

Ayutthaya

by John Walsh

"There is no city in the East where is seen more different nations than in the capital city of Siam, and where so many different tongues are spoken. It is two leagues round, and half a league broad, well peopled, although so much under water that it resembles rather an island. There are none but the Moors, Chinese, the French and the English who dwell in the town, all the other nations being lodged around about it in camps."

--de Chaumont and de Choisy (1685)

Introduction

Ayutthaya (sometimes spelled Ayudhya) is one of the great cities in the history of Southeast Asia. Supplanting Sukothai as the capital of Siam, it acted as a center of trade and diplomacy in the kingdom that saw contingents of Arabs, Indians, Japanese, Chinese, Portuguese, and Dutch traders and representatives locked in struggles with each other for preference -- and to avoid giving offense to the king; many an unfortunate merchant who said or did the wrong thing ended up in a large pot, being slowly boiled alive!

At the center of the court was the king, together with his advisors and mandarins, attended to by numerous slaves, servants, wives, little wives, priests, and soldiers. He would mount an elephant for state occasions and lead processions of gorgeous finery and pomp. Religious ceremonies might require the whole court to process to the Mekong River for ritual bathing. At other times, the king might like to travel the Chao Phraya River by boat or organize an elephant hunting expedition. Whatever he decided to do, he could be sure that a large group of merchants and their representatives would be willing him to listen to their petitions and grant their requests.

History

The Tai people only started to emigrate to Thailand (then called Siam) about one thousand years ago, mostly from southern China. Initially, they came as mercenary soldiers for the powerful Nanchao kingdom or as slaves, with only a few able to move voluntarily to seek freedom. However, by about the 13th century there were enough Tais in Thailand for them to start to establish large-scale cities and city-states. Earlier cities and states in the region were either built by earlier inhabitants, such as the Haripunjaya kingdom of the Mons, or else were small-scale cities such as Yonok that devoted most of their energies to survival.

By the 13th century, important Tai centers such as Sukothai and Lan Na (now known as Chiang Mai) had emerged, often based on existing towns that had been conquered. Sukothai was the creation of the famous warrior king Ramkhamhaeng and his sons and grandsons could not maintain their independence from Ayutthaya, who conquered it in 1279. Ayutthaya then became the capital of southern and central Siam. To the north, Lan Na remained a powerful and independent Tai state and, in the east, Lan Sang (occupying what is now Laos) was another important Tai state. Generally, there were few heavily occupied areas between major cities and so it was very difficult to establish a permanent, large territory because there were not enough people to resist an invading army of even a small size and not enough people to provide food for a military outpost. Consequently, the purpose of war was to try to capture a rival city and enslave its people to build up the strength and size of a state. Most of the time, to avoid war where possible, one city would voluntarily recognize the superiority of another city and send tribute to it. This meant that the smaller city would be technically part of the territory of the larger one but in practice meant that they faced no real compromise to their independence.

Ayutthaya was the capital of Siam until the 18th century when, as a result of being sacked by the Burmese, leadership passed to the City of Angels -- Krungthep, known in English as [Bangkok](#). It continues to be an important historical area but much of its commercial importance has disappeared as a result of changing climatic and environmental conditions that made it less feasible to ship goods so far up the Chao Phraya River.

Religion and Beliefs

The King and the majority of the Thai people of Ayutthaya were devout Buddhists. That meant they respected the three treasures of the Lord Buddha, His teachings, and the monkhood that lived in poverty. Some Buddhists take oaths to abstain from alcohol, meat, or sexual activities for a certain length of time or permanently. However, such oaths are voluntary, as is the stricture not to kill any living creatures. Most men will enter the monkhood for some period of time during their lives, from three weeks as a minimum until a permanent or at least open-ended entry. Monks must certainly abstain from alcohol and sexual activity and must eat only before noon. Most of their time is spent meditating and performing religious ceremonies. Early every morning, they would take their bowls and set forth in small rowing boats so that people could make merit by donating food or other items.

However, the belief in Buddhism did not rule out simultaneous acceptance of other, traditional beliefs. Different people had different beliefs, depending on which tribe or area they came from but most traditional beliefs were based on spirit worship. It was common, for example, to believe that every aspect of nature possessed its own protective spirit: rivers, trees, houses, and so on. These should periodically be propitiated with offerings of incense and chants, as well as the sacrifice of animals (pigs and chickens most commonly) and various types of dance. Spirits of larger areas such as whole forests should also receive offerings before cutting down any of the trees, while important activities such as rice growing also had gods or goddesses of their own. Since people had so many different types of belief and so many different spirits were possible, the GM is quite justified in improvising new rituals or ceremonies as needed. People not directly participating in a ceremony would mostly just ignore it and, since there were so many going on every day, then it would be a common occurrence to witness one.

The belief in spirits also extended to ghosts and demons. Restless spirits were similar to Chinese style ghosts in that they returned from the dead to harm the living in various ways and so should be offered food or other items to persuade them to stay away. If the presence of ghosts was suspected, monks might lead an exorcism ritual in which many people would try to flush out the ghosts with bamboo staves or other weapons and then seek to drive them off or kill them.

The Kings of Ayutthaya, as well as most of the people for most of the time, were quite tolerant of other religions, insofar as they understood them. Christians and Muslims were allowed to worship freely in their own quarters. Indeed, it was quite possible to convert some of the local people, although there would be at least a possibility that such people would just be adding another god to a list of beings to whom to show reverence and have little interest in adhering to a strict monotheistic creed.

Social Structure

Ayutthayan society was quite strictly ordered accorded to rank and social class. While it was not impossible to move up in rank, it was unusual or difficult, and the dangers of falling downwards were at least as great. At the top of society was the King, followed by his immediate male relatives. Since Kings could maintain not just an official queen but numerous little wives and concubines, and because of the dangers of disease and natural hazards that made early death a common phenomenon, complex protocols were established to determine the potential order of succession. Added to this complexity was the quite common possibility that the King might abdicate to become a monk or recluse and the numerous plots surrounding unfaithful queens, conspiratorial uncles, and rebellious second sons and the like, and there were frequently occasions of confusion and civil war.

Below the King would be his advisors and relatives; these two groups overlapped, often to a high degree. The King would appoint individuals to official positions in a governmental bureaucracy that grew more complex over time. For example, the Ministry of Trade was eventually divided between Trade with India and Trade with China, and then with Trade with Europe as well. Just as in the case with the Angkor kingdom of the Khmers (based in what is now Cambodia), women could occupy some of these high positions, although they would also have been of high social status to be eligible. It was also the case that some positions were reserved -- or at least regularly occupied -- by foreigners. Indeed, until the current day there are many examples of Siamese officials and Kings taking foreigners

from a range of countries as special advisors with some special wisdom or experience to offer -- or who just happened to be in the right place at the right time.

Below the high officials would be the lesser officials and recognized virtuous servants of the king, such as professional soldiers, monks, and Brahmans (Hindu priests). Most of the armed forces consisted of ordinary people who were obliged to provide unpaid service to the state every year (called *corvée* labor). They would be quite lightly armed and armored, and would probably need to provide at least equipment themselves. A smaller number of people would have enough wealth to become full-time soldiers. Some might have one or more of the small horses that the Tais brought with them from southern China to Thailand. Others might own elephants or else be paid elephant-handlers. While full-scale military campaigns did not happen often enough to keep soldiers permanently occupied, smaller scale raids on outlying villages and towns or bands of bandits were more common. These, of course, were more frequent in border areas or where different peoples lived quite close together. During raids, small and valuable items might be carried away and animals also driven off, although the main motivation would again be to try to secure slaves for the home state's labor force.

The comparative lack of people -- and therefore of the labor pool in general -- was an important motivating source inspiring kings, princes and nobles throughout the region. Slavery could occur in various styles and with various levels of service required. It was possible, for example, for a person to sell himself or his children into service to someone else in exchange for an up-front payment of cash or goods. Depending on the nature of the agreement, the enslaved person might or might not be able to redeem himself after a certain number of years. This form of voluntary enslavement was considered perfectly acceptable and an important right of people to dispose of themselves or their children and there was great popular resentment at the attempt to outlaw it in the early twentieth century.

Between the slaves and the lowest levels of officials were artisans, farmers and other working people. This was the largest group of people in Ayutthayan times and was known as the *phrai* -- the masters or upper classes were the *nai*. It included silk-weavers and silkworm tenders, farmers and fishermen, dancers and artisans. *Phrai* were subject to *corvée* labor requirements that meant they had to spend six months of the year working on public projects without pay. They were divided into the *phrai som* who were assigned to royal officials and mandarins, and *phrai luang* who served the king directly who would in turn assign them to individual projects or activities.

There were also a sizeable number of prostitutes. Prostitution was a widely recognized activity in Siam (and, indeed throughout Southeast Asia), partly stimulated by the *corvée* labor system that took men away from their families for often extended periods of time. Those engaged in providing services were mostly tolerated, but could of course it could be the subject of resentment, jealousy, or worse if it were felt that they had contributed to marital or familial problems.

Other people in Ayutthaya are foreigners from many different lands. The status of foreigners depends not just on their wealth and ability to adapt to Ayutthayan society but also to their country of origin. People from a known and powerful state such as China can be sure to receive some respect, although this is often compromised when bands of Haws (Chinese migrants) are involved with bandit activities in Siam. Europeans and Arabs would also be accorded respect, largely because they come from so far away. Those from closer to Siam, especially if they are considered to be a less civilized people from within the vicinity of Siam, would receive much more suspicion, even if the politeness of Siamese culture commonly prevented any seriously disrespectful acts being shown towards them.

For a fantasy campaign, anyone looking unfamiliarly inhuman will be treated with considerable fear and suspicion as a spirit from the forest or a ghost. Considering the few clothes that people wore, they would be few opportunities to disguise someone's true appearance.

When Europeans reached Southeast Asia in this period, they left records of their impressions, frequently noting how healthy the local people were; this was as a result, partly, of the abundance of food and of knowledge of useful healing methods based on local herbs and Chinese remedies. Regular bathing in clean water was also helpful. The local people were as tall as the Europeans of the era were. However, disease did strike; leprosy was a common problem and a major epidemic of small pox struck the kingdom in 1454 and later had devastating consequences in Indonesia. A plague of giant rats caused famine throughout lower Burma in 1596 and, despite the general abundance of food,

famine was not unknown on the event of flooding, unseasonable drought, or disease.

Since few Europeans spoke Siamese, translators from among the local population were usually hired to help with negotiations (these were often known to Europeans as mestizos). When foreign traders took up residence for an extended period in Ayutthaya, it was common for them to look for a wife from the local population, often from the ethnic minority Mon people. When they were ready to leave, they were free to divorce their wives; so long as they left a suitable amount of money or goods to support the wife and family, this was considered a good bargain for the woman who would become valued as a potential future wife for a local man. Any children born of the marriage would be well-placed to become intermediaries, such as mestizos.

The different foreigner groups spent a lot of time conspiring against each other and generally gossiping about each other's intentions. Concerns about who was able to convert more of the local people were commonly considered to be of great importance, especially among the devout and militant Spanish Catholics. From 1606, the Japanese became increasingly important in Ayutthaya after the Shogun Tokugawa Ieyasu ordered some muskets made in Siam. This led to the presence of Japanese in Ayutthaya and, despite the suppression of a rebellion incited by Japanese traders in 1610, King Sontham, who succeeded Ekathotsarat in that year, developed a personal Japanese bodyguard that remained with the monarch for the rest of Ayutthayan history.

Food, Clothing, and Recreation

Ayutthaya is at the center of a hot and humid climate with three main seasons, two of which are hot and one is hot and rainy. People tended not to wear too many clothes. Most people would wear a sarong or similar skirt like object, a short blouse for women or a cotton vest or jacket for men. Most went barefoot. Skin colors vary to some extent depending on area of birth and the tribe or people from which they came. People of different classes were subject to sumptuary laws, which strongly controlled what they were allowed to wear and, particularly, how much jewelry or other items of value they could show. Basically, the higher the social class, the more that people were allowed to wear. Anyone considered to be laying claim to a higher status than merited by wearing nicer clothes or jewelry would be subject to immediate punishment, which might include imprisonment or corporal or even capital punishment, depending on the circumstances.

Canals linked everywhere throughout the city, allowing people to travel wherever they liked by rowing boat. The canals would be filled with vendors and people traveling from place to place. The size of their boats and of their entourage would also depend upon social class. Anyone meeting a person of higher class would have to be careful to show appropriate deference. In the case of the King, the safest thing to do would be to keep out of his line of sight altogether. A number of European merchants were sentenced to death because they did not recognize at a distance the King on one of his boats and therefore did not make sufficient efforts to show respect to him.

Thai houses such as those found in Ayutthaya are traditionally wooden and based on stilts, so as to keep them clear of water and wild animals. Houses would be large enough for extended families to live together with each other. As food was so plentiful and cooking possibly dangerous in a wooden house, most people bought food from passing boat vendors or else from the floating markets. Prior to the arrival of the chilli from the Americas, the main spice was pepper, although many other herbs and spices grew abundantly. Meals were based on rice, freshwater fish that lived in rice paddy fields or in rivers, fresh seasonal vegetables (eggplants, kale, morning glory, mushrooms), and fruit (bananas, mangoes, papayas), together with frogs and some insects, chickens and their eggs, and occasionally a slaughtered pig or buffalo. While many people lived according to a subsistence regime, nevertheless food was quite freely available, either because it grew well on cultivable ground or else wild in the forests. Rice was used to create various kinds of rice wine, although most people customarily drank water or, alternatively, tea from China.

Entertainment was provided by troupes of musicians, actors, and acrobats. These may have been full-time entertainers or just amateurs joining in periodically. Musicians played instruments such as long drums, wooden xylophone type instruments, and flutes. Occasionally, larger fairs were organized in the grounds of wats (temples), which conveniently provided areas of ground that could be used. Wrestling and contests of martial arts were also popular on such occasions. People tended to rise and retire early, following the natural rhythm of the sun which, in a country quite close the equator, rose and fell at fairly constant hours throughout the year.

Astrology was an important activity in Ayutthaya and many people sought to earn a living by telling the future. The King maintained an official royal astrologer. Foreigners claiming some special knowledge of or ability to influence the future might attract considerable attention.

Adventure Seeds and Plot Hooks

The Diplomatic Mission

Players involved with characters in campaigns set in Japan or China or further afield might be despatched to conduct a diplomatic or commercial mission in Ayutthaya. They would be required to find their way to Siam, possibly being menaced by pirates or storms at sea or other perils, then seek audience with the king and his officials and seek to put forward a petition with suitable gifts and attention to protocol. Almost certainly, they would be required to wait upon the king's pleasure, often for extended periods of time and this would give them plenty of opportunities to interact with local people, fall in love, contract enemies, squabble with delegations from other countries and so forth. A journey into the countryside might provide opportunities to learn new skills and knowledge from village shamans or holy recluses.

A Murder Investigation

A minor princess has been found dead -- apparently murdered -- and all foreigners are under suspicion. The king has appointed the Prince of Louvo (an important ally) to conduct an investigation and punish any wrongdoers. The Prince's methods are strict and he will not hesitate to use torture -- for example, being slowly boiled alive in a large metal pot or placed in a sack and beaten with bamboo sticks. Suspicion will fall upon the characters and incriminating evidence is found in the possession of a trusted aide. Under the shadow of imminent arrest and interrogation and the pressure of time, can they discover which of their rivals is seeking to have them eliminated?

War

Warfare was a very popular activity for most of Southeast Asia's kings throughout this period. The main enemies of Ayutthaya were the Burmese -- who sacked the city twice -- but wars were also fought against Lanna, Lan Xang, the Chams of Vietnam, and the Khmers of Angkor. There were also incidents with Haws (Chinese) and with the pirates of the south China seas, mostly conducted with mercenaries because the Thais had little in the way of navigational skills or in traveling by sea. Here, the characters are offered the opportunity to take part in a military campaign, perhaps as an official observer or volunteer. Exposed to the dangers of travel in unfriendly areas (bamboo pit traps, tigers and crocodiles, disease and hunger, not to mention being shot at by enemy archers and spearmen), the party might have opportunities to hunt for elephants and fight on elephant back, as well as witness significant fighting and its perhaps terrible aftermath.

Fatal Flaws and Heroic Weaknesses

Drawbacks for the *d20 System*

by Owen K.C. Stephens

Though many game systems have rules for character flaws, the core *d20 System* only gives rules for making characters better. While this is fine as far as it goes, it leaves a number of classic character ideas -- the struggling coward, the scholarly weakling -- to being handled simply through low ability or skill scores and roleplaying. To handle these concepts more smoothly, this article presents a number of *d20 System* hindrances.

Hindrances all have game-mechanical effects, to prevent GMs and players from having to agree how character flaws and physical infirmities should be roleplayed. A character who takes the Coward hindrance may wish to be brave and bold, taking risks to prove himself, but when faced with true adversity his game-mechanical limitations kick in regardless of player or character intentions. They are more focused than low ability scores as well, allowing a poorly-educated wizard to still have the mystic power a higher Int brings.

If used as part of a [Cludge](#) game, each hindrance earns the character 5 additional character points. If used in a traditional *d20 System* game, a character may take a hindrance at 1st level in order to gain an additional bonus feat. A GM may also want to use hindrances for certain NPCs (either to make them more interesting, or to weaken powerful NPCs foes PCs could not otherwise handle). In games allowing races with ECL shifts, a character can take two hindrances to negate one level of ECL.

Obviously a character shouldn't be able to take a hindrance that doesn't particularly hinder him. A GM should feel free to disallow hindrances that aren't relevant in a particular campaign. Additionally, some hindrances have requirements a character must meet to take them. In many cases these are maximum allowable ability scores, to prevent a high Dex character from being described as a klutz, which seems counterintuitive at the least.

Buying off a hindrance is more expensive than the bonuses gained from it. First, whatever was gained (either character points or a free feat) must be given up (or repaid). Second, the character must take a 105 experience penalty for one level worth of exp (1,000 exp × the level when the character starts to pay off the hindrance). Once the exp penalty has been maintained for a level, the character has suffered the efforts needed (physical training or mental struggles) to overcome the hindrance.

A GM might also allow a character who underwent a major trauma to trade one hindrance for another, if an appropriate trade is suggested by the player. For example, a character who is a Coward -- but manages to make his Will saves against an army of undead and fight nearly to death -- might give up the Coward hindrance, replacing it with Weakling because of his disabling wounds.

Braggart

You love to hear the sound of your own voice, and can't help but talk about your accomplishments. In fact you love hearing the sound of your own voice so much, you rarely listen to what anyone else has to say.

Drawback: You take a -2 penalty to all Bluff, Diplomacy, Disguise, Gather Information, and Sense Motive checks, and automatically fail such checks on a natural "1" or "2" on the d20 roll. Any Bardic Lore or Gather Information checks made to get information about you gains a +4 circumstance bonus.

Brash

You always want to leap into the thick of the excitement, even when it's not a good idea.

Drawback: Any time action has started (defined as circumstances where character may not take 10 and/or when initiative rolls have been made) you take a -2 moral penalty to all d20 checks any time you don't take a full-round action, and you may never hold your action (though you may Ready).

Clueless

You simply aren't good at putting things together, noticing the world around you, or realizing when things are about to get complicated. When your friends and allies are gearing up for battle, you're wondering if you locked your front door.

Drawback: You take a -2 penalty to all Listen, Search and Spot checks, and a -4 penalty to all Initiative checks.

Coward

You are not brave, and suffer the thousand deaths of fear, dread, and anxiety.

Drawback: You take a -4 penalty to all saves vs Fear effects. When under an effect that would normally make you immune to fear effects, you simply don't take this penalty. When you suffer a morale penalty, you must double its value.

Fool

You are easily tricked, rarely insightful, and no one ever looks to you for advise. It's not that you lack knowledge; it's that you seem to live in a world all your own, and don't understand how things work in the real world.

Requirements: Wis 14 or less

Drawback: You take a -2 penalty to all Will saves. You also automatically fail any Wis-based skill check or Will save if you roll a natural "1" or "2" on the d20 roll.

Frail

You are a lightweight, susceptible to disease, poison, and exhaustion.

Requirements: Con 14 or less

Drawback: You take a -2 penalty to all Fort saves, Con checks and Con-based skills. You also automatically fail any Con-based skill check or Fort save if you roll a natural "1" or "2" on the d20 roll.

Green

You have no combat experience at all, and are more likely to get yourself killed than learn martial arts when exposed to danger.

Drawback: You have no starting weapon proficiencies (though you may buy them normally with feats after 1st level). Additionally, you provoke an attack of opportunity whenever you concentrate (such as to maintain a spell) or draw anything, including weapons.

Hedonist

You live to enjoy life, and don't deal well with "roughing it."

Drawback: You suffer a -5 penalty to any opposed check to resist an offer to engage in enjoyable activities.,

Additionally, you suffer a -4 penalty to all rolls for forced marching, avoiding damage from environmental conditions, and enduring any harsh or sleepless conditions. You require 12.5% more sleep (or meditation) than is normal for your species.

Ill-Educated

Requirements: Character would normally be literate.

You are poorly educated, and may even have a learning disability. You can't read. Letters swim before your eyes, and facts are difficult to keep clear in your head.

Drawback: You suffer a -2 to all Int checks and Int-based skill checks, and automatically fail such checks on a natural roll of "1" or "2" on the d20. Additionally, you can't read. You cannot buy literacy in any language without buying off this hindrance, and even then you must buy the ability to read each language you know separately.

Klutz

You are clumsy, awkward, and physically inept.

Requirements: Dex 14 or less

Drawback: You take a -2 penalty to all Reflex saves. You also automatically fail any Dex-based skill check or Reflex save if you roll a natural "1" or "2" on the d20 roll.

Lame

Either from a malformation or an old wound, one of your legs doesn't work properly. This condition is long past healing, even from magical sources, and makes it difficult for you to get around.

Drawback: All your innate move rates are halved. Additionally, you take a -5 penalty to all Balance, Climb, Swim and Tumble checks.

Toad

You are ugly, unpleasant, and generally unlikable. While it's true that Charisma represents multiple factors, you lack in all of them.

Requirements: Cha 12 or less.

Drawback: You suffer a -2 to all Cha checks and Cha-based skill checks, and automatically fail such checks on a natural roll of "1" or "2" on the d20. Any time a foe has a choice of targets, he chooses you. Additionally, you are treated as being 4 levels lower for purposes of the Leadership feat, familiars, animal companions and special mounts. All summoning spells you cast have a 25% chance of going wrong, with the summoned creature attacking the nearest target and ignoring your commands.

Unlucky

Things simply go badly for you, for no good reason.

Requirements: No ability to re-roll d20 rolls.

Drawback: Twice per game session, the GM may require you to re-roll a successful d20 check. You use all the same modifiers as the original check, and must live with the second result (even if it is better, you use it).

Weakling

Requirements: Str 12 or less.

Drawback: You suffer a -2 penalty to all Str checks and St-based skill checks, and automatically fail such checks on a natural roll of "1" or "2" on the d20. Your light and medium carrying capacities are ½ normal for your Str.

Wimp

You can't take the damage others seem to absorb without difficulty. You bleed easily, pass out quickly, and are likely to bleed out if not helped.

Requirements: Con 12 or less.

Drawback: In a game using hit points, you have 3 fewer hit points than your normal total. When disabled you begin bleeding if you take any action, even those that are not strenuous, and when dying you have only a 5% chance to stabilize. In a game with wounds, you simply have 3 fewer wounds than your normal total.

Pyramid Review

Gamma World Player's Handbook (for d20 Modern)

Published by [Swords & Sorcery](#)

Written by Bruce Baugh, Ian Eller, Geoff Skellams, Lizard, & Mikko Rautalahti

Illustrated by Ed Bourelle, Mike Chaney, Jeff Holt, Jeff Laubenstein, Brian LeBlanc, James Stowe & Tim Truman

248-page b&W hardcover; \$34.95

The roleplaying hobby has reached an age when many of its first releases -- some classics, others not -- have cause to celebrate their Silver Anniversary. For *Dungeons & Dragons*, that came in 1999, while 2001 saw the silver anniversary of TSR's science fantasy RPG *Metamorphosis Alpha*. Its original author, James M. Ward, celebrated the event by releasing [Metamorphosis Alpha Universe RPG](#) published by Fast Forward Entertainment, a rewrite of the original concept that combined an interesting campaign premise with a set of ill-judged and woefully archaic mechanics. If an anniversary rewrite of a classic like *Metamorphosis Alpha* could fail, what then of its offspring? For if *Metamorphosis Alpha* is the granddaddy of all post-apocalyptic games then *Gamma World* is their father, and it is *Gamma World* that celebrates its own Silver Anniversary in 2003. Since the release of that original in 1978, the *Gamma World* game and concept have gone through at least six editions, only really deviating with the last few versions. The first of these was for TSR's *Alternity* game system that stripped out many of *Gamma World's* core elements, and the second was a return to the *Metamorphosis Alpha* concept with *From Metamorphosis Alpha to Omega* for TSR's surprisingly different, but pleasing *Amazing Engine* series of RPGs.

For the 25th anniversary of *Gamma World*, it is no surprise that its return is powered by something different to the earlier editions. The seventh edition of *Gamma World* is a *d20 System* RPG, which in a sense brings the game back to the fourth edition, as several of that softcover's rules would later appear in *Dungeons & Dragons Third Edition* and the *d20 System*. Indeed, this interpretation is neither published by Wizards of the Coast nor powered by *Dungeons & Dragons 3rd Edition*, instead being published by White Wolf Studios, Inc. under their Swords & Sorcery imprint and employing the [d20 Modern RPG](#) rules to provide its underlying mechanical concepts. So with that in mind, and that this iteration has been developed by Bruce Baugh, the Origins-Award-winning co-developer of the RPG *Adventure!*, the fans should expect something a little different.

Physically, the *Gamma World Player's Handbook* is a sturdy hardback with an eye-catching and appropriately fluorescent green cover, behind which lies a very gray-looking tome. A spiral-bound-book motif is used throughout with the borders given a number of different metallic designs to look as if every page has been laid onto a metal plate. The artwork is uniformly good, but the book is let down by a lack of one last read through. There are relatively few spelling mistakes, but the appearance of the much-dreaded "page XX" does much to give the reader a poor impression. Another problem the text suffers from is the effect of the gray mottling on the page underneath it. In places where this mottling is particularly dark, it intrudes into the text, forcing the reader to wonder whether the mottling is actually punctuation or part of the underlying image.

The setting for *Gamma World* is at least a century from now. In that time, genetic engineering has become a child's plaything, artificial intelligence so common place that everyday tools talk, and this combination of both became known as "Soultech." Even though a cleaner, more environmentally friendly world was created using the new advances in

science, the problem of human jealousy had not been left behind . . . A simple argument tipped over into an exchange of destructive firepower, before escalating into hundreds of such exchanges, many between A.I. computer systems that could react faster than their human masters. Three generations have passed since the Final Wars that destroyed so much. There are few survivors who remember the time before the apocalypse, such that the new generations are not looking back to the Old World, but forward to building a new one.

The first and most important factor to note about this interpretation of the *Gamma World* setting is that it is not the *Gamma World* of 25 years ago or even 10 years ago. The nature of this version's apocalypse is not wholly nuclear, or indeed nuclear, biological, and chemical. Yes, it does involve the last three, but adds a fourth destructive agent to the usual trio of apocalyptic technologies: nanotechnology. This the science and technology of very, very small machines tasked to build, dismantle, enhance, repair, or destroy according to their programming and all at an incredibly efficient molecular level. Of course, such nanotech agents, left to their own devices or directed at the whim of their unsupervised A.I. masters, are a very real danger in the world of the post apocalypse, such that nanotech has become an ambient part of the environment.

Based upon the *d20 Modern* model, players create 3rd-level characters, but because of the nature of the *Gamma World* setting, the process is a little more complex. As part of their character's pre-campaign development, a player selects a genotype (Stock Human, Pure Strain Human, Mutant, or Synthetic), a basic class from the *d20 Modern* core book (Strong, Fast, Tough, Smart, Dedicated, or Charismatic), and an Occupation. All this represents the character at 1st level -- what they were -- while their 2nd level is what they became, and the 3rd what they are now. PCs' class for the 2nd and 3rd levels can be continued from their basic class or be selected from one of the new advanced classes given in the *Gamma World Player's Handbook*.

The four genotypes are akin to other setting's races. The Stock Human is the most common type found in the world after the Final Wars, and the same given in *d20 Modern*. Pure Strain Humans are those that survived in isolation and thus have not suffered from the effects of the Final Wars. Healthier and more energetic than Stock Humans, they are better educated and have greater familiarity with technology but are not as adaptable, nor as capable of dealing with people. Mutants can be engineered (or uplifted); animals; engineered humans, designed for a particular purpose; new men, who have been affected by the mutations, and are able to pass their mutations on to their children; and true mutants, of which no two are alike. Mutants begin the game with three minor and one major positive mutation, along with a minor negative one. They also suffer from an inherent genetic instability that makes them susceptible to further mutation. Synthetics can be androids, cyborgs, or robots, designed by the player to be as near human as they like, or not. They have the benefits of being a construct, as well as damage reduction, self-repair, and the ability to upgrade hardware and software to increase their capabilities. Unfortunately they possess a narrow focus in terms of skills, are limited in terms of feats chosen after character generation, and always have an allegiance hard wired in.

The six basic classes from *d20 Modern* remain mostly unaltered, but an example of each suggests how they can be modified for the setting, providing class skills, bonus feats, and a new talent tree for each. The 16 occupations add a few more class skills, bonus feats, and an increase to the wealth statistic. The six advanced classes are relatively self-explanatory. They consist of the Cyborgologist, able to understand the secrets of the synthetic mind; the Leader, skilled at commanding and directing a community; the Nanosmith, who possesses an intuitive grasp of how nanotech works and can control it to their advantage; the Survivor, able to live and thrive in environments that others could not; and the War Chief, capable commanders of security or military forces.

The creation process is solidly supported with an appropriate range of skills and feats that fit the game's setting. Where it suffers is in certain aspects of the FX (as the *Player's Handbook* terms the setting's mutations and biotechnology, implants and grafts, and psionics). At just 12 each of positive and minor mutations, both major and minor, for a total of 48 mutations, there are just not enough options to choose from. What this means is that there will not be enough variety between one mutant and the next. Further, there are limitations when it comes to playing the Mutant class. Players with memories of the previous version of *Gamma World* will decry the omission of the mutated plant as an option, and the lack of guidance for creating mutant animals. What is suggested is that players adapt one of the several anthropomorphized animals brought in from previous versions of *Gamma World*. These include the badger-like Badder, the canine Ark, and the leptoid Hoop, plus the several anthropomorphized animals or "Moreaus" given in *d20 Modern*. Yet they feel very much as an afterthought in what is a very human-centric game.

Yet despite the shortcomings in the breadth of the FX, there is no little depth to the information. Each of the various types is thoroughly discussed and in most cases cleverly applied to the game. Never more so than for nanotechnology, which is in some ways the conceptual high point for this book. The most personal type of nanotech will actually choose the host with which it bonds. Given the inherent user-friendly nature of nanotech, the host needs little in the way of training to actually use. Once bonded, a host possesses resources measured in "nanounits," which can be depleted to achieve a range of interesting effects. These can be designed by the user, or they can grab one of the examples listed, which include Flight, Force Field, Induce Mutation, Plasma Blast, Tissue Repair, Water Purification, and Topographical Imaging (sending out a nanotech swarm to map out the local surroundings).

Instead of using the Psionics system from *d20 Modern, Gamma World* gives a new rules system for psionic FX. Psionic characters can become quite powerful, growing as a character gains levels, but every time they need to make a psionic skill check, there is the danger of feedback. This occurs when a roll of "1" is made on the die roll, and results in the user suffering some adverse effect as created by the GM. This could easily be as bad as the character's head exploding, adding a danger that is not present in the other FX, even though it does harken back to the wacky elements of old.

The focus of *Gamma World* in terms of a campaign is twofold: environment and community. The various climates are examined and given rules, along with maps of the North American continent, the world, and the Mississippi Basin. These are clearly well-done maps, but since they are presented in grayscale, they show a very limited amount of information. Had they been in color, they could have shown more topographical details, especially the various environments already discussed. The book discusses the transition from the world before the Final Wars to the one that came after it, examining the widespread use of nanotechnology, clean power, and the prevalence of A.I. computers and Soultech . . . and how it was all destroyed. These ideas are meant to be applied to a GM's own campaign setting, perhaps even their every own neighborhood after they have projected it forward a century or so. The players are encouraged to participate in both this process and in the creation of a Community.

A Community is designed as if they were a *d20 System* character, with attribute scores, skills, and feats serving to define the Community's abilities, resources, and so on. Again the rules are supported by a number of examples that showcase what can be created using them, ranging from nomadic train robbers in Australia and tribal warfare in shattered "Nau Yorg" to prospecting for pre-war tech buried in Silicon Valley and anti-technology survivors in France. Each of these can be used as given, or as models for the GM's own campaign. Once a Community has been defined, how it operates is modeled through the Community Behavior Map. This is a diagram or flow chart that helps a GM keep track of how a Community reacts to influences from within and without. Though these rules complement those for Community creation, they do not feel as fully developed, nor are they given any working examples.

Fans of previous editions of *Gamma World* expecting a full bestiary are likely to be disappointed. Some old standbys are included, such as the dragonfly-like Arn, the intelligent equine Brutorz, the dumb leptoid riding beasts known as Hoppers, and the underground dwelling shark-like predator called the Sep. They are in turn joined by creations in keeping with the setting's update, such as Cleansing Slime, which seeks out particular substances and literally breaks them down using chemicals and nanosymbiotes, plus several well-designed and described robots. These range from the common household appliances and mobile medical robots to the Security Robot and the Death Machine. They can come in a variety of different models, but all are akin to the Ogre cybernetic tank of the game of the same name, and all sent quite, *quite* mad by the limits of their program minders.

What types of game can be played using the *Gamma World* rules is covered in a discussion on campaign styles. Suggestions include the light-hearted explore/kill/loot/repeat style best typified by *Dungeons & Dragons*, the reconstruction or construction of society anew, and pure exploration. There is solid advice on handling differing technology levels and their game effects, as well as setting player goals. Much of it is obvious stuff when you consider it, but having it spelled out is nevertheless useful. Also good is the examination of what it is that makes *Gamma World* different and what it is -- essentially Wonder, Survival, and Hope. Rules are provided to handle the investigation of both technology and cultures, these designed around the *d20 System's* skill and difficulty check mechanics. Although perfectly workable, it is very much a shame that the diagram that handled the investigation of technology seen in previous editions of *Gamma World* and also in the *Advanced Dungeons & Dragons First Edition* adventure, *S3, Expedition to the Barrier Peaks*, could not have been retained and modified. Finally covered are *Gamma World's*

Cryptic Alliances, the many organizations that espouse and pursue various goals, beliefs, and agendas, some peaceful, some not. Unfortunately, and much like the bestiary, only a few are covered in any kind of detail.

One pleasing conclusion is an appendix that brings *Gamma World* back to its roots by providing a means to play in this apocalypse using *Dungeons & Dragons 3.5*, rather than *d20 Modern*. This introduces and updates the four classes first presented in the fourth edition of *Gamma World*: the Enforcer, Esper, Examiner, and Scout. The intent is to have one of these classes with the one of the occupations given earlier in the book to create a character, and together these four make up the core classes for what is an alternative approach to playing beyond the Final Wars. Notes also adapt from *Gamma World d20* its Wealth system to the gold pieces of *Dungeons & Dragons*, as well as its skills and feats, and the Action Point system of *d20 Modern*.

Of course, this reinterpretation and update of a venerable classic comes to the gaming shelf weighed down by the baggage of its long published history. Gone is the wackiness that dominated all of those previous editions up until the fourth edition. Certainly those elements that could have supported that tone -- the mutations, the mutated animals, the cryptic alliances, and the technology -- are all present in the *Gamma World Player's Handbook*, but in a very reduced presence. These omissions -- and that of the mutated plant -- are to be very, *very* much missed. Hopefully, these missing elements will be rectified in future releases for the game line.

In their stead, there is no denying that this updating and reinterpretation of the *Gamma World* setting is nothing less than interesting. The introduction of nanotechnology and its application through the Nanosmith class is intelligently designed and thought out. As is much of the other FX, the Community Design rules and the discussion on applying the apocalypse to create the world after the Final Wars. It is a pity the Community Behavior Map rules feel underdeveloped, and perhaps they could have been left for a future supplement. Also, the feel and tone of this new *Gamma World* is more than ably captured in the color fiction that appears throughout the book.

Ultimately, the faults of the *Gamma World Player's Handbook* lie with what it omits rather than what it includes. The loss of wackiness and yahoo fun from earlier editions is something to be mourned. Yet a straight update of the setting to the *d20 System* -- without the re-interpretation, would be no more interesting than a word-for-word, shot-for-shot remake of *Psycho*, and who would welcome that? Indeed, such an exercise would probably not have interested either the developer or the authors. With an emphasis upon the rebuilding of the world much in the vein of Walter J. Miller Jr.'s *A Canticle for Leibowitz*, the result is a far more intelligent and restrained version of *Gamma World*, updated both in terms of its rules and its apocalypse.

Pyramid Review

You Need Drew's Truck

Published by [Interactivities Ink, Limited](#)

Designed by Mike Young

Art by Lee Moyer and Art Today

Edited by Val Kilgallon

Rules sheet, full-color map sheet, mini-truck, sheet of magnets, 45 cards, in an envelope; 2-6 players; requires three counters per player and a marker to represent the truck on the map; \$10.95

Mom and dad may have kicked you out. Perhaps college is finished, and it's time to find your own apartment. You and your boyfriend may have had a spat, and this time it really is over. You're out. You're moving. You have to take all your worldly possessions and schlep them across town. *You Need Drew's Truck*.

Interactivities Ink comes up with yet another surprising way of bringing games to your dining room table. The object this time is to be the first person to get three of your items, scattered as they are across town, back to your house.

To do this, you'll need to pile them onto Drew's truck. Stuff cards drawn from the deck depict the items to be moved, and the picture shown -- an arrangement of blocks in various compositions -- matches a counter of the same size and layout. These counters are printed on a sheet of magnets, and Drew's truck is pasted on the back of a metal panel (clearly an electric plate from the hardware store). In addition to the Stuff cards, there are also Action cards that let you alter game play. You can get a free move of some sort, trade out your cargo, throw someone else's stuff into the street, or rearrange the things on the truck.

Anyone who's ever played the popular block-dropping computer game Tetris is in for some nasty flashbacks -- this game uses similar graphic techniques. Drew's only got so many blocks worth of room in his truck, and the weirder the shapes of his cargo, the harder it is to get it all to interlock. If no one's cooperating (and if they're playing right they won't be), you can get perhaps three items on the truck at once. But since you only get so many actions each turn, there may not be enough left to get your stuff home. You have to spend actions to draw extra cards, load something onto the truck, take something off, or move the truck around the board. Since everyone gets a chance to pilot the vehicle on his turn, and everyone is trying to get their goods to a different "home base" on the small map, the truck will make a lot of weird stops and reversals.

There are plenty of item cards in the deck, and when you get to the end of the game there will be fierce, even paranoid resistance to letting anyone get anything useful done, so you can discard sets of extra Stuff cards in order to get free actions. Sooner or later this will allow someone to pull off the win.

Certainly the most striking feature of the game is the innovative use of the magnets. It's a simple (and inexpensive) thing, but it's just the sort of fiddly, hands-on kind of gimmick gamers love so dearly. It's often a stretch to accept that a certain arrangement of blocks should represent your stereo system, but it's a good way to keep track of pieces and a stable way to monitor progress. The magnets have to be cut out by the buyer (a really sharp utility blade knife will help here), but they're bright, colorful pieces and they won't easily become shuffled up accidentally.

The board itself is small but colorful. It's a circle of distinctive locations, and it's all you need to keep track of the action. Players mark their items at different locations with one of three markers (players have to provide three of them for each player, and one to keep track of where the truck is), and though the sheet itself is a little on the flimsy side, the map has room enough for the playing pieces.

Since turns are short, a game flies by fairly quickly (about half an hour once you have the rhythm). The action all seems the same after a while, so it may not be ideal for repeat play. Adding the "trade Stuff cards for Actions" rule was a good idea, but while it makes an ending more likely, it's not a guarantee against a game that could run a bit long in the end game when everyone desperately seeks to -- if not drop off their last item -- at least keep their opponents from doing the same.

You Need Drew's Truck is a delightfully irresistible idea, and it has another of those Interactivities Ink. "right prices," which makes it an amusing exercise and worth it as the occasional diversion. Though it won't sustain night after night of extended play, it's a solid game with engaging mechanics.

New Year's Fireworks and Crystal Balls

Last night I was at a friend-of-a-friend's house for a New Year's party. I had an okay time, although I had some slight problems even getting there because of a natural friction between one who is horrible at giving directions (my friend Chuck) and one who can get lost in a revolving door (myself).

Anyway, after finding the place and welcoming the beginning of my month-long "messing up of checks' date fields" celebration, we started to set off some fireworks. And over the course of an hour we proceeded to break *every* rule of responsible fireworks: holding fireworks and letting them launch from our hands; setting off as many fireworks as possible at once; using lit cigarettes and sparklers to help in setting them off . . . the works.

In fact, the only childhood fantasy that we *didn't* indulge was instead realized by the neighbor-of-a-friend-of-a-friend, who -- having grown bored with setting off fireworks one at a time -- proceeded to pack up all the fireworks back into their brown paper bag, and set the bag on fire. (The results, although fairly interesting, did not live up to the fantasy.)

There's almost no point to that tale, although if I were forced to tie this into gaming by gun-wielding maniacs who kicked down my door, I note that being an adult is very similar to most RPGs (and, very often, other games): You have the option to indulge in behavior that others would find socially unacceptable . . . or at least weird. And then I'd probably come up with some simile about fireworks relating to shooting Stormtroopers or becoming an unscrupulous real-estate tycoon.

But mostly I was looking for an easy column to write on this New Year's Day, especially since I seem to have burned my thumb (no doubt on some overly hot fondue last night).

Speaking of easy and New Year's (how's that for a segue, huh? Betcha can't tell who's got the Creative Writing degree *now!*), one of the most common columns of this time of year is the Prediction column, where one makes up answers that seem like they'll make sense. One of the nice things about doing prediction columns is that, really, they are pretty easy to write. (Being right, on the other hand, is not so easy.) And, presuming the writer is going to be around long enough to worry about *next* year, there's a ready-made sequel gestating for a full year. And if the writer is completely off-base . . . well, what're the odds that the readers will remember a full 365 days ago?

So without further ado, here are some fearless predictions for the coming year in the gaming biz. (I would like to take a moment to stress that these are completely my own thoughts, and are not based on any insider knowledge or other secret lore. So it would be a total coincidence if some of these predictions were too prescient . . . not a hidden message from the Neptune Overlord of Utah nor some cryptic Omaha mulberry.)

The Rise of Print-on-Demand. The technology already exists for people to print books in relatively small quantities (sometimes as few as one copy). However, for most gaming applications the profit mark-up and quality have both been too inadequate for many publishers to fully consider this possibility. I predict that this will change soon; advances in technology and competition among a number of services may resolve these problems for game manufacturers, and 2004 will see small-to-mid-sized publishers release older or lower-demand books using this "print on demand" technology. For the most part I don't see this as being a viable large-piece strategy for most publishers, since the profit margins for large-run books will always be greater. However, this will hopefully help ease many troubles that manufacturers have had with books that don't have *quite* enough demand to justify another full printing.

Revenge of Print-on-Demand. Although I don't see Print-on-Demand replacing traditional publishing, I predict that at least one company will do something innovative and creative with this method. Since print-on-demand uses electronic files for all its publishing, these files have the potential to be fairly dynamic before actual publication. What this innovation will be, I can't say. Some ideas that spring to mind:

- Inclusion of buyer-submitted artwork into a printed book. ("Hey! The king in this sourcebook looks like a charcoal-filter Photoshopping of *my* picture!")

- Modification of an adventure to include names, locations, and descriptions or details supplied by the buyer. ("Legends of the land of [Pyramue](#) tell of the heroic [Arr Kainjel](#) and [Krakazlar](#), who teamed up to thwart the sinister [Smar'sh](#) . . .")
- Heck, there's not much to prevent a "real" addition to a sourcebook. (Envision a Supers supplement detailing a city of metahumans. What if page 112 was left intentionally blank, allowing a buyer to submit his *own* character -- with illustration -- directly into the book?)

I don't see any of these innovations taking the world by storm, but I see them being another means for at least one smaller publisher to differentiate itself from the Big Guys.

Ashes To Ashes . . . Speaking of which, I predict that one of the Moderately Big Guys will have a major restructuring, involving a departure from the traditional games they had been creating, or getting out of that biz altogether. (I hope I'm wrong, but it seems like too long since the Etch-a-Sketch has been shaken.)

How Much for 96 Pages??? I see the gulf between the efforts of the Big Guys and smaller publishers getting wider, at least in the short term. Consumers will get to choose between big, fat full-color hardcovers that cost roughly the same as skinny, smaller-run works. I predict that these smaller books which offer something truly compelling or different will do okay, but those which do not may have real problems.

Downloads 'R' Us. I see electronic publishing continuing to grow. I predict that there will be at least one game line that exists exclusively in an electronic format (except, maybe, the "print-on-demand" option above), which will be popular enough for people to take note. Curiously, despite the one breakout hit I predict, I also see the trend continuing with a general reluctance for electronic-format purchases. The amount of high-quality free material available will continue to make things difficult for those offering similar material at a price, although some publishers (such as [Malhavoc Press](#)) will continue using worthwhile free material to funnel readers to more profitable options.

Coming Soo-aw, Crud. Given the cyclical nature of the game world, I predict at least three games will be released that all have a very similar theme, genre, or world idea, despite their having been developed independently and without knowledge of the other.

Abort, Retry, Fail. The computer will still fail to add significantly to the "traditional" gaming experience, despite at least one high-profile attempt to show otherwise. However, online MMORPGs will continue to be very popular and profitable.

Braaaiiiiiinns! At least two presumed-dead game lines will come back after a long absence, published by companies other than the one that originated them (probably by new companies formed by the investor[s] who were also fans of the original).

Old & New, Battered & Blue. I see the distribution picture for games continuing along as it has been, although I predict that smaller publishers will try more and more innovative techniques to get their products to consumers, especially older books (since so many retailers seem to focus on "new" releases). I also see the format innovated by White Wolf's *Orpheus* game -- the limited run "miniseries" format -- having at least one or two more trials by other companies. (I don't know if these two elements will tie together, but they're more similar than dissimilar, and I had too many small paragraphs back-to-back anyway.)

Fnord. And I have one more prediction, but it merits its own column, and ties into another column I wrote before . . . (It is also, I assure you, nowhere near as interesting as the mystery I'm building up around it.)

3rd, 4th, and 5th Dimensions??? And, finally, I predict that this will be the year where I *finally* am able to sit down and comprehend the first edition gold-box *Immortals* set from the original *Dungeons & Dragons* game.

Of course, I also predict that at least one of these predictions will be horribly, horribly off-base.

--Steven Marsh

Star Witness

A *GURPS Space* Adventure

by Stephen Dedman

For this adventure, the GM will need the *GURPS Basic Set*, *GURPS Compendium I* and *II*, *GURPS Space Third Edition*, *GURPS Ultra-Tech*, and *GURPS Robots*. *GURPS Ultra-Tech 2*, *GURPS Biotech*, and *GURPS Vehicles* may be useful, but are not essential. The adventure is designed for 100-point characters and set in the TL10 universe described in *GURPS Space* (p. S132), but can easily be adapted to any Space campaign, including the *GURPS Traveller* universe.

The PCs should, between them, have the skills needed to crew a small starship, including Pilot, Astrogation, Engineering, Mechanic, and Gunner. Other useful skills include Free Fall, Vacc Suit, Tactics, Fast-Talk, Survival, and, of course, combat and medical skills.

Payload

The adventure begins with the player characters temporarily delayed on an industrial world with a high CR. They may be waiting for payment for their cargo, for repairs to their ship, or something similar . . . when suddenly, one of them is approached by Patrol Lieutenant Stein. If the PCs have their own ship with at least one free berth, she will offer to charter it for a month (the duration of a flight to Wilde, the sector capital); if not, she will ask if they are interested in hiring on as crew on a starship in exchange for pay and passage offworld.

Any Streetwise PC (or player) will realize the value of doing a favor for the Patrol -- and the possible risks if they refuse. If they ask what the job entails, Stein will say simply that they urgently need to ship two passengers to a nearby planet -- secretly and securely. She will not reveal anything more unless the PCs accept the job: if they refuse it, they may find they receive a -1 Reputation among Patrol officers and other law enforcement professionals throughout the sector.

If the PCs agree, Stein will explain that one of the passengers is a witness in an important trial on Wilde, and the other is a court-appointed bodyguard. Stein will even agree to the witness being shipped in a freeze tube if there is a qualified medic on board ship. The PCs will need to leave within 24 hours; Stein will make sure there are no further delays.

The witness is the rather jittery Joshi Xu. The bodyguard is a Cerberus Security and Patrol robot, Patrol Sergeant DRN-88 ("Call me Darwin").

If the PCs want more information about Xu or the trial, they can ask Xu, Darwin, or Stein: use the NPC reaction roll, at -1 for each successive question. None of them want to reveal much, though Xu enjoys lying and may try to string them along. A character who rolls Streetwise -5 or Area Knowledge (Sector) -8 will learn that the only trial on Wilde likely to justify this sort of security is the conspiracy trial of Paul Valdez. More information about Valdez will require more questions: Criminology, Research, or Streetwise may all be useful.

Valdez is said to be the second-in-command of one of the sector's most ruthless crime bosses: the elusive Sherika Cano. Sher Cano started as a mercenary and gunrunner some 90 years ago, and is now said to control all smuggling throughout the sector and enforce her will with a small but well-equipped army. Xu was one of their most skilled computer programmers, and knows more about Cano's financial network than anyone else alive. He's the star witness at Valdez's trial, and it's hoped that his evidence can secure a conviction: if so, the Patrol hopes that Valdez might reveal Cano's whereabouts, or that she may attempt a rescue.

High Explosives

Shortly after leaving the orbital starport, but before they reach the jump point, the PCs will receive an urgent message from the planet's police. One of their informants has told them that a bomb has been placed on the heroes' ship, and set to explode once it leaves normal space. Unfortunately, the only other information they have is that the bomb is probably a mininuke (p. UT76), weighing a few pounds and easily concealed or disguised.

Everyone aboard the ship should make a Fright Check at -4; while they are panicking, the cop will promise to try to get more information. In the meantime, though, the PCs are politely requested not to return to the starport or come within 100 miles of any manned installations in the system. If they decide to evacuate the ship, the Patrol will rescue them as soon as it can.

Searching the interior of the ship takes 1d minutes and one Vision roll (or Electronic Operations (Sensors) roll if the PCs are using a radscanner) per space -- though there's nothing to find. If the ship has any security systems, they may help establish that no unauthorized people have entered the ship. Searching the hull will take two minutes per ksf, and will also require Free Fall and Vacc Suit rolls. The mininuke -- a large limpet mine -- is attached to the hull near the bridge, and is -4 to detect with normal vision and -2 to detect with a radscanner.

Once the bomb has been found, it can be described to the local cops, who will warn them not to touch it. The more precise the description the PCs give, the sooner the cops will be able to identify it.

The mine is a ZOM-76 .00001 kiloton mininuke, probably large enough to destroy the ship completely. It can be timer activated, remotely detonated by laser or radio, or triggered by anything opening the case or breaking the seal between the mine and the hull of the ship (if the PCs have already tried to do this, they're probably dead). Without the proper code signal to deactivate it, the cops have no way to render it harmless except by vaporizing it instantly. They advise the heroes to evacuate the ship; they won't risk any of their own bomb disposal experts by sending them up to defuse it, especially as they have no way of knowing whether the timer has been set, but will radio instructions if any of the PCs want to try.

If the heroes want to save their ship, the police will tell them that they should be able to remove the section of hull the mine is attached to, then send the mine away from the ship and target it with their weapons. If the ship has cDR0, removing the hull plate can be done with a laser torch or similar tool; if it has cDR1+, they will need a heavy plasma torch. It will also require Free Fall, Vacc Suit, and a Mechanic (Starship) roll. An ordinary failure will cause the bridge to lose air pressure and damage to some bridge system (see pp. S121-122) if the ship has cDR1 or less; if it has more, ignore this except on a critical failure. A critical failure may either destroy the bridge, or breach the mine casing, damaging the bomb components so that the PCs are exposed to a burst of radiation but minimal blast. Alternatively, it may destroy the trigger's radio receiver, which will start the timer.

The bomb's remote control is tuned to the beacon on the orbital starport: if anything blocks the signal (such as a ship jumping into hyperspace), the timer starts, and the bomb detonates 30 seconds later. The cops informant may discover this and relay the information just in time to save the PCs (e.g., just before they try activating a radio jammer), at the GM's option.

If the PCs manage to save their ship -- or enough of it that it can be repaired quickly rather than replaced -- they can proceed to Wilde as soon as repairs are finished (note that the charter agreement includes insurance for replacement cost): go to Trial Run. If the repairs will take three days or more, go to Sex Machine.

Sex Machine

Stein will keep Xu in a safe-house until a ship is ready, and will not reveal the location to the PCs.

If any of the PCs venture into Startown while the ship is being repaired, they may encounter the seductively-dressed Amber (or Anton, the male equivalent, if appropriate). If an opportunity presents itself, Amber will approach the PC

who seems most interested and make a Sex-Appeal roll. If the PC fails his Will roll to resist seduction (characters with the Lecherousness disadvantage roll at -5), Amber will follow him back to his hotel room for the night. The next morning, she will announce that she needs passage to Wilde to start her studies in theater arts: she has very little money, but is willing to work her way there -- and she's always wanted to try zero-gravity sex. If the PC seems reluctant, and has not become addicted to her neural stimulator, she will inject him with Crediline (pp. UT43-44) and try Fast-Talk or Hypnotism.

Amber is a "Lemon Angel" (p. RO119) with her empty spaces filled with weapons, including a drug injector (p. RO20) filled with Crediline in her left arm; a self-destruct device (p. RO30) and 2 lbs of explosive in her left leg; and a cyberswarm in her torso. If Amber manages to board the ship, she will attempt to release the swarm -- Flyer Terminator microbots with Non-Rechargeable AA cells -- into the ventilation system to target Xu.

Amber's instructions are to kill Xu, destroy his brain so that it cannot be read into a clone, then stand as close to his body as she can and self-destruct. She will not attack anyone else, including the PCs, unless they get in her way.

If Xu is killed, Stein will reveal that she's been expecting trouble, and that Darwin has several copies of Xu's braintape. She also suspects that Cano has allowed for that, and is hoping to either delay Xu's arrival on Wilde until after the trial has ended, or frighten Xu out of testifying, if she doesn't succeed in killing him. She warns the PCs that keeping Xu safe isn't enough: they have to keep him feeling safe, even if it means lying to him.

Trial Run

Q-ships from Cano's pirate fleet will be waiting near likely jump points on the route to Wilde, hoping that the PCs ship will emerge from hyperspace for an astrogation roll (see p. S132) close enough for them to attack. Fortunately, this is statistically very unlikely.

Every time the PCs emerge from hyperspace to "look around," make a reaction roll. On a neutral or better result, there are no pirate ships within sensor range. On a poor result, 1d-3 pirate ships are within sensor range, but both are too far away to pose a threat unless the PCs decide to attack, or something else prevents them making another jump (such as a failed Piloting or Engineer roll).

On a bad or worse result, the PCs have emerged from hyperspace near enough to at least one pirate ship for it to close to short range. If the PCs decide to run, it should be 1d+1 combat turns before they can recharge the Energy Bank for another jump.

The pirates will try to disable the heroes' ship and board it rather than destroying it outright; not only do they want to be sure that Xu is aboard, they'll also want a chance to loot the vessel of anything else valuable. For this reason, they'll keep the nukes in reserve, using the kinetic warheads and X-ray lasers instead.

Xu will become increasingly nervous with every encounter. If he learns that pirate ships have been spotted, he will make future fright checks at a further -1 penalty, with a further -1 penalty for every attack that damages the PCs ship.

Wilde

When the PCs arrive in Wilde's system, they will be given clearance to land at the surface starport (an orbital starport is in construction, but not yet ready for use). There are no more pirate ships in ambush, just a patrol cutter in orbit ready to escort them down.

A few miles out from the Class IV starport, while flying across the desert that surrounds Windermere, the sensors officer should make a roll on Electronics Operation (Sensors) to detect a low-powered laser -- a passive designator (p. UT56) -- being aimed at the ship. If this succeeds, the pilots of both ships will have a moment's warning of an incoming attack -- just enough time for Evasive Action. One brilliant missile (p. UT55) will hit the cutter's main maneuver drive engine, sending the cutter into a tailspin; the other, if not evaded, will hit the PCs' ship for 6dx10(10)

damage. Another missile will be fired at the PCs' ship a second later.

The designators are being aimed by two small, cheap robot drones (-2 to hit); the missiles are being fired by two of Cano's mercenaries with M-LAWS (p. UT55). If both drones are destroyed, the mercenaries will run rather than use the clip-on passive designators.

If a second missile hits the PCs' ship and penetrates its force screens and armor (if any), it will damage the ship's main power conduit, temporarily knocking out all computers, sensors, communicators, and turrets. The ship will be flying blind, leaving the pilot with three choices: bail out; attempt an emergency landing in the desert (at -5), endangering the lives of the crew and passengers but no one else; or continue flying towards the starport and risk crashing in a built-up and populated area. If the pilot has Overconfidence, he will have to make a Will roll not to attempt to fly towards the city. If he fails this Will roll, Darwin may try to overpower him and hand command over to a copilot.

If the pilot lands the ship at the starport and Xu survives, go to Hard Target. If the pilot lands in the desert, go to Sandstorm. An ordinary failure means that the hull takes 1d(5) its cHP in cDAM for every point by which the roll was missed: if this happens near the starport, it also does major damage to surrounding buildings and 5d damage to 1d people per point by which the roll was missed. A critical failure means that the hull is destroyed (see p. S140).

Sandstorm

If the PCs crash-land in the desert outside Windermere, they will be at least 500 miles from the city -- outside the normal range of short-range communicators (pp. UT31-32). Xu has a medium-range communicator with uplink and neutrino receiver built into his vacc suit, but Darwin is unaware of this and Xu will not reveal it unless he decides to give himself up to the Patrol instead of Cano. Instead (if conscious and alive), he will don the armored suit and tap into Cano's encrypted communications network, but he will not share any information he picks up until he's sure he can trust the PCs. If the heroes have a medium-range or better communicator and make an Electronics Operation (Communications) roll at -5, they will also be able to listen in on Cano's network, but cracking the code will require Cryptanalysis at -10 (one hour per attempt): Xu, who wrote the earlier version of their Cryptography software, has only a -1 modifier and needs 10 minutes per attempt.

Cano has mercenaries and robots within 100 miles of the crash site, and three minutes after the forced landing, Lucy will start broadcasting the following message: "To Joshi Xu and the crew of the starship (name and registration): do you require assistance? Please respond. Our medics can reach you much more quickly than the Patrol's."

Cano's mercenaries are monitoring communications frequencies, especially the Patrol and starport frequencies, to see if they can track them back to the ship. Any time the PCs attempt to communicate with the Patrol or Windermere, they will roll on Electronics Operation (Communications); every success will enable them to reduce the area they have to search to find the crash site (-5 for signals of less than 5 seconds).

PCs with the Gullibility disadvantage will have to roll against IQ not to respond, but others can ignore it. If Xu or the PCs do not respond to Lucy's message within 10 minutes, her tone will change to Intimidation: "To Joshi Xu and the crew of the starship (name and registration): we are very close to finding you. We have nuclear missiles that can destroy your ship or any vehicle that may be coming to rescue you. If you wish to surrender, please respond. None of you will be harmed."

Darwin will not allow Xu or any of the PCs to surrender, or to respond to this message, and will attempt to stun them if it's the only way he can prevent this. This message will repeat for five minutes, then Lucy will try Fast-Talk: "To the crew of the starship (name and registration): we will pay one million interstellar credits if you hand over the defector Joshi Xu and any braintapes that he may have made. This payment may take any of the following forms: untraceable credit deposited into a bank account of your choosing, bullion or gems, drugs, rare wines, military equipment, robots, bioroids, beautiful slaves, clones, software, art objects, or anything else we can provide."

Any PC making an IQ roll will realize that Lucy is offering to pander to the most common vices (Mental Disadvantages): a contest of her Fast-Talk skill against the Will of any PC with the Greed, Lecherousness, Addiction,

or Alcoholism disadvantage. Again, Darwin will tell the PCs that Cano cannot be trusted to deliver, and will try to stop the PCs responding, even if it means stunning everyone and hoping that help arrives before Cano's pirates. If the PCs try to haggle, Lucy will slowly raise the offer to two million while the mercenaries home in on the ship.

If the PCs give away their location, a Vulture (p. RO116) will be in firing range of the ship before they've had time to make any repairs. Lucy will give the PCs one minute to leave the ship, with Xu, or the Vulture will fire a mininuke. If they offer no resistance, four mercenaries and two Murasama 7 robots (p. RO115) will arrive in three jeeps an hour later, and take them back to their base for interrogation. Go to Traitor's Gate.

If the PCs don't give away their location, they will have one hour to make temporary repairs and perform first aid before Cano's spybots (p. RO111) find them. If the hull has been destroyed, the ship cannot be made to fly again, but it may be possible to repair one or more of the turrets, communicators, computers, etc. and connect them to a power supply.

Repairing the main power conduit requires an hour and a successful roll on either Electronics, Engineer, Mechanic or Shipbuilding (Starship); -2 if the PC is at half their HT or less; normal modifiers for tools (Major repairs). If the hull has not been destroyed, this will enable the ship to fly slowly at a low altitude and land safely at the starport (at -4). Another roll on the appropriate Electronics specialization will be needed for each of the Bridge systems (Communications, Computer, Sensors), and a roll on the appropriate Armory specialization is needed for each turret or weapon if the PCs want the ship to be able to fight.

An unarmed spybot will fly over the ship at the end of the hour; even if the PCs destroy the spybot, the Vulture (p. RO116) will be sent to the location to investigate, and will be in missile range (close range for the ship's weapons) 2d+1 minutes later. If the ship is not flying, Lucy will give the PCs one minute to leave the ship, as above; if the ship is flying, the Vulture will launch all its nukes without warning.

If the PCs defeat the Vulture, they will have another hour to attempt repairs before the jeeps arrive -- during which time they will receive a short-range communication from the Patrol, telling them that their satellites have located them, and a rescue team will be there as soon as possible. The mercenaries and Murasamas will arrive first: the PCs can either fight them or try to hide until the Patrol sends backup. Go to Hard Target.

Hard Target

If/when the PCs arrive at Windermere starport with Xu, whether in their own ship or with the Patrol rescue team, the Patrol captain will ask any who are uninjured if they could perform one last service. While every precaution is being taken to get Xu to the courthouse safely in time to testify, they want to make sure that copies of the braintape (taken before he left for Wilde) arrive. Each PC who accepts will be given one disc and a destination: the courthouse, the hospital, and the offices and homes of some of the prosecutors. Payment is a free license to carry a concealed weapon of LR 2+ on Wilde, good for a year, and an invitation to a drunken dinner with the SWAT team.

As the PC sent to the courthouse walks past the group of journalists waiting outside the court, on his way in, roll a contest of IQ (or Mind Shield, if he has one up) vs. a Telereceive skill of 14. If the PC wins, he will be able to warn the Patrol that there is a telepath present, though he will not be able to identify her unless he is himself telepathic or makes a critical success on IQ. If the telepath wins, she will discover where the other PCs are taking the other braintapes, and will arrange for them to be ambushed en route if possible. The ambushers will be a pair of thieves, who will shadow the PC for 10 minutes before attempting to pick his pocket -- but they're armed, and will fight if necessary. If arrested, they can reveal little about Cano's plans, except that she's prepared to "wipe Xu out at any cost," and that their orders are to try to prevent the braintapes being used.

Cano's plan is for the journalist to use Telesend to threaten the already edgy Xu, and if that fails, use Mindwipe to permanently delete all of his memories. If the Patrol knows that one of the journalists is a telepath, they will take appropriate precautions (psi shields, trying the case in camera, or letting Xu testify by communicator from a safe distance), even at the risk of a bad reaction from the judge or jury.

Traitor's Gate

If the PCs hand Xu over to Cano's mercenaries, they will be searched, disarmed, blindfolded, and taken to a pirate base. They will be kept in cells while Lucy and the mercenaries interrogate them. If Lucy is convinced that the PCs aren't trying to double-cross them, the PCs will wake up a day later in a cheap hotel Windermere startown. If possible, the mercenaries will leave their share of the reward (a credit transactor, a pleasure robot, a nuclear warhead, or whatever was agreed upon) at the foot of their bed. They will receive the insurance money to repair or replace the ship, but also a -2 Reputation with the Patrol and other law enforcement types, which will have to be bought off with good deeds (leading them back to the pirate base will reduce it to -1).

If Lucy is not convinced that the PCs have been bought, she'll keep her word not to harm them -- but the mercenaries will drop them in the middle of the desert naked, 200 miles from any water or shelter, with no communicators or survival equipment.

Wilde (Victoria V)

Planet type: Terrestrial

Diameter 11,200 mi.

Density: 3.9

Gravity: 1

Composition: Low-Iron

Axial tilt 12°

Seasonal variation: Minor

Length of Day: 25.1 hours

Length of Year: 14.29 Earth years (4867.7 local days).

Atmosphere: Pressure standard (1.09)

Type and Composition: 75% Nitrogen, 23% Oxygen.

Climate: Tropical

Temperatures at 30° Latitude: Low 81°; Average 103°; High 125°

Surface Water: 42%

Humidity: 44%

Primary Terrain: Desert/barren

Mineral Resources: Gems/Crystals scarce

Rare Minerals scarce

Radioactives scarce

Heavy Metals scarce

Industrial Metals scarce

Light Metals plentiful

Organics ample

Moons: 2 small moons, Dorian and Algernon

Biosphere: Dominant life form: marine animals, shore and water plants, extensive coral reefs. Other significant life forms; imported crops, humans, domestic animals.

Civilization: Population 18,000,000 (PR 7)

Tech Level: 10

Control Rating: 2/3

Society: Socialist Athenian Democracy.

Starports: Class IV (ground) at Windermere.

Installations: Patrol and Survey bases; Nature preserve; Special Justice Group office; Private Research center; University.

Economic/Production: Sector Capital; University.

Star Name: Victoria

Type: A2V (Bright White Main Sequence Star)

Biozone: 3.1 -- 4.7

Inner Limit: 0.0

Number of Planets: 5

Planet	Orbit	Distance	Type	Diameter	Density	Gravity	Atmosphere	Notes
Asteroid Belt	1	.3						
Asteroid Belt	2	.7						
Rock	3	1.1	Hot Rockball	2,700	7	0.43	none	
(Empty orbit)	4	1.9						
Wilde	5	3.5	Detailed above					
(Empty orbit)	6	6.7						
Whale	7	13.1	Gas giant	116,000	2.3	6.1	Hydrogen	14 moons, 6 moonlets
Ernest	8	25.9	Gas giant	60,000	1.8	2.47	Hydrogen	10 moons, 8 moonlets, faint ring
Saint Quentin	9	51.5	Gas giant	80,000	2.1	3.85	Hydrogen	8 moons, 10 moonlets

Cast

Joshi Xu

Age 39. Pale complexion, brown hair in pony-tail, blue eyes; 5'8", 120 lbs. Native gravity .9.

ST 9, DX 11, IQ 14, HT 9. Move 5.

Advantages: Bionic Ear (+2 Hearing, ultrafrequency); Eidetic Memory [30]; Mathematical Ability; Neural-interface Implant; Versatile.

Disadvantages: Combat Paralysis; Edgy; Extremely Curious; Low Pain Threshold; Unfit; Weak Will/2.

Quirks: Attentive; Imaginative; Overconfident about his mental skills; Prefers Dreamgames to real sex; Untidy, but fussy about cleanliness.

Skills: Accounting-16; Artist-13; Beam Weapons/TL10 (Sonic)-12; Chess-15; Computer Hacking/TL10-16; Computer Operation/TL10-14; Computer Programming/TL10-17; Cryptanalysis/TL10-16; Cryptography/TL10-16; Cryptology-11; Electronics/TL10 (Computers)-14; Electronics Operation/TL10 (Security Systems)-15; Fast-Talk-13; Forgery/TL10-14; Gambling-16; Mathematics/TL10-16; Merchant-13; Research-14; Streetwise-13.

Equipment: TL10 MCA vacc suit, with helmet light, improved communicator (medium-range with uplink and neutrino receiver), rebreather, reflective coating, and magnetized boot-soles; two-hour tank; Distort belt; Pocket Pack; Nightshades; Skinsuit; Genius small computer (Complexity 5) with Text scanner, printer, and Accounting, Datalink, Defense, assorted Dreamgames, Electronics Repair, News Daemon, Optical Recognition, Security, Word Processing, and Worm software.

Joshi was one of Valdez's chief computer wizards, an expert at cracking codes and laundering credit, which he does more for the challenge than the money (most of which he spends on computer upgrades). He fled after Valdez was arrested on Wilde, but was soon arrested by the Patrol. He has never knowingly met Cano.

Joshi is relatively harmless, though any compulsive gamblers in the crew may end the voyage poorer than they began (he likes to play for high stakes).

Lieutenant Ana Stein

Age 33. Tanned complexion, strawberry-blond hair, blue eyes; 5'8", 125 lbs. Native gravity 1.02.

ST 11, DX 12, IQ 12, HT 12. Move 6.

Advantages: Charisma/1; Combat Reflexes; G-Experience; High Pain Threshold; Interface Jack; Legal Enforcement Powers.

Disadvantages: Duty; Sense of Duty (her command).

Skills: Administration-12; Beam Weapons/TL10 (Laser)-16; Brawling-12; Criminology/TL10-12; Detect Lies-13; Diplomacy-12; Electronics Operation/TL10 (Sensors)-12; Fast-Draw (Pistol)-13; First Aid/TL10-12; Free-Fall-13; Gunner/TL10 (Laser)-15; Judo-13; Law (Alliance)-13; Leadership-12; Savoir-Faire-12; Streetwise-11; Tactics-13; Vacc Suit/TL10-13.

Equipment: Variable Heavy Laser pistol with selector switch (RoF 8); TL10 LCA vacc suit, with HUD, helmet light, rebreather, reflective coating, and magnetized boot-soles; two-hour tank; multiscanner.

Stein, the commander of the base on Galt, is a career Patrol officer with little interest in politics. Her chief loyalties are

to the patrollers under her command and to the Alliance, not to Galt's managers. She will give the refugees as much help as she can without endangering her own people or breaking her orders to defend the planet.

Patrol boarding party

ST 12, DX 11, IQ 11, HT 11. Move 5.

Advantages: Combat Reflexes; G-Experience; Legal Enforcement Powers.

Skills: Administration-10; Beam Weapons/TL10 (Laser)-15; Brawling-12; Criminology/TL10-12; Detect Lies-11; Electronics Operation/TL10 (Sensors)-12; Fast-Draw (Pistol)-12; First-Aid/TL10-12; Free-Fall-12; Gunner/TL10 (Laser)-13; Judo-12; Law (Alliance)-12; Streetwise-11; Tactics-10; Vacc Suit/TL10-12.

Equipment: Variable Heavy Laser pistol with selector switch (RoF 8); TL10 LCA vacc suit, with HUD, helmet light, rebreather, reflective coating, and magnetized boot-soles; two-hour tank; multiscanner. Cutter also carries Military X-ray laser rifles and Military Dinosaur lasers for use against heavily armored opponents.

One of the party also has Mechanic (Power Plant)-15, another has Physician-12.

Mercenary/Pirate

ST 11, DX 11, IQ 11, HT 11. Move 5.

Advantages: Combat Reflexes; G-Experience; High Pain Threshold; Patron (Cano, appears on or less).

Disadvantages: Code of Honor (Pirate's); Duty; and any two of the following: Bad Temper; Bloodlust; Bully; Greed; Lecherousness; Sadist.

Skills: Battlesuit/TL10-13; Beam Weapons/TL10 (Laser)-14; Brawling-13; Detect Lies-11; Driving (ATV)-12; Electronics Operation/TL10 (Sensors)-12; First-Aid/TL10-10; Free-Fall-12; Gunner/TL10 (Laser, Missile Launcher)-13; Judo-12; Streetwise-12; Tactics-10; Thrown Weapon (Grenade)-13; Vacc Suit/TL10-12.

Equipment: "Streethawk" Urban Battlesuit (p. RO113); 3 rip saw grenades. Jeep contains vapor filter and other desert survival gear.

Merc/pirate crews will also have specialists (Pilots, Medics, Engineers, Mechanics, Communications and Sensors officers, etc.) with IQ or DX 12 and ST 10; appropriate shipboard skill-14, other skills the same.

Thief

ST 10, DX 12, IQ 11, HT 10. Move 5.

Disadvantages: Duty; Greed.

Skills: Acting-10; Area Knowledge (Windermere)-12; Beam Weapons/TL10 (Lasers)-14; Brawling-12; Detect Lies-10; Disguise-10; Fast-Talk-11; Garrote-13; Holdout-12; Knife-13; Pickpocket-13; Running-10; Savoir-Faire-10; Shadowing-11; Stealth-12; Streetwise-12.

Equipment: Scrambler; Monowire garrote; Small non-metallic balisong knife; Nightshades; Varicloth suit.

Lucy

"Lucy" is a computer-generated voice and idealized face: the PCs will never meet her in the flesh, assuming she has any.

IQ 14

Advantages: Eidetic Memory [60]; Very Beautiful; Voice.

Skills: Detect Lies-16; Fast-Talk-16; Interrogation-16; Intimidation-15; Sex-Appeal-15; Streetwise-14.

DRN-88

DRN-88 ("Darwin") is a Cerberus Security and Patrol Robot, with 10-point Legal Enforcement Powers and the following software:

Advantages: Combat Reflexes; Full Co-ordination.

Disadvantages: Duty.

Skills: Administration-14; Beam Weapons/TL10 (Laser, Sonic)-13; Brawling-13; Criminology-15; Cryptanalysis/TL10-16; Detect Lies-16; Drive (Car)-12; Electronics Operation (Security Systems)-14; First Aid/TL10-16; Forensics/TL10-14; Interrogation-14; Intimidation-15; Judo-11; Law-15; Mechanic/TL10 (Robot)-15; Stealth-11; Tracking-13.

Other: Cargo Handling; Datalink; Encryption; Voiceprint Recognition.

Amber

Amber is a "Lemon Angel" (p. RO119) with her empty spaces filled with weapons: a drug injector (p. RO20) filled with Crediline in her left arm; a holdout blaster (p. RO23) in her right arm; a spray-gun filled with nanoburn (p. RO70) in her head; a self-destruct device (p. RO30) and 2 lbs of explosive in her left leg; and a cyberswarm hive (p. RO68), in her body. Her eyes also have the Retinaprinter and Hypno-Eye options.

Advantages: Combat Reflexes; Very Beautiful; Voice.

Skills: Acting-14; Beam Weapons/TL10 (Blaster)-14; Brawling-14; Dancing-13; Detect Lies-15; Disguise-14; Electronics Operation (Security Systems)-14; Erotic Art-12; Fast-Talk-14; Garrote-14; Holdout-14; Hypnotism-18; Interrogation-14; Judo-12; Sex-Appeal-15; Shadowing-12; Stealth-12.

Other: Datalink; Voiceprint Recognition.

Equipment: Clothing belt; Distort belt; Monowire garrote (disguised in jewelry).

Murasama 7 Commando (p. RO115)

Software:

Advantages: Combat Reflexes.

Disadvantages: Duty.

Skills: Beam Weapons/TL10 (Laser)-16; Climbing-12; Detect Lies-16; Drive (ATV)-12; Gunner (Laser)-15; Guns (GL)-15; Intimidation-15; Karate-12; Stealth-15; Tactics-15; Throwing-12.

Other: Datalink; Encryption.

Equipment: Military Dinosaur Laser; 3 ripsaw grenades.

Vulture

Cano's Vulture is identical to the model on p. RO116 except that two of the rockets have mininuke warheads. Software: Gunner/TL10 (Laser)-13, (Rocket Launcher)-13; Navigation-15; Encryption.

Ki-Rin class Patrol Cutter (TL10)

Ki-Rins are small patrol boats, slightly modified from a military shuttle used as an interplanetary troop carrier and medevac. A Ki-Rin has cDR3, two light lasers (4500 shots), and a missile bay with 40 light missiles, passenger seating for 150 people and bunks for 10, and 300 man-days full life support. Usual crew for patrol duty is 10, all troopers, including 1 command, 1 pilot, 1 engineer, 1 mechanic, 1 medic, and 1 gunner.

Hull: 50,000 cf SL Hull, 80 spaces, cDR 3. Size Mod +8.

Systems (Spaces): Medium Bridge/10 (2), Enhanced Sensors/10 (1), Super Thrusters/10 (40), Fusion Power/10 (21), Fusion Core (0.5), Passenger seats/10 (10), Bunk Room/10 (2); 2 Light Laser/10 in Double Small turret (2); Energy Bank/10 (0.5); Missile Bay (1); Automed bay (0.5); Entry module, small (0.5); Cargo Hold (1).

Statistics: EMass 698.25 tons. LMass 699.25 tons. Total cost \$M31.993. Scan 37/36/32. cHP 150. Hull Size Modifier +8. cSM -2.

Performance: sAccel 1.14 G. Air speed 3,873 mph.

Cano's Q-ships

Cano's pirate ships are modified Tanstaaf-class star freighters: one turret has replaced the four Lt. Lasers with Lt. X-ray Lasers, and a missile bay, loaded with heavy reaction drive missiles (14 kinetic, 2 nuclear) takes up one space of the cargo bay.

Welcome to the Boneyard

Anti-Fascist Espionage in the Firestorm-Effect 1950s

by Brian Rogers

Forensic Analysis

The Ossuary are an unknown. An enigma. A rumor even in the world of Cold War espionage. Armed with advanced technology, incredibly well-trained and hiding like a virus among the world's intelligence communities, they fight the remnants of the Nazi cause. Since in the fervently anti-Communist world of the 1950s they can't possibly exist, the best minds in intelligence must assume that they do. The questions are how? And why?

Their origins are known only to themselves. During the Second World War, as agents of the United States Office of Strategic Services (OSS) saw the end of the war become less theoretical, factions formed among the OSS. Some were already looking toward the next war against Stalin and the Red Menace, while others wanted to stay the course and erase the Nazi threat once and for all. When it became obvious that they would be shouted down, these anti-Fascist OSS agents quietly dropped their more strident views.

That was the beginning, but the Ossuary officially formed as an act of defiance against Project Paperclip. When the anti-Fascist OSS remnants saw the USA recruiting the scientists that empowered the Nazi war machine while doing little to stop Otto Skorzeny and his ODESSA organization's decamping to South America they knew they needed to act. In a street café in Versailles a core group of OSS agents dedicated themselves to doing what needed to be done, regardless of the death of their careers. Ironically dubbing their new brotherhood the "Very Wary OSS," it quickly became the Ossuary and their central command the Skeleton Crew. Some members accepted positions in the newly formed CIG (which would become the CIA) while others vanished with impressive amounts of unvouchered OSS funds and technology. The ghost war against the Fourth Reich had begun.

By the 1950s the Skeleton Crew has built their sparse crew of agents into an international presence. The scars of the recent war left key spies willing to consider dual allegiance if it meant making sure Nazi Fascism never again took root. To keep these agents on board, the Ossuary developed a simple, two point mandate and adhered to it religiously.

1. Monitor identified Fascists for signs of renewed Fascist activities.
2. Eliminate any attempts at resurrecting the cause of Fascism.

Obviously point two overlaps with point one, but the division lets the Ossuary keep the loyalty agents who are willing to observe but not execute attacks. More than 85% of their membership are these Point One agents; the remainder are Point Two agents, nicknamed Bonemen.

Point One agents exist throughout the world as members of various espionage services. In most cases, Point One agents are analysts and technicians, but the Skeleton Crew realizes the advantages of Human Intelligence and will recruit promising field agents. While the Ossuary has a precious few dedicated locations (called Joints), their ability to infiltrate other agencies gives them unprecedented access to intelligence and technology.

This parasitic relationship makes Bonemen very well informed and outfitted. Unlike Point Ones, most Point Two agents operate independent from other intelligence agencies, with cover identities that excuse worldwide travel (explorers, industrialists and even entertainers or sports figures). They are also beneficiaries of the early *Bluebird* and *Artichoke* projects: the Ossuary's parallels to those early CIA mind control experiments focused on hypnotism in project *Monument* rather than relying on the chemical and environment-based modification that became MK-ULTRA. This combination makes Bonemen pinnacles of humanity; often a single Point Two agent can handle even the worst of situations.

This is good, because the Ossuary faces an incredible challenge in the form of *die Spinne*: the international Nazi conspiracy, of which ODESSA is just a single leg. Skorzeny, seeing the war's end and accurately predicting Allied actions, spun his web well. Project Paperclip and its Soviet counterparts played directly into his hands, placing his agents throughout both the USA and USSR even as the public denazification of Germany eliminated those whom he did not need or trust. Counting on the Allies barely suppressed hatred of one another, *die Spinne* made trap doors within its enemies and waited for the day it could emerge. Once that occurred, it stretched its legs in the slow process of once again conquering the world. *Die Spinne* can't afford to be discovered by the general public, but to date the only agency that knows of its existence is similarly stymied: if the Ossuary were revealed in the era of premature-anti-Fascism it too would cease to exist. So the ghost war continues . . .

Even without *die Spinne* the Ossuary can serve several ends in an Atomic Horror campaign. In a world of constant paranoia against the Red Menace, the Ossuary reminds players that there are older, perhaps greater threats. They are also a moderately real-world agency dealing with a moderately real-world threat, showing that the Atomic Horror setting need not be all aliens and proton monsters when the ruthless science of the Nazis provides evil enough. Any character with an intelligence background could secretly be a Point One Ossuary agent, and *anyone* of the larger-than-life Atomic Horror heroes could be a Boneman or even a *die Spinne* operative. The Ossuary could work for or against [THEM](#) depending on their mission, and could provide secret support or conflict to the Theoretical Science Foundation from *GURPS Atomic Horror* if their goals ever overlap.

Inside the Skull

Bonemen are the elite Point Two field agents of the Ossuary, and represent the best informed and most dedicated spies on the planet. This still wouldn't be enough were it not for two factors: their technological edge and their *Monument* training.

Point One agents integrate the world's technological advances through a single house. Bonemen are armed with lots of advanced gadgets, ranging from the cigarette lighter cameras, garrote watches and other espionage gear that actually existed in the 1950s to advanced espionage technology made possible by an Atomic Horror setting, such as gauss needlers and micro-computer driven vehicles. *Die Spinne* uses similar equipment, but both groups design their gear with a tendency to explode if mishandled (standard Ossuary firearms, for instance, detonate if the wrong hands pull the trigger more than three times in a minute -- a feature that has saved more than one Boneman from being shot with his own gun).

More important than the gear is *Monument*: All agents get this hypnotic training. It focuses on self-hypnotism to improve memory, perception, reflexes, strength, stamina, and even healing speed. Ossuary agents are giving rapid-but-extensive training under hypnosis, allowing them to call up skills that they hardly remember they knew in a crisis. Given a few moments to prepare and enter their memory monument, an Ossuary agent could suddenly become a competent pilot or remember how to disarm a nuclear weapon. A fortunate side effect of *Monument* lets Ossuary agents compartmentalize their memories, hiding information while observed by lie detection devices, interrogators, and even telepathy!

Not all of the training is in *self*-hypnosis: Ossuary agents can use *Monument* to augment interrogation or seduction attempts, or perform memory alteration on hypnotized subjects. It is this ability that lets the Ossuary select appropriate agents and keep their existence a secret from their various shelter agencies.

The THEM Bone's Connected to the . . .

If you do decide to link the Ossuary to a campaign already containing the Trilateral Headquarters on Energy Management, here are some things to consider.

1. THEM does not know about the Ossuary, and wouldn't be happy if they did. Since the Trilateral Headquarters are concerned with making sure that technological advances stay out of the hands of the Reds, an organization that steals western engineering secrets to outfit its possibly-Soviet agents is not going to meet with their approval.
2. The technological supremacy THEM safeguards is partially built on the work of Project Paperclip scientists whom the sees as guilty parties (if not *die Spinne* agents). While

Die Spinne agents, in contrast, go for a more physical perfection (as befits the Nazi ideal). Their operations leg, the Werewolf, produces men and women whose physical prowess matches the mental power of *Monument*, and often these agents are of high intellect as well. Bred from eugenically perfect stock, trained from an early age and likewise well outfitted, Werewolves are another aspect of human perfection. The Skeleton Crew rightly fears *Monument* techniques falling into *die Spinne's* hands -- Ossuary agents have the self-hypnotic capacity to kill themselves before they allow that to happen.

Bare Bones: Building an Ossuary Agent

Here are some samples of how to build Ossuary Agents in *Silver Age Sentinels* (Or other *Tri-Stat* systems), which should be easily translatable into other systems.

Statistics

All Ossuary Agents should have a human max to superhuman Mind score, with above average Body and Soul scores. In *d10 Tri Stat*, a Mind of 12-15 and a Body & Soul of 6-10 are acceptable.

Characteristic Attributes

Organizational Ties are essential, with the cost based on how powerful the Ossuary is going to be in the setting. If it is just a subplot to the campaign then the cost should be 1 point per level. If the campaign focuses on the activities of Ossuary agents, then it costs 2 points per level. It is the GM's decision on whether points spent in Organizational Ties: The Ossuary carry over to the cover identities of Point One agents or if they have to be purchased separately. As a Global organization, Organization Ties to the Ossuary function 2 levels lower than normal.

Bonemen have several levels of the Gadgets advantage, and be outfitted with whatever spy-tech the player and GM think will be important for that mission. All of the Ossuary's gadgets are designed to be easily concealed and easily destroyed.

Likewise, Bonemen will probably have one or more Items of Power. Their specialized pistols are Personal Use Items of Power costing 6 points with various primary special attacks (Concealable, Hand Held and 20-40 damage with some combination of advantages and disabilities) and a secondary special attack with the Self Destruct disability (usually doing 80-100 points to the holder).

Finally, Point Two agents should have attributes to back their cover identity, such as Wealth, Henchmen or other Organizational Ties.

Power Attributes

All Ossuary agents have Power Flux: Self Hypnosis (10 points/level) at varying levels, letting them model their advanced training and hypnotic abilities. Point One agents will likely have one rank of this with a duration PMV of 5, letting them shift their self hypnosis once an hour. Bonemen will have 3 or even 4 levels of this, with a PMV of 8, so

THEM might help a Boneman deal with ODESSA plots, their ability to draw a line between "our" Nazis and "their" Nazis prevents a meeting of the minds.

