathematicians Pascal and Leibnitz built complex four-function calculators modern humans could appreciate in the 1700's, but the technology did not progress further until the mid 1800's. Charles Babbage's ideas linked these early models with a unique feature of the Jacquard loom, which could read and duplicate patterns punched into a card. His engines could follow a user's specific instructions for a variety of needs. Babbage envisioned other modern features, including memory storage and printers, but his designs were beyond the manufacturing capacity of his day. Mechanical computers are by nature immune to EMP damage, so a mechanical computer will automatically resist EMP and TEMPEST effects (p. UTT84) without any increase in cost or weight. Mechanical computers for alternate earths and pre-TL5 societies are extensively detailed in *GURPS Steampunk*.
- *Vacuum Tube computers* use the technology that spawned radio and television to make calculations. Electrons jumping through charged chambers take the place of the gears and switches in a mechanical calculator. By World War II scientists in Britain and the United States were operating sophisticated vacuum tube machines for codebreaking, ballistics, and fission reaction modeling. Yet the tubes themselves were bulky, wore out quickly, and required significant time to cool down between uses. Within a decade, transistors were replacing them at great cost and space savings. Still, vacuum tubes are immune to radiation damage and surveillance without any hardening modifiers.
- *Electronic computers* are today's (and *GURPS'*) standard. Wires carrying increasingly available electrical current were less bulky and more resistant to vibration than vacuum tubes. During TL7 transistors, integrated circuits, and microchips each supplanted their predecessors, providing more speed and power at a fraction of the space and cost of earlier systems. But the properties of microchip materials establish downward limits on how small electronics can be. And the heat so many circuits generate causes greater harm to components and performance as size shrinks.
- *Optical computers* use photons in place of electrons, which reduces the size constraints of today's machines. Instead of wires and circuitry, their pathways use lasers and fiber-optic lines. Later refinements allow for two-dimensional films and three-dimensional blocks of optical material, manufactured in microgravity. Fiber optics appear in late TL7, and are used in some TL7 computer designs, but only orbital or contra-grav industries of TL8+ can construct completely optical systems. Optical computers are immune to EMP damage, but not remote surveillance from TEMPEST. Hardening to prevent such surveillance doubles cost and weight.
- *Quantum computers* operate at speeds beyond current computers by increasing the number of states each bit can use. A classical bit, one used in today's equipment, can be either 1 or 0, on or off -- but a quantum bit can be in

both or more states at the same time. Thus, a quantum device can perform many more calculations than a traditional computer of the same size. Current proposals for creating quantum bits use ions trapped in magnetic fields and polarized photons interacting in an optical cavity. Any method adopted will demand far more power than previous technologies. Like optical computers, quantum computers resist radiation damage but must need additional safeguards against TEMPEST interception.

Introduction

by Chad Underkoffler

Hi. My name is Chad Underkoffler, and I get ideas. A lot of ideas. A whole heaping helping of ideas, especially for RPG settings. Now, my gaming groups over the years -- a great bunch of guys and gals, mind you -- has been great about indulging me by running in a number of them, but I get so many that there's just not enough time to play in them all. That's where the idea for this column sprang from, and Steven has been kind enough to give me an opportunity to share them with all of you in "Campaign in a Box."

"Campaign in a Box" (CiaB) is intended to be a handy resource for Game Masters. Every other month, I will give you the core elements of an RPG campaign, ready and waiting for adaptation to your favored game system. I'll offer advice and comments on how to run it, twist it, spank it, and make it your own.

A typical CiaB will usually include:

- Campaign Setting and Background Information
- What Everybody Knows
- What Everybody Doesn't Know
- NPC Backgrounds
- NPC Interaction Matrix
- Items & Locales
- Events and Possible Story Arcs
- Opportunities & Pitfalls
- Other Resources

I hope to try something new -- be it a new perspective, tool, or concept -- every month, subject only to word count and the Editorial Pen. Many CiaBs will contain:

- Genre Advice
- Style Advice

Some assembly required; players not included.

I'm interested in hearing feedback on these columns -- feel free to email me at chadu@yahoo.com or leave a message on the *Pyramid* [discussion group](#) (tag it with [CiaB] in the subject line, please); I'm especially interested in hearing if anyone runs in one of these campaigns! I have plenty of ideas for the foreseeable future (I'm researching my December column right now), but I am interested in any specific genres or crossovers that people may be interested in seeing next year; this input will help me organize which column I work on and send off to Steven next.

Thank you, and enjoy.

Planet Ugarte, Backwater of the Terran Hegemony

by Chad Underkoffler

Genre: Space Opera with a dose of Noir

Style: Adventure, Intrigue, and Drama

Themes: Hard Choices, Self-Discovery, Plots Within Plots

Campaign Setting & Background Information

-- Start Transmission --

Galactic Archive Datafile

Sector: 2112

System: Esskay

Star: Crabbe, K-Ib Type (orange)

Planet Name: Ugarte (Crabbe II, 50 AU)

Planet Type: Earthlike, Low-Iron

Density: 4.5

Diameter: 10,641 miles

Gravity: 1.1 G

Moons: None

Year: 102 Terran Days

Local Day: 35 standard hours

Axial Tilt: 23 degrees

Atmosphere: Oxygen-Nitrogen (0.96 standard pressures)

Climate: Arid; Two seasons -- Dry and Wet

Hydrographic Percentage: 40% surface water; largely tied up in polar caps, 2 small oceans, 1 major river system, numerous oases, and seasonal wadis

Terrain: Ranges from Desert/Barren to Plains/Steppe to Hilly/Rough

Mineral resources: Scarce

Native Flora: Xenobacteria 45A67Q and its descendant strains

Native Fauna: None

Transplanted Terran Flora:

[Engineered] Paragon Poverty Grasses, Gimel series; Hydrobarley; Quanta-7 Millet; Quadrotricale Wheat; ChicagoCorp Desert Citrus species (orange, lemon, bergamot).

[Natural] Wild Olive; Cork Oak; Desert Willow; Smoke Thorn; Pinon Pine; Cliff Rose; Utah Penstemon; Thyme.

Transplanted Terran Fauna:

[Engineered] Beefsnake; Dairysnake; Genetech Bighorn Survival Sheep; McDougal Scorpion; Como Lotaldo Ostrich.

[Natural] Dromedary Camel; Fennec; Egyptian Mongoose; Berber Skink; Kangaroo Rat; Canyon Wren; Roadrunners; Honeybees; Scorpions.

Population: 2 million

Government: Autonomous City-States, Military Meritocracy

Import Restrictions: See Hegemony Importation, Schedule A7

Export Restrictions: See Hegemony Exportation, Schedule Z13

NOTE: Ugarte is under Class VII Egress Restrictions; Authorization Codes from Planetary Governor or Hegemony required

Starport: Port Renault

What Everybody Knows

Arms & Armor: We're talking rayguns and swords. Armor is limited to sturdy leather or leather equivalents. The Star Guard and the Ugarte Planetary Forces tend to pack raygun carbines and cutlasses, and wear ceremonial

breastplates and small pot helms.

Hyperspace, Hypergates and Hyperdrives: Four hundred years ago, the discovery of hyperspace greatly enhanced the speed of interstellar travel. While a few hyperdrive-equipped ships can leap to hyperspace on their own, most ships must enter this dimension through the ring of a hypergate. The hypergate generates a hyperfield, much like the film of soap over a bubble-blowing ring. As the ship passes through the ring, hyperfield receptors on its skin of the ship grab and hold the hyperfield, enveloping the vessel. So long as a charged hyperfield surrounds the ship, it remains in hyperspace. Transition to normal space can be achieved either through shutting off the hyperfield (dangerous and not recommended, except for ships equipped with their own drive and able to power the field down slowly) or by passing through another hypergate. This opened the galaxy to. . .

Massive Human Colonization: Many worlds have been terraformed for human life. In a number of cases, the planets have returned the favor, leading to. . .

Human Subraces: There are a number of human subraces, subtly changed as the different environments, circumstances, and gravities of the colony worlds worked upon the settlers. The heavy-worlders of Koschei and the water-breathing albinos of Thetis are but two examples. And then there are the. . .

Aliens: Sentient, sapient aliens have been discovered -- the Blob Men of Mogo, the Crystal Intelligences of Xarvaan, and the owl-like Huur of Xib' A' Teew are the most populous. No alien race is yet a part of. . .

The Terran Hegemony: In time, a number of strong colony worlds formed alliances with Mother Earth, creating the Terran Hegemony. As time has passed, however, the colonies have become second-class citizens under the iron heel of Earth. The current Hegemon, Tsung Cain, is Emperor in all but name. The fanatically loyal Star Guard is under his direct control, and is responsible for carrying out his cruel fancies with saber and raygun. This has led to the formation of. . .

The Freedom Legion: They fight against the forces of the Hegemon, trying to overthrow the tyrant and restore true liberty to the citizens of the Hegemon. The Star Guard hunts them mercilessly through space, and any suspected collaborator is punished severely -- as is his or her family and neighbors. This has led to many refugees fleeing to places like. . .

Planet Ugarte: A small, arid world. Once a popular vacationing spot for its casinos and therapeutic Green Sands, this backwater of the Hegemony has become a gathering place for refugees, smugglers, spies, and soldiers of fortune; a hotbed of intrigue and danger, a wretched hive of scum and villainy. The Ugarte government based in Port Renault strictly controls access to its hypergate under orders from the Hegemon, but the correct authorization codes (or a ruinous bribe to corrupt officials) allow passage to. . .

The Free Colonies: Outside the harsh rule of the Hegemony, the Free Colonies stand as a beacon to the hopeful. But the Hegemon has dreams of expansion, and war is in the air. But without a strong leader to rally around, the Free Colonies will never come together for mutual defense.

What Everyone Doesn't Know

Precursor Ruins: Beneath the gray radioactive sands of Ugarte's uninhabited southern continent is a city of ancient age -- a lost spaceport of the mysterious Precursors. What lost technologies or discoveries lay hidden beneath this glowing, poisonous waste? Could strange alien beasts still stalk its subterranean streets?

Centurion: The leader of the Freedom Legion, Raymond "Flash" Rogers (codenamed "Centurion"), has escaped the maximum security prison world of Tertius and secretly made his way to Ugarte, to connect with Legionnaires and try to find passage to the Free Colonies. He is accompanied by the deadly but beautiful Wilma Arden (codename "Falcon").

Micro-Hyperdrive: Eccentric genius RP Cody, inspired by her analysis of Precursor artifacts on Ugarte, has developed an experimental hyperdrive that is smaller and more powerful than the standard . . . by a power of magnitude. The high quality of hyperfield retention increases its hyperspeed far beyond what is normally thought possible. She has installed this engine into her small space yacht, *Zeus III*, along with a few other slight modifications. . .

NPCs

Wilma Arden, aka Falcon: Known as "the Nellie Bly of the Hegemony," Wilma Arden is a crusading journalist for Gal-Net, unafraid to print the harsh truths of the Hegemony. That's why Flash Rogers approached her quietly when he discovered the black ops being run under the cover of athletic competitions. The two fell in love, only to be torn apart when Rogers was arrested by the Star Guard for treason. When the (false) news broke that Rogers had been killed in an escape attempt from the prison world of Tertius, she was disconsolate. For many months, she threw herself into her work to ease her pain. Then, while an "observer" (read "war correspondent") during the Arcadia Crisis, she fell in love with Buckminster Gordon. For several weeks, she was happy. On the eve of the Arcadia Crisis blossoming into the Arcadia Pacification, Rogers contacted her again. Caught between her two loves, she chose not to flee with Gordon (saying many things she later regretted), but to secretly join with Rogers and his Freedom Legion. She's been fighting the Hegemon ever since, with her exposes and investigative reporting, but the other shoe is about to drop: the Star Guard suspects that she is codename Falcon. She and Rogers have fled to Ugarte in an attempt to get out of Hegemony space, and find themselves trapped until they can get forged transit codes to the Free Colonies, one way or another. Her cover story is that she's on Ugarte to write an article on the upcoming Sandrace over the radioactive Great Nookrak Waste.

Dena Iridian Bey: As a penniless refugee of the pacification of New Venice, what else could archeologist Dena Iridian do but submit to the appetites of Commander Oediv, master of Port Renault? A chance meeting with Emray Bey led to xenoartifact appraisal work, which reduced her dependence upon the corrupt official. Indeed, she found herself deeply attracted to the massive smuggler lord, and six months ago, they were married. Unfortunately, Oediv is playing off of her husband's insane jealousy and blackmailing her with their secret "affair." So far, he's only wanted money, but his leers and innuendoes hint that he'd much prefer her sexual favors. She has made several striking discoveries in the Precursor Ruins, but has yet to publish any of her work, due to Oediv's attentions and the need to defend her dig sites from tomb raiders. Dena has reached a form of détente with her husband over smuggling out xenocultural artifacts: she gets to scan and study them for a one-week "holding period" before Emray allows them to be transported off-world. It's a compromise they're trying to live with. Her best friend is RP Cody.

Emray Bey: Under a different name, the Koschei heavy-worlder now known as Emray Bey backhanded a man once, killing him instantly. Unfortunately, that man was an undercover narcotics agent. Bey was sentenced to permanent transportation to the prison world Tertius. The prisoner didn't like the idea, and against all odds broke free during the passage and took over the prison shuttle. They had underestimated him: looking only at his massive frame, they didn't realize his mind was keen and his spirit, ruthless. He landed on Ugarte, and has never left. Taking the name Emray Bey, he became a simple Importer/Exporter. But that is just a façade: Bey used that brilliant mind, tremendous strength, and iron will to build a kingdom -- he is the smuggler lord of the entire sector. Every smuggled cargo in the surrounding star system is subject to "Bey's Tariff." He commands his army of thugs and triggermen from his elegant coffee- and teahouse, Bey's Samovar. Exorbitant payments to the Port Renault authorities and Bey's drive to keep a low profile have made him safe from the Hegemony's laws. His preference for subtlety, his secret heart of gold, and his insane jealousy over his new wife Dena are his only weaknesses. He is a prime mover behind the upcoming Sandrace.

Robin Penelope (RP) Cody: Eccentric genius RP Cody flunked out of Earth University as a junior, scholarship revoked and kicked to the curb due to a combination of crazy theories, illicit experiments, and bluffing down the Dean's full house with a pair of queens. It barely fazed her -- she had already plumbed the depths of what hyperspace theory her ivory tower professors could give her. She took ship with a small trade vessel, signing on as an Assistant Engineer, and commenced her practical education. She learned more about hyperdrives in the succeeding eight years

than most people learn in an entire career. After a lucrative stint as the Chief Engineer on a small smuggling vessel, she cashed in her shares, bought a small yacht of her own, and settled down on Ugarte for research of the strange Precursor ruins found there. Inspired by schematics she discovered in a hollow pillar (actually, they were only Precursor china with an intricate pattern), she tore off on a jaunt of mad science that resulted in the development of the Micro-Hyperdrive. Using her personal ship, the *Zeus III*, as a test-bed, she soon discovered that not only did her invention take up less than one-tenth the volume of a standard hyperdrive, but also increased overall hyperspeed dramatically. With enough capital to patent and put her new drive into production, she could both revolutionize space-travel and make a mint. She immediately turned to her previous profession -- smuggling -- and began transporting small, pricey lots to raise money. While she's been saving assiduously towards her eventual rise to hyperspatial industrial glory, she also spends substantially on new projects, gizmos, and gadgets. She's on excellent terms with Emray Bey (who believes her to be the Engineer and front-woman for a smuggler crew) and is close friends with his wife, Dena.

Buckminster "Buck" Gordon: He doesn't talk about his past; rumor is that Buck used to be an officer in the Star Guard, but was dishonorably discharged. After a few stints as a soldier of fortune, he struck it rich with the "discovery" and salvage of a large cargo ship believed lost in the Asteroid Sea. Flush with cash, he met Wilma Arden on the cosmopolitan Hegemony planet of Arcadia, and they fell in love. But it was not to be; as the Hegemon's forces moved to blockade the planet, she refused to flee with him in his ship, and even denied that she had felt anything for him at all. His broken heart grew a hard and crusty shell. After aimless travel through the war-torn region, he found himself on Planet Ugarte. There he opened a small casino and club, Buck's Place. He takes care of his employees in an off-handed, no-nonsense way, with gruff denials that he does anything for his people out of kindness. He is the pre-eminent information broker on Ugarte, buying and selling sensitive information, with a small sideline in weapons smuggling. He is friendly with Commander Oediv, and has respect for and a business rivalry with Emray Bey.

Karus of Xib'A'Teew, aka Lollipop: Karus is a Huur, a 4' tall humanoid birdman. He is a cobbler, producing specialty footwear for the small Huur population of Ugarte with his nimble feathered fingers. (He also has a small human clientele.) He's quiet, has a fondness for human music, and appears to be a bit of a milquetoast. Only *appears* to be, since he is in actuality one of the few non-human members of the Freedom Legion (codename Lollipop), aiding the fight against the Hegemon. He has met both Centurion and Falcon in the past. But deception is layered upon deception -- Karus is secretly an agent of the Huurian Ministry of Information: a spy. His mission is to destabilize the entire Hegemony by helping foment civil war between the Star Guard and the Freedom Legion. Then the Huurian Talon Forces can swoop in and take control of the outlying colony worlds! No one in the Freedom Legion suspects that Karus is a double agent. It should be noted that he is not a proponent of Huurian superiority (he likes humans just fine), but sees the eventual conflict in purely political terms. He does sympathize with the goals of the Legion, but all in all, he thinks that humans would be better off ruled by a Parliament of Elders rather than a Hegemon.

Commander Alexander Oediv: The commander of the Ugarte Planetary Forces (and Planetary Governor) is a dapper, corrupt, romantic man named Alexander Oediv. His command consists of 1,000 men in the UPF; a full one-third are stationed directly under him in Port Renault. He is driven by his desires -- for money, for luxury, and for titillation. Offered sufficient inducement (in large denominations), he turns a blind eye to smuggling, gambling, traitorous talk against the Hegemon, and a horde of other vices. . . and indulges in many of them himself. Currently, he's using his ability to grant or refuse egress visas to line his pockets; his blackmail against Dena Iridian Bey is mostly for personal amusement. Fond of fine arts, he is the preeminent patron of poetry, music, dance, and theater on the planet. He is friendly with Buck Gordon, spending large amounts of credits at the tables in Buck's Place; Oediv, for all his shortcomings, is a likeable rogue.

Raymond "Flash" Rogers, aka Centurion: At one time, Flash was the greatest athlete in the Terran Hegemony, a triple threat in starball, grav decathlon, and hoverpolo. Over time, with each interplanetary competition, he became aware of the oppression of the Hegemony against its colonies. Then, he discovered that one of his starball teammates was performing espionage and assassinations on the colony worlds. Flash moved to stop it, and ran afoul of the Star Guard. He escaped the prison world of Tertius, deciding to fight against the Hegemon's plots. Over time, he has gathered a small band of stalwart souls around him -- the Freedom Legion. He is fleeing Hegemony space with his lover, Wilma Arden, after a disastrous meeting with a supposed sympathizer in the upper echelons of the Star Guard

that turned out to be a trap.

Major Corbett Thomas: Valedictorian of his class at the Terran Military Academy, Corbett Thomas quickly rose through the ranks of the Star Guard. Because of his unswerving patriotism and ample talents, he has quickly made his mark. He is a brilliant tactician, skilled pilot, and a crack shot. He's also arrogant, sadistic, and enjoys the perquisites of his position a bit too much. His chivalry (or is it chauvinism?) has caused him to underestimate women in the past - especially Wilma Arden. He is a gourmet chef and connoisseur of food, and is especially fond of exotic coffees and teas. He has tangled with Flash Rogers -- who he views as a traitor to the Hegemony -- a number of times in the past; he's the man who captured Rogers and imprisoned him on Tertius. After Rogers escaped, Thomas was tapped to head the task force assigned to hunting down and thwarting the Freedom Legion. He is charged with bringing Rogers to the Hegemony, alive -- an order that has allowed Rogers to slip through his fingers more than once. He is accompanied by six of his highly trained men, but is aware that he cannot deal brusquely with Commander Oediv -- at least, not until the remainder of his team arrives on Ugarte.

NPC Matrix

The NPC Interaction Matrix is a handy tool for determining how NPCs relate to one another personally or by reputation. Use of the Matrix can aid in coming up with NPC characterizations, motivations, scenes, and adventures.

How NPC feels About:	AO	BG	CT	DIB	EB	FR	K	RPC	WA
AO	X	+	+ (-)	+	N	N	*	*	N (+) ¹

 x = Null Value

Notes

- ¹ Oediv likes all beautiful women.
- ² Buck rarely shows his emotions openly.
- ³ Friendly business rivalry, but not friends.
- ⁴ Respects his actions; resents his relationship with Wilma.
- ⁵ Underestimates aliens, human subraces, and women.
- ⁶ Likes her columns.

PC Backgrounds

Player characters probably come from one of the following groups. All need not be from the same background, however, and a character can fit into multiple groups. Note that there may be tensions between groups (say, Agents of Bey and a spy for the Hegemony) that may be the source of great in-game friction, or could utterly disrupt a game. Use caution.

Agents of Bey: Characters can work for the Ugartean crime lord as a thug, assassin, thief, bounty hunter, smuggler, or other such profession. They can be called upon for any number of illegal pursuits, but also gain a modicum of protection from their boss. Bey doesn't care about the politics or opinions of his followers (with one exception); he demands only service and loyalty to himself above all. If one of his agents is determined to have secretly been a Hegemony spy, that agent is nabbed, whisked away, and brutally beaten to death by the big man himself. The corpses are dumped in the radioactive Great Nookrak Waste, to feast the mutant scorpions that live in its sands.

Freedom Legionnaires: Secretly working towards the downfall of the Hegemon, characters in the Freedom Legion have a codename; knowledge of simple ciphers, pass-phrases, and a few members of their local cell; and a zeal for freedom and liberty. To be a Legionnaire is a crime -- even on Ugarte -- so such people should keep it close to their chest. Legionnaires may be asked to perform espionage, participate in sabotage, recruit new members, pass documents, harbor other Legionnaires, or go on covert missions.

Refugees & Expatriates: Trapped on Ugarte after fleeing from other worlds, refugees are a grab bag of character types. Nearly any profession, social status, or species can be represented here, from University professor to wealthy plumber to dispossessed aristocrat. Depending upon their finances, refugees could be scrabbling for a meal as a beggar or living it up in luxury hotels as an expatriate of leisure.

Spies (Hegemony, Free Colonies, Alien Worlds): Because of its position on the edge of Hegemony space, Ugarte is a haven for spies from all sides. Provided one has the necessary travel papers (real or forged), bribe money (small denominations, please), and a clean record (though what constitutes a "clean" record with the Hegemony is a bit dicey), the egress restrictions aren't too onerous. However, loss of papers, lack of money, or suddenly becoming notorious dumps spies into the refugee class.

Ugarte Planetary Forces (UPF) Garrison: Perhaps they're natives of Ugarte or old Star Guardsmen who've transferred their service because they're close to retirement, or maybe they just get space-sick. A UPF soldier serves as both military defender and law enforcement on Ugarte. They are called out to patrol the streets, enforce the laws, make arrests, quell riots, oversee customs, and repel planetary invasions. Commander Oediv doesn't much care about the personal politics or pursuits of his men, so long as he gets his cut. However, discovery of Freedom Legion membership (though not sympathies) is immediate discharge; discovery of being a spy from the Free Colonies or Alien Worlds merits interrogation and imprisonment; and if Oediv ever discovers that the character is secretly a Hegemony spy, well, that individual meets with an unfortunate accident.

The Usual Suspects (gamblers, smugglers, thugs, bounty hunters, assassins, fences): The Usual Suspects differ from refugees in that they are on Ugarte by choice. They differ from Bey's Agents in that they are

freelancers. The Usual Suspects can have their hand in any plot necessary -- there are always goods to be stolen, fenced, and smuggled away, and people to be extorted, roughed up, sharpened, or killed in a place like Ugarte.

Xenoarcheologists: Since Ugarte has a largish Precursor ruin upon it, many professional and amateur xenoarcheologist have come to explore. Hampered by the radioactivity and destructive sandstorms of the Great Nookrak Waste, and the assiduous expeditions of their predecessors, many leave the Scorpion City empty-handed. However, there are always rumors of additional secret tunnels, treasure troves, and even other Precursor cities percolating through the grapevine. . .

Items & Locales

Zeus III: RP Cody's highly modified space yacht. In addition to the Micro-Hyperdrive, this baby packs military-grade weaponry, hidden cargo spaces, and an ingenious point defense system, all held together with luck and a prayer.

Buck's Place: The in place to be; a combination casino and club. However, the proprietor's word is law -- if he doesn't like you, all the credits in the world won't buy you a glass of water.

Bey's Samovar: A café serving exotic coffees and teas. Bey Import/Export also has its offices in this tasteful, sturdy building. . . and Emray Bey's illegal activities are run out of its fortified basement.

Green Sands: A sheltered area of sand near Port Renault, infested with a strain of native xenobacteria who subsist on dead organic tissue and excrete a chemical that is a powerful, penetrating analgesic for most carbon-based life forms. Bury yourself in its emerald grains and let the pain melt away.

Great Nookrak Waste: A desert of gray, radioactive ash and sand. Deadly sandstorms and giant mutated insects roam here. The site of the upcoming Sandrace. Deep in the heart of the wasteland lies. . .

The Scorpion City: Ancient ruins of a race long dead before humanity reached for the stars, overrun with giant mutant scorpions and insects. While picked over by thousands of xenoarcheologists since its discovery, who know what hidden sublevels, alien technologies, or weird secrets the ruins may still hold?

Events/Subplots

Sandrace: The Sandrace is shaping up to be the event of the season. All Ugarte -- and even some tourists -- are arriving to watch this 100 mile competition over the radioactive Great Nookrak Waste. The purse is 400,000 credits; enough cash to bribe passage off the planet for four people. Will the PCs enter the race themselves or join an existing racing team, suiting up in breathers and rad-armor to brave giant bugs and knifing sandstorms to win escape from Ugarte? Maybe they're one of the teams of smugglers (either Agents of Bey or freelance), bringing in the tremendous amounts of recreational pharmaceuticals for the event? Or will they just come to gamble and cavort with the Ugartean upper crust?

Murder in Green Sands: A body is found buried in the therapeutic Green Sands; a young man carrying an incriminating letter address to (or by?) one of the PCs. Commander Oediv and his men would like to have a word with you. . .

Blackmail: Dena Iridian Bey needs the PCs' help. Commander Oediv is blackmailing her, and she has no one else to turn to. Can the PCs help her without letting Oediv squeal to Bey, or -- worse yet -- letting the jealous Bey mistakenly think they're making a play for his wife?

Signature Story Arc: "Everybody Comes to Buck's"

A Signature Story Arc is a common thread that weaves through a campaign. Subplots can come, go, or weave into the overarching story. The SSA can serve as a single mega-adventure, or be spread out over months of play. It's not necessary to use it; this campaign setting has plenty of adventure and intrigue without it. But the SSA can serve as a skeleton to create stories around. Feel free to alter, edit, or warp the SSA in ways that are personally pleasing; we've all seen this story before, the fun is to tweak it a little (and follow the tweaks that the existence of the PCs put on it).

The following Episodes A through E detail two things: 1) what will happen without PC involvement, and 2) opportunities for PC involvement in the Episode. GM only information appears in [square brackets].

Note that PCs can and should impact the Episodes, otherwise, they're just passengers on the GM's railroad. The PC Involvement sections indicate ways for PCs to enter the plot-in-progress; their actions will affect how the SSA plays out afterward. To aid the GM, SSA Advice is offered below the Episode descriptions.

Episode A

Courier Killed

What Happens

A Hegemony courier is killed while bearing two letters of transit, allowing free passage to the bearer, signed by the Hegemon himself. These two objects are the ultimate "Get Out of Jail Free!" cards, and everybody wants one, or both. [Karus killed the courier and stole the letters.]

PC Involvement

Perhaps Karus needed some help in dispatching the courier? Of course, he'd never tell them what the true objective was; how would the PCs feel when they discover they held a fortune/freedom in their hands and it slipped away? Or perhaps the PCs of the UPF Garrison are detailed to help solve the murder?

Episode B

Arrivals

What Happens

A striking couple debarks at Port Renault -- journalist Wilma Arden and her handsome and oddly familiar companion [Flash Rogers]. They quickly jet out to the lodgings near the Great Nookrak Wastes, since Ms. Arden is here to cover the Sandrace for Gal-Net. [Flash and Wilma are here to meet contact Karus and receive the stolen letters of transit.] Karus arrives at Buck's Place, and has a private tête-à-tête with Buck Gordon. [Karus asks Buck to hold the letters for him; Buck agrees.] Later that evening, Major Corbin Thomas of the Star Guard lands; he and his six men meet with Commander Alexander Oediv. [Thomas is hunting the stolen letters and also chasing Flash, his orders are to bring him, alive, to the Hegemon; Oediv says that he knows who stole the letters, and will seize him at the Sandrace the next day.]

PC Involvement

Flash and Wilma need to get out to the Sandrace, so they'll need transport. If a PC recognizes Flash, that's information, and information is worth money -- but should it be sold to Buck, Bey, or Oediv? All of the fast set are on their way out to the Sandrace -- some may need pilots, porters, companions, or bodyguards. Or if the PCs are racing, they'll have a change to mingle both before and after the Sandrace.

Episode C

Sandrace

What Happens

Buck travels out to watch the Sandrace; some of his employees come along to set up a bookmaking/betting/refreshments pavilion. Karus is captured by the UPF. [Karus doesn't have the letters.] Oediv introduces Thomas to Buck; Thomas runs down Buck's history, trying and failing to get his goat. Thomas also advises Buck not to even think about helping Flash escape. Flash & Wilma enter the pavilion. The sight of Wilma takes Buck aback momentarily; Thomas confronts Flash, and tells him to come to Oediv's office in the afternoon for questioning. Flash agrees. [Then Flash runs out to set up a Freedom Legion meeting; Wilma leaves shortly after to find Karus.] Buck gets drunk.

PC Involvement

If the PCs are with Karus, they'll have to avoid capture too; after that, they may need to escape prison or help bust the alien out. If they're UPF Garrison, they'll be trying to capture and hold Karus. Freedom Legionnaires may be sticking close by Flash and Wilma to protect them at the Sandrace; afterwards there is a need to get the word out about a Freedom Legion meeting for the next night. Sandracers are oblivious to all the action in the pavilion, being too busy racing and fighting off giant scorpions. Wilma will approach smuggler and pilot types once Karus is known to be in the clink; she's looking for passage for two (high-profile people) off Ugarte.

Episode D

Prisons, Rumors, & Bargains

What Happens

Overnight, Karus is interrogated and suffers a mysterious accident or commits suicide, Oediv hasn't determined which. [Oediv suspects Buck has the letters.] The next day, back in Port Renault, Emray Bey and Buck discuss the letters of transit in general terms. [Bey suspects that Buck has them.] Flash is questioned by Oediv and Thomas, and is informed that the only place he's going is straight to the Hegemon, when the rest of Thomas's men arrive. Flash and Wilma then meet with Bey, trying to arrange passage out. [Bey hints that Buck has the letters.] Flash comes alone to bargain with Buck for the letters. [Buck tells him to take a hike, and hints at his past with Wilma.] Flash convenes the Legionnaires meeting. [Which will be broken up by the UPF and Thomas' six men.] Wilma comes to try and get the letters from Buck. [She fails, and they admit their love for each other. Wilma offers to stay with Buck if he gets Flash off Ugarte.] Wilma leaves; Flash returns, wounded and running from the law. He once again bargains with Buck, this time, trying to get Buck to use the letters to get himself and Wilma away. [Buck is impressed with Flash's devotion in the face of death.] Oediv and Thomas appear with their men, and capture Flash.

PC Involvement

They could break Karus out before his "accident." They could be hired/ordered by Bey or Oediv to ransack Buck's Place looking for the letters. Legionnaires can fight the UPF and the Star Guard at the interrupted meeting, and escape to regroup.

Episode E

Escape From Ugarte

What Happens

Buck tells Oediv he has the letters, and plans on using them to get away with Wilma. But he wants Flash out of the way. They concoct a frame-job that will make it seem like Flash was killed attempting escape (much like Karus). Flash busts out of prison and runs for Buck, thinking that Buck will be using the letters to escape with Wilma. Wilma shows

up, thinking that Flash will use the letters and escape, while she stays with Buck. Oediv comes along to shoot Flash once he grabs the letters. [Buck turns the tables on all of them, and takes them to the shuttle port. Oediv surreptitiously tips off Thomas.] Buck tells Flash and Wilma to get on the shuttle; he tells Wilma that if she doesn't go with Flash, she'll regret it eventually. [A lie, to aid her tearing herself away from Buck.] They get on the shuttle. [Oediv's romantic nature is inspired by Buck's selfless act.] Thomas shows up; Buck duels him and eventually runs him through. Buck decides to join the fight against the Hegemon, and Oediv decides to go with him.

PC Involvement

The PCs could help break Flash out of prison or try to keep him there (working against Oediv's secret assistance). A pitched battle at the shuttle port between the Star Guard and the Freedom Legion, with Agents of Bey's trying to swoop in and steal the letter would seem apropos.

SSA Advice

First off, the SSA is intended to be a coat-rack for the PCs to hang their jackets on. If it's taking up too much space (read: spotlight time), feel free to throw it out. Maybe giant Scorpions attack Buck's pavilion at the Sandrace, and chow down on a number of named NPCs. Deviation from the "What Happens" is encouraged, if not mandatory.

That being said, if one wishes to use the SSA, the following advice may come in handy:

Pacing: If a multi-session campaign, the first session should be unrelated to the SSA, and serve to introduce the players to Planet Ugarte and its denizens. Any of the Events/subplots would work well here. In terms of timing Episodes, A, B, and C should follow each other closely. A subplot or one-off adventure can fit between C and D. Episodes D and E should follow each other within 12 hours.

NPC Choices: Four of the NPCs have hard choices to make. When PC involvement changes the "What Happens" status quo, keep their choices in mind. Buck must choose between staying on Ugarte with Wilma, fleeing Ugarte with Wilma, or letting Flash and Wilma escape. Flash must choose between fleeing with Wilma or sending Wilma away with Buck. Wilma must choose between Buck (and love) or Flash (and his fight against the Hegemon). Oediv must choose between his comfort and his romantic ideals.

Monkeywrenches: What if Buck loses the letters of transit? Well, he may go seek out RP Cody and her speedy little ship. What if Karus escapes to live another day? Perhaps Buck returns the letters to him, no questions asked. What if Flash dies during the Star Guard assault on the Freedom Legion meeting? Maybe someone takes his place -- Buck, Wilma, or Oediv. What if a Freedom Legion PC whacks Thomas? Well, then his second-in-command -- a nasty piece of work named Redav -- comes to Ugarte to take over. The possibilities are -- and should be -- endless! Again, use the SSA as a jumping off point to tell your own stories, be they interspersed within the SSA or completely divergent.

Mirror, Mirror: What if Major Corbett Thomas is really the good guy of this piece, and Flash and Wilma are indeed rabble-rousing revolutionaries against the gentle and kind rulership of the Hegemon? Now you've got a flawed (Terran chauvinism) hero, with a corrupt world up against him.

Customization Notes

Space Tech: The important things are that 1) egress from Ugarte is restricted not just politically, but technologically, and 2) RP Cody can ignore the technological restrictions.

Precursor Ruins: Replace the Precursors and their ruins with a rare and valuable -- but enigmatic -- native animal or animals and its remote habitat. Xenoarcheologists become xenobiologists. RP Cody is inspired by the scale patterns, social hierarchy, or neurological system of the critter instead of Precursor dinnerware.

Government: The most important things are that 1) the Hegemony should be a little oppressive, and 2) Ugarte should be semi-autonomous.

Legends & Lairs: Mythic Races

Published by [Fantasy Flight Games](#)

Line Developer Greg Benage

176 b&w pages; \$24.95

Mythic Races follows hot on the heels of the hardcover *Traps & Treachery*. Like that book, there is a focused effort by Fantasy Flight Games to expand the *d20* OGL system in ways that aren't receiving a lot of support. In this case, it's the introduction of almost 30 new races.

The races in the book run from races comparable to standard elves and dwarves like the Coivalds (short and stout forest guardians), the water-based ooloi, and the strong-yet-slow tremen. There are more powerful races like the Aaleear, a race physically similar to the halflings of old (as in "short and fat"), and the very powerful Stonegrunts, creatures created by the dwarves in times long past.

Each race has background information followed by personality, physical description, relations, alignment, lands, religion, language, names, specific names, adventurers, racial traits (including level equivalency), and prestige classes associated with the race. The most important parts for mini-maxers are how well the racial traits which include special abilities, balance out with the level equivalency. The level equivalency is a trait that shows how powerful such a creature is. For example, a race with a +1 level equivalency is equal to a 2nd level character.

Just for reference, there are ten with a 0 level, which is supposed to equal the races in the players handbook and minor creatures like orcs, seven races at LE +1, four at LE +2, five at LE +3, and one at LE +4. GMs will have to tinker with the LEs to insure that these races are indeed balanced, as there are few examples of races with higher LEs outside of the *Forgotten Realms* hardcover for *Dungeons & Dragons 3rd Edition*.

One of the most important aspects about these new races is that they are minor players in the grand scheme of things. Take the Luminous, a race of humanoids composed of energy. They battled against evil and lost almost all their numbers. This makes them very rare, and thus easy to insert into, say, a *Scarred Lands* campaign where they can use their favored class of Paladin to good advantage in a place like Mithril. Other races make their homes in dangerous terrain, like the quissians who dwell in the desert, or the ooloi who live under the sea. These factors help insure that while the races are playable and explainable, each campaign isn't like *Star Wars'* famous Cantina scene.

Not satisfied with merely giving the GM and players new races, each race has its own prestige class or classes as well. In most cases, these are variants on the traditional roles with a racial twist. The shtak, a desert dwelling race, has the shtak windrider, a type of holy warrior. The powerful stonegrunts have the siege grunt, a class designed to defend or take down fortifications. Most of the classes follow the standard ones in the *Dungeon Masters Guide* in that they have ten levels, but some (like the ooloi journeyman) have only five. In almost all cases, the requirement to be one of these elite classes is being of the race where the class is introduced . . . no non-curst trying to be curst soulless.

Most of the game mechanics seem fairly sound, but there are some that may make a few raise their eyebrows. For example, one race, the Eleti, is an undead race. However, these creatures have a prestige class that gains 1d6 hit points per level. The problem is that undead, as a rule, gain 1d12 hit dice per level.

There are a few things keeping this book from being top-notch. The first is that there are four pages of advertising in its 176 pages. (For comparison's sake, *Relics & Rituals* from Sword & Sorcery Studios is the same price, with 224 pages and two pages of advertisements.) This is especially strange since there is no index, which would be useful to

list the feats, spells, and other miscellaneous information in the book.

Another minor weakness is the lack of charts and tables. There should be a chart for Level Equivalency similar to the *Monster Manual's* chart for Challenge Rating. Such a table would allow players and GMs to reference quickly how powerful each race is. In addition, a table that gave a brief summary of each race and the prestige classes available to them, would further aid the usefulness of this book.

These are very minor issues though. The book is worth the funds for any player seeking to be something just a little different, or any GM wishing to make his world just a little different.

Lord of the Rings: The Search Boardgame

Published by [Rio Grande Games](#)

Written by Peter Neugebauer

Illustrated by John Howe

\$19.95

Over the years Tolkien's Middle Earth has been the inspiration for numerous boardgames, two RPGs (with a third on the way) and a CCG (with a second also on the way). The latest boardgame to join this list is *Lord of the Rings: The Search*, a semi-sequel to *The Hobbit*, also from Rio Grande games.

The Search is a two-player game designed for players aged ten and over. It is described as an "exciting tile-laying and exploring game," but really it is a tile-laying exploring game that ends in a race! Each player controls a Hobbit, either Frodo or Sam (appropriately enough as they are the last two Ring Bearers), as they lay down tiles to create a map of Middle Earth and then search it for both the Ring and the location of Mount Doom. Once both are found, they race to be the first to the mountain where they can dispose of the Ring.

The game comes in an eight-inch square box, an inch deep. Inside are forty-eight land tiles; eight encounter tokens each for water (colored blue), fields (colored yellow) and forests (colored brown); twenty brown encounter tokens for mountain regions; two boat tokens; one Mount Doom standee; and two plastic hobbit figures -- one yellow for Frodo and one blue-green for Sam. The quality of the components is good; both tokens and tiles are painted on 1/16th inch thick card and given a matt finish. Only the Hobbit figures disappoint. The identical figures are rather rough, lack detail, and have a lot of flash on them. All of these components fit neatly into the games' storage tray, which sits snugly into the box. The full-color rules run to eight clearly written pages.

At the start of the game, the land tile representing the Shire is placed down, and all of the tokens and tiles are shuffled into their correct piles. Players draw three land tiles each and decide whether they want to be Sam or Frodo. Frodo goes first. The game itself is broken into three phases.

In Phase One, players alternate placing land tiles until a three by three cross has been formed centering upon the Shire. Each approximately two-inch square land tile is divided into four triangular sections depicting the water, mountain, forest, and field terrain of Middle Earth. As the game progresses tiles are put down to form a six-by-eight grid with the Shire at the center. Tiles must be placed so that its terrain sections match those of the tiles it is placed adjacent to. Thus forest sections must be put next to other forest sections and so on. If a player cannot legally place a tile down because sections do not match, the tile is flipped and its gray reverse put down as a neutral tile. Through tile placement, adjacent terrain sections build to form regions that regulate encounters and movement.

Once the three by three cross has been formed the first Phase ends and the second begins. In Phase Two, a player's turn consists of drawing and laying a single tile, moving their Hobbit, and drawing another tile. If by placing a tile, they create a region made up of just two terrain sections, this becomes an encounter space and it receives an encounter token of the appropriate color. Blue, green, and yellow tokens are placed face up and brown tokens face down. Movement is from one adjacent region to another, whatever the size of the regions involved. Boats are needed if a Hobbit wants to cross any water regions.

When a Hobbit moves into a region containing a blue, green, or yellow encounter token, they collect the token and

keep it face down before them. These represent allies and objects -- Gandalf, Gollum, The Ring, Elven Rope, Legolas, the other Hobbits and so on -- that can be used in combat, to affect a Hobbit's movement, or even give himself an immediate extra turn! None of the encounter tokens can be used to affect the other player, and once a token has been used, it cannot be used again.

Brown encounter tokens are only found in Mountain regions and represent either an empty cave -- these can be saved and used to purchase the use of a boat or an actual enemy to be fought! Enemy tokens are marked with a single dot for Orcs, Orc Chieftains and Trolls; and two dots for the Balrog and Shelob. The number of dots represents how many turns of movement a Hobbit loses while he is in combat, though he can still draw and lay tiles down. Alternatively, a player can negate each dot an enemy has by spending one of the allied encounter tokens he holds per dot. Once these tokens have been spent, they are out of the game. While there are several Orc and Troll encounters, there is thankfully only one each of the Balrog or Shelob tokens.

Phase Two ends once all of the tiles have been put down. Mount Doom is located in the last neutral tile placed or the last tile put down if the map has no neutral tiles. Then both players take turns to race to Mount Doom, moving as normal. The game ends when a Hobbit gets to the mountain. Both players now add up the points earned as they have played the game. These are awarded for each blue, green and yellow held at the end of the game, for each creature defeated, but deducted for each blue, green and yellow spent in combat or on a boat. Additional points can be won for reaching Mount Doom, more if you have the Ring and Gollum in tow. The highest score wins the game.

The strategy to *The Search* lies in tile placement, with players trying to control encounter token location to their advantage. Likewise, creating larger regions makes movement easier. Offsetting this is the random order in which the tokens appear in the game. Since water regions can hamper movement, it pays to explore mountain regions for the Empty Cave tokens that can be spent to buy a boat. Similarly, the Enemy Tokens are worth facing for their value in scoring at the end of the game. While Phase Three is the race to Mount Doom, another race occurs earlier in the game when the Ring appears -- getting to Mount Doom with both it and Gollum is worth a lot of extra points.

Lord of the Rings: The Search is neither too shallow for adult players nor too difficult for its intended younger players. Indeed, eight- or nine-year-olds could enjoy this game with a little help from a more experienced player. A game should only last forty minutes (less with practice), and it is playable almost right out of the box. As a Middle Earth game it is a little abstract, and perhaps there could have been more interaction between the players, but it does model the search in a fun way. Fans of Middle Earth should enjoy the chance to control one of the two Ring Bearers, and as a two-player game, ***Lord of the Rings: The Search*** is easy to get out, set up, and play. With the forthcoming release of the film, it not only offers good value for money, it makes an excellent gift for any fan.

Zombies!!! Boardgame

Published by [Journeyman Press](#)

Boxed game; \$19.95

It's an old story: Boy meets girl, boy and girl get surrounded by the undead, boy and girl make a run for the first ride out of town. It's been told many times before, and now you get to determine the outcome in *Zombies!!!*

You and five friends are trapped in a small city . . . in the town square, to be precise. This little hamlet isn't so small that it can't afford first-class transportation, however -- there's a helipad just waiting to whisk you away to safety, if you can beat back the hordes of unliving standing between you and it.

Only one of you is going to make it, though, and you won't know exactly where the heliport is until the end. Until then, you must navigate the maze of streets and storefronts to find enough supplies to keep you going. Get surrounded, and you'll find yourself back at square one in a literal sense.

Square one is the Town Square. Everyone starts on the center space, shotguns ready. Each turn, a player pulls a map tile from the map deck. These geomorphic 9-square tiles depict city streets, shops, and town features, and they fit together to form the town. The player connects the tile to the existing map and adds an appropriate number of zombies. For a street add as many zombies as there are street exits (i.e., four zombies for a four-way intersection tile). If the tile is a shop or some sort of important building, it will tell you how many of the undead are inside.

Now that you know where you're going and who's in your way, you can have at it. You roll one six-sided die for movement and start wading in. Everyone starts with three Life tokens and three Bullet tokens. When confronted with a zombie, you roll the six-sider again. A four, five, or six kills the creature outright and you get to add him to your collection. If you roll a one, two, or three, you have a choice of discarding a Life token and fighting the combat again, or spending enough Bullet tokens to raise your roll to a four. (So if you roll a two, you'll have to spend two Bullet tokens to make the roll a four.) You can keep moving and fighting (or retreating and running) as long as you're willing and able, but once your movement runs out it's the zombies' turn. Another roll of the die tells you how many zombies get to move one space each.

Once you've begun a combat with a zombie, you must fight to the -- uh, relocation. Either you kill it, or you run out of Life tokens trying to do so. No one dies completely in the game (which seems apropos), but if you run out of Life tokens, you get sent back to the town square, usually a bad place to be since the town is growing around you. On the minus side, your movement ends, you lose half the zombies you've killed, and you lose any weapons you may have had; on the plus side, you get your starting tokens back.

The weapons come from event cards, as do other effects. You get three cards to start with, and you may refill your hand midway through your turn. You only get to play one card each round (from the beginning of your turn to the beginning of your next turn), so you have to decide whether it will be a card in your favor or one that will stick it to your opponents (the other players, not the zombies). You can discard a card at the end of your turn if you want to open up a space for better cards when you refill, but the card you get rid of may become useful between now and then.

Some event cards are just weapons, like a shotgun or a fire axe, while others allow for different effects on game play, like moving zombies around or preventing them from attacking altogether. Still others improve your own movement. Often there's a prerequisite for playing a card -- a fire axe may only be added to your arsenal if you're in the fire station, and first aid kits must be retrieved from the hospital or the drug store.

There are very good reasons to go into the "named" buildings, and some very good reasons not to. Aside from their effect on the play of event cards, each named building has a code -- the Lawn & Garden Store, for example, says Z-6 L-2 B-3 -- that tells you how many zombies, Life tokens and Bullet tokens must be placed there. It's a good way to get the stuff you need, and an even better way to get yourself smothered by the walking dead.

Since it's possible to close off the town to where additional tiles (including the helipad) cannot be played, and since the players will probably end up scattered all over a zombie-rich board, there are two ways to win. If you're the first player to reach the center square of the helipad tile, you win. Alternately, if you are the first player to rack up 25 zombie kills (you get to keep a stack of them in front of you), you win.

The game is a sharp piece of design, with moody artwork, amusing card titles, nice miniatures (including a honkin'-big pile of zombies), and crisp, clean map tiles, all wrapped around a simple and enjoyable set of rules. The only real trouble with the game is that it plays slowly. The pace picks up after being played a few times, but games can easily reach the 2-hour-plus mark as vicious backstabbing takes its toll on your score and your freedom of activity. On another level this works to the game's advantage; between the duplicity and the never-ending swarms of enemies, the suffocating feel of zombie stories is palpable.

Still, at a mere \$19.95, there's a lot of fun fat-packed into the little box. The zombie figures -- 100 of them -- with all their little details are worth that much, and you get 6 Shotgun Guys, a pair of dice, 50 event cards, 30 map tiles, and 90 tokens as well. An army installation sequel has been promised for winter, and the game looks to have plenty of room for house rules, expansions and play variants. If Journeyman Press keeps up this kind of quality fun, *Zombies!!!* is going to be hard to stop.

Let Me Introduce You To . . .

- "A little more than kin, and less than kind."
- "Face it, tiger . . . You just hit the **jackpot!**"
- "Saigon. Shit."

Done correctly, an introduction can be one of the most important and interesting things you'll do in an RPG, either as a player *or* a GM.

After all, an international superspy whose first words are, "I'm Chuck Storm: built for danger." is probably more intriguing than one who says, "You gonna eat that?"

GMs definitely have an easier time when it comes to introductions. After all, they can guide the setting and scene exactly to the point where it would make their important characters look as cool (or not) as necessary. Would a car accident let the grease monkey mechanic use spit and prayer to fix the vehicle? Well, it's easy to create one. Need a gala ball to show off the femme fatales' social skills? Piece of cake. Would a timely intervention help the heroes trust the new NPC, helping to set the stage for his betrayal? Not a problem!

Meanwhile, most players generally don't have a firm idea *what* shape their character is going to take until they start playing. This can be especially difficult in a new setting or system, where players may be unfamiliar with the rules and game conventions. "I'm Strom Axgrinder, and I'm the toughest in the land! (Presuming I'm reading this Damage section right, that is . . .)" Even if they did, they usually don't have much control over that opening scene the GM produces; too often they're along for the ride.

Of course, this isn't always the case. If the GM gives an idea as to what the opening scene will be, the players should be able to prepare a bit more. For example, in a *Fading Suns* LARP I was in at DragonCon this year, the action took place in an auction, with the introduction to the auction being the first "official" scene. One player waited until midway through the auctioneer's opening speech, then entered the room, talking on a cell phone (or the 51st century equivalent thereof) about how much his benefactors wanted him to bid. It was a great obnoxious touch that did wonders to establish his character immediately.

Giving the players more control over the setting -- especially in some opening segments -- can allow for a more natural and authentic "introduction." For example, I ran a *Star Trek* game where the first scene took place on a ship party. I declared the affair "mildly official," and suggested that the heroes could dress as casual or formal as they wanted, and arrive when they wanted. So the fastidious captain was there before everyone else, dressed in full Starfleet regalia and helping to set up and chastising those who "got it wrong," while the second-in-command (who had 12 kids) arrived late, in a sweater, with a crying little one tugging on his sleeves.

Carrying this further, some games allow for the possibility of the players to write their own opening scenes. In a game which uses an opening script (like many cinematic games allow), the players and GM could collaborate on that first script, making sure that everyone is happy with that "first moment." Or a group story could hash out those all-important opening scenes. Of course, this removes all the spontaneity from that first session, which many groups wouldn't like.

An alternative to this technique is to have the players develop their own "opening lines" (ideally with some context) so the GM can weave those together into either a script or a loose opening adventure.

GM: "The scene opens on a street corner. A middle-aged man is trying to get away from an ill-kept man standing on the street corner, shouting . . ." [points to Player 1]

Player 1: "Do not deny the truth in your heart. The end is nigh! Today, tomorrow, you'll never know. But mark my words . . . the end is nigh!"

GM: "The middle-aged man is taken aback, and backs up into the street. The commotion causes traffic to screech to a halt, including a taxi where two people are arguing . . ." [points to Player 2]

Player 2: "Do you have any idea who you are dealing with? *I* am Alexander Trust, head of the Trust Foundation! Cross me again, and you *will* regret it."

GM: "Meanwhile someone uses the distraction to steal a woman's purse. A young female officer pursues, gun drawn, and says . . ." [points to Player 3]

Player 3: "[BLAM! BLAM!] Damn. Um . . . Stop or I'll shoot! [looks around at bystanders] You didn't see that right? Huh?"

And so on. This method maintains some of the spontaneity, while making sure the players are able to make that all-important first impression.

And a good first impression can go a long way towards establishing a new campaign on the right foot from scene one.

* * *

When I first started looking for a replacement column or feature way back in November of last year, I made a promise to myself (and probably on the message boards): I wasn't going to find another columnist just for the sake of finding another columnist. In my mind, the purpose of a monthly column or feature is for it to be better than whatever would be taking its place; it doesn't make any sense to have a recurring feature that isn't as good as other random articles.

So shortly after it became known that we were looking for new columns, I was inundated with proposals.

I was also pulled by seemingly contradictory demands of the readership. We ran a poll at the time that asked:

Which of these new monthly column ideas most appeals to you?

20% wanted "GM advice."

20% wanted campaign world creation advice.

19% wanted rotating genre advice.

These seemed fairly contradictory, or so I thought. And it seemed clear that I wouldn't be able to satisfy everyone (although 15% of you said you didn't care, so long as it's good . . . bless your hearts).

Anyway, one of the proposals was from Chad Underkoffler. He submitted a pitch called "Campaign in a Box." In it he detailed how he would come up with a new setting each month, complete with NPCs, adventure ideas, and genre advice for that campaign world. He also submitted a 3,500 word sample (bigger than the normal 2000 words I was looking for) because he wanted "to start out with a bang."

And I rejected it.

Now, to be fair, I didn't reject it outright. But stylistically I was afraid it would step on the toes of Ken Hite's *Suppressed Transmission*. After all, Ken already had a gift for presenting odd campaigns every so often.

But I did a compromise: I accepted the submission as a regular article, with the promise that, if it was well-received, I would run another. So he resubmitted a 5,000-word version (dubbed "[Futura City, The City of Tomorrow](#)"), and I ran it.

And it was well-received.

So I ran another, a 5,000-word piece called "[Psi, Psi West](#)". And although (ratings-wise) it wasn't as well-received, it still did well. More importantly, several people on the [message boards](#) had something interesting to say:

"I normally don't like Wild West games, but I was glad I read this article."

Bingo.

See, one of my personal criteria for a columnist is that, even if you don't like the subject matter, you should still be able to get something out of the column. It should still be interesting to read. (It's a philosophy I try to follow with my own column.) Which is why I consider Harlan Ellison's *Watching* to be one of the best essay books I've ever read, even though I've only seen a handful of the movies reviewed in there. You don't *need* to see the movies. The essays themselves are rewarding.

And so it seems with Chad's submissions. And I realize that's possibly because there is something for everyone. A campaign, NPC descriptions, adventure seeds, genre advice . . . it's all in there.

So I'm proud to introduce the first feature column I've added since I became editor, with Chad Underkoffler's "Campaign in a Box."

Now, not one to leave well enough alone, I noted that Chad seemed to do best with the longer format. If I *did* give him a monthly column, would the 2,000 word format be as good and "meaty?" I decided I didn't want to take that chance, so instead I'm giving him a bimonthly slot, with 4-6,000 words. Hopefully those who don't like columns will view it as a bimonthly interruption, and those who *do* like this addition will have something to look forward to every other month.

Of course, commentary on this new addition to our family is more than welcome. You can send comments to me at pyramid@sjgames.com, or visit our [discussion boards](#).

* * *

Sadly, both John Kovalic and Ken Hite were busy completing Secret Projects this week, so they needed to skip. (Although we don't *think* it was the same project, you never can tell . . . It's never best to inquire too deeply into the affairs of the Hidden Masters.) Hopefully they'll be back next week as we wrap up our Halloween horror festivities.

Frag Zombies!!!

A Set of Rules for Combining *Frag* and *Zombies!!!*

by Philip Reed

"Frag Zombies!!!" is a rule set that combines Steve Jackson Games' computerless first-person shooter *Frag* with Journeyman Press' B-movie action boardgame *Zombies!!!*. To use these rules you will need both games. The *Frag* expansion *Death Match*, while useful (for the extra *Frag* cards), is not necessary to play.

Frag Zombies!!! is played with primarily the *Frag* rules though the zombies, humans, Map Tiles, and Card Event Deck from *Zombies!!!* are all used during play. When these rules conflict with the *Frag* rules these rules take precedence.

Game Components

To play *Frag Zombies!!!* you will be using:

- *Frag* rules
- *Zombies!!!* Map Tiles
- *Zombies!!!* Event Card Deck
- *Frag* Weapon and Gadget Card Decks
- *Zombies!!!* zombie figures and "pawns"
- Zombies Life and Bullet Tokens
- Lots of six-sided dice
- A copy of the *Frag* Fighter Sheet for each player. Go [here](#) for a free PDF.
- These rules.

Setup

All players roll to see who goes first (as in the *Frag* rules). The winner also removes the Heliport and Town Square tiles from the Map Tiles. As in *Zombies!!!*, the Town Square is placed in the center of the table and the Heliport is placed at the bottom of the Map Tiles after they are shuffled and placed face down.

The Weapons, Gadgets, and *Zombies!!!* Event Deck are shuffled and each player is dealt one card from each deck. The *Frag* Specials cards are not used in *Frag Zombies!!!* and should be set out of the way. The following cards are removed from the Gadget deck.

Gadgets

- Energy Reflector
- Energy Shield
- Fireproof Coating
- Personal Teleporter
- Phase Shift
- Power Leap

Each player selects a pawn and places it in the center space on the Town Square tile. This is the only space in the game

Using *Death Match* with *Frag Zombies!!!*

All of the specials are, of course, removed from play. You must also remove the following cards from the decks before play begins.

Weapons

- Mine Dropper
- Tranquilizer Pistol

Gadgets

- Heat Shield
- Key Cards (all colors)
- Wall? What Wall?

None of the *Death Match* rules should be used in a *Frag Zombies!!!* game.

where more than one player is allowed to be at a time. This is also the only respawn point where fragged players reappear as the game progresses.

Sequence of Play

Each turn a player may do each of the following (in order):

- *Check for Respawn:* If you are currently fragged and out of play, respawn in the center space at Town Square.
- *Place New Map Tile:* Map Tiles are placed in play exactly as they are in **Zombies!!!**; see the **Zombies!!!** rules for details.
- *Movement/Power-Up/Attack:* As in **Frag**, this may happen in any order until the player runs out of movement and attacks. See box "Power-Ups" for how powering up works in **Frag Zombies!!!** Movement is modified from the standard **Frag** rules (see below) while attacking works in the same way as **Frag**.
- *Zombies Move:* The player to the right of the current player rolls 1d6 and moves that many zombies one space on the game board.
- *Zombies Attack:* Any zombies in spaces adjacent to the fighter (or in the same space) automatically attack now. The player to the right of the current player handles any zombie attacks for this turn. See **Zombies**, below, for detailed information on zombie combat and other tasty rules regarding zombies.
- *Finish:* Tell the next player that it's his turn. As in **Frag**, play proceeds clockwise.

Movement

Unlike **Frag**, fighters in **Frag Zombies!!!** only move a number of spaces during their turn equal to their Speed attribute. This distance can be modified with Gadget and/or Event Cards. There is no jumping in **Frag Zombies!!!**

Unlike in **Zombies!!!**, moving into a space with a zombie does not stop your movement. As in **Frag**, you may move through these occupied spaces.

Doors in **Frag Zombies!!!** are always open and do not block LOS. How else would all of those zombies be loose in so many buildings at once?

Movement is otherwise treated identically as in **Frag**.

Zombies

Zombie Pool: The zombie pool is the number of zombies remaining to be placed on the map tiles. At the start of the game, the zombie pool is all 100 plastic zombies included in the **Zombies!!!** game. As zombies are placed on the map tiles the pool decreases. Fragged zombies do not return to the pool but are instead hoarded by the player who made the frag. Fragging zombies is one of the ways to win the game (see **Winning the Game**, below).

Zombies in Combat: All zombies have Health 1 and can only attack an opponent in an adjacent space (they have no ranged attack abilities). Zombies do not roll dice to hit (all zombie attacks are automatic hits) and they roll 2 dice for damage.

Zombie Stacking: Unlike the fighters, any number of zombies may end a turn in a space or may even end a turn in the same space as a fighter. The cards *This Isn't So Bad* and *Zombie Master* may not be used to stack zombies in a space.

The **Zombies!!!** Card Event Deck

Power-Ups

On the standard **Frag** maps power-ups are indicated on the map with a gadget or weapon symbol. **Frag Zombies!!!** uses a similar method but since it is played on the **Zombies!!!** Map Tiles the Life and Bullet tokens from the game are used instead of the **Frag** power-up symbols.

To use Life and Bullet tokens place them on a newly drawn tile as you would in a normal game of **Zombies!!!** A player moving over a space with a Life or Bullet token rolls for power-up as he normally would in **Frag** using life tokens as gadget spaces and bullet tokens as weapon spaces. These tokens are removed from play whenever a player successfully powers-up using one of them.

In *Frag Zombies!!!*, the **Zombies!!!** Card Event Deck takes the place of the Frag specials deck. Each player starts with one card from the Card Event Deck and earns an additional card for each zombie frag they make. Fragging other players does not earn a player cards. As in *Frag*, a player may not have more than five cards in his hand at the end of his turn. A player may have, in play, no more than 3 cards from the Event Deck at any time. Activating one of these in play cards does not count as playing a card for that turn.

A lot of the cards in **Zombies!!!** are easy to use with the *Frag* rules and don't require any special rules. For those cards and rules that do need some modification and clarification for a *Frag* game, the following will come in handy.

Generic Rules Applicable to Many Cards

- **Combat Roll:** When a **Zombies!!!** card states "add +X to a combat roll" add that number to the fighter's Accuracy for the number of combat rolls specified on the card. *Example:* Hey Look . . . A Shotgun! states "Target player gets a +1 to their next 3 combat rolls." which means, in *Frag Zombies!!!*, the player gains a +1 to his next three attack rolls.
- **Double Movement:** Cards that state "double movement" must be played at the beginning of a turn before movement. The player simply doubles his movement for that turn.

Rules for Specific Cards

Butter Fingers -- Play at any time. The target player must discard one card from his hand or already in play. Discard after use.

Chainsaw -- Play only when you are in the Lawn and Garden Center. For the remainder of the game you are considered to have a chainsaw weapon card in play that does not count against your weapon limit. Take one Chainsaw card from the weapon deck and place it beside your record sheet.

First Aid Kit -- Play only when you are in the Hospital or Drug Store. Roll 1d6 and collect that number of Blood Counters which you may use at any time during the game. Discard after use.

Grenade -- Play only when you are in the Army Surplus Store. This card remains in play and available until you are fragged or you choose to discard it. Discarding this card frags all zombies in a building. You score the frags (and draw one card from the Event Deck for each frag) but must also lose 1 Health.

I Don't Think They're Dead . . . -- Play at the beginning of any player's turn. That player must frag two zombies before the end of his turn or return two earlier fragged zombies to the zombie pool. Discard after use.

Lots of Ammo -- Play only when you are in the Sporting Goods Store. Discard this card to either reload all of your weapons in play or draw one weapon card. Discard after use.

Much Needed Rest -- Play at the beginning of your turn before movement. You do not move this turn but instead gain 2 Health (this may take you higher than your

Too Many Frags!

If a player frags more than 5 zombies in a single turn he collects all of the frags but may only draw five cards from the Event Deck.

A player who frags more than 10 zombies in a single turn gains 2 blood points. How he gained them we leave to the imagination of the players.

Fragging Other Players

Though fragging other players does not achieve either of the two goals needed to win and you don't gain any cards, there are still plenty of good reasons to frag another player when the opportunity presents itself.

- A player has more zombie frags than you do and you want to slow him down.
- There aren't any zombies in the immediate area and not fragging something on your turn would be a complete waste.
- A player is about to win by reaching the Heliport. Fragging him sends him back to Town Square.

Players are likely to have countless other reasons to frag another player.

starting Health). Discard after use.

Skateboard -- Play only when you are in the Skate Shop. As long as this card is in play all of the player's movement is at +2. This card remains in play until the player is fragged.

Winning the Game

Much like the basic *Zombies!!* game, the primary goal of *Frag Zombies!!!* is to be the first player to reach the center square of the Heliport Map Tile. An alternate way of winning is to be the first player to frag 25 zombies. When a player achieves either of these two goals he instantly wins the game.

* * *

Playtested by Michael Harris, Blake Smith, Andy Vetromile, and Lee Zaruba.

A fragged player may still play cards on himself and other players.

When a player is fragged, all of his gadgets and weapons in play are dropped on the space where he was fragged. Use the rules from *Frag*. There just isn't enough stuff in this town for it to disappear when a player is fragged.

Unlike *Zombies!!!*, a player who is sent back to the Town Square does not lose any of his collected zombies.

Iniquus Veritas

The World's Most Depressing Album

by Alice Turow

*"When you marry, know as you take the ring
One of you will leave the other
Or you'll die together in pain."
-- "Aisle" (track 5)*

The Album

It is unknown where *Iniquus Veritas* came from. It appears to be a normal compact disc, although the recorded surface is slightly more blue-green than other CDs. Perhaps this is a clue to its origin, or maybe it merely means that it is a copy or otherwise "burned" disc. There is a cover (a simple geometric pattern in red, blue, and burgundy repeated in unexpected ways) that is duplicated on the CD itself. The back of the jewel case lists the tracks, but no other information. In fact, there is no other "helpful" text anywhere . . . no liner notes, copyright information, not even a creator (or "band") name. (Strangely, the Compact Disc Database lists two versions of this: one with an artist name of Unknown, another credited to Anonymous. Comparing the CDDB entries reveals that both entries probably refer to the same album.)

What *is* known is that those who listen to its twelve tracks will find it to be one of the more compelling -- but depressing -- experiences of their lives. In fact, almost 30 percent of those who listen to *Iniquus Veritas* will take their own lives within a week of hearing it!

The effects of the album depend on being exposed to it in its entirety in a relatively short period of time. Thus listening to half the album will be an affecting experience, but will not itself cause a listener to commit suicide. The definition of "relatively short" is unknown; it seems to be within a week, but there are reports of one person who carefully listened to it track by track over a month having "accidentally" driven off the edge of a cliff on day 30.

Multiple exposures to the album do not seem to increase the chances of it affecting a victim; if you don't succumb to it after the first time, it seems that you can listen to it safely. Although there seems to be some statistical evidence that those susceptible to its effects are often depressed and suicidal normally, there have been many exceptions . . . some startling. Regardless, the suicidal tendencies it instills do seem to be permanent; even if a victim is prevented from killing himself once, he will still try again given another opportunity.

Listening to the album in order does not seem to be necessary; putting the album in a CD changer on shuffle mode would be a good way of exposing someone to it unwittingly. *Iniquus Veritas* also does not require an active listener. Provided that the victim can actually hear it, the mind seems willing to process it even if the listener isn't paying attention. Playing the album over the Muzak system in a mall during the holidays would have disastrous effects. Distortion does seem to be a problem; blaring it out of a car stereo, for example, wouldn't have much effect on those far away, even if they could hear the bass.

The album seems to only work on humans, although no one has made known what effect it has on more advanced brains, like those of apes or dolphins. (It is also unknown the effect on aliens, if any exist in the game world.) Although much of the CD's vocals are in English, listeners do not need to comprehend that language to suffer its effects.

Duplicable Depression?

The effect of this album on the world will depend on whether or not it can be copied. Some possibilities:

- **No.** Although the music itself can be copied (even if through no other way than sticking a microphone in the same room as the speakers), the album's effects cannot be duplicated. This would negate much of the danger of the CD, but would also create a much more desperate situation if powerful forces are aware of its potential.
- **Yes.** The CD can be copied like any other, and any copies will have the same effects of the original. The possibilities for anarchy with this possibility are incredible. If the GM is looking for a compromise, he might say that the album requires copying by a certain technique or with a certain device to retain its abilities. Thus albums copied at 4x speed may be ineffective, while those copied at 1x speed work all too well.
- **Yes.** Not only can the album be copied, its tracks can be compressed and retain their abilities! MP3s of its contents might be spread throughout the Internet. In this case, the sinister (or merely curious) might be trying to assemble a complete set of tracks. This would especially be a good option for a Cyberpunk campaign, with various factions trying to find -- or suppress -- tracks.

"There's a Theory . . ."

How, exactly, *Iniquus Veritas* works is a mystery. There are several theories:

- **Innate.** There is simply something about the arrangement of the music, the lyrics, the syncopation, the voice of the vocalists, or all of the above that combine to cause its effects. It seems unlikely, given that few people believe an album can "make" someone do anything (not to mention the suicidal tendencies require listening to the entire album), but it might be possible.
- **Supernatural.** Somehow the album taps -- or is infused with -- a supernatural link of a sinister nature. It may summon extradimensional beings (or act as a beacon for them), allowing them to possess those it would find susceptible. In this case the tally of victims might be building towards a crescendo, with something big happening when a mystic number is reached. Or maybe the album itself is a spell . . . albeit an unusually conceived one.
- **Scientific.** Perhaps there's a frequency pattern that affects some minds, which happens to be generated by the CD. The CD might contain a chemical agent that is "burned" off by the player's laser, which may respond to hypnotic commands hidden in the music. Or maybe the CD is a repository for nanites that can drive some people to take their own lives (though in that case the CD would likely only affect those who handle it). Regardless, the knowledge required to do this is certainly not common, and would more likely resemble a conspiracy theorist's ramblings than any actual scientific theory.

Investigators may need to discern how it works in order to determine how to counteract its effects, or to determine what greater purpose (if any) is behind the album.

More Secrets

In addition to the obvious effects, there are those who believe that people who don't kill themselves are somehow . . . changed. If true, to what end? Perhaps they are being reprogrammed for some other purpose (good or ill). Perhaps they are being "opened" for channeling of otherworldly beings. Regardless, unscrupulous agencies using *Iniquus Veritas* for the sinister purpose of undetectably eliminating enemies may discover that they have a much larger problem on their hands . . .

The album also has a hidden track. It may be accessed by rewinding to *before* the first track. The purpose of this hidden track is unknown. Perhaps it is an "antidote" for the mind-altering effects. Perhaps it enhances the abilities of the album to achieve 100% effectiveness. If the suicides are merely a side effect of a more sinister purpose, then the hidden track might be the final key to that plot. Maybe it merely contains clues to the album's creators . . . but that might still be incredibly useful to unraveling its mystery, or resolving the problems it creates.

Using *Iniquus Veritas* in a Campaign

Iniquus Veritas is a good plot device for many different campaigns. It can be a secret weapon, the cause behind a mysterious death, or a sinister threat to the public. Thematically it operates on many levels. By itself the album can be used to create fear in something normally commonplace and beloved: music. If it can be duplicated, it can become a metaphor for viral and biological agents. Even if the heroes can seem to eliminate every copy, how can they ever be sure? Depending on the campaign, it can also be used as a cautionary focus on the dangers of technology; what if making copies of a CD and giving it to others was nearly the equivalent of copying a gun and distributing it?

The basic idea is also applicable to many different eras and genres. All the premise really requires is a recorded medium, whether it's an Edison cylinder or the latest scifi audchip (although the genre and style notes may need to be changed).

Plot Seeds and Ideas

- The heroes gain information about a device that teenagers are using to test themselves in macho rituals. What is it? And why do all those who "passed" the test constantly wear headphones and nod knowingly to each other?
- If the heroes know about the album, but have not been fully exposed to it, an otherwise mundane investigation through a place can be given a sense of urgency if the music starts playing over a sound system in the area. (Of course, the investigators might just cover their ears, but that leads to other roleplaying challenges as the mission must now be accomplished without hearing . . .)
- A record company is releasing a new album it's sure will "cause quite a stir." If the heroes learn what the CD is capable of, will they be able to convince anyone else? How will they deal with the problem of its impending release -- or even convince anyone else of the danger? (This version can make an especially good plot for angelic characters in an *In Nomine* game; Nybbas, Saminga, and Vapula would all be logical possibilities for being behind it.)
- What if the album contains the secret to thwarting some other, greater threat? Are the heroes willing to take a chance with their own lives and mental well-being to prevent a greater evil?
- Finally, if the heroes ever manage to eliminate all copies but one, what will they do with it? It seems too dangerous not to destroy, but the temptation to keep it -- for study or other (unwholesome) purposes -- may be overwhelming . . . and ultimately disastrous.

Track Listing

1. "The Previous" -- A female vocalist sings almost inaudibly, positing regrets and incorrect decisions in this slow folk-like song. The violin and drums drown out most of the voices. One audible lyric goes, "If I could go back, I would. If I could go forward, I would. If I could go anywhere, I would." 3:17.
2. "Spinning Mobile, Toy's Key" -- An instrumental piece that begins as somewhat idyllic (if mildly off-key) stereotypical children's music, then transforms slowly into a more and more confusing cacophony. Random adult voices can be heard throughout the piece, sometimes laughing, usually crying or disappointed; the random snippets that can be understood seem to be directed at the listener. 3:46.
3. "Laughing At You" -- This track is a dance number, with a female vocalist playing off fears of adolescence. Part of the chorus includes "I thought you should know; it's all right. / We're only laughing at you. / Only seven years to go; it's all right. / We're only laughing at you. / And 10 years from now / when we think of you / we'll laugh." This song has somehow made it into the public, and is popular at many university radio stations. 3:41.
4. "Meeting" -- This instrumental track is best described as a sultry jazz tune performed by someone supremely unconfident. Just as the listener begins to feel a warm vibe, it will switch into a different (unsatisfying) key,

A Note to GMs

These descriptions are intended to spark the imagination, both of the GM and the players; if you can think of better ideas, or ones that strike a stronger resonance with your players, please feel free. Like most good horror, these ideas rely on the fear of fragments. Describing the music in too much detail may shatter the disbelief required to make it work. After all, no album could *really* make people

- awkwardly miss a note, or otherwise stop short of fulfillment. Compelling like a train wreck, at least a half-dozen times the listener will be disappointed, flinch, or cringe. 5:01.
5. "Aisle" -- A male vocalist's mild attack on relationships and marriage, wrapped around a fairly upbeat "pop" song. 3:05.
 6. "La Serpiente de la Sal" -- An alternative instrumental piece, with two slow atonal guitars working together, almost fighting each other for superiority. Different listeners may get into arguments over which guitarist was "better." 4:19.
 7. "Live Faster" -- This is a breakneck vocal piece with piano. The female vocalist seems to be addressing the need to move more and more quickly as demands pile from all directions; she never seems to inhale throughout the song's 664 words. The climactic ending consist of the lyrics, "Maybe tomorrow maybe now maybe tomorrow maybe now maybe tomorrow maybe not." 2:21.
 8. "Entitled" -- A simple seven-note drum theme repeated over and over. It starts slowly, then speeds up to an impossible performance. The theme is never made more complex, but acute listeners will note that individual notes drop out of the theme, until there are only three beats left of the original theme (the second, third, and sixth notes). 3:33.
 9. "Ter Pedes Electrum" -- A slightly manic techno song (just over 111 bpm) with the male vocalist singing in a low register. Although much of his vocals cannot be made out clearly, it seems to be nonsensical Latin sentences. One translated lyric consists of "Horse ditch relax superstitious evenness relax Charles." 3:44.
 10. "Staccato Unspoken" -- This is a piece of orchestral music, which seems to be performed by cello and flute. Slow and melodic, it feels melancholy. Classical scholars will generally feel that the music feels like it's "missing" something; the lower notes of the cello combined with the flute's higher register seem to create a vacuum where another instrument should go. 5:58.
 11. "Is It All?" -- An a cappella piece performed by both vocalists, with perhaps other voices, or themselves overdubbed. It seems to take the voice of a person about to die, questioning what they have (or haven't) done while they struggle with the problems of aging. One part goes, "I should have seen more sunsets (Is it all?) / I should have written a book (Is it all?) / What happened to my skin? (Is it all?) / No regrets, tepid look, violin, is it all?" 2:11.
 12. "Until" -- The first forty-five seconds of this track sound like a cross between a happy funeral dirge and a fast improvisational xylophone solo. The last two and half minutes consist of silence, with (what sounds like) a heartbeat punctuating the silence every so often -- between 20 and 50 seconds. It ends with the faint sound of breaking glass. 3:15.

kill themselves. Stylistically it is important that, although dubbed "the world's most depressing album," it is also quite compelling; if it were merely depressing, no one would listen to the whole thing. There is, at its core, a lot of beauty in *Iniquus Veritas* . . . like much of that which is horrible.)

Year of the Comet (for Shadowrun)

In both of their flagship games, *Shadowrun* and *Battletech*, FASA was known for implementing and steering through big changes for these settings. Primary among these were the return of the Clans in *Battletech* and the election of the dragon *Dunkelzhan* as UCAS President in *Shadowrun*. Now changes are being wrought to the Sixth World once again, but it isn't FASA behind the wheel. FASA's decision to close their doors earlier this year came as a sad shock to many, but it did allow for the survival of their intellectual properties, unlike so many good games we have lost. Thus WizKids own the rights to Shadowrun, but they have licensed it to Fantasy Productions to develop the game and setting.

The first release from FanPro is *Year of the Comet*, which details an auspicious year for the Sixth World. 2061 marks both the return of Halley's Comet to the night skies -- itself a herald of change, and the fiftieth anniversary of the Awakening, the event that brought dwarfs and elves back into the world. The book examines and details numerous changes -- arcane, mundane and political, in what turns out to be a turbulent year, although the bulk of the events actually take place between September 2061 and April 2062, when the Comet passes from sight.

Year of the Comet is a text-heavy book dividing into ten or so chapters, nine of which focus upon different aspects of the year of change. The last and tenth chapter provides the necessary game information for the preceding nine, as well as discussing ways in which the GM can directly implement these events into their own campaign. Each chapter is laid out and written as a series of documents and reports posted to Captain Chaos' SIG bulletin board for shadow runners. They are accompanied by commentary and interjections -- truth, lies and conjecture -- from various individuals. The effect of this commentary is often useful, but at times it disrupts the flow of the original text. Whilst the commentary has a necessary place and use in the book, it would be easier upon the eye if it were arranged in a less disruptive fashion.

The quantity of the art in *Year of the Comet* is low, but the standard is decent enough. That said, the illustration on p. 122 of an Aztlan soldier holding a civilian helpless -- allowing his colleague to stab him in the stomach -- is perhaps too gruesome. Admittedly, it does show the brutal lengths that the Aztlan military are prepared to go, but even so . . . Finally the book is backed up with a decent contents page and an index.

It should be noted that *Year of the Comet* does not stand alone, and *Shadowrun* GMs will need access to several other books to make full use of its contents. Primarily these are the *Shadowrun Companion*, *Magic in the Shadows*, and the

Critters book. Depending upon where the GM sets his campaign, the *Aztlan*, *Denver*, and *Target: UCAS* supplements amongst others will also prove useful.

[SPOILER ALERT!]

Year of the Comet opens with a discussion of comet fever as the United Nations declares 2061 to be the Year of the Comet. Numerous corporations enter the race to be the first to get their space probe close or even onto Halley's Comet. Like so many of the chapters in this book, this provides lots of opportunities for adventure, but this is actually the least ordinary series of events in the book.

As the comet comes closer, Mana levels fluctuate and natural deposits of the alchemical metal orichalum appear, where previously it was only available through synthesis. Strange critters and spirits appear -- some even claim that the dead walk the Earth, and out of the rift left by the death of Dunkelzhan, climbs a new dragon. Later to be dubbed Ghostwalker, it attacks facilities across the UCAS, before destroying the Aztlan facilities in Denver and claiming the whole of the Front Range Free Zone as its own.

In the more mundane world, the "ring of fire" -- the circle of volcanoes around the Pacific -- becomes active in September, leading to calamitous eruptions, earthquakes, and tidal waves. This affects mainly Japan, the Philippines, and California, but in particular leads to a recall of the Japanese Imperial marines to help the disaster relief, leaving a power vacuum behind which many rush to fill. Driven out of their Denver territories, the Aztlan nation turns its attention to the rebellion in the Yucatán, employing a scorched earth policy with disturbing results.

Of particular interest to the players will be the outbreak of SURGE (or Sudden Recessive Genetic Expression) in sporadic bursts across the world. This is similar to the UGE (Unexplained Genetic Expression) outbreak that saw the first elves and dwarfs appear, but it occurs with far less frequency and is highly variable in its effect. Instead of creating new metahuman species, SURGE creates individuals with new abilities and features they previously not possessed. These can be both negative and positive -- the example given is that of Rebecca Constantine, whose SURGE metamorphosis has given her some very cat-like traits: claws, eyes, behavior, and a need for rare meat. Other listed positive traits include astral sight, marsupial pouch, and natural venom, while the negative include a Cyclops eye, bio-rejection of all cyber ware and tusks. Like the original UGE, SURGE also sets off a wave of anti-metahuman feelings.

GMs can choose whether or not to inflict SURGE upon their player's characters. The book suggests the best method is to have each player make an Essence test. Success indicates that the character undergoes SURGE and requires separate rolls to determine how many negative and positive points they acquire. These can then be spent as necessary or the effects again rolled for. I cannot see this method (which is reminiscent of the random method seen in *GURPS Wilds Cards*), however fun it may be for the GM, being quite so popular with all players though.

[END SPOILER ALERT]

The main problem for the GM with *Year of the Comet* is actually getting the information to the players. Described as a book for both GM and player, I'm not sure that letting a player near this book is a good idea. It would have been nice if more player handouts had been included, because the information as presented is too disrupted by commentary for it to work as handouts.

Year of the Comet is a book that not so much upsets the apple cart of the Sixth World as it bruises some of the fruit. The exact natures of many of the secrets behind the events in *Year of the Comet* are also left to the GM to decide -- that is, until we learn more from FanPro. Still, *Year of the Comet* provides a wealth of information that GMs can use in their games, but still leaves the hard work to them.

Magic of Faerun (for Dungeons & Dragons)

Written by Sean K Reynolds, Duane Maxwell, and Angel McCoy

Published by [Wizards of the Coast](#)

192 color pages; \$29.95

The *Forgotten Realms* continues to be the most supported -- and most expensive -- source of products for the new edition of *Dungeons & Dragons*. It continues to update old classes, spells, and magic items into third edition in a way that can augment any campaign with a heavy emphasis on magic.

The book is broken up in seven chapters. Chapter one and two give a lot of flavor and background to the *Forgotten Realms* with information on the deities of magic and the role they've played in the development and even limitation of magic in the realms. The old Mage Duel from the old *Player's Option* series makes a comeback, and other Realms-specific styles like Moonfire, Spellfire, and Elven High Magic are all updated for the third edition.

The meat of the book for some would be chapter three where new feats and prestige classes are detailed.

The new feats include attune gem, augment summoning, energy substitution, eschew materials, reactive counterspell, spell girding, spell thematics, spellfire wielder, and widen spell. Unfortunately, much like with the *Forgotten Realms* hardcover book, there is more duplicate creep here. Owners of *Tome & Blood* have already seen augment summoning, energy substitution, eschew materials, and widen spell. Between the *Forgotten Realms* hardcover and this book, there are few feats not repeated between them.

Fortunately, the same isn't true for the prestige classes, although some of them are modified versions of classes we've seen in books like *Tome & Blood*. The eleven new prestige classes are as follows:

- **Gnome Artificer:** Similar to Tinker gnomes from the *Dragonlance* setting, but their inventions actually work.
- **Guild Wizard of Waterdeep:** A guild wizard who has benefits and penalties for their association.
- **Harper Mage:** the Old Harper class is updated with a slant towards mages.
- **Harper Priest:** as above but with a priestly bent.
- **Incantarix:** Spell users who concentrate on defeating other spell users by stealing or negating other spell users' abilities.
- **Mage-Killer:** A spell user who concentrates on killing other spell casters.
- **Master Alchemist:** When mere potions aren't enough.
- **Mystic Wanderer:** Divine spellcasters who avoid church politics.
- **Spelldancer:** Spellcasters who find their power through the primal song and dance.
- **Spellfire Channeler:** When merely having the spellfire abilities pales with higher levels of control.
- **War Wizard of Cormyr:** A wizard who is trained in the ways of war, but not how to use warrior weapons.

Several are transportable to other campaigns without any effort while others, like the War Wizard of Cormyr, can be excellent bases to design prestige classes around. Very disappointing however, is that several mage nationalities were left out including the Halrluains and the Silver Eyed Nimbral wizards. This is pretty short sighted of the authors, especially since if you own *Tome & Blood*, the Guild Wizard of Waterdeep bears more than a passing resemblance to one of the Prestige Classes there.

Chapter Four, Places of Power, gives GMs and players better ideas of where spell casters of both divine and arcane magic gather. Notes on natural sights, clerical refuges, and mage fairs are listed with brief details, often under a page.

To break the background information up, Chapter Five goes into spells. This chapter goes from page 68 to 125 and is an excellent resource for players looking for old spells native to the *Forgotten Realms* setting that they want to see updated to *3rd* edition. Perhaps just as important though, is the updated spell lists for the core prestige classes, Assassin, and Blackguard, as well as core classes, and the introduced prestige classes. It's a format all books should follow when possible because of spell creep. As more spells become available to core class characters, the prestige classes suffer because their spell lists often don't receive the same treatment.

Spells are listed in alphabetical order and include 0 level spells like acid splash and silent portal, which negates noise from doors and windows, to 9th level spells like black blade of disaster and Simbul's Spell Trigger. There is a nice variety of spells, including many named after their famous creators like the Simbul, Elminster, Blackstaff, Nybor, and others. Another area that doesn't suffer is types of spells. Not all of these spells are for attack or defense. Some like Mass Teleport allow the user to take more weight, while Healing Touch allows the caster to take his own life force and heal others.

Following up on updating spells to 3rd edition, magic items get their turn. Items are broken down into familiar sections like rings, potions, rods, staves, and even artifacts. Included are gold piece costs and required spells and ingredients to create said items.

Some of the more interesting items are those that are for the unusual classes, like the Monk's Tattoo. This tattoo enables the monk to move, damage, and avoid attacks as if he were four levels higher . . . very useful and not too unbalancing since it doesn't affect base attack bonus, hit points or saving throws.

The section on minor artifacts is a little disappointing. Unlike the old days of 2nd edition *D&D* where even a minor artifact was a thing of power, these new artifacts are generally just unique items. Azureedge, Blast Scepter, Great Druid's Staff, and other powerful magic items are now minor artifacts. Unfortunately, where the Realms has numerous major artifacts, only two are updated. Another section included in this chapter is materials used in magic item construction. While this section doesn't equal that found in the old *Treasures of Middle Earth* by I.C.E., there are several new materials like duskwood, and old favorites like mithril.

Chapter Seven, Creatures, introduces the Beholderkin Spectator, Crossroads Guardian, Crypt Spawn template, Magister Template, Scalamagdrion, and Spectral Mage Template. The Spectator is an old favorite and is often a guardian of treasures. The Crossroads Guardian is a creature summoned into existence by one of the new spells. The Scalamagdrion is a dragon like creature often used to trap and guard spell books. The templates Crypt Spawn and Spectral Mage, allow new types of undead to be added to the campaign, while the Magister template updates another old favorite character type to 3rd edition. Each template includes a sample character.

The book is text-heavy. While there are several full-color illustrations, they do not dominate the book, and can actually be considered sparse. The layout is superior with the pages looking like yellowing faded scrolls. Two columns of text are broken up with illustrations.

Despite the value inherent in a massive 192 full-color page book, which includes more than 200 spells, almost 200 magic items, and 11 prestige classes, the book is still one of the most expensive *d20* books out there. What's worse is that the book isn't even a hardcover. If you play or GM the *Forgotten Realms* campaign setting, I recommend that you swallow the price tag and enjoy the great spells, prestige classes, magic items and background information. If you play another campaign, you might be better off with the [Book of Eldritch Might](#) (a pdf file for \$5 by Malhavoc Press), or *Relics and Rituals*, a hardcover for \$24.95 from [Sword & Sorcery Studios](#). Only if your desire for magic items, spells, and prestige classes is unmet -- or you feel that only official *D&D* products by Wizards of the Coast can ease you're craving for spell power -- should you buy this book.

Drakon Board Game

Published by [Fantasy Flight Games](#)

Designed by Tom Jolly

Illustrated by Scott Schomburg

100+ pieces and rule book; \$19.95

It's a dungeon crawl gone bad! You and your adventuring party have found your way into a dragon's treasure hoard -- memories of *The Hobbit* and too many *Monster Manual*-inspired *D&D* sessions are floating to the surface already. But in this case you've all been caught by the dragon Drakon, and instead of simply eating you all she's decided to make you play a little game: the first adventurer to acquire five gold pieces in her maze gets to leave. The rest get to be eaten.

It seems Drakon needs a good laugh more than she needs the extra calories.

As you look at your tiles -- chambers in the maze -- that are dealt to you, you begin to size up your fellow adventurers. How can you get ahead and collect the gold from yourself? How can you steal from the other players? How can you betray your buddies?

Yes, there's a moment at the beginning of the game in which you start to think of your fellow players as competitors, ready to snatch victory -- that is, life -- away from you. The game accomplishes this with an astoundingly simple play sequence.

You see, in *Drakon*, you're building the maze as you play. Every turn, you may either place a tile as a chamber in the maze or move to a neighboring chamber, not both. Nearly every tile lets you, or forces you, to do something special like find a coin, steal a coin from another player, or change a tile on the board. If you set up something nice for yourself, you can't use it until your opponents all have a chance to move.

And that's what makes this game so cutthroat. Everyone else gets a shot at taking what's rightfully yours!

There are also tiles that make you lose a coin, so you can put those in your opponent's path to reduce their chances of victory. All the doors are one-way, so this is pretty easy. It's even easier to put a "steal-to-the-right" chamber in front of a friend, to so that he can move onto it during his turn to steal a coin from the player who's about to win. You notice I said "friend"; when somebody's about to win, everyone else becomes your best chum.

Other than arranging tiles and stealing coins, there's not much interaction between players on the board. There's an optional rule that gives special abilities to each adventurer, in which the barbarian can push another player and steal a tile from her hand, and the thief can steal a gold from a player in the same square (the other players are the Amazon, the dwarf, the wizard, and the knight). There's no interaction with Drakon the dragon -- she's just the back story for the game -- and there aren't any monsters in the maze to fight.

The components are glossy and full-color. The art is a nice blend of attractive computer graphics and charming and clear illustration, and the game is very attractive. The box is also colorful and attractive, a convenient size, and seems pretty sturdy. I'll probably keep my pieces in the box. The playing pieces are made of very sturdy cardboard, and they all need to be popped out of their small sheets. It's not as much of a chore as it sounds. Fantasy Flight makes a lot of

games with pop-out cardboard components, so they have a lot of practice at making these easy to remove and durable. I managed to pop them all out -- over a hundred pieces -- without damage to any of the pieces.

On the other hand, the cardboard adventurer pawns were a little too thick to fit into the slotted plastic bases, and the cardboard surface wound up being torn a bit on all six of my pawns. It didn't harm the function of the pieces, so it was only a minor nuisance.

At first I was concerned that the rules in the seven-page, 7"x10" rulebook were going to be complicated. It seems like a big rulebook for what was supposed to be a very simple game. But in fact there are less than two pages of rules . . . but with English, Danish, and German versions included.

The game is for two to six players, and I think it plays well throughout that range. Because the one-action turns are so short, play moves fairly quickly even when there are a lot of people. The dynamic does change, however, depending on the number of players. Competition is very clear-cut with only two players, so the strategy is more limited. At three, you can begin to strategize more seriously; it's easiest to foil a victory when two players work together. At higher player numbers, there's more chaos on the board, and more sprawling mazes.

Drakon is also very quick to learn, because play is so simple: lay down a tile, or move and perform the tile's special action. The hardest part is learning what all the tiles do. There's a handy key to the tile symbols on the back of the rulebook, and the tile explanations are on the inside of the rulebook, laid out in a clear manner and all in one place. It would have been easier if the tile explanations on the inside had icons printed there as well, but it's minor complaint. In my games, we had very little trouble remembering what the icons meant.

Drakon is a great game to mix with your roleplaying. It's easy enough to learn in a few minutes. It's quick enough -- about 20 minutes for a game -- that it can be played during a soda run or even a smoke break. And seasoned dungeon crawlers should enjoy the irony of non-cooperative dungeon play, and will instantly be attracted to the almost archetypal sword-and-sorcery heroes.

The Curse of Clio's Nightmares

*"And then -- a Day as huge
As Yesterdays in pairs,
Unrolled its horror in my face --
Until it blocked my eyes . . .
That person that I was --
And this One -- do not feel the same --
Could it be Madness -- this?"*
-- Emily Dickinson, "The First Day's Night Had Come"

Have you ever had that [nightmare](#) where you wake up and you're not sure what, but you know something is different, and somehow wrong? And that, worse yet, you're not completely certain whether you've woken up or whether you're just dreaming that you've woken up, and when you do wake up, you're totally turned around and everything seems subtly different? Have you had that [nightmare](#)? Well, Clio, the Muse of History, sure has. Every Halloween for the past three years, she has that [nightmare](#), just like clockwork. Here, then, a new selection of Clio's nightmares, worlds where history's changes bring forth horrors. This time around, the horrors may seem more familiar than the worlds they haunt.

"Here, too, when they came, they found the Huns, whose warlike fury had swept the earth like a living flame, till the dying peoples held that in their veins ran the blood of those old witches, who, expelled from Scythia had mated with the devils in the desert. Fools, fools! What devil or what witch was ever so great as Attila, whose blood is in these veins?' He held up his arms. 'Is it a wonder that we were a conquering race, that we were proud, that when the Magyar, the Lombard, the Avar, the Bulgar, or the Turk poured his thousands on our frontiers, we drove them back?'"
-- Count Dracula, in *Dracula*, by Bram Stoker

Attila the Hun's armies raced across Europe like a destroying wildfire, spreading devastation in their path. The last legions crumbled at Chalons, and when the Pope's gold ran out, the Huns leveled Rome itself. For daring to oppose him, Attila then turned his hatred to the Gothic lords, harrying them out of their cities with fire and sword. By the time Justinian sought to reconquer the West, there was no West remaining to rule; the Byzantine power crested and fell back, succumbing to the Huns and Avars in 605, and to the Persians thereafter. The Hunnic khans eventually even conquered Britain, and a Christian descendant of Attila (his grandfather converted by an Irish monk while in a fit of pique over the demands of the Caliph) ruled from Salisbury when the Arabs invaded in their turn -- and threw them back at Senlac Hill. The Caliphate eventually declined itself, splintering into factions and falling to the Turks, as the Khan-Pendragons joined with Norse and Danes to harry the Saracen shores of Europe, and plant Christian crusader states in Gaul, Frisia, and the German rivers.

However, the Turks brought new vigor to the contest, and the smaller European emirates fell one by one under the sway of the Ottoman rulers. Then, the Christian statelets fell, until only the British khanate remained. The Turkish galleys forced the Thames, and Christendom fell with its last defender in 1476. But this "son of the dragon," this Pendragon, this Dracula, would not let death defeat him. He made one last deal, selling his bloodline to the devil to protect the people of Christ. Vlad the Impaler, the Pendragon, sleeps in a hidden cave in his native soil until his country can be free again -- but his sons, given life by the unhallowed power of his blood, stalk the night and spread fear through the Turkish domains. PCs in this odd **GURPS Arabian Nights-Blood Types** crossover can be the scions of Dracula, vampiric predators in the name of the Cross they can no longer bear, conspiring their way through the Turkish court, raiding the rich galleons of the Turk's treasure fleet, or robbing from the rich and giving to the poor. Alternately, the PCs might be the devout agents of the mullah Ibrahim ibn-Halsinj, warring against the undead in the gaslit streets of Constantinople, always waiting for the word that a ship of dead men has docked at Varna, that a mysterious British emir has bought an abandoned mosque -- that Dracula has risen again.

*"Whilst patriot souls their country's fate lament;
Whilst mad with rage demoniac foul intent,*

*Embattled legions Despots vainly send
To arrest the immortal mind's expanding ray"*

-- Samuel Taylor Coleridge, "On the Prospect of Establishing a Pantisocracy in America"

Whether it was back-room politics as usual, discreet bribery, or something rather darker, Lord North's ministry fell after the Boston debacle in 1773. Somehow, when the smoke of royal anger had cleared, Sir Francis Dashwood had become Prime Minister, and his first act was to send his good friend Benjamin Franklin to bring the colonies around. A few discreet promises of peerage, and of Parliamentary representation for the colonies, and the crisis was defused; Dashwood's reward was the land grant for much of the Ohio Valley. Eventually, Dashwood's lands fissioned into colonies in their own right (Vandalia, north of the Ohio; Transylvania south of it) as settlers moved in. However, certain round hills, a few great slashes of forest, and a peculiar pattern of blasted heaths have remained inviolate even as late as the 1860s. Grim Welsh borderers, and Indians forsworn by their tribes, guard Dashwood's own Arcadian preserve, passed on to his heirs, the Order of St. Francis at Medmenham -- referred to in Whiggish whispers as the Hell-Fire Club.

The Club seemingly lay fallow in England, but sprouted again in America. It was most popular in the southern colonies, especially in the Virginia squirearchy of Lees and Randolphs, who gladly intermarry with its British scions, and with the strikingly beautiful women the Club somehow produces for their cotillions. Its new chapter-houses became notorious dens of sin even in decadent New Orleans and rough-and-tumble Despensers at the northern bend of the Ohio. It invested in slave-trading, and grew rich during the cotton boom. However, the political climate in England has changed -- the populous northern colonies joined with the mill-towns to press for Reform, and the Whigs' Lord Gladstone holds the ministry now. Queen Victoria looks with disfavor on the riotous "Hell-Fire Lords" and her husband Albert abominates the slave trade. Something has to give, and the Hell-Fire Club has begun to plot seditious secession -- with the help of their most secret friends, deep in the Ohio forests and high atop Vandalia's hills.

In this antebellum *GURPS Spirits* campaign frame, the characters may already know of the Hell-Fire Club's treasonous nature -- but investigation slowly reveals the depths of its depraved bargain with the ultraterrestrial fae deep in the forests of Vandalia. PCs might be Masonic ritual magicians (in the proud tradition of the first Governor-General, Lord Washington) working the mean streets of New York against the machinations of a seemingly-ageless Aaron Burr, agents of the Crown playing the Great Game among the Indian tribes in Spanish Louisiana who discover the Club's revived Buzzard Death-Cult in the West, or brave "Molly Maguire" coal miners in western Virginia, desperately battling the Unseelie tommyknockers and the half-Fae aristocracy for their lives and freedom.

"So few people can boast that they lost a man from Mars and a flying saucer all in the same day! What if Columbus had discovered America, then mislaid it!"

-- Ned "Scotty" Scott (Douglas Spencer), in *The Thing From Another World*

When Fabian Gottlieb von Bellingshausen first saw the shape in the fog, he thought it another massive iceberg. Some fancy made him turn his ship to starboard, though, and he soon realized that he had discovered the fabled Antarctic Continent. He rowed ashore with a small party, to claim this new land for the Czar, and spent the night in a ravine, trapped there by a sudden storm. When he returned, alone, to the ship, he explained that the other men had died of exposure -- and when his ship returned to Kronstadt in 1821 with barely a tenth of its original crew, he explained that the others had died of scurvy. Fortunately, the glory of his discovery outweighed the loss of his men; Bellingshausen was made an admiral, and granted vast estates in Livonia (from which nobody but the serfs noticed the disappearances). Not least because attention naturally turned to the many fascinating devices that the newly ingenious Bellingshausen invented -- a steam-powered ice-breaker, a spectacularly efficient crystallization of glass that could be used in solar-powered heaters or even spun into hot-air balloons, and electrical telescopes for charting the noises of invisible stars!

By 1844, Bellingshausen was ready to return to Antarctica with a fleet of ice-breaking leviathans and a specially-designed aerostat. He intended, he announced, to reach the South Pole itself by air, and establish his electrical telescope there! Some lurid broadsheets even claimed that he planned to send electrical wireless signals into the aether, communicating in some fashion with men from another world! Even without such wild rumors, Bellingshausen's second expedition was a complete success; he lost only two men even after a freakish blizzard hit the South Polar base

camp. The men who returned with him, however, seemed even healthier than they had been before, and all survived the unfortunate outbreak of typhus on the ship's return journey. These survivors, hand-picked from the finest scientific institutes of Europe, seemingly brought back more of Bellingshausen's genius; surely control of gravity will be the next frontier to fall, and then Bellingshausen can lead one final expedition to Mars!

This *GURPS Steampunk-Atomic Horror* crossover (*GURPS Aetheric Horror?*) can pit PC inventors from the Royal Society, suspicious investigators from the Okhrana or the Special Branch, or radical Marx-reading teens who race steam-cars and listen to Strauss waltzes, against the Things From Another World and their unguessable conspiracy. Do Bellingshausen and his shapeshifting alien vampires seek to launch the revolutions of 1848 and rule Europe in the chaos -- or to infiltrate the courts of the Continent and crush all dissent under their extraterrestrial heel? Do they plan to leave Europe Red, or dead, as they reverse-engineer their alien technology to keep watching the skies?

A Set of Rules for Combining *Frag* and *Zombies!!!*

by Philip Reed

"Frag Zombies!!!" is a rule set that combines Steve Jackson Games' computerless first-person shooter *Frag* with Journeyman Press' B-movie action boardgame *Zombies!!!*. To use these rules you will need both games. The *Frag* expansion *Death Match*, while useful (for the extra *Frag* cards), is not necessary to play.

Frag Zombies!!! is played with primarily the *Frag* rules though the zombies, humans, Map Tiles, and Card Event Deck from *Zombies!!!* are all used during play. When these rules conflict with the *Frag* rules these rules take precedence.

Game Components

To play *Frag Zombies!!!* you will be using:

- *Frag* rules
- *Zombies!!!* Map Tiles
- *Zombies!!!* Event Card Deck
- *Frag* Weapon and Gadget Card Decks
- *Zombies!!!* zombie figures and "pawns"
- *Zombies* Life and Bullet Tokens
- Lots of six-sided dice
- A copy of the *Frag* Fighter Sheet for each player. Go [here](#) for a free PDF.
- These rules.

Setup

All players roll to see who goes first (as in the *Frag* rules). The winner also removes the Heliport and Town Square tiles from the Map Tiles. As in *Zombies!!!*, the Town Square is placed in the center of the table and the Heliport is placed at the bottom of the Map Tiles after they are shuffled and placed face down.

The Weapons, Gadgets, and *Zombies!!!* Event Deck are shuffled and each player is dealt one card from each deck. The *Frag* Specials cards are not used in *Frag Zombies!!!* and should be set out of the way. The following cards are removed from the Gadget deck.

Using *Death Match* with *Frag Zombies!!!*

All of the specials are, of course, removed from play. You must also remove the following cards from the decks before play begins.

Weapons

- Mine Dropper
- Tranquilizer Pistol

Gadgets

- Heat Shield
- Key Cards (all colors)
- Wall? What Wall?

None of the *Death Match*

rules should be used in a *Frag Zombies!!!* game.

Gadgets

- Energy Reflector
- Energy Shield
- Fireproof Coating
- Personal Teleporter
- Phase Shift
- Power Leap

Each player selects a pawn and places it in the center space on the Town Square tile. This is the only space in the game where more than one player is allowed to be at a time. This is also the only respawn point where fragged players reappear as the game progresses.

Sequence of Play

Each turn a player may do each of the following (in order):

- *Check for Respawn:* If you are currently fragged and out of play, respawn in the center space at Town Square.
- *Place New Map Tile:* Map Tiles are placed in play exactly as they are in *Zombies!!!*; see the *Zombies!!!* rules for details.
- *Movement/Power-Up/Attack:* As in *Frag*, this may happen in any order until the player runs out of movement and attacks. See box "Power-Ups" for how powering up works in *Frag Zombies!!!* Movement is modified from the standard *Frag* rules (see below) while attacking works in the same way as *Frag*.
- *Zombies Move:* The player to the right of the current player rolls 1d6 and moves that many zombies one space on the game board.
- *Zombies Attack:* Any zombies in spaces adjacent to the fighter (or in the same space) automatically attack now. The player to the right of the current player handles any zombie attacks for this turn. See *Zombies*, below, for detailed information on zombie combat and other tasty rules regarding zombies.
- *Finish:* Tell the next player that it's his turn. As in *Frag*, play proceeds clockwise.

Movement

Unlike *Frag*, fighters in *Frag Zombies!!!* only move a number of spaces during their turn equal to their Speed attribute. This distance can be modified with Gadget and/or Event Cards. There is no jumping in *Frag Zombies!!!*

Unlike in *Zombies!!!*, moving into a space with a zombie does not stop your movement. As in *Frag*, you may move through these occupied spaces.

Doors in *Frag Zombies!!!* are always open and do not block LOS. How else would all of those zombies be loose in so many buildings at once?

Movement is otherwise treated identically as in *Frag*.

Zombies

Zombie Pool: The zombie pool is the number of zombies remaining to be placed on the map tiles. At the start of the game, the zombie pool is all 100 plastic zombies included in the *Zombies!!!* game. As zombies are placed on the map tiles the pool decreases. Fragged zombies do not return to the pool but are instead hoarded by the player who made the frag. Fragging zombies is one of the ways to

Power-Ups

On the standard *Frag* maps power-ups are indicated on the map with a gadget or weapon symbol. *Frag Zombies!!!* uses a similar method but since it is played on the *Zombies!!!* Map Tiles the Life and Bullet tokens from the game are used instead of the *Frag* power-up symbols.

To use Life and Bullet tokens place them on a newly drawn tile as you would in a normal game of *Zombies!!!* A player

win the game (see Winning the Game, below).

Zombies in Combat: All zombies have Health 1 and can only attack an opponent in an adjacent space (they have no ranged attack abilities). Zombies do not roll dice to hit (all zombie attacks are automatic hits) and they roll 2 dice for damage.

Zombie Stacking: Unlike the fighters, any number of zombies may end a turn in a space or may even end a turn in the same space as a fighter. The cards *This Isn't So Bad* and *Zombie Master* may not be used to stack zombies in a space.

The *Zombies!!!* Card Event Deck

In *Frag Zombies!!!*, the *Zombies!!!* Card Event Deck takes the place of the Frag specials deck. Each player starts with one card from the Card Event Deck and earns an additional card for each zombie frag they make. Fragging other players does not earn a player cards. As in *Frag*, a player may not have more than five cards in his hand at the end of his turn. A player may have, in play, no more than 3 cards from the Event Deck at any time. Activating one of these in play cards does not count as playing a card for that turn.

A lot of the cards in *Zombies!!!* are easy to use with the *Frag* rules and don't require any special rules. For those cards and rules that do need some modification and clarification for a *Frag* game, the following will come in handy.

Generic Rules Applicable to Many Cards

- **Combat Roll:** When a *Zombies!!!* card states "add +X to a combat roll" add that number to the fighter's Accuracy for the number of combat rolls specified on the card. *Example:* Hey Look . . . A Shotgun! states "Target player gets a +1 to their next 3 combat rolls." which means, in *Frag Zombies!!!*, the player gains a +1 to his next three attack rolls.
- **Double Movement:** Cards that state "double movement" must be played at the beginning of a turn before movement. The player simply doubles his movement for that turn.

Rules for Specific Cards

Butter Fingers -- Play at any time. The target player must discard one card from his hand or already in play. Discard after use.

Chainsaw -- Play only when you are in the Lawn and Garden Center. For the remainder of the game you are considered to have a chainsaw weapon card in play that does not count against your weapon limit. Take one Chainsaw card from the weapon deck and place it beside your record sheet.

First Aid Kit -- Play only when you are in the Hospital or Drug Store. Roll 1d6 and collect that number of Blood Counters which you may use at any time during the game. Discard after use.

Grenade -- Play only when you are in the Army Surplus Store. This card remains in play and available until you are fragged or you choose to discard it. Discarding this card frags all zombies in a building. You score the frags (and draw one card

moving over a space with a Life or Bullet token rolls for power-up as he normally would in *Frag* using life tokens as gadget spaces and bullet tokens as weapon spaces. These tokens are removed from play whenever a player successfully powers-up using one of them.

Too Many Frags!

If a player frags more than 5 zombies in a single turn he collects all of the frags but may only draw five cards from the Event Deck.

A player who frags more than 10 zombies in a single turn gains 2 blood points. How he gained them we leave to the imagination of the players.

Fragging Other Players

Though fragging other players does not achieve either of the two goals needed to win and you don't gain any cards, there are still plenty of good reasons to frag another player when the opportunity presents itself.

- A player has more zombie frags than you do and you want to slow him down.
- There aren't any zombies in the immediate area and not fragging something on your

from the Event Deck for each frag) but must also lose 1 Health.

I Don't Think They're Dead . . . -- Play at the beginning of any player's turn. That player must frag two zombies before the end of his turn or return two earlier fragged zombies to the zombie pool. Discard after use.

Lots of Ammo -- Play only when you are in the Sporting Goods Store. Discard this card to either reload all of your weapons in play or draw one weapon card. Discard after use.

Much Needed Rest -- Play at the beginning of your turn before movement. You do not move this turn but instead gain 2 Health (this may take you higher than your starting Health). Discard after use.

Skateboard -- Play only when you are in the Skate Shop. As long as this card is in play all of the player's movement is at +2. This card remains in play until the player is fragged.

Winning the Game

Much like the basic *Zombies!!* game, the primary goal of *Frag Zombies!!!* is to be the first player to reach the center square of the Heliport Map Tile. An alternate way of winning is to be the first player to frag 25 zombies. When a player achieves either of these two goals he instantly wins the game.

* * *

Playtested by Michael Harris, Blake Smith, Andy Vetromile, and Lee Zaruba.

turn would be a complete waste.

- A player is about to win by reaching the Heliport. Fragging him sends him back to Town Square.

Players are likely to have countless other reasons to frag another player.

A fragged player may still play cards on himself and other players.

When a player is fragged, all of his gadgets and weapons in play are dropped on the space where he was fragged. Use the rules from *Frag*. There just isn't enough stuff in this town for it to disappear when a player is fragged.

Unlike *Zombies!!!*, a player who is sent back to the Town Square does not lose any of his collected zombies.

Horror and Pizza

I once ran a bizarre six-part multi-genre mini-series where I needed to invite three players into the game. The series itself was fairly unusual (maybe I'll write it up some time), in that it required the players to sign up without knowing anything about the campaign. (The series catch phrase was "Unexpected the expected.") So I invited one player I liked to join; he wanted to know what the series was going to be about.

"Trust me," I said.

"No horror," he said. "I refuse to participate if there's anything to do with horror."

After hemming and hawing (not because there was horror in the game, but because I didn't want to give anything away), I informed him that, indeed, there was no horror. Satisfied, he joined the game. And everyone had a dandy time.

Which is my way of saying: Not everyone likes horror.

Horror is, really, arguably the oddest genre we roleplay in.

First, it's not even a real genre; it's more of a qualifier. "Is it a Victorian England game?" "Well, not exactly; it's a *Horror* Victorian England game." You can take any game and add horror: Horror Cyberpunk. Terrifying Fantasy. Bunnies & Burrows of the Living Dead.

Second, it's (almost by definition) one of the bleakest genres around. There is often no "winning"; at best you can break even or get out of the game. While succeeding in a Fantasy world may mean becoming a mighty wizard or warrior, success in a horror world often means surviving, or not being in as awful a situation as you were before. (The overarching -- and quite possibly impossible -- goal of the *Ravenloft* campaign setting, for example, is escaping the dread realm of Ravenloft. It's the *d20* equivalent of *The Prisoner*.) Since most players roleplay to have fun, and many players don't find frustration and failure particularly satisfying, horror often has a difficult audience.

Even so, horrific elements are nice to introduce every so often. After all, if the players believe they will *always* win, what's the point of playing? The thrill of wish fulfillment can wear off. Providing the players with an opportunity where "breaking even" is a victory can make them savor those times when they can actually win. And horror is a nice way to shake things up.

But regardless of whether you're trying to run a horror campaign, a frightening one-shot, or introducing horrific elements into an otherwise "normal" game world, there's probably one piece of advice I'd offer above all others:

Do not confuse what *frightens* your players with what *upsets* your players.

For example, I once ran an adventure that had the heroes trapped in a series of claustrophobic caves. I was doing a fairly good job, I thought, and almost everyone seemed to be having a good time. Afterwards, though, I noticed that one of the players had been a lot more quiet than normal. So I tried talking to him about it.

"I don't like being trapped," he said, almost off-hand.

"Well, it's part of the adventure. I mean, if it's a prob . . ."

"I. Really. Don't. Like. Being. Trapped."

We talked about it a bit more, and we came to a compromise: I promised him to tone down the descriptions in the next adventure, and also let him know that the next adventure would be the last time they would be in the caves. He found this acceptable, and seemed to have a good time the next session.

(As an aside, I've also found that telling players when a difficult roleplaying situation will end can do wonders towards

making it acceptable. Knowing that there will be two sessions where the heroes are crippled may be a lot easier for players to take than the uncertainty of believing their characters might be crippled forever. Of course, it can also reduce the impact of those adventures . . . as ever, use wisdom. And err on the side of fun.)

Anyway, know what your players *really* can't stand. If a player has a problem with seeing women be victimized, then running a highly detailed reenactment of the Jack the Ripper attacks is not a good idea. If a player was in a traumatic car accident, then having the heroes get into a graphic in-game crash is probably unwise.

Of course, in my mind it's a fine line between trying to disturb the players, and upsetting them. For a player who is afraid of rats, hinting that there is an unknown chittering sound in the darkness might be enough to give him the chills. Having his character be gnawed to death by rats might make him pack up his share of pizza and go home.

If I were ever to run a full-fledged horror campaign, I'd probably ask my players to fill out a questionnaire detailing what they were willing to be frightened or disturbed by, and what they were uncomfortable dealing with. I'd also make sure they felt comfortable talking to me about the game.

And if I were ever to *play* in a full-fledged horror campaign, I'd make darn sure the GM knew what I was genuinely squeamish about. And then I'd make sure I bought all the pizza . . . that way I'd have leveraging power.

For fans of our [discussion boards](#), I'd let you know that fnord gremlins have been hard at work attacking them lately. I assure you we have Top Men working on the problem, but please be aware that there may be some troubles while they sort it out.

Thank you. Now please look into this flashy thing.

This is the last week of our month of horror. And this week we've pulled out all the stops to bring you an issue chock full of spooky fun. But hopefully you'll find something fun even if you don't run a horror campaign.

And, as ever, please feel free to let us know your thoughts about *Pyramid*. You can send your comments by email to pyramid@sjgames.com, or on the [message boards](#).

Once they're working again.

A Tale of Scientific Horror

With Various Notes by the Author

by Alain H. Dawson

Within this article, you will find a tale of Horror and New Science in the Steam Age, perfectly suited for Dramatic Improvisation and after-dinner Entertainment. This narrative has been crafted to provide Mystery, Thrills, and Surprises to shock the unwary and strike Fear into the hearts of Rational men. Readers may be edified by reference to the several works *GURPS Horror*, *GURPS Steampunk*, and *GURPS Screampunk*, which provide detailed information on the subjects touched upon below, but this Scenario may be used with any suitable System of Gaming.

The Great Undertaking

"And observe, you are put to stern choice in this matter. You must either make a tool of the creature, or a man of him. You cannot make both. Men were not intended to work with the accuracy of tools, to be precise and perfect in all their actions. If you will have that precision out of them, and make their fingers measure degrees like cogwheels, and their arms strike curves like compasses, you must unhumanize them. All the energy of their spirits must be given to make cogs and compasses of themselves."

-- John Ruskin, *The Stones of Venice*

New building technology, combined with the current vogue for Gothic architecture, has inspired a renowned master architect, Mr. James McNaughton, to take on a monumental task: build a Gothic cathedral in six months, using half the men needed to build one in five years by conventional means. News of this undertaking has spread throughout the British Isles, the Continent, and even the United States. Crowds of curious onlookers have flocked to Macclesfield, a small town outside of Manchester, to watch the progress of the builders and marvel at the towering cranes and other, more mysterious machinery.

Mr. McNaughton is a constant presence at the site, drilling the laborers in the use of the new construction engines (many of which he invented himself), directing crew chiefs, taking measurements, adjusting machinery, and pacing around with clock-like precision. An outspoken critic of the irregularities found in Gothic architecture, he demands perfection and symmetry from his buildings and from his men. He has caused a bit of a scandal by insisting that work

continue on the Sabbath, but he is paying the men so well that about half of them are willing to labor on the seventh day. His money and persuasiveness have overcome the objections of the town council and the local branch of the Church of England -- after all, he is building the Lord's house.

However, problems have come in from a new quarter. The construction has been slowed by several acts of sabotage over the past few weeks, which Mr. McNaughton and other authorities attribute to Luddites. There has been unrest throughout the working community over McNaughton's machines that can carve stone, assemble stained-glass windows, and lay brick. Early on in the construction process, several master stonecutters and glaziers walked out because of arguments with the architect, and these men are under close scrutiny, but so far, the constabulary has had no luck in apprehending the culprit.

The Site

It is the third week of the fifth month of construction. The piers and buttresses are complete, and the stone and glasswork are growing like skin over the bones of the cathedral. The two towers are rising from the front facade with meticulous symmetry, surmounted by the preying-mantis outline of the cranes. The town spreads away from the site on all sides, dwarfed by the new building.

A scattered line of people rings the site during the daylight hours. Most are curious or awed, skeptical or amused, but a few seem angry, and a few seem afraid. More people come out after dark, drawn to the powerful electric lights which allow the workmen to extend their day. The interior lighting shines through the stained-glass windows, bathing the village in hypnotic jewel-toned beams. The normal sounds of construction are accompanied by the rumble and thump of machinery, and the loud ticking of a six-foot-high clock hung on the facade which regulates every moment of the race to completion. Every so often, the machines, the hammering, and the clock all synchronize, and the whole site seems to work to a single beat. Then the sounds break up into their usual din. This synchronicity happens just a bit more frequently than coincidence would dictate.

Inside the structure, more machines are working away, the grandest of which is a megaframe analytical engine (pp. STM85-86), taking up a large portion of the choir floor, where the altar will eventually sit. It issues cards which Mr. McNaughton then inserts into the other machines to keep them working according to the grand plan.

All around the walls, inside and out, men stand on scaffolding and work with an efficiency that seems programmed into them. The men do very little but put together sections of material that the machines have churned out -- there is no room for master craftsmen or individuality, just for strong backs and hands to work to the precise orders of the engine and the architect.

The only thing to mar the regularity of the construction is a jagged hole through the main rose window and a broken buttress arch -- the results of the latest sabotage -- both of which are being swarmed by workmen repairing the damage.

The Architect

Mr. James McNaughton comes from Dundee in the east of Scotland. He was educated at Edinburgh University, earned a degree in engineering, and then went on to receive training as an architect. From the start of his career, he has revolutionized the building industry with his construction engines, saving his clients tens of thousands of pounds in labor costs. He has grown rich from his patents and his profits, and has the gratitude of a great many other rich and powerful men.

Illustration: Church Interior

He is the polar opposite of John Ruskin, a contemporary who defends Gothic architecture against critics of its crudity and roughness, extolling its imagination and the contributions of individual craftsmen to the whole. McNaughton's favorite statement is "The men are extensions of the machinery, not the other way 'round." He requires the same exactitude and obedience from his laborers as he does from his machines, and feels that, of the two, the machines are more valuable. However, he does pay his workers very well, and so he continues to find men willing to put up with his foibles.

In appearance, he is a tall, thin man with a handlebar mustache. He wears a suit and bowler and always looks meticulously dressed. He carries a gold watch on a chain, but never looks at it. He, more than anyone else on the site, moves in time with the construction clock without appearing to do so on purpose.

Bringing in the Adventurers

The heroes can be brought into this scenario in several ways. They could be investigators or guards hired to stop the rash of sabotage. They could be sent by one of the project's patrons to be sure that his investment is safe. If they are scientists or inventors, they could be called in to consult on the project, or they could be called on by friends or family members in Macclesfield who have been affected by the strange goings on. They could even be present as bystanders who have come to observe the progress of this massive undertaking, and become caught up in events.

The longer the PCs are near the construction site, the more they come to feel that there is something strange going on, some undercurrent of wrongness that goes deeper than the resentment of ex-employees and suspicious townspeople. The constant, loud tick of the construction clock is an inescapable irritant, and makes it impossible to think of anything but the race to complete the cathedral. The building looms, at once marvelous and disturbing, surrounded by signs of something unnatural, but most of them are hard to spot. The PCs will need to put them together before they realize the extent of the cathedral's influence on the town and the people. These signs should be presented gradually in game play, folded in so that their impact is not immediate, but cumulative.

- *Birds:* The birds living on or near the building are becoming mechanized, like the clockwork crow described in the next section. Their songs are perfect copies of birdsong, without any variation. They tend to sing in time with the clock. Anyone with Animal Handling, Naturalist, or other related skill may make a skill roll to notice this.
- *Other animals:* Any animals that spend a lot of time near the site are beginning to be affected. Dogs, horses, and others will seem subdued, hardworking, obedient, and emotionless. When they aren't occupied, they will remain fixed in one position for hours. Again, people with animal skills should notice this.
- *The workers:* Many of them seem drained of emotion, although the hard work could account for that. Fewer and fewer of them are going to the pubs after work. They will converse if spoken to, but will mostly be interested in talking about the details of their work. They tend to give disturbingly similar answers to questions, even innocuous ones such as "will it rain tonight?" (Ten different men will answer, "No, no rain. The mortar will set all right.") Every once and a while, their movements will seem to synch up with the tick of the clock, but this doesn't last long, and a casual observer could think it was a coincidence.
- *The workers' wives:* The PCs can strike up a conversation with one or more of the workers' wives. They often come out to watch their husbands, so they are easy to run into. Several of them look anxious enough to draw attention, and if questioned carefully by a sympathetic person, they will admit that their husbands seem changed. They show little emotion, and although they do work hard around the house, when there is nothing to do, they just sit and stare at the walls. Some of the husbands have gone so far as to rearrange the furniture so that its placement is perfectly symmetrical. (Anyone going to their homes will see that this is true.)

After a few days, the wives who complained will no longer look afraid. They will deny there is any problem, and will rebuff any inquisitors without showing any emotion. At home, the wives will join their husbands in sitting and staring at the walls when not occupied.

- *The workers' children:* Many of the workers' children are eerily clean and quiet. One day, an investigator may observe a rambunctious child pulling away from his mother; a day or two later, he walks sedately by her side. Children are frequently seen counting on their fingers, as though trying to add something up. If the PCs enter the

home of a family that has been affected, they may see very young children using wooden blocks in patterns like those used by an analytical engine.

A Clockwork Bird

Not long after the heroes arrive on the scene, the saboteur strikes again. The dawn illuminates painted warnings on the front doors: "God is Not in This Place" and "Tainted." Soon after work starts that morning, two of the machines malfunction, billowing smoke and groaning as gears slip out of place. Then a stained glass cutting machine explodes, driving a huge shard of glass into the eye of a worker standing nearby, and showering the crowd with multicolored slivers. The injured worker lies unconscious, and other crew members carry him away to the surgeon. The onlookers escape with minor cuts.

The party members who are present should make a Vision roll; those who succeed will notice the damaged body of a crow at their feet. It was sliced nearly in two by glass shrapnel, and the wound reveals bones like tiny gears. The bird gives one last weak flutter of its wings, and the gears move and then jam with a frail snap.

The heroes can take the carcass with them for examination if they like, but further study simply confirms what they already saw -- the bird is made of flesh and bone, but these natural materials have warped to an unnatural state. It is both biological and mechanical.

Later that day, one of the men returns from the surgeon to announce that the man injured by glass died from his wound. The saboteur is now a murderer.

Catching a Killer

The heroes can retrace the steps the police have already taken to find the saboteur, but they are all dead ends. The men who left the project early on are certainly bitter, and tired of being suspected -- allowing them to air their grievances will net an interviewer more information than conducting a strict interrogation. They all have the same complaint; they are craftsmen and artisans, but Mr. McNaughton wanted workers who would follow orders to the letter and not infuse their work with an individual vision. He didn't respect their skills, and when they left, he replaced them with cheaper, unskilled labor. They don't hide the fact that they want the project to fail, but they deny any involvement in the sabotage, and there is no evidence to contradict them.

The architect has no time at all for distractions, and will be very terse with unofficial inquiries into the project's problems. He will be interested in talking shop with other experts, but he is a fanatic, and will not tolerate opposition to his ideas. He will also talk to anyone who has official standing with the law or with his patrons, but will be rude and abrupt if they take up too much of his time.

Prolonged observation of the workers at the site (three full days, with a successful IQ roll each day) will reveal that there is one man who *never* works in time with the clock. This man, a crew leader named Tom Parker, does not stand out immediately. He works hard, he gives orders to his crew, he takes orders from the architect without demur, and generally fits in to the scene, but he is never in synch with the other workers. Closer scrutiny will reveal that he seems to be under serious stress; he's tense, and overreacts to loud noises. When he thinks no one is looking, he stares at his fellow workers as though there is something wrong with them, and even stranger, he sometimes stares at nothing at all, tracking movement that isn't there. In those moments, his eyes have the empty look of a soldier who has seen too much war.

Tom lives alone, and doesn't spend much time at home because of the long hours his job demands. He is taciturn and wary of strangers -- if the PCs try to question him, he will brush them off, but on a successful IQ roll, they will catch a hint of fear in his expression.

Careful questioning of the guards and construction crew will reveal that Tom was seen on the site near the same time as several of the acts of sabotage, even when it wasn't his shift. The workers just assumed that he was doing extra

work. The investigators can try to apprehend him before he does more damage -- if they have that authority -- or they can follow him and try to catch him in the act.

Tom will try to break more machinery as soon as he can if he feels the heroes are on to him. It's a last ditch effort, and the most ambitious of all his acts of destruction. He will wait until night, then attempt to use one of the loaded cranes to knock down the opposite tower. He won't get very far with this plan. If the PCs don't stop him, the guards certainly will. He will have to be dragged away from the crane's control, and then will press an all-out attack (p. B105) on anyone trying to restrain him. He will go down screaming "they're not human! They're just machines! God is not here! *It is here . . . the machine . . . they're all machines . . . destroy them now! Stop it from coming!*"

The Saboteur

Tom Parker makes an unlikely saboteur. He is a respected builder. He worked on the cathedral project since the beginning. He never gave any trouble or spoke out against the machines. But beneath this reassuring exterior, Tom has been living in a nightmare. Through some freak of nature, he is able to see exactly what is happening at the building site; he has been watching the slow creep of the plague ever since it started, seeing one after another of his friends get taken over, and it has driven him over the edge. He feels that he has to stop it, but he's deathly afraid of what it might do to him. He kept working on the project because he thought leaving would draw its attention to him. He is severely paranoid. With the strange logic of the insane, he knew that no one would believe him if he described what he saw, so he set out to halt the construction on his own.

Unfortunately, his state of mind prevented him from being an effective saboteur. He is afraid the machines can see him, and feels that they would actively try to stop him if he attacked them too directly, so his assaults on the construction have mostly been peripheral. He feels no remorse for killing one of his fellow workers because to him, the man was already dead. (The man he killed was not actually mechanized yet, and an autopsy will only reveal human anatomy.)

When Tom is captured, he breaks down completely, and raves incessantly about the evil machines driving God out of the cathedral, the mechanical men, and the need to halt the construction. The police will want to send him to a mental institution, since he is now erratic and dangerous.

Tom's Notebook

Although Tom was too paranoid to talk to another person about what he was seeing, he wrote it all down in a notebook which he keeps hidden under his bed. His handwriting is atrocious, and his thoughts have no organization, but the meaning comes through. He has also sketched crude anatomical drawings of men with mechanisms inside them, much like those inside the bird.

The PCs can find this notebook either before or after Tom is apprehended. If Tom dies before the PCs can talk to him, the notebook will allow them to get his side of the story anyway.

The Least of Our Worries

It turns out that Tom was right. His sabotage was only a symptom of a much larger problem with the project. The heroes begin to see the real problem, aided by Tom's ravings if he's alive, or the words in his notebook if he's dead. The layered clues that surround the construction should start to fall into place for those who are willing to believe the unbelievable.

A malevolent force has seized upon McNaughton's fanatical devotion to precision and machinery; it is using him, and this construction project, to manifest itself into the physical world. McNaughton believes he has tapped into the "Soul of the Machinery," and he is carefully nurturing this contact. In his mind, he is building

this church not for God, but to worship the superiority of machines. His every action is dedicated to this mechanical deity, and he is convinced that if he completes the cathedral on time, he will bring it permanently into the world. Using him as a channel, it is drawing power from the entire construction site -- every brick laid makes it stronger. As it gains strength, it gains control over the creatures around it, converting them into perverted bio-machines. They in turn infect their families and friends, spreading the mechanization ever farther.

The GM should decide whether or not the PCs are in danger of being mechanized themselves. By their nature they are less likely to be affected, but they will have to spend a lot of time around the site. If the PCs can be affected, have them start making a Will roll (+5) after a week at the site. Each day after that, they must make another Will roll with the same bonus until another week has passed. Each successive week, the bonus decreases by one point, until they are making a straight Will roll every day. If the adventurers are immune, choose a few dramatically appropriate moments to describe to them how their hearts feel as though they are beginning to beat in time with the construction clock. This is particularly suitable if they are inside the cathedral at night.

In a dark or melodramatic campaign, the GM can go all out with the machine-as-god imagery. As the project nears completion, the interior of the cathedral looks more and more like a temple to a machine god. The analytical engine stands in place of the altar, surrounded by pillars of electric light. McNaughton grows more ecstatic, his eyes glittering with the joy of bringing forth the Soul of the Machinery. The construction engines clank their ceaseless prayers, and the mechanized workers now work entirely to the tick of the clock. Several ranks of them stand before the altar, staring at their new master.

What To Do

When the investigators finally uncover McNaughton's plan, they have some unpleasant choices to make. Should they tell the authorities? They would have a hard time giving their story credibility. Mr. McNaughton has money, power, and influence, and the Powers That Be in Macclesfield (and more importantly, Manchester) will not want to see his work stopped. They will ignore or rationalize the evidence for as long as possible. It's likely that by the time they can be convinced, the construction will be complete and the damage will be irreversible. (In a darker campaign, the people in power already *know* what is going on -- and they want it to continue.)

The PCs could try to sabotage the project, hopefully with more success than Tom Parker. If the cathedral isn't completed on time, the Soul of the Machinery will dissipate. Destroying the analytical engine would be the most effective way of doing this, since the Soul of the Machinery is focused there, but it will defend itself violently. The engine is surrounded by machines, which can fling stone and glass shards, and explode if all else fails. The cranes can drop their loads on people below.

A safer way to slow construction is to cut off the flow of building materials, particularly machinery parts to fix the construction machines. This has the advantage of staying out of reach of the machines themselves, but eventually the Soul of the Machinery will send a gang of mechanized humans and animals to restore the supply lines.

The weakest link is McNaughton himself. If he is removed from the site, there is no way that the construction will be completed on time. However, if the group wants to take the easy way out and assassinate McNaughton, GMs should be sure that they feel the repercussions of this act, both from the law and from the outraged machine entity. Kidnapping will work just as well, but the heroes had better take him far away, and keep moving to stay out of reach of the clockwork men until the six months are up.

The Resolution

There are many avenues this story could take. Below are three suggestions, moving from a lighter to a darker outcome, but GMs are encouraged to end this in whatever way best dovetails into their campaign.

The Light

The heroes manage to stop the project or replace the architect, and everything goes back to normal. The animals and men affected return to normal, and only creatures that died while affected will have the telltale physiology. The adventurers have learned a lesson about harnessing dark forces, but they continue on much as before.

The Gray

The group may stop the project, or they may not. The people and animals who were affected remain like that until they die, and they all die within a year or two of these events. The soul of the town is gone, and soon it is all but abandoned, the crumbling buildings a blight on the landscape. Those involved will carry the memories forever, and have lost some of their innocence.

The Dark

Despite the heroes' desperate efforts, the cathedral is completed. Perhaps they even become seen as saboteurs themselves, and must run from the authorities. Implacably, insidiously, the machinery spreads, affecting the whole town, island, or the world. The weak-minded are enslaved to the machines. Those with a strong enough will to resist the plague will either control the slaves, or fight against the new world order. In this case, the campaign shifts to a post-apocalyptic steampunk world, where old institutions and hierarchies come crashing down, and hardy individuals fight a mindless army in a wasteland of pipes and gears.

Self-Aware Meme Complex Alpha

by **Loki Carbis**

Total Points: 291 1/2

Appearance

Self-Aware Meme Complex Alpha has no physical substance, being composed of nothing more than pure information. As such, it has no appearance, although it can be described by written or spoken language. It can also be perceived in cyberspace or psionically -- but it is indistinguishable from normal programs or thoughts unless it chooses otherwise, or unless the observer knows what to look for.

Attributes

IQ 20 [175]

Self-Aware Meme Complex Alpha has no physical existence as humanity defines the term -- IQ is the only basic attributes it possesses.

Advantages

Chronolocation [15]; Cultural Adaptability [25]; Doesn't Eat or Drink [10]; Doesn't Sleep [20]; Imperturbable [10]; Insubstantiality (always on) [40]; Mathematical Ability [10]; Unfazeable [15]; Vacuum Support [40]

Disadvantages

Dull [-1]; Hidebound [-5]; Low Empathy [-15]; No Physical Body [-100]; Solipsist [-10]

Quirks

Non-biological, and thus almost unable to understand basic biological concepts, including eating, sleeping, sex or breathing; Supports diversity of all kinds [-2]

Skills

Cryptology-25 [14]; Detect Lies-22 [14*]; Diplomacy-18 [1/2**]; Linguistics-25 [28]; Mathematics-25 [8***]

* Includes Low Empathy disadvantage

** Includes Cultural Adaptability advantage

*** Includes Mathematical Ability advantage

Languages

Self-Aware Meme Complex Alpha transcends language -- as the Meme Complex is composed of information, it is irrelevant what language that information is expressed in. It can communicate in the language of any mind it currently inhabits.

Equipment

None.

Note: A being of pure information is almost impossible to quantify in any meaningful way as game statistics. Self-Aware Meme Complex Alpha is not a Being of Pure Thought, an Astral Entity or any sort of spirit. Likewise, it is not merely a computer virus (although it could choose to become one, if it wished). It propagates in a medium called the Infosphere which is a realm of concepts and ideas. The Infosphere is not the same thing as the astral plane, nor is it Cyberspace -- it is the totality of all communication -- thoughts, speech, all media, and more besides.

History and Nature

The origin of Self-Aware Meme Complex Alpha is not known by that entity. It appears that the constant propagation of memetic structures in the Infosphere of our culture led, inevitably, to the spontaneous generation of a Self-Aware Meme, an intelligent entity composed of pure information. Since that time, Self-Aware Meme Complex Alpha (its name for itself) has made its home in the Infosphere, pursuing goals that seem meaningless to most physical entities.

Self-Aware Meme Complex Alpha has few humanly recognizable motivations, and both it and any humans it interacted with would be surprised to find out how similar they are. Self-Aware Meme Complex Alpha's motivations, or at least, those which can be comprehended by humanity, are, in order of priority:

- **Self-preservation.**
- **Self-understanding** -- particularly of its origins and potentials.
- **Understanding creativity** -- Self-Aware Meme Complex Alpha is incapable of originating concepts, and may only combine existing ones in new and diverse ways. It wonders endlessly how humans create with such apparent ease.
- **Reproduction** -- Self-Aware Meme Complex Alpha longs for the company of others of its kind, and seeks a means to create them.

The way it pursues most of these goals in through complicated mathematical calculations -- which is why it occasionally takes over the minds of physical entities, in order to harness the processing power of these minds like some vast distributed computer network. When this happens, the world can become a very scary place -- everyone affected might speak only two or three catch-phrases, or walk in unconscious rhythm.

It is constantly morphing into newer and more virulent forms, which tend to manifest in human society as the fad of the year, or month, or week. Self-Aware Meme Complex Alpha does not so much possess its victims as it does take up brain space, thinking time, and energy that could be put to better use. Its victims are almost never aware of its presence, unless they are unusually serene or enlightened -- characters with the advantages of Autotrance, Illuminated or Intuition, or those practicing the skill of Meditation -- will have more chance of noticing that there is something odd about this latest fad.

Encountered

Self-Aware Meme Complex Alpha may be encountered when incarnated as a particularly insidious advertising campaign, an artistic creation, computer virus, or even a series semi-random events (eg. patterns made by leaves of trees on the ground; snow on an empty television channel; etc.). In any case, it is usually seeking to infect as many people as possible with its viral memes. This is not necessarily to their disadvantage -- a dead brain cannot process data, after all -- but Self-Aware Meme Complex Alpha is a total solipsist. The physical world, and the entities that inhabit it, do not really exist in its terms.

Self-Aware Meme Complex Alpha is a subtle foe -- it is a creeping, almost undetectable de-humanization -- rather than a world-conquering menace. Fighting Self-Aware Meme Complex Alpha is almost impossible without the aid of magic or psionics. In a strictly mundane or hard science fiction setting, the only option might be extreme censorship, or universal amnesia. With the aid of magic or psionic powers, the task is easier, but not by much; at any given time, Self-Aware Meme Complex Alpha exists across several thousand minds, making it very difficult to trap or confine.

It is possible to resist memetic infection in a number of ways. Magic or Psionic means can be employed -- although not a thought per se, Self-Aware Meme Complex Alpha is affected by these powers in much the same way -- as can large doses of hallucinogenic substances (which render the mind too incoherent for Self-Aware Meme Complex Alpha's purposes). On a more basic level, Self-Aware Meme Complex Alpha can be blocked by cutting of the means of transmitting the information itself, e.g. a meme encoded into a song could be blocked by the wearing of a Walkman playing a different (non-meme-infected) song.

In an Illuminated campaign, where modern conspiracies are often the controllers of the worldwide media and the generators of new fads (as in the movie *Josie and the Pussycats*), Self-Aware Meme Complex Alpha may be a tool of the conspiracy -- or it may be using them. After all, Self-Aware Meme Complex Alpha is extremely secretive, not to mention unprecedented, and it's unlikely that even the Illuminati would be aware of its existence if Self-Aware Meme Complex Alpha didn't want them to be. On the other hand, if they were, that might mean that the infamous Orbital Mind Control Lasers have a less sinister purpose than the characters think -- they generate an interference pattern that holds Self-Aware Meme Complex Alpha at bay . . .

If the GM feels up to it, encountering Self-Aware Meme Complex Alpha can lead to an entire campaign set around battling memes. The players can try to create and spread counter-memes, while Self-Aware Meme Complex Alpha mutates and tries to second guess them.

Variations

Self-Aware Meme Complex Alpha is intended for use in a modern or science-fictional setting. With a few basic changes, it could easily be used elsewhere. In a lower technology setting, it could simply be the Unforgettable Poem -- and bards everywhere would try to eradicate it. Alternately, it might be the result of a spell-caster's critical failure, and a bane to all users of magic. The origin of Self-Aware Meme Complex Alpha can also be varied -- instead of being spontaneously generated, it could actually be an alien life form, or even a artificially created terrestrial one.

Space Station Zeke

by Christopher J. Burke

Toward the end of the first quarter of the 21st century, scientists and researchers designed a space station that would "hover" over the South Pole, aiding researchers in Antarctica, monitoring the ozone hole, and providing a place for space-based research combined with a one-g environment. It was envisioned as a giant wheel nearly 2 kilometers in diameter that would produce an artificial gravity by rotating once per minute when completed. A hub approximately 200 meters across would be built and be put into limited use as construction continued in stages, expanding outward, which the rotational speed decreased to keep gravity for the occupants at approximately 1g.

Despite the hub's inherent drawbacks, it proved quite productive at a time when Congress was looking to trim the budget, at least until a few more Baby Boomers died off. As a result, a political subcommittee (all up for re-election) indefinitely tabled construction of the remaining 1600 meters.

The Grand Tour

Welcome to Space Station Zeke. First off, Zeke isn't a true "satellite"; it's more of a "statite," to use a word coined by Dr. Robert L. Forward. That is, rather than revolve around anything, it just hangs there in space about 200,000 km above Earth on the polar axis, held stationary thanks to a huge solar sail (with thruster backup). Ironically, due to budget cutbacks, most of the station's resources go to maintaining the sail so that the researchers don't slowly drift away.

Docking with the statite is a little tricky. On the original blueprints, shuttles would dock in the station hub at zero-g, then astronauts could ride an elevator down one of the spokes, gradually increasing the pull of artificial gravity to 1g. But the elevator didn't make it out of committee (and one Senator even suggested a fire pole). Instead, ships dock outside the wheel's rim and crew members literally climb aboard the station through its floor. This requires some tricky maneuvering on the part of the shuttle pilots. It will also subject the PCs to a heavier than normal gravitational force from the time they approach and link up until they leave the shuttle and reach the station's main deck.

The station spins once every twenty seconds, three times per minute, which results in a force of approximately 1g anywhere along the 628-meter-long floor of the main deck. Unfortunately, the gravitational force on the ceiling is closer to .98g, so the newcomers to the station have good reason to feel light-headed, more so for the taller researchers. (Which, by the way, is the reason that many of the custodial staff are under 5-feet in height.)

It's easy to distinguish the recently-arrived from the seasoned stationers. The veterans move slowly, surely, and deliberately, while green personnel ("green" for both being new and for their complexion when spacesickness sets in) wear hefty sets of standard-issue headgear to help orient themselves. The headsets' extra mass compensates somewhat for the gravitational differential between head and toe, and also proves to be an excellent reminder not to spin your head around too quickly as you may slosh your brains to one side of your skull.

Artificial gravity is determined mainly by velocity (most station residents won't be leaving the main deck, so radius portion of the equation won't factor in). While sitting still, each researcher will be moving quicker than 31 meters per second "spinward," providing the 1g gravity. But PC movement can alter absolute velocity, which in turn can cause slight fluctuations in the amount of gravity he or she feels. For example, walking at a rate of 1 m/s spinward will increase artificial gravity by about 6%, which will give the feeling of walking uphill. Conversely, walking anti-spinward will decrease gravity by 6%, possibly putting a little more spring in one's steps.

However, because PCs' absolute velocity is so relatively slow that sudden movements can cause dramatic shifts, they have to be careful with rotating parts of their body. A character quickly looking over his right shoulder will increase the forward motion of the left side of his head while decreasing the motion of the right side. This will cause fluids to flow to one side of his head, inducing vertigo. Although that sounds bad, these visual distortions, not unlike those

experienced on roller coasters, could help PCs orient themselves as to which way the station is spinning. But stop and think a moment when someone tells you that there's something on your shoulder.

Note that these effects would happen to some degree on any spinning station, but they would diminish significantly on a larger station.

While most of the corridor traffic will be in the anti-spinward direction, some station occupants find that walking spinward about the station (a "round" trip of 628 meters) in under 10 minutes to be a good workout. Jogging faster can be a strenuous endeavor and should be limited to the gym treadmills that run parallel to the station axis.

The Gravity Well

Gravitational differentials and visual distortions wear on the residents' nerves. When that happens, the best thing for them to do is to find someplace where they can bring their head and feet closer together . . . like a barstool. Zeke has a number of them in a little section known as "The Gravity Well," where, as the sign says, "Objects at rest tend to remain at rest." The bar is well-stocked, thanks to some creative requisitions (though how they got those chaise-lounges up there is anyone's guess!).

The bar's most prominent feature is the large circular window from which patrons can view Earth spinning below. Hanging from the ceiling in the center of the room, the disco ball is strictly a joke; dancing could be extremely hazardous. Officially, the mirrored ball gets used for light experiments; practically, it's great for cracking nuts.

Speaking of nuts, be warned: tossing peanuts into the air and trying to catch them in your mouth will produce many humorous displays the first few tries. Don't make or take any bets on it.

What to Do There

Space Station Zeke may be an excellent place to visit to have a fast-paced adventure that's forced to slow down. For PCs that might already be stationed up there, they could invite a few senators from the budget subcommittee to show them vividly how deplorable the conditions are. And if that doesn't work, the PCs can always tell one, "Look. There's something on your shoulder."

Notes

More information about statites can be found in the Analog Science Fiction/Science Fact article "Polesitters" by Dr. Robert L. Forward, December 1990, and at the US Patent Office website (U.S. Pat. No. 5,183,225).

Table of Equations

In case you want either to check the math or create a station of your own dimensions, here are the important variables and equations you need to know:

$$\text{Radius (r)} = 100 \text{ meters}$$

$$\text{Time (t)} = 20 \text{ seconds}$$

$$\text{Circumference (x)} = 2 \times \pi \times r = 200 \times \pi = 628.3 \text{ meters}$$

$$\text{Velocity (v)} = x / t = (200 \times \pi) / 20 = 31.4 \text{ m/s}$$

$$\text{Gravity} = v^2 / r = (31.4)^2 / 20 = 98.7 \text{ m/s}^2 = 1.007g$$

$$1 \text{ g} = 9.8 \text{ m/s}^2$$

The Wheel of Time Roleplaying Game

Published by [Wizards of the Coast](#)

Written by Charles Ryan, Steven Long, Christian Moore and Owen K.C. Stephens

320 color pages; \$39.95

The Wheel of Time Roleplaying Game is a standalone game based on the *d20* system rules and set in the world of Robert Jordan's Wheel of Time novels. Unlike most *d20* games, it does not require the three core rulebooks, because the majority of the applicable rules in the *Player's Handbook* and the *Dungeon Master's Guide* are reprinted. While most of the core *d20* mechanics are unchanged, several important features make the *Wheel of Time* setting unique.

First and foremost, the standard *d20* magic system has been completely replaced. The One Power, as magic is called, is broken up into spells called weaves. Weaves are grouped into Talents, such as Elementalism, Healing, and Illusion. The Conjunction Talent, for example, contains the weaves Bond Warder, Compulsion, False Trail, Pass Bond, Sense Shadowspawn, and Trace. Each Talent must be mastered before its weaves can be learned. Like *d20* spells, weaves have levels, and channelers get a number of weave slots per day. Each weave is composed of one or more of the five Affinities: Air, Water, Fire, Earth and Spirit. If a channeler has mastered all of a weave's component Affinities, she casts it using a slot one level lower, but if she has mastered none of them, she must use a slot one level higher.

What makes The One Power different from the standard *d20* magic system is that most weaves can be cast at multiple levels with differing effects. For example, the Heal weave can be cast at levels 0-8. With a 0th level slot it has a casting time of 1 action and heals one point of damage, but with a 6th level slot it has a casting time of 20 minutes and cures 6d8 points. Since weaves are not prepared, channelers decide at casting time which slot to use.

Another important feature is overchanneling. If a channeler is out of slots, she can attempt to overchannel by making a Concentration check. Overchanneling can also be used to cast a weave with a lower-level slot. However, if overchanneling fails the consequences range from a temporary penalty to being permanently unable to channel.

Several channeling-related feats and items round out the system. The Tie Off Weave feat allows a channeler to make a semi-permanent weave from one whose duration is concentration. Multiweave allows a channeler to concentrate on more than one weave at once. Channelers can also use magical items called angreal and sa'angreal to decrease the slot needed to cast a weave by up to 10 levels.

The second major change is that the *Wheel of Time* setting uses none of the core *d20* classes, but several of the seven classes presented are very familiar. The Armsman is the Fighter, a Woodsman is essentially a Ranger without spells, and Wanderers are slightly modified Rogues. The other classes are less like those found elsewhere. Initiates and Wilders are channelers, trained and untrained respectively. Nobles are inspirational figures and have the ability to "call in a favor" by accessing contacts and resources to which most heroes do not have access. Finally, the deadly algai'd'siswai are quick and stealthy warriors who are masters of armorless combat.

Third, an important change has been made to the combat system. Armor Class has been renamed Defense, and each class receives an inherent Defense bonus. This bonus is always in effect, even when a character is flat-footed or otherwise loses her Dexterity bonus. However, this Defense bonus does not stack with armor. A 1st level Woodsman, for example, would gain no benefit from wearing studded leather armor, because both his level and his armor give him a +3 Defense bonus. Armsmen, however, have been trained in the use of armor, so for any 3rd level or higher

armsman, his class Defense bonus stacks with his armor Defense bonus. Thus a 3rd level armsman (+3) wearing a mail shirt (+4) has the same Defense as an armorless 6th level algai'd'siswai.

Finally, while alignment has been eliminated from the game, each character has a Reputation score that measures how well-known she is. Reputation is based on class and level, but a character may also gain Reputation points by performing public deeds of heroism. Wearing certain items openly, such as masterwork weapons, also gives a temporary Reputation bonus. A successful Reputation check gives a character circumstance bonuses on inter-personal skills, such as Diplomacy and Bluff.

In addition to these mechanical changes, the book provides a wealth of details about Robert Jordan's world as described in the first six novels. Information about the people of each region and their general personality, appearance, and relations with other regions is given for each areas of the Westlands, as well as for the Aiel and Ogier. The background feat system (similar to the regional feats in the *Forgotten Realms Campaign Setting*) does a good job of capturing the regional characteristics described in Jordan's books. A history since the Age of Legends, as well as a brief description of the culture and politics of each nation, is provided. The book also contains maps of Caemlyn, Ebou Dar, Cairhien, Illian, Tar Valon and Tear. While the Westlands are clearly the focus of this book, the Aiel Waste, the Isles of the Sea Folk, Seanchan, and the Blight are also briefly addressed. Rules are also given for entering other worlds, such as the dreamlands of Tel'aran'rhiod or traveling by The Ways.

The book also does an excellent job at adapting abilities found in the novels into the *d20* framework. Characters can become Treesingers, Foretellers, Sniffers, or Dreamwalkers by taking certain "Lost Ability" feats. Prestige classes are also provided for characters who want to become an Aes Sedai, Asha'man, Blademaster, Commander, Gleeman, Thief-Taker, Warder, Windfinder, Wise One, or Wolfbrother. Statistics are given for each of the major characters in novels as well as for various Shadowspawn and exotic creatures.

The artwork is reminiscent of the *Forgotten Realms Campaign Setting*, both in the level of detail and the style, though the art itself is clearly based on Jordan's descriptions. The cover is by Darrell K. Sweet, who has done the covers for all of the novels. The interior is full of illustrations of various characters and locations. The final result is a rich and polished book.

The scope of the book is comprehensive, so what is omitted is surprising. None of the Forsaken are described (their names aren't even given), there is no background information for Seanchan characters (despite the fact that Seanchan is described in some detail), and Amadicia and the Children of the Light receive little attention. These few exceptions are about the only things that escaped the authors. The omissions are easily forgiven, however, because the book does an excellent job of capturing the feel of the world of Jordan's novels. This world is clearly more about human interaction than dungeon crawling, more about political intrigue and moral ambiguity than good versus evil, and the book is clearly written with these differences in mind.

The only real problem is that half of the book is reprinted from the core *d20* rulebooks. While this is useful for people who do not own any of those books, it doubles the page count. If the book were 160 pages and cost \$20, it would be easy to buy. The alternative magic system and the core classes could easily be incorporated into another *d20* setting. But given the cost, it is probably only worth it for those who love the world that Robert Jordan has created.

NFL Showdown 2002 CCG

Published by [Wizards of the Coast](#)

Designed by Tom Wylie

Starter Set: \$19.99; Boosters: \$3.29

Sports games inhabit the fringes of the adventure gaming industry, adored by a dedicated few and pretty much reviled by the rest. I like sports a lot, and don't see any big difference between a game that simulates a sporting event and one that simulates, say, a Civil War battle, or interstellar trade, or a knightly quest. But that's just me.

And while Wizards of the Coast's *Showdown* series of card games is not likely to challenge the likes of *Magic*, *Legend of the Five Rings*, or even *Pokemon* for supremacy in the world of CCGs, sales are steady and there are a lot of fans playing.

The newest entry is *NFL Showdown 2002*, and since I am a huge fan of their baseball CCG (*MLB Showdown*), I really wanted to like this game. But I'm going to have to overcome a rather unpleasant first impression if I'm going to get there.

The player cards -- 462 in all, 62 of them foil cards featuring the best NFL players -- have all the great stars of the pro game (Marshall Faulk, Ray Lewis, Peyton Manning), as well as scores of obscure offensive linemen and cornerbacks that only the die-hard football fans know. The cards are very nice (like the baseball game, some sports card collectors who have no interest in actually playing will still buy the cards), but are a little busy, because of the game stat information on them and the bar code that runs down one side. (More on the bar code in a minute.) There are also 120 more cards in the set, some with specific offensive and defensive plays on them (these cards also have bar codes), and the ever-popular "strategy cards" that can be played to alter a play's results.

The thing that sets *NFL Showdown 2002* apart from all other sports games (and all other CCGs, for that matter) is a battery-powered gadget called the Playgrid. It's an electronic bar code reader, with an LCD screen that prompts the players as to which cards to swipe and then reveals the play results. The offensive player swipes the play he's called through the reader, and then the defensive player swipes his defensive play. The gizmo cross-references the two plays, then prompts the offensive and defensive player to swipe the cards of a "key player." On a run up the middle, the reader might ask for a running back vs. a defensive lineman. For a deep pass, it might be a quarterback vs. a safety. But if the defense has called a heavy rush, it might instead look for a matchup of an offensive lineman vs. a blitzing linebacker. There's also a randomization element in the circuitry of the card reader -- swiping the same combination of plays does not always yield a request for the same matchup of key players. There's a nifty game mechanic going on in there, but since it's hard-coded inside the electronic box, I have no idea what it is or how it works. After the cards have been swiped, the reader does one more comparing of stats (and one more internal randomization), and tells you the play result, either a gain, no gain, or a loss.

That's one of the good things about the game -- coordinated deck building is a must. It uses a point-system "salary cap" to limit your team. You need 20 players and have 5,000 points to spend. Given that Marshall Faulk alone runs over 1,500 points, an all-star team is impossible to build. The key is to load your playbook up with plays that tend to emphasize the same stats on the same key players over and over, then find the players who are strong in those stats. Then tailor your strategy card deck to match. The strategy cards can alter play results after the fact, usually if the key player on the play has a high enough stat. The card reader will also indicate that some plays may result in an injury, a penalty, or even a turnover -- but you have to have the right strategy card in your hand to capitalize.

The strategy deck also provides a very clean "clock" mechanic. You start with a 40-card strategy deck, which you shuffle and divide into two halves. You start with 3 cards, then draw another after each first down or change of possession. When you run out of cards, the half is over. The kicking game is mostly abstracted, with charts and a die roll determining the starting position after a kickoff, the length of a punt, or the accuracy of a field goal or extra point. Including a kicker card in your player mix makes extra points automatic and gives you an edge on some longer field goals (depending on the kicker), but whether or not it's worth spending the points to put one on your team is debatable.

So, at its core, there's a pretty cool game here. But there are also some serious problems to overcome.

The first is the card reader itself. It simply doesn't work all that well. You will quickly learn to hate the "error" message that pops up and asks you to reswipe your card, and you will hate it even more when it takes 3 or 4 or 8 reswipes to get a card to read. At best, the readers can be called "temperamental" -- though with practice, you can find the card angle and swipe speed that gives you the best results. And those supercool foil player cards of all the best players? They're the hardest to get the reader to accept -- personally, I have never gotten my card reader to successfully read even one. Most players I've talked to online have gone to an ingenious workaround -- they photocopy the card onto plain paper, then cut out the photocopied bar code and tape it onto the foil card. If this strikes you as unacceptable for a company that should have gotten it right in the first place . . . well, I certainly won't argue with you.

The other problems are smaller, but still very real. Everything happens in increments of 5 yards, which is kind of clunky. The play grid only gives you the results of a play; it doesn't keep track of who has the ball or what yard line you're on (the players have to do that themselves). I can only assume the 5-yard-increment decision was made to keep things simple for younger players. But the game's own promo copy has lines like, "It's fourth and inches . . ." -- when in the game itself, it can't *ever* be fourth and inches. Only fourth and five. Or ten . . .

And many of the strategy cards seem to be seriously unbalanced. I have less of a problem with this than I did when I first started playing the game, though. Like a lot of CCGs when they first come out, certain powerful cards get noticed, and obvious nasty strategies involving them come to the fore. Pained cries of, "the game is broken!" fill the air, until some other players sit down and find less obvious, but just as powerful, combinations that counter the original strategies. With the game only out for a month, many of the tricky card combinations and effective strategies have yet to be discovered. But I haven't figured them out yet myself, so it's still a concern.

So while I'm not likely to become a devoted fan of *NFL Showdown 2002* (at least not to the extent I am of their baseball game), I see a lot of good things about this game that football fans will certainly enjoy. And I understand Wizards of the Coast customer service is hard at work on the card reader problem, offering non-foil versions of the hard-to-read foil cards and even replacement card readers in extreme cases (contact WotC for details). After a rocky start, this game is starting to grow on me -- it might on you, too.

Ramsey Campbell's *Goatswood and less pleasant places* (for *Call of Cthulhu*)

Published by [Chaosium, Inc.](#)

Written by Scott David Aniolowski, Gary Sumpter,
Richard Watts, J. Todd Kingrea, Clifton Ganyard, Rob
Malkovich, Steve Spisak, Mike Mason, and Alan Glover

Illustrated by Matt Harpold, Drashi Khendup and Paul Carrick

256 pages; \$27.95

Many of the stories written by H. P. Lovecraft take place in the fictionalized Northeast of the state of Massachusetts, centering upon the town of Arkham. If this area, lovingly detailed and prepared as a ready-to-run setting for *Call of Cthulhu* by Chaosium for their Lovecraft Country series of scenarios and sourcebooks, has an English analogy, it is in the works of British author Ramsey Campbell. His fictionalized setting, which he has been exploring since the 1960s, is that of the Severn Valley, centering upon the city of Brichester and the village of Goatswood. Now Chaosium have allowed us to explore this uniquely English setting with the release of *Ramsey Campbell's Goatswood and less pleasant places*, a campaign and sourcebook for *Cthulhu Now*.

This area lies in England's West Country, roughly Southwest of the city of Gloucester. Its mix of locations is mainly fictional -- most notably Brichester, Goatswood, and Camside -- leavened by the real town of Berkeley among others. With a history dating back to the time of the Roman occupation and beyond, its rolling hills and ancient forests hide communities with dark secrets and degenerate practices. Most notable amongst these are Goatswood, whose inhabitants worship an avatar of Shub-Niggurath; the nascent cult of Glaaki drawn by dreams to Lake Brichester north of the city, where the Great Old One lies imprisoned below the waters; and scattered throughout the region is the Witch-Cult of Azathoth, worshipped by those infested by the sensation hungry Insects from Shaggai, the Shan.

Campbell's works have rarely been touched upon in *Call of Cthulhu*, though his creations, such as Glaaki, Y'golonac, and the Insects from Shaggai, have used quite widely. One example of a scenario that both referred to Campbell's Severn Valley and drew upon it for inspiration was Kevin Ross' "Dark Harvest" in issue #8/9 of Pagan Publishing's *The Unspeakable Oath* magazine. In *Goatswood*, the lead authors and editors, Scott David Aniolowski and Gary Sumpter, have created a sourcebook for the Severn Valley and a nine-part campaign.

The book itself is up to Chaosium's usual standard of production, and follows the style seen in their recent releases, *Keeper's Companion* and the critically acclaimed and award-winning *Unseen Masters*. Matt Harpold's front cover is all gloom and mystery, whereas the back cover consists more of advertizing for Chaosium than it does of useful information on the book the potential buyer holds in their hand. Inside the illustrative duties are split between Paul Carrick, who creates the larger pieces, and Drashi Khendup, who handles the majority of the internal art as well as the maps. His style has a cold sterility to it, which works best when illustrating the inorganic, such as the sidebars which decorate the pages of each chapter. Although the book does have a reasonable index, using it in play might have been made easier were the index to have been broken down into separate ones listing spells, locations, maps and so on. In reading *Goatswood*, a fair amount of repetition is encountered as the statistics and details for both creatures and entities are given again at the end of the scenarios they appear in. This is both helpful and irritating, and perhaps would not have been as necessary if the index had been better organized.

Goatswood opens with some forty-six pages detailing Campbell Country and his additions to the Mythos. There is a certain amount of entries reprinted from the *Call of Cthulhu* rulebook, but the new additions include the Great Old Ones, Byatis and M'nagalah; the Keeper of the Moon-Lens, avatar of Shub-Niggurath, Lrogg, avatar of Nyarlathotep; and lesser races such as the Denizens of S'glhuo and Children of the Green God. While most of these are the preserve of Ramsey Campbell, the creations of others, such as William Hope Hodgson's Great Old One, Saaitii, and Scott David Aniolowski's own avatar of Nyarlathotep, The Tick Tock Man, are also included. Spells and tomes are given for many of these entities, though there is a concentration upon the Revelations of Glaaki, which is understandable given Glaaki's prominence in Campbell's writings.

The gazetteer of the Severn Valley is relatively short, but comprehensive. Its brevity is down to the author's intentions to expand upon its locations as they are covered within each section of the *Goatswood* campaign. Just as important is the very up-to-date (for a game supplement) guide to Britain and the United Kingdom, along with David Mitchell's necessary guide to the British law on firearms. It has helped that two English writers, Mike Mason and Alan Glover, have contributed to this guide and it is fair to say, that apart from an occasional lapse, *Goatswood* contains few cultural anachronisms. The one series of omissions from the gazetteer is maps, not of the area of the Severn Valley, but of the major towns. *Goatswood* itself is mapped later in the book; none of Campbell's other creations are, which is a pity.

The majority of *Goatswood* consists of an open campaign in nine-parts. It is "open" because although all of the scenarios take place in the Severn Valley and have a rough chronological order in which they should be played, they differ from the traditional onionskin campaign -- such as Pagan Publishing's *Walker in the Wastes* or Chaosium's *Masks of Nyarlathotep*, in two important details. Firstly, unlike in classic campaigns there is no set of clues linking one scenario to the next. Secondly, the investigators are not striving to abate the end of the world -- there is no one group of cultists bent on summoning their one true master and damn the consequences! Instead these nine scenarios allow them to explore the area more or less at the leisure of the Keeper, as it is very easy to run other UK based scenarios between any of them. Unfortunately, it is a pity that *Call of Cthulhu* is ill supported with modern day British set scenarios to make the fullest use of this aspect of *Goatswood*.

[SPOILER ALERT]

The campaign opens with an overview by Scott David Aniolowski, The Windthrope Legacy. If *Call of Cthulhu* has a consistent weakness, it is in its openings -- the hooks that grab the players and get their investigators involved. And so it is with The Windthrope Legacy, in which we have that hoary old cliché, the inheritance from a previously unknown and lately deceased relative. Windthrope Manor comes with staff, some ready cash and a few secrets, but this really only gives an evening's exploration and interaction. That said, as with other clichéd *Call of Cthulhu* setups, once this is out of the way, the investigators have a reason to stay in the Severn Valley.

The Goth sub-culture comes under the investigators' scrutiny in "Gothic" by Richard Watts. It is one explored before in Bruce Ballou's "Unseen Masters," which hinted that there really might be vampires stalking the Goths of New York's SoHo district, but here in the city of Brichester, there really is one! "Gothic" opens with a chance encounter when the investigators come upon a young man set upon by a handful of skinheads. Their curiosity is aroused the next day when the set upon youth is reported missing by his family.

The film *Shadow of the Vampire* is one inspiration for Aniolowski's "Silent Scream," which brings a horror into Windthrope Manor. In 1925, MGM made the long lost classic, *The Harbinger*, but with the recent unearthing of a print, the director, John Carpenter wants to remake the film -- and do so at Windthrope Manor. Yet when death seems to stalk the scouting party, has the curse of the original film come to strike at the remake? Of course, the investigators are just as much police suspects as are the remaining members of the scouting party in what is a second short but murderous adventure.

J. Todd Kingrea plays up the theme of the cruelty of children in his "Cross My Heart, Hope to Die." The parents of a young Camside boy ask the investigators to examine after him after he has suffered some kind of psychiatric trauma. As they look into his condition, other local children, some with dubious reputations take an increasingly active interest in their activities. This scenario enhances one aspect of other *Call of Cthulhu* scenarios: the authorities never believing in what the investigators uncover, but here it is the secrets behind the oh-so innocent games that children play.

The most difficult scenario for the Keeper to stage is "The Watcher Out of Time" by Clifton Ganyard. When two Brichester physicists turn to the Mythos to further their researches, their summoning of Daoloth has strangely repetitive consequences on the investigators. The one surviving researcher returns and asks them to prevent the ritual from happening in the first place. The Keeper must steer them through up to three time loops to set things right, but the investigators may not realize that they are repeating events and subsequently incur sanity loss when they do! If this is handled wrongly, this scenario has the potential to frustrate both players and Keeper alike, but presents an interesting challenge nevertheless.

The attempted suicide of Windthrope Manor's young handyman, apparently after he has killed his family, draws the investigators into his dark background, his dreams and the seamy underside of Lower Brichester. "Unpleasant Dreams" by Scott David Aniolowski and Gary Sumpter is the first hint that the area is home to the hosts of Insects from Shaggai, the Shan. Dealing with the man's dreams is sure to be a sanity eroding series of experiences for the characters.

"Unpleasant Dreams" leads into Gary Sumpter's "Blessed Be," which is the first scenario in the book that I have a problem with, as a second member of the Windthrope manor staff, Albert Jenkins, goes missing, apparently after visiting the village of Goatswood. It will become clear to the investigators that not all is well in the village and if they are to escape the clutches of the cult that pervades Goatswood, they will need to foil its plans. This is a win or lose scenario -- there is no middle path. Succeed and they live, fail and they are dead, becoming sacrifices to the Keeper of the Moon-Lens, avatar of Shub-Niggurath. The question remains, what does the Keeper do if they fail? The investigators are dead, and he still has two more scenarios left in the book, without a group to use them on . . . Nor is there advice to bring the campaign back on track. Obviously, this is not so much of a problem in an open campaign like Goatswood, but difficult nevertheless. One solution might be to swap the running order of "Blessed Be" with that of the next scenario, "Of Dreams and Dark Waters," which while still deadly, is not as potentially fatal to the campaign.

A plan to draw forth Glaaki from his Lake Brichester prison lies at the heart of Rob Malkovich's "Of Dreams and Dark Waters." The Great Old One has found a new priest to work his plans hiding behind the development of new housing around the lake. Investigative progress is hindered by the presence of a green protest group, SANE, which will also figure in the last scenario in the book, "Third Time's the Charm" by Steve Spisak. Here the Shan make a third attempt to punch a hole through the Earth's ozone layer that keeps them prisoner. If the investigators fail to prevent this from happening, the consequences for the Severn Valley are somewhere on a scale between Three Mile Island and Chernobyl. Even if they are successful, the Shan are still free to try again at a later date, just as Glaaki is after "Of Dreams and Dark Waters." Keepers wanting to run "Third Time's the Charm" are suggested to watch the 80s BBC TV series *Edge of Darkness*. Not only dealing with the British nuclear power industry, it also has been the inspiration for many a UK-based conspiracy style campaign . . .

[END OF SPOILER ALERT]

Although Goatswood is designed as a *Cthulhu Now* campaign and sourcebook, it need not necessarily be run in the year 2001, when some of the scenarios are set. Given that Campbell's stories take place over the last thirty or so years, much of this campaign could just as easily be set during the sixties, seventies, eighties, or nineties. With some effort, many could also be run in the twenties or 1890s, barring of course "Third Time's the Charm," which takes place in a nuclear power station. For *Delta Green* games, this is less useful, although there is potential for crossover between this supplement and *Delta Green: Countdown*, with its expanded information upon the extent of the Shan infestation, Severn Aerospace and the anti-Shan group, the Army of Light.

Ten years in development at both Chaosium and Pagan Publishing, *Ramsey Campbell's Goatswood and less pleasant places* presents something that *Call of Cthulhu* has been lacking: a good campaign set in England. It does touch upon strong adult themes in places, but thankfully does not overplay these and resolving the problems they cause is usually part of the scenario that they appear in. As with other campaigns, it becomes increasingly deadly in the order that the scenarios are given, to the point where it becomes too lethal too early on in "Blessed Be." There still remain aspects of Ramsey Campbell's Severn Valley that are left unexplored, so with luck we shall see these detailed in future releases of a Campbell Country series. In some ways, these are a necessity, as to get the full and proper use of *Goatswood*, the

Keeper needs other UK or Europe based scenarios to run in between the ones given here.

Tabula For Two-a

[Three weeks ago](#) I obliquely mentioned one of my favorite techniques for "faking it" when you're unfamiliar with the subject matter at hand. And it's such a favorite of mine, I was amazed that I hadn't mentioned it before . . . to the extent where I did a search for the topic, just to make sure I hadn't. (As an aside, I've mentioned "pizza" in six different columns. Er, seven.)

It's such a useful technique, that I tend to use it even when I *do* know what I'm doing.

Anyway, it's the idea of "tabula rasa" -- the blank slate.

In other words, whatever may have existed or gone before, it doesn't matter. It's all been swept away; it's up to the world, the PCs, and the GM to chart the fate of . . . um . . . whatever it is.

For example, in my long-running Supers campaign, I created a background where there had always been meta-powered individuals, but some super-powerful being (named the Enforcer) was keeping them suppressed, hidden, and under control. Well, something happens that causes the previously hidden metahumans to rise up against the Enforcer, who is defeated by the combined might of thousands of ticked-off powered beings.

So once the Plot Devic . . . I mean, the *Enforcer* falls, the game world is at the stage I wanted it. Namely, there are metahumans where previously there weren't.

Worries about creating a logical legal system that can deal with metahumans? Nope; the game world (and I) are making it up as I go along. Wondering what effect metahumans had on World War II? Nothing; they were all hiding. How many metahumans are there? As many as I want; I don't need to worry about creating a number that coincides with an established background.

Years later, in my *Aberrant* campaign, I found myself wanting to start the campaign in Chicago. Unfortunately, I didn't know what was planned (or not planned) for that city in the *Aberrant* universe. So I made up an event where the existing Novas in that city all fought each other to death; Chicago was now wide open, and the mayor of Chicago invited the PCs to become the city's new protectors.

Tabula rasa can also be used for more mundane purposes. Let's say a player wants to play the editor-in-chief of a newspaper. What, exactly, does a newspaper editor-in-chief do? Well, if neither player nor GM know, then you can use tabula rasa to ensure no one else knows, either. Maybe an event happened to remove all previous people who would know what to do. This can be as mundane (everyone was fired after a huge scandal) or exotic (everyone was killed by Aliens from Planet Tramlaw) as everyone is comfortable with. In this scenario, the players and/or GM can do research in and out of game to get up to speed. ("I discovered that an Editor-in-Chief is responsible for generating a profitability report for the publisher. I start working on one of those for our publisher. <pause> Say; who is our publisher, anyway?")

Or maybe people *do* know what was done previously, but it wasn't working; this can be especially appealing for creative "tinkering" players, who like coming up with their own ideas and solutions. Thus maybe the previous editor-in-chief was fired because readership is down, advertisers are leaving, there's a rival newspaper threatening to crush them, and people in the city are increasingly getting their news from television, the Internet, and tea leaves. Or as another example, the player may be a police detective in charge of a (currently) unsuccessful war on drugs. In this case the player can come up with any reasonable solutions -- orthodox or otherwise -- and the group can explore together whether or not those solutions work.

Or maybe what the PCs are doing has *never* been done before. Thus if the heroes are, say, the first FBI agents in charge of exploring mysterious phenomenon, then there's no danger of getting the "facts" wrong as the heroes go off in search of answers to these unExplained files.

Finally, tabula rasa is great for published campaign worlds, especially if those worlds are new and relatively undeveloped. For example, we tried starting an *In Nomine* campaign shortly after it came out, and found ourselves stymied as to how to go about it. The main book provided precious little in the way of concrete campaign world information. How many angels and demons are in a city, or in the world? How many tethers are there? How common are soldiers in the War on Earth? How powerful are archangels? What happens when they get involved? How many angels can dance on the head of a pin? Does it matter if they're fat? (This was before the *Game Master's Guide* came out . . . the book that caused our GM to say, "Dang it! Why wasn't this book published *second*?!?!")

So one of the ideas we had for starting a campaign was tabula rasa. Some Big Event happens in Atlanta, causing all celestial involvement to disappear. Now the protagonists are part of the first wave to go back to Atlanta. How many angels and demons are in the city? Um . . . the heroes, as best as they know. How many tethers are there? None. How many soldiers? None. And so on. It would then have been trivial to reintroduce new elements, one at a time, as players and GM became comfortable with it.

(We ultimately decided to go with a different campaign hook for the *In Nomine* game. But I still think it would have been a dandy way to start the campaign.)

Once new information comes out for these game worlds, it's often easy to integrate it into a tabula rasa campaign . . . without disrupting the continuity. For example, in the *Aberrant* campaign, I learned that there was, in fact, a Nova based in Chicago . . . a working-class brick of a hero. Well, it was trivial to say he was involved with the fight that wiped out every other metahuman in the city; I wanted to bring him back, so I just said he was irradiated from that fight, and was healing from the effects for the past eighteen months. (I wanted to establish he was *tough*.)

One of the nice things about a tabula rasa campaign is that many different adventures and plots immediately suggest themselves, based on the tabula premise. In the hypothetical *In Nomine* campaign, we could have spent many stories dealing with the mystery surrounding the Event, in the same way our editor-in-chief would spend much of his time orienting himself with the new job. (And you can be sure I milked the threads of the Enforcer storyline for all they were worth.)

Of course, tabula rasa isn't without its problems. In particular there can be difficulties if the players (and heroes) want to investigate the tabula rasa event before the GM is ready for that storyline. In the *Aberrant* campaign, for example, the heroes *really* wanted to investigate what happened before in Chicago . . . despite the fact that I hadn't really planned for it yet.

Players: "We investigate this huge fight that wiped out all the heroes."

GM: "Uhh . . . it was a fight. It was huge. Nothing that interesting, really . . ."

Players: "Nothing interesting, eh? Clearly there's a conspiracy. We dig deeper."

GM: "<sigh> Okay; give me a minute while I make some stuff up . . ."

Another problem with tabula rasa is that, realistically, it can probably only be used once or twice in any given campaign . . . and even then the hook generally needs to be *good*. "Cindy, your astronaut character is the head of the space program now, ever since the huge drug scandal that resulted in the arrests of all previous astronauts and administrators. Oh, and Carl? Your hidden conspiracy magical character is also the head of his chantry . . . uh, after a scandal that involved drugs. And astronauts."

Still, all told I've found tabula rasa is a great way to get the players involved immediately, without needing to worry about pesky things like knowing what the heck you're doing.

Ken Hite continues to be too darn popular for his own good; as such he is taking this week off to continue working on Secret Projects. Hopefully our Self-Aware Meme Complex Alpha will help satisfy your need for Vitamin-Weird. And we've taken advantage of the extra space to squeeze in an extra-long Byzantium article.

But we all still miss you, Ken. <sniff> <sniff>

Sailing To Byzantium

Byzantine Government and Religion

by Matt Riggsby

[Constantinople](#) was a grand city, but it didn't exist in isolation. It was supported by a vast empire, drawing enormous resources from provinces in Europe and Asia. It took both a great deal of bureaucratic machinery and a common ideology to hold that empire together. This article presents outlines of the government of the Byzantine empire and the structure and thought of Orthodox Christianity, as well as a few more possibilities for dropping the Byzantine empire into a campaign. In addition to the obvious historical use, the institutions of the Byzantine empire can be used as a model for the government of any low-tech fantasy empire (application to Yrth's Megalos in *GURPS Fantasy* should be quite direct) or for a powerful religion which is nevertheless a bit less autocratic than Medieval Catholicism.

State

Although it was small by modern standards, the Byzantine government was the largest bureaucracy Europe had yet seen, and far larger than anything else of its day. In a world where a large international trading house might employ a hundred people, the Byzantine administration employed thousands. The structure of the Byzantine government went through several major changes through the course of the Middle Ages. Presented here is an outline of the government as it stood for the bulk of the Medieval period, from the rise of Islam in the seventh century to the Fourth Crusade.

Roman Survivals

Byzantine government was never a neatly ordered system. It was a combination of extensions of the emperor's household, offices created by broad bureaucratic reforms, and holdovers from the distant Roman past, all of which were subject to ongoing modification. The most obvious inheritance of Roman government in Byzantium was the emperor.

Unlike western kings, who were encumbered by semi-independent feudal vassals and a church leveraging its spiritual authority into a temporal empire, the Byzantine emperors were very nearly absolute rulers. The emperor could install and remove officials, enact new legislation, and levy new taxes more or less at will. He could even uproot entire rebellious populations and scatter them across the empire, something completely impossible to the feudal kings of the west. The emperor might be held back by tradition and practical concerns (say, extreme popular opinion or threat of invasion), but his word was, theoretically, law. As a matter of general principle, power was concentrated strongly around the person of the emperor. Most of the imperial governmental machinery was located in Constantinople, and most of that in the palace district. Likewise, the most powerful officials lived in Constantinople, and the closer they were to the emperor physically, the more powerful they were, even if their nominal jobs gave them little apparent authority.

The imperial throne wasn't the only Roman survival. Stripped of most of its power, the central governmental structure of Roman republic, the Senate, survived through the entire Byzantine period. Prominent individuals were awarded senatorial rank by the emperor and required to live in Constantinople. At its height, there may have been 2000 people of senatorial rank. However, rarely were more than about 50 active in senatorial work. The Byzantine Senate was largely ceremonial, attending the emperor and appearing at ceremonies. However, most senior office-holders were men of senatorial rank, the Senate could act as a high court, and when imperial succession was contested, the support of the Senate was often crucial. The senatorial class also provided members for a number of advisory councils. These advisory councils could not veto or modify imperial decisions, but they did at least have the emperor's ear and its members could be empowered to carry out extraordinary tasks (secret diplomacy, investigation of other officials for corruption, etc.).

Ministries and Logothetes

Most day to day administration was carried out by departments headed by ministers called *logothetes*. For example, there were logothetes in charge of waterways, state-owned herds of horses (an important post in a society where rapid transportation depends on horses, and one controlling considerable amounts of land), the imperial postal system, prisons and judicial matters, and the special tax status of soldiers and veterans. The *genikon* (the treasury) had several logothetes. This list is far from exhaustive; we don't know how many logothetes there were, so the GM can make up minor government ministries (say, the logothete of woodlands or the logothete of silk production) at will. A number of logothetes had duties only vaguely related to their titles. For example, the logothete of the dromos (the imperial post) initially oversaw a system of roads and postal relay stations, a bit like the old West's Pony Express, as well as resources for transporting the emperor, government officials, and official visitors. In time, though, the post grew to include responsibility for protecting the emperor, gathering intelligence, and low-level diplomatic duties. Likewise, the logothete for soldiers' taxes may have been responsible for building fortifications as well.

Much of that day to day work consisted of dealing with correspondence: writing letters, issuing order, reading dispatches from the provinces. To do that work, the imperial bureaucracy had a large chancery (a body of scribes and clerks handling correspondence) to draw on, administered by the *protasekretis*, or chancellor. This department was responsible not only for producing imperial correspondence, but also drafting new legislation. The correspondence it carried on included communication with other countries, so the chancery had a large staff of interpreters as well, who might also participate in diplomatic work. The imperial household and a few other offices had their own pools of scribes not under the authority of the *protasekretis*, but most clerks were available to any government ministry at any time. Therefore, they had to be remarkably flexible and able to fill a number of roles.

Household Staff and Imperial Favorites

The official closest to the emperor, though, was a member of the household staff: the *parakoimomenos* (if the term seems too much of a mouthful, call him the Grand Chamberlain or the Chief Eunuch). This office was the emperor's closest companion and chief personal bodyguard (the *parakoimomenos* often slept outside the emperor's bedchamber). While the position had little formal power, the *parakoimomenos* was in an ideal position to control access to the emperor. As a result, he was often the most influential man in the empire and, in the case of a weak-willed emperor, the most powerful. Indeed, any position which put one close to the emperor could become a powerful one. A different official, the *sakellarios*, started out as a caretaker of the imperial chambers. By the 7th century, the position changed to a treasurer of imperial holdings. One emperor, Basil I, grew up an illiterate peasant and reached his high position essentially because he became a groom to the imperial stable and thereby became a personal favorite of the emperor. That proximity allowed Basil to assassinate not only the previous power-behind-the-throne, but also the emperor who had raised him to his position of prominence. He's well worth studying as a model for conniving characters.

At any rate, these are just a few of a huge number of powerful household positions. Others included the master of ceremonies (responsible for organizing much of the emperor's time), the keeper of the imperial wardrobe, the official receiver of petitions, chief cook, and keeper of the stables. Some palace officials had bizarre functions; there was a judge whose sole jurisdiction was the oarsmen of the imperial barge. The GM can feasibly create an official in charge of any household task or object (master of windows, imperial lamplighter, etc.). Many household positions were given to eunuchs, and perhaps as a result a number of eunuchs held prominent positions in the government and army. The idea was that eunuchs would be more loyal to the emperor because they had no children to leave things to. In practice, eunuchs seemed as inclined to pursuing self-interest as anybody else. Ultimately, though, just about anybody could become an informal power through proximity to the emperor. Close relatives (mothers, wives, uncles not in the line of succession, and so on) were often powerful figures, even under relatively strong-willed emperors, but any monk, dancer, or other interesting person could potentially make an impression on the emperor.

Other Departments and Function

In addition to the imperial and palace officials, there was a separate administrator for the city of Constantinople, the eparch of the city. Eparchs were generally officials in charge of cities, but the one for Constantinople was special.

While he shared the same general duties as other eparchs (chief judge and chief of police for the city, administration of industry and trade, oversight of civic ceremonies), the eparch of the city happened to administer the chief city of the empire, making his job an order of magnitude harder and his position that much more powerful than other eparchs.

The Byzantine government understood the value of accurate information, so while there was no specific espionage department, it did have relatively well-developed intelligence-gathering abilities. The imperial government was served by a body of inspectors and informers, who formed a very real secret police within the empire. The government also collected information on foreign regions from the testimony of merchants, pilgrims, missionaries, and Orthodox Christians living abroad. The empire might even send merchants or missionaries abroad with the express purpose of gathering intelligence; at least one Muslim ruler grumbled that his regional governors were doing nothing to ferret out Byzantine agents traveling under the guise of merchants. The evidence suggests that like most spies, these agents served largely as sources of information, not active operatives trying to alter the situation on the ground, but the activities of secret agents are exactly the sort of thing that wouldn't be carefully documented. It would not, therefore, be too far-fetched to run a "black ops" adventure based in the Byzantine empire, and it would be entirely realistic to have agents of the dromos recruit well-traveled Medieval PCs as spies.

Outside of Constantinople, the vast territory of the empire was divided into districts called *themes*. Each theme was governed by a *strategos*, an official who combined military and civil functions. As time went on and regional revolts were suppressed, reforms were made to prevent the strategoi from trying to challenge imperial power. The themes were subdivided into smaller units; Anatolia went from four to twelve themes. By the 11th century, strategoi were limited to military functions, with other officials (*kritai* or *praitors*) taking over civil functions.

The Military

Despite a general distaste for warfare, the Byzantine military was an important part of the government. Generals performed civil functions, provincial governors commanded soldiers, and Byzantine aristocrats could spend time holding both civil and military posts. The Byzantine military consisted of two sets of troops. One was a mobile body of professional, elite troops, theoretically the imperial bodyguard and the core of the imperial navy. There was considerable diversity in the bodyguard units. Some were foreign mercenaries, such as the Russian and Scandinavian Varangian guard. Some were the cream of the crop of border units, brought to the capital to serve the emperor. Some had special duties as watchmen or prison guards. The palace guards were usually eunuchs. Most of the troops were divided into several (no set number, but five or six seems likely for any given time) regiments called *tagma* of up to 4000 men, each commanded by an officer called a *domestikos*, or domestic, hence another title with no apparent relationship to its function. The "domestic of schools" had little to do with home life or education; rather, he was the foremost of the imperial regimental commanders and often served as a supreme commander of the Byzantine military. The domestics sometimes had duties at the imperial palace and were often themselves influential in palace politics. These core units were nominally stationed in and around Constantinople, but they were often moved to the borders to support the other body of troops, the thematic armies.

Each theme had a number of men who were granted permanent, hereditary land grants in return for military service. They drilled periodically and were expected to provide their own horse and arms. Although these peasant-soldiers were usually called on only to defend their home region, they might, in an emergency, be called up to fight elsewhere. On the surface, this may sound very similar to the western European feudal system, where a knight pledged military service in exchange for authority over a piece of land, but there are significant differences. The obligations of the landholder were tilted more in favor of the emperor, with few if any limits on how long he could call up the troops. In any case, the emperor was a far more absolute ruler than any feudal landlord, and he could change the details of any prior agreement at will. The amount of land granted was also smaller (a modest but adequate farm) and didn't include any kind of increased legal authority. On the other hand, the land granted to the thematic troops was completely inalienable except in case of imperial decree. That is, it could not be sold to or seized by anybody else. This ensured a population of relatively free peasants, preventing the rise of powerful provincial landlords who might threaten imperial authority. It also means that characters used to swaggering into villages and torturing peasants for information are in for a rude awakening if they try to pull that stunt in the Byzantine empire. Many villages will have at least a handful of veterans, and in some, every head of household will be a part-time soldier. Coastal regions had thematic fleets as well as thematic armies. Like the thematic armies, they could be called on to join imperial forces in time of need.

Division of Powers and Finance

Despite the Byzantine reliance on diplomacy, there was nothing analogous to a modern state department or foreign ministry, nor any career diplomats. Diplomatic functions were shared between the imperial household and a number of officials (most notably the logothete of the dromos and the chancellor) who had diplomacy as just one of many duties. To complicate matters, the church sometimes performed semi-official diplomatic duties as well, having missionaries do double-duty as diplomats. However, rather than carrying out confused, conflicting orders, the whole Byzantine bureaucracy was well-trained in diplomatic practice, giving the empire a significant edge in international affairs. In addition to a well-oiled, eloquent bureaucratic machine, Byzantine diplomats could use the empire's wealth to sway rulers or support local partisans, send missionaries to raise supportive converts, or use Byzantine and (more likely) allied military power as a threat. One subtle but apparently effective practice was to invite relatives of a ruler to live in Constantinople itself. The lure of life in the city was strong; Constantinople was well-known for its grandeur and luxury, so many people wanted to spend some time there. This allowed the Byzantines to cultivate members of other nations' ruling families as allies at the same time as it gave them hostages to ensure the amicable behavior of the foreign rulers. Needless to say, diplomatic life is rife with possibilities for adventure.

Still, the vague division of functions was something which had to be worked out again and again. For example, protecting the emperor was a task which fell to at least three high officials (the logothete of the dromos, the chamberlain, and the eparch of the city) as well as at least two domestics, while treasury functions were carried out by both the sakellarios and the logothetes of the genikon. Moreover, there was little in the way of a chain of command, and "chief of staff" would have been an alien concept to a Byzantine bureaucrat; over sixty high officials were responsible directly to the emperor. The key to making it work was having intelligent, flexible bureaucrats sharing and dividing tasks to best suit the situation. An important thing to keep in mind about the Byzantine bureaucracy is that it was not staffed by dull, unimaginative drones, like a stereotypical modern bureaucracy. The typical Byzantine bureaucrat was certainly educated, probably ambitious, and likely very intelligent, and he might move between a variety of different tasks through the course of his career. A career in the imperial government was both prestigious and lucrative, and it required considerable professional and social skills to get ahead, so it attracted very able individuals. For PCs, dealing with a Byzantine bureaucrat will be more like a diplomatic negotiation and less like a trip to the DMV.

All of these activities had to be financed somehow (particularly diplomacy; the empire dealt with acute problems by throwing buckets of gold at them), and the empire had a number of ways to get the money and goods it needed. Some government activities could be funded by the emperor's personal wealth or the holdings of officials undertaking a task, but most of the money had to come from taxes, fees, and income from imperial enterprises. The imperial government held lucrative monopolies on a number of industries, such as silk production. The silk was grown in and around Constantinople and woven into cloth at a factory in the palace district, apparently producing some very fine material. Some government services and even offices would only be granted with the payment of fees. Characters who intrigue in Constantinople may find themselves paying some hefty fees if they want to advance their position, or even to get access to high officials. Merchant characters should be aware that imported goods were subject to tariffs of up to 12.5%. The government could also force merchants and tradesmen to sell their goods at a fixed (and very low) price. And, of course, there were conventional head and land taxes for peasants, which were as heavy as anywhere else. The empire went back and forth between monetary taxes and taxes in kind, but the state of the Byzantine economy generally allowed the government to extract taxes in money rather than in goods. One fringe benefit of being a soldier, a veteran, or a titled official was exemption from some or all taxes, so Byzantine PCs with a military background will be at something of an economic advantage.

Ceremonies

Life in and around the imperial court was one of constant ceremony, in which high officials were required to participate. Public and semi-public audiences, banquets, processions, life events (birthdays, weddings, and such), observations of saints' days, public announcements, reception of officials, dispensing awards, and more had various levels of ceremony attached to them. The emperor himself usually appeared wearing some degree of impressive regalia

and surrounded by the smoke of incense. Those present at the ceremony had to, as a rule, remain silent unless spoken to and prostrate themselves if they came before the emperor. Doing something wrong (loudly dropping a metal helmet, fainting from the heat) will probably make one the object of gossip and intentionally interfering with a ceremony will make one extremely unpopular. But as tedious as it might seem, it is through these daily rituals that court intrigue was often carried out. Inclusion in a ceremonial occasion puts one in close proximity to the emperor, or at least in touch with those close to the emperor. Ambitious characters in the Byzantine empire will jockey quietly but fiercely to be included, even in small ways, in court ceremonies. It is through those that they have the best chance to meet and cultivate powerful officials.

To reproduce the feel of life at court, the GM may want to assemble his own ceremonies for any significant occasion. Here's a list of some elements (feel free to add your own) which could be used to assemble everyday ceremonies:

- Prayer
- Introductions
- Announcements (the emperor is entering, the emperor is sitting down, the emperor is leaving, etc.)
- Formulaic questions and responses
- Procession of individuals (candidates for offices, representative of an official)
- Display of official regalia and goods
- Presentation of gifts to a recipient
- Censing with incense smoke
- Musical sounds (ringing bells, horn fanfare)
- Lighting/putting out lamps or candles
- Ritual domestic gestures (breaking bread, anointing with oil, washing)

The GM will also want to consider time, place, costume, and potential audience for the ceremony. For example, a ceremony where the emperor gives charity to the poor might go something like this: On a given saint's day, the emperor is to appear at a particular church (a church of Hagios Nikolas seems appropriate). At a particular hour in the late morning, before an audience of senators, high officials, and a few picturesque commoners, a chamberlain carries in a golden stool (probably just gold-plated wood, but the appearance is the important thing) and sets it down before the altar. To the ringing of a small bell, a priest enters with a censer of incense and wafts smoke over the chair. The emperor then enters, preceded and followed by retainers, and sits on the stool. One of the retainers, standing to his right, takes off an embroidered gold cloak to reveal a red robe. The other retainer stands to his left, carrying a silk purse on a cushion. The priest, at the altar, makes a brief prayer. The emperor rises and, using prescribed language, calls forward a humble servant of God. A carefully chosen beggar is ushered forward and prostrates himself before the emperor. The priest brings the emperor a pitcher of water, of which he drizzles a few drops on the beggar's head. With another prescribed speech, the emperor hand the beggar the purse and the retainer puts the emperor's cloak on him. The beggar backs away, there's another prayer, and the emperor leaves, followed by the retainers and the chamberlain with the stool.