3. Ossuary agents followed [James Forrestal](#) in the months leading to his death. If THEM ever discovers this connection, expect all bets between the agencies to be off. The Old Man takes Forrestal's death very seriously.
4. While Ossuary agents are highly trained, they are still human. The risk of a Firestorm Effect becoming an uncontrolled force is enough to keep the Skeleton Crew from ever trusting such a figure with their secret. Thus, most FEs in an Ossuary game will be either random hazards or unwitting agents of *die Spinne*.
5. Finally, the Ossuary operates on an entirely different level of international secrecy than the Trilateral Headquarters. THEM's concerns are too mundane (impossible as that may seem) for the Ossuary and perhaps vice versa.

the powers can be shifted around every minute if need be. A Duration PMV of 8 is the limit, because the power is saddled with the -2 point Defect that it takes 1 minute of concentration to change the Self-Hypnotic state. The Flux Points granted by Self Hypnosis let the Ossuary agent pick up virtually any characteristic attribute that he can justify to the GM, as well as the power attribute of Mind Control with appropriate Defects to model Hypnosis. It is the GM's discretion as to whether this includes the Highly Skilled or Enhanced Statistic characteristics, but some combination of those is recommended to indicate the Ossuary agent's vast hypnotically-induced expertise.

Skills

If you're using skill groups, all Ossuary agents should have at least 1 level in Military, Adventuring and Detective. Using skill groups makes modeling *Monument* easier, as you can spend the flux points directly into skill groups without the math of Highly Skilled or Enhanced Characteristics.

If you're using the regular skill list, several levels of Highly Skilled buy agents a broad spectrum of skills at level 1. Ossuary agents rely on their high Mind score and ability to enhance either their stats or their skills via self-hypnosis over highly focused training. The only skills that should be ranked 2+ are those directly relating to espionage or their cover career.

Defects

Conditional Ownership is a must for all of the Boneman's equipment. Given the secrecy under which they operate, this is the 2 point level, imposing strict conditions on the equipment's use.

Nemesis: *die Spinne* is another common defect. Since Skorzeny's agents would like to see nothing more than to see the Ossuary destroyed, this should be at the 2 or 3 point levels.

Finally, Skeleton in the Closet: Ossuary Agent is assumed. Since the chance of discovery is low but the consequences are severe this is a 2 point defect. Ossuary agents are more willing to let themselves be falsely revealed as Communist spies than risk being more accurately identified.

Making the Skeletons Dance

Just as the Trilateral Headquarters is an attempt to fit the Supers concepts into Atomic Horror, The Ossuary is an attempt to fit the super-spy adventures of James Bond and Nick Fury into the same setting. In the Ossuary you have an ultra-top-secret espionage agency with virtual super-agents fighting a foe as intractable and elusive as Tarot or Hydra. Unlike THEM, there's nothing here that requires Atomic Horror, but the Ossuary is very much a product of that genre's home decade, with its belief in human ability, love/fear relationship with science, and fervent ideological stances. Here are various anatomies of Ossuary games.

The Ossuary could be less internally cohesive than it claims, as it exists on the same anti-Nazi principles that barely kept the Allies together. The ghost war can be another arena for Capitalist & Communist agents to seek minor edges over each other while still fighting a greater enemy. American anti-Communists may be correct in their fears, but much as UNCLE's Napoleon and Illya had to put their personal differences behind them, Ossuary agents have to have faith that their behind-the-curtain allies are really beyond political loyalties. Will a group of Bonemen have a falling out in Argentina when deciding which of them gets to bring home plans for a Nazi V-Wing?

Or, it could be more cohesive, which is a good solution for contemporary players who can't wrap their mind around the social mores of the 1950s. The Ossuary can have a very post Cold War feel, with people of all ideologies, genders and religions team up to punch out reliably evil Nazis. The players can look at the society of the 1950s while knowing that their PCs are comfortably beyond it. Doing so makes the 1950s more chrome than substance, but if you're already at the level of putting the bad guys in green jumpsuits with spider designs on the chest you may as well embrace the unreality of it and barrel forward.

Running an all-Ossuary game runs into the classic ultra-hero problem: what can challenge a group of people this skilled? Just as a 00 should be able to handle nearly any situation, Bonemen are so versatile, capable, and rare that they seldom need to work together. If your PCs are comfortable with a Prime Hero and Sidekick situation this works fine -- the other PCs are Point One agents helping the Boneman out. If everyone wants to play Bonemen, ramp up the difficulty of the challenges accordingly. Such a game should sideline other Atomic Horror threats in favor of the ghost war, but discovering that one of *die Spinne*'s arms are [Antarctic Space Nazis](#) could keep such a game vital for a long time.

Using a classic Atomic Horror setting takes some tweaking; it is likely that only one player character is an agent. This means making use of cover identities, but fortunately Bonemen are exactly the sort of people who star in Atomic Horror films. For the other players play balance could again be a problem. If you're willing to branch out you could have a Boneman working alongside a THEM FE Agent/Minder and an [athletic teenage polymath](#). The early adventures in such a game should revolve around Fascist threats, but the mysteries could grow deeper . . . perhaps *die Spinne* is an unwitting tool for aliens?

This new layer of intelligence opens things for an onionskin Atomic Horror game -- one that begins with a single FE incident, with the survivors becoming Trilateral Headquarters agents. These agents then learn about the Ossuary's ghost war, and perhaps discover that *die Spinne* is just a catspaw (for an *Illuminati* game) or that the Ossuary isn't the only surviving OSS splinter group (leading into *GURPS Warehouse 23*). Secrets within deceptions within lies, and not even the Skeleton Crew knows for sure . . .

Pyramid Review

Dork20 (an accessory for *d20 System*)

Published by [Atlas Games](#)

Written by Noah Sax & Michelle A. B. Nephew

Illustrated by John Kovalic

56-card deck; \$12.95

How do you out-munchkin a munchkin? Especially a munchkin roll-playing a munchkin character in that most potentially munchkinly of munchkinish games, *Dungeons & Dragons*? One option is, of course, to cheat; another is the use of loaded dice. But either is most definitely unsportsman-like and unfair. Then again, when *was* the science and art of being a munchkin ever about fairness? Actually, and thankfully, there is *now* a "fair" option available to anyone who abides by the munchkin creed.

Dork20 is a deck of 56 cards, designed to modify the *d20 System* during play on a temporary or one-time basis. As the name suggests, the cards have all been inspired by the roll-playing and roleplaying adventures and style of the cast of John Kovalic's award winning comic strip, *Dork Tower*. Not only that, but all of the cards have been done in full color by John Kovalic, so they are likely to appeal to the *Dork Tower* devotee as much as they are to the *d20 System* gamer. Both will understand the humor inherent in the little cartoons that illustrate the front of each card -- the fans from their knowledge of the strip, the gamer from how the game mechanic modifiers are illustrated. Of course, if the *Dork Tower* fan happens to game, or the gamer likes *Dork Tower*, then double the laughs!

Each card is very clearly done. Below the title, John Kovalic's illustration nicely depicts or alludes to the rules below it. The card backs have the *Dork20* logo on them, over a background that echoes that of the cover for the *Player's Handbook* for *Dungeons & Dragons Third Edition*, and also for the *Munchkin d20* RPG from Steve Jackson Games. Indeed, an alternative use for these cards would be for the *Munchkin d20* game -- literally upping the Munchkin ante!

An appropriate character from the cartoon strip suitably illustrates the effect of each modifier. Invariably, an illustration reflects both the in-game persona and the actually personality of said character. Some favorites included . . .

- "Eye of the Beholder," which forces an opposed Bluff or Diplomacy skill check against the Sense Motive skill between two characters. Should the Bluff or Diplomacy skill succeed, the second character is smitten with the first and is then subject to the effects of the *Charm Monster* spell for an hour. It is illustrated by a love-struck Matt mooning after Gilly, and the quote, "Put the romance back into necromancy!"
- "Insight" grants the character knowledge of something that they had missed earlier, whether from a failed roll or roleplaying opportunity gone awry. The illustration depicts Ken hiding behind a hedge with Igor and asking, "This rabbit . . . it's an avatar of Nyarlathotep, right?"
- "Save It For Later" lets a DM or player save a natural 20 rolled during a game and keep it for use later on. The illustration, accompanied by the quote, "All your dice belong to us!" shows an armored Kayleigh just having locked her PO Box.
- "Seller's Market" makes one possession owned by a player be of extreme value to an NPC such that they will pay double its actual worth to own it. The illustration shows Carson offering up a card marked "Black Lotus" to a desperate and hapless punter. The quote is of course, "It must be mine!"
- "First Strike" provides a bonus to an initiative roll and shows Igor charging into the fray with a cry of, "Sir Talbot leaps in first!"

All right, so the cards are fun and funny, but how do you use them in the game? This is explained on one side of the 8½ by 14-inch rule sheet (the other being taken up by the credits, advertising, and Open Gaming License) in a fairly large-faced font. Quite simply, each player begins a game session with four randomly dealt cards that can be used throughout the game to affect their character and those of the other players. They can also effect NPCs, monsters, and just about everything in the game bar the limitations placed by the DM or given on the card. Anytime during a game when a player has less than four cards, they can gain more by expending experience points, or the DM can hand them out as a reward. The latter method is the only way in which a player's hand can be increased above the limit of four. Two other options are also suggested, one increasing the effective level of the party when determining Encounter Levels and experience point awards, as the *Dork20* cards make the characters much tougher. The other allows the DM to draw cards and use them against the party!

Ultimately, *Dork20* is not an item for the serious game or gamer. Indeed, it would probably send an existing campaign spiraling in a very silly direction, and it would be inadvisable to introduce them without considering the repercussions. Yet if silliness is something that you want, whether to add to an existing game or to increase the munchkinness of an already silly game, then *Dork20* is the perfect addition that is sure to please the Munchkin and the *Dork Tower* fan in all of us.

The Ark of the Covenant

Published by [Inspiration Games](#)

Designed by Klaus-Jürgen Wrede

Art and design by Alvin Madden

English rules development by Jeremy Young, Matt Molen, Guido Teuber, Rick Thornquist, & Greg Aleknevicus

Full-color boxed set with 72 tiles, 45 wooden playing pieces, Ark counter/plastic stand, scoring track, & rules; \$24.95

Up to this point, the [Carcassonne](#) series has been relegated to the old city in France. Inspiration Games, a company dedicated to wholesome family fun, has started producing licensed versions of family games, adding a religious theme. They did this with *Settlers of Catan* (*Settlers of Zarahemla*), and now they've altered *Carcassonne* to fit in *The Ark of the Covenant*.

The object of the game is to score the most points by occupying roads, cities, fields, and temples in the newly occupied Promised Land.

Little has changed in this version from the iterations the fans know and love. As with standard *Carcassonne*, *Hunters and Gatherers*, et al, there are thematic changes. City sections are worth more when they sport a scroll, roads are peppered with valuable oases, and the livestock are now sheep of the fields, threatened by wolves. But basic game play remains the same.

As you lay the game's tiles, you decide on which of these you will tie up your resources. You only have so many pawns in your pool, and must choose which will be placed, temporarily or permanently, in which locations. This much is common to all the *Carcassonne* games.

In addition to the other places of interest, scattered throughout this land of milk and honey are temples (a bit like cloisters, for fans in the know). Claiming control of them allows you to ask repentance for your people -- i.e., you score hefty points. Players must populate the temple tile and the four surrounding orthogonal positions (in, of course, a "cross" pattern) with their followers. This is tricky since completing the cross means filling in a number of road spaces -- unless you're willing to permanently commit your followers to the fields, you'll probably have to pull many of your nearby pawns off the board for scoring purposes, and they won't count toward control of the temple.

The biggest change is the game's namesake: After the first city is completed, the Ark of the Covenant -- a counter that stands upright in its own little plastic stand -- is brought into play. If you forego placing a follower after laying the tile for your turn, you may instead take the artifact out among the people to encourage their faith. You may move the Ark up to five tiles, and every follower it passes scores the owning player a point. It can't backtrack, however, so moving it through your people could leave it close to a grouping of another players' followers.

A new pawn is used as well: the prophet, which looks like the other pieces but is slightly larger. It is used like any other follower for purposes of laying claim to land, paths, or cities. The two key differences are it may only be used

once (it is returned to the box once it has scored, not your pool), and if used in a city it will double the points gained from a completed city. Oddly, the prophet has no added effect around temples.

Although *Ark of the Covenant* is put out by another company, Inspiration Games maintains the same high level of quality in its game components and graphics as Rio Grande/Hans im Glück. The pieces are every bit as sturdy and colorful as those of the originating company (insofar as the desert backgrounds can be colorful). There is one minor, irritating visual oversight. The rule booklet contains pictures of the various tiles, including the temples. They have only one picture of the temple tiles in the "what's in this box" section, but there are two styles of temple tile (the other sneaks into an example). Just telling players how many temples are in the tile mix would have cleared this up -- blink, and you'll miss the "clarification."

The prophet is a nice addition, introducing as it does a small, gentle layer of strategy to a game that's better off not getting bogged down by too many fussy "improvements." The one complaint with it is the pawn's unremarkable look -- it's exactly like all the other follower pieces, save for a slight increase in size. This increase is minimal (to the tune of maybe a couple of millimeters), and something more distinguishing -- a still greater size increase, a different shade, even a different texture -- would make it far easier to spot.

The Ark is similarly understated in its effect on the play of game; while it's a quick way to grab a few points if the tiles aren't falling your way, "control" of the item isn't a sure victory. Moving it can increase your score now, but the advantage can easily revert to an opponent on the following turn. The winner will be the player who knows when to play the game and when to make use of this off-handed opportunity. The Ark serves as a focus for the game's theme, giving it a separate identity without stealing the spotlight from "regular" play.

The added elements provide just enough variation to make *The Ark of the Covenant* enjoyable without it being a simple rehash of its parent game. Owners of the original may find the differences too close to call, but Inspiration Games lives up to its name, proving they have enough grasp of game design to properly tailor this *Carcassonne* clone. They remain true to their source while letting their muse have her say.

A Change of Heart

by Mike Tresca

Alignment is often the guiding moral or immortal force behind a player character's many decisions. Although alignment is not meant to be a straitjacket that rigidly forces a player character to act in a repeatedly predictable manner, it is an inherent part of the character's personality. Alignment may not be all of the person, but it's an important part of that person.

People change. Sometimes that change comes about gradually, such as the result of a romance between a lawful and chaotic character. But sometimes, a change in ethos can come about in drastic, awesome, terrifying ways -- ways that fundamentally change a character forever. This article examines just what might happen in your character's life to justify that dramatic change.

For Dungeon Masters

This article provides a wellspring of ideas for ways that villains and allies might turn over a new leaf . . . or turn it back. It also provides Will save mechanics for allowing a player character the opportunity to change his alignment at the appropriate time.

For Players

This article is a great way to provide the framework for an alignment change without the old insanity excuse. Too often, player characters change alignment for bizarre, often inexplicable reasons because the player got bored with the alignment of his character. This article provides plausible reasons for why a player character might change his perspective on life and maps out some means of roleplaying the experience.

Atonement Spell

The atonement spell is the most readily accessible means of changing a character's alignment. The spell brings a character back from the "dark side," so it has little effect on good characters becoming evil (although it can help reverse the process). At the Dungeon Master's option, this spell might require a Will save (DC 15) to determine if the player character is sufficiently repentant to change his ways. Ultimately, atonement requires the desire to atone, so PCs shouldn't be able to change their entire world outlook at the flip of a switch. Any one of the other events listed here might be the trigger for the alignment change; the atonement spell simply allows the alignment change to happen immediately.

Falling in Love

It's an old cliché, but a standard trope: villain falls in love, villain repents. But it doesn't always work that way, and can even work in reverse. There's a fine line between lust and love, companionship and obsession, and some characters' ethos may blur those lines even further.

- A succubus tricks a good-aligned warrior into courting her. After the deception is revealed, the warrior becomes bitter about ever making a commitment to any woman (good to neutral).
- A monstrous villain lashes out at the world because nobody was willing to look beyond his gruesome exterior. Upon finding love, he begins to see the value in all life (evil to good).
- A good-aligned bard falls in love with a handsome aristocrat, only to have the aristocrat begin making demands on her that increasingly require more and more selfish acts (neutral to chaotic).

Helm of Opposite Alignment

This cursed item is one of the few immediate, drastic forms of alignment change that does not give the player the choice of switching alignment -- it is mandatory. However, the change need not be obvious. A character that switches from lawful good to chaotic evil doesn't immediately start twirling his moustache and cackling to himself. The character shouldn't feel any different; after all, the individual wearing the helm "thoroughly enjoys his new outlook." At the Dungeon Master's option, any of the below situations might trigger the alignment change. The helm just makes the change mandatory.

Loved One Dies

Although relatives are often in the background, their loss can deeply impact a character. The death or harm of a loved one can bring about feelings of rage, powerlessness, and most importantly, cold vengeance. This kind of trauma can cause a paladin to stray from his noble path or a monk to lash out in rage with his fists. In his quest for vengeance, a player character might lose track of his ethos, doing whatever it takes to avenge his family. If the quest takes long enough, the player character may suddenly find himself without a cause -- and a sharply different alignment from when he started.

There are different levels of emotion tied to such an event. Seeing the loss of a child is likely much more traumatic than hearing about it months later. Similarly, the news of a loathed relative's death is not as gripping as a beloved mother's passing.

- A lawful-aligned character's faith in the law is shattered when his wife's murderer turns out to be a highly esteemed judge (lawful to chaotic).
- An evil bandit's family is murdered in retribution for his failure to repay a debt to another evil baron, causing him to reconsider his livelihood (evil to good).
- A neutral-aligned farmer swears allegiance only to the local lord. Tired of his unwillingness to commit to any cause, the farmer's son joins the military and dies in a suicide mission. The farmer promises to never serve another lord again (neutral to chaotic).

Mental Contact With Alien Being

There are some things that man was simply not meant to know. Thanks to arcane spells, divine invocations, and psionics, it's possible to find out just what the most alien abominations and wretched beasts are thinking and feeling. Being inside a creature's head can be a traumatic experience, so traumatic that it may give the character a new perspective on life.

Spells that might cause such a backlash include detect thoughts, contact other plane, commune, commune with nature, dream, or nightmare. If a particularly strange being (possibly an aberration or outsider) is contacted as the originator or target of a mental contact spell, a Will save (DC equal to 10 + HD of alien creature) might be required. Failure means the player character has the option of suffering the effects of the confusion spell as if cast by the alien being and then changes his alignment to something . . . different.

- A druid contacts a forest with commune with nature. While casting the spell, the forest is set fire by rampaging orcs. The druid is transformed from the experience and becomes a murderous killing machine, hell-bent on killing orcs everywhere (neutral to chaotic).
- A good cleric attempts to detect the thoughts of a person who turns out to be a demon in disguise. The cleric suffers from a form of possession (good to evil).
- A sorcerer casts a dream spell on a target that has gone mad. The sorcerer experiences the warped nightmares that inhabit the madman's subconscious, making him more callous (good to neutral).

Physical Transformation

There's a saying: "Before you criticize someone, walk a mile in his shoes." A physical transformation puts this allegory into literal practice -- it transforms the character into another body entirely. The transformation can range from the subtle (increasing one's attractiveness) to the extreme (spending a year as a slug). Whatever the cause, the transformation can cause a profound change in the victim's outlook on life.

There are several spells that can cause a character to change into another form, including polymorph other, polymorph self, and bestow curse (by cursing Charisma). Depending on how extreme the difference in transformation is, the player character might make a Will save (DC ranging from 10 to 30) or suffer a sudden change in ethos.

- A beautiful, good-aligned fighter spends a year as a hideously deformed hunchback and realizes that society isn't quite as benevolent as she once thought it was (lawful to chaotic).
- A cattle rancher is polymorphed into a cow by a vengeful sorcerer. Will he ever eat beef again? (neutral to good)
- A vengeful druid transforms a destructive fighter into a tree. Once restored, the player character refuses to ever harm another plant again (chaotic to neutral).

Saved by a Different Alignment

It happens all the time: in a life-and-death moment, a person is saved -- through luck, chance, divine intervention, or whatever. The person may be physically rescued from death or torture or alternately, may be spiritually nudged off a self-destructive path. Whatever the situation, the character was heading towards a bad end and someone else, someone of a different alignment, brings about change that ultimately saves the player character.

- A hero sacrifices himself to save an evil character from harm (evil to good).
- A chaotic character reveals a high degree of corruption in a spiritual or secular leader that would ultimately have led the follower to his death (lawful to chaotic).
- A neutral character is brought back from the brink of death by a cleric of a benevolent deity (neutral to good).

Torture

Torture has extreme physical as well as psychological effects. The results of torture can cause a victim to feel cynical about the rest of the world, especially when cases of mental torture are involved (death threats, deprivation, solitary confinement, etc.). Of course, this is often what the torturers want -- to break the spirit of the victim.

Resisting torture's psychological effects can be even harder than resisting physical damage. Player characters can make a Will save (DC equal to the torture's Intimidate check) to avoid suffering a rapid spiral into depression and angst.

- A good cleric prays fervently to his deity for salvation, but ultimately is forced to escape on his own terms. The cleric loses faith in his deity as well as his willingness to rely on others for help (good to neutral).
- An evil rogue is tortured to the point of death and during that time realizes he might never get to enjoy the little pleasures in life. As a result, he mellows (evil to neutral).
- An outgoing bard is no longer willing to take risks with the law after being severely beaten by the watch (chaotic to neutral).

An alignment change towards a particular axis (good/evil, lawful/chaotic) probably should first involve the character shifting towards a neutral stance and then slowly warming up to the more extreme alignment. For a more pulpy-feel, alignment changes might happen drastically. Just ask Darth Vader . . .

Does Wearing Rose-Colored Glasses Make You See Red?

Two months ago, in my report on [NecronomiCon](#), I reported a panel I was on with many industry luminaries, including a gent named Steve Jackson who, as I understand it, runs some game outfit in Austin.

In my column I noted that I disagreed with everyone, including the esteemed Mr. Jackson regarding one question. But, tease that I am, I neglected to say what that question was, nor my answer.

Since then the nervous anticipation that my secret might be revealed has caused great global change; no doubt the capture of Saddam Hussain, the successful touchdown of a Mars lander, and the most successful Christmas shopping season of the past few years can all be directly attributed to this looming revelation. The suspense is over, the secret reve . . . oh, heck with it. Here we go.

The final question posed to this panel was, "Where do you see the gaming industry headed?" The first person to answer -- and, curse me for a fool, I cannot remember who this was -- responded that he saw the biz getting worse before it got better. The advent of cretins (my words) scanning in game products and making them available seems to be a significant threat; so does the number of "garage" operations crowding the field and cluttering shelves with substandard product, threatening to overshadow the Good Stuff.

The same question was posed to most of the rest of the panel, and they pretty much universally agreed with the first speaker . . . so much so that the moderator didn't ask *me* my answer to the question, forcing me to leap from my chair and slide down the table John Woo-style, two hands of dice a-blazing. (Or maybe I just cleared my throat . . .)

Anyway, optimist that I am, I admitted that things might get bad for some companies, but I also saw things getting better on the whole. I expressed my belief that the industry has been in an incredibly creative mode in the past few years, with options and avenues branching out in all directions. In particular, I noted that many of the most successful companies of the past few years have had one thing in common: They created something that was interesting and fun, while not being easily (or affordably) replicated or "stolen."

- The original *Dungeons & Dragons Third Edition* books were less than 20 bucks apiece; the bulk of the system's text was made free legally online, and Wizards of the Coast allowed other companies to make their own supplements royalty-free.
- WizKids has had incredible and varied success with its click-base miniature games, creating games that can be enjoyed by miniature enthusiasts, wargamers, and collectors alike.
- Steve Jackson Games has seen a renaissance of card and board games, including the *Munchkin* series, *Strange Synergy*, and *Dork Tower*.
- Ryan Dancey's [OrganizedPlay](#) has tried to restructure the notion of roleplaying games as being a community, with a subscription-based organization bringing players and GMs together to enjoy scenarios in living settings.

Anyway, all of these companies have created products that are reasonably immune to a thieving moron with a scanner; even if someone *did* scan in the entire *Strange Synergy* game, it would be a royal pain to print it, cut it out, and assemble it. It's much easier - and fun - to simply buy the game honestly.

I agreed with my cohorts in that things *may* well get bad for companies who are trying to create the same old, same old; the hobby as it exists this year is vastly different from the one that existed in 1994, which is different from the one of 1984, and publishers who exist in a model that's a decade or two old may have problems competing. But what was exciting to me was the notion that there is some Next Big Thing out there; I don't know *what* it is, but it's going to be exciting, playable, and expand our ideas of what this hobby is.

Ten years ago the idea of a board game retailing for \$39.95 would have been suicide for most publishers; now the market can bear quality games at that price point. Ten years ago it was unfathomable that the most popular RPG would

give away the bulk of its core game-text for free; now it has become the most significant RPG event of the past decade. Ten years ago miniatures games were relegated to those with the patience and fortitude to paint their own pre-selected sets; now it's common for people to buy painted miniatures, *and* the buyer has the thrill of surprise and mystery added to his purchase. And the rise of the Internet and instantaneous communications has made the idea of community - already important to the gaming world - even more mandatory; at least one company has found a way to make that idea profitable.

And so I see the gaming world moving toward products that are innovative in a way that folks haven't thought of (including myself, since if I thought of it then I'd be doing it and rolling around naked in money), but that offer high utility and extensive enjoyment. (I, for one, would love to see the resurgence of the "boxed" set, replete with goodies and exciting tidbits. However, I suspect the economics of this are still unrealistic currently.) I see lots more fat, interesting hardcovers - many in full color - chock full of good material. I see the escalation of "RPG book as art," first approached gingerly by White Wolf (such as the beautiful limited edition slipcases) and perhaps exemplified recently by *Nobilis*. I see purchasing an RPG book leading to a greater investment in and membership of a community, either by exclusive downloads from a company website (as seen in Necromancer Games' offerings), ability to affect and modify the game world (such as *Torg's* Metaverse idea, only with an Information Age twist), or something else equally exciting.

The gaming world is an industry of innovation and imagination, both from within and without. Regardless of who else may disagree with me, I think the future is out there, waiting to surprise.

Furry Thoughts

A New Race for *GURPS*

by **Kimara Bernard**

The concept of a humanoid feline race is old; in fact, they are one of the common types of alien or fantastic creature around. A famous portrayal is Niven's Kzinti, which are utterly feline, and extrapolate on the differences between ape-like creatures (us) and felines, making the Kzinti both familiar and very alien. And there is the utterly popular anime catpeople, which seem to be all the craze these days.

Most uplifted or coincidental cat-type species in literature seem to focus on a particular type of cat, such as a lion or housecat. This article takes a different tack on that approach: What about all sorts of cats? What about a race based on the menagerie of cats that exist in the real world?

Therefore . . . meet the Sahj, a feline race whose society has different cats on the record. Initially designed for a space setting, the Sahj are appropriate as a counterpoint to humans, or as a race standing on their own, appropriate for fantasy or science fiction. In this background, they are an uplifted race, created millennia ago by a precursor race that is long-gone.

The Sahj assumes a world that has technology, magic, and psionics, although magic can be exorcised easily. The Sahj are written here as a psionic race, but in a more "hard science" campaign, the psionics can easily be dropped without losing the Sahj's sense of distinction. In a more fantastic game, their Taboo Trait limiting Magery can be weakened or removed, or their psionic abilities replaced with magic. An entire world covered in Sahj and Sahj alone can be as flexible a fantasy campaign as any; the various types of Sahj can easily replace the standard fantasy assortment of races.

The Sahj do not believe themselves to be an uplifted race, and would vehemently argue the point with anyone, but the hints do stand strongly. They are divided into five subraces or breeds: Sorah, Skakak, Kohj, Inkahjahj, and Linhj. Each of these will seem familiar, as they're loosely based on a particular species of Earth cat.

Sahj society is based on a strict caste system, based on the individual's breed. Their breeds are significantly different from each other, much more so than the different ethnic groups of humanity. However, they are similar enough that most (but not all) can interbreed, just like real-world cats. This physical quality defines much of the ability to change status.

Sahj Base Template

All Sahj have a basic template, which can also be used to build additional subraces or breeds; perhaps the Sahj themselves are unaware of other groups out there. (Perhaps there are other uplifts lost elsewhere in the galaxy?) All Sahj are coated with a layer of fur, although it varies greatly in thickness and, accordingly, cost. Sahj teeth also vary a great deal, and some breeds have very dangerous jaws while some have a bite no more dangerous than the average human's. All Sahj have tails, but they are merely for balance, no more useful than your terrestrial feline's tail.

Sahj breeds do not have to follow their racial templates strictly; they could lack fur, claws, or psionics, for instance. However, lack of distinct Advantages generally causes the Sahj in question to be thrown out of their caste, becoming part of the dredges of society: the outcasted (see below).

The Sahj also have a Code of Honor that is ingrained in their entire society: they defer to elders or higher ranks except in their own areas of expertise, and they do not use psionic powers without prior permission or against beings not threatening their lives. (There are also strict laws in Sahj society governing this.) A Sahj who violates the Code and is

caught is automatically Outcasted (-10 point Social Stigma), and is likely to lose Status, good Reputation, and Wealth as well, as the government system is very unforgiving against such crimes.

Attributes: ST 10 [0]; DX 11 [10]; IQ 10 [0]; HT 10 [0].

Advantages: Normal Teeth [0]; Fur [0]; Claws [15].

Disadvantages: Sahj Code of Honor [-5].

All Sahj (with the exception of the Inkahjahj) have the Taboo Trait: No Magery (0 points). They also have their native breed language at no cost, and 1 point in the Sorah language, Ahj.

The Caste System

The Caste System is a very ancient and rigid set system of duties defined by the breed into which a Sahj is born. In the descriptions for each group, their general caste is listed below their name; this is an overview of the full system.

The caste system of the Sahj can seem brutally rigid from the outside, but to the Sahj themselves this system seems natural in many ways; many of the different breeds really do have predisposition towards the duties of their caste. There are, of course, tragic exceptions, such as the Kohj who wants to be a merchant or artist. By far the most open groups are the Sorah and the Linhj, the former of which have always had the most social mobility and the latter of which vividly recalls prejudice and works against it.

As Sahj society progresses technologically, the outcasted and lower-casted find more ways to escape "the system." In a space-age campaign with other races, the Inkahjahj and Linhj often leave Sahj society to live in other societies. The Sahj who is thrown out of society can always leave home and try to get a job somewhere else. In other eras, they may be people on the outskirts of societies, living in the wilderness and hoping that no one kills them. They will never be welcome at home, and -- similarly to being a sex offender in much of the United States -- the Outcasted status will never be erased from their records. (Although it might be possible that saving someone very important or being a hero to the entire Sahj race might do it.)

Casual Psionics and the Sahj

As stated in the basic package information, the Sahj have strict laws and a Code of Honor against thought-reading. But in addition to this, a setting where the Sahj are common should have a "casual thought shield" society in effect. In other words, virtually all people, psionically trained or no, will instinctively defend themselves from casual psionics. In game effects, this means that any attempt to read minds or use other powers directly on an intelligent target will always require a roll, and there is always a chance the reader will be noticed. Either a race is psionically attuned and simply instinctively defends itself, or a race is completely psionically inert, and is therefore harder to read. Either way, this makes casual abuse harder to attempt.

Additionally, Sahj hate "screamers" (people with Anti-Psi). They are a constant headache and nuisance for them.

Sahj Language

Each breed has multiple languages in an ancient or medieval setting, based on their region. Despite the heavy societal overlap by the three primary breeds (Sorah, Skakak, and Kohj), these three also tend to keep a breed language intact. The mainstream Sahj languages, for trade and travel purposes, are Sorah-based. They're the bulk of the population, and, more important to the spread of language, the merchants.

Most Sahj language are Mental/Hard for non-Sahj, unless they are unusually good at noises such as hisses, strong aspirations (breathy speech), and purr-like noises. The heavy usage of h's in their names indicates the hissing, breathy sounds common in the language. Sharp and short hisses are common in swear words.

By a modern (TL6+) or space age campaign (TL8+), the Sahj have one unified language that is the common speech, Ahj. This is their trade tongue and their political tongue, and all Sahj learn it from youth. It is also the primary Sorah tongue. All other breeds learn at least one breed-specific language as well, which are used in the home. Military Sahj all learn Ak'ji even if they are not Kohj, and any technician, scientist, or engineering-oriented Sahj learn Kalinhj (Linhj breed language) despite breed as well, since these are the languages of those respective professions. The Inkahjahj breed language is Kahihj, but is unknown outside of the breed and linguists, while the Skakak breed language, Ubehij, is spoken by any noble. There are also the archaic forms of each breed language which are used for historical study and religious functions.

Sahj are notorious for "Sahjifying" words for example, the word ending "j" marks a creature as sapient, so the Sahj would call human or a human "hoomanj". This makes a good quirk for Sahj characters.

Sahj Religion

Modern and space-age Sahj religion is henotheistic; they follow one god, with acknowledgement that others can exist. Most Sahj are sticklers for tradition and refuse to give up anything that was in their past; hence, although they believe in a primary deity (translated as "The Guide"), they have lists of ancient gods in all their temples. It's a "just in case we forgot anything" and "don't want to offend history by leaving out the old religion" attitude.

They are also iconoclastic about the Guide; although ancient deities no longer actively worshipped can be portrayed as people (and often are), the Guide cannot be. It is viewed as the ultimate blasphemy in their religion to even attempt to draw a picture of what you think the Guide looks like, and such heresy can cause a person to be thrown into prison for life. Of course, there are multitudes of religious sub-groups under this main belief, as confusing as humanity's.

Of particular note are the major differences of the Kohj and the Inkahjahj. The Kohj are staunch ancestor-worshippers, keeping huge catalogs of their heritages to recite in prayer. The Inkahjahj are still very pantheistic, centered around nature worship; however, they, too are firmly against humanoid portrayals of any of their deities, instead using symbols to represent sites or things sacred to them or one of their particular deities.

In earlier eras, the other Sahj deities are important, and the Guide is more an abstract view of the universe or a powerful deity the society is truly pantheistic in belief. Ancestors are deified, not simply worshipped, especially in Kohj cultures. The iconoclastic concepts are late introductions, mostly from later philosophy, in all their religions. Even the Inkahjahj portray their deities in earlier periods.

Settings

This article gives generalities for setting the Sahj in various time periods, drawing a few examples from the real world. *GURPS Japan* is recommended reading to get a feel of the medieval Sahj; of particular note is the idea of an existing Emperor but warring nobles and clans. Japan's samurai clans become Skakak or Kohj nobles and their warriors. Their renaissance and industrial revolution is pushed forward by the Linhj desperation to become members of society rather than near-slaves on the periphery. They introduce firearms and other devices, obtaining the patronage of the Skakak nobles. During this time period, many Sorah rise up in caste by intermarriage (which is when it first becomes common) or by becoming artists and artisans. The industrial revolution is almost entirely driven by Linhj and Sorah, nearly leaving others in the dust; however, without the government and military provided by Skakak and Kohj, society would not have held up to change. The Inkahjahj cultures, spread across plains and other fertile areas, are driven to the most desolate places as cities and civilization spread. They are always outcasted and outcasts through this time.

The Sahj change drastically once introduced to either other races or space. Although loosely unified, the introduction of other threats or allies (or both) drives them to become truly unified, leaving only the Inkahjahj on the periphery. This latter breed, oppressed even through the most enlightened ages of Sahj culture, only gains a second chance as Sahj leave the home world.

Breeds

Sorah

The Sorah are based off the *felis concolor*, also known as the mountain lion, cougar, and puma. Panther and leopard stock, of the *panthera pardus* type, is also part of the Sorah makeup. The Sorah have the greatest variability in the color and pattern of their fur of any breed. They are thin-framed, averaging about six feet tall and 160 pounds, with long tails about two feet in length.

Sorah constitute the majority of the Sahj population, and are the Commoner Caste. In a pre-industrial (TL4-) society, Sorah are serfs, peasants, and common workers, as well as a fair portion of the skilled labor and merchants. During industrialization, the Sorah are the most common group to be made factory workers, but as they are also the merchant class, they reap the profits of change. Sorah average about 50 to 60 percent of the total Sahj populace.

Sorah are egalitarian, believing in the capability of females. In medieval or fantasy settings, this is because the life of a Sorah male can be brutally short, as they are often the conscripted suicide troops of armies. They therefore allow females to own goods and businesses, and daughters to inherit. However, when there is a male in the inheritance line, unless proven incompetent, ownership defaults to him. This only changes in the modern (TL6+) period.

After TL4 or so, the Sorah as a breed gain the most social flexibility of any group of Sahj. They are able to climb up to the Noble Caste, sometimes by intermarriage and sometimes by pure wealth. The Sorah can freely interbreed with the Skakak and Kohj breeds, although there is a good chance (50%) the child will be sterile. These interbred children tend to have Sorah traits. If the mixed-breed child goes on to have children with a purebred Sorah, Skakak, or Kohj, the children will have traits like the purebred parent.

Sorah follow the basic Sahj template, but in a campaign with psionics, they should purchase at least 5 points of psionic powers. Non-psionic Sorah tend to be looked down upon, and if they also lack ability in other areas, Outcasted (-10 point Disadvantage). It costs 26 points (including the 5 points of psionics) to play a Sahj Sorah, or 11 points to play an Outcasted Sorah.

Skakak

Skakak are the Noble Caste, and cousin to lions (*panthera leo*). They are the elite leaders and arbiters of Sahj society. They hold power, and traditionally this power is given to them willingly. Sometimes Skakak are amid the commoners, but even those reduced to the commoner caste are regarded quite highly. Skilled in psionics, excellent in leadership, the Skakak have a certain quality to them that makes the title of "Noble" fit.

Skakak males are quite tall, averaging about 6' 3" in height, while the females are only an inch or two shorter. Only males have head-fur, which is long and luxurious, and kept in fine shape. They have elongated, pointed ears which are high upon the head. All Skakak have a fine coat of sun-colored fur, which remains short. Skakak, although regarded highly by other breeds regardless of status, regard themselves as fallen if they do not have some sort of leadership or warrior position. Even the females are highly competitive.

In a pre-TL4 society, Skakak are every bit the good and bad of nobility, but generally a bit arrogant and conceited. They command their own elite Skakak "knights"; the Sahj homeworld has the kashka (a very horse-like mammal -- use horse statistics) and Kohj warriors. The nobles vary in the same way human nobles did, ranging from cruel and demanding despots to beneficent rulers. Their competitive streak makes them dangerous; although early in Sahj history the bulk of society become united under "the Emperor", this unity is not unlike the medieval European Holy Roman Empire or Japan's Warring States period. Most Skakak (male or female), especially of the pre-TL4 society, are experts with swords and lances; claws just don't have range!

In a more modern period -- after Sahj society managed to calm down, somewhat unify, and go through an industrial revolution -- the Skakak are still the ruling class, but not completely dominant. They simply do not have the command

of mercantile and technological ventures that the Sorah and the Linhj do. However, their positions are more than ceremonial; Sahj society believes in the Noble Caste. Most Skakak go through military training in their youth, taught both to fight and to lead troops, and are the supporting caste of the governmental bureaucracy and its military. Commoner Caste Skakak are often the victims of political sabotage and familial infighting; despite their noble qualities, they are as political as any.

Although not required, Skakak should have the skill Karate Art (M/H). This represents the ceremonial claw-fighting which Skakak do at many ceremonies and meetings. They also tend to have other ceremonial combative skills and social skills, which can be reflected with other skills.

Skakak have the standard Sahj package, plus the following: HT+1 [+10], Sharp Teeth [+5], Telepathy 1 [+5], Status +1 [+5], and minimum Sense of Duty (to friends and acquaintances) [-5]. They also have the Skills Telereceive, Telesend, and Mind Shield at IQ-2 [3]. Most Skakak have a higher Sense of Duty than that, and often a higher point value Code of Honor. It costs a total of 34 points to play a Skakak. A Commoner Caste Skakak would not have Status +1.

Kohj

Kohj are the Warrior Caste and descendant of tigers (*panthera tigris*). Their caste and standing are without doubt; they are the largest and toughest of the Sahj. Standing an average six-and-a-half feet tall, with larger claws than other Sahj, they are impressive and powerful. Their fur is striped, with black stripes on gold and orange fur. Their head-fur never gets long, but in general their fur is thicker than other Sahj. They have ears which are not quite as elongated as other breeds, and are somewhat rounded, but also are high on the head. There is some variance on the fur colors, with lighter and darker coloration being normal. The Kohj do have near- albino members, who are white furred and chocolate striped, always with blue eyes; there is one Irihkohj ("white Kohj") for about every 50,000 Kohj or so. In ancient times (TL4-) they are regarded as prophets or great warriors, but there are no significant differences other than fur color. (Irihkohj are not albinos, and do not have the Albinism disadvantage.)

In ancient times, the Kohj are an independent group, both a noble and warrior caste, and frequently clash with the Skakak and Sorah. However, although Kohj are great warriors, they are not as good at leading as the Skakak, and accordingly their status fell over time. By the Sahj's medieval period (TL3-4), most Kohj have sworn fealty to a Skakak and become devoted to simply being a warrior caste. In modern times (TL6+), they are the front- line troops, although since the Sorah outnumber them, they are certainly not all of the military. They have no qualms about modern weaponry, but still prefer to close to melee if possible. They know they have an advantage over most other creatures. Kohj warriors are pledged to branches of their local military rather than individual nobles, but the oaths are remarkably similar. Even during times of peace, they are pushed to train for the next potential battle.

Kohj males and females are taught to fight, in equally rigid programs. The females are generally taught more defensive tactics, to defend bases and homes, while males are taught more aggressive tactics. Ownership, money, etc., defaults to females in families, as males are assumed to be busy training or fighting. Unmarried males are allowed to be independent or ask a female family member to manage their worldly goods. In modern times, this gives Kohj females a great deal of power and freedom. They tend to have an easier time "breaking the mold" of being a simple warrior, and pursuing other interests. Kohj males tend to gravitate towards protection and other pseudomilitary jobs; they have been taught little else.

All Kohj have military duties, regardless of time period. Every last Kohj, male or female, is trained as warriors. Those who fail in their duties tend to take on near-suicide missions to redeem themselves to do otherwise is to fail their race. . . . This is the reason for their higher Code of Honor than the typical Sahj. They are considered psionically weak by many Sahj, but this is a misconception: they tend to focus on one or two powers rather than branch out.

All Kohj have a minimum of 10 points in Brawling, Karate Art (see Skakak, above), Guns (at least two types), Armory, and any other appropriate combat skills the player desires. In a pre-modern game, the required skills are instead Brawling, Karate Art, Broadsword or Two-handed Sword, Bow, Staff, or Armory. (They may take the Uneducated disadvantage to explain a lack of these skills). Kohj can interbreed freely with Sorah and Skakak, but

there is a 50% chance for the children to be sterile. For this reason and because of their militant bent, the Kohj highly dissuade marriage outside of caste and breed.

Kohj have the basic Sahj package plus the following: ST+2 [+20], HT+1 [+10], Combat Reflexes [+15], Sharp Claws [+10], Sharp Teeth [+5], and Fur [+4]. They have the Kohj Code of Honor [-10], Sense of Duty (all Sahj) [-15], and the Taboo Trait: Psionic Limitations [0] (see below). In a campaign with other alien races, Kohj have Intolerance toward one of them. It costs 75 points to play a Kohj, counting the 10 points of skills. Kohj are limited to Power 3 or less in all psionic Power groups other than Psychokinesis and ESP.

Inkahjahj

The Inkahjahj are the plains-dwellers of the Sahj, preferring a lower technology and a reticent life, heavy with strange traditions. They are based on the *acinonyx jubatus*, or cheetah, and have lost the fewest of their animal traits. They are relatively tall for Sahj, averaging about 6'-6'2" for both males and females. However, they are slightly hunched, making them appear a few inches shorter. They are also unique amid Sahj in that they have not lost their capability to run on all fours. An Inkahjahj is nearly impossible to tell from his non-sapient cousin when running. Inkahjahj fur varies a fair amount, some with black stripes and some with black spots, but all are brown-yellow with darker patterning. These patterns are distinct enough that many Inkahjahj clans can spot even distant relatives by fur pattern.

The Inkahjahj culture is not unlike the plains-dwelling Native Americans; they are wandering hunters and gatherers, preferring to move about their plains unimpeded. In ancient times, this is not an issue; they simply avoid the other Sahj, and are classified as "savages" by other breeds. As the other Sahj breeds spread, the life of an Inkahjahj becomes harsher. They refuse to incorporate into the Sahj caste system, and flee to more and more obscure parts of the world. Combined with their unique trait of being capable of magic, not just psionics, they are Outcasted in all time periods of Sahj history. Like many nomadic cultures of Earth, the Inkahjahj ways are slowly being blotted out. (If the ability to use magic is allowed to all Sahj, the Inkahjahj should be better at it than others, and this may improve their social situation.)

As technology marches on, and the industrial revolution gets into full swing, some Inkahjahj are forced into society as serf or slave labor. Most of these sad souls languish and ultimately die out, often because of disease or cramped quarters, which drive them mad. By the modern and space-faring eras, the Inkahjahj are a dying breed, down to less than half a million members in a species of billions. They simply do not cope well with modern technology and cities; for instance, every last Inkahjahj is claustrophobic, and it can take a lifetime for them to fight this off. They have never been fond of technology, viewing as an unnecessary crutch, and their systems reject cybernetic implants and other medical technologies, making them even more wary. (Many have technophobia.)

Inkahjahj are proud to remain outcasted. Although they regard some aspects of Sahj society as good in particular, deference to elders and casual thought reading remain disliked in their society they are in general disgusted with their cousins. Most do not regard themselves as anything more than nominally Sahj. This is confirmed in their eyes and others by the fact that they cannot easily interbreed with other Sahj. The only interbreeding that results in any children are with Sorah, and the child is always sterile. This further drives them from Sahj society. In a campaign focusing on discovering history and precursors, it can be posited that the Inkahjahj are an incomplete uplift project, a point founded on the above facts.

Although they dislike technology and are unlikely to like using it, they often have technological skills related to survival-useful items. They hate heavy armor, space suits, and anything else that completely covers them, a problem related to their claustrophobia.

Inkahjahj have the following in addition to the Sahj basic package: additional DX+2 [+30], HT+1 [+10], Perfect Balance [+15], Enhanced Move 2 (Running) [+20], Claustrophobia (Severe) [-30], Social Stigma 2 (Outcasted) [-10], Cyber-Rejection [-10], and the Taboo Trait: Magery 1 only (0 points). They have the Skills Survival (Plains) at IQ-1, Spear at DX-1, and Spear Throwing at DX 1 [+3]. They may buy the Claustrophobia down to Mild at character creation, but it takes time and roleplaying to remove it entirely. It costs 39 points to play a Sahj Inkahjahj. In a pre-TL8 society, an Inkahjahj costs 49 points to play, as Cyber- Rejection is not applicable. In a campaign with other

magic-using Sahj, the Taboo Trait should be removed.

Linhj

The Linhj are, like the Inkahjahj, a Sahj breed on the edge of acceptable society, keeping to their own ways. Unlike most Sahj, however, the Linhj question society at each turn, and stand in a unique position to alter the society in ways they see fit. They continually argue with the rigid regime of the Sahj caste system and any strongly held traditions. They are technologically inclined . . . or rather, they love technology in all its forms. Most Sahj think all Linhj are perfectionists, and prefer technology over their inborn psionic abilities -- a stereotype based on truth. A Linhj born without psionics does more than fine in their society, as long as he proves his intellectual capabilities.

Before the great birth of technology Linhj are outcasted, rejects on the edge of society. Most Sahj prefer temperate or tropical climates, but the Linhj cling to cold and subterranean environments. (Linhj are the entire reason Sahj have air conditioning systems; their natural comfort range is from 15 to 70 degrees Fahrenheit.) They have become instrumental to the Sahj's industrial revolution and evolution, though, at first forced by the incursions of their unfriendly cousins and later by bribing their ways up with their devices. Past TL4, the Linhj are real movers and shakers, promoted up to the Commoner caste, and finally given their own niche, the Engineer Caste, by TL7. They have long memories, though, and their ancestors' tales to remind them of their former positions before they proved their worth to their fellow Sahj. They often demand respect from those around them.

Linhj are very short, only averaging about 4'8" for the males, an inch shorter for females. Most Linhj have white fur with some striping, especially about the face, with the rare Linhj being red or orange furred -- Irihlinhji. In ancient times, Irihlinhji were sometimes regarded as potential heroes or delegates to the other breeds, but there are no real differences other than a difference of coloration.

Linhj are proud of their facial fur and take good care of it, but do not sport long head-fur in back. They have very pointed ears with wisps of (generally) dark hair at the ends of them. Pulling these hairs is the highest insult in their culture! Albinism is more common amid the Linhj than any other, although it's sometimes hard to tell, since they are white-furred anyway the only real difference is faded or absent striping.

Linhj enjoy bucking the system. The Linhj of the modern and spacefaring societies enjoy their power within the Sahj hierarchy, because it doesn't matter how good a leader a Skakak is or how great a warrior the Kohj is if their ships or their weapons are broke, they have to come to the Linhj! This gives them something of a superiority complex. Linhj are also much more apt to like any non-Sahj, viewing encounters as opportunities to trade ideas.

All Linhj have technical skills, as taught to them growing up; it's their ticket out of a lousy cave in the Sahjis antipodes and into a nice air conditioned condo. However, they diversify quite a bit in their skills. Although many are engineers, yet other Linhj work in medical fields, construction, and other technical or scientific enterprises. It's the rare Linhj that doesn't admire building and technology.

In addition to the standard Sahj package, Linhj have ST-2 [-15], DR +2 [+6], Temperature Tolerance +4 versus Cold [+4], Sharp Teeth [+5], Versatile [+5], Mathematical Ability [+10], ESP 1 [3], Reduced Move 1 [-5], Sahj Code of Honor [-5], Odious Racial Habit: Enjoy arguing with the System [-5], and Intolerance: Peoples who like heat [-5]. They must have a minimum of 5 points in Scientific Skills. It costs 29 points to play a Sahj Linhj, 26 without psionics.

Government

Below TL5, the Sahj system of government is a city-state system not unlike ancient Greece, with Skakak or Kohj making up the warriors or elector-nobles of a city. Over time, the system became imperial. Like ancient Japan, however, this system fails and the Emperor loses power. This causes the shift to a large-scale feudal system, in which ultimately the Skakak come out on top as universal rulers. The advent of technology pushes the individual feudal states towards more organized government, including a loose democratic system in which individual Skakak (or Sorah, later) are elected to pseudonoble positions. Ultimately, upon arriving in the space age and encountering other species, they

reinstate the Emperor as an elected position, picked by a Great Council consisting of representatives of every breed. The bulk of Sahj society is very traditional, and they reached back to ancient roots to develop a universal system of rule. Most of the modern Sahj states and organizations have their predecessors in either the feudal states or even the most ancient city-states, while the Emperor is elected from a Royal Family that theoretically dates back thousands of years.

The final form of government is therefore a constitutional monarchy. Instead of a "constitution with rights," though, the Sahj have the Declaration of the Castes, which lists the traditional duties of the breeds and "amendments" allowing changes in society. Technically, any breed can move to any caste under the law; there is simply enough prejudice to keep this from actually happening. All breeds do have representatives spread throughout the system, not just the breed representatives, although the outcastes and barely casted (the Inkahjahj and Linhj) only have a handful. The general populace elects all of these representatives. A breed elects its breed representatives, while state and colony representatives are elected by their constituents.

The Emperor is chosen by the Great Council from the Royal Family, although the previous Emperor has a strong opinion which he expresses. Traditionally, the eldest son is groomed to inherit the position, but if the Council can declare him incompetent. They will then move on to another of the Emperor's children, then the Emperor's nephews and nieces, and so forth. "Emperor" is just a title there have been more than one Empress. In addition, although there is one, primary Royal Family, there are also closely related families from which an Emperor may be selected if there are no acceptable members in the primary family. In this case, the primary family changes as well. This is very rare.

The local-level governments hint very strongly at the ancient nobility system. Most positions have noble titles, and most higher up positions are held by Skakak, with the rare Kohj or Sorah holding a position of authority. The exception is the military; in the military system, the leadership positions are split about 60/40 between Skakak and Kohj.

Campaign Ideas

The All-Sahj Campaign

- In ancient times, Sorah rebels must confront brutal Skakak and Kohj warriors, a la Spartacus.
- An industrial revolution-focused game, such as *Steampunk*, with berserk Linhj scientists and engineers frantically trying to outdo each other for noble support, status improvements, and raw money.
- An Inkahjahj tribe, wandering the lands, attempts to find the traces of the lost civilizations of their earlier eras, when they attempted to settle down, before being driven out into the wilderness yet again. These ruins could hold the secrets to powerful magic unknown to all others.
- A classic fantasy-style game focusing on a group of medieval Sahj trying to stop Kohj raiders from ruining local lords, while trying to make heads or tails of the strange weapons the Linhj are trying to sell to them.

Sahj Mixed with Other Races

- A mixed-species scout ship runs across a world with semi-sapient creatures remarkably similar to the Sahj. Perhaps they're a lost breed? How did they get here? Why are they here? Maybe something is wrong with the planet itself, and they're not simply not evolved, but devolved.
- A splinter group of Kohj has broken with the traditions of the last thousand years and has declared itself independent of all governments, founding a militant colony on an obscure world. This is a breach of all the ancient pacts, and a blemish on Sahj society but how can they convince the splinter group to come back into the fold?
- An Inkahjahj tribe has decided to leave the homeworld. They've saved up enough money to pay a fortune to the ship that will take them to a plains-covered, friendly colony world. It seems the ideal job for a down-on-your-luck ship, until all those Inkahjahj are stuck onboard, claustrophobic and miserable. Of course, disaster sticks the ship in space for far longer than the voyage should be, supplies run short, and the Inkahjahj are making hell for the crew. Can sanity and supplies hold out for everyone?

* * *

Special Thanks the Archangel of Archives, who is kind to me even when I'm nagging her about writing and ideas, and the hubby Kayn Bernard, who changed the Sahj spellings to better fit linguistic logic and my ideas of pronunciation.

The Universal Breakdown Manual for *GURPS*

or, "What's in a Machine?"

by Eric Funk

"The universe is made of stories, not atoms."

-- Muriel Rukeyser

GM: *"Ok, your tank is hit; 700 points of damage get through armor, and you must make a Hazard Control Roll at -6."*

GM: *"After the hit rocks the ship, your distraught chief engineer calls the bridge, 'Captain, that last hit damaged the engines; we lost our main plasma regulator pump. Until we can replace it, I can only promise you 50% power.' "*

* * *

Do either of these situations sound familiar? The first example is concise, and perhaps a little too informative. Unless it directly affects the PC via a neural link, that character will probably not be in a position to know all the details about damage to the vehicle. "Minor damage" to a vehicle may mean that only the cooling system is damaged, so there's no immediate threat (from inside). An attack that barely penetrates armor might only knock out some backup systems, not impairing any functions -- for the time being.

Every component of a vehicle ceases to function at some point or another. Weapons fire can hit sensitive equipment. Bugs and inconsistencies in maintenance, scheduling, and operation software can run a part out of factory specs. Good old carelessness and neglect can just as easily push parts to a premature old age. Radiation and bombardment by solar and atmospheric winds and waves will eat through anything, given time. Reckless piloting and battle damage can overload even the best self-regenerating components.

Now that the heroes broke something, the real adventure begins: finding a replacement (which is easier than repairing it . . . usually).

A Place for Everything

"We adore chaos because we love to produce order."

-- M.C. Escher

From Steampunk submarines and modern automobiles to starships, engineers, mechanics, and scroungers will encounter a myriad of components with brand names, popular names, and slang attached to them. Every vehicle moves different substances around within itself to function and/or provide environmental control for its occupants. One will find examples of all combinations of tables "B," "C," and "D" within a modern automobile (with the noted exception of table item B6!). The point of all this is to be able to provide the GM with ideas of components so they can better be described to players, and to get them more involved in the game.

When a part is damaged, roll on Table A to determine what grade of component it was. Roll once each on tables B, C, and D to determine the exact nature of the part that must be replaced or repaired. Each result carries a modifier to the Scrounging skill, except Table A. Its modifier is handled by the Size of the component (see below for details).

Table A: Importance (roll 1d)

- 1-2** Backup/Reserve: Tiny units that you hope you never need. Perhaps 10-25% of full capacity.
- 3-4** Secondary/Auxiliary: Small units that may have 33-50% of normal capacity.

5-6 Primary/Main: Your front line units, what you depend on.

Table B: Scrounging Modifier from Component Examples (roll 1d)

- 1** +2 Harmless Gas Low pressure air, perhaps with harmless particles suspended (dust)
- 2** +1 Harmless Liquid Low-pressure water, waste or mildly toxic coolant like windshield wiper fluid
- 3** 0 Moderately Dangerous Liquid High-pressure Water, Toxic Coolant
- 4** -1 Moderately Dangerous Gas Hard Vacuum, or high-pressure (invisible) CO, CO2
- 5** -2 Flammable Liquid Hydrogen Gas/Liquid, Gasoline, Liquid Propellant
- 6** -3 Burning Corrosive Plasma, High-pressure Steam, radiation/Iodine Gas

Table C: Scrounging Modifier from Purpose (roll 2d)

- 1-3** **1** +3 Relay/Rifling
- 2** +2 Drain/Relief/Emitter
- 3** +2 Fill/Feed/Intake/Collector
- 4** +1 Limiting/Flow/Regulator/Flux
- 5** +1 Filter/Separator/Distributor/Phase Discriminator
- 6** 0 Cooling/Retarder
- 4-6** **1** 0 Heating/Accelerator
- 2** -1 Pulse/Phase Regulator
- 3** -1 Fusion/Combining
- 4** -2 Pressure/Balance/Expansion
- 5** -2 Processor/Reclamation/Generator
- 6** -3 Neutralizing/Stabilizer

Table D: Scrounging Modifier from Component

- 1** +2 Tank/Tube/Conduit/Pipe/Battery
- 2** +1 Sensor
- 3** 0 Valve
- 4** -1 Port/Vent/Intake
- 5** -2 Regulator
- 6** -3 Pump

For those who claim to have a vehicle with no moving parts, this alternate "Table B" for particle-based components may better suit the situation:

Alternate Table B: Scrounging Modifier from (Sub-)Atomic Particulate Component Examples

- 1** -5 Photon
- 2** -6 Electron
- 3** -7 Proton
- 4** -8 Neutron
- 5** -9 Neutrino
- 6** -10 Antiparticle (or other exotic)

These tables are arranged in order of complexity/size so that one could more easily estimate a price and rarity for a replacement. A suitable/compatible replacement "small air drain pipe" is logically simpler to find than a "large plasma processing pump."

Locating Parts

"To invent, you need a good imagination and a pile of junk."

-- Thomas Edison

The Scrounging skill (p. B67) will still be invaluable in finding these components. Subtract the part's Size Modifier from the total Scrounging Modifier, and modify this by the City Job Modifier (p. B195) to represent the chance of the part being available, or easily manufactured. If you really want to find it (and you don't mind the publicity), the advertising rules could also apply. Finally, apply cross-TL Penalties (p. B185) to find parts relative to the dominant TL in your area; finding a TL8 watch battery in a TL5 African village is near impossible, while finding a Model T (TL6) engine is just hard in a TL10 world. After all the knowns are tallied, the GM may add additional penalties or bonuses if the part itself is rare in this area (such as trying to find British auto parts in Japan).

Example 1: The Waddling Duck, a large 18-wheeler, has lost its Primary Vacuum Retarder Sensor (Emissions sensor) near a small city of 50,000 people. The GM rules that the part is between 0.3 and 1 cf (Size Mod -2). On his own, the driver would have a -2 (main) -2 (vacuum) +0 (Retarder) +1 (Sensor) +2 (small city) -(-2) (part size) for a total of +1 bonus to the Scrounging Roll.

Example 2: The One-Winged Angel, a delta-wing rocket glider built in someone's backyard was being tested. During the test, a secondary Proton (-7) Expansion (-2) Regulator (-2) was irrevocably damaged. Fortunately, this is a small part (Size Mod -2, which becomes a +2 bonus), and the yard is next to a major city (+3), for a net -6 to Scrounging rolls.

This is all scaled for a private civilian trying to access possibly dangerous technology. For individuals who are part of corporations or military units using official channels, the hunter must roll against his Administration skill, with a bonus equal to his Administration (or Military) Rank. A "professional" scrounger will then use his own Scrounging roll, modified by the Administration success and the perceived need of the part. Signatures from higher-ups can act as increased "Money Offered" (p. B195) (with a bonus equal to the difference in Rank over the supplicant's); this increases the amount of money actually paid for the item accordingly. Other methods for requisitioning goods in military are described in sidebars of p. SO 94-97, such as obtaining cash vouchers and using Patrons. These rules could just as easily apply to large organizations, which may (or may not!) have their own private security force(s).

Scrounging is the skill of locating items, and it is then up to one's Merchant, Thief, or Administration (in the case of a hierarchial organization) skills to acquire it. Once a component is located, a successful Engineer or Mechanic Skill Roll (of the appropriate Speciality) is required to assess the [current quality](#) of the item (assuming this is not a mail-order outlet). The local value of a component increases with the size and complexity (e.g. higher table numbers) but decreases the more common an item is, and also decreases with a higher bulk demand (because of greater mass production). To perform the actual maintenance or repairs, see p. VE146-147.

Taking Damage

"I have this terrible pain in all the diodes down my left side."

--Marvin the paranoid android

Ruggedized components (p. VE12 and p. VE27) enjoy a 100% increase in hit points (p. VE 183) at the cost of a 50% increase in volume, mass, and cost (see the Links at the end of this article for a good metric to account for Starship Redundancy). They also can resist shutting down when the section of the vehicle they are in takes damage. Instead of a raw 50% price, volume, and mass increase with no performance change but durability, an alternate viewpoint (that expands on the text on p. VE12) suggests that the "ruggedized unit" now consists of

1. The original main unit (100% original size)
2. A ~50% full capacity secondary unit
3. A ~20% full capacity backup unit

All three of these items fit within the new "ruggedized" volume (which is 150% of the original component's volume).

The 20% overlap consists of mutual access space, and control, bypass, and I/O lines that cannot be used simultaneously.

The end result is that you have two fallback measures with enough power to keep going in different levels of emergency. If the damage was inflicted by a precision shot (kinetic, impaling beam), a generous GM could roll d6 and refer to the table.

Hitting Subcomponents (roll 1d)

	Fraction of normal HP	System	Avg Relative Size Mod
1-3	100%	Main "Normal"	
4-5	33-50%	Secondary "Normal"	-1
6	10-25%	Backup "Normal"	-2

How Not To Put Out A Fire

"The difference between a violin and a viola is that a viola burns longer."

-- Victor Borge

Once a component is damaged, it may catch on fire (p. VE184-185). It may spread the damage over to nearby parts if the fire is not contained properly. Electrical fires (from overloads) should only be extinguished with inert gas or dry chemicals. Ordinary fires (wood, paper, cloth) should be stopped with only foam, water, and dry chemicals. Flammable liquids can be extinguished by any of the above except water, which helps spread the fire. As described on p. VE185, the fire extinguishers all seem to use inert gas except for the TL6 "Fire Extinguisher System."

There are a couple of concerns that must be addressed with respect to the different fire suppression systems. The first is that if a system uses anything other than inert gas (CO₂, halon) there is a mess to clean up that may interfere with equipment and create navigation/work hazards. The second is that if an inert gas system is used sufficiently to quench a fire, then it has replaced all the oxygen in that area. This means that any air-burning device (or life form) in the immediate area will choke. Both will Suffocate (p. B122) until the air can be replaced (from seconds to minutes). A major part will have the same HT the vehicle/structure it is in; the GM may simply set its HT equal to the element's TL or the vehicle's HT. (For more details, see Breath Control on p. B49 and p. B91. For specific effects of a CO₂ overdose, see p.CII 136.) Air-breathing components will keep running until they "choke," and then just stop working instead of taking damage. Safety provisions could be put in place to prevent the suffocation of crew members in the area. On the other hand, if there is a crew member in the area, and that prevents an extinguisher from activating, the fire will continue to burn unhindered. This is yet another reason why many starship crews don space suits and depressurize the ship at the first sign of combat.

Adventure Seeds

"It's time to start living the life you've imagined."

-- Henry James

- **Parts as MacGuffins:**

- They walk into the office of a business associate as per their appointment and find them dead, holding a _____.
- The party is hired to haul/protect a cargo consisting of a box/single huge/small _____. They may have unusual storage requirements, such as in a sealed vacuum, flooded with Xenon gas, or the like. Naturally the container will be damaged somehow. A flaw in the metal will run because of the vehicle's vibrations.
- The heroes have a shipping contract, as above, but the components are hollow and contain minimal life support for the expected duration of the voyage, plus 10%. The stowaways could be spies, illegal immigrants, or eco-lovers, or some combination thereof. Unusual delays at departure will force the time to

run out, and they will be forced to emerge. All will probably offer a handsome sum (or whatever they have on hand) to keep quiet if discovered. What happens next is up to the crew's reactions.

- As above, but the constituent contains mold, fungus, harmful bacteria, viruses that eat only copper or silicon. Perhaps a treasure map or [critters](#) are found within, or perhaps worst of all, a [court summons](#) for the crew.
- The PCs order a component as part of their routine, but instead, they get an _____. They must put off replacing an aging/damaged part until a new one can be returned. Depending on the company, they may not accept a return if someone signed for the delivery!
- A "compatible" third-party component isn't quite as compatible as the manual would suggest. Of course this is not apparent until the part is under stress . . .
- After a minor emergency ends, an old fire extinguisher was used, and it discharged some chemical agent that is reacting with old chemical residue from a cleaner, creating an acid, perhaps unnoticed until something fails.
- New "global" emissions standards were released quietly some time ago, and the deadline is only making news because at the last moment because the ruling authority increased fines for non-compliance to exorbitant heights (rumors may fly as to why, where the money is going, and the interrelations). Most the large corporations have upgraded already, but others are lagging. The adventurers are either hired to refit a corporate "fleet"/building or must themselves upgrade. The focus can be on acquisition of the "environmentally friendly" part that now is in extreme demand, the act of replacing the device itself (perhaps the location is in the middle of an industrial park or city and the owners aren't well liked), or even the disposal of the old parts (perhaps they have noxious, toxic, or even radioactive residue).
- As above, but it's a factory recall instead. Customs agents will enjoy people trying to ship large and/or radioactive parts back to the manufacturer to refund.

Other Suggestions for Integration

Old and unusual auto parts can make good props. The Internet is an excellent resource to find auto enthusiasts who enjoy documenting each "superior" part of their vehicles. See the Links section below for one.

Norgruk Niceaxe

by Phil Masters

Once, not so long ago, life was pretty good -- and pretty straightforward -- for Norgruk. He was a member of a valiant warrior culture, with a middle-ranking place in his tribe, and that tribe had acquired a pretty good base of operations. He even had a really nice weapon, a good sharp axe acquired in battle from one of the *Ibjroohargtk* ("Small Annoying Leathery Furry-Faced Beings"), which in turn had earned him a respectful nickname from his brother warriors.

Then, one day, the tribe's home was invaded by a rampaging, aggressive force -- a mixed band of *Ibjroohargtk*, *Bdjrrkitk* ("Tall Annoying Pale Numerous Outside-Dwelling Beings"), and *Bdjijfaathuk* ("Tall Intensely Annoying Pointy-Eared Forest-Dwelling Beings"). The invaders were evidently employing vile and unspeakable techniques; within seconds, most of the tribe were dead or disabled, and Norgruk had taken an arrow in the shoulder.

Not being a fool, Norgruk left hastily by a convenient exit, albeit one which led to parts of the lair which the tribe hadn't tidied up yet. Jogging briskly down the corridor, he quickly discovered a trapdoor (the hard way), leaving him deeper in the untidy parts of the lair and with a broken arm. Moving on, evading some of the curious local wildlife (thanks, it must be said, more to luck than to skill), Norgruk twice found that his only safe option was to take stairs leading downwards. (His luck only went so far.) He even noticed and ducked through at least one concealed door, which helped keep him alive for a little longer.

Finally, he came to room with a stone table surrounded by silly scrawls of the kind which the tribal shaman might have said could talk. On the table stood a bottle. Norgruk, faint from loss of blood and feeling harassed, felt the need for a drink. Unfortunately, though, the bottle turned out not to contain any liquid; just some kind of dark vapor. A vapor which, Norgruk felt sure as he dozed off, was *talking* to him, even *offering* him something . . .

The being looked down at Norgruk. It was honorable after its fashion, and it had offered a fair reward for the service he had performed. In reply to its question as to his greatest desire, Norgruk had mumbled something about wanting to cut things up. Anything. In fact, he'd said something about wanting to cut up the whole world.

The being considered itself to be a god, but it wasn't a god of healing, and frankly, Norgruk looked to be pretty much beyond repair. On the other hand, it did know about cutting things up, and moving them around afterwards, and it possessed a certain capacity for humor. So, before it left, it repaid its debt, after its fashion.

The adventuring party arrived a full day later, bloody but victorious over countless foes, only to discover that they were too late. The prophesied disaster had befallen, and the twisted god was free. This was going to take a *lot* of fixing. All that was left in the last chamber were a load of broken wards, an unsealed Flask of Imprisonment, a dead goblin, and a dwarven axe. With a howl of annoyance, one of the warriors picked up the axe and hurled it across the room.

As the axe went spinning, Norgruk's spirit flailed about mentally, seeking to exploit the powers which it didn't even know it now had. Then things got *very* strange, as the axe cut through reality itself . . .

Norgruk Niceaxe in GURPS (547 points)

ST 1/25 [-80]; **DX** 12 [20]; **IQ** 8 [-15]; **HT** 14 [45]

Speed 6.5; Move n/a

Advantages: Acceleration Tolerance [10]; Alertness +3 [15]; Damage Resistance 4 [12]; Damage Resistance +21 (Only protects the metal head, -20%) [50]; Doesn't Eat or Drink [10]; Doesn't Sleep [20]; Extra Fatigue +24 [72]; Fearlessness +6 [12]; Immunity to Disease [10]; Immunity to Poison [15]; Injury Tolerance (No Blood, Brain, Cutting/Impaling Bonus, Neck or Vitals) [50]; Natural Attack (sw+2 cut, bought as Long Talons with reach 1, Usable

by wielder +20%, Can't do impaling damage -10%, *Only* works when someone else wields him -20%) [54]; Night Vision [10]; Passive Defense 2 [50]; Passive Defense +2 (Only protects the metal head, -20%) [40]; Peripheral Vision [15]; Polarized Eyes [5]; Temperature Tolerance 20 (range -35 to 300 degrees) [20]; Unaging [15]; Vacuum Support [40]; World-Jumper (Can Visit New Worlds, Extra-heavy encumbrance, No concentration required, Cannot follow another jumper, Must be swung or thrown to use power -20%) [156].

Knacks: Find Weakness [2]; Lend Skill* (Touch Only, -20%) [32]; Might (Only lasts while subject holds axe, -10%) [36]; Shatter [10]; Telepathy (Touch Only, -20%) [64].

*As no item energy cost is listed for this spell, the knack cost was based on the details of comparable spells.

Disadvantages: Bad Temper [-10]; Bully [-10]; Dead Broke [-25]; Dependency (loses all magical powers in no-mana zones: common, constantly) [-12]; Illiteracy [-10]; Inconvenient Size [-15]; Innumerate [-5]; Intolerance (anyone who seems "elvish" -- slender artistic types, people with pointy ears, etc.) [-5]; Lame (legless) [-35]; Mute [-25]; No Manipulators [-50]; No Sense of Smell/Taste [-5]; Primitive (TL3) [-20]; Social Stigma (valuable property) [-10]; Unhealing (can be repaired by a skilled armorer) [-20].

Quirks: Doesn't really trust paper money; Doesn't trust his powers (yet); Likes destroying things; Petty-minded, lacks a real grasp of priorities; Vengeful. [-5]

Skills: Axe/Mace-14 [8]; Brawling-12 [1]; Shield-12 [1]; Stealth-12 [2]; Tactics-6 [1].

Languages: Goblin (native)-8 [0]; English-7 [1].

Notes

The magic which bonded Norgruk's spirit to his axe gave him a package of associated abilities, represented here by advantages and knacks. He is a functional axe, doing sw+2 cut damage, and by using his magical powers, he can strike especially effective blows against inanimate objects -- or rather, someone wielding him can, with his consent. He can also enhance his wielder's strength or skill to some extent. However, he's not indestructible. He'd probably survive having his wooden haft broken (and it probably breaks almost as easily as an ordinary axe handle), but the destruction of his (magically strengthened) metal head would likely be fatal. Details are left to the GM to resolve should the point ever arise; Norgruk tries to avoid testing the principle.

Norgruk also has the ability to see, in a way that feels to him like ordinary vision -- but because he's using magic rather than physical eyes, he can "look" to his sides quite easily, and he's largely immune to being dazzled. The character sheet assumes that he has ended up in a TL7 world where English is the main local language. He has learned to understand the essentials of what people say to him, but not much yet about the local technology. (When he first arrived, he would have had the Confused disadvantage.) GMs can adjust or delete his skills and Primitive disadvantage to reflect different game settings and Norgruk's gradual acclimatization. Note also that he has the power to communicate telepathically with anyone who touches him.

Game Uses

Norgruk has *shifted frames of reference*. He's designed for use in Supers or similarly wild and weird games, probably set in the present day. In a standard fantasy, he'd just be another magic weapon with some unusual features; the further he is from home, the more of a *character* he becomes.

Although he's pathetic in some ways, and some PCs might be tempted to sympathize with him if they get to hear his story (especially if they hear it from *him*), he is definitely *not* a nice guy when you get to know him. He has the personality of, well, a fantasy game goblin; being transformed into a magic weapon has just given an extra dimension to his bad attitude, and something new and unusual to complain about. (Being forced to work with *Bdjrrkitk* does nothing for his mood.) Still, he's definitely the product of his genes (when he had any) and environment, the same way

that a irritated ferret is.

He can make an interesting supervillain, although he will of course need to be wielded by somebody. If he becomes part of a villain team, one of the other villains could carry him, but that might just lead to squabbling; he would probably do better to recruit a series of teenage heavy metal fans with far more ambition than sense, to act as his hands and legs (and to lay claim to his share of the loot; it's going to be hard for Norgruk to buy off his Dead Broke disadvantage). These might be regarded as Allies, though Norgruk would probably see them as disposable. In fact, it is quite likely that the PCs will hear of and encounter a low-grade but dangerous new villain named "Axemaster" or suchlike, long before they determine that the real problem is not the man (or boy), but the weapon.

As presented here, Norgruk hasn't yet got the hang of his world- jumping powers, hasn't "memorized" the world he's in (or his homeworld or anywhere else), and won't try to use that power again unless he feels seriously threatened. (And then he'll have to persuade someone to swing or throw him to do so.) In time, he will probably gain in confidence (perhaps after making some emergency jumps), buying off the relevant quirk and "memorizing" several worlds. With the right wielder, he could then become a *serious* nuisance, leaping between realities to gain access to secure targets or to evade pursuit. Note that he can shift up to 160 lbs. (usually his wielder) with him each time he cuts through the fabric of reality, if he wishes; he'll have to avoid teaming up with anyone overweight . . .

Creative Leadership

Options for and Augmentations of the *d20 System's* Leadership Feat

by Owen K.C. Stephens

The Leadership feat is one of the most powerful feats available in the *d20 System*, giving a character both a loyal cohort to back him up in dangerous situation, and a bevy of lower-level followers to take care of more menial tasks. It is also one of the least-common feats, for a variety of reasons. It requires more work on the part of the GM, has the possibility of unbalancing a campaign quickly, and often is overlooked in favor of a combat-related ability.

It's also one of the very few standard *d20 System* feats that's more about playing a role than rolling dice. A character with Leadership has built-in concerns a GM can play on, and provides easy means for the GM to channel information to players. How a character treats and cares for his cohorts and followers can be the subject of hours of roleplaying, as can differences in philosophy between a character and those who obey him. With a little thought, a GM can get whole games out of a character's followers, and use them to help set tone, handle pacing, and generally enhance a campaign.

Many players have meta-game concerns with followers, seeing them as little more than minor figures that are likely to cost money to maintain and need constant guarding. Cohorts can also raise questions, especially about who runs them (GMs often have enough to do without adding an NPC, and players may not want to run their own cohort). Players sometimes feel another character having a cohort reduces their own "screen time" unfairly, and discourage others from taking the feat. Most of these issues can be settled with a discussion of expectations between the GM and players (and may include ideas such as having another player run a cohort, with GM approval of unusual actions, and having cohorts be informants or sages rather than combat monsters).

Often the stumbling block is not the balance of power or bookkeeping issues Leadership causes, but a sense that a group of followers do not work well with a given character concept. Only a few militant-types are very interested in having small armies at their beck and call. Especially at high levels, this is combined with a lack of ideas about what to do with 40 1st-level characters. Unless a character has a stronghold that needs butlers and stableboys, such followers are only useful in limited circumstances.

Below are presented a number of ideas about what else followers (and occasionally cohorts) may represent. These are often story-driven ideas that can be part of a character's background, though not becoming clear until he takes the feat. Many of these ideas assume that followers need not be humanoids, but can be any creature of approximately the same power level. A 1st level fighter is an appropriate follower, and thus a CR 1 light warhorse or darkmantle likely is as well. Further, a GM should feel free to play with a creature's power level by adjusting its level of loyalty and usefulness (a shark may be higher than CR 1, but if the campaign only occasionally enters the ocean, and the shark only aids the character rather than take orders from him, it may balance out).

A GM could also use the Leadership feat as an alternate award for success, replacing more common forms of treasure. As a rough benchmark, a feat can be considered worth 5,000 gp in a fantasy game. A GM may have a single character earn the feat for performing a particularly heroic act, or may make an entire party of adventurers the "leader" (averaging their Leadership score) of a single cohort and a few followers.

For a truly epic award, a GM may opt to pass out the Leadership award to every member of a party, allowing them to each earn a cohort and a number of followers. This would be appropriate for a group that saves an entire town, for example, causing them to be seen as worthy heroes by the populace. A band of four characters with leadership scores of 9, 12, 12, and 15, for example, could attract one 10th, two 8th, one 6th, one 3rd, two 2nd, and 36 1st level characters -- easily an entire town militia, or the whole of a thieves' guild. Many of the ideas below work better as rewards than traditional Leadership results.

Follower Concepts

A Follower in Every Port: Rather than followers being a group gather in a few places, make them individuals scattered across the world. For example, the character may be the son of a simple barber, but discover that barbers are part of a secret society that aid their own. In dozens of towns throughout the kingdom, there is at least one barber who knows the character and is willing to provide local rumors, a place to hide, and even a free disguise.

Ahoy!: A ship and its crew becomes beholden to a character (possibly with a cohort as the captain). It may have been saved by the character, or it may have been bought by a relative or ancestor and willed to the character. The advantage is that the ship is available for long sea-journeys when needed, but can care for itself when the character spends considerable time on land.

Blood is Thicker than Water: All a character's followers may be part of an extended family, such as young cousins who look up to him as a hero. They may be distant relations from a "disreputable" side of the family, or even lost relatives who have just discovered their new, famous, relation.

They may also be of a different species, representing a single cross-bred encounter in the character's distant family tree. For example, an elf may discover he's related to fairies, or an orc learn she has the blood of wolves in her veins.

Chosen One: A small cult is convinced the character is a divine leader, perhaps the reincarnation of their founder, or the offspring of their god. Regardless of what the character thinks (or wants), the cult (including all his followers, and possibly a cohort leader) do their best to spread word of his divinity and importance, as well as looking out for his best interest as they see it. They may obey a direct order from the character, but only if he accepts his role as their spiritual leader.

Guildsmen: Followers can represent a guild or business a character buys, inherits, or is given as an award. Rather than be useful in combat, the followers sit in a guildhall using their Craft skills to earn the character money. If any are able to make masterwork goods, they may even be useful as a source of high-quality equipment for the character and his allies. A cohort spellcaster able to make magic items may serve a similar role as non-combat support (especially one able to *identify* or *analyze dweomer*).

Harem: Killing an evil overlord, prelate, or slave master leaves a horde of attractive companions looking for direction and possibly protection. To make things more interesting they may secretly be thieves, sorcerers, or assassins. The same idea can be used with any foreign society where the characters interact without understanding the culture -- a rogue who thought he was just carousing wakes up to discover under local law he's married 37 women.

Nurture vs Nature: Characters who end up with infant or unhatched monsters may take the young as followers. Even powerful monsters like griffons can't be more than one hit die at birth, and their growth can be matched to the character's access to higher-level followers. The same idea can answer what happens to the infant orcs left after characters destroy a tribe.

One Ring to . . .: Some object that comes into the character's possession is linked to a horde of creatures that must obey its owner. To make things interesting, they may be of a radically different alignment. For example, a lawful good wizard takes a ring from a fallen foe only to discover a minor demon (the cohort) and a swarm of imps (followers) obey the orders of he who wears it. The wizard can't destroy the ring (as it would free the demons) or trust the demons (as they must obey the letter of his commands, but may twist the spirit because of their evil nature), but may not be willing to kill creatures that are truly devoted to him despite their failings.

Part of the Pack: Saving a wounded animal (wolf, lion, horse, etc.) from a monster of some kind results in that creature's entire pack/herd adopting the character. They can serve as guards in the wild (though they rarely fight anything dangerous, they can alert the character to danger), steeds, and even foragers (allowing the character to carry less food and not have to slow enough to forage for himself).

This also works for characters whose histories include being raised by wild animals.

Smitten: Rather than determine followers in advance, the GM may use them as needed to represent something irresistible about the character. For example, an elven princess of legendary beauty finds that men often become smitten with her at first glance. The GM uses her followers one at a time to represent random useful people suddenly becoming willing to do things for her. Jailors release her, bartenders hide her, and bards gather information for her as needed, each one using up one of her followers (though obviously remaining fairly loyal even after they've been defined).

The same idea works for many rakish swashbuckling character types.

Strange Bedfellows: In an urban game with strong ties to politics, followers can simply be supporters who march in favor of the character's ideas and vote for his initiatives. Their level becomes less relevant than their total number, and they are of use to the character despite their low total power. This can easily be added to many other follower ideas, especially Chosen One, Harem, and The Faithful.

Stronghold/School/Guild: The most traditional use of followers is to provide loyal servants for an organization the character runs. If a character builds a castle, starts an academy, or buys a business, followers are perfect for any hireling roles.

Even this trope can be made more interesting with a little thought, however. For example, a wizard's school might attract noble's children who can't perform magic, but want to learn how it works so they'll be better rulers when they inherit. A fighter could end up with a spymaster offering his services for a new castle, with thief and assassin followers outnumbering warriors.

Another good way to make followers more interesting and helpful is to pick a few to treat as very low-level cohorts, and having them increase in level when the character's Leadership score allows for higher level followers. If one of a character's followers is a 1st level bard, Bartle the Semi-Informed, allow Bartle to be second level once the Leadership score reaches 13. With bardic knowledge Bartle may have useful information occasionally even at low levels, and characters will grow to know and appreciate him as he (slowly) gains levels with them. Rather than a faceless follower, Bartle becomes a friend.

That Was the Pact!: The followers are all random, minor monsters and creatures scattered across the globe. The only thing they have in common is intelligence, and the knowledge of a pact made ages ago between their families and the character's. Each is bound to the character by this pact, though not all may be happy about it. The GM may opt to replace some minor followers with more powerful creatures, but rather than be followers each owes the character a single favor.

The Faithful: If the character is a religious figure of some kind, his cohort and followers may simply be loyal members of his flock. This works best if the character has a physical church, but they could also be wandering believers, who follow the character and spread his praises in towns near where he adventures.

New Feats

The Leadership feat is useful, but limited. The following feats are designed to augment Leadership, and provide alternatives for it. Though none of these feats require the Leadership feat, most are useless without it.

Cult Personality

You are the kind of character that attracts swarms of lesser followers.

Prerequisites: Cha 15+, char level 6+

Benefits: Cult personality works like the Leadership feat, with three differences. You do not attract a cohort. Your leadership score is your level plus twice your Cha bonus. You double the number of followers you get.

Elite Commander

You attract followers and cohorts of a higher caliber than most.

Prerequisites: Cha 15+

Benefits: All followers and cohorts you attract from this point onward have +2 Str and +2 Con.

Great Leader

You have a natural ability to lead, easily attracting cohorts and followers.

Prerequisites: Cha 13+

Benefits: Add 4 to your Leadership score.

Group Empathy

You have an empathic connection to your followers and cohorts.

Prerequisites: Cha 15+

Benefits: You can receive and send basic empathic feelings with your cohort and followers, up to a range of 10 miles. These are very basic feelings (pain, hunger, curiosity, fear, happiness), but they are enough to know if a follower is in trouble, or even conscious and/or alive.

Master of Two Worlds

You are leader of more than one group.

Prerequisites: Cha 17+, Leadership, Char level 9+

Benefits: This feat works just like the Leadership feat, but it allows a character to be leader of two different groups. He gains a second cohort, and another band of followers as determined by his Leadership score.

Pack Leader

You have a natural ability to attract and maintain a large number of loyal followers.

Prerequisites: Cha 13+

Benefits: Add 6 to your Leadership score for purposes of attracting followers (not cohorts).

Tyrant

You are adept at treating followers and cohorts poorly, but still inspiring loyalty.

Prerequisites: Cha 15+

Benefits: You take no penalty to your Leadership score for aloofness, cruelty, having a familiar, special mount or animal companion, recruiting followers or cohorts of different alignment or causing the death of a cohort or followers.

Digging Up Resurrection Mary

*"On a wild Chicago night, with a wind howling white,
I caught my first sign of Resurrection Mary.
I was trembling like a leaf, I was scared beyond belief,
After all my conscience ain't that clear.
I used to work for Mickey Finn, I did the numbers for Big Jim
Perhaps my day of reckoning lies here?"*
-- Ian Hunter, "The Ballad of Resurrection Mary"

It's after one in the morning, on one of the oldest roads in Chicago. There might be a moon out -- it might be cold, or just seem that way. In the headlights, you see a flash of white, and a toss of blonde hair; a girl's dress, and then the girl herself. Who is she? What is she doing on the side of the road? And where is her shadow, behind her -- or in the car with you? Slow down, and open your door. Let's find out -- I'll give you directions.

*"Girl Killed In Crash
Miss Marie Bregovy, 21 years old, 4611 S. Damen Avenue, was killed last night when the auto in which she was riding cracked up . . . The scene of the accident is known to the police as a danger spot."*
-- Chicago Tribune, March 11, 1934

Drivers in the southwest Chicago suburbs sometimes see a young girl in a white dress hitching a ride. She's going home after a dance, she explains, and gives directions along Archer Avenue, past South 70th Street. As the car passes Resurrection Cemetery, she disappears. Sometimes, her lucky date (always a man) picks her up at the Willowbrook Ballroom (formerly the Oh Henry) at 89th and Archer, or one of the other joints on the Southwest Side, and drives her "home." Sometimes he stops to let her out, and sees her melt through the bars of the graveyard. Sometimes, she runs (or stands) in front of a car near the cemetery, disappearing when the car hits her. Scores of eyewitnesses since 1936 have seen "Resurrection Mary"; she is Chicago's best known ghost.

Her true identity remains murky; early speculation in the 1930s centered around Mary Bregovy, whose unmarked grave is still pointed out to ghost tourists -- despite the fact that Mary was killed in the Loop, and had brown hair and an orchid-colored dress, unlike the "beckoning fair one" in white. Two other girls have been fingered, including one Anna Maria Norkus, who did die in a car wreck in 1927 on Archer Avenue after a dance (albeit at age 13, a little young for Mary's sirenish behavior) and was (possibly) buried at Resurrection Cemetery during a gravediggers' strike at St. Casimir's, her home parish. This may explain why Mary was seen wrenching at the bars of Resurrection Cemetery on August 10, 1976 -- the bars, which bore the burned marks of a young girl's fingers, were removed by the Archdiocese after they could not be painted or straightened. Or so they say.

"A prime example of the adaptability of older legends is 'The Vanishing Hitchhiker' -- the classic automobile legend. This returning-ghost tale was known by the turn of the century both in the United States and abroad. It acquired the newer automobile motif by the period of the Great Depression, and thereafter spawned a number of subtypes with greatly varied and oddly interlocking details, some of which themselves stemmed from earlier folk legends."
-- Jan Harold Brunvand, *The Vanishing Hitchhiker*

It's the "they" that get you; folklorist Jan Harold Brunvand identifies Resurrection Mary as a prototypical "Vanishing Hitchhiker" urban legend. You know how these stories go. A man picks up a girl hitchhiking. She may reject his advances, or have a story of rejecting another; either way, she prefers to ride in the back seat. When he gets to her house, she's gone. In many versions, he returns to the house the next day on some pretext -- perhaps she borrowed a book, or a sweater -- only to be told (or discover from a photo or portrait) that the girl is dead, and has been for some time. In some (somewhat more literary) versions, the man visits her grave to find his book, or sweater, there waiting for him.

"Behold, a man of Ethiopia, a eunuch of great authority under Candace queen of the Ethiopians . . . was returning, and sitting in his chariot reading Isaiah the prophet . . . And Philip ran thither to him, and heard him read the prophet

Isaiah, and said, Understandest thou what thou readest? And he said, How can I, except some man should guide me? And he desired Philip that he would come up and sit with him. . . . And [Philip] commanded the chariot to stand still: and they went down both into the water, both Philip and the eunuch; and he baptized him. And when they were come up out of the water, the Spirit of the Lord caught away Philip, that the eunuch saw him no more . . ."

-- Acts 8:27-39

Brunvand sees an explosion of such stories beginning in the 1930s (perhaps Mary's death opened up the [doorway](#) to her sisters across America), but can trace them back to at least 1876, and a horse-drawn coach version told in Watseka, Illinois. Variants appear in Korea by 1941, and all over Europe. One specific Chicago variant is the "prophetic hitchhiker" who declares, apropos of the 1933 World's Fair, that the fairgrounds would "slide off into Lake Michigan." Brunvand collects versions of prophetic hitchhikers including "Jesus," a "hippie dressed in white," and the Nephites of Mormon lore -- which echo the "vanishing Christ" on the road to Emmaus, as well as the "disappearing deacon" from the Book of Acts quoted above. Other hitchhikers (all across America) prophesy earthquakes or falsely promise early ends to WWII, often unpleasantly phrased thusly: "Hitler will die in six months just as sure as you'll have a dead man in your car tonight."

Death in the car, and Archer Avenue, also connect in the 1897 story of two Irish musicians playing at a church dance at St. James-Sag, at 106th and Archer. Late at night, they saw a woman in white, "filled with despair" in the churchyard. A spectral coach approached her twice, and she sank into the earth. A similar coach, drawn by horses "running from Hell itself" appears along Archer, in the Archer Woods Cemetery. Where, one may be interested to learn, the cries of the "sobbing woman" are heard in the night. Pieces of a larger story than one unfortunate Polish girl seem to come together along the old Indian trail known as Archer Avenue, lined by the Illinois and Michigan Canal.

"Ah me, Llorona

Llorona of yesterday and today

Yesterday I was a marvel, Llorona

Today, I am less than a shadow of that."

-- José Alfredo Jimenez, "La Llorona"

A sobbing woman by the water, dressed in white, needs no explanation in Mexico or the Southwest. Such an apparition is La Llorona, "the crying one," plaintively bewailing the death of her children -- who, the legend maintains, she killed herself. Luisa de Loveros, a mestizo woman, had two children by Don Nuño de Montescarlos. When he refused to marry beneath his station, she drowned the children and was hung. Since then, she has haunted Mexican women, seeking her children -- or drowning theirs in envy and hatred. (Political ghostologists sometimes identify La Llorona with Cortez' mistress "La Malinche," for no very good reason.) There are a couple of very interesting parallels with La Llorona in our ambit. The Aztec deity Cihuacoatl, who was a water-goddess and a goddess of childbirth (and child-death) supposedly appeared and prophesied doom to the Mexica in 1502 -- like the death of Hitler, it was a prophecy too soon. And La Llorona herself has appeared near the Calumet River along Cline Avenue in Gary, Indiana -- just over the border with East Chicago -- beginning in those ever-interesting 1930s. (And like Resurrection Mary, Gary's Llorona supposedly died in a car accident.) La Llorona is but one of the global manifestations of the "Women in White," who always appear in white, often wailing or sobbing, usually by water, and are associated with the death of children. The Bean Fhionn of Ireland and her banshees, [Berchta](#) and her German *weisse frauen*, France's Melusine and the other White Ladies, even the [Lamia](#) of Greece, are all part of Resurrection Mary's lineage, despite her Polish blood. The Manx *lhiannon-shee* even leaves burned fingerprints behind her, just as Mary did in 1976.

"[T]he name of Arthur's wife, Gwenhwyvar, resolves itself into White Phantom or White Apparition, in harmony with Arthur's line of descent from the region of phantoms and apparitions and fairy-folk."

-- W.Y. Evans-Wentz, *The Fairy Faith in Celtic Countries*

But the most famous of the Women in White comes not from the smoking [mirrors](#) of Mexico (behind which, perhaps, her cousin still lurks as "Bloody Mary"), but from the misty hills of Britain. Although Geoffrey of Monmouth tried to invent a Roman legacy for "Guenhumara," the White Phantom (*gwen hwyfar* in Welsh) is clearly a lady of the Otherworld in the older stories. In the Triads, in fact, she is depicted as a triple goddess, the daughter of giants and *sidhe*; the *Mabinogion* hints at her parallels with Blodeuwedd, the Flower Maiden created to bestow kingship on her

lovers. Obviously, the aristocratic Guinevere has more in common with the social-climbing La Llorona than with the girlish ghost of industrial Archer Avenue -- but we've already seen how the white dress shifts to cover different ladies as the story shifts in time and place. But always, there is water -- the Illinois and Michigan Canal along Archer Avenue, or the Water Bridge of Meleagant. As Evans-Wentz so charmingly puts it, "There is always the mystic water between the realm of the living and the realm of subjectivity." Looking a little harder at Guinevere, we note that she is childless (a hint of La Llorona's child-murder also plays out in some of the more dubious Mordred tales) or young. In almost every one of her histories she vanishes, usually being kidnapped by an Otherworldly figure (into a graveyard or underworld at times) -- death and resurrection? (Perhaps Lanzelet or Meleagant drives the dark coach from St. James-Sag.) Finally, she embodies the sovereignty of Britain -- as does the "figure of Mary" who Arthur wore on his shield. Young, vanishing, resurrected Mary -- from Britain to Chicago.

Folklorists such as Brunvand say that these hints and reflections, these pale apparitions of older stories, are the natural effects of a folk tale told over the generations; what we see as echoes or shadows from the supernatural past can be easily explained as the fossil record of our folklore. But -- true to our Heisenbergian age -- what if they are actually signs that the entities themselves adapt to fit niches in the "cantosphere," the invisible body of story and lore that seeps into and covers every nook and cranny of a society? Just as some habitats are more welcoming to creatures displaying certain evolutionary adaptations, might not some societies be more welcoming to myths that have dropped their vestigial triplicities and flowers in favor of fingerprints and immigrant accents? Perhaps these entities are always flowing down the canals and ley lines, shaping themselves into the holes our culture leaves them, in [Tombstone](#) or [Cleveland](#). Perhaps the White Phantom has put aside her crown in Chicago, for a night at the dance-hall and a ride in a really cool car -- doesn't that sound like Guinevere "the merrie" to you?

Pyramid Pick

Diana: Warrior Princess

Published by [Heliograph Incorporated](#)

Written by **Marcus L. Rowland**

Illustrated by **Aaron Williams**

116-page 6- by 9-inch b&w softcover; \$14.95

Take several thousand years of ancient history and knead as necessary until you have a pulpy mass. Force through a sieve and then again so that all of the boring bits have been removed. Spread liberally over the topography of New Zealand before it ripens into Middle Earth, sprinkle with a dusting of the best aged Greek and Roman pantheons, drizzle over with the best jump kicking, sword-swinging action, and for a final measure serve with a pair of push-up bras. This is of course, the recipe for the television series, *Xena: Warrior Princess*, and to some extent for *Hercules: The Legendary Journeys*, where the extra support was deemed not quite as necessary.

Since this exact formula has already been repeated for a game of its own in the form of West End Games' *Hercules: The Legendary Journeys & Xena: Warrior Princess Roleplaying Game*, it would be churlish of anyone else to apply it quite so exactly to one of their own games. So instead Marcus Rowland applies the concept to the history and culture of the 20th century, with a nod to the 19th century along the way. The writer is known for his numerous and often fondly regarded scenarios for a variety of different games -- *On the Trail of the Loathsome Slime* for *Call of Cthulhu*, *Queen Victoria and the Holy Grail* for *Golden Heroes*, and *Canal Priests of Mars* for *Space 1889* -- but is best known for his exploration of the science fiction in the 19th and early 20th centuries, in both [electronic format](#) and book form. Like *Forgotten Futures*, Rowland's new game is published by Heliograph Incorporated, who brought us the reprints of *Space 1889* and its supplements, including [Transactions of the Royal Martian Geographical Society](#), and who are currently working on the pulp action game, *Zeppelin Age*.

The idea of this little game, *Diana: Warrior Princess*, which originally appeared as "Diana: Amazon Princess" in issue 23 of *Valkyrie Magazine* in August 2001, is to view our era with the same kind of distance we view the ancient Greeks and Romans. Then throw any sense of realism or historical accuracy out of the window along with the baby, and then -- in turning it into a television series -- pick and choose the bits that will make it anything other than boring. This is a world in which clichés, absurdities, and anachronisms abound side-by-side most cheerfully. It is also a game that cocks a scurrilously satirical snook at the establishment, invariably to highly amusing effect.

This is a "world" in which Nell Armstrong, astronaut for Norton's Agency for Space Achievement, could be the first "man" on the Moon; CDs are played on phonographs *a la* "His Master's Voice"; Britannia is ruled by Queen Victoria and her Consort, Prince Albert Einstein, and protected by her loyal Beefeaters and her woad-daubed Scots bodyguard, John Brown; and mobile phones are chunky, novel-sized devices with heavy aerials and a text function that involves ticker tape. Britannia is, of course, ruled from Windsor Castle -- that is, Windsor, Ontario. While Queen Mary rules a misty land of bare-chested and kilted barbarians who gather in clans and drive steam-powered cars festooned with spikes, her cousin Queen Elizabeth rules England aided by her chancellor and advisor, Thatcher the Sorceress.

But Elizabeth has another side, in secret being the Queen Mother, evil criminal mastermind behind the worldwide trade in arms and tobacco. Seduced by the Dark Side of the Mystic Powers of Royalty, she has allied with Landmines, the God of War, and has plans to replace him eventually. (Likewise, Thatcher the Sorceress has plans to replace Queen Elizabeth.) As part of furthering her plans, Queen Elizabeth uses her easily controlled son as an agent, turning the affable, well-meaning, but often-ineffectual Bonnie Prince Charlie, into an uncaring swine given to casual violence.

It was Bonnie Prince Charlie's involvement -- though one he was not aware of -- in his mother's criminal doings which led his wife, Diana, to divorce him. Despite her not being Royal by birth, Diana has kept her own Mystic Powers of Royalty, which uses in the name of good and peace, toiling ceaselessly to thwart her mother-in-law's plans and those of Landmines. She is aided in this fight by her faithful, ever-present (though incredibly unlucky) sidekick, Fergie, who is always being captured, hypnotized, bitten by vampires, kidnapped by aliens, and so on. Other allies include Red Ken, friend and ally to reptiles everywhere and leader of the London Underground (who spearhead the anti-Thatcherite resistance); and Wild Bill Gates, River Boat Gambler and entrepreneur, whose motto is, "Make Money Fast." Other enemies include the conman, Ron L. Hubble, who was able to sell NASA a space telescope so bad it needed spectacles to actually work; Archer the Assassin, the cloaked and hooded figure that is Thatcher the Sorceress' most deadly henchman; and numerous warlords who worship Landmines, including Churchill, Mao, Milosovitch, Napoleon, and Stalin. The rest of the world is full of wild beasts -- from rabid coyote to saber tooth tigers, and wild savages . . . from Zulu tribesmen in Vietnam to Sikhs in the Indian territories of North America.

At its heart, *Diana: Warrior Princess* is an episodic television series based around two characters: the star, Diana, and her co-star, Fergie, with occasional appearances from guest stars such as Red Ken and Wild Bill Gates. There is nothing to stop players from generating characters of their own, but these are perhaps best used for the other series ideas also suggested. These include "Parton: Lust for Glory," in which hard-bitten General "Dolly" Parton commands a unit of cyborg camel-riding Amazon mercenaries across the deserts of the Korean War; "Richard of Hollywood," in which the deposed Duke Richard Nixon leads his merry band including Tiny Tim, Will Shakespeare and Maid Marilyn against the evil "Uncle" Sam from their forest hideout; "Gandhi's Angels," where Mahatma Gandhi trains three woman warriors -- "Babe" Ruth, Marion Morrison, and Toni Curtis -- in preparation for a series of mystic quests; and "Toni the Vampire Slayer," where ordinary school girl by day, Toni Blair, becomes enemy of Thatcher the Sorceress.

Characters are broadly drawn using 16 attributes that are as much skills as they are stats, and range from zero to 10. Thus the Marksmanship attribute covers any form of ranged combat, Science any knowledge of the physical universe, Driving control of any vehicle from bicycles to space shuttles, and Athlete any physical feat not covered by Speed, which includes initiative, dodging and swiftness. Some characters also possess a Mystic Power, such as Diana's Mystic Powers of Royalty that always keeps her clothes spotless, lets her heal some diseases by the laying on of hands, and occasionally boosts her attributes. Conversely, Queen Elizabeth's Mystic Powers of Royalty give her mind control abilities via her Crown, life draining beams from her Mace, and the ability to bestow deadly diseases with her bare hands.

How many points a player has to spread between the 16 attributes depends upon the Star Status of their character. Stars like Diana have a Status of 40 plus, co-stars like Fergie 30 plus, guest stars such as Red Ken and Queen Victoria have between 20 and 30. Major gods, like Landmines and Queen Elizabeth, have 50 and over, minor gods such as AmX, Goddess of Wealth and FedX, Messenger of the Gods have 20 to 40, villains like Thatcher the Sorceress have 30 to 40 and so on. Status also determines each character's Hits (hit points) and their Success number, which is the target needed to do anything rolled on a six-sided die. Both Status and Hits are equal to a fifth of a character's Status value.

The game system for *Diana: Warrior Princess* is exceedingly simple. Roll a number of six-sided dice equal to up to any three appropriate attributes, the aim being to obtain as many successes as possible. However, the more attributes involved, the more successes that are required. The Success target is 4+ for major gods, 5+ for stars, co-stars, guest stars, villains and henchmen, and 6 anyone else. All successes are rolled again, repeating until no more are rolled. For example, Wild Bill Gates suspects that Ron L. Hubble is cheating in their poker game. His Success is 5+, and he has the attributes of Thief (3) and Thinking (3), giving him six dice to roll. He rolls 6, 5, 5, 5, 3, and 2, for four successes; then those four are rolled for another two successes, and then no more rolled, giving Wild Bill a total of six successes. These would be counted against any of Ron L. Hubble's successes, and those left over would count in the winner's favor. Combat is equally simple, and designed to be as cinematic as the game's inspiration. Much of this should come from the players as much as the referee, with both playing up to the tongue-in-cheek, slightly over-the-top genre.

Successfully completed adventures can earn characters Bonus Points, between five to 10 for each scenario. These can be used to increase a character's Status, though this *is* an expensive process, and really it is not in keeping with the point of playing *Diana: Warrior Princess*. Instead they can be spent on a one-for-one basis to add more dice to a roll,

or alternatively, to alter the plot to a character's advantage. An appendix also discusses further options for the game, notably the Virtual Campaign, in which actors play the characters, in some form or another. In other words, adding a second layer of reality to the game, which can also be explored as part of the game.

Although several episode treatments are given, including "Plan Nine From Outer Mongolia," "Romancing The Scone," and "The Gnus Of Marylebone," roughly a fifth of playing *Diana: Warrior Princess* is devoted to the adventure, "Diana Does Dallas." This has Emperor Norton calling upon Diana's aid when someone threatens to kill President John F. Kenny, the elected official who does the day-to-day running of America. After a pre-credits scene in which Diana must rescue Fergie from the hands of the evil worshippers of the demon lord of disease and pollution, Nick O'Teen, they must fly to Dallas (which looks very much like Sydney) and board the steamboat, the *Norman Bates*. This is where President Kenny is negotiating with Elliot Ness, the leader of the Untouchables caste (who do all of the cleaning and other mucky jobs in America), for an end to segregation. This is a solid adventure that takes the characters across America and showcases the game to its best advantage.

This is excepting, of course, that it is somewhat at odds with the central setting of the game -- England (and possibly Britannia, but mostly England). All right, the title of the adventure, "Diana Does Dallas" is very much in keeping with the tone of the game and its approach to late 20th century history and culture. Yet this dichotomy -- having the adventure for what is a very Anglo-centric game set outside of our green and pleasant land -- also goes some way to address the fact that playing *Diana: Warrior Princess* is a very Anglo-centric game. Not every non-English gamer is going to understand *all* of this RPG's references.

Putting this problem aside, *Diana: Warrior Princess* is a highly amusing read; the author's prose is ably abetted by the illustrations of Aaron Williams, which are as on target as the writing. And though the writing is solid, the satire of *Diana: Warrior Princess* is affectionate in nature, rather than being truly scathing or biting. This explains why the author can get away with not so much poking fun at such a sacred cow as the late Princess Diana, but rather playing up to her supposed relationship with the rest of the Royal Family. In the end, *Diana: Warrior Princess* is more of a clever idea than a game to be played, though it is still quite playable. Even when played, it is something to be dipped into and visited occasionally, rather than being played over and over. Yet it is still well done, and if you can get the joke in the play as well as in the read, then *Diana: Warrior Princess* is a television series worth repeat viewing.

--Matthew Pook

Pyramid Review

The Penguin Ultimatum

Published by [Eight Foot Llama](#)

Designed by Jim Doherty

Art by Scott Starkey, Rick Chamberlain

110 full-color cards, 12 wooden invitation markers, 8 glass scoring stones, color rules sheet; \$19.95

If you've ever seen a nature documentary on the South Pole, you know what a bleak, white wasteland it can seem to the untrained eye. Penguins by the thousands mill about, all of them looking alike and waddling this way or that, seemingly without purpose. You may have thought to yourself, "What a boring existence that must be." The penguins couldn't agree more. They've had enough of this dull routine, so they have gone to their emperor (get it?) and laid down the law: Make this place livable -- or at least entertaining -- or there will be flightless trouble. In turn, the emperor comes to you and your fellow court jesters and demands that you throw one helluva penguin party. This is *The Penguin Ultimatum*.

The object of the game is to score the most points by entertaining more penguins than anyone else. Game play entails bringing out entertainers and surrounding them with an audience until they start their show. When the show starts, you want to make sure your guests are front-row center so you get all the credit.

The game is played using several different types of cards. The players (two to four of them) receive a hand of penguin cards, which show different colors and values, and depict penguins enjoying one of the four types of activity: acrobatics, dancing, music, and juggling. The four colors are the penguin families, and each prefers to see a different animal perform: sheep, bears, kangaroos, and seals.

Entertainer Cards will be placed on the table -- which represents the iceberg -- showing one of the four animal types performing one of the four activities. The entertainers have various arrangements of "triggering dots" located in the corners or on the sides of their card. On his turn, a jester takes a penguin from his hand and plays it adjacent to a card on the table (making this one of the few games in which diagonal is also adjacent). If you play like colors next to each other, you'll be forced to pay a "mingling fee" from your current victory point total (the clans want to meet new penguins, not other members of their extended family).

Just because you play a card doesn't mean it belongs to you. You can only "claim" a card by placing one of your three invitation markers on it. That makes them your special guest, i.e., they may gain victory points for you when the entertainer does his stuff. Entertainers break into song (and dance, or juggle balls, or whatever) when there's a card adjacent to all its trigger dots. Anyone who invited a guest to the party scores points if the guest likes that animal or that form of amusement. Points are awarded, the curtain falls (literally -- a Curtain Card replaces the entertainer), and the penguins all go find another performer to be amused by.

The player who scores the least from the performance is awarded the Entertainer Card. These can be saved up for more victory points at the end of the game, or can be spent to eliminate the mingling fee for placing a Penguin Card.

When all the Penguin Cards are gone, the game is over and everyone tallies their score. Extra points are given for having the most of any one kind of animal, and everyone has a different Activity Card that shows specific Entertainer Cards from the deck. If you were awarded that card during play, you get more points for that as well.

The Penguin Ultimatum is a lot to take in. There are a lot of card types to keep track of . . . and you use cards to track your score, too. Each player has two cards -- the 10s and 1s -- and two stones that sit on those cards to keep a running victory point total. The definitions sort themselves out after a bit, but considering how much else you have to look out for it's a bit of a task. The artwork on the cards may be one of the best things about the game. It is positively irresistible, and there will be many well-deserved "ooo"s and "aww"s generated by the cartoonish but heartwarming pictures.

The game has a good, simple mechanic in the triggering dots and a lot of point/counterpoint to balance things. You want to score high points for performances, but the low score gets the entertainers. Even if you didn't score the most for a performance, the current player gets to place the next entertainer; you may be able to force a show to start early, before others really get their invitation markers piled up near it, and that lets you decide the placement of the next entertainer. On the griping hand, the player to your left gets to place the next penguins and invitation markers. And with only three markers and a limited ability to move them around, you have to exercise caution about who you will invite.

There's so much to keep straight in your head it becomes hard to judge what will help you the most or hurt your opposition the best, especially when you're trying to plan for the endgame. The game plays better with multiple people; with only two jesters, it's almost an even trade, and you don't want to get into a pattern of spending your whole turn setting your foe up to score on his turn. However, if players can handle the math and can think a turn or three ahead, *The Penguin Ultimatum* is a clever and delightful game that will give the group a fun and intellectual workout.

Making Links and Bridging Gulfs

Okay. You're in the middle of a long-running campaign, you're starting to run out of ideas, and you'd like to get an idea for a new direction or series arc. Or maybe you're just starting a campaign, and are looking for some seeds to plant that can remain dormant for as long as you'd like, but can be sprung fairly easily.

When you're strapped for ideas, one of the surprisingly rich sources of inspiration is to look for tangents or connections that can either tie in elements of the universe together, or branch out the campaign world in a new and exciting direction. And often it's possible to do both.

Confused? I'm sorry; it's a fairly big concept I'm trekking around this time. I think it's best if I go through example.

Over in DC Comics, there was a long-running series called *Swamp Thing*. (This character's popularity and brand on the collective unconsciousness of the comics world is assured by a superb run by writer Alan Moore. I also understand a new *Swamp Thing* series will be starting in a few months, although I expect this one to last about as long as a teriyaki-marinated child in a real swamp. But I digress.)

Anyway, when the character was first established, he was a typical man-swamp amalgam, doing marshy things around me and having swampy adventures bayou. (Get it? HAH!)

At some point, however, they wanted to beef up the character a bit. So they decided that he was more than an animate plant-guy . . . he was the DC Universe's earth elemental -- the embodiment of that element for the universe.

This worked; it didn't contradict any known facts, and allowed the character some more room to grow and have adventures.

Now, those of you up on your alchemy know that an earth elemental immediately suggests three other elementals: fire, air, and water. And thus the editors at DC decided to incorporate this concept more broadly, and declared that semi-popular hero Firestorm was the fire elemental, and not-terribly-popular-but-recognizable-to-long-term-fans hero Red Tornado was the air elemental.

This was fine and, again, made sense (especially since it didn't ferociously step on any toes that were too popular). But the existence of three elementals gave the creators of this story the ability to fill in a hole by creating a *new* elemental . . . one tied to water. This character was called Naiad. (I'm not sure why they didn't use Aquaman in this role, except that DC might have been pretending he was still a first- or second-tier character. Or maybe he was too busy talking to Amazing Sea Monkeys at the time.)

Anyway, having used up a jillion words so that I can continue to justify my comic expenditures to the IRS, I note that this same technique can be used in RPGs very easily.

There are two general paths to take when using this technique; it is usually helpful to use both at the same time. You need to pick which character or game element will be used, and you need to figure out which pattern will be followed (and possibly extrapolated from).

The chosen character or element is often the easiest, since the requirements are fairly strict to make this technique work. The character or element needs to be easily pigeonholed into some aspect of the chosen pattern, so generally the character will be the ultimate embodiment of some element of that pattern. As such, picking out iconic characters - or characters with some iconic element - is often a good starting point. Alternatively, look for characters or elements that seem to imply - perhaps obliquely - the existence of other, alternate elements of the pattern. (Confused? Skim ahead to the examples below.)

The pattern is quite possibly the more difficult one to realize, because there are so many patterns in the world. In general, the less obscure the pattern the better. Swallowing that a PC is part of a grand cosmic pattern requires a

certain suspension of disbelief; learning that this pattern is based on Disney's Seven Dwarfs would probably make the whole thing fall apart.

Some classic iconic patterns include:

- Four classical elements
- 12 Zodiac signs
- The Tarot deck
- The nine planets
- The seven deadly sins/cardinal virtues
- Colors of the rainbow
- Four cardinal directions

There are, of course, many *many many* more. One resource I find invaluable for this (or other inspiration) is *The Book of Numbered Lists*, currently out of print but available pretty darn cheaply from Amazon. Other book of lists will likely provide similar inspiration; take a browse through the reference section of your Friendly Local Book Store.

So let's take an iconic character like Superman. This character could fit into plots that center around:

- Celestial bodies (Superman embodies the Sun)
- Aspects of ability (Superman embodies Power; perhaps Batman embodies Skill, and an unknown third could represent Knowledge?)
- Modes of travel (Superman embodies Flight; Flash embodies Running/Ground Movement)
- Nationalities (Superman embodies America)

And so on.

So, as a full-fledge example, consider DC hero Green Lantern. This character has a ring of power that can emit a beam of green light, which can be formed into any construct the wielder envisions. It has been called the DC Universe's "ultimate weapon." Now, considering the colors of the rainbow - and the works of noted mnemonic Roy G. Biv - green is in the middle of this spectrum, with red and violet at either extreme. While there are a number of directions we can go from here, I note that Green Lantern's ring is most often shown for its versatility. What if, through some cosmic pattern, there existed two *other* counterparts to Green Lantern whose powers derive from the other ends of the spectrum? Red - the color of passion, anger, and fire - might represent the ultimate offensive capability, while violet - the cusp of human visibility, and part of the phrase "shrinking violet" - might represent the ultimate defensive capacity. (I won't flesh out these concepts, but the names "Redlight" and "UltraV" sprang to mind as characters.) Both of these characters, once realized, could prove interesting challenges or counterparts to Green Lantern, from a completely different angle. There are two points to make regarding these patterns. First, they do not need to actually represent some Cosmic Kismet tying the world up in a neat bow. The pattern can merely serve as a jumping off point for adventure ideas; if Superman embodies America, what would the iconic metahuman of other countries - or other *planets* - look like?

Second, keep in mind that it's entirely possible that someone only *believes* this pattern to be true; the actual reality can be quite different. It can even be changed depending on how enthused (or un-) the players are to this development. Thus a nutjob might be convinced that a magic-wielding PC is the embodiment of "The Magician" Tarot card; he assembles a group to combat him, consisting of other adversaries who fit into the Tarot mold (the Devil, Justice, Strength, and so on). Whether or not this adversary's role as "The Fool" is revealed is up to the GM . . .

While it may seem that these kinds of overarching links can only apply to more fantastic or heroic campaigns, this technique can be used to fill in holes anywhere. For example, consider a game where the heroes work for the Department of Paranormal Investigation. The existence of this ultra-tippy-top secret organization can imply that there are other organizations out there; after all, "investigation" does not encompass all activities that may extrapolate from the paranormal. What if the heroes stumble across another secret agency at work, seemingly engaged in a covert war with a phenomenon that *they* discovered first? Learning that there is a Department of Paranormal Neutralization that exists alongside the DPI - both of which are unaware of the other - would open up a new avenue of adventures and

interactions.

While these link-joining ideas can be great to interject into an established campaign, they can be even *easier* to insert before a game begins, or before a new PC is brought into a game. If a player expresses an interest in being the greatest swordsman of all time, that can be interesting . . . especially if that implies the existence of the ultimate archer, ultimate cavalier, ultimate strategist . . .

Links can be a great way to tie the background more tightly together, or branch out in new ways. And, if nothing else, it can give some unexpected ideas. Have fun, and think laterally!

--*Steven Marsh*

Toadtown

by **Brian Rogers**

Toadtown is an example of how continued exposure makes the fantastic mundane. It is a small village residing in mostly safe lands and producing something exotic to outsiders but boring to the natives, it is an excellent place for PCs to come from, because the environment gives them every reason to leave.

Or, as one player put it, "Boy, and you thought moisture evaporators sucked!"

The Geography of Toadtown

Crapaud, commonly called Toadtown, is bisected by the Greenbriar River. Wide and slow for most of its length, it sometimes narrows and accelerates but is always navigable. The forest usually runs up to the riverbanks, forming a river canopy over the narrow points. A bridge connects the two halves of Crapaud, and there are several communal skiffs. Toadtown is the Greenbriar's northernmost community, so a bridge blocking river traffic doesn't matter. While the kingdom may surround it, Toadtown's inaccessibility makes it an isolated outpost of civilization in a vast wood.

Residents have felled the woods for a significant distance around the town, producing a grassy lawn several hundred yards from either bank. Sheep and goats are raised on the east, gardens are planted on the west. The town is of wood construction and spacious. The town is divided as follows: the wranglers are on the north Greenbriar (Warts to the East, Bufons to the West), shepherds on the east side, farmers on the west, fishers and traders on the south river. The town center holds the businesses that support and are supported by local industry.

Past the cleared land, the forest has been partially timbered -- more to the east than west, and the goatherds will lead their animals into the lesser forest to graze. Beyond that east-west (or immediately north-south), the forest is deep and thick. In all directions except south it gets even deeper and more dangerous. Few people have any cause to head north up the Greenbriar. The last people traveling north were a quartet of outsiders a decade ago who claimed that the Greenbriar reached Gnarl Ford, near the kingdom's North Keep (if true, could make the Greenbriar a possible trade route). They may be right, but if they reached Gnarl Ford, they never came back to Crapaud to tell anyone.

Politics in Toadtown

The town is in Dana, the realm of King Daniel the Wise, and in Mignonette County, which runs from Toadtown south and west to the Charity river. Mignonette is ruled by the Countess Anne. Toadtown is directly overseen by the aged knight Kenneth and his resident family: his wife Estelle and his youngest son Kendrick, a swordsman and wizard. Kenneth has three older children but all are off serving in the army. Kendrick stays to defend the town and keep the peace with his father, as is his duty.

There are two reeves in town, Emmett and Emmanuel. Emmett is 20 years older than his partner, and was a trader on the Greenbriar for years before an Optimate (a business leader, similar to a royally recognized guild-master) recommended him as a reeve. Emmanuel just retired here, having served under one of Kenneth's sons as a supply sergeant. They work together to transfer orders from the knight to the people. They are also the "long arm of the law" in Crapaud, which is easy enough given that the town has almost no crime. The families of the reeves (Emmett has several children and a couple grandchildren) act as deputies; Emmett's eldest daughter, Samantha, is expected to take his position when he retires. Samantha is the current toad-wrestling champ, but she faces stiff competition next year.

The town has one Optimate, that being Teague Tanner, the head of the Tanner clan and the main driving force in the aggressive marketing of toad products. He is friendly (if distant) with Kenneth, since the two share a desire to see the community improve. Sometimes Kenneth holds Teague in check, sometimes he pushes him forward, depending on Tanner's current ideas. Since Optimate is a purely mercantile, non-hereditary title, Teague desperately wants to see

himself knighted by the Countess for his work in the region, and for either he or his heir to be given oversight of Crapaud when Kenneth dies. Whether this will happen is unknown, but no doubt Teague is greasing the wheels. He is commonly assumed to be the most powerful man in Toadtown after Kenneth's family -- so much so that the reeves and deputies never bother him and seldom visit the Tanner complex (which lies outside Toadtown proper).

The Businesses and Families of Toadtown

The key aspect of Toadtown's economy is breeding Giant Toads. The toads are native to the Northern Greenbriar, thriving in the particular climate. Crapaud's residents have ways to use all parts of the toad except the ribbit. There are two groups that handle toad breeding: the Bufon family, and the Wart clan. The Warts are the original toad wranglers, and with the death of their patriarch Ryan Wart two years ago the three brothers, their wives and children have started an internal struggle for control of the family business. This has let the smaller Bufon clan make inroads into the toad market, despite having only two generations to work with (though the older brother is recently married). People following this profession are known as Toad Wranglers. The preferred tool of a Toad-Wrangler is a Toad-Spear, which looks like a lower case "y" -- the crook being used to catch small toads to the ground or prevent larger ones from running themselves up the spear.

Moving downstream, the center of town holds the Greenbriar Inn (informally called the Toadstool), which has three bedrooms for rent. Given the amount of traffic in Toadtown, these are most often used by Silas Wart after fights with his wife (this happens about once a month, though other times when kicked out he just vanishes for a while). The Toadstool is run by the Hostel family: John, Lisa, John Jr. and Liza. It is the only restaurant in town, and does brisk business as a tavern -- most nights the dining hall is $\frac{1}{2}$ to $\frac{3}{4}$ full for the evening meal. Depending on who's around, this may include entertainment; some of Crapaud's citizens are skilled singers or storytellers.

A common sight at the Toadstool is Jenkin Trapper, also known as Red-Nose Jenkins. Jenkins is famed for his routine of returning from a trapping run with a variety of non-toad animals, spending the money earned on drinks at the Toadstool and sleeping in the woods. When he's out of money he goes back into the woods. Since he's generous with his cash when he has it, and is a quiet drunk who doesn't bother anyone (though he can spins mad delusional stories while in his cups), the reeves leave him alone. Plus, his non-toad animal supplies are in great demand.

The center of town also boasts temples to both Kisha and Mathelwyn, a carpenter, a cooper who doubles as a ship-wright and toad-spear maker, a smith (who works with scarce imported metal), two bakers, a butcher, the man who keeps the town's donkeys (communally owned by the farmers, but rented out to others for heavy work), and a weaver. Finally, there is the Knight's estate (a walled yard with a large house) which contains a shrine to Gabriel.

There is also a Chandler, named Isaac, who came into the town 14 years ago. Brought in by Teague Tanner and Kenneth, he proved skilled at making candles and lamp oil from toad by-products, letting him set himself up rather smartly. Isaac Chandler is a clever and industrious man -- he used a sum of money he brought with him to make a large order from the river merchants for staples such as cloth and needles and sold them on the side. His shop quickly became a general store on the west bank of Crapaud, and he opened a second, smaller one on the east bank. Isaac has his house outside of the town proper where he maintains several small beehives that provide both beeswax and honey

A Brief Word on Toads

The Giant Toads of the Greenbriar hatch as tadpoles the size of kittens, and quickly grow into toads the size of dogs. They continue to grow for as long as they live: a three-year toad is as big as a human, a six-year toad is as big as a bear. Around seven years toads die of natural causes, though there are rumors of the occasional "decader," which would be the Grendel of giant amphibians. They are carnivorous, surviving on fish and the game found in the woods, including the wild dogs. (As a cultural note, the people of Crapaud don't keep dogs and pets, referring to them as "toad kibble.") They attack by suddenly leaping at prey and either swallowing them whole or landing on them and biting. Their mouth's ridge does some damage, but the main threat is the toad's paralytic saliva. A toad four years or older could leap on a human, paralyze the pinned head, and then consume the body at its leisure. Toad wranglers will hamstring their herds, and often remove the poison gland; after that operation the Toads can't consume live food.

for his store. He has three female assistants who watch the shops for him during his frequent absences at his house/workshop or hives.

Further down river we have the community of fishermen and river traders. The traders bring the toad products to the rest of the world, and goods from the rest of the world here. They are strong-limbed men who row against the current to get to Crapaud and are fonts of lore on the outside world. This makes them dashing and romantic figures, and the youth are cautioned to not compromise themselves. One of them, Henrietta, a native daughter to one of the goatherds, is now owner of her own boat. She and her ever-changing crew of three will stay in town longer than most traders, giving the crew a chance to meet the locals and providing Henrietta opportunities to wander the woods her parents taught her as a child. She is in town once every other month.

The fishermen consider themselves the most cosmopolitan of Toadtown's residents because they spend the most time with the River Traders and therefore are most in touch with the "outside world." They read whatever they can find and write poetry -- some of it quite good. They fish by net during the slow period, but usually do line fishing from the banks or by boat during the spawn. This assures an even catch spring through fall and prevents damage the local fish population (which was severely over-fished 20 years ago and took years to restore). Their wives run a fish-market, selling the latest catches and smoking or salting the remainder with communal equipment for a fair profit. Many of the fishermen's families are inter-married, which gives this part of the town a very close knit feel.

The eastern edge of Crapaud is home to a variety of goat and shepherds, who use the several hundred yards of cleared land, along with partially forested eastern woods, to graze their respective flocks. Quiet and family oriented, they are as a rule firm devotees of Kisha, and can get rowdy on her holy days.

The slaughterhouse and tanner are in the northeast woods, mostly to keep their scents away from the town. This is Teague Tanner's domain, and he runs the Tanner clan with the same iron hand that his brother-in-law Ryan used with the Warts, all-but-insuring that his death will lead to as much familial in-fighting. The Tanner outpost -- five buildings, including a worker's dormitory/commissary -- is very nearly a town to itself. Teague is only seen in town on holy days, or for quarterly meetings with Kenneth. All other times, people come to him when summoned.

The western edge of Toadtown belong to the farmers, who use the timbered land for a variety of vegetable plots. The farmers are as interdependent as the fishermen: there simply isn't enough tillable land, so a complex arrangement of rotated crops is in force. The main farming families rotate the growth of beans, corn, wheat, and assorted vegetables (cucumbers, tomatoes, carrots, and beets). They do their best to provide all the community's needs, but the river merchants still provide the majority of the town's grain -- paid for by the Tanner family. The farmers desperately want to make the town self sufficient with vegetables and grain, and advocate to Kenneth that western land be timbered to give them more room. He has so far refused.

In those woods lie two houses. The deeper of the two is the one belonging to Isaac Chandler, discussed earlier. The nearer (abutting with the farmland) is the home, plot and workshop of Derek of Ambervale, the local healer. Derek came to town within a year of Isaac, and for much the same reasons. With ready access to Toad Poison, he has found many uses for the stuff -- from knockout drugs to a topical anaesthetic to a rash cure. He has a moderately sized plot for growing the herbs he requires, and he goes on occasional trips into the woods for esoteric ingredients. Derek is a willful man, good at getting townsfolk to do what's best for them even when they don't want to.

All told, the total population of Crapaud is about 400 people. There is only one non-human family.

Religion in Toadtown

There are two temples in Crapaud. One is to Kisha as the goddess of community and domesticated animals, the other to Mathelwyn in his aspect as the god of rivers and forests. Both of these shrines have about a half dozen initiates who also act as other members of the community. The initiates of Kisha do odd jobs through the town, helping the shepherds, farmers and wranglers as needed during the year. The initiates of Mathelwyn fish and occasionally hunt. The High Initiate of Kisha is a short, broad-boned woman named Alonza. The High Initiate of Mathelwyn is an older, thin and balding man named Robert.

There is also a small shrine to Gabriel in Kenneth's estate. The two initiates, Murphy and Ilea, oversee funeral rights and keep the town's records. Neither holds high rank, and there are no major services to Gabriel in Toadtown (unlike the ones for Kisha and Mathelwyn), though citizens can attend the smaller services if they choose.

Young Adults in Toadtown

Tradition has children taking up their parents' business, with the eldest assuming control when the parents die. Sometimes, if there is enough business or too much friction, children demand their share and strike out alone. They usually start their own businesses in Crapaud but sometimes leave all together. In the farmer, fisher, and herder trades, this has little impact. For tradesmen, it leads to new businesses on the opposite side of the river; this is why the town has two bakeries.

For social groups, children usually congregate with those who live near them, leading to cliques of the town's youth. The Fishers are seen as uppity or putting on airs -- reading poetry, gossiping about town -- but can be dashing, charming rogues to local girls as they emulate the river merchants (who actually *are* dashing, charming rogues). The Farmers and Herders have a tendency to not get along, and there is fierce competition between the two in sports, especially the field sport played in town (very similar to soccer). The knight and reeves work hard to keep these two sides of the river from arguing, aided by marriages in the last few years. If current gossip is correct, there is another one in the works -- Tess Harvest and Gerald Ram are often "missing" at the same time, bumping into one another in town or while visiting Kisha's shrine. It is rumored that the Initiates arrange clandestine meetings between the rival children to smooth such a courtship.

One nuisance is Mortimer, the Carpenter's son. He thinks one of the young social groups (the PCs) are really cool. For several years he has followed them around and tried desperately to fit in. Unfortunately, he was sullen and moody and sensitive and not very good at social interaction. Being three years younger than his idols just made things worse. Mortimer has been going off on his own lately: he had wanted to be an initiate of Mathelwyn, but that desire seems to have fallen by the wayside. He certainly isn't taking great pains to learn his father's profession.

Wendell and Quentin River are two of the fishermen community who intend to follow Henrietta's example and get out of town. They are somewhat oily and don't look entirely scrupulous, imitating the worst of the river merchants. They also disparage anyone else who talks about leaving town, stating that they're the only people who have any hope of getting out, and they're leaving once they reach their majority. Their general air of insolence has the reeves keeping a close eye on them. They bristle under that, further straining their relations with the law.

Sherri Baker is another peer, but missing of late. A pretty, vivacious girl, she vanished unexpectedly about three months ago. Her parents say that they sent her to apprentice to a city baker down river, but given her age this seems unlikely. If the gossips are to be believed, the girl is pregnant (probably by one of the River boys, who aren't to be trusted, the little rakes!) and was sent away until she could have the baby without stigma.

The Gods of Toadtown

Some brief information on the deities mentioned, though obviously the GM should replace them as needed. They could be new saints to the church on Yrth or *Warhammer*, any deities with the appropriate domains in *Dungeons & Dragons*, or the passions Garlin, Jasperee, and Floranis in *Earthdawn*.

Kisha: The goddess of cities and towns, strength and domesticated animals (especially horses). She oversees the defense & construction of community, and is a great warrior & promoter in stability. She is the goddess of gardens -- the embodiment of the taming of nature -- and of motherhood.

Mathelwyn: The god of wizards, rivers, forests, and jungles, Mathelwyn is the patron of the cunning and wily. Those who want vengeance invoke his name, as do those who hope for inspiration. Mathelwyn is said to have had an elder sister who shared these aspects but died before his birth; his name is common among people who have shared that misfortune.

Gabriel: The god of arts and literature, of instruments, and most importantly of teaching and history. He is also the overseer of the dead. It was his presence and his church that made written history possible, and he is a great promoter of

Johnny and Reggie Wart, two of the Wart clan, wander the town acting as bullies and pests. Often slapped down by the reeves, they haven't publicly done anything criminal . . . yet. Mostly they are blowhards who think that their family's prestige should afford them privilege. They are particularly belligerent to the Bufons, who they fear threaten their livelihood. It is interesting to note that no Tanners (who *do* have special consideration) act in this fashion. Of course, few of them are ever seen in town, and Teague would have their heads if they disrupted the economy.

The one Tanner commonly in town is Edward, Teague's first grandson and groomed to take his father's position when his father takes his grandfather's. Edward is tall, strong, well spoken, attractive and charming. When in town he is mostly talking with Isaac or Derek, looking in on the toad based industries or talking with other tradesmen to see if there's anything the Tanners can do to help business. Given where Isaac and Dominic live, Edward has to pass through the farmers, who don't like this pleasant young lad (an extension of their general dislike for the Tanners). Over recent months he's been an ambassador with the Bufons, who complained that the Tanners short-changed them in favor of the Warts. That is no longer a concern, but Edward is still around the Bufon ranch quite a bit, checking in. The town gossips have Edward and the Bufon's eldest daughter married in a year.

Introducing the PCs to Toadtown

Toadtown is the small isolated community from which our heroes emerge. With this assumption, the PCs should be young adults within a few years of age of one another, perhaps kin by marriage ties.

The most logical starting point are the Bufons; directly engaged in the town's peculiar business, this upstart family engages in a struggle for respect and market share. It lacks the heavy handed discipline of the Tanners or the back-stabbing arrogance of the Warts. Since the family is moderately small (the parents, one married eldest son, and five other children), Bufon PCs would feel the weight of responsibility to their kin which is appropriate for the genre. The eldest daughter -- the one courted by the Edward Tanner -- makes an excellent PC choice.

There are several avenues of training in Crapaud. PCs could work with the reeves to get formal combat training (as opposed to wrestling toads); woodland skills can be absorbed from Mathelwyn's initiates or via Jenkin Trapper; Kendrick is a spellcaster who could take promising youth as apprentices; the shrines are on the lookout for suitably devout young people and cover both "civilized" and "natural" worship; many see entertainment as a critical aspect of life, so Bard skills are available. Thief training is difficult to obtain, but a former-smuggler riverman could be introduced if a PC requires those skills.

Race variation is deliberately small; one aspect of this genre trope is the small town heroes limited contact with other races. As such, all of Crapaud is human except for one family. That family is of the PC race desired. Orcs captured in the last war might have been integrated into the community as a goatherd or slave, producing full or half-orc offspring. Likewise, an elven or halfling family or individual might have settled here for reasons of their own (or even pre-date the town's founding) to provide young adventurers.

Adventures in Toadtown

Lost Explorers: What did happen to those explorers a decade ago? Were they really trying to trace the waterway, or following directions to a lost and distant dungeon? This is the best way to integrate Toadtown into a classic *Dungeons & Dragons* game. For *Earthdawn*, replace the dungeon with a lost Kaer. The town can simply be a home base for

civilization. He is the nominal leader of Humanity's gods in peacetime.

Healing in Toadtown

As the description of Derek of Ambervale suggests, Toadtown does not assume a link between religion and healing. If your game has religions dominate healing skills, you may want to make changes. Remember, the town doesn't have many initiates and it's likely the much of local clergy are lay-people with little spellcasting ability. This should keep the PCs cautious in the absence of healing magic, keep Derek involved with his various medical skills, and make healings miraculous once the young heroes enter the larger world. Alternately, Derek could be a cleric of a healing god who doesn't preach, or a wizard with a magical knowledge of healing that doesn't depend on faith.

limited healing and supplies, the young adventurers could juggle secret dungeon delving with the politics of the town, or the economic effects of such a find near this isolated town could be explored.

Secrets, Lies, and Toads: Readers might have noticed that there are a lot of characters who conveniently vanish or who are never seen. If the young heroes find evidence of a cult or other foul activity, they'll be hard-pressed to pin down a culprit. This can lead to investigation, spying and inevitably trying to convince the authorities that the PCs are more than just children spinning tales. While this works well for any game, the darker undertones are appropriate for *Earthdawn* or *Warhammer*.

Town Hi-Jinx!: In the absence of any real threats the players could easily make their own! Youth conflicts between the Bufons and the Warts (or the farmers and the herders) could counterpoint actual community tensions. Fanciful PCs could wage daring excursions into the well-defended Tanner complex at night. Sports conflicts between two riverbanks, seeking or avoiding arranged marriages or preparing for the spring festival with its toad wrestling competition could occupy the young adventurers for some time.

Hunting the Greenbriar: The Greenbriar river has few predators. There are no fish that pose a danger to humans, and precious few water-snakes (most of which have mild venom). On the banks, there are some comparatively rare giant spiders. Wild dogs and toads can be threats as well -- sometimes significant ones. This makes a good threat balance for young adventurers heading into the woods after less common game. The people of Crapaud hold a "toad culling" roughly twice a decade, heading out in small groups to kill larger toads before they become a hazard.

Wipe them out . . . all of them: Many children of destiny have their idyllic childhoods destroyed (or at least damaged) by invaders. You could easily jump a Toadtown game into high gear when the orc/goblin/drow army pours out of the woods or targets attacks against the prophesied heroes. The PCs will be forced to leave their lives behind, with a bittersweet reunion when they return and learn they no longer fit in.

Apparitions, Genius Loci, and Mingled Reality

Optional Rules for *Transhuman Space*

by James P. Barrett

Angela observed Victor entering the hotel room in Shanghai via the cameras discreetly located around its edges. He resolutely strode towards the desk at the center, moving out of the way of the furniture as he passed. Using the array of sensors in the suite she had an almost perfect three dimensional impression of where he was, and what actions he was taking, which was further enhanced by the location signals which Helmut (his person AI residing inside his VII) was transmitting to the building's v-tag network. With scarcely more than a thought she was negotiating access permissions with Helmut, and a fraction of a second later she had limited privileges to provide Augmentive Reality information which would be shown on Victor's VII. Flicking through her "wardrobe" she selected her customary tall, attractive northern European appearance, clad in a uniquely created ensemble based upon the current fashion for women in London.

Victor was unsurprised when Angela appeared out of thin air directly in front of him. Helmut informed him discreetly that she was an apparition and not physical, something he really felt he could have worked out for himself. His movements and speech made it obvious to Andrew, who was observing through the same camera system, that he must have been talking to Angela. Seeing that the discussion didn't seem to be too personal (dealing with a private members bill Victor was helping to move through parliament) he signaled Angela and Helmut asking to set up a three-way conversation.

Apparitions and Mingled Reality

The virtual interface equipment used by most sapients in fifth wave nations has led to considerable blurring of the distinction between reality and VR. This is never more apparent than with the recent phenomenon of so called "Mingled Reality" environments, locations which are neither wholly physical, nor wholly virtual, but instead combine elements of both. The main technology behind MR domains is not new. It consists simply of a full surveillance grid (generally combining cameras, infrared sensors, and sometimes even surveillance dust), a dynamic system of v-tags, and a Virtuality node containing a Digital Kingdom modeled precisely upon the physical structure of the area. While in the physical room all persons (and indeed non-persons such as animals and 'shell equipped NAIs) are monitored by the surveillance grid, and the data is used to control a representation of them within the Digital Kingdom. At the same time, any user accessing the Digital Kingdom has an image of their character (often referred to as an apparition due to its insubstantial nature) projected onto the VIG equipment of all physically present characters via the local v-tag system. The effect is to allow users accessing the Virtuality Node to interact with persons physically located in the room exactly as if they were physically present themselves, with the one proviso that, since they have no physical presence they are unable to touch or lift solid objects, being, in effect, insubstantial.

The Software required to run an MR domain is referred to as an MR Manager. It is twice the price and one Complexity level higher than VR Manager software (p. TS145) capable of handling the same number of users; for these purposes both those physically present and those accessing via the web are counted against the number of users the software can support. Interacting with an MR environment via the web requires only normal VR software and equipment, and all actions take the normal Telepresence penalty (p.TS144).

Although for most purposes the MR environment has little or no advantage over a similar purely virtual environment, it has recently started to become popular with groups who carry the "really being there" meme, but wish to still be able to interact with people who are for whatever reason unable to be physically present.

Free Floating Apparitions

Although apparitions appear most frequently in Minged Reality environments, with the correct access any AI is capable of sending visual information to a person's VIG for display no matter where they are (as long as they are on the web). The creation of an apparition as a means of properly communicating and interacting with a person however requires more than simply the ability to send visual and auditory information, it also needs a good perceptual image of the person's surroundings and a knowledge of their location, together with the ability to manage a simulated VR character internally. If the GM wishes to allow it, characters with the Digital Mind feature may be able to be designed with this capability. This is a modified form of the Spirit Projection advantage (p.SP76):

Spirit Projection (Easy Materialization 3, +60%; Unlimited Lifespan, +30%; Limited Materialization: Sounds and Visual Effects Only via VIGs, -15%; Limited Perception: Can Perceive the Physical World Only Through Cameras, -10%; Missing Powers: cannot taste/smell, or ride in vehicles, cannot use Awareness, or Spirit Travel, can communicate telepathically only with VII users, cannot tap fatigue, use poltergeist effect, possession, or Probability Alteration, -105%) [60]. Unless the character also has Mindshare, projecting an Apparition takes full concentration, and the character may not perform other actions at the same time; in effect whatever 'shell the infomorph is currently inhabiting is rendered "unconscious" for the duration of the manifestation. Infomorphs with the Mindshare Advantage can use it to allow them to operate their current 'shell while projecting, or to project multiple apparitions simultaneously.

The ability to manifest is also very dependent upon the availability of accessible surveillance instruments in the area in which the target is located. Most public locations in fifth wave cities will be well-covered, but payment and permission may need to be negotiated in order to make use of the equipment depending upon the location. For private dwellings it is likely that only trusted friends and acquaintances will be given access, and sometimes not even they will. As a general rule, the more public a place is the more likely it is that the surveillance equipment there will be accessible to the general public. For example, a common tourist site and widely-used thoroughfare in a major European city is likely to have full camera coverage with no restriction as to who can view the footage, while a camera monitoring a back alley leading to the loading area for goods to be brought into a row of shops in the same city is probably only accessible by the police. Similarly the higher Control Rating of the area, the less likely the footage is to be available to the general public; thus a similarly large thoroughfare and tourist site in Kazakstaan is very unlikely to be publicly accessible (and if it is then the feed is highly unlikely to be accurate).

Genius Loci

The concept of the Apparition brings up the possibility of a new kind of infomorph character: the Genius Loci, or spirit of place, which keeps its program stored and running on a distant server upon which it pays for computer time, while interacting with other characters and in other places by the means of Apparitions and telepresence. GMs should be warned that the Genius Loci template below should only be allowed to Infomorph characters whose physical location is, for the purposes of the game, irrelevant, because either the computer upon which they run will never be attacked, or because backups are made almost continuously, and so physical destruction would not matter. Such characters are probably out of place in (and would be of little use in) a heavily combat-based game, but make good characters for heavily political or social games, and even in combat-heavy games can make good NPCs.

Genius Loci

30 points

Attribute Modifiers: ST -; HT -.

Advantages: Radio Speech (Infrared and radio, +20%) [30]; Spirit Form (Easy Materialization 3, +60%; Unlimited Lifespan, +30%; Limited Materialization: Sounds and Visual Effects Only via VIGs, -15%; Limited Perception: Can Perceive the Physical World Only Through Cameras, -10%; Missing Powers: cannot taste/smell, or ride in vehicles, cannot use Awareness, or Spirit Travel, can communicate telepathically only with VII users, cannot tap fatigue, use poltergeist effect, possession, or Probability Alteration, -105%) [60].

Disadvantages: Dread (Lack of Web Access) [-10]; No Manipulators [-50].

Features: Any computer. **Taboo Trait:** Physical Changes. **Date:** Any. **Cost:** Per computer (p.TS142).

The Genius Loci template is combined with an Infomorph template, and so replaces the normal cybershell or bioshell which the infomorph would need to purchase; in effect this is an infoshell, a body constructed entirely out of computer data. As always, the infomorph character may buy Mindshare (which will allow the manifestation of multiple apparitions at a time), or Vessel, which will allow the infomorph to have physical bodies into which it can be transferred. Since such an infomorph will retain its dedicated apparition managing capabilities when transferred to another body (although without Mindshare the normal restrictions on number of apparitions and/or 'shells controlled at once still apply) the GM may wish to treat the Spirit Form advantage included in this template as being part of the character's mind rather than their 'shell, and thus still accessible (as the modified Spirit Jumper Advantage described above) while the character has been transferred to a different Vessel.

Arcane Laws

Magic and Society for the *d20 System*

by Michael Tresca

Let's face it; arcane magic is powerful. Unlike divine magic, arcane magic is not subject to the discretion of a divine being. With the wide variety of enchantments, illusions, and alteration spells at their disposal, wizards can cause havoc and chaos in civilized areas. If your players have gotten too cocky with their spells in public, you may want to remind them that mortal society has its own means of dealing with wizards.

There are two kinds of authorities that are likely to take a dim view of a wizard casting fireballs in town, depending on the ruling political system: the secular or the ecclesiastical.

The Secular Arm

Here is one way the secular arm of the law might manifest in a *d20 System* game; even if not used whole-cloth, it should provide ideas for other campaigns.

The secular world is concerned with the effects of magic. A wizard casting a fireball during a barroom brawl has broken the law, regardless of his alignment. Laws that deal with force will be applied to wizards who commit crimes of force. A sorcerer casting magic missile at a peasant will be treated as if he had fired an arrow from a bow -- while the source is different, the effects are the same.

All NPCs who are affiliated with the secular world, from guards to judges, will have a prevailing attitude towards the wizard based on the magical crime for which he is accused. For spells that are from the schools of abjuration, transmutation, and evocation, the Secular Arm is likely to have an attitude of indifference. Magic that has a less obvious effect, such as enchantment and illusion spells, poses much more of a threat, and thus the prevailing attitude is hostile. Necromancy, the art of controlling life and death, is stigmatized as a very dangerous and illegal magical practice, and is also perceived as hostile. Conjunction and divination, which are considered to be traffic with extra-planar (and therefore, demonic) beings creates an unfriendly attitude.

Accusatory Procedure

A trial begins only when an aggrieved party presses charges in court and takes the responsibility of proving them. If the accuser does not prove the allegations then he is liable to suffer the same punishment that the wizard would otherwise have suffered. This keeps serious accusations to a minimum, but desperate or vengeful victims of a wizard's wrath may be willing to take the risk.

Some reasons that would include accusations of magery include:

- **Murder.** Casting a lightning bolt at someone in the middle of town, even in self-defense, will definitely bring out the local law. Accuser: Family of the deceased.
- **Intrigue.** Whenever someone seems to reach a means of political power in a noble's court and there's no other dirt to drag up, accusations of sorcery are a final recourse. Accuser: Court rivals.
- **Turf Wars.** When a relatively new religion is trying to establish itself, its first order of business is to prove to the secular authorities that its magic is divinely influenced. Accuser: Head of the religious institution.
- **Major Disaster.** Crop failures, plagues, and strange weather phenomena are all likely to be attributed to a mage in the area. Accuser: Landowners or influential citizens.
- **Implication.** A wizard whose master is arrested and tortured may be implicated as well. Members of the wizard's party who wear magical armor, weapons, amulets, or any other magical items will also be accused of

magical crimes. Accuser: Inquisitors and witch hunters.

Accusers will attempt to steal spell books and any other obviously magical items as proof of the wizard's guilt. Several witnesses who are able to account for a wizard casting a spell in public are more than sufficient. The accuser must then arrest the wizard with whatever help is provided.

A magistrate then institutes an inquiry. The informers and witnesses make an oath before the Justice and their depositions are committed to writing for certification to the justices. The accuser enters into a recognizance to appear before the justices and then writes up a bill of indictment against the wizard. The witnesses are likewise bound to appear.

Reinforcements

When a wizard escapes arrest, the law has another recourse. The Vehm, the secret police of the secular arm, will be called in. Treat them as Lawful Neutral Rogues equal in level to the accused wizard.

The Vehm is ruthless and efficient. They stalk their prey carefully, using their extensive information network to track the weaknesses and strengths of a wizard, and striking at the most opportune moment. What the Vehm lacks in power, they compensate with guile.

An officer of the Vehm makes the accusation in one of the courts and a summons is issued. Three such summonses are issued, each 45 days apart, giving the wizard ample opportunity to make a defense. At the trial, a sword and a noose are placed on a table in front of the judge, which symbolizes the judge's powers of administering justice and the penalty entailed by transgression.

The wizard has only compurgation (see below) as recourse. Should he answer a summons, he must produce no less than 30 witnesses to attest to his good character. The accuser has the right to do likewise. Each is able to have a barrister represent him. Tribunals are conducted quickly and secretly. If convicted, the wizard is hung on the spot. When a convicted person is hung, a knife is stuck into the tree from which he was hung to demonstrate whose authority convicted him.

Should the wizard not show up for the trial, he is condemned in his absence. Any three supporters of the Vehm are within their rights to hang him. The accusing officer can produce a sealed document that allows him to claim assistance from any other members of the Vehm. Anyone who aids or abets the condemned in evading the Vehm will also be hung.

Trial . . .

The most difficult problem in answering accusations of wizardry is in proving one's innocence without the use of magic. The secular arm does not use magic and it does not recognize the legitimacy of the wizard's own magic. There are four legal means of proving one's innocence.

- **Compurgation.** Only wizards of high birth and reputation can call upon this defense. He must find two witnesses of good standing to swear he is telling the truth. Should the accuser bring co-accusers, the wizard will have to produce an equal number of compurgators. This form of justice is essentially a popularity contest. If the wizard is accused of using enchantment magic the court may prohibit this form of defense. Witnesses won't help a wizard unless their attitude is considered Helpful.

Resolution: The wizard and accuser must make an Opposed Check using the Diplomacy skill.

- **Judicial Duel.** The wizard may choose to fight a chosen champion in one on one combat. Magic cannot be used, but few sane wizards voluntarily choose this means of defense. The law assumes that fate and the gods will adjudicate the outcome of a battle so that the just win. If the wizard is older than mature, he may ask for a champion.

To start a judicial duel, it is the responsibility of the injured party to call out the opponent. This can be an oral challenge in front of witnesses or a written challenge. The secular arm is then petitioned for a field. The field typically constitutes a courtyard or open field where there is enough room to hold the combat and also allow for the judges and spectators. Each combatant declares a grandfather who is his spokesperson and one or more seconds. The grandfathers come to the terms of the combat (weapons used, armor worn, time of the duel, etc.) and they also check for hidden weapons and magical protections on the part of the wizard. The seconds either fight on the side of or, in the case of a champion, for the parties involved.

Resolution: Regular combat is joined. The duel ends when one party is injured, when one or both are killed, or when the sun sets.

- **Ordeal by Fire.** Before an ordeal by fire begins, all involved take part in a religious rite. This rite lasts three days, during which the wizard undergoes fasting. The trial requires the wizard to carry a three-pound lump of hot iron for three yards. The other type of ordeal by fire involves walking blindfolded across hot coals. In both trials, the burn wounds are then wrapped. After three days, if the wounds are still open, the wizard is guilty.

Resolution: In both cases, the wizard must make a Fortitude save (DC 15) to walk the required distance under duress, and then another Fortitude save (DC 15) to see if the wounds heal over.

- **Ordeal by Water.** In this type of ordeal, the water is meant to symbolically wash the crime from the wizard. As in the ordeal by fire, a three-day fasting rite is held beforehand. Afterwards, the wizard must plunge his arm into boiling water to the depth of his elbow. The burn is bandaged for three days before the fateful examination.

Alternately, the ordeal may be by cold water. The wizard's hands and feet are tied and he is lowered into cold water by a rope. This rope is tied around the wizard's waist and has a knot a particular distance from the torso. If both knot and accused dip beneath the surface of the water, the wizard is proven innocent. If the knot is dry, the wizard is guilty.

Resolution: In the first trial, the wizard must make a Fortitude save (DC 15), and then another Fortitude save (DC 15) to see if the wounds heal over. In the second trial, the wizard must make a Swimming check (DC 15).

... and Punishment

Secular punishment will generally take the form of one (or more) of the following:

- **Execution.** Most wizards will be hung for their crimes. Others will be garroted first and then burned at the stake. There are more creative forms of execution, including: impaling, iron maidens, flesh torn with hot pincers, pressing, or being broken on the wheel.

Resolution: The wizard must make a Fortitude save (DC 15) or die. Success means the wizard must make another check at an increased DC of 1 each round until the wizard finally expires.

- **Imprisonment.** Although many wizards would be in a fix once stripped of their spell books and components, some may still be capable of casting verbal spells to escape. The answer to this problem is the branks -- a metal cage for the head with a built-in gag. This cruel device will effectively prevent the caster from casting any spell with a verbal component. Coupled with shackles, the wizard will probably be quite helpless. Confinement to jail may also end fatally due to cold, disease, or starvation.

Resolution: The wizard loses one Constitution point per year. He is considered perpetually Entangled and Fatigued. To escape shackles, he must make an Escape Artist check (DC 30).

- **Pillory.** The pillory is a public shaming device for criminals, binding the head and hands to a pole, or thrusting them through boards cut to fit and restrain them. Branks will also be used. The punishment lasts for six hours, during which the wizard is exposed to weather, ridicule, and attack.

Resolution: The wizard suffers from Hot or Cold Dangers, depending on the weather conditions.

Table 1: Secular Punishments

<i>Crime</i>	<i>Punishment</i>
Murder	Execution and forfeiture of all goods.
Harm 1 person (1st offense)	One-year imprisonment, pilloried four times, public confession.
Harm 1 person (2nd offense)	Imprisoned for life and forfeiture of all goods.
Harming 2 or more people (1st offense)	One-year imprisonment, pilloried four times, public confession.
Harming 2 or more people (2nd offense)	Execution and forfeiture of all goods.
Divination (1st offense)	One-year imprisonment, pilloried four times, public confession.
Divination (2nd offense)	Imprisoned for life and forfeiture of all goods.
Enchantment (1st offense)	One-year imprisonment, pilloried four times, public confession.
Enchantment (2nd offense)	Forfeiture of all goods

Ecclesiastical Authorities

The ecclesiastical law, unlike the secular arm, is more concerned with the nature of the spells cast. Because divine spells are meant to be symbols of a god's power, dominant religions can often perceive any arcane magic as a threat to their authority. Again, here is one possible interpretation of ecclesiastical law in a fantasy world.

Wizards are likely to end up being condemned as heretics or pagans. Being condemned as a heretic is a death-sentence for most. Clerics who use hermetic magic or magical items that are not directly tied to their religion may be condemned as heretical. While players may find multiclassing as cleric/wizards a decided advantage in adventuring, the dominant religion may not look kindly upon such behavior.

Accusatory Procedure

The ecclesiastical answer to the heretic is the inquisitor -- a cleric of the dominant faith with access to the spheres of Law or Knowledge. Inquisitors undertake persecution on their own initiative without waiting for an aggrieved party to lodge an accusation and take responsibility for proving the charges. The inquisitor is licensed to use intimidation and torture to secure a confession. One 3rd-level warrior and five 1st-level warriors always accompany an inquisitor. He is expected to bring his full clerical powers to bear in apprehending the heretic. The inquisitor's level will always be equal to the accused wizard's in level.

Table 2: Ecclesiastical Punishments

<i>Crime</i>	<i>Punishment</i>
Murder	7 years of penance, 3 of which must be spent fasting.
Divination	5 years of penance, 3 of which must be spent fasting.
Heresy	Excommunication.

Reinforcements

An inquisitor will seek a very public showdown so that there are witnesses to his deity's superiority when the cleric strikes the wizard down. The cleric will accept only three outcomes: the wizard agrees to leave the area, the wizard agrees to convert (thus burning all spell books and renouncing his magical arts), or the wizard dies. If the wizard should succeed in defeating the cleric, a cleric one level higher will appear an extra week later.

Top 10 Casting Tips

1. *Don't look the part.* Obvious magic items that might draw unwanted attention can be concealed with a Disguise check.
2. *Keep it private.* By

Wizards who manage to win these showdowns are branded as wicked beings. Even good wizards may find themselves being forced to defend themselves against good-aligned clerics. After three attempts the deity will send an outsider (depending on the deity's alignment) to deal with the offending wizard personally.

Punishment

- **Excommunication.** As a result of this punishment, no member of the religion may conduct business with the wizard, speak with the wizard, or stand within four paces of him. Failure to do so results in excommunication of the offending individual.

Resolution: All followers who are aware of the wizard's excommunication have an initial attitude of Unfriendly.

- **Fasting.** The wizard may eat only one full meal a day. The other two meals united (in weight) may not exceed the weight of the whole meal.

Resolution: The wizard loses one Constitution point for each year he must eat in this fashion, but the points are gained back for each month spent eating normally.

- **Penance.** The wizard must retreat in prayer and almsgiving.

Resolution: The wizard must pray every day to the dominant deity. He must donate 10% of his earnings every year to the poor and an additional 10% of his earnings every three years.

- **Imprisonment:** Wizards awaiting judgment will be imprisoned as an unofficial punishment. The above punishments are only if the judge favors the wizard. If the wizard loses, he is sentenced to death. In all cases, if the wizard is unrepentant, unwilling to burn all magical paraphernalia, and unwilling to implicate all other known wizards, he is tortured. Ill-treatment is seen as a loophole around restrictions against torture. This includes walking, starving, sleep deprivation for three days and nights, and swimming. If torture or ill treatment fail to elicit testimony, the wizard is summarily executed.

Resolution: Wizards suffer the effects of Fatigue or Exhaustion as a result of such treatment.

The wizard, then, is a dangerous individual indeed. In the eyes of the law, he could well be seen as an "unregistered weapon" that is unpredictable. In the eyes of religious authorities, he might be an embarrassing enigma at best and a heretical rival at worst. Unless the wizard lives in a magical fortress beyond the grasp of an army, he would be wise to carefully choose when and where he casts his spells.

concealing spell gestures with the Still Spell feat, wizards create fewer witnesses.

3. *Keep your mouth shut.* By concealing spell chants with the Silent Spell feat, wizards create fewer witnesses.
4. *Don't get too familiar.* In court, a familiar will be used against a wizard by harming the familiar to see if it causes the wizard grief.
5. *Always have a contingency.* Because the wizard may end up being imprisoned rather than specifically harmed to a certain amount of hit points, a contingency spell placed for when a branks is placed on the wizard's head is an excellent idea.
6. *Don't settle down.* A wizard who lives in a town where magic is restricted may return home to find him dwelling ransacked and his spell books burned. Wizards should have more than one hideout, preferably away from civilization.
7. *Get fit.* Because many of the tortures and ordeals are tests of endurance, wizards who have the Endurance feat have better chance of surviving ordeals.
8. *Money works wonders.* Unscrupulous (or desperate) wizards may try bribing officials with a Bluff check.
9. *Friends in high places.* High-level connections with clergy or chief justices will often gain the wizard a pardon or a

lesser sentence with a successful Diplomacy check.

10. *Be sneaky.* A wizard/rogue can extricate himself from particularly sticky situations where spell casting is impossible.

Pyramid Review

Redhurst Academy of Magic: Student Handbook (for *d20 System*)

Published by [Human Head Studios](#)

Written by Matt Forbeck, Seth Johnson, Timothy S. Gerritsen, David Gulisano, & Paul Tutcher

Illustrated by Kyle Anderson, Tim Bowman, Steven Danielle, Jeff DeWitt, Mike Dutton, Larry Elmore, David Gulisano, Shane Gurno, Ted Halstead, Brett Hawkins, Jason Hill, Greg Marshall, Matt Mitchell, Nichol Norman, Jim Pavelec, Randy Redetzke, Rebecca Rettenmund, Steven Sanders, Shawn Sharp, James Sumwalt, & Eli Quinn

160-page color hardcover; 29.99

That there are many supplements on magic -- especially for *Dungeons & Dragons Third Edition* and the *d20 System* - is no surprise. Although it does not appear directly in the title, magic has always been a core feature of the game. The majority of these supplements have taken one of the eight schools of the *d20 System* and focused upon it exclusively, providing an examination of its subject, along with a selection of new spells, magic items, and artifacts. Of course, with some many independent publishers, there have been several different books released upon the same subject, such as Mongoose Publishing's *Necromancy: Beyond the Grave* and *Secret College of Necromancy* from Green Ronin Publishing. Other supplements have similarly concentrated on magical items. The latest supplement for the arcane aspect of *d20 System* concentrates not on any one college of magic, but encompasses all of the in a manner that will be familiar to fans of Harry Potter everywhere!

Redhurst Academy of Magic: Student Handbook details an educational establishment that sets out to instruct the most promising student wizards from across the known worlds. Indeed, the Redhurst Academy of Magic can traverse the known worlds, teleporting from one location to another at the beginning of each day. In this way, the fortress-like school can visit those it maintains cordial relations with, let students visit their homes, and have new ones enroll and arrange field trips to visit interesting places, meet interesting peoples, and view interesting phenomena. Some eight such worlds, all from well-known publishers, are detailed.

The most notable fact about this supplement is the format. It comes in the horizontal landscape format rather than the common portrait. As the title suggests, this book is written as a handbook, given out to every new pupil at the Redhurst Academy of Magic. It differs from an ordinary student handbook by the two major ways in which it has been amended. First, various details about the academy and its faculty staff have been encoded according to the *d20 System*. This is done by the perpetrator of the second more obvious amendment: the commentary included in the margins of each page, in red ink and a cursive font at the bidding of the perpetrator's master. While the identity of this master is unknown -- in other words, he can be whomever a DM wants -- that of the perpetrator is at least hinted at. He certainly bears the Redhurst Academy of Magic no little ill will; he admits to murdering at least one of the Academy's founders and parents to the current headmaster, knows more about the staff than they might each wish, and is a wizard on the staff at the Redhurst Academy of Magic. He has also heard rumors of the "Wizards of the Coast," but knows little of them and believes that they represent a possible threat to his master's plans, and that their actions should be monitored accordingly.

As an in-game artifact, this book has been created using Redhurst's magical printing methods. These include the use of one spell among many that in particular to the Redhurst Library of the Arcane. This is the *capture image* spell, an illusion cantrip that takes whatever the caster can see and transfers it to paper or parchment. This is employed by the many artists who have graduated from the Redhurst Academy of Magic, and who have since returned to have their images grace the pages of the Student Handbook. It is also written in the style of a collegiate handbook, barring some jarring uses of American English. But in keeping with its world-hopping ability -- which has proven useful in the defense of the fortress-like campus -- the well-known author, Margaret Weiss, pens the book's foreword.

The many buildings of Redhurst Academy of Magic are mapped, from their rooftops through the third and second floors to the ground floor. A set of general maps is given inside the front and back pages; these provide an overview of the campus' 55 locations. Then each of these locations is magnified alongside their actual descriptions to give a greater sense of their layout. No one room is specifically detailed or numbered, and such information will have to be furnished by the DM.

All magic eight schools of the core *d20 System* are available for study at Redhurst Academy of Magic, including the most feared aspect -- the Mordant School of Necromancy. The Academy's stance is that one cannot study magic by negating one core part of it and it is only right that its students should be prepared in case they have to defend against such death magic. Each of the eight schools is fully detailed, with the write up and statistics for their Dean and Assistant Dean (some of whom have 20 total levels); descriptions (though no stats) for two or three other staff members; a list of their basic and advanced classes; and several signature spells. There is some groan-inducing humor employed for some of the class titles, such as the Bisechen School of Conjunction's "Something for Nothing," the Jecture School of Divination's "I Know What You're Thinking," and the Nammor School of Enchantment's "To Sleep Perchance to Dream" class which attempts to answer the question, "do people under the effects of a sleep spell dream of magical sheep?" Students are encouraged to choose a school in which to specialize, though some do not and graduate as Wizards, rather than Diviners, Enchanters, Illusionists, or the like.

Students can pursue extra-curricular activities, including sports on the dueling grounds (enchanted so that no one is truly hurt). Excursions to the worlds where the Academy stops are popular, as are the various magically enhanced games and dramatic presentations. Of the former, all types are played, as well as live action dungeon events organized by the Grand Adventurer's Club. To wizards from outside of the Academy, as well as alumni, the libraries and laboratories offer excellent research facilities.

The Student Handbook devotes a page each to eight of the locations that the campus visits. These include Battle City, as described in Atlas Games' *Seven Cities*; Green Ronin's *Freeport, City of Adventure*; various locations within the *Kingdom of Kalamar* from Kenzer & Company, but most notably the city of Seavue; near Lake Gomala in Atlas Games' *Nyambe*; the Lands of Lerum in Sovereign Press' *Sovereign Stone* setting; and *Hollowfast -- City of Necromancers*, set in Sword and Sorcery Studios' *Scarred Lands*. The faculty have had contact with Fast Forward Entertainment's *Dungeon World*, but students are not allowed to visit it. Outside of these eight, any world that uses magic can probably be visited by the Redhurst Academy of Magic.

What this means is that the players could create characters from any of these settings and of any race that the GM allows. Essentially players can create the characters they want, and a game can be run using a surprisingly eclectic mix! They enter the academy as 1st-level wizards and should graduate at 3rd level, having spent 2,000gp per year for their tuition. Instead of experience points, the students are awarded merits and demerits, needing 6,000 to graduate. These are translated back into the normal experience points upon graduation, when the wizard also gains the free feat of Redhurst Alumni.

Throughout the book, any OGL material is kept to a minimum and invariably to one side. What new magical items, spells and monsters there are tend towards interesting rather than world-shaking or powerful. Of course, the comprehensive nature of the Redhurst Library of the Arcane means that any spell and details of any magical item can probably be found in its stacks. In this way, any *d20 System* magic sourcebook (and others!) can be a supplement to *Redhurst Academy of Magic: Student Handbook*.

The most obvious way in which the *Redhurst Academy of Magic: Student Handbook* can be used is as a *d20 System*

campaign setting for young wizards. The relative unobtrusiveness of the *d20 System* material means that it could run in a similar fashion, but for whatever game system the DM prefers. A lesser use would be to relegate the Redhurst Academy of Magic as somewhere to visit; more obviously, it could be a roving resource and research center for wizard, sorcerer, or bard characters. On the whole, this option would make it harder for the GM to involve a party in the entire internal goings on of the eight schools and relationships between the staff of the campus. Of course, there is one other obvious option (one that is not mentioned in the book for equally obvious reasons). It's possible to ditch the more obtrusive of the setting's *Dungeons & Dragons*-style trappings and use it to run a game like J.K. Rowling's Harry Potter stories. In other words, make Redhurst Academy of Magic into Hogwarts. This would be a relatively easy exercise, and there already exist some minor parallels.

It should also be noted that *Redhurst Academy of Magic: Student Handbook* is the first pen-and-paper released by Human Head Studios, the software company better known for their *Rune* computer game, which of course, has been licensed as an [RPG](#) itself by Atlas Games. As such, *Redhurst Academy of Magic* is a very nice take upon an old idea - the college of wizards -- particularly because it is designed to encompass any *d20 System* setting where magic is known. Its parallels with the Harry Potter tales means that *Redhurst Academy of Magic* could be used as an introductory game for fans of those books, and it would be wonderful if the publisher could support this through a series of adventures or year-books that would take the player characters from 1st level and enrolment to 3rd level and graduation. Such releases might provide more of a structure to study and academy life than is given here, which is slightly loose. It's also regrettable that an unamended version of the *Student Handbook* is unavailable as a massive handout, since this copy reveals many secrets from an unknown villain.

These are the only niggles to what is otherwise a solidly done sourcebook and setting. That it can encompass any magic setting is a very clever design feature as is the built-in flexibility, which both serve to make *Redhurst Academy of Magic: Student Handbook* suitable for all games with an arcane bent, and not just the *d20 System*.

Pyramid Review

Carcassonne: The Castle

Published by Hans im Glück Verlags-GmbH/[Rio Grande Games](#)

Created by Reiner Knizia

Carcassonne game system designed by Klaus Jürgen Wrede

10-piece jig-cut castle wall, 60 castle tiles, 18 wall tiles, 14 pawns and 2 keeps in two colors, color rule booklet; \$19.95

Short of going into outer space, it seems like there aren't many more places into which the *Carcassonne* series of games can expand. Trust Hans im Glück, then, to go to the other extreme. For the first time, instead of a wide-open playing surface limited only by the edge of one's dining room table, a *Carcassonne* game has built-in limits. Enter *Carcassonne: The Castle*.

The object of the game is to score the most points by occupying the right tiles in Castle Carcassonne.

Once more, thematic changes have been made to the *Carcassonne* formula. Here within the walls of the castle, there are no fields and no livestock for farmers to watch over. Instead, small market stalls dot the open courtyards. Roads are simple paths with wells and bounded by town squares, and since the whole game takes place inside a single structure, pawns gain points for completing houses and towers instead of fortifications or cities.

The heart of the game is still about laying tiles and placing one's followers on these spaces to score points. Where previous versions of the game allowed players to connect the tiles wherever they choose, The Castle forces players to play in the castle walls.

The walls enter play in a number of ways. They are made of the same material as the tiles, but are long and jig-cut at the ends to interlock. Aside from simply determining where castle tiles must be played, the walls have a selection of starting spaces from which the tiles must originate. The walls also display the point track. The numbers 0 to 99 run the circumference, and the score markers are placed here.

Additionally, the track has counters called wall tiles placed at irregular intervals; a player who gets points during the game and lands on one of these counters with his scoring marker gets to turn it over and use it. Most allow the player to get extra points for structures during or after the game. As a sort of midpoint between *Hunters & Gatherers* and traditional *Carcassonne*, players do not normally score for uncompleted buildings or paths at the end of the game, but the right wall tile allows you to change that. The wall tiles may also offer the player another turn or a free increase in the size of his keep.

The keep is a new pawn; this one, the player puts on his first completed house. Anytime he builds a larger house (one made with more tiles than the last one), the keep moves to that location. At the end of the game, whichever player holds the largest keep scores points for the biggest "hole" -- there will be as many as 16 spaces within the city not covered by castle tiles, and the largest contiguous gap formed by these empty spaces scores an equal number of points.

Although the components are high quality, they also offer the game's biggest concern: the paths don't match up. In all versions of the *Carcassonne* series, there are trails or streams of some sort to connect for points, but here some of them match perfectly and many others do not (often both, depending on which end of the tile you're using). Given the close quarters for play in this version, the rule limitations on where paths may or may not be placed (and terminated), and

the tendency of many paths to hug the edges of buildings, one begins to wonder if this is sloppy graphic work or the designers really didn't want players placing certain tiles in certain arrangements. The nomenclature can also be a little confusing at first, with wall tiles and castle tiles being two distinct entities and starting spaces and tower spaces having separate functions.

Carcassonne: The Castle is a more easily manipulated operation than its predecessors. Players can see what's happening and, while they're not likely to be able to prevent their opponent from placing his tile, they'll actually be able to maneuver to outdo or outpace each other. Anticipating moves is easier when you can't sprawl all over the table. Decisions about whether to score small now or wait and score big in the endgame are much more critical -- claiming a smaller point value now could land you on a valuable wall counter worth more in the long run. These wall tiles have to be placed face-up, so they still add enough unpredictability to keep participants exercising their minds during play while giving the enemy a chance to respond meaningfully. There are also more such pieces than are used in one game, so it's never a sure bet whether the piece you need is there.

While ***Carcassonne*** has always been touted as being great for two players, this version is *only* for two players. This is a wise decision, given the tight quarters and the benefit to the aforementioned player ability to direct the game, but it costs the game some of that friendly, competitive spirit that makes other editions such a pleasant pastime. The degree of control is a refreshing feature, and more than any other incarnation in the series, ***The Castle*** keeps the same feel of play while significantly changing the way it runs. In short, you're not buying the same game again. Some variations offer mostly cosmetic changes, but this is a genuinely different experience even for veteran players.

--Andy Vetromile

A Brief History of Dice

A few years ago there was a common trend in the comics, which - although still-tapped - isn't as common nowadays. (For those of you wondering why I'm doing another comic-based column, my only defense is that - in my biggest cleaning binge ever - I recently sold off one-third of my collection. As a result, I've spent a *lot* of time recently staring at comics and wondering, "Hmm . . . about this comic makes it special or worthy of saving?" For those of you growing antsy, I note that I've got a television-based column in the percolator even as you read.)

Anyway, for a while it was chic to make references to the different eras of comics, either by telling "lost tales" from those eras or by superimposing modern characters in that sentimentality. Thus in one story Superman might find himself in a 1940s World War II tale, with greatly reduced powers and the ability to leap buildings instead of flying over them. In the next story he might be caught in the whimsy of the 1960s, with psychic dogs, time-traveling monsters from Planet Drooom!, and Jimmy Olsen spouting dialog like "I'd believe Superman had a big, red *ant head* before I'd believe he was a coward!" (yes, he really said that). And he might finally be in a socially relevant 1970s-style story, with world hunger, drugs, and protesting hippies providing the narrative thrust. In the end it might be revealed that it was all the mastermind of some reality-altering villain who yadda yadda yadda . . . really, the justification isn't as important as much as the opportunity to visit the continuity (or lack thereof) that makes the history of comics so interesting.

I've always enjoyed these tales, mostly because I find the evolution of the backdrop of superheroic comics fascinating, and partly because I love looking at the relation between real-world history and how it's dealt with (or not) in comics. (It seems unthinkable that comics published during World War II could escape dealing with the global conflict, and indeed they often *did* deal with imaginary Nazi saboteurs on American soil. On the other hand, the Vietnam conflict went largely ignored at the time it was raging, and the current "war on terror" has been little touched upon by most modern comics.)

Anyway, I've wondered how it might be possible to run an RPG using the same technique. All you need is one reality-bending villain, some players who are game (ha!), and you're set to hop through different expressions of the gaming hobby.

To a certain extent, some games have already done this. White Wolf, for example, has explored different genres in both its World of Darkness line (*Vampire: Dark Ages* is more similar than not to many Fantasy games) and its Aeonverse (which combines pulp, supers, and sci-fi in the same universe but different eras). And AEG's *Spycraft* game has decade books coming out, allowing players to recreate the feel of different spy eras . . . not unlike the *Austin Powers* movies, only presumably with fewer excretory jokes.

However, I'm not aware offhand of any RPG or adventure that has bridged the various eras and *styles* of gaming. I suspect that, for one thing, it would be a nightmare mechanics-wise. If the point is to recreate some of the types of games that have come down the river, then almost by definition no one system could encompass it . . . and creating different systems for what is, in essence, a one-off event would seem to be an awful lot of work for a publisher. On the other hand, there's nothing to keep the gaming omnivore from raiding his shelf and tapping into the Shelves Of Gaming Past, filing off serial numbers if so desired.