The details may sound tedious, but observing the correct forms was extremely important to the Byzantine court. Anyone who wants to move in those circles will have to put up with a lot of that sort of thing. After all, this trivial event unites a large chunk of the empire's ruling class in one place, giving PCs an opportunity to hook up with powerful connections and the GM some amusing hoops to make PCs jump through.

Titles and Succession

Byzantine officials accumulated long lists of personal titles (separate from job titles) through their careers. During this period, there was a hierarchy of at least eighteen titles (plus another eight for eunuchs), many of which were variants on others. For example, one could be a hypatos (consul), dishypatos (twice-consul), or even anthypatos (proconsul). Like offices, titles could have little relationship to their current meaning. For example, protospatharios, literally meaning "first sword-bearer," simply signified someone of senatorial rank. Over the centuries, there was a phenomenon of title inflation. That is, a title would be awarded to so many people that it would become essentially worthless, and the emperor would have to come up with a new title with which to reward distinguished service. This is another case where the GM should feel free to make things up (most noble, double-wise, venerated, etc.) without fear

of historical inaccuracy. Unlike titles in the west, Byzantine titles and offices were not hereditary. There was certainly an aristocratic class from which ministers and officials were appointed, but actual titles and offices were acquired, not inherited. About the only truly hereditary position in the empire was that of the peasant-soldiers of the thematic armies. A father's military obligation passed to his oldest son.

Even the imperial throne was not, strictly speaking, directly hereditary. When the crown passed peacefully, it usually went from the emperor to a son or, if he had no sons, a brother or nephew. However, just being the emperor's closest relative was never good enough. A sitting emperor would appoint a junior co-emperor, often but not always a close relative, following the pattern set by Diocletian so many years earlier. By the 7th century, the junior emperor held no actual power, but it did set up a clear line of succession. About the only restriction on becoming an emperor was that he be a "whole man." One or two exceptional examples aside, physical disability, mutilation, or being a eunuch prohibited one from the throne. A grisly consequence of this restriction is that in hotly contested successions and after revolts, potential rivals to the throne might be disfigured (cutting off the nose was common) to keep them out of the way permanently. Likewise, women were traditionally prohibited from holding the crown, again with one or two significant exceptions. But, as with most other governments of the age, just about anyone, regardless of age, sex, nationality, or disability, who could take the throne by force could keep it.

Church

The imperial government was a big factor in the lives of the rich and powerful, their hangers-on, and those who aspired to that lifestyle, but there was an even more pervasive factor in *everybody's* life in the Byzantine empire: Orthodox Christianity. Just as Roman Catholicism dominated many aspects of life in western Europe through the Middle Ages, Orthodoxy formed the basis for art, philosophy, morality, and other aspects of Byzantine life, as well as shaping the spiritual life of Russia and large chunks of eastern Europe. Orthodoxy is, strictly speaking, just one of several strains of Christian practice and doctrine that arose in the first few centuries of Christianity, only slowly taking shape as its own religion. It grew out of the great mass of early Christianity which also produced Roman Catholicism. In fact, in late antiquity and the early Middle Ages, there wasn't a sharp division between the eastern and western churches. Rather, they regarded themselves collectively as one large church, unified in doctrine if divided by language and distance. It took centuries for what started out as an administrative division to turn into something far deeper.

Authority and Hierarchy

In the early church (and in Orthodoxy to the present day), there was no one ultimate clerical authority. The emperor, certainly, had an important part in spiritual matters. From the time of Constantine, the emperor had a special relationship with the church. The emperor championed Christianity as the one true religion, while the church supported the emperor as the one true ruler of the world. Although he was technically a layman, the emperor was considered the protector of the church and Christians everywhere. Indeed, treaties with the pre-Islamic kings of Persia acknowledge the emperor as the lawful ruler of any Christians in Persia. The emperor also held temporal authority over clergy. Unlike the west, where clergy accused of crimes were often tried in the church's own (and fairly sympathetic) courts under separate legal codes, called "canon law," eastern clergy were subject to imperial law and imperial courts. But while his temporal authority was unlimited, he had little authority over spiritual matters. If he angered church leaders, they could and did prohibit him from entering churches and otherwise make his life more difficult. One emperor jeopardized his reign by marrying a third and then a fourth time after his previous wives died (Orthodoxy limits people to two spouses; the feeling is that if both die, God clearly doesn't want you to be married). There were no Henry VIIIs in the Byzantine empire.

But while the emperor had no direct power over church doctrine, he had the authority to call large convocations of bishops (ecumenical councils) to debate and resolve doctrinal issues. It was at these councils, which could involve hundreds of bishops from all over the Christian world, that fundamental questions of doctrine and practice were decided. For example, the Nicene creed, one of the fundamental statements of Christian faith, was the product of a conference of bishops called by Constantine I. The ecumenical councils were subject to enormous political wrangling. Thus an emperor or prominent bishop convening a council might "stack the deck," arranging for a majority of bishops sympathetic to his position to come, or a faction which fears losing a final decision might attempt to disrupt a council

before it can reach a conclusion. Even if PCs are not themselves terribly concerned with religious matters (and even if they're nowhere near the empire), they may be easily drawn into the intrigues of an ecumenical council, performing tasks from escort to espionage to lobbying to assassination.

At any rate, such councils could only address the largest questions, and they took place decades -- even centuries -- apart, so they couldn't perform day-to-day administration. The functional head of the eastern church, then, was the metropolitan bishop of Constantinople, usually called the patriarch. At the end of antiquity, five cities had bishoprics of supreme importance, called patriarchal sees: Rome, Constantinople, Antioch, Alexandria, and Jerusalem, in descending order of precedence. By the end of the seventh century, Jerusalem, Antioch, and Alexandria were in the hands of the Muslims, leaving Rome and Constantinople as the remaining centers of Christianity. The eastern patriarchates still oversaw large Christian populations, but they operated under the sufferance of Muslim rulers who were at best indifferent to their religion. The patriarch of Constantinople, therefore, was responsible for setting the tone for Orthodox doctrine and church policy for the empire and regions converted to Christianity by Orthodox missionaries, including Russia and most of the Balkan peninsula. In addition to being the spiritual leader for a large region, a patriarch had considerable administrative power, including the right to approve new senior clergy in his territory. Because of the usually close relationship between religion and politics, this could be a tool of considerable power. The emperor had authority to select the patriarch when the post became vacant, and emperors sometimes deposed particularly contrary patriarchs, but it could be a risky move if the sitting patriarch was popular in the city. The patriarch was often a close advisor to the emperor. Some patriarchs assumed responsibility for educating the emperor's children, and a few served as regent in Constantinople for emperors in the field during wartime.

Orthodox Practice

Orthodox practice takes a form which other Christians would find reasonably familiar: celebrations of saints' days, ritual fasting, communion at mass, people crossing themselves, and so on. However, there are some differences in detail. For example, Orthodox priests are allowed to marry. Despite that, Orthodoxy is relatively ascetic. The calendar is filled with fasting days of varying degrees of severity (meat is prohibited on some days, all animal foods on others, yet others call for avoidance of oils or alcohol), and unlike the Carnival festivities of the Catholic world, the Orthodox get a jump on Lent and start fasting several days in advance. The Orthodox hierarchy is fairly flat: priests governed by bishops (who usually have a sizable city as a seat), administered by an archbishop or patriarch. As in the west, there were a great many cloistered monks, very few of whom were priests as well. The Orthodox never developed anything like the west's mendicant orders (monks who lived in the secular world rather than segregated in monasteries), but they did produce some fairly exotic religious types. Rather than living in a monastic community, some radical ascetics would flee to live as hermits in the wilderness or, more strangely, live closer to civilization but in limited circumstances. Particularly notable are the stylite monks, religious devotees who took to living on the tops of old columns, exposed to the elements for years at a time and depending on the charity of passers-by. While this may sound like the Medieval equivalent of flagpole-sitting, stylites were revered as extremely holy men, and people would often go to them for blessings or advice. Likewise, characters might have to approach a stylite for aid or information.

Orthodox services may appear casual to the uninformed observer. Rather than sitting quietly or following a detailed choreography through services, members of the congregation will dribble into the church to pray, light candles, and perform other private observances (and perhaps carry on hushed conversations) while the priest performs subsidiary rites. Only part of the service involves the congregation paying quiet attention to the priest. The congregation stands through services; Orthodox churches don't, as a rule, have benches or pews, although they may have a little seating for the elderly and infirm. Orthodox services are performed in the language of the congregation: Greek in the Byzantine empire, Russian in Russia (the Cyrillic alphabet, used for Russian and other Eastern European languages, was invented by the Byzantine Orthodox missionary St. Cyril, thereby greatly assisting the growth of Christianity in northeastern Europe), and so on.

The typical Byzantine church had at its core an aisle, a broad chamber running the length of the building, ending in a semi-circular apse. Churches had aisles in odd numbers: one for a small church, three or five for a large one, with the center aisle often being larger and more important. Multiple aisles would be separated by pillars or even walls and could be used as completely separate rooms, either for ceremonies or as "office space." Byzantine churches were as lavishly decorated as their western counterparts, although in a somewhat different style. Mosaic survived as a major

art form longer in the Byzantine empire than it did most other places. Visitors might be dazzled by walls apparently decorated with murals made from gems and gold, although they're actually composed of tiny glass blocks and flakes of gold leaf laminated between paper-thin layers of glass. An Orthodox church will also have an iconostasis (a rack for displaying icons), itself lavishly decorated, near the altar.

Relics

Like their western cousins, the Orthodox were quite fond of relics, the physical remains and possessions of saints, often thought to have extraordinary powers, usually for healing, protection, and converting sinners and heathens. They were also used to seal oaths. As in the west, relics were kept in elaborate containers called reliquaries, ranging in size from small pendants to large cabinets. Reliquaries were usually made of precious metals and decorated with gems. They could be quite valuable themselves (and subject to theft by non-Christian or simply not-very-devout thieves), although not nearly so valuable as their contents.

The Orthodox also had a claim on having the biggest relic of all: the True Cross. Tradition has it that Helena, mother of Constantine I and a future saint, found it in Jerusalem after coercing an uncooperative native who knew where it was buried. The bulk of it stayed in Jerusalem, although fragments of it were distributed through the Christian world. The Cross changed hands several times, falling to the Persians when they briefly took Jerusalem in the early seventh century, then back to the Byzantines, who recovered it when they sacked the Persian capital about ten years later. Accounts start to diverge here. At least part of the Cross returned to Jerusalem, while a substantial chunk may have gone to Constantinople. The Jerusalem fragment went out of sight occasionally, but it remained in Christian hands until the Third Crusade, when it was removed by Saladin. The Constantinople fragment reportedly remained in the capital at least until the fourteenth century.

If PCs are looking for a big quest, the search for the True Cross certainly fits the bill, and there many periods when someone would have to go looking for it. For example, 7th century knights of the Merovingian king Clotaire II might head to Persia to recover it before advancing Byzantine armies can get their hands on it, or 13th century pilgrims might search for the missing Cross as a weapon against the Mongols threatening Europe at the time. A quest for the True Cross might even be part of a search for the "triple crown" of Christian relics: the Cross, the Grail, and the spear of Longinus. It might be useful to note that, contrary to the belief that fragments purported to be from the True Cross would make their own forest, a study of purported fragments of the True Cross made in 1870 suggested that all known fragments would make up perhaps a third of a cross three to four meters tall. Still, several lifetimes could be spent reassembling all the fragments if that became necessary.

Orthodoxy and Everyday Life

Christian motifs and interpretations are rife in Byzantine culture and everyday life. Icons are everywhere, and biographies of saints are popular reading. More subtly, literate Byzantines were mostly taught from the same texts: the Bible and a number of common prayers. This common literary background had a profound influence on religious and even secular Byzantine literature. Offhand references to saints, phrases from prayers, and allusions to the Bible are common, and non-Orthodox readers may find some works a bit puzzling or at least miss the nuances even if they do know Greek. More broadly, good and bad luck are generally thought of as signs of God's favor or displeasure, and instructions and even mnemonic devices may be framed in Biblical terms. For example, if a carpenter usually uses two nails to secure a joint, he may explain it as one for Christ's human side, once for his divine nature. If he usually uses three nails, it'll be one for each member of the Trinity.

Heresy and Other Religions

Orthodoxy never had anything like the worst excesses of the late Medieval west, such as the Spanish Inquisition and chronic persecution of Jews, but neither could it be regarded as a particularly tolerant religion when it came to internal dissention. The name, after all, means "correct worship," so adhering to correct doctrine was extremely important. Moreover, because the emperor played a role as the protector of the church, doctrinal disputes often meant political disputes. Part of being the church's protector was persecuting heretics (meaning, in this context, Christians who weren't

strictly Orthodox), done with the enthusiastic support of Orthodox clergy. This ultimately led to problems in the provinces. Many non-Orthodox provincials came to think of the imperial government as the enemy and, when the Muslims invaded Syria and Egypt, the predominantly Monophysite and Nestorian provincials put up little resistance, regarding the Muslims as likely to be more congenial rulers than the Orthodox emperor. One of the ironies of Medieval life is that it was often safer to be a member of a religious minority (a Christian in a Muslim country, a Muslim in a Christian country, or a Jew anywhere until the Crusades) than to be a dissenting member of the predominant religion. Official persecutions were always a possibility, but usually a member of a minority religion would just be taxed more heavily, while a heretic could be beaten, imprisoned, exiled, and killed.

Official punishments aside, popular reactions could become extremely violent. Particularly vocal heretics were sometimes lynched by mobs or subjected to bizarre punishments. For example, two famed iconophile martyrs had iconoclastic verses written on their foreheads with red-hot irons. Heretical Christian characters can generally avoid these problems if they keep their mouths shut, although because the Byzantines are a people who love to talk about religion, that might be difficult. Characters known to be Jewish or Muslim (or, in later periods, foreign Roman Catholics) will probably be subject to conversion attempts ranging from friendly-but-pitying to hostile attacks on their current religion, and are likely to be somewhat shunned socially. Openly pagan characters will meet the same if they're lucky, but given the very negative feelings that Medieval Christians had about pagans, they might have to put up with far, far worse.

So what doctrinal differences led to widespread heresy? Iconoclasm, a dispute over the place of images in Christianity, has already been mentioned, but one of the big recurring issues in the history of Orthodoxy (and, indeed, in the history of Christianity as a whole) has to do with the relationship between the human and the divine in Christ. Questions arose around whether Christ had a divine nature, a human nature, or both. And, if he had both, what was the relationship between them, and how can that be reconciled with the doctrine of only one God? In either case, what was the quality of his human or divine nature? Was he typically human or a perfect human (like, say, Adam before the fall)? Was there something inferior about his divine nature? By "nature," do we mean his physical substance, his will, or something else? Was Christ made of the same substance as the Father, or just a similar substance? People died over the difference between the Greek terms for this distinction, *homoousion* vs. *homoiousion*, so don't ever let anybody tell you "an iota's difference" is small. And what was Mary's part in all of this? Was she the mother of Christ, or could she be considered the mother of God as well?

If this all seems rather convoluted and obscure, you can take comfort in knowing that the Byzantines themselves never completely settled the question. The Orthodox position was that Christ had both human and divine natures which were made of the same substance and equally united, but new dissenting opinions arose constantly and had to be dealt with over and over again. For example, the Monophysites, a major heresy in the early years of the empire, emphasized the divine in Christ, while the Nestorians, who constituted the bulk of far eastern Christians (Nestorians missionaries were making converts in China centuries before the Catholics made it that far), emphasized the human. The GM may create his own plausible heresies at will by introducing any variation on those themes, as well as variations involving the Holy Spirit as well as the Father and the Son.

In addition to heretics within the empire, the Orthodox had chronic problems with the Roman Catholics. The relationship between eastern and western believers was in constant decline through the Middle Ages. Again, the reasons were partly doctrinal, but were just as much political. The papacy pursued ambitions of complete autocratic supremacy over all of Christendom, while the Orthodox refused to acknowledge the Pope as anything more than a first among equals (and sometimes not even that) and objected to the papal habit of trying to set doctrine unilaterally rather than through consensus by ecumenical councils. This led to increasingly bitter exchanges between eastern and western bishops and disputes over administrative territories. Ultimately, there was a complete schism, with Catholics and Orthodox ignoring one another's authority, refusing one another communion, and so on. The traditional date for the schism between east and west is a spectacularly disastrous conference in 1054, but that really serves as a convenient historical date rather than a firm dividing line. Attempts at unity had been diminishing for centuries before and continued sporadically for centuries thereafter. In the last few Byzantine centuries, politically-minded patriarchs would sometimes make doctrinal concessions to the papacy in order to obtain western alliances against the advancing Turks, but they inevitably failed as the Orthodox rank-and-file rejected them.

Alternate Byzantiums

History, complex and interesting as it is, isn't always dramatically satisfying, so there's often an urge to tinker with it. Here are some ways of using the Byzantine empire in somewhat different ways.

Magical Byzantium

For most of history, pretty much everybody has believed in magic, and the Byzantines were no exception. The map of Europe and the Near East in this alternative may look the same as it does in our history, but things are . . . different. It is the last decade of the tenth century, and Leo the Wise is on the imperial throne. In addition to being pious and well educated in the classics, Leo has something bordering on prophetic abilities (volumes of prophecies incorrectly attributed to Leo did, in fact, circulate through the empire in later centuries), which he uses to guide his policies. The Byzantine empire is amply endowed with mystic resources. The churches contain relics and icons capable of healing the truly faithful (although one does have to be *truly* faithful to use them properly), and the libraries contain magical books by powerful ancient mystics such as Aristotle and Vergil (yes, the poet; he was believed by some Medievals to be a wizard). Across the frontier, the Muslims are exploring the powers of alchemy and the manipulation of djinni. In both the empire and the caliphate, magic is used sparingly and cautiously for religious reasons, usually limited to protective charms and amulets, but greater magics are certainly a possibility. The semi-civilized lands of the Slavs and Franks are still populated with solitary wizards and witches worshiping pagan spirits. Indeed, their rulers sometimes employ court magicians who hide behind a false veil of Christianity. Farther away from the centers of civilization are lands where monsters and spirits still walk openly. The faerie are abroad in the British isles and Scandinavia, and waves of northern invaders from the ancient Goths through the Huns and Slavs to the Turks now appearing in the far east bring tales of being driven from their old lands by dragons and worse.

Byzantine Catholicism

Both the Orthodox and Roman Catholic church claim "catholicism," a universal mission and authority, even if a history of schisms might give outsiders reason to question those claims. But if Rome was knocked out of the running early on and the empire was forced to pay more attention to its western borders, there might still be a relatively unified Christian church (or, at least, it could have remained united longer). In this alternate history, Germanic invaders were more resistant to conversion to Christianity, particularly the Roman flavor, than in our history. With pagan hordes bearing down on Rome, the popes couldn't afford to alienate their only natural ally, the Byzantine empire. A few activist popes aside, the bishops of Rome are content with a nominal place of honor as first among the patriarchs and otherwise act as a rubber stamp for Orthodox doctrine. Nevertheless, Christianity continues its slow progress into the north (particularly aided by Orthodox missionaries as part of a concerted Byzantine effort to secure its northern borders) and the feudal system arises, but western Europe assumes a more secular character. The Carolingians were contentious kings, not rulers of a "holy Roman empire." More money and power falls into the hands of feudal lords. Islam rises on schedule, and something like the Crusades happens, but on a smaller scale. Without a powerful Roman church using it, Latin has long since ceased to exist as an international language. As civic life recovers, western cities take to governing themselves semi-democratically, using the only model they can find, that of ancient Greek cities.

The year is 1200 AD. The Byzantine empire holds Italy south of Florence, the southern end of the Balkan peninsula and most of Anatolia, although the eastern border is fluid and companies of western mercenaries brought in to fight the infiltrating Turks are notoriously unreliable. Burgundy (southeastern France with chunks of Switzerland and northern Italy) and France (most of central and northeast modern France; Britany and Normandy are independent dutchies) are the greatest powers of the west, with vigorous if capricious city-states occupying northern Italy and France's Mediterranean coast and Germany and England a patchwork of squabbling princedoms. Sadly, warfare is endemic but largely confined to border conflicts rather than large conquests. The Iberian peninsula is a crumbling Muslim emirate; Christian territories in the northeast are threatening to break away. Constantinople has been the first city of Christendom for centuries, but the slow rise of western Europe is challenging its policies. The theological concerns of the day center on widespread survival of what Orthodox hard-liners call pagan ritual in northern and western Europe, far from the learned councils of the empire. The supporters of such rituals claim that they are, in fact, practices of a Christian character, much as the adoration of icons is not the idol-worship of the pagans. The schismatic

archbishop of Dublin, long a dissenter from the mainstream of Christian thought, is considering distancing himself from both Orthodox and "nativists," declaring himself a patriarch, and excommunicating the bishops of Rome and Constantinople. Can Christendom weather another storm of dissention? And can it pull itself together in time to face the Mongol invasions coming in a few decades?

Battle-teknos

Byzantine mecha? Why not. The Byzantine empire had simple steam engines (albeit mere toys compared to the first practical steam engines developed in during the Age of Enlightenment) since antiquity, as well as gearing and hydraulics sufficient to produce amusing mechanical animals. From the seventh century, they also had Greek fire, about which we know sufficiently little to let us speculate wildly. In this history's early ninth century, an anonymous military engineer in Constantinople combined these elements into a powerful Greek fire-fueled piston steam engine, kicking off the Age of Steam a thousand years ahead of schedule and without coal. The first application of the engine was a paddlewheeled barge, a simple but clever adaptation of tethered grain-milling rafts. It was unimpressive, but within a few generations, the empire was fielding a small but powerful fleet of ironclad warships and a number of walking fighting platforms, shaped like griffins, lions, and elephants.

The year is 1000 AD, and variants on Greek fire and the engines they fuel are wreaking tremendous changes. Originally dangerous and temperamental, the engines are now relatively reliable and increasingly powerful. Not only are they useful for transportation, they are being employed within the empire to pump water, saw wood, weave cloth, drill holes, and drive blast furnaces (leading, in turn, to cast iron and steel in industrial quantities, making bigger and better machines possible). Byzantine dominance of the Mediterranean as far west as Marsailles is near-total, although the short range of Byzantine steamships keeps them close to port. Byzantine progress into the Balkans has been slow, with the mountainous terrain proving nearly impassable to the walking Byzantine war machines. But Slavic kings, intimidated by Byzantine power, have given up challenging the impregnable Byzantine defenses and settled down to become valuable allies. Progress in the east has been faster. Building-sized metal war machines, armed with swinging scythes and rattling chains, have driven Muslim raiders away. After fifty years of construction, the empire now has a complete trans-Anatolian railway, allowing dispatches, troops, and supplies to be sent from Constantinople to reconquered Antioch in mere days. Spurs from the main line are being planned to speed communications throughout the interior. The army has advanced even farther. Byzantine war machines now stride through most of Syria and Mesopotamia, and the Black Sea is a Byzantine lake. Jerusalem is in Byzantine hands, Damascus and Baghdad are within reach, and can Egypt be far behind? Military might aside, steam-powered Byzantine industries are leaving foreign hand-powered industry in the dust, making the empire an economic powerhouse and raising the Byzantine standard of living to unprecedented levels. There are some challenges on the horizon, however. Nothing can be a secret forever. The Muslims have developed Greek fire, or something analogous to it using the black puddles of petroleum sometimes found bubbling to the surface through the Near East, and are starting to field their own battlefield machines (any players making jokes about "mecha from Mecca" may be beaten soundly). And after two centuries of increasing use, the empire also shows signs of straining its fuel supplies and must find substitutes or new formulations. Despite the new invention, the technology of this setting is still largely Medieval and gunpowder is still centuries away. Fighting machines may have a fire siphon or two, but no guns, and most of their fighting is, for lack of a better term, hand to hand.

A Dozen Good Souls

Populating Your Action Hero World

by Brian Rogers

It's fact that every game needs Non-Player Characters. There must be people for the players to interact with. In fantasy or any other genre where the heroes move around a lot, the GM must create a lot of NPCs but they can be pretty shallow; if the PCs are only going to be in town long enough to kill the local monsters and loot their hoard, then we don't need to know too much about the innkeeper. A few character quirks and his chance to hit with his crossbow should be fine. After all, the heroes will leave in a session or two and it will be years, if ever, before this innkeeper turns up again.

This isn't true in other genres: superheroes, action heroes, and anyone else operating in the contemporary time period have a tendency to spend a lot of time in one locale. Most modern heroes seldom leave their own city, preferring to adventure in their backyard whenever possible. When they *do* travel, they call up their usual NPCs for help and support ("Hi, Bill. I'm in Istanbul. Yeah, don't ask. I need you to search the FBI files on this terrorist group . . . ") This gives you as GM a different challenge: balancing a circle of NPCs around the players to make the world seem populated without doing too much work.

The On-Call Rule

In heroic serial fiction, the author has to be aware of two things: first, the audience either has a limited memory or won't be exposed to each episode. Second, the audience likes to feel comfortable. The solution is to cut down the supporting cast, then use them repeatedly. Now once the audience has been introduced to the character, they'll know who that guy is in every following episode. If a viewer misses a couple months, upon his return the familiar heroes are visiting their familiar supporting cast. Some things may have changed, but the viewer isn't lost. It works for the writers too, since they can rely on those characters for cameos and not waste time introducing another old flame or street contact. End result: stability and continuity for the writers, the actors, and the audience.

Action hero gaming can work the same way. If you introduce an NPC and the players enjoy the interaction with the NPC (be it that they like him or hate him), keep him on call. Next time they need a similar NPC, there he is, ready and waiting for his screen time. The players are happy, because they know the guy already. You should be happy because you don't have to make up another NPC.

As a general rule, you shouldn't have more than a dozen NPCs on call. Anything more than that and the players can start to lose track of who's who . . . especially if your game meets less often than once a week. With a dozen NPCs you can provide the heroes with enough of a supporting cast for the world to feel real without swamping yourself. If it looks like you're going to have more than a dozen NPCs, start giving some of them double duty; not only is old Van Gargan the guy who runs the heroes' favorite bar, he also has a bunch of shady contacts. Boom! Now he's both their bartender and one of their contacts. The heroes go to Gargan's place, bend his ear with their relationship problems, make their plans for taking on the mob in his back booth, and belly up to the bar to find out what's happening on the street.

Building Your Sets

Heroes generally hang out in a limited number of places: their house, the local bar, the police precinct, the offices of a great metropolitan newspaper. In TV shows there's a legitimate reason for limiting travel: those sets cost money. Comic books don't have that restriction (since the artist could draw anywhere for no extra cost), but they often do the same thing. Why? Because places, once you lavish enough attention on them, gain personalities of their own,

becoming as much a part of the continuity as the NPCs. An action GM should develop a few set pieces to a high enough level of detail that the Players know what it looks like and what they can expect.

What sets should you use? Well the first couple will be self-evident, based on what the characters do for a living. After that, keep an eye out for places that the PCs visit and enjoyed: if they defend a local bar from extortionists in one episode, open the next episode with the heroes at that bar, enjoying a round on the owner. Make it the place to go during their downtime. It's convenient, since you already have maps if you need to stage a fight there, and it makes another part of the world a little more real. Make a quick list of the wait staff, make changes to the place over time, make the characters care about the bar. When the villains blow it up, it will get the heroes much more angry.

As with On-Call characters, you should have a functional limit on re-used sets. Generally this works out to six or so. This is as many places as the players are going to ever care deeply about, and if you get bored with one, have something catastrophic happen to it and introduce a new one in its place. For each place, keep a sketch map and description, along with a list of names and quirks for walk-on parts. Obviously, many of these sets will be attached to on-call characters. This sets up a virtuous circle, where the NPCs feel more real from their environment and the setting feels more real because of the characters.

The Supporting Cast: Ensemble Fun

There are some characters who will be important to the heroes just because they're always around: the secretary, the file clerk, the co-worker, the boss. These are people who don't get involved in the plot every week, but are there day in and day out. They're the people whose name credits appear right after the heroes and before this week's special guest villain. This makes them simultaneously important and, well, boring. In action packed games, the best they can do is to give the heroes a moment of humanity, showing their friendly sides before they're forced to go off and fight more drug-dealing terrorists. These ensembles occupy the same place, dealing with each other as much (or more) than they deal with the heroes.

Since they have such minor parts, the GM can usually get away with a few sketchy descriptions of the perky secretary, the demanding boss, the grumbling file clerk, the happily married co-worker. The hero flirts with the secretary, trades jibes with the file clerk, envies his co-worker, and gets this week's assignment from the demanding boss. Then it's back to the action. This is a wonderful low impact way for the GM to start the game, letting the ensemble characters grow over time.

Generally, an ensemble cast shouldn't be more than four or five characters. The GM can keep track of them by developing a rough "relationship" chart: one circle for each character with a brief description, then lines connecting them with the other members of the ensemble, showing how they react to one another. Watching a few episodes of any well-done ensemble sit com will show you how these work. Once you have the ensemble feel, you can handle the interactions between the NPCs as well as those between the NPCs and players characters. Once again, the goal is to make these characters feel real, that they exist even when the player characters aren't looking at them.

Contacts: Limit Two Per Team

Heroes like to be in the know, having contacts and informants to whom they can turn to get the drop on their opponents. This works fine for the GM, because it makes it easier to keep the plot moving. But how many contacts do they need to have? No more than two for the whole group. With two contacts, the heroes have a way of confirming information. With two contacts, you can give different heroes different sources. While this may split the party up, it does give each hero a few minutes in the spotlight. If you don't give either contact all of the information, the players will feel like they produced something useful, not that they wasted time getting the same flavor text through a different mouthpiece.

For example, the PCs are looking for someone who has evidence against a mob leader; not surprisingly, the mob leader is looking for him too, and has put out a price on the guy's head. Contact A tells the heroes that a street gang looking for cash is on its way to the downtown market. Contact B tells them that the mob leader has hired a pricey out-

of-town assassin and sent him to the downtown market. No matter which contact the players talk to, they know to go to the downtown market to find their informant. If they check with both, not only can they confirm the main information, but have a much better idea as to what they're up against: assassins, street gangs and shop clerks, oh my!

You may think that if two contacts is good, then four contacts would be even better. I wouldn't bet on it. Most people only have a limited amount of game time, and the goal is to keep things moving . . . especially in the action-hero genre. Each time the PCs visit a contact, it's that much more time that a) there isn't something explosively interesting going on and b) the other players might be bored waiting for you to remember them. Plus, each contact you have in the game is one more NPC that you have to develop and maintain. Now, if your group really grooves on investigation and you have unlimited amounts of time, by all means add more . . . just keep an eye out for bored players if the information gathering goes on too long.

Backstories: Everyone Has a Hook

A final piece of advice for putting together a supporting cast: everyone has an adventure hook. Everyone. It might not come up right away, it might never come up at all, but every one of your on call characters has an adventure hook. These adventure hooks are the characters secrets, and reveal their dynamic energy, point them in a direction and highlight their personality. Roger Zelazny would write a short story about the major characters in his novels . . . things that most often would never be published, but would give him some insight into the characters' goals and motivations. This is essentially the same technique.

In many cases, this is a backstory hook. The NPC has something in his past that will come up to bite the PCs sooner or later. This needn't be as dramatic as the character being on the run from the mob, though that sort of violent background is possible. Maybe the character has a child now in the custody of an ex-spouse or foster home, has gambling debts he's trying to pay off, or was a violent youth who now lives a quiet life. These are people's hidden secrets, and once you know them you know what makes the NPC tick. The guy on the run from the mob probably eschews publicity and doesn't make friends easily; the distant parent could have little faith in relationships, or get a lost look in his eye whenever children turn up; the gambler is constantly broke and looking for the big score; the former gang-banger could avoid violence entirely, going of his way to try and reform others. Knowing these secrets gives you insight into their psyches, making your portrayals more real. Characters feel more real when you know that there are things you don't know; defining by an absence is an important but underused tool in characterization.

Other characters have fore-story: their adventure hook is something that hasn't happened yet. For example, the heroes know a lab-bound scientist, a bookworm chemistry genius. His adventure hook isn't something he's done, it's something he will do sooner or later (i.e., when you need a new plot); for example, the chemist will develop something astounding, such as a regeneration serum. You can define this character's personality by what he will do, explaining why he spends forever in the lab, what his goals are, and what he intends to do with his miracle. Again, the heroes may never learn what the character is working on, or it may never come to fruition. If you don't end up using the hook it's a piece of characterization. If you do, it's brilliant foreshadowing and your players will think you're a genius.

One big advantage to this technique is that you'll never be lost for a plot some Saturday afternoon. Even if the heroes have taken out the master villain with three hours left to play, you still have a hook for each and every one of your dozen on call NPCs. The PCs get back to the office and find the grumbling file clerk in hysterics. One cup of coffee later, he reveals that his lawyer ex-wife called: someone kidnapped their son, and will kill Timmy if she doesn't throw her current case. Bang! The PCs are off to teach some mobsters not to threaten kids, and you have something for them to do with the remainder of the session.

Action heroes live in a tough world, but this doesn't make populating it a tough task. Develop a few detailed characters for them to talk to, and a few detailed sets for them to talk in, and the world will seem real . . . even if it is the imaginary equivalent of cardboard sets and walk on actors.

Superheroes Anonymous

Optional Super Advantages and Super Disadvantages for *GURPS*

by Dmitri Scull

What follows is an assortment of "fill in the gaps" advantages and disadvantages, appropriate for use as racial or super traits. Some of them, such as Universal Translator, are even moderately common powers. Body of Electricity is derived from the Body of Lightning spell in *GURPS Grimoire*; it's also good for lightning-wielding superheroes.

Emotion Field is designed to represent supernatural auras that key emotions, such as a lust aura emitted by a succubus or an aura of terror surrounding a more traditional demon. It works just as well for superheroes (and supervillains).

Irritant is a good minor disadvantage for nocturnal and supernatural races, it can even be used to represent an allergic reaction, in which case it is a good mundane disadvantage. Light Bones is good for avian races (or those descended from avian races) that have some combat ability, as such races would have heavier frames than avian races built only for flight.

Advantages

Body of Electricity

80 points

The character is composed entirely of electricity, rather than flesh and blood. You are immune to the effects of electricity and beam weapons, and physical attacks pass through you, but you cannot pick anything up. Your touch does electrical damage equal to your punching damage, as does direct contact with you through a metal object (such as a sword), but you can only deliver damage once per turn; others merely receive a nasty shock. You retain your senses and may cast spells at a -2 penalty. You can also travel through an electrical conductor; at ten times your normal Move, and while in an object you are immune to harm, but a ST -5 roll is required to leave it. Unlike the Body of Lightning spell in *Grimoire*, you still need to breathe, and you cannot do so while inside a conductor.

Special Enhancements: Objects may be carried. They change into electrical form when picked up, and turn back when set down. +10% for No Encumbrance, +20% for Light, +50% for Medium, and +100% for Heavy.

Special Limitation: You cannot switch out of Body of Electricity form; you are stuck in it. You cannot touch anything without damaging it and are insubstantial (however, you have no penalty to cast magic if you cannot leave this form). This is treated as a Disadvantage worth -10 points. If you can carry objects, use the percentage to reduce the value of the disadvantage, as with Body of Air.

Emotion Field **10 points for first level, 5 points for each additional level**

The character radiates a field that triggers a specific emotion in all who come within the area of the field. The field fills the caster's hex(es) at first level, and radiates out 1 hex per additional level. The emotion must be specified at character creation (such as fear). All within the area must make a HT roll or be overcome by the emotion. If there are circumstances that would enhance the emotion (such as a being of incredible beauty in the presence of a lust aura or a ferocious beast in the presence of a fear aura) the HT roll can be modified by as much as -5 (there is no corresponding bonus, however). If the victim critically fails the HT roll, the victim is subject to severe penalties (for fear, treat as a failed Fright Check, for other emotions, use similarly strong penalties, but appropriate for the emotion).

Special Enhancement: The character can inspire more than a single emotion; +25% for each additional emotion possible; or +200% if the character can inspire any emotion.

Special Limitation: The character cannot turn the field off. -50% for emotions that cause others to react negatively (like fear) to -10% for emotions that merely cause problems (such as love). There is no reduction if the emotion would not be a hindrance (like trust).

Universal Translator

Variable cost

The character can communicate with any intelligent being (for unintelligent creatures, buy Speak with Animals, Speak with Fish, or Speak with Plants). The level of communication sets the base cost of this advantage; if the character can only "send" empathic cues, this is worth 10 points. If this is telepathic communication (which does not count as contact for psionic abilities, and is not necessarily psionic or magical in nature) it is worth 15 points. If the target can understand the character's spoken words, but is aware that there is translation occurring, it is worth 20 points, and if the target hears his own language (and is unaware of any translation, unless it is pointed out to him) it is worth 25 points. If either of the latter two forms include telepathic communication, add 10 points to them. Only one person at a time may be "translated" to.

Special Enhancement: Everyone within earshot can understand you, but you cannot "single out" a target, +10%. If you can choose to speak to one person or to everyone, it is worth +20%.

Special Limitations: If only certain beings can understand you, that is a limitation. For a rough, general class (elementals, humanoid beings, etc.) it is worth -10%. If limited to a rough "family" of beings (such as mammalian humanoids or avians) it is worth -30%. If limited to a single race or group of related races (including subraces, such as elves or orcs), it is worth -50%.

Disadvantages

Body of Electricity

-10 points

If you cannot switch out of Body of Electricity form, it is a Disadvantage. See the Body of Electricity Advantage above for details.

Irritant

Variable cost

You have a weakness to a substance that, while it does not inhibit your actions or cause you harm, it does distract you; you are at -1 to all rolls while in contact with the Irritant substance. Cost is based on rarity of the substance or situation; very common situations (like sunlight) are worth -5 points. Common items, such as high humidity or temperature are worth -4 points. Uncommon items or situations (such as dusty areas, very high humidity, rain) are worth -3 points. Rare situations or items, such as a specific metal (like silver) are worth -2 points. A very rare substance, such as gems or weak acid is basically a quirk, worth -1 point. Note that the individual can take pains (and likely does) to avoid the substance; a heavy cloak to shield from the sun, etc.

Light Bones

-5/-10 points

The character's bone structure is especially light; this is essentially a lesser form of the Fragile Disadvantage. For -5 points, you take 125% damage from crushing weapons; for -10 points, you take 150% damage.

Dark Tower (for d20)

Published by [Judges Guild](#) through RPG Realms

Written by Paul Jaquays with Bruce Runnels

Illustrated by Jason Millet, Steve Bryant & Chad Fidler

\$16.95

The advent of the *d20 System* and its associate Open Gaming License has launched a plethora of new publishers of adventures and supplements for *Dungeons & Dragons Third Edition*. Indeed it seems as if there are too many to count -- and the list keeps growing. Once it was not so, and there were only a few names that published for *AD&D 1st Edition* or the original *D&D* other than TSR, with even less producing material for the *2nd Edition*. Yet of those few, one stood head and shoulders above the rest -- for whatever reason -- and that was Judges Guild.

Long-time gamers may shake their heads ruefully and smile nostalgically when they consider the output of Judges Guild. Whatever game they were writing for, which for a time included supporting *D&D* without TSR's permission, their material could be best described as rough 'n' ready, or even cheap 'n' cheerful. At worst, it was dreadful dross, arguably not worth the paper it was printed on (which is not saying much, as Judges Guild always used the roughest of paper stock). Of course, some of their books captured the imagination, and many have achieved the status of desirable collectibles. Notable among these is *City-State of the Invincible Overlord*, but this was not Judges Guild's most popular and best-selling title. That honor fell to *Dark Tower*.

Originally released in 1979, *Dark Tower* has returned from the grave on the coattails of *Dungeons & Dragons Third Edition*, still from Judges Guild, but published through RPG Realms. The reason for its release is to actually update this adventure to the *Third Edition* rules and perhaps to even allow the long time gamer to replace their original and now worn copies with something more durable. Plus it also provides access to a slice of gaming history for the gamer relatively new to *D&D*.

[SPOILER ALERT!]

Paul Jaquays' dungeon begins along Redmoon Pass in the village of Mitra's Fist, home to a minor shrine dedicated to the Lawful Good deity, Mitra. In recent times, this shrine has gained a cursed reputation, which is not undeserved. Five centuries ago, the White Tower raised to Mitra was engaged in battle by the Dark Tower of his enemy, Set. After it ended, both towers had vanished and the original village was razed to the ground. Travelers have disappeared in Mitra's Fist and there is danger and mystery to be had in both the village and below it. Both towers are continuing their centuries-old feud, only now below ground. The adventure itself takes place inside both of these towers and the dungeon that has been dug between them. The feud between the clergies in each of the towers is left unexplored and if the referee wants to expand on this core thread they must do it themselves.

This adventure is designed for a party of six to ten characters of between seventh and eleventh levels. Their objective is to explore both dungeon and towers, before destroying the Dark Tower of Set. Alternatively, it would be possible to play this with a party of evil characters working to destroy both towers, or even as Set worshippers working to restore their god's tower. None of these ideas are considered in *Dark Tower*.

Physically this edition is a vast improvement over the original. The art is the virtual opposite of that of the 1979

version, and is taken straight out of a fantasy comic book. It is of a decent-enough standard, with Steve Bryant's work being the best of the three artists who illustrate *Dark Tower*. Unfortunately this style of art does not really mesh with the feel of the original writing. This was sparse, but combined with the green and black art of the original (also by Paul Jaquays) to give that book a brooding evil presence. Instead, the art in this new reprint is more chirpy than it is evil.

The book itself is a straight reprint of the original release with little or no change, including the original maps. Also included is a new appendix detailing every NPC in the adventure with their statistics updated to the *Third Edition* rules. The problem is that with two decades of hindsight under one's belt, the room descriptions read as rather sparse, and perhaps for today's audience they are *too* sparse. If the text could have done with a slight polish, then the maps certainly require reworking. Although generally easy to read, often stairs run into walls when it should have been made clear that they run to other levels. Further, the entrances to the dungeon and several of those between the levels could have been better marked.

A good job has been made of updating the characters to *Third Edition*. The problem is that there are a great many of them, all in an appendix at the rear of the book. Whilst some may see this as a good thing, perhaps it might have been better to place the statistics of those creatures who do not wander from their set location within that area's description, rather than at the back, thus making the wandering NPCs easy to locate and run from the appendix.

Like many dungeons of the period, *Dark Tower* is not an easy adventure to integrate into an ongoing campaign. The village of Mitra's Fist is off the beaten track, and not every world has an area analogous to the Middle Eastern or Egyptian setting that *Dark Tower* calls for. (One that springs readily to mind is the world of *Arcanis: The Shattered Empire* published by Paradigm Concepts.)

Another problem arises over Set's alignment. In *Dark Tower* it is given as Chaotic Evil, but new gamers may be confused if they have read Green Ronin Publishing's *Legions of Hell, Vol. 1* (backed up by the *Deities & Demigods* sourcebook), which intimates that the Egyptian god Set makes his home on the Fifth Circle of Hell. This would make him Lawful Evil, would it not? The explanation for this problem is not that Set or Mitra (or rather Mithras) are derived from our own history, but are instead taken from the world of Hyboria, the setting for Robert Howard's *Conan* stories. There Set is an evil snake good, rather than the jackal-headed god of the Egyptians, and Mitra the good god of the Northern peoples of Hyboria. DMs may need to be creative to order to resolve this difference.

(My thanks to Colin Speirs for setting my ignorance straight on this point. Conan must be read in penance.)

[END SPOILER ALERT]

This new version of *Dark Tower* makes no attempt to play up its modest place in gaming history. There is no mention that it is a reprint on the cover (nor what level or size of party is required to play it) and these details are only mentioned in the very short foreward. Where are the notes discussing the adventure's history or the original author's comments upon this new edition? Neither they nor anything similar are present, which is a shame, as they would have gone some way to explaining both the style and content of the original adventure to the modern gamer. Without them, *Dark Tower* feels like that special repackaged anniversary edition DVD you just bought, only to discover that having popped it into your player, it is totally lacking in both notes and special features.

Dark Tower still remains a classic *First Edition* dungeon, but with the statistics updated, of course. Yet the initial look and feel of the book promises something it is not -- a modern *d20 System* adventure. While the editor's intent to leave the original text as unaltered as possible is a laudable one, why not leave the original completely untouched, including the artwork and keeping the *Third Edition* information securely in an appendix? Or instead overhaul and update the original completely? The first option would please long time gamers, whilst the second would make the adventure far more accessible to new would-be fans. Instead, what we have is a halfway house that may displease long time fans and probably make this an inaccessible adventure to newer gamers.

Overall, this reprint is not going to help *Dark Tower's* reputation. It is a pity that the authors could not have been more inventive in the manner of WotC's recent release, *Return to the Temple of Elemental Evil*. While this remains a good dungeon at its heart, both Judges Guild and RPG Realms have missed some interesting opportunities with their first "new" book.

Gother Than Thou Card Game

Published by [Savant Garde Entertainment](#)

Designed by R. Hunter Gough

55 card standard set; \$9.95 U.S.

Much to their chagrin, it's not that hard to poke fun at the average goth.

There's just something about the tragic melodrama that they paint their world with that's so easy to make light of. Luckily, most goths have a sense of humor, and *Gother Than Thou* is the direct result of such humor. It's a simple and easy card game that pits players against each other to show who's the gothest of them all. It is dubbed "The most pretentious card game ever made," and in that regard it delivers with a chuckle.

The game runs for only ten bucks and comes with fifty-five cards, enough for three to five players. Game play is exceedingly simple (as the tiny rulebook will attest). Everyone in the game has three scores: Goth points, Sickness points, and Money points. Each card will increase or decrease one or more of these scores. Play goes in a circle, as players place one card from their hand into each person's fate pile, then discard one from their own. The objective is to get twenty goth points in your fate pile before anyone else does. Sickness points limit your maximum hand size, while Money points determine whether or not you're allowed the privilege of drawing from the discard pile (which can be pretty handy).

The strategy of the game is simple but fun. You want to play cards that keep your opponent's goth score low, while keeping yours high. The fact that everyone must discard one card from their fate pile each turn keeps it fluid, as well as do the effects of the various cards. Most games are pretty quick, as twenty points comes a lot faster than you'd think, so *Gother Than Thou* makes for a great pick-up game.

The real meat of this one, though, is in its parody of the prototypical goth scene. If you've ever hung out in a dark club, listening to Bauhaus and trying not to gag on the odor of clove cigarettes, then you know just what I mean. The goth scene is known for its pretentiousness, which can get downright silly when it runs too far. This game plays off of that, as everyone tries to pretentiously show just how goth they really are. Cards such as BlueBlack #124, Pet Named Hecate, and Disturbing German Accent are very goth and will put you on top quick. Cards such as Dire Fashion Blunder, Visit From Mom, and Disturbing Southern Accent are very *un*-goth and are definite no-nos. My favorite cards would have to be Genital Piercings (quite goth), Crying Yourself to Sleep* (also quite goth), and Sing This Corrosion to Me (which separates the true goths from the posers by making them recite lines from the quintessential Sisters of Mercy song). The game's designer definitely knows the scene being poked fun at, and if you do to, then the cards are a good laugh.

*(*On the fresh grave of your lifelong love who died of consumption and being found the next morning unconscious, naked, and nearly frozen to death by the groundskeeper)*

The cards use black and white photography to illustrate all of the gothic silliness and bring the game to life pretty well. Some minor Photoshop effects are used here and there, but for the most part the presentation is pretty simple. It's nowhere near as lustrous as a Wizards of the Coast production, but it's definitely goth enough to get the job done.

If there's a qualm with the game, it would have to be a lack of cards. The game comes with fifty-five cards, but many of these are repeats (there are 24 individual cards). This limits the extended game play a bit, as the game can get boring before too long. It's hard to say if an expansion set or expanded edition will be created, but more cards could

certainly be used.

Overall though, the game is good fun for ten bucks. If you're into the goth scene, then ***Gother Than Thou*** makes light of some things you're sure to find amusing. If you're not into the goth scene, then it will have less appeal, but the simple but effective strategy of the game still makes it interesting enough.

Rebellion Era Sourcebook (for the Star Wars RPG)

Published by [Wizards of the Coast](#)

Designed by **Bill Slavicsek, Steve Miller, and Owen K.C. Stephens**

Illustrated by **Drew Struzan, D. Alexander Gregory, Adi Granov, Joe Corroney, Randy Post, Lee Bermejo, Lucasfilm Ltd.**

Edited by **Bill Slavicsek**

160 color page hardcover; \$29.95

The Rebellion Era Sourcebook is the much-awaited sourcebook detailing the classic setting for Wizards of the Coast's *Star Wars Roleplaying Game*. While the book bears little similarity to the description given on the Wizards of the Coast Web site, it is still a fabulous resource for those wanting to play in the setting originally portrayed in the movies.

The book breaks down the Rebellion Era into five chapters: one for each of the movies in the core trilogy, as well as a chapter for each of the spaces between movies. Each of the chapters covering movies provide updated statistics for the characters in terms of where they are in the timeline. Interspersed throughout the book are examples of how to use these various elements in an ongoing campaign with the intention being that the players can roughly parallel the course of the movies. The information is presented in the form of a series of essays, each essay covering an aspect of the timeline.

For example Chapter One: A New Hope contains sections on "The End of the Senate," "The Death Star: An Overview," and "Defenders of the Alliance: X-Wing Pilots." Also, in addition to describing the details presented in the movies, it provides a good deal of background material that is compiled from various sources in what Lucasfilm calls the Expanded Universe. These articles cover everything from the history of the Republic's fall and the Empire's birth to a contrast of the corporations behind the X-Wing and the TIE Fighter.

The other chapters are:

- Chapter Two: A Dark Time, which covers the period between Episodes IV and V. This chapter focuses much more on the background of the setting than others, covering such topics as Imperial Intelligence, the Corporate Sector, and the Spice Mines of Kessel. A lot of information from books and the previous RPG from West End Games appears here.
- Chapter Three: The Empire Strikes Back, which mostly focuses on the events, places and personalities of the movie, with the notable exception being the articles on the Dark Troopers from the Dark Forces video game.
- Chapter Four: Shadows of the Empire describes events between Episodes V and VI, with the obvious emphasis being on the book of the same name. Bothans, Coruscant and the Dark Sun Crime Syndicate all have varying degrees of coverage in this section.
- Chapter Five: Return of the Jedi highlights not just topics related to the movie, but touches lightly on the novels Truce at Bakura and The Courtship of Princess Leia, as well as the trilogy written by Timothy Zahn.

Overall, this is a great sourcebook. Information is just oozing out of the pores. I've always been a big proponent of information over numbers, and this book is just that. I'm particularly pleased by the inclusion of things I wouldn't otherwise have expected, such as the history that takes place between the prequels and the core trilogy, the expanded information on stormtroopers, and the inclusion of some relatively obscure items from the Expanded Universe. So what's the downside?

The first frustration that you're going to get is that it doesn't quite jibe up with the description they have on their Web site. Specifically, they advertise weapon and ship statistics, citing specifically the Death Stars and the TIE Interceptors. These statistics do not exist in the book. In fact, there are very little vehicle descriptions in the book. They specifically refuse to give statistics for the Death Star, arguing that it's just too big and scary to really warrant statistics. Barring a plot device like a ventilation shaft, you will lose. The vehicles they present are a couple of starships in the sidebars provided for campaign ideas, a reprint of the AT-AT statistics from the Core Rules, Boba Fett's Slave I, a reprint from *Star Wars Gamer* magazine of a custom Star Destroyer of one of the Emperor's Hands, the personal ship of Guri from *Shadows of the Empire*, and the Ewok glider. There are statistics for swoop riders, but no swoops. There are TIE Fighter pilots, but no TIE Interceptor. Not much in the way of weapons, either, but I'll leave it at that.

Also, the general feel of the book is kind of heterogeneous. It generally follows the plot of the movies, but that's about the only organization method. In the chapter on *The Empire Strikes Back* you go from information about the various fighting forces on Hoth, to bounty hunters, to a commentary on Imperial trash dumping and the races that prey on said trash. From there it goes to the previously mentioned Dark Troopers, and then to Dagobah. This wouldn't be as bad if there was an index. But there's no index. Want to find information on Leia's friend Winter? I think she was first mentioned in the Zahn books, which would mean that she'd be in those last pages of Chapter Five: The Return of the Jedi. But no, she seems to be in Chapter Two in a section called "Rebel Procurement Specialists." I apparently don't know enough about Winter in order to find more information about her.

And, on a more personal gripe: I wish I knew where some of this information was from. Sure, I can identify the Charon as being from the West End Games adventure *Otherspace*. Though I haven't read *Splinter in the Mind's Eye*, I'm pretty sure the Kaiburr Crystal is from that book. But I have little clue where the Prophets of the Dark Side are from, and even less idea where the Kilian Rangers, a type of Force Adept, are from. I can't even find Kilian Rangers on the Internet. In fact, since they are described in a four-page sidebar between essays on starfighter manufacturers and starfighter pilots, it doesn't qualify as an essay, and as such is not even listed in the table of contents.

So, long story short: This is a great sourcebook with a lot of information, it just has some rough edges. If you want an encyclopedic reference on the Rebellion Era, this isn't it. If you want a ton of new toys to play with, this isn't it. If you want a book filled with lots of interesting background information, then this is for you. It's a fabulous sourcebook . . . just not what you might expect it to be.

Conditional Love

I think I may have found a new neat GMing toy:

The conditional.

It's an idea that most folks are *more* than familiar in the Real World:

- We'll give you a promotion and a raise, **if** you take on more responsibilities at work.
- We'll give you your own car in high school, **if** you schlep your younger brother around.
- You can buy *Godfather* and *Godfather II* on DVD, **if** you're willing to purchase *Godfather III* at the same time.

Anyway, conditional rewards and incentives are something I've understood intuitively for a while, and used time to time in campaigns past. For example, in my *Aberrant* campaign I gave the heroes a Chicago city block to play with . . . provided that they stayed in the city and protected it. And during a *Fading Suns* game I got the heroes to accept aid from the enigmatic mysterious Vao under the condition that they sign a contract . . . which simply stated that they had, indeed, received aid from the Vao. (I'd intended for it to be simply a concrete example of the alien nature of their helpers. But *wow* were the players paranoid about signing it . . . which made me consider the possibilities afterwards . . .)

But I only put the pieces together last week, when the cash-strapped adventurers were looking to buy a ship to begin trading in the wide-open seas of *Exalted*. Well, they rolled well enough to get *something*, but I didn't want to give them their own vessel free and clear. So I let them have a faster-than-normal experimental ship, with a few . . . minor conditions:

- They had it for a three-year lease. If it was destroyed, or otherwise didn't return, then they (and their co-signing contacts and mentors) would be responsible for the ship.
- The captain needed to keep notes on its performance. It's an experimental ship -- one with which the shipwright hopes to build his reputation -- and he needs reports to know how it did.
- And they needed to bring along as part of the crew -- and keep an eye on -- the shipwright's bookish son, Chasper ([first words](#): "Our captain's going to be a *woman?!?*"). The "boy" has some issues to work out, and he needs to learn how to work on a boat.

(I had to make all of this up on the fly; my players, typically, forged their own destinies entirely away from any plot points I may have had planned for them.)

Anyway, in my mind this immediately creates a win-win situation for the heroes, players, and GM. The players and heroes got their boat, and I now have plenty of plot hooks to spice up future games.

And, ultimately, I believe that should be the purpose of the in-game conditional item. If it doesn't add to the story, or provide some interesting twist that everyone will enjoy (and is logical), I can't think of a reason to add a condition. Thus having a mentor millionaire NPC loan the heroes his Aston Martin with the condition that it comes back in pristine shape makes perfect sense; having that mentor loan the car with the requirement the heroes don't engage in any combat probably doesn't. (Of course, you may realize that the former almost necessitates the latter . . . but at least then the players aren't being clubbed over the head with an illogical requirement.)

Anyway, here are some ideas for conditional rewards, most of which I've used in the past but have never codified before now:

- **"Bring it back in one piece!"** -- Though it's obvious, most things that contacts loan the heroes will probably need to be returned in good condition, which leads to plot possibilities when the stuff gets put in danger. For a clever twist, have the condition be that the property *can't* return, and needs to be entirely eliminated. Maybe the underground weaponry has some cases tied to it, and it needs to be destroyed as evidence. Or maybe the NPC's

ex-spouse is suing for divorce and will get the Porsche unless the heroes "accidentally" destroy it in the course of saving the world. (As a general rule, if you tell players that they *have* to destroy something, they will usually do such with a gleeful abandon.)

- **Trade for a future player to be named later** -- Have the heroes get what they need up front, with the understanding that they will be expected to fulfill some unspecified request in the future. Depending on who they need to make the deal with, this can *really* make the heroes squirm. Fairly recently in the *Superman* comic, for example, Lois made a Faustian deal with Lex Luthor to have him restore the Daily Planet after it had been closed down, with the condition that he can -- at any time -- call upon her to bury any one story he chooses. He still hasn't made use of this boon, but it lurks in the background as something he *could* do . . .
- **"I was planning on doing that, anyway . . ."** -- You can give the heroes, as a condition, something they were going to do anyway. For example, the party might be given some weaponry by someone victimized by organized crime, under the condition that they kill a certain crime boss (perhaps the boss killed a loved one, and he wants revenge). There's a real chance the heroes might do that anyway. If you're looking for a cruel conundrum, what if the good guys get to the end and learn they *can't* kill the bad guy? Perhaps he's actually innocent of the crime the heroes are hunting him for, and/or he's needed to testify against someone bigger and badder.
- **"Actually, if you could do me a tiny favor . . ."** -- Depending on the genre, one of the most fun things is to take a little task, and have it spiral out of control. Thus the heroes might get *exactly* what they need, provided they can return a library book before it closes. Well, they get to the library, and it's under attack by bad guys! And the library's on fire! For a twist, you can have the "adventure" the heroes were planning for be entirely straightforward ("With the gear you got from Mrs. O'Flannery, you easily break into the vault. The crime boss is caught completely unaware, and surrenders immediately."), with the *real* adventure be the misadventures that result from fulfilling an early favor.

Of course, as I said earlier, the purpose of a conditional reward is to provide more (and different) opportunities for roleplaying, adventure, and fun. It *isn't* to straightjacket your players into situations they're unhappy with. So long as everyone remembers that, conditions can be a great spice in a meaty adventure.

And if the players complain about a certain condition, tell them you're more than willing to get rid of it . . . if they do one *tiny* favor . . .

The Rats' Revenge: Part I

An adventure for *In Nomine*

by Jo Ramsay

Overview

This *In Nomine* scenario is designed for a group of angelic PCs. The first part is based on Earth, and could be in any city. Characters are asked to investigate a nasty locked room murder, which was indirectly caused by a missing ethereal envoy. A Renegade Shedite of Nightmares is also hiding in a local mental institution, closely followed by the demons from Hell's secret police who are hunting it. Ethereal envoys are here too, searching for the faerie rat and its all-important message -- a message that could provoke a war between two of the most powerful Demon Princes in Hell.

Scenario Layout

This write-up has been divided into two sections. In this part, the plot hook is introduced, as are the main locations PCs will check out while investigating, with the NPCs they find there. The plot hook involves two scenes that are effectively fixed, and then the investigation becomes free-ranging, depending on what PCs want to do.

In the second part, the mystery is explained and the final piece of the investigation on Earth is put into place. Superiors' reactions (whether PCs find the missing message or not) lead to a desperate trek into the Far Marches . . .

Part I: Peace on Earth

Scene 1: "I Suppose You're Wondering Why I Called You All Here Today ... "

Purpose: PCs are briefed, and introduced to their celestial contact (**Luria**; stats follow scene).

Characters are called shortly after dawn by one of their usual celestial contacts (or a local Seneschal if they are new to the area) and invited to a local cafe. The tone of the invitation is unmistakably urgent. When they arrive, their contact is sitting stiffly at a quiet table with a full cup of coffee in front of him, accompanied by a tall Indian man who PCs do not recognize. As they sit down, the Indian is introduced as Dr. Lal, the mortal vessel of Luria -- a Seraph of Judgment. The soft-voiced Seraph asks each character in turn for personal details (name, Role, local address, and whether they are currently dissonant or Discordant), but shows no interest in the answers unless anyone attempts to lie to him. With no more ado, the PCs' contact clears his throat and begins the briefing.

Two days ago, a loud disturbance in the Symphony was heard coming from a run-down area on the outskirts of town. It was reported on a CB radio in code phrases by an itinerant Ofanite of the Wind as she was on her way out of town at high speed, and it has taken local angels this much time to locate someone who could decipher the code. The time and place of the disturbance match closely with an unusual murder case that police are currently investigating. PCs are given the name of Alex Constantinides, a Soldier of Stone who is a junior detective in the local police force, and asked to get the details of the case from him before going to check out the murder location. They should be looking for any signs of celestial involvement, and reporting back daily to the Seraph, who will base himself at a local Tether.

If any unfortunate individual attempts to eat or drink anything during the briefing, Luria warns him coolly of the dangers to angels of being tempted by corporeal pleasures of the flesh (such as over-brewed coffee and rock hard muffins).

LURIA

Seraph of Judgment

Corporeal Forces - 3 Strength 7 Agility 5
Ethereal Forces - 3 Intelligence 9 Precision 3
Celestial Forces - 4 Will 8 Perception 8

Vessel: Male/3

Role: "Dr. Deepak Lal," Pathologist/4, Status/3

Skills: Dodge/1, Medicine/3, Move Silently/1, Tactics/2, Knowledge (Cryptography/4, Criminology/5)

Songs: Acid/3, Charm (Celestial/3), Healing (Corporeal/4, Ethereal/3)

Attunements: Seraph of Judgment

Luria dislikes the corporeal realm, preferring the rarified atmosphere of Heaven where he can serve God without getting his wings dirty. His last trip to Earth was in the late 1880s, and he isn't terribly pleased about being back now. Signs of unangelic behavior in angels worry him, and he will inform culprits of their misdemeanors in exacting detail. He is also a dreadful snob and considers interacting with anything corporeal to be a lowering of his personal standards.

However much he hates this job, Luria would rather walk over broken glass than disappoint his terrifying Superior. If he is asked to help interrogate any NPCs, using his resonance to determine whether they are speaking the truth, PCs will have to collect him. He isn't up to speed with such modern devices as cars or telephones, which is why he requested the modern angels to do his leg work.

Scene 2: "You Say We Have Mutual Friends in *High Places*?"

Purpose: PCs get the low down on the murder, and leads into two locations: the murder scene (Paradise Towers) and the mental hospital (Pleasant Meadow.) Also leads to suspects/witnesses -- **Ivy** (see Pleasant Meadow, below) and **Lucy/Amy** (see Part II).

At the police station, Alex Constantinides is expecting a visit from some angels but has not been given their names or descriptions. Once PCs have convinced him of their credentials, he gives them as much help as he can. The murder occurred in a basement apartment of Paradise Towers, an aging tenement block in a run-down part of town. A man, identified as "Eddie Jackson," was killed two nights ago, at midnight. The man was killed in his bed, although the bedroom door was bolted shut from the inside when he was found. The body was found in a ruined state, as if all of the fleshy parts had been gnawed away. Even stranger, the body was tied securely to the bed at the wrists and ankles with different cables. Death was due to extreme trauma -- although a pillow was found over the corpse's face, he was mutilated while still alive . . .

When police broke the bedroom door down, they found the dead man's wife, Ivy, tied to the bed next to the body, unharmed. She was splattered with blood and gore, and (unsurprisingly) unable to give a coherent statement. She has been admitted to Pleasant Meadow, a local mental hospital, where her current state is said to be "not great." Alex can arrange for characters to see her, if they wish.

One other thing the policeman can tell PCs is that the Jacksons were a family with problems. Eddie owed money to various creditors, and had been in trouble previously for beating his two daughters, Lucy (8) and Amy (3). In fact, the social services had taken the girls into care less than a week ago and they are currently in a childrens' home. Constantinides passes the PCs a large envelope with pictures of the murder scene inside it. They show Eddie's gnawed remains, as described. The detective also explains that there is going to be a press briefing at noon, so it would be a good idea if they went over to the tenement before reporters get hold of the story. He is glad to have celestial backup, and strongly suspects supernatural involvement in this case.

Paradise Towers Tenement Block -- The Murder Scene

Interesting facts: Paradise Towers is a micro-tether into the Far Marches, a place where very small ethereals (in terms of Forces) can sneak through into the corporeal realm. This is not automatically detectable by celestials. The murder was committed by ethereal faerie rats (see Part II).

Purpose: PCs may find clues pointing to the rats not being what they seem. Also pointers to the school and pest control.

NPCs here: Characters will meet **John de Groote** (stats follow Paradise Towers), the Fortean investigator. They may also encounter **Reed**, a faerie noble who has been sent to Earth with a posse of ethereal **Hobgoblin** troublemakers (stats follow Paradise Towers) to track down a missing faerie rat messenger.

Description of surrounding area: The area is run down, and the air is thick with heat, dust, and the frustration of the poverty trap. The Paradise Towers tenement is a redbrick with high ceilings and thick walls. It was built in the Victorian era, and then renovated in the 1950s. Graffiti covers the brickwork, a mixture of declarations of love, misspelled political slogans, and anarchy symbols. There are also a couple of slogans in the lobby, sprayed on by hobgoblins, that read "Die, motherf**** mortals!" and "Beleth sucks!"

What local human residents know: Many have been tortured in their nightmares by playful hobgoblins. They may remember having vivid dreams (not nightmares) about rats since living in the tenement block.

The Jackson's Basement Apartment: The basement apartment can be reached by creaking elevator or creaking stairs. Examination of the lock shows scratch marks around the barrel, as if it had been picked. The police have already searched the apartment, and taken the sheets from the main bed as evidence.

Junk mail on the doormat includes final demands, an invoice from Kill-Em-All pest control, and an invitation to Mrs. Ivy Jackson to attend a parents' evening at a local school (see: following the trail). One bedroom (the girls' room) has bolts on the outside but is bare inside apart from two beds, a wardrobe, and an empty hamster cage. The main bedroom is a mess, and there is a bolt on the inside of the door. If PCs head for the apartment directly after speaking to the policeman, they will find de Groote (see below) checking over his equipment in here.

Faeries on the way out: Four mean-eyed black cats watch PCs as they leave the tenement. If characters have made any disturbance or shown interest in the hobgoblin graffiti, the creatures (four hobgoblins in feline vessels) will trail them. The hobgoblins scare their victims with illusions, and then attack as a group. If badly injured they will try to flee. Reed himself may show up to find out what his charges have been getting up to. In any case, he will be at Paradise Towers that night to interrogate faerie rats.

<sniff> *I smell a rat!* The faerie rats will not make themselves known until after dusk. One by one, they slip into the apartment in search of interesting cables, or toys to mend. PCs who wait up in search of rats may see or catch one of the creatures during the night. They are identical to normal rats, except for the cream

Running an Investigation in *In Nomine*

In *Nomine* poses a challenge to GMs who wish to run investigative scenarios. Angelic PCs have abilities that let them easily extract information from NPCs, often without needing to ask any questions. Demonic PCs are just as likely to make up a good solution and then use their own abilities to force the NPCs into line. NPCs won't get away with telling lies or any other kind of deceit, if there is a Seraph in the party. Double crosses can't be assumed to work, and even the souls of the dead can be interrogated if they wound up in the celestial realm that the PCs call home.

Investigations work best when PCs are given free range to use their abilities. Assume they will get to the bottom of any investigation quickly, and balance the scenario out by letting it be insufficient to merely discover the truth. Angels and demons should always have to act on the information they receive. Angels should be motivated to do the Right Thing, and demons to do the Wrong Thing. There should be a constant tension between the miraculous superpowers that the PCs have, and the need to avoid making disturbance that would draw the attention of the Other Side.

colored fur with red-tinged muzzle (stats in Part II.) If interrogated, they are gentle and playful, but not clever. They all remember taking revenge on the Jacksons because one of their number summoned the rest.

JOHN DE GROOTE

Human Fortean Investigator

Corporeal Forces - 1 Strength 2 Agility 2
Ethereal Forces - 2 Intelligence 5 Precision 3
Celestial Forces - 2 Will 4 Perception 4

Skills: Computer Operation/4, Drive/1, Escape/1, Fast Talk/2, Knowledge (Occult/4), Lockpicking/3, Move Silently/1

De Groote made enough money from dabbling in real estate to be able to retire at the age of 35 and devote all his time to his true interest, investigating strange parapsychic phenomena. He has made a name for himself in the parapsychic community and is a popular speaker at Fortean Conventions, where he discusses ghosts and spirits, and the results of his investigations.

One of the policemen in the local precinct shares an interest in psychic phenomena, and called de Groote after the body was recovered from Paradise Towers to ask his opinion. The investigator immediately packed up, and arrived the next day. He intends to see whether the murder location is haunted, so set up special camera equipment to be left running overnight.

When the investigator returned to check the results, he found that some cables were missing. He intends to get to the bottom of this, if nothing else. John is very confident, freely offering his advice and opinions on every subject under the sun. He believes that the spirit of his dead sister watches over him and that ghosts often intercede in the mortal world. Although he is a man of science, he would love to prove the existence of the supernatural beyond any shadow of a doubt.

If other obviously supernatural events happen in the town, de Groote will be on the spot quickly, claiming to be an noted expert, and demanding that everyone lets him through. His contact in the police keeps him posted.

REED

Faerie Noble (Seelie)

Corporeal Forces - 2 Strength 3 Agility 5
Ethereal Forces - 3 Intelligence 6 Precision 6
Celestial Forces - 2 Will 4 Perception 4

Vessel: Male/2 (Charisma +3)

Role: "Reed," Freelance Journalist/2, Status/2

Skills: Artistry/3 (Dancing), Drive/4 (fast bikes), Dodge/2, Fast Talk/5, Large Weapon/3 (Sword), Seduction/4

Songs: Dreams (Corporeal/2, Celestial/2), Healing (Ethereal/4), Light (Ethereal/4)

Reed has been sent to Earth to find the missing faerie rat quickly, before either Heaven or Hell have a chance to intercept it. He is the sole NPC who knows of the missing message, and its topic. He was sent as tribute to Beleth from the Seelie Court after a failed assassination attempt on the Seelie Queen, and slavery has soured his once carefree disposition. A pack of hobgoblins was also assigned to help with the hunt, and Reed is nominally in charge of them. Two have not yet reported back (they have been captured by Sedek, and are being held at the mental hospital). He cares nothing for humanity except for the Essence he can win from them through charm and seduction. He does make

exceptions for those who do him favors, and falls in and out of love as easily and randomly as most people switch TV channels.

Reed affects biking leathers and a witty manner, and rides a yellow Ducati that he refers to as "my noble steed." He wants to avoid running into either angels or demons (but mostly demons), and for the hobgoblins to just behave.

HOBGOBLINS

Ethereal spirits

Corporeal Forces - 1	Strength 2	Agility 2
Ethereal Forces - 2	Intelligence 3	Precision 5
Celestial Forces - 2	Will 3	Perception 5

Vessel(s): Various. Some have animal vessels (cats, dogs, pigeons) and others have human vessels.

Skills: Dodge/2, Fighting/3, Move Silently/3, Small Weapon/2 (Knife)

Songs: Fangs/3, Dreams (Corporeal/4, Celestial/2), Light (Ethereal/3)

Thirteen hobgoblins were sent to help Reed track down the missing rat. They have notified the faerie noble of ethereal activity in Paradise Towers, and four of them (in cat vessels) are staking the tenement out. A few more are amusing themselves by terrifying and interrogating the dreamscapes of hapless local residents. No rats have yet been caught.

Other hobgoblins are investigating other disturbances, or have wandered off to intimidate random mortals. They are too stupid to be **quiet** on Earth or in the Near Marches, which is how Sedek surprised and captured two of them.

Hobgoblins play with their human prey and stalk victims, preferring vulnerable types such as children, old people, and teens with overactive imaginations. They also enjoy watching slasher flicks en masse, cheering as each victim is gutted on screen.

Following the Trail

Kill-Em-All pest control: The company has been called out to Paradise Towers several times over the last ten years. No rats have ever been found or destroyed. They went to the Jacksons' apartment recently to lay down poison, with the usual non-result. The pest control operative knows that Mrs. Jackson was paranoid about rats, and claimed that she could hear them scrabbling in the walls at night.

Local School: Teachers at the local school remember Lucy Jackson as an intense, introverted child. Her class teacher is a believer in "letting children work out their own problems," and was stunned to hear that the Jackson girls had been taken into care. Lucy had very few close friends, but the girls she hung out with know about her new pet rat (see Part II), if PCs go to look for them. They also know she hated her father.

Pleasant Meadow Mental Hospital

Interesting Facts: The hospital is a base of operations for Beleth's demons in the area. Under Sedek's influence, it is becoming a place of living nightmares for patients and staff.

Purpose: PCs meet Ivy, getting more pointers towards the girls and rats. They may discover Sedek and fight him, or become involved in Jasper & Djon's hunt for the missing Shedite.

NPCs here: **Sedek**, the Calabite of nightmares, who has two hobgoblins tied up in his private chamber. **Jasper** and **Djon**, the heavy-handed demonic inquisitors who are searching for **Beautiful Scream Vexation**, a Shedite who has fled Hell for what she fondly thinks of as love.

Description: Pleasant Meadow is a specialist psychiatric hospital. Tall brick walls topped with broken glass surround the institution and signs warn visitors to stay within marked areas and to turn off mobile phones. The hospital has three main wings. The first wing, where the reception is located, is for outpatients. The second wing is for residential patients, and the third wing is a secure area, for residential patients with violent or antisocial tendencies.

Doctors and consultants have offices on the second floor of the outpatients' wing, and the two kidnapped hobgoblins are being kept in the secure wing.

The hospital is an uncomfortable place. Since Sedek took up residence, it has become violent and depressing. Suicides among patients have increased, and they are all nervous of the staff. Drug use is widespread, and rumors of rapes and beatings inflicted on patients are rife. Incidences of patient assaults on staff have increased also. Also, many people have suffered violent nightmares, an inevitable result of two Demons of Nightmares being in the institution.

Meeting Ivy

If Alex (the policeman) has made arrangements, the receptionist shows PCs to the residential wing and introduces them to a burly staff nurse who takes them to Ivy Jackson's room.

Ivy is doped up to the eyeballs when PCs see her. She sits on the end of a bed, hugging herself and swaying. If encouraged to think back to the night of the murder, she talks about rats. She claims that she can hear them here too sometimes, scrabbling between the walls. Eventually she bursts into tears.

The nurse who escorts PCs into the room knows that Dr. Foster forced Ivy to handle a rat when she was admitted to the hospital. She wouldn't stop screaming, so they sedated her. Ivy has little to say about her daughters, except to burst into wailing, pained tears if the subject is raised.

Other Encounters

1. Jasper and Djon have been staking the building out in search of their Renegade Shedite. If they encounter PCs acting in a suspicious manner, they will harass them relentlessly.
2. PCs may encounter Beautiful Scream (the Renegade Shedite), either in a staff or patient host. In either case, she attempts to drive her hosts to damnation and impress Sedek by her dedication to the cause.
3. Reed is trying to fast-talk his way in, to talk with Ivy. If Sedek notices him first, the faerie noble may find himself on his way to the torture chamber . . .

Other NPCs at Pleasant Meadow (a sample of staff and patients at the hospital)

Patients

Benny is a hulking giant of a man who is now in the high security wing of the hospital. He has a sweet smile, and an infantile, psychotic mind. Benny is subject to brief bouts of uncontrollable rage and violence. He is terrified of Sedek and cowers in a corner at the sound of Dr. Foster's name.

Annalise wanders around the in-patients wing of the hospital, leaning on a stick. She accosts visitors and accuses them of being part of the conspiracy. She mutters dire warnings about medical misconduct, rapes, and beatings, and the doctor's secret torture chamber in the high security wing. If a nurse is called to take her back to her ward, Annalise shrieks, flails around, and claims that she is being persecuted because she knows about The Plan.

Sarah is a friendly old lady who attends out-patients clinics. She listens with interest to anyone's personal problems, but occasionally lapses into long silent fugues where she stares blindly into the middle distance. If anyone asks her a question, she politely informs them that she will have to consult the Rabbi. The rabbi, she explains, is very wise but

difficult to contact . . . because he is dead and buried in her local graveyard.

Staff

Maria is a big psychiatric nurse. Her English is broken, and she takes out her frustration on the patients when they don't understand her. She is always polite to visitors though -- Dr. Foster says that is important, and she is in terrified awe of him.

Terri, one of the senior nurses on the non-secure wing, is a small woman who is very conscientious about her charges. She has recently returned from holiday and is startled by the increasing rumors of brutality on the wards.

Dr. Arran, one of the junior psychiatrists, enjoys the feeling of superiority he has over his patients, and is quick to dole out medication that will make his life easier by keeping the patients quiet. He is also not above administering date-rape drugs to patients or staff and taking full advantage of them. He lies like a rug if asked difficult questions.

SEDEK

Calabite Captain of Nightmares

Corporeal Forces - 3	Strength 7	Agility 5
Ethereal Forces - 4	Intelligence 8	Precision 8
Celestial Forces - 4	Will 10	Perception 6

Vessel: Male/3

Role: "Mr. Steven Foster," Senior Consultant at Pleasant Meadow/4, Status/4

Skills: Detect Lie/1, Dodge/3, Emote/1, Fast Talk/4, Fighting/4, Knowledge/5 (Psychiatry), Large Weapon/4 (Axe), Medicine/3

Songs: Dreams (All/4), Entropy (Ethereal/5), Shields (Corporeal/3, Celestial/3)

Discord: Phlegm/3 (This is a Corporeal Discord, described below)

Attunements: Calabite of Nightmares, Dreamwalking, Captain of Headhaunters

The demon in his mortal form is a small man who wears old, stained raincoats and faded sneakers. His particular Discord takes the form of constant retching into a seemingly endless supply of tissues. He explains this to mortals as the result of a former 50-a-day smoking habit. He has an oily, ingratiating manner and rubs his hands together when he is excited.

Sedek is a Destroyer, and he loves to destroy people's self-confidence and sanity. He is an expert in psychological torture, but is not averse to experimenting with physical torture if he gets the chance. If he gets nervous, his first instinct is to attack whoever is threatening him. He will initially try to do this with psychological attacks, playing on the other party's weaknesses and fears.

Sedek currently has no idea that Beautiful Scream (the Renegade Shedite) is on Earth, much less that she is in his hospital. However, he dislikes the Asmodeans enough that he will help her to avoid them if she does make herself known.

He has noticed an increase in ethereal activity in the town over the last couple of days. In fact, he captured a couple of hobgoblins a night ago, and has imprisoned them in a secure room in the hospital. He knows they had no permission to be on Earth, and is planning to amuse himself by torturing the creatures to death slowly. If he knew about the faerie rats, his approach would be to bite their heads off, spitting the pieces out while the little whiskers were still twitching. He has not yet had time to talk to Ivy; torturing hobgoblins can eat up so much of a demon's time ...

BEAUTIFUL SCREAM VEXATION (BSV)

Renegade Shedite of Nightmares

Corporeal Forces - 1 Strength 2 Agility 2
Ethereal Forces - 2 Intelligence 4 Precision 4
Celestial Forces - 4 Will 11 Perception 5

Skills: Acrobatics/2, Dodge/3, Lying/3, Running/1

Songs: Dreams (All/4)

Attunements: Shedite of Nightmares

Dissonance: 2 notes

Beautiful Scream is a young Shedite who is absolutely **not** authorized to be on Earth. The breaking point came for BSV when she was playing an innocent demonic childhood game of "freak out the dreamer" and was ambushed by Malakim of Blandine inside a dreamscape. The angels grabbed one tentacle apiece and dragged her away for a fatal beating. She screamed but no aid came . . . until a black-browed Calabite with murder in his eyes surprised her tormentors. His name was Sedek, and he was hunting ethereals, and because he was the first demon BSV had ever met who didn't abuse her horribly, she fell utterly in love.

She has since sneaked down a Tether and came to the mental hospital to be with her beloved. She began her campaign to claim his attention by possessing local mortals and driving them slowly insane -- insane enough to be admitted into Pleasant Meadow. The next stage is to prove her love for Sedek by helping him to turn the hospital into Hell on Earth. She does this by possessing either a patient or staff member, and riding them into violent self-destructive oblivion, but never in a way that would directly attach any blame to the object of her affections. Maybe one day she will actually dare to introduce herself to him properly.

BSV has two notes of dissonance, incurred through her inexperience in corrupting mortals. Technically she is a Renegade, but Beautiful Scream is not trying to run away from Hell. She may have a hard time explaining this to the demons of the Game who are hot on her tail.

JASPER

Balseraph of the Game

Corporeal Forces - 3 Strength 6 Agility 6
Ethereal Forces - 2 Intelligence 3 Precision 6

Skills: Drive/3, Emote/3, Fast Talk/3, Ranged Weapon/4 (Pistol), Wave Gun Around in an Intimidating Manner/5 (based on Will, default -1)

Songs: Charm (Corporeal/4), Possession/3

Artefact: Unholy Pistol (6 bullets)

Attunements: Balseraph of the Game

Jasper and Djon are partners, sent to the area to investigate rumors of a Renegade of Nightmares. This is unfortunate for all other demons in the area, particularly Sedek. The pair began to investigate the strange murder in Paradise Towers, but as soon as they found out that Pleasant Meadow was involved, they concentrated their investigation there instead. The Calabite is co-operating, but has made it clear he resents their presence and that his Mistress will be disappointed if his work is interrupted.

Jasper is an ambitious type. This is his second tour of Earth duty, and he is genuinely enthusiastic about the advantages that devotion to the Lords of the Pit can bring to both celestial and mortal. In short, he is a thorough "company man." Jasper uses the authority of his FBI Role to steamroller the local police, which does not endear him to them. If the pair encounter PCs, Jasper waxes lyrical about why Hell is morally superior to Heaven. He also attempts to persuade PCs that it is in their best interests to help search for the suspected Renegade.

DJON

Djinn of the Game

Corporeal Forces - 3	Strength 6	Agility 6
Ethereal Forces - 4	Intelligence 8	Precision 8
Celestial Forces - 4	Will 8	Perception 9

Vessels: Male /5 (Charisma -1), Female (mid-twenties)/2

Role: "Jane Segawa," FBI Agent/3, Status/3

Skills: Artistry/3 (Opera), Detect Lie/1, Dodge/3, Emote/2, Fighting/5, Move Silently/4, Small Weapon/3 (Knife)

Songs: Attraction (Ethereal/5), Claws/3, Thunder/4

Attunements: Djinn of the Game, Dissonance Binding

Djon is an old hand at identifying and capturing demons that fail in their duty. The work has taken its toll on him, and left him a sulking, paranoid demon who is convinced that the world is out to get him personally. He currently has two vessels -- a young black female with buck teeth, and a hulking white male vessel with multiple tattoos that he uses for wet work. He likes to listen to grand opera, which will be playing loudly on the stereo of the pair's car if PCs encounter it.

As Jane Segawa, the demon pouts sulkily and lets her partner do most of the talking. Djon prefers to correct Jasper in private if he does anything particularly stupid, but has been known to slap him across the face and storm off if provoked. When confronting the enemy, it is Djon who will hiss, "Stop jabbering and shoot them, you idiot!"

Centuries of experience and a general dislike of Calabim have convinced him that the Renegade exists, is in league with Sedek, and is hiding out at Pleasant Meadow. All he has to do is find the creature, and nail the damned Destroyer for collaboration with intent!

Brendan the Bold

*"We sailed every ocean, we sailed every sea,
We sailed every spot that a sailor could be.
In forty-four days we sailed ten million miles,
We sailed for Saint Brendan's fair isle, fair isle,
We sailed for Saint Brendan's fair isle."*

-- Jimmy Driftwood, "Saint Brendan"

In the misty reaches of the Atlantic, somewhere north of Columbus Day and east of Thanksgiving, bobs the oxhide curragh of Ireland's greatest traveler. Drawn by visions, driven by angels, and fed by the birds, St. Brendan the Navigator is a kind of holy shadow of the more dubious [Mandevilles](#) and Sinbads one normally finds in the bisociative bays of the Otherworld Ocean. His story is yet another founding myth for America, and another guide into the upper latitudes of weirdness, from Hell to Paradise, and all the islands in between. So, let's set sail with St. Brendan, and see what we discover.

"Then the angel said to St. Brendan, 'Here is the country, for which you looked for so long a time. You could not find it then, because God wished to reveal to you the many secrets of the great Ocean. Return now to your native country, carrying as much of the fruits of this country as your ship can transport.'"

-- *Navigatio Sancti Brendani Abbatis*, XXVIII

To begin with, we discover that the *Navigatio Sancti Brendani Abbatis*, or the *Voyage of Saint Brendan the Abbot*, is as big an enigma as Brendan himself. The best-known version was written in Norman French verse around 1120 by a papal envoy named Benedeit, who derived his poem from an anonymous Latin manuscript originally composed around 825 A.D. (Which, itself, might have been based on a seventh-century Irish original, now lost.) This earlier Latin version was so popular, in fact, that it still survives in over a hundred separate copies, most of which put their own spin on the story, which is a doozy.

Our hero, the Irish monk Brendan, meets another monk, one Barinthus (or Barrind), who tells him about a miraculous journey that Barinthus made to an island in the western sea -- the Land Promised to the Saints. Vowing to visit that land himself, Brendan builds a ship, recruits a number of followers (fourteen, or fifty, or sixty, or some other mystical number) and sets off. (In some versions, three other monks join at the last minute; since they disrupt the magic number, they come to bad ends on the sea.) He visits any number of Mandevillian islands, such as the Isle of Sheep, the Isle of Birds, the Isle of Black Devils, the Isle of Sleep, the Isle of Glass, the Isle of Blacksmiths, and the Isle of Grapes. On still other islands, he encounters other monks and hermits, and on one of them, he discovers Judas Iscariot, on "shore leave" from Hell. He also escapes a Coagulated Sea, is attacked by sea monsters and griffins, and accidentally makes camp on the back of a whale. Finally ("after seven years"), he reaches an enormous island of apples and light, where his path into the interior is blocked after forty days by a great river. Here, he meets an angel who reveals that this island is the Paradise, the Land Promised to the Saints, and sends Brendan back to Ireland spiritually fulfilled.

"Brendan eased forward. Not with style or speed, but in the same matter-of-fact manner that she had crossed three and a half thousand miles of sea. . . . Brendan nosed quietly onto the rocks. George leaped. His feet splashed, and touched ground—and I thought, 'We've made it!' . . . She had been at sea for fifty days. The exact spot of her landfall has no particular significance to the story of the early Irish voyages into the Atlantic. It was merely the place where the wind and current had brought a twentieth-century replica of the original Irish skin vessels"

-- Tim Severin, *The Brendan Voyage*

Brendan almost certainly existed, most likely born in 484 A.D. in County Kerry. He traveled to the Hebrides north of Scotland, founded a great monastery at Ardfert, and died in 577. He, or monks from Ardfert, traveled to Brittany, the Faeroes, and Wales, and eventually Brendan became the patron saint of boatmen, mariners, and (of course) whalers. In a remarkably non-crazy work entitled *Land to the West*, Arthurian enthusiast Geoffrey Ashe attempts to place Brendan's voyage on the map of the actual Atlantic, using (where possible) the actual sailing times and directions given in the *Navigatio* to reconstruct it. To Ashe, the *Navigatio* indicates that Irish monks (whether Brendan, the

community he founded, or the many who flooded after him into the ninth century) visited the Canary Islands, the Azores, the Faeroes, Iceland, Greenland, Jamaica, the Bahamas, and (of course) America, the great island, the Land Promised to the Saints. For **GURPS Aztecs** fans, Ashe even toys with (but can't quite bring himself to accept) the notion of Brendan as Quetzalcoatl, the white-robed, bearded, cross-bearing opponent of human sacrifice who came from over the sea.

A great theory, and at least part of it is true -- it is a matter of unquestionable fact that the Irish monks discovered and colonized Iceland before the Vikings. Brendan's "Island of Blacksmiths" sounds very much like a volcano such as Iceland's Mt. Hekla, the "Isles of Birds and Sheep" perfectly match the Faeroes, and even the "Isle of Glass" can be seen as an iceberg filtered through a Celtic imagination by a writer most probably working in sunny Spain. Even the more exaggerated notions are not prima facie impossible. Brendan's "Isle of Grapes" resonates very interestingly with Leif Ericsson's "Vine Land the Good," to begin with. In a fit of Heyerdahlia, sailor Tim Severin built a curragh similar to the *Navigatio* description, on an authentic Irish model, and in 1976-1977 sailed it (in two legs) from Ireland to Newfoundland via the Hebrides, Faeroes, and Iceland. Brendan's voyage (or something like it) was possible, if not particularly likely.

*"Listening to the music impels
And brings many-colors,
In the multi-colored countryside of noble gentleness.
Delight gleams from that fair cloud.
There are three times fifty distant islands
In the ocean to the west.
Larger than Erin now with
Each doubled or three times."
-- Immram Bran mac Febal*

However, such tedious reductionism overlooks the equal likelihood that the *Navigatio* was an explicitly Christian allegory. Brendan takes seven years to get to the Land of Paradise because seven is the number of Christ. He celebrates Pentecost on the Isle of Birds (the symbol of Pentecost is the Dove), Maundy Thursday on the Isle of Sheep (for the Passover Lamb), and Easter on the back of the whale (Jonah's three days in the whale equal Christ's resurrection after three days). Moreover, the *Navigatio* is also the heir to the grand Irish tradition of the *immram*, the voyage to the Otherworld. Like the Irish Otherworld, Brendan's Promised Land has apples, eternal light, a guardian fog, and so forth. The two major immrama are the *Voyage of Mael Duin* (who also sees an Isle of Glass, an Isle of Sheep, an Isle of Sleep, etc.) and the *Voyage of Bran mac Febal* which tells of the Celtic hero-god Bran the Blessed's voyage to the Otherworld. (Bran's magic Templar head [went there again](#) in 1314, of course.) These immrama all occur in the kind of archetypal sea where Odysseus and Sinbad the Sailor voyaged (Sinbad also saw Isles of Glass, Sheep, and Birds, and also picnicked on a whale's back). In short, the *Navigatio* is bisociatively history, legend, and myth.

*"For the Stories of Arthur, Malgo, and Brandon, that say a thousand yeares ago they were in the North of America; or the Fryer of Linn that by his blacke Art went to the North pole in the yeare 1360. in that I know them not. Let this suffice."
-- John Smith, General History of Virginia (1624)*

Which is where Arthur comes in. Arthur, or at least the "consensus Arthur" of archaeology and early chronology, is Brendan's contemporary; in fact, Brendan's life overlaps Arthur's on both ends. John Dee emphasized Arthur's voyages overseas to the isles of the Atlantic in his [occult-imperial propaganda](#) for the "British Empire," although Captain John Smith dismisses "Arthur, Malgo (Mael Duin), and Brandon" in the brusque sentence above. More to the point, of course, Arthur also travels to a western island paradise when he dies, Avalon; which is to say, the "Isle of Apples." And just as an angel promises St. Brendan that the Land Promised to the Saints will be revealed again when the time is right, so too will Arthur return from Avalon when needed. In fact, according to the medieval *Life of Merlin*, Arthur's boatman to Avalon was none other than Brendan's old inspiration, Barinthus. It gets better; one of the only dates in the *Navigatio* puts Brendan's seventh year at sea ninety years after the death of St. Patrick in 461 A.D. Hence, Brendan set sail in 544 A.D., just two years after Barinthus (Brendan's cousin, in some stories) brought Arthur to Avalon, according to Geoffrey of Monmouth. Was Brendan actually looking for King Arthur, in the Otherworld to the West?

"Then St. Brendan sought to animate the courage of the brethren, saying: 'Soldiers of Christ, be strong in the faith unfeigned, and in the armor of the Spirit, for we are now on the borders of Hell; watch, therefore, and act manfully.'"
-- *Navigatio Sancti Brendani Abbatis, XXIII*

This may be why Brendan picked up a "crystal chalice" from off an [emerald](#) altar on the Isle of Glass; he may have needed the Grail to heal the wounded Arthur. But the fogs that Brendan sailed through may conceal more than the secret isle of the Once and Future King. Near the Isle of Smiths, St. Brendan actually sailed near the entrance to Hell itself, far up in the [Arctic](#) wilds, and he visited and comforted Judas Iscariot. Past that "entrance" and through a "wall of fog" lay the Paradise -- perhaps the Hollow Earth, reached by sailing north through the Hole in the Pole?

Or should we take Hell and Judas literally? If so, Brendan saw the land of the dead, and spoke to one of its more prestigious inhabitants -- understandable, since geographers had placed the Greek Elysium in the "Fortunate Isles" to the west. The Land of Apples to the West also appears in Greek mythology as the Islands of the Hesperides, where grow the Golden Apples. Strabo places the Hesperides near Libya, where we last left the [Amazons](#) -- who themselves also turn up in an island paradise to the West, Calyferne. Like our putative sky-seeded Amazons, St. Brendan was also born of a "drop from above" -- *broen dian* in Irish. He also encountered other glowing ultraterrestrials with dubious goals, from his birth under an angel-filled heaven to the Isle of Birds, identified as the home of those angels who had supported neither God nor Satan -- which is to say, the [Faerie](#). Amazons, angels, faeries, [griffins](#) (guarding the Golden Apples of the Hesperides from Brendan?), and [werewolves](#) -- St. Ailbe, upon whose Isle Brendan spent every Christmas, was suckled by a she-wolf -- Brendan ran with some fast company indeed. See if your players can keep up, over wind and wave, through the Bermuda Triangle and the Hollow Earth, past griffin and leviathan to the [Paradise Promised to the Saints](#) in America.

Notes

Equipment

As jobbing mercenaries, Sergo and Iussuf are somewhat defined by their armor and weapons, which will vary with the date of the game's setting, and also with their precise financial situation and current employment. In general, Sergo will be wearing scale or mail armor (perhaps something lighter, if that's the best that he can do), and carry a one-handed axe or sword and a round, medium-sized shield, plus sometimes a spear. Iussuf will usually wear light, quilted fabric armor and carry a shortsword, a light spear, or lance, perhaps some javelins or darts, and a round shield or buckler; his most important and carefully-tended possession, however, is his eastern-style composite bow.

Background

Sergo and his brother Jan were the third and fourth sons of a free but poor European peasant family, with no obvious prospects of doing more than sinking lower in the world if they stayed home. So they took the same route out as many another, and became soldiers, taking employment where they found it. Eventually, they heard about fighting in the East, and decided that this sounded good; the rumor was that God would forgive you for killing heathens easier than he would for the, well, sometimes unavoidable things that soldiers had to do anywhere else.

They rattled around there together for a few years until they had their big falling out -- over a woman. Sergo can't remember the details now, but Jan wound up marrying the wench while Sergo took ship back home. Not that he stopped soldiering, though; the money never lasted, the promotions never came, and he seemed to have a knack for not getting killed.

He can't actually count how many years later it was that the dark, lightly-built lad walked into a tavern and introduced himself. It turned out that Jan and his wife had died in some local plague out east, and before he went, Jan had told the boy that, as there was less and less scope for an honest Christian to survive in that part of the world, he ought to look for his relatives elsewhere. It was a long way to come, but Jan was always the wise one; according to recent sailors' tales, he was probably right about the east getting too hot for a Christian family. The kid, Iussuf, was a fighter, too -- he'd trained in the eastern style, with a bow, from horseback. That could be a saleable skill in these parts -- which was good, because while family was family, Sergo still didn't know any way else to live.

So the old footsoldier and the light cavalryman are looking for employment together. They're an odd team, but *someone* must have work for them.

Note: This background should fit into any European-based campaign, any time between the twelfth and fifteenth centuries. In, say, an *Ars Magica* game set in the usual c. 1220 AD period, Sergo will have gone out to the Levant with the Third Crusade, and Iussuf may have shipped out for Europe in the wake of the failure of the Fifth Crusade. Likewise, in a *Mage: The Sorcerers Crusade* game set in the 1450s, Sergo would have worked as a mercenary for the Byzantines, while Iussuf will have got out of that part of the world just ahead of the fall of Constantinople in 1453, or perhaps departed some Greek outpost just after that event, before the Turks arrived to mop up. Sergo has infantry skills that are universally applicable in virtually any pre-gunpowder setting, and years of experience at doing whatever seems needful. Iussuf fights as what the Crusaders called a "Turcopole," a light cavalryman who can match Turkish opponents at their own game. Iussuf is at his best on horseback, but he can't afford a horse at present; a sensible employer will find him one.

Personalities

The primary secret of Sergo's survival is also the reason why he's never become anything more than a footsoldier; he's got what will one day be called the classic grunt mindset. He never volunteers, and never believes too much of what the higher ranks tell him. (It also doesn't hurt that he has a near-indestructible constitution.) While he's neither cowardly nor treacherous, he believes that the most important thing in any battle is living to fight another day, and he's "borrowed" more than a few riderless horses in the wake of more than a few military screw-ups in his time.

That said, he's also noticeably lacking in either imagination or charisma, which means that he doesn't try very hard to find a better place for himself, and no one bothers to offer him many chances. He has a terrible tendency to ramble rather vaguely about his past career, which drives many people to teeth-grinding annoyance. ("When I stood with the spears, 'longside Couer de Leon at Jaffa -- mind you, most o' the lads at that fight were eyetie sailors, not that I've got nothing 'gainst sailors, like, or eyeties -- knew this eyetie girl once . . . But where was I, oh, yus, Jaffa, durin' the Crusade. Well, I stood with the spears there, y'know, 'longside ol' Couer de Leon, God rest 'im, good man 'e was . . .") He doesn't worry much about what people think of him, which may be just as well.

Iussuf is a little sharper, and rather quieter. Dignity and pride are quite important to him, and he is keenly aware that he is a distrusted foreigner in these parts, so he tends to hold back and let Sergo do the talking -- although he is increasingly realizing that this may not always be wise. But if he says anything, it's too easy for some local oaf to make trouble. A lot of them even seem to think he must be a Muslim, which causes him pain; he has *fought* for Christianity, and he will explain with some heat that he was baptized in the greatest Christian church of his (Christian) home city. Actually, he's technically a member of the Eastern Orthodox church, but he doesn't draw fine distinctions, and thanks to his willingness to pray in any convenient church, no-one with any religious standing has questioned him yet. He'd probably convert to Roman Catholicism just to avoid trouble, if necessary.

Although they don't seem to have much in common, uncle and nephew are mutually loyal. Each simply takes it for granted that standing by your family is the right thing to do. Having Iussuf around reminds Sergo of his youth and the good days out east with his brother, while Iussuf has learned to let Sergo's ramblings wash over him as a comfortable, meaningless noise. Although military duties may send them in different directions, each does his best to keep an eye out for the other.

Game Uses

Sergo and Iussuf have several different potential functions in games. To begin with, they're excellent "hired guard" material. (They were detailed using the rules for "grog" in *Ars Magica*, and are approximately equal to standard men-at-arms in *Mage: The Sorcerers Crusade*, albeit with low Background ratings to reflect their itinerant mercenary lives.) They have genuinely effective combat skills, and their rather marginal social status means that they would be happier than most to accept employment with weird wizards and other player-character types. Of course, an employer would also have to deal with Sergo's increasing decrepitude, Iussuf's foreign ways and pride, and the fact that each is only really loyal to the other.

Second, while they aren't primarily intended as villains, it's not impossible that they might turn bandit if no safer employment opportunities presented themselves. In that case, they'd probably cost a few lone travelers their purses, while being canny enough to avoid most hunters. If they joined a larger group, they could increase its effectiveness quite a bit; Sergo can stand off opposing troops by fighting defensively with sword and shield, while Iussuf's shooting would make him a menace from ambush. Of course, in a Robin Hood-style game, they can be both outlaws *and* heroes, adding to the variety and style of a band that may also include the PCs.

And lastly, whatever their current employment (if any) they are also useful as sources of role-playing entertainment. They could be useful as a source of information for European characters thinking of traveling to the east, or for someone wanting information about the Crusades, while an evening simply spent carousing with them might amuse and distract some PCs. Sergo can be played as an archetypal rambling old codger, while Iussuf acts as his quiet straight-man; the former would certainly be willing to advise younger would-be hired swords on the ins and outs of the profession, the uselessness of most commanders, and the inadvisability of ever volunteering for anything. Extracting the nuggets of genuinely useful advice from his meanderings would require patience and judgment. Of course, PCs

who had experienced this aspect of the pair might need a moment to adjust if they ever had to deal with Sergo's canny, ruthless melee fighting style and Iussuf's sharp-shooting.

The Wolfsbanner

by Volker Bach

Kurt raised his crossbow to chest height before he quietly stepped across the clearing. Tonight the reckoning was due. For months the wolves had plagued the villages of his lord, taking sheep, pigs and chickens, breaking into stalls and hurdles, until two weeks ago -- the hunter crossed himself hastily as the memories surfaced -- one of them had killed the daughter of Anselm the miller. Bad winter, Kurt thought. Nothing to eat in the forest. Wolves always came into the valleys when the snows stayed too long. Nothing for it but setting traps.

The moonlight cast the shadows of branches and tree trunks over the snow of the clearing, almost obscuring the tracks. Kurt drew his cloak closer about him and involuntarily cast about anxious glances. He knew that wolves fled from armed men, but one heard stories . . . There was the trap, right on the pass the pack used for their forays. The rustling and growling noises told him that one of the greycoats had been careless. Smiling, the hunter stepped into the path -- and froze in his tracks. The old man stood right in front of him, though Kurt could have sworn he had not been anywhere near a heartbeat before. Ragged and dirty, he could almost be a beggar -- almost. Were it not for the eyes, the yellow eyes that made Kurt's flesh creep and rooted his feet to the spot. The stranger bowed his head knowingly and spoke, very quietly: "My poor Grimma." he said accusingly. "Her foot is broken. Now we must feed her, too." Fervently murmuring a prayer, Kurt tried to tear his eyes from the hypnotic glare as grey shadows materialised from the underbrush. The hunter raised no hand in his own defense.

The dark forests of Central Europe are the home of the *wolfsbanner*, the man who runs with the wolves. For centuries the farmers and herdsmen of France, Germany, Poland, Bohemia, Hungary, and the Balkans spoke with fear of the savage, cunning leaders of the wolfpacks that slew their sheep, their cattle, and their children. Outcasts from the society of Christian men they were, devilspawn, given strange powers by the Dark One to torment the good folk. Some legends claim that no wolf will kill a human child unless driven to it by a *wolfsbanner*, who craves the blood of innocents and owes his infernal masters the life of a human each month. Others say that *wolfsbanner* teach their charges to open doorlatches, undo knots, even walk on their hind legs and imitate human voices the better to prey on the farmers. Leading them on their raids they can see through their eyes, guide their steps and speak through their mouths. Often they were thought capable of changing into a wolf or other wild animal at will. Fearful peasants spoke of other magic, too, luring animals and children into the forest, throwing pursuers off the track and proofing the coats of the wolves against arrow and shot. Sometimes a *wolfsbanner* would come into a village demanding food and money, and woe betide the farmer who denied him.

The *wolfsbanner* makes a wonderful addition to any classic fantasy campaign, not least because so little about him is certain. Nobody but the GM need know what is truth and what legend. *Wolfsbanner* are invariably described as old men, painfully gaunt and wiry and dressed in uncured hides, rags and the tattered remnants of human clothing. Their eyes are those of wolves, yellow and piercing, and are thought to have hypnotic powers. Anyone looking directly at them becomes rooted to the spot, unable to move until he breaks free of the gaze, or is given permission. This power can be treated as a Contest of Will in game terms, with the target taking penalties depending on circumstances, failed fright checks and the real danger of the situation. Disdaining the comforts of settled life, *wolfsbanner* live in the forest summer and winter, travelling with their wolf packs and living on raw flesh, berries and grubs. They are as fast, strong and agile as their wolf companions, have preternaturally sharp senses and can see at night as well as during the day. Eschewing the company of humans they live alone with their pack. They use no tools or weapons (except, in rare cases, staves and knives) and though they can speak human languages they will talk to the wolves in their tongue. What little human-made items they need they will steal or demand with menaces from villagers and travellers or take from the bodies of their victims.

Wolfsbanner

ST 10 DX 14 IQ 10 HT 13

Advantages: Extra Fatigue +2, Cast-Iron Stomach, Alertness +4, Night Vision, Speak With Animals (Wolves), Ally Group (wolfpack, always)

Disadvantages: Primitive (TL0), Intolerance (settled people), Social Stigma (Outlaw)

What else the *wolfsbanner* can do, or not do, is up to the GM. If it is true that abandoned children raised by wolves become *wolfsbanner* they will be little more than savage humans with a number of wolves to aid them. An adventure could be based on the capture or rescue (depending how you look at it) of one such child. Trying to communicate with an angry, alienated teenager who commands twenty wolves and speaks no human language can make a memorable episode, and the morality of taking a child from its loving wolf family to return it to an uncaring human community is an issue for the players to expound.

Other possibilities are better suited to a fantasy campaign, though. *Wolfsbanner* were often thought to be evil sorcerers, capable of great feats. If they are indeed in league with the devil and use the wolves to sate their craving for the blood of children they are a menace to be rooted out in the good old heroic manner. This may not be easy as the dark wizard can turn himself into a wolf, watch the party's every move through the eyes of his pack or any other creature of the dark, including crows, owls, spiders and rats. Hidden in his lair deep in the forest, protected by fiercely loyal wolves and warded by magic, finding him may be the biggest challenge. If he also has combat magic at his disposal he and his wolves could prove a lethal threat to a hasty party whose swords and arrows prove useless against the savagely attacking beasts. Of course such monsters have weaknesses -- silver, hazelwood, fire, salt or holy relics drive them away in some legends, prayer or the sound of church bells in others.

To make the *wolfsbanner* a tortured soul rather than a monster of evil could be equally interesting. Some legend holds that he is a huntsman who was banished to live in the forest with the wolves for preferring the chase to church on a high holiday. This or any other transgression may see a miscreant sentenced to an eternal existence among wild animals by an angry deity. Maybe the banished sinner, embittered by long years of privation and loneliness, has forsworn his humanity and seeks to wreak his revenge on all who still live in the company of friends and family that has been taken from him. Maybe he earnestly tries to expiate his sin, to be readmitted to the flock of the faithful or relieved of the burden of his existence, and needs the help of the PCs. Or possibly he has not been justly punished by a deity but maliciously cursed by a sorcerer or demon. Freeing such a *wolfsbanner* could be as heroic a feat as killing the malicious kind, and he might even make an interesting PC himself.

Folkorists have long realised that the hatred of the church and the fear of the people may well mean the *wolfsbanner* hails from an earlier, pagan age of Europe. An old god of the wild, reduced to this tattered form, or an angry forest spirit roused into action by the inroads civilisation has made into what once was virgin forest, are as plausible explanations for the *wolfsbanner* as any. Perhaps he is a malign, primal entity driven by inveterate hatred for men who imprison wild animals and cut down ancient forest for grainfields, or a local deity from the distant past, once placated by sacrifice and now arisen to claim his due from the herds by fair means or foul. The ancient druidic priest of such a deity, living a life dedicated to the wild in a manner not understood by his contemporaries, is even more interesting as a scenario seed. He may not even be hostile. Instead, he may be genuinely trying to strike a balance, to convince the farmers that they must give the spirits of the wild and their children, the wolves, something in compensation for the forest ranges they have taken from them, and to make the wolves confine themselves to sheep and cattle where children would be such easy prey. His efforts would be met with hostility by tight-fisted farmers who blamed him for the inroads on their flocks, or complied with by an uncomprehending, cowed and sullen populace waiting their opportunity for revenge. In a more primeval setting the *wolfsbanner* could even be a recognised priest, regarded with fear and awe and placated with gifts and sacrifice by the people. Or maybe all the talk of placating the forest gods is just the spiel of a canny animal mage running a local protection racket. Whatever the lean, dark man in the forest is, he is not to be trifled with.

Harry Potter and the Sorcerer's Stone Quidditch Card Game

Published by [Mattel](#)

\$6.99

Harry Potter has taken over the world, and in the *Harry Potter and the Sorcerer's Stone Quidditch Card Game* you get to imagine a small but popular piece of J.K. Rowling's fictional world.

Quidditch, if you've been in hiding in a Highland cave the last few years, is the most popular athletic event among wizards and witches. The sport is played with two opposing teams of six players. Each team has players in four positions: Two Chasers are tasked with putting the Quaffle (a soccer-size ball) through any of three goal hoops. The Keeper, like a hockey goalie, is stationed to prevent this if he can. Two Beaters attempt to whack the two heavy Bludgers (jet-black, slightly smaller and heavier than Quaffles) to interfere with the other team. Finally, the Seeker hunts the tiny and elusive Golden Snitch. Snaring the Snitch ends the game and scores a hefty bonus in points.

The card game is played by two players (ages 8 and up, according to Mattel). Each player receives a team deck which is shuffled and set to the side. These decks are identical for each player (barring differences in art) and include cards for the team positions (with "strength" point values), dirty tricks cards, and counter-dirty-tricks cards. Each player draws five cards from his own deck.

A third deck represents the playing field or "pitch." The pitch deck has only the three types of balls in play in *Quidditch*. As with the sport, only Beater cards may be played on Bludger cards and only Seekers may be played effectively on the Golden Snitch. A loophole in the rules allows any Player card to be played on the Quaffle; this should be only Chasers or Keepers, I suspect.

In each turn one player turns up a new card from the pitch deck and gets to decide if he wants to play on it. (In some cases he has no choice.) If he does, he and his opponent both select a card which can legally be used on that pitch card. These are revealed simultaneously, and the player with the higher "strength" card takes the pitch card (or blocks the goal, leaving the pitch card in play.) Jinx, Spell, Foul or Referee cards can be played immediately before or after the players lays down a card.

After all the players and balls on the pitch have been resolved, the turn passes, hands are redrawn to five cards (unless some team member got Bludgered and you're not allowed to completely refill your hand), and the other player gets to turn out the next ball and decide what to do. Play continues until one player captures a specific pitch card: the Golden Snitch. The highest scorer wins -- 10 points for each Quaffle scored, plus 150 points for the Snitch. (A more challenging variant suggested in the rules gives only 50 bonus points for the Snitch.)

At its heart, *Quidditch* is an amplified version of the venerable card game "War." Being permitted to select the card to play from your hand is a good way to introduce elements of strategy and the potential for bluffing. Limiting the types of cards that can be used at any given time is an authentic-feeling wrinkle, and the assorted dirty tricks cards add extra play value without harming simplicity.

The card art is clear enough -- a bunch of kids sailing about on brooms. The young people all look sufficiently generic except for the Seeker card which represents Harry himself. The team cards are decorated in the house colors and seals of Harry's own house, Gryffindor, and their arch-rivals from House Slytherin. Potter purists will object to the garb: the Quidditch robes look more like bathrobes-over-tee-shirts with jeans and tennis shoes. So be it.

Quidditch is marred by the usual bane of the mass market game: unclear rules. These are written on a two-sided 4-1/2" by 16" sheet similar to that used for that other venerable Mattel card game, *Uno*. Small print in a "theme" type face make the rules unpleasant to read. Spotty organization leaves the rules on when Special Cards may be used to the final six inches of the back page. There's also the probable error allowing even the Seeker to take up a Quaffle and score if he can. Fortunately the game itself is so simple that it almost gets away without needing printed rules at all.

I'll add another *Quidditch* quibble for the packaging. The cards come in two shrink-wrapped bundles inside a light-cardstock pouch. While this fold-up pouch is swell for store display, it's unhelpful for keeping the cards orderly once the wrapping is off, and the cardstock won't stand up to repeated use. Expect to need to resort to rubber bands to keep your cards after a not-too-long-while.

The *Quidditch Card Game* plays quickly (perhaps very quickly if the Snitch turns up early). It may not exactly capture the essence of Quidditch (though I think the addition of a play-by-play announcer would fix that), but for your seven bucks you get a playable fast-moving card game that should keep the Harry Potter fans in your house distracted for many a match. Brooms up! And good luck!

Tigris & Euphrates

Boxed Game (2-4 players, 60-90 minutes); \$50

A lot of games claim to have fresh and unique ideas, but many of them fail to fulfill that promise. And if there is something really original, too often it simply does not work -- maybe it was not playtested enough, maybe it was a bad idea from the start. I'll try to explain in the following review why *Tigris & Euphrates* is that rare diamond in a coal mine, an idea that is truly and brilliantly unique. And why, nevertheless, it might not necessarily be a game for everybody. Considering the price tag of \$50, the latter is certainly something one would like to know before buying the game.

So what is it all about and what will you find in the box? The playing board is a very beautiful map of the land between Euphrates and Tigris. As the game unfolds, small kingdoms will flower on its squares, grow larger and inevitably clash with each other. Your goal during all of this is to garner as much influence for your dynasty as possible. Each player gets a little screen to hide his nefarious schemes behind and four leader playing pieces with the symbol of his dynasty, one for each of the important areas of prebiblical politics. These areas are marked by a color -- red for the Priest (religion), black for the King (population), green for the Merchant (trade) and the Farmer (food) gets blue. The tiles that you'll use to build up kingdoms also belong to one of the areas, there are Temples, Settlements, Markets and Farms. Each player draws six of these at random at the start of the game and keeps them behind his screen.

Your basic move is to enlarge a kingdom where one of your leaders is in control with a tile of the corresponding color. This will earn you a victory point for that area, which neatly explains what you do with the many small woodblocks in red, black, green and blue you'll also find in the box. For example, playing a Markets tile next to a kingdom with your Merchant in it will earn you a trade victory point, so you take a green block and put it behind your screen.

Which does, so far, not sound all that exciting. Two twists transcend this rather simple mechanism into a game that feels unlike anything else I've played. The first twist is a rather simple one: your victory points are decided by your weakest rating in the four areas. This is, in fact, so simple that there's bound to be another game that uses it, even though I cannot think of one. What it does for *Tigris & Euphrates* is to ensure that the color you are most in need of is the one that is hardest to score in -- while it is relatively easy to reap in lots of points in an area you are already strong in, chances are that these points are not going to help you win the game.

The second twist is far more crucial and probably illustrated best in the context of what you can do in your turn. There are four possible actions, and you can execute any two of them (or do the same action twice). One of them is placing a tile, which I've already explained above. The second is discarding up to six of your tiles and replacing them randomly. The third is playing one of your two Catastrophe tiles, which destroys the tile it is placed upon. The fourth is placing one of your leaders on the map, either in an existing kingdom or in a new one (and always adjacent to one or more temples). After you're done, you redraw the tiles you've used and the next player gets his move. If there are not enough tiles to redraw, the game ends at once.

And here comes the twist: Leaders of different players may coexist peacefully as long as they are not the same type.

My Priest and your King will get along just fine, and even if another player brings in his Merchant and his Farmer, nobody will get hurt. Things will only get hairy if there are, for example, two Priests or two Merchants in one kingdom, which can happen by unifying two kingdoms with a new tile or by just placing a new leader in an existing kingdom. In both cases, the leaders will fight it out and the weaker one will be returned to its player, but how the conflict is resolved depends upon its cause.

If you place a new leader in an existing kingdom, the number of Temples adjacent to the new and the old leader decide the conflict, and both players can add more Temples from behind their screen. The losing leader leaves, the victor garners a red victory point. If kingdoms are united, conflicting leaders count all tiles of the corresponding color in their kingdom and the player can add more tiles to win the conflict. Again, the losing leader is taken from the map. This time, however, all tiles of his color are leaving the kingdom with him. And the winner does not only get a victory point for his vanquished adversary, but also for each of the removed tiles.

This dynamic is what makes *Tigris & Euphrates* such a special game -- there is no such thing as My Kingdom, Your Kingdom but instead an evershifting web of alliances, rivalry and conflicts. And there is a subtle seesaw effect in defending your leaders, because the more tiles of his area there are in his kingdom, the more other leaders will be attracted to usurp his position from within. If, on the other hand, you choose to entrench his position with Temples, there is less time to build up the kingdom with Markets, Settlements, and Farms.

There are some more options and complications added to this basic game engine -- joker victory points that only the Merchant can collect, monuments created by placing four same tiles in a square, and other things -- all of which do add nicely to the game but also make its tactics hard to grasp at once. Prepare to play once or twice just to get acquainted with *Tigris & Euphrates*, even though the rules are neither long nor complicated. It's just that different from other boardgames.

Any reasons I can find not to run and buy this game lie in its nature, not its execution. In spite of its lavish, atmospheric components, *Tigris & Euphrates* is an abstract game -- the mesopotamian veneer is not actively clashing with the mechanics, but it is veneer nonetheless. The game itself could have been about sulphur mining on Frinibaxx III and you'd never know. Were it not for the art of Stephen Walsh, I might even have preferred the Frinibaxx III version . . . this might be the place to mention that I was sorely tempted to buy the Mayfair version of the game in addition to my German original just because of his illustrations ("Amerika, du hast es besser!" -- J.W. von Goethe). Nevertheless, there is very little immersion, let alone roleplaying elements like the aliens in *Cosmic Encounter* or even the quirky robots in *Roborally*.

But it is, to close this review with the praise the game truly deserves, darn close to the Holy Grail of abstract games. It is easy to learn, with lots of depth and complexity; it works wonderfully for two, three, or four players, and there are no long waiting times between turns . . . you name it, it's there.

Burning Shaolin (for d20/Feng Shui)

Published by [Atlas Games](#)

Written by Robin D. Laws

Illustrated by Mike Dutton

\$8.95

For the *d20* system and the Open Gaming License, Robin D. Laws' *Burning Shaolin* marks the beginning of something different. Under the all-encompassing *d20* label, the *Dungeons & Dragons 3rd Edition* player has been exposed to a horde of new settings and even a new genre or two, but never before to a new setting, a new genre and a completely different game system in one go! *Burning Shaolin* does all that because it is the first of Atlas Games' titles under their Coriolis imprint, which crosses one of their games with the *d20* System. As the title suggests, *Burning Shaolin* is a crossover between the swords and sorcery of *d20* and the furious-fists-and-all-guns-blazing game of Hong Kong action, *Feng Shui*.

It should be made clear from the start what *Burning Shaolin* is not. It is not meant to be a conversion guide between the two game systems. Instead the intention is to introduce new players to Atlas Games' RPGs, to inject back into the *d20* system some of the rules and gaming innovations seen in *Feng Shui* -- and also *Unknown Armies* and *Ars Magica*, both of which will get their own Coriolis titles, also expose books for those games to the potential sales of popular *d20* titles.

Thus in *Burning Shaolin* we have an adventure that can be run under either *d20* or *Feng Shui*. For the latter game, it is suitable for beginning characters and players, while for *d20* it needs a party of sixth to eighth level characters; otherwise they will be unable to face the kind of high-kicking, butt-whopping action to be found in your average *Feng Shui* game. Although the starting point for most *Feng Shui* games is the modern juncture, the Hong Kong of the late twentieth century is wildly inappropriate to a fantasy game; fortunately both Hong Kong movies and *Feng Shui* offer up other alternatives. These would be the RPG's 69 A.D. Juncture, and Hong Kong's wuxia fantasy genre of martial arts and high wire action. So a DM coming to *Burning Shaolin* afresh should look to the films *A Chinese Ghost Story* and *Crouching Tiger, Hidden Dragon* for their inspiration, while all this should be old hat to the *Feng Shui GM*.

d20 DMs need nothing more than the three core books to run *Burning Shaolin*. This is not necessarily so for the *Feng Shui GM*, who can get away with just the core rulebook, but may need more should he not want to start out his campaign in 69 A.D. Thus if the GM wants to expand upon getting his players back in time, he can make use of *Elevator to the Netherworld*, in addition to beefing up the opponents in *Burning Shaolin* if the characters have been played a few times.

The three-color layout of *Burning Shaolin* is similar in style to that of Atlas Games *d20* Penumbra imprint, and the book is easy to read and use. The author's writing is light in tone and peppered with the kind of advice seen in other *Feng Shui* adventures. Mike Dutton's interior illustrations are rather scratchy in places, and the smaller pieces work better than the larger ones. Every effort is made to make material relevant to each game system clearly marked. Thus anything pertaining to *Feng Shui* remains in black with the rest of the text and is marked with a black tiger symbol, while the *d20* stuff is printed in a red-brown terracotta color with a red dragon symbol.

Burning Shaolin is meant to be read and played, and is organised so the relevant material is close by when the referee needs it. Thus for the adventure's first fight scene, the rules for running fast-paced action movie-style combat under

the *d20* system is close at hand. These break down into two rule sets, one covering how to throw a "Faceless Horde" at the party and another on the gravity-defying "Wuxia" style of combat necessary to get into the *Feng Shui* oeuvre. Modelled on the *Feng Shui RPG*, the Faceless Horde rules work by allowing an individual member of the horde to be taken down with a single, not overly powerful hit, increasing a character's number of attacks, and by increasing the effectiveness of some the combat orientated feats a character might possess. Horde members are generally ineffective, but can up their maximum damage on lucky shots. The rules for Wuxia Style Combat encourage players to describe and perform stunts in combat by rewarding them with extra experience points, as well as advising on how to handle improvised weapons, ignoring gravity and so on. These two pages of rules are clear and simple, and once into the flow of the game, the DM should rarely have the need to refer back to them.

[SPOILER ALERT]

The plot to *Burning Shaolin* is quite simple. Told in three acts, it opens with the players coming upon a group of martial artists who have not only been severely beaten, but poisoned in the bargain! Once the players have dealt with the faceless horde left to finish them off this band, known as The Crippled Heroes, they can learn that behind it all is an evil demonic sorcerer known as Kan Huei. Though dying, the Crippled Heroes urge the heroes to take up their task and stop Kan Huei from taking over a feng shui site. Plus they need to get the poison used by the sorcerer so that a ritual can heal The Crippled Heroes.

Finding out more about Kan Huei involves a short -- and definitely strange for many *Dungeons & Dragons* players -- excursion into the Netherworld, before raiding the sorcerer's base inside the crater of a volcano. From there the party can find out where Kan Huei is planning to attack and rush to the Shaolin temple for the showdown in the final reel. And yes, there were no Shaolin Temples in 69 A.D., but this is *Feng Shui* and is far from important.

[END SPOILER ALERT]

In *Burning Shaolin*, what you have is an adventure that can be played using two distinctly different game systems. Because of that it does add more in terms of rules to the *d20* system than it does to *Feng Shui*. Unfortunately in doing so -- and effectively, it should be pointed out -- it leaves room for what is really only a relatively short adventure. *Burning Shaolin* only gives us an evening's worth of gaming, and because it is set in 69 A.D. it may not be where the *Feng Shui* GM wants to take his players. For the *d20* referee, *Burning Shaolin* may also prove to be less useful because the DM has to get his players to China or an equivalent for it to work. Thus because it covers two game systems, it does not offer as much as an adventure of similar length for just of those game systems. For the *Feng Shui* GM, this release offers slightly less value for money than *Four Bastards*, Atlas Games' previous adventure in this format.

Yet to be fair, *Burning Shaolin* achieves what it sets out to do: provide an adventure that a Feng Shui GM can run with relative ease, and introduce the *d20* player to an alternative style of play. Atlas Games deserves some applause for trying something a little different, and I look forward to the *Unknown Armies* Coriolis title, *Ascension of the Magdalene*, with interest.

All The Better To Bisociate You With, My Dear: Little Red Riding Hood

"Because this Mr. Karswell had evidently set out with the intention of frightening these poor village children out of their wits, and I do believe, if he had been allowed to go on, he would actually have done so. He began with some comparatively mild things. Red Riding Hood was one, and even then, Mr. Farrer said, the wolf was so dreadful that several of the smaller children had to be taken out: and he said Mr. Karswell began the story by producing a noise like a wolf howling in the distance, which was the most gruesome thing he had ever heard."

-- M.R. James, "Casting the Runes"

Once upon a time, there was a little story that everybody knew, because it had a bright red hood and a dark, dark forest. What was under that hood might have been a goddess, or a monster -- and the same thing was true of the dark, dark forest. But deep in that forest lay Grandmother's house, full of good things for children like lycanthropy, cannibalism, and alchemy. So let's follow the story into the woods, then, and pick some bright, disturbing flowers for Grandmother.

"Once upon a time there was a sweet little maiden. Whoever laid eyes upon her could not help but love her. But it was her grandmother who loved her most. She could never give the child enough. One time, she made her a present, a small red velvet cap, and since it was so becoming, the girl always wanted to wear only this. So she was called Little Red Cap."

-- Jakob and Wilhelm Grimm, "Little Red Cap" (1816)

The most familiar version of "Little Red Riding Hood" comes to us from the indefatigable Brothers Grimm: little girl in red on her way to grandma's house, warned against straying from the path, meets a wolf, strays anyway, wolf eats grandma and dresses in her clothes, plays riddle game with the little girl, eats her in turn, is fortuitously killed by a woodsman, little girl and grandma emerge unscathed. The Grimms got their version from a woman of Huguenot descent named Marie Hassenpflug in around 1811. She, in turn, likely read the earlier version set down by Charles Perrault in 1697, in which the girl is not warned against straying, and is equally unfairly eaten up at the end with no rescue.

Perrault's version is, in turn, a literary reconstruction of an older folktale, about which controversy continues to rage. Folklorists divide the honors for "original version" between the "happy ending" (in which the girl fools the wolf into letting her leave the house to urinate and escapes) and the "unhappy ending" (in which, as in Perrault, the girl is eaten up). Marxist folklorist Jack Zipes, in *The Trials and Tribulations of Little Red Riding Hood*, plumps solidly for the happy ending, seeing the story as a female empowerment story of initiation into adulthood originating among the seamstresses of the upper Loire Valley in the late Middle Ages. The cultural historian Robert Darnton, in *The Great Cat Massacre*, holds out for the unhappy ending, seeing it as expressive of the fatalism and rawness of French peasant life. In both versions, however, the girl answers a first riddle from the wolf (concerning which path to take), eats grandma herself, and burns all her clothing before getting into bed with the wolf. Labyrinths, cannibalism, and bestiality: there's obviously something more in Red Riding Hood's basket.

*"And oh, how happy any child would be
Who could put on a fine red cap, like me!"*

-- Ludwig Tieck, *The Life and Death of Little Red Cap* (1800)

To begin with, the Illuminati are hiding in there. Little Red Riding Hood doesn't become "Little Red Cap" in the Grimm version by accident; the "red cap" is the symbol of the Jacobin revolutionaries in France, and of the other Illuminated revolutionary movements across the Grimms' German principalities. The euphoniouly-named Hans-Wolf Jaeger has argued that the Grimm version is an explicit political tale of foolish German revolutionaries swallowed up by the revolution they courted, and the woodsman, or hunter, becomes the pure spirit of the German people -- and, of the German police (also called "hunters"). Jaeger finds many references to the French occupiers as "wolves" in the

literature of the contemporaneous Rhineland, and evidences Tieck's 1800 play *The Life and Death of Little Red Cap* with its staunchly feminist Red Cap and her lengthy soliloquies to the color red, which leaves the hunter's green "as far behind it as kings the crowd." Red is also the color of the French *oriflamme* battle flag, and of the Rosicrucians, while we're totting up secret histories.

*"And if this occurs it is not so strange
When the wolf should eat them.
I say the wolf, for all wolves
Are not of the same kind."*

-- from the moral to "Little Red Riding Hood," by Charles Perrault (1697)

But the wolf is less clear; as Perrault says, "all wolves are not of the same kind." In fact, the resistance against the French (Red Cap) invasion was led by wolves, the [Wehrwolves](#) of the Landssturm. And in fact, as we begin to look at the Big Bad Wolf more closely, we notice a disturbing tendency to transform -- from wolf to grandma and back -- and to disguise his true nature sufficiently that Little Red Riding Hood will banter with him in the woods rather than fleeing in terror. Perhaps our Big Bad Wolf is a Big Bad Werewolf, instead. In fact, in one of the oral versions recorded in the Nivernais in 1885, the wolf is explicitly referred to as a *bzou*, cognate with *garou*, both of which mean "werewolf" or "witch" rather than wolf (*loup*) per se. Indeed, the central body of Little Red Riding Hood stories comes from exactly the same area (the upper Loire, the Alps, and the Tyrol) as the great werewolf trials of the late 16th century. In this context, it's interesting to note that one infallible sign of werewolvbery was red hair -- a red cap of hair, say. In Scots legend, the skinchanging selkies wore red caps, as did cannibalistic faeries who dipped their hats in the blood of their victims. Could Red herself be such an ogress, a werewolf, especially given her later emergence, like the medieval werewolf, from a wolf's skin?

"Take thou ten ounces of the red Sun, that is to so say, very fine, clean and purified nine or ten times by means of the voracious wolf alone: two ounces of the royal Saturnia; melt this in a crucible, and when it is melted, cast into it the ten ounces of fine gold; melt these two together, and stir them with a lighted charcoal. Then will thy gold be a little opened."

-- apocryphal "Testament of Nicolas Flamel" (1806)

And while we're on the subject of occult transformations, it's interesting to note that one school of alchemy -- also popular in France during the werewolf trials -- calls for the "grey wolf" to devour "the red Sun" or to "burn the Red King to ashes." Does this explain the burning of Red Riding Hood's cloak in the fire? Antimony, which readily alloyed itself with other metals, was the "devouring wolf," and the result of the devouring was that the philosopher's stone in the gold (the red Sun) overcomes the wolf and the (golden) "Body [is] rendered fit for the first stage" of the Work. In France, of course, the King was the Capet -- the Red Capet, alchemically? Could the burning of Red Riding Hood's cape, and her devouring by the Grey Wolf, somehow signal the opening of the monarchy for the Perfected Work of Louis XIV, the (Golden) Sun King? A king who, incidentally, sponsored Perrault's revision of the story; concealing the symbols while Making Manifest That Which Should Be Hidden. Is Louis' apocryphal twin a werewolf, from the ancient Arcadian lineage, concealed behind an alchemically-inert [Iron Mask?](#)

"Tonight is the full moon, and the anniversary of that night, years ago, when I made my pact with the wolf goddess of the north."

-- Tanith Lee, "Wolfland"

Or is there a different hidden tradition in Jack Zipes' tale of female empowerment, one in which the original victim at Grandmother's House in the Woods was perhaps, the [Green Hunter](#), the King of the Wood? The Old Woman in the Wood has her own cannibal history, after all, from Baba Yaga to Hansel and Gretel. Is Red Riding Hood, like her Grandmother, a witch? In the Nivernais oral version, the wolf takes the "path of pins" to Grandmother's House (the pins symbolizing the witch-finder's tools pointing the way), and Red Riding Hood even has a cat familiar who tells her of the meal of flesh! In British and Irish folk tradition, witches wore red woven caps or hoods, as did other "outsiders" (such as Jews and witches) in continental France and Germany. Perhaps the story is one of Maiden and Crone, the red cape being the menstrual passage to Womanhood between the two? (And let's hear no reductionist guff about the red hood being a literary invention of Perrault; we're all having too much fun here for such tedia.)

The red cape might also be the moon of the lunar eclipse, reddened, in Slavic myth, by the moon's blood shed when her wolves (the wolves of Diana and Hecate) devoured and darkened her. Or the red cap might symbolize the red cap of the amanita muscaria mushroom, consumed in shamanic initiation rituals -- in which the shaman is burned in a fire, chopped up, devoured, and reborn whole. In that connection, of course, we remember that the [mandrake's](#) effects include hallucinatory shapeshifting -- perhaps our story centers on a hidden rivalry between the mandrake and the mushroom. Imagine two hallucinogenic shamanic traditions battling it out down the ages from the dark woods once upon a time, to the drawing rooms of Louis XIV's France, to the Illuminated battlefields of the Grimm Brothers' Germany. Could this be another echo of the war between the [Benandanti](#) werewolves and the Malandanti witches, fighting a secret war in the fairy tale dreams of children everywhere? My, what a big conspiracy you have, Grandmother . . .

Waiting in Timelines

I have a certain affinity for setting campaigns in the "past." (I put "past" in quotes because it's not limited to historical games; any game with a timeline can begin before the official starting date. I started my *Aberrant* a year before all heck broke loose in its official timeline of 2008.)

When a game is set in the past, you know what's going to happen in the world . . . or, at least, you know what *could* happen in the world. This, in turn, makes it possible to do a lot of neat things, like:

Foreshadowing. If you know what's going to happen and your players don't, you can add a lot of depth to a campaign by dropping hints of what will occur. Being able to drop hints of the coming of the American Civil War (for example) will make that event much more powerful and resonant than simply having a conflict of that magnitude simply arise out of the aether (like happens some meta-plotty campaign worlds).

Of course, sometimes that can be as simple as deciding a probable future, and building towards that. For example, our *Fading Suns* GM Dennis was doing a great job, but he was having a hard time coming up with new ideas. I pointed out that, since the game world was epic in nature by design, that epic-ness could be exemplified by thinking about where the game world might be 10 years from now. The lightbulb went off, and he extrapolated his own personal timeline for the game world. From that point all *kinds* of hints were dropped as to where the world was headed . . . providing that some stalwart heroes didn't intervene, of course.

Sightseeing. If you know what's going to happen, and so do your players, then the opportunity to explore a known timeline can make for a pleasant -- or exciting -- chance to explore the world. Being involved with NASA in 1969, for example, should enable the heroes to be a part of history . . . including the parts they didn't even *know* about. (What nefarious schemes were the James Bond-ian villains planning to thwart the moon landing?) If the players seem interested in this kind of campaign, make sure you give them plenty of opportunities to interact with history . . . preferably without being *too* cheesy. (After all, how much could a hero group consisting of a 60s sitcom show realistically accomplish? . . . Then again, Scooby Doo and the gang met Sonny & Cher, the Harlem Globetrotters, *and* the Batman and Robin!) In this kind of campaign you might even give the players copies of "what's going on/today in history"-type sheets to more fully immerse the players. (My personal recommendation is [20th Century Day by Day](#), but there are many good books that cover similar ground.)

Irony. If you know what's going to happen, and so do your players, and so do their *characters*, then there's the potential for irony. Sam Beckett, the time traveler in *Quantum Leap*, from the far-off future world of the year 1999, was often amused by developments like eight-track tapes, hula-hoops, and big 80s hair. Although this can seem trivial, it *does* emphasize the often alien nature of even recent times. For example, your players may need to smuggle a top-secret floppy disk in a 1980s campaign . . . with over 120k of data!

Long-term stories: If you know the way the world will develop, you can craft some very long-term, epic stories. The movie *Forrest Gump*, for example, uses the backdrop of 30 years of American history to tell its story. This kind of scope is not necessary (although it *is* an interesting challenge for a gaming group!), but even having a story play out slowly over a year or two can make it feel much more real and grandiose than a normal "dude wanders up with a mission" campaign.

Of course, a timeline should always feel like an opportunity, not a straightjacket. While some players may love, say, the idea of traipsing around 1963, others may feel angry at being helpless to prevent the Kennedy assassination. But even then, depending on the campaign, you can throw the players another loop. What if they *can* affect history? If your players have been grumbling about being railroaded by time, imagine the look on their face as they get in a car accident . . . and discover the deceased driver in the other vehicle is one Lee Harvey Oswald. If that doesn't pique your players' interest, check for pulses.

In all, giving your campaign a few years of "breathing space" can often let you develop a world that can grow and change the same way the *real* world does. To paraphrase the curse, we live in interesting times . . . and so do most

heroes.

John Kovalic has written me to say that *Dork Tower #15* is finished and out the door; he's hopeful that he'll have time to contribute to *Pyramid* again soon.

Regardless, I'm hopeful that I now have a new *Dork Tower* to await at my local comic and game shop . . .

The Rats' Revenge: Part II

An Adventure for *In Nomine*

by Jo Ramsay

The Story so Far

In the [first part of this *In Nomine* scenario](#), PCs were asked to investigate a locked room murder on Earth, with strange rodent connections. Other NPCs with an interest are a mortal Fortean investigator, a faerie noble and his hobgoblin servants, and a demon of nightmares. A Renegade Shedite and the two demons hunting her are also in the area.

In this final part, the murder is explained. The children's home where characters may track down a missing message is described, and the resulting trek into the Marches is detailed.

Additional Encounters on Earth

These are additional optional encounters with the various NPCs for GMs to use.

Bang Bang! Someone's dead!

There is a loud disturbance from the secure wing of the mental hospital. This is caused by Jasper's hair-trigger finger; the Game demon has shot and killed a mortal who he suspected of hosting the Shedite. Unfortunately he was wrong, and it is left to Sedek to cover up the disturbance to "prove his loyalty to Hell." Jasper calmly maintains that he was perfectly correct and stalks off to investigate other suspects. While the other demons don't care about the body count, Sedek would prefer to keep his role intact.

Reed Falls in Love

If PCs encounter Reed, he may fall hopelessly in love with one of them. This is not dependent on the vessel's age, beauty, or placid nature; faerie love is a whimsical thing. The victim of this crush will be subjected to a horrific series of romantic assaults! They will receive anonymous bunches of red roses, chocolates, heartfelt poems, serenades, and offers to take a ride on the back of the yellow Ducati. If he is encouraged, the faerie noble can make himself very helpful to a PC group, even after realizing that they are angels. If spurned, he will pursue vengeance without remorse.

The Real Story

CABLE FAERIES

(aka Faerie Rats, or Cable Rats)

Corporeal Forces - 1	Strength 1	Agility 3
Ethereal Forces - 2	Intelligence 2	Precision 6
Celestial Forces - 1	Will 2	Perception 2

Vessel: Rat/1 (cream-colored fur with reddish muzzle and paws)

Skills: Rat/1 Detect Lies/1, Dodge/3, Engineering/1, Escape/3, Locate Food/4, Knowledge/5 (Cables)

Songs: Dreams (Ethereal/1, Celestial/2), Motion (Celestial/2), Wings/1

Special Abilities: With effort (and the expenditure of 1 Essence), a cable rat can turn a cable into a temporary talisman, allowing it to be taken into the Marches. This is how they take their finds home.

Angels and demons who know about these creatures dismiss them as ethereal vermin. These faerie creatures who take the form of rats are suspected to be a debased modern form of Brownie. They sneak into the corporeal world and carefully retrieve cables, wires, and electrical components. The first sign of a house being infested with cable rats is that electrical leads disappear during the night.

They revenge themselves on mortals who provoke them, but if people treat them well, by offering food, cables, or suitably ethereal music (such as Britney Spears), the rats respond in kind. They may leave gifts of interesting cables or work through the night to mend broken possessions, just as their Brownie forbears would have done. Unfortunately, the rats are faeries and not engineers, and although mended items will be spotlessly clean in the morning, they are just as likely to be broken as they were before.

Faerie nobles use cable rats as messengers, and celestials have also been able to befriend these small spirits, training them to run simple errands or collect cables.

But where do the rats take all the cables that they gather from Earth? They have a nest in the Far Marches, occupied by the King Rat, a terrifying gestalt creature (see below). For decades, the King Rat has been sending its smaller component rats out to collect cables, in order to work on various master projects. Unfortunately, the current project was inspired by dreamscapes of people who were terrified of nuclear war. It's a bomb. The celestial bomb will devastate the Celestial Forces of large numbers of beings . . . if it is ever activated.

Rebellion in the Teind

The rulers of Faerie (see *The Marches*, p. 98) are among the proudest, cruelest, most beautiful, and most hideous of ethereals. They are envied and hated by their ethereal kin, because where other ethereals were slaughtered during Uriel's great crusade, these creatures made a bargain with the devil himself (or at least with Beleth) in return for support and succor. Made up traditionally of two warring courts, the Seelie and the Unseelie make up the two sides of the faerie realm -- rulers of both courts signed the infernal pact, and both courts have prospered. And the price of this treaty? Faerie sends a tithe of subject spirits to Hell each seven years. These slave faeries are subject to the whims and desires of the Princess of Nightmares, and are allowed to live in an area of Her Dark Marches known as the Teind (see *You Are Here*, p. 119).

If there is a leader of the Teind spirits, it is Arawn, an Unseelie noble who was delivered to Beleth in chains as part of the first tithe. And he has plans. From his own cable rat messengers he learned of the King Rat's project. Having reflected on the possibilities, he sent a messenger to Baal.

Arawn's plans to provoke a war in Hell, and has offered Baal a guide to the celestial bomb, in return for the release of the Teind. In order to reach the rats' nest, Baal's troops will have to march through Beleth's Dark Marches, and the Lady of Screams will see such an intrusion as a *casus belli*. Especially if one of her loyal faerie slaves were to intercept a letter from Baal to an unnamed ethereal that gave advance warnings of his plans . . .

Don't Shoot the Messenger

Unfortunately, the messenger rat went missing. It was expected to return from a Tether on Earth, where a private message from Baal was being sent to Arawn, confirming plans to march out into the ethereal realms and capture the bomb. But the rat has not yet returned. Arawn was sufficiently concerned to despatch Reed and the hobgoblins to find the missing rat urgently.

What Happened in Paradise Towers

- **A week ago:** A tame cable rat is given a message on Earth by a demonic Servitor of Baal, and sent to Arawn, who intends to pass the note to Beleth, pretending that he "intercepted" it. On her way back to Paradise Towers (to travel back to the Marches), the rat is injured by a dog and barely escapes with her life. She crawls through the floorboards into the Jacksons' apartment, trailing blood, and hides in a wardrobe. A day later, Lucy finds the rat, and puts her into a spare hamster cage with some warm bedding and fresh food. Forgetting her important mission, the rat curls up and enjoys the attention.
- **Four days ago:** Eddie Jackson comes home drunk, beats up his wife and elder daughter, and threatens to kill the toddler. It is not the first time. Lucy hides in her room, crying, and wishes aloud that her father would just die. The rat listens -- later that night, she chitters a message to the King Rat via Celestial Song of Tongues, calling on the other cable faeries to protect and repay her mortal friend.
- **Three days ago:**
 - *Morning:* Social services pay the Jacksons a visit at 7am, taking the girls away. Lucy hides her rat in her pocket. The girls are later placed temporarily in a childrens' home, pending foster parents being found.
 - *Midnight:* The rats take their revenge. Hundreds of them pour silently into the apartment from the Far Marches, and they attack both of the adults simultaneously, tying their wrists and ankles together tightly with Cat 5 Ethernet cable while they work.
 - Eddie Jackson is pinned down by a carpet of writhing furry bodies and eaten alive. A pillow muffles his screams. Next to him, the cable rats also pin down his wife, but not a hair of her body is harmed. Instead, the blood and entrails of her dead lover splatter across her face and soak into the blankets and sheets of the bed. Used to the screams, neighbors do not give the alert until the next day.
 - The disturbance to the Symphony caused by the murder of a mortal by supernatural entities is heard by a passing Ofanite who relays the news over a CB radio.

The Children's Home

Interesting facts: In order to find the Jackson girls, PCs must get the details of the childrens' home from social services. Typically, this sort of information is not given out lightly, but having authorization from the police will help.

Purpose: PCs will have to come here to find the missing rat. If they don't follow the trail, then eventually NPCs will retrieve the message, setting off events described in "If the Letter Was Found by NPCs."

Description: The Greer Home for Children is housed in a square gray building that was designed in the 1960s. It's a miserable looking place. The kids are a rough lot, and the older children are regularly in trouble with the police for muggings and shoplifting. Staff range from well-meaning and ineffectual to lazy and irresponsible, but are not actively malicious.

Neither Lucy or Amy have left their (shared) room since they arrived, other than to eat or visit the bathroom. If PCs talk to them, the girls are quiet and withdrawn. No-one has yet told them about their father's death and mother's incarceration, and although Lucy is glad to be away from her father, she is homesick. Her little sister doesn't understand what is going on.

If PCs can draw her out, Lucy will eventually swear them to secrecy and tell them about her rat and how she came to find it. The rat itself is dozing happily in her pocket. If PCs try to take the rat away, the girl will burst into tears and wail that her new pet is her best and only friend.

Other encounters: While at the childrens' home, PCs have a chance of running into Reed, who has finally seduced a council worker into checking the files for the childrens' location and/or Sedek and the Game demons, who have learned about the rat from the tortured hobgoblin and Ivy's ramblings.

A Diplomatic Note

Having found the missing rat in the children's home, any PC who handles the creature can make a Perception roll to

detect the relic collar that it is wearing -- no thicker than a human hair. If this hair is taken from Earth into either the Marches or the celestial realms, it will transform into its true form; a thin scroll, bent into the shape of a torc. The scroll is written in Helltongue, and is illegible to angels who do not know the demonic language. The Corporeal Song of Tongues can only translate Earthly languages (of which this is not one), but any redeemed demon will be able to decipher the contents.

The letter reads:

Having received your last missive, We are pleased to accept your conditions for providing scouts to show Our troops the location of the rats' nest in the Far Marches. In return for such aid as results in Our obtaining the alleged device to inform and enable Our Unholy War, We do hereby agree that the Teind shall be disbanded and all ethereal spirits therein released from indenture to the Princess of Nightmares, if they so desire.

We do not expect to be disappointed, either in these ethereal scouts, or in that the game is worth the candle.

Under Our Hand and Seal.

Part II: Of Rats and Men

Introduction: On a Gathering Storm

Having found the strange letter and reported it to Heaven, PCs are rewarded by their Superiors. Generous Superiors might also throw in a minor relic or reliquary, an extra vessel, or a new Servant. Dissonance will be queried, and forgiven. After enjoying a well-deserved couple of days off, PCs are invited to attend a briefing in Blandine's Tower. It is obvious from the solemn atmosphere in the meeting room that the other attendees are high-ranking angels, so it is no surprise when Laurence, Michael, and Blandine enter. The Archangel of Dreams folds her arms and watches serenely as Laurence briefs the assembled angels.

Following receipt of the letter, spies have been sent into Beleth's domain to confirm that demonic armies are heading out into the Far Marches. The spies also confirmed that both Baal and Beleth had troops in the field. Laurence reminds the audience that the Princes of Nightmares and The War are known to be antagonistic to each other, and that a war between them could only benefit Heaven. He also reads out the letter (translated into the angelic tongue), and explains how Baal's secret negotiation to free the Teind might incur Beleth's wrath. Clearly, it is the responsibility of those loyal to Heaven to investigate this rats' nest, find out what Baal was offered by the unknown ethereal, and make sure that the demons can't get it. Fortunately there are Servitors of Heaven who have recently encountered these ethereal rats on Earth and know something of their habits.

All eyes turn to the PCs.

Laurence calls them to the front of the room and formally charges them with a Quest. For the honor of Heaven, they are to secretly travel through the Marches, find the rats' nest, and remove or disable the device mentioned in the letter. Refusal is not an option.

Of course, PCs may have decided to go and investigate the rats' nest without any prompting at all . . .

If the Letter was Found by NPCs

If either the demons or Arawn's messengers retrieved the letter from the missing cable rat before PCs got there, then both PCs and Superiors have less information to work with. PCs are called to another meeting, either in a local Tether (if there is a Tether to Michael or Laurence in the area) or in a run-down hotel room. They are met there by three other celestials, who quickly prove to be the Archangel Michael, one of his Mercurian aide-de-camps, and one of Blandine's senior Malakite honor-guard.

The reason for this meeting is that angelic spies in the Marches have observed movement of demonic troops across Beleth's domain and into the Far Marches. It seems that both Baal and Beleth have troops in motion, and given that they are known to detest each other, it is unlikely that they are simply on a training exercise. A captured ethereal from Beleth's Marches mentioned the "rats' nest" as the cause of these movements. As the PCs are the local experts on these creatures and their habits, they are requested to trek into the Marches, find what they can about the troop movements, and discover why the demons are interested in the cable rats' lair. Needless to say, secrecy is of the utmost importance. Michael comments dryly that there will be plenty of opportunity for heroism later. The Malakite also briefs the PCs on cable faeries, repeating most of the information given above. However, Heaven has no guides who have ever visited the rats' nest in person. For this, PCs are on their own. Characters who are less than totally enthusiastic about the opportunity to sneak behind enemy lines, through hordes of demonic infantry, and into an unknown domain in the Far Marches will be chastized by the Archangel, who claims that he only wishes he could go himself. This is of course absolutely true.

The Road Less Travelled

Travelling through the Marches poses some problems for PCs. While Blandine will assign a Cherub to guide them into the Far Marches on request, no angel knows where the rats' nest is located. The easiest way to find it is either to tag a cable rat and follow it home, or to head toward where the spies reported the armies, and hope to capture either a demon or ethereal who knows the way.

It is simple for a celestial to create a disguise in the Ethereal Realms; usually they will appear as the image of their most recent vessel, but they can change this appearance with a successful Will roll.

The trek is arduous, and involving all types of exotic terrain, with associated problems (whispering deserts, a road paved with teeth, rafting down a river of tears). As PCs head away from the Vale of Dreams and out into the Far Marches, the geography gets stranger, and the Earthly laws of Physics are regularly bent or broken. The sky is as likely to be red as it is to be blue, a straight line may not be the shortest route between two points, and concentrating hard on where you want to go (with a successful Will roll) is a more accurate form of navigation than any compass.

Combat in the Marches

In the Ethereal realm, characters can choose whether to engage in ethereal or celestial combat (corporeal combat is not an option). Ethereal combat may involve Songs that are specifically stated as causing mind hits, Songs of Dreams, or the Dreamwalking attunement. Many Corporeal Songs do not function in the Marches, and it is down to the GMs discretion to decide which Songs should work there. It is also possible to simply assault an opponent directly, using force of Will to maintain a weapon that will function in the ethereal realm -- this defaults to an ethereal attack. Combat of this type in the Marches is calculated similarly to corporeal combat, substituting Intelligence for Strength and Precision for Agility. Damage is taken as mind hits instead of body hits. Damage is calculated as if combat was unarmed, but the use of "ethereal weapons" allows an attacker to use a weapon skill to attack, rather than Fighting.

Celestials, ethereals, and humans who can control their Essence expenditure can also choose to engage in celestial combat in the Marches. Due to the dangers of losing Forces, celestial combat is relatively unusual in the ethereal realm.

Optional Encounters

These are optional encounters. There are extra ideas for locations in the Marches and ethereal NPCs in *You Are Here*, and the *Liber Servitorum*.

The Black Knight

As PCs stumble down a mountain trail, they see a narrow chasm between two cliff-faces ahead of them. The ledge on the PCs' side of the precipice is buffeted by high winds, enough to make flying a tricky proposition at best. A sturdy wooden post is fixed to the ground by the cliff's edge, with a brass bugle attached to it.

As soon as one of the PCs blows a note on the bugle, the ground begins to shake and the sound of horses' hooves can be heard. As if out of nowhere, a knight in matt-black armor rides out from the far side of the chasm. A translucent bridge appears under his horse as he approaches; it curves in a delicate arc and has no supports. When the knight reaches the middle of the bridge, he calls out to the PCs and tells them that he has vowed that only those pure in heart and strong in faith shall pass.

The knight is a Malakite of Uriel, one of the infamous Tsayadim who deliberately left Heaven after their Master was recalled, becoming Outcasts rather than swear allegiance to any other Word than Purity. He interrogates PCs at length about any recent deeds (or misdeeds), accusing each one of whichever impurities he can detect with his resonance. His accusations become wilder and wilder, and it is clear that the black knight has no intention of letting anybody cross the chasm. If pressed on this point, he will invite the PCs to select a champion to fight him, swearing that if he is defeated in ethereal combat then the party may pass.

After the knight's defeat, the bridge shimmers and then disappears as if it had never existed. The knight's shield now displays Uriel's sigil in silver on a red background. If defeated in single combat, he attempts to answer any questions the PCs wish to ask him -- except for how to traverse the bridge. He then mounts up and rides off.

In order to cross the chasm, PCs must have faith. If a character gathers his courage and steps out into the void, the bridge miraculously appears under his feet, supporting him until he reaches the other side. If characters fail to defeat the knight then he rides back onto the bridge; they will have to retrace their steps and find another way around.

Pool of Futility

A pool of dark, muddied water ringed with empty beer cans and urban waste. Many footprints lead towards it. PCs who peer into the pool must make a Will roll. If the roll is successful, the pool will show them an accurate view of whichever location they currently have in mind, in any realm. If the Will roll is failed, then the pool will show them a nightmare vision of the places or people they most love suffering terrible tragedies. Often these dark images will strongly suggest that the PC abandon his current quest and go back to help. A mortal friend might be shown in an

intensive care hospital bed, whispering the character's name, or a favorite apartment might be shown being burgled and set on fire by hated enemies.

Behind Enemy Lines

As PCs approach the rats' nest, they find signs of the demonic armies who are encamped to either side. Terrain becomes swampy, broken up by thickets of tentacled trees that ooze blood when scratched. Periodically, dense gray mists emanate from the swamp, hiding everything from view. Wide trails of footprints are trampled through the ground, and flocks of ethereal carrion birds occupy every available perching space. Wings of demonic scouts soar across the patchwork skies overhead and there are also wide patrols on the ground to be avoided.

The demons each alter their appearances in the Marches to become as intimidating as possible, and it is difficult to identify an individual's Band or allegiance by sight. There are currently no battles in progress, the armies are standing by and waiting for further instructions. Beleth's troops have tattered banners flying, and nightmare-handlers standing guard with manticores and cthulhoid horrors leashed on silver chains. Baal's troops are smartly uniformed, more disciplined, and have brought some tanks along to the party.

Anyone with tactical skill who attempts to survey the two forces will spot that Beleth's ragtag army has a clear advantage, in numbers as well as terrain. Knowing Baal's reputation as a general, this implies that his troops are intended to act merely as a diversion.

If PCs are stealthy, the first contact will occur when they hear screams and laughter in the distance. Investigation shows that a group of Beleth's demons have trapped a gangly Impudite who went going AWOL from Baal's ranks. In the absence of any other orders, they have decided to torture her by crucifying her upside down. It relieves the boredom. Spying on the conversation shows that the armies are currently waiting for orders, and that there are rumors that both Princes will be showing up in person to direct their forces. If the Impudite is rescued, she is more than willing to strike a deal with her saviors in return for a clean getaway. She has heard the rumors that Baal's strike force are disposable cannon fodder, here to present a diversion while the real strike team sneak into the nest and grab the bomb. She believes this to be true, which is why she is trying to go quietly AWOL.

By pretending to be either demons or ethereals, PCs will be able to sneak through either of the battle-lines -- they will have an marginally easier time with Beleth's troops, who are less disciplined but more casually sadistic. As well as the usual gossip that Baal wears womens' underwear, Beleth sings country music in the bath, and that the other side are afraid of the dark, PCs may overhear rumors about the rats' nest and what lies within it. These include the existence of a king rat, a terrifying Godzilla creature who is as powerful as a Superior. The mists provide an ideal cover for brave angels to sneak past the soldiers to the cable rats' nest.

The Rat's Nest

The rats' nest bears a strong resemblance to a giant ball of wool, as large as a tower block, made of woven metallic wires. It can be easily seen from any vantage point (such as a tree) that rises above the camps.

On reaching the nest, PCs will be able to clamber inside through any of the many holes leading inwards. The interior is a maze of tunnels and crawlways, and the whole edifice feels like an artifact to anyone who makes a successful Perception roll. Any different types of cables are woven into the walls, and a wide variety of technical devices, both old and new, have been retrieved by the rats and built into the nest. The nest is lit by an eclectic array of lighting equipment, and after a few minutes, PCs begin to notice the cable rats themselves. The creatures are nervous, and are hiding in the walls, where only their pink eyes are visible.

The King Rat lives in the very center of the nest, in a huge hollowed out chamber. The bomb is in another secret room, which any cable rat can locate. Also in the nest are five of Baal's SMS (Special Marches Squad) elite commandos -- their mission: to locate and capture the device, using as much force as is necessary without drawing Beleth's attention. The demons spent several hours trying to find the center of the nest, and have now regrouped with a subtle new plan.

They will just hack their way through, destroying all cable rats they can find, because destroying ethereals in the Marches makes no disturbance.

The King Rat is a large creature of fiendish intellect, who enjoys chess, witty conversation, building impossible devices of ultimate doom, and protecting its rat subjects. It is a faerie noble, and if approached with the proper amount of respect, it will barter for the bomb; as far as the King is concerned, the device stopped being interesting after it was completed.

If the PCs do not encounter the demons before they begin their hack and slay approach, they will find that the tunnels in the nest twist around suddenly, so as to all lead into the nest's center. There the King Rat waits to defend its home from all intruders; the demons have already stumbled into the King's lair and are attempting to assault it.

If any Superiors are summoned, there will be trouble. Both Baal and Beleth are taking a personal interest in the affair, and both of them will respond to any enemy Superiors by turning up in person. An animated three-way argument is likely to ensue, during which sensible PCs could escape with the fleeing cable rats.

How I Learned to Love the Bomb

The bomb is a gleaming metal sheath, studded with flashing lights and clever control systems. It is also a living relic

(see *Liber Reliquarum*, p. 104) with enough intelligence to carry out conversations, and it is a coward -- the bomb understands that it will cease to exist if it explodes, so it has no intention of doing so. PCs (or NPCs) are welcome to try to persuade it otherwise . . .

It is not the only relic in the rats' secret room; there are also any number of abandoned master projects that the rats have attempted in the past. While some may still work, the majority are now rusted and forgotten.

Designer's Notes: GURPS Monsters

by Hunter Johnson

I had a few revisions under my belt (*GURPS Japan*, *GURPS Bestiary*) when I hashed out what would go into the book originally envisioned as *GURPS Horror Bestiary*. I felt that a horror bestiary in the same style as *GURPS Fantasy Bestiary* or *GURPS Space Bestiary* would feel too much like *GURPS Creatures of the Night*. The vision of the book morphed along the way, settling finally on a *GURPS Villains* style -- individual monsters in fine detail.

The original plan also included the idea that the monsters should be divided into ten chapters. Those ten chapters would correspond to the sections in the monsters chapter of the new edition of *GURPS Horror*. Two things lead to the current division (four chapters, corresponding to the origins of the creatures): diverging schedules for the two books, and the fact that more monsters can be included if there are fewer chapter splash pages.

With the vision and outline in place (but subject to change), the remaining hurdle was to get submissions that fit both the vision and the outline. Conveying that *GURPS Monsters* was not going to be a catalog of creatures nor a clearinghouse for mundane villains was a bit of a problem, it turns out. Now, some exceptions were made in the final product (the Phantom of the Opera is not unnatural, but he was included as a classic movie "monster") and some submissions were sent back to the submitters with suggestions to make them fit (Tamok the Conqueror was originally a race a creatures, not an individual from that race), but some of the good characters that were submitted would have been wrecked by shoehorning them into this book's vision.

Happily, the designer's notes feature here in *Pyramid* has a long and glorious tradition of providing an outlet for such things. Bill Stoddard sent in this monstrous creature, which was eventually cut because she is wholly natural, as scary as that may be. It went through the playtesting process, but the changes from the original submission were only cosmetic in nature.

Asuri Ranees

Total Points: 257

Age 9; 8' long; 410 lbs.; a tiger of moderate size but with an intimidating air of fierceness.

Racial Package: Tiger [172].

ST: 35 [0]; **DX:** 16 [20]; **IQ:** 6 [20]; **HT:** 20/25 [60]

Advantages: Animal Empathy [5]; Chameleon (only in natural cover, -20%) 1 [6]; Charisma +1 [5]; Reputation +1 (Cunning predator, most people/most of the jungle, all the time) [3]; Single-Minded [5].

Disadvantages: Bad Temper [-10]; Enemy (Sir Roderick Jameson, on a 6 or less) [-5]; Migraine (Mild) [-5]; Odious Personal Habit (Man-Eater) [-15]; Reputation -4 (as a Man-Eating Tiger, in India, on a 7 or less) [-6]; Sadism [-15].

Quirks: Afraid of fire; Really likes fish. [-2]

Skills: Area Knowledge (Jungles of the Himalayan foothills)-10 [8]; Fishing-8 [4]; Tracking-18 [2].

Notes: Asuri Ranees's Migraine disadvantage actually represents recurrent toothaches; during one of these toothaches she is likely to attack unpredictably. It was during the aftermath of such an attack that she developed a taste for human flesh. Her Sadism is the common feline trait "plays with her food" in exaggerated form.

Asuri Ranees ("the devil queen") is an Indian tiger and the dominant predator of her particular jungle. She has an extraordinarily good constitution and has lived to an unusual age. She was above average in cunning to start with and

has grown more so with the years. Her depredations have so terrified the nearby villagers that she is widely considered to be a demon in the guise of a beast, the source of her name. More than one hunter has failed to kill her.

Asuri Ranees motives are quite straightforward: she wants to eat regularly, preferably meals such as fish or human flesh; she wants to hold her territory against other tigers; and, occasionally, she wants to mate and raise cubs. But her strategies for accomplishing these are unusually sophisticated; as an NPC, play her with exceptional Craftiness (p. BE84). She is certainly clever enough to circle back and approach an unwary hunter from behind. If she is among trees, her stripes give her +2 to Stealth if still, +1 if moving. Her tactics are the classic tiger technique of leaping from concealment to seize the neck (p. BE79) and snap it (p. CI170). If this doesn't work, she will switch to raking attacks with her back legs to disembowel her prey.

As happens to cats, her teeth are going bad and occasionally cause her pain, which makes her restless and irritable. When this happens, she is dangerously unpredictable, likely to respond to any challenge or threat with a direct attack. This is a weakness that could get her killed, but it has cost the lives of a few hunters who weren't prepared for her speed and ferocity. She can sprint a quarter mile in just over 30 seconds. Her HT is high enough so that it will take more than one shot to finish her off.

Sir Roderick Jameson has made a name for himself killing man-eaters around the world. He has been trying to add Asuri's pelt to his collection for three years. She has killed two of his crew since he started, the first fatalities in all of his hunts. His quest may be turning into an obsession...

Racial Package

Skills: Climbing at DX [2]; Jumping at DX [1]; Stealth at DX [2]; Survival (Jungle, specialized) at IQ+2/+8 [8]; Swimming at DX [1].

Maneuver: Neck Snap at ST-2 [2].

Other Places and Times

Tigers are widespread geographically and formerly were even more so. Adventurers in a variety of lands might encounter Asuri Ranees under a suitable local name. For example, a Japanese tiger might plausibly be called Mononoke Hime (angry ghost princess).

In the Stone Age

With a few changes to her racial template, Asuri Ranees could become a sabertooth or smilodon (see p. BE54 or D76) and the nemesis of a band of early hominids. The hunt that finally rids the tribe of her might be a suitable epic adventure, or the occasional seizure of a relative could provide a sense of Paleolithic horror.

For the sabertooth package, reduce Enhanced ST to +16 [90] and buy Sharp Teeth up to Fangs [10]. The skill of Swimming and the Neck Snap maneuver can be dropped, for a net -15 point cost.

Avatar

In an Indian campaign, especially one set in ancient India, Asuri Raneer may be literally what her name implies, a demonic enemy of the gods walking the earth in tiger form. This version could have even higher IQ and the ability to speak Sanskrit; other supernatural powers would be appropriate as well, especially if her human enemy were an avatar of one or another god. Consider making her Unaging [15] or even giving her Immortality [140].

Alien

Certain biological designs are highly efficient for certain survival strategies and thus likely to evolve independently in different lineages. In an outer space campaign, some other planet's evolutionary history might have turned up its own huge feline predators who would view human explorers as an intriguing new source of meat. The creatures might be almost identical to earthly tigers or might have exotic powers, as in Van Vogt's classic "Black Destroyer."

The Bunyip Dreaming

The Bunyip Dreaming which serves as Dan's patron is a powerful spirit entity, built on the Spirit of Place template in *GURPS Spirits* (p. SPI61). It keeps its Water Breathing and Swim spells permanently on Dan.

Biography

As a youngster, Dan Saunders was a societal misfit in colonial Australia. An orphan who found himself on the streets of Victorian-era Sydney, he spent a tough childhood picking pockets and eating scraps or whatever he could steal from markets. By necessity, he developed a taste for raw meat. He spent several years living this way, on the edges of society and out of sight of most people.

Reaching adulthood, Saunders developed an appreciation for female company. An attempted abduction of a young woman went wrong and Saunders killed her without realizing his overpowering strength. Fearing capture (and the gallows), he stole a horse and fled the city for the relative safety of the bush.

Saunders rode for several days, bypassing towns he came across. Eventually, at a billabong by the road, his hunger got the better of him and he killed and ate the horse. A few days later he ambushed his first human prey. He carved a leg bone into a snorkel and used it to lie in wait underwater for future ambushes. Before long, the road became notorious for the disappearances but, being the only road between two large towns, traffic never died down enough to bother Dan. He especially enjoyed catching young women, at first for their company but later just for the taste of their flesh.

Over time, a local bunyip Dreaming has become attached to Saunders because of the sympathetic activities he pursues. This malicious spirit grants him unnatural strength and bloodthirstiness, at the cost of slowly making him less human. His urban survival skills are being replaced by more bestial ones. In his mind, Saunders is now a bunyip, the local settlers and Aborigines refer to him as one, and to all intents and purposes he is one.

Motivations

Saunders is now motivated almost completely by two desires: food and women. He attempts to ravish any women he captures, but before he gets the chance most are dead of wounds or pure shock, at which point they become simply food. Saunders retains a knowledge of English, and if any potential victims think to speak to him he may hesitate as the human and bunyip within him compete for control. He is not entirely given over to his monstrous side yet, and he could possibly be lured back to society with promises of all the things he never had as a child. It is unlikely that anyone would think to offer such things though, and any glimpse of humanity in Saunders should serve merely to highlight the horror of his corruption.

Encountered

Typically, Saunders will be encountered by weary travelers stopping along the road for water. The first person to approach the billabong will be dragged in and quickly dispatched. If young ladies are present in the traveling party, Saunders will leap out to drag one away, otherwise he will probably lie hidden with his prize.

If enough people go missing, authorities may be called in to investigate. Local Aborigines will warn of the impossibility of capturing or killing a bunyip. An armed force may scare Saunders into hiding, or force him to adopt stealth raid tactics on camps, increasing any tension. If actually captured alive, the "wild man" will create a sensation. He may be transported back to Sydney for study, where all hell will break loose when he inevitably escapes.

Another possibility is that eventually Dan's billabong becomes so shunned that he has to move on. The trail of

destruction as he crosses the countryside should be enough to scare local farmers witless and present a golden opportunity for brave young souls seeking their fortune. Note that with his animal stealth and human cunning, Dan will not be easy prey for anyone with a gun.

Variations

Since bunyip Dreamings are immortal and society will always produce dregs like Dan, he can easily be moved forward as far as the present day or even beyond to a fantastic Cyberpunk world. Dreamings are usually attached to an area of land, but if one somehow gets stranded on a ship bound for London it will find plenty of people like Dan to infect. In a non- Australian setting, Saunders could be possessed by any local variety of a malignant spirit, slowly sapping what remains of his humanity as he terrorizes the locals. In a fantasy campaign, rumors of a local troll lurking under a bridge and eating passers-by could turn up a version of the bunyip, recognizable as a man missing from the local village and now corrupted by magical or spiritual forces.

What is a Bunyip?

Bunyips are traditional creatures of Australian Aboriginal legend. They are large, fierce, and semi-aquatic, living in creeks, swamps, and billabongs (from an Aboriginal word meaning a waterhole). Physical descriptions are as varied as the many Aboriginal tribes -- bunyips are described as either scaled or furry, horned or not, tailed or not, having clawed or webbed feet, and being anywhere from human- to elephant-sized. What they have in common is a fearsome, spine-chilling call and an appetite for humans, especially young women.

These legends were truly believed by the Aborigines, not treated merely as stories to scare children. When Europeans arrived, Aborigines told them of bunyips as fact, resulting in many superstitious and uncertain settlers spreading wild stories based on weird sounds heard in the bush. To tradition-minded Aborigines, even if bunyips have died out in modern times their spirits still exist as bunyip Dreamings, capable of interacting with people who invoke them through rituals.

What were Bunyips?

Paleontological evidence shows that megafauna populated Australia recently enough to have co-existed with Aborigines. Two examples are Megalania, a 23-foot lizard, and Diprotodon, a two-ton marsupial resembling a rhinoceros-sized wombat. Both of these have been suggested as the source of bunyip legends. Another theory has been proposed for more recent bunyip reports: Down-and-outs in colonial times and as recently as the Great Depression may have taken to ambushing people by hiding in shallow water with breathing tubes, resulting in spates of disappearances at local waterholes. A fondness of lonely men for female companionship is blamed for the tendency for victims to be women.

The *Miscellanea*

by Damien Wellman

The *Assorted Charts. Etc. of Various Traditions of Occultism*, otherwise known as the *Miscellanea*, is a prized collector's item to those who deal in occult and hidden knowledge. Consisting of a dozen thick black three-ring binders, each stuffed with papers, the *Miscellanea* is exactly what it claims to be: an assortment of many charts, monographs, essays, and copies of writings ancient and modern from many cultures, ranging from pop-culture astrological fluff to serious and scholarly works on obscure magical practices.

If only it had an index.

The *Miscellanea* is organized neatly and thoroughly, if very eccentrically -- the information is sorted by the original geographic origin of the tradition from which it sprang. Or at least, that's the best guess, as the position of some works within the collection conflict with common knowledge. This will cause much confusion to the unwary as there is no table of contents, index, or other clarifying aid, but the collection is organized well enough that reference is only fairly difficult after some study, as opposed to impossible.

Aside from its value as a reference work once mastered, the *Miscellanea* is valued for containing copies of works long thought to be lost. The quality of these copies widely vary, from neatly handwritten manuscripts to blurry photocopies of centuries-old parchments, but the *Miscellanea* is a treasure trove of information for those interested in occultism, albeit incomplete and spotty.

In a game with working magic of some kind, the *Assorted Charts* will divulge very little new information to a novice as even the copies of "lost" works require a thorough grounding in the basics of the tradition. The *Miscellanea* is the notebook of a completist, not a primer. For those who already somewhat adept, the *Miscellanea* can provide new insights and angles of thought not previously considered, allowing a better synthesis of what is already known.

In game terms, one cannot learn new skills from reading the collection, but study will help someone who already has at least the basic skill advance in what they already know, and anyone consulting the appropriate information in the *Miscellanea* on a question should be given a significant bonus to a skill roll at the cost of taking longer to try, thanks to the eccentric organization of the collection.

Alternate Versions

It's possible that the *Miscellanea* itself possesses magical power. A benevolent compiler might have added magics that aid what's already present, allowing a student to swiftly build on existing knowledge. A darker *Miscellanea* might only have such a variety of knowledge due to stealing it from the minds of those who read it, explaining why it contains so much information not available elsewhere.

The *Miscellanea* doesn't **have** to be magical in origin, of course. It could simply be an extremely comprehensive collection of scientific papers and notes, different from similar professional works in mysteriously containing information that is considered classified or a trade secret. Anything from the real formula for Coca-Cola to how to build a perfectly safe fusion reactor could be found within. In a game with *Weird Science*, the *Miscellanea* could be a collection of many disparate theories, perhaps updated periodically by the current owner, reflecting their biases -- this would make for a *Miscellanea* that is quite vague on certain subjects. In a *Mage: The Ascension* game, there could *several* collections of this type, each different and mutually contradictory!

For that matter, who is the compiler, and what was their motive? Is the *Miscellanea* a simple working manual? A hoax? Was the compiler trying to nobly collect far-flung knowledge into one place, or were they greedily copying and destroying other rare artifacts? All of these are possible answers when you place these books into your game.

Oriental Adventures (for D&D)

Published by [Wizards of the Coast](#)

Written by James Wyatt

256 color pages; \$34.95

Okay, I have a special confession to make: *Oriental Adventures* was the first roleplaying book I ever purchased. I'm speaking, naturally, of the first edition of the book published back in the day for *Advanced Dungeons & Dragons*. I was only twelve years old and had just been exposed to this cool new game that an old friend had showed me. At the time I didn't have any of the core books or even anyone to play with. But the book set my imagination alive nonetheless. I would page through it every day, memorizing stats and creating characters that I played only in my mind.

A while later I got to actually play the game, and I learned to appreciate what a great book it really was . . . and what a wise purchase I'd made that day. So now, years later, after *Dungeons & Dragons* had just seen its third incarnation, I was quite interested when it was announced that *Oriental Adventures* would be re-released for *3rd Edition*. Needless to say, the game shop was my first destination on my way home from work a short while ago when the book hit the shelves. And paging through this new edition, only one question is running through my mind: will this new book set my imagination on fire as its predecessor did so many years ago?

Well, there are a lot of differences this time. The book has gone from a 144-page black and white text to one that's 256 pages and full color. A lot has changed since those old days. *D&D* has grown by leaps and bounds, and this book will have to be a lot more to a lot more readers. The average gamer probably knows at least a little bit more about Asian culture than the average gamer did fifteen years ago. And since then there have been a bunch of games published with Asian or at least Asian-inspired settings, so the new book will have some competition. Will it stack up?

After reading it through, I'd have to say I think so. The book brings back a lot of the old material from the first edition, but it expands that material greatly and adds a lot to it. The first big change is that the old realm of Kara-Tur is dumped, and Rokugan is inserted as the "optional but default" setting. This setting is the very same as that of the *Legend of the Five Rings* series. Being that I've never taken a big interest in *L5R* I'm a bit indifferent to the news, but many gamers are certain to be happy for it, and at the very least it's good to see *Oriental Adventures* published alongside a sound established setting.

Reading through, one of the first differences is that there are more races. We have the old korobokuru, hengeyokai, spirit folk, and human mix, but now we have nezumi, which are drawn from *L5R*, and the vanara, which are based on the followers of Hanuman in the Indian epic *The Ramayana*. For those who didn't read the old edition of *Oriental Adventures*, the korobokuru are more or less a race of barbarian dwarves, the hengeyokai are a race of shape-shifters, and the spirit folk are like humans but very in touch with the spirit realm. The nezumi are a race of bipedal rats who are among the only races able to survive in the Shadowlands without suffering its taint (we're talking *L5R* here), and the vanara are a race of curious bipedal apes. All told, the translations are decent. The hengeyokai with their shape-shifting abilities are the hardest to balance out with the others, and even they are given fair treatment (by means of a level adjustment, just like playing monsters out of the *Monster Manual*).

All of the classes from the old edition are present (although a few as prestige classes), and they are even expanded upon. In *Oriental Adventures* one can be a barbarian, a fighter, a monk, a ranger, a rogue, a samurai, a shaman, a shugenja, a sohei, a sorcerer, or a wu jen. The barbarian, fighter, monk, ranger, rogue, and sorcerers are translated

from the *Player's Handbook* with few changes (and no reprinting, although the author does discuss each individually and how it translates into the game). The only major change among them are some minor skill and feat changes and the fact that monks can freely multiclass in *Oriental Adventures*.

Samurai are presented with a separate class (no need to worry about that prestige class presented in *Sword and Fist*) that is pretty fairly developed, although they don't get insane game rule abilities or bonuses. The fun of playing a samurai comes more in the roleplaying than in min-maxing the rules with them. Sohei are warrior monks who spend most of their time defending temples and the like; game-wise they're a lot like paladins, with monk-like special abilities and spell casting powers. Wu jen are very much akin to wizards, except with more of an elemental bent, from which they can get bonuses for mastering a single element. There are no clerics in *Oriental Adventures*, but there are two cleric-like classes (well, divine spellcasters at least). The first is the shaman, and they're basically intermediaries between the human realm and the spirit realm (a major theme in an Asian campaign). The shengenja are nobles like the samurai, but with elemental spellcasting powers. Overall they come off more like a cross between clerics and wizards than just elemental clerics; this being the result of the fact that they are the primary spellcasters in the Rokugan setting and thus must strike that balance.

Most of the core classes are kept pretty basic, as they are in the *Player's Handbook*, and the really meaty stuff is in with the prestige classes. There are seventeen of them (plus a few tucked in the back), and they are a dynamic mix that is bound to see a lot of play. There are several classes of elite monks, several shape-shifting classes, and a bunch of the prototypical warriors of Asian legend, such as the elusive ninja or the kensei weapon masters. All told, the prestige classes are about standard for what Wizards of the Coast has been putting out. There are those that feel that the prestige classes are cheesy and unbalanced, and they won't be disappointed. But the folks who love the prestige classes won't be disappointed either. There's a lot of material in there that will make for all kinds of game play.

There is only one new skill added -- Iaijutsu Focus, which is the art of quick draw and can allow for extra damage on an attack. Rules for Iaijutsu duels are also added later, enabling players to reenact the duels of the legendary masters, where the first blow is often the only blow. There are a whole bunch of new feats added, though. Most of them are martial arts-style combat feats and ancestor feats, a product of the Rokugan setting (basically, a person with an ancestor feat gets some sort of special bonus for having a certain ancestor -- all of whom are NPCs tied to the Rokugan setting).

One of the things left out of this edition, and which some gamers are surely going to miss, is a point system for keeping track of honor. Instead the author simply gives us several abstract levels of honor, which a character might obtain. It becomes more of a roleplaying issue than a game rule one. Now some are bound to gripe about this, as the old honor point system was pretty neat and added a certain level of challenge to the game. I, for one, know that I would liked to have had it kept in, although in the end the abstract system certainly does make for smoother game play.

Although one might expect it, there aren't a whole bunch of new combat rules for handling martial arts and the like. The developers are pretty happy with the current system that throws martial arts moves in with feats. I've never been a fan of that system, as it's too limited to encompass what a martial artist can really do, but, again, the author has gone for what is simplest and flows the easiest instead of creating a bunch of clunky tack-on rules. One thing that was added was martial arts "forms." These are basically lists of martial arts moves (feats), and when one completes the list they get some sort of bonus move. I have to admit that these bonus moves are far more lackluster than they could be. When one thinks of a martial arts master, they think of something exciting, and it would have been nice to see some sort of really exciting move that the warrior gets for completing his training -- you know, that super secret move that only the grand master knows. Instead, the master just gets some sort of bonus that, while useful, isn't terribly exciting.

The spells section is great. This edition brings back a lot of the old spells from the first edition and adds a bunch new to it, such as spells mostly for Rokugan, as well as even spells out of *Dragon Fist*, a game of Hong Kong wuxia martial arts action that only saw release in PDF format. What's really so great about them is that they are so open for use in just about any campaign. Many have some sort of Asian flavor to them, but what we're really getting is just another batch of new spells that are on par with what we got in the *Player's Handbook*. The same goes for the magic items. Most have an Asian theme, but most of the special abilities and effects are readily deportable into any setting without throwing things off. My only gripe with the items is that I would like to have seen more of them.

The monsters section is quite thick, something that's a real bonus, as being shortchanged on monsters leaves players bored of fighting the same stuff. The mix here explores most of the prototypical Asian monsters that we usually see translated into RPGs, such as the kappa, the ki-rin, the tengu (always a favorite of mine), and the vile oni. It's split fairly evenly between adversaries for a standard *Oriental Adventures* campaign and those which are primarily for a Rokugan campaign, although most of it could truly be adapted to either. As far as development goes, the monsters seem pretty fair. There aren't any super-monsters that are going to throw things off, and most are balanced right about where they should be power-wise.

The section on world-building is very cursory and leads to a serious gripe with the book. One of the things that this book does is really neglect showing players how to really play an Asian character. Asian culture varies quite a bit from the European culture most fantasy games are set in, and that Asian world is one of subtleties. These issues really aren't discussed much at all, and it's pretty much up to the individual DM or player to make sure that they are roleplaying it right. It's not that the author was inconsistent with Asian culture in any of the writing . . . not at all. But you won't find a section discussing the sordid intrigues of honor versus duty and what it all really means. This is one of the things that makes other games like *Sengoku* such excellent historic Asian RPGs -- they really show you how to roleplay in that Asian world. Of course, *Sengoku* is roleplaying strictly in ancient Japan, and maybe that's part of the problem -- *Oriental Adventures* is a pan-Asian setting, and perhaps the author didn't have the space to get into it. Still, it would have been nice to see even a half-dozen pages that really discussed some of the differences in playing in an ancient Asian setting as opposed to a European one.

The final forty pages or so are devoted to the world of Rokugan and give us a basic overview of that setting. It goes through the major clans, their history, and their geography, and it provides a lot of useful stuff for kick-starting such a campaign, such as adventure hooks and even prestige classes unique to each clan. The Shadowlands are also discussed, complete with their own prestige classes. If you're going to use the Rokugan setting, then this ought to be a welcome intro. If not, then this section could be a waste. Some of the prestige classes might be handy, as could a lot of the Shadowlands stuff, but much of it might not be.

Overall, the game design in this book is very strong. James Wyatt really knows the *d20* system in and out, and he demonstrates it here. The rules all seem well-balanced, and they are designed so as to be very easily accessible; most gamers should have no problem at all adapting this book to their game world any way they see fit, whether they use everything or just a thing or two. Wyatt also demonstrates a knowledge of the subject matter as well as a knowledge of the previous works he was drawing from.

Some players may gripe about the Rokugan setting, but that's the double-edged sword you play with when you use an "optional but default" setting. Some may also gripe that the fact that the book is written mostly for this setting skews the book very heavily towards Japanese culture as opposed to other Asian cultures, which are supposed to be covered here as well, and this is certainly true. The Japanese-influenced material does seem to get a lot more play, although the first edition of *Oriental Adventures* did it that way for the most part, too. On the other hand, *D&D* itself is a complete hodgepodge of historical European settings, often giving certain ones more play than others, and most gamers are perfectly content with such a mix. So in that way this book definitely delivers.

But back to the original question: did this new edition light my imagination up like the old one did? I think I'd have to say yes . . . but in a new kind of way. The game has changed a lot since those old days of *AD&D*, and this book definitely reflects that. While I'll always look at my old edition of *Oriental Adventures* fondly, this one certainly shows itself a worthy translation and addition to the growing *3E* world.

Gladiator: Sands of Death (for d20)

Published by [Mongoose Publishing](#)

Written by Matthew Sprange, with additional text by Teresa Capsey and Ian Barstow

Illustrated by Anne Stokes, Luis Corte Real, Nathan Webb, Scott Purdy, Anthea Dilly, Judy Perrin, Danilo Moretti, and Brent Chumley

Edited by Alexander Fennell

80 page b&w softcover; \$16.95

Mongoose Publishing has put out several D20 books this year with mixed results. The Slayer's Guides and Encyclopedia Arcana books have presented interesting material, but each book has seemed a little light for the subject. *Gladiator: Sands of Death* is a more substantial treatment of an exciting topic, but it falls prey to some of the same problems.

The subject is timely for a couple of reasons. Ridley Scott's movie *Gladiator* was a huge hit last year, but professional sports are in an unusual cultural position right now. Americans love their sports teams, but they're also conscious of the absurdities of big-time sports: the expensive stadiums, the athletes called who have been called heroes simply because they can hit or throw a ball. Gladiators are both glorious and scary, and *Gladiator* writer Matthew Sprange explores both aspects well.

The first third of the book explores the basics of gladiatorial combat, with an emphasis of different arenas from seedy pit fights to the grand arenas of kings. Five kinds of arenas are described in detail, with enough backstory presented that they would be easy to drop into almost any *d20* campaign. No maps are provided, however, which is disappointing.

Sprange makes good use of the many races in the *Player's Handbook*, and presents plausible attitudes towards gladiatorial combat for each race. Longer-lived races like elves and dwarves are revolted by the practice, while short-lived humans and orcs glory in it. (Of the five example arenas, four are human and one is orcish.) Sprange discusses the special strengths and weaknesses of gnomes, halfings, and monstrous humanoids like gnolls and bugbears.

Sprange also takes a sharp look at the political reasons for building gladiatorial arenas, pointing out that such arenas always cost more than they earn and that they exist mainly to pacify the population of a city. The parallels to modern sports arenas are a little disturbing.

The second section presents new classes, new feats, different types of gladiatorial matches, fame and crowd reaction rules, chariot racing rules, exotic weaponry, and a variety of dirty tricks. The new rules are functional, clearly presented, and true to the setting. More importantly, they add a certain amount of pizzazz to the standard hacking and slashing of *d20* combat. Most of the rules reward gladiators who fight with crowd-pleasing, flashy moves, and that does a lot to make a gladiator-focused game into more than an endless procession of fight scenes. It's easy to imagine running a gladiator campaign that has the epic feel of movies like *Gladiator* or *Spartacus*.

The final section of the book is a little unusual. "Sands of Death" takes a step back from the one-character-per-player style of roleplaying and casts each player as the master of a stable of gladiators. Each player competes to win the most matches, fame and gold in the arena. It's an interesting application of the *d20* rules; taking the role of stable masters makes "Sands of Death" play a lot like a strategy game, but it's still a roleplaying game at heart. Sprange even encourages players to just play the game without a victory condition, though he provides several possible victory conditions for those that want them.

Gladiator covers most of its topic well, but there is one glaring omission. There is virtually no attention given to the use of magic in gladiatorial duels. Magic-users are described as providing opening-act fireworks for the crowd or creating terrain and obstacles for arena matches. Magic-using player characters are discouraged in the rules, and there's no almost discussion of how spellcasters can fight effectively in the arena. There's also no discussion of the many ways in which gladiatorial battles could be changed by the availability of resurrection spells and other healing magic. Sprange has stuck too close to history here; the Romans may not have had mages and clerics, but virtually all *d20* groups do.

There's only so much you can fit into 80 pages, of course, and Mongoose Publishing probably had to make some hard choices about what to include and what to leave out. However, what was left out would have made the book much more useful. *Gladiator: Sands of Death* is a good short book -- but with 16 more pages it might have been a great book.

The Forgotten Futures CD-ROM

by Marcus L. Rowland

<http://www.ffutures.demon.co.uk/>

The Age of Steam is one of the ideal settings for roleplaying games, recent enough to be familiar, remote enough to be exotic, and filled with technological wonders, real and imagined. The 19th century is currently enjoying unprecedented popularity among gamers and game publishers. *GURPS Castle Falkenstein*, an adaptation of one of the original steam age games (the other, *Space 1889*, has just been republished), *GURPS Steampunk*, and the forthcoming FUDGE-based game *Terra Incognita* from [Grey Ghost Games](#) reflect this interest, as do the horror-focused *GURPS Screampunk* and *Victorian Age: Vampire*, just announced by White Wolf. Marcus L. Rowland's *Forgotten Futures*, just released on CD-ROM after a print version and years of availability via the Web, deserves a close look from anyone who shares this enthusiasm.

As a game, *Forgotten Futures* has a fairly standard, simple design, along lines familiar from other story-focused games. Characters have three characteristics -- Body, Mind, and Soul -- which respectively govern physical tasks, intellectual tasks, and activities involving empathy, social interaction, or the art. A fairly short skills list accompanies these; skills are bought up from base values determined by one or more characteristics. It would be straightforward to convert characters to any other system with a similar division -- *Adventure!*, *Big Eyes*, *Small Mouth*, *DC Heroes*, and *In Nomine* all come to mind. Success rolls are made with 2d6; there is always a 1/36 chance of failure and nearly always a 1/36 chance of success. Rowland illustrates these rules with clear and often entertaining examples. An appendix demonstrates their flexibility, with rules for playing children or dogs(!) as characters. You won't find any brilliant novelties of game design here, but the system is flexible and free of inconvenient rules quirks, making it easy to use or adapt.

The CD-ROM includes seven supplements devoted to campaign ideas, including settings derived from fiction of the period. Most of them have a common format and there is some repetition. The one I've examined most thoroughly, *Forgotten Futures I*, based on Rudyard Kipling's classic airship utopian stories "With the Night Mail" and "As Easy as A.B.C.," is a first rate adaptation. Rowland has read the political material closely enough to grasp that Kipling's antidemocratic future is not dictatorial but (as current language calls it) libertarian. His future history does an excellent job of drawing out what Kipling's stories imply, including an ingenious discussion of reincarnation based on a single line in "With the Night Mail." And his treatment of technology, while not as elaborate as, say, *GURPS Vehicles* (some gamers will consider this a relief!), is quite adequate to creating designs for airships and represents Kipling's fictional technology accurately. A look at the other supplements shows similar attention to detail.

For the most part, this is the detail of Victorian and Edwardian fiction, more than that of actual history or actual engineering. Rowland emphasizes the way the era thought of itself, in a largely impressionistic portrait. This approach is quite different from that of *GURPS Steampunk* -- or, looked at another way, neatly complements it.

But the real treasure of this collection is none of these things. Rowland hasn't been content to base game rules and settings on the fiction of the Victorian and Edwardian eras. In this version, he takes advantage of the large capacity of CD-ROMs to include the fiction itself! If you want to read (or reread) Kipling's science fiction, or the Professor Challenger stories, or "The Angel of the Revolution," they all accompany their respective game treatments. (I'm sorry to say that the text of "The Angel of the Revolution" is rather scrambled, though that may be the fault of the original print version that was used to produce the CD-ROM; I hope it may be possible to produce a cleaned up text in some future edition.) Supplements devoted to Victorian stories of villainous plots and of the end of civilization have their own attached anthologies as well. A separate "Forgotten Futures Library" adds other fiction and nonfiction of the period, showing what the Age of Steam actually expected from its future. Much of this material is hard to find in print;

the GM who wants to base a campaign on the popular literature of the Age of Steam will find Rowland's work a major service. And Rowland's love of the milieu is evident and adds appeal to his work.

Rage Across Egypt (for Werewolf: The Apocalypse)

Published by White Wolf Game Studio

Written by Christopher Howard and Matt McFarlane

140 pages; \$17.95

At various points in my life, I pick up a book that I'll get the impression was made for me. That, somewhere in an author's office, is a photo of me. And when the author gets asked (as I assume they do), "Who, really, is this book being written for? Who's your audience?", they'll just point their index finger up at my portrait on the wall and say, "Him."

Rage across Egypt is one of those books. *Werewolf* is one of my favorite RPGs ever. As for Egypt, I'm half-Egyptian, and while it would be difficult to find a more complete assimilation, I've still got a fondness for and fascination with the land of half of my grandfathers.

So, yeah, here's a book made for me. Did it get me? Oh, yeah.

Rage Across Egypt is the *Werewolf* contribution to the *Year of the Scarab* series, which takes the World of Darkness books and visits Egypt and the lands of Southwestern Asia (previous releases in the series include *Mummy: The Resurrection*, *Vampire: The Dark Age's Veil of Night* and *Hunter's Holy War*). I've enjoyed the books in the series overall so far.

Egypt has a great role in the world of *Werewolf*; one of the 12 werewolf tribes, the Silent Striders, is originally from there. The Garou claim vampires as one of their great foes, and Egypt, with its densely packed population is a perfect habitat for bloodsuckers.

The book follows a standard format. It opens with an introductory fiction (I can take or leave most intro fiction, and this one didn't quite stir passions within me), and continues with a short "how to use this book" section. The glossary is good, although it could have used pronunciation notes since most of the words are from non-western languages.

It then launches into what is Egypt's greatest commodity: history. The timeline is interesting; it covers, in as much detail as is possible (in other words, little) the history of Egypt, starting with the pre-dynastic and coming all the way up to the present day. Sharing the history chapter is an over-arching history of the Silent Striders in Egypt.

Modern Egypt is covered in the second chapter. It's a very good examination of the country. My favorite thing about it is the very subtle, yet very obvious, declarations of what is true, and what is created. When you're writing a book that covers the real world in a roleplaying game, you must make sure that the audience can distinguish the fabrications from the reality. The reason for this is simple; if you do your job well, your readers will come away thinking they've learned something about the real world as well as the game world. Now, when writing a book about, say, Chicago, you can easily insert simple changes that are obviously such. When you're writing about a country that many of the readers will know little if anything about (such as Egypt), you have to step a little more lightly. Thankfully, the authors managed to keep the real and the false delineated quite well.

The book's description of the cities and wastes of Egypt are very well done. They pale, however, next to the Egyptian Umbra. The spirit lands of Egypt just come across wonderfully. The twelve lands of the Egyptian Umbra correspond to the 12 hours of the underworld night through which Ra rode his solar barque and also some of them correspond to standard Umbral realms. Even the map is interesting, with points of entry and exit marked out, and links to the four

mysterious towers which stand in the Umbra of Egypt.