There is another problem, however. Much like the point of Cecil Adams' column on ["We get nostalgic for Victorian Christmases. What did Victorians get nostalgic for?"](#), it's tough to get nostalgic for something if it won't go away. Unlike comics' seven or so decades, gaming is still relatively new. And, for the most part, the various eras of gaming are still here and among us; if a 1977 *Dungeons & Dragons* player were teleported to a *d20 System* gaming table, he'd probably be able to pick up a character sheet and start playing pretty quickly. (Of course, he'd wonder why everyone was using dice instead of cardboard chits in a cup, but still . . .) Likewise, most other significant eras of RPG gaming are still here, in some form or another.

Nevertheless, it should still be possible to tap into the meta-multi-RPG well, and come up with a series of adventures that would bring a series of characters through an evolution of gaming. Off-hand, this is how I'd do it.

First, I'd determine what genre I'd be playing in; this would probably be fantasy since, for better or worse, the history of the hobby is still closely tied to the fantasy genre. I'd have the players define their characters as loosely and as broadly as they were comfortable with.

Then I'd come up with a series of game styles. I'd probably mix them up as best I could, chronologically, just to keep players on their toes. (After all, you don't want them to *know* it's a cross-meta-genre RPG extravaganza from the beginning . . . do you?)

Straight "Dungeon Crawl" Fantasy: I'd probably start the players off with as close to a "generic" Fantasy game as possible. Pre-rolled stats, levels, straightforward combat . . . the works. I'd try to make it *interesting*, of course (unlike the other dabbling in the [metagenre](#) I'd discussed in another article), but it would be as classic as possible.

Whodunnit?: Then I'd probably have a *How to Host A Murder*-esque adventure, where the players don't even *have* a GM, for the most part, but instead follow the instructions of the rules to reveal the story and determine the outcome of the event. (Whether or not they figure it out may determine how events proceed later on.)

Damned (You Do, You Don't): Of course, by now the players know that something strange is going on. For the third adventure, I'd probably tap into the gloomfest of the early 1990s, inflicting some dread vampirilycanthropicghostfaemummialidocious on the players. The adventure would probably focus on the downward spiral of that era, although it probably would need to be accelerated so that the players "got it" . . . after all, in the stereotypical games of this sort the players generally don't sink into oblivion for at least a few game sessions. I'd probably try to have each of the players hit rock bottom, however it's appropriate . . .

Do You Want To Play A Game? . . . And then I'd run the next game session online, or by e-mail. The players wake up in a scenic village. They're all better, everyone is happy, etc. This would be a heavily story-based adventure, with little-to-no mechanics. While the previous adventure would advance the darker side of the story, this one would be a good time to advance the more mundane aspects of the game; after all, almost by necessity plots generally need to be smaller online. I'd probably try to end this adventure with all the heroes outside some castle they were going to siege . . .

Move 1d6 Squares: . . . and the next game would be a literal tribute to their wargaming roots. The characters would all be reduced as much as possible to even simpler stats, with die rolls representing the various attacks. The players would then control their miniature throughout the castle siege, going room to room as tactically as they could. They'd encounter the Master Villian, who would reveal some aspect of the Over-Arching Plot (it needs to be big!), and end there before going on to . . .

Suddenly! . . . the next adventure, a tribute to the cinematic player-tilted logarithmic systems that reward high dice rolls, decisive action, and Big Stories! (Think *DC Heroes/MEGS* or *Torg/Masterbook*.) This would be, by far, the most cinematic story of the series, and I wouldn't consider it a success unless at least one player managed to pick up a mountain and toss it at someone (or something similar). Ideally, once the heroes manage to thwart Tvlinok the Kingdom-Eater, the eldritch energies that wash over them will separate them . . .

Abort, Retry, Fail: . . . and I'd give each of the players a computer disc at the end of the session. There, they would need to work their way (separately) through a small dungeon computer game, using one of the RPG-generator programs out there. At the end of each player's adventure, he would find himself in a large antechamber, having acquired one line of a poem . . .

LARP, I Need Somebody: . . . and the next adventure would be a live-action game, combining Cops & Robbers, *Killer*, treasure hunts, and so on. Here, the players would get all the clues together to realize what's Really Going On (you know, that Reality-Altering Bad-Guy Yadda Yadda Yadda), and then steal themselves for . . .

What's The Point? . . . a point-based system, such as *GURPS*. Here, the players would have combat, interaction, and so on, all culminating in the final confrontation, where the heroes need to make some cosmic revelation about themselves (probably that their selves are encompassed in each of the meta-genres explored).

Fade to black.

Before you all write me, I will confess that there are a number of trends I didn't pick (such as cross-genre gaming or diceless tabletop roleplaying); also, the LARP one encompasses more history than I'd be comfortable doing in a term paper. But, as a whirlwind outline to let the players *and* characters explore gaming history, it's a good start.

Of course, much of narrative pull for this series would be the surprise of each genre and "revelation" . . . so, by reading this, none of you all could ever play in this game.

Whether or not this is a good thing I will leave as an exercise for the reader.

--*Steven Marsh*

Tomb 55, Who Are You?

*". . . I have watched
Thy shadow, and the darkness of thy steps,
And my heart ever gazes on the depth
Of thy deep mysteries. I have made my bed
In charnels and on coffins, where black death
Keeps record of the trophies won from thee,
Hoping to still these obstinate questionings
Of thee and thine, by forcing some lone ghost,
Thy messenger, to render up the tale
Of what we are."*

-- Percy Bysshe Shelley, "Alastor, or the Spirit of Solitude," lines 20-29

We've bisociated [lenses](#), [and maps](#), and [books](#), shifting our stance to overlay contending truths for vibrant effect. This time, it's a whole body -- well, a skeleton, anyway -- that might shift as we shift our perspective. Male or female, Pharaoh or courtier -- human or alien? Nobody knows. The mummy in Tomb 55 took its secrets into the earth -- and somebody made sure that they stayed there for three millennia. Get a chisel and a mirror, and we'll find out what's behind door number one. Or two. Or 55.

"The fact that they had time to brick up the entrance with these valuable gold-covered artefacts lying within arm's reach, could only mean that the outer portal to the tomb was regarded as a magical barrier against whatever evil they imagined to be inside . . . not to protect the tomb from influences from the outside as was usually the case, but to prevent whatever was inside from escaping. It would seem that Tomb 55 was not so much a final resting place as a prison."

-- Graham Phillips, *Atlantis and the Ten Plagues of Egypt*

On January 6, 1907, the Egyptologist Edward Ayrton, clearing the rubble from other tomb sites in the Valley of the Kings, discovered an unknown tomb entrance, 21 steps down hacked into the limestone -- implying a royal tomb. However, the wall at the foot of the stairs bore no royal seal. Arthur Weigall, the representative of Cairo's Antiquities Service, ordered Ayrton to begin cataloging the site and called Howard Carter (in Luxor at the time) to join the dig. Rather than wait for Carter to arrive (and possibly steal the credit), Ayrton ordered the wall broken through, only to find a second wall behind the first, this one still sealed with the royal seal of Anubis and nine bound captives. Ayrton's backer, the rich American lawyer Theodore Davis, Ayrton, and the formerly cautious Weigall then smashed the sealed wall with pickaxes, tossed aside two gilded wooden "doors" lying on top of the rubble in the corridor, and generally Indiana Jonesed the site to heck. Whatever clues once existed to the completely unorthodox "double wall-single seal" structure were gone forever.

Inside the tomb, the three vandals managed to smash the rest of the "doors", which turned out to be part of a funerary shrine of Akhenaten, the mysterious heretic pharaoh of the XVIIIth Dynasty. They then dropped the coffin and split it open, following their act by tearing the bandages off the mummy, powdering one of its teeth and most of its body, and damaging its pelvis. They weren't the first vandals to enter the tomb, however. The gold foil in the coffin was torn and wadded, the mask on the mummy had been ripped apart, and all the cartouches -- inscriptions naming the person buried in the tomb -- had been chiseled out. Some clues remained, however. The four canopic jars were women's jars, the coffin was small (and possibly "female"), the mummy had been wearing a queenly vulture crown, and the mummy had been left in a symbolically female pose.

"Forbes also stated that 'several noted Egyptologists' had unofficially claimed to have seen the coffin elements, or photos of them, and reported that the cartouche of Smenkhkare appears on a band of hieroglyphs running down the interior bottom of the restored basin. Forbes also reported, however, that Dr. Schoske denied the existence of this cartouche but maintained that some of the titles appearing in the existing inscriptions 'would surprise many Egyptologists.'"

-- William Max Miller, "KV 55's Lost Objects: Where Are they Today?"

Based on that evidence, Davis decided that the tomb (later designated Tomb 55 in the Valley of the Kings, or KV 55) was that of Queen Tiye, favorite wife of the Pharaoh Amenhotep III, and the mother of Akhenaten. His argument was also bolstered by the inscription on the shrine panels, indicating it was made for her. When Ayrton discovered Tutankhamen's royal seal in the rubble (belatedly sifting through it like a proper archaeologist), that clinched it for Davis -- Tiye was the only royal woman known to have died during Tutankhamen's reign. For Ayrton, the seal proved that the body was Tutankhamen's -- an early identification of the mummy as female by a local obstetrician dismayed him not, as he promptly sent the body to an anatomy professor in Cairo who pronounced the skeleton that of a young man. (The despised Howard Carter disproved the theory more convincingly in 1922 by discovering Tutankhamen's tomb -- 15 yards away and directly across the Valley from Tomb 55.) Another archaeologist, Norman de Garis Davies, proposed that the body was actually that of Smenkhkare, a mysterious Pharaoh between Akhenaten's reign and Tutankhamen's, who served as co-regent during Akhenaten's last years. Modern discoveries of the "lower coffin" in Munich (stolen from Cairo some time during 1915 or 1916) provide more evidence for the Smenkhkare theory, including a possible cartouche bearing his name on the gold foil further crumpled and creased by Ayrton and company.

This would all be fairly clear cut, even given the skeleton's sex changes, were it not for a body of evidence that suggests that "Smenkhkare" never existed at all. His "regency" begins immediately after Nefertiti, Akhenaten's wife, disappears from the records, and Smenkhkare shares "his" title Neferneferuaten (a female title) with Nefertiti. So could the mummy of Tomb 55 be Nefertiti? Her mummy (unlike that of Queen Tiye) has never been found. Other theorists have proposed Meritaten, the daughter-wife of Akhenaten (who vanished at his death), Ankhesenamun (daughter of Akhenaten and sister-wife of both Smenkhkare and Tutankhamen), and Kiya, the (possible) mother of Tutankhamen and wife of Akhenaten. Whoever the mummy was, she (or he) was definitely closely related to Tutankhamen -- they share the same blood type and skull shape.

"The body was lying in a coffin inscribed with Akhenaton's name; it was bound around with ribbons inscribed with his name; it had the physical characteristics of the portraits of Akhenaton; it had the idiosyncracies of a religious reformer such as he was; it was that of a man of Akhenaton's age as deduced from the monuments; it lay in the tomb of Akhenaton's mother; those who erased the names must have thought it to be Akhenaton's body, unless one supposes an utter chaos of cross-purposes in their actions; and finally, there is nobody else who, with any degree of probability, it could be."

-- Arthur Weigall, "The Mummy of Akhenaton," in the *Journal of Egyptian Archaeology*

Or, of course, it might be Akhenaten himself. Weigall proposed that theory in 1907, after the discovery in Tomb 55 of four "magic bricks" inscribed with Akhenaten's throne name, Neferkheperure. The shrine and coffin also bear similar oblique inscriptions -- and the missing cartouches become evidence for Akhenaten's presence in the tomb, since the priests of Amen chiseled his name off of every surface they could find after his death. (They also forced Tutankhaten, Akhenaten's son, to change his name to Tutankhamen.) The fact that we know perfectly well where Akhenaten's tomb actually was -- in his capital city of Akhetaten -- boots us little, since his body was never buried there. Again, the disarranged, ad hoc collection of ornaments for men and women match an image of the hasty reburial and desecration of a hated king's corpse. Even the odd skeleton can be explained; existing depictions of Akhenaten show him with an elongated head and wide pelvis, a possible consequence of Frohlich's Syndrome, Marfan's Syndrome, or "47XXY" chromosomal disorder, any of which might also throw off the age forensics of the skull and bones.

"After an appropriate silence, King Akhunaton spoke: 'My heritage is celestial. I shall reveal my stellar origin on the last day of the month of Khoiak. All of Egypt will see signs in the sky on that day. The next day, the first of spring, in the fifth year of my reign, these signs will again be seen. By daylight, two boats of the sky, the Atet and the Sektet, will dance under the sun over Thebes.'"

-- Daniel Blair Stewart, *Akhunaton: The Extraterrestrial King*

There might, of course, be another explanation for Akhenaten's deformities. As we've [seen before](#), the presence of divine -- or ultraterrestrial -- DNA in a human shell can warp and distort its shape into monstrous levels. Descended

directly from his grandfather Re-Harakhty (a version of the hawk-god Horus, often parsed as "Horus of the Two Horizons") and from the oldest lineage of Theban priesthood (via his mother, Queen Tiye), Akhenaten joined a divine bloodline to that of Egypt itself. Unlike even his deified father, Amenhotep III, Akhenaten was an incarnation of the divine on earth. Hence, his wholesale reforms and persecutions of Egypt's religious establishment, replacing it with a single deity -- Aten -- who could only be approached through himself. Akhetaten, his capital, resembled Pyongyang, with wide streets and the image of the Divine Leader everywhere. His social experiments recalled Mao's Cultural Revolution and his use of the army to enforce order and collect taxes had something of Saddam Hussein about it, as did his bizarrely incompetent foreign policy. Make no mistake -- Edwardian sentiment aside, Akhenaten was a first-class megalomaniac, altering religion, art, and even geography to worship himself. Akhenaten's startling resemblance to the Grey aliens (bulging eyes, narrow chin, long head and fingers, weak chest, spindly legs) makes such behavior even more suspicious -- especially when such a being exalts the image of a flying disk.

"It becomes apparent, therefore, that the object of veneration of the so-called Aten or 'disk worshippers' signalled the re-introduction of a vastly ancient cult. The disk typified, not the solar orb, but a cycle of time described in space, literally, by the Seven Stars of Typhon, who brought to birth, and was thereby manifested by, her son, Set . . ."

-- Kenneth Grant, *Outer Gateways*

Conventional Egyptology, and much of Akhenaten's propaganda, identified "the Aten" as the disk of the sun, perhaps in an attempt to win the heliophilic people of Egypt over to his cult. During the Middle Kingdom, however, the term Aten could be applied to any disk, including the surface of a [mirror](#), the moon -- or a "winged disk" in the sky. Akhenaten had a fascination with the benben stones, conical sacred stones marking the holy sites of Egypt -- the first of which [fell from the sky](#) before the Pharaohs emerged. Between flying disks, descending cones, and sacred geography, we arrive back at Akhenaten's capital, Akhetaten, which he placed (in a miserable desert bowl) in the exact center of Egypt. This "horizon of Aten" was chosen for more than one reason. Although the language of the Akhetaten boundary stelae is a murky blend of hippie and bureaucrat, it seems to proclaim that Akhenaten founded this city in the middle of the desert because here "for the first time [he] discovered it by His [Aten's] Presence." This Roswell by the Nile became the alien capital of a twisted pharaoh.

In Akhenaten's first temple to Aten, in Thebes, Aten shared the honors with two gods: Re-Harakhty (fair enough, given that he was Akhenaten's grandfather) and Set, the mysterious god of evil and night. (Re-Harakhty is also depicted as a [sphinx](#), the only non-human form ever shown for Akhenaten.) Although Set eventually vanished from the official iconography, he symbolically re-emerged when Akhenaten in the ninth year of his suzerainty declared Aten not only the chief, but the only, god of Egypt. Only Set had dared to kill other gods and usurp the throne of Heaven. The Egyptian chronicler Manetho, a millennium later, recalled the era of Akhenaten as one of Set-worship by "unclean souls." And sure enough, by the end of Akhenaten's reign, a deadly plague swept through Egypt, killing his wives and children. Akhenaten's ascension was perhaps also prefigured by pestilence -- Amenhotep III, in his last years, erected a staggering 700 statues to Sekhmet, the goddess of plague and sterility (and sphinxes). But Sekhmet would not be placated, and Akhenaten (of whom there is no record during Amenhotep III's reign) emerged from the shadows to take the throne of Egypt.

"The Pharaoh Nephren-Ka built around it a temple with a windowless crypt, and did that which caused his name to be stricken from all monuments and records. Then it slept in the ruins of that evil fane which the priests and the new Pharaoh destroyed, till the delver's spade once more brought it forth to curse mankind."

-- H.P. Lovecraft, "The Haunter of the Dark"

The imaginative Graham Phillips proposes that Akhenaten (and possibly Smenkhkare) were seen by the Egyptian priests as the "carriers" of some horrific supernatural evil, evidenced by the wars, plagues, and disasters of Akhenaten's rule, as well as by the nightmarish heresies promulgated from the "horizon of Aten." Hence the defacement of the cartouches -- with no *ren*, or name, visible in the tomb, the pharaoh's spirit would be unable to leave his coffin. (Similarly, Akhenaten's name was removed from the ritual king lists, taking it out of the heavenly record.) Perhaps the multiple doors, the women's artifacts, and the other confusing remains in Tomb 55 similarly served as magical chaff, to blind the Aten and trap it in a dark, nonsensical hell-tomb. Until, of course, 3,000 years later, it sensed Ayrton and

Davis' greed, and twisted their minds as it had twisted Akhenaten's body. Their bizarre destructive monomania was very much out of character for Egyptologists, even in 1907, but it may have served the purpose of something else quite well.

Did the Aten call out a few years earlier, to Aleister Crowley in Cairo in 1904, dictating *The Book of the Law* as the entity Aiwass? Both, after all, are identified with Re-Harakhty, and both can be described as "faceless." (Crowley also channelled something that looked a lot like Akhenaten -- or a Grey -- in 1918, called "Lam.") Crowley manifested his "New Order," the Argentinum Astrum, in early 1907, the year that Tomb 55 was opened. However, if Crowley was the Aten's "John the Baptist," we must still look for its incarnation. In 1907, [Rudolf Hess](#) left Egypt for Germany. Was he a "carrier" of the Aten? Was this the explanation for his drastically changed appearance after his bizarre defection in 1941? Did he initiate his Nazi comrades into the new cult of the solar wheel -- the swastika? Or did the Aten merely hitch a ride with Hess, entering a young, would-be architect (shades of Akhetaten) in Vienna? Does this explain the Aten host's rumored ambiguous sexual deformities, and his increasing physical disintegration during the war? Did the Aten announce its coming by disease in 1907, just as it did in the XVIIIth Dynasty? Because that would explain why, on the day Tomb 55 was opened, Adolf Hitler's mother was diagnosed with cancer.

Dork Tower!

Out of the Mud

A World War II Scenario

by Austin Chamberlain and Dylan Craig

A secret German rocket weapon project is being dismantled and shipped to Germany to keep it away from the advancing Allies. One of the shipments holds a disassembled V-3 rocket along with fuel and construction plans; this train has gone missing between stations, and now both the Germans and a small advance group of Allied soldiers (the PCs) are searching for it. The PCs' orders are to:

- proceed to the train's last reported location and determine which route it took from there;
- follow that route and find the train, neutralizing any resistance at the site and securing the rocket (after determining that it is, in fact, on board the train);
- Radio for backup and await the arrival of a motorized battalion with armor support, who will retrieve the rocket.

This adventure can thus be divided neatly into three sections: following the trail, finding the train, and then holding off the German counter-attack until help arrives.

Characters

This scenario is set in Poland, and thus it is assumed that the characters are soldiers of the Red Army, pushing West towards Germany. This becomes significant at several points in the adventure, especially with regard to NPC attitudes towards the party. However, the scenario can easily be adapted to handle soldiers from the forces of the Western allies; this may mean replacing the Ukrainian POWs in the final scene with Italians or Romanians to preserve the tension in their relationships with the PCs.

The Fate of the Train

Three days ago, upon arriving at Dzialoszyn, the train (designation: Waffezug 4) was notified that partisan activity along the main track to Peenemunde had rendered that route unsafe; accordingly, it was diverted along a secondary track, via the town of Krzepice -- a tiny settlement at the base of a hydroelectric dam. However, as the train pulled into the siding, a flight of Russian fighter-bombers, returning from another target with unused ammunition, dropped out of the sky and strafed the dam wall. Slowly the concrete arches buckled and crumbled; a wave of mud and water swept down the valley, drowning half the town and most of the train under an avalanche of black silt. The town's garrison were entombed; the survivors fled, leaving Krzepice a ghost town populated only by scavengers, the shell-shocked remnants of the train's *SS Totenkopfverbände* (Death's Head Group) guards, and the survivors of a Ukrainian POW detachment attached to the train as a manual labor component, who have armed themselves and are intent on killing everything in a uniform which sets foot in the village.

Part I: Dzialoszyn

The characters are concealed on a hillock overlooking the railroad track leading into Dzialoszyn. It is 30 minutes before sunrise; it has taken the heroes most of the evening to get into position, but they have all had a few hours' sleep here and there and are feeling as rested as possible given the circumstances.

Below them, Dzialoszyn is very quiet. Several SdKfz-231 (half-tracks) are parked in the middle of the village, but no patrols have been sighted since the sky began to grow light. As sunrise approaches, the occasional scurrying figure of a civilian can be seen moving along the streets, delivering milk or getting ready for work.

Refer to the map of Dzialoszyn. You may show this handout to the players; their elevated position allows them as good as a bird's-eye view.

Dzialoszyn Map

The Germans

There are 20 German soldiers encamped in Dzialoszyn:

- Four, plus a *hauptmann* (captain), occupy the main command post on the ground floor of the town's largest hotel (location A1). Two of these soldiers are regular infantry; the other two are a radio operator and a typist respectively.
- Four more men are on guard at the train station (A3), four more at the post office/ telegraph station (A4), and the remaining six men plus a *leutnant* (lieutenant) are organized into two patrol forces, one traversing the town's perimeter and the other moving up and down the main roads checking for partisans and mines. Both of these forces regroup by returning to their starting positions outside the hotel every hour.

The *hauptmann* and *leutnant* have the only two-way radios in the group. In the case of weapons fire inside the town, the two patrol groups' orders are to pull back to the hotel and the railway station respectively (with the *leutnant* and his

radio in the latter group), and hold them until further orders are received. This means that unless pinned down, German troops encountered by the characters will always seek to disengage and pull back the safety of the machine-gun emplacements and grenade stashes at these two locations.

If the characters' attack becomes too much for the garrison to handle, causing more than 25% casualties, or if their presence as a regular Red Army detachment becomes known, the *hauptmann* will call for reinforcements (assuming the long-range radio antenna at the HQ is still functional); see the Reinforcements section, below.

Captured German soldiers may, of course, be interrogated. Only the *hauptmann*, however, knows that the train the characters are looking for was rerouted through Krzepice. The rest are only good for informing the characters that yes, the train was here, but that they have no idea where it went; they also know that the captain and the train guards' commanding officer consulted with the station master (now under arrest at the German HQ -- see below) before rerouting it. They can also tell the characters the day's password. However, it should be noted that while trying to bluff their way into the town (perhaps by wearing captured German uniforms) will fool any citizens who might observe the characters -- new German troops pass through here every day or two -- it won't work on other soldiers except at night, because they know each other too well.

The Citizens

Dzialoszyn's remaining civilians are few in number and have been made timid by prolonged military overlordship. Around 60 men and women are still living in the town itself, and perhaps another 50 in farms and cottages dotted across the surrounding landscape. Ethnic Poles, they bear no special love for Russia; any notions of Slavic loyalties from which the party might benefit are balanced against their fear of retaliation by the Germans -- several locals have already been hung as an example against assisting partisans in the last few months. The most recent crop of bodies still swing on the gallows (location A2).

In any given encounter with citizens of Dzialoszyn, a good rule of thumb is that they will betray the party to the Germans as soon as possible 25% of the time, assist them 25% of the time, do both (i.e. first assist and then betray) 25% of the time, and simply shake their heads, cower, and refuse to get involved 25% of the time. Several factors might modify this distribution, though.

If the party can convince a local to take them to the head of the town council (in a farm two miles outside the town), they will be told that Slawomir Radziwill, the mayor, is being held under guard with several other town notaries in one of the rooms of the hotel. Among this group is the town's station master, detained since the start of the German occupation because of the sensitive nature of his profession. If the party show good faith by freeing these prisoners, the locals will contact their partisan colleagues and find out where the train they are looking for has got to.

Embarking on this rescue is one way to bypass a bloody firefight by tackling the station; another possibility (should the characters be less than charmed with taking on a side mission of this nature) will be made clear to them as they leave. Barbara Lubomirski, a local woman and the baker's wife, takes food to the prisoners every day at noon. If the characters retrieve her son's body from the gallows in town, she will make discreet enquiries of the station master during her lunchtime rounds, and return to the characters' hideout just after two with his answer. The consequences of each of these courses of action are detailed below.

Raiding the Hotel

The first floor, where the prisoners are kept, is accessible from the main staircase and from the fire escape along the side wall. The main entrance is guarded by a single German soldier outside the building; the side entrance is not guarded, but the doors on each landing are securely locked and noisy entrances will draw the attention of the second guard, whose position is just outside the prisoners' door.

There is no easy way to sneak up on the main door guard; the characters will have to try and bluff their way up to him if they intend to take him out quietly. The second guard is much more vulnerable, especially given his tendency to investigate unusual noises and footfalls in the deserted hotel rather than calling for backup. If either guard sounds the

alarm or shots are fired, the hauptmann and remaining soldiers will rush to the main stairwell and take up defensive positions there while coordinating the movements of the patrol groups.

The prisoners, once rescued, are in good condition and cooperative. Their primary concern is for anyone involved with the rescue to flee the town and any German reprisals; however, they will be glad to point the characters off in the direction of Krzepice. Of course, if the German hauptmann was captured, they will be able to get the same information from him.

Retrieving the Body

Four bodies swing from the gallows -- two men, a woman, and a teenage boy. The boy is the one the characters are looking for; his crime was being caught placing caltrops along the main road past Dzialoszyn -- an act of sabotage, as far as the military authorities were concerned. Cutting him down is not a particularly difficult task, except for two complicating factors:

- First, the gallows lie on the route of both patrol groups. This gives the heroes only a 20-minute window of opportunity to enter the town, cut down the body, and make their escape. This will require stealthy action from each member of the unit. If more than one person fails, a Polish civilian will come out to see what is going on. A critical failure draws one of the patrols. The task can be made simpler by hiding near the square while one patrol goes by, popping out once they have left, cutting down the body, and withdrawing; these methods will impose a minor penalty to the stealth checks, depending on the novelty of the technique, location used to hide in, and the number of characters participating.
- Second, the occupying troops have left a grenade stuffed into the inside coat pocket of one of the other bodies on the gallows -- the elder of the two men, who was executed for partisan activities. If his body is cut down or searched, or the boy's body is cut down roughly (a Dexterity roll is needed to avoid), the grenade will roll free and detonate. Apart from injuring or killing anyone nearby, this will raise the alarm and draw the German troops' attention. Noticing the bulge requires a vision check if anyone examines the other bodies, and a demolitions roll to retrieve it and/or make it safe.

The mother will be as good as her word, assuming the characters can retrieve the body without causing a firefight, and will reveal the train's destination as promised. If the characters retrieve the body but get into a firefight while doing so and thus betray their presence, the *hauptmann* will put two and two together, seize the mother during her bread delivery, extract the group's location from her, and coordinate a relief force to attack the PCs.

Storming the Station

The final option open to the characters is to storm the train station looking for clues or the station master's log book. The German troops defending it are arranged as follows; one guard on the platforms, one sniper on the rooftop, and two soldiers manning a machine-gun nest inside the ticket counter, facing out of the station and down the street. While not in the habit of shooting anything that moves, the soldiers know that the townsfolk are under orders to stay away from the station; thus suspicious figures will be challenged first, and then shot. Weapons fire will draw the lieutenant's patrol group within a few minutes.

The station master's log makes the train's intended path clear, as well as the deviation in course to Krzepice authorized by the hauptmann and the train guards' commander, Sturmbannfuhrer Hartmann. A final annotation indicates that a query was received from HQ yesterday, noting that the train did not arrive in Peenemunde as scheduled, and indicating that several scouting elements had been detached from their regular duties to track it down.

Moving On

If the station is liberated, the characters have the option of taking a petrol-powered track repair trolley along the track towards Krzepice, rather than walking. The townsfolk are more than happy to let the characters "liberate" it in exchange for their help. This is the safest option, although there is a only 50% chance to make it to Krzepice without

encountering any Ilyushin Il-2 Shturmoviki (Russian ground-attack planes), which might decide to strafe the trolley. Each character on the trolley should make hearing checks; those who fail don't jump clear in time and should take light wounds from flying shrapnel, cannon rounds, etc.

Commandeering civilian or German military vehicles is similarly risky, but also carries the possible complication of German roadblocks 50% of the time. These roadblocks can be avoided without incident if the group makes its vision checks, followed by a drive roll to escape. If they tangle with a roadblock, it will be manned by four soldiers and a *feldwebel*, equipped with a machine-gun and panzerfaust.

Walking is without doubt the safest method of reaching Krzepice, but also the slowest; it will take six hours to march the distance, but only one to reach it by trolley or vehicle. Keep track of what time the characters arrive in Krzepice; every hour they save in getting there is an hour they will be able to spend on its defense (see Part III).

Part II: Krzepice

From far outside Krzepice, the destruction wreaked by the collapsed dam is evident. Farm animals wander unattended and starving, bloated bodies (human and animal) are visible in trees where the water deposited them before receding, and above it all the caws and croaks of carrion crows echo harshly off the sides of the valley, providing a raucous counterpoint to the far-off thunder of the front lines. The shattered dam wall is clearly visible as the agent of the destruction.

Unlike Dzialoszyn, Krzepice is not guarded by any organized military force. Instead, the two main groups of combatants in the town are scattered loosely all over the area, with the exception of a hard core of SS guards dug in around the front of the train (see map). Between this and the ruined nature of the town, conducting operations in the town is simultaneously more and less difficult than in Dzialoszyn.

Dzialoszyn Map

- **Scouting:** Unlike Dzialoszyn, Krzepice is not surrounded by hills and thus, unless they take a long detour into the mountains where the dam used to stand, the party cannot get a bird's eye view of the town, and scouting is required to get an idea of its layout. This will require a scouting, tactics, or strategy roll; it will be more difficult at night, but easier with field glasses (binoculars). If this is successful, you may show them the map of the town. If they fumble the roll, they have encountered armed resistance -- see Entering Town, below. If they simply fail (but do not fumble), they have been unable to get a clear idea of the town and you should describe it in general terms and provide a simplified sketch rather than the handout. Scouting takes an hour, or two hours if performed by less than three characters.
- **Going to Higher Ground:** The dam itself is ruined and deserted, but still provides a good position from which to observe the town. The main problem is that the minefield that used to protect its base has now been swept up by the deluge and spread all the way down the river valley. Spotting a mine sticking out of a mud bank requires a vision roll; characters with Danger Sense or a similar ability get two rolls. If all rolls are failed, making it to an elevated position without stepping on a mine is fairly easy (with only a 20% of encountering a mine). If the mines are spotted, but the characters decide to press on anyway, the odds become very easy (10%), because of the heroes' forewarning. Once they have reached the dam, show the players the map of Krzepice; however, the heroes need to negotiate the mines again on their way back. Detouring to the dam and back takes two hours.

Entering Town

The town is black, muddy, and lifeless. The civilian population, apart from those driven mad by the calamity, has disappeared. Apart from these unfortunates -- who can be glimpsed digging in the wreckage of their houses or skulking in the shadows -- everyone in the village is armed and hostile, falling into the groups detailed below. If the characters are simply moving through the town, there is 30% chance per quarter of the town explored of encountering one of these groups (equal chance of either group), in which case the groups encounter each other at 10-60 meters distance with no surprise benefits in either case:

- **Bands of armed POWs:** These former combatants are roaming the town, looting, and looking for stray Germans and Poles to shoot. These groups are composed of five to 10 individuals, roughly equivalent in martial skill to the average raw recruit. They will fire on Russians and Germans with equal vigor; at this stage, any armed figure is a target. If the characters are stalking such a group, surprising it is a fairly easy task, accomplished with a Stealth roll, which will allow them to silently capture a stray POW for interrogation or to ambush the main group with a free round of firing before the POWs can react. There are 30 armed POWs in the town overall.
- **Roving SS:** These elite soldiers are attempting to corner and exterminate the POWs in order to reestablish some kind of defensive perimeter and send for help. Each unit is composed of 1d6 soldiers and led by a *feldwebel*. Stalking the SS is harder than stalking the POWs, requiring two Stealth rolls to get within SMG range; if any of these rolls are failed, the SS immediately become aware of, and begin stalking, the characters with the intent of ambushing them. There are 15 roving SS scattered around the town in total.
- **Emplaced SS:** The *SS Sturmbannfuhrer* has given several small machine-gun units the responsibility of keeping the area around the train free of unauthorized presences. Four of these three-man units are concealed in high buildings surrounding location B1 (the front of the train), with two men on each machine gun and one guarding their backs. The bodies of a handful of POWs and a few civilians lie as mute testimony to their firepower in this area. Flushing them out is a matter of drawing their fire through a ruse or feint attack (requiring a tactics roll -- failure means a machine-gun attack against a random character) and then flushing each team out with grenades or house-to-house fighting. Assisting the characters in this respect is the way the machine guns have been embedded; if they can make it into the building in which each team has concealed itself, the SS guards will be unable to bring their machine-gun to bear and will be forced to defend themselves with small arms. Make a note of how many machine-guns are destroyed in this phase of the operation; the characters may soon find themselves wishing for those machine guns.

Dealing with the "defenders" of Krzepice should be a tense affair, filled with suppressing fire, grenades tossed in through windows, the rattle of submachine-guns up staircases and through pasteboard walls, but it is impossible to detail every location in the town or account for every tactic the characters may come up with. It is thus important for the GM to think on his feet here, maintaining a gritty atmosphere while still rewarding player initiative. Here are two examples of possible tactics and their likely effects:

- **The Alliance Game:** The POWs, as Ukrainians, don't like Russians much (nationalist sentiment ran high in Ukraine during WW2, not least because of the pre-war Ukrainian famine which was partly engineered by Stalin) -- but they hate their erstwhile captors, the SS, even worse. If the characters manage to take a group of POWs prisoner (perhaps by surprising them with an ambush as detailed above), and then release them with the aim of fighting the Germans together, they have a good chance of winning them over. It will take fast-talk or leadership ability, but if they succeed, 10-20 POWs will come over to their side immediately and the others will leave the town. The POWs aren't interested in going into the train, but they will help the characters wipe out the remaining SS with much greater ease if a character with tactical sense takes them in hand.
- **Smoke and Mirrors:** With several heavily-armed groups out looking for trouble, characters who are fast on their feet might be able to lead them into each other. This will require a couple of good rolls: average tactics and stealth rolls to get POWs firing on SS troops or each other; slightly difficult tactics and stealth rolls to get SS to fire on POWs; and difficult tactics and stealth rolls to get SS firing at SS. All these rolls are easier at night. This might also be a good way for the party to find out where the emplaced machine guns are; just get a band of POWs to chase you into the killing zone, and sit back with your notebook and a cigarette.

Either way, the characters need to get to that train, and it isn't going to happen while the SS or the POWs are roaming

free. Once they've killed or allied their way to control of Krzepice, they can move on to the next stage - the train itself.

The Train

Waffezug 4 is still intact after having its front half caught in the mudslide, but that's about all that can be said about it. It's lying on its side 400 yards downriver from the siding, kinked into an S-shape with only the locomotive, tender, and front troop carriage visible above the mud; everything else has been buried under the black silt from the dam.

A military-issue petrol-driven generator stands on the muddy ground next to the entrance to the rearmost carriage, currently turned off but connected to a string of light bulbs disappearing into the darkened maw of the doorway. Whatever the contents of the wrecked train, someone has bothered to extend illumination to them. The generator is almost empty, and will run for only half an hour once switched on. The heroes may decide to switch it on. If they do, its slow putt-putt will disappear behind them as they enter the first carriage and whatever awaits them below. If not, only silence and darkness wait to greet them.

Exploring the train is, unfortunately, a necessity. Even captured and interrogated German soldiers will be unable to confirm the nature of the train's cargo, although they know that it is intact and lying in one of the rearmost armored carriages. The heavy steel plate of the train's walls has kept the carriages from buckling -- for now -- and thus the cargo sections are still reachable by walking from compartment to buried compartment. The soldiers will also be able to tell the characters that their commanding officer, Herr Sturmbannfuhrer Friedhelm Hartmann, is inside the train attending to leaks and structural damage to keep the cargo section accessible. Removing the contents is not possible without heavy lifting and digging equipment. They will also reluctantly admit that they haven't been able to send for help yet, although a Dornier Do-17 (a German scout plane) flew over them at noon and must have spotted them.

The first four buried carriages were troop carriages. These are eerie places indeed, lit only by the flickering string of lights looped from the "roof" (if the characters switched the generator on) or by their own illumination (if they didn't). The "floor" slopes downwards at an angle of about 10 degrees below the horizontal, and is wet with mud, black water, and oil. The final carriage has been converted into something of a rudimentary hospital for the SS soldiers injured when the mudslide hit. There are a dozen soldiers here, mostly unconscious and high on morphine but in one or two cases raving quietly to themselves. Their injuries are mostly severe breaks, sprains, and crushing injuries. A bucket of steaming hot water, for washing instruments, stands in one corner.

The next carriage was a sleeper carriage, holding 80 beds in columns of four along both walls, and it is here that they characters might have their first difficulties with Herr Sturmbannfuhrer Hartmann.

- If they turned on the generator lights, he knows they are coming, and his *subaltern* (a lieutenant) is lying in wait for them with an MP-40. He will wait until at least two characters have entered the carriage and are manoeuvring with difficulty through the uneven floors before opening fire. One fact might work in the characters' benefit, though; if they are wearing regular army uniforms (i.e., not SS uniforms but those of the soldiers in Dzialoszyn), he will think they are the relief force, and will stand up and greet them cheerfully rather than opening fire. How he pays for his mistake is, of course, up to the characters.
- If he has *not* been alerted, the leutnant can be seen moving between crates of rocket parts, bracing the sagging carriage walls with support struts and welding plate steel over jagged tears with the aid of an acetylene torch; Hartmann himself is nowhere to be seen. They will have to deal with the subaltern before proceeding -- same stats as above, except that they have the benefit of surprise.

Whatever the situation -- whether they dealt with the subaltern in here or in the sleeper coach -- Herr Sturmbannfuhrer Hartmann is found sitting in at the foot of a stack of crates in a growing puddle of liquid rocket fuel, with a chest full of bandages, a flaming acetylene torch in his left hand, and a rock-steady Walther P38 pistol in his right. The fuel is leaking from a drum which he has just punctured with his SS officer's dagger. If the characters shoot him, he is sure to drop the torch, blowing them all to hell; and yet, they cannot leave him here. What to do?

- **The Big Picture:** Herr Sturmbannfuhrer Hartmann's objectives are to get the rocket back to Berlin. If blowing it up was more important, he would have done it already -- but he is determined to follow orders, and will thus

only blow it up is all else fails. Currently, he is prepared to sit here with his improvised deadman switch until help arrives, no matter how long that takes.

- **Sever the Hose:** Herr Sturmbannfuhrer Hartmann's acetylene supply is reaching the torch in his hand via a two-meter long rubberized hose linking it to an acetylene tank behind him. A thrown knife could sever the hose, depriving Hartmann's torch of gas just long enough to plug him. Such a throw would require a knife-throwing roll. A blunt object could be thrown against the tap handle to close it in much the same way, although this would be much trickier.
- **Sploosh!:** The bucket of water in the medical car would put the acetylene torch out on a throwing roll, or wash enough of the rocket fuel away from around Hartmann that the torch wouldn't ignite anything if dropped, on an easy throwing roll.
- **Dive:** Diving for the ground next to Hartmann while an accomplice shoots him is yet another possibility. This requires a brawling check by the diver; in addition, Hartmann gets a free shot at the diver in mid-air; landing next to him is no good if you're too dead to catch the dropped torch.
- **"We got them, Sir!":** Staging a "rescue" using captured/turned SS guards with unloaded weapons who "counterattack" from outside the train and force the "Bolshevik scum" to surrender would get Hartmann to turn off his torch.

Needless to say, Hartmann is not open to bribery, threats, or political rhetoric. The minute he decides the situation is untenable, he'll blow the rocket (and the characters, and their mission) to bits. And he won't engage in Evil Nemesis-style banter with the characters either, specifically not the kind that gives away the crates' contents.

Once Herr Sturmbannfuhrer Hartmann has been dealt with, the characters are free to step past him and examine the crates. Yes indeed, there's a disassembled V3 rocket in them, leaving the characters free to radio back to HQ and receive the following piece of bad news:

"Privyet, tovarisch! Congratulations on securing the fascist secret weapon. Your courage is truly exemplary, and your loyalty unfaultable. However, another test lies ahead of you. Our contacts among the Polish resistance fighters tell us that a fascist armored column has been dispatched towards your location. They will reach you sometime tomorrow morning. Their orders are to retrieve the rocket or destroy it. We are rushing to your aid too, but resistance has been stiff and we will need you to buy us time. You are hereby ordered to defend the town to the last round and the last man until relieved. There must be no retreat. Take whatever steps are necessary. Za Rodinu -- za Stalina! Long live Stalin and the Motherland!"

Part III: Preparing for the Fight

What time is it? The characters arrived at Dzialoszyn at 5:30 a.m. Depending on which course of action they followed, they might have arrived at Krzepice any time between 7 A.M. and 8 P.M. Scouting and clearing the town might have added anything from two to four hours to the time elapsed. This gives us a current time (when they get the message) of between 9 A.M. and midnight. The German column will arrive (unbeknownst to the characters) at 7 A.M.

No doubt the characters will want to prepare defenses in order to better resist the German attacks. This preparation can be handled in as much detail as desired, using any appropriate skirmish rules (such as those in **GURPS: WW2**) or simply as a large personal combat. As the characters get better entrenched, their chance of success rises; when the attack occurs, each defensive measure taken during the preceding hours should provide some bonus to their attempts at resistance. Sample defensive measures are as follows:

- **Defensive scouting:** figuring out lanes of fire and good places to attack from.
- **Battlefield Modification:** digging anti-vehicle trenches, barricades, and booby traps.
- **Coordinating Reinforcements:** any POWs on the characters' side can be converted to worthwhile comrades-in-arms, but only between one and six can be trained per instructor per hour. Instructors must use tactics or leadership skills or waste the hour.
- **Minelfields:** The riverbank is thick with washed-up mines. Retrieving mines from the mud and re-laying them requires demolitions roll, with failure losing the mine (into liquid mud, or explodes harmlessly) and critical failure causing injury. This allows two hours of work (one harvesting, one planting) to salvage one to six mines.

This can be done multiple times, but time is doubled for each subsequent attempt, as the mines are harder to get to and farther away. Thus the first harvesting and planting takes two hours, the next takes four hours, the next eight, and so on.

- **Machine-guns:** Ideal defensive weapons, assuming the PCs didn't destroy them all getting in.

The efficiency of other strategies the players come up with will have to be adjudicated by the GM. POWs may be used as brute labor for battlefield modification, and as scouts to keep watch for the approaching Germans, but not for any of the other activities.

Holding the Line

By 6 A.M., the rumbling of an approaching column of vehicles is clearly audible.

The characters may consider a preemptive strike on the armored column before it reaches the defensive line. Depending on scale and tactical soundness, this may do anything from delaying the attack to forcing the Germans to deploy their infantry prematurely and lose the benefit of their armor. Such an attack is likely to be of a hit-and-run nature; once the initial damage has been inflicted, the ambushers would be well advised to withdraw. If they do not, they will be forced to fight the German troops without the benefits of cover and concealment, as the surrounding countryside is relatively bare.

At 7 A.M. the Germans attack. While their Stug-III assault tanks shell the town from a distance, infantry and SdKfz-234 (armored cars) close in along a broad front, making the most of the available cover while still conducting a thorough sweep.

As in the battle for possession of the town fought earlier, the scope of the conflict precludes any specific description of scenes or scenarios. Once again, the GM is recommended to use the action scenes in movies such as *Saving Private Ryan* or *Enemy at the Gates* as his inspiration in depicting the events; a geysering battlefield of mud and whizzing metal, the urgent cries of the wounded, falling back from house to house before the seemingly unstoppable German advance, daring sprints across fire-swept streets strewn with rubble, burning tanks, and so on.

If the characters can survive for an hour, the armored spearhead arrives to deliver them. If they somehow destroy the German force before then, they have repulsed the attack on their own. Either way, they are victorious and their mission a glorious success. Their futures are assured and they can return to their regular units safe in the knowledge that they have done their part to secure the post-war future of Mother Russia and all her children.

Appendix A: Reinforcements

If the Germans manage to get reinforcements at any stage, they will be similar to the relief force in Part III. Make it four Stug-III assault tanks, two SdKfz-234 armored cars and about 30 infantry on foot. None of the heroes should start with anti-tank weapons, since they're too heavy for a fast-moving group like this. If the group get such a weapon from somewhere, use the gunnery skill. A success knocks out one vehicle; rolling on the skill immobilizes the vehicle but does not disable the crew or weapons.

Appendix B: Making the War Weirder

The easiest way to "upgrade" this scenario to handle the peculiarities of alternate-history WW2 settings is to alter the train cargo. Instead of a V3 prototype, Waffezug 4 might be carrying anything from a plutonium-based "dirty bomb" warhead intended for London, or a fringe-science drug cocktail capable of raising the dead (for *Delta Green* campaigns, this could be the secret elixir behind the Eastern Front's "resuscitated casualties"). A further complication could be provided if the cargo has been ruptured or accidentally opened -- this would mean a radioactive or zombie-infested battleground, which the players would need to turn to their advantage if they are to survive the oncoming German forces.

Alternately, keep the train cargo as is but change the PCs and NPCs; either by adding superhumans to the mix (as in the *Godlike*, *Silver Age Sentinels*, or *Brave New World* RPGs), or by introducing occult threads to the setting; perhaps Sturmbannfuhrer Hartmann is a powerful arcanist, or perhaps Krzepice's dam wall was not ruptured by the bomb impacts themselves but rather the ropy tentacles of whatever slumbering being(s) the bombs awakened. Don't forget the townsfolk and the Ukrainians; these groups could be (thanks to inbreeding, exposure to unusual energies, or concentration camp paravivisection) anything from uncontrolled psychics to shape-changing mutants. The potential for terror when the heroes find that the real danger comes not from their opposite numbers in the SS, but from the maw of terror that both sides are now stuck in, is very high indeed . . .

Diplomacy Of Ogres

by Ken Burnside

Allan Calhamer's *Diplomacy* (published by Avalon Hill) is one of the classics of modern game design. With elegant rules, it provides Machiavellian intrigue, tense play, and a wildly seesawing strategic position.

As great as *Diplomacy* is on its own, it's even better as a scenario generator for tactical wargames, such as *Ogre* or *Warhammer 40K*. Using *Diplomacy* as a scenario generator gives players a strategic context for the outcome of a battle, while giving them a reason to preserve units for later engagements.

In a nutshell, *Diplomacy* has two kinds of units (Armies and Navies), and a limited set of terrains (Coastal, Inland, Impassable, Ocean, and Mixed). There are four basic orders to give: Attack(Move), Support, Convoy, and Hold Position. The full rules can be found at <http://www.avalonhill.com/rules/diplomacy.pdf>. Best of all, Diplomacy turns generally take about 15-20 minutes, with low record-keeping overhead, allowing it to add options to a miniatures campaign without being a burden to keep track of. Laminating a copy of the diplomacy map at Kinko's is recommended; it lets the permanent strategic situation be recorded and transported without lugging the boxed game around.

Using a tactical engine to complete the battles in *Diplomacy* remedies one of *Diplomacy's* major design flaws: the dreaded stalemate line. The standard *Diplomacy* map is quasi-historical, and experienced players know where to place units with support that cannot be cut, which will force a draw. A tactical game makes it easier to destroy units on the *Diplomacy* map, making it possible to break the stalemate line. The tactical game results can force a strategic breakthrough, bettering both games.

As a caution, *Diplomacy* is the game of gaining someone's trust, bargaining with them, and stabbing them in the back for material gain when it looks like you'll win the game. It may not be the right choice for your local wargaming group.

Modifications To *Diplomacy*

The first decision to make is what *Diplomacy* map you'll use. Some games just don't feel right when played on a map of 1900 Europe, although some games (such as *Ogre*) make sense. Several hundred variant maps exist, and finding one that suits your needs (including number of players) should not be hard. A useful resource for all things *Diplomacy* can be found at <http://www.diplom.org/>.

The second choice is "What tactical game are we making a campaign for?" It helps if your tactical game can handle naval battles, land battles, and "amphibious assault" battles, as these are the three sorts of fights *Diplomacy* generates. If your tactical game has no naval component, you can make a landlocked campaign by ignoring all the ocean spaces on the map, or resolve all Naval actions on the *Diplomacy* level.

The third major decision is "how many points is a *Diplomacy* army worth?" For *Deluxe Ogre*, recommended army sizes are in the 30 to 40 point range, with *Ogre Miniatures* armies converting at 180 to 250 points. For *Warhammer 40K*, army sizes of around 600 to 650 points work well. The most common actions fought will involve two or three *Diplomacy* armies on the tactical game at any one time. Each army remains a unique entity. For other games, the optimum army sizes will either be reinforced companies or battalions.

While *Diplomacy* standardizes on six-month turns, with new builds happening at the end of even numbered turns, the frequency of build turns sets the "feel" of the campaign and can be changed. Having three-month turns -- with builds happening every fourth turn -- makes losing a unit more painful, but effectively increases the size of the map, as units that are not supported by a supply center can live for up to three turns. Having build turns happen every turn encourages a bit more slugging, and gets into more of an attritional fight. While *Diplomacy* defaults to being able to only build units in your home territories, allowing units to be built in any controlled supply center can add a novel

twist.

To determine the initial selection of countries and units, roll randomly for country selection order. Once countries are selected, have each player select one unit at a time and place it in one of their starting territories in the same order. This lets people choose what their starting armies are with an organic appreciation of what their neighbors are building.

Interfacing Between The Games

There are two questions that need to be answered when interfacing between the games. "When do we resolve fights with the *Diplomacy* rules?" and "When do we resolve on a tactical level to blow things up?" In essence, this comes down to "How do we force an engagement?"

The simplest method is to say that all battles are handled in the tactical game. The drawback to this is that some players don't like playing tactical battles where they're outnumbered at three to one, and would vastly prefer the *Diplomacy* retreat rules to getting hammered.

A better method is to have each player draw two playing cards per supply center they hold at the start of the *Diplomacy* turn, with the person having the lowest number of supply centers drawing two additional cards as a balancing factor. After combat is resolved, the cards are shuffled back into the deck.

When units come into contact, each *player* in the conflict plays two cards, making a Blackjack hand. The player being dislodged in a given space can play three cards. The highest blackjack hand determines the resolution method, with ties handled by players playing an additional card until one side either busts or wins. This adds a touch of randomness to the game, along with a short-term strategic resource to manage.

The territories on the *Diplomacy* map will suggest a range of possible terrain types for land actions. Depending on how long a *Diplomacy* turn is (the default is six months for *Standard Diplomacy*), the turn may also influence what weather is used on the tactical map.

Modifications to the Tactical Game

The tactical game will probably need some additional tweaking or table rules to make things fit.

The first is defining when an army is "broken." Because *Diplomacy* puts a premium on retreating with armies intact, it makes sense to give the tactical player a reason to retreat while he still can. A good compromise is to have each player secretly roll 5d6, multiply by 3, and take that as a percentage: (For example: rolling 5d6, getting 19, times 3 is 57%). If using the "blackjack" method of resolution determination, allow players to play a card to add 2 to 11 points directly to their break threshold percentage.

This "break percentage" is the maximum number of casualties your force can take before the unit is destroyed. This can be treated as figure counts, or as balance point counts. The random break threshold method makes the common two-on-one *Diplomacy* dislodgement scenario interesting to play, while keeping them secret adds a certain amount of tension in play. Thresholds should be kept secret from the other players in the fight; record them, and then place them face down on a card at the edge of the table for verification after the fight. If using a card to increase the break threshold, it should be recorded and revealed at the end of the game.

The second change is defining retreat directions on the tactical battle, which determines which space on the *Diplomacy* map a retreating unit goes to. Most wargames have a scenario comparable to "Ceasefire Collapse" in *Ogre*, which is a good template to for this kind of fight.

A unit engaged in more than one combat in one *Diplomacy* turn repairs half the damage done in the previous combat before going to the next one. This can happen as a result of a three unit "bounce" in diplomacy. (Unit A is holding the

territory, units B and C are both trying to take it from unit A and not supporting each other.)

The trickiest scenario to set up may be the amphibious assault scenario. In *Ogre*, having GEVs dropping troops onto a beach while being supported with off-map cruise missile salvoes barrages is the best way to handle it. For *Warhammer* or *BattleTech*, buying off-map artillery barrages is probably the best way to go.

Bringing The Tactical Back To The Strategic

When moving back to the *Diplomacy* level, units that retreat are assumed to have retreated in the appropriate direction on the *Diplomacy* map. Destroyed units are removed from the map.

All surviving units have their casualties replaced at the end of the *Diplomacy* turn, while new units are built at the end of the build turn. Units lost due to a reduction in the number of supply centers happen during the build turns.

Campaign Experience Levels (Optional)

Units that win battles gain experience; this allows army sizes to grow as the campaign progresses, and other benefits. The following scale may be useful; points are scored per side in the battle, then divided evenly among the players on the winning side, with fractional points dropped. Experience points are only given for winning a tactical battle, not for battles won using the more abstract Diplomacy resolutions.

Per enemy unit destroyed:	3 XP
Per enemy unit forced to retreat:	1 XP
Took an enemy's home supply center as part of the victory:	1 XP

Example: In a fight where two Ogres run by different players drive two infantry battalions off the map, destroying one and forcing the other to retreat, the allied Ogres earned 3+1 experience points, which divided among the two players gives 2 apiece.

Experience points should convert to army boosts. The following conversion rate has been tested and found enjoyable:

1 XP allows you to add points equal to 2.5% of your army's initial value to every army you control. This upgrade happens when the army reaches a supply center at the end of a *Diplomacy* turn. Any new units created will be at this point level.

1 XP allows you to add a number of points equal to 8% of the initial purchase price to any single army. However, if this army is ever broken or destroyed, those points go away forever.

If using the Blackjack method for resolution determination, two additional cards drawn at the end of the Diplomacy phase will consume 1 XP. The experience point can be spent after seeing the cards drawn, but must be spent before any cards are played.

1 XP can be spent to add 10% to the break threshold of an individual army before the start of the tactical scenario.

1 XP can be spent to increase the break threshold for all of your units by 1% as a permanent increase in capabilities.

While experience points are nice, winning the campaign comes from meeting the *Diplomacy* victory conditions.

Tactical Engines Of Choice

The two obvious tactical engines for this article are *Ogre* and *Warhammer 40K*. However, it will also work (with some thought put into scenario creation) for *De Bellus Antiquitatis* or *De Bellus Multitudinis* from Wargames Research Group, *BattleTech* (either *Classic* or *MechWarrior: Dark Age*) or *Mage Knight*, or *StarGrunts* from Ground Zero

Games.

Diplomacy can also be used to set up the basis of conflict in any multi-party game, such as ***Vampire the Masquerade***. Having the Storytellers maintain a ***Diplomacy*** board (where control of supply centers represent the relative influence between the clans) works well in actual play. The key here is to use the conflict over a limited resource (supply centers) as a driving engine behind the plots of the game.

Pet-Antics

by Eric Funk

Pets (BE98) are an often-overlooked roleplaying tool. (Star)ships can have their cat and/or dog. A soldier on an alien planet can befriend an electric squirrel. An adventurer in cyberspace can pick up a cute floating diamond. Pirates can have their parrots. While mainly a comedy, the movie *Fierce Creatures* illustrates different levels of bonds between trainers and animals. Pets can often identify strangers attempting to infiltrate a group, and locate secret passages. Animals can lead the way to new friends, and new enemies. In steampunk, alternate present, or in futuristic campaigns, pet translators may work and allow humans to understand pets' vocalizations. (A web search on "bowlingual" or "meowlingual" will reveal 2002 technology that was mass marketed!)

"Hi, I'm Elle Woods and this is Bruiser Woods"

-- *Legally Blonde*

There are three levels of intensity for which a person can care for a pet:

1. As a Friend or Loved One (Dependent, see p. B38). The character cares about the pet and it follows him freely. This is most common with dogs, as well as a few cats. Intensely trained animals, such as birds and horses, may follow a person willingly after their education is finished. If let loose, it will seek out its owner. Competent pets (with a value of over 75 character points) are indeed Allies (p. B23).
2. While in the proximity of its keeper, this pet may listen to instructions, but given the chance, it's gone. While not hostile to the owner, this pet must be kept on a leash or it will run away, not listening to instructions. One way to model this may be Ally (Unwilling) (p. CI19), or a variant for unwilling Dependents. Treat the dependent as one point value category smaller for cost purposes, the lowest being "0 or fewer." The behavior may be modeled using the "Wild Animals as Companions" section on p. BE102. If it escapes, it may seek a place of refuge, or perhaps attack the owner.
3. The creature is kept in a cage, and may or may not recognize its owner as friendly. This is less of a Dependent, and more of a Sense of Duty or Obsession of the owner (but not both). As 2) above, but it may only be able to follow a few instructions, and then only while in the cage.

The GM must decide how often the pet can reasonably show up in adventures; this will then be built into the Dependant/Ally value. A dog with a doggy door may find the hero at the scene of the crime. The ship may be taken

over while the party is away, and the hero should be worried about the pet. If the pet escapes, the owner is bound by the above disadvantages to seek to recover the creature as swiftly as possible, uninjured. They must also dissuade anyone else from taking violent action against the creature, unless the PC has a greater Duty/Sense of Duty in direct

Examples of "Ordinary" Pets

Source	Name	Species
<i>Alice in Wonderland</i>	Dinah	cat
<i>Discworld</i>	Greebo(DW185)	cat
<i>Harry Potter</i>	Arthur Weasley's Car	car
<i>Herbie the Love Bug</i>	Herbie	Volkswagon Beetle
<i>Lord of the Rings</i>	Bill	pony
<i>The Mummy</i>	Horus	hawk
<i>Nightmare before Christmas</i>	Zero	ghost dog
<i>Reboot</i>	Frisket	cyberspace watchdog
<i>Roughnecks</i>	Sparky	alien electric squirrel
<i>Star Trek: the Next Generation</i>	Spot	cat
<i>Tron</i>	Bit	bit 0/1
<i>Wizard of Oz</i>	Toto	dog

Examples of "Intelligent" Animals

<i>Flipper</i>	Flipper	dolphin
<i>Kiki's Delivery Service</i>	Jiji	cat
<i>Lassie</i>	Lassie	dog
<i>Littlest Hobo</i>	Hobo	dog
<i>Superman</i>	Krypto	Kryptonian dog

conflict to the Dependent/Obsession/Sense of Duty (pet) combination. As indicated in Dependent (see p. B38), there is a significant emotional tie to the target, and if something happens to them, then the progress of the player character can be hindered.

Special Care

"Where's my elephant?"
-- Bart Simpson, *The Simpsons*

Many modern pets have tattoos which identify their kennel and serial number. Cutting-edge technology involves short-range transponder implants (like those beginning to replace UPC codes in the United States). In the future, GPS may even be available to find the pets wherever they are.

Most pets cannot survive on human food alone. A successful roll against Animal Handling (appropriate)-6, Biochemistry-2, Survival (creatures' native terrain), Veterinary (appropriate specialty), Zoology, or Xenology (if appropriate) is required to identify what the pet would need. Pet-specific medicine may be hard to find away from population centers. Out in the wilds, smaller pets can also attract predators that would otherwise ignore humanoids.

Quarantine

"Friends, help! The Guinea pig tricked me!"
-- Dr. Zoidberg, *Futurama*

Commercial travelers between planets may have to show proof of immunizations for their pets with them. In low and ultra-tech societies, this is generally less of a problem for different reasons. In a low-tech society, "border officers" often don't care as long as the animal isn't obviously sick; all that may be required is to pay a toll or tax. In ultra-tech societies, the pets can get a proprietary version of Panimmunity (at increased cost). Panimmunity gives one an "active" immune system, which actively destroys any foreign organisms, thus preventing them from being carriers of diseases they are immune to.

In settings where magic is not uncommon, the Wealthy may be able to purchase collars enchanted with Resist Disease (G54) (wizard's cost of \$63,500). This could server to protect the pet, and perhaps to avoid legislation. Large centers may require all animals brought in be treated with Cure Disease, Resist Disease, or even Sterilize! Suspended Animation may be an alternative if the animal is to simply pass through.

Modern Australia has a one to four month quarantine on imported animals. In Britain, the quarantine could be up to six months if the animal does not have proper medical documentation. At borders, if the pets are refused entry (or are being held for a time), they may be held in a boarding kennel. This is an excellent tool for roleplaying. If the heroes are in the Capitol and hear about a fire at the boarding kennel at the border, they can be torn between Duty and Sense of Duty. Unfair kennels may institute changes in policy that can only be corrected in person. This is also a good place for a super-villain (or unrelated ninjas, or both!) to try to kidnap the mascot while the team is off on business; while not necessarily someone's pet, the loss of the animal should spark a reaction within anyone who has the Duty or Sense of Duty to (the team). Note that many hotels do not allow pets, and the ones that do often set their "pet-friendly" rooms as a subset of the smoking rooms.

Allergies

Cats and dogs can sense those that are uneasy around them and some even become extra "friendly" toward persons who are allergic to them. For great ideas on how to handle allergies check out the Pyramid article ["Allergies"](#) by Andrew J. Sheldon.

GURPS Statistics

"Today, we're going to teach poodles how to fly!"

-- Raoul, *UHF*

Advantages/Disadvantages

Reputation: (Keeper of _____): In a modern, western campaign, someone who is a keeper of a certain type of animal can easily have a certain positive reaction with others who keep the same kind. (i.e.: a kind of brotherhood of cat owners). Others may grant a general bonus if the animal in question is normally only owned by the social "elite", or requires unusually hard to gain permits (e.g.: Only the Crown can breed dragons, and nobles require a permit for each dragon). Mixed reactions will be gained by those known to hold "endangered" species in captivity. Owning some other kinds of pets can easily generate negative reputations, even if the pet is legal. Many people react negatively to the owner of a tarantula while the topic is relevant, even if they are not especially arachnophobic. A reputation as an owner of a particularly vicious animal should get a bonus to intimidation equal to the absolute value of the reputation to the affected party.

Pet as an excuse to gain advantages: There are some who have claimed to gain advantages while learning to care for pets. Some claim to have gained Combat Reflexes, High Pain Threshold, and Toughness from just being cat owners for 10 years. In a less serious campaign this may be a real way to gain such advantages. See *GURPS Goblins* pp. 65-67 for suggestions on how to gain advantages through "mistreatment."

Phobia

Some people take pets as a form of confrontational therapy. Others enjoy keeping animals about them that frighten others. Having a vicious-looking pit bull at one's side, or a tarantula on one's shoulder may count as a display of strength or bloodthirstiness (see Intimidation rules p. B246). Those with specific phobias must roll to resist them before rolling to resist intimidation attempts.

Term	Fear
Zoophobia	Animals in general
Ailurophobia	Cats
Cynophobia	Dogs (or rabies)
Herpetophobia	Reptiles
Ornithophobia	Birds
Ichthyophobia	Fish

For more phobias, please consult the Links section at the end.

Related, there is Brontophobia (see p. B36), which can be activated by medium or large dogs' barking. Animals that are self-cleaning (cats and rabbits) or well-groomed will keep someone with Rupophobia from reacting poorly. A Will roll would be needed before such a person could approach wild animals or even unkept farm animals.

"Then I get Fang." "Fine. Just so's you know, he's a ruddy coward."

-- Draco and Hagrid, *Harry Potter and the Philosopher's Stone*

Skills

Rules for animals learning skills are covered on pp. BE118-119. The skills for the trainer/owner is Animal Handling(specialty). This allows a person to know the moods and tendencies of an animal, and can be used as an Influence skill when dealing with them. Animal Empathy or Beast Kin also help a person relate to the beasts. The only other generic animal skill is Veterinary(specialty), which gives a great bonus if one is familiar with the animal in addition to the optional specialization. This means that someone with 1/2 point in Veterinary(dogs) gets the skill at IQ+7 when working with their own dog, or a dog that "trusts" them.

Adventure Seeds

"If there's one thing a cat never gives, it's a straight answer."

-- The cat, *The Last Unicorn*

McGuffins

- The party is relaxing between adventures, taking one of the heroes' pets for a walk. (Alternately, it could be a Dependant's pet, or even just a valuable pet they are hired to walk.) In the middle, they are beset by ninjas/thugs, who eventually steal all the items of value that the group has with them . . . even the pets' collar! If interrogated, all they know is they were hired anonymously via a drop, and are to drop the valuables the team had in another drop. The temporary location of the group can be given, and the items returned if the place is raided before the scheduled drop. Meanwhile, the mastermind actually intended that the goons steal the pet itself! Unfortunately, the orders were incomplete or improperly decoded.
- A normally loyal Dependant('s) pet has run away.
 - As above, but it's in a forest/jungle area
 - As either above, but there's a reward out so there will be many treasure hunters about.
 - As above, but someone will kidnap the pet if they find it and hold it for ransom.
 - With any of the above, the person who first found it didn't know about the reward and gave the pet to their daughter, a little girl. She and the pet get along very well.
 - With any of the above, but the pet is valuable/ has stolen a valuable/irreplaceable object. Tasers or paralysis beams might damage it.
 - With any of the above, but (yet?) another party is trying to kill it for some sort of revenge.
- In a Supers/Atomic Horror: game, the mascot/Dependant('s) pet has developed super powers and is running amok! It thinks it is only playing but meanwhile is causing havoc.
 - As above, but a villain is taking the opportunity to strike at the opposite end of town.
 - As above, but another villain is simultaneously trying to control the creature.
 - As any of the above, but the powers were given intentionally, but the creature grew out of control
 - As any of the above, but this is not really the animal it is thought to be, it is merely an amplified clone (a popular alien trick).

So, when the ship is set to self-destruct and a slimy alien is killing everything in sight, please remember to take the cat along in the escape pod, too.

Redefining Staves

by Owen K.C. Stephens

One of the most common fantasy tropes is the wizard and his staff. Images of gray-haired adepts carrying gnarled lengths of wood through which they perform mighty magics fill many *d20 System* player's heads when they sit down to make a character. Unfortunately, those using the standard *d20 System* fantasy rules are likely to be disappointed. Staves are among the most expensive magic items in the game, not likely to be available to characters before 8th or 9th level. Even worse, a staff can generally be used a maximum of 50 times, and it then becomes a worthless stick. This is hardly the mighty tool of archmages often presented in fantasy literature.

There are numerous simple alternatives that can be used to fix this problems. The special powers of rods, which can be as cheap as 3,000 gp and rarely have charges, can be moved to staves. Similarly the abilities granted by rings or wondrous magic items could be combined with offensive magic weapon enhancements (remembering the non-magical use of staves), to form useful wizard-friendly magic items that are both cheaper and longer lasting than standard *d20 System* staves.

There are two main drawbacks to these ideas. First, most players are well aware of which magic items do what, and will recognize any simple "retread" of existing abilities. This is fine for some players, but others may feel a lack of wonder or excitement at a staff that's nothing more than a standard magic item in another shape. Second, rods, rings, wondrous items and weapons can be used by anyone, and staves are traditionally spellcaster-only magic items. A staff that allows the wizard to turn invisible and fly may seem like a lot of fun, but it's not so impressive when the warrior can pick it up and use it as well. Again, this approach doesn't present permanent staves as something new and interesting for spellcasters only.

This article presents an alternative by presenting staves as items that do nothing on their own, but instead grant spellcasters access to additional spells they can cast using their own spell slots. Not only does this allow staves to be built at multiple power levels, including low-level characters, it tackles the common objection among *d20 System* wizards that spell preparations are too limiting. Since staves now grant access to additional spells, spellcasters become more flexible. Since this flexibility comes in the form of items, the classes aren't unbalanced, as other characters can gain similar benefits from their own items. The balance of power is maintained, though game play ends up with a different, and more traditional, feel.

This new ability is called spell access. A staff grants access to one or more spells, allowing a spellcaster who has these spells on his spell list to channel stored spell energy into the staff to cast the staff's spell. This works much like a cleric's ability to channel any prepared spell into a healing spell. Only spellcasters who have a given spell on their spell list (whether or not they know it themselves) can use spell access items, and the spell is cast at their level. The spellcaster must use a spell slot of equal or higher level to the stored spell to cast a spell from an item, and makes all decisions regarding the spell (target, area, etc.).

The question of how to price spell access items is a tricky one. All spell pricing begins by multiplying spell level by caster level, but we want the spell to be cast at the level of the character using the staff. Additionally while there are prices for gaining bonus spell castings, spells a certain number of times per day, and even permanent spells, there's nothing quite like spell access.

This article works on the assumption that a fair way to figure caster level price is to average the minimum caster level possible for the spell with 10.5 (average caster level of 1st-20th level, i.e. Non-epic, spellcasters). This tends to make staves somewhat pricey at low levels, and perhaps cheap at high levels, but that seems reasonable. Gaining access to new spells is more useful at lower levels, and less likely to be a big deal at higher levels.

Spell Level	Min. Caster Level	Averaged with 10.5	Final Price × (Average × spell level)
0 (.5)	1	5.75	2.875

1	1	5.75	5.75
2	3	6.75	13.5
3	5	7.75	23.25
4	7	8.75	35
5	9	9.57	48.75
6	11	10.75	64.5
7	13	11.75	82.25
8	15	12.75	102
9	17	13.75	123.75

Since a bonus spell casting costs a base price of 1,000 gp, but has a lower level multiple than our bonus spell access ability, it seems reasonable to use a base price of 500 gp for our new power. This results in the prices listed below. A GM who decides that bonus spell-access is worth more or less than this article assumes can alter any part of these formulas, to arrive at a new set of costs appropriate for his campaigns.

Bonus Spell Access Level	Base Cost
0	1,437.5 gp
1	2,875 gp
2	6,750 gp
3	11,625 gp
4	17,500 gp
5	24,375 gp
6	32,250 gp
7	41,125 gp
8	51,000 gp
9	61,875 gp

The rule of diminishing returns seems applicable here as well. Certainly having access to *fireball* without having to learn or prepare it is useful, but without additional castings per day having access to *fireball*, *fly*, *bull's strength* and *shield* isn't 4 times as helpful, as the caster may run out of spell slots. Matching the progression of traditional staves, it's assumed that the second most expensive spell is worth 75% as much, and all lesser spells 50% as much.

Assuming staves are the only spell access items allowed in a game, they can be created by anyone with the Craft Staff feat. If a GM wishes to make staves more common, he may opt to lower the level requirement for that feat to 9th, or even 5th level. Even with a spell access staff, a caster must have a spell's required material components and spend any experience points required. Spells with focuses can have the cost of the focus added into the staff, in which case no other focus is required.

Below are some sample staves using the spell access ability. Only a few examples are given, as such magic items are little more than a list of spells, and not difficult to develop.

Staves

Battle: A *battle staff* is made of hardwood, banded in iron or steel. Many are also magic weapons (though the cost of weapon enchantments on a *battle staff* are doubled). These staves are carried by warrior wizards to augment their flexibility in combat.

Battle staves give access to the following spells:

- *magic missile*
- *true strike*

Moderate divination, evocation; CL 5th; Create Staff, *magic missile*, *true strike*; Price 5,031.25 gp.

A *battle staff* that is also a +1 magic weapon costs 7,031.25, and a +2 *battle staff* costs 21,031.25

Fire: These staves are made of reddish wood covered with branded runes. They have a slightly charred smell to them. Most such staves are used by war-wizards, though clerics devoted to fire gods can also access some of their powers.

Fire staves give access to the following spells:

- *burning hands*
- *resist elements* (fire and cold only)
- *fireball*

Moderate abjuration, evocation; CL 7th; Create Staff, *burning hands, resist elements, fireball*; Price 18,125 gp.

Healing: *Staves of healing* are clerical items made of ivory, etched in silver, and generally covered in images of healing symbols and runes. Many are kept in churches, to ensure that the sick and injured can be treated, no matter what spells the priests there feel compelled to prepare. Because they are designed for clerics they do not include cure spells, which clerics can always access.

Staves of healing give access to the following spells:

- *detect poison*
- *remove paralysis*
- *remove blindness/deafness*
- *remove curse*
- *remove disease*
- *restoration*

Moderate abjuration, evocation; CL 11th; Create Staff, *remove curse, remove disease, restoration*; Price 110,533.25 gp.

Ice: An *ice staff* is made of white wood, often with strips of bark left clinging in snowflake patterns. These staves are used equally by druids and wizards, though most are created by druid masters for use by woodland guardians.

Ice staves give access to the following spells:

- *sleet storm*
- *ice storm*

Moderate evocation; CL 9th; Create Staff, *sleet storm, ice storm*; Price 26,218.25 gp.

Storms: A *staff of storms* is generally a gnarled shaft of oak or elm, twisted and rough. These potent magic items are held by powerful druids, masters of their own groves or powerful champions of the wilds.

Staves of storms give access to the following spells:

- *obscuring mist*
- *gust of wind*
- *call lightning*
- *control winds*
- *control weather*

Strong evocation; CL 15th; Create Staff, *control weather*; Price 68,595.75 gp.

Trollkiller: A *trollkiller staff* is carried by wizards who want to be prepared if ever attacked by regenerating creatures. Most are made of bone or ivory, and adorned with fetishes of small skulls or feathers.

Trollkiller staves give access to the following spells:

- *acid splash*
- *acid arrow (maximized)*

Moderate evocation; CL 13th; Create Staff, *acid arrow*, Maximize Spell feat; Price 33,328.13 gp.

Utility: These staves are made of common materials, mostly cheap woods though some are copper or bronze. They are carried by spellcasters of all types, though mostly only in cities and safe wildernesses. The staves allow spellcasters to cast common cantrips and orisons without having to prepare them, allowing them to prepare less commonly needed spells.

Utility staves give access to the following spells:

- *detect magic*
- *detect poison*
- *light*
- *read magic*

Moderate abjuration, evocation; CL 7th; Create Staff, *burning hands*, *resist elements*, *fireball*; Price 3953.13 gp.

Pyramid Review

Cthulhu Mash

Published by [Evil Polish Brothers](#)

Design and Graphics by David M. Niecikowski

Rules by John P. Niecikowski

Art by Donald Mickler

Boxed set: 16 geomorphic board tiles; four character cards, character stand-ups, and character plastic stands; 64 monster and generator tiles; 88 objects and traps; 80 health and sanity counters; four dice (2d6, 1d8, 1d10); rulebook (all but the rules in full color) \$30.00

Once upon a time, Chaosium's *Arkham Horror* was the only good way to get your Lovecraft fix in board game form. With *Cthulhu Mash* from Evil Polish Brothers, the mythos come to life once again.

A quartet of adventurers has come loose in time and space. The four antiheroes -- the 1920s gumshoe, the Arctic explorer, the mariner merchant, and the psychotherapist -- have all found themselves in a crazy pastiche of a world. Here, the Plateau of Leng sits next to the Mi-Go moon base, which in turn empties into the Miskatonic University Library. These areas are infested with gateways that are allowing the usual slate of Things Man Was Not Meant to Know out of their cages and into our world . . . and the next . . . and the next . . .

The object of the game is to visit each world (represented by individual tiles), close the gates, and kill any monsters that have been released.

The different characters you can play each have different powers or abilities that help them try to regain control of things. The mariner can parry attacks, and her albatross companion will scout the area. The psychotherapist can drug opponents and can memorize spells quickly and easily. At home in icy areas of the playing field, the explorer can blow up with dynamite anything that offends his sensibilities. And the private dick has a derringer to shoot anything she spots with her increased searching abilities. Their skills, move scores, and basic abilities also vary, and each character has a Health and Sanity (also called Mentality) score for use in combat or withstanding the mind-bending mythos. A character gets a certain number of actions, and these can be used to initiate attacks, use equipment or spells, or move.

Each character has a starting board keyed to their story background. From there, they may pass from one world (board) to another through gates on the edges of their boards. The boards have to match up (gate to gate, so you have a complete oval), so not every edge is passable. This forces adventurers to maneuver the boards; however, given the arrangement of half-ovals, you shouldn't have to worry much about not being able to get around. Even when you get to a board, there are plenty of crates and corners (or cells or teleporters or whatever characterizes that dimension) to get around or hide behind.

The boards are alive with tiles called generators, and through these the denizens of horrible other places pour into our world. Each generator is associated with a certain kind of creature: The Deep Ones come out of the Whirlpools, for example, and the Moon Beasts emerge from the Guard Cells. Dice are rolled each turn to see which generators spawn critters. Monsters come with abilities of their own, and may immobilize, drain, or just plain savage you depending on their tactics. Combat is your die roll vs. the creature's defense score. If you hit, you do a point of damage. Do enough damage and the aberration dies, otherwise you must use another action to do more damage (or get a better weapon).

The better you are at something, the bigger the die you get to use; the mariner gets a d8 in melee, but only a d6 for ranged attacks.

If you can fight your way through the monsters, you can attack to destroy the generator; eliminate enough of them to reach your "Power Up Kills" threshold and you get a power up that will boost your statistics. A destroyed generator also yields some objects of use to the players. These may be simple pieces of gear like nets or handcuffs; weapons such as the spectral razor or the cast-iron skillet; or weird artifacts like the Leng web shield or a magic tome. Books like the *Necronomicon* provide useful spells like Heal (for Health points) or Temporal Dust (for another chance at performing an action), but at the same time some of these may cost Sanity. The generator may also produce traps that, when flipped over, damage or slow the character. Depending on the game you choose to play, dead or insane characters may be out of play or they may respawn on their starting board. It's obvious the game was designed to resemble a video game in many respects.

There are a plethora of optional rules as well. Half-gates may allow one-way passage, monsters could use objects, and Sanity loss from creatures (of all things to make optional) can have temporary or lasting side effects (otherwise Mentality is drained only by spells or other tile effects).

The big drawback to *Cthulhu Mash* is the chaos -- the *Necronomicon* has nothing on this for lack of organization. Information and rules are split up almost wholly without reason throughout the book, and even if players understand things once they've read through them they won't be able to easily reference them during play. Add to this that the rulebook (like the box itself) is a tall, skinny thing that tries its best to snap shut on you and is almost impossible to flip through without it fighting back, and you have some fairly inaccessible rules. There are many types of tiles, several abilities for both characters and monsters, and a lot of subtleties to look out for -- lines of different colors on the board have different effects on movement, each board (heck, most everything) has its own special rules, and a different color of text on a tile may be used to make a one-use item stand apart from one that doesn't require an action.

If you're up to the challenge of deciphering the material, *Cthulhu Mash* is actually a pretty good game. It has a lot in common with the aforementioned *Arkham Horror*, but while both games have horrendously confusing rules, at least *Cthulhu Mash* makes sense once you make it to the other end of the tunnel. Play is challenging and entertaining, and the game has multiple modes of play (capture the flag, cooperative, head-to-head, and the engine works better than average as a solitaire game), plenty of potential for customization, compatibility with other releases in the Mash series (such as *Monster Mash*), and the inevitable scenario creation. Once you've gotten past their writing sins, the Evil Polish Brothers have created an entertaining pastime to fill the void left by *Arkham Horror*.

*Note: This game is a revised version of the company's release **Ultra Vilelence**.*

Pyramid Review

Pax Gladius - Epic Swords & Sandals Adventure

Published by [Deep7](#)

Written by Andrew Kenrick with James Stubbs

Cover by Todd Downing

13-page electronic document; \$3.95

Pax Gladius - Epic Swords & Sandals Adventure is the latest *IPG* title released by Deep7, the games publisher that specializes in little games with a pick-up-and-play quality. The idea behind them is that each of their components fits exactly onto a single page -- one for the players and character generation, one for the rules of play, another for the GM, and then one for each of the game's scenarios (usually five or six per title). The range of *IPG* games to date covers a variety of genres that swing from the semi-historical, such as *Daisho: Samurai Adventure* and *Six Gun: The Game of the Western*, to those inspired by the movies, such as [Full Clip: Hong Kong Action RPG](#) and *Disaster!* Even then, the semi-historical *IPGs* each has a movie-like quality to them in their play and plotting.

It is into the semi-historical camp that *Pax Gladius* falls, being (as the title suggests) the *IPG* of Ancient Rome. Behind Todd Downing's excellent cover, the game is explained as being one of defiance, liberty, and dramatic speeches in the face of dangers such as deadly combat and thrilling chariot races. It is inspired by, and meant to be played in the vein of, films such as *Ben Hur*, *Spartacus*, and *Gladiator*. But since *Pax Gladius* is a *IPG*, it should be played without emulating their epic length, and more with a sense of their epic action.

As with previous *IPG* titles, changes to the game system are more cosmetic in nature rather than fundamental to reflect the genre. They amount to renaming the four core stats, the skills, and the secondary stats. Thus, the Body stat becomes Vigour, Charisma becomes Splendour, Craftiness is changed to Scheming, and Brains becomes Acumen. The skill changes are equally clear and obvious. One substantial change is the secondary stat, Popularity, which becomes Esteem and takes a more active role in the game. In a sense, a character's Esteem becomes a pool of hero or luck points that can be spent to inflict extra damage, gain extra Blood (the game's equivalent of hit points), increase Dodge skill, and gain the favor of the crowd. These rules are particular to the gladiatorial arena, and Esteem expended in this way can only be gained through victories on the sands of the circus, or (of course) successfully playing through adventures for the Glory of Rome. Eventually, gladiators can earn enough Esteem to win their own freedom.

Pax Gladius also changes the name and effect of its Background and Status Tables, which are used to determine a character's origins in a *IPG* game. Here the Background Table provides a character with his status, from Slave and Gladiator up through Freedman and Soldier to Equestrian and Senator. The Provenance Table replaces the Status Table, and this determines where a character is from within the Roman Empire: Rome, Greece, Britannia, Aegyptus, Gaul, and Germania. The rolls on these two tables provide a character with a series of bonuses to their skills and stats.

The new rules also allow for chariot racing, and these adhere to the *IPG* ethos of keep it simple and keep it fast. That said, a *Pax Gladius* GM is encouraged to refer to [The IPG Companion: A Toolkit For Deep7's Beer & Pretzels RPGs](#) should they want to either add more detail to their chariot races or model them using miniatures or toy soldiers.

[SPOILER ALERT!]

Pax Gladius is rounded out with a six-part epic adventure in which the characters have the opportunity to save Rome from being plunged into an unwanted war. Like the excellent [Dime Heroes RPG](#) before it, the scenarios in *Pax*

Gladivs form a mini-campaign, instead of the usual collection of one-shots. It opens with "The Iron Lion," which finds the characters in Rome on their way to the games and suddenly coming to the aid of Senator Veccirius, who is subject to an assassination attempt at the claws of the king of the beasts. Their success is enough to gain them the Senator's patronage, and in "Don't Look Down," they enter his service as bodyguards on a trip over the Alps into Southern Germania. There accompanied by his daughter, Cyrene, the Senator is to negotiate a peace treaty with a local tribe. Upon reaching the destination villa in "Unwelcome Guests," the army takes over protection of the senator and his daughter, and the local General, Activius, sends the party to investigate a local tribe whom he believes will disrupt the negotiations. This is when the characters get their first inkling that not all is as it seems; when they return to the villa, it is in flames, Veccirius is dead, and Cyrene is missing. The chase is on in "A Walk In The Woods," resulting in capture by barbarians in "Death In the Pit" and a climactic denouement with the villain of the piece in "Fort Eyrie."

[END SPOILER ALERT]

Overall, this mini-campaign is a solid affair, and should provide six good sessions of gaming. Yet it is not as pleasing as the campaigns given in *Dime Heroes* or its companion volume, *Jungle Adventures*; really, it lacks the flair, polish, and wit of the excellent [Buggin' RPG: The Tiny Game of Big Adventures](#). This does not mean that a gaming group cannot have fun playing *Pax Gladivs* -- as they should get out of it as much as they put in -- but rather that the GM will have to smooth over its slightly rough edges. Another distracting factor may be its lack of historical detail; however, as a game drawn from movies made about Ancient Rome, players are expected to have watched those rather than to have read Gaius Julius Caesar's *Gallic War: Conquest of Gaul* or *Twelve Caesars* by Suetonius. Of course, copies of either *GURPS Rome* or the [FVLMINATA: Armed With Lightning](#) RPG might prove useful should a GM want both background and game details. Indeed, the campaign given in *Pax Gladivs* could be run using either of those game systems.

It is a shame that the quality of this game does not quite match that of its nicely done cover. This, however, should not be enough of a reason to put off potential purchasers, as this *IPG* does exactly what it should: provide plenty of light, action-orientated adventure, and do so at an attractive price. Which only goes to prove that *Pax Gladivs - Epic Swords & Sandals Adventure* is another welcome addition to the *IPG* family.

Irregular Webcomic

by David Morgan-Mar

Irregular Webcomic

Irregular Webcomic

Dreamation, All I Ever Wanted . . .

"R076: In Nomine; 'The Kensington Codex' by Steven Marsh. You're all Malakim from the militant faction of Heaven. Your superiors have given you a simple job get the demon out of the kid with out harming the child. This should be simple if only the nasty critter would leave. . ."

There are certain dreams I have often enough that I consider them part of my nightmare repertoire. One of them is the classic where I forget I have a final exam in a college class, so I show up completely unprepared, not having the book, and an hour late. I'm also not wearing pants.

This was the first thing that came to mind when I saw the program schedule for [Double Exposure Inc.](#)'s Dreamation 2004 program booklet, the guide to the con for which I was graciously invited as a guest, along with fellow SJ Games associate and previous *Pyramid* wrangler, Scott Haring.

It was an intriguing blurb, and the title provided did, indeed, match up with my adventure's title. But -- as long-time *Pyramid* readers know -- [my adventure](#) had *nothing* to do with *In Nomine*, Malakim, or possessed children. Mind you, I was bemoaning the fact that I didn't bring my *In Nomine* book, since then I would have seriously considered doing an on-the-fly conversion of my *GURPS Cliffhangers* action-packed 1930's archeological adventure to the world of angels and demons.

Anyway, this was the greatest personal mishap that befell me in what was otherwise a fun and entertaining convention.

This was the second year in a row I was a guest at Dreamation, held in East Brunswick, New Jersey. Last year's memories are a bit hazy, owing to an inner ear problem that manifested while landing at Newark's airport, resulting in splitting skull pain that lasted the better part of a week. So it was with lump in my throat that I flew there again this year, waiting and hoping that my ear equilibrium would stabilize upon landing. It did. And there was much rejoicing.

It's always hard to codify these convention reports, since I would at least like to *pretend* that they are interesting to read. As such, I try to avoid excruciatingly detailed travelogues and go more for overall impressions of various aspects that caught my eye.

The Big Picture

Percentage-wise, there were more cute women at this gaming convention than I have seen at quite possibly any other gamerly gathering.