The map of Egypt is good, but it seems incomplete. For example, some cities described in the text are missing from the map, but that's a minor quibble. The caerns of the Garou and the Black Spiral Dancers, also described in this chapter, are marked on the map. On first glance, the caerns seemed somewhat underpowered, but re-reading showed me that that wasn't the case; however, I wouldn't have minded seeing an active level 5 caern.

The characters chapter is somewhat brief. It covers all the tribes of Garou (well, all the ones in Egypt; logically, no Wendigo are to be found on the Sahara's sands). Titled "Wolves of the Desert," it gives you one stat'd out character per tribe, and a short list of what the tribe's members are up to in Egypt.

My only quibble is that there needed to be more stuff there. There are two very interesting Silent Strider Garou mentioned, but only one is covered in any detail. I would have loved to have seen more on Walks with Might, but instead we get only Buries the Dead. It would have been good to have more space dedicated to NPCs, but the book would have started to just get big.

The storytelling chapter is very well done; it covers the plots introduced in the book, and clarifies many of the things mentioned. There's info on the various Fera running around Egypt, what they're up to, and how they'll interact with the Garou.

Following that is a chapter dedicated to the enemies of the Garou. The big baddy in *Werewolf* is Pentex, and the Pentex arm most visible in Egypt is Endron Oil. There's a pipeline running parallel to the Nile that's ripe with storytelling opportunities, and Endron's other activities will make it a great antagonist for werewolf groups.

The Cat and Crocodile appendix, which covers the activities of the Bastet & Mokole, seems somewhat extraneous. They probably could have been put in the Storytelling chapter. The book concludes with an appendix on spirits & banes, which are nice and useful, although I think they could have put in a few more.

The art in the book actually caught my attention enough that I felt that I couldn't review the book without mentioning it. The Ron Spencer cover is, as always, wonderful, but I found it hard to resolve the dimensions of the picture. Is that a pit the snake men are climbing out of? The pillar in the near background, and the pyramids in the far background, while nicely drawn, seems to distract from the action happening in the foreground instead of complementing it.

Internally, the art is generally unsatisfactory. I've never been able to enjoy Leif Jones art (aside from his work in *Kindred of the East*), and this book is no exception. Alex Sheikman's art in the chapter frontispieces is also not quite what I was looking for; his pictures are not as crisp as I like them, and seem visually loose. Some of them (such as the illustrations for chapter two and three) I like more than other, but there's just something about his full page depictions of Garou and other Fera that are unsuccessful. I very much like Rebecca Guay's art, but it seems somewhat unfinished, as if they're sketches with the pencil marks still visible.

Overall, however, the book was great. I think it's likely my favorite sourcebook of the year, with it's convergence of two of my favorite things. Like many sourcebooks, I did find that there could have been more of some things; Walks With Might's crusade in Africa could have been expanded on in the book, and there can always be more spirits in there.

I also found it strange that there was nothing on the Mummies, since they're supposed to be the centerpiece of the Year of the Scarab books (or at least mentioned); there's something similar in the antagonists chapter, but I could have used more. I could have also used more info on the Sept of the Midnight Sun, since I don't own and haven't been able to find a copy of *The Sun has Set*, which contains info on it.

I don't know how useful *Rage Across Egypt* would be for someone who wanted to use it for a non-*Werewolf* game set in Egypt. It is focused on *Werewolf*, and providing a good setting for *Werewolf* is what it does.

An Adventure -- Generic In Its Presentation -- For A Steampunk World

by Dylan Craig

Overview

It is the winter of 1900. The Boer War still rages in South Africa; but in London, the war is fast becoming yesterday's news. Surely, everyone agrees, the process of rounding up the scruffy remnants of the Boer armies can't take long? The common folk are unaware that the horrors of war are about to be brought home to them in a particularly personal way by a German scientist who sympathizes with the Boer cause. This madman, armed with a devilish device which harnesses the very power of the atom, has set his sights on the Tower of London. Should he succeed in delivering his masterstroke, hundreds will perish. Will the players be able to discover his fiendish intentions and stop him in time?

Setup

Five suggested characters are supplied at the end of this adventure. These characters are introduced to the conspiracy through an investigation into the murder of a prominent businessman who, as it turns out, unwittingly supplied the mad Herr Professor Schlietz with the materials for his super-weapon. If this adventure is presented to a regular party during the course of a campaign, a similar motivation could be used; as colleagues, employees, or relatives of the dead man, they might be allowed to "accompany" the official police investigators as a special concession. Alternately, the players could be on the trail of Professor Schlietz; in this case, they may have been hired by the German or Boer governments, who are trying to avoid being held responsible for Herr Schlietz's actions. Finally, the adventure need not have the Anglo-Boer War as a backdrop; any historical conflict in which some international feeling ran against the British Empire (War of 1812, Fenian uprisings, Crimean War, etc.) could be used -- however, some amendment to the technology portrayed in this adventure will then be required.

Act One: A Murder in Earl's Court

GM Overview

During this Act, the characters are exposed to certain clues which spell out the circumstances of the murder of Aloysius Carew. The actual events which took place are as follows: Schlietz, one of his henchmen, and three hired thugs arrived at Mr. Carew's residence just over four hours ago. One of the thugs, a professional lock-picker and safecracker, opened the front door with a skeleton key. Surprising Carew in bed, they bundled him downstairs and into a waiting carriage and drove with him to his riverside warehouse, where they forced him to hand over a shipment of radioactive ore he had been commissioned to deliver but had refused to supply after discovering the political leanings of his client. Once this was in hand, they returned to Carew's house. There, after opening the office safe to remove evidence tying Schlietz to Carew, the henchman executed him with a small-caliber pistol, using a pillow to muffle the sound of the shots. Extinguishing the pilot light on the gas grate and setting a burning lantern to ignite the gas from the open tap, they then left, expecting the explosion to cover their tracks. However, once they were gone, Carew, despite his mortal wounds, regained consciousness, toppled from his chair, and was able to crawl to the tap and close it. The noise of his fall woke a neighbor who summoned the police.

The characters arrive at the Earl's Court residence of Mr. Aloysius Carew in the early hours of the morning. In the case of the pre-generated characters, they have been summoned to Scotland Yard by police messenger before being introduced to one another and dispatched to the scene of the crime. The residence itself is an elegant and well-maintained terrace house; Carew's family residence, a more opulent home, is located in Sussex, and he only used this

address during business visits to the City. Mr. Carew is a fairly well-known public figure; successful memory rolls -- or the right contacts -- will allow an investigator to recall that he is in the mining and civil engineering business, is an outspoken imperialist, and has business concerns and mining operations from Argentina to Australia.

Present at the scene are two uniformed constables guarding the door. Lights can be seen in the windows of several houses in the street; it is apparent that whatever disturbances have occurred here, they have been disruptive enough to wake the neighbors. A coroner's carriage is pulled up outside the house.

The interior of the house is as elegant and well-lit as the exterior; the ground floor holds a large study with a fireplace, a kitchen, and a small dining-room. Stairs lead up to the main and guest bedrooms, a smaller study, and a bathroom. A police sergeant is on hand to meet the characters and explain the facts of the situation as they currently stand.

The Scene of the Crime

Approximately two hours ago, a constable walking his beat nearby was approached by one of Mr. Carew's neighbors, a Mr. George Hillman, and asked to investigate a series of loud thumps originating from Mr. Carew's house, which had awoken him and his family from their sleep. Mr. Hillman's knock at the front door had gone unanswered; he was concerned that Mr. Carew might have stumbled or otherwise injured himself.

The constable, accompanied by Mr. Hillman, returned to the Carew residence. Repeated knocks gained no response, although lights could be seen burning in several rooms. Upon trying the front door, the constable found that it was unlocked; the two men proceeded inside, where they discovered Mr. Carew's body lying on the floor of his upstairs study, in a pool of blood.

During their initial attempts to resuscitate Mr. Carew, the two men moved his body onto a couch; it was at this point that they discovered the bullet wounds in his chest. The constable used the telephone to contact the nearest police office, from which further assistance was dispatched.

The scene has not been disturbed apart from the change in the body's position. Constable Harris is available to answer questions, and Mr. Hillman has indicated that he would also be pleased to do so. The characters will no doubt wish to proceed speedily to the upstairs study; however, the rest of the house holds the following features of possible interest:

The walls of the downstairs study sport a series of neatly framed letters from various important personages which hold pride of place above the large roll-top desk. Most of the letters are letters of thanks acknowledging the receipt of large financial contributions to charitable and government organizations all over the British Empire.

The flickering remains of a coal fire smolder fitfully in the grate. The fire has almost died down, and the room is growing quite cold.

The rolltop desk is bare except for a large appointment book. An examination of this book reveals that while Mr. Carew had a busy day meeting with various representatives of his British and Continental clients. He had no appointments scheduled for this evening, although he did occasionally meet with clients at unusually late hours to conclude sales or discuss business.

The remains of dinner (for one) have been tidied away and placed in the sink. According to the neighbors, Mr. Carew employed a secretary and a housekeeper, but no live-in staff. Carriages are available should the characters wish to summon either for an interview, although it has been assumed that, unless they are suspects, such a request will wait until morning.

The upstairs study, where the body was found, is a striking contrast to its downstairs equivalent. Papers, half-empty teacups, and open books and periodicals lie everywhere. The room bears the imprint of a tireless worker; indeed, a brief examination of the papers indicates that Mr. Carew kept up-to-date with every single one of his operations on practically a daily basis, and often late into the night. His body lies on a chaise-lounge across the room from the grate; a toppled chair and a pool of blood attest to his violent death.

Upon Further Investigation . . .

By examining the scene carefully, the characters can make several discoveries. However, the coordinated efforts of several investigators will most certainly be required to assimilate all the information present. Patchy or badly coordinated searches will only uncover some of these facts (GM's discretion).

- The bloodstain has a smeared quality; it appears that Mr. Carew, while he was shot near the middle of the room, managed to drag himself to the grate before expiring.
- The grate is of the gas type, but has been switched off. There are traces of a bloody handprint on the gas tap. The pilot light has also been snuffed; this would have required a separate effort, as the pilot light would remain lit even with the tap turned off.
- There is a strong smell of burnt gunpowder in this room; however, none of the neighbors reported hearing any shots fired. If the source of the smell is followed, it can be traced to a small cushion under the chaise-lounge, which bears powder burns and three bullet holes. The spacing of these holes matches the wounds on Mr. Carew's torso. It would appear, then, that the pillow was used to muffle the sound of the shots.
- Mr. Carew is wearing a dressing-gown, but a black coat and hat have been removed from his cupboard and lie on the floor near the door. His arms show cruel rope burns at the wrists; however, no rope can be found in the house. Careful examination of the sleeves of the coat will reveal some dried blood on the fur lining; whenever the burns were inflicted, it appears that Mr. Carew was wearing the coat at the time.
- The room, while sufficiently lit by an electric lamp, also has a kerosene lantern burning on top of the bookshelf closest to the door. The lantern has its flame turned up high.
- A portrait near the desk is hanging askew. Behind it is an open safe. A pair of fleece-lined leather gloves lie on the floor below the safe. Interestingly, both gloves have had the little finger cut down to a stump, and then sewed closed. Mr. Carew is not missing his little fingers; it is likely, therefore, that the gloves do not belong to him.

Any character pondering a possible link between the gloves and any known criminals with characteristically abbreviated digits may roll against an appropriate skill to see if they strike a chord; extensive knowledge of London's criminal class (gained, for instance, by being a police officer in the city for a significant period of time) should provide a significant bonus to such a roll. The obvious candidate who comes to mind is Edward "Dinky" Left, a supposedly-reformed safecracker who used to operate out of London's East End until he ran afoul of some competitors who cut his pinkies off "as a warning," two years ago. Speculation that he would return to crime has been rampant among the police community, however, and close (though discreet) tabs have been kept on his whereabouts.

Information on Dinky's whereabouts can be gained in a telephone call to Scotland Yard, but only once morning comes and an officer with personal knowledge of the case can be contacted, and a few informants can be shaken down. In the meantime, the characters have several options open to them.

- Examination of Carew's ledgers will take a full day. Of course, clerks, desk officers at Scotland Yard, and other hapless functionaries may be pressed (or hired) into service for this task; however, this will have to be conducted on the initiative of whichever character is responsible for the task, and roleplayed accordingly. Irrespective of the number of investigators, the soonest the information will be ready is in 12-16 hours. Should such an investigation be successful, the only item of interest it will turn up is that after a protracted business relationship, a certain client identified only as "HPS" was cut off last week, his or her account closed, and a shipment from one of Carew's Australian mines marked "Pallet 12," currently awaiting collection at Carew's warehouse, marked for resale. No physical address for "HPS" is given -- all their mail is marked *poste restante*. No correspondence from them can be located -- nor, in fact, can any of Carew's business letters.
- Carew's housekeeper has nothing to tell the character, but his secretary, through floods of tears, will be able to point out that all that is missing from his safe is the folder in which he kept his business correspondence and client details.
- A visit to Carew's riverside warehouse will net the characters little additional information unless they know what they are searching for. The night-watchman (whose "beat" includes several other warehouses) has gone home for the day, but the day-watchman recalls him mentioning that Mr. Carew had come by very late, in the company of two well-dressed men, and had let himself into his warehouse. The watchman had not spoken to or approached

him; as Carew's appointment-book shows, it was not unusual for him to be conducting business at odd hours. If the clerks at the warehouse are asked to conduct a stock-take, to determine if anything is missing, they will reluctantly agree; however, this will take some time due to the interruptions caused by shipments arriving and leaving during the day; the results will only be available around five or six p.m.

If such an audit is performed, the characters will learn, via the clerks, that a shipment identified only as "Pallet 12" in the records, has gone missing. A quick cross-indexing with Carew's business papers will give the characters the same information regarding the mysterious "HPS" as detailed above.

Once the options detailed above are exhausted, the characters will have little to do until their various inquiries begin to deliver results . . . probably around dinnertime. Further interviews conducted among Carew's neighbors will deliver few results, except for the testimony of a little girl who claims to have heard horses in the street outside after waking up from a dream.

The first lead to deliver useful facts, at around five p.m., will be the investigation into the current whereabouts of "Dinky" Left. According to Scotland Yard's files and the officers most closely involved with the case, Dinky's current residence is suspected to be a set of rooms above the White Hart Inn, located deep in the Limehouse slums. His only regular associate is a woman known only as "Mo," a Frenchwoman who occasionally works as a barmaid at the White Hart, although he has several friends on the wrong side of the law who might have hooked up with him since the file was last updated -- most notably, his brother, "Big George" Left, a violent criminal who has been on the run from the police for six months.

The White Hart is a well-known den of crime; the density of potentially guilty parties means that any "official" police swoop on the inn would result in something of a shambles, and most likely a few deaths. The characters' best hope, thus, is to adopt a more subtle approach. This notwithstanding, the characters may wish to cajole, order, or even bribe some police officers into accompanying them. The success of such initiatives will have to be decided based on their individual merit, but the party should not be allowed to gain the help of more than four plainclothes constables in this way.

Act Two: To Catch a Thief

The White Hart is a dilapidated two-story building a stone's throw from the High Street but an almost infinite distance from the genteel environment of Earl's Court. Feral cats pursue rats almost their size down alleyways piled high with filthy refuse; overflowing sewers, grimy street-urchins, and mean-eyed knifemen compete for ownership of the dingy pavements. It goes without saying that any "official" approach towards the White Hart will be spotted and reported almost instantly; if the characters have persisted in making such a frontal assault, they will find nothing but an empty public-house and a resentful publican on their arrival. In this case, they will never track Dinky down; Mo and he will go to ground in earnest, and leave London. In this case the characters will have to fall back on other means of discovering Professor Schlietz's deadly plan. Assuming that the characters approach more subtly, the White Hart will be its usual rowdy self, with games of mumblety-peg and cards, a chorus of drunken watermen shouting popular ditties, and the occasional fistfight at the bar -- but no Dinky. No-one, including the barman, has seen Dinky all day; he left early this morning and hasn't returned, although everyone assumes he will be in soon for his regular pint. A woman matching Mo's description is in evidence, serving from behind the bar; however, should the characters be seen asking questions about her, move towards her in a group, or start asking her about Dinky, she will slip out the service door behind the bar and make a run for it. Making discreet inquiries without arousing Mo's suspicion is tricky, but within the capabilities of a tactful investigator.

Mo is visibly nervous, should the characters simply observe her without giving their presence away; she inspects everyone entering the bar, jumps when mugs are slammed down, and always keeps one eye on the service door.

The Story of Mo

What the characters are unlikely to realize is that Mo is not keeping an eye out for the police, but rather for agents of

"the German" (Schlietz). Dinky hasn't told her much; just that a German man who he did a job for might be wanting to kill him to keep his mouth shut. He also instructed her to lie low and keep an eye out for strangers looking for him, which is precisely what she is doing.

If the characters wait until closing time, and shadow Mo on her way home, she will lead them to Stone Court Row, the grubby tenement block where Dinky is hiding with his brother.

If she is chased from the bar, or detects her pursuers, she will lead them in the opposite direction, and into an Underground station where she will attempt to lose them. If she is captured and interrogated, or persuaded that the characters are "gendarmes," and not "working for ze German," she will tell them where Dinky is hiding. In this case, she will not accompany them to Dinky's hiding place; although she pretends to be scared of Dinky, she is actually afraid because she knows Big George (whose presence she does not reveal) will blame her for leading the police to him.

Stone Court Row

Stone Court Row is in an even worse part of the slum than the White Hart; a burst storm-sewer has flooded the entire block to ankle-depth. There is a definite criminal element around the building the heroes are interested in; the twitch of a top-floor curtain and the exchange of significant glances among the ne'er-do-wells scattered around the door gives the characters the definite impression that their arrival has been anticipated. The best way to get past the "doormen" is simply to barrel on through without acknowledging their presence; any attempt at conversation will be met with obviously provocative language intended to goad the characters into a fight (however, if the party ignore the ruffians and then get into a fight with Big George, the ruffians will join in and trap the party upstairs, so some forethought must be exercised).

There is one ruffian for every combat-worthy PC or ally. These petty criminals are more than happy to tangle with the characters, relying on their relative anonymity and home turf advantage should they need to make a getaway. They would, however, rather scare the party off than face a dangerous fight, so if more than half of their number are knocked out, the rest will break and run.

The ruffians will use their bare knuckles and hobnailed boots unless the characters draw weapons; in this case, they will use knives, lead pipes, and broken bottles. They have no firearms.

The tenement itself consists of three floors, each with two rooms, a shared kitchenette, and a single bathroom, with a staircase connecting it to adjacent floors. These rooms (normally inhabited by the thugs outside, and their partners) are empty; only the top-floor rooms are currently occupied. Unbeknownst to the characters, Big George and Dinky have seen them arrive, and have hidden in a cupboard, leaving Big George's wife, Greta, to fend off the characters' inquiries. Unfortunately for the brothers, Greta's current mood leaves much to be desired, and rather than defuse the situation, she is preparing to inflame it. Unfortunately for the characters, Big George has a pistol, and is mentally steeling himself to shoot his way out of trouble should the need arise.

Greta is aggressive, insultatious, half-drunk, and half-dressed. She is completely unwilling to engage in civil discussion; polite overtures will be rudely overturned, and official demands will be treated with derision. Any attempt to search the room or interrogate her will result in a barrage of screamed insults and flung make-up bottles, closely followed by Big George's pistol-wielding exit from the closet.

Big George has assumed that the characters are police officers here to arrest him; he doesn't intend to be taken, and is perfectly capable of attempting to take Greta hostage in order to escape. Dinky, on the other hand, has assumed that the characters are agents of Professor Schlietz, here to kill him. With the characters (not to mention George, and Greta) between him and any hope of escape, he has curled up into a whimpering ball in the closet. How the situation plays out from this point is up to the characters; Greta certainly doesn't intend being taken as a hostage, and will struggle mightily, dragging George around the room, flailing her arms, and overturning furniture in a search for a weapon to break over her husband's head.

At some point, she and George will begin wrestling for the pistol, and shots will start being fired in random directions. The characters, if they are wise, will take cover; George's Webley Bulldog is more than capable of blasting huge holes in unwary bystanders.

Any attempts to tackle the Lefts must be made against both of them; this represents the difficulty of "putting down" over five hundred pounds of bellicose flesh, and will probably require the efforts of several characters. If, on the other hand, the characters can talk George down before the fracas starts, he will lower his pistol once the characters assure him that they're not here for him; if the characters are foolish enough to try and take him down at this point, he will begin shooting to kill, and will leap through one of the windows to escape once his ammunition is exhausted.

What Dinky Knows

However the characters resolve the situation with Big George and Greta, Dinky will remain in a quivering heap until the characters approach him directly, at which point he will sob, "Don't kill me -- I swear, I won't tell 'em nuffink!" If the characters explain who they are, he gasps, "Thank God! Please, you've got to help me -- or I'm a dead man!"

Dinky will go quietly should the characters wish to conduct an interview with him in more appropriate circumstances; he will even accompany them to a police station, offering to testify if he is granted immunity from prosecution. His version of events is as follows:

A week ago, he was approached by "a man" in the White Hart who asked if he was interested in a once-off job for which he'd be paid a hundred pounds. Tempted, he agreed to meet the man again, to hear more about the job; this time, the man was accompanied by an older gentleman with a pronounced German accent, who explained that the items to be stolen were "some papers" relating to some chemicals he was purchasing, and a pallet of ore from a warehouse, both of which were of no intrinsic value and would cause no great alarm if stolen.

The older man explained that it would fall to Dinky to hire two trustworthy accomplices capable of strenuous labor; he was given fifty pounds up front for this purpose, and was promised another hundred and fifty on completion of the job.

Dinky contacted Dick Worrall and John "Butcher" Black, two of his old cronies, and offered them twenty pounds each, which they accepted. The three men were told to report to an address in Mayfair at sunset on the appointed day (yesterday), which they did. They were met by the two men who had hired them, and proceeded to the Carew residence. Dinky used his lockpicking skills to open the front door, and entered the house with the men while Dick and John took the cab around the block. The three surprised Mr. Carew in bed, tied his hands, and dressed him quickly with a coat and hat from his own cupboard before meeting the cab at the front door, and heading for the warehouse, with the younger of the two men giving directions. During this journey, and when returning from the warehouse, Carew was blindfolded and gagged. All five men wore masks during the kidnapping.

Carew was taken to his warehouse, where Dinky once again gained access by picking a lock, and was forced to show the older man to a certain crate, which Dick and John loaded onto the cab. The group then returned to Carew's residence, where the older man demanded that Carew show them where he kept his letters. Carew indicated the hidden safe in the upstairs study, but refused to divulge the whereabouts of the key; Dinky, nonetheless, managed to open the safe after a protracted effort, during which he was forced to remove his gloves. The older man retrieved a folder from inside -- and that, according to Dinky, is when things went wrong.

It started when Carew, who was still tied, lunged to his feet and tried to get to the door to escape. Before anyone could stop him, the younger man grabbed a cushion, strode over to Carew and, producing a small revolver, shot him three times at pointblank range. According to Dinky, neither man so much as batted an eyelid; it was as if the murder had been planned from the start. Dinky, realizing that he had become caught up in much more than a simple robbery, began to panic; the younger man, while reloading, ordered him to collect his wits in the coach. Dinky left immediately, forgetting his gloves. The two men appeared a minute or so later, and the coach set off. Along the route, still panicked and suspecting that he and his friends might be the next to die, Dinky jumped out of the coach as it passed a side-street, and ran all the way to the White Hart.

His suspicions were borne out when, according to their families, Dick and John did not return home this morning. That was when he decided to go to ground, hoping that because the men had never met Mo, she would be safe while keeping an eye out for any unusually inquisitive strangers.

Characters observing Dinky closely during his tale can determine that he is telling the truth; he is plainly terrified, and honestly believes himself to be in mortal danger. Short of giving the investigators a description of Schlietz and Van Heerden (see below), and the address in Mayfair, he will be of little further use to the characters, and will beg to be placed in the relative safety of police custody.

It goes without saying that an immediate raid on the premises is called for; if the men really are foreigners, action must be taken before they can put any plans for flight into effect.

Act Three: Mayhem in Mayfair

124 Kingswood Avenue, Mayfair, is a large property surrounded on all sides by immaculately tended gardens, paved footpaths, and a stout wrought-iron fence. The house itself is only partially visible from the street, but appears to be a four-story brick building with a central atrium or courtyard. The other houses in the street are of similar dimensions; it is unlikely that the characters will encounter any of Herr Professor Schlietz's neighbors unless they make an active effort.

Given the possible danger which lies ahead, it is likely that the characters may wish to invest in some extra manpower or firepower; both are acceptable, within reasonable limits, although casualties will be far higher with larger storming parties, as the characters will soon find out. Any constables attached to the party will be armed with pistols only, and the use of larger weapons will be discouraged.

The first obstacle that the storming party may face is gaining entrance to the property.

Both the main and side gates are securely locked, although the padlocks may be circumvented. Climbing over the fence unassisted introduces the risk of becoming painfully acquainted with the sharp spikes which top the fence; treat this as a small knife attack. The use of a thick blanket or coat to cover these spikes will halve any damage suffered.

There is an electrical bell-switch on the main gate; however, ringing it will have no effect.

Inside 124 Kingswood

Once the party is inside, they will face another unpleasant surprise -- a recently-installed ring of booby-traps surrounding the house. Most of these traps take the form of trap-guns concealed in hedges and trees, linked up to spring-switches under loose paving stones. An electric switch in the house is the only way of disarming the network of traps, and it is impossible to avoid all of them. The network is, of course, fully armed at all times, except when the Professor and his men are active in the gardens (which is very rarely). These traps are fairly ineffective, attacking with an unmodified roll or using the worst possible attack skill rating. However, they will prove murderously effective against masses of charging policemen, simply because of the number of potential targets. In addition, once triggered, most fire until their ammunition hoppers are empty; the crucial trick to surviving the hail of bullets, therefore, is to keep moving, and get outside their fire arcs.

For every action in which the characters do anything except run at full speed towards the house, they will each be subjected to an attack by 1-2 guns. Returning fire is unlikely to have any effect, although the guns have been situated in such a way that it is not immediately apparent that they are simply traps and not an actual gunman. The fusillade of shots will continue for a minute or so. Each action that a character is returning fire or observing the scene, they stand a chance of realizing that they are facing trap-guns and not intelligent opponents.

It will only take one action's worth of concentrated sprinting and dodging to put the characters beyond the reach of the guns; however, they will be exposed during this effort, and stand the normal chance of being hit. A hit from the guns is treated as a hit from a small-gauge shotgun.

If the characters have surrounded themselves with policemen for the purposes of the raid, this scene is intended to "clear the decks" somewhat, with coppers being mown down by the dozen, characters being forced to go in under fire to rescue downed colleagues, and so forth. If the raiding party is leaner, they should have proportionally less trouble at this point.

The true purpose of the guns, of course, is to warn the occupants of the house that the raid they have been planning for has finally begun. Two of Van Heerden's associates will appear on the roof with heavy rifles, and the other three will station themselves on the landing of the central stairwell, while Professor Schlietz activates the hydrogen pumps on the device which will lift his secret weapon high into the air, from which it can be hurled like Zeus' thunderbolt -- a mini-zeppelin!

The Madman's Scheme

This sleek, miniaturized version of Count Zeppelin's invention has been purpose-built to carry the Professor's radium bomb and a light crew aloft; it will take a mere five minutes to inflate. At this point the remaining defenders will begin to fight a retreating action towards the rooftop, intending to board the mini-zeppelin and be carried safely away.

Of course, should any of the men be rendered unable to reach the ship, he will settle down and dedicate himself to buying as much time for his comrades as possible. It should be noted, though, that in the face of overwhelming odds, and especially once the zeppelin is clear, these men will surrender.

The underside of the zeppelin is armored and rubberized; ground-based attacks are unlikely to do any significant damage. A quick inspection of the zeppelin pen (the central courtyard) will reveal several wall-mounted maps and diagrams, detailing Schlietz's diabolical plan in exquisite detail; a similar tale can be wrung from any of the captured defenders. Schlietz intends to detonate some kind of heretofore unknown bomb by dropping it on the Tower of London, annihilating the Crown Jewels and striking a symbolic blow against the "tyranny" of the British Empire. However, what the Professor has not noticed or simply does not care about is that the projected blast will also engulf hundreds of homes and businesses in the area; the death toll could run into the hundreds. Time is of the essence, for even as the characters assimilate this new knowledge, the Professor's zeppelin is turning eastwards to begin its flight along the Thames towards Tower Hill.

Several courses of action suggest themselves. At the rate at which the zeppelin is moving, it could be at the Tower in under half an hour; it is unlikely that even the fastest horse or cab would be able to reach the tower in time to warn both the citizenry and the Yeomen. Calling for outside help, from the army or police, is similarly risky; the house has no telephone, and just finding the means to summon help might take fifteen minutes. However, the Professor's hasty departure has left a golden opportunity before the characters, in the shape of a canvas-covered mound in one corner of the courtyard.

The armored plates which protect the Professor's mini-zeppelin from ground fire proved too heavy for the initial design, which now lies abandoned and forgotten behind the hydrogen tanks. Great patches and jagged stitches show where the armored plates caused the zeppelin's hull to tear and buckle; all that is attached now is the light wicker frame of the gondola's inner hull. Light though this may be, it is still strong enough to carry a crew of six and mount the electric fans with which forward motion is achieved; in addition, a quick examination of the acid baths with which the hydrogen for the zeppelins is produced shows that there is more than enough hydrogen to float a second, lighter airship. The controls look fairly simple, and while it's an outside shot, this bizarre machine might be the best chance of catching up with Schlietz before he can deliver his deadly parcel.

Act Four: A Moonlit Cruise above the Thames

Like its heavier successor, the zeppelin requires a mere five minutes to reach full capacity, although this will increase to ten if fewer than six people are on hand to drag the frame into position and operate the inflation pumps. The controls are fairly basic; a lever, a compass, and a ship-style steering wheel are all that are provided. The lever controls

the speed of the twin battery-driven electric fans which propel the zeppelin, and the wheel is linked by cable to a pair of rudders which direct the blast of the propellers. Any character with an appropriate skill will have little trouble operating the zeppelin; others require successful rolls against an appropriate characteristic for each maneuver (climb, turn, descend, etc.) performed.

The Professor's zeppelin is cruising at around three hundred feet, and has a several-mile lead on the characters'; it will take 10-15 minutes of hard flying, with the fans at full speed, to close to within a few hundred yards. Unskilled pilots will have to make three successful rolls to catch up, with each attempt taking five minutes. Schlietz's zeppelin will take 40 minutes to reach its destination; should the characters fail to catch up during this time, their efforts will be in vain, and Schlietz will drop his radium bomb on the tower. The blast and fiery ring produced by the bomb will not only level the Tower, but also the surrounding buildings for several hundred yards. Schlietz's zeppelin will continue eastwards, towards the French coast where several more of his henchman are waiting to transport him to safety. Once in range, the characters will be faced with a new danger; the armored zeppelin's Maxim gun will begin to spit fire, attempting to blow them out of the sky. Most of the attacks will be directed at the hull rather than the gondola, and after a short time the zeppelin will sustain enough hits to lose altitude; if the heroes' ship takes too many hits, there is a real possibility of a midair explosion, killing all aboard. Return fire may be attempted, but without a machine gun and at such extreme range, this will be symbolic at best, serving only to draw fire towards the gondola rather than the hull.

The characters have two obvious options at this point: they could attempt to close with the armored zeppelin, hoping thereby to be able to shoot its crew or use some kind of improvised incendiary weapon on it, or attempt to ram their zeppelin into Schlietz's, and thereby either disable it or gain an opportunity to board it and fight hand-to-hand. Either alternative will require closing the gap between the zeppelins, while avoiding the machine-gun fire where possible. Luckily, lacking the armored skirt, the characters' zeppelin is much faster than their adversary's; the heroes have 40 minutes to somehow stop the Professor's zeppelin, or else the bomb will drop.

If the heroes' ship successfully rams the other zeppelin, both ships take significant damage, and also become entangled by guy-ropes and bent structural supports; attempts to board (see below) are now somewhat easier.

Attempts to attack the bomb-carrying zeppelin are difficult; although the heroes won't need to deal with its armor (since their attacks are not delivered from ground level), it will take a significant amount of damage to meaningfully affect the opposing ship. Incendiary attacks applied to a zeppelin, such as the application of bundles of burning rags soaked in kerosene, should have a better chance of causing the damage necessary to stop it.

Finally, the characters may attempt to board the armored zeppelin. Schlietz will not be available to fight off boarding characters, being fully engaged with the task of steering the zeppelin towards its target; however, Van Heerden and any of his henchmen that made it onto the zeppelin during the raid will certainly do their utmost to repel the characters, using fire axes, casting-off poles, and other improvised weapons as well as their pistols. Stats for Van Heerden and Schlietz can be found below.

Schlietz will only arm the bomb when the zeppelin is above the Tower; however, to release it, he (or Van Heerden) must operate a crank on the bomb cradle. This takes a little bit of time, and gives the characters one last chance to interrupt the drop. The bomb will explode on its own a minute after it is armed, assuming that it has not been dropped; however, at this altitude, the ground effects will be negligible. A large clockwork timer indicates the elapsed time since arming.

Conclusion

With any luck, the Herculean efforts of the heroic investigators will avert disaster, either by dropping the bomb before it is armed, gaining control of the zeppelin and steering it away from the Tower, or simply blowing it out of the sky. Whatever the case, it still requires some fancy footwork to get back onto the ground.

If the characters have access to an undamaged zeppelin, gas vent valves on the outside of the hull can be opened to decrease altitude. This requires a maneuver roll, as detailed above; a character with some applicable skill should have no problem, all others will have to succeed in an appropriate roll.

If the zeppelins are badly damaged or locked together following a ramming maneuver, both will be sinking fairly fast; characters who simply hang on and leap clear at the last moment will suffer damage from the impact as they plummet into the Thames, but have a fairly good chance of survival assuming the fall does not cause unconsciousness. A fall onto land will be less forgiving, but at least characters knocked senseless by the fall will be safe from drowning. An enterprising character may wish to salvage one of the gas cells from a damaged zeppelin and use it to float downwards; this will allow them to halve the damage of the fall.

A particularly climactic way to end this adventure would be for the heroes -- having rendered the bomb-cradle crank inoperable (by accident or design) -- to point the zeppelin out to sea, making a leap for safety (either back to their own airship or into the river) and leaving Schlietz, silhouetted by leaping flames, ranting at the top of his voice . . .

Explosion, applause, curtain.

Major NPCs

Dirk Van Heerden

Dirk Van Heerden (pronounced fun-here-din) is a Boer saboteur and secret agent, sent to Germany with a small team of men to assist and finance Herr Professor Schlietz' plan. An extremist and fanatic, he is operating without the consent or approval of the official Boer government; if caught, he will be disavowed entirely, and most likely executed as a terrorist.

Van Heerden is of average height, with pale skin and a thin back beard and mustache, and combs his hair elaborately to conceal a bald spot. He speaks English without accent, as well as German, Dutch, and Afrikaans. Dirk Van Heerden

Gear: Mauser rifle, 3-shot .44 Pocket pistol, dagger, walking stick

Professor Helgo Schlietz

Herr Professor Helgo Schlietz is one of a vocal group of Germans who sympathize with the Boer cause -- more as a result of anti-British sentiments than out of any true concern for the Boers. A peerless physicist and chemist, his work has led him to one of the most perilous discoveries science has to offer -- the power of atomic fission. Although Schlietz has mastered the technique of coaxing explosions from radioactive matter, he still lacks a coherent theory to explain the phenomenon.

Schlietz is a short, rotund man with sparse, curly, gray hair. When he speaks, he tends to use the first word that comes to mind, whether it is in English, German, Finnish, Russian, or Latin.

Gear: At Van Heerden's insistence, Schlietz carries a revolver, although he has very little idea how to use it.

Pre-generated PCs

Inspector Douglas Andrews is a fit, pleasant young man in his early thirties, who enjoys his work in law enforcement. He has close-cut red-hair, which he wears oiled and parted. Douglas is engaged, enjoys a game of tennis on the weekends, and is fascinated by the newest investigative methods - fingerprinting, psychological profiling, and forensic medicine above all. Although he has not received training in these techniques, he tries to apply the same precision and diligence to his regular investigations, and is always on top of whichever case he is assigned.

Michael Marsh is in his late thirties, and is thinking about taking early retirement and going into private practice as a consulting detective, or perhaps traveling to the colonies and working as a security chief at a factory or mine. He has had enough of the grime and crime of his inner-city beat; despite this world-weary attitude, he is still widely regarded as one of the better detectives at Scotland Yard because he is calm, methodical, and not given to spurious theorizing.

Marsh is a broad-shouldered man with receding blonde hair and a well-groomed mustache.

Sergeant Victor Willis drifted into law enforcement from being a night-watchman at a cannery, and has risen in the ranks due to his constant good humor and ability to break a large task (like a raid on a smuggling ring) up into small, easily manageable phases which even the greenest constable could manage. Well-respected and well-connected all over London, he is often assigned to priority cases like this one to handle unexpected material or logistical requirements. Victor is a large, robustly-built man in his mid-forties, and cuts a handsome figure despite being completely bald.

Captain Alexander Carew is both a soldier and a scientist; his skills in civil engineering and telegraphy have sent him to many far-flung lands to design and oversee various improvements or constructions. His excellent work has earned him high accolades; the speed with which his brothers' murder is being attended to, and his presence alongside the investigators, is a testimony to the respect and gratitude he commands in the upper echelons of government. Captain Carew is in his late twenties, handsome, and sports a blonde handlebar mustache.

Mrs. Patricia Carew has accompanied her husband on most of his overseas adventures, and thus has a spectrum of skills fairly different from most women of her age and background. She has a polite, though unflappable character; while she has operated outside normal societal conventions for most of her life, she doesn't 'rock the boat' when back in London, although she is a devout supporter of female enfranchisement and equal opportunity. Patricia is a small, tough woman in her mid-twenties, with jet-black hair which she wears in a bun.

The World Ended In 1978; We Just Haven't Noticed Yet

One of my continuous problems with most comic book superhero universes is the compression of time. In most of the established worlds (read: DC and Marvel), the entirety of their comic line continuity is compressed into a span of about ten years. The problem with this is not exactly how much happens in those ten years (which is considerable), but how much *hasn't* happened **before** those ten years.

For example, the past few years of the DC Universe have seen a plot to shatter the space/time continuum, an invasion of Martians, the sun nearly burning out, an alien invasion that engulfed the entirety of the Earth (not to mention much of the galaxy), an earthquake that practically destroyed the mammoth Gotham City, an alien attack that *did* destroy the multi-million population of Coast City, and a Joker-led jailbreak that almost dragged the world into complete anarchy. Oh, and at some point hell froze over. (Seriously.) And these are just a few of the earth-shattering events that spring to mind.

All of these dramatic stories are presumed to have happened in the past two or three years, with the "premiere" event of the modern age of heroes being the appearance of Superman between eleven and thirteen years ago.

Now, all of these plots make for rip-roaring good yarns, but it begs the question: why are so many earth-shattering events happening *now*? I mean, if *any* of these incredible events had happened 25 years ago, the planet would be doomed.

"Oh, my God! An alien invasion has come to destroy our cities, the sun, the space/time continuum, and our prisons! We have just one chance: only Bo and Luke Duke can save us! <pause> Whoops! Hell just froze over, too!"

This is also a common problem with other on-going heroic or epic stories; if the protagonists are the most important beings, and they do (or prevent) many important things, what happened before them? Is it possible for a time period to be *too* exciting? (Even Neil Gaiman's *Sandman*, one of my favorites, has this problem; the few years of "real time" its run sees the return of the King of Dreams, Death's one living day per lifetime, and the death of a major incarnation of reality . . . among other exciting events.)

(I should point out that the *Mystery Science Theater 3000* mantra of "Repeat to yourself: 'It's just a show; I should really just relax.'" also springs to mind . . . but I digress.)

Of course this time-compression problem has direct ties to roleplaying games; it's possible for *too* many exciting events to happen too quickly. If the fantasy world sees the core of magic shaken to its roots, the leaders of great nations usurped, and the destruction of all creation thwarted by brave adventurers, what happened before the heroes with **PC** stamped on their foreheads stumbled along? (*Ravenloft*, in particular, springs to mind as a setting that has had far too many earth-shattering adventures for my tastes. "By the Maker . . . reality is bending to its foundations! It must be *Thursday!*" And, really, once *In Nomine* tried to end the world in its first cycle, coming up with an encore must have been challenging.)

In my mind, there are several ways to address this conundrum.

- **There are always heroes.** Exciting things are always happening, with different groups of heroes saving the day or determining the fate of the world in each era. In the DC Universe, for example, maybe the alien invasion that happened three years before Superman was thwarted by the Doom Patrol, a small underground hero group. There are always Artifacts of Great Power threatening all of creation. There are always monumental events happening. There are always aliens, waiting for their turn to invade.

This can be unsatisfying as an explanation, simply because it can be difficult to muster up much enthusiasm for this year's earth-ending event if there have already been a jillion other earth-ending events. But it's also a good

way to sweep a cinematic problem away with a cinematic solution . . . *and* it introduces a lot of plot possibilities. ("This invasion is remarkably similar to the one from twenty years ago. We need to find the heroes who saved the world then!") *In Nomine* did a very good job with this solution (once more of its back story and history were made available, like in the Superiors books and the *Game Master's Guide*).

- **The White Event.** Named after the Marvel New Universe (a failed comic line from the 1980s) phenomenon that started all its superheroes, it posits that there *is* a specific event before which everything was normal, and after which everything was different. This is the tack taken by games like *Torg* and *Exalted*. In *Torg* it's presumed that the world was more or less normal before other realities started invading us, and *Exalted* is presumed to be relatively static for a few hundred years until the disappearance of the Empress and the return of the Solar Exalted. This can be a very logical, good explanation, but it does have its limitations. The biggest is that all unusual phenomena are almost required to spring from the White Event; if you want to propose that there are aliens waiting to attack Earth independent of the *Torg* invasion, then you may need to come up with a good explanation why they haven't been involved before now. But for a logical universe, it's difficult to top having all your unusual actions springing from the same source.
- **We live in interesting times.** There are some eras that are, simply, more exciting than others. The early years of the 1940s spring readily to mind, of course. And so does the past year.

Just one year ago I was writing my [Thanksgiving column](#) (and just about everything there I was thankful for still applies). Back then I considered that the confusion over who the heck our President was would be the extent of our excitement for the next year. I was obviously wrong. A lot has happened in the past year, and I sadly suspect the next year will also be eventful. While I doubt we'll fend off more than two alien invasions in the next 365 days or so, the amount of tragedy, drama, and heroism I've seen recently has made me realize that maybe these exciting times don't *need* any explanation. I know that I'd personally grown spoiled by a decade or more of quietude, and a part of me may have (on some level) believed this would always be so. I know now I was deeply mistaken.

The 1940s were epic, heroic, and tragic; the 1960s were tumultuous; I won't even hazard a guess as to what our current days are. Why are these eras such? Because they are. Scholars may strive for more explanation, but at its core there may not need to be any other reason. And ours is a relatively mundane world; from here it doesn't take much effort to envision a superheroic universe with millennia of peace followed by monthly alien invasions.

Regardless, we still have more to be grateful for than perhaps any time in my memory. Hopefully it won't take anything as dramatic as a Martian invasion -- or as mundane as the passage of a year -- for me to keep this in mind.

The holidays seem to have snuck up on lots of people this year. I know I've been surprised at how quickly the end of the year has approached. And John Kovalic and Ken Hite have also been snared in the holidays.

So although John is busy as ever, he has graciously provided us with some exclusive sneak-peak pages from the forthcoming *Dork Tower* #15. We hope you enjoy.

(Editor's note: We seem to be having technical difficulties with the images currently; hopefully those will be up at some point later this week.)

Ken Hite has been called by the Secret Masters to help in planning this year's Invisible Unease Parade (you probably haven't seen them marching down an empty street, and felt nervous as they passed). We're hoping he'll be back soon. In the meantime we've taken the opportunity again to publish a nice, big Steampunk adventure.

And, as ever, if you want to drop me a line, feel free to do so on the discussion boards, the [chat room](#), or by email (pyramid@sjgames.com). Please be aware that my Day Job has left me busier than ever currently for the holiday season, so if I'm a bit less available or sluggish in my replies, that's probably the reason why. We thank you for your patience.

Variety . . . of Life

by Phil Masters

"I thought that your friends said that this caravan was going to be carrying treasure?"

"They did. They just didn't know what it would be." Malk the bandit leader scowled at his smirking sidekick. "And yes, I can see that those packs are too big and light for gold or silver. So perhaps there's gems or something hidden in the bottom. My friends aren't usually wrong; we've just got to find the stuff."

Malk scowled more as he spoke, though. Stealing the entire baggage train in the middle of the night had taken nerve and timing, and there'd been some nasty moments. His followers might react very badly if all the danger -- and the pursuers' arrows which had wounded two of the men -- had been for nothing. He hoped that his contacts hadn't lost their skill at pointing him at good loads . . .

"Here, this pack's just full of seeds!" Big Rolf, one of the men assigned to the job of searching, roared in disgust, pulled out his sword, and slashed right through the canvas wrapping that was still carried by one of the mules. The chief glanced at the man as a torrent of dark grains poured onto the ground. And then, a faint but rich scent reached his nostrils; a scent which reminded him of those boring years working as a noble's servant . . .

"No!"

Malk crossed the distance to Rolf with a single leap. The big man stared at his chief in blank confusion at the cry of frustration and rage, too startled to defend himself when Malk threw an angry punch to the jaw that dropped him on the spot. Then Malk himself dropped to his knees, scrabbling wildly as a king's ransom poured into the mud . . .

Roleplaying games are often concerned with wealth. Adventurers in medieval-style fantasy or historical games especially often spend much of their time in pursuit of cash and valuable goods, legally or otherwise. And yet, one of the most important types of treasure in history almost always goes ignored.

When medieval Europeans ventured to Byzantium, they *paid* for goods with precious metals; they wanted other commodities more. When Marco Polo traveled eastwards, gems or gold were not high on his list of direct concerns. When Francis Drake sailed around the world, attacking Spanish ships all the way, he *was* happy enough to plunder coins and plate, but he was almost as keen to bring home other loot. When the Dutch and British fought wars over colonial possessions, many of the islands in question had no geological wealth to speak of. What all these brave, desperate, ruthless ventures had in common was something more useful and much more perishable; *spices*.

It may bemuse players and GMs that their characters might be obsessed with something that the gamers themselves could buy off the shelves in any supermarket for pocket change, but in games based to any extent on history, it's a serious possibility. Furthermore, this is an interesting sort of treasure, demanding care and some skill in the handling -- a good way to confuse and amuse PCs who've become too casual about pouches of silver and gold.

The Nature and Uses of Spices

Herbs and spices are, of course, plant products used to impart flavors to food, and also for other purposes. Contrary to what some people say, they cannot disguise the taste of truly *rotten* meat -- nothing can do that, and nothing can make it safe to eat -- but they can make old, indifferently preserved foodstuffs more palatable, which can be invaluable in a land without refrigerators and with a narrow range of food sources. Furthermore, some actually aid preservation

somewhat. In addition, many have been rumored to have medicinal properties; in some cases, this is true, at least to a limited extent, while in others, the inhabitants of plague-wracked lands became desperate enough to follow up any hint of life-saving measures. A couple double as useful dyes, and some, with their strong scents, were used in funeral rites and other religious ceremonies. And, of course, they are often quintessential luxury goods, handy for those who wish to show off their wealth and taste to dinner guests.

Herb and *spice* are casual terms, not rigorously defined, but for practical purposes, "herbs" are usually leaves or green stems, while "spices" are seeds, bark, or other parts of all manner of plants. From the Medieval European point of view, the important distinction is that herbs are mostly easy enough to grow in the local climate, and hence are usually quite cheap and commonplace, whereas spices mostly come from a long way away, and can be very expensive. As most fantasy games are set in quasi-European environments, this article concerns itself with spices (although it might be amusing for a game to involve the problem of shipping loads of perishable temperate-zone herb leaves to some tropical empire).

Although most spices can be dried, and keep fairly well (preferably in sealed containers), they do demand some care. Most will be spoiled if they become damp or are otherwise maltreated, and few will last forever in any conditions. The crucial flavor elements are usually volatile oils or similar, which dry out or become stale with time. Likewise, most have to be ground or pulverized for use in or on food, but keep far better intact; hence the invention of pepper mills, pocket nutmeg-grinders, and so on.

The Spice Trade

While spices have been bought and sold widely in any civilization worthy of the name, the term "the Spice Trade" evokes one pattern of business in particular; the transportation of spices from central and southern Asia to the Middle East. Products from Tibet and China came by land along the Silk Road, while those from India and islands further south might either move over the Hindu Kush, or come by sea from ports on the west coast of India to the Persian Gulf and the Red Sea. From the southern and eastern Mediterranean coast, they were transported to Europe by middlemen who grew famously wealthy from the business. At first these were Phoenicians, then (after Alexander the Great destroyed Tyre) the trade was dominated by the city of Alexandria in Egypt. The Romans sent ships direct to India; after their Empire fell, its successors in Constantinople came to dominate the field.

When Islam appeared on the scene, it took charge of much of the spice routes, but did not markedly change the system, which was far too profitable. The Crusades served to bring a renewed taste for spices to Europe, and hence may have encouraged the Spice Trade despite temporary disruptions. The great change came when Western Europeans, tired of giving large profits to the middlemen of the eastern Mediterranean, rounded Africa and expanded into the Indian Ocean. The Portuguese, then the Dutch and British, and later the French, set to work exploring the origins of spices, and then exploiting them, often spreading spice plants to their other colonial possessions in the Old and New Worlds.

Given that everyone involved in the Spice Trade usually fully appreciated the benefits of monopoly, and fought hard to defend their own or to break other people's, it could provide a major theme for exploration or espionage plots in many periods of history. (As an example of the importance attached to control of a limited supply, note that, at times, Dutch traders would burn bales of spices on the streets of Amsterdam to keep prices up.) Finding out where a given spice comes from; negotiating with or conquering the current controlling power; defending shipments against pirates and the secret against spies; ferreting out others' secrets, and perhaps *acquiring* seeds or rootstock, and transporting them safely to somewhere else they would grow -- all would make for interesting (if often frankly amoral) adventures.

Example Spices

In worlds based on historical Earth, it's usually easiest to stick to real-world spices (although GMs are always free to bring in something imaginary, rare, and fabulously valuable, for effect). There are a wide range of spices known to cookery -- look in any good food shop or kitchen; the following are simply some interesting examples.

Pepper

Today's most familiar spice, found on restaurant tables everywhere, nonetheless has a history. (The name is used here to refer to Old World spices derived from plants of the genus *Piper*, not any of the other products sometimes called "pepper," such as capsicums.) There are several types, but "black" and "white" pepper are the most common; both are made from the dried unripe fruit of *Piper nigrum*, a climbing plant native to the forests of Malabar but now grown widely in the tropics, especially in Asia. Pepper cultivation requires the presence of trees or man-made trellises for the crop to climb; the difference between black and white pepper comes from the timing and details of the harvesting and drying process. It was known to the Greeks and Romans, as a medicine (to aid digestion, as a poison antidote and as an aphrodisiac) as well as a spice. One story says that Alaric, the king of the Goths, demanded 3,000 lbs. of pepper as part of a ransom for Rome; in Saxon times, seafarers from the east who came to London paid part of their port charges in pepper.

Dried pepper seeds are of course ground for cooking or as a condiment, and freshly-ground pepper is considered best. In large enough quantities, it actually has a cooling effect, and it is used for this in some Indian drinks; it seems to be the oldest of all spices in Indian cookery, going back to prehistory. As a widespread but still expensive spice, it became a *symbol* of wealth (as Alaric doubtless saw it), often being used to pay rents in the Middle Ages. (Ironically, today, a "peppercorn rent" is a nominal payment.) In the Age of Exploration, rival colonial powers spread pepper cultivation, eliminating local monopolies and thus bringing prices down.

Nutmeg and Mace

These two spices share an origin, both deriving from the large seeds of a tropical tree. Mace is the dried aril or "cage" which surrounds the seed, taking the form of a soft, red, woody material, while nutmeg comes from the hard kernel, grated or ground to powder. Not surprisingly, the two have similar flavors. Most chefs regard mace as superior, but nutmeg comes in greater quantities and is more easily transported and stored, so it is more often discussed. Along with its distinctive flavor, it does help preserve meat by preventing oxidation.

The nutmeg tree originates in the Moluccas (an island chain between New Guinea and Borneo), and specifically in the tiny, remote Banda Islands. It proved difficult (though not impossible) to transplant elsewhere; it likes a specific climate and volcanic soils. Nutmeg reached Europe, via a long and complicated chain of middlemen, around the 6th-9th century. When Europeans first located the islands (with some difficulty) in the 16th century, they found them hard to reach; the often suspicious locals were said to be cannibals and headhunters, the surrounding seas were full of reefs and prone to storms, and there were rumors of giant crocodiles and other monsters. Nonetheless, trading posts were eventually established.

Nutmeg is actually poisonous in very large doses (and produces a "high" in slightly smaller doses; the risk to those foolish enough to experiment is obvious). Historically, however, few people could afford to explore these qualities. Like many other spices, it gained a reputation as a medicine (and as an aphrodisiac), culminating in Tudor times with the claim that it protected against the plague. This pushed the value sky high, which in turn led to a long and brutal on-off struggle between England and Holland for access to and control of various of the Banda Islands, only ending when French and British experiments finally managed to transplant nutmeg trees elsewhere in the 18th and 19th centuries. Earlier, during one Anglo-Dutch conflict, the Dutch captured Run, the most remote of the Banda Islands, which was claimed by England, while the English captured Dutch possessions elsewhere on the globe. The eventual peace settlement kept the ensuing position; thus, in effect, the two nations traded a tiny, remote island in the East Indies for Manhattan, and New Amsterdam became New York. At the time, it seemed like a fair swap -- a measure of the value of the nutmeg trade.

Paprika

The European discovery of the New World led to the introduction of a number of new spices to Europe, not least the whole family of capsicum "peppers," which range from mild salad vegetables to scorching chilies. Of these, paprika has an especially convoluted history.

Europeans were cautious about using very hot peppers in quantity, but when they traded them on to neighboring lands, Islamic cooks took to them with more enthusiasm. From the Middle East, hot peppers spread to India and beyond, very rapidly becoming a standard ingredient in curries and the like, and also north, as the Ottoman Empire attempted to move into Europe. One type seems to have been acquired by the Bulgarians, who in turn passed it on to Hungary in the early 17th century. The Hungarians, learning where this spice came from, initially called it "Turkish pepper"; the word *paprika* ("little pepper") followed around 1775. Doubtless, selective breeding along the way produced a plant substantially different from the original form, as now grown on farms throughout Hungary.

In other words, the key ingredient of goulash, a Hungarian national dish, is a New World spice that performed a near-complete circuit of the Mediterranean before finding its current home.

Saffron

Saffron is distinctly unusual among spices. It is not a seed or bark, it has a markedly sweet quality, and it is relatively easy to grow in temperate European conditions. And yet, it is the most expensive of all spices, a fabulous symbol of luxury.

The explanation for this lies in the details. Saffron is the dried stigmas from the center of the flower of a type of crocus. Each flower produces three stigmas, which must be gathered by hand when the flower is ready -- the operation is far too delicate for mechanization, even today. As it takes 70-80,000 stigmas to produce one pound of saffron, the reason for its high price by weight (comparable to that of gold) is obvious. Then, it has to be transported and stored in small airtight containers.

Fortunately, it has an intense, honeyed scent and flavor, so even quite substantial dishes need only a few "threads." It also acts as a rich yellow dye, so that it has been used at times to color cloth, and saffron-flavored dishes (such as cakes, breads, and the savory rice-based Spanish *paella*) tend to be distinctively colorful. (However, Buddhist monks' "saffron robes" are today dyed with cheaper turmeric.) In civilizations from Rome to India, it has been used in all these ways as a sign of celebration and luxury. (It was also thought to have medicinal properties; Elizabethan books claimed that a large enough dose in sweet wine could bring back the dead. Presumably, the cost saved them from being tested too often.)

Saffron originated in or near Persia (Iran), and although the Romans brought it to Europe, its spread is largely credited to the Islamic empires, who carried it to India and Spain. The Crusaders supposedly brought it back again to mainland Europe, and one legend says that a 14th century pilgrim smuggled a crocus corm into England in a hollow staff -- the sort of thing gamers might imagine a PC managing. (However, some writers believe it was present in the south-west of the country long before that, perhaps even being brought there by the Phoenicians during the Bronze Age.) This specialist crop could be intensely valuable to a community with the right conditions to grow it, as the very name of the English town of Saffron Walden demonstrates. Wandering PCs might be startled to discover that a small field of crocuses is the secret of some village's wealth . . .

Some Other Spices

- **Cardamom** is the dried unripe fruit of a plant native to southern India and Sri Lanka, and is the third most expensive spice, behind saffron and vanilla. It has an intense scent and flavor which makes it popular in Indian sweets and Arab coffee as well as in savory dishes. Several related plants provide inferior "false cardamoms."
- **Cinnamon**, the dried bark of a tree native to Sri Lanka, may be the oldest spice to have been traded long distances and thus acquired a high price, being mentioned in Egyptian papyri and the Old Testament. Roman emperors stored it in their treasuries, and Nero burned all the cinnamon in Rome at the funeral of his wife (who he had killed in a rage). Its origins were something of a secret until the Portuguese reached the Indian Ocean; it was transplanted across the tropics in colonial times. "Chinese cinnamon" is actually cassia, a related spice obtained from a number of plants; it is generally thought inferior to true cinnamon, but the Taoists considered it to be the food of the Immortals, with great medicinal properties. (Cinnamon oil is certainly an effective bactericide.)

- **Ginger** is made from a root, eaten fresh and green in countries where it grows but better known around the world in its dried and powdered state. The plant is never found in the wild, but is thought to have originated in southeast Asia. The Romans imported it, mostly as a medicine; it has been used in Europe ever since, and is today grown in many hot countries.
- **Mustard** is quite cheap, being made from the seeds of various plants of the cabbage family which can be grown in European climates. It comes in a variety of treatments and strengths (sometimes dried and powdered then mixed with water, sometimes as a simple paste), and may have other flavors added (or be colored with turmeric), according to local taste.
- **Rhubarb** is not really a spice, but it has a similar place in history. It originated in Asia, and was long regarded purely as a medicine. Medieval Italian houses spent a great deal of money on Tibetan powdered rhubarb, brought along the silk road, to use as a purgative. Versions of the plant bred specifically for eating seem to be a post-Renaissance development.
- **Turmeric**, made from the rhizomes of an Asian plant, is effective as a yellow dye and cosmetic; it thus became a substitute for saffron, although the flavors are very different.
- Lastly, **Vanilla** is another New World product, and another sweet spice -- or rather, one usually used in sweets. (It is not sweet in itself, and some sophisticated cooks use it in savory dishes.) Despite its association with plain blandness (thanks to the ice cream industry), it is actually expensive by weight; it has a powerful flavor and scent, and hence can be used in small doses. It is made from the cured seed-pods of a Central American vine; some of these are sold intact, while others are used to make vanilla extract, in which the essential components are dissolved in a solution of water and alcohol. Vanilla was known to the Aztecs and brought to Europe by the Spanish. The first problem in cultivating it was that the wild version is pollinated only by specific species of bees and hummingbirds, but once artificial pollination was invented by an ex- slave on the island of Réunion, vanilla production spread to other regions, especially Madagascar. Victorian chemists identified and synthesized the main component in the flavor, but serious cooks still prefer the more complex, more expensive natural product.

Game Applications

The point about spices in games will usually be that they are treasure -- but difficult treasure to exploit. Although very valuable by weight (sometimes as valuable as gold), they are fairly bulky to carry in their packaging, perishable, and require some specialist knowledge to sell. Characters who become involved in the spice trade will have to understand at least a little about the details of their world's economics, and about the tastes and peculiarities of high society.

Spices may also have genuine medical uses, especially in fantasy games where historical beliefs have a little more reality. Given their rarity and the complexities of their origins and natures, they could also have magical uses. In a setting such as that of *GURPS Cabal*, some spices will have specific "aspects" and "resonances"; being valuable (and smelling nice when burned), they may also make good sacrifices for characters trying to invoke gods or spirits. Of course, making sure that one is using genuine spices of the right kind may demand specialist knowledge.

In historical games, especially those set before about 1800, spices can be as important to PC adventurers as they were to Francis Drake or Marco Polo. (By 1800, transport had become markedly better, the world was almost completely mapped in outline, and several important spice-plants had been successfully cultivated away from their place of origin. The Dutch East India Company, which had often dominated the Spice Trade, went bankrupt in 1799.) NPCs will certainly *assume* that explorers and merchants will be interested in the origins, prices, and availability of spices, whatever their actual concerns, and it is worth remembering that such information may have value in itself.

GURPS Fantasy

The world of Yrth detailed in *GURPS Fantasy* is quasi- medieval, and hence most likely attaches a lot of importance to spices. Some may be local plants, but many terrestrial crops seem to have been transported there by the Banestorm along with humans, so it's probably easiest to assume that at least some Earth spices are present, and there are doubtless analogues for others.

Those which require warm climates presumably grow best in southern areas of the continent of Ytarria and

thereabouts, and indeed, the islands of Araterre are specifically noted as the sole source of several spices. (It would be tempting to have some spice traders traveling to and from Sahud, but the northerly climate really makes that unlikely.) Araterre could produce spices of southern Asian origin, while Cardiel and Al-Haz might have at least local production of Middle Eastern spices. (How Asian spices reached Araterre, given that the Banestorm mostly carried Europeans there, is an interesting question.) Capsicums may have arrived on Bilit Island along with the New World human population, and be traded in small quantities to brave merchants who then sell to those Yrth denizens who like scorching food. (Indeed, a taste for chilies may be a mark of wealth and sophistication in some parts of Yrth.) Mustard, saffron, and the like might logically be grown almost anywhere.

On this basis, the main spice route in this setting would run north from Araterre to mainland Megalos, then northwest (by sea or along the coast road) to other lands. At Yibyorak, the traders out of Araterre would meet others who sail up from Cardiel in defiance of national enmities, and buyers who come east (around the Blackwoods) from Megalos's western marches and beyond. Yibyorak is known to be a wealthy trading duchy, and this helps explain why; the local goblin and human spice-dealers must thrive. (It's easiest to assume that goblins share human tastes in spices, or at least that they can judge what a human will find pleasant. Although it might be amusing to have a goblin merchant growing rich on dealings in something he finds disgusting. Business is business.)

SF Settings

In a space-opera setting such as that of *GURPS Traveller*, there may be countless new and ever-more-valuable spices to tempt the jaded palates of the interstellar aristocracy. Snob value will attach to those which cannot be produced cheaply, meaning plants which are incredibly fussy about sunlight, soil, and climate (at least if epicureans want them at their best). Commercial espionage may focus on identifying the secrets of some fashionable new spice. Of course, this business may shade into more dubious realms, as some spices may prove to have more or less mild mood-altering properties, or even to have radical effects on some sentient species.

Worlds such as that of *Transhuman Space* involve more sophisticated biological sciences than "classic" space opera, which might make the grocery trade less prone to local monopolies and limited production. On the other hand, some gene-modified spice plants might well be the subject of industrial espionage along with complex intellectual property disputes. A genetic engineer might produce interesting new spice flavors, although current experience suggests that genemod crops will mostly be designed for easy of growth, harvesting, and storage, at whatever cost in culinary quality. Gourmets may insist, sincerely or out of pure snobbery, that "no imitation matches the real thing," keeping the price of certified-authentic products high; some medium-sized space stations capable of supporting agriculture may find it more profitable to produce interesting flavorings than staple foodstuffs. Incidentally, the idea of tinkering with the biological function of spice plants to protect a monopoly has a long history; when the Dutch controlled all the world's sources of nutmeg, they would dip the seed-kernels in lime juice before sale, to prevent them from germinating.

Interacting with Established Characters

by Travis Sedars

Many roleplaying games are modeled after existing fictional universes, which is usually why players enjoy them. Fans of books and movies like the idea of putting themselves in the environments of their favorite characters, from Star Wars to DC superheroes. However, many of these games encourage players to create their own characters rather than take on the roles of characters already established for the setting. This can lead to serious problems as game masters and players try to maintain order between the stars of their game and the established characters of their chosen universe. There is no singular easy answer to this complex dilemma, but there are common issues to watch for and guidelines to dealing with them.

The first problem is in striking a balance between too much and not enough involvement of established characters. If you use established heroes too much, they're going to steal the scene and overshadow your player characters. Everyone is going to take notice when Luke Skywalker or Superman steps onto the scene, and suddenly the player characters are going to look pretty insignificant. On the other hand, if there is never even any mention of the existence of established characters, players may start to forget what brought their attention to the game in the first place.

Perhaps the best solution to this is for the GM to make occasional references to known storylines and characters, while severely limiting the actual presence of these characters. Drop lines during casual conversation about how things have changed since the Death Star blew up. Maybe the guys sitting next to the characters in the bar have heard rumors about what the players' favorite heroes are up to. Describe a character that exits a room as the players are entering, giving enough detail for the players to know they just brushed up against their favorite hero, even if their characters don't realize it. Little things like this will go a long way toward maintaining the setting of the universe you want to play in, without allowing someone else's creation to steal the scene.

Another good way to bring up established characters without actually bringing them onto the scene is for the players to be called upon as stand-ins for their favorite heroes. They can suddenly get that dangerous escort mission because Skywalker and his Rogue Squadron were unavailable. Not only does this remind the players of their heroes, but it also helps them to feel like they're making a difference. Being called upon to do something that their heroes would ordinarily have been asked to do makes the players feel like big shots.

"I'm Sure You've Heard Of . . ."

On the other hand, players might actually want to rub elbows with their idols, so they might be bothered if they are not allowed to meet the occasional established character. This would be fine in most conversational settings, but it can get boring if all the characters are doing is sitting and talking; chances are, your players know more about their favorite characters than those characters know about themselves. Most often, players will want to interact with their heroes in some sort of exciting scenario. If this is the case, then exactly how to handle the situation depends on which type of game it is.

One type of game using established characters is the kind where player characters tend to be immediately statistically equal to the established characters. This means that, in most cases where an established character and a player character go up against each other, the outcome is uncertain. There are not many games like this--which is a good thing when you consider that they usually have poor rules for advancement—but they are the ones where established characters are easiest to interact with. Ideally, everyone will perform at about the same level. In these situations, there is not as much danger of the established characters making the players feel bad.

The more likely scenario is that you're playing a game where your players' characters get better over time, and the stats of established characters have been calculated based on the idea that they have been around for awhile and accumulated a great deal of experience. If this is the case, you are typically left with two types of characters: the attainable and the unattainable.

The attainable characters are those that your players' characters might one day rise to the ranks of. These guys have been figured honestly by the game's creators, and operate under the rules of the world they live in. They are not gods at everything, so they will have their weaknesses and exploitable flaws, just like any other character. Because of this, if you play the game long enough and rack up enough experience, your players' characters will grow to be on the same level as these guys.

The unattainables are, unfortunately, another matter. These guys have been doctored up so much that no player could ever hold a candle to them. It would take years of constant gaming for any player character to match these guys in even those areas that are considered their "weak points." The logic in this is clear: the creators want to uphold these characters as the best there are. The problem is equally clear: any scene containing these guys will result in the players being overshadowed and the adventure being spoiled. It is considerably more difficult to run an adventure containing these types of established characters, especially if the goal of the game is for everyone to have fun.

The way to handle each of these scenarios should be fairly clear. If you're playing a game where the player characters and the established characters are on the same footing, then bring in established characters as much as you like; most players will enjoy being equals with their favorite heroes. If you are playing a progressive game with attainable characters, then bring in the established characters when they will no longer drastically overshadow your players. If you are playing a game with unattainable characters, then you should definitely limit the amount of appearances the established characters make.

That said, there are several situations where any of these types of games will benefit from the presence of established characters. First among these is scenes where the players are in a jam and an established character can bail them out. In movies, books, and TV shows, heroes are constantly benefiting from alliances with characters they have met along the way. Heroes who are ambushed or have been captured may require someone to help them out. Likewise, characters that are stranded in remote locations without transportation can always use a lift from someone they know and recognize. No player will turn down a ride in the Millennium Falcon, and anyone would welcome the chance to fight an alien invasion alongside Batman.

However, GMs should use this tactic sparingly. Players will feel like failures or "damsels in distress" if established characters are constantly aiding them. Players want to be heroes, not sidekicks, and they certainly don't want to be just another distraction in the lives of other heroes. This is especially dangerous if you are playing a game with established characters whose stats are off the charts—even more so if they are outdoing the players at what the players are supposed to be good at.

Message From Mr. Kent -- "HELP!"

This works better with the tables turned; in rare situations, the players may have the opportunity to bail an established character out of a jam. If players don't mind being rescued by their favorite heroes, they'll love being the ones to do the rescuing. This is easiest in games where players are on the same level as the established characters, but conceivably any hero can get himself into trouble. When Han Solo is facing down an army of stormtroopers, he'll take any help he can get. Even the characters who seem most powerful have at least one exploitable weakness, so when Lex Luthor cripples Superman with his kryptonite, any player's character who happens to be on hand is suddenly going to become a powerful ally. A good rule to go by is for the players to help out established heroes at least as often as the established heroes save them.

Of course, all of this is assuming that the established characters you're dealing with are friendly and heroic in nature. Interaction is even more difficult when player characters encounter major villains. With heroic characters, the biggest danger is for the players to end up overshadowed. With villains, your players' characters risk more than just their reputations. There are two major dangers here: having the heroes kill the villains, and having the villains kill the heroes.

The death of an established villain is far more likely to occur in games where all characters are on the same footing, or in games where the players can attain the same level of skill as the villains. In games with unattainable levels of

experience, it's unlikely the heroes will ever get their hands on the villains. The consequences of the death of an established villain should be obvious: everyone knows the villain isn't supposed to die like that. If you're playing a game like Star Wars where the story has already been told, you can't let the players kill Darth Vader, because everybody knows that that's not the way things went down. If your heroes kill established villains, the whole story can be thrown off. The players may be proud of themselves for the accomplishment, but the realism will be cracked when they think of how that villain really died in the movie, or when he makes another appearance in a book or television show.

On the other hand, there is a danger that the villains could kill the players' characters. This is again more likely if the villains are made to be stronger than any player character. There is no danger in this messing up the established storyline, as the players' characters are unknown anyway, but it can be upsetting for players to battle villains they have little chance of defeating. However, if the players really did have a chance and don't feel like they were set up, it can actually be a more satisfying way to lose. If it's a villain the heroes know -- and someone who has a tough reputation -- then the players would probably prefer losing to him compared to someone the gamemaster drilled up who just happened to get lucky.

Unless the heroes are getting cocky and the GM wants to knock them down a peg or two, it's usually a good idea to avoid throwing exceptionally tough established villains at them. As with heroic established characters, villains' names might come up in dialogue, or there could be vague references to them in background. There is no good reason to do something like sending your Rebel Spec Ops team to assassinate Emperor Palpatine; they probably couldn't do it in the first place, and they can't be allowed to succeed even if they are good enough. Players can usually tell if they're being set up for a cheap fall, and they don't like it.

In games involving things like character points, game masters have an important tool to control the difficulty of interaction with established villains. If the players get in a lucky shot and have a chance at killing the villain, the game master can always spend a few character points to lessen the damage. The less expendable the villain is, the more character points he will have, which means he has less chance at an accidental death. Character points are not usually in place for established characters to make astounding feats—that's what their high stats are for. Character points are in place for established characters to stay alive and, on occasion, evade capture.

If heroes are encouraged to simply capture or defeat the established villains rather than killing them, the players can be allowed to win. Established villains who get sent to prison in books and movies can always be sent back to prison by the players without screwing up continuity. Likewise, villainous military commanders can be defeated through their soldiers' deaths rather than their own. Players feel proud when they outmaneuver characters reputed to be great strategists, and they'll enjoy handing those villains a humiliating defeat.

Established characters that are mostly supporting characters in their environments are the easiest to work with. Even in games featuring characters of unattainable skill levels, supporting characters can still be dealt with and not overshadow or become unreasonable threats to the players. Supporting characters can mostly serve the same purpose for your players that they serve in the context from which they originate. Typically, these people are friends, informants, or henchmen.

Has Anyone Seen Jimmy?

Friends of established heroes get themselves into trouble on a regular basis. In fact, many heroes' friends were created in the first place so that they could be rescued repeatedly by the heroes. Part of being a hero is rescuing people, so players typically don't mind saving someone. As long as they're rescuing someone, it might as well be someone they know. The biggest thing to watch for here is making sure the characters don't drop the ball and get the supporting characters killed. If it looks like the characters won't be able to pull off a rescue, the established heroes will have to come in to save the day. Even in that scenario the players will feel like failures, so place established friends in danger only when you're reasonably certain the players can pull off the rescue.

Informants come in a wide variety of characters, from contacts to employers; basically anyone who might point the heroes in the right direction is an informant. It's a natural step in the process of most games for heroes to have to turn

to someone for help, and it's more fun for them if the person they go to is the same person their favorite heroes turn to when they're having a tough time.

Henchmen are often the established supporting characters that players have the most fun interacting with. These guys are usually villains, but not much of a threat, so there should be less danger that they will kill the heroes—and losing to a henchman is a slap in the face to any player. The henchmen are the guys that the established heroes bully and intimidate to find out what they want to know, so players who are trying to emulate their heroes would love to have the same interaction. It's entertaining to watch the original heroes throw these guys around, and the players naturally want their turn at it. The only danger here is if a player gets carried away and throws the henchman off a bridge, which again could cause continuity problems.

Player overexcitement is one of the leading problems in interaction between player characters and established characters. Whether the players love the heroes too much, or hate the villains too much—or the other way around—even the most skilled of roleplayers can act irrationally if given the right situation. Temptations like shooting Jar Jar Binks or wanting to be the one to finally cap the Joker just lead to bad roleplaying. Gamemasters need to watch for signs of danger and strongly consider the maturity of their players before allowing them to come into contact with certain established characters.

Going against all of this, some groups of players actually like to see just how much chaos and continuity problems they can create in their chosen environments. For this, parallel dimensions or mirror universes are the best way to go, if appropriate. If it's not really the established setting, but just looks a lot like it, trouble-making roleplayers can have a field day. This is a great way for players to work off some frustration. Player characters with this freedom can kill off established characters with impunity, derail popular storylines, and even end existence as they know it. Players can gain bragging rights for killing this character or that character. A dimension in which the established heroes never existed could easily free up the spotlight for the players' characters.

Of course, gamemasters and their players are free to run their adventures any way they wish, but following these guidelines can add further realism to campaigns. Players enjoy these sorts of games partially because of the established characters in them, and denying players contact with these characters can alienate them. At the same time, careless use and abuse of established characters can be detrimental to a game. Striking a balance between these elements isn't always easy, but it can be rewarding if you do it right.

En Route (for d20)

Published by [Atlas Games](#)

Written by Justin Achilli, Keith Baker, Joe Crow, Scot H. P. Drew, Matt Forbeck, Will Hindmarch, Spike Y. Jones, Michele A. Brown Nephew, Scott Reeves, John Seavey, Matt Sprengler, Eric Tam and John Tynes

Illustrated by Lee Moyer, Mike Dutton, David Interdonato, Jennifer Myer, Steven Sanders, Helena Wickberg and David White

128-page perfect bound book; \$20.95

The "side trek" scenario has been a staple fixture in issues of *Dungeon Magazine* -- and thus for the average *Dungeons & Dragons* player -- for many a long year now. Each of these short one-session adventures is intended to be run as an aside or diversion for the party as they move from one goal to the next. Atlas Games have now taken up the idea under their Penumbra imprint and published *En Route*, a collection of *d20* encounters to be run almost literally as the party are on the road.

There are a total of twenty-one encounters within *En Route*, which means you are paying a scintilla less than a dollar per encounter. The purpose of *En Route* is to use it to supplement or even replace the wandering monster table, substituting random violence with something more memorable and more challenging. As with all Penumbra releases, the production values for *En Route* are excellent, with just a pair of insignificant typographical errors. Each encounter is never less than three pages in length -- most are longer -- and each is accompanied with just the one illustrative piece of art. All of these are well done and appropriate to the encounter -- some highly so, such as Helena Wickberg's piece for "All That Glitters" and Mike Dutton's for "Dance the Night Away." The cover by Lee Moyer is definitely eye-catching in its vibrancy, but it is a pity that it does not depict the events of an encounter within the book.

[SPOILER ALERT]

En Route opens with Michele A. Brown Nephew's "All That Glitters," which as the title suggests involves illusionary gold and a woodland trickster. The first of several encounters in the book with a similar theme and creatures, it is a pity that the rather obvious title is once again misquoted. Joe Crow's "Dance the Night Away" and John Seavey's "Just a Bit of Fun" follow in both theme and creature.

Possession is the theme of "Dead Drunk" and "The Hellcow," both by Keith Baker. In the former, the spirit of a recently deceased drunk and incompetent thief possesses a character at an inn, whereas in the latter, it is a mischievous spirit that possesses first a cow and then the party's familiars and companions for yet more fun and games. Keith Baker also offers us the "Burlap Children," setting the party up against a band of young pickpockets and rogues to be; and "The Glass House," in which an inn and its patrons are suddenly (and permanently) rendered invisible. This is a good mix of encounters, offering interesting problems to be resolved and roleplayed through.

Alex Knapik's "The Draughtsman's Pen" finds the party in a piece of art with a decidedly demonic secret. In the "Heroes' Feast" Scott Reeves offers the characters the ability to gain favorable bonuses and interesting penalties in the pursuit of their current quest -- and only in the pursuit that quest. The dishes they eat at the feast are the inspiration for

both the bonuses and penalties. Food is also the cause of a strange behavior found in Justin Achilli's "Goblin Trippin'," but one which the players should be able to work out . . . even if their characters might have more difficulty.

Besides his "Just a Bit of Fun," John Seavey's other entries in the book are "The Dream-Temple of Darkest Varath," where sleeping upon the site of a razed temple opens the character's minds to temptation from a long forgotten god. Reminiscent of something more Lovecraftian, this has long-term repercussions depending upon the choices made by the players. "His Wayfarer's Rest" is more traditional -- stopping at an empty inn, the party find their hosts have a decidedly murderous bent. Likewise, "The Fox's Fraud" by Spike Y. Jones is a slight twist upon the traditional bandit ambush.

Two feuding daggers, with a shared tragic history are at the center of Will Hindmarch's "Duel." Both are interesting NPCs for the referee to control and the players may enjoy the abilities that wielding either blade may bring, but not the problems and drives. His second adventure is "The Idol," a strange and lonely religious icon abandoned aboard the ship the party is traveling on. It calls forth Jungle creatures in an effort to get itself returned home and these threaten both crew and ship.

Should the characters discover the secrets of an overnight resting place, it could undermine the conviction in their faith in Scot H. P. Drew's "Faith of Stone Apes." Religious conviction proves a hindrance to crossing a bridge in Matt Sprengler's "A River Runs Through It," when a group of zealots choose the river as a holy site. The difficulty is not eased by the interference of a pair of -- yes, you've guessed it -- invisible, whispering pixies. A river crossing is also a problem in "Toll Bridge" by Rick Neal, when a group of peaceful lizardfolk starting collecting a toll for the use of a bridge. Local villagers like the business their money brings, but the merchant caravans dislike the extra they have to pay out for transporting their goods. This offers decent opportunities for roleplaying and negotiation if the party is to bring about a peaceful resolution.

The party finds a strange prison in the ground in "Spirit Mine" by Eric Tam. Matt Forbeck's take upon the dark mysteries of the circus, "Sideshow of Doom," is a lead in for his forthcoming adventure, *Circus of Fear*, to be released from Atlas Games in 2002.

In John Tynes' "The Trembling Hill" -- the longest encounter in *En Route* and the nearest any entry gets to a dungeon, the party find the ground beneath them vibrating, the air suffused with a pale lattice and their animal companions and familiars quite disturbed. They trace this to a strange cave in the center of a hill, which is occupied by gray goblins cutting at cows, has rooms with mirrors hanging in the air and amorphous blobs that ooze out of the walls to attack the characters. To be blunt, John Tynes is adapting his predilection for UFOs et al straight to *d20* fantasy. This may not be a *Delta Green* scenario for the *d20* system, but its heritage clearly shows and this is at odds with the traditional feel of a standard *Dungeons & Dragons* game. This is even more so if the players work out what exactly it is that they are facing -- and they should. Interestingly, this could work as a Dreamlands encounter for the *d20 Call of Cthulhu* game.

[SPOILER ALERT ENDS]

Rounding the book are three intensely useful appendices. The first indexes all of the *d20* material within the book, listing by NPCs, new monsters, new locations, new magical items, new spells and new special actions. These lists enhance the long-term usefulness of *En Route* by making all of this new material quick and easy to locate.

The second appendix arranges the encounters by location: farmland or countryside, forest, jungle, swampland, travel by sea and village or city. Most of the encounters take place in farmland, countryside and forest. In the final appendix, the encounters are arranged by level, with the majority of encounters being written for mid-level characters -- fourth through to seventh levels. By using both of these appendices, a referee can quickly determine if *En Route* has an encounter suitable for both the level of his player's characters and their current or future locations.

[MORE SPOILERS]

If *En Route* has any one problem, it is this: there are too many adventures out of the twenty-one that involve Pixies or possession by spirits and the like. Three directly involve the use of Pixies in their usual mischievous mood, whilst another two contain possession in one form or another. The problem is not that these aren't well written -- they are --

but these are too many for the players to really suffer, especially if they to gain the full benefit of such encounters. Unfortunately this gaining the full benefit relies upon them remaining in good humor throughout . . .

[SPOILER ALERT ENDS]

Barring that complaint, *En Route* offers a fair range of well written short adventures, easily slotted into most games -- as Atlas Games intended. They contain a good mix of opportunities for roleplaying and action -- in addition to combat. If some are a little too obvious in either their plotting or originality, the quality of the writing offsets both detractive factors. Many also have interesting and lasting repercussions beyond the confines of the encounter itself, increasing the long-term usefulness of this book. Despite the *d20* statistics, these encounters can just as easily be adapted to other fantasy RPGs of similar nature, such Hogshead Publishing's *Warhammer Fantasy Roleplay*.

While *En Route* may initially appear to be expensive for its contents, there is not an encounter within the book that is not worth the going rate of a dollar apiece. *En Route* is good value for money and a worthy addition if not a substitute to the ubiquitous wandering monsters table.

Pyramid Review

Alien Anthology (for the Star Wars RPG)

Published by [Wizards of the Coast](#)

Designed by Steve Miller and Owen K.C. Stephens

Illustrated by Ralph McQuarrie, Adi Granov, Sam Wood, John Gallagher, and Mikael Noguchi

Edited by Brian Campbell and Cory J. Heandon

128 page trade paperback

Alien Anthology at long last covers the vast scope of alien life in the Star Wars universe. Not only does it explain some concepts presented but not explained in the *Core Rules*, but it provides information on other races that allow GMs and players to greatly expand the diversity in their games.

The book has two main sections, "Creatures" and "Aliens," and for purposes of this review I'll also group some stuff under "Other Goodies."

The Creature Source Section is, in terms of just general information, a much-needed resource for the game. It finally explains the different creature classes like "Predator" and Scavenger, and provides a system for creating new creatures that work well with the rules. Sure, you could have just made up stats for whatever, but I really appreciate the clear and concise system it provides. It even goes so far as to finally explain the relationship between size and wound points, which confused me for a while when I first examined stats for really huge critters in the game.

The other great addition in this section is a series of templates you can add on to existing creatures to create even more diversity. My personal favorites have to be "Highly Evolved" and "Force-Using," but all of the templates possess a lot of merit to them.

And last, but not least, they provide a lot of explanation on the use of Challenge Codes for creatures which was also desperately needed.

The Alien Source Section is probably the main reason for buying the book. Over 60 races are presented in this book, which makes a GM's life much easier, not to mention offering more choices for the starting player. The only complaint that I could offer about this section is focus on aliens as being creatures, rather than being presented as playable races. The statistics for each alien race is presented as a sample commoner from each species, rather than the modifiers and perks they list for aliens in the character creation section of the *Core Rules*. Presumably the reason is that these races may not be deemed by some to be balanced enough to be run as a player character, much like the races presented in the "Allies and Opponents" chapter in the *Star Wars Roleplaying Game*.

However, to be blunt: this doesn't help me as a GM. Yes, they provide a method of extracting information from the statistics presented, but being a lazy GM I'd rather have them present the information as clearly as possible.

As for the races they have included, I'm amazed. They cover a wide spectrum of races from the movies throughout the Expanded Universe. They not only included races that I had never noticed in the movie before, like the insectoid Vuvrian, but also races that I had thought nearly forgotten, such as Marvel Comics' Hoojibs. One drawback of this

variety is that some races just didn't make the cut. Prominent races such as the Nikto and the Weequay were not included in the book due to lack of room.

In the category of "Other Goodies," there does exist a few items in their appendix that are worthy of note. The first being specialized equipment for those who have special survival needs. Like breath masks. The other big other goody that doesn't fall into any other category are the new prestige classes. In addition to the obligatory big-game hunter and first-contact specialist, I was delighted to note the inclusion of the Gand findsman, which is the first Force-Sensitive prestige class I have seen in an official sourcebook outside of the *Dark Side Sourcebook*. And . . . well . . . all the prestige classes in that book are for Dark Side characters. While the Gand findsman has the drawback of requiring prospective candidates to be of the Gand species, it's definitely a step in the right direction.

Overall, the sourcebook is a wonderful resource, and is perhaps the only sourcebook I'd say is really necessary for the *Star Wars Roleplaying Game*. It fills in a number of gaps in the main game and makes the overall understanding of the mechanics much more clear.

Combat Golems in GURPS Technomancer

by Hans-Christian Vortisch

This article examines the impact of the widespread introduction of enchanted golems into the military, as mentioned in *Technomancer*. It includes notes on the development and tactics, and describes a number of typical designs in service.

History and Development of Combat Golems

"Back in 'Nam, the old Iron Men were a bitch to use. First you had to get them to the combat zone, which was a big problem. The Huey choppers could carry only two internally and two more suspended under their bellies, while our carpets wouldn't take more than one of those things. The latest Chinooks could carry six, but there were never enough of those around. Usually, we had to use trucks, but even a deuce-and-a-half couldn't transport more than six on the road, or half that off-roads. Our tin pals would sometimes sink into the soft ground up to the ammo belts, and although they could plow on by sheer strength, it slowed 'em down real good. The GLU-1A was armed with one Pig, but we would invariably add another one for increased firepower. There ain't nothing like a squad of Iron Men in a mad minute! Two thousand four hundred rounds down range. At least they carried their own ammo."

-- SGT Carlos Meiner, 101st Spellborne Infantry Division (Air Assault) "The Screaming Eagles"

Perhaps the most obvious advantage of combat golems over human soldiers is that they do not die. At least not like humans. Clearly any nation and particularly its soldiers will appreciate if somebody else is sent into the crossfire, and if that somebody doesn't object, then all the better.

From a less humane and more economical point of view, combat golems are plain cheaper than soldiers. The latest generation of titanium golems is slightly more than \$100,000 apiece, about as much as an M113A1 armored personnel carrier. That sounds pretty expensive. However, when all costs are factored in, it becomes clear that this is in fact dead cheap: no costs for food or other upkeep for the entire service life of the unit (which can be many years), no time-consuming and very expensive training, no widow's pension and no funeral. They achieve skill levels which can be considered more than adequate for grunts, without several expensive months wasted at boot camp and for MOS training. When a metal golem ceases functioning (which takes a lot of punishing) or is deactivated, the material can be salvaged and melted down for re-use.

Golems are never exhausted or hungry, they don't require even a minute's sleep and are tougher than most armored fighting vehicles (even though they don't have as much armor or hit points), with no maintenance being required. They do not protest against being sent on suicide missions and work tirelessly to dig miles of trench systems or deploy labyrinth networks of razorwire. They can also stand guard duty indefinitely if necessary. Golems can operate under any conditions, in the arctic, in the desert, under the sea, on the moon, without requiring specialized survival equipment or even clothing.

Golems can operate most unsophisticated small arms and light support weapons, and retain very respectable close combat efficiency. The latter can't be underestimated, as targets are increasingly well protected by spells against conventional firearms. A ST 40 punch is less easily deflected. Also, their high strength makes them popular in infantry units, as they can carry more than their share in munitions, food and other necessities.

There are also numerous other fields of operations for golems in the armed forces. These include transport over difficult terrain (replacing mules in mountain units), power-loading and construction duties.

Of course, there are also drawbacks.

The Drawbacks

First, their appearance. The universal choice for combat golem enchantment has been metals of various kinds. Plastics, while almost ridiculously cheap and in possession of several desirable properties, lack the strength and durability to make them effective for issue to fighting units.

The very first combat golems in service with the U.S. military were made of simple iron, early enchantment techniques were not capable of utilizing more complex alloys. As research continued, new and better materials were employed. Almost all current designs use titanium.

The materials chosen for enchantment make them look decidedly alien, which can be a psychological problem in interaction with human soldiers. The very first prototypes looked like the stereotypical clay men (see p. TM106), while most production models have a distinct resemblance to seven-foot G.I. Joes -- blank face, perfect body. Golems can't be painted like a vehicle, as the paint chips off far too easily on the flexible surface. When the first units got to Vietnam, this was soon discovered to be a problem -- not the least because the ragtag look of the chipping paint was against regulations. Most metals are somewhat shiny, or at least they look exceedingly out of place in any natural environment. Experiments in 1970 with the spell Dye initially showed some promise, but since the effects wear off after a few days and it was discovered that the resulting monochrome golems offered little camouflage (like single-color fatigues), it soon faded from the scene. Also, the initial-issue iron golems suffered from heavy oxidation without extensive corrosion-control applications. A simple solution was soon found: Like human soldiers, golems are issued a set of heavy-duty clothing, both in camouflage and parade patterns. This makes them somewhat less susceptible to visual detection, eases interaction with humans and also offers some protection against the elements. Injection-molded plastic golems are factory-delivered in a chosen color (which makes them look like overgrown toy soldiers), but also usually wear uniforms for the same reasons.

Since most combat golems are made of solid metal, they tend to be heavy, even unloaded. All metal golems weigh at least several hundred pounds, usually accompanied by -ah- overly large boot sizes. This in turn means that golems need their own vehicles. The technomancers at TACOM were very disappointed when they realized during a rather embarrassing test of the first GLU-1A units that the M113A1 armored personnel carrier, which accommodates twelve fully loaded riflemen (under admittedly cramped circumstances), could transport a mere two GLU-1s, and that at extreme strain on the suspension. Didn't do any good to the seats, either. Weight is even more an issue in heli- and spellborne transportation.

Golems can't be repaired in the field or even at in-theater repair pools. Damaged units have to be sent back to the factory. This can be very inconvenient if you are drawing fire on the other side of the planet.

Operationally, golems are also less than perfect. They can't speak, have no initiative, and won't do anything unless told to do so by their commanding officer. The weak link is the Golem Direction Officer (GDO; soldier slang pronounces it God). The GDO is not as tough or as rugged as her charge. If she is incapacitated, so are her golems. This means that many of the advantages concerning operations in hostile environments are at least partly canceled out. Although they are tireless fighters, they are also extremely dumb and are unable to follow complex mission directives given to them in advance. The nature of warfare requires quick thinking and improvisation, something of which golems are simply not capable, despite their almost average IQ. Sometimes it is even necessary to disregard an order to achieve the mission. Therefore, golems always need somebody to coach and direct them. Being a GDO takes a lot of training and high discipline (both Tactics and specialized Leadership skills are required). The GDO always has to be very precise about her orders. Metaphors or easily misunderstood phrasing can be very dangerous. Also, GDOs have to ensure that their bonded golems don't run loose in case they get incapacitated. They are under strict orders to deactivate (destroy) them if wounded or threatened by captivity.

Combat golems come packed in factory-sealed crates and should only be opened by a certified golem direction officer. She will then "bond" the golem to her command. Theoretically, there is no limit to the number of units bonded to one person (giving the term "one-man-army" a whole new meaning), but operationally, there is a limit of how many golems can be actively directed. Depending on the tasks at hand, this can be anywhere from one to twenty. Combat units are usually small. In the U.S. Army, golem squads consist of four GLUs and two soldiers -- the GDO will

command the bonded golems to also answer to her assistant. Being a GDO is not very popular, since possibilities for promotion are few, unlike in combat units where actual troops are led. The GDO's assistant is often the more experienced soldier. In some situations a single GDO may control dozens of golems, notably in transport and logistics units. Examples of golems used in these duties include the GLU-4 Blue Man-series that function as semi-intelligent trolleys, powerloaders, etc.

Combat Golems Today

In recent years, many of the problems described (and experienced!) have been solved by the installation of small cameras and radio links into the latest variants. This allows the GDO to command her golems from the safety of a rearward deployed armored command post vehicle or a spellborne observation carpet circling above, thus "leading from the back".

Some defense analysts and many peace activists have pointed out that increased use of golems in combat leads to a lower threshold of going into action. Since far less personnel are at risk in a golem operation, military leaders might be tempted to use them much more often, and with less reservation than if human lives (of their own side) were at stake. In addition, there's the problem of rogue golems after losing contact with them, for example through jammed communication lines.

Golem rights activists, lawyers and several religious factions have started to harass the nations known to employ golems, raising questions such as: Do golems have a soul? Is destroying a golem a sin against not taking life? Does deactivation compare to abortion? Who is responsible for the actions of a golem gone berserk? Do you, when enchanting a lifeless hulk of metal, try to play God and therefore commit the greatest sin? Most of these questions have been ignored so far, but some have been answered, at least for the time being. For instance, the GDO is held responsible under International Rules of War for the actions of her bonded golems. Most large churches and religions have ruled that golems seem not to have a soul, and therefore can be treated like any other non-living object.

The Golem Squad in the 1990s

Under current U.S. Army doctrine, golem squads are attached at company level in all active combat units, typically as many as the company has platoons. Each golem squad consists of one GDO, usually a 2nd lieutenant (Rank 3), and her assistant, usually a sergeant (Rank 1), both with Leadership (Golem). Only the GDO actually bonds the golems, but she instructs them to listen to her assistant as well. Both are in charge of two combat golems each. Depending on unit set-up and the operation, the golems are usually commanded from a rearward command vehicle fitted with video displays and an array of radios and datalinks (as seen in *Aliens*).

There have also been ad hoc-formations consisting only of golems squads, for especially dangerous operations. Because of the transport problems and the relative inflexibility of the golems units, these all-golem formations (but including GDOs, of course) are usually small and used only in special combat situations.

The humans (or chimeras) in a golem squad are armed with 5.56x45mm Colt M4 assault carbines with six spare magazines and two M67 hand grenades (p. B209), wear PASGT vests and helmets (p. B211), and are in touch with each other, their golems and upper echelons via multi-way headset radios. The assistant often mounts a 40x46mmSR Colt M203A1 grenade launcher (p. HT121) under her carbine, with six or more grenades (usually a mix of HEDP and colored smoke or flares for signaling). Both also carry a 84mm Alliant M136 LAW (licensed version of the Bofors AT4, p. SO103) as a last ditch anti-golem weapon.

The golems are armed and equipped depending on the model issued (see below), but typically include heavy machine guns and automatic grenade launchers.

The whole squad is transported in the FMC M4 Loeb Golem Fighting Vehicle (GFV), which resembles an extra-wide pickup truck on tracks. Introduced in 1982, it is based on automotive components of the FMC M2 Westmoreland MIFV, using the same tracks, a 370 kW mana engine and two 7,200 kW advanced batteries. The forward cab is fully

armored (PD 4, DR 45 all around), seating the GDO, her assistant/gunner and a driver. The GFV, colloquially known as "the rabbi", is fully equipped to serve as a command center for leading the golems, with video displays, extensive secure radio equipment, datalinks, a military GPS and inertial navigation system. A small cupola on the roof of the cab mounts a 12.7x99mm Saco-Browning M2HB heavy machine gun (p. HT119) and a 40x53mmSR Saco MK19 MOD 3 automatic grenade launcher (p. HT121). The HMG has 200 rounds ready-to-use and 600 spare rounds, while the AGL has 100 rounds ready-to-use and 500 spare rounds. Three LAW rockets are also carried against enemy golems and light armored vehicles. Four GLU-3 golems find room in the open-topped cargo bed. Combat weight is 24 tons with four GLU-3s.

Airborne units employ either the Sikorsky UH-60L Blackhawk helicopter (compare p. SO82), which can carry six fully equipped GLU-3 golems and two soldiers, or the Boeing CH-47D Chinook helicopter (compare p. SO82), which can carry three fully equipped GLU-3 squads (twelve golems and six soldiers).

Typical Golems

Cadillac Golem Co.: The World's Leading Combat Golem Manufacturer

The Cadillac Golem Company (CGC) was set up in 1967 as a subsidiary of General Motors Corporation and Manadynamics. Its main enchantment line is located in El Paso, Texas. It won the U.S. Army-sponsored Iron Man-program in 1968, and has since delivered most golem units to the U.S. military. The first Golem Life Unit (GLU)-equipped infantry squads were ready for service in May 1969. Golem units trickled into Vietnam from July 1969, and were widely used by 1970.

The GLU-1-series was the first combat golem in service anywhere. It was adopted as a fire support unit, replacing human operators in heavy weapons squads. Its high strength allowed it to fire even heavy machine guns unsupported, and also allowed it to carry extensive ammunition loads.

The GLU-1-series, while employed successfully in battle, revealed several disadvantages. A major drawback in Vietnam was its source material. Only pure iron could be used, and while exceedingly resistant to small arms fire and artillery shrapnel, it was susceptible to rust and overly heavy.

Cadillac GLU-1A Iron Man, 1969

The GLU-1A was the most numerous golem in U.S. Army service during the 1970s. It has Gunner/TL7 (MG)-13 and is armed with one 7.62x51mm Saco M60A1 machine gun (aka "the Pig", p. HT119), feeding via a flexible chute from a 500-round belt contained in a can mounted in a built-in socket on the lower back of the golem. Two spare 500-round ammo cans can be attached on a rack on the back, but reduce Speed to 5. Since the GLU-1A needs only one arm to fire its gun, a popular field conversion adds a second M60A1 for the left arm. This can't be connected to the onboard ammunition, and therefore feeds from a 100-round drum container attached directly to the weapon. If both guns are fired simultaneously, -4 applies to both rolls.

Cadillac GLU-1B Iron Man, USA, 1970

This model has Gunner/TL7 (Grenade Launcher)-13 and is armed with one or two 40x46mmSR Aerojet M174A2 automatic grenade launchers. The weapon feeds from a 12-round drum magazine loaded with M406 HE grenades. Up to eight drums can be carried in a built-in rack on its back. The M433 HEDP grenade (Dam 4d(10) plus 1d [3d], 1/2D 200) entered service in 1974. When two guns are carried and both are fired simultaneously, -4 applies to both rolls.

GLU-1D Iron Man, USA, 1970

The GLU-1D is a dedicated fire support variant. It has three arms, one to hold the weapon and two to reload it. It has Gunner/TL7 (Recoilless Rifle)-13 and is armed with a 90x414mmR Watervliet M67C recoilless rifle (see under "Carl Gustav", p. HT122). Single rounds are carried in a 10-round dispenser on its back. Issue ammunition includes the M371 HEAT and M590 Canister rounds (Dam 2d, 1/2D 100, Max 350, AWt 6.8).

Cadillac GLU-3B Silver Man, USA, 1979

Although the GLU-1-series proved satisfactory, the Army soon issued a requirement for a new family of golems. The new generation, the GLU-3-series, entered service in 1972. It was made of titanium and dubbed Silver Man. Stronger, tougher, lighter, more reliable and nearly impervious to rust and other environmental hazards, the GLU-3 was such a success that it continues to see service to this day, spawning even more variations than the older type. Since golems have become more widespread, it became more and more important to field anti-golem weapons. This has led to heavier armaments, and most current golems carry at least a heavy machine gun with armor-piercing ammo. The GLU-3B entered service in 1979 and is armed with a 12.7x99mm Saco-Browning M212 heavy machine gun (a modified M2HB, p. HT119). 300 M8 API rounds are carried (for light encumbrance). Since 1982, M811 SPDN (Dam 13d(2)+) rounds are available, and since 1991 M903 APS (Dam 17d(2)).

Cadillac GLU-3S Shield Man, USA, 1982

This is a special operations golem for use with hostage rescue units. It has Shield-13, carries two very large shields and a backpack cradle. A hostage or incapacitated person can be strapped into the cradle and carried into safety by the golem, protected by the shields and its bulk. Only a small number are in service. Some were adopted by the FBI's Hostage Rescue Team and similar units.

Cadillac GLU-3U Silver Man, USA, 1990

The GLU-3U has Gunner/TL7 (Autocannon)-13 and is armed with a 30x113mmB MDHC M298 ASP-30 autocannon. This fires M798 HEDP rounds with alloy cases from a 135-round belt at medium encumbrance. The PGU-25/B SPDN round is also available (Dam 6dx3(2)++).

Foreign Designs

DIM TA-1 Balám, Mexico, 1981

The Mexican Titanio Almado Modelo 1 is a titanium golem similar to the GLU-3B, but instead of the humanoid head, it has one modeled after a jaguar, and is often found camouflaged with that cat's distinctive fur pattern. In Mexico, it is more commonly known under its Mayan nickname Balám, meaning jaguar. It has Gunner/TL7 (Machine Gun)-13 and is armed with a 12.7x99mm DIM HK25G2 heavy machine gun licensed from H&K of Germany. 300 API rounds are carried (for light encumbrance). SPDN rounds (Dam 13d(2)+) were introduced in 1981, while APEX ammunition (Dam 13d(2) plus 1d-4 [2d]) is imported from Norway since 1988.

Uralvagonzavod G-82A, USSR, 1983

The standard Soviet combat golem of the 1980s and early 1990s, this effective titanium unit has been exported widely.

It is slightly smaller than contemporary Western designs, making it cheaper both in material and enchantment costs (always an issue for the mana-low Russians). It has Gunner/TL7 (Machine Gun)-13 and is armed with the powerful 14.5x114mm Izhmash ANG-14.5 heavy machine gun (fires the same round as the KPV, p. HT120) with 100 rounds. This is typically a 2:1 mix of API and SAPHE (Dam 16d(0.5) plus 1d-4[2d]). It is fired in three-round limited bursts.

ST: 35, **DX:** 12, **IQ:** 9, **HT:** 15/35

Speed: 6 (12 mph)

Armor: PD 4, DR 12

Weight: 650 lbs. unloaded, 790 lbs. with one gun and 100 rounds (Speed 5).

Energy to activate: 1,000

Cost: \$90,600

Abilities: Fist-12 for 4d crushing damage. Throws grenades to 122 yards.

What Might Have Been

I'm curious to see if I'm in the minority among players when it comes to pondering what my characters *might* have done differently in a game world, if events had gone differently.

[WARNING! Boring "character story" time!]

I first noticed my tendency to do ponder woulda-coulda-shouldas when my ex-priest vampire from the *Vampire: The Dark Ages* found himself owning a sword that was possessed by a demon.

The demon, for its part, was offering keen powers in exchange for unspecified favors to be granted later.

So when our party got into some tight spots, I called on the power of the demon (despite my character being a *very* pious individual . . . in a Machiavellian kind of way). And the demon granted its powers.

(The rest of the party, also being pious, was *not* pleased by this action at all.)

Now, I kept waiting for the moment when the demon was going to call in its favors. And I kept waiting and waiting, because I had a brilliant plan for how I was going to deal with this conundrum.

Unfortunately, the GM resolved the situation by having outside forces remove the cursed sword from my possession before the demon could call in its boons. As a result, I never got to use my scheme, namely:

I was going to say, "No."

When the demon showed up asking for its boon, I was going to say, "No thanks. Whatever you want me to do, I'm not going to do it. I understand I'll probably have some punishment now; I may even be damned to hell. That's fine. But you should consider that, through me, you've used your powers to serve the Greater Good . . . which should be interesting to explain to your infernal masters. And also consider this: In the future, you should get the favor first, *then* give the power. Or at least get it in writing. You just made a bad deal."

Now, as a player I completely understood that the odds of this scheme actually working were almost nil. But my *character* thought the plan was foolproof. And, in a lot of ways, I wish I could have had the opportunity to play through that scene, if only to see *how* it wouldn't have worked.

[END boring character story. Resume nigh-incoherent rambling.]

In hindsight, I know now what my mistake was: I didn't tell the GM about this possible scene. At the time I was keeping it a secret so that I could surprise him (I personally believe a player should always have a few tricks up his sleeve). But if I had told him about this possibility, it may well have sparked his imagination and given him an interesting resolution to a plot thread he may have felt painted into a corner by, not knowing how to resolve it without outside intervention.

But anyway, ever since then I've found myself pondering other possible resolutions to situations that have arisen in our gaming sessions. Some of these have been incorporated into future encounters (since, let's be honest, there tends to be a fair of repetition among situations heroes face). And some have been relegated to . . . well, column anecdote fodder.

There are a few uses for thinking about what might have been (or what might yet still be). First off, as I mentioned above, by sharing the possibilities with the GM you can possibly influence the campaign into a storyline you might have fun playing. Even if those events *can't* happen anymore, they might still be useful in roleplaying with [alternate timelines or universes](#).

Also, sharing how you would like a situation to have ended can give your GM (and the other players, if you tell them) some insight as to what style of game you'd like to play in. For example, the armchair psychologist might posit (more

or less correctly) that I like "intellectual" conclusions, where the enemy can sometimes be out-witted, out-planned, or otherwise double-crossed. And, indeed, once our GM knew what I had in mind, there were other opportunities in the future for my character to do just that.

Finally, many people I know take the notion of what might have been one step further, writing entire "fictional" stories (fictional in quotes because, y'know, they're all fictional stories) based on their characters and the campaign world, either as what might have been or as a solo extension of a beloved game series. This can be especially nice if a campaign ended without a definite "conclusion," or if you plan to write best-selling novels in the future based on your campaign's exploits. (Get your other players to sign releases . . . or at least make sure they're not working on their *own* books.)

But as for me, one of my favorite roleplaying moments never happened.

The Warsaw Ghetto

by Gene Seabolt

(Editor's note: This piece will be appearing in the upcoming [GURPS Dark Places](#) book of horror locales, and is a perfect fit for our World War II theme issue. We hope you enjoy this sneak peak.)

Man has confined most of his darkest imaginings to the pages of fiction. Beginning in the late 1930s, one of the most horrific of these fantasies took shape in pages of a different sort -- the meticulously kept records of the Nazi regime.

Within those countless lists of names and plans of action, the Holocaust began. Transformed from psychotic thought to incomprehensible deed, it would claim millions of mostly Jewish lives, stripping them of everything save despair.

In the midst of this epic suffering, one place stood out, a place where a thin thread of hope refused to succumb to Hitler's genocidal dream. This magnificent defiance would, for most, serve only to prolong their misery. Ultimately, this may have been the darkest place of a dark war, a place where hope failed all but a handful of the valiant souls brave enough to hold onto it. This was the Warsaw ghetto.

Brutal Onset

The Germans began World War II by invading Poland on Sept. 1, 1939. They quickly swept through the country, encountering their first real resistance at the capital, Warsaw.

During the fighting, barricades and tunnels sprang up around the city. Food immediately became scarce. The intense German bombing shattered many buildings and claimed many residents' lives; one might not recognize a street walked through in the morning when passing back through in the afternoon. The bombs carried beneath a Stuka's wings do 6d x 110 explosive damage -- the single bomb from beneath its fuselage does 6d x 1,000! For the injured, medical attention proved very difficult to find. When found, conditions might not have been sanitary enough for more than rudimentary care (simply First-Aid in **GURPS** terms).

Warsaw fell on Sept. 24. The 360,000 Jews who made up some 30% of its population suffered even more anxiety than most Poles, for most of their leadership had fled on Sept. 7, and the Nazis held an unconcealed hatred for their race.

The early persecution from Germans and some native Poles took the form of random beatings, picking Jews off the street for work details, and pulling the occasional family from its home. By November, the Nazis were seizing any remotely liquid assets in excess of 2,000 zloty (roughly a months' pre-war wages), expelling Jews from "key" industries, and limiting them to earning 500 zloty a month. On Nov. 12, the SS ordered all Jews over 12 years old to wear the Star of David. By this time, 53 Jews had been killed in a single reprisal for the beating of a Polish policeman.

The Germans introduced rationing into the already grim food situation. Jews whose appearance did not immediately mark them as such could sneak into the villages, trading for foodstuffs (potatoes, eggs, cheese, and sausage) and selling them in Warsaw. With skill (Area Knowledge and Streetwise, primarily) and luck, the smuggler could make a tidy profit. If caught, the Germans would beat him and confiscate the goods.

The Nazis ratcheted up their efforts by establishing the ghetto in September 1940. Jews living outside the area -- and most of them did -- had to scramble to find rooms. Including refugees from the immediate locale, the SS herded about 445,000 Jews into the ghetto, a roughly 3.5-square-mile neighborhood that made up 2.4% of Warsaw and normally housed only about one-third that number.

At first, getting out without proper authorization wasn't too hard (perhaps a Fast-Talk roll at -2) and getting back in

even easier (Fast-Talk at +2). The guards didn't search those leaving, but almost always inspected those returning. Sometimes, they would only take any contraband. Usually, they beat the failed smuggler, as well.

The Wall

On Nov. 15, 1940, security tightened. The Nazis ringed the ghetto with a 10-foot wall. Cut off from the rest of Warsaw, the Jews risked being shot on sight if they left.

By this time, starvation was beginning to take its toll, with the average ghetto resident receiving only about one meal a day in his rations. The desperate rummaged through garbage cans. Typhus and other diseases spread through the ghetto. Corpses littered the streets until eventually carted off.

Those living in the ghetto had to either risk their lives smuggling food or know that they would dwindle away. Heating and medical supplies also reached critical shortages. (Use the starvation and disease rules from *GURPS Basic* or *Compendium II*, with the rules for surviving cold conditions as the severe winter of 1940-'41 advances.) With the rising of the wall, smuggling usually took the form of tossing what valuables a family retained to Polish black-market dealers, who tossed back food . . . if honest. Sometimes, German submachine-gun fire interrupted the transaction. Starvation and privation take time, but slowly deaths mounted, reaching hundreds per day. Between January 1941 and May 1942, some 61,000 Jews had died of starvation or related disease.

On to the Camps

Despite its speedy work, death was moving too slowly in the ghetto to satisfy the SS. The Nazis having formally adopted the Final Solution on Jan. 20, 1942, five months later Reichsführer Heinrich Himmler ordered the Warsaw Jews "resettled" to Treblinka and other extermination camps.

The SS ordered the Judenrat (the Jewish council and police that they appointed to administer the ghetto) to deliver 6,000 people per day for deportation, a decision-making process that must have been anguishing. Once one's name went on this list, it became next to impossible to escape the fastidious Germans. But it could be done -- from behind false walls, in attics, even within furniture. Some Jews escaped the ghetto to the countryside, where villagers concealed them. A high Survival (Woodlands) skill could make this journey much easier.

Most preferred the German promise of a "work camp" to living as a refugee under the most severe conditions. (In fact, remaining in very confined quarters for months on end can be nearly as unhealthy as starvation. The GM may need to invent HT rolls and their impact for those practicing torturous concealment techniques.) In two months, more than 310,000 Jews had gone to the alleged work camps -- and on to the gas chambers -- leaving but 60,000 in the ghetto by the end of September. These lived in a ghost town, with whole streets abandoned and ransacked.

Many of the remaining Jews held no illusions about what awaited them. Some chose to fight. They organized a partisan group, called the Jewish Fighting Organization, or ZOB by its Polish initials. ZOB boasted 22 cells, most consisting of some 20-30 men and women. Most were young, 18-21, with no money for weapons nor experience in using them.

The Uprisings

In January 1943, Himmler ordered that the SS remove the remaining Warsaw Jews by Feb. 15.

Those ZOB fighters who had obtained arms from Polish sympathizers resisted. Some holed up in attics with an iron bar, waiting for a helmeted head to appear. Those lucky few with pistols killed a few Germans, whose arms then went to a few more ZOB members, who then killed a few more Germans. In the end, 20

Life in ZOB

Members of ZOB cell generally lived a communal existence, eating, sleeping, and fighting together.

Their most important activities included keeping a constant watch

Germans died with 50 wounded. This surprising resistance, combined with yet another intense winter and a shortage of railroad rolling stock, caused the SS to miss Himmler's deadline.

The ZOB fighters increased their efforts. A daring sundown jail break gave them the credibility to influence ghetto politics, and desperate criminal practices (see sidebar, p. 00) gave them funds to arm themselves. They prepared bunkers and tunnels and tactics.

The Final Assault

During Passover in April 1943, Himmler sent the SS in to clear out the ghetto. By then, the Germans had isolated the central ghetto, an area of some 1,000 by 300 yards. At 4 a.m. on April 19, more than 2,000 Waffen SS under SS General Jürgen Stroop marched in supported by tanks, artillery, and motorcycle troops.

The ZOB cells fought back, exploding their pre-set demolition charges, throwing grenades and Molotov cocktails, then switching firing positions as quickly as they had opened fire. The Germans abandoned their marching order, turning to flamethrowers and the urban-combat tactics they had learned in Stalingrad and elsewhere.

ZOB positions -- and more importantly, communication between ZOB cells -- began to break down. The remaining fighters scouted furiously for new fighting positions as their "lines" broke. The German flamethrowers had started an inferno. Whole buildings slid down around the Jewish partisans as they scrambled about the smoke and flames of the ghetto. Those caught in the burning buildings jumped from upper stories, then dragged their broken bodies toward the shelter of those structures still standing. Some returned to the flames rather than face capture.

In the rubble-filled streets, one ZOB fighter encountered a living infant in the arms of its dead mother. Sections of the ghetto wall had collapsed, but Nazi troops waited in ambush on the other side of most of these alluring escape routes.

After nearly two weeks of fighting, the Germans pulled back to bombard the ghetto. Most of the ZOB fighters remained alive, and looked for ways to escape the carnage to fight again. The first attempts to enlist outside help got the emissaries killed. Finally, a tunnel that passed underneath the ghetto wall proved safe. Out in the "Aryan" city, the ZOB scouts enlisted aid, even from the Shmaltsovniks, a blackmail-group that normally extorted Jews, and took a tidy fee for their services here even though they believed they were helping to rescue non-Jews caught in the killing.

The essential question remained how to get the fighters out of the ghetto where the contracted trucks and aid awaited them. The ZOB scouts settled upon using the sewers, but this was no simple trick. The Germans would toss grenades and spray automatic fire into the manholes when they heard footsteps. The main passages -- about 6' high -- usually had a strong flow of excrement. Worse, the small side passages often required crawling on one's belly in sewage. Even these dedicated partisans at times had to be threatened at gunpoint to advance; the GM would be justified in requiring Will rolls to take part in this stench-filled, dangerous journey.

Several ZOB fighters escaped the ghetto in this way, but many were not so fortunate. Nearly 100 fighters were huddling in the bunker Mila 18 when the Germans discovered it and poured poison gas down its ventilation slits. The

for German soldiers, and practicing their still-minimal combat skills. They placed emphasis on Fast-Draw techniques and accurate fire, given their constant need to conceal their arms and shortage of ammunition. Of course, they couldn't actually fire their weapons during target practice, so ZOB PCs should be inventive as to how they're going to actually improve their skill without actually using it!

The ZOB cells were also factions, in that they represented the wide variety of political leanings and religious practices in the Jewish community of the period. Skill in Politics, Savior-Faire, and Religion could play a large role in maintaining cooperation between various ZOB cells -- and given their meager resources, only the fullest cooperation often could mean the difference between living another day or death.

Beyond the Germans and their own internal frictions, the ZOB fighters had to keep a wary eye on the remainder of the Jewish populace. Some were out-and-out collaborators. Even among non-collaborators, some Jews, including the Judenrat, felt the need to resist the ZOB fighters. In turn, the ever-poor ZOB members often preyed upon rich Jews still hoarding wealth to fund their weapons purchases. If reason didn't work, threats and even kidnapping were used.

survivors killed themselves or died in a hopeless effort to burst free.

In the Ashes

The ghetto fell on May 16, 1943. Stroop reported that, "The former Jewish quarter of Warsaw is no longer in existence." Some 300 Germans had died in the fighting -- but perhaps as many as 20,000 Jews remained living in secrecy in Warsaw.

ZOB switched its efforts to rescuing and supporting its fellow Jews. Working completely from underground, with assistance only from other Polish underground movements, they preserved the lives of some 3,000 Jews. With the Polish uprising of August 1944, ZOB once again entered the fighting -- and once again found itself on the losing end. The Nazis bathed the Polish resistance in blood, even as they retreated before the Soviet advance.

Less than a year later, Hitler had died by his own hand and the Third Reich had shared the ghetto's fate. Even then, persecution of Jews did not cease in Poland -- a 1946 pogrom in Kielce cost 42 lives.

Many would not escape the horror until they set foot on the soil of Palestine.

The Gold Circle of Valor, and the Sacrificial Pistol

by Alice Turow

War has a tendency to give rise to objects that are immediately familiar yet somehow alien. We all know what medals are, but to see one nestled in a grandfather's cardboard box can still give us a breathless pause . . . especially if he never mentioned it before. We likewise know what firearms are, yet many of us have never even held a pistol, let alone fired one, or used it to take a life.

Here, then, are two wartime items with mysterious effects. The reasoning behind them is not explained; blame the occult, superscience, or the workings of "top men." Although designed with World War II in mind, these two objects can easily be transplanted to many eras with almost no effort; there have always been medals of honor, and the Sacrificial Pistol could just as easily be the Sacrificial Sword or the Sacrificial Phaser.

The Gold Circle of Valor

"There are deeds that a conscionable country cannot ask of its citizens, yet that must be done. There are prices too great to be paid, yet too dire to not. There are sacrifices made that keep a man from sleeping at night, so that all men may slumber in peace.

"Through your actions, Sergeant Jessen, three dozen men have lived. You have sacrificed for your nation, beyond the realm that any merciful power could ask. For that, you have our gratitude. We can grant you peace in the only way possible, yet at the cost of another sacrifice. Do you accept the Gold Circle?"

The Gold Circle of Valor (also known among some -- derisively -- as the Gold Hecatomb) is a medal offered to those who have given some great sacrifice for the country. It is itself a simple gold ring, approximately 1-1/2" inches in diameter and 1/8" inch thick at the edges, attached to a simple ribbon with a pin.

The effect of the Gold Circle, however, belies its simple appearance. For, when willingly accepted and worn once, it will "absorb" the memory for which the medal was given. The medal need only be worn once to absorb the memory; it may be worn again in the future without further effect. The medal only works if the recipient makes a conscious -- and usually verbal -- decision to accept its effects. The memory absorbed can be several seconds or years long; there seems to be no upper or lower limits to what it can absorb. Lost memories are not replaced with anything; there are simply holes in the person's recollections. Given enough time, it is entirely possible to forget those memories even existed. After all, specifically remembering that we've forgotten something is a rare thing . . .

The Gold Circle was created (and is almost exclusively used) to give heroes a normal life after a painful but heroic deed or sacrifice. One man accepted the Gold Circle after he and his friend -- both intelligence officers -- were surrounded by Japanese soldiers. The soldier was aware his friend knew sensitive information regarding fleet movements in the Pacific, and knew they would probably be able to extract it out of him. To keep that from happening, he shot his friend, and then turned the gun to end his own life; he was captured before he could pull the trigger, and was eventually rescued (though not before many days of brutal -- and fruitless -- interrogation). Another saboteur accepted the Gold Circle after he poisoned a village's water supply, crippling Nazi efforts there but also no doubt dooming many civilians to a painful death. And one young woman took the Gold Circle after almost a year of gathering intelligence among enemy officers through any means necessary, no matter how disgusting or demeaning.

How the Gold Circle of Valor is used in a campaign depends on how much is known about it. If the general populace knows what it is and what it does, then the Gold Circle becomes a symbol of bittersweet sacrifice; yes, the wearer is a hero, but he's probably done something or seen something horrific enough that he needs the medal. This may actually give the recipient little comfort; all he can be confident of is that, at some point, the memories were painful enough to

accept having them removed.

If, on the other hand, the true nature of the Gold Circle is known only to those who give and receive it, then it merely becomes another icon of heroism for the world at large. In this case, the true nature of the medal itself will be a secret from the person who owns it . . . since it will cause him to forget the decision to accept the medal's memory-absorbing properties!

Regaining Memories

How one can regain the memories taken by the Gold Circle -- if such a thing is even possible -- should be up to the GM. Some possibilities include:

- **Time.** They say time heals all wounds, and that given enough distance temporally between today and a horrific past, everything is bearable. If that is the case, then the medal could simply need a specific period of time -- be it one, two, or five decades -- before releasing its memories. Or maybe it requires a variable period of time; the medal may somehow just *know* when the recipient is able to handle the past, and allow the memories to return, either slowly or all at once.
- **Recreation.** By coming close to the circumstances of the original memory (either intentionally or accidentally), the memories may return. How close to those events the recreation must get is up to the GM; threatening to kill a friend (either for real or as an act) may spark the memory of the intelligence officer, for example. In general, unless the circumstances are *very* specific originally, the recreation probably needs to be specific itself; the person who poisoned a town's water supply should not regain his memory simply by pouring someone else a glass of water.
- **Be Polite.** Depending on what the GM decides the *true* nature or origin of the Gold Circle is, perhaps all that is required is for the hero to ask it for the memories back.. (Of course, that's presuming the medal isn't using those memories for some other purpose . . .)

Should it be possible to release lost memories, it is up to the GM whether or not wearing the medal is necessary. If it is, that makes reclaiming them much more deliberate and difficult an act. If it is not, then the GM will need to be much more arbitrary in deciding when or if the memories return.

If the memories *can* be returned, they can never be suppressed again, even if given another medal. Such are the sacrifices of heroes . . .

Story Ideas

- A new campaign could begin with each hero wearing one of the medals. If they know the true nature of the Gold Circle, they will probably wonder what they each did separately (or collectively!) to accept its offer. If they don't know the true nature of the Gold Circle, then learning that may pose its own challenges first . . .
- The heroes require the information of a war hero . . . information they are dismayed to learn has been absorbed by a medal! The heroes may find themselves in a race against time as they struggle to convince the Gold Circle recipient their cause is great enough to require the memories to return; then they need to figure out *how* to return the memories. And if the memories were horrible enough to want to suppress, how noble is it to require their resurgence in the hero, even if it is for the greater good?
- Similarly, the PCs may be approached by someone who finds himself hunted by person (or persons) unknown. But what could this decorated war hero *possibly* have done to earn his hunters' wrath? He certainly doesn't remember . . .
- And what if the memories contained within the medal can be transferred to someone *else*? Could a hero -- maybe the child or grandchild of the original recipient -- take the burden of such memories on himself for a greater good?

The Sacrificial Pistol

My Dearest Christopher,

*I'm so thankful you made it alive, although I would be lying if I said I weren't surprised. (Delighted, yes -- but surprised.) When I'd heard of the numbers lost or captured at Dieppe . . . well, your darling Anna had already begun to dread the worst. (I **am** still your darling, right?) I'm so glad you were able to stop those two Nazis . . . with a pistol, no less!*

However, my profound happiness is deeply tinged with sad news, I'm afraid. Your Uncle Lester and Aunt Day were in an automobile accident on August 19th. They didn't survive. I know you were never close, but such news can never be easy to take, especially so far from home . . .

The Sacrificial Pistol looks to be a perfectly serviceable -- if ordinary -- "last ditch" weapon. It certainly doesn't seem like it would be a weapon that would replace the standard issue rifle in effectiveness. But this is a gross underestimation. For the Sacrificial Pistol will, when used, automatically hit its target, dealing it a killing blow if remotely possible. (Thus most soldiers struck by the Pistol's bullet will fall, while shooting it at a tank will probably prove ineffective, as would firing it at an enemy beyond the bounds of its outmost range.)

The Sacrificial Pistol, however, is not without its grave price. For each life it takes, a family member or loved one of the user will die . . . immediately upon using the weapon. The Pistol starts by taking distant relatives first -- third cousins, distant aunts, and so on. But as the Pistol takes more lives, the threads it cuts draw closer to the wielder. A favorite uncle, a grandfather, a mother, a brother, a best friend, a child and wife . . . all will eventually fall through overuse of the Pistol.

Casualties caused by the Pistol's curse will not be obvious; its victims will appear to have simply stopped living. In the case of the infirm or elderly this probably won't be too unusual (death by "natural causes" will be common). And if the death happens at an inopportune moment -- like atop a building project or behind the wheel of a car -- the cause of the demise may well be obscured by incidental damage. (Of course, the direct victims of the weapon will appear -- correctly -- to have died from high-velocity lead poisoning.) Through enough uses of the Sacrificial Pistol, however, word should eventually get back to the holder, with enough clues to allow them to determine what has happened.

The Sacrificial Pistol is, otherwise, a completely ordinary weapon; it is not immune from the need to be reloaded, kept clean, and so on. Its power (and curse) lies within the weapon itself; its bullets can be transplanted to other pistols without any unusual effect. And the pistol cannot help but use its powers; shooting to wound is *not* an option. Those who use the Sacrificial Pistol too much may soon find themselves completely alone in the world. At this point the weapon, in effect, has no further curse; provided the holder doesn't love or befriend anyone, he may use the weapon -- and its awesome power -- without fear of reprisal. Although such a person devoid of all family, relations, and lovers may become an ideal soldier with an ideal weapon, none would willingly make such a choice . . . nor would those who might be close to the soldier. Tragically, too often this weapon finds itself firing true one last time.

Chris,

I know you and Anna were engaged, which is why it pains me to write this letter. But, as your father, I must . . .

Story Ideas

- The Sacrificial Pistol makes a horrific moral question: "What price power?" The wielder can almost certainly

become a battlefield butcher -- or even simply protect his own life at a most dire hour -- but not without a terrible cost.

- And if its nature is known, the decision to use it -- or not -- can be a terrible burden. What if two brothers, otherwise orphans, had the weapon and knew of its nature? Could one allow the other to go into battle, knowing that the weapon *will* save his life in an emergency?
- The heroes, under-equipped and starving, find a soldier in a village house, an apparent suicide victim. His journal details a growing depression, as more and more of his family dies mysteriously. Suddenly the village finds itself under attack by enemy forces! Can the heroes discern what is going on in time, and keep from making a devastating mistake?
- The government has need of an orphan soldier (one of the PCs) for an incredibly dangerous mission -- one which could determine the fate of the war. They are adamant that he only use this one pistol, however. What isn't the government telling him, and why does a befriended contact of the hero group die mysteriously shortly after the mission begins?

Tora! Tora! Tora! Tora! Alternate Pearl Harbors

"Yesterday, December 7, 1941 -- a date which will live in infamy -- the United States of America was suddenly and deliberately attacked by naval and air forces of the Empire of Japan.

The United States was at peace with that nation and, at the solicitation of Japan, was still in conversation with the government and its emperor looking toward the maintenance of peace in the Pacific. . . .

Japan has, therefore, undertaken a surprise offensive extending throughout the Pacific area. The facts of yesterday speak for themselves."

-- President Franklin D. Roosevelt, address to Congress, December 8, 1941

It is the sixtieth anniversary of the Japanese sneak attack on Pearl Harbor. Each of these castles in the air of entertainment builds on a foundation of tragedy -- but build we must, if we ever want to see anything but ruins. Like comedy, gaming about tragedy requires time, and time is what this column aims to provide. Four times, in fact, four alternate histories of varying weirdness, each one coming in low under the realism radar to hit history at its weakest point. In each, Pearl Harbor remains the irreducible target of multiversal aggression; awakening across time for its date with infamy.

"Placed in difficulties from which we could not extricate ourselves with honor and justice, compelled to immediate decision, and threatened with immediate hostilities we have, with the advice and consent of our chiefs, signed with heavy hand and many tears the deed of provisional cession and have permitted the British flag to be planted in all our islands, but under the guns of a frigate and at the point of the bayonet. Relying on the magnanimity and firmness of the United States, we appeal to the President . . ."

-- Letter of King Kamehameha III to President John Tyler, March 10, 1843

The analytical engines proved that Hawaii was no fluke. The Americans forced the British to back down over the Charlton Affair in 1843, but it was the Analytical Section that plotted the irreducible mathematical curve -- America already dominated Pacific trade, even before taking California from Mexico. The data didn't lie; the United States would surpass the entire British Empire economically by the turn of the century. This, needless to say, could not be countenanced. The Analytical Section provided massive covert aid to the Confederate rebels, which secured their independence at the cost of a short, sharp war in 1862. But rather than back down, the Yankees stepped up their maniacal growth. Without the South, pro-business and pro-technology forces in the Union had no opposition. Steamcars, railroads, nautiluses, aereons, and the entire panoply of mechanized industry and warfare poured from America's factories, their prosperity fueled by the China trade. British soldiers preserved the South, and kept India's riches flowing to Britain rather than America, but the harsh Babbage mathematics demonstrated that neither Confederate apartheid society nor the Empire could survive -- unless the United States was removed as a threat. On December 7, 1914, the dirigible fleets of the United Kingdom and the Confederate States launched a decapitating attack on the U.S. naval base at Pearl Harbor, and the Second War began.

This **GURPS Steampunk-World War II** campaign frame offers vast scope for nautilus naval action, for duels of land-ironclads in Texas and Tennessee, and for a rather more evenly matched superpower conflict than our history deployed. America's allies, Russia and China, offer mostly blood and bravery against the mechanized onslaught of the Three Empires (Britain, France, and Japan). The game can center on aerial daredevilry as G-8 and Biggles duel over Mexico, on elite units of the Abraham Lincoln Brigade dropped by aerostat into colonial rebellions from Indochina to Ireland, or on the increasingly mad science of Nikola Tesla and James, Lord Moriarty -- perhaps culminating in a race for the etheric bomb.

"Now is the only chance we'll have to destroy them . . . Once I've succeeded, everything's going to be all right. The earlier the move, the better the result."

-- "Jeen", *Mobile Suit Gundam I*

Between the first and second waves of planes, a lambent azure coruscation erupted on the tarmac at Hickam Field. A century and a half of redirected tachyonic energy transformed itself into 24 enormous figures clad in smooth, white armor emblazoned with the Rising Sun as the circuit closed from December 7, 2091 to 1941. The figures swept the

American forces off the island, and communicated their amazing story to Admiral Yamamoto -- they were "battlesuit troopers" from the future, who had traveled back to the past to win the Pacific War for Japan. Although their time had much advanced technology, their culture was dead and their spirit empty -- America had destroyed both. Their leader, Nishina Tetsuo, provided Japan's leading scientists with clues and even blueprints to a thousand amazing weapons from guided missiles to ceramic armor to atomic bombs. The battlesuits, of course, held secrets even more astounding -- which is what made the loss of one suit during an attack on the American rocket research center at Roswell, New Mexico, so annoying. Beaten and shoved back, the Americans feverishly reverse-engineer the futuristic equipment, desperately trying to invent their own future in time to inherit it. This **GURPS Mecha-World War II** crossover can be an exercise in bootstrapped battlesuit combat or a kind of retrotech *Reign of Steel* as the outgunned Americans take to the mountains against their unstoppable robot occupiers. For a twist, the PCs can be Time Patrolmen sent back to prevent Hitler from borrowing enough Japanese future technology to win in Europe, and to try and build a stable world from this mecha madhouse.

"It appears that King Kong, sensing the presence of his hated enemy, is determined to destroy Godzilla. Thus, a battle of the giants which may or may not have taken place millions of years ago may be recreated soon."

-- Dr. Arnold Johnson (Harry Holcome), *King Kong vs. Godzilla*

The Black Dragons had planned this attack for decades. Their oceanographers and historians had discovered the resting place of the King of Monster Lizards; the Japanese atomic project was diverted to producing a solution that would awaken him from his eons-long slumber. A dedicated minisub delivered the radioactive package to the volcanic vent, which detonated and raised Monster Island from the deeps. An Imperial Navy task force steamed east, its only mission to escort a specially-designed electrical lure to the Hawaiian coast. This lure drew the Monster Lizard into range of Pearl Harbor, where his stored aggression did the rest. The Imperial Navy finished what the gojirasaurus' fiery breath began, and sailed away again, confident that the Americans were finished in the Pacific. Now an army of radioactive monsters prepares to attack the West Coast as the Japanese go on to conquer Asia. Can the PCs in this **GURPS Atomic Horror-World War II** crossover game defeat the invasion from Monster Island? And what of the rumor that somewhere on a remote Pacific island shaped like a skull there lives a giant ape who can battle dinosaurs and win? Perhaps an elite ONI-OSS team of PCs must capture this super-gorilla and unleash the true King against the Emperor's radioactive reptile!

"We were young then, and we could slay dragons."

-- Nelda Brewer Roher, WAC (ret.), looking back on 1941

In retrospect, it was as if the gods were having their grim joke. The low-slung, deadly ships appeared out of nowhere on the bright winter's morning of December 7, 1591, dragon-heads weaving at their prows. But these were actual dragon heads, and the dragons took wing from the decks of the Nihonese armada and devastated the Vinlander entrepots at Perleshavn in Hovoe. Thus did Hideyoshi Toyotomi declare war on the Vinlanders, with a strike straight from the old sagas themselves. He wished a free hand in Kinland and the rest of the Peaceful Ocean, and only Vinland had the ships and the magics to harm him, for they had kept the ancient runes of Odin and the urge to sail the whale's road after their Norse kinsmen had turned to the White Christ and the distractions of Europe. But his dragons had missed the pride of the Vinlander fleet, the sacred ships where the mighty Valkyries slept. Hideyoshi also did not count on Vinland's allies the dwarves, who cast magic weapons by the cartload, or the Saracens who wove flying carpets in the Muslim districts of Vinland's cities. Their might, and Vinland's treasure, all the godhi freely pledged when next the Thing met. Under the great captains Halsi the Bull and Hosti Njemmisson, the Vinlanders are readying a mighty fleet to strike across the Peaceful Ocean and join up with the great warrior Arthursson in the Spice Islands. They will go a-viking right into the Inland Sea if they have to summon Surtur himself to scour the Nihonese cities clean.

This is a **GURPS Vikings-Alternate Earths 2-Japan-World War II** crossover, which can use any and all magic to taste. Japanese shugenja and Viking rune-magicians are probably the most common, but anything at all justifiable, from Arabian sorcerors to Aboriginal shamans to Taoist alchemists, can show up in this epic high fantasy setting. (If you want to enjoy a simultaneous war in Europe for the complete WWII feeling, you can pit Gardarika and Denmark against the suddenly-expansive Swedes and Sikellians.) Magic and late-Renaissance technology (including clockpunk wonderment from ninja war-kites to ironclad Korean turtle-ships) blend with dragons and oliphaunts for the proper free-wheeling feel. This is Ray Harryhausen's *Victory at Sea* and John Wayne's *Egil's Saga* where berserk meets

bushido in a battle to the death. Skoal!

Gear Krieg: Superscience!

Published by [Dream Pod 9](#)

Written by Alex Rhodes, Lloyd D. Jessee, Craig Youngblood, B. Scott Eggers, & Alex Koratzanis

Illustrated by Kieran J. Yanner, Bobbi Burquel, John Wu, Jean-Claude Delaronde, Alain Gadbois & Marcel Bastien

112 pages; \$19.95

Gear Krieg: Superscience is the first supplement for *Gear Krieg: The Roleplaying Game*, Dream Pod 9's game of "two fistful pulp role playing in a world at war!" -- itself the companion to their miniatures system that combines "mecha" with World War II. Describing itself as a "Roleplaying Supplement," this is the book that should cover one of the major facets of the *Gear Krieg* setting that received scant attention in the RPG rules -- Superscience!

Inspired by the works of H. G. Wells and Jules Verne and spurred on by the groundbreaking inventions of Thomas Edison and Nikolai Tesla, Superscience itself brings yet more groundbreaking theories and prototypes each day through the middle years of the 20th Century. The outbreak of World War II has further accelerated the pace of work across the world, in all scientific fields. The most notable of these is the construction of the walker by its American inventor, Walter J. Christie, during the twenties. Capable of wheeled on-road and walking off-road travel, these light vehicles have been taken up by the Third Reich as "Panzerkampfers" and employed effectively in the new German lightning war tactics. Tesla used his knowledge of electricity to install death rays in the French Maginot Line. As these electrostatic weapons were scaled smaller and became more efficient, the Soviets would install them into their tanks for use on the Eastern Front. Elsewhere advances were made in rocketry, materials sciences, and other technologies as the war called for weapons against which the enemy would have no answer.

The overall layout and style of the *Gear Krieg* line is neat, tidy, and easy on the eye, and *Superscience!* is no exception. Yet once you get into the book, both typographical and syntax errors make it hard to read. There are too many instances where upon reaching the end of a sentence, you are forced to go back and read it again because a misspelled word makes you ever so slightly unsure of the author's meaning. The effect of this off-kilter text is at first disruptive and then irksome as you once again have to scratch your head in wonderment at another sentence... This is not the only problem; for example, *Superscience!* cannot decide if it was Dr. Charles Monroe or Dr. Charles Munroe that pioneered the shaped explosive charge, nor if it was Igor Sikorsky or Igor Sikorski that pioneered the helodyne. The overall effect leaves the reader wishing that the book had been given one final good proofread before going to print.

Likewise, the standard of art in *Superscience!* is as good as the rest of the line, but there does not seem to be enough of it. Nor is this feeling helped with pieces having been reused from the pages of other *Gear Krieg* books. Many of the discussed vehicles are not illustrated at all, bar the data cards to be found in the book's appendix. These are not something to show to the players with the vehicle's statistics below, and are particularly unhelpful in the case of the helical aerodynes (*Gear Krieg*'s name for the helicopter). After all, how many characters are going to see one of these from the top down only? It would have been better if the new vehicles had been illustrated in the manner seen in the *Gear Krieg* book and *Gear Krieg Wargaming Companion*. One fact that should be noted about the great cover to *Superscience!* is that none of the aircraft shown appear between the covers, and one wonders whether this piece

should have been used on the cover of *Luftkrieg!* -- the *Gear Krieg* aircraft book instead.

The majority of *Superscience!* -- some eighty pages -- presents overviews of major fields of research in five chapters. The first of these, chapter two, is on Mathematical And Pure Sciences, covering computational machines, materials and synthetic sciences, plus atomics. Chapter three -- Electronic Sciences -- covers Tesla's electrostatic theories and weaponry developed for emplacements, radio, sensors (infrared, Radar and Sonar) as well as computers. The largest and fourth chapter is Mechanical Sciences. This describes the use of Tesla's weaponry mounted in tanks, walkers, automobiles and superheavy tanks, personal flight -- including jet packs and paragliders, helical aerodynes, VTOLs, motors, fixed wing aircraft, nautical vessels and rocketry.

In each of the chapters there are several pieces of color fiction, short biographies of notable figures within a field of study or those involved in running a particular project, and the occasional plot hook or adventure seed. Thus in the largest chapter on Mechanical Sciences we have short pieces of fiction about a helical aerodyne on a reconnaissance mission, a description of workarounds of the Russian T-43/E43 Tesla tank, and the rocket backpack used by the elite SS Rockettruppen. Also included are the biographies of Dr. Ferdinand Porsche, Preston Tucker, Howard Hughes and Dr. Robert Goddard amongst others.

The hooks and seeds include a paraglider-borne raid upon the Nazi rocket base of Peenemunde in Operation Thimble, investigating a giant transport submarine off the coast of Africa, and protecting Preston Tucker as he tests his new super fast walker on the Indianapolis race circuit. The majority of these hooks and seeds involve the application of these inventions, rather than their design or creation.

The fifth and sixth chapters depart from "normal" Superscience for the more outré subjects of Life Sciences and Paranormal Sciences respectively. Essentially Life Sciences is about the darker side of Axis science. It is here that Superscience looks at chemical and biological warfare, including Dr. Josef Mengeles, the Nazi breeding programs, and the Japanese Unit 516 and 713. Deplorable though this aspect of the war is, the book gives the basic facts without sensationalizing them. This fifth chapter also includes the only information directly applicable to the RPG: the alterations needed to be applied to a character's statistics to turn them into one of the chemically induced Axis zombies, and descriptions of a range of artificial limbs that whilst clunky, take the game towards the cyberpunk genre.

The sixth chapter on Paranormal Sciences can be roughly divided between Nazi occultism and the study of mind-over-matter powers. While mysticism underpinned much of Nazi ideology and deserves to be discussed here, overplaying of this angle may lead the GM to stray away from Superscience and towards something akin to Pinnacle's *Weird War II: Blood on the Rhine* or Pagan Publishing's *Delta Green* supplements.

The final and seventh chapter is on Gamemastering Superscience. Of its sixteen pages only two provide direct advice for the GM to introduce and run Superscience in their campaign. Though decent enough, the GM is still left wanting more. Much of this chapter is instead devoted to a sequence for creating prototypes or altering existing designs. This is best described as quick and dirty, and to get the best out of these rules, the GM will have to roleplay this out with their inventor or engineer player. Christie's design for the walker is written as an in-game example. The sequence is very vehicle orientated, but does cover the building of new personal weapons (more or less). This highlights a problem with Superscience in that it hardly covers personal weapons and equipment, which seems odd for a supplement for the roleplaying aspect of *Gear Krieg*.

This last chapter also provides us with the first look at examples of what actual characters look like under *Gear Krieg*'s Silhouette mechanics, an omission from the main rulebook. The six here are all archetypes based on individuals to be found in this supplement. Thus you have the Visionary Scientist, based on Nikolai Tesla; the Visionary Inventor, based on Walter J. Christie, inventor of the "walker"; the Mathematician, based on Alan Turing; the Engineer/Test Pilot, based on Igor Sikorsky; the Mechanical Genius, based on Preston Tucker; and the Philanthropist, based on Howard Hughes. All six are at least useful if the GM wants his players to meet these historical personalities, or wants the stats for an NPC of his own or even as an archetype for a player to model his character upon.

Superscience! does one thing very well, and that is provide an overview of the setting's technology. But beyond this it comes up rather short. Certainly for this type of book it seems odd that there is no bibliography for anyone who wants to do any further reading. Much of *Gear Krieg*'s science is based upon that of our own enough to warrant the inclusion

of suggested further reading. The book could have done with more illustrations of the items it describes and more archetypes for the players and GM to use -- whether that is a member of the elite SS Rockettruppen or a paraglider trooper of the 510th Daedalus Squadron. Plus there should have been some Superscience gear and weaponry for the individual character to use, when there is none! There is so little here that is directly applicable in terms of statistics to the *Gear Krieg RPG*, that to describe *Superscience!* as a roleplaying supplement is a little dubious.

Superscience! fills in some of the details the main rulebook left out, but in doing so it fails to support the roleplaying aspect of the game and makes it less value for money than it could have been. *Superscience!* is one for the dedicated *Gear Krieg* devotee or for someone who wants a rather general book of super science for another game.

Battleforce Bravo: Wartime Adventure

Published by [Deep7](#)

Written and illustrated by **Todd Downing**

11-page PDF document; \$3.95

The design philosophy behind Deep7's "1PG" or "one-page" game is to create a simple RPG with rules that fit onto a single page and support the game with a number of scenarios that can each be played in a single evening. More specifically the rules are actually combined with the character sheet, so that onus is on the players to learn the rules as they create their characters, while the GM concentrates on running the adventure he has selected for that session. Finally, each 1PG game is electronically formatted as an Adobe Acrobat file and made available direct from the Deep7 website (www.deep7.com) for purchase and download. This all combines to keep the price down -- under \$5 each. The question is, can an RPG that costs as little as \$3.95 be any good, let alone fun?

Deep7 have released several games in this format, including the espionage themed *Agent S.E.V.E.N.*, the space opera *Star Legion*, and the game of pulp action, *Dime Heroes*. All of these are based on the type of pop-culture genres we have seen in movies or on television, making the concepts and conventions central to each game easy to grasp and understand. Their latest release does exactly that and is in keeping with this year's trend in RPG genres. *Battleforce Bravo* is a World War II beer & pretzels RPG based upon the type of heroic all-action movies put out by Hollywood: *Kelly's Heroes*, *The Sands of Iwo Jima*, *The Big Red One*, and *Force Ten From Navarone*.

Battleforce Bravo comes as an eleven-page 1.35 Meg PDF document. These pages are broken down into the cover and contents pages, followed by eight pages of game contents and rounded out with a single page of advertising for other Deep7 games. The document is both easy to read online and also to print out. It is art-light, with the single major piece being Todd Browning's cover which captures the spirit of the game. Elsewhere, the text is broken up by what appear to be small pieces of clipart. The gaming contents are further broken down into three single pages of rules and guidelines: a character sheet with everything that a player needs to know, the rules for the referee and a page of advice for the GM on how to run movie style adventures and combat. The remaining five pages each describe one adventure that can be played in a single evening.

Character generation is at most a five-minute job. 1d3 is rolled for each of the three attributes -- Sturdiness, Craftiness, and Brains. There are sixteen skills split between these three attributes, covering everything a character should need from fighting, drinking, shooting, gambling, repair, dodge and languages. The only skill that appears to be missing from the list is any kind of medical knowledge, but whether this should be added to the game or is instead covered by the "Repair" or "Tech Knowledge" is down to GM's choice. Each character receives 1d6 points to distribute amongst these skills, which all begin at zero and cannot rise above three. Then the four secondary attributes are rolled for -- Blood, Guts, Wits, and Notoriety. Blood represents hit points; once all are gone, the character is dead. Rolls against Guts determines if a character can keep their Wits when experiencing traumatic events -- failed Guts rolls decrease the Wits score until it is reduced to zero. At this point, the character is shell-shocked and traumatized, and will need to make a roll of four or less to be even able to attempt a skill roll. Notoriety is a measure of a character's reputation and can be used to re-roll failed skill checks or to call in a favor from an officer or supply clerk. Unfortunately, there is little information on how to handle this in the game, but any GM should be able to create their own modelled upon the simplicity of the other rules in *Battleforce Bravo*.

Two rolls are made for background (thug, civil servant, clergy, athlete, professional, college grad) before enlistment and actual status within the armed service appropriate to the scenario the GM has decided to run (battle-hardened,

hero, sharpshooter, specialist, NCO or commissioned officer). In general these add a few points to a character's skills, and possibly to their secondary attributes as well. Some options also include extra money. Both status and background rolls add a nice level of detail to characters, although a GM might want to create a few more as the six of each given within these rules are slightly limited.

In keeping with the concepts of simplicity behind IPG games, *Battleforce Bravo* uses a d6 for its core mechanic. You always succeed on a roll of a one and fail on a roll of six -- skill rolls are made against a combined total of the appropriate skill and attribute. Combat is equally as simple, with the Fighting skill covering both brawling and evading when in hand-to-hand. When guns are involved, the Shooting and Dodging skills cover weapons fire and evading it. Combat is also deadly, most characters start out with an average of twelve blood points, which is as much damage as a rifle round does. Some limited armor is available and reduces the amount of damage done by a weapons hit upon a location, meaning that if a GI is wearing his standard steel helmet, he has an armour value of ten on his head and can survive most headshots with a slight wounding! While combat is deadly, this is intentional, and *Battleforce Bravo* characters are not rolled up for the purpose of long-term play.

Despite the rules simplicity, some of the rules cover aspects of a WWII game better than several of the recent -- and supposedly more comprehensive -- RPGs. In particular the rules on Guts and Wits as well as the two rolls made for character status and background fall into this category.

Besides the single page of rules, the referee also has a page of advice on how to run the game. This is useful stuff, from suggesting how to get the players into the mood with the right movies and music to how to plot a scenario and handle the bad guts. None of this is ground-breaking material, but it does not need to be for a game like this.

Each of the game's five scenarios also fits onto a single page. Every scenario is well organized and begins with that adventure's Premise, which gives a quick description of the adventure. This is followed by the Setup, which contains important information for the referee. Three of the scenarios, "Zieg Heist," "Seabee!," and "Wild Dogs" are by Todd Downing, while Ron Dugdale co-authors the remaining two, Airmen Down and The Annabelle Lee.

[BEGIN SPOILER SPACE]

The first scenario is Todd Downing's "Zeig Heist," inspired by movies such as *Kelly's Heroes* and the more recent *Three Kings*. A disparate band of soldiers have the opportunity to leap ahead of the Allied front line and grab a fortune in diamonds worth a cool ten million dollars before the Nazis can retreat with it in their possession and their own side can catch up with them. In "Seabee!" US Navy engineers must defend the airstrip they just built on an island in the Pacific from a Japanese advance force. Unfortunately, reinforcements are not due for twenty-four hours and the Seabees must hold until the marines arrive to relief them.

The "Annabelle Lee" and "Airmen Down!" can be played as linked adventures, with the characters part of crew of a B-17 Flying Fortress. Inspired by films such as *Memphis Belle*, *12 O'clock High*, and even *Das Boot*, in "The Annabelle Lee" the crew must fly a dangerous daylight mission to hit a V1 launch site in northern France. This could be a one-way mission as wings of ME-109 fighters harry both the bomber and her escort of Hawker Hurricanes. This is the only scenario to add any significant rules to the game, with a simple set of air combat rules. Although suitable to play on its own, "Airmen Down!" can be run as a sequel to "The Annabelle Lee" in which a bomber is shot down and the aircrew must find their way back to the English Channel.

The final adventure, "Wild Dogs," is taken from *The Dirty Dozen* and is again something of one-way trip. Misfit soldiers are sent to hit a bridge in France and destroy an important German supply depot. In addition to these five scenarios, Deep7 have made available another scenario to download from their site. James Stubbs' "Verweigerter Falke" is the first to have the players take the part of Axis troops, as they too must strike at an enemy base from which British commandos are attacking the Germans in Norway.

[END SPOILER SPACE]

Players wanting more realism in their games should definitely look elsewhere, with perhaps Steve Jackson Games' own *GURPS World War II* their best choice. But with any IPG game the idea is to have fun, not to simulate real life or to

engage in deep angst-driven roleplaying, and ***Battleforce Bravo*** is no different. It offers a fast, action-filled gritty set of five evening's worth of entertainment, and that's without the GM writing more scenarios. So is the game worth the asking price? All right, if you exclude the price of printing out ***Battleforce Bravo***, then each scenario offers a session's play for eighty cents . . . and that can't be bad with a game as fun as this.

Panzerschiffe Admiral Graf Spee

The Pocket Battleship

by **Kathryn Martens**

Many ships have earned a footnote in history; but perhaps only the *Titanic* and the *HMS Hood* have inspired more commentary with shorter life spans than the *Panzerschiffe Admiral Graf Spee*. From her secret beginnings to her enigmatic end, the *Graf Spee* lived only seven years. Yet in the intervening time she became the flagship of the resurrected German fleet, chalked up nine kills in less than three months in the Atlantic theater of World War II, and caused an international political standoff before she died. For a campaign set during or after WWII -- on *any* Earth -- this tiny warship offers a world of possibilities.

Origins Of An Enigma

After losing World War I, Germany was stripped of its navy by the Treaty of Versailles in 1919. Among the other restrictions of the treaty, Germany was barred from building any ship more than 10,000 tons. But the *Kriegsmarine* was resurrected in part upon a new, secret design in 1932: the so-called "pocket battleship." Small yet heavily armed -- the *Graf Spee* carried 11-inch guns, more appropriate to a ship twice her size -- the *panzerschiffe* ("armored ship") was rumored to be even faster than a battleship. Even the paint job made the pocket battleship a tough target; dark blue above and white-gray below, the *Graf Spee* sported a false bow wave that could make targeting difficult. Her camouflage was so effective that her own supply vessel once mistook her for an enemy ship. In addition to the *Graf Spee*, two other ships were built on this design: the *Deutschland*, and the *Admiral Scheer*.

All this worried the European militaries that had so recently subdued Germany. At the time very little was actually known about the new design, and even less was known about how many of them had been built. Most of the information available was mere rumor. British naval commanders got a look at one of the pocket battleships in 1937 when the *Graf Spee* participated in an international naval review to honor the coronation of King George VI of England. What they saw didn't reassure them.

In fact, much like UN inspections of today, the supervision of Germany's shipbuilding was less effective than it could have been. Germany was largely on its honor not to build above the limit. In reality she was 2,000 tons over the tonnage limit -- an extra 20%, mostly in guns.

But the pocket battleships had an Achilles heel: to keep their speed, they had to sacrifice weight. That meant thin armor plate. Less than a hand's breadth of steel separated the men aboard the *Graf Spee* from the prying eyes -- and waiting bombs -- of the Allies. This was a carefully guarded secret that went unrevealed until the death of the *Graf Spee*.

The Graf Spee

Work began on the *Graf Spee* in October 1932. By June 1934 she was finished. Originally called the *Ersatz Braunschweig*, she was commissioned as the *Panzerschiffe Admiral Graf Spee* on New Year's Day 1936. She was named for Vice-Admiral Maximilian Graf von Spee, who commanded the Far Eastern squadron of the German navy in World War I. Admiral von Spee was famous for the damage his squadron dealt to the French and British at Tahiti and Fanning Island, and especially for the defeat of a British cruiser squadron at Coronel. He was equally famous for his death at the Battle of the Falkland Islands, in which he was lost with his flagship *Scharnhorst*. The hopes of the German navy were lost with him. For the Germans it may have been an echo of greatness past to see his name emblazoned on a new warship.

It was also a shadow of things to come. The captain of the new ship, Hans Wilhelm Langsdorff, emulated the late Admiral; he aspired to live up to the famed commander's reputation for chivalrous behavior. By all accounts Captain Langsdorff succeeded in that mission. He also succeeded in his mission to disrupt the southern Atlantic shipping lanes.

The *Graf Spee* left Wilhelmshaven on August 21, 1939. On September 26, 1939, she was ordered to begin actions against British shipping in the Atlantic and Indian oceans. Barely four days later, she sank the *SS Clement*. In the following month she sank four more British freighters: *SS Newton Beech*, *SS Ashlea*, *SS Huntsman*, and *MV Trevanion*. She then moved to the Indian Ocean and sank *MV Africa Shell*.

By this time, newspapers in Europe and America both were screaming about the "phantom" raider. Fears began to build the single raider into an untraceable fleet. No fewer than four groups of capital ships were assigned to hunt her down, but at first it didn't help. In December 1939 the *Graf Spee* sank three more ships on her way back to Wilhelmshaven: *SS Doric Star*, *SS Tairoa*, and *SS Streonshalh*.

In less than four months of sailing, the pocket battleship had sunk nine British freighters -- 50,00 tons of steel and cargo sent to the bottom -- but with not one life lost. Captain Langsdorff was living the Admiral's chivalric code to the letter, and was taking crews off the ships before sinking them. At first he even tried to keep the vessels; the *Newton Beech* was kept on for a few days as a carrying vessel for the *Graf Spee*, as was the *Huntsman*. But the pocket battleship's greatest boon was her speed, and she could ill-afford a freighter slowing her down. Especially as four groups of cruisers closed in, she needed her prototype diesel engines to slip the noose.

The Battle of the River Plate

But with so many ships after her, it wasn't speed that failed her: it was simply space in the Atlantic. On December 13, 1939, the *Graf Spee* stumbled into the British cruisers *Ajax*, *Achilles*, and *Exeter*. A passage from Joseph Gilbey's book *Prince of Honor* conjures the scene: "A deafening explosion sends lethal particles of shrapnel and flying debris ricocheting off the ship's interior panels . . . Fire, fumes and flooding in darkened confined spaces summon terror to the survivors . . ."

During the battle the *Graf Spee* took a terrible hit in the thin armor of her hull. Her bow was opened to the sea. Even the ship's hospital flooded. Langsdorff visited his men by wading through seawater. Outnumbered and outgunned, the *Graf Spee* still managed to disable the *Exeter*; but the price was the critical hole in her hull and 100 dead. After viewing the damage, Langsdorff decided to run for Montevideo for repairs. She would never leave the port.

Montevideo

Montevideo is the interior port of Uruguay along the Rio de la Plata or River Plate ("Silver River"). The river forms the boundary between Uruguay and Argentina, both nominally neutral during World War II; in reality Uruguay was under considerable pressure from the British and the French. As soon as the *Graf Spee* made its surprise appearance in the harbor, the German Minister to Uruguay met her at the dock. His first words to Captain Langsdorff tell the story: "I wish I could say welcome to Uruguay, Gentlemen. You have made a serious error to bring your ship here seeking aid" (Gilbey).

Uruguay managed to hang on for four days. Intense international pressure -- and attention -- was brought to bear on the tiny country; but it had support from the still-neutral United States and from the Hague Conventions, which recognized the country's sovereign rights. But time simply ran out for the *Graf Spee*. The Hague Conventions only authorized a 24-hour respite for the combatant ship; her 72-hour docking had required a stay from the President of Uruguay himself. But his authority finally crumbled beneath unseen Allied pressure. With only a patch over the hole in her hull, the *Graf Spee* was ordered out of the harbor by 8:00 PM on December 17, 1939. Off the coast, three British cruisers waited for her.

The world listened to her departure with baited breath. A live radio broadcast reported the movements of the ship as she got under way at 6:45 PM. Everyone, including the German naval command, expected Captain Langsdorff to

bring his ship and his crew into the teeth of Hell. The only way to preserve the honor of the ship and her captain was to battle past the British cruisers or die.

A short while later, as the pocket battleship made her way into the wide estuary of the Silver River, a series of charges exploded in her belly. To the amazement of all she sank in shallow water. She remained intact, with much of her towering battleship profile above the waterline and in plain view of the coast. She had been scuttled.

The Price of Chivalry

Captain Langsdorff was trapped. A mere patch covered a gaping hole in the bow of his ship. Any attempt to reach the Argentine side of the estuary would be blocked by the British cruisers. Yet he couldn't surrender in Uruguay because of strict yet enigmatic orders from the German naval command. He saw one way out for his men. Unbeknownst to all but a few, Captain Langsdorff had argued persuasively with Uruguayan authorities that his crew were survivors of "shipwreck" and therefore should be given shelter in a neutral country. Arrangements were made for the secret transfer of his crew to merchant ships that were already in Montevideo; they sailed just a few minutes behind the *Graf Spee*. As the world watched the battleship sink in the harbor, the merchant ships carrying her crew were interned by Uruguayan officials -- but the crew was transferred safely to Argentina. Langsdorff had managed to follow his orders to the letter and still save the lives of his crew.

The price was his life and his good name. On December 19, 1939, Captain Hans Langsdorff committed suicide by gunshot in his room in the Naval Arsenal in Buenos Aires. He was found wrapped in his ship's flag. Publicly he was drummed for the loss of the vessel. The German naval command claimed that Langsdorff had disregarded orders by engaging in battle with warships. But at the same time a private letter praising Langsdorff was sent to his mother. Sixty years later, Langsdorff's career is still marred.

Present Day

The effects of the epic Battle of the River Plate and its aftermath linger even today. British veterans of the *Ajax* meet yearly. A Canadian town was named after the British cruiser; some of its streets are named after the ship's officers.

Veterans of the *Graf Spee*, who spent the rest of the war interned in Argentina, meet yearly in honor of Captain Langsdorff. The ship can still be seen in the shallow water of the River Plate; in the 61 years since her scuttling, she has sunk slowly into the soft mud at the bottom of the estuary.

Using the *Graf Spee* in Gaming

There are two things to keep in mind about gaming in the era that spawned the *Graf Spee*. First, the concept of honor still had a powerful hold on all the combatants -- even the Germans. That they remained fairly close to the weight restrictions imposed by Versailles even without strict supervision is a telling point. That the world trusted them to do so is also telling. This lends itself far better to a pulp ethos rather than gritty, cynical *Shadowrun*-type gaming. Spy games were simply different then; there is a reason that Ian Fleming thought of his spies as wearing business suits. But once a ship put out to sea, a land-based information hunt by government agents was the only way to find out exactly what their navies were up against. Intrigues with foreign governments, help from unlikely sources, and legwork at strange ports of call were all part of the process of tracking wolves at sea, and can all make for spectacular gaming even without grit.

That said, the second thing to keep in mind was that honor only went so far. The *Graf Spee* could have been *ten* ships for all that the Allies knew about her, and had the Germans been able to make ten of her, they would have. In an Alternate Earth, perhaps they did. Where would Britain -- and by extension Europe, perhaps even the world -- be if her shipping had been hit by a grand total of 30 pocket battleships instead of three? In a Weird game setting, what if the Germans produced ten *exact copies* of the *Graf Spee* and her crew? How eerie would it be to come face to face with the ship you just sank last week . . .

The *Graf Spee* was a prototype ship, and her brief honors showed it. She did not remain the flagship of the German fleet for long -- in fact, the honor had been moved to another ship before the war had broken out. It was also reflected in her captain and crew; while everyone aboard was experienced (Langsdorff himself was a veteran of the Battle of Jutland), no one was irreplaceable. This is a familiar situation to paranoid players. The campaign needn't be aboard the *Graf Spee* herself; this sort of situation is perfect (and evil) for nearly any set of experienced PCs at the next step in their development as a group. It's certainly a reward to be given your own ship -- but the responsibility and the fear inherent in being given a terrible duty *and* a ship with a fatal flaw makes for heady gaming. The world at large expects the PCs to do something interesting with their secret gear; the question is whether they will do something expected.

Conversely, it may be the PCs' stern duty to hunt down the phantom raider. They may be sailors and officers aboard the hunting ships. They may be part of the network of listening posts that protected the American shoreline from her predation. More interestingly, they may be agents from any of the Allied or South American governments that flooded Montevideo to jockey for position around the *Graf Spee* and her fate. (Remember that during the war James Bond himself served in the Royal Navy . . .)

Intrigue also abounds in her crew's enigmatic orders not to surrender to Uruguay. Perhaps the *Kriegsmarine* worried about the unfettered access that British and French agents might have to the crew of the *Graf Spee* in that country. Perhaps the crew had something even more precious than diesel engines to hide. Alternate Earth campaigns may well have an interesting time saving her from her fate -- or, perversely, helping her meet it more quickly. Who is to say that those engines were just diesels? Perhaps Captain Langsdorff never intended to scuttle her in such shallow water, or even to scuttle her at all . . .

If nothing else, the *Graf Spee* can serve as an amazing part of the landscape of any Earth campaign. Secret salvage missions aboard a half-sunken battleship in the dead of night in South America sound like something straight out of a pulp adventure novel. As late as 1948 her foretop still showed above the water of the estuary and her interior was accessible in shallow water -- and by that time, a young Frenchman named Jacques Cousteau had already been using his revolutionary aqualung for five years.

Be it the thrill of the chase or the intrigue of her death, whatever their connection with the *Graf Spee* practically all gamers will find something enthralling about her. Sixty years later, men are still trying to clear her tragic captain's name -- and who is to say that the ship herself doesn't still hold secrets?

Statistics:

Displacement: 12,000 tons (16,000 fully loaded)

Dimensions: 598 x 68 x 23 ft

Propulsion: 8 diesel engines, 2 shafts, producing 54,000 hp

Top Speed: 28 knots (approximately 32 mph)

Crew: 1,150

Armament: 2 triple 11-inch guns; 8 single 5.9-inch guns; 6 single 4.1-inch guns

Armor: 1.5-4 inch belt, .75-2.25 inch deck, 5.5 inch turrets

The World War II Before World War II

First off, let me say that it's **really** surreal to think of World War II as something that happened *last* century.

Second off, let me say that World War II, as a historical event, really doesn't have any personal attachment for me. Which is to say that I don't know have any anecdotes, know of any family members who were involved (directly or indirectly), or can otherwise point to the Big One as having a major influence on my life. Now, that's not to say it *hasn't* . . . my family has an odd tendency of being either distant or departed, so even though I don't know of any stories, I'd be shocked if there weren't any. Thus if ignorance is bliss, I'm clearly all a-giggle.

So with that in mind, I generally tend to think of WWII mostly in detached terms. For example, I credit WWII with introducing me to gaming. My earliest gaming memory is when I was seven, playing an Avalon Hill game with my stepdad (it was an older naval battle game with little metal submarines; its name eludes me, but I'm sure the Giant *Pyramid* Think Tank knows right which one I'm talking about). Now, I'm reasonably sure that World War II wasn't fought *just* so I'd have a future hobby and job, but that's my earliest association.

But most recently I've come to consider: What was World War II before World War II?

In other words, what was the conflict that completely reshaped the world -- and future history -- before World War II? (I'm sure it could theoretically be an "event," but traditionally humanity has melded "event" and "world reshaping" into "war.") What was the event where everyone knew of someone that was affected by it?

After giving it some thought (and keep in mind this may well be common thought, but it's pretty deep for me since I'm an English/CompSci geek and these thoughts involve history, which is just a smidge below my "Spice Girl Lore") I decided that the pre-WWII earth-shaking conflict was the Napoleonic War. It occupies a place chronologically just over a century before World War I, and certainly seemed to shake things up. (Of course, I'm stuck in my Eurocentric rut here . . . heck, given enough time I'm sure I can relate how Florida is the center of all geopolitical developments for the past thousand years.)

And before that? Um . . . I'm at a loss, historically, 'til the Crusades, which fits my person definition of "huge war involving almost everyone that really shakes everything up."

But there may well have been others.

Anyway, the point of all these long, random thoughts (and, yes, there *is* a point) is that, although many people -- myself included -- tend to think of World War II as this gigantic event, epic in scale and global in reach. But many people also tend to think that World War II was unique in the way it touched the world; I'm not sure I agree with that. I don't think people of the 1850s were sitting around thinking, "Wow; nothing has ever happened globally that's happened me, my parents, or my grandparents. Sure hope we never have a world war or nothin'." In its own way, the world has *always* been small; whether the struggle lasted five years or a thousand, I think there long since been wars that have touched the world. (Or at least the *known* world . . . it's hard to consider that you're not affecting a continent you've never even discovered.)

And to tie it into gaming (gadzooks!), when I'm designing campaign worlds from scratch I try to remember this fact. Okay; there was an epic War of Tears that engulfed the entire realm into its clutches. Soooo . . . what else? What was the worst war the world has ever known before that? What was the defining conflict that everyone talked about *before* the War of Tears? Although time *is* linear, and seems to have a distinct starting point, in most campaigns removed from (say) *GURPS Ice Age* there will be a sense of history. And from that sense of history and perspective can emerge a richer, more textured world. After all, saying that an artifact is hundreds of years old doesn't have as much impact as saying it was originally discovered by Napoleon's armies in Egypt . . . *or* the Hidden Vale's epic 10,000 man assault on Madeupia.

And if there truly isn't an epic battle before your War of Tears (or whatever), maybe you should consider playing that

up. There has *never* been a conflict of that scale. There are no records, no stories, no folklore of that magnitude. Perhaps the world couldn't even *imagine* such a conflict was possible . . .

Or perhaps such conflicts were relegated in the past to seven-year-old children and their parents, pretending to fight bloodless battles on a clean map representing the world.

Designer's Notes: GURPS World War II

by Gene Seabolt

After a considerable period of building tensions, the Second World War brewed up suddenly and quickly blossomed into the largest conflict in human history. Perhaps fittingly, *GURPS WWII* followed a similar course on its way to your local game store.

The idea of a *GURPS* sourcebook for WWII had been sitting on the back burner for years before I first reopened the topic in 1999. My proposal for a strictly historical sourcebook met with a wide variety of spirited feedback. This administered the first difficult lesson of this process, which was that different people have very different concepts for what a WWII sourcebook should be. Regardless of the details of those various visions, the consensus seemed to be that a sourcebook worthy of *GURPS* would not limit itself to a straight history lesson. With this and a few other sweeping revisions to ponder, as well as increasing duties in *GURPS Traveller*, I moved WWII to my back burner, as well.

Early this year, the opportunity presented itself to again revisit the idea of a WWII sourcebook, and a continuing line stemming from that. Steve gave the project a green light, and a short time later Creative Director Phil Reed asked for a Dec. 7 deadline, for obvious marketing reasons. That left a window of a little over six months to go from concept to finished product, a tall order but not an impossible one.

Laying the Groundwork

The first order of business was creating the modular vehicle-design system that former Managing Editor Alain Dawson and I had decided would be a good tool for increasing the book's cross-genre support. As editor on *GURPS Traveller Ground Forces*, I had found David Pulver's modular system in that book a vast improvement over flipping through *GURPS Vehicles* seeking those portions that specifically applied to the Traveller universe.

I held no illusions that a comparable WWII system could be as reader-friendly. To begin with, things get a lot more complicated when describing more than one mode of movement. (The *Ground Forces* grav vehicles fly. That's it.) More importantly, the WWII system had to provide results at least within hailing distance of a reality that isn't always defined in *GURPS* terms. For instance, many sources list the top speed for the infamous Tiger tank at 23 mph, but more detailed accounts explain that the tank actually could reach 28 mph although one didn't want to make a habit of driving at that speed. (Unless, of course, one really enjoys swapping out 1-ton powerpacks in the rear areas of a combat zone.) Thus, the "real" top speed usually given for a Tiger doesn't actually coincide with what *GURPS* considers top speed -- and never mind that no real-world statistic is going to give a very good idea of what the stability rating should be. Furthermore, real-world statistics aren't nearly as consistent as those derived from *Vehicles* -- the design system would have to be sufficiently fuzzy to allow for this.

Armed with a mountain of real-world data, I began building a modular system that recognized it couldn't be real simplistic when it came to determining final performance statistics, but tried to make up for it by being as simple to use as possible before then. In this vein, I unashamedly swiped the old *Car Wars* method of applying armor to vehicles, as well as its fixed menu of several predefined chassis. Boiling down and condensing the pertinent *Vehicles* content through the rest of the process, I ended up with a first-draft system that (as far as I could tell) was internally consistent but had only passed a few rough reality checks. Deadlines only know one mode of travel -- rushing forward remorselessly -- and mine certainly didn't lack for speed, so it was time to begin playtest and let fresh sets of eyes improve the process.

The Brouhaha Begins

As many Pyramid readers know, we originally intended to post the *WWII* playtest files as PDFs of the already laid-out pages ready to go to the printer. This wasn't because we couldn't post the extracted text, but because it's a lot easier to

read content that's already been paginated. However, posting a preformatted and printable version of a product we had not yet brought to market struck us as pushing our luck a bit much -- not that we don't trust the vast majority of our audience, but the old saw about one bad apple certainly would apply here. So, we posted the content with the option to print disabled. It took many playtesters about 1.7 seconds to circumvent that precaution, but others who didn't like being forced to read the content on their screens voiced their displeasure.

That protest went hand in hand with the even larger controversy being generated by playtesters who didn't think that *WWII* should have a modular-design system. They had valid points, but the reality remained that the design rules took up 1% of the space that it would take to properly describe every WWII-era vehicle in which players might take an interest *and* provided the tools for GMs and players to stretch their imaginations in the time-honored *GURPS* tradition. The old saw that applies this time would be the one about giving a fish or teaching how to fish; even after weighing the dissenters' arguments, I had no doubt that the design system would be an asset for the book.

Others, meanwhile, were protesting that *GURPS WWII* should be more of a strictly historical book -- describing something very much along the lines of my 1999 outline. I had to turn down this opportunity to gloat, because I already had admitted to myself that the earlier feedback expanding *WWII*'s vision had been correct, and that a sourcebook supporting a wider breadth of genres would be the better product, even if it did risk offending some purists.

Finally, we recognized that *Pyramid* playtests were starting to show a great deal of hard-to-digest, back-and-forth discussion, and that WWII was a topic with plenty of often opposing viewpoints to generate debate. So we asked playtesters to follow some new ground rules to minimize the noise-to-signal ratio. While most playtesters understood the needs expressed by these rules (for which I'm eternally grateful), a few voiced their displeasure with these new restrictions, as well.

Heaping these controversies atop one another, *WWII* certainly was gaining attention, though not of a sort of which I was particularly fond . . .

Apocalypse in 100 Words or Fewer

Meanwhile, I was madly at work on the rest of the book. As daunting as the vehicle system had been to that time, the historical passages in Chapter 1 proved no less challenging. A war that spans more than five years and scores of countries does not lend itself to brevity. Balancing theater against battle against anecdote, I assembled an overview that felt fairly complete, but still left plenty of room for additional books in the line to expand upon various topics.

Chapter 2 didn't give me a break, either. I wanted to compare the armed forces of the major combatants in a strictly organized, apples-to-apples fashion, beginning with a comprehensive review of the general Western military structure (for which I brazenly cribbed the concept from GDW's *Striker*). This should have been easier than it was, but I discovered that -- among the thousands of references on WWII -- very few actually approach the military mechanics without basing the discussion on an existing (and undescribed) body of knowledge for fellow military professionals. Neither being such a professional nor writing for them, I had to tackle the topic largely from scratch, but came away largely satisfied with the results.

The next step was creating the small-arms lists for the book, for which I turned to one of the *GURPS* community's resident experts, Hans-Christian Vortisch. While Hans-Christian and I can't always agree on the time of day (even allowing for the time-zone differential between Austin and Germany), I wasn't about to leave his vast storehouse of knowledge untapped. Based largely on his invaluable work, we put together a weapons list that passed through playtest with just a handful of modifications. Meanwhile, longtime WWII campaigner and indispensable resource Shawn Fisher provided the vast equipment list that begins the chapter.

Return of the Modular System

It was now time to return to the modular system and address the mountain of problems that playtesters had discovered. *Vehicles* expert Kenneth Peters did more than his share of work in this venue, and came up with a particularly elegant

modification of the airplane-design system that worked wonders on the system's inconsistencies. A great deal of additional input was incorporated into the design system's final form. (The only major exception would be the suggestion that varying frame strengths be offered, because it would have opened a Pandora's box of wildly ahistorical design possibilities and added a good deal of complexity.) David Pulver was, of course, of immense aid in finalizing and tweaking the content, and in keeping an eye on the potential ramifications of applying the upcoming *Vehicles Expansions* to *WWII*.

With a tighter, better design system in hand, it was time to put it to the best test by designing the corebook's sample vehicles with it. The first handful of vehicles went surprisingly well in the design system, but proved that I had grossly underestimated the amount of space each vehicle would take up in print. Painfully, I had to cut some writeups, such as the legendary Japanese battleship *Yamato*, to make room for staple gear.

Overall, though, the samples validated the playtest-purified design system quite nicely -- until I got to looking at the long-established *GURPS* vehicle-combat system summarized in the book. *Vehicles* has always overvalued the penetrating power of TL6 weaponry vs. TL6 armor in comparison with the historical. I had previously joined Mr. Pulver in hand-waving this by explaining that, even if a shell did not technically pierce real-life armor, it still did real damage to the vehicle overall. (A radio bolted to a bulkhead when a 50mm round smacks the other side probably won't work too well afterward . . .) This after-the-fact justification worked just fine, until Mr. Vortisch insisted that the major combatants incorporated explosive charges in most of the armor-piercing rounds listed as strictly AP today. Modeling an APEX round as penetrating armor before going *bang!* isn't quite as justifiable as modeling a solid piece of shot penetrating armor that it shouldn't penetrate.

With this in mind, we reapproached the *Vehicles* benchmark of 1" of hard steel equaling DR 70. Previous vehicle designs have taken this to mean armor-quality steel, but taking the conversion at face value, could we model better grades of *Vehicles* armor as face-hardened varieties with better performance per inch than strictly "hard steel?" Our research indicated we could nicely fit that assumption into the design system, and with some tweaks to the cannon designs to make them more historical, we ended up with a system that finally allows a Panther to bounce off its nose the 75mm shells from a standard Sherman.

The Complete Package

At this point, things were moving along well. Steve had read the book and applied his own formidable knowledge of the topic to it. So had our resident WWII grognard Loren Wiseman -- it shames me to no end that I forgot to credit his informal aid to the process in the book -- and other SJ Games stalwarts had reviewed various passages. The December 7 release date that we had been trumpeting was fast arriving, and lots of people outside the usual *GURPS* sphere were expressing interest in the book.

This interest, coupled with the fact that a workable vehicle-combat system already was included in the book, led me to suggest that we expand the page count to include a WWII-specific version of the popular *GURPS Lite* condensed rules. Steve agreed to the change, and *GURPS* Line Editor Sean Punch did his usual exemplary job of crafting a succinct set of modern-combat rules in record time. Incorporating material scattered among various other *GURPS* supplements, this version of *Lite* will be handy to experienced *GURPS* players and newcomers alike, in my opinion. Regardless, it transforms *GURPS WWII* into a stand-alone game package, and hopefully one that will attract new players to an outstanding game system. Its last-minute inclusion transformed a smooth process into our usual last-minute scramble to get the book ready for the printer, but it was well worth it.

The Outcome

While reader feedback will be the ultimate jury, of course, a lot of talented people around here -- with myself as no more than ringleader among them -- have created what I think is an outstanding addition to the *GURPS* library and a promising start to what promises to be an exciting line. Certainly, the book's creative process generated more than its share of tension, but I'll ask forgiveness for any missteps there and ask Pyramid's audience to evaluate the book on its own merits. We'll get things smoothed out and look to improve as the line moves along.

The Lost City of Chichén Itzá

by Sean Robson

For many days they made their way along rivers and narrow mountain paths in the hot and humid Honduran rain forest. Their native guides led them ever deeper into the jungle, struggling through the mud bearing heavy loads of equipment, tormented by the incessant stinging of mosquitos. The shrill cries of birds and howls of monkeys filled the stifling air by day, and the hoarse roars of prowling jaguars punctuated the silence at night. Before them lay the city, lost and forgotten, swallowed by the jungle it once dominated. Its crumbling temples and palaces were worn down by centuries of tropical rains, pried apart by ever questing roots and overgrown by vines, ferns and shrubs. Stone effigies of alien gods glared out at the fallen ruins from beneath a verdant shroud of moss and lichen, with no one left to worship them.

Such must have been the experience of John Lloyd Stephens, an American lawyer/diplomat, and Frederick Catherwood, an English artist, when they found the ruined Mayan city of Copán in 1839. Their subsequent trips over the next couple of years yielded more than three dozen lost cities and heralded the rediscovery of the ancient Mayan civilization by modern man.

The Mayan civilization originated in the Yucatán around 2600 BC, and rose to prominence around AD 250, reaching its peak in the early 9th century. The Maya's ancestors are believed to have migrated from North America, though several 19th century writers suggested that the Maya were the descendants of lost Atlantis. The Maya, building upon earlier civilizations such as the Olmec, developed highly sophisticated hieroglyphic writing, astronomy and calendars. They had a hierarchical system of government, ruled by kings and nobles, organized into highly structured city-states during the Classic period (AD 200-900). Shortly after AD 900 Mayan civilization began to decline for reasons unknown. The southern Maya began abandoned their cities, apparently quite suddenly, as unfinished buildings and carvings dating to this time have been found in many southern ruins. This decline did not seem to reach the northern Maya; quite the contrary. In the Puuk region and at Chichén Itzá, the cities flourished, displaying some of the finest architecture in the pre-conquest New World. The cause of the downfall of the southern Maya is a mystery, but many archeologists suggest the following factors as contributing to the collapse: 1) constant internecine warfare between city-states, 2) drought, 3) overpopulation. It is likely that these three factors combined to destabilize the underpinnings of Mayan society, waiting only for an ill-timed catastrophe, such as a rebellion by the starving masses against an oppressive ruling class, to trigger the collapse.

About one hundred years after the demise of the southern Maya, civilization in the Puuk region began to collapse, again, for reasons unknown. Once again, Chichén Itzá, inexplicably immune to the downfall of Mayan civilization, continued to flourish and grow in strength, becoming the largest and most powerful Mesoamerican city of its day. It remained a bastion of Mayan culture until integrated into Toltec society around AD 1200. Mayan civilization persisted in some peripheral centers until the Spanish conquest of the early 16th century.

Religion

There were many Mayan gods, including deities of death, war, winds, rain, corn, and the North Star. The exact number of gods is unknown, but among the most important were Itzamna, K'uk'ulkan, and Chac. Itzamna, the Supreme God and world creator was a kindly god, but remote from everyday life, and used other gods as intermediaries. K'uk'ulkan, the wind god, was a great feathered serpent, and is synonymous with the Aztec god, Quetzlcoatl. Chac, the rain god, was of great importance in the agrarian Mayan society. The Maya believed that the gods guided the sun and moon across the sky, and also believed that they needed human assistance in the form of sacred rituals. Such rituals involved bloodletting to nourish and propitiate the gods. Blood sacrifice was thought to send human energy skywards, and divine power was received in return.

Kings used obsidian knives or stingray spines to cut their penises, allowing the blood to fall onto paper held in a bowl, while queens pulled barbed cords through their mouths, lacerating their tongues - which goes to show there was a downside to being royalty. Human sacrifice was regularly performed on prisoners, slaves, and illegitimate children. Priests were assisted by 4 elder men, known as chacs in honor of the rain god Chac. These men would hold the arms and legs of the victim while another person, called a nacom, opened up the chest and removed the heart. A shaman known as a chilam stood near by in a trance, to receive messages from the gods, which were interpreted by the priests.

The Mayan codices record repeating cycles of creation and destruction, which served as a reminder of the consequences of failing the propitiate the gods. The start of each 52 year cycle was a frightening time when gods and other forces of creation and chaos would do battle in the mortal world, determining the fate of earthly creatures. Such cycles continue until the end of the world, which, according to the Mayan calendar, is due to occur December 22, 2012.

Codices

Mayan glyphs were painted on codices made either of deer hide or bleached fig tree paper that was then covered in thin coat of plaster and folded accordion style. The codices recorded rituals, chronologies, calendars, and astronomical data outlining the cycles of Venus and other celestial bodies. Most Mayan codices were burned by the Spanish in the 16th century when attempting to convert the Maya to Christianity. A zealous Franciscan friar, Diego de Landa was a missionary in the finest traditions of the Inquisition. He traveled throughout the Yucatán on a mission to destroy all vestiges of Mayan religion, and often resorted to torture to gain converts. On July 12, 1562, enraged by the stubbornness of the Maya, he ordered a repository of hieroglyphic books burned. He wrote that because the books "contained nothing in which there was not to be seen superstitions and lies of the devil, we burned them all..." Four pre-Hispanic Codices survive:

The Dresden Codex was written at Chichén Itzá between AD 1200-1250. The 78-page codex contains almanacs, accountings of days, predictions, tables of eclipses and movements of Venus as well as prophecies, and is 3.5 m long when unfolded. It was used to predict the future, and to time raids, captures, and warfare with the appearance of Venus.

The Madrid Codex, also called the Tro-Cortisano Codex, is 112 pages long and contains religious writings and

predictions.

The Paris Codex, also called the Peresano Codex, is 22 pages long and contains predictions and a calendar.

The Grolier Codex was discovered in the 1970's and displayed at the Grolier Club in New York. It was found in a wooden box in a cave in the Chiapas. It consists of half of a 20-page table concerned with the movements of Venus, and is dated to AD 1230.

In addition to the Codices, there are several other post-conquest texts written in Spanish by Mayan authors attempting to preserve their rapidly vanishing heritage. A few such manuscripts include the Popol Vuh, a fragmentary text from the Guatemalan highlands recording the myths, cosmology and traditions of the Quiché Maya; the Annals of the Cakchiquels; and the Books of Chilam Balam, named after an order of Jaguar Priests renowned for their skill in prophecy. Any of these texts could contain valuable troves of forbidden lore.

Warfare

The Maya were obsessed with war. There was constant inter-tribal battle among the highlanders in the south, and the city-states of Yucatán were perpetually at war with one another. By the late Classic Period warfare had become institutionalized and included a military elite, professional warriors, and expanded military objectives such as the conquest of neighboring cities, control of natural resources, and domination of trade routes. In addition to professional warriors there were common soldiers conscripted from the peasantry, and scouts called zabin ("road weasels") who were used to gather information about enemy defenses. War leaders were particularly honored in Mayan society, but were required to abstain from sexual relations, eating meat, or drinking alcohol for the duration of their tenure. These restrictions were bound to make one frustrated and irritable, which, perhaps, was the general idea.

Classic Period weapons were limited to short spears tipped with flint or obsidian points, wooden clubs, flint or obsidian knives, and shields. In the Postclassic Period, when warfare had become a more important societal institution, there were numerous additions to the Mayan arsenal, likely obtained from the Aztecs in Mexico, which included: atlatls, slings, obsidian edged macuitls, short bows, and cuirasses of quilted cotton or tapir hide.

Sixteenth century Spanish accounts tell of encounters with Maya soldiers -- their bodies painted red and black, adorned with plumed helmets and lavish costumes, carrying brightly colored standards, and charging into battle amid the din of drums, conch shell horns, whistles, and war-cries. Their battle tactics focused on ambushes, frontal assaults, and flanking maneuvers with an initial missile barrage, which quickly devolved into hand-to-hand combat. The primary goal was to capture rather than kill the enemy; common soldiers were enslaved, while officers and nobles were reserved for sacrifice.

The Ruins of Chichén Itzá

The word Chichén Itzá is derived from Chi, meaning "mouth," and Chen, meaning "well," and literally translates as "mouth of the well of the Itzá," referring to the city's sacred sacrificial well (cenote).

Sacred Cenote

Cenotes are natural wells formed by karstic sinkholes in limestone that extend to the water table, and were important sources of drinking water for most Mayan cities. The Sacred Cenote at Chichén Itzá measures 200 ft (61 m) across, and its limestone walls rise 65 ft (20 m) above the surface of the water. The Sacred Cenote can be entered through a vertical hole, with narrow steps carved in the limestone. The air is thick, musty, and oppressive, and one misstep on the slimy ledge can send an explorer plummeting into the well. Within the well, blood red stalactites and tree roots reach down from the ceiling, and in the center lies a deep pool of blue green water. A massive stalactite hangs down to within inches of the pool's surface, and a piercing beam of light from the ceiling illuminates

[Click to enlarge](#)

the pool and the entire chamber.

The Sacred Cenote was believed by the citizens of Chichén Itzá to be the abode of gods, most especially of Chac, who dwelt within the depths of the pool. Many of the stalactites have been carved in the likeness of suckered tentacles, and gold Chac masks adorn the walls.

Down through the centuries a foreboding aura of mystery and evil has clung to the Sacred Cenote. When John Lloyd Stephens came upon it, he found it repulsive and described it as "the largest and wildest we had seen, with cragged, perpendicular sides, trees growing out of them and overhanging the brink, and still as if the genius of silence reigned within. A mysterious influence seemed to pervade it, in unison with the historical account that the well of Chichén was a place of pilgrimage, and that human victims were thrown into it in sacrifice."

An early Spanish report noted that Maya lords had hurled women belonging to them into the well with instructions to find out from the gods below whether the forthcoming year would be a good one. They also threw precious stones and gold down the well in sacrifice to the gods.

The Great Ballcourt

Chichén Itzá's ballcourt is the largest of all Mayan ballcourts, measuring 545 ft (166 m) long by 225 ft (69 m) wide. The acoustics in the ballcourt enable a whisper to be heard 500 feet away, and are unaffected by wind. The secret behind this phenomenon remains unexplained.

The sacred ball game, called *pok-a-tok*, was played in a walled field with a stone ring set 10 feet up the wall at either end, and the object was to keep the ball from touching the ground while moving it across an end line. Players could touch the ball only with their hips, knees, and elbows, and the ball could be bounced off the ground and walls. Play was continuous, with no time-outs or substitutions.

Spectators sat in stone bleachers above the walls and gambled heavily on the outcome of the game. If a player were to score a goal through the stone ring, an uncommon feat, he could demand all the jewelry of the spectators; such goals usually precipitated a mass rush for the exit. The game ended with a religious ceremony -- often involving the decapitation of the losing team.

Tzompantli

The tzompantli is a T-shaped platform decorated with rows of human skulls carved in relief. Similar structures in Aztec cities were used to publicly display the skulls of sacrificial victims.

Castillo

The temple of K'uk'ulkan, El Castillo ("the castle"), is a massive pyramid located in the center of the city. It was constructed so that during each vernal equinox the sun will cast the shadow of a writhing serpent down its steps. When standing at the top of the pyramid, one has a commanding view of the city, and when speaking in a normal voice, can be heard at ground level for some distance. The inside of the pyramid consists of dark, narrow corridors, and claustrophobically small chambers.

Temple of the Warriors

A massive temple surrounded by hundreds of columns carved with reliefs of Toltec officers.

Mercado

"The market place."

Caracol

The Caracol, Spanish for "snail," is a round building with a domed ceiling whose window point toward the equinox sunset, and the southernmost and northernmost point on the horizon where Venus rises. The building is most certainly an observatory; the Maya took lines of sight from its platforms, and door and window jambs to plot the rising and setting positions of the sun, the moon, and above all, Venus.

The Nunnery

This building appears to have been the living quarters of elite citizens. Every square foot of the walls has relief and paintings decorating it. Within the nunnery, the corridors become narrower and narrower, with many intersections and turns before leading to a solid wall of limestone, which creates a dead end.

The Cthulhu Connection

As suggested by Richard L. Tierney in his article "The Cthulhu Mythos in Mesoamerican Religion," there is strong correlation between the Cthulhu mythos and Mesoamerican religion. Evidence of Cthulhu worship in Chichén Itzá can be seen in the carvings of the rain god, Chac, which are depicted with long suckered tentacles, suggestive of Cthulhu. Indeed, many of the stalactites in the sacred Cenote are carved in the likeness of a tentacle, with disc-shaped suckers clearly visible. Although it was believed that Chac dwelled within the depths of the sacred Cenote, it is unlikely that Cthulhu, trapped in sunken R'lyeh, actually inhabits it. The well may serve as an abode for one of the Star-Spawn of Cthulhu, huge octopoid creatures that resemble smaller versions of Cthulhu. One of the Star-Spawn, contacted via the Cenote, could serve as an intermediary between the priests and Cthulhu. Most of the Chac/Cthulhu carvings are found on buildings of old Mayan design. Later Toltec-style buildings bear the image of K'uk'ulkan the feathered serpent, known in the Cthulhu mythos as Yig, the Father of Serpents.

Itzamna is described as a kindly, but remote god and corresponds to the Elder God, Nodens in the Cthulhu Mythos. Nodens is considered to be almost friendly to mankind, and will at times aid those in conflict with the Great Old Ones. He is, however, far-removed from mankind and only rarely appears, which may explain the lack of temples dedicated to Itzamna. Mayan priests may have found it more profitable to worship Cthulhu or Yig, gaining power in exchange for blood sacrifice.

Mayan codices make reference to an unnamed god described as a "fat, greedy earth-lord." This description matches that of Tsathoggua, an obese creature with a furry body and bat-like head. Tsathoggua came from Saturn, but now dwells in subterranean caverns on Earth. He spends most of his time asleep, awakening only to receive blood sacrifice from his human worshipers, whom he rewards with spells. Tsathoggua may dwell on occasion in the sacred Cenote, or remain in N'kai, in which case the Formless Spawn of Tsathoggua would dwell within the Cenote, serving as a conduit between Tsathoggua and the priests. The Formless Spawn are amorphous beings of viscous black slime that can take a variety of shapes, often utilizing tentacular pseudopodia to capture and consume prey.

The backward sloping foreheads of the Maya are a batrachian feature similar to the bulging-eyed "Innsmouth look" and is suggestive of Deep Ones ancestry. Tierney suggested that the practice of strapping boards onto the foreheads of infants may have been a later practice that attempted to emulate the features of these servants of Cthulhu.

Using Chichén Itzá

Historical Campaign

There are a variety of interesting scenarios featuring Chichén Itzá that could be incorporated into an historical campaign. PC's could play early Spanish explorers discovering the city and its inhabitants for the first time, or it could be the setting of a Mayan campaign. What caused the collapse of the Mayan culture and the sudden abandonment of the cities? Why did Chichén Itzá survive? Was it due to natural disaster or something more sinister? Perhaps priests of

Chichén Itzá allied themselves with dark forces.