(I'm not even sure if it's politically correct to make such proclamations nowadays, but I noted it to one of the convention hosts, and she nodded emphatically and said I needed to report on this observation . . . all in the name of scientific and sociological research, of course. I also note that, if a jillion gamer guys flock to Dreamation in response to this, the percentages for the next con will be skewed significantly. *C'est la vie.*)

The convention was fairly small, all things considered; the last "official" number I heard was 671 attendees on Saturday, although that number may well have changed before the end. However, the chosen venue was well-suited for the gathering; the Brunswick Hilton had events spread out enough that I never felt claustrophobic, but it was compact enough that the event always felt bustling. The only significant drawback was that events were spread out over two floors; most of the action was on the main floor, but several important locations -- such as the RPGA and LARP headquarters, and the Staff Suite -- were on the floor above. This became especially awkward when the power went out for an hour, sending the middle third of the hotel -- including the elevators to the floor above -- into darkness. It was quite bizarre to see, from within the zone of darkness, active and bustling tables on either side of the blackout.

Forget what you may have heard on television or the movies; New Jerseyans are nice. Everyone -- staff, volunteers, attendees, hotel workers, mutant radioactive pigs -- was very pleasant, helpful, and . . . well, *nice*. The people who run this convention are clearly doing so out of love for the hobby, and that passion and enthusiasm showed.

The convention itself was fairly well-organized and tightly run; outside of the power outage -- which was eventually traced back to a faulty fire alarm -- there were almost no problems. (One volunteer noted there were no problems that I *saw* . . . which made me immediately envision a Black Ops team scurrying around, concealing catastrophes: "We have vomit on the CCG table! This is not a drill! Code Red! No witnesses!") Even the registration table -- the bane of many a convention -- seemed fairly smooth and trouble-free throughout the weekend.

Guests

First off, let me note that I have rarely seen a convention that has bent over backwards as much to ensure its guests were treated right, and *never* seen one where "guests" was so widely defined. Basically, anyone who helped with events for the show -- "important" people such as myself (*ha!*), staff, volunteers, and even all the GMs -- were entitled to visit the Staff Suite.

And what was contained within this mythical Suite?

Food.

Lots and lots of really good food.

Over the course of the weekend I ate chicken fresh out the roaster, turkey stroganoff, a chicken parmesan sandwich, in addition to more "normal" convention fare such as bagels and cereal.

Aaron Rosenberg, chief architect and bottle-washer of [Clockworks Games](#), noted this fact alone should be used as a selling point to attract more industry luminaries: "Don't you understand?!? They'll *feed* you!"

Even the "regular" convention-goers got access to the Con Suite, which contained round-the-clock drinks and snacks, plus daily "Baglemania" events in the morning and two evening sugar-fest events: Ice Cream Dreams and Chocolate Heaven.

Speaking of famous people, I got to spend one-to-one time at this convention with more Interesting Gaming Folks than I ever have at a con. As mentioned before, I finally got to meet Scott Haring, who was as much a gentleman in person as our online interactions. (This is even in spite of his delivering the most stinging zinger of the weekend: "Of course, it's still possible for a piece of writing to spell-check correctly, yet have the words be incorrect. We call those 'Pyramid articles.' ")

I also met the aforementioned Aaron Rosenberg, prolific creator behind and author of the book *Gamemastering Secrets* (which won an Origins Award despite my contribution). He's been a full-time freelancer for four-fifths of forever, and has accumulated much wisdom and knowledge of the inner workings of the game biz which I tapped mercilessly. He also brought his latest collaboration -- his adorable daughter Adara, who did a great job running the Clockworks table, especially given that she's only four months old. Aaron and I are both kindred spirits in the importance of character sheets to an RPG book, a topic about which I'll probably squeeze a column out of at some point soon. Should anyone meet Aaron, be sure to ask him about the "Don't Eat This!" marble anecdote.

I also got to meet some of the current crew of [West End Games](#): long-time Creative Director Nikola Vrtis and new WEG owner Eric Gibson. I didn't get to spend much time with Eric, although he seems to be a nice, smart guy who's eager to learn; he's also living the fantasy that I and some of my friends had speculated several times during college: "If I had a bunch of money, I'd buy the rights to *Torg* and . . ." Nikola is not (as I've always envisioned) a Russian expatriate on the lam from former KGB anti-gaming extremists, but is instead a fellow native-born emigrant of Michigan. (You can always tell the native Michiganders because they tell you where they're from using their hand: "The center of my palm is Lansing, and if you go southwest . . .") Nikola has an enthusiasm for the hobby and material

that is contagious; she's also one of the few minds I've met that seems comfortable writing, editing, and developing . . . all at the same time. I've been a big fan of West End Games for almost 20 years (at least since my beloved *Star Trek III* solo wargame set), and I wish the company's new incarnation all the best; I know I'm looking forward to the two upcoming products (one being the last compiled original "1.5" *Torg* rulebook later this year, the other being the all-new edition of *Torg* coming next year).

Games

Unfortunately, listed games from smaller companies seemed fairly under-attended at the con. Aaron and I had our game sessions scheduled at the same time, and both times we found ourselves looking at each other across our empty tables. I *did* have two people who attended my second session, but they both had *In Nomine* books in hand (despite putting up errata on the sign-in sheet), and only one of them seemed interested in playing a *GURPS Cliffhangers* adventure.

Fortunately, both sessions I was able to defect to other games after deciding that I was going to be short enough players. Thus I got to play a *Vampire* game (which was confusing but still pretty fun) and a *D6 Space* game, run by the aforementioned Nikola. The latter was a lot of fun, although I note that our group fell back on Universal Plan B -- running, shooting, and blowing stuff up -- in a record five minutes.

Finally, the group of us had a late-night impromptu "industry-insiders-only" *D6 Fantasy* adventure, again ran by the ever-busy Ms. Vrtis. This game helped reinforce my near-forgotten enjoyment of the *D6* system (most popularly seen in the original *Star Wars RPG*); anyone who's looking for an easy-to-teach-and-play game that's withstood the test of time may want to check out the current or upcoming incarnations of the *D6* line.

Secret Meetings Of The Hidden Masters (See also: Panels)

Finally, I was signed up to be on three late-night panels, where I would get to share my accumulated wit and wisdom with the teeming millions who would amass for our discussions.

At least, that was the plan. Unfortunately, the other con-goers had different plans, which did *not* involve their attending our panels. With the exception of the "What's Going on at SJ Games?" panel (where a few of our area Men In Black came out for additional reprogramming), none of the others had any attendees.

As a result, the other two panels transformed into industry-insider chat-fests. By far the most surreal was the "How To Break Into The Game Industry" panel; there were 10 people there . . . all of whom were *already* in the game industry. The topic quickly transformed to "How To Break *Out* Of The Game Industry."

I can't express how much fun it was to just chat with others in the biz for an hour or two each night; we made extreme insider jokes, fabricated rumors (most of which revolved around Clockworks Games buying various companies), and commiserated about various things that seem vitally important to us, but would no doubt bore the tears out of The Real World. I also learned a great deal about conventions and what makes them tick, thanks to the patience of Dreamation's PR Director and Hostess Extraordinaire Becca Badurina. In particular I'm fascinated by the relationship between demo folks, game companies, and cons; hopefully I'll get my act together soon and write a column about what I've learned.

In all, I was pleasantly surprised by my Dreamation experience. I was especially impressed by how accessible and open to suggestions the con organizers were (and not just from guests; I witnessed staff members chatting with many people about ideas to make things better next time). It lacks the size or depth of cons such as DragonCon, and events could definitely be a bit better attended (except the LARPs, which seemed quite bustling and well-organized). But the con had a lot of heart, and everyone who attended seemed to have a lot of fun; even an extra four-and-a-half hours stranded in airports (thanks to drizzling in Atlanta) did little to deter my enjoyment of the weekend. If this year's Dreamation is any indication, I can recommend it and other conventions run by Double Exposure, Inc. to those in the northeast part of the U.S. According to the program booklet, they'll be hosting Spring Gathering 2004 (April 23-25), DexCon 7 (July 14-18), and Southern Exposure (September 30-October 3).

And if you're willing to work a bit, they'll *feed* you!

--*Steven Marsh*

The Memory of Ruin

A Medieval Scenario Setting for *Ars Magica* and *GURPS* Part 1: The Lost Castle

by Neil Taylor & Phil Masters

*(Note: This scenario was originally written as part of the recently released **Ars Magica** supplement **Faerie Stories**, but was cut between the first and final drafts. It has been revised and expanded, and has had **GURPS** data added, for this publication. Many thanks to **Ars Magica** line editor David Chart for permission to do this, and for editorial input on early versions.)*

This article describes not so much a scenario or story as a *setting* -- specifically, a ruined castle, somewhere in medieval Europe (or some European-style fantasy land; parts of *GURPS Fantasy*'s Yrth might qualify), where history has left a supernatural legacy. It is suited to PC parties of moderate power, but they will need some magical ability or similar (and not just the ability to throw fireballs) to complete the exploration at all safely. Part 1, this week, deals with the more "material" aspects of the site; part 2, next week, covers the strange innermost secrets.

How PCs might discover this location is a matter for the GM and the campaign. *Ars Magica* characters may be exploring a wilderness area in search of vis; certainly, PCs in many games may simply go out in search of magical materials and secrets, or perhaps even a location for a new castle or wizard's tower. Alternatively, they might be a band of retainers, employed by a lord to help pacify some remote region and to explore its wilder corners. The GM/storyguide might trail clues across the characters' path (perhaps in the form of peasant gossip), and then rely on curiosity and greed to draw them on.

The wood wherein the castle lies has a reputation in surrounding villages for being haunted, and no one seems to venture there much. If characters seek to track down any details, all they get is tales of dangerous natural creatures, and perhaps the odd very minor supernatural monster. There may be hints of some kind of ruin deep in the wilderness, but no one can be found who will admit to having ventured there. In *Ars Magica* games, there are no reports of Hermetic activity in the area, and no recorded claims to vis sources.

GM/Storyguide's Background: Attack and Defense

In truth, there *used* to be human communities in these parts, but they collapsed a long time ago. This then-prosperous land was subject to raids by outland plunderers -- savage "barbarians." They could be called Vikings, except that the castle which features in this story has many features which date from after the Viking era. In a mythic or "Hollywood" game, everyone can happily ignore such anachronisms and say they were Norsemen; in a more realistic historically-based game, or one set in lands not subject to Viking attack, they can simply be defined as "raiders." The descriptions in this text give the key characters Norse-style names, and include one or two Scandinavian-style details; GMs are welcome to change these.

Tennent's Castle

These raiders were a brutal nuisance, and so a strong castle was built to protect a certain village and the surrounding lands, under the leadership of a heroic lord named Tennent. Then a raiding party lead by the fearsome Hrolf Wolfsgrim arrived in the area. Hrolf's men fought a number of minor engagements with the defenders, until they ended up at the castle itself, which seemed impregnable. For a while, they camped outside while the defenders smiled grimly down at them.

The Last Battle

But, one evening, a great storm came up. A wild figure was seen standing before the castle, taunting the defenders as the rain and lightning lashed down, and both sides sensed that sorcery was involved. One huge bolt of lightning struck the base of the keep with such force that the very ground gave way and slumped towards the river. The collapse tore away its foundations, the wall was breached, and half of the keep collapsed, killing many defenders. The raiders gleefully made their way up the rubble slope to the ruins, pouring in through the breach.

Then the two leaders met and fought directly, long and hard; likewise, their followers fought bitterly in the gathering darkness, blood and rain mixing to make the stones slick and treacherous.

The Fallen

The next day, the castle was a hollow ruin, only corpses lying within, raider and defender alike; even the two heroes had fallen, locked in their mutual fury. What few of the garrison had escaped now left the scene, as the castle could no longer be held effectively, and another raiding party was reportedly coming. Those new raiders fell upon the defenseless peasants of the area, so that they too fled. Soon, all was left abandoned.

Now, however, tales spread among folk in neighboring areas that the battle was not over, but that the ghosts of the warriors renewed their struggle every night, and the clamor of battle could be heard from within the ruins. No one wanted to return to the area, and eventually the ruins were forgotten.

Approaching the Castle

Explorers approaching the castle will find that themselves having to push their way through dense woodland, although there are a number of game trails. The woods are rich in deer and boar, actually drawn by a slight but definite magical aura of untamed, wild nature. In *Ars Magica* terms, within a mile or two of the castle, the woods have a faerie aura of 1 -- just a slight sense of oddity, some might say. In *GURPS* terms, there may be small areas of aspected mana (p.M94), giving +1 to effective skill in Animal and Plant college spells. Lengthy investigation *might* find the tracks of two major predators, described below as resident in the castle: the bear and the wyrm. (The wyrm also leaves blighted plants where it exhales.) In theory, a very long and careful search might find the ruins of the village that used to lie below the castle, and the remains of some other cottages nearby, but these have completely collapsed and become so overgrown that this search could take weeks, and in any case it would achieve little.

The Castle Today

The castle is long overgrown. Trees grow in the courtyard, and creepers cover the walls and much of the keep. What is left of the keep tower stands proud of the trees and can be seen from the shallow river valley below the castle, through which the visitors will find themselves moving. (Incidentally, the river broadens to form a shallow lake at one point; the explorers may have to skirt that.) The ditch that once formed a dry moat is now filled with brambles and thorn bushes. In *Ars Magica*, all of this has a magic aura of 1; in *GURPS*, spells such as Detect Magic and advantages such as Awareness or Second Sight will pick up a very faint but unmistakable sense of the supernatural.

The castle was built on a rocky outcrop, which unbeknownst to the builders was faulted and divided below ground. The part of the keep that still stands rests on a firm base; the part that fell rested on a second, smaller rock, which collapsed. The slumped ground now forms an uneven slope with boulders and dense scrub, making the climb up to the ruins difficult. The opened floors of the keep can clearly be seen by anyone approaching. The gatehouse still stands firm, although the wooden gate rotted and has been wrenched open.

GM/Storyguide Information

The crucial point here is that the castle ruins are no longer entirely of this world. Rather, the whole area has become a kind of portal to ghostly "spirit realms" where supernatural forces hold sway. In *Ars Magica* terms, a fairly complex, three level regio lies over the site. In *GURPS* terms, characters wandering round the castle may enter a series of "levels" of "outer spirit worlds" (*GURPS Spirits*, p.SPI25-6), each slightly less connected to mundane reality than the last. Visitors are likely to find themselves moving through different "levels" as they explore, at least until they come to understand the nature of things here. However, a powerful magical creature discovered this place long before them.

GMs/storyguides may also note at this point that, beyond the slope, in the woods, lie the remains of Lodric the Shaman. See part 2 for more on this.

Lower Floors

The Gatehouse

The castle's gatehouse has now been adopted as its lair by a bear which wandered in from the woods. When it first arrived at the castle, it somehow sensed that there might be something of interest to it here, and forced open the rotten wood of the gates, leaving impressive gouges from its claws. Once inside, it decided that this was an appealing "cave"; since then, the mystical aura of the place has led it to grow mighty, while instinct and its keen sense of smell have enabled it to avoid the wyrm.

There is a musty smell around this building, and those who know woodlands will recognize bear spoor. (*Ars Magica*: roll 6+ on Int+Hunt or Survival; *GURPS*: roll vs. Tracking at +1.) The lair contains piles of bracken and leaves as bedding, plus assorted bones of prey animals, droppings, etc.

Ars Magica: Bear of Virtue

Characteristics: Cun +3, Per +3, Str +5, Sta +5, Dex 0, Qik +1

Magic Might: 15

Size: +2

Personality Traits: Ferocious +3, Faithful +1

Attack	Init	Atk	Dfn	Dam	Fat
Maul	+7	+8	+4	+11	+5
Tackle	+7	+4	+1	+7*	+5

*Target must make a Str+Siz roll of 12+ to stay standing.

Soak: +15

Fatigue levels: OK, 0/0, -1/-1, -3, -5, Unconscious

Body levels: OK, 0/0, -1/-1, -3, -5, Incapacitated

Abilities: Athletics 3 (running), Awareness 4 (smell).

Ferocity: +1 (when seeking honey)

Powers:

Mighty Hug, PeCo 15, 0 points: if the bear grapples an opponent, it may crush him for +15 damage.

Vis: 3 Animal in heart.

For more detail, see p.32 of *The Medieval Bestiary*.

GURPS: Oversized Bear

ST: 27 **Move/Dodge:** 7/6 **Size:** 3*
DX: 13 **PD/DR:** 1/2 **Weight:** 1,200 lbs.

IQ: 5 **Damage:** 2d-2 cr*
HT: 14/25 **Reach:** C,1

Notes: This is a 3-hex animal when walking on all fours; when it rises onto its hind legs, it occupies 1 hex. The listed damage represents a paw swipe; the bear can also bite for the same amount of cutting damage at close range. European bears do not usually hug opponents, but this one has learned the trick as it grew; treat this as a grapple in close combat, which can be followed by a bite. Having absorbed power from its surroundings, it also has 4 levels of Magic Resistance. For more on bears, see *GURPS Bestiary*, p.BE8-9.

Characters who find the bear at home may be able to avoid confrontation by cautiously waiting for it to depart, or they might use stealth and skill to catch it asleep and defeat it easily -- or they might blunder into a hard fight. Conversely, if it is away from its lair when they first arrive, it may wander back at any time, and become irate to discover intruders. Fleeing from it into the spirit realms (see below) may be satisfying, but means that it will still be there when they depart, and probably still irritated.

GMs/storyguides can use the bear to advance or slow progress as needed -- either as a distraction, or to nudge the characters along.

Entering the Spirit Realms

The gatehouse is, of course, the main entrance to the castle. It *also* leads into the spirit lands. Anyone walking through the gatehouse in the mundane world, through the outer doors and then the inner doors, will by default enter a ghostly world, unless they specifically concentrate on remaining on the mundane level, or follow a guide who does so. Most animals will remain in the mundane world as they pass through, so a rider or someone following a beast will not enter the spirit lands.

Once they have entered the first "level" of the spirit lands, it should quickly be obvious that something strange has happened; apart from anything else, anyone looking back will see the gatehouse doors intact (and closed). For further details of what they may discover next, see part 2.

Alternatively, the GM/storyguide may determine that the portal to the ghostly realms only opens at certain times -- say, at midnight, or even only on the anniversary of the battle. Visitors could explore the castle, defeat its monstrous inhabitants, and perhaps even begin clearing it out for occupation, only to suffer a nasty shock later. In this case, whether or not the wyrm can usually shift to the spirit realm is likewise optional; it does give the creature a useful edge, and could provide a mystery and a hint which the later discovery of the spirit realms would explain.

The Open Keep

The scrub and brambles on the rubble slope grow up to the breach in the base of the keep. A character who scrambles up the slope can walk freely into the kitchen, climb up to the Great Hall, or scramble on into the courtyard.

The Kitchen

The chamber that makes up the ground floor, actually below the entrance level, was once the keep's storeroom and kitchen. The stairs from the kitchen are built into the stone walls and are still firm; the ceiling (that is, the floor above) is weak and near collapse. The smoke vent for the kitchen fire leads up through the walls, and joins the flue from the central fireplace within in the thick wall.

Unfortunately for explorers, a great wyrm has made its lair in here, slithering out at night to hunt in the woods. During the day, it is usually asleep in the darkest recesses of the kitchen; however, it has very keen senses, and will hear most activity and waken. There is a permanent foul stench from its breath (although the miasma is not actually poisonous). It will thus be a formidable threat in daylight -- and a group which chooses to remain around the ruins after nightfall will be in *very* serious danger. Its emanations have polluted the well in the courtyard and withered all the plants in that

area.

Ars Magica: Great Serpent (Land Wurm)

Characteristics: Cun +2, Per +2, Str +9, Sta +5, Dex +0, Qik +1

Magic Might: 20

Size: +4

Personality Traits: Cruel +3, Greedy +3

Attack	Init	Atk	Dfn	Dam	Fat
Bite	+8	+8	+3	+15*	+5
Tail Grab	+9	+7	+2	+13**	+5

*Poisonous bite: victim must roll Sta 9+ or lose 1 Fatigue level; in the next round roll 6+ or lose another Fatigue level; in the 3rd round roll 3+ or lose another.

**The Wurm will try to immobilize one opponent with its tail (see *Brawling Maneuvers*, *Ars Magica* p.169) while biting another; anyone immobilized will be bitten on the next round.

Soak: +20

Fatigue levels: OK, 0/0/0, -1/ -1, -3/-3, -5, Unconscious

Body levels: OK, 0/0/0, -1/ -1, -3/-3, -5, Incapacitated

Abilities: Athletics 3 (burst of speed), Awareness 3 (keen hearing), Hunt 2 (men)

Ferocity: 4 (when hunted)

Powers:

Poisonous Touch: MuAq 40, 0 points: the touch of this creature renders any water it comes in contact with unfit to sustain life, as per the spell *Vile Water of Sterility* (*Ars Magica* p.115, but target reduced to Individual).

Foul Breath: CrAu 10, 0 points: the breath of the serpent is like the spell *Stench of Twenty Corpses* (*Ars Magica* p.118). Those within 10 paces must roll Sta 6+ or act with a -3 penalty on all rolls. Anyone who botches the roll vomits and is incapacitated for (10-Sta) rounds.

Breath of the Basilisk, PeCo 40, 5 points: the Serpent can expel a cloud of poison, roughly 10 paces long by 3 paces wide. Those within the cloud take +20 damage (Armor only offers half protection).

Vis: 2 Animal in body, 2 Perdo in fangs.

GURPS: Medium-Sized Legged Worm

ST: 44 **Move/Dodge:** 6/7 **Size:** 10

DX: 13 **PD/DR:** 3/4 **Weight:** 3,000 lbs.

IQ: 13 **Damage:** 2d+1 cut

HT: 15/48 **Reach:** C,1

Notes: The worm can breath a cloud of poison; treat this as two levels of the Venom advantage (p.CI71), with the corrosive option, the "Cloud of Mist" enhancement, and 5 levels of the "Costs Fatigue" limitation. (This poison also withers plants, poisons wells, and so on.) It also has the advantages Alertness +2, Awareness 1, Extra Legs (4), High Pain Threshold, Immunity to Disease, Immunity to Poison, Magic Resistance 4, Nictating Membrane 2, Night Vision, Temperature Tolerance 6 (2 times HT at bottom of range, 4 times HT at top), and Unaging. Of course, it also has the disadvantages associated with its horizontal posture and lack of functional hands. It can do the listed damage with either claws or teeth, depending on what is convenient at the time. Its IQ reflects its perceptiveness and evil cunning; despite this practical intelligence, it is essentially animalistic. It may manage some clever tactics, but it has no real strategy, and it will flee from pain, chase after food, and so on. It will usually breath one or two clouds of poison at the start of any fight, but as this tires it slightly, and it enjoys maiming foes, it tends to close quickly.

The wurm is a slim, sinuous beast, some 30' long, with short clawless legs. Its scales are black, with an oily sheen. It can navigate the familiar basement area even in complete darkness; furthermore, as a magical native of the area, it can see between adjacent spirit-realm levels, and freely shift between them, although it doesn't normally move beyond the first, ghost-haunted "level." (Its magical power renders it immune to the ghosts' attacks.) It is cunning enough to use

shifts between levels for tactical advantage, moving secretly and invisibly before shifting back and attacking by surprise.

The Courtyard

Characters can enter the courtyard from the rubble slope; the keep wall is fallen, so one can also walk into the keep storeroom and kitchen. Trees and shrubs now fill most of the space, except around the well; the wyrm has rendered the water oily and foul, and what little vegetation struggles to grow nearby is warped and twisted. Trees overhang the walls, and creepers cover the stonework, making them easy to climb.

The courtyard once held stables for cavalry horses, sheltered cattle in emergencies, and provided a workspace. There were a number of wooden and stone buildings against the walls, but these were torched by the raiders; what didn't burn has rotted away.

A narrow staircase leads up the side of the keep to the great hall. The keep door stands, and has some strength left in it: it can be forced open by brute strength (*Ars Magica*: combined Str roll 12+; *GURPS* total ST 30), or broken down.

Upper Floors

The Great Hall

The hall of the keep is two stories (20') high, and had a wooden gallery around the upper portion. As well as providing space for entertainers, this provided access to arrow slits in the outer walls.

Half the outer hall fell when the keep side collapsed; characters can now just scramble in over the rubble. The doors out to the inner courtyard still stand -- the invaders entered through the gaping hole in the walls!

The floor is treacherously rotten, as rain comes in through the roof, and drips over and through the boards of the upper and lower floors. Anyone walking across may collapse a portion. (There are stone pillars beneath, so the floor will not all fall at one time.) An agile character may be able to leap aside; in *Ars Magica*, make a Qik+Athletics roll of 9+ (6+ if the character's advance is cautious and prepared), in *GURPS* make a roll against DX-2 or Acrobatics (DX or Acrobatics+2 if the character's advance is cautious and prepared). Otherwise, the character plummets into the lower levels. The gallery timbers, and the stairs leading to it, are also rotten.

A stone staircase within the wall leads down to the kitchen (the wyrm's lair); another lies behind a stout door and leads down through the wall (beyond the kitchen, and not communicating with it) to the cellar, which is cut into the solid rock. A third staircase spirals up through the walls to the upper floors. The rotten floor must be crossed to reach these.

A large fireplace has a smoke flue leading up through the wall; higher up, it joins the flue from the kitchen. A few chairs, benches and the great tables still remain, along with other non-portable or low-value items. Any portable goods were removed by the survivors when the keep was abandoned.

The Cellar (Below the Kitchens)

A small chamber at the base of the staircase from the Great Hall has two doors of stout oak. The wood has swollen and jammed. One door opens to a passage which leads to the crypt, the other to the cells.

The Crypt: Bones of past inhabitants were interred down here. The place feels solemn; there is Christian imagery carved into the walls, and statues of local saints in niches. In *Ars Magica*, there is a dominion aura 2; in *GURPS*, appropriate spells or advantages may detect a subtle sense of lingering holiness, and priests may even receive a *small*

bonus to supernatural powers.

The Cells: Four tiny cells (5' square) held prisoners; a fifth, larger (5' by 10') cell was used for other purposes (e.g. interrogation).

The Treasure Chamber: One of the blocks of the stone facing of the chamber pivots into the wall. The secret chamber beyond held the castle's most precious valuables. Any silver has corroded away in the contaminated damp which runs down the walls, but some gold coins and bars remain, to the value of perhaps 15 pounds (1.5 lbs weight of gold) in *Ars Magica*, or \$1,000 in *GURPS*.

The Upper Floor Chambers

The floorboards on the upper levels are even more precarious than those below; there are gaping holes in places. These living areas were divide by curtains and light partitions; these are in *very* poor condition. There are abandoned traces of occupation -- bedrolls and chests of old clothing (some left gaping as departing people took the good stuff). The stairs in the walls lead down and up; a doorway connects through to the outer tower.

The Lord and his lady had a chamber up here, the solarium, while the rest of the upper chamber provided space for the knights and privileged among the troops; the rest slept in the Great Hall.

The Roof

On the roof, there are crenellations, and three remaining towers (10' across) at the corners. (Originally there were towers at all four corners.)

Two supernaturally large owls have a nest up here, inside one of the corner towers, now covered in bird lime and owl pellets. They have raised chicks in the past, but none are present just now.

Ars Magica: Great Owls

Characteristics: Cun +2, Per +3, Str 0, Sta 0, Dex +1, Qik +1

Magic Might: 10

Size: -1

Personality Traits: Secretive +2

Attack	Init	Atk	Dfn	Dam	Fat
Beak/Talon	+5	+5	+6	+1	+0

Soak: +3

Fatigue levels: OK, -1, -3, -5, Unconscious

Body levels: OK, -1, -3, -5, Incapacitated

Abilities: Athletics 4 (flying), Awareness 3 (seeking prey), Hunt 3 (swooping on prey), Stealth 5 (at night)

Ferocity: 4 (those lost at night)

Powers:

Night Vision: +4 to Per when using vision at night.

Vis: 2 pawns Intellego in the eyes.

GURPS: Giant Owls

ST: 12 **Move/Dodge:** 12/6 **Size:** 1

DX: 14 **PD/DR:** 1/1 **Weight:** 100 lbs.

IQ: 4 **Damage:** 1d-1 cut

HT: 12 **Reach:** C

Notes: As nocturnal hunters, these creatures have Night Vision and Stealth-14. Their sight and hearing are both excellent; all sense rolls are at 14. Their move rate assumes that they are flying; on the ground, their Move and Dodge are both reduced to 2.

These owls are fairly dangerous in a fight, and prone to defend their nest and each other, but are basically just animals, and will flee rather than fighting to the death. They like shiny things, and have accumulated a number of trinkets: shiny stones, bright feathers, and a curious ring, which is made of iron, free of rust, and bears a design of rowan leaves.

Ars Magica: Roll Herbalism 3+, Faerie Lore or Legend Lore 5+, Survival 7+, or Area Lore 9+ to recognize these leaves. The ring has non-Hermetic magical powers against the Fae: add +5 to Penetration and +2 to Natural Resistance when opposing faeries. Also, any Fae nearby will feel a great irritation at its presence, much worse than normal iron: they will treat the bearer as having Faerie Enmity (-6 reactions, extending to all companions). Treat the ring as having MuVi 20 powers for the purposes of investigation in the laboratory.

GURPS: Roll vs. Herbalist at -1 or Naturalist to recognize the leaves. If the wearer uses magic (including other magic item effects) against faerie beings, they make any resistance rolls required at -4, while any faerie using magic or spell-like powers against the wearer makes any required rolls at -2, *and* the wearer makes any resistance rolls at +2. However, any faeries nearby will feel a great irritation at the presence of the ring (much worse than they may feel at, say, normal iron): they will react to the bearer and all his companions at -5.

Next Week . . .

Part 2 of this article will describe the spirit realms into which our heroes must venture to discover the remaining secrets and treasures of the lost castle.

Joys of a Good Vendetta

Alternate Views of Enemies in *GURPS*

by Daniel Phillips

So, your party is full of people with checkered pasts who are busily leaving a trail of bodies (and enemies) in their wake. You, as GM, are discovering that everyone has an arch-nemesis who wants one of your valiant questers (or your ignoble thieves) dead. What to do?

These incessant battles seem to be detracting from the adventure, leaving little time for a plot, but rewarding the deadly players with 40 extra points for killing their enemy goes against the very core of a good GM's being. Likewise, forbidding your friends from taking an enemy, thus robbing you of a chance to mete out punishment and pain, as any GM should, and cheating yourself of the potential shot in the arm to bolster a lagging campaign, is unnatural.

What is a GM, an agent of chaos, the harbinger of ills to do?

First, you must remember three very important things when designing and playing an enemy:

Avoid the god complex. (or, "**Blood makes the grass grow. Kill, kill,kill!**") Many GM's think they must crush the insignificant fools who would dare oppose them, and so design an enemy that can dazzle and destroy their foes with ease, on the first encounter. Such enemy carries with them the blessings and aid of the god of their world, and a nigh-unbeatable collection of combat skills. There is no need for this! Everyone knows you can throw enough brute force at the party to crush it utterly. The GM is half-referee, half-storyteller, half-tactician, half-mediator, and 100% god in his world.

Instead of creating the ultimate warrior, make an intelligent, crafty, interesting, and -- yes -- formidable opponent that you can rely on to make your game fascinating for many games to come. This brings us to the second point.

Avoid the Last Battle. (or, "**Hello. My Name is Inigo Montoya. You killed my father. Prepare to die.**") You may not plan it, but inevitably, there will be a reckoning between foe and player. What will happen? Who will die? The answer is that no one must die. An enemy is as much a true disadvantage as blindness, and to allow even the most resourceful, creative player the opportunity for 10 to 40 free points for one kill is simply unfair. Certainly battle is likely, and death possible, but always there must be the possibility that either party member, or the foe, may escape. If the enemy fails, perhaps he has an ally who will take up his cause, or perhaps he does enough damage to force a physical disadvantage upon his foe. In a high tech world, or a magical campaign, the second option seems to pose a temporary inconvenience at best. It might be better avoided. You may also allow your friends to buy off the disadvantage, but I am yet to find a player who wished to do so.

What is my motivation? (or "**There can be only one!**") Enemies are people too. Vicious, bloodthirsty, and often ill-tempered; all in all, not that different from the party! They may wish the death of their sworn enemy, or their intent may be to ruin the player's life first. They may harass and interfere with them at all turns, hunting them down. Not every enemy encounter must be an assassination attempt. Perhaps the deadly assassin, not wishing to provoke a fight in which he is outnumbered by the party 7 to 1, simply sits down and has a "friendly" drink with his nemesis in a tavern. He may be content to frighten him for now, knowing he's safe because the authorities would intervene on his behalf should a fight start. Perhaps he poisons his foe's drink, or a flunky does it in the kitchen; perhaps not. There's only one way to know for certain, and to avoid becoming predictable, and that's by throwing it into the realm of chance.

Here are some optional rules to use in order to get the most out of your vendettas. First, as per *GURPS Basic* rules for enemy appearance frequency, the GM will roll to see whether an enemy will appear during this game session. If so, the GM will roll once more, on the table listed below, to determine the nature of the enemy's appearance.

Die Roll	Enemy	Appearance Type	Incidental Interaction	Intentions	IQ Roll
3	Direct	Confrontational	Collateral Damage	Combative	Yes
4	Direct	Discreet	Collateral Damage	Damaging	No
5	Direct	Confrontational	Immediate Group	Combative	Yes
6	Direct	Discreet	Immediate Group	Damaging	Yes/No
7	Direct	Confrontational	None	Deadly	No
8	Direct	Discreet	None	Deadly	No
9	Direct	Conversational	None	Warning	Yes
10	Direct	Visual	None	Ominous	No
11	Indirect	Visual	None	Ominous	No
12	Indirect	Conversational	None	Warning	Yes
13	Indirect	Discreet	None	Deadly	No
14	Indirect	Confrontational	None	Deadly	No
15	Indirect	Discreet	Immediate Group	Damaging	Yes/No
16	Indirect	Confrontational	Immediate Group	Combative	Yes
17	Indirect	Discreet	Collateral Damage	Damaging	No
18	Indirect	Confrontational	Collateral Damage	Combative	Yes

The Enemy column dictates whether the player's enemy will act personally (direct) or will send some one he has hired or influenced (indirect) to do his dirty work. The Appearance Type column shows the type of appearance the enemy will make. On a confrontational roll, the enemy or his agent will seek a fight, or make a direct assault of some sort upon the character. On a Discreet Roll, it will be an assassination type attack, such as poisoning, a sniper attack, or similar tactics. Conversational appearances simply mean that the situation is not right for any sort of combat, so the enemy merely lets his presence be known by directly speaking to and warning the player that he's there. On a Visual appearance, the player spots the enemy, but is not certain if he himself was seen.

Incidental Interaction is simply how many people are affected by the appearance. Collateral Damage means that anyone and anything in the vicinity is affected by the enemy's attack. Immediate Group means that the entire party, and any others in the general area, are at risk. None means no one is at risk other than the character who is the enemy's target. Only during Visual or Conversational encounters is there no danger. And a Discreet encounter may pose as Conversational or Visual. After all, what better time to poison a person than when you're sitting, drinking with them?

The Intentions column describes the purpose of the encounter. Combative encounters are those in which the player will need to take active measures to stay alive. Damaging encounters are those which, if sense rolls, IQ rolls, or resistance rolls are missed, and the player doesn't guess in what form the inevitable attack will come, the person attacked will be hurt, and possibly killed. Deadly encounters are those in which there will be no interference (back alley duels, kidnappings, etc.) and the confrontation will be only between arch-enemies. Warnings consist of threats and bluffs. No one is injured unless the player initiates it, and circumstances are stacked to discourage conflict, (Such as, the presence of police officers, soldiers, guards, etc.) Ominous encounters are when the player is made aware of his enemy's presence. He cannot know if this is the extent of the encounter or not for the remainder of the game session, though he will remain on guard.

The IQ Roll is made by anyone injured in the battle, in order to tell who the intended target was. If there is an attack in a tavern, for example, and a 3 is rolled, then after the attack is over, the GM rolls one roll for the average IQ of the NPCs in the tavern. If the IQ roll is made, the player who was the intended target is at minuses to his reaction by any patron equal to how much the IQ roll succeeded by. If any NPCs are in the party, an IQ roll must be made for each of them as well. If the enemy is a secret kept by the player, the other members of the party may roll as well. (If it is not a secret, then no roll is necessary.) This is the case on a roll of 6 or 15...the attack was discreet, but effects the entire party. IQ rolls are only made if the party is unaware of the fact that one of their number has an enemy. Once the enemy's appearance has been determined, the GM must roll against the enemy IQ, to determine if the enemy, or one of his hirelings, spies out their intended victim successfully. On a success, the attack/meeting proceeds normally. On a failure, the enemy has temporarily mistaken someone else for the player, and any Discreet attacks that do not cause collateral damage will automatically miss. Any secondary attacks the GM may initiate, however, will be at the correct target: the enemy has realized his mistake.

After the battle, if the chart indicates an IQ roll is required, the NPCs who have been affected, or have heard the conversation, must make a reaction roll (one roll for the entire mob) and the player is at minuses equal to how much the IQ roll succeeds by. If the IQ roll fails, (one for the entire mob) then no reaction roll is required.

Example

Benny the Blade has an enemy, Sammy the Shiv, who appears on a dice roll of 6-. At the start of game play, the GM rolls a 6, thus insuring that Sammy will appear. The GM then rolls against the enemy encounter chart, rolling a 3. The encounter will be combative, cause a great deal of collateral damage, and require others present to make a die roll vs. IQ to realize that Benny was the intended victim.

The GM allows the game to proceed normally, until Benny the Blade, and the rest of the party, Two Ton Tommy, and Louie the Loser, enter a restaurant on the 30th floor of a skyscraper where they had been sent to fetch a package.

While they are waiting, the GM requires hearing rolls, which all make, and turn towards the plate glass windows in time to see Sammy the Shiv behind the stick of a helicopter, aiming its guns at them.

There is mass bedlam, as they all duck behind tables, as Sammy opens fire, wrecking the place. Sammy failed his IQ roll, so he first takes out a waiter he thought was Benny, before returning his guns on his arch-enemy. Benny dodges most of the bullets, is hit by several, which, luckily for him, hit him in the chest and are absorbed by his bullet-proof vest.

Sammy escapes, as Tommy and Louie pull out their pistols and return fire, at which point the GM rolls against the patrons in the restaurants' IQ, and fails. No one knows why he attacked, or who he was after, another lucky break for Benny! The restaurant patrons are very angry, and would love to get their hands on the intended target of the attack. Nonchalantly, the trio claim their package and beat a hasty retreat, another job completed.

After-Action Reviews

by Ryan P. Macklin

Often, Special Forces and covert operations/espionage games operate with the idea that the end of the mission or getting home in one piece is the climax of the game, perhaps with a little debriefing. Most of the time that is where the game ends; gamers usually don't want to reenact their boring real-life desk jobs by writing reports. However, writing an After-Action Review can be fun, as the players are documenting the events of a particular mission, their exploits and craftiness, as well as giving their take on how the mission went down.

The content and purpose of an After-Action Review (AAR for short) is sketched out in *GURPS Special Ops*, page 99. That section also includes the type of information that is generally contained in one, so you may wish to refer to it in order to learn the sort of details to include. The focus of this article is on how to use player-written AARs in a game.

Functions of an After-Action Review

An AAR has several uses: Collecting intelligence to assist with related operations, aiding in the success of similar operations in the future, and evaluating the performance of the team, both collectively and individually. These are the reasons why the characters of the game world would write them. However, when engaging your players in this activity, there are other in-game and out-of-game reasons for them:

Gives a feel for down time. The bulk of many special operations game sessions is planning before the mission or action during the mission, especially when the GM has to incorporate the various tactics the players use into the game, such as splitting up, doing recon, or performing specialty tasks (setting up a sniping position, perhaps, or wiring a bridge with explosives). Doing things like writing reports, having lengthy debriefings, and going to get some chow and shut eye are often off-camera. Writing an AAR can give more of a feel for the game world and lend a bit of realism -- characters have to justify their actions, and they have a life outside of dodging explosions and gunfire.

Records a story for posterity. Players and GMs may look back fondly at the reviews from a Black Ops dinosaur hunt campaign when stumbling upon them months or years later. Perhaps they may decide to run a sequel or a spin-off, or just enjoy passing them around for old time's sake.

Allow for subtle secret communication. If you have one person playing a character whose true identity or purpose is a secret to the rest of the party, he could write up a review for his Secret Masters after each mission. Having written reviews the player hands to his superiors can also help determine what information he feeds them, rather than relying on memory or on assumptions about what the character tells. In addition, the character can deliberately leave out information and the GM will know to not feed those facts to the NPC superiors, such as omitting the location of a party member that the operative is growing attached to.

Gives opportunity to keep secrets from superiors. If the operatives decide that they need to keep a portion of a mission a secret -- such as not reporting that the Thing Lurking In The Shadows slaughtered half the team in fear that they would be locked away as murderous psychotics -- then the players can roleplay that in their reviews, and the GM knows to only include any information in the reviews in his mental "what the superiors know" checklist.

Props for a later game. Written reviews can be used as props when the GM plays a superior who wants to question the characters about an inconsistent story. This can help add drama or tension if the players are trying to keep an aspect of the mission secret. What if one of the agents in the "secrets" situation decides not to hold to the pact? Alternatively, a new campaign or different game can involve a mission to rescue an operative by including parts of his reviews in the Operation Order. In this case, holding onto past AARs is good for future game fodder.

Settling disputes between characters. When a mission doesn't go as planned, the characters and their superiors will look to see what went wrong and who, if anyone, is to blame. Rather than waiting until the debriefing, sometimes

arguments will take place in the middle of a game, such as when the commander gives an order to retreat. An AAR gives the character the ability to voice his disagreement with the order to his superiors while still following orders. It also allows the character to state why he disobeyed orders if necessary. A well-written and well-reasoned AAR could affect the superiors' judgment upon that character -- the commander's superiors could reason that the order was ill-advised, and may forgive the character for disobeying the order.

Settling disputes between players. Tactician players can sometimes get into heated arguments about the position of their characters and the situation they are in when something goes wrong. If Agent Zulu argues about Agent Rice's poor decision to fire a snap shot at an escaped prisoner running right next to Zulu, and an argument breaks out about distances from each character, skill scores, and firing penalties, it's up to the GM to get that resolved so the game can move on. Telling the players to remember it for the AAR (and to remember to keep it in character) can help resolve that argument for the time being without making either player feel like he has no say in the matter.

How to use After-Action Reviews in your game

First, decide if you want the reviews to be optional or mandatory. In general, optional is the best way to go if you want to introduce the idea to your group and don't want to penalize anyone who might not be interested or feels daunted by the idea. Mandatory is appropriate if you want to heavily involve players in the downtime of a character or if you have a behind-the-scenes plot you want the players to report about, such as the existence of an alien conspiracy.

If you use AARs as an optional part of the game, you might entice players with a small reward, such as a character point or two to spend on skills. This will initially motivate players to write reviews, and then seeing the AAR's effects in action might continue that motivation. If a player does not write one, then assume his character wrote one, but give it no special benefit or penalty.

If you are planning to have AARs as a mandatory part of the game, you will want to talk to your group and make sure they are comfortable with the idea. Many gamers use gaming as a retreat from school or work, and adding a "homework" factor into the gaming experience could be unpleasant for some people, so you should make sure their reports have an impact on the game that they can feel, above and beyond character point awards.

Once you incorporate AARs into your gaming, you must decide what to do with them. There are a few things to consider:

What format do you want the reviews in? You should decide whether or not you want to set a strict format for the documents. A simple narrative essay is easy for some people to write, particularly those who are not used to writing under strict guidelines. Others will prefer to follow a template and insert information accordingly. If you decide on a required format, you should provide the players with a blank copy and maybe an example AAR to help them.

How much access do the other players and characters have to another operative's review? In some cases, especially if you are involving your players in secret subplots, you will not want to show the reviews to the other players -- both they and their characters are in the dark, unless a player specifically shows the others, either in or out of character. In cases like this, it is quite possible that the character would distribute false AARs to other team members, to sow confusion or to cover up something.

At other times, you may wish to show the players what everyone has written, to give them ideas for future reviews and to let them know how others viewed the adventure. You should make it clear whether this is in-character knowledge or not. If you decide it is not in-character knowledge, be sure you aren't putting a burden on your group by feeding them too much information they aren't able to act on.

How will you reward your players? A small character point or experience point award can be a fun enticement, especially to get things started. Other possible rewards include promotions or decorations for characters who have their exploits written about (especially by other characters), or add to the group's reputation with colleagues and favor with superiors. Such advancement could be used to activate subplots, such as special high-profile missions or access to experimental gear. ("Did you hear about how Team Six handled that operation in Brazil? They might be able to help

test out the X-220!") Good individual and team rewards make the experience worthwhile, and may cause the players to put more effort into future reviews.

One thing to keep in mind when rewarding players is the content of the review, not the player's writing skill. Unless you want to treat it as such, this is not an English class. Many people may be able to play characters well but lack strong writing skills. While it is fine to reward players who go over the top in reviews, just as they do in the actual game session, remember to not discount those who are making serious efforts to also play along.

Other ways to do AARs

The idea of an After-Action Review can be easily molded to fit other campaigns. In a World War II infantry campaign, characters could be writing letters home to family and friends, instead of or in addition to AARs. In this case, they wouldn't be rewarded by superiors for what they write, but it would further their character immersion, and they may be able to get special rewards such as Mom's Homemade Cookies (which could be useful for bartering) or just a good feeling hearing that your brother is alive and well after his plane was shot down in the Pacific (which could give the character +1 to Will rolls for morale).

A horror or mystery game could involve people writing in journals, sharing the information and trying to uncover a crime. This is especially useful for tying together two or more separate groups running in one meta-campaign -- such as tracking down a mysterious cult and sharing the information with each other from different parts of the world.

Another idea is to change the format of the After-Action Review into a news article. In a pulp-era UFO chasing campaign, players could be from a fringe press that publishes articles on strange phenomena. Players could write articles after their adventure, and there would be a definite reward in the form of payment if the article is published. The opportunity to play a grizzled scheming editor like Spider-Man-nemesis J. J. Jameson can be fun for players or GMs. This sort of format lends itself to immersing the player in the character's day-to-day professional life, rather than just a series of adventures they are called to go on. Having articles published could lead to fame and fortune, or the wrong kind of attention from the wrong kind of people.

An After-Action Review is not suited for every campaign, such as epic fantasy games, where the heroes continue from one day to the next on their quest rather than returning home and writing reports for their superiors (especially when some of those characters may not even be literate). Nor is it suited for every group. However, there is a lot of fun to be had with this additional layer of gaming, and a campaign can be greatly enriched with After-Action Reviews.

Figureheads of Wondrous Power

Seafaring Magic Items for the *d20 System*

by Steve Honeywell

An average ship has many distinct parts, but perhaps no part is more distinguishing than the figurehead. The figurehead helps give the ship its personality and helps define it to others who see it. Figureheads are more than simply a decorative piece of sculpture hanging on the front of the ship; they are, for lack of a better term, the central element of a ship's personality. Like a good hood ornament can complete a stylish automobile, the right figurehead makes a ship truly distinctive. While the figurehead is not important to the overall workings of the ship, having the right appearance and making the right statement can make all the difference.

If enchanted, a ship's figurehead becomes a much more integral part of the whole. A magical effect placed on a figurehead affects either the entire ship or all of the rightful occupants of the ship. A ship can have only one figurehead at a time, and the magic on the figurehead works only while it is attached to a ship. Adding or removing a figurehead to a ship requires a Profession: Shipwright or Craft: Shipbuilding check with a DC of 15. Actually creating the figurehead requires a Craft: Shipbuilding or Craft: Woodworking check with a DC of 20, although any finely-carved figurehead can be enchanted.

Because the magic that most figureheads are imbued with covers a substantial amount of area (an entire ship and all of its contents and passengers), the caster level required to make this items is significantly higher than for similar, smaller items. The following samples are but an example of the possibilities that can be explored with enchanted figureheads.

Blessed Figurehead

This item effectively confers the benefits of a *bless* spell to all rightful occupants of the ship. These effects last only so long as the person is on the ship in question, and disappear as soon as he leaves the ship. This item is most useful for defending the ship from boarders, since the benefit is not conferred on anyone who does not have a right to be on the ship. Usually, *blessed figureheads* are carved in the shape of an angelic creature holding either the holy symbol of the creator or brandishing a large sword.

Caster Level: 8th

Prerequisites: Craft Wondrous Item, *bless*

Market Price: 12,500gp

Figurehead of Lesser Avoidance

This figurehead is favored by captains who wish to remain anonymous. Many military ships feature figureheads of this nature, allowing them to move through the water without being located by enemies. Any ship featuring this item cannot be viewed through any form of magical scrying, although it can still be seen normally. Anyone attempting to scry the ship, any of its crew or passengers, or any items on the ship must succeed at a caster level check against a DC of 20.

Figureheads of lesser avoidance tend to be of blindfolded or otherwise sightless creatures.

Caster Level: 12th

Prerequisites: Craft Wondrous Item, *nondetection*

Market Price: 50,000gp

Figurehead of Greater Avoidance

Much more powerful than the weaker model, the *figurehead of greater avoidance* has all of the powers and abilities of the lesser version. Additionally, once per day, the entire ship, its crew, passengers and all effects can be made

completely undetectable. When activated, the entire ship is protected by the effects of a *sequester* spell, making it completely invisible to any form of magical scrying, divination, or even the naked eye. Anyone attempting to scry the ship or anything on the ship must succeed at a caster level check against a DC of 25. More impressively, the ship also leaves no visible wake. Naturally, there is a danger of collision in busy waters, and docking is tricky. This effect lasts for an hour, but can be dismissed at any time. These figureheads are favored by smugglers and pirates, and are similar in appearance to *figureheads of lesser avoidance*.

Caster Level: 19th

Prerequisites: Craft Wondrous Item, *sequester*, *pass without trace*

Market Price: 100,000gp

Figurehead of Clear Sailing

This item is useful for all ships, and commonly appears on military vessels and on merchant ships carrying extremely valuable cargoes. The *figurehead of clear sailing* allows the possessor to affect the severity of storms in the immediate area surrounding the ship. With this item, the strength of prevailing winds can be reduced up to 25mph. While this generally won't save a ship caught in a hurricane, it will prevent the ship from being buffeted by severe storms. The *figurehead of clear sailing* cannot be used to change wind direction or produce wind to move a calmed vessel. These devices are usually carved to look like birds or other winged figures.

Caster Level: 15th

Prerequisites: Craft Wondrous Item, *control weather*

Market Price: 60,000gp

Figurehead of Etherealness

As the name of this item implies, when activated, the *figurehead of etherealness* allows the ship and its contents to move temporarily to the Ethereal Plane. This device can be used for up to 10 minutes per day. These 10 minutes do not need to be consecutive. *Figureheads of etherealness* can be carved in any fashion, but tend to look like hooded or ghostly figures.

Caster Level: 19th

Prerequisites: Craft Wondrous Item, *ethereal jaunt*

Market Price: 100,000gp

Figurehead of Fear

Favored by pirates and some military vessels, the *figurehead of fear* only appears on ships that see a lot of combat. Up to three times per day, this figurehead casts *fear* with a save DC of 17. Crew and passengers on the ship with this device are immune to the fear effect. Virtually all *figureheads of fear* are carved in the shape of demonic or devilish beings.

Caster Level: 12th

Prerequisites: Craft Wondrous Item, *fear*

Market Price: 25,000gp

Figurehead of Fire Protection

Fire is one of the most devastating things that can happen on a ship. This device absorbs the first 12 points of fire damage to the ship, contents, and occupants every round. This does not stack with other forms of fire resistance. While this will not prevent the ship from catching fire if caught in a devastating attack (red dragon breath, *fireball*, etc.), it will prevent most normal fires from igniting or spreading. Most of these devices are carved in the shape of elemental fire creatures like salamanders.

Caster Level: 9th

Prerequisites: Craft Wondrous Item, *resist elements*

Market Price: 15,000gp

Figurehead of Flame

As mentioned above, fire is particularly deadly onboard an oceangoing vessel. For military ships looking to reduce enemy numbers quickly or pirate vessels wishing to eliminate evidence of their crimes, the *figurehead of flame* is a wise choice. Once per day, this figurehead can unleash a gout of flame equivalent to that of a young red dragon, which does 6d10. While creatures in the path of the flame are entitled to a saving throw (DC 19) for half damage, anything flammable, including other ships and their sails, will almost certainly catch fire. Virtually all of these devices are crafted to look like red dragons.

Caster Level: 12th

Prerequisites: Craft Wondrous Item, *fireball*

Market Price: 20,000gp

Figurehead of Speed

Another figurehead favored by smugglers, criminals, and military vessels, the *figurehead of speed* allows the possessor to temporarily double the speed of his ship. This effect can be invoked once per day and lasts 1 hour, but can be dismissed at any time. This device is usually used for discouraging pursuit or for catching up with vessels being pursued. *Figureheads of speed* have no particular look, and many are carved to resemble other magical figureheads.

Caster Level: 12th

Prerequisites: Craft Wondrous Item, *haste*, *expeditious retreat*

Market Price: 20,000gp

Figurehead of Trade

This item is a boon for merchants, and it is generally found on merchant vessels. The owner of the ship gains an effective +5 on all Bluff, Diplomacy, and Profession: Merchant checks made within sight of the vessel. On the ship itself, the bonus for these skills raises to +10. The *figurehead of trade* usually features a woman holding a merchant's scale.

Caster Level: 10th

Prerequisites: Craft Wondrous Item, creator must have 5 ranks of Profession: Merchant

Market Price: 17,500gp

Figurehead of Undead Power

Favored by necromancers and leaders of undead navies, the *figurehead of undead power* grants turn resistance +2 to all undead creatures on and within 100 feet of the ship. This stacks with any turn resistance already possessed by the undead in question. Most of these items are of skeletal or mummified figures.

Caster Level: 10th

Prerequisites: Craft Wondrous Item, creator must be able to channel negative energy

Market Price: 10,000gp

Figurehead of Wholeness

The *figurehead of wholeness* is frequently spotted on military vessels as well as ships that must frequently travel in dangerous waters. Three times per day, the magic of this figurehead can be invoked. Each use repairs the most serious damage on the ship's hull or masts, completely patching the largest hole or break in the craft. A broken mast always takes precedence over repairs to the ship's hull, but the majority of the mast must be present for the spell to take effect. Only one whole or damaged area is repaired at a time, so a series of small holes require several applications of this figurehead. Additionally, the magic will not repair fire damage, and cannot repair damaged sails. These items have no particular special appearance.

Caster Level: 12th

Prerequisites: Craft Wondrous Item, *make whole*

Market Price: 25,000gp

Pyramid Review

Portable Adventures

Set 01: Lair of the Rat-King

Set 02: 8th Grade

Published by [Third World Games](#)

Designed by Dan Smith with Michael Nickoloff

Graphic Design by Dan Smith

60 full-color cards, rule sheet, & four six-sided dice; \$12.95

Described as "The Multi Genre Card Game System For 2-4 Players," *Portable Adventures* is another release from Third World Games, who also publish the [The Testimony of Jacob Hollow](#) and [Battle of the Bands - The Rock & Roll Card Game!](#) Like the latter, *Portable Adventures* is designed by the artist Dan Smith, best known for illustrating supplements such as *GURPS Cthulhupunk* and the long running "Bruno" cartoon, both for Steve Jackson Games. The concept behind *Portable Adventures* is simple: purchase one set and this provides the rules and experience to play any of the other sets, each of which explores a different genre. Further, any set can be combined with another in a number of different ways. Currently there are two sets available, *Set 01: Lair of the Rat-King* sends groups of adventurers underground to fight the invasion of a Ratling Horde, while *Set 02: 8th Grade*, deals with life in, well, the 8th Grade.

Portable Adventures is for two and four players 13 years and up -- about the right age to get the most out of *Set 02: 8th Grade!* Each set consists of a deck of 60 cards, an 11 by 8½-inch rules sheet and four six-sided dice -- one for each player. The deck consists of:

- Four ME Character cards (the equivalent of player characters, one for each player)
- 11 Character cards (NPCs used as group members or as reinforcements during an adventure)
- 13 Stuff cards (equipment such as magic items, weapons, or treasures)
- 13 Encounter cards
- 11 Event cards
- Eight Adventure cards

All of the cards are full-color and attractively illustrated and designed by Dan Smith, invariably to an amusing effect. For example, the game has the Human, Urk, Dwarph, Moo, Mawws, and Pfairy races instead of ordinary Humans, Dwarves, Elves, Orcs, Minotaurs, Mice, and Fairies.

The aim of the game is to acquire as many Adventure Points (AP) as possible. These can be gained by completing adventures or by grabbing one of the several special cards that can award a player more AP. This is done by adding characters to go with the basic ME Character each player starts the game with, equipping them with Stuff and making the group strong enough to deal with the Adventures.

There are four rough classes in the game: Warriors (red), Priests (purple), Rogues (green), and Wizards (blue), plus a general follower class (tan); however these do not play a major role in the game, except that most of the game's Stuff cards are color-coded and thus can be used only by some Characters. For example, the red/green Bow & Arrows Stuff card can be used by Warriors and Rogues, but not Priests or Wizards, whereas the Sleepy spell Stuff card can be used by Priests and Wizards but not by Warriors or Rogues. Many cards can also be flipped, either through activating an ability (all ME Characters can be flipped to discard their player's hand of cards and refresh it by drawing up to four cards), or from the effect of another character's ability. For example, Gnuurgh the Urk has a special way with the girls

-- "MR. G LOVES THE LADIES" -- and when his player discards a card from their hand, he can attempt to flip any female character in play. Some Characters lack a Character Point (CP) value when flipped; this is a measure of their strength throughout the game, and when this happens, such a character is discarded along with his Stuff. Worse still, some Characters can have negative Character Point value when flipped, while others have a higher value. Some Stuff cards are also flipped when used, while others are discarded after use. Many Characters also have a Die face on their card, this is important in determining who take part in Adventure Rounds.

Event cards can be played on single Characters or upon a group as a whole. Examples include "Better Pay!," with which a non-ME Character can be poached from another group and added to another group; "Visit Village," which sends a group to the safety of the village where they safe from any opponent's cards; "The Familiar," which increases a Character's a CP value or if given to a Wizard character, awards the group an AP bonus; and "The Dragon!" which the target group must fight and win more AP, or lose all of their Stuff!

From their starting ME Character and a hand of five cards, players take turns during which they can conduct a single action. This can be adding a Character to any group -- up to maximum of four in a two-player game, but an unlimited number if there are more players; adding or replacing a Stuff card on any Character in play; play an Event card on any Character or Group in play; play an Adventure card or discard up to three cards in their hand to un-flip an equal number of cards. Play proceeds around the table until somebody plays an Adventure Card on his turn, and then the game enters the Adventure Round.

The adventures include "The Laughing Ass Tavern" and "Blackmist Swamp," but some of the Adventure Cards are related to the theme or genre of the game. Thus in *Set 01: Lair of the Rat-King*, those that relate to the Ratling invasion are "Undercity Caverns," "The Hidden Nest," and "The Lair of the Rat King." Most of the Adventure Cards award two AP, though the latter Adventure Card awards a total of four AP. Any player can participate in an Adventure Round; those that do so can augment their groups with reinforcement Character cards that are discarded after the end of the Adventure, with Stuff cards, or activate a Stuff card that requires a die roll. Alternatively, they can play an Encounter card on another group. These represent things that happen as part of the Adventure, and include "Coward," which prevents a single Character from participating in the Adventure; "Wounded!," which flips a target Character; and "Squeecker! The Henchrat," the appearance of which imposes a penalty upon the roll to see who wins the Adventure card. Once everyone has played the cards they want, each player rolls a die and their results compared with the Die faces shown on the characters of all opponents. Should there be a match, those characters are flipped and then everyone adds their die rolls to the combined CP value of their remaining Characters and their Stuff. The highest total rolled wins the Adventure Card and adds it to their total, with some Adventure Cards allowing a player to rifle through the discard pile for a Stuff card to add to their group. The first player to gain seven Adventure Points wins a game, or possesses the most Adventure Points after the last card has been drawn.

In play, *Portable Adventures* is quite fun and not as complex as it sounds, nor as the rules read. They go for brevity over depth, which is not so much of a problem for the experienced or dedicated gamer; however, the lack of explanation and full examples may somewhat daunting for the casual player. Yet actually playing the game makes everything far more transparent and obvious in how it really works. This is helped by the simplicity of the instructions given on the cards, which lend themselves to strategies that are easy to grasp. They are not always so easily enacted, as there is a strong element of luck that can send the player in the strongest position tumbling to the back of the pack. Fortunes can change from one turn to the next, and any player so knocked back will have to rebuild his group.

At first only being able to play one card per turn seemed very limited, but this is actually quite a speedy process. The game does slow down slightly in later turns, especially when one player becomes dominant and another has been forced to rebuild. One problem we did come across when playing *Set 01: Lair of the Rat-King* was that of players not being able to play any card from their hand on their turn. There was no clear answer to this given in the rules and we allowed a player to draw and discard a card as an alternative, since the only option -- that of flipping the ME character to discard their hand and draw four fresh cards -- only serves to penalize the player for drawing a bad hand.

With both releases for *Portable Adventures* in hand, we tried them in numerical order with *Set 01: Lair of the Rat-King* being played first, followed by *Set 02: 8th Grade*. Of the two, we found the latter to be more fun, as it is obvious that the designer has had the opportunity to develop the concept, adding a greater degree of interaction between the

various cards. It also contains a streak of sly humor that pokes fun at school life and politics, the effect of which is to make *Set 02: 8th Grade* more appealing than *Set 01: Lair of the Rat-King* and its more obvious humor. *Set 02: 8th Grade* is the *Portable Adventures* game that we come back to as a nicely contained 20-minute-or-so game. Since there is obvious similarity between each game and thus their rules, there is a lot of repeated material between the sheets for *Set 01: Lair of the Rat-King* and *Set 02: 8th Grade*, complete with the same kind of brevity problems in the writing. The problem of not having a card or option to play did not come up with *Set 02: 8th Grade*.

Of course, having both sets opens up an interesting range of options through the combination of both decks of cards! The "Multiverse" option simply combines the two decks, while "Conjunction Of The Planes" brings the two decks together when a "Trigger Card" -- marked with an asterisk in the lower left hand corner -- is played. At this point, play continues with the second (previously unused) deck, so a bunch of quasi-medieval adventurers could suddenly find themselves in the school halls, or a bunch of 8th Graders find themselves having to deal with a Ratling horde. Genres are set against each other in "On The Borderlands," with players drawing and playing from their own deck against the decks of their opponents. This is at the moment is only a two-player option, as there only the two sets for *Portable Adventures* currently available. It is also possible to create and design decks much in the manner of other Collectible Card Games, but again this is an option for the dedicated gamer. Of course, with only two sets currently available this is a rather limited alternative.

Of the two, *Set 02: 8th Grade* is the far more enjoyable to play, but both are clearly well designed. They do feel similar in nature to Steve Jackson Games' *Munchkin* line of games, but without the same degree of absurdity and with more depth and complexity. That each of the *Portable Adventures* line comes self-contained with dice enough for every player, along with the cards and rules, is a pleasingly professional touch, meaning that it can be got out and played without the need to hunt down any other components. Although the rules do need developing such they are easier to understand, the ease of play does offset this problem once they are grasped. And once done so, either set of *Portable Adventures* should offer a diverting half-hour or so worth of gaming, with both *Set 01: Lair of the Rat-King* and *Set 02: 8th Grade* providing a greater depth and range of possibilities in their combination that will appeal to the dedicated gamer.

--Matthew Pook

Pyramid Review

d20 Menace Manual

Published by [Wizards of the Coast](#)

Designed by J.D. Wiker, Eric Cagle, Matthew Sernett, Christopher Perkins

Art & Graphics by Robert Raper, Cynthia Fliege, Dave Johnson, Kalman Andrasofszky, Jason Alexander, Joachim Barrum, Ted Bargeon, Langdon Foss, Frazer Irving, Karl Kersch, Chester Lawrence, Kagan McLeod, Raven Mimura, Mikael Noguchi, Dean Ormston, Jake Parker, Zak Plucinski, Scott Schomburg, Joel Thomas, Jonathon Wayshak, Sam Wood, Rob Lazzaretti, & Dennis Kauth

224-page full-color hardcover; \$34.95

It seems to have taken Wizards of the Coast a while to get around to a volume devoted to encounters for *d20 Modern*. There have been books on developing the settings for that game, but the *d20 Menace Manual* may fill some voids by adding some faces and creatures to it.

Not that this is merely a Modern *Monster Manual* with another alliterative title. It's split into three sections: creatures, characters, and factions. Actually, it's four sections if you include the introduction, which is mostly a "how to use this book" piece, or five if you include the last page and its CR rankings for the different beasts.

The creatures section describes -- what else? -- creatures. Most of these are just animals, real or imagined, that might attack or meaningfully interact with the player characters. Real ones include fairly straightforward choices, such as chimpanzees, hippopotami, or monitor lizards. Most of the fanciful ones are new, but some are culled from other Wizards books, such as the thought eater from the *Psionics Handbook* or the Tyrannosaur from the *Monster Manual*. Others are reimagined for the new *d20 Modern* environment, such as the doppelganger; it becomes the star doppelganger, a more disgusting abomination that consumes its double's flesh.

Some of the offerings start to feel a little repetitive. There seem to be quite a few amorphous creatures that rise up out of something mankind has dumped. There are monsters made of garbage, not to be confused with the sewer sludge, which in turn should not be mistaken for the toxic sludge.

The section isn't just critters, though. Fans of previous Wizards of the Coast works may recognize the alien Fraal as they attempt to . . . well, that would be telling. They -- and their technology -- sit next to creatures of Earth legend like Sasquatch, the mothmen, rods, and sea serpents.

The characters chapter describes several people the group might run into during an adventure. You get the firefighter, the black marketer, the animal handler, and all of them come with a low-, medium-, and high-level versions to accommodate PCs of varying levels. The problem of repetition isn't as pronounced in this chapter as it is in the gooey-bodied creatures segment, but there's still some hair-splitting. You get an attorney and a lawyer; a security guard and a security specialist (one could see the different roles they might fill, but the inclusion of high and low levels erases

many of the differences); and the cultists, clergy, and Vatican investigators might have been better off as a base entry with options for tailoring it for specific roles.

After the generic faces in the crowd are covered, there are some more fully realized heroic GM characters -- "heroic" here meaning they don't wet their pants when the bullets start flying, because few of them are nice folks. Most of these "name" characters are presented in bands, all united by a common cause or belief. Barret's Crew is a bunch of high-tech thieves who love a challenge, while the more streetwise Cleaning Crew is a host of thugs looking to break a few limbs. There are also a few stray ideas on how to bring important characters to life, including a chart with some "hooks" for identifying a new face.

The last chapter is all about factions -- those full organizations with an agenda of some sort to follow. This is also a mix of the real and the fanciful. Real-world groups like the CIA and the FBI are set alongside somewhat less plausible groups like the United Nations Elite Security Unit, which sees all its problems as nails in need of hammering -- they're ready for the New World Order, when society teeters on collapse and the biggest bully on the block takes charge.

There's an Al-Qaeda-like bloc called Al-Jambiya, bent purely on murdering Americans. They have operatives everywhere, and unlike some of their real-world inspirations they're prepared to act without a lot of posturing. Crimson Scorpion held together when the Soviet Union fell, and now they're back to take over the world -- even if that means letting it literally destroy itself and then coming out of hiding to collect what's left. A ridiculous cult called the Six-Fingered Hand serves all the GM's evil religious sect needs, and mad scientists (though they don't call themselves that) abound in the surprisingly homicidal Nautilus Club.

While most of these entries are worthwhile and don't pound the GM with too many obvious suggestions, the chapter contains several DC lists for use with skill rolls on Knowledge, Research, and such when investigating the factions. These methods differ, as do their results, but not enough to justify separate lists for each. They could have been combined or streamlined for brevity's sake, leaving quite a bit more space. Each group has a sample member or an important figure that represents it, and some have handy little maps that can be used as described or stolen for other campaign moments (though two of them, sadly, are ships -- the duplications continue). These diagrams are sharp, and there are no quibbles with the rest of the artwork, even those pieces that go heavy on the stylization (oozes certainly don't need to look any more fluid).

The book isn't dull and it has useful stuff by the truckload, but the *d20 Menace Manual's* failing may be in its title. To be sure, there's a good bit of menace here. Some of the entries have it out for the PCs, and there are plots aplenty to keep things running in your Modern game. The book contains almost as much in the way of friendlies as it does opponents, and some of the stuff here just isn't likely to show up in the course of a game anyway (when was the last time your game group was imperiled by the recording industry?).

There's a random, scattershot feel to the material. It might be more accurate to say it's a compilation of odds and ends that neatly plug the holes in a GM's sessions. He'll be able to come back to it for quick NPCs, useful maps, and comparative values for threats he makes up out of whole cloth. Anyone looking for a utile, general-purpose supplement to flesh out their backgrounds will find it invaluable, but those seeking to torment their players with a pantheon of new, ugly horrors is liable to find the price tag the most threatening thing about it.

My Wounded Pride Takes Three Months To Heal

Like many GMs, I consider myself having succeeded in a particularly nasty encounter when the Bad Guys have been dealt with, and the Good Guys are broken, battered, and bruised but emerging victorious. Players seem to like this as well (at least the players I've gamed with); clawing back from potential defeat is *fun*. And not too long ago I even gave some advice for those looking to find the sweet spot in putting their players [on the ropes](#).

Unfortunately there's a slight problem with this mindset, at least in an on-going campaign: Broken, battered, and bruised heroes take a while to heal. While inflicting a broken bone on a death-defying adventurer may be a great adventure obstacle, in a remotely realistic campaign it might take three months for that injury to heal. And many other wounds would require a fair bit of healing, rehabilitation, or just plain luck to recover from.

I thought about this recently as I recently purchased and devoured the Season Two boxed set of *The Shield*, easily one of the most compelling television programs I've ever seen.

[MILD SPOILER ALERT!]

In an early episode in the season, the show's antihero Vic Mackey is shot at the show's climax. He and the drug-dealer he had been following shot each other, and the two of them struggled with their own wounds while trying to figure out how to deal with their adversary.

Anyway, Vic emerges victorious (and since the show revolves around him, I don't think I'm giving anything away here), and is brought to a hospital to be patched up. The end of this episode stresses the seriousness of his wound, and the next episode deals with the social repercussions of his being shot.

And then the this development is dropped.

I mean, in a later episode he sort of winces as he sits in a chair once or twice, but otherwise they never mention the fact that he'd been near-fatally shot in the recent past. Given that much of the series deals with long-term implications and consequences of actions, this was a fairly glaring oversight.

[END SPOILER ALERT]

This is a fairly common phenomenon; for example, the hyper-trained-but-still-human Batman seems to lose at least a pint of blood every other night, mutters often about one of his ribs getting broken, and suffers enough injuries that the whole "millionaire playboy" façade should be nigh-impossible to keep. ("These bruises, cuts, and extensive bandages? Errr . . . In hindsight, I suppose asking Alfred to build a mansion entirely out staircases, strobe lights, and roller-skates *was* a mistake . . .") Even my fave Indiana Jones seems to recover *awfully* quickly for someone who periodically gets the tar beaten out of him.

It's a completely understandable phenomenon from the creators' point of view; after all, you don't want your hero to be completely out of commission while he recovers. Unfortunately, much like [death](#), once you lessen the impact of broken bones and blood loss, it's really difficult to get that emotional impact back.

So what's a PC-pummeling GM to do?

Well, here are some tips I've used in my various games. There isn't One Right Answer that can be used universally -- and all these ideas won't work for all campaigns -- they should at least give you some ideas for managing your mangling.

Think carefully before seriously injuring a character. This is perhaps the most obvious piece of advice, but it bears repeating; the heroes can't become accustomed to crippling injuries if they aren't common. There are plenty of ways that the Good Guys can get knocked around that *shouldn't* result in a trip to the emergency room after the adventure is

done.

Unfortunately, a lot of games don't have "non-injuries" as an option; it's assumed that if someone makes contact and deals a flesh-injuring wound, then . . . well, flesh was injured. (Duh.) Although this makes a great deal of logical sense, it isn't necessarily conducive to keeping the heroes from looking like stuck pigs at the end of an adventure.

There are a number of ways around this. Probably the easiest is to modify what "damage" is. For example, the original *Advanced Dungeons & Dragons* system defined Hit Points not as actual physical damage, but as an amalgam of skill, luck, and experience, in addition to the amount of bodily punishment someone can take. As a result, the loss of Hit Points didn't represent wound after wound, but rather the depletion of the luck and skill that has enabled the hero to stay alive. (Of course, if message boards and the fan community are any indication, I may be the only person in the universe who actually *liked* that justification . . .)

Anyway, the general application can be swiped for most games. If you skew the results of injury so that, say, the first half of "damage" dealt to the heroes doesn't represent actual injury but instead minor scuffs that show the *possibility* of future damage. Thus a *GURPS* character might have 12 hit points; the first six of those might not represent actual "damage" but the general light bruising and tussled hair that makes heroes seem more heroic . . . and only the *last* six points of damage represent "real" injury. This allows heroes to escape minor threats without emerging in a body cast, and makes encounters that dip below that "scuff threshold" seem more dangerous. (This also simulates many action movies and television shows better; the heroes can face minor threats and not be worried about losing two pints of blood from otherwise minor wounds.)

Some games already simulate minor versus major injuries in various ways, but adding another layer can be a good way to tweak a game to simulate certain game conventions.

Give lots of time between adventures. If you'd like a game to remain realistic while still inflicting serious injuries on the heroes, the solution might be as simple as making sure there's a lot of time between adventures (or at least combat-intensive ones). That way heroes can receive life-threatening injuries and have enough R&R to be back up to fighting speed. To return to the *Indiana Jones* series, the long stretches of time between his adventures mean that he can be beaten to a pulp (HAH!), and still be healed up in time for his next globe-trotting adventure.

In more proactive campaigns, heroes might use rehabilitation and recovery to advance their goals or pursue long-term leads. For example, a pulp-conspiracy game might consist of months (and sessions) of research, investigation, and character interaction, punctuated by rare-but-exciting life-threatening encounters.

The biggest problem with this method, of course, is that many games are difficult to structure so that long healing periods between adventures are possible. After all, if a gaming group meets every week and spends every other session advancing the timeline by three months, before long it's chronologically a cyberpunk game. Likewise a 1930s pulp-era game could only have 40 adventures if the entire decade was used in three-month increments. There are a few ways around this. You can make sure the game is pushed back far enough in time to give some breathing room . . . say, starting the "modern-day" conspiracy campaign in 1980. You could hand-wave and say the timeline never advances beyond the vague era of the game (although that seems counterproductive to the desires of making a more realistic world). Or the gaming group could realize that the campaign is going to be a finite series and plan accordingly; there's nothing that says a pulp campaign *has* to be planned to go on forever.

Have more than one character per player. If each player is playing, say, three or four members of the Globe-Roaming Ultra-Natural Team, then if one or two is in traction for a few months then the rest of the team can continue to have adventures. Although not all players are comfortable juggling multiple characters at a time, it can be a great option for certain campaigns.

If preternatural healing is available, make it hurt. Many games hand-wave away serious injury by making various quick-healing methods available. If someone can cure that bullet-wound with Transmute Lead to Nanites, then it makes debilitating injuries much less serious; anything that doesn't kill the hero gets patched up by the convenient healer.

Presuming the game requires such healing methods to retain its flavor, one of the simple things the GM can do is merely state -- and emphasize -- that this healing removes the problem of time from healing, but not the physical discomfort. Healing is uncomfortable; cells regenerate, bones re-knit themselves, skin itches madly. With good players, it can be enough to emphasize the distress of unnatural healing to make the original injury more noteworthy. If you strike a nerve with the players, you can inflict serious injury on their characters, knowing that -- even if they *can* heal up quickly -- they still won't be happy about it.

Finally, make injuries have repercussions. Although this is an obvious idea, it's rarely implemented in most of the campaigns I've been part of. If a player has both legs broken by Smash-Man, then -- even after he heals -- he's probably likely to retain lasting mementos of that encounter: perhaps scars, slight weakness on stairs, walking with a limp or cane, or something similar. This doesn't mean you need to remind each player of every injury ever, nor does it need to be detrimental in game effects. (That limp can merely be part of the hero's charm, and disappear or be glossed over when life-threatening action starts.) But encouraging everyone to make reference to previous serious injuries can help to emphasize that they did, indeed, survive before . . . and are all the more heroic for it.

Pushing PCs to the edge is a tried-and-true GM technique. And although the dice may be willing, the facts of injury may be less so. But with a few tweaks and some forethought, you can knock the heroes down, let them get back up, and they'll still be appreciative of the fact they were down. Although they'll still probably want insurance.

The Memory of Ruin

A Medieval Scenario Setting for *Ars Magica* and *GURPS* Part 2: The Spirit Realms

by Neil Taylor & Phil Masters

(Part 1 of this scenario, [last week](#), described the relatively mundane setting -- a lost castle, deep in the forest, now imbued with wild but subtle magics and infested with monsters. However, to complete their exploration of the site, bold visitors must confront even stranger phenomena.)

As described in Part 1, characters can enter the first level of the regio/spirit world, the "Ghost Level," through the gatehouse. They can leave by returning out through the gatehouse, *or* by walking through the breach in the walls. From the breach, walking *outwards* returns anyone to the mundane world, but circling close to the walls and back to the gatehouse enables them to reenter, and then walk on into the next level, the "Bone Level." Repeating the process again, opening and closing the outer doors and then the inner doors as one goes, follows a natural path into the last, "innermost" level. Once again, by default, such visitors will come out into the innermost level unless they concentrate on remaining on the current level (or follow a guide who goes through before them).

The Place of Ghosts

The first level has a magical aura of 2 in *Ars Magica*, or slightly aspected mana giving +1 to Necromantic and Illusion/Creation spells in *GURPS*. This is a realm of unquiet dead, in the traditional form of intangible spirits reenacting their deaths.

The Keep and the Howling Ghosts

The castle looks much the same on this level as in the mundane world, showing the signs of the battle and the subsequent stripping of its contents, save that it has not become overgrown. It simply lies bare and empty. The well in the outer courtyard is still polluted by the wyrm (see Part 1), which visits this "level" regularly.

The ghosts, the spirits of those who died in the battle, remain here, forgetting their past but bound to the place. They appear as poorly formed remnants, howling like the wind, draped in shrouds, with their bodies trailing off and disappearing below the waist. They are stark white save for their dark hollowed eyes and mouths. Meeting them may be worth a fright check or similar, if characters are unused to such supernatural terrors.

If living beings come close, the ghosts will turn on them, and try to drain the life out of them; see below for the relevant game mechanics. They have to grapple to accomplish this, but only one ghost can grapple any human-sized opponent at a time, and they will break away in temporary confusion if their powers do not work against a particular opponent. Thus, they will likely end up flocking around anyone with magic resistance, while individuals grapple anyone without. They are dangerous to characters with no supernatural defenses, but competent use of magic or "priestly powers" can defeat them.

They have lost most of their minds, and cannot reason. They have some limited memory of the battle, and that they must continue to fight it; if undisturbed, they reenact it as best they can. If anyone wishes to lay these ghosts to rest, their bones are in the inner regio, and may be given a proper funeral there. Alternatively, they will be released (or fade away) if the innermost regio is cleared of magical power; see below.

Note that no number is given for the dead warriors, here or elsewhere; GMs/storyguides can set this to suit their party size, or simply assume that there are more than enough to make the players adopt some tactic other than destroying every single one of them, even if they have some attacks suited to this. In all cases, though, the numbers on each "level" must be the same.

Ars Magica: Howling Ghosts

Characteristics: Int -5, Per 0, Pre 0, Com -3, Str n/a, Sta n/a, Dex +3, Qik +5

Magic Might: 10

Size: 0

Personality Traits: Frustrated +3

Weapon/Attack	Init	Atk	Dfn	Dam	Fat
Touch/Grapple	+10	+8	+10	*	n/a

* Does no physical damage, but causes magical harm; see *Powers* below.

Soak: n/a (cannot be harmed physically)

Body levels: OK, Destroyed

Powers:

Horrible Grasp, PeCo 15, 1 point: If the ghost successfully grapples, its touch acts like *Grip Of The Choking Hand* (*Ars Magica*, p.127) -- the victim loses a Fatigue level, and must roll Sta 6+ each subsequent round of grappling or the effect continues and another Fatigue level is lost.

Insubstantial: the ghosts have no bodily form, and can only be harmed by magic. Likewise, they cannot be parried (as they pass straight through arms and armor), but must be dodged.

Vis: none.

Notes: The ghosts have no bodily form and cannot be harmed by physical weapons or spells causing physical damage (such as Fire), nor does Corpus affect them. They can be harmed by Mentem spells, including improvised spells using Mentem as the Art but Corpus guidelines for effect. If a way is found to damage them, they are very easily destroyed. The spell *Lay to Rest the Haunting Spirit* is especially effective, given their low Might -- and if reduced to Touch range, even a spontaneous spell is likely to destroy one.

GURPS: Howling Ghosts

ST: 12 **Move/Dodge:** 5/5 **Size:** 1

DX: 12 **PD/DR:** 0/0 **Weight:** n/a

IQ: 6 **Damage:** see below

HT: 8/2 **Reach:** C

Notes: These are similar to Mindless Spirits (p.SPI36), with the Spirit Form advantage (p.SPI33- 36), but without most of the powers this normally grants, or any real volition. They are immune to physical assault, but their minds, while reduced to mere fragments, are fully present in this realm, and can be affected by magic, psionics, etc.; unlike most Mindless Spirits, they are *not* invulnerable to mind control (although they are Single-Minded, and cannot undertake much in the way of other actions even if controlled), and they are of course also susceptible to spirit-related magic. While they cannot attack physically, they have a power similar to the Steal Strength spell. To use this, they must successfully grapple the victim; then, on each round, roll a quick contest between an effective "skill" of 14 and the victim's HT; the victim's Fatigue is then reduced by the amount by which the ghost won the contest. If Fatigue reaches 0, the victim falls unconscious and the ghost can start to drain Hit Points similarly, stopping only when the victim is dead. Parrying or blocking doesn't work against the ghosts' attacks, as they can pass right through a sword or shield; they must be dodged. Likewise, once one has "grappled" a victim, only destroying it can make it let go. However, these are quite supernaturally feeble entities; their effective "skill" with this power is reduced by *three times* any Magic Resistance possessed by the victim, and they are quite easily magically destroyed.

The Place of Bones

The second level has a magical aura of 3 in *Ars Magica*, or aspected mana giving +3 to Necromantic college spells in *GURPS*. This is a realm where the dead, although all too visibly slain, reenact their deaths in physical form. Their flesh has failed them, but still they struggle on.

Note that, on this level, going back through the gatehouse returns one to the first level, walking outwards from the breach takes one direct to the mundane world, while circling the walls and back through the gatehouse enables one to enter the third and highest spirit-realm level.

Them Bones

The castle here shows the battle in progress. Warriors are everywhere, fighting for eternity. They stand guard in the gatehouse, and defend the core of the tower; the invaders have taken the Outer Courtyard and the lower parts of the keep. The battle rages within the tower and in the inner courtyard.

These warriors take the form of rotted skeletons; once again, GMs/storyguides may require characters to test for fear or morale problems if they are unused to meeting undead, although after a confrontation with the ghosts, such physical opponents might almost come as a relief. They wear some armor (mostly steel scale half-armor in *Ars Magica*, heavy leather in *GURPS*); the defenders wear ragged cloaks and fight with sword (longsword in *Ars Magica*, broadsword in *GURPS*) and round/small shield, the raiders bear wolf skins and fight with battleaxe/great axe or axe and round/small shield. All of their equipment (except for some magic items possessed by their leaders) has been ravaged by time, and is now only sustained by the magic of the place; if removed from the castle, bones, wood, leather, and metal will all crumble into decay.

They are preoccupied with fighting each other, ignoring mortals moving carefully between them; however, if a mortal should attack any of them, or obstruct their reenactment of their deaths, all the skeletons nearby will turn on these interlopers, fighting until they are destroyed or their opponents disabled. They re-form after a few minutes if destroyed, resuming their battling with each other.

Ars Magica: Skeleton Warriors

Characteristics: Cun -4, Per -2, Pre n/a, Com n/a, Str +3, Sta +3, Dex 0, Qik 0

Magic Might: 5

Size: 0

Personality Traits: Mindless Combativeness +6.

Weapon/Attack	Init	Atk	Dfn	Dam	Fat
Brawling (fist)	+5	+4	+4	+3	n/a
Longsword and shield	+7	+7	+12	+7	n/a
Axe and shield	+7	+7	+10	+9	n/a
Battleaxe	+9	+7	+7	+13	n/a

Soak: +15 (+20 vs. puncturing damage)

Body levels: OK, Destroyed

Abilities: Athletics 1 (run), Awareness 3 (alertness), Brawl 3 (fist), Great Weapon 5 (battleaxe) *or* Weapon and Shield 5 (round shield)

Powers:

Mindlessness: The skeletons are immune to mind-affecting magics, having nothing to affect.

Equipment: steel scale half-armor, weapons as noted above, cloak or wolf-skin.

Encumbrance: -1

Vis: none.

GURPS: Skeleton Warriors

ST: 9 **Move/Dodge:** 6/6 **Size:** 1
DX: 12 **PD/DR:** 2/2* **Weight:** 100 lbs
IQ: 8 **Damage:** by weapon
HT: 10 **Reach:** by weapon

Notes: These are essentially mindless beings; their IQ is used only for sense rolls and the like. They fight until destroyed, and ignore mind-affecting magics, physical or mental stunning, and so on. Their PD and DR come from the armor they still wear, and the PD does not include the bonus granted by the shields some of them carry; they have an additional DR 2 against missiles, beams, and impaling attacks, thanks to their skeletal forms, and the last do no bonus damage against them -- nor do they bleed or have vital organs to injure. (See *GURPS Undead* for more on all this.) They have effective skill 12 in Brawling and with their weapons and shields.

Some heroes of the battle remain among the fighters. They wear chainmail; the defending knights are cloaked and fighting with longsword/thrusting broadsword and kite/medium shield, the raiding berserkers are in wolf skins with axe and round/small shield or with battleaxe/great axe.

Ars Magica: Skeleton "Heroes"

Characteristics: Cun 0, Per +2, Pre n/a, Com n/a, Str +4, Sta +4, Dex 0, Qik 0

Magic Might: 15

Size: +1

Personality Traits: Mindless Combativeness +6.

Weapon/Attack	Init	Atk	Dfn	Dam	Fat
Brawling (fist)	+7	+6	+6	+4	n/a
Longsword and shield	+9	+9	+15	+8	n/a
Axe and shield	+9	+9	+12	+10	n/a
Battleaxe	+12	+10	+14	+16	n/a

Soak: +17 (+22 vs. puncturing damage)

Body levels: OK, -1, Destroyed

Abilities: Athletics 3 (run), Awareness 3 (alertness), Brawl 5 (fist), Great Weapon 7 (battleaxe) *or* Weapon and Shield 7 (round or kite shield)

Powers:

Mindlessness: The skeletons are immune to mind-affecting magics, having nothing to affect.