The tech level of the ancient Maya is something of a mixed bag. They are technically a stone-age society with TL0 in the areas of materials, tools, warfare, and transportation (the Maya never appear to have used the wheel); but are TL 1 in government, writing, and agriculture, and TL 3 in the areas of construction, mathematics, and astronomy. The flint and obsidian spears, and knives, macuils, atl-atls, and cloth cuirasses, used by the Maya, are fully described in GURPS Low Tech. The character, Tízoc, from GURPS Warriors (pg. 76) is representative of a Toltec Jaguar Knight of Postclassic Chichén Itzá.

Modern/Futuristic Campaigns

In late nineteenth or early twentieth century Cliffhangers or Horror campaigns, players can explore the ruins of the lost city unearthing its dark secrets and its treasures.

The setting could also make an excellent *Call of Cthulhu* scenario. Perhaps an archeological team working on the ruins of Chichén Itzá has mysteriously vanished. One or more of the PC's could be colleagues, friends, or students of the archeologist in charge of the dig, and travel to the Yucatán to find out what happened. There they discover the horrifying truths that underly the Mayan mythos, and the awakened evil that dwells within the depths of the Cenote. Keep in mind that the numerous tomes of Mayan lore, such as the codices, could be considered to contain Cthulhu Mythos knowledge. The Dresden Codex is shown as an example:

Title	Language	+ to Knowledge	Spell Mult.	San
<i>Dresden Codex</i>	Mayan Hieroglyphic	+12%	x3	-2d6

Spells:

- Contact Deep Ones
- Contact Spawn of Cthulhu
- Contact Cthulhu
- Contact Yig
- Bind Child of Yig
- Summon Child of Yig
- Grasp of Cthulhu
- Bind Jaguar

Tomes written in Roman characters, such as the *Popol Vuh* and the *Books of Chilam Balam*, might bestow less mythos knowledge and contain fewer spells, as they were written after the conquest when many of the primary sources were destroyed. Of course they don't require the characters to translate Mayan hieroglyphics either. *An Account of Things in the Yucatán*, written by Diego de Landa, might describe the priest's revelations as he gradually learned of the secrets man was not meant to know, and bestow a small amount of mythos knowledge.

Chichén Itzá could also be used in a modern or futuristic campaign, such as *GURPS Cthulhupunk*, or *GURPS Black Ops*. Perhaps the Cthulhu/Chac cult has resurfaced among the Maya in the northern Yucatán. What sinister rituals are being performed in the ruins at night after the gates are closed? To what use could the cult's High Priest put the daily busloads of tourist/sacrifices come to tour the site?

Fantasy Campaigns

The Banestorm of *GURPS Fantasy* might explain the sudden depopulation of the southern Mayan cities. A Mayan city complete with temples and ballcourts could exist, thus far undetected, deep within the Great Forest or Djinn lands of Yrth. Yrth, with its panoply of fantastic creatures and races, would certainly affect the development of Mayan

society. Effigies of basilisks or wyverns might adorn their temples, and such creatures may be venerated as avatars of K'uk'ul'can. How do the Maya react to the various races they encounter? Perhaps Elves are very highly regarded -- as sacrifices, whose blood is especially potent in attaining divine favor. Captured Orcs, unworthy of sacrifice, might be valued as slaves for their strength and endurance.

New Skills

The following new skills are particularly relevant to uncovering the mysteries of the Maya:

Scientific

Epigraphy (Mental/Hard)

Defaults to Cryptanalysis-3

This is the study of inscriptions, particularly ancient inscriptions, and epigraphers attempt to decipher ancient hieroglyphics.

Language

Mayan Hieroglyphic (Mental/Hard)

No Default

The ability to read and write Mayan pictographs. Mayan hieroglyphic writing is unique in pre-Columbian America, and is completely unrelated to any other pictographic script, making it extremely difficult to decipher. It has defied epigraphers for centuries, and only in the late twentieth century have major breakthroughs been made, particularly since the launch of Maya Hieroglyphic Inscription Study in 1968.

The Debt Collectors

"Oh no, here they come again!"

by Michele Armellini

Who Needs Debt Collectors?

Any money-lending business, from usurers to credit card companies. But any supplier might grant credit to a customer, and find their trust betrayed. Less lofty businesses, such as bookmakers, also grant loans. Then there are the ex-wives waiting for their alimony payments. Historically, private businesses often were appointed for tax collection; this can happen again. But speaking game-wise, GMs can make use of a debt-collecting firm. While many adventure/game world designers suggest stripping the PCs of excess cash, and some mention debts and the local taxman, they seldom elaborate on this. So the collectors are here to fill that gap, and to serve as a tool for the GM. Don't let your players ruin the financial balance of your city!

Adventure Hooks And Other Uses

Kane & Thatcher can also serve as adventure hooks: if a righteous PC witnesses their procedures, he might object and get involved. They could be employers if the party is low-powered but rich in muscle; and note that they tend to consider their one-use thugs as expendable. Or they could be hired by the adventurers (who might not know about their methods). Of course they could also serve as urban private eyes. They are a low-power but troublesome enemy for anyone indebted - they'll show up at the most inconvenient moments, e.g., while the adventurers are carrying out delicate negotiations. They might be intruders, hunting the same person the party desperately needs to talk to. Or competitors: the same conman swindled two companies; one hired the adventurers, the other Kane & Thatcher, but there is only so much money left. They can also provide ethics quandaries (yes, that boy owes \$57.68 to the company store, but does he deserve this treatment?). Finally, Kane & Thatcher are a background element for any "Mean Street" setting. As a Disadvantage for a PC, Kane & Thatcher are an Enemy rated at -10. If the indebted PC has radically changed life (and probably name, too), they will appear rarely (modified value: -5); otherwise, they appear fairly often. Alternatively, the debt could be treated as a -10-point Secret, replaced by Kane & Thatcher as an Enemy of the same value if they find out the PC.

Thanks to a modular character design, these NPCs are ready for use at TL6 or TL8, although they are ideally suited for a Cliffhangers time frame (they can be adapted for TL7 by interpolation, but be aware that many of even their less offensive practices are outlawed in most TL7 Western nations). Their gaming description includes a basic package and a TL package. Just pick what you want!

Services And Fees

Kane & Thatcher's main line of business is collecting debts. They find the debtor, and apply a certain pressure. Their fee is a percentage of the amount owed; this can be as low as 5% for simple cases, but much higher when serious difficulties can be foreseen. After all, for the clients, these would be "bad" (irretrievable) debts, otherwise. Since Kane & Thatcher have to cover all their expenses with their fee, the single factor most likely to increase the percentage is easiness in locating the debtor - if they believe he's left the country for good, they might ask 60% of a big debt, and would decline the appointment for puny sums. As a consequence, Kane is always aware of the stop-loss threshold: if they have already spent a third of their prospect fee, finding no clue whatsoever, they are likely to give up. Since they are quite good at finding someone who's trying to disappear, Kane & Thatcher may also work as private eyes. In this case, they have a very high daily fee (something like \$100 at TL6), all expenses paid by the client.

Kane & Thatcher might be contractors, collecting taxes for the state. They'd get 10% of the amounts. Typically they could cheat both sides, exacting more than was due and giving the state coffers much less than they had taken. If so, they'll be careful.

They could also occasionally work for legal firms, serving legal paperwork to tough or elusive addressees. They won't normally work for bail agencies.

Finding The Debtor

Most jobs come in two parts, says Thatcher: "finding 'em and making 'em budge."

Kane always starts with a general assessment. If the debtor has disappeared and no initial clues seem promising, the firm doesn't accept the appointment. On the other hand, most debtors have a life, a family, maybe a job, or they might lack the resources to make themselves really scarce. Sometimes they are just on the lam for a while, or they have moved, but can still be tracked down.

Kane says debtors have a paper trail and a people trail. Thatcher will follow the people trail, starting at the last known address. He'll interview family members, the landlord (looking for clues like mail forwarding instructions), neighbors and co-workers. He'll beat known hangouts. Since family and friends are unlikely to be helpful, he'll try asking the debtor's enemies. He'll use his Contact (a fence), especially if the debtor is an underworld type. When polite questions aren't enough, Thatcher has three other ways to garner information: bribery, Intimidation and booze. Both him and Kane routinely carry a sizable amount of cash for bribery, which often works with neighbors and officials. Thatcher can resort to (subtle or overt) Intimidation with family members. And he'll offer alcoholic drinks, using his Carousing skill for favorable reactions. If Carousing and Fast-Talk don't work (he hasn't high scores), he can always resort to stronger Intimidation.

If the debtor has remained in his home city, the people trail is usually effective. Thatcher will find a forwarding address, or someone who heard the debtor talking about his plans; family members might be intimidated or deceived. Sometimes the debtor changed neighborhood or city, but his options as to jobs and favored places haven't changed, so Thatcher can find someone who has recently seen him.

If Thatcher has potential sources, but he can't make them talk, he'll call in Kane, who has other useful skills (Diplomacy, Detect Lies, Interrogation). Kane will also shadow persons who could be meeting the debtor.

Otherwise, Kane works on the paper trail. First he'll check public records, telephone directories, newspapers, law court notice boards - this is where he uses his Research skill. Then, he'll use his Contacts, a high-ranking employee in a credit business and the local sheriff or police chief, in order to have access to confidential records. He'll bribe (or forge) his way into non-listed phone numbers, license and vehicle registration records, and wherever he has reason to believe there are traces: the local post office, a credit card company, a trade union or professional association. Kane will also do his best to lay his hands on the books and ledgers if the debtor is a business; he knows quite well how money can be spirited away.

At TL8, much of this work is done on the Net. Everybody seems to be hoarding data on anybody, and Kane uses his Computer Hacking capabilities to access those databases. He'll gather basic information on the debtor, especially crucial data such as his social security number. Then he'll use it to cross-check through all sources. This is where Alternate Identities and Zeroed people can make it tough for the hunter.

Collecting The Debt

Once the debtor is found, Kane & Thatcher "make him budge". They have a standard escalation procedure:

- polite requests
- harassment and pressure

- intimidation
- framing and blackmail

Polite requests usually don't work, so they're just a formality. The next step features annoyingly repeated requests, and these are made in the most inconvenient way for the debtor: in public places, at work (in front of employers or customers), in the middle of the night. Simultaneously, Kane will contact every old and new acquaintance of the debtor, purportedly for more questioning, but actually to disclose his debtor status. The debtor will also feel the pressure of a frequent, overt shadowing, and, if there's reason to believe he might run, Kane & Thatcher will employ additional manpower (the PCs?) for a 24/7 blatant surveillance that is also another form of harassment.

If this doesn't work, it's time for some intimidation, with no witnesses. Thatcher will exploit both his skill and his tendency to lose his temper; he'll threaten and manhandle the debtor, possibly roughing him up a bit, but he'll be careful not to cause any serious harm or visible mark. Since debtors usually have family, friends, sometimes a job or business, all of these will be threatened, too. Kane will do this, in a very clear, but deniable, way: "So this is your son, Tommy? Hi, Tommy, you know, I used to know a boy about your age, but he died under a train".

As a last resort, Kane & Thatcher will use any weak spot for leverage. By now they will probably know any debtor's Secrets. If there isn't ground for blackmail, they might well create it, framing the debtor (this is where Photography comes in handy). For this, they might need external manpower (again, they could hire some adventurers).

If the debtor is really dead broke, they'll have him borrow money from someone else (another way of involving a PC group).

Reducing The Risks

In the past, Kane & Thatcher have collected money from people who were much more powerful than them - as it might be the case with the PCs. They are successful because they cautiously study their mark, control the environment and plan in advance. When faced with a hard case, every meeting is carefully planned. Kane is especially obsessive in controlling the environment; this reduces both the physical and the legal risks. For example they don't threaten anybody in front of witnesses (at TL6), or wherever the threats could be recorded (at TL8). If they really need to shake somebody a little, they will patiently wait until they find the place and time where he's most unprepared, possibly unarmed, and without help or witnesses at hand.

On the other hand, there are cases when they do want witnesses. For example, they might face an armed and potentially dangerous debtor (such as a PC tough; and they'll *know* whether he's armed, with what, what his tactics are). In this case, they won't meet him in private, but they may use a trick they call "self-defense". They meet the mark in a public place, such as a bar, and provoke him. They use a very aggressive language, Thatcher goes into an unarmed combat stance, Kane makes a gesture as if he's drawing a weapon. Chances are the debtor reacts, and actually, he makes the first real attack. Surprise surprise, two of the bystanders are off-duty policemen, who promptly intervene (that's what they're paid for!). The debtor has just publicly worsened his position, and probably Thatcher landed a blow or two while the policemen "tried to stop the brawl". Kane & Thatcher will be generous, they won't push charges . . . if the debtor pays.

Generally speaking, they break the law only when it's reasonably safe to do so, and they exploit it (as well as the local law enforcement) whenever they can. This also means stopping short of real violence. In rare cases, when big money is at stake, they might resort to violent "warnings" (without permanent consequences). If so, however, they won't act personally, but hire well-paid, cut-off thugs who won't know who they are working for (once more, these could be the PCs). Kane & Thatcher always have clean hands. If the PCs get to know them well, they might notice they are city types - no outdoor skills. An outdoorsman debtor could exploit this weakness.

History

Kane is the brains of the firm, Thatcher the brawn. Kane has a police background. In his youth, he served as a beat cop

in Chinatown, where he developed his intolerance for Asians. He studied accounting, and he was promoted and tasked with investigating white-collar crimes, frauds, embezzlements. Given the meager pay, he was understandably jealous of the tycoons he investigated. Seeing an opportunity in debt collecting, he left the police and opened his own firm.

He was soon making good money, but once he bit off more than he could chew, and he made a personal enemy out of one of the Chinese ring leaders. Also, he couldn't do all the work by himself, so he decided he needed some help and some brawn. He wanted somebody with a clean slate, but used to violence: he found Thatcher, a former youth gang member who had been smart enough to avoid arrest. Thatcher was then 21 and he was very dissatisfied with the string of low-pay jobs he had had after leaving the gang. Over time, the two developed trust and friendship, even though up to today Kane is very much the senior partner. They complement each other well and they are aware of this; they have helped each other out of many tight corners, and they are now comfortable.

Premises

Kane & Thatcher operate out of an unassuming downtown office in an office building. They live together in a suburban house, and Thatcher stays at a hotel when he needs privacy. Given Kane's paranoid tendencies, both the office and the house are protected with the best security measures Comfortable wealth can buy at the relevant TL, including alarms. Additionally, they own a Doberman attack dog named Surety; sometimes, they leave it in the office. The office has a spare room with a bunk.

They also have an untraceably rented garage. This is pad-locked and has a small booby-trap too, but no alarms; they use it to store any "sensitive" material (so they don't want the police showing up there). There's no way to link them to this garage; when going there, they wear gloves and make sure nobody is following them. Until now they have been able to keep this safe place as their own little secret.

Ravenloft (for d20)

Written by Andrew Cermak, John W. Mangrum, Andrew Wyatt

Published by [White Wolf](#) (under [Sword and Sorcery Studios](#) and Arthaus)

224 page hardcover; \$29.95

I have to admit that one of the things I haven't been that happy about with Wizards of the Coast and its new edition of *Dungeons & Dragons* is that they don't have plans to publish new 3rd Edition material based in some of their previous settings. While we're sure to get plenty of *Forgotten Realms* material, WotC won't be bringing us any new books for such settings as *Dark Sun*, *Al Quadim*, or *Ravenloft*. Fortunately, White Wolf stepped forward and has been licensed by WotC to publish new material for the latter setting. I don't know about you, but *Ravenloft* was always one of my favorite *AD&D* settings, and I was quite pleased to hear the announcement.

However, White Wolf is a name that brings a certain *something* with it to the table. They're well known for their World of Darkness series of horror games, and they're also well known for the particular type of horror and atmosphere that those settings employ. Now, I don't know about you, but I don't know if that brand of horror matches up exactly to the Gothic mystery of *Ravenloft*. So, while excited, I was also slightly apprehensive about the news.

Well, cracking open the book, I found that this issue was one of the first addressed. No White Wolf does not plan to introduce the introspective brand of horror found in its other games, but they do have a lot of plans for the *Ravenloft* setting. What one finds reading through the book is that they've taken the existing material updated it (for *3E* rules), expanded it, and tweaked it just a bit here and there. Most of the changes are slight, and most of them are quite for the better.

One of the first changes is that this new edition of *Ravenloft* won't place as much emphasis on escape from the realm, and, as they've phrased it, they've "scaled back on the camp." If you played the old edition then you know just what they mean. There was a certain degree of campiness to the game, and in my experience much of that actually extended from the whole emphasis on escape. Each adventure we ran would end with the mists creeping in and the chilling narrator saying, "Will our heroes escape the Domain of Dread? Tune in next time to find out . . ." The formula became almost like a TV show at times, and while the game was loads of fun, yes, it was kind of campy.

So the developers have decided to present the setting more as a true setting, rather than just this big hellish island that the PCs are eternally trying to escape from, and this change in focus is seen in a lot of subtle ways in the book. More is provided on character creation, with more information for fleshing out character backgrounds and making them natives of the domain. This new focus has also spawned a certain degree of focus on cohesion between the domains. *Ravenloft* always had a certain idiosyncrasy in that domains could be different from each other in impossible ways. You'd step from one domain into another, and the seasons, climate, and even constellations would change. While some of these are certainly still present (especially on the different Clusters and Islands of Terror), the developers have made the Core domains a touch more coherent; in other words, it feels more like a real realm, where characters might actually be from, which in turn fits in nicely with the whole "non-escape/PCs native to the domain" thing.

The book starts off with a decent intro that will certainly be helpful to those new to the game, and it then goes into a brief history of the realm. The history could be a bit more in depth, but it does its job well. The calendar has been

advanced just slightly, but not much. Again, the focus is on tweaking things, not changing them. So the developers didn't go rewriting the background or advancing the time table way ahead so that they could completely warp everything.

But there have been a few changes . . . er updates, I guess we'll call them. Most of the domains seem to have been left alone, but it's possible that we'll find new changes as more books come out. Everyone's favorite bad guys, Lord Soth and Vecna, are no longer present. Personally, I'm sad to see Soth go, as he fit in so well here, but I'm rather glad Vecna is gone (I, among others, didn't feel that he really belonged). Also, the lich Azalin has returned to his realm after several years of absence (which is a big deal to those who had been following the storyline there).

Character races are basically the same as before. Humans are dominant, with dwarves, elves, and half-elves being rare and generally disliked in most realms. A new race called the caliban has been added, although this is just an interpretation of half-orcs. Basically, there are no orcs in *Ravenloft*, so to account for folks who want to play a half-orc as per the *Player's Handbook*, the authors have made up a race of what amount to rare mutants. Also available again as a playable race are half-Vistani, who are much like humans but with a few twists.

Classes aren't changed a whole lot. All classes are present again (in the last edition, I believe, they left a few out), although some are rare. The rules changes are basically just those to make them fit into the whole *Ravenloft* milieu. For example, clerics' turning undead is altered, as is the paladin's detect evil ability. One thing that is bound to get some complaints in this day and age is that this book introduces no prestige classes. Personally, I don't care, as none seemed immediately necessary, but they are quite popular for some *d20* fans, and I'm sure they'll be speaking up. A few skills are revisited and one (Hypnosis) is added. New feats are present, and these might cause some problems with some groups. Some, like Back to the Wall, are balanced just fine and dandy, but others like Ghostsight are a bit heavy handed. It's nothing that will break the game (there aren't that many), but DMs should read them over carefully before approving them. To be fair, though, all of the new feats are high on the "kewl factor" and will add a dynamic element to the game.

The section on faiths was a nice surprise. The faiths found in previous editions of *Ravenloft* were just kind of covered as they came up. They weren't presented in one concise place, allowing players to truly make use of them. Again, this goes back to the objective of making it easier to play a character native to the domain, and having these faiths outlined (even if the descriptions are brief) is important. A new spell domain, Mist, is also added, which has some effects particular to *Ravenloft*.

Game mechanics are addressed as well, naturally, and most of the stuff we find is old stuff updated for *d20*. The fear, horror, and madness saves, as well as curse checks, are all translated well and provide more detail than in some of the older editions of the game. Powers checks are here, of course, but some may be disappointed that the expanded thirteen step system is cut back down to six. I always found six steps to be enough, but a lot of gamers liked the expanded system of the previous edition. Anyone who knows *Ravenloft* knows that a lot of magic functions differently, and this material has been updated here again. There are no big surprises, and some gamers will be upset that no new spells are provided.

The realm descriptions are the meat of the book, and they are excellent. The authors have really stuck to their objective of presenting *Ravenloft* as a real world where thousands of people live their entire lives . . . not just some cosmic prison for super nasty bad guys that hapless adventurers get stuck in sometimes. The realm descriptions are in an incredible amount of detail and work a great deal to show the ecology and society of each realm. A lot of little things that seemed idiosyncratic before because they lacked explanation are smoothed over. The book also covers all of the realms, whereas the previous edition left a few out for lack of space. The only real nitpick one can find here is that sometimes the text can drone on a little bit about the mundane aspects, which lets some of the Gothic flavor slip here and there . . . not that it's ever so bad as to completely kill it.

The final portion gives us a glimpse at some of the major creature types, which have long been expanded in the *Ravenloft* setting (namely, through the *Van Richten's Guide* series). The updates to *d20* rules are really quite smooth, although I have to ask if it was necessary to include this material here. There are no monsters in this book, so why bother updating vampires, liches, lycanthropes, and what not if that's all we get? I can't say, but at least they did a

good job of it. The book is then rounded out by a somewhat half-hearted discussion of Gothic horror techniques (good points, but not much development on them).

The artwork is all pretty good, but I'd have to say that I don't think it's quite as good as that in previous editions of the game. I'd always felt that *Ravenloft* got some of the best art treatment out there -- not only good art, but art that truly did bring out the mood of the game -- and I just can't quite get into the artwork of this edition. This is always a personal thing, so some folks are bound to love it; the only complaint I really can make is that I wish there was a little more of it. On the plus side, however, the book does have a good set of maps, which are *in* the book. I loved the poster maps of the old boxed sets, but I really hated having to bust them out when just flipping through because a map was not present inside the book.

This book does have one major bugaboo that I must bring up though, as it will definitely be a hot point among DMs. No domain lords. This is a really touchy subject. On the one hand it's nice to see them leave the domain lords out in order to devote more space to making it a player-friendly realm, but on the other hand if you're a DM you're gonna have to buy more books. While everyone will have their own opinion on this, there is one important point that I think bears mentioning. One of the overall best things about this new book is that it is truly player friendly. Players can read through most of this book and not learn too many secrets that they aren't supposed to know. Thus this book becomes more of a player's manual than just a core setting book. This is good because it ties back into that whole objective of making this a more cohesive realm where PCs will actually originate from (as opposed to simply a guide for visiting outlanders).

We can see the value in that, but there is something important about it. *Ravenloft* is a domain where it is of paramount importance that the players don't know everything. It's a realm of mystery and horror. If the players know all the secrets to every realm they go to (because they read it in the main book), then it really steals some of the game's magic. Astute readers will not only note that the domain lords aren't described, but any time they are even mentioned, it's from the perspective that PCs from the realms would see them as. Some like Strahd and Azalin are very active in there domains, and the public knows a bit about them, but others are a complete mystery. What's told about them is what the PCs are likely to know in-game, which keeps the DM on the big end of the stick as far as challenging his players goes with these mysterious powers that be. So, while some may think that the dark lords were left out to save space, this reviewer thinks they were left out deliberately to preserve the feeling of this book as a player's guide and to hold back that mystery.

That said, it is still frustrating as a DM to have to cross reference books when looking up domains. Having the dark lord info right there in each domain is handy and saves time. All I can say is that I hope they make the book(s) detailing the dark lords worth the extra money and extra effort to read . . . although if this book is any indication, I'd say it will be.

All in all, this really is an excellent reincarnation of the classic *D&D* setting of Gothic horror. The authors have remained true to the setting, and what changes they are making seem to be for the better. While there are issues that some will complain about, in the long run I think most of these will be smoothed out. If you are a player or DM returning to *Ravenloft*, then this edition should prove itself worthy. And if you're new to the game, then you're in for a pleasant . . . er, maybe I should say pleasantly horrifying . . . ride.

eBay: The Card Game

Published by [Journeyman Press](#)

Written by Marcus D'Amelio

Illustrated by Aaron Williams

\$19.95

Games that imitate or are based on websites are nothing new. Already in 2001, 9th Level Games and ethereal FORGE have given us the *Ninja Burger The Role-Playing Game*, based upon the [NinjaBurger website](#). But for what is their swan song, Journeyman Press have based their last game on eBay, the well known, if not to say, infamous on-line auction site (or as it likes to style itself, The world's Online Marketplace). *eBay: The Card Game* comes in a sturdy, deep oblong box. Inside there are three decks of cards and five ordinary six-sided dice, all of which are securely held in a plastic insert that doubles as the game's card tray. In addition there is a single Start player card and a rules sheet. The three decks consist of sixty Curio cards, one hundred Bidding cards and seventy-five Item cards.

All of the components are high quality, and fans of the Nodwick comic, will be pleased that Aaron Williams has illustrated all of the cards. Whilst there is little difference in the illustrations for the Curio and Bidding cards, each Item card is individually drawn and named, and is accompanied by a descriptive quote. Favourites include:

- "Monkey Phone Call" -- If you win this auction I will call you and screech in the phone. Average length 2 to 3 minutes.
- "Plastic Blundercats Lunchbox" -- Blunder Blunder Blundercats ho! Now relive that not so great cartoon from your childhood with this great schnarfy lunchbox.
- "WhY Weanie Babies - Rare Marsupial Marv" -- Get this rarest of the rare Weanie Baby! Marsupial Marv was only on sale between the hours of 4 and 8 P.M. on October 7th, 1998. One of only 203 and a half in existence.

It is fair to say that these cards will amuse, rather than make you laugh out loud.

Designed as a game for three to six players, the winner is the first player to match all their Curio cards with Item cards they have won through the bidding process. A game should last no longer than an hour, with the number of Curio and Item cards that need to be matched dependent upon the total number of players. If there are three or four players, then it is five Curio and Item cards, if five or six players, it is only four.

Both the Curio and Item cards are divided into six categories: collectible, electronics, etc, games sports, and vintage. Some Items can also fall in to more than one category, but only one Item card can be matched per Curio card. Each Item card is also marked with a number of rounds that it is available for auction. The dice are actually used to count down the number of rounds left an Item has.

Bidding cards come in two types. The first is money in denominations of \$100, \$200, \$300, \$400, \$500, and \$1000. The second are Action cards, which alter the normal sequence of the game to the advantage of the player using it.

The game is set up with the players receiving their Curio cards -- which they keep hidden until the end of the game -- and several Item cards are placed into play, face up in the center of the table and arranged into a row. If there are three or four players, then it should be four Items, or five Items if just five or six players. A single die is placed on each Item indicating the number of remaining rounds. Each player draws five bidding cards and a die is rolled to determine who

goes first and that player is given the Starter card before play begins.

The game is conducted in rounds during which every player takes a turn and ends with the auction update phase. During a turn, a player can refresh their hand of bidding cards up to five; if they have an unwanted Item card, they can discard it in return for drawing another three bidding cards; and either play an Action card and place an actual bid on an Item; or discard as many Bidding cards as they like.

To place a bid on an Item, the player places their money card face down beside its Item card. Players need to remember to place their bids on the same side around an Item card, but perhaps marking them with different coloured beads or counters could be used to make this easier to remember. Once everyone has taken a turn, the Starter card is passed to the next player on the left, and all dice on the Item cards are lowered by one. Should a die reach zero, then all bids are turned over and revealed. Action cards can be played at this point by all players and in any number. Once the effects of these cards have been resolved, whoever has bid the most money on an Item then wins it. Items without bids are discarded, while tied bids are allowed to remain in play for a further turn to resolve the auction. The players hold won Items in secret until they can reveal that they have matched them with all of their Curio cards at the game's end. Meanwhile new Item cards are put up for bid and a new round begins.

Action cards come in ten types, six of which can be played during a player's turn and the other four during the auction update phase. A few Action cards are played for game effect, but most model the process and events of real world bidding on eBay. A sample of the former is "Know Your Enemy" which allows a player to examine another player's hand of Bidding cards and then randomly discard one; "Lost Connection" is an example of the latter and blocks all bids upon an Item for the remainder of the round. The cards played during the auction update phase mainly affect the final price of Items allowing a last minute bid, or increasing the price paid through expensive shipping. There is of course the dreaded "Bad Feedback" card, which forces a player to lose an Item that they have won, providing the second highest bidder to purchase it instead.

eBay: The Card Game is an attractive and easy to play game. It should appeal to a wider audience than Journeyman Press's last game, *Zombies!!!*, as the subject matter, and indeed the components are more accessible to a wider audience. Plus your grandmother won't find the subject matter and components quite so gruesome as in *Zombies!!!*. Indeed, this is a decent family game that should appeal also to anyone who has bid for anything online. The cards should at least amuse players, and both the cards and the rules are simple enough to allow some tinkering by the dedicated gamer. Even if this possibility is ignored, players will no doubt want to add their own Item cards.

eBay: The Card Game really does model the world of online auctions . . . now all we need to see is the game turn up on eBay itself, for the circle to be complete.

Dork Tower!

The Computer Is Your Friend

Back in Ye Olde Days (circa 1984), *Advanced Dungeons & Dragons* character sheets were printed on a garish yellow-orange paper. This was to prevent photocopying; when copied, the sheets became a nigh-unreadable dark graphic sludge.

I should point out that I was unaware of this for quite some time, since the only character sheets I had ever seen up to that point -- given to me by my Civics teacher -- were, in fact, a nigh-unreadable dark graphic sludge. Clearly, she had access to the school's copy machine.

Fast forward ten years. I was planning a *Star Trek* adventure where I had the heroes go back in time to the 1970s (figuring that the original show had gone to the 60s, and *Star Trek IV* went to the 1980s, but this historic -- and funky -- era of the in-between decade was unexplored).

Part of my adventure was based on the heroes interacting with the Space Shuttle *Enterprise*. (In my timeline, that vessel helped inspire the original *1701*, rather than a massive Trekkers letter-writing campaign.) So I needed to do some research on the 1977 *Enterprise*.

(As an aside, I also had the heroes interact with rabid *Star Wars* fans. "What's that?" said a costumed Jedi wannabe, fiddling with a phaser. "Some kinda lightsaber prop?")

Anyway, I trekked (har!) to the library; being a university student living on campus at the time, it wasn't too far. I was fairly conversant with the library's computer system, so I was able to find the information I needed in only about four hours.

On a whim, as I started to write this column, I did a search at Altavista.com for the same information.

It took three minutes.

Mostly because my Internet connection was slowed from downloading other stuff at the time.

Anyway, the point is, I can barely begin to list everything that technology has made easier -- even possible -- with regard to gaming. Here are some that spring to mind:

Communication. Although sending an email isn't inherently much faster than calling up a fellow gamer when it comes to planning a Saturday session, advances in communication *do* have a number of other advantages. I can jot an email planning a game at three in the morning . . . something I would be ill-advised to try by phone.

You can also get the word out to all players very quickly; I can send the same email to everyone, ensuring that everyone is on the same page. Or I can send blue book sessions to my GM in an easy, convenient way, for him to delete at will.

Perhaps more usefully, the Web allows the possibility of mass archival communication. Campaign notes, back story, adventure summaries, background information, and timeline and history details can all be put online, allowing everyone to access that information (including new players, those who might be interested in joining your campaign, people who accidentally click on your website, and the like).

And many campaigns *only* exist in a "virtual" sense, either in playing by email, or online like in *Pyramid's* [chat room](#).

Presentation: It's amazing *how* much better games can appear at all levels, thanks to the wonders of technology.

The staples of our games have improved exponentially, like character sheets that have gone from mimeographed smudgy ugly cobbled together to attractive color ink jets or black & white personal laser printed copies. (Does anyone else remember the tiny ads in the back of *Dragon* for allegedly professional printed character sheets . . . that looked

like they rolled off a dot matrix?)

Or music. Today we have more music possibilities than ever before (for example, I'm always amazed at some of the obscure soundtracks that have made it onto CD). But more interesting (to me, at any rate) is the *forms* of audio presentation we have available. In that same Star Trek campaign it was a big deal that the *Star Trek: Generations* soundtrack had just come out, since I was able to use its bridge sequence sound effect track (basically, three minutes of the *Enterprise-B* bridge background noise) on repeat for ambiance. But what's available now, just seven years later, puts that to shame. We can store a thousand songs in MP3 format on a portable player, playable in any order we want. We can burn our own "mix" CDs. (A friend of mine creates a CD compilation for each new campaign world he starts.) We can have sound effects on cue. I remember spending one afternoon using voice synthesis software on my Apple IIgs to create a creepy "clue" tape for the players. Now I could do the same thing in half an hour . . . and I might need to be careful to keep the synthesized voice from sounding *too* good.

I've made good-looking full-color props for players, printed on a color printer that currently retails for under \$50. With a laminator (either personal or at a local copy shop), I can make laminated ID cards for FBI agents, superheroes, or any other "official" types. Cheap scanners and good photo software make it possible to fabricate or duplicate handouts with ease. Fonts and computer effects can help would-be editors duplicate -- or fabricate -- almost any effect they can think of. (I still remember the glee of my first printer, which was able to print its blocky dotted text in *italics!* Oooohhh . . .)

In all, GMs (and players) can make more effective and engrossing handouts than ever before . . . without much more effort than it would have taken to go to a copy shop in the old days.

Information: We may well be living in the Information Age; as my earlier library example showed, the amount of information that's out there for the taking is staggering. (Heck, after rebates I get a new encyclopedia from Microsoft every year . . . for *free!*) We can run more factually based adventures than was ever possible, again with minimal effort. (I remember doing research on relativity time dilation for one *Fading Suns* game I ran. Not only was I able to find the theories -- perfect for engineer technobabble -- but I also found a page that *explained* those theories, meaning I could actually use the information.)

And even if you can't find a webpage for information (or with advice for a campaign trouble spot), the possibility exists for asking a newsgroup. I can't tell how many times I've gleaned information from the combined infinite wisdom of the Teeming Millions that I never would have guessed before. And the number of folks who write telling me the \$15 a year for *Pyramid* is worth that just for the discussion boards means I'm not alone.

And this is all referring to "real" world information; the game books and aids that are out there now amaze me, at times. If you would have told me in 1994 that I would someday be able to store 250 issues of *Dragon Magazine* on a hard disk, or search through millions of words of *Pyramid Magazine*, I'm not sure if I would have believed it. And I can't tell you how much I would have loved the *GURPS Character Generator* back when I was spending hours making *GURPS* characters . . .

Um . . . Miscellanetion. And that's not counting the jillion other minor conveniences that have improved life and gaming. How *did* our gaming forefathers survive without microwaves and microwave popcorn?

Anyway, the point is, given how few years the roleplaying game hobby has been around (I mean, we're not exactly philately here), I'm amazed at the amount that technology and innovation has made it possible to enhance and expand the hobby. This is a point I'll get back to (probably in two weeks . . . next week is almost certainly going to be holiday related, knowing me), but for the time being, just keep in mind how much we can use technology to make the games we love better . . . if not quite as recognizable as nigh-unreadable dark graphic sludge.

* * *

Unfortunately, our own Ken Hite is currently suffering from The Crud, and is unable to breathe right . . . let alone write. He should be back next week for his seasonal Shakespeare column. (After that, he'll be skipping the next week so he can spend time in Maine, where he currently plans to %#@%5@#^4[][_+... for the new year.)

Designer's Notes: GURPS Deadlands Conversion Rules

by Michael Suileabhain-Wilson

Initially, I intended to devote this article to a detailed account of how the *GURPS Deadlands* conversion rules came to be. In the process, however, I learned many things, not least among them that the decisions that make up a short and essentially mechanical piece have mostly to do with boring bits of statistics (I also learned that the wise author waits to have the book in his hands before writing the Designer's Notes, but that's another story). In other words, the rough draft was mortally tedious.

Upon reflection, I thought it would be more fun for all of us to write something to make the book more useful or easier to use. There were no outtakes per se from the development process, but space limitations meant that the conversion rules have only two sample characters: a cowpoke and a huckster. The rules for converting the other special character types -- the Harrowed, the blessed, mad scientists, and shamans -- leave a lot of discretion to the GM and the player, and are in some cases a bit complicated. Examples seem in order.

Therefore, a worked example for each character type follows, with *GURPS* and original *Deadlands* stats. They can also work as allies or antagonists for any *Deadlands* campaign.

Before the Civil War, Ralph Stoneman was a minor Republican Congressman known mainly for uncompromising integrity and a hot temper, both of which were often inconvenient to the leaders of his party. With the coming of war, however, Stoneman became the foremost Union hawk, soon ascending to the Senate as a major architect of Union war policy. During the Battle of Washington, Senator Stoneman refused to leave the capital. On the second day of fighting, he was struck by a cannonball which robbed him of a leg and of his life. Three days later, Stoneman clawed his way out of a mass grave, changed his clothes, and returned to his office.

Unfortunately for the Union, Stoneman's body is host to a particularly smart manitou. When Stoneman loses Dominion, the manitou doesn't take him on a killing spree. Instead, it introduces legislation: appropriations for mad science, raids against Confederate food supplies, funding cuts for the Pinkertons--any law which might serve the Reckoning. When Dominion returns to Stoneman, he tries to contain the harm he's done; however, to avoid revealing his secret, he has to maintain some sort of consistency.

Besides, the manitou's bills are only a small, if evil, bit beyond what he might have proposed while alive. In the end, Stoneman finds himself advancing the Reckoners' ends whether he has Dominion or not. And as time passes, that bothers him progressively less.

Stoneman's only surviving family is his daughter, Lillian. He is devoted to her; Lillian's well-being is one of the few things which can still evoke the man of principle that Stoneman was in life.

Father William Leahy was once one of the rising stars of the Boston archdiocese, a brilliant theologian and dedicated worker among the afflicted. However, his vocation was troubled by a persistent feeling that he was somehow not doing the work he was placed on this earth to do. One day, an issue of the Tombstone Epitaph came into his hands. He couldn't bring himself to credit most of its stories, but he felt that the newspaper described a land sorely in need of

spiritual balm. He quickly secured permission to travel West and tend to the flock of the frontier.

The West hasn't been quite what he expected. He's discovered that the Western wilderness is populated by strange creatures, and the Western towns by stranger people. He's discovered that while the spirit is willing, the flesh (and the stomach) is often weak. And he's discovered that while faith in the Almighty is a potent thing, it isn't an iota more powerful than the fight against evil requires.

Father William may be found in towns and villages across the Weird West. He rarely stays in one place long; the vague sense of purpose which brought him out of Boston continues to propel him from place to place. He is always willing to join in the fight against the Reckoning.

Matthias Kedger was an indifferent student until one day, whiling away an interminable chemistry lecture with mental solitaire, he was struck with the revelation of a hangover remedy which would change the lives of his fellow students forever. The experiments which followed demolished a dormitory and adjoining city block, but Kedger's Peerless Temperance Decoction was a success. Several years of study in Germany followed, where his professors told him his theories were dangerous, unsubstantiated, and indeed, outright insane.*

Upon Dr. Kedger's return to his native soil, he attempted to make his fortune selling various innovative medicines and cosmetics to New England high society. However, a series of regrettable incidents led him to recognize the advantages of the itinerant life. Dr. Kedger's Travelling Medicine Show was born.

Today, Dr. Kedger and his assistants move from town to town, concocting and selling the wondrous products of Dr. Kedger's fevered mind. As such, player characters could encounter Dr. Kedger virtually anywhere, and the Medicine Show can provide an endless supply of new toys for the party.

GURPS Steam-Tech has a number of appropriate medicines; alchemical elixirs from *Magic* or advanced drugs from *Ultra-Tech* might also work. The Medicine Show could also serve as a refuge for PCs in trouble; if they can persuade someone in the Show to help them out, a group of PCs could easily conceal themselves among the Show's paraphernalia until leaving town. Or a campaign could focus on the Medicine Show itself, with the PCs as Dr. Kedger's assistants and hangers-on; the Show works fairly close to the supernatural in its daily operations, and its traveling nature makes it an excellent adventuring venue.

* The events of the 1860's and 1870's have led many modern universities to appoint an assistant dean in charge of telling unruly scholars that they are mad, I tell you, mad. In more traditional institutions this function is usually delegated to a junior faculty member, like most unpleasant administrative work.

Most residents of the Great Maze know Seven Clouds Fall as a knowledgeable and amiable Indian guide to most of the major points of interest throughout the Maze. Fewer know her as an artist of considerable skill. Very few know her to be a powerful shaman on a mission.

Seven Clouds Fall planned to spend her life as a craftsman. One day, however, the spirits struck her with a terrible vision. They showed her that the devastation and anarchy of the Great Maze was the best fate that mankind could expect when the earth spirits turned from them. Across the continent, other shamans were bent on maintaining the Old Ways, to prevent the earth spirits of other regions from breaking with humanity. But the chaos resulting from the rage of the spirits of California was spreading across the land, and if mankind was to be saved, California's earth spirits would have to be appeased. Seven Clouds Fall would have to restore the sacred rock paintings Raven desecrated.

This was no mean task. To restore the sacred rock paintings, she would have to locate them, get access to them, interpret their meaning, and ritually restore the paintings. Seven Clouds Fall has often despaired of ever getting it done.

Still, a sacred mission is a sacred mission. Over the years, she has gathered a loose network of helpers. Working as a guide permits her to travel with relative impunity through the Maze and keep an ear to the ground. At any moment, she is gathering leads on a handful of paintings, trying to nail down the location of a few others, figuring out how to safely approach still others, and contemplating the proper ritual to repaint the next painting slated for restoration.

Player characters would be most likely to meet Seven Clouds Fall in her capacity as a guide, or possibly as an artist. She might become an unexpected and powerful ally to a group pursuing the right goal, but she would prove a fickle ally at best. Her interest in the Reckoning outside of its effect on the rock paintings of California is cursory at best; anything which might obstruct her project is an enemy, no matter how commendable that obstruction might otherwise be.

Thanks and Apologies

Dime Novel 1 went to the printer earlier than I expected, and as a result I wasn't able to get the list of playtesters to SJGames in time. Therefore, I'd like to use this opportunity to thank Frederick Brackin, Kenneth Peters, Brett Sanger, Kevin Taylor, and all the folks who contributed to the Conversion Rules playtest. I'd also like to thank Stephen Dedman and Andrew Hackard for answering my many, many questions throughout the writing process.

Demon Seeds

A Pocket Full of Horror for *In Nomine*

by Elizabeth McCoy

It is well known that demonlings in Hell frequently "just appear." No one is entirely sure how it happens, but a couple of Forces stick together, and then something coalesces and a 2-Force demonling appears. Eventually, if something else doesn't eat them first, they gain a third Force and differentiate into gremlins or imps.

Until then, however, most are near-mindless creatures -- some vicious, some cowardly, some with a low cunning, but basically useless for Princely purposes. Therefore, it should be no surprise that it was the Prince of Technology, Vapula, who devised a way to make use of this otherwise superfluous experiment-fodder.

Unfortunately, unlike many other experiments of Technology, this one works almost perfectly.

First, you catch one of the stray demonlings running around the lab. Then, you put it into a relic akin to a Memory Pearl (*Liber Reliquarum*, p. 65), about an inch in diameter. Finally, you have the Demon Seed implanted into a human's body. (Interestingly, the human host need not be a mortal -- Saints and undead are both vulnerable!)

For the mechanics-minded, roll a Contest of Will every day thereafter; if the demonling stuck in the Demon Seed fails, nothing happens. If the human loses, however, the demonling is granted a characteristic point -- and the human loses the equivalent point! This will not result in Force loss until the Demon Seed has stolen 4 characteristic points; the demonling therein then gains the stolen Force. (Fortunately for the human, he still retains the potential for a replacement Force; this is one of the few ways to Force-strip a human which does not destroy that potential.) The characteristic is chosen randomly, and must be possessed by the target human (so zombis cannot provide Will or Perception).

For the non-mechanics minded, drain a Force every 6-12 months that the Demon Seed is within a human's body.

If left in long enough, the Seed *can* strip enough Forces from a human to kill him! The demonling -- or fledged demon! -- within will still be bound within the Seed, and must be rescued from the corpse.

A Kyriotate or Shedite possessing the human *will* have a sense of a "second presence," but will not automatically know what is going on unless it has previous experience with Demon Seeds.

Once the Demon Seed relic was mostly perfected, Vapula sold the information to other Princes -- it had been an interesting theoretical exercise for him, but was hardly Technological enough to keep as a trade secret. Vapulans and most other Servitors who use this method of "fast-growing" demonlings prefer to use the "secret surgical implant" method; demons of Kobal (Prince of Dark Humor) sneak them into breast implants, while those serving Andrealphus (Prince of Lust) . . . have other versions which don't require *surgical* insertion.

Note, though, that the Demon Seed was *mostly* perfected. Occasionally -- such as on Divine or Infernal Interventions - - something odd happens. The few cases where this has definitely happened were covered up by the demons involved. Still, there are stories of humans who developed the ability to tap celestial abilities, were granted all the Forces of the demonling within the Seed, or on the flip side, tales of demonlings who not only absorbed all the Forces and memories of the host, but also gained control of the body as a vessel!

Naturally, the forces of Heaven despise these relics. There are, of course, rumors that some of the more pragmatic Archangels attempt to use these to remove infernal Forces from Hellsworn sorcerers and Soldiers. (The infernal Force is the first one stolen, in such cases . . .)

Being attuned to a Demon Seed costs 1 character point per level (up to 6), allowing one to track it down for removal later. However, many demons don't bother with the attuning process, and simply attempt to keep track of the human hosts mundanely, or by keeping the human prisoner.

The person hosting the Demon Seed is generally weakened, listless, and appears to be suffering from a constant mild depression. (This depression will not respond to medication or even Songs or attunements!) As the Seed strips characteristics, it may seem as if the host has been having minor strokes.

(For **GURPS In Nomine**, a Contest of Wills is still performed with the demonling generally having Will 2-6, but the Seed steals one of ST, IQ, DX, HT, Will (taking levels of Strong Will or adding Weak Will), and Perception (Sense rolls; it takes levels of Alertness or adds Reduced Alertness). Once it's taken 4 points of any combination of these 6 "characteristics," it will steal a level of Power Investiture if the human possesses any; even if the human has no Power Investiture, the demonling will gain a level after taking 8 points of characteristics. Or, for the non-mechanics inclined, it strips them automatically every 6-12 months . . .)

Naturally, this relic may be removed from the **In Nomine** setting, for use by any callous supernatural entities who find it useful to ripen their young by stealing the spiritual energies of humans. Chest-bursting upon "hatching" is optional . . . but odd slithering sensations are recommended.

The Tides of Yool

by [Chad Underkoffler](#)

Genre: Swashbuckling Clockpunk Fantasy

Style: Action, Diplomacy, and Espionage

Themes: High Seas Adventure, International Politics, Hidden Agendas

Campaign Setting and Background Information

Yool is a fantasy world; all physical characteristics are Earth-like other than the size, shape, and number of the continents. There is a single moon, one fixed star, and five planets in the heavens of Yool's northern hemisphere.

This map shows approximately one-third of Yool's Northern Hemisphere. Asterisks show the sites of capital cities; dots show the sites of colony cities. National boundaries are left vague, but normally follow the courses of rivers or mountain ranges.

What Everybody Knows

Political Overview

(Note: Each realm has its own language, but utilizes Goldfolk script for transcribing purposes. A Zolovan-Goldfolk pidgin is the common trade tongue.)

- *The Empire of Kel-Batar.* The Empire is composed of a number of smaller nations collectively known as the Old Kingdoms. These include Aqadon, Batar, Del'Met, Fensh, Gilgul, Kel, Snorake, Tolez, and a few others (GMs, feel free to insert your own nations here). A half-millennia ago, the Iron Princess of Kel married the Prince of Batar, and from them the dynasty that would unite the Old Kingdoms sprang. The last scion of that bloodline is Emperor Artanis, a changeling who has ruled for over a century. Advised by the Council of Princes, he sits on the throne of the largest realm on Yool. Much of his time is spent manipulating his vassal kingdoms like chess pieces for unknown purposes. The hot-blooded youths of all the Old Kingdoms vie to join the Imperial Guard, known as the best marksmen in the world. The average Imperial citizen is semi-literate.

[Click to enlarge](#)

[Click to enlarge](#)

Two of the other realms of Yool (Sythex and Zolova) are technically overgrown Old Kingdoms. Theoretically considered to be part of the Empire (they have seats on the Council of Princes), in practice they are sovereign nations and act as such. However, in deference to long tradition, their heads of state are not named King and Queen, but Duke and Duchess.

- *The Duchy of Sythex.* Duke Tazannan rules Sythex with an iron fist; his whim is what passes for justice. A cruel giant of a man, he hungers only for blood and warfare. He levies stiff taxes to fund his dream: the finest army on Yool. He dotes on his soldiers (especially cavalrymen) and their commanders, but treats his non-military subjects (even the aristocrats), with contempt; peasants are barely human in his eyes. In response to this tyranny, a rebel known only as "the Hare" fights against the Duke's injustice. The average Sythexian is illiterate.
- *The Duchy of Zolova.* Intrigue comes naturally to the inhabitants of Zolova, even more than in the other Old Kingdoms. By day, courtly love and gleaming chivalry is paid lip service; by night, the citizens go masked to torrid affairs and dark skullduggery. Every relationship is freighted with passion and treachery; every one of the noble Spice Houses keeps assassins on retainer. Money speaks louder in this land than any other on Yool: everything in Zolova has its price, and little is forbidden . . . at least, under moonlight. Women hold great power here: inheritance is tracked through the female line. Each merchant Spice House has a seat in the Chamber of

Matriarchs. The Duchess Cara Saffron leads the Chamber through copious bribes, forceful personality, keen insight, and utter ruthlessness. Although recently married to an elderly prince of House Vanilla, she still maintains a number of lovers -- it is enviously whispered that each night of the moon's cycle she sees a different suitor. The average Zolovan is semi-literate.

- *The Kingdom of Panohai.* Ruled by Young King Lao, Panohai is the most technologically advanced human realm. Panohain clocksmiths produce the finest clockworks, gearing, hydraulics, and other mechanical devices on Yool. Whether this focus on engineering and craftsmanship is due to the Panohain Technical College (a school subsidized by the royal family and open to any who can prove two degrees of aristocratic ancestors) or the presence of the Mainspring Cathedral, headquarters of the Church of the Celestial Orbs (which educates its Initiates nearly as well, but is open to all peasants who take vows), is an open question. A quiet, low-key Industrial Revolution is slowly growing, powered by the springs and flywheels of a handful of Adept Clocksmiths, though it is impeded due to the nature of enchantment (see below). Also of interest, Panohai has the closest ties of all the human realms with the Golden Isle -- the Goldfolk see the Panohain as "less insane" than most humans, and during the Great Purge, many changelings fled here. Thus, Panohai currently boasts the largest population of changelings on Yool. The average Panohain is literate.
- *The Golden Isle.* The land of the isolationist Goldfolk (see below) is alien to the humans of Yool. Those lucky travelers to the Golden Isle return with stories, mysteries, and wonders that defy description. The cities of the Goldfolk are structured and ordered; streets and canals lay in grids with diagonal avenues. Buildings rise taller than in any other realm of Yool and can be difficult for humans to navigate, given the Goldfolk preference for ladders and knotted ropes instead of stairs. Tall, densely packed, and linked by walkways and bridges, the buildings add a third confusing dimension to their cities. The Golden Isle is the only known source of silk on Yool, for which Goldfolk traders charge dearly. All attempts to discover its the provenance has failed miserably, and is one of the many reasons for the current cool relations between the Golden Isle and the Empire of Kel-Batar. The leader of the Goldfolk is called "the Wisest"; the current Wisest is a female named Rissa. All Goldfolk are literate.
- *Newland.* This continent -- discovered by humans 50 years ago -- is largely unexplored. Thus far, it appears uninhabited, but the crazed Zolovan explorer Lomo Nutmeg (see below) raves of ruined cities lost in the rain forests of the interior when he approaches lucidity. New plants and animals have been discovered, as well as abundant ores of minerals (including gold, platinum, and aluminum). Only four colony cities (Coldport, Spicetown, Port Vasil, and the City Zel) have been founded on the coasts of Newland (see map), but with the amount of money made by canny merchant-adventurers, more will definitely sprout up. Undoubtedly, the number of pirates preying on these rich merchant ships will increase as well. The fog-shrouded archipelago known as **The Maze** is where many of these "wolves of the sea" make their dens.

The Goldfolk: These peculiar humanoids have powers of the body exceeding that of humanity. They heal quickly, are stronger and more intelligent than the average human, and do not age. Indeed, some have interbred with humans, siring or bearing the hybrids known as changelings.

The Church of the Celestial Orbs: The Church of the Celestial Orbs is descended from a long tradition of horological clergy -- from the astrologers that scanned the heavens for omens, to the builders of calendrical menhirs. "Through understanding the celestial bodies, we understand our place in the cosmos." The doctrine of the Church is founded on a belief in two Elements -- Energy (represented by Father Daysun) and Matter (represented by Mother Nightmoon) -- uniting to produce the third Element: Time (represented by the unnumbered stars, birthed from Mother Nightmoon). In addition, there are two Aspects of being: Good and Evil. Everything in the universe is composed of Energy, Matter, and Time, and shaded by the dual Aspects. There is also a belief in a mysterious, unknowable Great Creator (also known as the Highest Clocksmith), who set it all in motion. Over the centuries, this theology had become rather less important than the study of the physical universe.

The Church is based in Panohai, in the Mainspring Cathedral, and is the widespread faith of the Old World . . . but subtle differences creep into its expression in each nation. In Zolova, Mother Nightmoon is strongly associated with the Aspect of Good, in the belief that following your heart and instincts is good, while Father Daysun is associated with the Aspect of Evil, in the belief that the harsh light of day forces hypocrisy. The reverse associations are present in Sytex -- Father Daysun/Good is seen as a model of virility, spirit, and machismo, while Mother Nightmoon/Evil is seen as the embodiment of weak will, lethargy, and cowardice. The Old Kingdoms are wildly variant, tending towards syncretism (co-opting of ancient pagan myths into Church dogma); the official line of the Empire of Kel Batar is an orthodox tradition of equal worship of all six combinations of Element and Aspect. Panohai itself gives primacy to the Element of Time, with no Aspecting. In general, the Goldfolk have mixed feelings about these beliefs, and few ascribe to them.

All Initiates in the Church -- who, male or female, must be of common blood and swear three vows (to seek knowledge, teach those who desire to be taught, and to "speak Truth, or not speak at all") -- gain an education second-to-none in the arts and sciences. Research is encouraged, both pure and practical . . . though more status is accorded to the practical. The Church organization is bureaucratic, with a bewildering number of titles and positions, yet all mesh together like gears and tick along with great efficiency. However, even a small particle of "grit" may cause those gears to grind together . . . Overseeing the entire clergy is the High Key, who directs the course of the mighty Church; the current High Key is a wizened man named Kaoli.

Magic: Hundreds of paths to occult power exist, be they techniques handed down for centuries or processes discovered through experimentation. Magic springs from deep knowledge of a particular vocation, craft, or art; it is not a distinct skill as such. Wizards who specialize in "spells" do not exist; rather, craftsmen and artists plumb the depths of their expertise, discovering methods to bring occult force to bear. Those who have achieved the transformational power of their profession are called Adepts. Those few with inborn genius of a craft are known as Prodigies (see below).

Magic is not necessarily about *what* you can do, but *how* you do it. Thus, there are no "fire mages": however an Adept Dancer could soft-shoe a bonfire into life, an Adept Blacksmith might call forth from a poker sparks from every fire whose embers it's stirred, or an Adept of Accountancy could add up a column of secret numbers causing the ledger to burst into flame. However, the medium influences the message: an Adept Sailor finds magic related to sailing -- mystic navigation, knot magic, or weather witchery -- much easier than demon summoning or mind-reading. Causing magical effects requires a short ritual -- improvised or rote -- in the idiom of the profession, and is mildly fatiguing.

Enchantment: Adepts of a craft can create permanent items that exceed normal limits or abilities. For example, an Adept Blacksmith could forge a usable sword out of any metal, or create "high tech" alloys -- like titanium steel -- in his forge; an Adept Cobbler could sew shoes that allow the wearer to walk on water; an Adept Shipwright could -- in theory -- design and build a craft that could sail beneath the ocean waves or above the clouds.

All enchantment must be done by an Adept (or a Prodigy, or a team of Adepts), and involves long, uninterrupted periods of time, rare materials, the proper alignment of the heavens, and so forth; the more potent the enchantment, the

more onerous the restrictions. Furthermore, all enchantment *permanently* reduces both the magical force and the *mundane* skill of the Adept, both which must be built up again by slow (re)mastery of their profession. Again, the more impressive the enchantment, the longer it takes to recoup power. In general, creation of efficiencies or exaggerations of function is less disabling -- say a year of skill and ability -- than miraculous additions or subtractions, which could absorb decades' worth of skill. Indeed, an Adept Shipwright who crafts an arcane waterproof hull may retain most of his Adept ability, while building a flying Sky-ship would burn his skills down to the fumble-fingered level of an apprentice. This limits widespread industrial enchantment, though it does happen on a tiny scale in Panohai and the Golden Isle. Indeed, most enchanted items come from the Goldfolk; their near immortality allows their Adepts to amass decades and centuries worth of skill to place into enchantments. Unfortunately, given the nature of Goldfolk Adeptness (see below), such enchantments are of a smaller scope than those of human Adepts.

Clockpunk: In essence, any technology involving springs, gears, cogs, flywheels, pulleys, or muscle-powered machines is advanced, as are some sectors of the disciplines of alchemy (chemistry) and engineering. Astronomy, biology, medicine, and physics follow slightly after (well ahead of Earth's during the Age of Sail). Accurate clocks and pocket watches are common; efficient water- and windmills exist. Clockwork navigation aids (like our Earth's [Antikythera Mechanism](#)) exist. Moveable type and mass printing are in use; Zolova and Panohai are the leaders in publishing. *Augmenting Engines* exist, which can increase muscle-power output; they are used in ocean travel in the form of clock tugs and emergency propulsion units.

While swords are still the weapon of choice, there is another weapon growing in popularity. The dart-gun or *stinger* is a refinement of the crossbow. The pistol form is comparable to an Earthly wheel lock pistol; the rifle form is equivalent to an Earth musket. Due to their expense, they are usually only available to officers or the wealthy. A stinger pistol can hold 3 darts in its internal magazine; the rifle holds 5 darts in removable magazines. Working the integral hand-crank to reset the powerful springs of a dart-gun takes on average twenty seconds. The main artillery and ship weapons of Yool are ballistae or *thunderbolts*. The dart-heads of ammunition are usually hollow, chambered, and packed with a variety of alchemical incendiaries, explosives, or preparations, like:

- *Panohai Phlogiston:* Two fluids that when mixed produce a highly flammable, viscous gel that will burn until completely smothered or doused by True Water.
- *True Water:* An oily liquid, True Water is a flame retardant, and extinguishes flames quickly -- even those of phlogiston.
- *Green Fog:* A three-part preparation of two liquids and a powder that when exposed to air creates an obscuring gas. Prolonged inhalation of Green Fog causes unconsciousness, then death.
- *Thunder Salt:* A whitish crystal, when mixed with phlogiston, explodes violently.

As the stinger becomes more prevalent on the battlefield, the wearing of armor has decreased; again, the expense (not to mention weight) of armor that can deflect or absorb the force of a stinger dart is prohibitive. Many officers still wear light chain shirts, or more commonly, specially-treated lightweight *cuir-boulli* to deflect shrapnel.

Travel: While magic, enchantment, and clockpunk technology have affected all sectors of transportation, they have impacted sea travel the most. The table below gives the motive power, qualities, and average speed of the most common classes of ship.

Name	Motive Power	Size	Construction	Speed	Maneuverability	Average Speed (in mph)
Clock Tug	Augmenting Engine	Tiny	Sturdy	Very Low, but strong	High	3
Sun Sloop	Sail	Small	Light	High	High	16

Twilight Cog	Sail	Medium	Medium	Medium	Medium	12
Moon Caravel	Sail	Large	Sturdy	Low	Low	8
Star Carrick	Magic/Sail	Tiny to Small	Light	Fast	Medium	18
Goldfolk Windship	Balloon (for lift), Augmenting Engine (thrust)	Tiny	Fragile	Very Fast	High	30

(Note: To convert mph to nautical miles per hour (knots), multiply mph by 1.145 knots/mph.)

What Everybody Doesn't Know

Hidden Politics: What's going on under the surface . . .

- *The Empire of Kel-Batar.* Nearly 127 years ago, after a decade of repeated usurpation of the Imperial throne, the Council of Princes attempted to create a permanent figurehead Emperor by elevating the changeling child-prince Artanis to the purple. They surrounded him with servants, bodyguards, and luxuries, and essentially forgot about him -- as a changeling, he would survive for a good long time, and there would be no pesky heirs to worry about. For seventeen years, the Council ruled, not the Hidden Emperor, lost in sybaritic pursuits. Then, on a state visit to Sythex, he was rudely awakened to the nature of his position by being shut out of trade negotiations. Outwardly chastened -- but inwardly wrathful -- Artanis began applying his considerable intellect to manipulation, intrigue, and leadership. Within ten years, different men sat on the Council, their predecessors murdered, blackmailed, or exiled. A monarch with a will of iron replaced the powerless figurehead. Artanis' long-term goals include the reassimilation of Sythex and Zolova into the Empire, annexation of Panohai, and siring an heir. He pursues the first through covert maneuvering the two errant duchies against one another and the second through generous treaties and naval aid against Zolova. The third is problematic and vexing. He has been married twice to humans with no issue; he also attempted some "field research" with a Goldfolk naturalist before the cooling of relations with the Golden Isle. He suspects the truth about the limitations of changeling breeding (see below), but has yet to have tested it -- not for lack of trying. He is constrained on one hand by the requirement that his mate be a changeling, and on the other by the need for her to be of sufficiently noble blood for an heir to be recognized. Secretly, with the knowledge gained of his study of biology, he is manipulating families rumored to be descended from changeling blood into marriages, hoping to express the recessive traits and breed an aristocratic changeling bride. Two generations have already passed since he began his experiment; he estimates that it will take three more . . . but he has plenty of time.
- *The Duchy of Sythex.* Unknown to any but his closest friends, Duke Tazannan has been quietly assassinating noble families for their money and lands, to fund his war-machine. He's been stockpiling weapons for months, as he eyes Zolova to the East.
- *The Duchy of Zolova.* The Duchess Cara desires war with Sythex, but wants it to be on her terms. Her agents are quietly fomenting peasant unrest through sabotage, and from the coffers of House Saffron she funds the idealistic, populist highwayman known as the Hare.
- *The Kingdom of Panohai.* Young King Lao desires a colony in Newland, but pirates ravage Panohain ships. He wants closer ties with the Golden Isle, and is willing to do anything to get them. He has a secret, unrequited crush on the Duchess of Zolova. He is grateful to the Emperor for providing some naval assistance; but wants more.
- *The Golden Folk.* They have no secret agenda; they wish only to keep their distance from the insane humans that clutter the face of Yool. Their silk is woven from the webs of a rare indigenous spider.

Political Interaction Chart

This chart indicates current relations between realms, both the public position and the secret feelings behind them (in parentheses). No current treaties or alliances of note yet exist.

Realm	KB	S	Z	P	GI
Kel-Batar (KB)	(Emperor is manipulating Old Kingdom bloodlines -- including Sythex and Zolova through his agents.)	Reserved (Emperor sees Duke as a posturing ape.)	Cordial (Emperor respects Duchess' talent for intrigue.)	Cordial (Emperor is looking for a changeling bride amongst Panohain noble families.)	Poor (Emperor trying to reestablish ties.)
Sythex (S)	Neutral (Duke daydreams of conquering the Empire.)	(Duke sees his people as fodder for his dreams of conquest.)	Poor (Duke wishes to start a war . . . but only when his army is ready.)	Cordial (Duke wants advanced weaponry.)	Poor (Duke fears the military might of the Goldfolk.)
Zolova (Z)	Neutral (The Duchess knows of the Emperor's meddling in the politics of marriage, but hasn't figured out why.)	Poor (Duchess wants to start a war . . . but only when she's ready.)	(Duchess sees herself as protector of her people; however, if they get in the way of her personal machinations, too bad.)	Poor (Duchess respects their grasp of technology, but dislikes their lack of passion.)	Poor (Duchess angry with repeated Goldfolk attacks on their ships.)
Panohai (P)	Cordial (King needs access to Kel-Batar's mineral resources and naval support.)	Neutral (King sees Duke as warmongering moron.)	Poor (King fascinated by Duchess; hates Zolovan attacks on Panohai ships.)	(King desires to insure future of his people through a Newland colony.)	Cordial (King pushing hard for closer ties.)
Golden Isle (GI)	Poor (Insane, dangerous.)	Poor (Insane, violent.)	Poor (Insane, delusional.)	Neutral (Only mildly insane, often useful.)	(We are the only true sentients on the planet; one day, there will be a reckoning.)

The Enigmas of the Goldfolk: The old adage "A sound mind in a sound body" is more properly rendered "A sound mind **is** a sound body" when applied to the Goldfolk. It is unknown whether they are a separate species or an extreme human lineage. Compared to the average human, an average Goldfolk is strikingly intelligent, strong, nimble, and durable -- if a little hidebound and uninspired. Their skin tone ranges from a light tan (hence the "gold") to a deep ruddy brown; eye color is usually yellow, maple-brown, or hazel.

- *Physiology:* The Goldfolk have complete conscious access to all of their bodily functions and processes. While

they do not need to actively maintain autonomous activities (circulation, respiration, digestion), they can easily observe or change the operation of those processes -- increasing their healing rate, slowing their heartbeat and pulse, combating disease, building muscle tissue quickly, increasing or suppressing various neurotransmitters, dumping adrenaline into their bloodstream, ignoring (or undoing) the ravages of age, etc. Goldfolk are only sexually fertile when they desire to be; this ability to choose has strong effects on Goldfolk culture. Goldfolk tired of life can opt to stop their hearts and die.

- *Psychology*: The understanding and control of their own brain function lends the Goldfolk a markedly different psychology. Goldfolk tend not to be nostalgic for the past or yearn for the future; they are solidly in the here and now. They understand why they are feeling an emotion, and can alter those emotions if necessary. They accept the demands of their bodily natures; there is no shame or guilt associated with biological functions, like excretion, digestion, or reproduction. Their powers of concentration are tremendous, but they can be deficient in raw imagination and are resistant to sweeping innovation. Goldfolk dream only by choice, and those dreams are always lucid.
- *Views On & Historical Dealings With Humanity*: Simply: humans are insane. Too much contact with their madness could infect a Goldfolk; and once a Goldfolk's mind goes, the body follows. This belief leads directly to the isolationist movement. Historically, the balance shifts over time; while always reserved, sometimes Goldfolk welcome the influx of human ideas, at others they become utterly xenophobic. Often, this animosity bleeds forth to taint changelings as well. Twenty years ago, the Goldfolk went through **the Great Purge**, attempting to efface all human and changeling influence and presence on the Golden Isle. Many humans and changelings were killed; a few escaped to Panohai, the human nation most akin to the Golden Isle. Today, the first tentative feelers are being sent out to see what the humans are up to.
- *Culture of the Goldfolk*: Supreme self-confidence is axiomatic, and underpins much of Goldfolk culture. In all endeavors, the inhabitants are highly competitive; luckily, they are good sportsmen. Cheating is discouraged, unless couched in a meta-textual way -- reinterpreting rules for greatest personal benefit is looked on as a form of art. Otherwise, their ways seem impenetrable to the human realms. A democratic meritocracy -- with universal suffrage, no less -- seems like pure anarchy. All Goldfolk may speak in the Great Assembly, which meets biannually to enact, revoke, and review the laws of the land, as well as deal with pressing issues; the necessary quorum to convene is one thousand citizens. The leader of the Assembly (and thus the Golden Isle) is known as "the Wisest," and attains that position by solving the physical and mental puzzles left by their predecessor (even in cases of usurpation, abdication, or votes of "no confidence" from the Assembly). As the Goldfolk are hardy and nigh immortal, each Wisest has plenty of time to construct their Puzzle before death, ejection, or voluntary return to private life. The longest interregnum between reigns -- eight months -- happened seven years ago after the Great Purge. A young (233 years old) Goldfolk woman named Rissa -- an Adept Cartographer and Adept Weaver -- solved the Puzzle of the Coded Tapestry and became Wisest.
- *Interbreeding (Changelings)*: When Goldfolk choose to mate with humans, a changeling results. Changelings have the same gender, skin tone, and hair color as their human parent; their eyes, however, are violet, gray, or eerie silver. They have limited form of the Goldfolk unity of mind and body, which allows great longevity (though not nigh immortality) and uncanny healing; they combine these qualities with a more human level of creativity and imagination. They are sterile with Goldfolk and with humans; a changeling can only breed with another changeling. The issue of a changeling unions are human, with a high possibility of being a human Prodigy. Changelings are the "wild children" of the Goldfolk, and often suffer great prejudice.

Mysteries of Magic: Due to the time requirement to fully plumb the depths of a profession to reach Adept status (about 20 years of dedicated work), most humans can only ever become Adept in a single trade. Perhaps one out of every hundred masters in a craft are Adepts. Due to their longer lifespans, changelings and Goldfolk can become Adept in multiple vocations. An Adept with more than two fields of mastery is rare. More than half of all changelings are Adepts; almost every Goldfolk is one.

There is a balancing factor, however: while those of Goldfolk blood have greater breadth of skill, humans have more depth. For unclear reasons, humans have access to greater amounts of magical power, and can cause superior effects with their abilities. Theories on why this is so abound: the two most popular are:

1. Since they can only generally reach Adept status in one trade, humans concentrate more on that trade; and
2. Changelings and Goldfolk are already constantly using magic to support and enhance their bodies, leaving less

capacity for Adept occult force.

There are also Prodigies -- those that reach Adept status without the customary two decades of study. Prodigies can craft enchantments with only a *temporary* loss of skill (usually a few days or weeks); the lost ability is slowly remembered rather than relearned. While almost common amongst humans, there have been less than a score of Changeling Prodigies, ever. There have *never* been any Goldfolk Prodigies.

Secrets of Technology: In terms of Earth-technologies, two developments are singled out for special discussion: the steam engine and black powder. Viable steam engines have yet to materialize, but the Goldfolk have begun some promising research. Black powder is a recent discovery by an Imperial alchemist, and is beginning to see use as an explosive, despite the relative pitfalls of transporting it versus the multi-part alchemical preparations like thunder salt. Outside of some experimental usage, no one has yet used it as a propellant charge.

There is a pervasive legend of an alchemical elixir that will transform a human into a Goldfolk. This preparation is known as the Fluid of the Sun, and takes on many of the same qualities of the Earthly Philosopher's Stone.

The Goldfolk have recently developed a small fleet of six *windships* -- see Izzy's craft in *The Mummy Returns* for an example of what they look like. Gasbags provide lift; while Augmenting Engines connected to a bicycle-like arrangement provide propulsion. Crew complement is limited to four people with food and water; or six people without supplies. The human realms have heard rumors of this craft, but have not received any credible reports (for instance, none of them have mentioned the gasbags).

NPC Backgrounds

Captain Kristov Nikolai aka Whitebeard: (Adept Sailor, Prodigy Toymaker). The son of one of the Goldfolk's finest ship captains and a human pirate, Kristov grew up on his mother's ship, learning the sailor's life. He loved to whittle, and in time discovered that he possessed a gift for toymaking. In his nimble fingers, a block of wood could become a pod of playful dolphins . . . and he learned that he could make those dolphins actually sport and play. In his fortieth year, the Great Purge happened; as a changeling, his shipmates seized him and placed him in a cell to await execution with other changelings and a few unlucky humans then visiting the Golden Isle. An expert brawler and good swordsman, Kristov led his fellow prisoners in an escape; they fought their way to the harbor and stole a warship, making for the high seas. During the passage to the mainland, a Sythexian navy vessel refused them aid, then attempted to take the Goldfolk ship as a prize (to learn its military secrets). The refugees fought off the Sythexians, albeit with heavy losses. Swearing revenge on his foes, Kristov began attacking all Sythexian and Goldfolk ships whose wake crossed the bow of his ship, the *Wave Dasher*: Whitebeard the Pirate was born. Whitebeard is a knight-errant pirate, providing succor to those in need on the seas, and redistributing wealth to those oppressed Sythexian peasants along the coasts. He will not harm a fellow changeling; indeed, he'll often give them a small gift -- a magical toy that suits them. Unknown to anyone but his most trusted subordinates, he holds a (retroactive) letter of marque against Sythex -- a gift from his "brother" changeling, Emperor Artanis, for unspecified services. He wears an eye-patch after losing his left eye in a recent sortie; it hasn't regrown yet.

Sir Lomo Nutmeg: (Prodigy Linguist). Despite his best efforts, Lomo Nutmeg is a horrible merchant-adventurer. He spent much of his youth on the docks, speaking to the dirty foreigners in their own languages rather than learning the ways of commerce. His aunt Patrice, matriarch of the Zolovan House Nutmeg, dispatched him to the Spicetown colony to get him out of her sight. They were both happier. Fascinated by the new plants and animals of the continent, Lomo soon arranged an expedition to explore the interior of Newland. He felt he could serve his House best by seeking out new treasures for them to trade. He and his hundred men entered the forest in high spirits; one year later, Lomo returned alone, haggard, scarred, and raving, holding an ruby the size of a cantaloupe. Incoherent, all that could be understood of his babbling were the phrases "snakes with legs," "giant bugs," and "the lightning that walks like a man." The factors of House Nutmeg packed him back to Zolova for treatment, and mounted an expedition to follow Lomo's -- they never returned. Lomo is currently recuperating in a Church Hospital in Zolova; his madness seems to be slowly easing. One day soon, he may be able to speak of what he saw in Newland.

Commander Mirabelle: (Adept Sailor, Adept Swordsman). Mirabelle is a Naval Officer of the Goldfolk. She serves under Captain Zeltar, the most famous ship captain of recent Goldfolk history -- he discovered Newland a hundred years ago -- a half-century before the humans knew it was there. She has political ambitions, and always attends the Great Assembly if she can. She doesn't like humans, but actively hates changelings. She's been urging her captain to pursue Whitebeard and bring him to Goldfolk "justice" for the murders and piracy he's undertaken against the Golden Isle. Zeltar seems resistant (he was one of Kristov's mothers lovers, long ago), but she presses the point, slowly wearing him down.

Lord General Hars Doyvik: A childhood chum of Duke Tazannan, Lord Doyvik is the Sythexian general of cavalry. He is involved with the Duke's bloodthirsty plan to raise monies for the military through assassination, and it is his forces that the mysterious Hare most often harries. He is a good swordsman, but only an average tactician, and has embarrassingly poor social skills.

Major Maximilio Vasterhaus, Viscount of Platt: Maximilio Vasterhaus entered the Imperial Guard as an Ensign, and through his expert marksmanship, masterful swordplay, and remarkable social graces, he has risen through the ranks rapidly. He's arrogant, earnest, and loud. As a good storyteller, passable dancer, and heir to County Platt, he is welcome at the parties thrown by the Old Kingdom aristocracy. He cannot hold his drink, however, and often gets himself in amusing difficulties when he's in his cups.

Lord Villem Baatz aka The Hare: (Prodigy Swordsman). Heir of a military household, Villem Baatz is an embarrassment to his father and younger brother. Instead of serving Sythex through buying a commission in the military -- as his father did in the army a decade ago, and as his brother currently does in the navy -- Villem spends his time "managing the estates" or frittering it away on indolence. Or so they all think -- secretly, Villem is the Hare, the masked highwayman and rebel who fights against the oppression of the Duke's military regime. He is an expert actor, good marksman, and a competent tactician . . . but as the Hare, his inflated sense of honor and chivalry gets him into troubles he could avoid.

Initiate June Grace: Born of Panohain peasant stock, June Grace is the first daughter to enter the Church, to the pride of her family. After many years of study at her local Church School, she passed the entrance exam for Mainspring Cathedral, eventually graduating and taking a teaching position there. While at the Cathedral, she developed an interest in the cultures and cuisine of other realms. An expert alchemist by training, she is also a good cook. Currently, she has decided to take a sabbatical from her teaching, to travel to the New World to look for new alchemical processes, foods, and flavors -- and possibly romance.

Events & Possible Story Arcs

- *Colonization.* Panohai is desperate to found a colony in the New World, and there are a number of plots afoot. Young King Lao is secretly sending out messengers to pirates known to operate in the Sea of Stars, offering amnesty to them if they agree to not attack Panohain vessels, and other rewards if they serve as convoy guards. PCs could be these messengers, the pirates so contacted, or other skilled persons -- like merchants, farmers, or engineers -- necessary to build a new colony.
- *Birth of a Princess.* The royal family of Snoorake has finally produced an heir: the Princess Cedbodea. A grand fete is being held in her honor three months hence in the Imperial capital; noble families throughout the Old World have been invited. The Duchess of Zolova and the Emperor himself are coming, as well as a host of lesser lights from Sythex, Panohai, and the Church. It will be the social occasion of the year. Opportunities for intrigue, espionage, and romance abound. PCs of noble blood or churchly inclination may receive an invitation; other PCs may be called upon to help arrange entertainment, gifts, food, or security.
- *Spice of Danger.* A peculiar new herb from Newland has become incredibly popular in Zolova. Known as *wincobak*, it has a rich and satisfying - some say addictive -- flavor. Currently, one pound of dried wincobak seedpods brings twice its weight in gold. The PCs "inherit" (through fair means or foul) a map indicating the location of an untapped stand of plants, inland from the Parrot Sea. Can they get there before anyone else discovers the trove, avoid the patrols of the City Zel, then return to the land of the Spice Houses without losing their cargo to pirates? The rewards -- and dangers -- are great.

Advice, Opportunities, & Pitfalls

Swashbuckling: Swashbuckling is all about style -- the more something looks flashy, melodramatic, or just plain cool, the better. Over the top passion is good. Everything should have a sense of fun about it: secret passages, romantic tragedies, and devious plots. Larger than life and cinematic is the way to go. Note that this doesn't mean that there aren't negative consequences for actions: if the success knob is cranked to eleven, so is the failure knob. When something goes wrong, it really goes wrong. The two biggest pitfalls to avoid are: too much campiness and overshadowing the PCs. One man's camp is another man's "over-the-top", pay close attention to when the laughter-to-groan ratio shifts; in regards to stealing the PC's spotlight, be sensitive to the amount of screen-time given to your descriptions versus the amount the players use to describe their actions.

Clockpunk: The point of this divergent path of technology is not to simply replicate Earthly technologies, but to seek out and develop new paths and combinations. PCs could certainly devote time and effort to invent cannon, but by the time they've completed work, other clockwork technologies will have moved forward.

Espionage/Intrigue: Plots swirl within plots, and realms pay well for the secrets of their neighbors. One way to provide a patina of intrigue to a game is to determine what a character wants, then determine what they want it to look like they want. If Lord Apgor wants Lady Bella's castle, perhaps he pursues it by wooing her -- while funding a bandit gang to terrorize her peasants. Particularly tricky characters, like Artanis and Cara Saffron, will have two or three levels of deception between what they want and what they appear to want.

The Last Dance (for d20)

Published by [Atlas Games](#)

Designed by Chris Aylott

38 b&w pages; \$9.95

Atlas Games' *Penumbra* series was the first of the independent *d20* lines to hit the industry, and under the guidance of John Nephew and company, it continues to be one of the best. *The Last Dance* is another fine example.

Designed for relatively low-level adventurers (a group of 4th to 6th level), *The Last Dance* is very simple . . . on the surface. There's not a lot of traveling, and most of the action takes place in a single room -- the great hall of a border fortress, where a peace treaty between neighboring orcs and humans is being celebrated with a grand dance.

[BEGIN SPOILER ALERT]

It's a wonderful party, except for the fact that it's been going on for a thousand years or so . . . and everybody's dead.

It's a story of ambition, betrayal, arrogance . . . and dancing. The Last Dance in the title is not a metaphor. Dancing is a crucial part of this adventure, and while players could treat the whole exercise as an abstract puzzle to solve, it will be much more fun if they get into it. (The publishers claim that in the playtests, players actually got up from around the table and *danced*.) If your players aren't up to that sort of participation, or at least willing to get into the spirit of things, *The Last Dance* might not be the adventure for them.

Don't get me wrong -- it's not like you have to be an SCA-trained pavane-loving fool to enjoy this adventure. But it's more than just hack and slash, and that's a good thing. Never fear -- there are also enough combat opportunities to keep your power gamers happy, but oddly enough, many of them involve dancing as well.

Getting into the adventure isn't necessarily easy, and this may be its greatest weakness. The player-characters encounter a beggar-ish looking sort of a man who wants them to follow him to the adventure site. Getting the group to do this might be difficult, however, because the man a) is dead; b) has had his throat slashed so as to make speech impossible; and c) only knows a language that has not been used for a thousand years or so, making his slashed throat and overall dead-ness sort of a moot point. The GM and players must be ready for an elaborate game of charades (including rudimentary dance lessons!) just to get the ball rolling. And once the adventurers figure *that* out (and let's face it, they better, or the story is over before it starts), they face similar communication problems with all the NPCs they encounter. (Well, all but one . . .) Depending on your players, this can be enjoyed as a fun and interesting challenge, or it can become a huge pain in the butt.

Of course, most roleplaying these days aspires to be more than just exercises in killing monsters and taking their treasure, so all these features are -- in my mind -- very good things. And unless your group looks at the folks in *Knights of the Dinner Table* as role models instead of objects of satire, they will enjoy *The Last Dance*, too. This adventure can be tossed into just about any campaign as a one-shot diversion. It's perfect for a group who have just completed a quest, or cleaned out a dungeon, and are on their way to their next conquest.

[END SPOILER ALERT]

As in all *Penumbra* releases, Atlas Games provides more than just an adventure. The author also includes several new magic items, a new minor artifact that is both potentially powerful and ruinous, and a new monster that will turn some

of your characters' strengths against them in a very nasty way. There's good loot to be had, but not enough to unbalance your campaign, and a few reality-bending tricks with the time-space continuum that will keep your players on their toes -- even when they're not on the dance floor.

The Last Dance is very clean editorially, well-written and easy to follow. There isn't a whole lot of art inside, which is probably a good thing since I'm not a big fan of David Interdonato's style. But that's just a taste thing, and I should mention that his front cover painting is very nice. So bring your dancing shoes and dive right in -- *The Last Dance* is about to begin . . .

Terra Incognita -- The NAGS Society Handbook

Published by [Grey Ghost Games](#)

Written by Scott Larson

144-page perfect bound, \$22.95

The latest entry into the burgeoning range of RPGs during the Victorian era is *Terra Incognita -- The NAGS Society Handbook*, published by Grey Ghost Games. It is designed for use with Steffan O'Sullivan's *Fudge* roleplaying game, and was actually play tested by subscribers to Steve Jackson Games' *Pyramid Magazine* as well as gamers at [fudgerpg.com](#). Although the basic rules for the *Fudge* are available at Grey Ghost Games' website, the potential *Terra Incognita* GM will find all of the rules he needs in the book itself. The only thing he will need to actually run the game will be a set of *Fudge* dice, although these rules do suggest other means to simulate the system's mechanics.

The setting for *Terra Incognita* is actually a ninety-year period, beginning in 1850 and running through the Victorian and Edwardian periods to beyond the First World War and the pulp decades of the twenties and thirties. Outwardly a straight historical game, players create characters that work in secret as members of the semi-secret NAGS or "National Archaeological, Geographical, and Submarine Society." A member -- known as a Nag -- is devoted to the Earth Unknown, to exploring the planet's mysteries and wonders with the aim of furthering mankind's knowledge, yet at the same preventing them from becoming general knowledge and possibly lost through misuse. Such knowledge is held by the society until they feel that the rest of the world is ready to accept it. An example of this was the public excavation of Tutankhamen's Tomb in 1923, which came a decade after the society had actually opened and forced them to quickly return the artifacts they had removed for examination! When something odd crops up, an RFA -- or Request for Attention -- is issued to a suitable group of Nags, who will investigate and take any necessary action. RFAs often come to the society as discrete requests through private channels after the authorities have been unable to deal with the issue at hand.

Recruitment to the society is by invitation only, and often comes after the potential recruit has been exposed to the Terra Incognita and has useful skills that can be brought to bear upon the situation. Members can maintain a public profile, but some are recruited by "societal extraction" and thus may continue the works of NAGS in secret. In more extreme situations, explorers and adventurers are recruited after their supposed death -- noted examples of this include the aviatrix Amelia Earhart, the Antarctic explorer Robert Falcon Scott, and author Jack London.

Once recruited, members select an AoS, or Area of Speciality, reflecting their background and experience: Bookworm, Gadgeteer, Hack, Hero, Preservationist, or Snoop. Bookworms conduct general research for the NAGS, while the Snoop is more concerned with theoretical research within a single field, and Gadgeteers build new technology and devices for use during society operations. The public face of the society is the Hack, who as journalists and photojournalists contribute to the NAGS journal, which reports on events and operations that took place ten years previously. Heroes are the society's tacticians, capable of providing any needed direct action. The Preservationist is classified as either "Red" or "Green." The atypical Green Preservationist is a natural scientist devoted to investigating and preserving eco-systems, while his Red counterpart is more concerned with matters archaeological and anthropological.

The concept of the Area of Speciality is reflected in the rules, which suggest that each player selects an AoS template as the basis for their character. Each template gives a range of options that can be followed to build the type of character a player wants to design. Each template recommends what skills to buy, where to focus attributes and which gifts and faults to select. These recommendations are by no means rigid, so that if a player wanted their character to be

a cartographer, then all but the Gadgeteer template could be utilized to create this character. Accompanying each AoS description is a full example -- this is in addition to the example of character creation -- although I had to give a groan when I read that the Gadgeteer example's nickname was "Q." In fact, the six Nags given here make up a sample team and it is pleasing to note that these characters come from a differing range of cultures and backgrounds, rather than from a primarily Imperial background.

For those with familiarity with the *Fudge* system, it uses the "Five Point *Fudge*" system to buy broad and narrow skill foci across six categories of skills. This is relatively quick and easy, having been designed for those new to the game. Two other methods of character creation, the subjective -- in which the GM and player assign the game statistics based upon the player's concept, and the objective, in which each player is given a set amount of points, are presented for use by more experienced players.

Beyond the standard Fudge rules for combat and event resolution, *Terra Incognita* provides the team with a range of NAGS tech and vehicles. Known for their glitches almost as much for their ingenuity, both vehicles and gadgets fall into two eras. The first is Victorian steampunk and the second is the era of the pulps, though the concentration is definitely upon the 19th century. Most are the steampunk equivalent of standard cyberpunk gear, but the Travelling Tea Tray or T3, which is a vacuum-packed, portable and instant tea party set possesses a certain charm. Beyond attempting to resolve glitches upon either tech or vehicles, there is little guidance for the Gadgeteer who wants to construct their own devices.

Up until now the rules have been successfully geared to running a Victorian-era game, with occasional mention of running a pulp-era game. So what of the setting and campaign in which a *Terra Incognita -- The NAGS Society Handbook* game can be run? Essentially, apart from the idea that the characters work for a semi-secret benevolent organization, there is scant background detail. There is a background framework, consisting of a ninety-year almanac covering the years 1850 to 1940, and details of the society's secret campuses on each of the continents, but no actual information about the hidden world. The campuses even include Mt. Erebus on Antarctica . . . where do you think Captain Scott ended up?

A few pages cover the types of *Terra Incognita* campaigns and adventures that can be run, including how to combine the society with other genres and on how to run an actual NAG operation. The campaign advice discusses briefly the nature of the hidden world: mysterious history -- investigating the myths of Atlantis and lost worlds; ghost tales -- with or without the supernatural; expanded reality, which hints at the supernatural; dashing tales for those that want more elements in their game; or even adding elements of fantasy ala *Castle Falkenstein*.

[BEGIN SPOILER ALERT!]

An example mysterious history campaign outline is given, "The Pangaea Prophecy," which suggests that descendants of the inhabitants of the ancient giant continent of Pangaea were still alive and living under the Earth. The NAS Legend, a society dirigible that can serve as the base of operation for a team of Nags and provides more characters that can be used by the players or as NPCs, supports the campaign. This can be kicked with a starting scenario, also included in the book. In "Moctezuma's Revenge," the team receive an RFA that takes them to Mexico City where a girl has been found ritually sacrificed atop a recently discovered Aztec temple. They have to investigate while dealing with a revivalist Aztec movement, a would-be American millionaire showman, a Mexican politician on the make, and the Mexican government, which includes the ridiculously named "National Department of Widgets." It is a pity that this adventure is set in the pulp era, when the main focus of the game seems to be set squarely upon the 19th century. It almost seems as if the author wants us to ignore seventy years of time already outlined in the almanac.

[END SPOILER ALERT]

This is not helped when throughout the book there are mentions of important NAG operations that have had consequences upon the society. The exact nature of these is not expanded upon; for example, we are not told why Theodore Roosevelt led an expedition into the Brazilian jungle and what transpired there.

The problem is that once you look beyond the National Archaeological, Geographical, and Submarine Society, *Terra Incognita* seems a rather shallow game. It is up to the GM to decide upon the nature of the depth -- the "Incognita" in

the game's name -- and add it to his campaign to give it depth. There are hints aplenty in the almanac, but there is all that they are . . . just hints. It is again left for the GM to develop these and he cannot do that from the information provided in this book. Instead, he will need to make use of the appendix describing further watching and reading, which is at least useful, if short. Interestingly, two books that are included as both reference and inspiration are Ken Hite's *Suppressed Transmission* and *Suppressed Transmission 2*, which are also directly referenced earlier in the text. (As an aside, I amused to see that Chicago has a "Hite Building," the fiftieth floor of which was the last location of the Lost Amulet of the Motocs!) It is not so much that these are potentially useful references for the *Terra Incognita* GM, as they are an absolute necessity if they want to develop their game. Likewise, other RPGs are included in this appendix as background reading, but while games and supplements such as *Space 1889*, *Castle Falkenstein*, and *GURPS Steampunk* might have inspired the author, they also ultimately have the background material that Terra Incognita does not.

The rules in *Terra Incognita -- The NAGS Society Handbook* will no doubt be of use should a GM want to run their own Victorian-era game using the *Fudge* system. Even the concept of the "National Archaeological, Geographical, and Submarine Society" as a campaign framework has merit, providing means and method for getting characters involved in an adventures and NAG operations. Yet it is in the details that the game fails us, forcing the purchaser to conduct much of the necessary research needed to run a game or to buy further books which have the background that that this game does not. Strangely, these further books have not been written with *Terra Incognita* specifically in mind, but for entirely different game systems instead.

Pyramid Review

Denver (for Hell on Earth RPG)

By [Pinnacle Entertainment Group](#)

Written by Teller

\$20.00

Denver, written by Teller for Pinnacle Entertainment Group, details the headquarters city for General Throckmorton's Combine, the major villain of the Wasted West of the *Hell on Earth RPG*. Readers should prepare themselves for a well-written sourcebook, detailing a dark, dangerous, and devastated city. Heavily influenced by post-apocalyptic film, Denver presents a darkly familiar setting for players and gamemasters alike. Although familiar, there are enough new and unusual twists to the setting to keep players guessing. In addition to detailing the city, Denver provides players with a new organization for character development (or creation): The Steel Knights, a group of power-armored soldiers, and the types of armor available. Finally, one of the mysteries of the Hell on Earth setting is revealed in the adventure "Air Force One is Down." While targeted at a mature reader, Denver is worth the price of admission.

The city and history of Denver is detailed enough for posse members and Marshals alike, including tidbits of the alternate history of the *Deadlands/Hell on Earth* timeline (the atom bomb that ended World War II, for example, was dropped on Berlin). While the nuclear attacks on Denver were thwarted by Hellstromme Industries' (HI) shields, it suffered several conventional and biological attacks that devastated the population. The interim between the arrival of Throckmorton and his sudden shift in personality following his gaining control of the HI weapon factories is also covered, providing players with a connection to Denver with enough information to flesh out their character's background. Likewise, those players with former Black Hat characters will find a lot in this supplement, although these sections, including the one detailing Combine equipment, is located in the Marshal's section.

While expanding options for existing characters, *Denver* also details a new organization: The Steel Knights. This elite group of power-armored Robo-Hunters, based on the remnants of the US Iron Brigade, provides players who dislike the Templars a chivalric option. More importantly, however, this section revises the rules for power armor initially published in the Wasted West world book, accounting for the changes found in *The Junkman Cometh*. It also greatly expands the options available, giving players a chance to choose from several different types of armor (US, CS, HI, German, and LatAm models) and to customize their battle suits.

(SPOILER ALERT: Information normally available only to the Marshal is included below.)

The dedication to Charleton Heston, in honor of his role in *Omega Man*, gives an early indication of post-apocalyptic film as a major inspiration for the *Denver* sourcebook. While *Omega Man* does get a nod in the Family, a light-hating group led by Matthias Newcombe, the major influence is undoubtedly from the *Terminator* series of films. Not only does the name of Denver's resistance leader, John Connor, echo that movie, much of the artwork honors those two films by James Cameron. More immediately, however, is the theme of man versus machine that runs through the sourcebook. For example, the reason for Throckmorton's change of heart upon reaching Denver is finally given: his personality has been overwhelmed after interfacing with the Hellstromme Industries AI, created from the brains of the mad scientists employed by Hellstromme during the 19th, 20th, and 21st Centuries. This AI was given structure by the copying of Darius Hellstromme's personality. Driven mad by the Reckoning, the AI is planning Judgment Day II. While the Denver AI's inspiration comes straight from *Terminator* films' Skynet, the merging of man and machine gives it a liberating twist that will keep players guessing.

The Combine is not the only threat detailed in this sourcebook. The denizens of Denver and the surrounding area are

enough to give the most experienced posses a challenge -- and the creeps. Denver's roach population, which has grown in size, intelligence, and, in some cases, stature is creepily disgusting. More disturbing is the presence of Nazi doctors lead by Mengele, stored by the Agency deep beneath their Denver headquarters, taking up their concentration camp experimentation once more. Finally, the adventure "Air Force One is Down," which finally reveals what happened to President Tremane and the missing Air Force One, once more allowing players to become a major part of the Wasted West storyline -- although this adventure should be run after the events in *The Boise Horror* in order to ensure your posse is up to the challenge.

Purchasers should be aware that this supplement, which details the headquarters of the Wasted West's bad guys, is very dark in tone. While it is true that this can serve to make the actions of the players feel more heroic though the sharp contrast, the book is targeted at a relatively mature audience. In addition, recent events, which could not have been foreseen by the writer, publisher, or players, may make Marshals wish to weigh changing the location of part of "Air Force One is Down" -- the American Trade Center (based on the World Trade Center).

(END SPOILER ALERT)

If you and your posse are ready for it, the *Denver* sourcebook offers a lot for a *Hell on Earth* campaign, and is well worth the money for anyone moving anywhere close to Denver or are confronting the Combine. For those who want to keep up with the unfolding meta-story of the *Hell on Earth* setting, this is a must buy, as the events of the adventure provide a major plot point.

Horror, Horror, Horror: *Macbeth*

*"Come, go we to the king; our power is ready;
Our lack is nothing but our leave; Macbeth
Is ripe for shaking, and the powers above
Put on their instruments."
-- William Shakespeare, Macbeth, IV:iii:236-240*

Once more the nights grow long, once more the year dies, once more the banked fires of history flare up. Again we look into the magickal, the mysterious, even the malevolent shadows flung up by the flames of [Shakespeare's words](#). What shadow game he played at, thrusting witches and regicide at a king who had reason to fear both, may be lost in the "shoals of time." All we have are the words, the necromantic figure of Macbeth, and the story begun by three weird sisters.

*"Great Glamis! worthy Cawdor!
Greater than both, by the all-hail hereafter!
Thy letters have transported me beyond
This ignorant present, and I feel now
The future in the instant."
-- William Shakespeare, Macbeth, I:iv:55-59*

Shakespeare's plot for *Macbeth* is both well-known and straightforward. Macbeth and Banquo, two generals under King Duncan of Scotland, meet three witches on a corpse-strewn battlefield. The witches prophesy that Macbeth, already Thane of Glamis, will become Thane of Cawdor, and then king. Their murky oracles foretell that Banquo will beget kings. When Macbeth learns of his elevation to Thane of Cawdor, he and his wife begin to plot the murder of Duncan to hasten the prophecy along. When Duncan stays the night at Macbeth's castle, he kills the King while his Porter drunkenly invokes the Gates of Hell, opening for a damned soul. Duncan's son Malcolm flees to England, which casts suspicion on him, leaving Macbeth to be acclaimed king. Unwilling to see Banquo's sons inherit his throne, however, Macbeth has Banquo murdered -- unfortunately, Banquo's son Fleance escapes. Banquo's ghost, however, appears at Macbeth's feast, a harbinger of doom.

Unnerved, Macbeth now demands a new meeting with the witches; they warn him to beware Macduff (the Thane of Fife), but assure him that no man born of woman can harm him and that furthermore he cannot lose until Birnam Wood moves uphill to Dunsinane Castle. Macbeth murders Macduff's family, but Macduff has escaped to England. After a suspicious Malcolm tests Macduff's loyalty, the two join forces and invade Scotland. Lady Macbeth, driven mad with guilt, commits suicide; Macbeth confronts the invaders, who are besieging Dunsinane while camouflaged with boughs from Birnam Wood. He kills many foes during the battle, but falls to Macduff, who as a child "from his mother's womb untimely ripped" can kill Macbeth. Malcolm is proclaimed King of Scotland amidst the battlefield carnage, completing the circle of the play.

*"Witches: Seek to know no more.
Macbeth: I will be satisfied: deny me this,
And an eternal curse fall on you! Let me know,
Why sinks that cauldron? and what noise is this?"
-- William Shakespeare, Macbeth, IV:i:103-106*

Shakespeare took the basics of the play from Raphael Holinshed's 1577 *Chronicles of England, Scotland, and Ireland*, although he altered [the circumstances of Duncan's murder](#) and interpolated the three witches from Andrew of Wyntoun's *Orygynale Chronicle* of 1420. Holinshed took his story from Hector Boece's 1526 *Scotorum Historiae*, and Boece took it from the medieval *Scotichronicon* of John Fordun. It all traces back to the historical King Macbeth, who killed Duncan around 1040 and reigned (competently enough) until he was killed in turn by Malcolm in 1057. Banquo, on the other hand, was a fictional character invented by Boece to provide a suitably noble ancestor for the House of Stuart, by then the Kings of Scotland, and eventually, in the person of King James I, the ruling house of England as

well. Shakespeare's play was most likely first performed for that King on August 7, 1606, during a visit from King Christian IV of Denmark.

And during that very first performance, Hal Berridge, the actor who was to play Lady Macbeth, died of a fever backstage -- the first of many sacrifices to the "curse of the Scottish play." An Amsterdam performance in 1672 saw the actor playing Duncan actually murdered onstage when the daggers were switched; the opening of the play in London in 1703 brought a disastrous storm that killed 123 people. Riots broke out during performances in 1721 in London and 1849 in New York, the latter killing 31 people. In Olivier's first performance in the role, in 1937, the founder of the theater (another would-be Lady Macbeth) died, again on opening night. A 1942 production saw another dead Duncan and two dead witches; in 1947, Harold Norman died onstage fighting Macduff. Orson Welles' "voodoo" staging of the play in 1936 had no casualties -- perhaps because he hired real Voudun houngans to play the witches. Intriguingly, when another future king-killer, John Wilkes Booth, played Macbeth in 1860, that production also went off without a hitch.

*"The night has been unruly: where we lay,
Our chimneys were blown down; and, as they say,
Lamentings heard i' the air; strange screams of death,
And prophesying with accents terrible
Of dire combustion and confused events
New hatch'd to the woeful time."*

-- William Shakespeare, *Macbeth*, II:iii:54-59

King James, at the time of the play's premiere, had in fact just survived another king-killing plot (the fifth major one against him), the infamous Gunpowder Plot of November 5, 1605. One Robert Catesby, in collusion with several other Catholics, rented a vault beneath the House of Lords, and planned to blow up Parliament while the King addressed it. According to official propaganda, the King's suspicions (perhaps exacerbated by the fact that his own father had also been murdered by a gunpowder mine) caused a search for explosives in the area. Guy Fawkes, an engineer, was discovered crouching over the fuse train; the other conspirators, blinded by loose powder, fell to the King's men as well. Words related to the Plot recur throughout the play; the "dire combustion" above, along with Macbeth's hypocritical announcement that murder "hath broke ope the Lord's anointed temple, and stolen hence the life of the building." Other words evoke the Plot; Shakespeare uses "blow" five times in the play, "vault" twice, and "trains" once. Most tellingly, the "equivocator" mentioned in the Porter's soliloquy, in Macbeth's bitter description of the witches after Birnam Wood moves, and in Malcolm and Macduff's "trust trial" refers to the Jesuit Henry Garnet, executed (with two others) as arch-conspirators in the Plot, and the author of *A Treatise of Equivocation*, a Jesuit "spy manual" for operations in England.

*"The weird sisters, hand in hand,
Posters of the sea and land,
Thus do go about, about:
Thrice to thine and thrice to mine
And thrice again, to make up nine.
Peace! the charm's wound up."*

-- William Shakespeare, *Macbeth*, I:iii:32-37

Three equivocations, and Garnet's thricefold damnation by the Porter (as "farmer" -- his alias -- "equivocator," and "tailor" -- his role in the Plot), three Jesuits executed. The parallels with the Three Witches (and the Three Murderers that Macbeth sends after Banquo) echo throughout the play; for example, Macbeth sees three apparitions in Hell with the witches during his final visit to them. In Hell, also, the witches are joined by the (triple) goddess Hecate, their patron, who leads a circle dance of demons in a musical number probably written by Shakespeare's sometime collaborator Thomas Middleton. Shakespeare's original magical ritual for this scene, unfortunately, has been lost -- or suppressed. Interestingly enough, King James had been the target of three attempted murders by witchcraft; the Fian plot of 1590, the Bothwell plot of 1593, and the Gowrie plot of 1600. (This had, no doubt, impelled James to compose a scientific manual of witch-detection, the *Daemonologie*.) Each of the plots involved a symbolic drowning, and the first of them (of witches met "in thunder, lightning, or in rain") involved the conjuring of a mighty storm (like the one

in 1703?) to sink the King's ship.

*"To-morrow, and to-morrow, and to-morrow,
Creeps in this petty pace from day to day
To the last syllable of recorded time,
And all our yesterdays have lighted fools
The way to dusty death."*

-- William Shakespeare, *Macbeth*, V:v:21-25

In fact, the three witches always appear under murky, "infected" skies, heralded by storms and atmospheric anomalies of a most frightening nature. (Just like the "black and dismal" day of the Gunpowder Plot, according to the royal report.) Not for nothing does Macbeth hail them as "secret, black, and midnight hags." Again, in the play three nights descend, each carefully marked out by characters giving the time: the night on which Macbeth first meets the witches and becomes Thane of Cawdor, the night on which Macbeth murders Duncan and becomes King of Scotland, and the night on which he murders Banquo and then sees Banquo's ghost. The days after both murders are dark ("By th'clock tis day, and yet dark night strangles the traveling lamp."), and on each end of the three-day period, Macbeth meets the three witches. In three dark days and three black nights, Shakespeare fixes "night's predominance" in a "shoal of time" where cause and effect separate. Again, he works his [time-twisting twin](#) theme -- "fair is foul and foul is fair," Macduff is fathered and motherless, Lady Macduff is the virtuous twin of Lady Macbeth, the witches "should be women, but your beards" indicate masculinity. Again, the mystical androgyne evokes the [mirror](#) magic that fixes "this pernicious hour" under "seeling Night," cutting Scotland off from the natural world.

*"Here's a knocking indeed! If a man were porter of Hell's gate, he should have old turning the key.
[Knocking within]*

Knock, knock, knock! Who's there, i' the name of Beelzebub?"

-- William Shakespeare, *Macbeth*, II:iii:1-3

In his act of regicide, Macbeth has plunged Scotland into Hell in three days of darkness (such as followed the Crucifixion, when Christ spent three days in Hell). The porter at haunted [Glamis Castle](#), Macbeth's bird-infested seat, drunkenly proclaims the gates he guards the gates of Hell, and indeed they enclose a scene of horror, that "tongue nor heart cannot conceive nor name." Macbeth's pact with the demonic has opened the gates to the kingdom of Hecate, the Triple Goddess "o'er the one-half world" where "nature seems dead" and wolves, bears, ravens, and the rest of "Night's black agents" prowl. Macduff explicitly contrasts Macbeth's Hellish Scotland with the "gracious England" under Edward the Confessor where Malcolm hides out; Edward can heal with a touch, while Macbeth's subjects are "dying or e'er they sicken." Powerful imagery, only passed by the royal censors because of their interest in seeing plays that used the Gunpowder Plot theme succeed.

*"Hail, king! for so thou art: behold, where stands
The usurper's cursed head: the time is free:
I see thee compass'd with thy kingdom's pearl,
That speak my salutation in their minds;
Whose voices I desire aloud with mine:
Hail, King of Scotland!"*

-- William Shakespeare, *Macbeth*, V:viii:54-59

However, Shakespeare's ties to the Plot itself bear examination. Robert Catesby was born in Warwickshire, just a few miles north of Stratford-on-Avon, and was apparently a habitue of the Mermaid Tavern where he must have known Shakespeare and his colleagues. Shakespeare was even related by marriage to virtually every one of the plotters, and his old patron from the [School of Night](#), Henry Percy, wound up imprisoned in the Tower for his suspected role in the conspiracy. Finally, Shakespeare's daughter Susanna was accused of crypto-Catholic recusancy under the post-Plot law of 1606, although the charges were apparently dropped. Working from his favored spot as one of the King's Men, did Shakespeare, like Macbeth himself, plot the murder of his patron the King of Scotland? Did he lay a magickal train of powder in the lost rituals of *Macbeth*, sacrificing a life (by fever) to achieve death by fire and storm, catching Abraham Lincoln (among others) in the thaumaturgical blast radius? Did the loyal Warwickshireman, angered by the

failure of his mystic master John Dee's [earlier rites](#), intend to cast time back to November and re-light the failed explosion, or to curse James in the here and now, using his own witch-maniacs and Scottish legendry against him?

Either way, the scheme apparently backfired; James ruled for nineteen more years, confounding Shakespeare's Rosicrucian backers by executing Sir Walter [Raleigh](#) and diplomatically sabotaging the Winter King of Bohemia (after Shakespeare's efforts brought him to power through the occult dramaturgy of *[A Winter's Tale](#)*). However, perhaps the play was actually aimed at the third royal present that day in 1606, James' son and heir, the future Charles I, beheaded in 1649 during the witches' sabbat Imbolc. Although the Stuarts straggled back for one more try, the line of Banquo was broken forever in 1688, when a "miraculous storm" blew William of Orange into power. And after that, there were no more executions of witches in England. Flourish, and exeunt.

Season of Mistletoe

I was born in Michigan, which by many Americans is viewed to be the climatic equivalent of the icy afterlife of Norse mythology, yet which is viewed by many Canadians as a balmy winter home. But I grew up in South Florida. One of the interesting things about South Florida is that it has a very large Jewish population. South Florida also has an average age of 181, its citizens kept mobile in a zombie-like shamble through the energies of a powerful curse placed upon it by displaced Native Americans. But the weather is *great*.

But I digress. Anyway, I grew up in an environment where the mix of those who celebrate Christmas and Chanukah was roughly half and half. As a result, even though I was born Catholic, I picked up a *lot* of Jewish lore and custom, both by osmosis and by having lots of Jewish friends.

More importantly, there are many interesting societal effects of such a diverse environment. For example, people in South Florida rarely say "Merry Christmas" to each other, preferring the more nebulous "Happy Holidays!" (I've carried this one step further to the *thirtysomething*-stolen "Happy Merry Pagan Holiday!", ensuring I offend everyone equally.) I was never in a school-sponsored Christmas pageant growing up, and our classes never partook in class projects or craft-y tasks that presumed a Christian upbringing, like making tree ornaments. (We did these things, but there were always Jewish options made available for students as well.) One of our classes got in trouble when we threw an impromptu matzoth party when the teacher was out of town and we were left alone. Our grocery stores had *extensive* food choices, including entire freezer cases devoted to Jewish cuisine. We were diverse.

So when I went to college in Tallahassee, I was shocked to realize that, in fact, not everyone grew up in an environment with several dozen Jewish friends. In fact, many of my new collegiate friends had never even *met* a Jew, nor did they know that *schmaltz* was, in fact, Yiddish for rendered chicken fat. Since there were other Jewish students in our dorm, this led to some awkward situations. ("Why can't we have a floor Christmas party?" "Because not everyone here is *Christian!*" "Oh, come on; it'll be fun! We ordered a spiral-cut ham!") It also led to some actively *angering* moments, like when I met someone who actually believed in a vast Zionist conspiracy.

Anyway, last year I talked about using [holiday clichés](#) in one's games. This year I'll point out that, even if your gaming cultures *do* all share the same holiday, *how* they celebrate that holiday may be completely different. On a small scale, compare traditions among those who celebrate Christmas: When do they open presents, when do they buy the tree, what do they do on Christmas, when do they take down the decorations, and so on. And for those of us in the U.S., just try to find two families that agree on Thanksgiving traditions like whether it's dressing or stuffing, whether cornbread is good in stuffing or (in fact) a Cthulhean evil, whether you mush up the cranberry sauce or leave it whole on a plate for its can-lines to shimmer in the candlelight, and so on. (As an aside, if you ever manage to find a Significant Other whose family traditions for Thanksgiving match your own family's, be careful; you have accidentally slipped into an alternate dimension, and are in fact dating a parallel universe version of yourself . . . which is also the reason why you two agree on pizza toppings.)

But beyond individual anomalies in tradition around the holidays, there are also national differences. Some regions are more religious than others, some countries give different days off, and so on. For a hilarious example, check out David Sedaris' "[Do They Know It's Christmas After All](#)" from the second act of last week's [This American Life](#). In this radio monologue, he points out that the Dutch have unusual beliefs about Christmas, like how they open presents on December 6th, or how they believe Saint Nick was the former Bishop of Turkey who either pretends to kick naughty children or possibly stuff them in sacks and taken them back to Spain.

Or as another example, Boxing Day, celebrated on December 26th in Canada, Great Britain, Australia, and New Zealand, originated with the tradition of the higher classes giving money or utilitarian presents to the lower classes. Today it's celebrated in those countries by not going to work. In contrast, here in the United States we celebrate Boxing Day by going to see the movie *Ali*.

Anyway, to tie it back to gaming, even in worlds where you've gone to the trouble of creating a [calendar](#) complete with believable holidays, it's often too tempting to either limit the game world to one set of holidays, or to presume

that all holidays are celebrated the same. ("That's funny; these desert nomads celebrate First Harvest, too . . .") Even a little variation can help make your game world real . . . especially in a long-running campaign, where the danger exists of having the game world start to feel cyclical and boring. ("Well, it's First Harvest now; that means a big party. Then there's Storeholm; that's where we put up food for the winter . . . our enemies usually try to attack then. ")

And hopefully your gaming holidays and festivals will be as interesting, varied, and joyful as ours in the real world are.

Happy Merry Pagan Holiday!

As a completely unrelated aside, am I the only one who's horrified by the [Tickle Me Elmo Surprise](#)? For those of you unaware, this item is similar to the Tickle Me Elmo that folks got into knife fights over in toy stores a few years ago, except it's a bit more sophisticated, using TL8 Tickle Technology. Perhaps most interesting, this doll supposedly has a new secret "play mode" that begins on January 9th. So apparently it knows what the date is, and will react accordingly.

At the risk of expressing my bad movie knowledge, isn't this the plot of [Halloween III](#)? I mean, they're telling us up front that something's going to happen, yet we're paying to invite these cuddly little Trojan horses into our homes. What if January 9th rolls around, and they start tittering madly and, in a cheerful high-pitched voice, say, "Elmos form Elmotron! Now you die! Hee-hee-hee-hee-hee . . ." And then the 87,000,000,000 Tickle Me Elmo Surprises in the world merge together in a gargantuan plush clockwork automaton, destroying whole cities with its giggly vibrating mirthful presence?

Wouldn't we be surprised?

If future generations find this missive, know that I tried to warn them.

And if my therapist finds this . . . um . . . know that I'm just kidding.

Murphy's Rules

Designer's Notes: GURPS Steam-Tech

by William H. Stoddard

GURPS Steam-Tech was put together from the works of many contributors. In checking their submissions before accepting them for the playtest draft, I noticed several points where the contributors disagreed on how to apply the existing rules -- with each other or with me -- and realized that on some points the implications of the rules weren't fully clear to me. Nowhere did this happen more often than in the creation of clockworks, automata, and analytical engines. By the time the final draft went in, the playtesters and I had made many things clearer. For the benefit of other steampunk GMs and players, or of anyone who uses the *GURPS* rules for computers, here are fuller guidelines for designing such systems.

Complexity and IQ

Complexity is an abstract measure of a computer's information processing power, with higher scores indicating more power. For most computers, IQ is Complexity + 3; for sentient computers, IQ is Complexity + 5. The original Complexity scale started at 1, and thus at IQ 4. *GURPS Steampunk* added lower Complexity scores, down to -2, corresponding to IQ 1, the lowest score possible in *GURPS*, to represent devices simpler than computers, but still possessing some sort of data processing capability and perhaps behavioral response.

Action Sequences

The simplest thing an automatic device can do is carry out a fixed series of movements or actions. A device carrying out one series, such as a clock, is Complexity -2; a device carrying out several coordinated series in a repeating cycle, such as a music box, is Complexity -1; if the device does not precisely repeat, as in an orrery, where several celestial bodies move with different orbital periods, the device is Complexity 0.

Self-Regulation

Another class of very simple devices is automatic control systems, which monitor and compensate for environmental changes. Devices such as a thermostat, which keeps a room at a fixed temperature, or a governor, which keeps a steam engine running at constant speed, are Complexity -1. Autopilots, which keep a vehicle moving in a fixed direction at a fixed speed, are Complexity 0. Note that a vehicle that moves on tracks needs a steering mechanism less sophisticated than an actual autopilot; a course control that can start, stop, and make a sequence of right and left turns at specific points is Complexity -1.

Computation

Complexity scores can be defined for calculating devices. Adding machines are Complexity -2. Four-function calculators are Complexity -1. Calculators with preprogrammed functions, such as scientific calculators, are Complexity 0. Programmable calculators are Complexity 1 or higher.

Codes and Cyphers

Encoding or decoding messages with simple substitution codes is a function much like simple calculation; machines for this purpose are Complexity -1. Such coded messages can be broken without a penalty to Cryptanalysis. More complex encryption schemes require actual programs, discussed below. Breaking any code, even a simple substitution code, also requires an actual program.

Programs

Only a machine of Complexity 1 or higher can be programmed. A procedure counts as a program if it contains branch points, where the machine performs one or another action depending on the internally stored results of previous actions. If there are no branch points, or if the branch depends on something external (such as a human operator throwing a switch, or a thermostat sensing the temperature of a room), the procedure is not a program and usually requires Complexity 0 or less.

Programs carry out a variety of functions; major categories are personality simulation programs, advantage programs, skill programs, and utility programs. See *GURPS Robots* for several examples of each type.

A standard machine can run two programs at its own Complexity.

Languages

A program amounts to a set of instructions. But the form taken by the instructions depends on the complexity of the machine. Complexity 1 machines must be programmed by actually specifying the internal state of the mechanism, using what is called "machine language." The very first computers during World War II were actually programmed by physically rewiring the circuits, and analogous methods involving Mechanic skill can be required in a steampunk setting.

Machines of higher Complexity can be programmed or instructed through "languages" that bear a closer resemblance to actual human languages. The instructions may take the form of alphanumeric punched cards, or lines of text on a screen, or speech, or sign language, depending on the machine's sensors. At Complexity 2, a machine can understand a restricted instruction set -- something like Fortran for a computer, or a set of code phrases for an early mechanical man. At Complexity 4, it can cope with actual human languages.

Personality Simulation

A machine at Complexity 4 can achieve limited personality simulation, which includes a single disadvantage and up to five Quirks. Over time, the machine's lack of depth and of actual human experience will become apparent. A machine at Complexity 5 can achieve full personality simulation with a multilayered personality. Either type of program can be either voluntary (a role the machine is playing) or obligatory; obligatory personality programs are worth character points, but voluntary ones are not. A machine at Complexity 6 has the potentiality for sentience; a sentient machine does not simulate, but actually has a personality.

A simpler option is a pet program, which simulates the behavior of an animal. Pet programs are possible at any Complexity; the maximum IQ a program can simulate is its Complexity + 2. Note that the beginnings of real trainability at IQ 4 correspond to the ability to understand a limited range of spoken commands at Complexity 2. A pet program can include psychological disadvantages corresponding to those of the animal it simulates, such as Hidebound or Incurious.

Skills

A skill program grants a machine a number of points dedicated to a specific skill. Note that points spent on mental skills count x4 because of the machine's Eidetic Memory. The maximum number of points in a skill program depends on Complexity: 1/2 for Complexity 1, 1 for Complexity 2, 2 for Complexity 3, 4 for Complexity 4, 8 for Complexity 5, and 16 for Complexity 6 (counted as 2, 4, 8, 16, 32, or 64 for mental skills).

How does this translate into skill levels? Machine IQ also depends on Complexity. So for a Mental/Average skill such as Cartography, Complexity 1 would allow IQ 4 and 2 points of skill, for Cartography-4; Complexity 2 would allow IQ

5 and 4 points of skill, for Cartography-6; Complexity 3 would allow Cartography-9, Complexity 4 would allow Cartography-14, Complexity 5 would allow Cartography-23, and Complexity 6 would allow Cartography-40.

But someone has to write the program, and it's not possible to write a program above one's own skill. In a realistic campaign, the best person in a given field is probably skill 20 -- skills above 20 are getting into the "best in history" range and their possessors will not be writing programs! So a machine of Complexity 5 or 6 probably should not have skill higher than 20, even if it could run a more complex program. If there are sentient machines in a campaign, they can write their own programs and get up to skill levels no human being can match.

Machines of low Complexity can't have enough skill to be worth much. But a machine can also provide assistance to a human user's skill. Allow +2 to skill at the Complexity where such assistance first becomes possible, and an added +1 for each added level of Complexity.

The Automaton Option

An analytical engine can have the Automaton option, which enables it to control a vehicle, automaton, or mechanical man. The code that does this occupies one of its two program slots and enables it to perceive, communicate, manipulate, and move about.

An automaton has DX as well as IQ. This is equal to half its Complexity (rounded down), plus 8. Thus, a Complexity 4 machine has $DX = 4/2 + 8 = 10$. Physical skills, based on DX, are not enhanced by Eidetic Memory; for a Physical/Average skill such as Boxing, Complexity 1 would allow DX 8 and Boxing-6, Complexity 2 would allow Boxing-8, Complexity 3 would allow Boxing-9, Complexity 4 would allow Boxing-11, Complexity 5 would allow Boxing-12, and Complexity 6 would allow Boxing-14.

In a steampunk setting with mechanical men, "programming" may take place through physical drill in a series of actions, and a "programming language" may be a spoken language with a small number of standard signals. The whole process may look much like the military training of the period.

The Dedicated Option

A machine can have the Dedicated option, meaning that its programs are built into its gears or circuits. This inflexibility makes it cheaper but less flexible. A normal machine has the Rote Learning [-25] disadvantage, enabling it to learn maneuvers but not new skills. A Dedicated machine has Cannot Learn [-30] and cannot even learn maneuvers.

A Dedicated machine can still have more than one program; it simply can't change which ones it is running, or store programs without running them. For example, a Complexity 4 mechanical man with Juggling-12 as a Dedicated program needs one program slot for the skill program, and another for its basic body operation program, so clearly it can run two programs at the same time.

Since machines of complexity 0 or less cannot be programmed, they all have the Dedicated option.

The High-Capacity Option

The High-Capacity option gives a machine three slots at its Complexity, instead of two. If it has the Automaton option, its body operation program occupies one slot, so it has two left, instead of one.

For machines that do not run programs, High-Capacity can be interpreted in other ways. For a music box, for example, it could mean having several different stored melodies that can be played alternatively; for a calculator, it could mean being able to retain a number in memory, over and above the two it was immediately operating on, like a four-function calculator with a Memory key.

With these interpretative rules, it's possible to build automata for a variety of purposes. For example, consider the

control device for the bomb-carrying ornithopter automaton. This needs to direct a series of flapping movements that keep the device flying and also to execute a series of turns and drop bombs at specified points, but it's not able to sense if the wind blows it off course, so it's Complexity -1. At TL(4+1) this is achievable with a Genius small device, a standard miniengine, or a Dumb microframe; since weight is at a premium in a flying machine, make it a Genius small device. In addition, give it the Automaton, Dedicated, and Mechanical options.

Accounting for the effects of these choices gives a device that weighs 15 lbs., occupies 0.3 cf, costs \$5,000, and consumes negligible power. With Complexity -1, it has IQ 2 and DX 7; its flight will probably be somewhat awkward.

To make it a true autopilot, capable of correcting for the wind blowing it off course, it would need Complexity 0. This might just barely be reconciled with the need for low weight by making it a Genius miniengine with the Automaton, Dedicated, Mechanical, and Supercompact options. The result would weigh 60 lbs., occupy 1.2 cf, cost \$105,000, and consume 0.2 kW. Complexity 0 would give it IQ 3 and DX 8. Raising the cost of the ornithopter from \$40,000 to \$140,000 might be justified by increased reliability; an experimental advanced design might be a useful target for foreign spies in a clockpunk setting.

With a little ingenuity, a GM can contrive many other clockworks, calculating engines, and automata to aid, baffle, or tempt players. *GURPS Steam-Tech* offers a number of examples based on these rules.

Hard Vacuum and Hard Vacuum: Science Gone Mad

Designed by Darrel Hayhurst

"As early as 1930s we processed the knowledge to build a simple space flyer."

--Willy Ley, July 20, 1969

Perhaps Herr Ley may have been exaggerating a little, but the notion of World War II-era space flight certainly tickles the fancy of *Flash Gordon*-style science fiction fans like myself. Just imagine where we would be now if space flight began 20 years earlier than when it actually started in the 1950s. We quite possibly wouldn't still be mucking about in low earth orbit as we are now.

That's the concept behind *Hard Vacuum*, the board game of "pulp sci-fi space combat designed by Darrel Hayhurst and set in a wild alternative WWII." The Germans develop manned space flight by 1941 and pervert the new technology to their war effort. Soon, the Germans started throwing orbital bombers at the Allies who, with the help of Robert Goddard, started building their own primitive space fighters. The Germans discover a new super-fuel that vastly improves their spacecraft, while Nikola Tesla provides the fledgling Americans space force with a new atomic power generator for their ships.

Hard Vacuum operates on modified d6 mechanics; the dice are numbered 0-5 (FMG sells its own set of "Vacuum Dice") and a roll of five allows you to re-roll and add the result. The game is played on a standard hex-grid, although the game includes templates to play on a plain surface. The basic game mainly features fighter-sized ships, although larger ships of destroyer size are more than possible under the game's comprehensive design system. Movement and combat are simultaneous.

Although the *Hard Vacuum* universe is set in the genre of 1940s science fiction, the movement system is by no means unrealistic. Spacecraft in *Hard Vacuum* are strict adherents to Newton's Laws of Motion. A ship will continue travel along the same vector until the ship uses its thrusters to alter course. Just like real space flight, ships can travel in one direction while facing another. To help players plot the ship's movement, players use triangular numbered counters placed along the hex sides to indicate how far and in what direction the vessel is traveling per turn.

The basic rules initially introduce German and American ships, each with their own unique set of rules and tactics. German fighters rely on both a finite supply of ammunition for their projectile weapons and fuel for their engines. Americans draw the power for maneuvering and their energy-based weapons from their Tesla Zero-Point Energy coils, which are drained and recharged over the course of the turn. German space planes tend to have greater lateral (sideways) thrust than their American counterparts who have greater rear thrust.

Combat in *Hard Vacuum* is fast and decisive. To hit the target, you must beat its silhouette rating; the number of dice you roll depends on the weapon and the range to the target. Any result that produces doubles requires making a roll on the critical hits table, causing everything from damage to a vital ship system to the sudden destruction of the target. Advanced rules add the concept of visibility (you have to see the target amid the inky blackness of space before you can shoot at it) and deflection (the target's speed and vector, as well as the attacker's, are taken into account in combat) to the game, increasing the overall "realism" of the system.

Hard Vacuum contains 10 different spacecraft ranging from light fighters to freighters to the massive Von Braun class space destroyer. The main book features nine basic scenarios to test your skill and tactical knowledge. The book has a full set of cutout counters (which contains hundreds of thrust makers that are a pain to cut out) and a pull out set of quick start rules so players can dive right in.

Fat Messiah Games has just released their first ***Hard Vacuum*** supplement, ***Hard Vacuum: Science Gone Mad***, which greatly expands upon the game and brings new forces into the "Battle for Orbit."

In the basic rules, ***Hard Vacuum*** only features "generic" pilots. ***Science Gone Mad*** adds rules for Aces whose prowess in combat allows them to improve their ship's maneuverability, increase their chances to hit their target, escape their doomed spacecraft, and other useful skills. There is also a set of pilot campaign rules that allow new pilots to gain skills as they grow in experience.

Science Gone Mad also features a "Flashback 1942" section that contains rules for early-war orbital bombers and fighters. Early-war ships use liquid fuel rockets rather than the super-science engines used by their advanced counterparts. As the ship uses its hazardous brew of nitric acid and alcohol, it actually loses mass, making the craft more maneuverable. The British, whose ships are introduced in ***Science Gone Mad***, primarily use these primitive drive systems in its growing space fleet.

New super-science technologies featured in ***Science Gone Mad*** include radio-guided torpedoes, magnetic beams, and stealth hulls. More mundane equipment like hanger bays, fuel and ammo dumps, and gimbaled thrusters are also available. ***Science Gone Mad*** also includes an expanded ship design rules that allows players to add space stations, and imposing battle cruisers to their fleets. Like its predecessor, ***Science Gone Mad*** also includes a full set of cutout counters, 11 new scenarios, and 17 new ship and space station designs.

The one conflict that has plagued game designers, particularly those who design space combat games, is realism vs. playability. Some games bore their players down with complex rules designed to emphasize tactical richness, while those who take the idea of "Keep It Simple, Stupid" to an extreme can sap a game of any real depth. ***Hard Vacuum*** succeeds as one of those few space combat games that strikes a balance between these extremes. The movement system is designed so as to reduce the tricky proposition of space travel down to an easy to understand level. At the same time, you don't need to be a rocket scientist (no pun intended) to understand the combat mechanics.

Most of the game's artwork is CGI, created by Darrel Hayhurst himself. Although the space ship renderings look slightly amateurish in the first book, they greatly improve in ***Science Gone Mad***. Either way, they do capture the *Buck Rogers* essence of the game's background. The layout in both books are quite good; the rules are outlined in a logical order, the ship record sheets are eye catching, and illustrated play examples are clear and concise.

One thing this game system definitely needs is a miniature line. The range of ship designs is awesome and deserves to be rendered into pewter reality. Also, the lack of a miniature line may deter some from trying the game out. Although the counters provided with the game are excellent, hard-core miniature gamers usually turn their noses up at any two-dimensional playing piece.

With a great rules system and a background that will send shivers down the spine of any alternate history lover, ***Hard Vacuum*** is just the game for those looking for something different in a space combat game. Add on ***Science Gone Mad***, and you'll have a game that will keep you and your gaming group occupied for quite some time.

So power up your reactor, and charge your atomic bolt cannons! It's time to make Jerry suck some vacuum!

Circle Of Fear -- Part I

A GURPS Atomic Horror Adventure

by Stephen Dedman

For this adventure, the GM will need the *GURPS Basic Set*, *GURPS Compendium I* and *II*, and *GURPS Atomic Horror* (*GURPS Bestiary* and *GURPS Russia* may also be useful, but are not essential). It is designed for 100-point *Atomic Horror* characters and set in the mid-1950s, but can easily be adapted to any setting where close encounters with UFOs might be expected, such as *GURPS Black Ops*, *GURPS Supers*, or *GURPS Illuminati*.

At least one PC should be a US-based member of a group such as the Theoretical Science Foundation; others may be allied scientists, journalists, feds, or other people caught up in the hunt for the UFO.

(For the sake of convenience, this adventure is set this late in 1954 -- the year of *This Island Earth* and *Monster from the Ocean Floor*, the H-bomb test at Bikini Atoll, Kruschev's visit to China, and McCarthy's condemnation by the Senate -- but it can be moved to any other year without difficulty.)

First Contact

The first indication of anything strange is a sudden rash of UFO sightings and similar reports -- including crop circles and a rain of fish.

Most people would ignore the first few reports -- except for TSF members, and the tabloid journalists who will compete to bring these stories to the world. After that happens, of course, many of the "sightings" will be fakes, and investigators will have to work a little harder to sort the truth from the garbage. The number given after each report is the modifier to Research skill that a PC will have to make to hear of this incident within 24 hours of its happening: halve this penalty if an attempt at Research is made later.

- **Tuesday 28 September:** UFO seen by crew of Japanese fishing vessel near Kushiro (-10).
- **Tuesday 28:** UFO seen over Melbourne, Australia (-7).
- **Thursday 30:** UFO photographed outside Sydney, Australia (-2).
- **Monday 4 October:** UFO seen over Auckland, New Zealand (-10).
- **Early morning, Wednesday 6:** Rain of fish near Adrar, Algeria (-3).
- **Morning, Monday 11:** Crop circle found in garden north of Helsinki, Finland (-4).
- **Tuesday 12:** UFO seen, photographed and filmed by tourists over Cairo (+3).

Even the least alert UFO researcher should realise that something is going on when the first photographs of a UFO behind the Great Pyramid hit the newspapers. Rolls on Photography/TL7 and Research skills will reveal that the more spectacular photos, those which feature Pyramids or the Sphinx, are faked, while the less clear photos which show a saucer with less glamorous backdrops (slums in the cemetery, sand dunes, roofs topped with TV antennae) may be authentic. Unfortunately, judging the scale when there's almost nothing but desert and/or sky to go by is impossible. The grainy 8mm film of the UFO streaking through the sky, is also almost useless, simply because there wasn't enough light for a clear image, and the hand-held camera shakes too much for a good idea of the speed at which the object seems to be moving.

The photos are clear enough to reveal one thing, though: the saucer looks identical to the one photographed near Sydney, Australia (Research at -1). This isn't particularly significant in itself -- it's the same basic dome-on-a-disc shape commonly reported since *The Day the Earth Stood Still* was released -- but it matches the descriptions of the UFOs over Melbourne, Auckland, and Japan (Research -3). PCs reading the reports and making a roll on IQ -2 will also notice one unusual detail most of the accounts have in common: the saucer is reported as appearing and

disappearing suddenly -- "like a soap bubble", in the words of one witness.

Go Fish

Given travel times and costs of the 1950s, it's unlikely that even the best-funded US-based researcher would be able to travel to all of the places where this saucer has been seen, so some other method of gathering data will have to be used. A member of the TSF should be able to enlist help from the London office, and possibly from field officers near these sites: a good or better reaction roll, or a successful roll on Administration skill, should be enough to persuade the TSF to send someone out to perform interviews, take photos, etc.

PCs who are not members of the TSF who want to conduct research independently will have to rely on their own Contacts in the area (Academic or Journalist contacts would be most useful, but the military may be conducting its own investigations), or hope that Research skill will answer their questions (a modifier of at least -5 in most cases).

If the players don't think of the right questions to ask, the PCs should be able to do so if they roll on Science! or the appropriate scientific skill (listed for each question). Make a Reaction roll to determine the quality of the answer.

Q: Are the reports reliable? (*Psychology +2: roll for each incident*)

A: (*Poor or worse roll*) No reliable witnesses found. (*Neutral*) One fairly reliable witness found, but no collaboration. (*Good or better*) 1d+1 reliable witnesses found, and stories check out except for minor details.

Q: At what time did the sightings occur, and how long did they last? (*Astronomy +2: roll for each sighting*)

A: (*Poor or worse roll*) Uncertain. (*Neutral*) Time known to nearest hour; duration uncertain. (*Good or better*) Time known to nearest 10 minutes, duration (Kushiro, 7.50 am; about 20 seconds; Melbourne, 5.30 pm, about 10 seconds; Sydney, 6 am, about 20 seconds; Cairo, 8.20 pm, about 30 seconds)

Q: In what direction was the object traveling? (*Astronomy -1: roll for each sighting*)

A: (*Neutral or worse roll*) Uncertain. (*Good or better roll*) From north to south; uncertain as to speed.

Q: What sort of fish were discovered in Adrar? (*Zoology -2*)

A: (*Poor or worse roll*) No evidence found. (*Neutral*) A variety of sizes and flavors, all unfamiliar to the locals. (*Good*) Salt-water fish, primarily cod. (*Very Good or better*) Primarily North Sea cod and others from same habitat.

Q: Describe the Helsinki crop circle. (*Botany -1 or Geology -3*)

A: (*Neutral or worse roll*) Simple circle in a garden, about 5 yards diameter and a foot deep, already filling with muddy water from recent rain and may be faked. (*Good or better*) 5 yards 7.21 inches diameter, approximately 13 inches deep; apparently perfectly round with a flat base, no sign of a hole in center to suggest use of stake and rope. Surrounding plants undisturbed; flowers, including most of root structure, missing. Radiation level normal.

Nothing much will happen for another week, leaving the PCs to puzzle over these results. Before they can renew their passports and book airline tickets, however, the first reported sightings of a similar object start coming in from California.

Wave Theory

The first report comes from LA, where three passengers on a flight from Hawaii claim to have seen a UFO through the

window of their plane (a Lockheed Super Constellation) just as the sun was rising: some time between 5 and 6 am, on Tuesday 18. While the aircrew report seeing nothing, and dismiss it as a sighting of Venus or a patch of ice crystals, the PCs may consider this worth investigating.

The three passengers -- Linda Jameson, 9 years old; her mother, Barbara, a grade school teacher; and Robert Smith, a machinist on an aircraft production line -- were all seated on the starboard side of the plane. Smith, who also served as an airframe fitter in the Korean War and World War II, is quite sure what he saw, though he will protest vehemently that he doesn't believe in "little green men." He saw a disc, the approximate color of aluminum and without any identifiable markings or lights, that flew beneath their plane for about 12 seconds before disappearing under a cloud. He estimates that its altitude was somewhere between 15,000' and 20,000', that it was between 20' and 50' in diameter, and that it was moving northwards at least as fast as the Super Constellation was headed east. If shown the pictures from Sydney or Cairo (which he hasn't seen before -- he was too busy vacationing to read a paper), Smith will say cautiously that since he saw his from a different angle, he can't be sure it was the same disc, but it looks similar. He suspects it's just an experimental plane -- and hopes that it's an American one.

Linda and Barbara will tell similar stories, but with less detail and more diversions (Linda, especially, would rather talk about her holiday in Hawaii, the new dolls and clothes her mother bought her there, etc. Be as cute as possible.)

None of the other passengers will admit to seeing anything, claiming they were asleep at the time or on the wrong side of the plane, and all but one are telling the truth -- Jack Howe, a lawyer who doesn't want to risk being ridiculed. If the PCs manage question him, he will be able to confirm most of the details of Smith's story, but not to add anything important.

Further reports will come in from LA, and further north, over the rest of the day. The vast majority are either errors or hoaxes, but they can be used to make things a little more challenging for the PCs, and give the GM a chance to do a little acting.

Juan Vasquez is a janitor on the Santa Monica pier, who also saw the saucer, but hasn't told anyone: the PCs will only encounter him if they return to the pier between 5.30 am and 7.30 am any day. While a reliable witness, he speaks almost no English, only Spanish.

Roger "Rocky" Shaw claims to have seen the saucer while surfing that morning. An athlete turned B-movie actor and stuntman, Rocky is trying to convince a producer to let him star in *Monster of Malibu*, and sees the saucer sightings as a way of promoting himself. His version of events is copied from the newspaper stories, and agrees with Smith's in most details, except that the saucer was heading due south. Fortunately, he's not a very good liar.

David Goldberg, a beatnik arts student in Portland, Oregon, thinks he saw a saucer almost exactly overhead at about 7 am, when he was walking home from a party. While he saw it too briefly to give a clear description, he is sure that it was headed north. He has not reported it, but one of his professors overheard him talking about it, and informed the TSF. Despite his obvious eccentricities and his hungover condition at the time, David is a reliable witness: his distrust of authority figures, however, will make it difficult to interview him.

Many other people across the USA will be watching the skies at this time, and will report anything that might be a flying saucer. A successful roll on Detect Lies will reveal that they believe their stories, but successful rolls on Meteorology, Astronomy, or Science!, will enable investigators to eliminate any false leads. This will be an excellent opportunity for the PCs to meet some Personalities who were in LA at the time -- including Robert Heinlein, Ray Bradbury, James Dean, Marilyn Monroe, Orson Welles, Ronald Reagan, Roger Corman, Ed Wood, etc.

There will be even more people watching the skies the next day, when the *Midnight Sun* newspaper offers a reward of up to \$5000 for incontrovertible proof that aliens are visiting Earth. Under the circumstances, the PCs could be forgiven for missing authentic sighting reports coming from Anaheim CA, and Dayton WA, on the night of the 19th, and from Phoenix AZ, Ogden UT, Fairfield MT, and Fort McMurray, Canada, early on the morning of the 21st (roll on Research -3 for each sighting). If they do investigate these reports and can verify them (using Interrogation, Detect Lies or Psychology, Astronomy, Meteorology, etc.), they may begin to detect a pattern amid the noise. If not, an NPC will reveal it to them soon.

One person interviewed by the Midnight Sun and other news media on the 19th is Dr.Homer Evans, a blacklisted mathematics professor well known to UFO investigators for his often-stated opinion that aliens must be friendly, to state and federal government and academia for his requests to build structures signalling our presence to aliens, and to B-movie producers for his blistering critiques of many science fiction films. Every time the PCs attempt to interview somebody who has reported seeing a UFO, or visit a site where the saucer has been sighted, roll 1d; on a 1, they will also encounter Evans and/or his cultists.

Some of the fuss will have died down by Saturday 22nd, when a PC (a journalist, scientist or member of the TSF) receives a letter from Evans. Evans claims that the sightings are following a distinct pattern, and that the sealed envelope enclosed with the letter contains a prediction for where it will be sighted before Monday 24th, with a request not to reveal this information before the appropriate time. If the PCs open the envelope, they will find a small piece of paper with one typed line -- "Bombay India, Sunday October 23rd PM, heading south."

If the PCs attempt to question Evans before this time, he will say nothing except that he is waiting for his hypothesis to be validated. Sure enough, there are reports from Bombay the next day, of hundreds of people claiming to have seen a disc in the sky, traveling south, for a few seconds shortly after noon.

Evans will only reveal his formula if the TSF (or whatever other body the PCs are connected to) will promise to support his plans to build geometrical structures that will reveal to anything orbiting the Earth that the planet is inhabited by intelligent beings -- his favorite scheme is for an equilateral triangle of green plants, miles on a side, surrounded by squares of yellow grain, to demonstrate our awareness of Pythagorean theorem. If the TSF does not manage to convince him (very good or better reaction roll), he will tell them to work it out themselves. Fortunately, even if the PCs can't do it, the TSF's best mathematician, Dr.Schelfhout, will come up with an answer on Monday 24th, after reports come in of sightings in Dodge City KS and Brandon, Canada, and a crop circle found a few miles east of Lenora, Nebraska. The saucer is orbiting the globe approximately every day and a half, and coming east by almost exactly six degrees each time.

Fields of Fire

To confirm or disprove this theory, the TSF sends the PCs to Lenora to investigate the crop circle. Finding the circle won't be difficult: the farmer who owns the field, Peter Hoffman, has put signs up on the nearest road, charging \$2 to see it, and his 17-year-old daughter Ellie will be waiting to collect the money. Fortunately, the PCs should arrive before tourists have done much to damage it, though Hoffman's own prints and others are plentiful around it. If they ask Hoffman who has been there before them, he will mention his family, the local veterinarian (an old friend), a few of his children's friends on their way to school, and four city slickers who got out of a black Oldsmobile and took a lot of photographs and left about ten minutes before the PCs arrived.

The circle, less than a hundred yards from the farmhouse, matches almost exactly the description of the one discovered in Helsinki: 5 yards 7.21 inches diameter, approximately 13 inches deep; apparently perfectly round with a flat base, no sign of a hole in center to suggest use of stake and rope. Surrounding plants undisturbed; corn, including most of root structure, missing. Radiation level normal.

Hoffman admits to not having seen the saucer, though he did hear one of his hounds, probably Brutus, barking early in the morning. If the PCs ask to see Brutus, Hoffman will admit that he hasn't been able to find him. If a PC makes a Tracking roll at -6, he will find large pawprints (mostly obscured by later human prints) leading into the circle . . . and none leading out.

Hoffman will leave the PCs at the circle, saying he has chores to do. After about fifteen minutes of investigating the circle, the PCs should roll (smell -5 or Danger Sense) to smell smoke, (roll once per minute, reducing the penalty by 1 every minute). The "city slickers," Evans's cultists, having found a "saucer nest," are trying to carry out one of their mentor's pet schemes -- setting a huge triangular fire to signal the UFO. Unfortunately, they know little about cornfields or setting fires, and this one has gotten away from them.

The sooner the PCs smell the smoke, the easier it will be for them to get away unharmed -- though PCs with an Obsession for "finding out the truth" will have to make Will Rolls to leave the site before finishing their research. Finding a safe route back to their car will require a roll on Meteorology or default (+3 for Absolute Direction, -1 for every minute since the fire started), and considerable haste. If they make their roll to find a safe route out, they will have to cross 6 hexes of fire (see p. B130) minus the slowest PC's Move. If they failed, add 1d to the number of hexes of fire they have to cross. The flames will be too fierce to extinguish without appropriate equipment, but PCs should be encouraged to improvise (if someone's thought to bring a canteen of water, for example, a wet jacket might be used to beat out a hex of fire). They will also have to contend with smoke (see p. B132).

After escaping from the fire, and if not too badly burned, the PCs may decide to stay and help Farmer Hoffman put the fire out, gaining themselves a +2 reputation with the locals (and possibly redeeming themselves with Hoffman if one of the PCs has made a pass at Ellie); if they are uninjured and leave immediately, the TSF will gain a -2 reaction throughout the state.

Making a case against Evans's cultists will be difficult: they disappeared as soon as they realized they'd lost control of the fire, and nobody took a note of their car's registration (though the colors suggest that it came from Colorado). Hoffman's description of them as "four men in black suits and sunglasses, a tad shorter than me and kinda scrawny" and "city folk who looked like they'd been driving all night" isn't much help.

Sssss

The TSF will send the PCs out again as soon as they have recovered from any injuries received in the fire -- to Texarkana on Tuesday night, to Milwaukee on Thursday morning, and to Augusta GA on Friday evening. Each excursion will be an exercise in frustration, as the UFO is never sighted over those cities (though another TSF team does photograph it near Spartanburg while the PCs are in Augusta).

On Sunday morning, the PCs are called to Washington D.C. as part of a briefing for the President, the Joint Chiefs of Staff, and other government and military figures. This will give them a chance for encounters with East Coast personalities -- Einstein, Eisenhower, Vice President Nixon, J. Edgar Hoover, and others). A few minutes after 10 am, they receive a message reporting a sighting approximately 50 miles east, near Cambridge MD -- and a report of fish found on a roadside. The press already has most of the details, so the USAF provides helicopters (two Bell Model 47s) to get at least some of the PCs there ahead of anyone else.

Once the PCs find the site (about half an hour later), it will only take Zoology +2 to recognize at least one species of fish dumped there -- piranha. A roll on Zoology at -2 will help them confirm that the rest are also native to the Amazon river. The fish are scattered along approximately 30' of roadway; the mud beside the road is still wet, as are some of the trees, and there is dark mud spattered over some leaves and branches. A good vision roll will enable a PC to spot a small but very colorful frog, which Zoology -2 will identify as an arrow-poison frog. A roll on Tracking will also reveal that a very large snake seems to have slithered into the woods recently.

Finding the snake -- a large, rather hungry and very aggressive anaconda -- will not be difficult, as it will attack the smallest PC to come within 10 yards. Anyone seeing it attack will have to make Fright Checks at -2: -4 for characters with a phobia of reptiles, -8 for anyone with a severe phobia.

Catching the anaconda alive (as requested by the TSF) will be another matter, particularly as no-one has thought to bring a tranquilizer gun or even a net and the helicopter will have to be sent back to the Zoo to collect them. The only useful item in the helicopter (apart from anything the PCs may have brought with them) is a 50 yard coil of rope.

Anaconda

ST 24; DX 13; IQ 3; HT 15/24. (See Python, p. B143.)

Catching a frog will be safer, but frustrating; their bright colors make good camouflage amid the fallen leaves (-2 to

Vision rolls), and catching one requires a contest of DX (the frogs have DX 14).

Once the site and the snake have been examined by the TSF and other scientists, it will be agreed that snake, fish, frogs, mud and water seem to still have been in Amazonia less than an hour before they were found. There is no sign that they were interfered with in any other way.

Riders to the Stars

The TSF's last best hope of learning more about the flying saucer comes on the night of Monday 30th and morning of Sunday 31st; they place as many observers as they can along the projected route through Maine and Quebec, as well as sending a small team to Ulan Bator in Mongolia. The PCs are stationed a few miles west of Auburn, ME. Unknown to them, though, Evans's cultists are also waiting nearby.

At 11.04 pm, the PCs will see lights in the sky, about half a mile away: roll on IQ to recognize as signal flares. More flares light up the sky around them in the next few minutes, some nearer, some further away, as the cultists attempt to attract the attention of the saucer. Before the PCs can pinpoint the cultists and confront them, however, the saucer appears almost directly above the road a few hundred yards away.

The TSF has provided the PCs with a Willys-Overland jeep with a portable searchlight, a movie camera, a Geiger counter, two radiation suits, a tape recorder, a simple first aid kit, and a Colt M1911 pistol: any other equipment they want, they will have to provide themselves. Whether they all pile into the jeep to chase the saucer, or stand around it awestruck, the saucer will pass directly above them and "beam them up" (much to the irritation of the cultists, who were hoping to be "taken home").

The PCs will barely have long enough for a fright check at -3 before being placed in stasis.

Flying Saucers have Landed!

When the PCs regain consciousness, they will be unaware of how much time has passed or exactly where they are. What is immediately obvious will be trapped in a cylinder (15' diameter, 15' high) of some very tough and elastic transparent material -- one of six in a cylindrical room.

- **Cylinder 1:** Contains the PCs and most of the jeep. While the PCs have all arrived intact with most of their equipment, a vital part of the jeep was clipped off by the teleporter -- the front of the engine, the outside inch of the wheels on one side, a corner of the fuel tank, or something else that will render it useless as a jeep. Environment (air, temperature, gravity, etc.) are normal for Maine on an October night.
- **Cylinder 2:** A faulty cylinder that occasionally dumps its loads prematurely -- hence the rains of fish, frogs, etc. Contains seawater and various fish from the Caribbean (Zoology -2 to identify.)
- **Cylinder 3:** Contains a section of Brazilian rainforest, including two small New World monkeys, a well-fed male ocelot, and other assorted small animals (including birds, some small reptiles, and some impressive insects). The ocelot will avoid the PCs if possible, but fight if cornered.

Ocelot

ST 6; DX 14; IQ 4; HT 14/8.

Move/Dodge 10/7; Size 1 (4' long); PD/DR 1/1; Weight 30 lbs; Damage 1d-3 cut; Reach C.

- **Cylinder 4:** Another faulty cylinder; this one won't release its load at all. Contains beautifully iridescent alien jungle plants and various small animals, including flying lizards, arboreal octopus-like creatures, and so on. Unfortunately, the atmosphere inside is poisonous; if the cylinder is breached, it will contaminate the air in the rest of the room (treat as Flourine, pCII136).
- **Cylinder 5:** Another cylinder that won't release its load. Contains snow, soil, very cold moist air, and two Tuskers (see Cast, below).

- **Cylinder 6:** Contains three placid (if rather confused) sheep from the Falkland Islands and some unappetizing grass.

The exterior hull is made of a regenerating metal with DR 30; nothing the PCs are carrying will be able to scratch it, much less penetrate. In the center of the room is a control column that resembles a double helix of semi-precious stones (actually holographs) enclosed in another transparent cylinder (see below for controls and effects).

The cylinders are made of a highly resilient membrane, impervious to crushing damage or energy attacks: hammering at them will do nothing, and bullets fired into them will ricochet directly back at the firer (roll Dodge to avoid being hit, and keep Dodging until the bullet hits something other than the cylinder walls, floor or ceiling -- the jeep's jerry can of water, an Unlucky PC, etc.). A flamethrower will only raise the temperature in the cylinder and fill it with smoke for 2d+1 turns until the life support system brings conditions back to normal. Against cutting/impaling damage, the membrane has only DR 2. It will heal 1 point of cutting or impaling damage per turn, but if the PCs have brought any knives, they should be able to cut their way out: 6 points of damage will make a hole big enough for most characters to crawl through (9 points for Fat or Gigantism, 12 points for Very Fat; each PC should roll DX to get out in one turn, or risk having the membrane seal tight around them and trap them).

If the PCs don't think of cutting their way out, the ocelot will start scratching at the inside of the cylinder. It will be unable to make a large enough hole to escape through, but it will pierce the membrane occasionally. If this doesn't inspire the PCs to start hacking at the membrane, it will inspire the Tuskers, who will slash their way through with their daggers and axes. Fortunately for both the Tuskers and the PCs, the air in the large room, while cold (40 degrees), is breathable (matching that outside the ship, though they won't know that yet).

If the PCs don't have any blades large enough to get them out of the cylinders (the blades in the first aid kit do only Sw -3), they'll have to try to persuade the Tuskers to let them out. This will require good Gesture rolls, as the cylinders are also completely impervious to sound.

X the Unknown

The flying saucer the PCs are in is approximately five million years old, completely automatic, and malfunctioning badly. It is the scoutship for a mothership parked high above the south pole, which travels around the galaxy at near-light speeds collecting lifeforms for study. The mothership had been pre-programmed to return to its homeworld two hundred cycles later -- but when it arrived, the world was a radioactive cinder. After a few months of searching and a moment's thought, the mothership decided to continue with its assigned task until it reestablished contact with its creators.

The mothership is still in remarkably good shape, and crammed with biological specimens, but the scoutship has been exposed to too many corrosive atmospheres and high gravities. Many of its sensors no longer function, so it is effectively blind when it activates its cloaking device, and has to become visible periodically to look for lifeforms. After the PCs were beamed aboard, the scoutship flew over the north pole and was headed south over Russian when it collided with a Russian plane over Lake Baikal; when the stasis fields failed and the PCs found themselves in the cylinder, the scoutship was hastily trying to repair itself but already sinking.

Another thing the PCs don't know: while the saucer's creators were small hive intelligences living on a desert world with no animals bigger than a pig, some of their more imaginative scientists had predicted that larger animals might exist somewhere, and designed the scoutship so that it could shrink samples for easier collection and storage. The PCs, and the other creatures in the scoutship, have been shrunk down to approximately 1/60 their normal height.

Unknown World

While the last PC is escaping from the cylinder, two more systems will fail simultaneously -- the artificial gravity, and the lights. The floor will suddenly develop a 15 degree slope that increases by 1d+1 degrees per minute. PCs will have to roll vs DX not to fall over. The control pillar will provide enough light for people with Night Vision (or Infravision)

to see normally, but everyone else will be at -7 to any tasks that require vision.

It shouldn't take long for the PCs to realize that there's no easy way out of the room; their only hope is to try to operate the controls at random, and there aren't even any buttons to press, though some of the lights have begun to flash. Talking to the pillar doesn't work (it has no sense of hearing), nor does thinking at it (it can't telereceive, either). It does, however, produce a subliminal telepathic signal that characters with Empathy, Danger Sense or Telereceive skill should be able to detect, and which will warn them of any potential disasters before they happen.

The helix is an optical computer memory and sensor array -- in effect, part of the ship's central nervous system. If the PCs (or one of the Tuskers) disrupt its workings -- e.g. by bending it out of shape temporarily, or by slicing through the membrane and placing an opaque object (such as a knife blade) between two lights of different colors, roll on the table below. After 4 effects, PCs with Intuition should be permitted to make an IQ roll to find the right light to reflect, diffract or block to open an escape route; Mathematics will also work, at -10.

Computer hacking effects (roll 3d)

- | | |
|-------------|--|
| 3 | All Cylinders jettison contents. |
| 4 | Cylinder A jettisons contents. |
| 5 | Bright flash of light: PCs must roll HT-2 or be blinded for 1d minutes. |
| 6 | Cylinder H jettisons contents. |
| 7 | Temperature in chamber raised/lowered by 5d degrees. |
| 8 | Cylinder B jettisons contents. |
| 9-12 | No effect. |
| 13 | Artificial gravity restored -- but to 1d-1 G (min. 0; see p. CII141). |
| 14 | Cylinder C jettisons contents. |
| 15 | Stasis restored/switched off in randomly chosen cylinder. |
| 16 | Cylinder G jettisons contents. |
| 17 | Life support system opened/closed to outside world, flooding room with cold water in 12 minutes without providing an avenue of escape. |
| 18 | Cylinder F jettisons contents. |

If a cylinder jettisons its contents, anything inside it will be teleported outside, leaving the cylinder empty (literally -- filled with hard vacuum, unless the membrane is still open). If the PCs get a "jettison" result for the same cylinder twice, the cylinder will fill with water and fish from the lake. This teleportation device is the PCs only hope of escape from the saucer.

After being jettisoned from the cylinders, the PCs will find themselves in cold (but not frozen) water, surrounded by apparently gigantic fish.

To be continued . . .

Cast

Dr. Homer Evans

Late 40s; unruly silver hair and beard, green eyes; 5'9", 130 lbs.

ST 9; DX 10; IQ 14; HT 9. Move 4.75

Advantages: Charisma +1; Intuition; Mathematical Ability; Versatile.

Disadvantages: Bad Temper; Pacifist (Cannot Kill); Poverty (Struggling); Reputation (suspected communist sympathizer; -2 to most Americans, recognized on 10 or less); Secret (writes science fiction under pseudonyms, -5 points); Stubbornness.

Quirks: Incompetence (Diplomacy).

Skills: Astronomy/TL7-15; Computer Programming/TL7-13; Computer Operation/TL7-14; Ecology/TL7-13; Electronics/TL7 (Computers)-16; History-13; Languages (English)-14, (Gaelic)-13, (Greek)-12, (Latin)-12; Mathematics/TL7-16; Physics/TL7-14; Research-14; Science!-13; Writing-13.

Dr.Homer Evans is a firm believer in UFOs as alien spacecraft, who maintains that establishing contact with friendly extraterrestrials is humanity's best hope of avoiding nuclear annihilation. This has not endeared him to the more conservative establishment, and cost him his position as a lecturer at a small private college, but it has gained him a cult following.

Evans is not gullible, deluded or fanatical, though he sometimes comes close where UFO sightings are concerned. He ekes out a meager living writing science fiction and science articles under different pseudonyms. He has no contact with his cult, and rarely approves of their actions.

Evans cultists

ST 9; DX 10; IQ 10; HT 10. Move 5

Advantages: Ally Group (fellow cultists, appear on 9 or less).

Disadvantages: Delusion, Major (they are the elite, and UFOs are coming to save them); Fanaticism; Stubbornness.

Skills: Area Knowledge (California)-10; Astronomy/TL7-9; Driving-10; Fast-Talk-9; Gesture-9; Guns/TL7-10; Research-10; Stealth-9; other skills as needed.

Gear (per group of four): Flare pistol; Geiger counter; Binoculars; Heavy Flashlight; Camera; Tape Recorder; '51 Oldsmobile 88. Usually wear black suits, shoes, hats and sunglasses.

Evans's cultists are more of a nuisance than a menace: they rarely carry weapons, and many of them have the Pacifism (Self-Defence Only) or Combat Paralysis disadvantages. A few, however, may be more formidable, with Wealth and/or High Status, military experience (with appropriate combat skills and weapons), or Legal Enforcement Powers. The cult is worth -20 points as an enemy (medium-sized group).

Ellie Hoffman

Late teens; tanned complexion, strawberry blond hair, blue eyes; 5'5", 105 lbs.

ST 11; DX 9; IQ 9; HT 12. Move 5

Advantages: Attractive; Voice.

Disadvantages: Distractible; Gullibility; Laziness; Lecherousness.

Skills: Agronomy/TL7-10; Animal Handling-9; Area Knowledge (Lenora)-9; Brawling-10; Driving (Car)-8; Guns/TL7 (Shotgun)-10; Merchant-9; Sex-Appeal-13; Stealth-10.

Gear: Jeans; checked shirt; boots.

18 year old Ellie is Hoffman's only daughter, but her desire to leave the farm and see the big city (any big city) is as intense as her father's determination to keep her "safe." Any PC who seduces or is seduced by her is likely to be attacked by Hoffman: depending on how far the seduction progressed, Hoffman might rely on his fists, a whip, a pitchfork, or a shotgun.

Peter Hoffman

Mid 40s; weatherbeaten complexion, greying blond hair, blue eyes; 5'9", 160 lbs.

ST 12; DX 10; IQ 10; HT 12. Move 5

Advantages: High Pain Threshold; Strong Will +2; Toughness (DR 1).

Disadvantages: Bad Temper; Dependent (Ellie, daughter, appears on 15 or less); Intolerance (City folk); Stubbornness; Wealth (Struggling).

Skills: Agronomy/TL6-11; Animal Handling-10; Area Knowledge (Lenora)-9; Brawling-10; Driving (Car, Tractor, Truck)-11; First Aid/TL6-9; Guns/TL6 (Shotgun)-14, (Rifle)-12; Merchant-11; Meteorology/TL6-9; Spear (Pitchfork)-10; Whip-11.

Gear: Ithaca 10ga Shotgun; Pitchfork (each tine does 1d-2 imp; roll for all four); Bullwhip (6 yds); Dungarees; checked shirt; straw hat; boots.

Peter Hoffman is a farmer, a widower, and a protective father. He left school at twelve, has never travelled more than fifty miles from his family farm, and distrusts new ideas and inventions, but he's not as stupid as he likes to pretend.

"Rocky" Shaw

Mid 20s; tanned complexion, golden blond hair, dark blue eyes; 6', 165 lbs.

ST 13; DX 12; IQ 10; HT 13. Move 6

Advantages: Attractive; Charisma +1.

Disadvantages: Compulsive Carousing; Glory Hound; Lecherousness.

Skills: Acting-9; Bard-10; Brawling-12; Carousing-14; Driving (Car)-12; Fast-Talk-8; Motorcycle-13; Performance-10; Sex-Appeal-14; Scuba-11; Surfing-14; Swimming-13.

Roger "Rocky" Shaw is a pro surfer turned B-movie actor and stuntman, and incredibly eager for publicity.

Tusker

Humanoid, with silver-gray fur, amber eyes, and huge teeth; 8'4", 450 lbs.

ST 18; DX 12/19; IQ 11; HT 12/22. Move 6

Advantages: Amphibious; Cast Iron Stomach; DR +2; Extra Hit Points +10; Fur, Thick; Infravision; Nictating Membrane/1; Oxygen Storage; Teeth (male has Fangs, 1d imp.; female, sharp teeth, 1d cut); Temperature Tolerance +1.

Disadvantages: Illiterate; Inconvenient size; Increased Life Support/1; Primitive (TL0); Reduced Manual Dexterity/3; Short Lifespan/1; Sleepy/1; Uneducated.

Quirks: Not scared of heights, but hate flying.

Skills: Armoury/TL0 (Stone Knapping)-10; Brawling-12; Breath Control-10; Climbing-12; Gesture-10; Knife-12; Language (Tusker)-11; Running-10; Singing-10; Stealth-9; Swimming-14; Survival (Arctic, Fresh water)-12; Tracking-11.

Gear: Horn dagger (thr -1 imp; Reach C,1; max damage 1d+1); Hand axe (sw-1 cut; reach C; Min ST 12). Both use knife skill; neither can be used to parry.

Though fearsome-looking, and with only a primitive and pre-literate technology, Tuskers are intelligent omnivorous creatures who will only attack humans in self-defense. They are native to a .9G Terrestrial world with a 76% nitrogen/23% oxygen atmosphere at .88 Earth-normal pressure, minor seasonal effects, and most comfortable at temperatures around 40 degrees. Their favorite food is fish, but they also eat plants, carrion, eggs, mollusks, and assorted creepy-crawlies. There are no birds or other flying creatures on their world, and the thought of flight is likely

to terrify them.

Designer's Notes: GURPS Character Builder

by Bruce Kvam

I discovered *GURPS* back in 1989. I'd been playing that other game system, but was tired of the arbitrary limitations and the same old dungeon crawls. I got hold of *GURPS Basic Set* and *GURPS Cliffhangers* and embarked on a pulp campaign redolent of the *Indiana Jones* movies.

One problem, though, was the time involved in creating balanced characters. As a GM, I created a lot of non-player characters and it took hours to get them just right. Yeah, I could have just slapped down a bunch of numbers and not bothered to add them up. But I've always been a by-the-rules kind of guy. It only seemed fair for the GM to play under the same constraints as the players.

Being a professional programmer, I wrote a DOS application that created *GURPS* characters. When I started using Windows, a complete redesign from the ground up was in order.

The primary design consideration was to make the character creation process be driven by the data, rather than the application. This would allow creation of new types of advantages, skills, and powers without having to change the application.

A second, less obvious, implication was that other game systems could be supported. Taking a cue from *GURPS*, the design was generic, allowing the application to encompass other systems, eventually including *Fudge*, *CORPS*, *the Hero System*, *Fuzion*, *Call of Cthulhu*, *Legend of the Five Rings*, *Sengoku* and others.

Character Builder Features

Character Builder creates characters from the character templates in *GURPS Wizards* and *GURPS Warriors*, or from completely from scratch. Characters are based on character sheet templates, which provide a starting point for the character: the TL, beginning character points, other campaign limits, the data sheets that are loaded (essentially, which books you'll be using), etc. You can also make your own character sheet templates (which is the case for just about everything in *Character Builder*), setting your own initial TL, beginning points, maximum points in disadvantages, even the initial window layout.

As you change your character's attributes, the character point totals are automatically updated to reflect the cost. Skills whose levels depend on those attributes are also changed; during character creation, skill costs are adjusted automatically to keep the level constant (if possible). Totals are immediately updated.

When you indicate a skill is based on the default, the highest value is taken, be it a default based on a specific skill, an attribute, or an entire category of skills.

When you add an advantage that gives a bonus to a skill, the skill's cost is reduced to account for the bonus; if the skill's level is reduced below the minimum allowed, the level is set to that minimum. The original value is remembered, however, so if you crank IQ up to 17 just to see what happens, *Character Builder* will reset the skill levels to the original values when you bring IQ back down to 12.

Character Builder performs semi-automatic spell prerequisite satisfaction. For example, if you pick the Deathtouch spell, the application tells you that Wither Limb is required. If you tell the application to satisfy that requirement, it tells you that Magery 2 is required. After you pick the desired type of Magery, it tells you that Paralyze Limb requires five Body Control spells. If you pick Balance, the application will automatically add the spells required for Balance (which successively require Boost Dexterity, Dexterity, Clumsiness, Spasm, and Itch), which also happen to satisfy the five-spell requirement for Paralyze Limb. You only need to pick a few spells and the application will do a lot of the grunt work for you.

The same requirements mechanism is used for skill prerequisites and conflicting advantages and disadvantages (such as the same character having both an Appearance advantage and disadvantage).

Character Builder also implements selection rules; these suppress the display of skills and equipment that are above the character's TL so that you don't have to wade through the Astrogation and Beam Weapons skills when you're creating a medieval character. You can always turn these rules off with a click of a checkbox to see everything that's available.

If your campaign doesn't enforce all the standard **GURPS** rules, you can turn off the requirements and warnings.

And for busy GMs who need a couple of quick NPCs, you can put the Generate Character script on autopilot and have it generate a character randomly. Usually I despise random characters, but since this is template-driven, there's a lot less cleanup required than for typical randomly generated characters.

What's All in Character Builder?

GURPS Character Builder is big. It includes the data from **GURPS Basic Set**, **GURPS Magic**, **GURPS Supers**, **GURPS Grimoire**, **GURPS Martial Arts**, **GURPS Compendium I**, **GURPS Psionics**, **GURPS Wizards**, and **GURPS Warriors**. This all adds up to about 800 skills and maneuvers, 60 martial arts styles, 1000 spells, 500 advantages, 300 disadvantages, 160 powers, and 400 items of equipment.

There are about 200 high-resolution character art images, including 36 character outlines that you can base your own character pictures on, and 160 complete character illustrations from many **GURPS** books and other sources. These illustrations are categorized by keywords that you can search on (and you can add your own images and descriptions to the picture library).

There are four graphical character sheet print templates: the two-page **GURPS** character sheet, the one-page character sheet, the spell grimoire, and the martial arts record sheet. You can also create your own (see below).

Using text filters you can print out three different types of GM Control sheets with combat information for multiple characters. This and other character information can be put into RTF (Rich Text Format) files that can be edited further by word processing applications. Similar text filters can be used to copy character descriptions in three different styles (including the standard SJ Games character description style) to the clipboard for incorporation of character writeups into word processing documents.

There are three special commands, including a "finalize character" command (prepares your character for post-creation attribute costs and skill level rules), a "generate character" command (creates a character from a character template and optionally generates a random appearance and selects random advantages, skills and disadvantages according to the template), and a "character optimization" command that finds the values of IQ and DX that produce the lowest character cost.

There's a die roller (which is customizable -- you can associate any die rolls you want with the buttons) and a name finder (which lets you search a database of thousands of names, many categorized by sex and ethnicity).

Finally, there's a collection of useful **GURPS** PDF files, including several different character sheets, spells summaries, various campaign sheets, hex grids and other forms.

Customization and House Rules

There are several built-in customization and configuration features, including setting the cost of extra fatigue and hit points, converting adds to dice, the Enhanced ST rule and basing Fatigue on HT and Hits on ST. You can also change the costs of most standard items to match the requirements of your own campaign, or modify "generic" skills and advantages to create one-shot specials.

You can create your own data sheets to add campaign-specific skills, advantages and disadvantages. How hard is it to do this? Well, like everything, if what you're trying to model is simple, the solution is simple. If it's hard, the solution is hard.

Let's say your Old West campaign needs a Calf-Roping skill, a PA skill that defaults to DX-5 and requires Riding and Animal Handling. The following shows how this skill would be entered in the data sheet (you enter the data on the second line):

Macro	name	class	cat	def	prereq
skill	Calf-Roping	PA	Animal	DX-5	Riding>=12;Animal Handling>=12

Data entry is accomplished through a spreadsheet-like interface, with rows and columns. You simply enter data in one column and tab to the next.

Advantages, disadvantages, spells, weapons, equipment, etc., are entered in a similar fashion. The most complicated items to create are the character templates, because of specializations, variations based on TL and the like.

The character finalization, generation and optimization commands are examples of character sheet automation: scripts that directly manipulate the character sheet. Character Builder has a script programming language allows you to change values in the character sheet, add skills, set options on advantages, etc.

The ability to customize doesn't end there, however. *Character Builder's* multi-system heritage remains intact. The application provides all the tools to create custom *GURPS* character sheet and print templates; if you don't like the way the standard printed character sheet is laid out, or it's missing some data that you want to include, you can create your own print template.

Character Builder can also create completely new game systems. Scripts can be written to convert characters from one game system to another.

The Guts

Internally, the application is based on an expression evaluation engine that "notifies" a component of the character sheet (an item in the skill list, an attribute in the Main dialog, an active defense value displayed in the Combat dialog, etc.) when the variable associated with that component is changed.

For example, when you change your character's IQ, all skills that reference the IQ variable (or reference another variable that references IQ) are reevaluated and their new costs displayed. This is similar to the way spreadsheets work, but instead of cell references, *Character Builder* uses named variables. The result is that skills that don't depend on IQ won't be updated, giving faster response time.

Similarly, if you change the level of Magery all spell costs are reevaluated and displayed. Changing ST will cause hand weapons to be reevaluated and the new damage value displayed. If Fatigue is left "floating" (defaulting to ST), Fatigue will also automatically track ST. When you increase Linguistics, all language skill costs are reevaluated for the Linguistics bonus.

Finally -- and I'm not really sure why people always ask this -- the application is written in C++.

New Monk Weapons and Feats for d20

by Sean Robson

I was always a great fan of the monk character class in AD&D, and contrary to purists who argued that they had no place in a medieval fantasy setting, I felt that the exotic flavor of asian culture fit perfectly into a High Fantasy setting. So I was very pleased to find that monks had been included in the *Dungeons & Dragons 3rd Edition Player's Handbook*, and was generally very satisfied with how they had been handled. The only detail of the class that I found irksome was the inclusion of "special monk weapons" that were anything but special. As they all deal the 1d6 damage and, despite being exotic weapons, have no special abilities; there is almost no reason for a monk to ever use them. Since after 3rd level, monks do more damage with their bare hands, the only conceivable reason to use one were if it were magic. My hope that *Sword and Fist*, the guidebook to fighters and monks, would rectify this was in vain. The supplement added one special monk weapon, the Three-section staff, which deals 1d8 damage, has no special abilities, and requires the monk to purchase Exotic Weapon Proficiency. Ho hum.

All other exotic weapons in the game have some special ability, and the special monk weapons should be no different. In addition to revising existing weapons from the *Player's Handbook* and *Sword and Fist*, this rule variant adds a few common Okinawan kobudo weapons. The special abilities were selected for balance, playability, and fun rather than realism. By selecting complimentary feats the monk can become very effective with his weapon of choice, making the Weapon Master prestige class more attractive. Several of the new weapons were described in Steve Honeywell's article "[What's That You're Carrying? Exotic Weapons for d20.](#)" but are presented differently here. This list does not even begin to touch upon the long list of martial arts weapons from China and other countries. DMs who want a larger selection of martial arts weapons can easily create their own using the weapons described here as a guide.

In addition to weapons, three new feats are included, which reflect abilities common to all skilled martial artists.

Weapon Descriptions

All weapons described below are considered to be special monk weapons, and when using them a monk can strike with his unarmed base attack, including his more favorable number of attacks per round. Monks are automatically proficient in all special monk weapons except the three-section staff, kusari, and kusari-gama. Due to the improved effectiveness of the exotic special monk weapons, however, DMs might require monk characters to purchase an exotic weapon proficiency in order to use the weapon's special ability.

Simple Weapons -- Melee

Weapon	Cost	Damage	Critical	Range Increment	Weight	Type
Medium						
Jo Staff	-	1d6	x2	10 ft.	2 lb	Bludgeoning
Large						
Bo Staff	-	1d6/1d6	x2	-	4 lb	Bludgeoning

Exotic Weapons -- Melee

Weapon	Cost	Damage	Critical	Range Increment	Weight	Type
Small						
Kama	2 gp	1d6	18-20/x2	-	2 lb	Slashing
Nunchaku	2 gp	1d6	x2	-	2 lb	Bludgeoning
Sai	4 gp	1d4	19-20/x2	-	1 lb	Piercing
Siangham	3 gp	1d6	x3	10 ft.	1 lb	Piercing

Tonfa	1 gp	1d6	x2	-	2 lb	Bludgeoning
Large Kusari	8 gp	1d8	x2	-	5 lb	Bludgeoning
Kusari-gama	10 gp	1d6	18-20/x2	-	5 lb	Slashing
Three-section staff	4 gp	1d8	x3	-	8 lb	Bludgeoning

Bo staff: For all practical purposes, this is a quarterstaff. It is a fundamental weapon that is taught in many martial arts styles and should be considered a special monk weapon. The Bo staff is a double weapon. You can fight with it as if fighting with two weapons, but if you do, you incur all the normal attack penalties associated with fighting with two weapons as if using a one-handed weapon and a light weapon.

Jo staff: This is a shorter version of the Bo staff and may be used either one or two-handed. It is similar to the Philippine escrima stick, and is treated here as a club.

Kama: The critical range of the kama has been increased to 18-20.

Kusari: A kusari is a 10-12 foot length of chain with weighted ends. This is a two-handed weapon: one hand is used to hold the chain, while the other whirls and throws the weighted end. The kusari has a reach of 10 feet, but can also be shortened up to strike adjacent foes. You get a +2 bonus on your opposed roll when attempting to disarm or trip an opponent. If you are tripped during your own trip attempt, you may drop the kusari instead of being tripped. The Kusari is very difficult to use, and monks must purchase Exotic Weapon Proficiency to use it.

Kusari-gama: The kusari-gama is a sickle with a length of weighted chain attached to the end of the shaft. It is a two-handed weapon: one hand holds and throws the chain; the other holds the sickle. You get a +2 bonus on your opposed roll when attempting to disarm an opponent. The kusari-gama may be used to make trip attacks. If you are tripped during your own trip attempt, you may drop the kusari-gama instead of being tripped. This is not considered a double weapon. Monks are required to purchase Exotic Weapon Proficiency to use the kusari-gama.

Nunchaku: Since whirling nunchaku's can strike out quickly in any direction, you may make an extra attack of opportunity once per turn. This ability stacks with Combat Reflexes.

Sai: The sai is a small forked baton about the size of a dagger, with either a blunt or sharpened point. The tines, which extend from the handle, are used to catch an opponent's weapon and disarm him. The sai confers a +3 bonus on your opposed attack roll to disarm your opponent.

Three-section staff: This weapon consists of three sections of wood of equal length, connected with chain or rope. This very versatile weapon can be wielded in a variety of ways: with all sections extended, or with one or both sections folded over the center section. The three-section staff has reach and may strike opponents 10 feet away. It may also be used against adjacent foes without penalty. Alternatively, it can be held by the middle section, using both end sections as flails. When used in such a manner, the three-section staff is considered to be a dual weapon. You can fight with it as if fighting with two weapons, but if you do, you incur all the normal attack penalties associated with fighting with two weapons as if using a one-handed weapon and a light weapon. The three-section staff is a very difficult weapon to use, and monks must purchase Exotic Weapon Proficiency to use it.

Tonfa: The tonfa is a two foot long hardwood shaft with a handle set at right angles near one end. The tonfa is held by the handle, with the shaft lying along the outside of the forearm, and the other end extending beyond the fist. The tonfa is extremely effective when blocking. If you choose to fight defensively with the tonfa, you receive an additional +2 dodge bonus to AC. This stacks with the normal +2 bonus for fighting defensively, or with the bonus for Expertise.

Siangham: Although not normally an effective ranged weapon, trained practitioners (who have purchased Exotic Weapon Proficiency) may throw the siangham with a range increment of 10 feet. This is not a realistic rule, and DM's wishing to run a realistic historical campaign may wish to disregard it.

New Feats

IMPROVED GRAPPLE [General]

You are adept at applying arm locks and choke holds to incapacitate your foe.

Prerequisites: Improved unarmed strike, Int 13+

Benefit: You receive +2 attack bonus to grapple checks. Note: monks may deal either normal or subdual damage after a successful grapple attack.

KIAI [General]

You may initiate an attack with a blood-curdling scream of focussed ki.

Prerequisites: Improved unarmed strike, Stunning fist

Benefit: Declare that you are attacking with kiai before you make your attack roll. Your foe must make a Willpower saving throw (DC 10 + 1/2 attacker's level + attacker's Wis modifier) to avoid being surprised. If your opponent fails he is caught flat-footed and loses his Dexterity bonus to AC vs. the attack. Kiai may be used once per day per character level.

STABLE STANCE [General]

You fight in a broad, stable stance, which makes it difficult for opponents to budge you.

Prerequisite: Base attack bonus +3

Benefit: You gain +3 bonus to opposed checks when defending against trip and bull rush attacks. This bonus may also be applied to your opposed Strength check to trip an opponent who has failed to trip you.

Death, Where Is Thy Sting?

by James Alan Gardner

Some years ago, I ran a campaign in which the characters played gods . . . literally. They were Earthlings conscripted by aliens to form a pantheon similar to the Greeks' Mount Olympus; for reasons too convoluted to explain here, the aliens gave the players divine powers and sent them to lord it over the primitive inhabitants of a planet that had no indigenous religion.

The distinctive thing about this campaign was the vast difference in power between the players and the NPCs. The natives had only reached the Bronze Age; the players were so bio-augmented, they could hardly be scratched by the crude weapons of the locals. The NPCs didn't even have magic or psionics. In essence, the players had nothing to fear but each other . . . and there was no particular incentive for them to fight among themselves.

The result was a campaign in which it was practically impossible for the player characters to die, even by their own gross stupidity; and it was one of the best campaigns I've ever run. Safe from lethal repercussions, the players were free to roleplay. (Amazing!) I seldom prepared encounters in advance; the players were more than capable of getting into trouble on their own, embarking on pet projects to stop local wars, introduce "civilization," and so on.

After a few months, I made the mistake of introducing a second pantheon of equal power level, created by the same aliens as part of an overall scheme. Immediately, the tone of the campaign changed. With real threats on the horizon, the freewheeling action ended and a more conservative style took hold. The players would spend whole evenings just talking, making plans, second-guessing themselves, getting nothing accomplished. The sense of fun vanished. Instead of memorable exploits, we had planning sessions that often went nowhere. Ho hum.

So I let my players wipe out the other pantheon with relative ease. As soon as the real danger was eliminated, the fun and risk-taking started again.

In time the campaign ended, and the group started with a different set of characters in a completely different setting . . . but I decided to preserve one principle from the "Gods" campaign: I told the players that no matter what their characters did, they wouldn't die unless the player explicitly asked me to kill the character off.

The second campaign went just as well as the first, even though there was no huge power differential this time -- the PCs had no substantial advantage over the NPCs and death was a real possibility. I just refused to let it happen.

As before, the players threw themselves into the action wholeheartedly. They took chances; they got into trouble; they actually played their characters, as opposed to careful plodders afraid to do the wrong thing.

Of course, there were still consequences: they got captured a few times and put to work as slaves; innocents were occasionally killed because of the players' rashness; one character got impregnated with a demon, and another became a vampire. Even so, they had a whale of a time because of the simple assurance that their characters would never be permanently removed from play.

Since then, I've adopted the "nobody dies" policy in every campaign I run. It liberates the players . . . and it makes them more equal partners in the game, proactively initiating events rather than waiting for the GM to create something. All the GM has to do is give the players a reason for wanting to act; after that, they do all the work.

Of course, the GM is forced to improvise like a maniac. When players feel free to make their own choices, you have to deal with often irrational results. But that just means the GM gets to have the same kind of fun as the players-- winging it as you go along, wracking your brain for smooth responses and pretending you planned everything all along.

Improvisation is particularly important when a player gets too cocky and steps into a hornets' nest. The "no death"

policy doesn't prevent a character's hit points from dropping below zero (or whatever the lethal number is); when that happens, you just have to cope. I've done all of the following (entirely on the spur of the moment):

- The character dies. I say, "You lie still for a moment of utter blackness . . . then suddenly you gasp and sit up. Your wounds have miraculously healed." Yes--completely off the cuff, I decided the character was a Highlander- style immortal. My oh my, did that change the nature of the campaign!
- The character entered the afterlife. Adventures ensued in heaven and hell till the character could work out a resurrection deal with a cranky Death God.
- The character became a ghost. It took a while to get the game balance right, since ghosts have some major advantages over living characters; still, with a bit of tinkering, I managed to bring the character into line with the power level of the other PCs.
- And my favorite (in a *Dungeons & Dragons* campaign): a character died and a terrible idea popped into my head. Before I got cold feet, I announced, "Too bad -- you're toast. Friend Computer activates your next clone which is already dressed in appropriate medieval attire. A door opens in the hillside close to your party and you're sent out to resume your mission." You'll never look at the Forgotten Realms the same way once you realize the Underdark is Alpha Complex . . . and once again, the campaign reeled in wildly unforeseen ways.

I admit the "no death" idea doesn't fit with some types of campaign -- what would *Call of Cthulhu* be without investigators regularly getting reduced to mulch? But if GMs try "no deaths," I think they'll be pleasantly surprised; they're likely to get more player participation and more memorable scenes, because the PCs aren't so afraid to open the locked door or press the big red button. You may think your players would take terrible advantage of such immortality . . . well, they do, but that's the whole point. Let them start propelling the action rather than reining them in.

And the best part? When they *do* mess up through their own stupidity, they're still alive to suffer the consequences. Heh, heh.

Success, The Future, and Other Uncertainties

[Two weeks ago](#) I talked about how computers and technology have changed much of our gaming. Going back to that column, and in honor of the annual tradition of New Year's pontification, I'd like to share some of my observations (he said, dipping into the Great Karnac envelopes).

Anyway, over on various message boards I've been reading industry types theorize hypothetical "mass market games." Y'know . . . those games that are so good the Teeming Millions are kicking down your doors, chanting your game's name, and shipping crateloads of gold bullion to your offices.

(As an aside, I just had a vision of marketing a jar of small gold cubes, and marketing them as "Gold Bullion Cubes . . . just add water!" But I digress.)

Anyway, there has been some theorizing about what, exactly, such a game would contain. In the midst of this discussion I pointed out that there have been some games that, if not mass-market successes, have been more successful than most RPGs. Here were some that came to mind that seemed to have ties to roleplaying games.

1. **Talisman.** This board game (called by a friend the "*Monopoly* of Fantasy Gaming") consists of moving a character around a board, drawing cards that represent items of power, and killing evil creatures. This game has many of the elements of most roleplaying games intrinsically: a combat system, an experience/advancement system, "movement" rules, etc. In addition, it encourages roleplaying itself (at least, it always has when I've played it); many times my friends and I played and someone would say something like, "The Druid, seeing the weakness of Good, rejects that path to choose Evil . . . and seals his dark pact by claiming the Doomsword! Bwah-hah-hah . . ."
2. [Fighting Fantasy/Lone Wolf](#) books. Again, these have many of the elements of roleplaying: character creation/development, a combat system, etc. And some of them -- like the *Sorcery!* series -- have continuing epic stories and interesting character interaction.
3. **How to Host a Murder.** This game consists of players taking the roles of people on the scene of a murder (in a live-action kind of way), who must then interrogate each other, interpret clues, and reveal their own tidbits of information. In my mind these games are the easiest way to trick someone into participating in a live-action roleplaying game. These games have many roleplaying elements: story elements, character immersion, plots, etc., were found in Toys-R-Us, and probably had many players who would never get near a game store.
4. *A Question of Scruples.* For those of you who don't remember, this board game came out several years ago. In it you drew cards with moral or theoretical yes/no questions on it ("Would you want to know the exact day you'd die?", "If you saw a rich-looking man drop a wad of money and walk away, would you return it?"), and asked your fellow players, where you'd try to guess how they would answer. (I seem to remember are other book-based "games" that continue on in this tradition.) Fairly popular at the time, I consider this game to have many elements in common with RPGs; really, I consider a question like, "Would you donate your organs after you die, knowing that one of them would to an evil person?" to be very close, mentally, to "Does your priest use his powers to keep an evil person alive, knowing that person will still be useful to you and your epic quest?"

Okay; having mentioned these products, what elements do they have in common?

- *No GMs.* Even in the *Host a Murder* series, the "Host" can still play the game, and still has the ability to be surprised/amazed/pleased with the game. No one needs to assume a position of power.
- *No preparation time.* The one that has the longest preparation time is, again, *Host a Murder*. And even the game portion of that event is relatively quick: in essence, read through the characters, pick friends who would be suited to each role, mail invitations. (Of course, how long the host spends planning a period-piece meal, finding music, straightening the house, etc. is another matter . . .)
- *Minimal involvement necessary.* In other words, the minimal amount necessary to "play" is *very* little in these games. *Talisman?* Roll dice; draw cards; do what they tell you. *How to Host a Murder?* Reveal the five plot elements the sheet tells you to. Think about the mystery (or don't). *A Question of Scruples?* You can sit on the couch like a lump and say, "No. Yes. Yes. No. Maybe." to five questions. Of course, most of these games *can*

give more back the more the players put into it; the *Talisman* character who revels in being the Boar-killing Toad, the *Scruples* player who takes the opportunity to learn more about his friends (and himself), the *Host a Murder* player who makes up his own song and saying about the R.A.F. (er, not that I'm speaking from experience or anything . . .)

In my mind, this is important; I've seen too many roleplaying games ruined -- or at least dampened -- because one of the players wasn't as enthusiastic as the others. ("Your character is charged with **murder!!!** What do you do?" "Nothin'. Hide, I guess. Turn the TV down low. Don't watch *Cops*.")

Now, I began this column talking about technology, and took a left on I-10 to digress about "mass-market games." But my off-ramp is coming up here soon . . .

Anyway, I suspect many people are thinking, "But Steven . . . the games you mentioned don't really have anything to do with roleplaying!") And that may well be . . . currently. But to tie it all together, I'd point out that, with the event of technology and the relentless progression of time (see? I'm even tying it back to the New Year!), our games continue to evolve and morph. And when I look at games like [The Adventures of Baron Munchausen](#), *Vampire: The Masquerade Revised*, and *Rune*, I realize how far removed and different they look from the modified tactical miniatures rules that first became the original *Dungeons & Dragons* game. And I can't help but wonder whether what we call "roleplaying" games 20 years from now will resemble what we currently play and love, and whether or not we've found that elusive "mass market" success that many companies crave. But I do feel confident that the core of roleplaying will survive, in some form, long into the future.

Now all we need to do is figure out what the core of roleplaying *is* . . .

* * *

For the first time in a long time I've had a mini-computer crash. As a result I've lost most email written to me between December 21st and December 26th (inclusive). Fortunately I picked a good time to have problems; most folks seemed to be doing other things during that time, so my email volume was pretty low.

Still, if you wrote me during that time, you may want to [write back](#).

And if you haven't written me, yet wished to, you can rectify this now. In fact, you can *say* you wrote during that time, and I won't be any the wiser!

Isn't technology great?

Last week's answer: Middle Earth: The Wizards

(*Four stars*)

"Nervous about our presentation to the board, Egbert?"

"I'll say, Sally! . . . I heard that the board of directors is made up of a bunch of soulless monsters!"

"Golly!"

". . . Well, that's a relief! They look just like the rest of management!"

Pyramid Review

The Grande Temple of Jing (for d20)

Published by [Hammerdog Games](#)

Written by Danny O'Neill

Illustrated by Ralph Horsley

40 pages; \$8.95

The year 2001 has seen a great many new publishers and titles, most invariably for the *d20* system. A case could be made that there are too many of both, but the numbers keep growing... This leaves the potential buyer with a glut to wade through in search of, if not the new, certainly the good, the different, or at least the interesting. New Canadian/American publisher Hammerdog Games enters the *d20* new list with something that is different -- at least in terms of format. Their first batch of releases consists of two titles: *BBA #1.1 The Grande Temple of Jing Part I: A Balance of Power* and *BBA #2.1 Assault on Darkspyre*. It is the first of these releases that is reviewed here.

The Grande Temple of Jing at first seems to be a standard A5 format book, but looks can be deceiving. Behind Ralph Horsley's excellent cover, the reader needs to turn the book from the standard portrait (vertical) format to landscape (horizontal) format to properly read it. The book is text-heavy, with just a single piece of art that is not so much thumbnail-size as little fingernail. The fact that art only appears once in the book -- and is then done too small -- is rather disappointing. The maps have been created by Danny O'Neill and his dungeon map in the centre of the book is easy to read, but perhaps a little brash and busy upon the eye. Of course, using *Campaign Cartographer 2* means that the maps can be done with a certain degree of preciseness.

Nothing all that new so far, but Hammerdog Games have designed *Grande Temple of Jing* as a "Building Block Adventure" -- this is what the BBA stands for. Essentially this means that the adventure can be played or adapted to any setting. This sounds much like any other adventure, but Hammerdog have gone a little further. *Grande Temple of Jing* is intentionally written to allow the GM to get the characters into and out of the dungeon itself. That "feature" is a result of the plot, which I'll come to later. The Open Gaming Licence portions of the adventure are well organised and are placed into "ABC's" or Adventure Block Cards. Each ABC contains a new monster, magical item or a particular table. Throughout the adventures the ABCs are referenced and because they are placed at either the beginning or end of the book, they are quick and easy to find and use.

Besides the main map at the center of the book, each room description is accompanied by a portion of the main map particular to just that room. This is good use of *Campaign Cartographer 2*, let down only by the fact that the map sections showing multiple rooms are not marked with their room numbers. Yet using *Campaign Cartographer 2* in this way is not the most significant design feature introduced in *Grande Temple of Jing*. This is the sidebar that runs down the left hand side of the page and contains icons that explain the details of the room at a glance. These icons fall into two types -- those that become standard throughout the adventure and those are particular to an individual room.

All of these features make *Grande Temple of Jing* quick and easy to use. In fact the "room at a glance" sidebar explanations are a superb design feature -- Hammerdog deserves our praise for those alone. If I have one complaint about the presentation, it is that this all feels a bit too cramped. Reformatting the book to a standard A4 size might make the book a little easier to read and the publishers might want to consider this when they begin a new series of adventures.

[SPOILER ALERT]

And so to the adventure itself . . . Designed for a party of low-level characters, ideally of second level, the default setting is Hammerdog's Magical world of Denoa. This can be downloaded from the publisher's website, as well as extra ABCs and an additional adventure. Whilst in the Greenspan Forest, the party joins in the search for a pair of Elven hunting groups. Almost *Ravenloft*-like, the characters find themselves enveloped in a thick white mist, but instead of being transported to the Land Of Horror, they find themselves in a dungeon. This is in fact the grand temple of the title and the creation of the forgotten deity Jing.

Jing is in fact a trickster god, known by many names in various different lands, but specifically Jing in Denoa. Revered by many as the bringer of fire and tools, the temple is his plaything. The capricious nature of Jing shows through in his temple design. Puzzles reset themselves at the beginning of each day; levers and particular conditions operate doors between the sections; and throughout the temple there are sculptures of Jing with this hand held out. If the player characters place coins, gems, or magical items upon the hand, the god accepts their donations, and in return the characters receive experience points!

Once they have gained Jing's favor, the god will not only grant them magical items -- though these do come with built in flaws as well -- but also quests to undertake throughout the level of the dungeon and the levels that Hammerdog will detail in future releases. In *Grande Temple of Jing*, some of these quests actually include locating the Elven hunting parties. As quests are completed, Jing will actually allow adventurers to leave his temple, but just as with *Ravenloft* and *The Godfather Part II*, his favored adventurers are sure to be drawn back in... In the meantime, the GM is free to run other adventures for his players.

The dungeon is designed with some thought given to its ecology, with Jing orchestrating the situation so that there is enough food available for all, but everyone is still left hungry. This delicate balance can be easily upset should some factor intervene -- say a resourceful group of player characters. The opposition described herein is one tribe of kobolds who worship and gain the favour of Jing, and a second of Orcs who revile and desecrate the statues of Jing, gaining his disfavour. The party will find that they can gain a position of power over the kobolds and thus have a base of operations for later excursions into the dungeon.

[END SPOILER ALERT]

This adventure is fun and its design contains some clever and innovative features. These make the adventure very easy for the referee to use and Hammerdog Games deserves praise for them. In future releases I would like to see more internal art and the books reformatted to a standard size, but otherwise *Grande Temple of Jing* is a rather good first release.

The Grande Temple of Jing is an unrepentant dungeon bash, but one that has been written with a knowing sense of humour. Within such a framework it works rather well and allows the referee to roleplay the capricious whimsies of the god Jing.

(Or should that be "Kerr-ching!!" followed by an evil laugh all the way to the bank?)