Equipment: chainmail half-armor, weapons as noted above, cloak or wolf-skin.

Encumbrance: -1

Vis: none.

GURPS: Skeleton "Heroes"

ST: 10 **Move/Dodge:** 6/6 **Size:** 1
DX: 13 **PD/DR:** 3/4* **Weight:** 120 lbs.
IQ: 8 **Damage:** by weapon
HT: 11 **Reach:** by weapon

Notes: The notes above for the skeleton warriors also apply here. Note that the PD and DR listed are for chainmail, and are reduced vs. impaling weapons; however, they do get the additional DR 2 against missiles, beams, and impaling attacks. Again, the PD does not include the bonus granted by the shields some of them carry. All combat skills for these skeletons are at 14.

Outside the base of the Keep, the two skeletal leaders are locked in their personal duel. Tennent bears the magic sword "Keenest," and wears full armor (chainmail in *Ars Magica*, scale in *GURPS*) and carries a kite/medium shield, while Hrolf wears chainmail, ornate (magical) gold bracers on his arms, and the remains of his wolf skin cloak, and wields a battleaxe/great axe.

Ars Magica: Tennent

Characteristics: Int 0, Per +2, Pre n/a, Com n/a, Str +5, Sta +4, Dex +3, Qik 0

Magic Might: 20

Size: +1

Personality Traits: Mindless Combativeness +6

Weapon/Attack	Init	Atk	Dfn	Dam	Fat
Brawling (fist)	+7	+9	+5	+6	n/a
Longsword and shield	+9	+12	+14	+12	n/a

(Note: Tennent's skeleton retains just enough battle instinct to use his sword's special power occasionally when it is to his advantage.)

Soak: +22 (+27 vs. puncturing damage)

Body levels: OK, 0, -1, Destroyed

Abilities: Athletics 4 (run), Awareness 5 (alertness), Brawl 6 (Fist), Weapon and Shield 7 (kite shield)

Powers:

Mindlessness: The skeleton is immune to mind-affecting magics, having nothing to affect.

Equipment: cloak, full chain, magic sword, kite shield

Encumbrance: -2

Vis: 4 Corpus, in his skull.

Ars Magica: Hrolf Wolfsgrim

Characteristics: Int 0, Per +2, Pre n/a, Com n/a, Str +5, Sta +5, Dex +3, Qik +5

Magic Might: 20

Size: +1

Personality Traits: Mindless Combativeness +6

Weapon/Attack	Init	Atk	Dfn	Dam	Fat
Brawling (fist)	+13	+10	+11	+6	n/a
Battleaxe	+18	+14	+15	+16	n/a

Soak: +17 (+22 vs. puncturing damage)

Fatigue levels: n/a.

Body levels: OK, 0, -1, Destroyed

Abilities: Athletics 4 (run), Awareness 5 (alertness), Brawl 6 (fist), Great Weapon 7 (battleaxe)

Powers:

Mindlessness: The skeleton is immune to mind-affecting magics, having nothing to affect.

Equipment: wolf skins, chainmail, magic bracers, battleaxe.

Encumbrance: 0

Vis: 4 Corpus, in his skull.

GURPS: Tennent

ST: 13 **Move/Dodge:** 6/6

Size: 1

DX: 14 **PD/DR:** 6/4

Weight: 130 lbs.

IQ: 8 **Damage:** 2d+1 cut or 1d+3 imp (broadsword)

HT: 11 Reach: 1 (broadsword)

GURPS: Hrolf Wolfsgrim

ST: 17 Move/Dodge: 7/7 Size: 1
DX: 16 PD/DR: 3/6 Weight: 130 lbs.
IQ: 8 Damage: 3d+2 cut (great axe)
HT: 12 Reach: 1,2 (great axe)

Notes: The remarks above on the other skeletons also apply here, of course. Tennent's skeleton retains just enough battle instinct to use his sword's special power (see below) occasionally when it is to his advantage, while the attributes listed for Hrolf include the bonuses from his magic bracers. Tennent's PD comes from his shield and armor, and his DR is also from his armor. Hrolf's PD and DR come from his armor and bracers; as the former is chainmail, both numbers should be reduced against impaling attacks. Both skeletons get the additional DR 2 against missiles, beams, and impaling attacks. Treat each of them as having all combat skills at 16.

The enchantments on the leaders' magical items mean that these *can* be removed from the scene and used (or investigated in a magical laboratory).

"Keenest": In *Ars Magica*, this longsword gives +1 to Init, Atk, and Dfn, and +2 Dam, and a ReTe 10 effect "Deflect A Single Attack" which enables it to make one automatically successful parry on any round in which it is not used to attack (touch range, unlimited uses). This and the enhancements together represent a level 15 enchantment, which are close enough to Hermetic in style to be quite easy to analyze in a Hermetic laboratory. In *GURPS*, it is a thrusting broadsword which gives +1 to all attack, parry, and damage rolls, and +5 to one parry roll on any round in which it is not used to attack.

Gold Bracers: These are for heroes only. *Ars Magica:* Only work for those with both Str and Sta positive, and then give +4 Soak and increase Str to +4 (or by +1 if it is already +4 or higher). This enchantment is an old pagan working, otherwise similar to the level 25 spell *Gift of the Bear's Fortitude*, but any attempts to investigate such a non-Hermetic effect in the laboratory must beat double its level, i.e. 50. *GURPS:* Only work for those with ST and HT both 12+, giving +3 ST and +2 DR.

Rest and Requiem

Each Howling ghost in the outer regio corresponds to a fighting skeleton in this regio, though you would be hard put to count or compare them. However, their fates are permanently entwined.

A skeleton which is disabled and then given proper burial rites of some kind will stay buried. In addition, its spirit (trapped on the lower level) will also be freed and depart for its final destination. Similarly, if a Howling Ghost is laid to rest or dispelled by magic, then the corresponding skeleton will fall inert and decay away.

The Rubble Slope and Lodric

One other thing may be seen at this level, although it is not immediately obvious. During the battle, Lodric, the raiders' "shaman," stood out beyond the slope and called down the lightning. If the raiders were Norsemen, Lodric may have been a *Seithmathr*, a transvestite Norse witch; see the *Ars Magica* supplement *Ultima Thule*, p.63. Otherwise, he can be seen as a hedge-magician with a talent for elemental spells -- in *Ars Magica* terms, a Spirit Master specializing in elementals (see *Hedge Magic*, pp.44-49), in *GURPS*, a wizard with a talent for the Elemental colleges. The warriors rushed in to battle, while he stayed, calling to the winds -- but he was then struck and killed by an arrow from the castle. He fell, and dropped his amulet. In the mundane world, his bones rest in the same place beyond the slope. The spot lies outside the limits of the castle's strange effects, but can be seen from within; anyone who takes the time to look will see a strangely robed figure standing, evidently waving and chanting, then being struck down and collapsing to dust. After a few moments, the dust will reform and repeat the scene.

Returning to the mundane world, an alert observer could locate the same spot (GMs/storyguides might demand a few dice rolls). Lodric's bones have been partly buried, and partly covered by leaf litter, but are easily exposed.

However, Lodric, as a mystic, was not entirely discomfited by his sudden death. Unlike the other ghosts, he is neither tied to this place nor insane, but can come and go freely on the spirit plane. Only the image of his body is bound to reenact his death. He keeps an "eye" on his mortal remains, as he would not like to have his grave desecrated. He and his allied spirit can move between the regiones and the mundane world, and *will* attack anyone who defiles his bones. He *might* tolerate someone who merely took the amulet while treating his bones with respect, or downright friendly to someone who provided a proper funeral; he knows he can no longer use the amulet. This is at the GM/storyguide's option, however; at the very least, he should be played as proud and strange.

Ars Magica: Lodric

Characteristics: Int +3, Per +2, Pre +1, Com +2, Str n/a, Sta n/a, Dex +1, Qik +3

Magic Might: 30

Size: 0

Confidence: 3

Virtues and Flaws: "Ghost"

Personality Traits: Proud +3, Vengeful +2

Weapons/Attacks: none

Soak: n/a

Body levels: OK, 0, -1, -3, -5, Destroyed

Abilities: Awareness 4 (search), Bargain 6 (spirits), Charm 4 (spirits), Legend Lore 6 (elementals), Magic Sensitivity 5 (spirits), Occult Lore 5 (elementals), Second Sight 6 (spirits)

Powers:

Possession, ReMe 40, 3 points: Lodric can take over the bodies of the living. The victim can resist with a roll of Magic Resistance, Might, or Sta+5 against a target of 15+.

Call the Howling Doom, ReMe 40, 4 points: Lodric has power over less self-aware spirits, especially in the vicinity of his place of death. He can call Howling Ghosts from the castle; if so called, they can leave the castle bounds and magically travel to him (though they cannot otherwise leave the regio). They remain for one hour, after which Lodric may expend 1 Might to extend their service by another hour (and so on).

Insubstantial: Ghosts have no bodily form, and can only be harmed by magic.

Vis: 6 Mentem, in his spirit form.

Notes: This treatment assumes that Lodric was an elemental; it might be varied a little to reflect a specific cultural background for the character. He had a variety of useful abilities in life, but these are irrelevant in death. However he was strong-willed and close to the spirit world; he retains most of his free will, and substantial power. As an insubstantial ghost, he has no bodily form and cannot be harmed by physical weapons or spells causing physical damage (such as Fire), nor does Corpus affect him. He can be harmed by Mentem spells, including improvised spells using Mentem as the Art but Corpus guidelines for effect. If attacked so, he is much stronger than the flimsy spirits in the castle regiones, and has normal body levels for this purpose. His Allied Spirit still accompanies him, now as a free-willed ghostly (female) cat. She has a Magic Might of 20, and can become visible temporarily (no Might cost, just concentrate), but has no real powers any more.

GURPS: Lodric

ST: 11/40 **Move/Dodge:** 6/6 **Size:** 1

DX: 12 **PD/DR:** 0/0 **Weight:** n/a

IQ: 13 **Damage:** n/a

HT: 12 **Reach:** C

Notes: Lodric has the Spirit Form advantage (p.SPI35), much like the Howling Ghosts (see above), but much more free will and sanity, and he has adapted to this state quite well. Amongst other things, he has full use of all standard spirit

abilities *except* Poltergeist and Materialization, and an Unlimited Lifespan (see pp.SPI33-5). However, unlike the Howling Ghosts, he cannot drain life energy. He *can* summons Howling Ghosts from the castle to serve him; by taking a round of concentration and spending a point of fatigue, he can cause 1d ghosts to appear instantly at his side (the only way that any of them can leave the castle itself); he can do this as often as he likes, until all the ghosts are destroyed or laid to rest, and they can remain for up to an hour, after which he can immediately summons them again if he chooses.

The Amulet: Lodric's amulet is shaped like a miniature silver war-hammer (actually Thor's hammer, assuming a Norse background). He called it the *Amulet of Storm's Vengeance*. Once per day, during a Storm, the wielder may recite a chant to strike down his enemies, and summon a bolt of Lightning from the sky. In *Ars Magica* terms, this is a CrAu 35 effect; in *GURPS*, treat it as a Lightning spell, but doing 5d damage and with Acc +6, no 1/2D range and Max 200, but only usable in the open air during a storm. Lodric's ghost knows the chant; otherwise, it might be discovered by magical research. (In *Ars Magica*, treat this as a CrAu 35 effect comparable to *Incantation of the Lightning*, but due to its non-Hermetic nature, *double* the lab total required for successful research; in *GURPS*, learning the chant will require three successful castings of Analyze Magic, resisted by an effective skill of 20, and if the item successfully resists, that caster gets *no* further attempts, *ever* -- although a team of casters can pool their efforts to build up the three successes between them.)

The Place of Memory

The last, "deepest" or "highest" spiritual level has a magical aura of 5 in *Ars Magica*, or a mana level one higher than the surrounding countryside in *GURPS*. Here, the images of men still walk as men, and the Castle has not decayed nor been abandoned. As before, going back through the gatehouse returns one to the previous level, and walking outwards from the breach takes one direct to the mundane world -- but circling the walls and coming back through the gatehouse leaves one still on the same level.

Dreams of Time and Place

Depending on where one stands, one can see and even participate in various scenes from the castle's last days. The castle itself appears in full glory, as the *ideal* of a castle, not just the historical actuality. Flags and pennants fly from the turrets, and knights wear bright surcoats and tabards.

In the Great Hall of the keep, the breach is recent. It is dark, and stormy, and the rain plummets down; lightning flashes in the distance. The defenders react to the new breach with horror, and turn to it, replaying the first moments after it was made.

Up on the second floor of the Tower, the images continue with "life" as normal, unaware of what is about to happen. Sir Tennent and his knights sit with their ladies, while the men feast in their hall. The storm rages; the raiders can be seen scowling outside the stout walls.

Beyond those walls, the witch stands surrounded by warriors as he shrieks with glee at the results of his chants. He brandishes his *Amulet of the Storm's Vengeance*, which gleams and reflects the lightning, or perhaps flashes from within in synchrony with the Lightning strokes.

In the courtyard, the raiders have just rushed through the breach from outside, and been engaged by the defenders. Hrolf and Tennent stand aside from the others, fighting a personal duel. Tennent's sword flashes brightly, and Hrolf's golden bracers gleam.

These images of men reenact stages of the battle, but are largely unaware of what has happened -- they do not know what is happening elsewhere in the castle, nor of the centuries that have passed. It is perfectly possible to talk to them (in their native languages), but they are no more tangible than illusions, and even if they are told of their state, they will dismiss or forget what they hear after a few moments.

This level should serve mostly as a source of clues to matters in the outer levels -- especially regarding the bracers and sword, the amulet, and so on. The images do *not* vanish if their bones are laid to rest or their ghosts are exorcised, and nor are they vulnerable to spells or powers which work against normal spirits; they are essentially the memories of the original people, not their spirits, and exist in a kind of timeless state. Magic (or psionics) will find no actual minds to read or influence.

Afterwards

Having explored all the mysteries of the castle and defeated its threats, a party may be able to exploit it, even if they do not choose to settle here.

Ars Magica: Vis Harvesting

Hard-headed Hermetic wizards may eventually be able to determine that this place could be raided and stripped of all its magic, causing a cessation of all activity within the castle, or, more subtly, its magic could be harvested annually.

Primarily, the various scenes noted above can yield Mentem vis if the images found on the third, "innermost" level of the regio are somehow carefully captured. The images of Hrolf and Tennent fighting are worth one pawn *each*, as are each of the other full scenes, for a grand total of five pawns. A MuIm 20 spell with requisites of Rego and Vim should "capture" the scene, in the form of shimmering light; if this is cast on a crystal, the Vis might remain bound there.

If the whole castle is "strip-mined," by magi carefully and methodically capturing every image, and testing all the spirits, stones, shadows, nooks, and crannies for traces of power, over a period of a week or so, it yields 25 pawns of Mentem vis. That will leave the place as a hollow ruin with a rapidly fading magic aura and vanishing regio, notable only for the slight (and itself probably fading) faerie influence in the surrounding woods. (Of course, the wizards will probably have had to destroy or dispel a lot of the castle's creatures and phenomena first anyway.) Conversely, if the scenes are "captured" as described above, it will provide an annual yield of five pawns of Mentem vis, indefinitely.

GURPS: Mana Harvesting

In addition to the various items and treasures to be found round the site, GMs may reward methodical wizard PCs by permitting them to extract portable power from this highly magical location. Methodical use of spells such as Detect Magic or Mage Sight around the "innermost" level of the spirit realms will eventually locate five seemingly unremarkable objects which actually had some subtle significance to the people who died in the great battle -- a dagger dropped by Hrolf in the death duel, the goblet from which Tennent drank his last toast with his knights, the banner which flew from the keep, the bow which was used to slay Lodric, and the helm worn by the first berserker through the breach and cloven by a defender's sword. Approached by someone aware of their nature, these items will prove solid and material, and can be removed from the castle. Each will then serve as a one-use 10 point powerstone. Removing any of them will weaken the bonds which keep the haunting active, so that it will fade within decades or years; if they are all removed, the ghosts and spirits, and access to the spirit realms, will vanish within a few months.

(Note also that the monsters encountered in part 1 were somewhat supernatural, and had been living in a magical area for some years; their bodies may incorporate useful mana organs, or provide valuable ingredients for enchantments. See *GURPS Fantasy Bestiary*, p.FB113.)

Wizards with long-term plans may prefer to keep the place intact, ensuring themselves access to the higher mana of the "innermost" level. It is also possible that some of the ghosts will sense any desecration of their former possessions, and return to haunt the individuals responsible, even if their bones have been laid to rest. Handling the details of this is left to the GM.

The Kiss

by Steven Marsh

*"Thus from my lips, by thine my sin is purg'd."
"Then have my lips the sin that they have took?"
"Sin from my lips? O trespass sweetly urg'd!
Give me my sin again."
--William Shakespeare, *Romeo & Juliet*, I:v*

In the general case, the kiss is one of the oldest and most common expressions of intimacy known to mankind. Even practitioners of the world's oldest profession know the power of the kiss, and some charge additionally for that extra intimacy, or forgo it as a possibility altogether. In the specific case, The Kiss embodies all the potential, closeness, and trust of its lower-cased counterpart, only amplified by an utmost degree.

Where it came from and how it came to be, nobody knows. However, The Kiss is a source of great power, unknown anywhere else. One who has been Kissed is one who possesses abilities far removed from normal men . . . abilities that can be given up as easily as they were received.

Those who know of The Kiss' existence debate even its true nature; is it a physical object transferred from one person to another, a spiritual component that crosses a linked bridge of intimacy, a mystical construct that crosses from one to another, or some combination of all of these?

Regardless of what it is, The Kiss is a source of power that is sought by many, possessed by one, and fully understood by none.

Rules of The Kiss

Despite the unusual properties of The Kiss, those who have been entangled in its story know -- or learn quickly -- of certain rules that govern its existence. However, none of this knowledge is intrinsic, and must either be instructed by someone more learned in its ways (usually the Kisser), or learned through trial and error.

The Kiss is power. Although he may not realize why, whoever possesses The Kiss is exhilarated and invigorated, and has access to great power. The emotional height of this Kiss is obvious and sensed immediately by the recipient; many people describe it as the butterfly-heart palpitations of a person's first intimate kiss, only more so. Although the powers it gives are not immediately obvious, they are usually discovered quickly enough; all that is necessary is for The Kissed to contemplate a desire to tap its energy (even a mental "I wish I could . . ." longing is enough), so it's usually easy for most who have been Kissed to stumble across its abilities. This is especially true given the euphoria of the Kiss' exhilaration; those who are new to the experience may find their minds racing in a thousand directions, all filled with the kinds of emotions and random thoughts which accompany that first encounter with love. (See "But What Does It Do?," below, for more information on its actual powers.)

The Kiss is irrevocably tied to the act of kissing. Whoever possesses The Kiss may retain it as long as he wants, free to take advantage of the powers as much or as little as he would like. (Even the effects of the euphoria, like any strong emotion, can be ultimately suppressed by a determined person.) However, at the moment the holder chooses to kiss another person in any way, The Kiss is transferred to the person so kissed. The Kiss does not care what kind of kiss it uses as its medium: romantic, torrid, familial, friendly, or any other type can transfer The Kiss to another. Gender does not preclude transferal; a father's goodnight kiss on his son's forehead would transfer The Kiss as readily as a wedding embrace. The Kiss will transfer automatically upon kissing, and this transferal cannot be avoided by either party (although, of course, the holder of The Kiss can choose not to kiss anyone else).

The Kiss can *only* be transferred as a conscious decision to kiss another person; there is no other way a living person

can transfer The Kiss to another, nor can he be compelled or forced to give it up. Thus if the holder is possessed, mind controlled, or under the influence of powerful drugs, The Kiss will not be transferred, nor will forcing the holder's lips to make contact with another transfer it. Although it's theoretical that less affecting drugs such as alcohol can influence someone into Kissing another, usually the holder of The Kiss knows exactly what would be given up by embracing someone else, and will not take such decisions lightly.

However, the holder of The Kiss *can* be directly or indirectly coerced (such as having a gun put to his or a loved one's head), or tricked into giving up The Kiss, perhaps by being seduced, or duped by someone disguised as a loved one. Likewise the holder of The Kiss can use his lips in other ways without fear of "accidentally" transferring it, such as to bite someone or administer CPR. (From a game standpoint, transferring The Kiss requires the person to make a conscious decision along the lines of, "I give _____ a kiss . . ." Of course, any players who try to get around even these meager restrictions by arguing semantics -- "I press my lips against hers in an intimate way, but I'm not kissing her . . ." -- deserve to be fed to piranha.)

Having possessed The Kiss is no preclusion to receiving it again. In fact, some people theorize this is one reason The Kiss exists. In a way, possessing it is inherently lonely, since the holder knows he possesses a unique force; however, if two people (or more!) mutually trust each other enough to share The Kiss back and forth, nothing prevents them from doing so. Couples have reported that the cyclical sensations of this circuit are intensely satisfying. Of course, after such sessions are over, only one of such a pairing can retain The Kiss afterwards . . .

The Kiss is unique. All evidence points to the fact that there is only one instance of The Kiss in the whole world, and any attempts to duplicate, replicate, or otherwise get around this limitation are doomed to failure. In the event of ludicrous or contrived situations -- "I kiss Lois' and Lana's fingers at the same time" -- go with the first name uttered or pick a name randomly.

Upon death, The Kiss reverts to the previous holder. Thus if Maria gives The Kiss to Tony, and Tony is captured by a power-crazed gang and killed after he wouldn't give it up, The Kiss would revert back to Maria (who, because of the energy and euphoria, would almost certainly know she had received The Kiss again). This is a fairly unknown property, and it's entirely possible for someone to regain The Kiss yet not be aware this means the person he had Kissed is now demised. Note that death is the only exception to the normal means of the Kiss' transferal; the Kissed cannot "will" it to revert to the previous holder, although (if he is aware of this property) he could theoretically take his own life.

If the previous holder of The Kiss is also dead, then it transfers to the holder before that . . . and so on, backwards, until it resettles in a living prior recipient of The Kiss.

But What Does It *Do*?

Astute readers will no doubt realize that The Kiss is merely a plot device, and has no intrinsic abilities beyond those to make -- and extend -- an interesting story. In addition, since it can apply to many eras and genres, tying it down here would only weaken its effects as a Macguffin.

However, for those looking for more guidance, here are some ideas for designing The Kiss' effects to heighten its storytelling potential.

Regardless of what it does, The Kiss' abilities should (if at all possible) be unique in the game world. One of its themes revolves around the loneliness of having been Kissed, and the responsibility that follows; in a world where the Psychic Institute can tap the brains' powers in six weeks, who cares that The Kiss can bestow Telepathy as well? GMs should likewise resist the temptation to introduce multiple Kisses; doing so would almost invariably force plots to a point where they converge. ("Wow! We encountered a unique effect just like this *last* week!") If a unique effect not possible -- for example, in an

But How Could It Possibly . . .

The Kiss' rule about transferring to the previous holder in the event of the Kissed's death may not make sense depending on where, exactly, the GM determines its powers come from and how they manifest. This clause primarily exists for game justification and balance; given the violent nature of many RPGs, it would seem a shame to be rid of a unique plot element because a trigger-happy PC managed to blow away the

established Supers world -- then The Kiss should at least do something different from other established effects. Thus in our Psychic Institute world, maybe anti-psi powers have no effect on the recipient of The Kiss; even if it *did* bestow humdrum Telepathy, it would be very different.

The Kiss should be fairly powerful, but not *too* powerful. Giving it the right power level for a campaign is fairly tricky; in general, it should give powers that put the Kissed apart from humanity, but not so far removed that he would be immune to attempts by humanity to incapacitate or control him. In most campaign worlds, getting shot should still be a concern. This gives the recipient cause to keep the nature of The Kiss a secret, and also helps keep its abilities under control should one of the PCs receive it.

The Kiss should not have any other adverse effects. It is, at its core, a fairly optimistic concept; the recipient is given great powers by whoever honored and trusted him, and he in turn has the ability to express honor and trust upon someone else. Like many things involving love, this doesn't mean this trust can't be violated; however, the complications and difficulties that arise from The Kiss should come from the human psyche, not some Cursed Death Plague side effects.

The Kiss should be exhilarating but mildly alienating. This is usually accomplished by the power effects being unique (being given the power to fly in a world where no one else can would be thrilling), but GMs can also emphasize this by noting how alive and energized the recipient feels.

Some possibilities include:

- **Science Fiction:** The Kiss utilizes highly personalized but adaptable nanotechnology; the act of kissing another transfers the nanites and activates a mental trigger which redefines the nanotech's target. The Kiss could bestow rapid healing, increased bodily control and energy reservoirs, and heightened senses or information processing.
- **Fantasy:** The Kiss is almost certainly magical in nature, and can be used to introduce any kind of unique school or type of magic to a campaign world. Of course, the GM should probably work to ensure these powers are at least somewhat tied together thematically; emotion, love, or energy magics would all be logical, but a selection of random cold-based spells would probably not be.
- **Horror:** In a horrific campaign, The Kiss might give crystal clarity or heightened perception, making him a much more effective combatant -- and target -- in the unseen war. The Kissed might become immune to the mind-shattering effects of Things Man Was Not Meant To Know . . . or, perhaps even better (from a plot standpoint), The Kiss makes the recipient immune to the effects of exposure to madness while possessing the Kiss, but the madness itself lingers. Although not horrific itself, this can make the implications of The Kiss even greater for the recipient; can you receive The Kiss, knowing that you are damning someone to give up their sanity in the process? Can you give The Kiss to another, knowing that you may be sacrificing your mind in the process?
- **Pulp:** The Kiss is mystical in nature, and should be tied to some far-off exotic locale or historical/spiritual event. Ideally it is the sole mystical campaign element from that region, so that its uniqueness is doubly ensured. Chi or other energy-based effects can easily be introduced using

holder of The Kiss. (For that matter, it's also not dramatically satisfying if the possessor of this one-of-a-kind aspect is hit by a train.)

In a game where transferal to the previous recipient doesn't make either logical or thematic sense, such as in the nanotechnology example (see below), the GM should pick some other way that The Kiss can remain in play after the demise of the holder. Some possibilities include:

- Upon cessation of brain and heart activity, The Kiss may transfer to the person who next has physical contact with the body. (The GM should consider the implications of this one carefully; a conspiracy of serial super-powered funeral directors is a hard sell for most games.)
- Upon death, The Kiss transfers to the next person who touches the body that had previous possession of The Kiss. (Again, in the nanotech option this might represent The Kiss reverting to a previous instruction set once it transfers to a new host.)
- The Kiss might transfer to the next person or situation that most embodies the reason for The Kiss' existence. Thus if The Kiss is a manifestation of the power of spontaneous human contact, then it might reform from new at the very next instance that is the case (say, an airport meeting half a world away of reunited lovers),

The Kiss as a justification.

- **Supers:** In a Supers world, ideally The Kiss is of an energy type completely unique to the rest of the campaign. Thus it might be the only source of "True Magic" in an otherwise science-heavy universe, or it might tap into a long-lost civilization's energy or spiritual reservoir. Regardless, its effects are best manifested as fairly low-powered but *weird*. In a world where most heroes manifest as Spandex-clad musclemen, perhaps The Kissed is a Steve Ditko-esque manifestation of swirling colored lights and other-dimensional waves of energy; regardless, it should be clear that The Kissed is playing by a different set of rules. (This is especially important if it's difficult to fabricate actual unique game effects.) The Kiss also makes a great "origin" story for a character; possessing The Kiss then becomes a modified vow of chastity, with a great deal of plot possibility if the character forgoes that vow, either in the name of love or to help someone by giving him the power he possesses.

Adventure Seeds

- Even in a world full of super-powered individuals, the guardians of Janustown are considered unique. Although they have never been seen together, the public has always assumed that Dr. Day and Nyght were in some way tied to each other. Their powers are very similar, and they just *look* like they would make a good couple. However, the Guardian Duo (as the press dubbed them) disappeared from the public scene two weeks ago, and a woman with very similar powers has appeared, dubbing herself Twilight and causing a crime wave of epic proportions. Where did she come from, what happened to the Duo, and why has university professor Pat Daye been so insistent in trying to enlist the PCs' help in bringing Twilight to justice?
- In a modern-day campaign, the heroes need to infiltrate a commune compound to retrieve information from one of the cult's occupants. However, despite his proclamations of "free love," the cult's self-styled Holy Emperor of All, Dietre Avrase, maintains a tight hold over the occupants. And what is the Blessed Embrace that is rumored to circulate throughout the community that Avrase claims will keep him and his compound safe from outsiders?
- In a science fiction game, the heroes manage to track down someone rumored to have unique powers vital to solving a galactic problem. The voyage to the source of the problem is problematic, however, as she is standoffish, aloof, and generally unpleasant to be around. However, a pirate attack on the heroes' vessel seems to change everything; an errant blast strikes her and she slumps over, grievously injured. Why, then, does she choose that moment to try to get one of the adventurers to kiss her? And, assuming he does so, what happens after they save the galaxy and she awakens from her coma?

or it might reform at the next big embodiment of that concept (such as the embrace of an earthquake victim's family after he had been buried alive for eight days and presumed dead. This possibility is, admittedly, even more illogical than transferring to the previous holder, but might make sense for some campaigns; in the case of the "big embodiment" option, it might also give characters new avenues to hunt for clues as to The Kiss' current location.

Regardless, the GM should still leave possibilities for a holder of The Kiss to be incapacitated and unable to transfer it, at least for a long while (such as The Kissed being in a coma); many PCs can grow frustrated if there is no possibility to ever be rid of a plot device.

AucHaus Item #48274113: Six Things I Stole From Cupid

by Alice Turow

Bidding begins at: **\$0.01**

Seller: [Ondlam](#) [A- Seller, 3w Active]

7 days, 13:41 Left

I have found myself in a situation where I am seeking to sell several one-of-a-kind artifacts. Although I am not the original owner, all items are in good condition. (In fact, unless otherwise noted, I have used each item only once.) All items are also guaranteed to work in the manner specified; bidders are encouraged to read carefully.

You are bidding on the following items:

Take-Back Pinkie Ring

This is, admittedly, a rather plain-looking ring, consisting of a plain pewter band inset with a garnet. It is intended to be worn on the pinkie, but should be able to be resized if so desired. If worn by someone in a relationship, this item will enable the wearer to rewind up to 15 seconds of time by rubbing the stone. This only works in situations directly involving interactions with the other partner in a relationship; however, if not used to take back long-distance interactions (such as a phone call), all that seems to be required is for the partner to be within one's line of sight.

So, as a completely hypothetical example, if the wearer were to refer to one's partner as an unmentionable body part in the middle of an argument at an expensive Italian restaurant, the Take-Back Pinkie Ring would enable the wearer to take back the unfortunate comment and try again. In fact, the ring can be rubbed multiple times to take incremental steps backwards in time.

Although the item no longer works for me, I have confirmed that it works for others. This item is not in the best of shape, and bears abrasion and scuff marks; presumably a previous wearer rubbed it vigorously on more than one occasion. I would recommend any buyer not grow to rely on this product overly much.

If the person is not in a relationship, the pinkie ring will do nothing when worn. When worn by someone in a relationship, the ring will work a total number of times equal to the length of the relationship in months; thus donning it on the anniversary of a two-year relationship would give it 24 charges. It always starts with a minimum of one charge, even if the relationship is less than one month old. This item can never be recharged or used again for the same relationship, although the number of charges would reset if worn again by someone in a new relationship. Complications are most likely to arise from this item if the wearer grows to rely on its abilities overly much; taking for granted the ability to correct one's mistakes can have disastrous consequences.

Chastity Anklet

This unisex anklet has the luster of 24-karat gold, although I am uncertain of its actual composition since it is not

marked in any way. It is made up of attractive but understated miniature chain links, shaped into loops; it resembles a tiny boat anchor chain. It is surprisingly adaptable, and should fit any ankle snugly but comfortably. (It could also be worn as a bracelet, if desired.) Anyone who receives the anklet as a gift and then wears it will not have any amorous desires toward anyone other than the giver. That person will also not have any desire to remove it, although it can be removed by others (probably against the protestations of the wearer); if this is done, the effects are dispelled, and the former wearer should be able to piece together what transpired if he was exposed to anyone toward whom he would normally feel attraction. In this case, since the anklet is then possessed by the recipient, he would be free to give it to another, with the new owner feeling the effects as normal. **If you are the winner of this auction, you are strongly encouraged not to wear the anklet yourself.**

This item does not create any romantic feelings in another toward the giver; it merely ensures that the wearer cannot feel any such feelings toward anyone else. If the chastity anklet is given to someone who will never naturally feel any desire toward the giver, then the likely outcome is that the recipient will never feel passionate love toward anyone.

Vacation Potion

Many couples complain they don't have enough time to "get away from it all"; this concoction seeks to rectify that situation. Stored in a tequila bottle, this elixir is best served with salt and a wedge of lime. When consumed, drinkers are transported to . . . Well, I am uncertain. I believe it to be some kind of alternate dimension, but it could be some kind of vivid dream state, or something else I can't figure out. Regardless, it feels entirely real for the participants. The locale visited needs be agreed upon beforehand; a group shout of "Let's go to Cancun!" is enough to do the trick. This elixir requires at least two people to define a location; if six people each consume an ounce, and three declare they want to go to the orbital space station, two decide they want to go to Hawaii, and one wants to go to Antarctica, then five will get to share a vacation and one will be left behind.

Regardless of how it works, the vacation world is wonderful. Everyone is polite, it never rains unless you want it to, and the experience is completely relaxing. It must be seen to be believed.

Each fluid ounce consumed will result in a one-day vacation, which lasts for one hour in the real world. The potion can be consumed in half-ounce increments for a half-day. The drink takes five minutes to take effect, so multiple doses consumed in that time can result in an extended vacation. The bottle seems to stay at its quarter-full state, at least as long as it is merely consumed from. (The bottle was previously just over half full, but an incident resulted in it being knocked over; apparently portions spilled in this way to not replenish.)

In honesty I am reluctant to part with this item. However, I would prefer to sell all these items as a set.

Consumers of this potion are not actually transported anywhere, physically. Instead, the bodies enter a death-like coma for the duration of the experience, while the minds partake of their "vacation." Drinking this elixir alone -- or without a location partner -- will send him into a coma for the duration without the benefit of a voyage.

*GMs looking for a "twist" on this idea might decide that people visit the alternate locale, but not with each other; they only **think** they've been with their partner or vacation-mates. Instead, each person under the liquid's effect is in a separate reality, linked by idealized experiences and manifestations of each other in the separate realities. This enhances the pleasurable "vacationing" effect; thus a partner's bothersome snoring would be eliminated, and if he was unwilling to go snowboarding on his own, the alternate manifestation might be willing. (Likewise that partner who didn't like snowboarding would probably do something enjoyable to him with his partner in his other-world vacation.) This enhances the relaxing effects of traveling elsewhere, but could lead to incongruities; while the broad strokes of the shared vacation will match up, specific details probably won't. In this*

version, obviously the more people who enter into a shared world will result in more discrepancies.

Regardless of which interpretation is used, a shared vacation world might be a good way to introduce any kind of other-worldly plot or complication, such as [Love Potion Number Pi](#).

Happiest Days Picture Frame Set

This beautiful matching set of silver picture frames is intended for a couple in a relationship, one frame belonging to each partner. (One person in a relationship can give it to the other, or the pair can be given to the couple by an outside source.) However, the frames are not intended to house pictures the recipients choose themselves. Instead, they display a professional-quality "photograph," each depicting the moment the owning partner considers to be the happiest in the relationship. The image can change instantly, to reflect new opinions of the owner, although it seems that the frames never change images when they could be observed in any way. Please note that one of these frames will require a new front pane of glass, owing to an incident involving a wall.

"Thinking Of You" Heart Candies

This is a box of tiny candy hearts; although the box is seemingly made of cardboard, it is surprisingly strong and seems capable of withstanding normal wear and tear in a coat pocket or purse. If eaten as normal, the candy hearts will bear messages regularly found on edible hearts of this sort: "I LOVE YOU," or "KISSES TO YOU." However, if you give this box of candy to another, you will be able to project messages to the recipient, through the candy. The recipient will know when he has a candy message, and the act of tapping a candy out of the box seems to be what brings the note into existence. Messages are limited to two lines, each composed of up to six letters (all capital), numbers, or spaces. The recipient can take as long as he likes to get the message, although the box can only store one message at a time. The sender can choose to send longer messages through multiple candies, but has no way of knowing if earlier messages have been received, and must pause what feels like an appropriate amount of time before sending the next part, or else run the risk of "overwriting" an earlier piece of the message. Thus "CALL MOM" or "PICK UP MEG" are viable messages, as is "MEET 4 DINNER" "AT LOUIES" "BY EIGHT." Although the box is small, it seems to hold an inordinate number of candies.

*In addition, any sufficiently strong thought from the giver directed at the bearer of the box will also trigger a candy message. Alternatively, GMs might consider that **any** sufficiently strong emotion from the giver will trigger a message, regardless of its target. In either case, the giver may find himself needing to explain candy hearts such as "TAKE IT OFF," "GO TO HELL," or "SHUTUP ALREADY."*

The "No, You Said" CD

The "No, You Said" CD is black on its read side and red on top, with large yellow letters exclaiming, "NO, YOU SAID . . ." It contains an audio record of everything you and your significant other have ever said to each other. Tracks are organized by date and conversation. It is continuously updating, and will add new conversations as soon as they are ended. (In a particularly heated exchange it is usually possible to say, "This conversation is **over!**" to force it to update; information useful to the exchange can thus be retrieved and played back.)

In addition, the act of holding the CD will give the person a feeling as to where the information is on it, greatly speeding up most searches. The CD's audio quality is great, and will accurately record all audio conversations both people in a relationship were part of, including those over the phone.

The CD only works for the two people in a committed relationship, although either person may tap its information.

The "No, You Said" CD only seems to attune itself to one relationship at a time, and the act of ending the union is enough to render it blank. However, if a new relationship is established -- or the old one given another chance -- then the CD fills retroactively, including all the conversations that were on there previously in the case of renewed relationships.

*All attempts to copy either the CD or information off the CD will meet in failure; audio tapes refuse to pick it up, computers cannot read it, and so on. The CD **can** be played for other people directly. However, this might prove awkward, since the "No, You Said" CD has logical reason for existing as it does.*

Of course, this concept can work with various other media; video tapes or DVDs, a book of knowledge, etc. Regardless, it might be, in fact, a part -- or an edited revision -- of the [permanent record](#).

* * *

Thank you for considering these items for purchase. Payment will be accepted in any form imaginable, and is not -- strictly speaking -- necessary. I cannot tell you how much I look forward to the successful completion of this auction.

Put Out the Lights: *Othello*

*"If thou dost slander her and torture me,
Never pray more; abandon all remorse;
On horror's head horrors accumulate;
Do deeds to make heaven weep, all earth amaz'd;
For nothing canst thou to damnation add
Greater than that."*

-- William Shakespeare, *Othello*, III:iii:416-421

It's [Valentine's Day](#) again, which means the spirit of romance once more stalks the land. We've seen Shakespeare conjure that spirit for [combustive astrology](#) and for the [death-struggle of the gods](#). This year, love's horrors accumulate on the head of *Othello*, who "loved not wisely, but too well." Blow out the candle, and let your eye get adjusted to the dark.

*"Little of this great world can I speak,
More than pertains to feats of broil and battle;
And therefore little shall I grace my cause
In speaking for myself. Yet, by your gracious patience,
I will a round unvarnish'd tale deliver
Of my whole course of love; what drugs, what charms,
What conjuration, and what mighty magic,
For such proceeding I am charg'd withal,
I won his daughter."*

-- William Shakespeare, *Othello*, I:iii:100-108

In Venice, the soldiers Iago and Roderigo are both affronted by the general Othello, a converted Moor. Othello has passed over Iago for promotion in favor of Cassio, and has eloped with Roderigo's beloved, Desdemona. Iago talks Roderigo into revealing the tryst to Desdemona's father, Brabantio, who reacts by charging Othello with sorcerous seduction. However, not only does Desdemona proclaim herself truly in love with Othello, the Venetian Senate needs Othello to take over the war against the Turks; Brabantio's complaint is dismissed, and the Duke of Venice orders everyone to Cyprus. Othello, appointed governor of Cyprus, is delayed by a storm (which conveniently wrecks the Turkish invasion), leaving Iago and Roderigo time to plot against him. Iago gets Cassio into a drunken brawl with Roderigo, destroying Cassio's reputation and career. He then manipulates Cassio into pleading with Desdemona for reinstatement, while hinting to Othello that Cassio's new closeness with Desdemona is the cover for an adulterous affair.

Desdemona, meanwhile, has dropped a handkerchief given her by Othello; her maidservant Emilia (conveniently, Iago's wife) gives it to Iago, who plants it in Cassio's rooms; Cassio then gives it to his slut, Bianca. Iago then tells Othello of Cassio's lust for Desdemona, and of seeing him with Desdemona's handkerchief. When Desdemona next pleads Cassio's case, Othello flies into a jealous rage, especially when she cannot produce the handkerchief. When Bianca returns the handkerchief to Cassio as Othello watches from hiding, Othello vows to kill Desdemona while Iago kills Cassio. Iago tries to get Roderigo to do the deed, but Roderigo only wounds Cassio; Iago then kills Roderigo to conceal his schemes. Othello meanwhile smothers Desdemona with a pillow; her death shocks Emilia into revealing the truth. Although Iago kills Emilia, his cover stories collapse and he is arrested; Othello kills himself in remorse, pleading that the truth be told after his death.

*"Whoe'er he be that in this foul proceeding
Hath thus beguil'd your daughter of herself
And you of her, the bloody book of law
You shall yourself read in the bitter letter
After your own sense."*

-- William Shakespeare, *Othello*, I:iii:77-81

Shakespeare probably wrote *Othello* in 1603, to flatter the newly crowned King James I of England, who fancied himself an expert on the Turkish wars. It apparently worked, since *Othello* debuted at court for All Saints' Day in 1604, despite the tricky name of the scheming villain Iago -- Spanish for "James." (The many hints in the play of Iago's homosexuality also apparently flew by the effeminate new king.) Shakespeare made up all the names in the play except Desdemona, which he took from his source, Giambattista Giraldi Cinthio's 1565 *Hecatommithi*, a collection of traveler's tales supposedly told on shipboard after the sack of Rome in 1527. In Cinthio's original story, "the Moor" (possibly based on a historical Venetian captain, Christophoro Moro) and Alfiero (the Iago character) murder Desdemona together and then pull down the ceiling to make it look like an accident; Alfiero's motive is pure sexual jealousy. "Desdemona" is a Greek pun; her name is *dis-daimon*, an "unlucky spirit." Similar classical allusions fill Cinthio's tale (which has elements of Odysseus and Penelope within it) and, interestingly, Shakespeare's play. For Othello's African background, Shakespeare cribs from Pliny and Leo Africanus; Iago swears "By Janus!" -- an odd oath for a Christian, even a two-faced one.

*"'Tis true; there's magic in the web of it;
A sibyl, that had number'd in the world
The sun to course two hundred compasses,
In her prophetic fury sew'd the work;
The worms were hallow'd that did breed the silk,
And it was dy'd in mummy which the skilful
Conserv'd of maidens' hearts."*

-- William Shakespeare, *Othello*, III:iv:72-78

But not, perhaps, for a magician. Iago's trickery and lies (Mercurian -- Hermetic -- actions), his words and symbols, have a strong magical feel to them even before we hear him boast to himself of his "medicine" or "poison" or "elixir" or "mineral" or "pestilence." He recapitulates (and explicitly endorses, to Rogerio, Cassio, and Othello in turn) the path of the magus: to dare, to will, to know, and throughout to keep silent. He brags of somehow causing Othello's epileptic fit in Act IV, a fit associated (in both Shakespeare's London and the Moor's "Ethiopia") with the *malocchio*, the evil eye. Given Shakespeare's explicit choice of the name, the connection to "I" for "Iago" is not impossible, especially since Iago knows enough about the evil eye to utter charms against it ("God bless the mark!") and to steal the handkerchief ("a darling like your precious eye") that contains magical power over a husband's eye. Sure enough, only after the handkerchief vanishes does Othello fall into his fit; only after the theft does Iago, Medusalike, turn Othello's "heart to stone," and Othello turn his own hateful eye upon Desdemona ("You are fatal then/When your eyes roll so"). The handkerchief indeed has "magic in the web of it," it binds Desdemona to Othello, then protects their love, and then betrays them both to their deaths. It becomes the Web of Fate, woven by the [Three Sisters](#) who (in some versions of the story) have only one eye between them: Iago's?

"It is Othello's pleasure, our noble and valiant general, that, upon certain tidings now arrived, importing the mere perdition of the Turkish fleet, every man put himself into triumph; some to dance, some to make bonfires, each man to what sport and revels his addiction leads him; for, besides these beneficial news, it is the celebration of his nuptial. So much was his pleasure should be proclaimed. All offices are open, and there is full liberty of feasting from this present hour of five till the bell have told eleven."

-- William Shakespeare, *Othello*, II:ii:1-7

But why does Iago turn on Othello's marriage, after safely disposing of Cassio in a drunken brawl? Coleridge (who knew something of horror himself) called it "motiveless malignity." But perhaps Iago intends to connect Cassio and Desdemona in ritual, as well as gossip? One can read the action as Iago's attempt to replicate Egyptian mystery casting Othello as jealous Set (the dark, foreign god), Desdemona as the virgin-whore Isis ("a pearl" for whom the stormy seas make way), and Cassio (who suffers damage of "a mortal kind" but returns Easter Sunday morning with only a wound to his "leg") as Osiris. Perhaps Iago intends to step in at the crisis, and replace either Set or Osiris with himself (Hermetic Thoth? Horus of the Hawk's Eye?); perhaps simply staging the death ritual (on the night before Easter, by the song cues) is enough.

Whatever the reason, Iago intends it from the beginning; the first scene sets in motion a ritual exposure (to the Eye) and destruction of Othello's marriage. This ritual, very common in early modern Europe, is the charivari (which becomes the "shivaree" in Cajun Louisiana). The actors of charivari (which, like [Shakespearean drama](#), connects the street masque of Carnival to the [Dionysian](#) sacred revel) make a disturbance outside the marriage house until the groom and bride emerge, display themselves sexually, and feed them. (Charivari survives in modern America in the glass-banging for a kiss at the reception and the sabotage or vandalism of the honeymoon car.) Iago and Roderigo make charivari outside Brabantio's house to force Desdemona and Othello to reveal their marriage; then, in Cyprus, Cassio and Roderigo's brawl is a more violent charivari on Othello's "nuptial" celebration night.

Some theorists, examining the play's timing as an eternal Carnival, hint that Othello and Desdemona are unable to consummate their marriage (since the dawning of Lent would forbid it), leaving Desdemona "chaste as Dian" and her sheets unspotted and thus (eerily) suitable for a shroud. Where [Richard II](#) is an "un-crowning" play, *Othello* becomes an "un-marrying" play, a kind of Black Mass of marriage in which lovers become strangers and jealousy replaces courtship. It ends in human sacrifice ("Thou makest me call what I intend to do/A murder, which I had thought a sacrifice") as horrific, parodic consummation in the marriage bed, on the "wedding sheets." Significantly, the [usual alchemical resonances](#) in Shakespeare are tragically (and violently) reversed -- the alchemical marriage of nigredo (often represented by an "Ethiopian" or Moor in alchemical art) and albedo already exists at the beginning of the play; the Great Work has already begun offstage. Their sublime union is cloven by the Mercurian figure of Iago; rather than gold and perfection, the result is baseness, death, and chaos.

*"O, insupportable! O heavy hour!
Methinks it should be now a huge eclipse
Of sun and moon, and that the affrighted globe
Should yawn at alteration."
-- William Shakespeare, Othello, V:ii:119-122*

Iago has unleashed powerful spirits, both alcoholic (when he destroys Cassio with wine) and psychic, when he awakens Othello's fiery, murderous, selfish nature. His words (his "medicine" or "mineral") have split the athanor (or the atom) that is Othello's marriage, unleashing a wave of murder and destruction that finally even silences him. As we have seen [before](#), the first step in such sorcery is the unhinging of time. Not only does Shakespeare telescope the drama into an impossible "three days" (triplicity again, this time echoing the Osiris-Christ story), but he sets music and story cues against each other, hints that time in Cyprus is not "continue," and has Iago boast of using "dilatatory time" to work his mischief. Suddenly the destruction of Cassio makes sense -- Cassio, himself, as an "arithmetician" embodies time. He'll "watch the horologe a double set" -- until Iago gets him drunk, that is, and destroys "the just equinox" within him. That done, Iago's way is clear to steal the Web of Fate, splinter the marriage of opposites, and abort the Great Work of creation by eating away at Othello's love. "When I love thee not," Othello promises Desdemona, "Chaos is come again." Like [King Lear](#), the play contains the seeds of Chaos, for altering the "affrighted globe" and creating the "very error of the moon." For whatever reason -- or motiveless malignity -- Shakespeare gave a royal Iago the power to unmake the world. And that year, he retired from the stage, content to watch the plays with his clear, unwavering Eye.

Film Frenzy: Action Movie Edition

Published by [Comic Images](#)

Written by Tom Lauria, Chris Lauria, Tom Gilliano, & Colin Merlo

Designed & Developed by Colin Merlo, Chris Lauria, Tom Lauria, Tom Gilliano, TCT Productions, Mike Crenshaw, & Shoe Shine Studios, Inc.

Art & Graphics by Chris Lauria, Tom Gilliano, & Neil Vokes

120 full-color cards; \$19.95

When *Die Hard* premiered in theaters, it broke the mold for action movies and reinvented the genre. A film no one was sure about turned out to be a smash hit. It's nice to see that happen again with Comic Images' *Film Frenzy: Action Movie Edition*.

The object of the game is to score the most points by playing cards that match the action on-screen.

Players have a hand of five cards, plus one Rewind card and a Pause card. The game starts when the dealer, who controls the remote, hits play, and it doesn't stop until the film ends. As the movie unfolds, players play their cards and announce them by title when they see an action or situation in the movie that matches. The card is placed in front of that player. The more common the action is, the fewer points it is worth, and conversely the rare occurrences score more.

At the common end of the scale are moments like Hand Gun; it's only worth one point, and there are plenty of them so the table will fill with them when the gunfire starts. There's only one Doomsday Device, in the movie and on the cards, so it's worth nine. Some cards have special bonuses that make them worth more; you get an extra point for Hand Gun if the actor is using two of them or if the weapon is equipped with a silencer.

The cards hit all of the movie clichés. You can score points if something blows up or catches fire; if the villain explains his plans or uses foul language; or if someone gets tossed through a window, off a precipice, or onto some pointy scenery. The regular cast of characters fits in as well: the Corrupt Official, the Streetwise pimps and junkies, and the Long Haired Guy all net points when they show up. For every card you play, you draw another into your hand.

Some of the cards have a red border, and these can cancel other specific cards. Most are thematically linked, so the Heavy Weapons card can cancel the effects of Machine Gun, and Trench Coats will stop Risqué. The Rewind Card allows you to play a card that applies to a situation that arose earlier in the film, before you had the card available in hand. Pause is one of two ways to stop the film or get rid of unwanted cards; when used, the dealer must pause the film. Each player takes turns discarding however many of their cards they like and replacing them. Then the movie resumes.

If the deck runs out, game play halts while the cards are reshuffled and dealt anew. The deck will be exhausted at least a couple of times during the show depending on how many players join in and the flick's running time. Any cards played up to now are tallied, the resulting scores written down, and the cards returned to the deck for the shuffle.

What looks like a truly dull exercise when you open the box and read the rules -- watch a movie, play a matching card

-- turns out to be engaging and exciting. There's a sort of gestalt working here, where the interactivity makes the game greater than the sum of its parts. There's plenty of calling things out without the competitive and argumentative rush to be first. If you've never seen the selected movie before, it adds tension as you hope for just the right scene. If you have seen it, you have to gauge how long to keep the cards in your hand: "I know that car chase is coming up, but the bar fight is next and if I don't use Pause to switch out cards, I won't have any decent cards." In a mixed group, the two sides can even out, and there are always the red-bordered counter-cards in case someone pulls ahead -- though that's tough to do in the thick of the action.

The cards are illustrated by Neil Vokes ("Spider-Man"), and have bright, colorful, and sometimes amusing illustrations. The cards are easy to read at a glance, though the bonuses will make you peer a little more closely. These parts aren't critical in the heat of play, though, so there will be plenty of time for them during the end-of-deck shuffle. There is something else on each card: an Easter egg all but buried in plain sight . . .

Film Frenzy is one of those rare finds: a game that puts enjoyment over the rules and succeeds by adroitly meshing the two. "Action Movie Edition" suggests this is the first release in what will no doubt be a very popular series.

Pyramid Review

Naughty & Dice: An Adult Gamer's Guide to Sexual Situations

Published by [Sabledrake Enterprises](#)

Written by Christine & Tim Morgan

Illustrated by Frederick K. T. Andersson, Laura Bayless, Allison L. Cassel "Gabriel Moonshadow," J. "Kythera" Contreras, Jayne "Jala" DePaolo, Christi Smith Hayden, Peta "Chaypeta" Hewitt, Jim Milligan, Jamie "Hinode" Pancy, Kayce Sizer, Terence, Jamie "Lynnwood" Thatcher, Teresa Troxell, Dara "Weirdlet" Williamson, & David Wong

104-page b&w softcover; \$19.95

Editor's note: While not explicit, this review does talk about . . . well, sex, particularly within the context of an RPG. If such topics are not your cup of tea, I'd recommend skipping it.

Just when you think that there is never going to be a book about sex and sexual situations that can add that certain friction to your roleplaying game, two come along in the same year. The one that got all the press was the *Book of Erotic Fantasy*, causing no little furor as its release turned the nature of the *d20 System* license upside-down, while the second was released with nothing like the fanfare nor the controversy. *Naughty & Dice: An Adult Gamer's Guide to Sexual Situations* comes from the writing team of Christine and Tim Morgan, the former known for her works of fiction such as *The MageLore* and *The ElfLore Trilogies*, and the Origins-Award-nominated short story, "Dawn of the Living-Impaired" from Eden Studios' *The Book of All Flesh*.

Naughty & Dice: An Adult Gamer's Guide to Sexual Situations comes in a cover that pokes fun at its subject matter, having been done so as to look as if it is wrapped in torn brown paper. It is clearly marked with the words "FOR MATURE EYES ONLY" and "CENSORED," and makes the claims that it is "Putting the 'R' in RPG!" and is also, "The Most Exhaustively Playtested Sourcebook Ever!" The actual front cover, the one hidden by all that faux brown paper, is reproduced fully in the book's frontispiece, depicting an amply built gamer rolling the dice for the characters on the board below. It sets the tone for the rest of the book, being a not-unattractive piece with just a slight nod to the chainmail bikini school of art, but is far from being either prurient or salacious. While there is the occasional bare nipple or two on show, this is as far as all but one of the many illustrations go in their explicitness. No worse then, than the half-time entertainment at the Superbowl, and probably more tasteful. At their worst, the illustrations in *Naughty & Dice* are merely suggestive, erotic rather than explicit. Not so the writing, which instead takes a calm and measured approach to its provocative subject.

That subject is (of course) sex, something that is rarely discussed in roleplaying games, or indeed comes up in the average campaign. Which is a shame, as the subject of romance does arise, and once romance rears its head, then sex cannot be far behind -- unless, of course, that game is *Pendragon*. Explanations as to why sex is not part of gaming can be boiled down to a number of reasons, mainly due to the once youthful age, and once wholly masculine nature of the average gaming group. Another reason is our society's attitude toward both games and roleplaying games, their

supposedly being not for an adult audience and should therefore have no reason to include sexual content. But demographically, the average gaming group is aging and maturing, and more commonly containing a greater number of female gamers than ever before. Thus an argument could be put forward that a supplement such as *Naughty & Dice* fills a certain void in the gaming market. Not that games have avoided the subject all together, ranging from the dreaded sex-change card drawn from *Advanced Dungeons & Dragons'* "Deck of Many Things," and the hedonistic goddess, Dlamélish, the Green-Eyed Lady of Fleshly Joys, from *Empire of the Petal Throne* to the "Mr. Studd Sexual Implant" cyberware of *Cyberpunk 2020*, but no single supplement has addressed sex as a whole.

After the necessary warning that both its contents and their use are for mature participating gamers only, *Naughty & Dice* gets on with being a gaming supplement. It does this in as generic a manner as is possible; the nearest it gets to actual game stats are in the OGL compliant appendix. That said, it is none too difficult to map the contents of the rest of the book on to other generic or universal game systems, such as *FUDGE*, *GURPS*, or the *Hero System*. It defines a new attribute, Sexuality, calculated as the average of Health and Charisma scores, and from this both a character's responsiveness to sexual situation and their ability with sexual skills can be determined.

Instead of advantages and disadvantages, *Naughty & Dice* has "Turn-Ons" and "Turn-Offs." These cover both the biological -- High Sperm Count, Barren, and Social Disease (four such are detailed, from Syphilis to HIV/AIDS), and the social or romantic -- Allure, Nice Guy/Girl Syndrome and Wedding Vows. Where most other RPGs might go so far as to include the Sex Appeal or Seduction skills, this supplement provides 24! These are divided between those that relate directly to the act and the art of sex, to the sex industry and medical side of sexuality. There is even a note on how to use the kiss as a combat maneuver! All of this can be used in conjunction with any character or with the book's various archetypes that run from the Bad Boy and Pimp to the Good Girl and the Soiled Dove.

The chapter on "Sex Support" discusses tools and aphrodisiacs and also exposes the lies behind the most common form of Spam delivered to e-mail inboxes daily. Another details the consequences of sex -- pregnancy -- and how to prevent it. After giving a straight explanation of the facts of sex, *Naughty & Dice* begins to get away from that with chapters on the folklore, the mythology, and the history of sex. These are each interesting reads, going around the world and back again, before coming right up to date with the effects of the HIV/AIDS virus.

The book moves further away from the given facts and more into fantasy, with a slew of spells and magical items. Both are described without the need for statistics, but are these still easy enough for any GM to assign, whatever the game system. The major gaming genres are explored chapter by chapter: cyberware and advanced technology, sex, aliens, and hybrids for Science Fiction; the usual races plus Dragons, Minotaurs, and other theriomorphs (part-human/part-beast) are discussed under Fantasy; and vampires, werewolves, incubi, and succubi are in the chapter on Horror and the paranormal.

A sample sexually charged faith is taken from Christine Morgan's own fantasy novels. Talopea is the goddess of pleasure, with a dislike of those who misuse or deny the act of sex. With a love of the body beautiful, this faith also has a hatred of the undead, as death is anathema to them. Not only does the worship of Talopea make use of several of the sex spells and sex skills given earlier, a cleric class of its own in the OGL Conversion Appendix also supports it. Both this class and the chapter on Talopea are likely to be the least useful of the material given in *Naughty & Dice*. As examples they work fairly well, but the goddess is unlikely to be used as anything other than a faith to be encountered, and the cleric class itself will be a radically brave choice for most players.

The OGL Conversion Appendix also contains two NPC classes, the Don Juan/Demi-Monde class and the Hedonist. These are suited to more roleplaying-orientated campaigns, while the Femme Fatale Prestige Class may turn out to be a welcome addition to many a campaign. It is unfortunate that she is only described in fantasy terms, but it should little effort to adapt to other times and genres. The appendix also includes several new feats, of which "A Great Night Out" and "Wrangle Invitation" are nice additions to any game. The spells given earlier are here given stats. The second appendix contains the book's bibliography, including a number of website URLs, and these should provide more detail should a referee so desire.

Rounding out *Naughty & Dice* is a collection of expanded story seeds ready for the referee to develop. These come from a variety of different periods from our history, from the Sultan's Harem and Victorian England to Regency

London and the Wild West, but pride of place goes to "Castle Spank." Inspired directly by issue #14 of John Kovalic's *Dork Tower*, this describes what could be the worst imaginings of Matt's mind and is as salacious as this supplement gets. There is, unfortunately, no mention of "Spanky Goths."

Naughty & Dice is an interesting read, not just in the main text, but also in its quotes and fiction. The former are found throughout the book, and come from sources as diverse as Angie Dickinson, Geoffrey Chaucer, Mae West, Jane Austen, Steve Martin, and Mark Twain. While the quotes add a pithy quality to the book, the pieces of fiction that preface each chapter prove to be entertaining. Particularly good are those of an atypical trio of adventurers -- a light-fingered gambler, an Orc hating fighter, and an Elf Lothario -- as they pay a visit to a tavern. These are used to highlight the chapter's forthcoming contents, culminating in a rotten twist for the Lothario. The switches back and forth between in- and out-of-game conversations are deftly done, the latter serving to relate the player reactions to the events of the game. It is in these pieces of fiction that the book comes closest to ribald humor, but really they should raise no more than a smile.

What this supplement does not deliver is depth, and nor should it. Rather, such depth should come from the players and referee alike within their game, but only as long as they are comfortable with the nature of said game. This is one of the strengths of the book; it makes what could be a titillating or embarrassing subject into a comfortable and interesting read. Ultimately, *Naughty & Dice: An Adult Gamer's Guide to Sexual Situations* provides a broad overview of its subject, with just enough information to both get the referee started and pointed in the right direction should they want to know more.

Pyramid Pick

The Outcaste (for Exalted RPG)

Published by [White Wolf Publishing](#)

Written by R. Sean Borgstrom, Eric Brennan, Genevieve Cogman, & Scott Taylor

160-page b&w softcover; \$22.99

White Wolf's recent releases for its *Exalted* line have all been of exceptionally high quality, and *The Outcaste* continues this trend. But while *Aspectbook: Air* and *Kingdom of Halta* were both only 96 pages, *The Outcaste* weighs in at 160 pages for only a few dollars more.

More important than its price or page-count, however, is the book's content. The bulk of *The Outcaste* is spent describing three vastly different societies of Dragon-Blooded (or Terrestrial Exalted), ranging from the highly militarized Seventh Legion of Lookshy to the pirates of Eos and Ossissa, and the simultaneously deluded and immortal brigands who make up the Forest Witches. While all the book's material is specifically geared toward enriching *Exalted's* highly developed world, pieces of the setting material could definitely be adapted for use in other games, though doing so would likely alter the tone of a campaign dramatically.

This is because all the societies described in *The Outcaste* are dependent on or shaped by powerful magic, though the form that it takes differs in each case. The military of Lookshy and the Seventh Legion depends on the extensive use of magical equipment, ranging from giant robot suits, to aerial battleships and transports, to a vast array of magical weapons and armor intended for use by both its mortal foot soldiers and their exalted commanders. The pirate captains Eos and Ossissa maintain their fleet by sailing beyond the edge of the world to the courts of the Fae, where they can gain anything they desire at the risk of becoming storybook caricatures of themselves. And the Forest Witches are the strangest of all; so strange, in fact, that to attempt to describe their society in detail would be to do its intricacies a disservice. Suffice it to say that they take part in a communal delusion which ensures their survival in the minds of their comrades even if they should fall in battle, and if they can steal enough artifacts, that delusion will become self-sustaining, and they will never need to deal with the real world again.

The Lookshy section is one of the best parts of the book, describing the Seventh Legion's force structures, unit composition, equipment, tactics, and troop readiness in considerable detail. The city itself is mapped (a relative rarity in *Exalted* supplements), and the description of the city's culture gives a good sense of what life is like for the city's helots and citizens, as well as visitors and its exalted overlords. The city's political relations with the world-spanning empire of the Realm and its neighbors in the Scavenger Lands are well detailed, as are its gods and several incidents in its recent history, but those looking for a complete history of the city and the Seventh Legion are referred to the section on Lookshy in the *Scavenger Sons* supplement. Descriptions and statistics for all the artifacts and pieces of gear that the Seventh Legion is likely to use in the field are included as well, though Warstrider stats and most of the spells used by Lookshy's sorcerer-engineers are only to be found in the *Book of 3 Circles*. This need for other books is not a drawback, however; for a storyteller planning to run a campaign set in Lookshy, *Scavenger Sons* is essential, while *The Book of 3 Circles* is necessary if anyone wants to play a sorcerer.

The chapter on Eos and Ossissa, while interesting, is probably the most limited of all the book's sections, as it focuses on a single group of pirates, their vendetta against the mercantile Guild, and their home base in the chaos of Wyld. As in the Forest Witches chapter, its major NPCs (Eos and Ossissa) are given stats, and a number of Charms and spells specific to the nautical setting are included. While the specifics of Eos and Ossissa's operation are well laid-out, most groups will have to mine this section for ideas instead of using it in their game, as its details are really only useful for

those who want to play Dragon-Blooded pirates.

The Forest Witches section, like that on Eos and Ossissa, is unlikely to be of direct use to most play groups, but it drips with ideas that could become the core of a campaign. The wood the witches live in is alive, and provides for all their needs so long as their spirit is periodically offered a beautiful sacrifice, which first it cossets and then eventually kills. The mist enshrouding the wood is inhabited by strange and alien beings called numina, and the PCs can join their number, so long as they are willing to leave behind their humanity to become something else. The dead live on in Atsiluth Eternal -- a city so perfect that none of them care that it only exists in a dream -- while the living reincarnate themselves as the children of nearby rulers, regaining their powers and most of their memories as they grow older, until at last they can control or destroy the countries they inhabit from within. The few Charms provided are only appropriate to a Forest Witches game, but it hardly matters, since the chapter contains so many fascinating ideas.

The final section of the book is the one likely to be the most useful to many play groups, as it details the lives of those born Outcaste in the Realm or in the various directions of the Threshold. Relatively short compared to the book's other sections, the chapter provides an overview of how patrician Dragon-Bloods are auctioned off to the Realm's Great Houses, while those born of common stock are given over to either the Imperial Legions or a life of contemplation and martial arts training in the Immaculate Order. The lives of Dragon-Blooded in the Threshold are only given a few pages, but as those pages are chock full of plot hooks, there's little to complain about.

All in all, *Exalted: The Outcaste* is a very impressive supplement, and certainly one of the best written sourcebooks yet released for the line. Even those fantasy gamers who don't play *Exalted* should consider making it a part of their library.

Murphy's Rules

What's Love Got to Do With It?

Conditions of Love for the *d20 System*

by Owen K.C. Stephens

One of the ways the *d20 System* keeps its rules consistent is to have a set of conditions with specific, game mechanical meanings. If a spell or situation states a character is dazed, dazzled, or dying, those terms refer to a particular game condition that is defined in advance. Regardless of the source of a condition, the result on the character is the same. The conditions are designed to be consistent, so a character that is blinded has the same difficulty hitting a foe as one striking at an invisible target.

Nor are all of the conditions purely physical. Mental states ranging from fear-based conditions (cowering, frightened, panicked, and shaken), to confusion and being fascinated are covered, allowing mind-affecting spells with those themes to remain as consistent as physical effects. There are, however, no conditions describing the conditions related to romantic attraction and love.

Given how often love and attraction come up in many fantasy stories, this seems an unfortunate oversight. Presumably most groups simply roleplay such emotions, and see little need for defining their affects in game terms. This prevents some of the standard adventure tropes, however. A character besotted with a seductress can ignore her as soon as a fight breaks out, unless she actually has charm magic handy. And the most famous of love conditions, true love, becomes nothing more than a motivation for heroes. It has no real power when faced with skill checks and spellcasting.

In keeping with the season, and to patch this potential gap, this article presents five new conditions -- infatuated, enamored, besotted, heart-smitten, and true love. Each is given specific game effects, and new rules are presented to show how they're used. Not every group is going to have any use for these, but campaigns trying to mix romantic adventure with players uncomfortable roleplaying romantic urges may find them useful as well as those revolving around themes more subtle than killing monsters and taking their stuff.

New Conditions Summary

Infatuated: A character that is infatuated has positive feeling towards a creature, and is at a disadvantage when interacting with that creature. An infatuated character is considered to have a friendly attitude towards the creature, and suffers a -2 penalty to all opposed Bluff, Diplomacy, and Sense Motive checks made against the object of his infatuation, as well as to attack rolls and AC if attacking or being attacked by the creature (even to nonlethal attacks made in self-defense).

Enamored: A character that is infatuated has positive feeling towards a creature, and is distracted by the presence of that creature. An enamored character is considered to have a friendly attitude towards the creature, and suffers a -2 moral penalty to all Reflex and Will saves, as well as Dex, Int and Wis based skills when in the presence of the object of his affections.

If a character becomes infatuated with a creature he is already infatuated with, he instead becomes enamored.

Besotted: A character that is besotted has strong positive feelings towards another creature. If the creature is of the appropriate type and gender, the besotted character feels romantically interested. If not, the besotted character treats the creature as a close and trusted friend (the character's attitude toward the creature is friendly).

Being besotted does not mean the character obeys any order from the object of his affections, but the character perceives the creature's words and actions in the most favorable way. The creature can try to give the character orders, but it must win an opposed Charisma check to convince the character to do anything he wouldn't ordinarily do.

(Retries are not allowed.) A besotted creature never obeys suicidal or obviously harmful orders, but might be convinced that something very dangerous is worth doing.

If a character becomes enamored with a creature he is already enamored with, he instead becomes besotted.

Heart-smitten: A character who is heart-smitten is truly in love with a creature. A heart-smitten character is considered to have a helpful attitude towards the creature, and places that creature's well-being above his own. A heart-smitten character does not automatically take orders from the object of his affection, nor is he distracted by their presence.

Once each day a character acting directly to aid or protect a creature he is heart-smitten with may gain a +2 morale bonus to one d20 roll. A character directly sacrificing his own good in favor of a creature he is heart-smitten with (such as moving to take an attack in place of the object of his affection) always gains a +2 morale bonus to all checks needed to make this sacrifice.

It's possible to be infatuated, enamored, or besotted with a creature while being heart-smitten.

True Love: True Love is the rarest of conditions, with less than one person in a thousand ever having even a chance at it. Two characters with True Love for one another always find their way back to one another. Even death is only a temporary barrier to True Love. The GM is responsible for seeing to it that characters with mutual True Love eventually find their way back to each other. If a campaign ends before this happens, it's assumed they meet shortly afterward.

A character with True Love toward another who does not return that condition instead simply acts as though heart-smitten.

There are many possible uses for these conditions. As examples, presented below are some rules for skills, feats, and spells. Some of these are additions to the normal rules, while others replace existing game write-ups with those that match the conditions above.

Skills

Bluff: It's possible to use Bluff to seduce, or at least interest, creatures potentially romantically inclined towards you. This works only for creatures interested in a romantic liaison with a creature of your race and gender (though occupation, nationality and alignment are irrelevant). This works on NPC attitudes in the same way as Diplomacy, but rather than going from Friendly to Helpful, Bluff checks go from Friendly to Infatuated.

Seduction doesn't last as long as true friendship based on mutual respect and common interests. A creature that has been moved to a friendlier attitude stays there only if you engage in the kind of romantic relationship it is interested in, or keep stringing it along. In the first case, you must make a new Bluff check every week against the creature's original attitude, with the DC increasing by 1 each week. If stringing the creature along without engaging in a desired relationship, you must make anew Bluff check each time you meet the creature, with the DC increasing by 2 each time. In both cases, if you fail to adjust its attitude to infatuated, it reverts immediately back to one condition worse that it started.

A creature that you have failed to seduce is always harder to make friendly in the future, with Diplomacy and Bluff DCs to change attitude 5 higher.

Diplomacy: Diplomacy can be used to woo a creature potentially interested in you as a mate. A creature that already has a attitude of Friendly or better and is interested in a romantic liaison with a creature of your race and gender can be gradually brought around to loving you. This requires constant attention (at least one noteworthy contact each week), and time (this skill requires a month per check).

The DC for this Diplomacy check is 25. A check of 10 or more below the target DC results in the creature feeling you

are a friend, but inappropriate for a romantic relationship, resulting in the friend modifier below. This Diplomacy roll is modified by other factors, as noted below. If you fail to hit the DC by 10 or more for 4 consecutive checks, the creature becomes uncomfortable with your advances, and if Helpful moves from Helpful to Friendly. Another 4 consecutive failures by 10 or more results in the creature moving from Friendly to Indifferent. Most creatures ask the advances stop before this occurs.

Condition	DC Modifier
Creature is already infatuated, enamored or besotted	+3
Creature is already heart-smitten	+5
Creature is in a romantic relationship	+10
Creature is aware you're in a romantic relationship	+5
Creature sees you as just a friend	+10
Creature is in True Love	+20
Each month you've managed a DC of 25 or more	-1
You don't see creature in person daily	+5
You don't see creature in person weekly	+10

Spells

Charm Person

Enchantment (Charm) [Mind-Affecting]

Level: Brd 1, Sor/Wiz 1

Components: V, S

Casting Time: 1 standard action

Range: Close (25 ft. + 5 ft./2 levels)

Target: One humanoid creature

Duration: 1 hour/level

Saving Throw: Will negates

Spell Resistance: Yes

This charm causes a humanoid creature to become besotted with you. If the creature is currently being threatened or attacked by you or your allies, however, it receives a +5 bonus on its saving throw. Any act by you or your apparent allies that threatens the charmed person breaks the spell. You must speak the person's language to communicate your commands, or else be good at pantomiming.

Seduction

Enchantment (Charm) [Mind-Affecting]

Level: Brd 1, Sor/Wiz 1

Components: V, S

Casting Time: 1 standard action

Range: Touch

Target: One creature touched

Duration: 1 day/level

Saving Throw: Will negates

Spell Resistance: Yes

This charm causes a humanoid creature to become infatuated with you. If the creature is currently being threatened or attacked by you or your allies, however, it receives a +5 bonus on its saving throw. Any act by you or your apparent allies that threatens the seduced person breaks the spell.

Feats

Alluring [General]

You have a way about you, that attracts the romantic attention of others.

Prerequisites: Cha 15+

Benefits: Creatures often become infatuated with you. Anytime you encounter a creature that is romantically interested in creatures of your race and gender, which also has a friendly attitude towards you, it must make a Will save (DC 10 + ½ your level + your Cha bonus) or be infatuated for 1-4 days.

A creature that has made its save against this effect once is never forced to do so again.

True Love

You have that one chance at True Love -- but only a chance.

Prerequisites: Heart-smitten

Benefits: If two heart-smitten creatures both take True Love in regards to each other, they are considered to be in the condition of True Love. The GM may call upon any effect, up to and including a *limited wish*, to bring the two characters back together, generally in the form of coincidence and random chance. Once this has been done, the character must take True Love a second time if he wishes another intervention on the same level, though as long as True Love exists, some way will be found, though it may take 17 years.

If only one of a pair take True Love, he is permanently heart-smitten with the creature selected, but does not gain the benefits of True Love.

Alchemical Items

Heartsfire

Heartsfire is a powerful intoxicant that makes everyone seem more seductive and alluring. A character drinking heartsfire must make a DC 13 Will save, or become infatuated with the highest Cha creature of a race and gender appropriate for him to have romantic feelings. A failed save also deals 1d6 Wis damage. The infatuation ends once the Wis damage is healed.

Heartsfire has an overly-sweet flavor, and unless hidden in a strong dessert anyone eating or drinking it may make a DC 15 Wis check (DC 10 if the character is a gnome or has scent) to notice the sticky-sweet flavor.

Heartsfire costs 200 gp/dose, and requires a DC 25 Craft (alchemy) check to create.

Just In Time For Love Out of Time

For many roleplayers, portraying a character with a romantic interest or subplot is a lot of fun. Wooing a new-found love, interacting with that sweetheart between adventures, and swinging in and saving the damsel (or gent) in distress are all part of the fun for many heroes. Of course, coming up with a new romantic focus can be a pain; it doesn't take many character concepts or storylines to exhaust most of the obvious ones, even if you explore avenues such as [life after marriage](#). What sets *this* chandelier-swinging swashbuckler of love apart from all the other ones? What makes this "royal marriage" story different from the rest? How can you insert some spice into a romantic subplot, or into the romantic aspect of the world?

For something new, the answer might be as simple as mixing up the idea of what love is, either in the character or in the game world. Love is not a concept that has remained constant throughout time; there have always been controversies as to what is "proper" love, the role of marriage, and the definition of relationships and family. For example, the Greeks separated the ideas of love and marriage; the rise of Christianity brought with it the notion that sex was evil; and the Pre-Renaissance saw the creation of courtly love, which was a completely new concept in the Western world. Most games fall into one of two traps; they either assume that stories set in centuries past can have protagonists whose worldviews are very modern, or they assume that all members of a society adhere to the same moral and ethical code, with little room for variance. But neither needs extreme needs to be the law, and spicing things up with different views can lead to a lot of storytelling potential.

Romantic plots are all about friction. [Insert your *own* joke here!] While most of the time this friction come within the characters (she's taken a vow of chastity, he's afraid of commitment) or from the plot (she's taken away by demonic hordes, he's afraid of demons), the tension of the story can come from the definitions and views of romance themselves. A swashbuckler based on the Roman ideal of love would have a completely different outlook from one based on the typical chivalric code, which would be different again from the same character who followed a Victorian worldview; all three would react very differently to rescuing a victim imprisoned by an evil prince. Likewise a Shadowrunner with a conservative 1950's view on marriage and family can help differentiate that character from others, and would be a great deal of fun for the right player. [Scene of decked-out cyber-implanted street samurai holding a suitcase dripping blood in one corner, entering a modest suburban residence: "Hi, honey! I'm home!"]

As an alternative complication, all that may be necessary is to modify a region's entire outlook on relations. For example, it would be possible to construct a stereotypical medieval society, only one based around the principles of a 1960's "free love" openness . . . especially if magic or technology existed to deal with unwanted consequences of such actions. Of course, the GM will need to be careful that these elements do not enter the realm of the absurd, lest he be accused of turning the game into *Castle Hawke 90210*. Still, an otherwise mundane castle encounter can have new life breathed into it by having characters who, in other circumstances, would be cooing over poetry wistfully and coyly dropping handkerchiefs, instead be openly propositioning the PCs.

Ideas of love and sexuality have always been hot topics for a society to struggle with, and this can help provide either backdrop setting bits or full-fledged stories. Even today -- as I type -- people in power are debating vigorously as to what defines marriage, who can get married to whom, and what the implications of those definitions are. What if these ideas were projected forward or backward in time, or to other genres? What if a fae decides he wants to enter into a mortal union with a milkmaid? What if an AI starts arguing for polygamy rights to "wed" who it wants in meatspace, since it can split its essence into as many copies as needed? (As ever, the gaming group will need to find its own comfort threshold in dealing - even allegorically - with controversial modern topics.)

Some gaming groups may believe it stretches implausibility to have anachronistic ideas pop up, but I'm not sure I'd agree. At least in modern games, it's easy to look backwards; I've known people who have tried following chivalric or Victorian ideals in their romantic relations, and many writers and artists of eras past have held - and in some cases helped shape - alternate or progressive views of relations. (Of course, they were often burned at the stake as a result, but it should be possible to gloss over that . . . or even work in that danger as a plot possibility!) And outlooks on relations can be a source of major character development and progression; if an adventurer has been raised to believe

that women are soulless property, how does he react when a female fellow adventurer saves his butt a few times?

I hear this new Internet thing is popular with all the kids, and I would guess that a lot of information about different kinds and ideals of love are out there. At an admittedly casual search, the most useful link I found was at <http://www.neo-tech.com/history/>, where the article "The History of Love and Sex" gives a fairly thorough timeline of outlooks and attitudes (at least from a Western point of view).

If you're looking to add romance to your games, either as a player or GM, but don't know how to interject anything different, the answer might be as simple as adjusting the views of characters or the setting, and seeing what interesting things happen.

The Eisenhower Netrunners and open-love princesses will thank you.

--*Steven Marsh*

The Object Of His Affection

A Tale of Cupid & Psycho

by Michael Anguiano

Brief

Dennis Sherman is a deranged man obsessed with the actress Annaliese Simone. Unfortunately, Dennis is also a powerful latent psychic, causing each of his victims to also believe she *is* Annaliese Simone.

The Set-Up

Another dream of Hollywood stardom has come to a tragic end.

Michelle Dowling, an exotic dancer in her late 20s, has just been found gruesomely murdered, her naked body wrapped in a plastic sheet and dumped in a garbage dumpster. Dowling has been missing for four days. Dowling's car has been found abandoned in an area of downtown Los Angeles. The LAPD is assuming she was abducted from the area where her car was left, but as yet no witnesses have come forward.

Dowling was last seen alive at the Westwood mansion of actress Annaliese Simone, claiming to be the actress herself. The two women were only superficially similar in appearance. Simone was home when Dowling arrived at the mansion gate and demanded entry from the staff. After Dowling refused to leave, Simone confronted Dowling herself and sent her away, threatening police action. When interviewed by police, Simone reports that Dowling left in a sedan driven by a man, but recollects no other details. Security cameras show Dowling at the gate but the car and driver were off-camera.

The coroner estimates she has been dead for three days. No useful evidence was found on her body, aside from a few strands of random fibers, apparently from clothing. The murder included extensive ante mortem mutilation that indicates preoccupation with the victim's identity. Dowling was identified through fingerprints and dental records. In an odd twist, those handling the body initially identified Dowling's body as Annaliese Simone, but under later questioning were uncertain as to why.

A police search of Dowling's apartment suggests that she truly believed herself to be Annaliese Simone. Documents older than four weeks are signed by Dowling, but more recent documents, including checks and correspondence, are signed in Dowling's handwriting as Simone. These documents were often side by side without apparent conflict. Dowling even has recently printed acting resumes, which identify her as Simone. All of Simone's information is that gleaned from mainstream sources, like E! and the IMDB, containing resultant the occasional inaccuracy.

Dowling has not been dating anyone exclusively and her occasional lovers will have reasonably credible alibis, leaving police without an obvious suspect. "Plenty O'Toole's," the adult club where Dowling performed, will report that she stopped showing up for work about three weeks ago and was fired (by answering machine message) about two weeks ago.

Her friends and family will report that she had been acting oddly in recent weeks, but had little contact with her during that time and did not realize the extent of her behavior. Her credit card has been used extensively at several area restaurants, clubs, and clothing stores. Receipts will again indicate Simone's name signed in Dowling's handwriting. Upon questioning, service personnel will simply shrug. This is LA, after all, and they get a lot of wannabes pretending to be celebrities, including Simone.

The Austrian-born Annaliese Simone is pale, blond, and gorgeous, occasionally called "the Aryan Angel" in the foreign press. She began as a model, worked on a failed BBC television series, and then inexplicably made the leap to the big screen after a small but attention-getting role in an independent Australian film. Despite only moderate talent, Annaliese has managed to become the ascendant starlet of Hollywood on the basis of her looks and personal charisma. Her latest project is *Object*, a big-budget romance that features Annaliese as a jetset model who must overcome her elitist attitudes to accept the romantic overtures of an earnest young street musician. Annaliese hopes *Object* will establish her as an A-list star. Similar hopes are held by her manager, Mina Abrams, and her publicist, Lem Shalala of Creative Representation.

The studio behind *Object*, Maximarc Films, is understandably nervous about any publicity that might link their star to the dead woman. Due to be released in two weeks, promotional machinery for *Object* is fully in motion as Simone makes appearances, gives interviews, and does the talk show circuit. With tens of millions of dollars on the line, Maximarc would prefer to avoid any press about the murder until at least three weeks after the movie's release.

Behind The Scenes

Dennis Sherman is a Caucasian man in his mid-30s, raised in the Midwest. He was physically and emotionally abused as a child by his adoptive parents, Carl and Theresa, who often used him as a pawn in their vitriolic -- sometimes violent -- arguments. Carl worked as a carpenter to support the family, while Theresa cleaned homes. Dennis had few friends through childhood, took early to alcohol, and only finished high school because of an indifferent school administration. He dropped out of community college after a single semester and worked as a carpenter alongside his father. When he was 20, his mother died of misdiagnosed ovarian cancer. Following a protracted argument with his father, Dennis packed his few belongings and moved to Los Angeles.

Good with his hands, Dennis has worked as a carpenter and occasionally as a roofer during his 15 or so years in California. He mostly does contracting work in house construction and makes a decent living. He has pursued a series of romantic relationships, which usually ended over his drinking, possessiveness, or abuse. He has a police record in different jurisdictions regarding two drunken barfights and several domestic disturbance calls. He alternates between castigating himself for a failed, worthless life and blaming the world for not recognizing his potential greatness.

Four years ago, Dennis and a dozen others were hired on a construction project that turned out to be a downtown location shoot for the movie *Radiant*. During the work, Dennis met a beautiful young actress named Annaliese Simone, cast in a prominent ingénue role. The two spent much time chatting and flirting on the set. Flattered by the unexpected attention, Dennis assured Simone that she was destined for great things. Annaliese, for her part, was mostly concerned with making her costar (and then-boyfriend) jealous.

Following this encounter, Dennis had yet another violent, drunken argument with his on-again, off-again girlfriend, Jo Meachem. This time, Meachem knocked him briefly unconscious with a beer bottle. When he regained consciousness, Dennis killed her. Despite blinding headaches, he pulled himself together enough to dispose of the body at a building site, the day before the concrete foundation was poured. As part of justifying his actions to himself, Dennis began to convince himself that he and Simone were developing a relationship.

The blinding headaches have been a chronic occurrence since being knocked unconscious but Dennis refuses to see a physician. After all, he reasons, his mother wasn't sick until after she went to the doctor. He is unaware that the initial trauma was not the end of the damage and he will die of a massive stroke approximately six years after being hit (barring additional cerebral trauma). He is further unaware that the cranial trauma has unlocked a powerful, latent psychic ability. Of course, he is also unaware that he is becoming increasingly delusional and obsessed with Simone, jointly caused by a need to believe his rationalizations and his own psychic gifts operating against himself.

Dennis has followed a fairly straightforward pattern since his encounter with Simone. He will randomly bump into a woman who loosely fits Simone's general profile, follow her on impulse, and become convinced that she is Simone. Dennis will trail her from a distance and watch her, often taking time off from construction jobs to do so. After several weeks, he will intensify his surveillance, reluctant to approach her but hoping she will recognize him, at which point his psychic abilities will begin to have an effect on his victim. Shortly thereafter, the victim will begin to believe

herself to be Simone.

Once this happens, two outcomes are possible. In the first, the victim is involuntarily committed to a mental institution as delusional. Denied close proximity for more than a month, Dennis is initially extremely anxious but will slowly lose interest and realize that he was mistaken. Meanwhile, the victim will slowly emerge from her delusional state and eventually be pronounced cured by the authorities. Three of Dennis' victims have survived in this way.

The second outcome is that the victim will fully believe herself to be Simone and find herself unaccountably drawn to a "special place" in the downtown area. This is where Dennis met the real Simone. Now, Dennis waits there to meet his delusional Simone, who is locked fully into his delusion as well. Unfortunately, Dennis' unstable self-image will spill over into his victim's perception of him, causing her at some point to reject him as worthless. Humiliated and enraged, Dennis strangles her and later buries the body in a construction site, after which he convinces himself that he was misled, since Simone remains alive and in headlines. Five of Dennis' victims have died in this way.

In either outcome, Dennis would remain adrift for a time and pursue his life as normal before latching onto his next victim. Michelle Dowling suffered a different fate for a simple reason: Dowling convinced Dennis to give her a ride "home," at which point Dennis saw her and Simone standing face to face. He recognized Dowling as an imposter and seethed with rage at her fraud and, subconsciously, at himself because his delusion had been brought so dangerously close to his own awareness. Two days later, he dumped Dowling's dead body.

Currently, Dennis is very close to being completely over the edge. Witnessing the confrontation between Dowling and Simone has sparked a change in his pathology. Rather than expecting to see Simone randomly in the mall or at a restaurant, he knows that he must find her either at her home or her workplace. Additionally, prepublicity for *Object* has convinced him that the entire movie is a love letter from Simone to him, although he's sure the director changed the male lead into a musician to satisfy the studio. The closer the film's release, therefore, the more Dennis is convinced he must take action to be with Simone, rather than waiting for her to find him.

What To Do

At any point after the body's discovery but before the premiere of *Object*, the PCs can be detailed to the police investigation through a connection to any of the following: Michelle Dowling, Annaliese Simone, Simone's manager, Simone's publicist, or Maximarc Films. Each will entail a different set of priorities. Of course, the earlier that the heroes are brought in, the longer the GM can keep them busy with the routine work of the investigation itself. The most obvious problem for the party is that the police are unaware of Dennis' other victims, and no direct connection exists between the victims themselves.

If the PCs look into unsolved missing persons cases, several will involve Simone wannabes. Of the five relevant cases, three left cars near the "special place" downtown, one took the bus, and one took a cab there. Proper investigation shows that the first disappearance took place four months after this spot was used for filming, but 10 months before the movie was released. If questioned about the location, Simone will remember quarreling with her boyfriend but little else. However, other production staff will remember that she spent much time flirting with one of the crew, and further inquiry will identify Dennis Sherman as the person involved. Simone does not remember Dennis.

If the PCs find the relevant missing persons cases but miss the "special place," they can instead look more deeply into the missing persons themselves. This sort of search will require the PCs to sort through much, much more material. Each victim's workplace was near home construction sites, which employed several of the same crews. Proper investigation will place Dennis on each site and identify him as the obvious choice for a serial killer.

If PCs look into only the Dowling case directly, they will chase false leads and dead ends for a couple of days. This may be frustrating. However, at this point, several agents and studios have received mail with acting resumes with Dowling's picture over Simone's name. They will pass this information to either the police or Simone's agent, whichever is more convenient for the PCs. Further investigation at different agencies and studios will disclose that other women have done the same, and some of these can be identified as unsolved missing persons. This is a much more tenuous connection, but it should put the PCs back on track.

If heroes decide to simply guard Simone and let Dennis come to them, then innocent victims will eventually pay the price. Dennis will unsuccessfully try to sneak into the studio a couple of times, just like innumerable other fans. At the *Object* premiere, he will wrangle himself a good spot on the red carpet and even make eye contact with Simone, who will not recognize him. Feeling humiliated and rejected, he will now deliberately stalk and murder women who fit Simone's general profile. Rather than delusively seeking Simone herself, Dennis is now consciously seeking to assuage a wounded self-image by exercising control (by proxy) over the woman who humiliated him. The PCs' passive strategy has allowed Dennis to become a more active serial killer who now has a deteriorating mental state and an accelerating pattern of activity.

If apprehended, Dennis is fairly muscular and an experienced, if untrained, combatant. Police will find that some of his household knives will bear traces of blood, but no useful DNA. Some fiber analysis will link him circumstantially to Dowling's body. If "reunited" with Simone, he can be enticed into confessing to her the things that he has done to protect her from impostors. However, Simone will then become the person he thinks she is, which means that she will be in love with him and grateful for his protection. PCs should by now realize Dennis' peculiar situation.

For a more paranormal resolution, PCs might discover that Dennis' previous victims are lingering on as ghosts in the buildings constructed over their bodies. The victims' spirits are unable to move on because of their traumatic death but also because they died thinking they were Annaliese Simone. The result is a series of ghosts who think they are someone who is still living. Confronting each ghost with either a disbelieving Dennis or the real Simone should solve the problem.

Designer Notes: GURPS WWII: All the King's Men

by Brian J. Underhill

Generally speaking, writing a book for Steve Jackson Games takes anywhere from a few months to a year. But now and then a book comes along that just hangs on and demands attention above and beyond the norm.

From the time I signed the *All the King's Men* contract in December 2001, until the release of the book in early 2004, more than two years elapsed. The initial writing took place during most of 2002, during which I also finished *Cliffhangers 2/e* and wrote *GURPS Traveller: Bounty Hunters* and *GURPS WWII: Return to Honor*. The following year was no easier; *All the King's Men* went through playtest and subsequent drafts, while I cranked out *GURPS SWAT*, *GURPS WWII: Blitzkrieg*, and part of *GURPS All-Star Jam 2004*. Factor in five other, non-GURPS writing projects I was involved in from 2001-2004, and it's more than a mild surprise that *All the King's Men* ever saw the light of day.

But despite the lengthy process (and the occasionally heated discussions about Britain in WWII), the final version ended up a fine product, due in very large part to the patience and work of the WWII line editor, Gene Seabolt.

All Me? No Way!

I've often shared the spotlight with other writers, and producing *All the King's Men* was no exception. Because I was strapped for time from the beginning of the project, I relied heavily on fellow writers and historian friends to provide several pieces of the book during the initial draft.

A tremendous amount of technical material came from tech-savvy GURPS authors and playtesters. The small arms section is almost entirely the creation of GURPS weapon wiz, Hans-Christian Vortisch; and vehicle virtuosos like Brandon Cope and Kenneth Peters designed every vehicle in the book. The "additional material" credits in the front of the book attest to the number and quality of contributors to the project; without their help I could never have completed the book and still met the deadlines such a project incurs.

Unfortunately, these additional contributions took place in mid- and late-2002, a full year before the book reached playtest, making it difficult to wade through the playtest comments and deal with them quickly and easily. A substantial amount of my playtest time was spent checking dates, places, regimental designations, and other historical facts; occasionally I had few (if any!) references to check the information, and had to email my contributors to find out which of them might have the answer.

The Playtest: Crucial, but Time Consuming

As with other SJ Games projects, the playtest provided no end of criticisms, complaints, suggestions, fact corrections, and general opinions. It has been my experience, however, that playtests for WWII books seem to generate far more "fact checking" problems than most books. The problem is compounded by the disparity of historical information available in print; one source regularly contradicts others, and revisionist historical accounts abound.

Dealing with issues that arose during playtest was, perhaps, more difficult than writing the original manuscript to begin with. At times, with sufficient research, a reasonably solid fact could be established and confirmed. Other alleged factual errors simply couldn't be verified one way or another, and the manuscript had to either 1) be changed to address the equivocal nature of the data, 2) be changed to reflect the opinion of the majority of reliable sources, or 3) simply take a neutral stand on the issue based on the information that was available. All three techniques were used, depending on the topic being discussed. For example, determining the caliber of bullet used in a Sten Mk V submachine gun was easy; trying to sum up small unit tactics used by the British Army across a five-year-span was not!

A Book at Last

The British war experience was unlike any other, and certainly far removed from what my family experienced here in the United States. It shaped men and women at home and abroad, and the Commonwealth almost single-handedly stemmed the Nazi tide for more than two years. After several years of Allied effort, WWII came to an end.

Likewise, after two years of collaborative effort, the work of creating *All the King's Men* ended as well. With what result?

The final draft is richer, more detailed, and more accurate, thanks to the hard work of friends and colleagues. I also came away from the project with a greater appreciation for the Britons and their contribution to the war, as well as the trials they endured on the home front. My own research turned up stories of triumph and tragedy, but the personal experiences of those who lived through it, or whose families did, carried even greater impact.

Taking two years from start to finish, *All the King's Men* is certainly the most time-consuming project I've worked on. But despite the trials along the way, the finished product is also one I'm proud of. My hat's off to those that contributed along the way, as well as the men and women around that world that gave their time, energy, loved ones, and lives more than 50 years ago. It is no exaggeration to say that the world today owes a tremendous debt of gratitude to all the king's men.

The Highly Anticipated Director's Cut

As has become the custom, the following information is provided as an adjunct to *All the King's Men*. As it turns out, very little additional material was cut from the draft, and much of what was cut was sporadic and diffuse, making it unusable to most gamers. The only section that was cut intact -- *The Graf Spee* -- was originally included due to my own personal fascination with the German raider and the personal integrity of her captain, Hans Langsdorff. The section was cut for space, primarily because it did not directly relate to the British war effort.

The Graf Spee

The German raider KMS *Graf Spee* was dispatched to the Atlantic in September 1939 and quickly became a thorn in the side of the British Admiralty. Stationed in the South Atlantic, the "pocket battleship" waited quietly near the sea-lanes until activated by radio from OKM (German HQ) in Berlin (see W:IC33). On September 26, 1939, *Graf Spee* received word to begin raider operations against merchant ships. Four days later she recorded her first success by sinking the merchant ship *S.S. Clement*. This was only the first of many.

Over the next two and a half months the *Graf Spee* (commanded by Captain Hans Langsdorff) sank nine merchantmen totaling over 50,000 tons of shipping. Langsdorff warned merchant ships by radio before he opened fire, giving the British merchantmen plenty of time to abandon ship before the *Graf Spee* sank their vessel.

The *Graf Spee* soon caught the attention of the British Admiralty. It responded by forming 10 different hunting groups comprising nearly two dozen of the latest French and British warships. The squadrons were given letter designations (e.g., Force K, Force H, Force L), and many later went on to participate in other famous naval actions (see *The Bismarck*, p. W20). Eventually the German raider's time ran out. While attempting to disrupt the rich merchant traffic off the coast of South America, she was surprised by three British cruisers: HMS *Exeter*, HMS *Achilles*, and HMS *Ajax*. The cruisers attacked *Graf Spee* aggressively, and for an hour and a half a fierce battle raged.

The *Exeter* was severely damaged; nearly every man aboard was killed or wounded during the attack. *Exeter* eventually lost her guns, caught fire, and began listing badly. She soon withdrew from the fight. HMS *Ajax* was also heavily damaged, with two turrets knocked out and radio communications destroyed.

Eventually, *Graf Spee* herself broke off the action. Although she was not critically damaged, Langsdorff was certain

his ship could not continue without repairs, and sought refuge in neutral Uruguay. With British cruisers waiting off the coast, and reinforcements no doubt en route, Langsdorff opted to scuttle the *Graf Spee* rather than allow her to fall into British hands. Unable to cope with the loss of his ship, Langsdorff shot himself that night.

Guard, Turn, Dodge, Parry, Spin, Thrust!

More Combat Maneuvers for *d20 System*

by Justin Bacon

The new combat maneuvers presented in this article can be used by any character (including monsters and NPCs). Just like a bull rush or a disarm, characters don't need to take feats in order to perform these maneuvers; they're simply new tactical options which can be used upon the field of combat.

New feats which improve the use of these new maneuvers can also be found below.

New Maneuvers

Back-to-Back

On your turn you can choose to fight back-to-back with an ally as a free action. The ally must be within five feet, and must choose to fight back-to-back with you. While fighting back-to-back, you and your ally work to protect each other -- shoring up each other's defense and, literally, watching each other's back. You and your ally make attacks at a -2 penalty while fighting back-to-back, but so long as you are fighting back-to-back you cannot be flanked.

Note: You can fight back-to-back with multiple allies. However, in order to fight back-to-back with multiple allies, all your allies not only need to be within 5 feet of you, but within five feet of each other.

Drive Back

As a melee attack, you can attempt to drive back your opponent. In doing so, you are attacking in a way that should force your opponent to back away from you. When you perform the drive back maneuver, your opponent can either choose to move five feet directly away from you or remain where he is.

If he chooses to move, he suffers no adverse effects. However, you can choose to follow him (also moving five feet).

If he chooses not to move, you resolve your attack against them normally.

Note: The movement taken as part of the drive back does not count against your movement or your opponent's movement for the round. Your movement does not provoke an attack of opportunity from your opponent, nor does his movement provoke an attack of opportunity from you. However, this movement may provoke attacks of opportunity from other combatants.

Engage

As a melee attack you can choose to engage one opponent. If an engaged opponent attempts to move away from you before your next turn, you may take an attack against him at the same Base Attack Bonus as the attack you used to engage them (this attack is in addition to any attacks of opportunity you would normally be able to take).

Note: Even if you have more than one attack per round, you cannot engage a single opponent more than once (although you can engage multiple opponents at once).

Parry

On your turn you can choose to use one or more of your attacks as a parry. If anyone attempts to perform a melee attack against you before your next turn, you may use one of your parries. Doing so allows you to apply the attack bonus of the attack you sacrificed as a bonus to your Armor Class against that one attack.

Note: You cannot parry an armed attack while unarmed, unless you have the Improved Unarmed Strike feat (or similar class ability). This also means that you cannot parry an unarmed attack from someone who possesses the Improved Unarmed Strike feat (or similar class ability), unless you also possess the Improved Unarmed Strike feat (or similar class ability).

Throw

When grappling an opponent, you can attempt to throw him as an attack (in addition to the other options presented in the standard *d20 System*). To do so, make an opposed grapple check. If you succeed, make a Strength check. You throw your opponent five ft. + 1 ft./2 points above 10 on this check, to a maximum distance of your Height $\times 2$.

Characters who are thrown for 10 feet or more suffer damage as if they had fallen a distance equal to the throw. As with falling damage, a successful Tumble check (DC 15) allows a character to ignore the first 10 feet.

Special: Monks who possess the Leap of the Clouds class ability can ignore the maximum distance limitation when throwing opponents.

New Feats

Expert Grappler [General]

You are skilled at grappling opponents and are capable of performing maneuvers in combat that others cannot.

Benefit: The Expert Grappler feat gives you three new options during a grapple:

- If you pin an opponent during a grapple, you can choose to immediately bull rush them. (If you or your opponent are being grappled by others, however, you must first escape those grapples.) To do so, perform the bull rush maneuver normally (however, you are already in their space, so you do not need to move in before making the opposed strength check).
- When an opponent attempts to escape your pin, you can attempt to throw them rather than allowing them the chance to escape. Before resolving the escape check, make an opposed grapple check. If your opponent succeeds, they make their escape check normally. If you succeed, you can throw your opponent as a free action.
- When you escape a grapple, you can leave your opponent prone. After making a successful escape check, immediately make a Trip attack against your opponents.

Normal: See the description of grapple options.

Improved Drive Back [General]

You are particularly skilled at using your melee attacks to drive back your opponent.

Prerequisites: Int 13+, Expertise

Benefit: When performing the drive back maneuver, your opponents are driven back 10 feet.

Normal: A character performing a drive back normally only forces his opponent to move back five feet.

Improved Engage [General]

You are adept at keeping your opponents occupied on the field of combat.

Prerequisites: Int 13+, Expertise

Benefit: If a character chooses to disengage from you after you have used the engage maneuver, you attack them at your highest Base Attack Bonus.

Normal: When attacking a character who chooses to disengage from you, you attack them at the same Base Attack Bonus of the attack you sacrificed to engage them.

Improved Parry [General]

You are highly skilled at defending yourself from the blows of others.

Prerequisites: Int 13+, Expertise

Benefit: For each attack you choose to use as a parry, you can perform two parries. In other words, if you choose to use one attack as a parry, you would be able to parry two melee attacks before your next turn.

Normal: For each attack you choose to use as a parry, you can perform only one parry.

Power Drive [General]

You are capable of forcing your opponents to retreat from your melee attacks.

Prerequisites: Str 13+, Power Attack

Benefit: When you perform a drive back, if your opponent chooses to remain where he is, you may choose to force him to step back instead taking an attack. You and your opponent must make an opposed attack roll. If you succeed, your opponent must move back.

Normal: When performing a drive back without this feat, your opponent can choose to remain where he is.

Optional New Skill

The following new skill, Martial Arts, is optional. If you use it in your game, those trained in unarmed combat (i.e. those who take ranks in the skill) will become far more potent against those untrained in unarmed combat. Those who are frustrated by the fact that a 20th-level monk is not noticeably better at tripping an opponent than a 1st-level monk should consider this skill.

Martial Arts is a class skill for fighters, monks, assassins, and warriors. It is a cross-class skill for all the other classes in the the *d20 System*. When using classes found in other books, the DM will need to make a judgment call as to whether or not Martial Arts should be a class skill.

Martial Arts (Str)

You are skilled in unarmed combat, capable of performing certain combat maneuvers with great skill and precision.

Check: When attempting a bull rush, making a trip attack, or throwing an opponent in a grapple use this skill check instead of making a Strength check.

Retry: No, although you can attempt the same maneuver again.

Special: When someone attempts to make a trip attack against you, you can choose to use Dexterity as the key ability for this skill.

Julius Schwartz, R.I.P.

Before I became involved with *Pyramid*, I generally considered myself a writer . . . or at the very least a wannabe-writer. However, after I took the reins of *Pyramid* (four years ago this week), I came to associate myself more closely with my editorial duties. Oh, sure, I still do a fair bit of writing, but number-wise the alligator wants to eat the four million words I've edited more than the half-million I've written.

This has led to a number of interesting self-image issues. Primary among them is that, all things considered, I don't have many people I look up to for professional inspiration. When I'm writing, I can tell myself, "Wow, I hope I do half as good a job with this as . . ." and plug in the name of a dozen or so writers from across various creative fields I love.

But when it comes to editing, there are almost no people that I can conjure up and think, "I hope I can get close to the legacy of . . ."

In fact, there was only one person I routinely recalled in my editorial duties. That person was Julius Schwartz, long-time editor for DC Comics as well as one of the founders of science fiction fandom. Julie passed away on Sunday, February 8th.

I'm not going to write a eulogy of Julie's many achievements and contributions here; there are, frankly, many people much more qualified than I am to do so. (I can especially recommend Mark Evanier's comments and anecdotes from [February 8th](#) and [9th](#), as well as [DC Comics' eulogy](#).) Suffice it to say, as some highlights, that Julie edited comics for five decades; revitalized the Flash, Batman, and Superman when all three were in danger of disappearing; and, as an agent, sold Ray Bradbury's first story and some of H.P. Lovecraft's last ones.

Instead, I'm going to post some random thoughts as to what I've gleaned, both from Julie and his passing.

As an editor, Julie was inclusive. When DC Comics revitalized their defunct heroes in the 1950s, they were completely new versions; the (then-new) Flash did not live in the same world as the "old" Flash, and in fact the old version had only existed as a comic book character that the new iteration used as inspiration. I don't know the state of comic fandom at the time, but I imagine this caused a bit of dismay for long-time fans; what happened to the old Flash, Green Lantern, or Atom? Were their stories merely insignificant comics in this new vision? But several years after those characters were introduced, Julie used an idea from science fiction to tie it all together; by making alternate dimensions (where Earth-1 was the current world and Earth-2 was the "golden age" world), he was able to have the older heroes exist in their own stories, *and* interact with their new incarnations.

Think about how encompassing this is. In one stroke Julie was able to fondly recall an entire library of classic comic stories, while still keeping the modern tales relevant and new. The Superman and Batman who fought in World War II that someone read about as a child are still around; they just happen to be elsewhere. And having different versions of these icons meet must have been a truly exciting prospect . . . not unlike having Captain Kirk meet Picard, only in a story that wasn't pig excrement.

The best games continue to do be inclusive as well. As I've mentioned [before](#), one of the reasons I'm quick to sing *Vampire's* praises, for example, is that practically *any* vampire concept a player can bring to the table -- vampires as monsters, vampires as Anne Rice-esque fops, vampires as reflectionless servants of darkness, and so on -- can be represented in the game. (I suspect the converse of this is why I consider *Werewolf* to be a much less compelling and difficult-to-sell game; practically *no* preconceived notions about werewolves are true there.) I've tried to do use inclusive principles as an editor, as well. There are hundreds of different types of games -- many styles, genres, and systems -- and I've tried to ensure that everyone who reads *Pyramid* would hopefully find *something* that appeals to them.

Julie was excellent at determining the core of a character or story. In his revitalizations of Superman and Batman, he was able to pare down a lot of the cruft that had accumulated on them and return them to their essences. Thus Batman became a city-bound detective again, and his cases become gloomier and more mysterious (instead of the goofy

planet-hopping adventures from the previous decade). Superman became a true Man of Tomorrow, with incredible powers but greater responsibilities. Julius eliminated kryptonite as the omnipresent equalizer that had dogged Superman for decades, but also removed some of the more ludicrous of the Man of Steel's powers.

This is another area where I've tried to apply my editorial skills. In general, I look for articles to be the best type of that article it can. If I receive an article that's, say, a modern action-adventure story, except two-thirds of the way through a ghost appears and gives the heroes some new instructions, I'll likely reject it and tell the writer to either introduce supernatural elements earlier in the adventure or remove the spirit entirely. Or if I receive an article that is half about undersea adventuring and half about building submarines, I'll probably tell the writer to split it in two. Julie had a gift for looking at a story or character and telling what *kind* of creation it wanted to be; I have to work at it.

Finally, I've taken one more thought from Julie's passing. About a month ago, when Julie was in the hospital, long-time media professional Mark Evanier set up an e-mail address to write to Julie and publicized it on his [website](#), with the idea that he would print out the letters and mail them to Julie at the hospital. This was the letter I wrote.

Dear Julie,

I have been the editor of an online gaming magazine for four years now. Our magazine just had its 10th anniversary (having migrated to the Internet five years ago), and I consider us one of the few online ventures that escaped the Internet Bubble intact.

Anyway, one of my mantras I like to say for our magazine is, "If I'm doing my job right as an editor, no one knows I'm there."

After all, no one picks up a magazine and goes, "Damn! Someone edited the -heck- out of this magazine!" or "Wow! Did you see how that one article was =edited=?!?"

No, people only notice that the magazine even -has- an editor when I make mistakes, either on a micro level (I fail to catch a dumb typo or an incorrect word choice) or a macro level (I select an article that readers really dislike, or pick something that has already been done better elsewhere).

As such, I hope you can take it as one of the most sincere compliments I can offer when I say that, for many, many years as a young comic reader and fan, I didn't even know you existed.

Oh, sure, in hindsight I can recognize your fingerprints all over my favorite comics: well-chosen stories, attention to characterization, value with each issue, and a delicate balance between "advancing" a character while at the same time keeping it accessible and true to the book's roots.

And, of course, this doesn't even count all the additional bits I know an editor does every day. Mistakes and misspellings were nonexistent, at least to my memory. The letter columns were always thoughtful and encouraged dialog between the creators and the fans. Writers and artists were always well-chosen for their assignments, such that -- as a young fan -- I usually had a hard time even -considering- other creators in those roles.

And it's when these facts are absent from today's comics that I fully realize how much I admire and appreciate you. Every typo I see, every continuity error, every woefully miscast creator, every time a book runs late, every time a beloved character drifts far afield of what made me a fan, I find myself thinking: "Julie never would have allowed this..."

I have met you several times at DragonCon; although you've graciously and personally signed my copies of "Man of Two Worlds," "Essential Showcase," and "Last Superman Story," I don't know if I've ever shared my thoughts with you on this. To be honest, it's usually all I can do to fumble for my latest rediscovered Schwartzian treasure for an autograph, and maybe mutter a thanks or two. However, as an editor who wants to do the best job possible, I find myself constantly judging myself based on the grace and talent of one man: Julius Schwartz.

Thank you for being the most important creator who -- for most of my earliest comic memories -- I didn't even know existed.

I wish you a speedy recovery and hope you get well soon.

Sincerely,

Steven Marsh
Editor of Pyramid Magazine
pyramid@sjgames.com

Although I wrote to Julie, I'm not sure if he ever received it or read it. I wrote the letter on January 29th, and less than two weeks later he was gone.

I don't like letting things go unsaid, and for the most part I've been fairly successful in letting people know how they've affected me or what they've contributed to my life. For some reason, though, I never wrote Julie, and -- despite his eminent approachability and affability -- I never told him in person. This is probably because it wasn't convenient; he didn't have an e-mail address or other obvious means of writing him, and I'm painfully shy around strangers. However, in hindsight this strikes me as a really lame excuse.

If there's one more pearl of wisdom I would pass on, then, it would be to tell the people who've affected you that they've done so. This goes for anyone: friends, artists, professors, family members . . . anyone. We go though touching so many lives, but I suspect that many -- even those who are "famous" or "successful" -- don't know the depths that they've influenced others. Even those who *are* aware -- perhaps in a vague, abstract way -- could probably stand to hear it again. After all, it's difficult to envision a circumstance where you might go, "I really regret telling that person how I feel," but it's easy to come up with a scenario where the opposite is true.

Good-bye, Julie. And thank you.

--Steven Marsh

For those looking for more good Julius Schwartz-touched works, I can recommend the following:

- *Man of Two Worlds*, by Julius Schwartz with Brian M. Thomsen. This was Julie's autobiography, and is a fascinating read, covering in roughly equal proportions his involvement with both science fiction and comics.
- *Whatever Happened to the Man of Tomorrow?* by Alan Moore, Curt Swan, George Perez, and Kurt Schaffenberger. This was the last "Silver-Age" Superman story, is the last comic Julie edited, and is probably the best Superman story ever. It still gives me a lump in my throat.
- *Superman #400*, by Elliot Maggin and various. Besides being a good anniversary story itself (highlighting what was the more-epic-than-epic of the 1980s pre-Crisis Superman stories), this book also had pin-ups or contributions of many luminaries -- such as Will Eisner, Jack Kirby, and Steranko -- all in one place. (I should also note

that, as I dug up this issue, I was pleasantly surprised to learn that I had gotten Julie's signature on it.)

- *The Essential Showcase 1956-1959*. This book shows Julie's hand in helping to revitalize the super-hero genre, and includes an interesting snapshot of what comics were before then -- and might have continued to be like -- if the renaissance had been unsuccessful.

Pyramid Pick

Grimm

Grimm: Adventures In A World Of Twisted Fairy Tales (for d20 System)

Published by [Fantasy Flight Games](#)

Written by Robert J. Schwalb

Cover by Larry MacDougall

Illustrated by Jim Brady, Larry MacDougall, James Ryman, and Scott Schomburg

64-page b&W softcover; \$14.95

Grimm: Adventures In A World Of Twisted Fairy Tales is the second release for the "Horizon: New Roleplaying Frontiers" line published by Fantasy Flight Games. Each in the line is a self-contained exploration of a particular world or genre. Designed for the *d20 System*, each title is meant to be -- like many of the current RPGs released in PDF format such as [Buggin' RPG: The Tiny Game of Big Adventures](#) from Deep7 and [Vice Squad: Eighties Police Adventure](#) from Politically Incorrect Games -- used as a diversion from, or a break between, longer campaigns. Of course, there is nothing to prevent a DM from expanding any Horizon-based games into something longer than a mere diversion. To date, the only other Horizon title, [Redline: High Speed Road Duels In A Post-Apocalyptic Future](#), explored a post apocalyptic world in the mode of *Mad Max* and *A Boy and His Dog*, while the forthcoming *Virtual* casts the players as sentient software in imminent danger of nuclear immolation at the hands of squabbling humans. Where *Redline* and *Virtual* explore a pair of different dark futures, *Grimm* looks to the familiar past for its dark origins.

Like [Lashings of Ginger Beer](#) and [Little Fears](#), *Grimm* is a game in which the players take the roles of children. Its tone and subject matter lies between the two, *Lashings of Ginger Beer* being set in an age of innocence, and *Little Fears* being about the all too real threats of the bogeymen, creatures under the bed and worse still, of child abuse. *Grimm* lies closer to *Little Fears* in tone and feel, but its subject matter is not quite so adult in nature.

As its title suggests, *Grimm* is set in a world of fairy tales, specifically those of "*Kinder-und Hausmarchen*" ("Children and Household") or *Grimm's Fairy Tales* by Wilhelm and Jacob Grimm. They saw their work as an attempt to catalog all of the strange peoples, creatures, and so on of their age, though in *Grimm* it was actually commissioned for some malevolent but unseen employer. As the brothers made a new entry in their book, the very subject of the entry disappeared and receded into myth. Where they disappeared is not known, except by those children unlucky enough to be pulled -- or find their way through -- the doors that lead into the Grimm Lands. There they find a strange but familiar land of patchwork square kingdoms and surrounded by an endless sea. It is just like the real world, only more so, its features exaggerated with looming or impassable mountains, wide and rushing rivers, and thick forests penetrated by narrow paths that lead in from lush green meadows. This land has a fickle nature, with even the Sun and Moon taking an occasional dark pleasure in the suffering below. Even worse, the lay of the land can change while its inhabitants are sleeping, and travel throughout the many little Chequered Kingdoms is not always easy. The quickest routes are by crossing one of the many bridges across the Riotous River (though a toll will have to be paid to the troll beneath it), or to traverse along the Giant Beanstalk, fallen to earth and hollowed out by gnomes to provide safe passage.

Just as dangerous are the denizens of the Grimm Lands. Even the ordinary inhabitants are affected by the madness of their world, such that they will view everything around them as ordinary and the sanity of the children as being quite mad. Worse still are many of its major denizens, each of which is a very twisted interpretation of a figure from a classic fairy tale. There is Humpty Dumpty, the Rotten King, who was not put back together properly and is homicidally insane, both shell and mind cracked; the Three Little Pigs, who have become specialists in fortress construction; Mother Goose, who flies out over the great and awful forest in search of children to torment; and a cross-dressing evil queen with a hatred of all women, starting with Snow White.

Player characters in *Grimm* are children between the ages of eight and 12, for they possess the imagination to not only end up in the Grimm Lands, but also to find their way out . . . which is their eventual objective. Counted as small creatures under the *d20 System*, the characters are rolled up as normal, except for being physically weaker than adults, only rolling 2d8 for Strength. Instead of class and race, players select one of six archetypes, each obvious in their stereotyping and combining the concept of class and race in one. The six are the Bully, the Dreamer, the Jock, the Nerd, the Normal Kid, the Outcast, and the Popular Kid. Each archetype consists of only six levels, with one level gained at the end of an adventure, reflecting the direct and simple nature of a game in which survival is its own reward. An archetype comes with an inherent Armor Class bonus that increases by level, but this works only as long as they remain un-armored. Each archetype also possesses an equally inherent flaw; for example the Bully is only secure if he has the upper hand and suffers penalties after losing three quarters of his hit points. Similarly, the Normal Kid cannot over-specialize in his skills and will always be the first target of choice for any aggressor. In addition, because they are children, all archetypes possess Imagination Points -- the Dreamer more than any other does -- that can be used to fuel small changes in the Grimm Lands around them as well as Incantations, the game's equivalent of spells.

Grimm reduces the *d20 System* skill list to just 25 skills. For example, Diplomacy, Gather Information, and Sense Motive all fall under the new Socialize skill, the Boy Scout skill covers First Aid plus Survival, and Athletics covers all physical skill outside of combat. Other new skills include the familiar Home Ec and Industrial Arts, while the less-familiar Magical Intuition is used to learn and cast Incantations, and Nimbleness is used to avoid attacks of opportunity, replacing both the Escape Artist skill and Armor Class when actively dodging.

New feats are also detailed, including six origin feats, one of which must be selected during character generation. These are City Kid, Exchange Student, Home Schooled, Orphan, Rich Kid, and Farm Kid. The other new feats are either tied into the nature of the kid or that of the Grimm Lands. Thus for the former there is Allowance, Brat, I'm Telling, Punk, and Self Reliant, while for the latter there is Cut it Open, the ability to free an ally trapped inside the gut of a monster that has swallowed them whole; Inedible, which gives a child an unappealing culinary quality to the monsters that would eat them; and Maturity, with which a character can overcome their archetype's inherent flaw. In some cases there is a natural and obvious progression in these feats. For example, a player wanting their character to hold lofty ideals might select Promising so that all Knights, nobles, and royalty will recognize a certain noble quality in them, then progress on to Noble Spirit, which gives benefits when they are protecting someone else during combat, and then Knightly Prowess, which gives bonuses when using a knight's weapons.

At the beginning of the game each child has a set of equipment to fit its nature: Studious, Prepared, Distracted, Devious, Equipped, and Fashionable. They also have focuses, treasured items into which they place their hopes and dreams; as long as a focus remains in his possession, a child in the Grimm Lands will not lose hope. Like their starting equipment, a focus also reflects their nature. Yet each can also provide a special ability. A beeper can warn when a friend is in danger, a mobile phone connects to the Grimm Lands Answering Service and will answer one question each day, a holy book will suggest the proper course of action just like the *augury* spell, and an umbrella will act as a *feather fall* spell.

Arms and armor is handled somewhat differently to the standard *d20 System* game. Weapon size is described relative to a child's own size, so to a small character, an adult's hunting knife would be the equivalent of a long sword. Armor comes not as single suits but as three pieces: one for the body, plus a shield and helmet. These pieces can be prosaic, including cardboard, football pads, heavy winter coat, or wooden barrel, each worn on the body; even serving platters or barrel lids can be used as shields. Actual combat encourages cooperation between children, especially against larger, more capable opponents. It also covers the common theme of being swallowed whole by (for example) the Big

Bad Wolf.

Imagination Points fuel many of an archetype's innate abilities and can be spent to alter the world around them: heal a point of damage, find a simple but useful item lying around, use a skill they do not actually possess, control the next action of an NPC, enchant an item for a limited time, and even boost any aspect of a character on a on-time permanent basis. Though Imagination Points can be regained overnight, a child with no Imagination Points suffers from an exhaustive fatigue. Spell or incantations, also fueled by Imagination Points, can take mere minutes for 0-level spells to days for higher levels, and can come from any *d20 System* school bar those of Evocation and Necromancy, as they are not in keeping with the flavor of *Grimm*. The higher level spells can be expensive in terms of Imagination Point expenditure to cast, but no incantation requires a concentration check nor can it be interrupted or provoke an attack of opportunity. Though some NPCs are able to cast spells as per standard *d20 System* rules, the possession of an imagination as modeled through the use of Imagination Points is a major advantage that children have over the inhabitants of the Grimm Lands, who have neither points nor an imagination.

Balanced against the child's imagination is the danger of Despair. As long as they have the powers of imagination and the companionship of their friends, then their fears can be kept at bay. Yet if they end up alone in an unknown and frightening place, Will Checks are required to resist Despair; failure results in a loss of their Imagination Points and eventually causes an exhaustive state. This perilous situation can be successfully resisted, and can also be recovered from if returned to both the companionship of friends and restful sleep.

As well as describing the major denizens and places of the Grimm Lands, including the Devil, the Dragon, and Giants, there is solid advice for the DM on running a campaign set within the Grimm Lands. This starts out with mechanical elements, such as templates for both upright *and* talking animals, but also discusses staples of the genre. In particular these include the binding nature of oaths and the dangers of breaking them, and the perils of falling prey to temptation. The appendix is where the authors discuss "Telling Tales," the creation of adventures in the Grimm Lands. The emphasis is upon taking a moral from a fairy tale, and giving it that *Grimm* twist, but this should be part of the ongoing quest of the children to find *the* door out of the Grimm Lands. Running at just two pages, it is a shame that no examples of adventure seeds are included, but then a referee should be able to find plenty of ideas and concepts to be inspired from throughout this supplement.

Physically, *Grimm* is a very well done softcover from the pleasing cover inwards. The internal artwork is equally good, particularly that of Larry MacDougall, whose beautiful depiction of the six archetypes echoes the feel of Atlas Games' *Lunch Money* card game. Elsewhere he captures both the horror of Little Red Riding Hood and the madness of the Rotten King, Humpty Dumpty perfectly. James Ryman's line art is also good, depicting equally well the dark and twisted whimsy of fairy tales in the Grimm Lands. Unfortunately, his artwork in a couple of places has been reproduced back to front -- the only real production error in *Grimm*.

In setting out to explore both the genre of fairy tales and the horror we felt at reading them or having them read to us, *Grimm* lives up to the subtitle of the Horizon line: "New Roleplaying Frontiers." At least in terms of the *d20 System*, because *Little Fears* has explored the same territory, at least in intent rather than genre. Bearing that in mind, *Grimm's* approach to the subject is no less valid or uninteresting, though it is not as strong in material as *Little Fears*. This makes it more suitable for a less adult audience, but then an adult gaming group is likely to appreciate and get the most out of *Grimm*. In some ways it is a shame that it has been constrained to just 64 pages, as it deserves an expanded treatment; it is also disappointing that the archetypes are constrained to just six levels. The obvious way around this is for the referee to award character levels when they feel it is appropriate rather than at the end of every adventure. Otherwise a campaign may be shorter than the book deserves.

In the end, *Grimm* is not a horror RPG, although it contains such elements. It shares with [Buffy the Vampire Slayer Roleplaying Game](#) a sense of empowerment, there of female empowerment, here in *Grimm* of empowering children against the fears they acquire from tales. In *Grimm* they have the chance to face them down, even though they have been given a dark and sometimes quite adult twist. That empowerment is perfectly modeled in the use of the Imagination Points, without which the children could not stand up to the threats they face in the Grimm Lands. If *Redline: High Speed Road Duels In A Post-Apocalyptic Future* was good, *Grimm: Adventures In A World Of Twisted Fairy Tales* is even better, more intelligent and more adult because of its subject matter and its treatment.

Pyramid Review

Time Control

Time Control

Published by [Thompson Industries](#)

Designed by Anthony Thompson

Edited by Andrew Mayer

Illustrated by Rob Arnow

4 timeline boards (full-color), 72 time wave tokens (full-color), 31 Fate cards, 64 Problem Cards, 88 time control tokens, 48 time agent tokens, rulebook, boxed; \$24.95

As confusing as time travel can be, trying to mimic it in a gaming format can be even harder. Trying to fit the broad spectrum of this literary device into the compact environment of a board or set of cards seems almost impossible. *Time Control*, the new time travel game from Thompson Industries, is of little help.

The object of the game is to be the last time-traveling power left in the game.

Each player gets a timeline board showing the present and the six other descending eras of the past (back to the prehistoric) for their timeline, and a set of time agent disks representing the men sent through history to maintain or fight for the timeline. The disks are generic agents, brawlers, historians, and scientists, the last three having special abilities for dealing with duels or time waves.

In a single round, activity is split into two turns: the Time Agent turn and the Time Wave turn. During the Time Agent turn, after all the players have sent their agents to whatever era they want on their board and "alerted" (flipped over) those agents that were busy doing something the previous turn, players may use agents to take actions.

The game plays in real time, without turns. Everyone does anything they wish with their agents simultaneously, though if there is a conflict there will be a duel. Actions entail moving through time and attempting to fight other agents or the time waves they start. You can travel backward (as you did at the start of the turn, though when you see what other players do you may want to move more agents), slide sideways through time to the same era on another player's board, or snap back to today.

While in the past, you can create a time wave to hurt your opponent, you can attack an enemy agent in the same time and board as you, or you can try to stop a time wave in your current era (waves attack you in the Time Wave turn). Time waves comprise time wave tokens, and as these move through your history they may gain strength. When you attack one, you simply remove a token from the wave (alternately, a Historian or Scientist can flip over some or all of them). Other forms of combat are more involved.

If two or more players want to perform actions that conflict, they must duel for Time Control. Similarly, if they want to attack other agents, or if a time wave attacks them, there will be a duel. In a duel, players use their Time Control tokens or draw a Fate card. A player's tokens are numbered 1 through 21 (or marked Fate), and he chooses which one he will bring to the fight. Using the Fate token means you draw a Fate card -- valued from 15 to -15 -- and use its value instead. The higher value wins, though if a player loses, he can demand a re-duel. When the (re-)duel is over, the players discard the highest-value token they used and draw another Fate card. This last card will dictate what happens to the winner and the loser: move the agents, busy them, discard them, etc.

If a time wave passes through history and ends up in your present day, you may be saddled with Problem cards. The tokens in a wave say "Create" on one side and "Solve" on the other, and give or take problems as appropriate. Problems are technological, cultural, or societal in nature, and if a player has four or more of a single type, his timeline is eliminated from the game. Each card also lists a limitation for that player or his agents while the problem is in force -- time travel may be limited, re-duels may be prohibited, and time tokens may have to be chosen randomly.

You can also cash out. This is a twisted system by which you can trade out Time Control tokens, agents, and problems for one another, somewhat like an unforgiving round of rock-paper-scissors.

Time Control suffers in many ways. While the components are fine and the pictures on the timeline boards have an artful, elegant simplicity, the rules suck a lot of the fun out of the germ of a good idea. The timelines lack any concrete events or context, which wouldn't be bad in and of itself except that it leaves behind a generic, flavorless gaming experience (the game could be taking place on Earth, or it could just as easily be Alpha Centauri). The need for simplicity in a time travel game is understandable, but the bland strategy game that apparently is meant to stand in for a lot of complex interlocking historical events leaves one wanting. The Problem cards are similarly inscrutable -- the effects and rules are clear, but if there's a matching theme it isn't entirely obvious. There's no more perspective on events here than there is with the royal families in a pack of playing cards. The cards also layer on a lot of new things to remember, and since the cards can be cashed out it's an ever-changing landscape of rules and limitations.

With the circular nature of the cashing in method and the cyclic rotation of agents through the time streams, getting to the end of a game seems more likely to happen by sheer accident than through well-planned intentions -- if an ending is reached at all. *Time Control* is the gaming equivalent of doing long division in your head. Like a chess game with no parameters for movement, it's an almost impossible exercise in trying to anticipate the moves of others with actions of your own. Combined with the dry and anemic feel of the generic setting, it ends up being a contest of stamina to see who will cry "mercy" to the rules first.

Dork Tower!

Dork Tower!

Virginia Wade: A Thoroughly Modern Mage

For *GURPS*

by Mark Gellis

Everyone has neighbors. Some of them change your life.

When Virginia Wade was a little girl, she knew Ruth Fitz as the old lady with wispy silver-white hair who lived in a big house at the end of her block. Mrs. Fitz was a nice neighbor. Her husband had died years ago and she did not go out much, but sometimes you would see her gardening. She would always say hello to Virginia and her mother if they saw each other at the grocery store, and she always had good candy on Halloween. But there was something funny about her . . . something which Virginia could never put her finger on.

The years went by and Virginia was in high school. Mrs. Fitz still lived down the block. Virginia got involved in her high school's "Meals on Wheels" program. She wasn't sure why she joined; it just felt like the right thing to do. Naturally, they assigned her to visit the senior citizens in her neighborhood. Including Mrs. Fitz.

She liked visiting Mrs. Fitz. The old lady was frail, but her mind was sharp, and she loved talking to Virginia. They talked about everything from television to politics. Over time, the conversations started to become more and more philosophical. Mrs. Fitz, it seemed, knew quite a bit about magic. Not stage magic, but real magic.

At first, Virginia did not believe magic actually worked, but she thought what Mrs. Fitz had to say about it was interesting.

One day, she asked Virginia if she would like to see something. Virginia nodded. Mrs. Fitz took out a candle, muttered a few words, and the candle lit itself. Virginia stared at the flame until Mrs. Fitz said a few more words and the flame put itself out.

Virginia asked how she had done that. Mrs. Fitz responded by asking if she would like her to teach her to do it herself. When Virginia wondered aloud if that was possible, Mrs. Fitz smiled, as if she had been waiting for years to answer that question, saying, "Oh, child, of course you can. Like me, you have the Gift. You just needed someone to teach you how to use it."

In fact, she *had* been waiting for years. She had known from the first time she saw Virginia in her stroller that the little girl had the Gift. So she had waited until Virginia was old enough to be told, and "arranged" for her to start visiting so she could decide if the girl was someone she wanted to teach.

Virginia was one of the smartest girls in her class. She was pretty, but skinny, and had braces. She was proud of how well she did in school, and she had friends, but a lot of the time she felt somewhere between invisible and ugly . . . especially when she realized that, once again, she had been talking too much and people were laughing at her. And now someone wanted to teach her how to pull the secret strings of reality. Did she want to learn magic? She nodded eagerly.

And that was how Virginia Wade started her education in magic. She finished high school. She went to college. She went to graduate school. She got a job. But she stayed close, never living more than 50 miles from her home town. She would call Mrs. Fitz every few days to talk, and also visited Mrs. Fitz once a week to study together.

It was more than just the magic, though. The two women became close friends. Mrs. Fitz came to all of her graduations. Virginia called her "Grandma Fitz." Eventually, so did the rest of her family. (Ginny has never told them that she is a mage and that Mrs. Fitz was her teacher. To this day, they know only that Mrs. Fitz was a sweet old lady who lived down the block. Which, of course, was quite true.)

Ginny learned how to make potions. She learned the physics of magic, what Mrs. Fitz called Thaumatology. And she learned about the world of magic, of the people who had the Gift, and of the other things that had and used magic, hiding in the shadowed places, of wood and stone and even steel, some of them friendly, some of them monstrous.

She learned that spells -- real spells -- were difficult to use in our world, because there was little magical energy available. There were other worlds, Mrs. Fitz said, and some of them had a lot of mana, but opening a gate to those worlds could be a risky business.

A few years after Virginia started her first teaching job, Mrs. Fitz died, quietly in her sleep, at the age of 81. In her will, she left Virginia a small collection of books and a silver ring with a ruby in it. The books were mostly about magic and astrology. The ring was completely ordinary; it had been a gift Mrs. Fitz's husband had given her many years ago and Virginia had always admired it. Virginia considers it one of her most precious possessions and wears it most days on her right ring finger.

Virginia, or Ginny, as she likes to be called, is now 30. She has an M.A. in Foreign Languages and teaches at a local high school. She is a good teacher and quite popular with her colleagues, except for her tendency to just keep talking sometimes, mostly about completely trivial topics, long after a conversation has run out of steam. (The one exception to this is that she never talks about magic unless she knows someone else is a mage. And, for some reason, she never babbles when she is talking about magic.) This gives some people the impression that she is ditzzy when they first meet her, and they are often surprised to see how intelligent and competent she really is. Most of her students like her, too. The girls think she is nice and smart, if a little ditzzy; the boys think she is nice. And pretty. And a little weird . . .but definitely pretty.

Ginny lives in a small house within walking distance of the school where she teaches. She lives quietly, spending much of her free time reading, gardening, and listening to music. She continues to study magic, mostly on her own, although she sometimes corresponds with other mages. She has been thinking about approaching a powerful mage she met some years ago and asking if she could study under his tutelage. Whether he will accept her as a student, and what he will ask for in return, is left to the GM.

Using Ginny In A Campaign

At 100 points, Ginny could be used as a PC in any modern-day campaign that allowed magic, from a light "urban fantasy" to a far more serious story, such as *GURPS Horror* or *GURPS Cabal*. She could also serve as an ally or contact for heroes (perhaps they are working for the mage with whom she wishes to study; his "tuition fee" is that Ginny helps them out on occasion). Or, she could be a client, initiating an adventure by asking the player characters for their help, and then providing whatever assistance the GM considers appropriate.

As a player character, ally, contact, or client, Ginny could be quite useful to a team of adventurers. She is a capable linguist who speaks and reads five languages. She knows quite a bit about literature, history, and the occult, and is a skilled enough researcher to be able to find out what she does not already know. Her magical abilities, while limited, are still fairly impressive. What Ginny cannot do very well is fight. She has studied karate so she can defend herself (and because it is good aerobic exercise), but this is her only combat skill. (It would be a simple matter to replace Karate with a Gun skill, but it is not clear why a person like Ginny would learn to use a firearm, unless she has already been involved in some dangerous situations.) In adventures involving serious combat, her limitations need to be taken into consideration.

Alchemy is probably her most powerful magical ability. Potions take longer to make in low mana zones and the effects do not last as long, but the ability to make potions and their effects remain the same. Ginny is also a competent herbalist and astrologer. She knows several spells, but because she lives in a low mana world, her effective skill is at a penalty of -5. This means that many of her spells require long, elaborate castings, and about half of the time they still do not work.

Ginny knows other mages, and could get in touch with them if she needed to, but she is not close to any of them, so

they do not count as Allies or Patrons. (The exception would be if she had started studying with the aforementioned senior mage; the cost of the Patron advantage would then need to be balanced with Duty, Sense of Duty, Enemies, or other disadvantages to keep her at 100 points, if someone wanted to use her as a PC.)

Despite her many positive traits, it would be fair to say that Ginny is also a bit of a flake. As such, she offers an excellent opportunity for players who want to play a character who is a little on the eccentric side, and good for some comic roleplaying, but who is still competent and capable.

One of her long term goals is to become more knowledgeable about magic. Naturally, this creates possibilities for adventures. Ginny might learn of a rare book of magic and try to locate it. But someone else (or something) is also looking for the book, and willing to do anything to keep her from getting to it first. Or Ginny might accidentally uncover some eldritch secret, which would make her the target of those interested in making sure that secret was never revealed. Another possibility is that one of Ginny's connections in the world of magic (perhaps the senior mage with whom she wishes to study) might invite her to join in some project, and there are many ways in which such things can go terribly wrong, ranging from releasing something horrific into our world by accident to drawing the unwanted attention of rivals or enemies.

It would be easy to adapt her for other locations (simply change the Area Knowledge skill) or other periods in the 20th century or late 19th century (probably replacing Computer Operation with Typing, and perhaps replacing Driving with Riding, Karate with Judo or Bow, etc.). She might, for example, be working as a language and literature teacher at an elite girl's school during the Cliffhanger era, or as a translator and occult specialist helping protect the home front in a Weird War II campaign.

Another possibility for a campaign would be to play a group of youngsters -- students at the school where Ginny teaches -- who happen to have unusual talents, becoming her protégés. Ginny knows what it means to be unusual and have a secret, and to have a special talent that needs to be nurtured. She would guide them while they solved mysteries and battled evil. Characters for a "Welcome to Adventure High" campaign might be built with a budget of 75 points. Ginny would gain an Ally Group, available on 12-, and worth 10 points; she would also gain a Secret (Teacher encouraging students to dabble in dangerous activities) [-10]; she probably would not go to jail if her secret came out, but she might be fired and have to start over in another town. Ginny is still worth only 100 points, so she would count as a 5-point Ally, available on 12-, and worth a total of 10 points when designing the youngsters (who would probably have a 5-point Sense of Duty (to Ginny) to reduce the cost). The GM should determine whether their powers would be limited to occult advantages and spells or if they could include psionic or super abilities.

One last possibility for a scenario is if Ginny learned that her beloved mentor Mrs. Fitz had not died of natural causes. Mrs. Fitz was a practicing mage for more than 50 years (she was probably a 150- to 200-point character, with at least half of that in spells and magic-related skills) and may well have crossed paths with some truly unsavory individuals. The books she left Ginny included some of her personal notebooks on the subject of magic. Perhaps they will provide a clue to solving the mystery, if it is a mystery, of her death.

Virginia Wade

Female; Age 30; 5'5", 120 lbs.; Hair: Strawberry Blond, Eyes: Brown, Skin: White

ST: 9 [-10] **DX:** 10 [0] **IQ:** 14 [45] **HT:** 10/9 [-5]
Speed: 5.00 Move: 5 Dodge: 5 Parry: 6

Advantages: Attractive [5]; Contact (Other mages Ginny knows, effective skill 15-, available on 9-, usually reliable) [4], Magery 2 [25]

Disadvantages: Odious Personal Habit (Babbling) [-5]; Secret (Mage) [-10]

Quirks: Has a large collection of hats (and loves wearing them) [-1]; Likes to be called "Ginny" [-1]; Loves plants (and often talks to them) [-1]; Prefers to sleep naked [-1]

Theme(s): Secrets, Action, Order vs. Chaos

Campaign Setting and Background Information

What Everybody Knows

Sixty minutes into the future, it's basically what you see outside your window. . .

What Everybody Doesn't Know

. . . yet beneath the surface, secret organizations strive against each other for the fate of the world!

What Everyspy Knows

The State of the World

It's not the Cold War anymore. This fact of history -- while it hasn't eliminated the need for spies and spying -- started the changes in the nature of espionage. The dwindling importance of nationalism in the face of international relations -- with a few notable holdouts, such as the United States of America -- has given way to the rising importance of multinational organizations, corporations, and ideologies contesting each other for the most important resource on Earth: information. While the national intelligence-networks remain, they're more commonly just recruitment pools for new-style spies. . . and even that is changing, as the modern agencies develop their own idiosyncratic training programs.

Secret Knowledge

Thus, the Great Games of Espionage go on, except the new players outshine the old ones. The two most powerful and effective intelligence organizations on Earth are described below: *CHESS* and *POKER*. Their epic struggles against one another dominate the Great Games.

***CHESS* (Central Headquarters for Espionage, Security, and Safety)**

- **Ideology:** CHESS is all about order, control, and security. It is more important to be safe than free, in their eyes. To that end, they are willing to do anything to protect the world from radical things, be they technologies, individuals, groups, or ideas.
- **Organization:** This organization is composed

Black Knight

of 33 individuals, 32 who are codenamed (and structured) along the lines of the pieces of a standard chess set.

- *Kings/Queens*: The four Kings and Queens are the top, double-oh, licensed to kill superspies of CHESS. By tradition, the Kings are male and the Queens are female agents. While the Kings are nominally of a higher rank than Queens, their roles and duties are the same in practice, with one proviso: the White King and the Black King have responsibility for management of their Color's headquarters (or *Citadel*) -- which they tend to oversee in an executive fashion, delegating the day-to-day to their Pawns (see below).
- *Bishops*: Bishops are intelligence specialists -- gathering, analyzing, manufacturing, and disseminating.
- *Knights*: Knights are highly-trained combatants, assassins, and weaponry experts.
- *Rooks*: Rooks are skilled at construction, demolition, infiltration, and gadgetry.
- *Pawns*: Pawns support their direct superior in the agency, either to extend the superior's skillset (i.e., a Bishop's Pawn may concentrate on information gathering or analysis) or as a supplement to the superior's skillset (i.e., another Bishop's Pawn may be a field agent for their intellectual but wheelchair-bound Bishop). They are batmen, sidekicks, major domos, and bodyguards.

The 33rd individual is the mysterious *Grandmaster*, who moves his pieces as he will in defense of world order. The two Colors of chess pieces indicate a division in CHESS operations and agent skills:

- *White Ops* have a *visible* effect; that is, people will notice that something about the world has changed: destruction of a bridge, introduction of a new piece of technology, a shift in fashion, or the theft of a new telecommunications satellite before launch.
- *Black Ops* have an *invisible* effect; that is, people should not notice that anything has changed: a bridge destroyed and replaced with an exact duplicate (that possess a hidden mechanism), an alteration of an existing technology to add secret new functionality, a minor change in fashion easily attributable to the natural churn of the Paris designers, or the upgrade of a telecommunications satellite to make it into a covert weapons platform.

CHESS operations are generally compartmentalized, working in ignorance of each other; the Grandmaster only informs field-teams of possible conflicts on a need-to-know basis.

- **Hierarchy**: In questions of primacy of rank, orders, or operations, rank comes first, followed by file, then Color (Kingside ranks are superior to Queenside ranks, in a reversal of Steinitz's support of the Queenside majority;

- and Black is always superior to White, in a reversal of the "White always moves first" rule). Thus, a Black Queen's Bishop can give orders to both White Bishops and any operative of lower rank -- no matter their Color - - and is subject to the commands of the Black King's Bishop, both Queens, both Kings, and the Grandmaster.
- **Resources:** CHESS operatives have the best training and most advanced technology -- save in one telling regard -- on Earth. They have dump-trucks full of money, and access to many governmental and corporate entities.
 - **Special:** There are some special aspects to the CHESS organization:
 - *Promotion:* If a lower-ranked operative's skills or knowledge is essential to a particular mission, they can be temporarily promoted to Queen rank, with all the perks, visibility, and danger associated with it.
 - *Castling:* If one of the Kings sends out the command to Castle, this is an immediate, A-1 priority order for all Rooks and their Pawns to assemble at the Citadel -- they are to drop *everything*, even deep-cover work, and haul it to HQ, while all other ranks move to a state of alert.
 - *Check, Checkmate, & Stalemate:* The declaration of *check* means that a King or Queen rank operative is in danger, and all CHESS members in the area are to lend aid. *Checkmate* is used as a codeword to indicate failure of a mission and call for immediate extraction; *stalemate* is the codeword to indicate slow disengagement from a mission, as it cannot be completed under the original parameters.
 - **High Road:** The world is getting wilder and woollier by the day -- folks can make serious bombs out of simple household goods, crime is on the rise, any wacko with a gun and no respect for life (especially their own) can cause massacres, what amounts to uncontrolled psychological warfare is being perpetrated on everyone, and the freedoms we hold so dear are being perverted with ill-intent. It's chaos out there, unsafe for people. CHESS is dedicated to restoring that security, so that people can sleep without fear.
 - **Low Road:** It's all about *control*. Untrammelled liberty has made the world into an abattoir. CHESS is there to clean-up the mess and resurrect a workable structure for the human animal to live and work in, by any means necessary.

POKER (The Peoples' Organization of Knowledge, Espionage, and Revelation)

- **Ideology:** POKER is all about chaos, liberty, and independence. It is more important to be free than safe, in their eyes. To that end, they will do what they must to liberate and inform the world of all the choices they have in technologies, individuals, groups, or ideas that would otherwise get swept discreetly under the carpet. Jack of Hearts
- **Organization:** This organization is composed of 53 individuals divided into 4 suits of 13 members each, who are codenamed (and structured) along the lines of the pieces of a standard deck of cards.
 - *Aces:* Aces are the department heads, older operatives who rarely venture into the field anymore. However, if thrown into play, their long experience in the Great Games and knowledge of the playing field makes them deadly opponents.
 - *Court:* The Court cards are the elite field agents of POKER. They are highly-trained in the skills of their Suit (see below), and well-trained in other aspects of espionage. Court cards are the ones gambling at Monte Carlo, bantering with evil masterminds, and skiing down mountainsides pursued by snow-ninjas. 
 - *Number:* POKER's number cards are lesser agents who support their Suit's Court: the even numbers work in the field, while odd numbers work remotely from secure agency locations.

The fifty-third individual is the mysterious *Joker*, who plays his cards as he will in defense of freedom for all people.

The card Suits indicate a division in POKER operations and operative

skills:

- **Hearts** are the socially-adept agents, the face men, the confidence tricksters, the shmoozers, the femme fatales and lotharios.
- **Diamonds** are the go-to guys and gals for *stuff*: money, cars, weapons, residences, passports, gadgets -- you name it.
- **Spades** are the detectives, the investigators, and the snoops, those agents who rely on their intellect as their greatest weapon.
- **Clubs** are the physical specialists: the fighters, the killers, the pilots, the racecar drivers, the mountain-climbers, and the sneaks.

Knowledge of ongoing POKER operations is usually restricted below the Court level, though at their own discretion, Court agents can inform those working under them of other missions in the same area.

- **Hierarchy:** The Joker is in absolute charge, followed by the Aces, then the Court, then the Numbers; nominally, orders flow downhill in that way. Normally, a POKER agent only respects orders within their Suit; no Suit is considered "higher" than another (but see *Trump* below).
- **Resources:** POKER operatives have pretty good espionage training and slightly advanced gadgetry; however, they are notably lesser-skilled than CHESS agents. There is one thing they possess than no one else does: the *Circuit*, an utterly secure and untraceable worldwide, wideband, wireless communications network. While the Circuit can be jammed in rare occasions (with great effort, enough to knock out *all* human telecommunications in a large geographical region), messages passed between the Joker and his pack of cards cannot be otherwise blocked, detected, intercepted, or decoded. Furthermore, each POKER agent is issued a *Deck*, an ultraminiaturized computer about the size of a postage stamp, that can link into the Circuit, the Internet, and local telecom networks; Decks possess multimedia information transfer, holographic display capability, vast electronic storage, and excellent voice recognition capabilities. Under the all-seeing eye of the Joker, agents are teamed, advised, connected, and directed in real-time, which allows uncanny coordination of their efforts; this "tele-teamwork" is what makes POKER a threat to other organizations such as CHESS. If a Deck is captured by enemy agents, it generally destroys itself; depending upon the situation, this self-destruct can be almost unnoticeable (it just "vanishes") or brilliantly spectacular (it explodes and takes out a city block).
- **Special:** There are some special aspects to the POKER organization:
 - *Trump*: If the Joker declares a Suit *Trump* on a particular mission, POKER operatives of that Suit possess absolute command on the mission. They still must obey their superiors within their Suit, however. This means that on a Hearts Trump mission, the chain of command might run Jack of Hearts, Four of Hearts, Ten of Spades, and King of Clubs.
 - *Wildcard*: The Joker can also declare a particular agent a *Wildcard*, which removes them from under any authority (other than his own) and grants them temporary Ace rank for all Suits.
 - *Table Talk*: *Ante* is the resources required for a mission; the *pot* is the target of the mission, a *check* is an action during the mission that doesn't expend resources or increase risk, a *bet* indicates that more resources must be spent on an aspect of the mission, a *raise* informs other team-members that the risk-factor has increased, *call* means that a showdown in the mission is imminent, and *fold* is a warning/command to abort the mission. If a mission is *stud*, it has an overt component or goal; *draw* missions have covert components or goal.
- **High Road:** The world is getting more organized and stifling by the day -- governments are sticking their noses into everybody's business, corporations are pulling the wool over the eyes of their employees and customers, police powers are growing more wide-ranging and stupid, old-boy networks and outright conspiracies are shaping the future while the people are unaware and disenfranchised, and voices of reasonable dissent are being drowned out. POKER is dedicated to restoring the liberty so many have died for before it's all dubiously taken away in the name of "security."
- **Low Road:** It's all about *chaos*. Too much control has stunted the growth and development of the world, choking off all potentials for change. POKER exists to smash all structures and free the human animal to live and die independently.

Other Players in the Great Games

Really, the only two world-class contenders in this world of 60 minutes into the future are POKER and CHESS. However, there are a few smaller competitors in the Great Games that often turn up, ready to play:

- The once-great national spy organizations (CIA, MI6, KGB, etc.), which are slowly collapsing into uselessness.
- The fresh-faced World Government kids of the UN, ready to make a name for themselves, with little training, experience, or resources: the agents of *WHIST* (World Headquarters for Information/Security Tactics).
- The first "spycorp" -- a fully-tricked out business concern dedicated to (usually industrial) espionage for cash -- that is heavy on the toys and light on the skills: *CRAPS* (The Corporation for Reconnaissance And Professional Spying).
- Ideological organizations, who have minimal skills and resources, but an amazing can-do attitude (and example would be *Rule 8*, a group solely-dedicated to discovering, informing the public of, and -- if possible -- stopping fixed elections).
- Other superspy groups, such as SHIELD, COBRA, KOBRA, HYDRA, or [the Ossuary](#).

What Everyspy Doesn't Know

Who are the Chiefs?

Both CHESS and POKER are run by mysterious commanders. Who are the Grandmaster and the Joker? Here are some options:

- Legendary spies or detectives (fictional characters are great to pattern these sorts of leaders on: James Bond, Felix Leiter, Konrad Siegfried, Operator Number 5, Batman, Sherlock Holmes, Kent Allard, etc.).
- An operative who's serving in the ranks, probably at the middle-ranks of superspydom (CHESS Bishop/POKER Queen or lower).
- Cold War-era supercomputers which, with continual upgrading with the very latest technologies, finally became self-aware.
- Two immortals (spirits, aliens, demigods, mutants) simply playing.
- The same entity (running the Great Games for fun or as some expression of a split personality).
- Some combination of all of the above.

How Many Chiefs?

Some operatives in both organizations wonder about their bosses -- is there really only one Chief? After all, no one can be on duty 24 hours a day, 7 days a week, month after month, year in and year out. Surely, someone must spell them for the time they need to sleep, right? Are there secret chiefs unknown to the spies of CHESS and POKER? Even a Grandmaster needs a Player on the Other Side of the chessboard, and many decks of cards come with a second Joker (often called *the Bug*). . .

PC Opportunities

Spy Skills

A cinematic spy's skills generally revolve around a knowledge of codes, ciphers, situational analysis, sneaking, hiding, psychology, con-artistry, foreign languages, disguise, weapons use, hand-to-hand combat, breaking and entering (climbing, picking locks, safecracking), combat driving, tailing/shadowing and evasion, searching, sleight of hand, interrogation, computer use, and access to cool spytech. This is the base from which specialized abilities -- gadgeteering, gambling, intel analysis, and seduction -- of advanced operatives build upon.

Which Company Are You With, Again?

Characters in a "Spy Games" campaign can be operatives from CHESS, POKER, or other espionage organizations. (Indeed, some adventures could be every interesting if the PCs come from a mix of groups with differing motives and goals. And do not neglect the gaming potentials for double- or triple-agentry!)

Depending upon the organization a PC is part of, they gain certain strengths or weaknesses related to the nature of that group that builds on or takes away from their basic Spy skill package:

- **CHESS Ops:** These agents are the gold standard for spy skills, technology, and cash, but do tend to suffer from an overabundance of rules, regulations, hierarchy, complicated plans, and a limited ability to improvise in the field.
- **POKER Ops:** Pound for pound, a POKER operative's skills and spytech aren't as picture-perfect as a CHESS operative's, but they are excellent improvisers and jury-riggers, and their team-efforts are synergistically hyper-effective. They also possess a Deck, which grants absolutely secure communications.
- **WHIST Ops:** WHIST agents aren't much better than plain old spies in their skills and resources, but they do have something no other group does: the recognized freedom and authority to operate in every country that belongs to the UN.
- **CRAPS Ops:** Agents of CRAPS have decent spy skills, but their real talents revolve around business skills and technologies; they also have CHESS-equivalent spytech.
- **Rule 8 Ops:** The members of Rule 8 cannot be considered superspies -- they're just not in the league of these other organizations. What they do have is an uncanny ability to gain support and aid from people they meet outside of the Spy Games; the worldwide public invariably responds favorably when a Rule 8 agent explains his or her organization's mission and goals.

Advice, Opportunities, & Pitfalls

Spy Story Structures

Cinematic spy stories follow two main structures or idioms:

A. Bondian

1. Teaser (sometimes, two of them: Villain and Hero);
2. Briefing (by Superior);
3. Gear Up (visiting R&D for cool toys);
4. Infiltrate (agent insertion into Villain locale or plot);
5. Meet & Greet (the Villain, the Notable Henchman, the Femme Fatale, the Double Agent);
6. Report to Superior (and gain further information);
7. Caught by Villain (either by bad luck, treachery, or foreknowledge);
8. Villain Monologue (often over dinner or drinks; indeed, this may be the point of many missions -- hearing the Villain's plans);
9. Deathtrap (see "[The Deathtrap Construction Kit](#)" for ideas);
10. Escape Deathtrap (usually using toys from Gear Up);
11. Thwart Villain/Plot (may or may not involve death of Henchman and Villain, but probably includes an explosion);
12. Debriefing (agent tells Superior what happened); and
13. Tag (agent canoodles with someone).

B. Impossibilian

The instructions to writers of the first series [of *Mission: Impossible*] read: "The tape message contains the *problem*. An enemy or criminal *plot* is in existence; the IMF must *counter* it. The situation must be of enough importance and difficulty that only the IMF could do it. The villains (as here and later portrayed) are so black, and so clever that the

intricate means used to defeat them are necessary. Very commonly, but not inevitably, the *mission* is to retrieve a valuable item or man, and/or to discredit (eliminate) the villain or villains. . ." (Emphases in the above paragraph are mine; see also below, *Other Resources*, for the source of this quote and more information.)

Generally, a Bondian plot is reactive (something has happened, and the Hero must respond) and an Impossibilian plot is active (the Heroes do something to stop something else from happening). Mixing up these two types of mission for a gaming group can help a GM avoid "plot-fatigue." ("Another Mad Scientist bent on world domination? Yawn.")

Generating Missions

Given the iconography of CHESS and POKER, a GM can get a lot of mileage out of the use of descriptions of chess gambits or a poker glossary (see *Other Resources* for examples).

Running a Gambit: There are two ways one can interpret a chess gambit to generate a mission for a Spy Game adventure:

1. Pick a side (CHESS itself is represented by either White or Black); or
2. Taken pieces represent the mission goals (all the pieces on the board are assumed to be CHESS agents in action, and when a piece is removed from the board, it shows that their individual goal has either succeeded or failed).

Here's an example of using choice 1 to design a mission called *the Sicilian Defense*:

- The descriptive chess notation for this sequence would be something like: White KP-K4; Black QBP-QB5; White QP-Q4; Black QBP-Q4, BxQP (which translates to "White moves King's Pawn 2 spaces forward; Black moves Queen's Bishop's Pawn 2 spaces forward; White moves Queen's Pawn 2 spaces forward; Black Queen's Bishop's Pawn captures White Queen's Pawn.")
- White represents the opposite "side of the mission" (say, an unnamed Balkan government) and Black represents CHESS.
- The first move in the game is the movement of White's King's Pawn into a position of vulnerability. Who is the Pawn? Well, let's say that the King is the Prime Minister of Slavoslavia; that would make the Pawn his personal secretary.
- Black moves, placing a Bishop Pawn (intelligence specialist assistant) in position.
- White moves, placing a Queen's Pawn -- possibly another personal secretary who works for another prominent Slavoslavian minister, possibly the Minister of Defense -- next to the Prime Minister's secretary. Perhaps the two secretaries are conspiring to blackmail their bosses with knowledge of secret arms deals that the Ministers have been gaining illicit funds from?
- Black moves, with the CHESS agent capturing the secretary to the Minister of Defense and ending up on the same square . . . a situation that could be read (if we go with Black Ops as being "invisible") as the CHESS Operative killing and replacing the secretary. Now, he is undercover with the conspiratorial secretary of the Prime Minister, and can proceed from there.

Deal a Hand: Dealing out a hand or two of cards can help the GM assemble a team of POKER agents . . . the fun part is then analyzing the hand by rank and Suit to figure out what sort of mission such a team would be assembled for. Here's an example, using the cards that Wild Bill Hickok held when he was shot to death: *the Dead Man's Hand* (Ace of Clubs, the Ace of Spades, the Eight of Clubs, the Eight of Spades, and the Nine of Diamonds).

- This gives us a team of agents comprised of two Department heads (in intel and combat), two medium-ranked field agents (again, in intel and combat), and a gadget guy in a base somewhere.
- Two Department heads means that this mission is serious (and possibly dangerous).
- The existence of two field agents -- the Eights -- could mean that the Aces have been roistered out from behind their desks.
- The absence of Court cards can mean that the use of the best agents would be a risk . . . or that they were unavailable for use.
- The absence of the Hearts Suit might be telling.

- So, here's an idea for the mission: CHESS has somehow gotten their hands on a list of all of the POKER Court agents and their missions . . . possibly through turning the Ace of Hearts. Maybe the Heart's Court has been captured, replaced with Killbots, or mind-controlled; evidence is sketchy, but what's been found is compelling. The black Aces have recruited the two second-best Number-rank field agents -- not the best, the Tens, because that reassignment would raise too many flags -- and the best Number-rank gadget desk agent available. They're flying under the radar of their own organization as they try to figure out how to stop the insanity.
- The biggest questions here, of course, are "what happened to the Joker?" and "why didn't he notice this happening?" (Well, maybe the Dead Man's Hand are the ones being mind-controlled. Maybe the Big J is running this as an Internal Affairs op, trying to find evidence that the Ace of Hearts has gone over to the other side. Maybe he's one of the agents who's been captured or controlled? Failing all that . . . sunspots?)

Defining Other Operatives in Play

Given the turnover of folks in the spying life (from promotion, retirement, and casualty), it can be extra, unneeded effort for a GM to assign all of the agents of an organization. The nomenclature of CHESS and POKER help minimize this. That is, by virtue of the roles and skills encapsulated in the different schemes for rank and Color/Suit, the GM will already have a general idea of the abilities of the BQP (Black Queen's Pawn) or the Ten of Diamonds. The former will be the assistant to a covert-op superspy (probably a lady's maid or chauffeur), and the latter will be a gadgeteer field agent.

Q-ing Up for Gadgets

The fruits of spytechnology are the wonderful toys that operatives carry with them in the field. These gadgets tend to possess one or more basic capabilities or qualities:

1. They are *disguised* as something else (a Geiger counter watch; a robot-camera fish);
2. They are *small* and/or *collapsible* (a camera the size of a thumbnail; a gun that can be disassembled into five common, small personal items); and
3. They are more *advanced* than the commonly-recognized technology (a two-way wrist TV when portable radios had to be fit into car trunks).

Operatives generally receive one of each of the following classes of spytech when going out on a mission:

- Weaponry (overt, covert, or both; with ammo);
- Detectors (Geiger counters, tracers, biochem sniffers);
- Recorders (mini-cameras, memory sticks, micro-copiers);
- Communicators (shoe phones, watch phones, one-time pads); and
- Transport (Aston Martins, Shaguars, alligator mini-sub).

Furthermore, a cliché of the genre is that at least one of the toys the agent receives will have a telling impact upon the plot of the story, whether used to distract or eliminate the Villain's Henchman, break the Hero out of the Deathtrap, or aid in the final escape of the Hero after the Climax.

Badguytech

Often, Villains have even better toys than the Heroes. Here's a short list of gadgets or equipment that Evil Masterminds tend to utilize in their plots for world domination:

- Army of X (ants, sharks, zombies . . .)
- Assassination of World Leaders
- Bioweapons
- Cloning
- Cryptography

- Laser
- Mind Control Satellite
- Nanotech
- Nuclear Missiles
- Resource Control (cornering the market or destruction of the resource)
- Robots or Androids (as an army or world leader replacement)
- Weather & Natural Disaster Control (visiting upon or protecting from)
- Xenotech (crashed alien spaceship technology)
- Any combination of the above

Inter-Agency Relations

Note that CHESS and POKER can both be played as "good guy" (High Road) or "bad guy" (Low Road) groups. While it's obvious to set one as "good" and one as "bad" for a Spy Games campaign, setting them as the "same" type of group can lead to interesting dynamics:

- *Both High Road:* While both groups are dedicated to the protection of the world, they prefer different methods and endpoints. This stance makes the decision to kill an enemy agent a murky moral question, and could very well lead to a setting rife with "Spy Codes of Honor" and sportsmanlike agency rivalries.
- *Both Low Road:* If CHESS and POKER are both solely concerned with gaining control of the world, the setting takes a darker turn. Since their ideologies are antithetical, agents will have no compunction about slaughtering enemy agents (or even innocent bystanders) to reach their goals. The only concern will be with keeping things quiet enough so that they can operate effectively.

Intra-Agency Relations

GMs should never neglect the opportunity to promote intra-agency rivalries and counterplots between Colors and Suits: often their methods and goals will be at odds with one another. However, while the tele-omnipresence of the Joker keeps the internal competition of POKER within safe levels, the Grandmaster of CHESS may actually *encourage* strife between the Colors -- or even the front and back files -- in order to promote a "survival of the fittest" organization.

ADVENTURE -- Mission: Cascade

Mission Briefing

Situation: Something is brewing in the state of Slavoslavia. Doctor Laszlo Sklenchar, reclusive but brilliant scientist, has made a scientific breakthrough, the nature of which has the Slavoslavian Ministry of Science in a tizzy. Exactly what is unclear; our sources have been unable to gain further information.

Background: The following information is available to operatives on this mission:

- **Slavoslavia:** *Capital:* Borcharesh. *Population:* 4.7 million. *Main Exports:* High-grade bauxite ore, coal, zinc. Known as the "Monte Carlo of the Black Sea," Slavoslavia has had a tumultuous history of repeated invasion, starting with the Greeks, Mongols, and Turks, up through Germany and the USSR in WWII. After the end of the Cold War, the royal family of Hanover-Krstulovic was welcomed back from their British exile to head the newly-formed constitutional monarchy. Interestingly, His Grace Tibor Hanover-Krstulovic has taken the title of "Duke" rather than "King," owing to the tradition of Dukes holding the throne of the land in trust for when the Lost King Zakarrij returns. Today, Slavoslavian science and industry is blossoming in the field of high-speed telecommunications technologies.
- **Doctor Laszlo Sklenchar:** Sklenchar possesses several degrees, most notably doctorates in Subatomic Physics and Astrophysics, and significant postgraduate work in Anthropology and Archeology. While well-respected among his peers in physics, in recent years, this regard has decreased. After being removed (under suspicious

circumstances, it must be said) from Nobel Prize consideration several years ago, Sklenchar began to exhibit signs of extreme paranoia regarding his work. While he lectures once a week at Slavoslavian University in Borcharesh, he refuses to use the University's facilities for his studies, and maintains a lab at an undisclosed location. Interestingly, Sklenchar is closely related to the royal family through the Krstulovic bloodline, and resides in an apartment in the Royal Palace. With the recent death of Count Erno Krstulovic, Sklenchar is now third in succession to the Slavoslavian throne after the Duchess and the Countess Hope. The Slavoslavian Secret Service (SSS, or S-3) has stepped up their observation of him.

Observations: We first became aware of Sklenchar's unknown breakthrough through another mission (observation of Cornell quantum physicist Dr. Emil Reynolds; cross-ref *Mission: Iota*). E-mails exchanged between the two scientists referenced the "boson cascade effect," an abstruse piece of superstring theory, which is thought to be unverifiable . . . except Sklenchar broadly hinted that he had indeed verified it, with "interesting effects on macro-reality." (Unfortunately, given the events of *Mission: Iota*, that information source has dried up.) Sklenchar's paranoia and secretiveness, combined with a mild societal taboo in Slavoslavian culture discouraging "unseemly" interest into royal affairs, and the relatively recent emergence of widespread First World technologies, has made remote data collection problematical. That is why you are being sent into the field now.

In seven days, Sklenchar is scheduled to escort his cousin, the Countess Hope, to her upcoming Birthday Gala. This party is by invitation-only, and will be held at the Casino Sublime, the hottest nightclub of Borcharesh. Analysis indicates that the optimum times to observe or interact with Sklenchar is before or during the Countess' Birthday Gala.

Mission Goals: Primary Goal: Discover the nature of Dr. Sklenchar's current work. **Secondary Goal:** Locate Dr. Sklenchar's secret lab. **Tertiary Goal:** Make direct contact with Sklenchar and gain his trust.

- **(Further details & objectives for CHESS PCs):** We believe that there are POKER agents currently operating in Slavoslavia with the same objective; exercise caution. This is initially an information-gathering mission; however, if the nature of Sklenchar's discovery warrants it and the opportunity presents itself, the mission *may* switch to a snatch-and-grab, if the Grandmaster approves. This is a Black Op, and Black agents are ranked for the duration, even if cover is broken. (CHESS operatives will not be informed of the Black King's Knight's Mission.)
- **(Further details & objectives for POKER PCs):** We believe that there are CHESS agents currently operating in Slavoslavia with the same objective; exercise caution. This is solely an information-gathering mission; unless one of your team, Dr. Sklenchar, or an innocent civilian are endangered, further activities are unnecessary. The Joker will, as always, be monitoring your situation. Additionally, there is a team of your fellow agents currently on a mission in Slavoslavia, codenamed "Short Straight." Unless asked to assist by the ranking agent -- the Jack of Hearts -- or directed to get involved by the Joker, do not interfere in or with Short Straight. However, if your mission goes south and the circumstances justify it, the Short Straight team *may* be available to serve as your backup. . . but don't count on it.

Recommended Team Composition: CHESS teams should have at least one Rook or Rook's Pawn and one Bishop or Bishop's Pawn. POKER teams should have at least one Spade and at least one Diamond.

Available Covers & Resources: Possible cover identities for this Mission include: Senior Analyst position with British Technicore; Press credentials with AmeriNews*; the grandchild of Slavoslavian war hero, Sandor Boyko*; Grant Researcher with Marduk Philanthropies; and Diplomatic Attache for the Embassy of Iceland*. All covers include relevant passports and identity papers. Those marked with an asterisk include an invitation to the Birthday Gala.

All agents will be issued 1500 USD and 10,000 Slavoslavia zlotnys (roughly 2000 USD) for this mission. Other gear available upon request (with a strong recommendation against unconcealed weaponry).

Concurrent Missions

CHESS Operation: Sicilian Defense: The basic structure of this mission is detailed above (see *Running a*

Gambit), but the details are slightly different: taking the place of the white pieces is Vasily Dzursky, the Slavoslavian Undersecretary to the Minister of Defense, who wishes to purchase atomic secrets from a Korean arms dealer named Kim Sam Kun. The CHESS team is planning on eliminating the arms dealer and sending their own ringer (the Black Queen's Bishop's Pawn) in his place to meet with the Undersecretary. The CHESS team is comprised of the Black King's Knight (BKN) and his Pawn (BKNP), the Black Queen's Bishop (BQB), and the White Queen's Rook's Pawn (WQRP).

POKER Operation: Short Straight: The POKER team is made up of two field agents (the Jack of Hearts and the Ten of Spades) and one remote agent (the Nine of Diamonds). Their mission is to gather blackmail evidence on vacationing American executive Sandra Vargo, VP of Research & Development for MicroTeleCom. POKER wishes to lay the foundation for sabotage of some highly-invasive cellphone technology MTC is working on. Currently, the Jack is seducing Vargo during her three week long gambling junket at the Casino Sublime; meanwhile, the Ten monitors all of her communications via tracers, bugs, phone and internet taps, etc.

Other Ops in Place

S-3 Operation: Cake: The Slavoslavian Secret Service is working overtime to make safe the Casino Sublime for the Countess' Gala. Security is tight for the week previous to the Gala: all incoming casino guests, their luggage, and service personnel are (and will be until after the party) scanned and searched; all hotel staff and guests will be issued photo and magnetic strip security badges; all guards are equipped with portable card readers; and a police cordon will go up around the Casino beginning at dawn on the day of the celebration.

The Doctor's Plan: Sklenchar is due to give his weekly lecture at the University four days before the Gala, after which he will have dinner with the Duke and Duchess at the Royal Palace. He will secretly leave the palace by a side-door, and bike downtown through the narrow streets of the capital to his lab, where he will remain sequestered until he has to escort his beloved cousin, the Countess, to the party via limousine. He will show his cousin a good time and help her keep to the party itinerary as best he can. After the Gala, the Doctor will convey his drunken cousin home to her townhouse in the limo. As he walks her in, the chauffeur will remove a bicycle from the trunk. When Sklenchar returns, he will mount the bike, wave good evening to the driver, and pedal off madly down the narrow streets of the capital. He will go back to his lab, without even stopping to change out of his eveningwear.

Further Details

Sklenchar's Research: Simply pick a likely choice from *Badguytech* above. He will drop enigmatic hints as to his research -- more if he's drunk -- so long as he has no intimation that the person (or persons) he is speaking to has any substantial scientific or technology grounding. If he suspects that the listener might be able to puzzle out his abstruse allusions, he'll clam up.

Sklenchar's Lab: The Doctor's hidden lab is located on the second floor of a small commercial office building in the downtown business district of Borcharesh; the only tenant listed is the "Blenki Brokerage" on the third floor (the phone and internet lines from the third floor have been patched to lead down into his lab). Sklenchar *always* takes a circuitous route to the lab. If he ever suspects he is being followed on his way to the lab, he will redouble his efforts to lose pursuers, doubling back along alleys, riding down staircases, cutting across plazas, discarding his bike in a dumpster, etc.

Getting Into the Gala: No One True Way of entry for agent PCs is provided, though use of a cover identity with an invitation is probably the easiest option. GMs should use the parameters of *S-3 Operation: Cake* above to adjudicate likely responses. That is, if the PCs just knock out the waitstaff and steal their uniforms, they'll probably run into problems with security since their id pictures won't match their faces (not to mention any weaponry or spytech the scanners detect). Then again, there's nothing that says that the characters *need* to attend the Gala . . .

The Countess' Itinerary: Up until three days before the Gala, the Countess is skiing in Switzerland. Upon her return to Slavoslavia, she will spend the days between partying on her private yacht, in nightclubs, and her swanky

apartment downtown. She and Sklenchar are due to leave the Royal Palace at six on the night of the Gala, and will travel by motorcade to the Casino Sublime for the party. The Countess will spend most of her time trying to sneak away from her cousin (Doctor Sklenchar) to chase after attractive young men (and women). Towards the end of the evening, she will become quite drunk, and need to be taken home to her apartment.

Party Down!: Everything might go down at the Gala. Just mix in all the characters, the Mission timelines (see the matrix below), the *Cover Concerns & Mission Complications* (see below), high-stakes gambling, and liberal amounts of alcohol.

Mission Interaction Matrix

The matrix below shows the timelines for each of the plots currently in motion in Slavoslavia that PC operatives might notice (or interfere with). *Phase 1* indicates the six days before the Gala; *Phase 2* means the daytime hours leading up to the Gala; *Phase 3* is the Gala itself; and *Phase 4* is immediately after the Gala. (Parenthetical notes) show actions taken in response if relevant NPCs detect the PC team (or anyone else) observing them during that Phase; [bracketed notes] give the GM further info.

As always, the progression of these plots is considered in a vacuum; if PCs change the basis situation -- by killing Kim Sam Kun, for instance -- all bets are off and the NPCs will adapt to this change.

	CHESS: SD	POKER: SS	S-3: C	Doctor's Plan
<i>Phase 1</i>	A1	B1	C1	D1
<i>Phase 2</i>	A2	B2	C1	D2
<i>Phase 3</i>	A3	B3	C1	D3
<i>Phase 4</i>	A4	B4	C1	D4

Key for Mission Events

CHESS: Silician Defense

- *A1:* On Day 1, Kim Sam Kun arrives in Borcharesh. [Any Spades, Bishops, Bishop Pawns, or other characters with experience in Southeast Asian covert mission may recognize him.] He is immediately put under observation and tailed by CHESS agents. [Unless Kim is recognized by a PC, this CHESS activity is probably overlooked.] (If the PCs show interest in Kim, CHESS may put them under observation as well.) On Day 2, Kim contacts Vasily Dzursky; they will exchange money for information at the Gala. On Day 3, the BKN abducts, interrogates, and kills Kim; the BQB takes his place. (The BKN will attack any PCs who become too nosy or try to interfere.) Day 4 and Day 5 are spent arranging high-tech recording equipment in the Casino bar while dodging S-3 agents. (BKNP will be dispatched to observe anyone expressing undue interest in these activities.)
- *A2:* The BKN and BQB prepare to attend the Gala, while the WQRP makes final checks on the equipment from his Casino suite. (BKNP will observe anyone interested in these activities; today, he has authorization to kill enemy agents doing so.)
- *A3:* The BKN covertly guards the BQB at the Gala; the BKNP watches the BKN's back; the BQB meets with Dzursky in the bar; the WQRP remotely operates the equipment to produce blackmail material on Dzursky. (Any interfering enemy agents detected at this juncture will be quietly eliminated by the BKN or BKNP.)
- *A4:* Extraction from Slavoslavia.

POKER: Short Straight

- *B1:* On Day 2, the Jack of Hearts dazzles Sandra Vargo at the gaming tables, while the Ten of Spades bugs her room. [Any Hearts, Bishops, or Bishop's Pawns will recognize the Jack.] (If at any time during the course of this mission, the Jack sees another POKER team, he'll quietly arrange to meet with them and share info in a secure location; if he instead notices CHESS or other enemy agents, he will coordinate with the Joker, then table his

current Mission, dropping Vargo like a hot potato. The Short Straight team will immediately begin covert observation of the enemy operatives.) On Day 4, Vargo has a short e-mail from her personal assistant, in order to arrange a teleconference with one of her Research Divisions for the day after the Gala. On the evening of Day 5, Vargo is out clubbing with the Countess, an old school friend. [The Countess becomes interested in the Jack at this point.]

- *B2*: In the wee hours, Vargo and the Jack have a fight over the Countess' interest in him. The Jack spends the remainder of the day getting back into her good graces.
- *B3*: The Jack avoids the Countess while maintaining visible interest in Vargo; he must somehow manage to modify her cellphone with a cunning short-range tap created by the Nine of Diamonds in time for the teleconference tomorrow.
- *B4*: After Vargo's teleconference is over and POKER has gathered all the intel possible on MTC's current research, the Ten will immediately leave Slavoslovakia with the information, while the Jack slowly cools the relationship with Vargo over the next few days.

S-3: Cake

- *C1*: Security patrols begin and new procedures are put into place as noted above. (Suspicious characters are put under observation; if these suspicious pan out in the eyes of S-3 agents, the perpetrators are arrested and taken downtown for holding and interrogation.)

Doctor's Plan

- *D1*: See above for full details; information replicated here for timeline purposes. On Day 2, Sklenchar gives his lecture and dines with the Duke and Duchess. He then goes to his secret lab. (If he suspects he's being followed, see above, *Sklenchar's Lab*).
- *D2*: Appears in his apartments at the Royal Palace, prepares for the Gala, escorts the Countess to the Casino Sublime.
- *D3*: Attempt to keep the Countess to the itinerary and have fun. (If he suspects he's being pumped for information on his work, see above, *Sklenchar's Research*).
- *D4*: After taking the Countess to her townhouse, bikes to his lab. . (If he suspects he's being followed, see above, *Sklenchar's Lab*).

Cover Concerns & Other Complications

Here are some interesting concerns and complications to further spice up the Missions being run:

- The BKN and the Jack of Hearts have a "history."
- Sklenchar is very interested in getting a grant from the Marduk Philantropies -- not for the money, but the prestige.
- The Countess is attracted to several attendees at her party: the Jack of Hearts, her old school chum Sandra Vargo, and that fascinating Asian man, Kim Sam Kun.
- Vargo is looking to jump ship from MTC, and would be quite interested in a commensurate job at British Technicore.
- Since Sklenchar's Nobel woes stem from Ketil Thorkellson, an Icelandic physicist, he has an unreasoning dislike of all Icelanders and those openly friendly with them.
- After the Gala starts, S-3 agents discover that Slavoslovakian war hero Sandor Boyko died without issue, which means that the "grandchild" in attendance is a phony!

NPC Backgrounds

NOTE: In the interests of space, the following NPCs are not written up: (CHESS) BKNP, BQB, the WQRP, Vasily Dzursky, and Kim Sam Kun; (POKER) the Ten of Spades, the Nine of Diamonds, and Vice President of R&D for

MicroTeleCom Sandra Vargo.

Countess Hope Hanover-Krstulovic: More glamorous than pretty, the twentysomething Countess Can Drink Like a Fish (Expert), Dance Like a Dream (Expert), and has Bedroom Eyes (Good); she's also a Spoiled Brat (Poor) and a bad Gambler (Poor). While she respects her brilliant cousin, she's not going to let that old fuddy-duddy mess up her party!

CHESSE Agent Victor Pax aka the Black King's Knight: Dressed in tailored black leather, Victor Pax looks like a rockstar . . . of death! While Charming (Good) and Witty (Good), his real talents lie in Assassination (Master), where he favors hands-on techniques over firearms, poisons, or "accidents." He's otherwise an Expert Spy, and has a Distracting Scar (Poor) that's too big to disguise adequately.

Doctor Laszlo Sklenchar: (See above, *Mission Briefing*, for further details.) Master in Subatomic Physics and Astronphysics, Expert in Anthropology, Good in Archeology, an Average Athlete, and a Paranoid (Poor in situations involving his work).

POKER Agent Jack Valentine aka Jack of Hearts: Valentine -- he changed the surname after his promotion to Court rank-- is a Handsome Devil (Expert) and as Smooth as Silk (Expert). He's a Good Spy in other regards . . . but a Poor Driver. His preferred sidearm is a Beretta automatic, his watch is chock-full of gadgets, and his Deck is disguised as a St. Christopher's medal.

Losing the Memories of Civilization

by David Morgan-Mar

Information is the currency of the future and, increasingly, the present. It also holds the keys to understanding the past. What happens when the information you need isn't there, because it wasn't stored properly or has been lost to the ravages of time? What if you can read the raw data, but can't translate it into something you can understand? If you're digging through the abandoned County Records Office for birth details or uncovering an alien library in an archaeological dig, what sorts of data are likely to have survived?

Questions like this, and their answers, can pose interesting problems for characters.

Encoding Data

In order to understand how data can be lost, the first step is understanding how it can be recorded. Information generally falls into two classes:

- **Human-readable:** Data that can be directly understood by a person. Examples include text (in a known language), lists of numbers, and images.
- **Encoded:** Data that needs to be processed in some way before it can be understood by a person. This includes any form of digital computer file (even text files are actually stored as series of ones and zeros in a physical manner that humans usually can't see), digital storage medium (CDs, floppy disks, etc), and some analog media such as video tapes or vinyl records.

(These definitions are somewhat flexible and can overlap depending on exactly what you consider to be "processing." For example, is text written in a microdot "encoded" because you need a microscope to read it? This is merely a question of terminology and should not affect the application of this article! Also, written language is, in a sense, encoded, but it can be understood by a human without additional hardware, which is the important point here.)

Human-readable data has the obvious advantage that it can be understood without any help. Encoded data has other advantages: it can be more secure, stored in a much smaller physical space, and easily processed by automated systems. The big disadvantage of encoded data is that if you lose either the decoding algorithm or hardware, you cannot understand the data at all. That becomes an important issue when considering long-term storage and recovery of information.

Storing Data

Once someone has chosen what format they wish to record data in, the next step is deciding on the physical medium for storage.

Stone

Carvings in stone are extremely durable, but their portability is limited, to say the least. Depending on the hardness of the stone used, carved symbols can remain legible after tens of thousands of years if exposed to erosion by the elements. Exposed granite erodes from 0.2 to 5 inches per 10,000 years, depending on climatic conditions -- faster with heavy rainfall, slower in arid regions. Softer stones erode faster. Engravings will be visible for a time dependent on the depth of the engraving. If stone is stored out of the elements, it will last almost indefinitely.

Clay Tablets

The next step up from carving stone is making impressions in clay tablets, which are then baked to harden the clay. Such tablets have been found in legible condition, buried in the ruins of ancient cities some 5,000 years ago. Buried, such tablets would last until geological processes erode or distort the area -- perhaps a million years. Exposed, clay tablets erode much faster than rock.

Parchment and Vellum

Parchment is the prepared skins of animals used as a writing surface. The Domesday Book, written in 1086 on sheepskin parchment, is still in good condition. The Dead Sea Scrolls are over 2,000 years old, with some in reasonable condition while others are crumbling away. Vellum is high-quality parchment made from calfskin. The Book of Kells, 1,200 years old and well-preserved, is written on vellum.

Paper

The archival lifetime of paper depends critically on how it is stored. Temperature and humidity extremes or variability, exposure to ultraviolet radiation (such as from sunlight), airborne pollutants, mold, and vermin all affect paper in adverse ways. When stored away from such influences, components of the paper itself become the factors limiting its longevity.

Normal modern paper contains acids from the manufacturing process that can degrade the paper integrity and make it crumble within 50 years. It can be stored longer if de-acidified by backing it with buffered alkaline matting and coating it in a neutral and stable polymer like Mylar. Ironically, a lot of older paper -- from before the industrial revolution -- is still in reasonably good condition today, because acids were not used in the laborious procedures used to make paper then.

Archival quality (acid-free) paper has a claimed storage lifetime of 100 or more years. Since modern acid-free paper was only introduced a few decades ago, nobody has tested it conclusively to establish a longer lifetime, but it is a good bet that it will last at least as well as pre-industrial paper, some of which has survived 1,000 years.

Microfilm

Microfilm is a polyester film used for storing printed images at a microscopic size. Information is stored on microfilm in the form of text and images, and can be read by a human with nothing more than a microscope or enlarging viewer. Commercial microfilm manufacturers claim microfilm is stable and remains readable for 500 years.

Magnetic Media

Magnetic disks and tapes are often used for data backup purposes these days, but magnetic media are not suitable for long-term archiving. Tapes and disks are subject to environmental influences such as magnetic fields, temperature, and humidity. All of these can change the alignment of the magnetic particles and corrupt the data within a few years, even under ideal storage conditions.

Magnetic media used for archival purposes cannot be stored reliably for more than three to five years. Standard practice is to read the media and record new copies every 18-24 months.

CDs

CDs (and DVDs) are plastic disks with a reflective metal layer inside them. This layer is pitted by the manufacturing or recording process to represent digitally encoded data, which can be read back by measuring the reflectivity of a focused laser. The metal layer slowly oxidizes and deteriorates, until it becomes unreadable. Kodak estimates that its premium recordable CDs, stored in ideal conditions, will retain data for over 200 years. TDK estimates the lifetime of its CD-Rs at 70 years. 3M has published a figure of 100 years for pressed CD-ROMs. More commonly quoted figures for CDs stored in home or office conditions are a more meager five to 10 years.

Audiovisual Media

One of the great boons of modern technology is the ability to record not only text, but audio and video. The problem is, the most commonly used media for storing these recordings are magnetic (audio and video tape) or CD-like. Tapes record data in an analog format, which is more robust to degradation of the medium than digital files. Kodak claims a high quality videotape stored in ideal conditions remains watchable for 30 years, although after this time the image and sound will be degraded somewhat with static due to the deterioration of the magnetic domains. CDs and DVDs will fare a little better, but will certainly be rendered obsolete within their own lifetimes, making finding the right hardware to decode them an issue.

The best audiovisual medium for long-term storage is, ironically, film. Movies are now being shot without film, and it may be that in 100 years people will still be enjoying *Citizen Kane* while *Star Wars: Episode I -- The Phantom Menace* is lost (no comment on the relative merits of the films is intended!). Perhaps more importantly, news images are routinely recorded directly on to videotape. Unless transferred to a longer-term storage medium, video images of the events that have most strongly affected our lives will inevitably decay and be lost within decades.

Engraved Metal

The Voyager 1 and 2 deep space probes carry deliberately recorded information about Earth. It is encoded in analog form as grooves on a copper disk, similar to a phonograph record. The disks are gold-plated and stored inside a protective sleeve, which contains engraved symbolic instructions on how to play the disk and decode the data. The data consist of 115 images (of fairly low resolution), audio greeting messages in 55 human languages, 40 different natural and man-made sounds, and finally 90 minutes of widely varied music. The images are designed to be decodable by a technological civilization and provide scientific, technical, and hopefully cultural information about Earth and its life forms. In interstellar space, where Voyager will spend most of its existence, the limiting factor on data integrity is microscopic pitting caused by collisions with dust particles. Carl Sagan -- designer of the Voyager disks -- estimated that they will still be readable after a billion years in space.

More advanced is High Density Read-Only Memory (HD-ROM) disks. These are ion-beam etched nickel disks, with pixel sizes in the nanometer range. Text and images can be stored unencoded at a density about 200 times that of a CD-ROM, and read with an interferometric laser microscope or scanning electron microscope. Digitally encoded data could be stored at about five times the density of unencoded data. Tests show these disks remain readable for at least 400 years in *uncontrolled or poor* storage conditions -- including fire or immersion in salt water. In a controlled environment, they would be likely to last many thousands of years.

Environmental Factors

The lifetimes for the media discussed above assume reasonable storage conditions. Common sense will usually suffice to decide if a particular medium is damaged by extreme conditions. Books and CDs will be destroyed by fire, while engraved stone and metal will survive unscathed, for example.

Reading Data

Storing information is all well and good, but that is only half the story. The really interesting part comes after a long time, when someone wants to *read* the data.

For digitally encoded data, the crucial issue often is not

Data Loss Timeline

All of these times are approximate, and can vary widely in different environmental conditions. They represent an average for "normal" storage.

Time	Data Lost
5 years	Magnetic data tapes
50 years	Standard modern paper
100 years	CD-ROMs and CD-Rs
500 years	Microfilm
1,000 years	Pre-industrial hand-made paper, acid-free paper
2,000 years	Parchment, vellum
1,000-20,000 years	Carved stone exposed to weather

how long the media will last, but how quickly the software encoding used and the hardware to read the media become obsolete. It's no use having a readable CD in 100 years if the last CD player fell apart 50 years ago. If you have the specification for CD data encoding, you may be able to cobble together a makeshift reader -- with time, effort, and expense -- but if the specification is lost (or stored on CDs!), the data will remain a random stream of infuriating bits.

10,000 years	Ion-beam etched HD-ROMs
+	
1,000,000,000 years	"Voyager record" engraved metal in interstellar space

Now consider the revolution in data storage that accompanied the several abortive moves toward a paperless office over the past 20 years. A lot of records have been written to magnetic media, by people thinking that this would ensure their availability essentially forever. Much of that information is *already lost* to the physical ravages of only a few years, or to the fact that hardware to read those media are now museum pieces and the amount of work required to read and recode the data on to longer-term media is simply too much. Such losses include financial records, business reports, surveys, market research, demographic data, medical records, news articles, works of fiction, and scientific research data, to name just a few.

For media like paper and parchment, modern day preservation techniques are good enough to read the content off any material that hasn't actually physically disintegrated yet. This may involve storage in inert gases or conserving chemicals, and reading by CT scanning or other exotic technologies that did not exist just a few decades ago. Characters in a game without such technology may be faced with the frustrating experience of having books turn to dust as they open them to read them. In appropriate campaigns, [magic might help](#) in retrieving data from old storage media.

Understanding Data

Once any medium is decoded or read, there may then come the problem of understanding the language in which it is recorded. Many of the most important relics we have of the earliest civilizations and attempts at recording information remain [tantalizingly incomprehensible](#) to us, even though we can see the [symbols and perhaps even illustrations](#) clearly. Such items may record a known language in an unknown way, or might be the only remnants of a [language otherwise unknown](#).

Magic might be able to help characters comprehend unknown languages, but without mystical assistance the best chance is to find something akin to the Rosetta Stone. The original Rosetta Stone is a slab of basalt engraved with the same text in ancient Egyptian hieroglyphics, demotic script, and ancient Greek. It was carved around 200 B.C., found in 1799, and was instrumental in the deciphering of Egyptian hieroglyphics in the 19th century. A modern-day "Rosetta Stone" could be anything that helps translate an unknown language into something understandable, from multilingual historical records, to the last living speaker of a language, to a travelers' phrasebook. And can you imagine the potential for misunderstanding when translating important documents with the equivalent of a dime-store phrasebook?

Most old information is stored under the assumption that whoever reads it will know the language in which it is recorded. But it is also possible to deliberately include a primer of some sort designed to allow comprehension to future readers who do not share the writers' language. In fact, if this is the case, the data will be more likely to be stored in a manner designed to last the ravages of time -- a time capsule for the benefit of future generations, or a message akin to the Voyager records for aliens.

Even when data are understood in basic terms, the significance of the information might need to be worked out. In many cases, much of what is gleaned may be [worthless or misleading](#). Sometimes the information might promise material riches, scientific understanding, or spiritual enlightenment, yet the clues as to how to achieve these might be so infuriatingly opaque that the [whole document might be dismissed as legend](#). Such cases may lead to mythologically based archaeological treasure hunts, complete with dangerous rivals to challenge cliffhanging adventurers.

Gaming Applications

The loss and retrieval of data can be used in most games with a little thought, or even made a feature.

Fantasy or Historical

In a fantasy game, arcane knowledge often holds power, whether it be formulae for magical spells or alchemical compounds, or lore about intelligent races or monsters. Many fantasy worlds have a long back-history, allowing for ancient civilizations or long-dead wizards who may have recorded valuable information in some way. Appropriate media include parchment, clay tablets, and carven stone. Most retrieval problems will revolve around recovering the physical medium intact, possibly in the face of potentially destructive forces such as dragon flame or giant rats, and then translating the language. If magical translation is unavailable or ineffective for some reason, seeking the means to understand the inscriptions can launch quests, either for native speakers, scholarly sages, or to find the only known skull of an ancient dwarven line followed by communing with the dead.

Historical characters will be concerned with more mundane information, such as tax records, religious texts, or the lineages of nobility. Any of these could form the core of an adventure based around a misunderstanding or falsification that can be proved false by appeal to records. Complications arise when the records are found to be damaged, ambiguous, or written in arcane tongues.

Modern Day

Any sort of investigator will eventually run across the need to find information from missing, damaged, or obsolete media. A lot of records are still stored on slowly-decaying paper, in libraries or halls of records. Particular items of interest to adventurers might be genealogies or old news stories relating to a current spate of strange activity. Musty books in old libraries or personal collections might require active conservation or technology to read them before they fall apart, which can involve complications based on discovering and acquiring the right services or equipment.

Digital media pose another suite of problems. Many are fragile and can be damaged by exposure to heat, water, or magnetic fields, not to mention gunfire, explosions, and being tossed out of speeding vehicles. Then there is the problem of decoding the digital data. If it has been recorded recently, easily available computers might be sufficient. If not, the heroes may need access to museum pieces or to build their own reading hardware. Maintaining confidentiality can be a problem when you need the services of a company to read a digital format that hasn't been used for 20 years.

On the other hand, there is the problem of preserving and deciphering historical writings, inscriptions, and carvings. Information about the past can be valuable enough to kill for, especially if it might be mystical in nature or lead to priceless treasures. Scholars able to understand dead languages may be in demand, or in peril. These sorts of events fit well into cliffhanging style campaigns, but can also pave the path to mystical or cosmic horror as the heroes slowly uncover information best left unknown.

Future

People in years to come will look back on us and wonder why we didn't have the means or motivation to preserve our data better. Almost all of the paper we are using now will be gone in 100 years. Digital storage media won't last that long. Multiply redundant computer systems may keep digital data accessible for some time, but people die, companies go bust, and eventually the will to keep the machines up and running will peter out as new technology emerges and the cost of maintaining and moving ever-growing piles of obsoletely stored data increases. You may have some genuinely interesting things on your web site, but do you honestly think it will still be accessible in 100 years? The omnipresent audio and video recordings of our time are also ephemeral. People of the future may be able to read about Pearl Jam and the Chicago Bulls, while being unable to see or hear them perform.

About the only things that will survive past the century mark are those that people take deliberate steps to make available to future generations, by recording on more stable media. Archaeologists a thousand years hence will not be flipping through books or searching computer files for ideas of what life is like now -- they will be examining microfilms and etched metal plates. And 10,000 years from now, our civilization might only be known from those

metal plates -- the equivalent of the Rosetta Stone.

These considerations have a profound impact on future settings in which knowledge of the past is important -- particularly post-apocalyptic games. If the downfall of civilization was caused by a nuclear war, magnetic media and computers in bombed cities would be wiped clean by electromagnetic pulses produced by the nukes themselves. Papers would be scorched and burnt. Finding information on the past would mean finding towns or bunkers untouched by the damage. Less destructive apocalypses such as disease or environmental disaster leave storage media relatively untouched, but finding a working floppy disk reader before the data on that disk become irretrievably corrupted by time could be a difficult task. And hundreds of years after the doomsday event there won't be much information left about how the Ancients manufactured ammunition for the relic weapons they left behind. In a post-apocalyptic world in which [pre-apocalypse information is powerful](#) in itself, retrieving it will be a priority of heroes and villains everywhere.

The other great realm of futuristic information-gathering is the investigation of alien civilizations. Unless self-repairing, their computer systems are likely to be long-dead, and hints will need to be garnered from sources such as decorative carvings, inscriptions on jewelry, and perhaps archival media like HD-ROMs. Of course deciphering the language will take some work, and may slowly uncover clues to why the aliens died out -- and if the forces that caused it might still be at work. Other mysteries in space can involve lost pockets of humanity. [Investigating a dead colony world](#) can be made more complicated if the data storage systems for local computer networks and news media have passed the point of decay.

Time Travel

One solution to recovering old or lost information is to travel back to the time when it was recorded! Time travel can circumvent many of the problems of acquiring the data, but may be less helpful with reading and understanding it. It's little use recovering an ancient Babylonian text if you still can't read Babylonian. Time journeys can therefore become fact-finding and translating missions, even for documents found in the present day. Finding someone in Babylon who can read the ancient text is the simple part -- explaining why you want him to read it and getting him to explain it to you so you can understand it are much more difficult, especially if he gets suspicious as to why strangers are asking him to read royal court transcripts listing the contents of the king's tomb, *before he's dead* . . .

Animal Vessels in GURPS In Nomine

by Elizabeth McCoy

Were-characters, and other kinds of shapeshifters, are covered briefly in *GURPS Bestiary*, and are the focus of the forthcoming *GURPS Shapeshifters*. However, *GURPS In Nomine* vessels have properties which are peculiar to the setting, and are thus treated somewhat differently.

In *GURPS In Nomine*, a basic human vessel costs 30 points if the character has a Role associated with it (i.e., Alternate Identity, p. CI20), or 35 if the vessel is Zeroed (p. CI32). Advantages and disadvantages that affect only that vessel modify it accordingly, but the cost can never be less than 5 points (p. IN34). (It's never a disadvantage to have a spare vessel; the alternatives are always . . . worse.)

To aid the GM or player designing animal vessels for celestials and ethereals, here are some guidelines.

Animal vessels are bought as a collection of advantages and disadvantages that modify the basic 35 points for a Zeroed vessel. (There are a few types of animal vessel which warrant the 30 point cost; prizewinning racehorses or police dogs, for instance. Subtract 5 points if the vessel has such a Role -- or role -- attached to it.) Note that the *default* for an animal vessel is that it can speak and sees in full color! Colorblind, Disturbing Voice, and Mute are disadvantages. Also remember that it's the default to transport the characteristics across "straight" -- DX is DX for the character, not the racial type.

Animal vessels come in three modes: *economy*, *deluxe*, and *exotic*.

An *economy* vessel only modifies the form of the being. Cats don't have Catfall, dogs can't distinguish smells much better than normal, eagles can't see all that well from the air, and horses tend to fall down if anyone heavy tries to ride them. These are the cheapest form of vessel, and considering that the average characteristic of a celestial is 14, not 10, that's not too shabby. (Cats, dogs, and eagles will all be *very* strong for their sizes. Elephants and horses get enough Natural ST to move around, but tend to slip and fall over if they try to push against things, etc.)

Deluxe vessels add in all the advantages inherent in the species, such as Catfall for cats, Discriminatory Smell for dogs, etc. Large vessels, such as horses or elephants, get enough Natural ST to do more than lumber around carefully. (There are shades between economy and deluxe, but those are more likely to depend on what's affordable.) Skills packages (see below) are usually part of a deluxe vessel, but should be bought separately.

Exotic vessels add something extra to the package; prehensile tails are popular. If the extra feature is unusual enough to draw unwanted attention with a casual search (a bird with a pair of arms, or a dog with thumbs), it also has the Unnatural Feature disadvantage -- which, in this case, *adds* to the cost of the vessel! (You have to have that many more brownie points to get a Superior to give you something that could get the mortals in an uproar.) Note that an exotic extra can be added to an economy vessel!

Many vessels may have a skill package associated with them -- a set of skills for being an effective, normal-seeming member of the species. This package only needs to be purchased once, and will affect all similar vessels the character owns (GM's decision as to what is "similar" enough). At the GM's option, these skills apply to the *base character* and are not limited to the vessel! Otherwise, these skills are optimized for the animal vessel only, and must be improved separately from any skills in non-animal vessels.

Also, disadvantages are sometimes taken, such as Colorblind or Disturbing Voice. (Few celestials or ethereals willingly take Mute -- but it happens now and then.)

Sample Vessel Templates

All point costs are drawn from *GURPS Bestiary* and *GURPS Compendium I* unless noted otherwise. Consult those books for the actual values of individual advantages.

If a given economy vessel's cost would be below the minimum, such as cat and dog vessels are, advantages are added to it until it is at least the 5-point minimum.

Bird *(Based loosely on the Parrot template on p. BE111)*

Birds all get Flight at DX by default; the GM may rule that celestials without winged celestial forms have a default of DX-4 instead.

Economy Bird Vessel: 18 points (with an Alternate Identity as a pet) or 23 points (if Zeroed). Advantages are Decreased Life Support (Small Vessel, -50%), Enhanced Move (Flying) $\times 1.5$, Flight (Winged, Cannot Hover), Increased Speed $\times \frac{1}{2}$, and Peripheral Vision. (Owls lack Peripheral Vision, but gain Night Vision.) Disadvantages are Fragile (necessary for flight), Inconvenient Size, Poor Grip, Poverty (Dead Broke), Restricted Manipulators, and Social Stigma (Valuable Property). This is a good template for the average pigeon vessel.

Deluxe Bird Vessel: 52 points with Alternate Identity, or 57 with Zeroed. Adds the advantages of Acute Hearing +3, Alertness +5 (Mundane Only, -10%), and Attractive Appearance. (Predator bird forms will add Sharp Claws, and large values of Acute Vision.)

Exotic Additions frequently include Pouch and Mimicry (p. BE111 or CI60). A very exotic addition would be a pair of Short Arms, folded into the feathers to be hidden from casual viewing, removing the Poor Grip and Restricted Manipulators disadvantages, but adding Unnatural Feature, for a total charge of 15 points.

Cat *(Based on the Cat template on p. BE108)*

Economy Cat Vessel: 5 (with an Alternate Identity as a pet) or 8 (if Zeroed). Advantages are Acute Hearing +4, Acute Taste and Smell +4, Attractive Appearance, Fur, Claws, Decreased Life Support (Small Vessel, -50%), Double-Jointed, Enhanced Move $\times \frac{1}{2}$, Faz Sense (3-hex range), Four Legs, and Sharp Teeth. Disadvantages include Horizontal, Inconvenient Size, No Fine Manipulators, Poverty (Dead Broke), Short Arms, and Social Stigma (Valuable Property). The economy cat vessel includes no skills.

Deluxe Cat Vessel: 81 points (with Alternate Identity) or 86 points (if Zeroed). This adds the advantages of Alertness +5 (Mundane Only, -10%), Catfall, Discriminatory Smell, Night Vision, Perfect Balance, and Ultrahearing. The first cat vessel will include the Cat Skills Package, below.

Cat Skills Package: Acrobatics, Climbing, and Jumping at DX, and Stealth at DX+2. (15 points.) Note that cats are at +3 to climb up, and -3 to climb down, as per *GURPS Bestiary*.

Exotic Additions frequently include Prehensile Tail, Pouch, and Thumbs.

Dog *(Based on the medium-sized Dog template on p. BE108)*

A small dog vessel adds Inconvenient Size, reducing costs by 10 points; in the case of the economy vessel, this is below the minimum of 5 points for the vessel, and is treated as 5 points, for a cost of 10 or 15 (Alternate Identity or Zeroed). The largest dogs no longer have Decreased Life Support (Small Vessel, -50%), raising their cost by 5 points.

Wolf-vessels are similar; remove Decreased Life Support from the economy Dog vessel, change Social Stigma to Barbarian, and add Penetrating Call and Thick Fur to the deluxe Dog vessel.

Economy Dog Vessel: 13 points (Alternate Identity) or 18 points (Zeroed). Advantages are Acute Hearing +4, Acute Taste and Smell +4, Alertness +5 (Mundane Only, -10%), Decreased Life Support (Small Vessel, -50%), Enhanced Move $\times\frac{1}{2}$, Four Legs, Fur, Sharp Teeth, and Ultrahearing. Disadvantages are Horizontal, No Fine Manipulators, Poverty (Dead Broke), Short Arms, and Social Stigma (Valuable Property).

Deluxe Dog Vessel: 36 points (Alternate Identity) or 41 points (Zeroed). Add the advantage of Discriminatory Smell (functions as Empathy within 2 hexes,+50%). The first dog vessel will include the Dog and Wolf Skills Package, below.

Dog and Wolf Skills Package: Brawling, Running, and Stealth at DX. (7 points.)

Exotic Additions typically include Pouch and Prehensile Tail.

Dolphin

(Based on the Dolphin template on p. BE109)

This is a popular vessel for Jordi's Seraphim, rarely found among Servitors of other Superiors. Some ethereals also favor dolphin vessels, especially if they happen to have a Beasts strand, or an Image of Flipper.

Economy Dolphin Vessel: 10 points (Alternate Identity) or 15 (Zeroed). Advantages are Acute Hearing +3, Enhanced Move (Swimming) $\times 1$, Independently Focusable Eyes, Nictating Membrane $\times 1$, Oxygen Storage, Peripheral Vision, Pressure Support, Sonar Vision, and Ultrasonic Speech. Disadvantages are Aquatic, Horizontal, Increased Life Support, No Manipulators, Poverty (Dead Broke), and Social Stigma (Barbarian). This is a slightly weak dolphin for its species, and the vessel requires water to function over long periods of time.

(If using Transhuman Space dolphins, remove the disadvantage of Horizontal and the advantage of Acute Hearing, adding 4 points to the total economy template.)

Deluxe Dolphin Vessel: 86 points (Alternate Identity) or 91 (Zeroed). Add the advantages of Enhanced ST +6 (No Fine Manipulators), Alertness +3 (Mundane Only, -10%), and 3D Spatial Sense. Remove the Increased Life Support disadvantage -- a beached deluxe dolphin vessel will merely be annoyed, not in danger of death. The first such vessel also gets the Dolphin Skills Package, below.

Dolphin Skills Package: Acrobatics at DX and Survival (Open Oceans) at IQ +4. (14 points.) Considering the typical IQ gap between celestials and dolphins, Survival (Open Oceans) might be lowered somewhat, modifying the package's cost.

Exotic Additions: most commonly include trading No Manipulators for No Fine Manipulators and One Fine Manipulator (raising the cost by 5 points), and a male dolphin vessel. There is enough anecdotal evidence that male dolphins can control their anatomy that few humans would be surprised to observe this. This can also justify changing No Manipulators to One Fine Manipulator with Bad Grip (raising cost by 25 points) or One Fine Manipulator with Poor Grip (raising the cost by 30 points). Changing it to merely One Fine Manipulator would count as a secret Unnatural Feature -- no one expects *that* amount of flexibility! Likewise, a hermaphrodite dolphin might attract some attention, if discovered.

Other exotic additions include weak arms (raising the cost by 50 points, hidden in pouches near the front fins or in the genital slit, and slowing swimming speed if not "stowed"), Gills (typically replacing Oxygen Storage, for a *gain* of 4 points), and Pouch. Jordi's Seraphim frequently take Disturbing Voice for talking to "landlubbers"; their Ultrasonic Speech lets them communicate with each other without hassle.

Horse

(Based on the Warhorse template on p. BE112)

Economy Horse Vessel: 24 or 29 points. Advantages are Enhanced Move $\times 2$, Enhanced ST +10 (No Fine

Manipulators, -40%); Four Legs, and Peripheral Vision. Disadvantages are Horizontal, Inconvenient Size, Increased Life Support (Large Vessel, -50%), No Depth Perception, No Fine Manipulators, Poverty (Dead Broke), and Social Stigma (Valuable Property).

Deluxe Horse Vessel: 83 or 88 points for a pony (no extra Enhanced ST); 128/133 for a racehorse (Enhanced ST +20; No Fine Manipulators, -40%); 137/142 for a warhorse (Enhanced ST +30; No Fine Manipulators, -40%); 140/145 for a draft horse (Enhanced ST +40; No Fine Manipulators, -40%). Aside from the Enhanced ST suitable for the type of horse, add the advantages of Acute Hearing +2, Acute Taste and Smell +4, Alertness +6 (Mundane Only, -10%), Attractive Appearance, and Enhanced Dodge. Also add the Horse Skills Package, below.

Horse Skills Package: Riding (Being Ridden) at DX. (2 points.)

Exotic Additions typically start with buying off No Depth Perception, raising the cost by 10 points. Prehensile Tails can also be hidden in the horsehair. Pouch is sometimes used, but usually only when paired with a Prehensile Tail, or low-ST arms that tuck into the pouch as well. (While a Prehensile Tail might be missed on such things as x-rays, pouch-arms are Unnatural Features.) Servitors of Beleth are prone to adding such Unnatural Features as Fangs, retractable hoof-Claws, and finger-tentacles that protrude from the hooves, giving them a form of Restricted Manipulators (p. BE118; the structure is such that they can't swing a weapon or use more than one "hand" at a time easily). Adding the Unnatural Feature of a Horn (Long tusk, p. CI67) gives one a unicorn. Adding Fragile and Winged Flight (Cannot Hover) results in a pegasus . . .

Rat and Mouse *(Based loosely on the Giant Rat template on p. BE110)*

Economy Rat Vessel: 11 or 16 points (Alternate Identity or Zeroed). Advantages are Acute Taste and Smell +2, Cast Iron Stomach, Decreased Life Support (Small Vessel, -50%), Faz Sense (3 hex range, -20%), Fur, Night Vision, Passive Defense +1 (due to size), Peripheral Vision, and Sharp Teeth.

Deluxe Rat Vessel: 48 or 53 points. Add Acute Taste and Smell +2 (total +4), Alertness +4 (Mundane Only, -10%) and Cast Iron Stomach.

Exotic Additions start with eliminating No Depth Perception, and continue with Prehensile Tail and Pouch. A mouse's Pouch would be even smaller, but even a tiny Pouch can carry a gemstone or two, or valuable postage stamps.

Animal Vessel Advantage Notes

Alertness for vessels has the -10% limitation that it does not affect resonances or other supernatural abilities that require a Perception roll. The vessel's Alertness is only a combination of increased sense of touch, Acute Hearing, Acute Vision, and Acute Taste and Smell.

Decreased Life Support with a -50% limitation reflects the reduced breathing needs of a small vessel. Since celestials don't eat and drink, breathing is the only life support they require. (A vessel that is very large will have the same limitation, as it only requires more air.)

Prehensile Tail replaces No Fine Manipulators with One Fine Manipulator with Poor Grip (-2 to skills requiring a firm grip) and Extra Flexibility, adding 25 points to the vessel.

Pouch adds a discreet kangaroo-style pouch to a vessel, frequently with sphincter muscles to hold it closed, costing 2 points per pound of capacity. (More detailed rules for large races are in *GURPS Bio-Tech*, p. 136.) For a bird-sized vessel, the maximum is a half-pound (and restricts flight accordingly!). For cat-sized vessels, the pouch holds a maximum of one pound. For medium size dog-sized vessels, the maximum is three pounds. For large dog-sized vessels, the maximum is 10 pounds. Horse-sized beings have a maximum of 100 total pounds of pouch(es), and elephant-sized gets a maximum of 1,000 pounds! (Naturally, someone can always have smaller pouches than the

maximum that an animal vessel will allow.) A pouch is very useful for Thieves and Windys!

Thumbs are primarily useful for cats with polydactylism ("extra fingers"); the fat, doubled "thumb-claws" conceal the muscles and joint-modifications required for an opposable thumb. Replace No Fine Manipulators with Bad Grip (-4 to anything requiring a firm grip), for a net gain of +20 points. (This does *not* affect cats' Climbing skill.) When in doubt as to what actions could be accomplished, wrap rubber-bands around the player's finger's middle knuckles.

Unnatural Feature, as stated above, is an "advantage" for the purposes of obtaining a vessel; the weirder the form, the more likely that it will bring the secret of celestials to mortal attention. (Alternatively, the GM could simply bring even more pressure to bear on the Secret disadvantage in every non-human's racial template -- but Unnatural Feature should never reduce the cost of a vessel, since the purpose of vessels is *not* to attract attention to unnatural goings-on.)

A Note on Wealth

The animal vessels above all have Dead Broke and Social Stigma attached to them. That's because they're *animals*. It doesn't matter if your other vessel has a Filthy Rich Role -- you can't touch that money to buy things or bribe people while you're a parrot. (Flying up to the ATM to get money out is considered bad form, and you can't spend the money anyway.)

One loophole in this is the Internet or, if your voice sounds the same as your human vessel's, telephone. In the *In Nomine* spirit of "don't sweat the small stuff," these are ignored. You'll have enough trouble typing in your credit card with your beak (or paws; on the Internet, no one knows you're a dog), and signing for your package when it's delivered.

Swamp Ogres and Desert Minotaurs

Templates for Sub-Species of Giants, Monstrous Humanoids, and Humanoids for the d20 System

by Owen K.C. Stephens

Templates are a quick and easy way to expand the options DMs have to challenge players without creating basic rule problems or taking up a huge amount of room. Templates can apply to numerous different monsters, and work within the existing framework of creature types, so new favored enemies and Knowledge skills don't become necessary. Just a few templates can change the flavor of a game and keep players on their toes, while helping to fill out the number of monsters of a given type available at each CR level.

This article presents a number of regional templates designed to create subspecies of giants and monstrous humanoids. The templates are kept intentionally simple, so they give monsters a new flavor without forcing a DM to do a lot of work. All the templates have "giant" in their name, as giants, ogres, and trolls are the most common examples of such creatures. Many of the templates can also be added to monstrous humanoids and humanoids, however, allowing DMs to create subspecies of minotaurs, centaurs, and even goblins.

Though geared for different environments, these three templates essentially make giants and humanoids bigger, smaller, or just tougher. A DM can easily mix and match these traits, turning swamp ogres into desert ogres simply by changing their breath weapon to something heat-related. Cosmetic changes of this kind do not affect a templates basic function or CR shift, and thus were not made into independent templates.

Desert Giant

Desert giants are monsters adapted to the harsh conditions of the deepest deserts. Though smaller than their less hearty brethren, desert giants are no less strong and considerably more nimble. They have keen senses and great natural cunning, allowing them to plan ambushes and build communities more successfully than others of their kind. Desert giants feel no kinship to non-desert breeds, and often make war on those they come into contact with.

Creating A Desert Giant

"Desert Giant" is an inherited template that can be added to any giant, humanoid or monstrous humanoid. A desert giant uses all the base creature's statistics and special abilities except as noted here.

Size and Type: Decrease size by one category, making all appropriate changes to size modifiers for AC, attack rolls and skills.

Speed: A desert giant's base speed in all natural forms of movement is increased by 10 feet.

Armor Class: Natural armor improves by +2 (this stacks with any natural armor bonus the base creature has).

Attacks: The desert giant gains a bite attack if the base creature didn't already have one. This attack deals the damage listed below, based on size. The creature uses its bite attack only when unarmed or making a full attack action.

Size	Bite Damage
Small or smaller	1d6
Medium	1d8
Large	2d6

Huge	3d6
Gargantuan	4d6

Special Attacks: A desert giant retains all the special attacks of the base creature and also gains the following special abilities.

Poison (Ex): The bite of a desert giant is poisonous. The desert giant may, as a standard action, lick a melee weapon or single piece of ammunition to poison it as well. A poisoned weapon is effective for one blow or 1d4 minutes, whichever comes first. The poison has a fort DC of (10 + 1/2 racial hit dice + con modifier), initial damage of 1d6 Str, and secondary damage of 1d6 Con.

Special Qualities: A desert giant has all the special qualities of the base creature, plus the following special qualities.

- Tremorsense to 30 feet.
- Scent

Abilities: Increase from the base creature as follows: Dex +4, Con +2, Wis +4.

Feats: Desert giants receive Alertness and Multiattack as bonus feats.

Challenge Rating: HD 8 or less, as base creature +1; HD 9 to 18, as base creature +2; HD 19 or more, as base creature +3.

Alignment: Usually lawful evil

Sample Desert Giant

Desert Minotaur

Medium Monstrous Humanoid

Hit Dice: 6d8+18 (45 hp)

Initiative: +2

Speed: 40 ft. (8 squares)

Armor Class: 19 (+2 Dex, +7 natural), touch 10, flat-footed NA

Base Attack/Grapple: +6/+14

Attack: Greataxe +10 melee (3d6+6/x3) or gore +10 melee (1d8+4) or bite +10 melee (1d8+4) plus poison

Full Attack: Greataxe +10/+5 melee (3d6+6/x3) and gore +8 melee (1d8+2) and bite +8 melee (1d8+4) plus poison

Space/Reach: 5 ft./5 ft.

Special Attacks: Powerful charge 4d6+6, poison bite (DC 16, 1d6 Str/1d6 Con).

Special Qualities: Darkvision 60 ft., natural cunning, scent, tremorsense (30 ft.)

Saves: Fort +7, Ref +7, Will +5

Abilities: Str 19, Dex 14, Con 17, Int 7, Wis 14, Cha 8

Skills: Intimidate +2, Listen +11, Search +2, Spot +11

Feats: Alertness, Great Fortitude, Multiattack, Power Attack, Track

Environment: Any desert

Organization: Solitary, pair, or gang (3-4)

Challenge Rating: 5

Treasure: Standard

Alignment: Usually lawful evil

Advancement: By character class

A desert minotaur stands more than 6 feet tall and weighs about 600 pounds. Desert minotaurs speak Giant.

Mountain Giant

Mountain giants are freaks of nature -- larger, tougher versions of common giants of their kind. Most scholars believe mountain giant creatures are throwbacks to an ancient time when all monsters were larger and more powerful, while others claim they are from bloodlines with a dash of titan blood. Mountain giants are often found among other giant types, with mountain fire giants living on volcanos and mountain frost giants living on glaciers. As larger and tougher versions of their type, mountain giants often rule other giants or monstrous humanoids of their type. They rarely gather in communities of their own.

Creating A Mountain Giant

"Mountain Giant" is an inherited template that can be added to any giant or monstrous humanoid. A mountain giant uses all the base creature's statistics and special abilities except as noted here.

Size and Type: Increase size by one category, making all appropriate changes to size modifiers for AC, attack rolls and skills.

Speed: A mountain giant's base speed in all natural forms of movement is doubled.

Armor Class: Natural armor improves by +4 (this stacks with any natural armor bonus the base creature has).

Special Attacks: A mountain giant retains all the special attacks of the base creature and also gains the following special abilities.

Mighty Blow (Su): A mountain giant's melee attacks deal triple damage to inanimate objects.

Smite (Su): Once per day a mountain giant can make a normal melee attack to deal extra damage equal to its HD (maximum of +20) against any one foe.

Special Qualities: A mountain giant has all the special qualities of the base creature, plus the following special qualities.

- Damage reduction: 5/adamantine (8 HD or less) or DR 10/adamantine (HD or more)..
- SR equal to 10 + base creature's hit dice (maximum SR 30).

Abilities: Increase from the base creature as follows: Str +8, Dex -2, Con +4, Wis +4.

Challenge Rating: HD 5 or less, as base creature +2; HD 6 to 10, as base creature +3; HD 11 or more, as base creature +4.

Alignment: As base creature.

Sample Mountain Giant

Mountain Fire Giant

Huge Giant (Fire)

Hit Dice: 15d8+105 (172 hp)

Initiative: -2

Speed: 60 ft. in half-plate armor (6 squares); base speed 80 ft.

Armor Class: 25 (-2 size, -2 Dex, +12 natural, +7 half-plate armor) touch 6, flat-footed 25

Base Attack/Grapple: +11/+25

Attack: Greatsword +23 melee (4d6+21) or slam +23 melee (1d6+14) or rock +8 ranged (3d6+14 plus 2d6 fire)

Full Attack: Greatsword +23/+18/+13 melee (4d6+21) or 2 slams +23 melee (1d6+14) or rock +8 ranged (3d6+14 plus 2d6 fire)

Space/Reach: 15 ft./15 ft.

Special Attacks: Rock throwing, mighty blow, smite

Special Qualities: DR 10/adamantine, immunity to fire, low-light vision, rock catching, SR 25, vulnerability to cold
Saves: Fort +16, Ref +3, Will +11
Abilities: Str 39, Dex 7, Con 25, Int 10, Wis 18, Cha 11
Skills: Climb +13, Craft (any one) +6, Intimidate +6, Jump +13, Spot +16
Feats: Cleave, Great Cleave, Improved Overrun, Improved Sunder, Iron Will, Power Attack
Environment: Volcanos, Warm mountains
Organization: Solitary, or with a gang (2-5) of fire giants
Challenge Rating: 14
Treasure: Standard
Alignment: Often lawful evil
Advancement: By character class

An adult male fire mountain giant stands 24 feet tall, has a chest that measures 12 feet around, and weighs about 40,000 pounds. Females are slightly shorter and lighter. Fire giants can live to be 700 years old. Fire mountain giants wear sturdy cloth or leather garments colored red, orange, yellow, or black. Warriors wear helmets and half-plate armor of blackened steel.

Swamp Giant

Swamp giants are most common among ogres and trolls, though a few other monstrous humanoids come in swamp varieties as well. Swamp giants are solitary creatures, rarely gathering in numbers above two or three. Their long lifespans and increased toughness make up for their tendency not to mate.

Creating A Swamp Giant

"Swamp Giant" is an inherited template that can be added to any nongood giant, monstrous humanoid or humanoid with at least 4 non-class hit dice.

A swamp giant uses all the base creature's statistics and special abilities except as noted here.

Speed: A swamp giant gains a swim speed of 30 feet. If the base creature has a swim speed of 30 feet or greater, than speed is increased by 10 feet.

Armor Class: Natural armor improves by +2 (this stacks with any natural armor bonus the base creature has).

Special Attacks: A swamp giant retains all the special attacks of the base creature and also gains the following special abilities.

Breath Weapon (Su): A swamp giant and gains a breath weapon that deals 1d8 points of damage per hit die of the swamp giant in a 30 foot cone. A successful Reflex save (DC 10 + 1/2 swamp giant's racial HD + swamp giant's Con modifier) reduces damage by half. It may use this break weapon once every 2d4 rounds.

Special Qualities: A swamp giant has all the special qualities of the base creature, plus the following special qualities.

- Darkvision out to 60 feet. (Or +30 feet if base creature has darkvision)
- Low-light vision.
- Immunity to disease.
- Resistance to acid 20, and cold 20.
- +4 racial bonus on Fortitude saves against poison.

Abilities: Increase from the base creature as follows: Str +6, Con +6, Wis +4.

Challenge Rating: HD 5 or less, as base creature +1; HD 6 to 10, as base creature +2; HD 11 or more, as base creature +3.

Alignment: Always evil (any).

Sample Swamp Giant

Swamp Ogre

Large Giant

Hit Dice: 4d8+23 (42 hp)

Initiative: -1

Speed: 30 ft. in hide armor (6 squares); base speed 40 ft.

Armor Class: 16 (-1 size, -1 Dex, +5 natural, +3 hide armor), touch 8, flat-footed 16

Base Attack/Grapple: +3/+12

Attack: Greatclub +11 melee (2d8+12) or javelin +1 ranged (1d8+8)

Full Attack: Greatclub +11 melee (2d8+12) or javelin +1 ranged (1d8+8)

Space/Reach: 10 ft./10 ft.

Special Attacks: Breath weapon (30 foot cone, 4d8, DC 14)

Special Qualities: Acid and cold resistance 20, darkvision 90 ft., immune to disease, low-light vision, +4 to saves vs poison

Saves: Fort +6, Ref +0, Will +1

Abilities: Str 27, Dex 8, Con 21, Int 6, Wis 14, Cha 7

Skills: Climb +8, Listen +4, Spot +4

Feats: Toughness, Weapon Focus (greatclub)

Environment: Any swamp

Organization: Solitary

Challenge Rating: 4

Treasure: Standard

Alignment: Usually chaotic evil

Advancement: By character class

Level Adjustment: +2

Adult swamp ogres stand 8 to 9 feet tall and weigh 500 to 550 pounds. Their skin color ranges from dull green to dull black. Their clothing consists of poorly cured furs and hides, which add to their naturally repellent odor.

Swamp ogres speak Giant, and those specimens who boast Intelligence scores of at least 10 also speak Common.

Pyramid Review

Iron & Silk: The Player's Guide To Improvised Weapons (for Feng Shui)

Published by [Atlas Games](#)

Written by Will Hindmarch, Chris Jones, & John Seavey

Cover by Kagan Mcleod

Illustrated by J. Scott Reeves

72-page softback; \$17.95

The situation is this: It's downtime. Your latest mission is over and you have just spent an enjoyable evening celebrating at a local restaurant. And in true Dashiell Hammett style, just when you least expect it, ninja attack. The problem is they are armed to the hilt with sword and throwing stars, and you left your favourite Glock locked in the boot of the car. But what do you have on hand? Since this is *Feng Shui*, lots and lots of things -- plates, chopsticks, Chinese lanterns, the silk drapes hanging on the wall, the ceremonial giant gong over by the entrance that would make excellent cover -- and all this before the fight moves to the kitchen!

The point is that everything and anything in the *Feng Shui* game can be turned into a weapon, but sometimes the imagination deserts a player, or that he is not a true devotee of the Hong Kong martial arts flick and is just short of getting into the genre. This is where *Iron & Silk: The Player's Guide To Improvised Weapons* comes in handy. Designed to sit readily at hand near the gaming table, it is primarily a collection of items that live up to the book's tag line, ". . . Everything is a weapon."

In fact, there are over 350 such potential weapons described and given stats in *Iron & Silk*. There are new rules to allow for the fact that, while anything can be picked up and used to whack somebody over the head with it, doing so will destroy the item in the process. This can range from the simple vase -- which as we know will smash immediately upon contact with that mook's head -- right up to the human or zombie arm. You might get five good hits in with the bloodied limb, but as soon as it is successfully parried, it is rendered useless. The same goes for the zombie arm, but its desiccated and decaying nature means that it only lasts for three hits. Even better is the arm of the "Jiang Shi," the hopping vampire, which lasts until it is parried and can even induce temporary paralysis upon a successful hit. Other rules allow for the use of improvised shields and parrying.

These 350 entries are spread over almost 50 pages and across all four junctures. This means that both the mundane and the esoteric are listed. So you have the household appliance, the Knirk (the multi-purpose eating utensil brought to you by the Buro after a century of scientific progress and Swedish design), the mattress, and the stapler. And then the bumper car, the cricket cage, the iron egg (a quail's egg left in horse dung and urine for a month, considered a delicacy), the upright scooter (or Segueway) and the baby squid. While their direct ability to dish out damage is covered in the stats, often their description suggests other uses, such as squeezing the baby squid's ink sac at an opponent. Items that cannot be directly employed as weapons are likewise described, such as the hair rope, which is better employed to bind supernatural creatures.

Besides all of this, each of the game's four junctures is given a short location list and the type of items that can be found there. The descriptions of each juncture serve as a handy guide to what kind of life and dangers the heroes are going to find there, but without giving out anything otherwise reserved for the GM. The various locations refer back to those mentioned in their juncture description and are really thumbnail write-ups to help a player get a quick grasp of

its set-up.

If the supplement has a weakness, it is that it highlights the game's need for a book of locations in the mode of the *Thrilling Locations* sourcebook for the *James Bond 007 RPG*. Done in style of booklet that came with the [On Location: The Feng Shui GM Screen](#), it would make the perfect companion to *Iron & Silk*. There are one or two typographical errors, but otherwise this supplement is well done and the internal artwork of J. Scott Reeves perfectly captures the feel of the genre.

Though all characters will doubtless find something in here to fight with, the core game's "Everyday Hero" archetype will get the most out of it, as they possess an intrinsic bonus with improvised weapons. Even so, *Iron & Silk* is a book useful for player and GM alike, as it is not purely a "Player's Guide." Both will be referencing its pages on a regular basis, particularly during the midst of a fight, making *Iron & Silk: The Player's Guide To Improvised Weapons* likely to be the most used supplement bar the *Feng Shui* rulebook.

Pyramid Review

Universe Primer (for Universe RPG)

Published by [Tower Ravens](#)

Designed by Mark Wilkinson, Michael Wilkinson, Kristen Redd Wilkinson, & William Pace

Illustrated by Andria Stark, Tracy Pace, Eric Wallis, Mike Sorenson, & David Matson

320-page b&w softcover; \$29.95

Most contemporary RPGs tout a movement away from complicated sets of rules, toward fewer charts and tables, and toward less-detailed combat and action systems. *Universe* from Tower Ravens is something of a throwback, then, to involved games like *TimeLords*, *Powers & Perils*, and *Space Opera*.

The game is set in the Antwaris galaxy, in a 100-light-year cubed area that seems to overflow with humanity. There are no fewer than four species of humans, and perhaps more, all saddled with an uneasy alliance following centuries of war and cross-colonization efforts that have subverted, enslaved, freed, and politicized relations among the offshoots. Much of the Primer is set on Marrgen, a volleyball of a world that has been the most hotly contested of the five Terra-like planets in the Thuwasik System. The game includes an extensive and detailed history that sets the stage for the action.

Action is based on percentile dice rolls. Characters are made with a selection of attributes, rated from one to 100, paired up fairly intuitively so that points shifted back and forth won't make you super-tough and weak as a kitten. Strength and Stamina are matched, for example, as are Comeliness and Charisma. Shifting points from one paired set to another is more costly. Skills are called Aptitudes, and are ranked one through eight. Characters may also have psionic powers, which get a cursory treatment here. The chapter reads rather philosophically, like a cross between an evolution lesson and an examination of chakras, which gets in the way of an already elaborate system for powers. They do score points for originality, and the powers fit the rest of the game system. As for where all this information goes -- and about half of the character creation process comes with the caveat "This is not used in the Primer" -- note that the character sheet is 12 pages.

The Performance Table is used to adjudicate all the rolls in the game -- find your Aptitude on the left (or your Attribute if you have no skill), and do a Row Shift up or down depending on the modifiers. Roll d100 and read across the table to find what percentage of success you achieved; the roll of a d100 is not the same as the percentage the table will give you. Those successes decrease only in increments of 10, and then fall off into marginal, total, or critical failures.

Below that the table has a percentage region, usually used for determining damage. It only lists 1s and 10s, so if your weapon does 46 points of damage and your success percentage was 30, you have to read across the 40 row to the 30 column (12) and then the 6 row to the 30 column (2). Add those together and you get 14. Graphically it's easier than it sounds, but not by much.

Combat uses Action Points -- the faster you are, the more you have to spend during a round of combat, though longer actions (bandaging a wound) may take several points over a number of segments. Actions occur simultaneously, so initiative in ranged combat is only used to determine who acts first in case of conflict (you want to hit the airlock

button, but your opponent hopes to shoot you). In melee combat, you may only attack if you have initiative. Otherwise you're on the defensive and have to try to win initiative back. Reversing your roll gives you the hit location, so if you roll well -- a 01 -- the hit location is the head (10). This puts the most damaging rolls in the most vital areas.

Everything comes with its own name. The GM is modestly called the OverLord, the attacker in melee is the assertor, the defender is the refuter. The Performance Table lists things by the Ordinate and Abscissa (the axes, though it also talks about rows and columns). Sometimes the product is detailed because that's the intent of the design, but other times it seems to be used only to establish proprietorship over the contents.

The background story is a convoluted tale of takeovers, rebellions, and alliances made and broken. It seems like every other paragraph someone is splitting from their government and forming a splinter group. After a while one wonders where they're finding room on Marrgen for these countless entities, and how they can keep from constantly fighting (not that there isn't plenty of that). Wisely, Tower Ravens states up front which portions of the setting they will not be describing, giving game mas . . . er, OverLords a sandbox to play in that won't be overrun by company canon.

The *Universe Primer* (part of the Primer Series) is a lead-in to the Master Series, which will delve deeper into the Antwaris Galaxy and provide even *more* rules. Some of the book sounds like it was cut and pasted from the larger work. This doesn't appear to have any detrimental effects on the rules themselves, but you get the sense that there may be the occasional bit of unimportant but connecting text missing. That may be just as well in the case of the "running the game" advice chapter. It's brief, it barely touches on practical advice for anyone (new players or veterans, players of this setting or not), and it rambles. It's confrontational in places, almost hateful, and borders on open contempt for no one in particular.

For casual gamers, or those who appreciate the simplicity of an *Over the Edge* or Storyteller set of rules, *Universe* will send them screaming from the store. For those seeking a level of realism lost from many modern systems, who don't mind the dearth of setting material, and who can't wait for the Master Rulebook to provide more information, the *Universe Primer* will be a mature and welcome change of pace in the market.

Ring of the Lords: Reality Alberich

*"Inheritance of the world
Would be won by the man
Who from the Rhinegold
Could fashion the Ring
That would bestow limitless power on him."*

-- Richard Wagner, *The Rhinegold* (1869)

Call it a Worked Example in advance of the landing of *GURPS Fantasy*, or an alternate-historian's response to cinematic Tolkein-mania in honor of Oscar season. All quotes are accurate, and some of them may even be true. Whatever excuse I provide [this time](#), Reality Alberich is nothing so much as a Wagnerian tale of conspiracies and bloodlines, a Dark Lord's Reich rising in the East and the kings and wizards he brings under his Shadow. This is operatic fantasy splayed against the torchlit canvas of the [first Millennium](#), the last great [Apocalypse](#) and the ending of an Age of Darkness. Adventures in Alberich are grim tales, certes -- but they are tales that flare with firelight and gleam with gold.

"This Otto was grandson of the Italian queen and son of a Greek princess, the daughter of the emperor Romanus. He had inherited all of the Byzantine ideas of the imperial power. . . . His great ideal was his predecessor Charlemagne, and in the year 1000 he is said to have solemnly opened the tomb of the latter and to have looked with emotion upon the figure of the great emperor; from the finger of Charles he is said to have taken a ring which he always wore until his death."

-- Dana Carleton Munro, *The Middle Ages* (1902)

It is the thousandth year after the birth of Our Lord, or thereabouts. Time has fallen into [some confusion](#), and the clerks agree neither on the dates of Easter or the words of the Creed. Two popes contend for the Throne of Peter, and claim each other Antichrist. Surely one must be correct; a great comet appears in heaven in September, and fiery armies are seen contending in the skies over Rheims. Saint Anthony's Fire grips Burgundy and France, bringing hallucinations and madness in its wake -- or perhaps it brings demons and night-hags. The moon has crimsoned over Germany, a lidless red eye staring down at a realm covered in primeval forest, a realm grown from the ancient Saxon marches of the sundered Grossreich of Charlemagne. The Saxons grew from the roots of a white tree -- the Irminsul -- and a shoot from their branch, Otto III, has claimed the throne of the Reich. Literally, as it happens: Otto entered the tomb of Charlemagne, hidden and inviolate for 200 years, and removed the Undying Kaiser's throne and regalia. He has gifted powerful artifacts from Charlemagne's tomb (the Spear and the Crown) to the kings of the Easterlings, the Slav and Magyar hordes his ancestors had warred against, and spread his cloak and power over them. And from the finger of Charlemagne, Otto drew off the Ring of the Nibelungs, and placed it on his own hand.

"Let this suffice for the present, to shew, if not the genealogic, at least the mythical identity of the Frankish royal family with those Nibelungen of the saga; which has adopted unmistakable features from the history of this stem into its later, more historical development, where the focus still remains possession of that Hoard, the cynosure of earthly rule."

-- Richard Wagner, *The Wibelungen* (1848)

The Nibelungs (called Wibelungs in Swabia, where they ruled long, and Ghibellines in Italy, where they long sought to rule) were one of the contending Great Houses of the Franks and Burgundians, who invaded Roman Gaul during the end of the Second Age. They produced great warriors such as Karl Hammerhand, and from the days of Pippin the Fat became Steward to the Frankish kings. But Pippin slew his master Dagobert II and broke the royal line; his son Karl Hammerhand gained great power over the weakened kings, and made his own son Pippin the Short king in 751, placing the Nibelungs on the throne. And Pippin's son Charlemagne became Kaiser, taking the powers of old Rome, placing a certain Spear head onto the Ash Shaft that Wotan had cut from the World Tree. For fifty years he warred against all the world, and his might spread over the earth in a Greater Reich. And from the golden treasures of Irminsul, the Tree of the Sun watered by the Rhine, he (or his dwarf Alberich) melted down a mighty Ring, within

which was bound the power and the will to rule the world. When Charlemagne died, none of his heirs could agree who took the Ring, so it was sealed up with him, and the power of the Nibelungs was lost, and the Reich was sundered.

The Nibelungs, or Niflungar, are those from Niflheim -- the land of *nifl*, the mists, boiling up from below the roots of the World Ash Tree. Niflheim is also home to the dishonored dead, who now march in the armies of Otto, their hereditary master, who called them up by the power of Charlemagne's sword Joieuse, and commands them with the Ring. There are learned doctors among the Jews in Spain who hint that the Niflungar are the "fallen ones" -- the [Nephilim](#), who took power from the Tree of the Serpent -- returned at the last days. But among the Anglo-Saxons, they know the Nephilim as the Entas, the tree-giants who begin to stir again as Something quickens their roots. In all these tales, the power coils at the roots of the Tree like the dragon Fafnir -- or Satan -- wrapped around itself in a ring of fire. And inside this ring of fire lies all the Dragon's cruelty, and his malice, and his will to dominate every living thing. Charlemagne turned the ring of fire into a Ring of gold. And those who take up this ring become Nephilim or Nibelungs, subject to its fell powers.

"What you gave, you were either able to give or you were not. If you were not able to, why did you pretend to be able to? If you were able to, what unknown emperor without name commands our emperor? In what shadows is he lurking?"

-- letter of Gerbert of Aurillac to Otto III (997 A.D.)

Against the Ring, a few wise and holy men could stand. Chief among them was Gerbert the White, the wizard-priest of Rheims. He had studied the stars, including the hateful new stars and fearful conjunctions of the time, and studied deeply in books of wisdom, such as the *Astronomicon* of Manilius, left over from the Second Age. He had a marvellous chamber that could appear or disappear at a word, and a wondrous mechanism that could fix time in place by means of bells and water. He had even traveled among the Saracen wizards of the South, and learned Southron ways and seemings. In the South, he discovered [Abuphimahet](#), the speaking Brazen Head of Wisdom, and learned from it dark secrets. With such secret lore Gerbert suborned the lesser Nibelungs Lothair and Clovis from the throne of France, replacing them with the Capets, whose name gave secret sign of the Head that perhaps chose them.

Most astounding of all, he had found the Speculum, a miraculous mirror that once belonged to Vergil Magus in the Second Age, into which he gazed long nights as the red moon glowered down. Perhaps too long; long enough to look into the eye of the Kaiser, then roaming incessantly in search of the Ring. Or perhaps in Southron lands he, too, had heard the whisper of the Ring from the brass lips of Abuphimahet, and coveted its power for himself. He abandoned Rheims and joined the court of Otto, becoming an appanage of the growing Reich. He told the Kaiser where the lost tomb of Charlemagne was hidden, and saw the Ring regained. Then he told Otto of the hidden forge of Vergil, in a Brazen Tower on the slopes of Vesuvius, where the Ring can be remade to transfer Charlemagne's powers to Otto, who will become the new Undying Kaiser. So Otto, "the pale death of the South," moves into Italy, to place Gerbert on the ancient hills of Rome as Pope and Pontifex, Lord of the Gateways, and to open the way to a Thousand-Year Reich.

"But as God willed it, Isenbart himself came by and asked the old woman what she was carrying. She answered that she had some whelps [welfen] or young puppies. 'Let me see if some of them can be used later for breeding,' said the count. 'Oh, you have dogs enough,' said the old woman, backing away. 'It would give you the creeps to see this messy tangle of dogs.' But the count did not give in and forced her to uncover the children and show them to him."

-- Jakob and Wilhelm Grimm, *German Sagas* (1818)

Otto and his Nibelungs are opposed by the Welfs, or Guelphs -- or wolves -- of Burgundy and Bavaria, the descendants of the "whelps" disguised as "a messy tangle of dogs" long ago. Wolfsblood runs in their veins, from the days of the ancient [Neuri](#). Well do they remember the dark years of Charlemagne, when two *luporii* rangers were sent to every town to kill wolves without let or mercy. The Welf scion Rudolf III rules [wolf-haunted](#) Burgundy, where he battles both the Nibelung line there and Gerbert's creature Robert Capet of France, who presses against the borders even as he luxuriates in incestuous anathema. Heinrich of Bavaria, who attempted to take control of Otto from his Byzantine mother Theophano, is now tied to the Welfs by marriage, and shudders at the pallid passage of the Kaiser's armies, and at what the Ring has called out of the Black Forest. The Welfs further have an ancient link to Rome, city founded by another pair of whelps, Romulus and Remus, suckled by a she-wolf on Capitoline Hill. But the milk of

wolves is thin and curdled there now. Only the feeble mobs commanded by the tyrant John Crescentius cower within the Eternal City's tumbled walls, waiting for the inevitable end of days.

"It is said that when Chlodio was staying with his wife on the sea shore in the summer, his wife went to the water to bathe at noon, and a beast of Neptune resembling the Quinotaur sought her out. As she conceived right away, either by the beast or by her husband, she afterwards gave birth to a son called Merovech, after whom the kings of the Franks were later called Merovingians."

-- Fredegar of Burgundy, *Chronicle* (c. 680 A.D.)

The other ancient blood that cries out against Otto is that of the true kings, the Merovingians descended from the sunken lords of [Atlantys](#) by the wife of Chlodio, king of the Franks. The "sea-born" kings hold a certain power and grace that not even Charlemagne could blot out. Childeric, the last Merovingian king, died in 754, three years after Pippin the Short deposed him and cut his long hair, in which resided his strength, and which covered a certain mark or [scar](#). But somewhere the line of Merovech continues -- Dagobert II, basely slain by Pippin the Fat, had an heir, Sigisbert IV, who escaped into the Pyrenees, where the last Iron Tower of Atlantys is hidden from impious eyes. Here in the holy place, the Merovingian holy blood regained a measure of its strength. Sigisbert VI attempted to rebel against the Nibelungs of France in 881, but failed; his heirs themselves fled into the elven forests of Broceliande in Brittany, a dell riven only by pure waters and golden sunlight.

"[W]hat then can we think but that the whole human race, root and branch, is sliding willingly down again into the gulf of primeval chaos? . . . And because, in fulfillment (as we see) of the Apostle's prophecy, love waxes cold and iniquity abounds among men that are lovers of their own selves, therefore these things aforesaid befel more frequently than usual in all parts of the world about the thousandth year after the birth of our Lord and Saviour. For, in the seventh year before that date, Mount Vesuvius (which is also called Vulcan's Caldron) gaped far more often than his wont and belched forth a multitude of vast stones mingled with sulphurous flames which fell even to a distance of three miles around; and thus by the stench of his breath he began to make all the surrounding province uninhabitable."

-- Radulf Glaber, *Miracles de St.-Benoit* (ca. 1020)

So thus matters stand. Mount Vesuvius erupts, spreading ash across the plains of Campania as Otto's Dark Reich spreads across Europe. He has brought the armies of the East to his banner, and through Gerbert's treason France is prisoner and the Southrons gather their black corsairs for the slaughter. The wise wizard-priests Abbon and Arnulf alone hold the guttering hopes of the free peoples. But they cannot defeat the Shadow alone, or blind the burning Eye over Germany. They need a fellowship -- men of Rome, wolflings of Burgundy, elves of Broceliande and Arden -- dedicated to destroying the power of the Ring. Could the Norse ship-lord Olaf Tryggvason be found, who defeated Thor himself but vanished into the sea during a battle against the pagan Svein Forkbeard? And talking of kings from the sea, what of the Merovingian heir, the Lost King? Do the ancient Basques of Navarre, who slew Charlemagne's greatest wraith at Roncesvalles, keep his Horn of Apocalypse in their Pyrenean fastnesses guarding the Iron Tower? If so, could its sounding somehow restore the [true Christian history](#) from this hateful caricature? And there is another hope. Arnulf, poring over Gerbert's library abandoned at Rheims, has read of a second Ring -- an Atlantean ring, held by the sorcerer Gyges the Gray, that makes its wielder invisible. Could this ring somehow bring and bind the Ring of the Nibelungs? Someone must answer these questions, and soon -- before the Crack of Doom opens to swallow the world.

Adopt an Adaptable Game!

I've spent a fair bit of time in the past little while trying to figure out if there are any other "games" akin to RPGs, where the point is generally not to "win" but solely to have fun and tell a story. (I'm also lumping in RPG-like constructs, such as the [How to Host a Murder](#) series.) So far I haven't come up with any other examples, outside of maybe some story-telling parlor games or improvisational theatre. In fact, I wondered if RPGs might be better classified as "toys" instead of "games," since "no clearly defined victory conditions" are one of the hallmarks of toys. But that's not the point of this column directly.

Let's say you're watching a horse race. Generally speaking, it's rare for someone who's eight lengths ahead at the end to suddenly pull the reins and slow down enough for everyone else to catch up, since it's much more exciting to have a close race.

Or say you're part of the Scrabble World Championship. You rub your eyes briefly - owing to the fact that you weren't prepared to be dumped headlong into another hypothetical example - only to learn that your opponent is kicking your butt. "Don't worry," he says, handing you two blank tiles. "I can see you're down on your luck, and might be able to use these."

I was thinking about these non-examples last month when I was at the Dreamation gaming convention, as part of a fantasy RPG. As I am wont to do, I created a fairly social character, heavy on smarts and know-stuff skills but light on pointy-stabby abilities. However, during the game itself I tweaked my play style a little bit, since, y'know, it's a game convention . . . even if everyone hates what I'm doing, I'll never see these folks again. (Admittedly, this is the same logic that leads to unspeakably rude behavior at checkout lines and other signs of society's decline, so tread lightly.) Anyway, I made heavy use of my know-stuff skills, as normal, but then during most of the combats I relinquished the spotlight entirely; I excused my character to "guard duty" in the hall, protecting the rear, and so on, incorporating that quirk into my character. ("Oh, sure . . . I may have *seemed* cowardly, but I bet you would've been thanking me if you all were ambushed in the hallway! Hey, I must've done something right, because no one snuck up on us! Gotta go!")

Since I'm not a huge fan of straight "hack 'til someone falls over" [combat](#), I'm generally more than content to allow the other players who enjoy fighting to do so. But I usually rely on my character's incompetence to ensure that I'm not overshadowing the fighters; this was the first time I can recall where I was actively choosing to avoid combat.

And I realized this was one of the great strengths of a roleplaying game; it's completely adaptable on-the-fly, by both the GM and the players.

I've known for a while on some level that the GM can modify the game to ensure the players are having fun; I've dropped encounters at the end of an adventure because I sensed the game was going too long, I've modified scenarios to beef up bits the players liked, and I've talked in the past about bringing the heroes to the ["edge of defeat" threshold](#). But the players also modify the game according to their own interests and desires. If the players are handed a puzzle and one of the players enjoys solving those out-of-character, then he can have his character solve the puzzle, too; conversely, if none of the players like puzzles, the GM can abstract that obstacle to skill rolls. If players enjoy angst-heavy roleplaying, then it's possible for them to structure their characters and playing style to help ensure they get what they want. (Of course, it helps if the players communicate their wants to the GM as well.)

None of this is a particularly profound revelation, but hopefully stating it will give some players some ideas. Your actions - both in and out of character - can modify the game to something you're more likely to play; if you like interacting with others, shopping, or out-thinking your enemies, you have a fair shot at being able to structure things so that you get what you want. (And, conversely, if you *don't* like doing some of those things, you might consider leaving that portion of the spotlight, in the hopes that the other players will relinquish again when something you're interested in pops up.)

However, what's interesting to me is that adapting an adventure isn't something that the GM necessarily needs to do on the fly. Especially in long-running games, the GM should have a pretty good idea of what his players enjoy, and how

to give them what they want if the adventure threatens to deny a couple of them.

I suspect this is an idea that has existed on the periphery of gaming since the beginning; I believe that the initial groups who played and enjoyed RPGs were primarily interested in tactical combat (given the hobby's origins as an offshoot of wargaming). How was this idea implemented, then? Through the almost-quaint Wandering Monster Table. Think about it; this was a table of encounters that only came into play when *nothing* else interesting was happening. You don't roll on the Wandering Monster Table when you enter a scripted encounter, complete with an interesting room description and set of complications. No, it only comes into play if the heroes are wandering past already-encountered rooms, through unpopulated portions of the dungeon, or otherwise in danger of being bored.

Now, I've never been a big fan of Wandering Monster Tables; I'm usually more content to fast-forward to the next encounter, skip over the "poking every 10-foot section of dungeon with a pole" bits, and go on to the parts I find more interesting. But if the point of an RPG is to provide the players with scenarios to use their tactical might, then these Tables make perfect sense.

But why can't a similar idea be applied to *other* player types? If the purpose of the Wandering Monster Table was to provide combat opportunities when those who like combat might otherwise get bored, the GM should be able to fabricate similar devices for his other players.

Now, I'm not suggesting a Wandering Angst Table. ("You rolled an 87; you just realized that -- being a bloodsucking monster wandering the night --- you'll never again enjoy a Japanese steakhouse for all eternity! Taste the *ennui*!") But the GM might be able to craft similarly "disposable" encounters for his players depending on their style.

For example, let's say you have a player who enjoys playing characters with inner torment. ("You have a player who enjoys pl . . ." oh, knock it off.) At some point it might be wise to give that player some kind of Anguish McGuffin with Cheese, such as a [demonically possessed artifact](#). Then, if the player looks like he might be getting bored, or if events have conspired to keep him from enjoying the game as much as he might, simply have the demon pop up in the character's head and provide him some torment. ("Your friends don't appreciate you . . . I can sense it . . . take your McGuffin, strike them down, and then your transformation to the dark side will be complete!") Yes, it's advancing another subplot, but it can be keyed to provide events primarily for an unsatisfied player.

Or say you have a player who enjoys NPC interaction more than anything else. It might be a matter of creating an NPC ahead of time with a secret -- *any* secret - and be prepared to drop him into the next remotely plausible situation. ("Nothing is happening in the airport, so you wander around waiting for your flight. Suddenly, *you* [rolling random dice, pointing to talky player] see a woman crying and trying unsuccessfully to hide over by the newsstand. 'You've got to get me out of here,' she says, 'before they get me!' What do you do?") You may or may not have an exact "plot hook" in mind at the time, but in many campaigns it isn't a problem to connect the NPC later . . . and it might be easier just to listen to the players. ("Who's after you? Is it the NSA?" "Errrm . . . yep, you guessed it!")

Or, finally, consider the example of a player who enjoys puzzles and problem-solving. In this case it might be simple enough to provide him ahead of time with an incredibly difficult puzzle (such as a cryptogram not in English, but in a language you know he took in college). He probably won't be able to solve it originally, but then you can feed him clues whenever he's looking bored. ("Wandering this dank, uninteresting dungeon has caused your mind to wander laterally and you realize . . . this isn't in English!") Chances are he'll pull out the puzzle and get to work on it again, content to let the other players poke things with sticks while *he* has a new avenue to explore.

RPGs are quite possibly unique because they're so easily adaptable; players and GMs alike can modify the game on the fly to create a more enjoyable experience for themselves and everyone else. Giving that facet a bit more conscious thought can lead to a more enjoyable game for everyone.

And when all else fails, roll on the Wandering Fun Table.

--Steven Marsh

Designer's Notes: Munchkin Monster Manual 2.5

A Guide to the Creation of a Theoretically Funny Collection of Monsters

by John W. Mangrum

Munchkin Master: All right, dude, you're up. What are you gonna do?

Player: I explain the joke!

Munchkin Master: Okay, roll to hit.

Player: (rolls) Natural 20!

* * *

Howdy! Having been given the choice between writing up some designer notes or having my legs broken, I thought that you, the tireless fans of the *Munchkin RPG* (not to mention prospective game designers seeking to learn from a true master), might benefit from a look behind the scenes at how the latest *Munchkin* masterpiece was created.

First, I was assigned the project of writing the book. How did I land the job? The same way *all* freelance authors get work in the RPG industry -- through the trade of unspeakable favors. Ha! I kid. Actually, I got this project because I seem to have done okay with this book's predecessor, the *Munchkin Monster Manual*. That project I *did* land through the trade of unspeakable favors. After that book hit shelves, the fine Texans at Steve Jackson Games probably suspected that my bottomless well of spite was good for at least a few more buckets of snark.

Which leads to what may be a major revelation for some folks: For all the jokes made at munchkins' expense, I actually *don't* "despise" munchkin-style roleplaying, as some readers have claimed. (Well, it was just *one* reader, actually, but let me keep my illusions of having a mass audience.) Personally, I'm too much of a control freak as a GM to be good at running that kind of no-holds-barred campaign myself, but I'm very much of the "whatever everyone at the game table agrees is fun is A-OK" mindset. I simply view many of the running gags (such as the "sexy female NPCs always turn out to be monsters" joke I've dragged across two books now) to be, well, let's just call them *acknowledgements* about certain aspects of games and gamer culture I've experienced over 20 years in this hobby. I get my best material just from listening to gamer conversations, and none of the jokes are meant with malice.

(Oh, except the ones about the gamers who actually took offense at the very *thought* of a *Munchkin RPG*. Those guys need some good ribbing.)

So anyway; now that I'd landed the job, it was time to dig in.

Phase One: Brainstorming

In the beginning, it's just me and a list of monster names. I'm always juggling three basic goals when working on these books. On the one hand, the book needs to be funny. 'Nuff said. On the other hand, I try to be as faithful to concepts in the *Munchkin* card game as I can. And on the third hand (I'm currently in Phase Three on *Star Munchkin*; it comes with the territory), I'm actually a hard-nosed rules stickler, so I also want to provide a solid book of playable monsters folks can actually use in their games. (I said *playable*, not *balanced*.)

As my first step, I chart out what monsters to include. Some monsters are required lest my masters crack their whips, but I can pick and choose among the rest. I assign Challenge Ratings (based on the monsters' levels in the card game), creature types (based on the ol' hairy eyeball), creature sizes (based on height and mass) and alignments (based on

ancient dualistic philosophical concepts), and list all the monsters by each.

My goal is to make sure that I provide a sampling of monsters in every category. Sadly, I actually didn't make my self-imposed quota this time. Yes, it's true. I, the author of a completely satirical book of silly monsters, spend my free time fretting because I wasn't able to fit in a Diminutive monster, a construct, or the "monster that starts with a U."

The creative process starts with a lot of what I like to call mental percolating -- just letting ideas bubble up in a stream of consciousness as I go about my day. If at all possible, I wander around with the actual *Munchkin* cards in my shirt pocket, taking inspiration from John Kovalic's illustrations. (I mean, yes, I do take the cards out and look at them -- I don't mean to imply some sort of art-nipple osmosis process here.) I also carry a small notebook around with me everywhere I go, filling it with the jumbled chicken-scratches of a diseased mind. I might fill pages on such deep issues as, "Should I do a Halliburton joke or a Foghorn Leghorn joke? Could I *combine* Halliburton and Foghorn Leghorn?"

In case you're ever wondering what the guy sitting across from you on the cross-town bus is thinking about, it may well be this:

Notes from a crazy bus-riding man

I have *stacks* of notebooks filled with stuff like this. Kevin Spacey in *Se7en* has *nuthin'* on me.

Phase Two: Gut-Wrenching Terror

Once I actually sit down to write, I like to wade through a few hours a day of sheer panic, convinced that none of my jokes are funny, that the whole book will be a failure, and that no one will ever speak to me again. If I have time, I also like to either shed or pack on about five pounds in the first week, depending on whether I'm forgetting to eat dinner until 4 AM or soothing my nerves with ice cream.

Hmm. "Like to" might be a little strong. "Inevitably" seems to be more apropos, all things considered. What can I say?

I have issues.

Phase Three: The Long, Hard Slog

At long last, I start actually producing legible text. Rather than tackling the monsters in alphabetical order, working from front to back, I jump all around, first writing up the critters I find the most inspiring and working my way down. It's a handy technique I recommend for all freelancers writing monster books, since it helps camouflage my rapid descent from "incredibly clever" to "incredibly desperate." Ha! I kid again! Well, sort of.

The One That Got Away

In the end, books only have so many pages (honestly; you can check them yourself), so inevitably I'll start work on a few monsters that nonetheless never make it off the standby list. In the first *Munchkin Monster Manual*, it was the poor insurance salesmen, lawyers, and shrieking geeks who got left on the bench, so I was glad to get another chance to shuffle them out into the light of day in the *Munchkin Monster Manual 2.5*. Hey, what freelancer *doesn't* like getting paid to start work he's already halfway finished?

This time around, space concerns kept yet another handful of hopeful horrors out of the limelight. For being the sort of folks who *can* laugh at lowbrow jokes, I've leave you with the critter that was at the *very top* of the *Munchkin Monster Manual 2.5* waiting list. (It was going to fill that darn "Diminutive" gap.) Stand by for a *world-wide exclusive*, netizens!

Crawling Hand

Diminutive Undead

Hit Dice: 8d12 (52 hp)

Initiative: +8

Speed: 20 ft. (4 squares)

Armor Class: 19 (+4 size, +4 Dex, +1 natural), touch 18, flat-footed 15

Base Attack/Grapple: +4/-6

Attacks: Slam +10 melee

Damage: Slam 1d2+3

Space/Reach: 1 ft./

Special Attacks: Wedgie of the dead

Special Qualities: Blindsight, talk to the hand, undead traits, with this ring...

Saves: Fort +2, Ref +8, Will +6

Abilities: Str 14, Dex 19, Con , Int 4, Wis 10, Cha 6

Skills: Hide +17, Jump +8, Open Lock +5

Feats: Dodge, Improved Initiative, Lightning Reflexes

Environment: Any nail parlor, poker game, and underground

Organization: Solitary or pair

Challenge Rating: 5

Treasure: No coins, standard goods, standard items (all of it rings, bracelets, etc.)

Alignment: Usually lawful evil

Advancement:

The ooky, kooky forces of evil create these skittering nasties to serve as their minions. Evil clerics and wizards animate crawling claws by pumping necromantic magic into the flayed and desiccated corpses of sock puppets or ventriloquist dummies until they fairly well crackle with negative energy. Crawling hands are unusually powerful for their size, but they're mainly just greedy little pests who always seem to have their hands out, asking for favors.

Crawling hands speak sign language.

Combat

Wedgie of the Dead: When battling an armored (or at least clothed) opponent, a crawling hand can attempt to grab onto the opponent's loincloth in place of dealing slam damage (this requires a successful attack roll as usual). If the hand gets a hold, then on its next turn it automatically yanks the opponent's loincloth up and over his head as a standard action. The opponent must succeed at a Fortitude save (DC 16) or be stunned for one round. The wedged opponent also suffers an effective decrease of -2d3 points of Dexterity (to a minimum of 1). This decrease lasts until the victim pulls his loincloth back out of his nether regions, requiring a standard action that provokes attacks of opportunity. However, a victim must first remove all his armor to fix a wedgie.

Blindsense: A crawling hand senses its surroundings through touch, naturally enough, and can sense vibrations up to 60 feet away. The hand is otherwise blind and deaf, and cannot sense creatures that make no vibrations (such as incorporeal creatures) or otherwise make no impact (such as Joe Lieberman).

Talk to the Hand: If a crawling hand's master (see below) is targeted by a creature using a sonic, language-dependent effect, the master can deflect that effect to the hand instead by succeeding at a contested Charisma check with the mouthy creature. The crawling hand is then targeted by the sonic effect as if it were the original target.

Undead Traits: Immune to mind-influencing effects, poison, sleep, paralysis, stunning, and disease. Not subject to critical hits, nonlethal damage, ability damage, energy drain, finger wrinkling, or death from massive damage.

With This Ring . . .: When a crawling hand is created, the first creature to present it with a gift of a magical ring, glove, or gauntlet wins its undying devotion. Get it? Undying! Har! The hand benefits from whatever magical properties its gift conveys. If the hand's master later takes the magic trinket away again, the hand flips its ex-master a certain gesture believed to date back to the Battle of Hastings and attacks him.

* * *

Munchkin Master: *Okay, you explain the joke. (rolls) The joke fails its Fort save. It dies.*

Player: *Woot! I level up!*

It Came From the Golden Age

by Robert J. Garitta

Sixty years ago, the World seemed to enter a new Dark Age at the same time comic books were entering their Golden Age. Drawing from the sensational pulp magazines and the Sunday funnies, hundreds of characters fought crime and spies at home and Axis evil abroad.

Artwork was often simple or plain bad. Plots just moved the heroes from one fight to another. Characterization was sparse and continuity wouldn't be a concern for years. Inventions that could change civilization were saved from spies and never mentioned again. Some heroes received their powers from incredible devices or formulas they never thought of sharing with the armed forces or industry.

Simplistic? Naïve? Illogical? Sure. Some stories were also jingoistic and racist. But the nation was at war and comics were for kids. Few writers addressed issues such as poverty and war. Stories were usually simple villain bashing and flag waving.

There was no single typical Golden Age mystery man (the term "super-hero" became popular late in World War II). Character types ran from the exceptional human to nearly cosmic beings. Many backgrounds familiar to comic readers today were present: aliens, robots, androids, wizards, jungle lords, and detectives. Some characters received their powers from bizarre formulas or devices. Mutants were nonexistent -- the effects of radiation on heredity were not widely known at this time. Most characters had (weird) science backgrounds, but others derived their powers from magic. Some of the first comic book characters were mages, fighting crime in tuxedos. The bias towards science-based heroes reflected the feeling of the time; technology was improving and it seemed like science could beat any problem. The view that technology was a double-edged sword came later.

The Golden Age heroes had plenty of enemies. Abroad there were the Nazis and the Japanese Empire, while at home crime ran wild. The mad scientist was a fixture along with his counterpart, the evil wizard. The Axis nations regularly employed wizards, scientists, and racketeers as hired muscle or spies. Super-powered criminals were relatively rare during the war years and when they did appear were often given the role of archenemies to the heroes. All of the standard super types fit in a Golden Age campaign with a little tweaking. A few additional types also were popular at this time.

Tanks and Blasters were similar to their modern relatives. The Battlesuit Goon was very rare during the war years, though many heroes had battlesuit trappings, such as rocket packs. Blasters usually had innate abilities. Energy weapons were portrayed as large death ray cannons. Portable energy weapons were rare and usually a villain or hero's special weapon. The Psi was almost never encountered as a straight psychic character in comics of the period. Many supers had telepathic powers as a minor ability especially magical heroes. There is no reason why a Psi couldn't exist. Psychic characters might have very low power levels and augment them temporarily with special formulas (as a plot device). This would give a period feel and also restrict telepathic and clairvoyant plot busting.

Skulkers deserve special mention. While many characters used stealth in their adventures, Skulkers made the underworld fear them. Skulkers were clearly descendants of pulp magazine heroes. They often used guns and lethal force; even the Batman used a gun in his early stories. Some Skulkers had the Confuse power with various limitations. The Skulker laughed ghoulishly or cast a menacing silhouette. Some Skulkers just had an extreme reputation. Skulkers often were crossed with Gimmicks or Gadgeteers, but rarely had super powers.

The Super Normal was probably the most common Golden Age character type. Many characters simply put on a costume and started catching crooks with little or no reason. Some had years of training and others had no experience. Some powerful Supers also had competent (or inept) Super Normals as sidekicks. Strangely enough, even the Lone Avenger had a sidekick. Advantages such as Unfazeable and Hard to Kill are useful. Cinematic campaigns can allow Fast Healing, Slow Regeneration or anything that keeps a character alive in a fight without making him obviously

bulletproof. Many only used their fists and wits to beat armed opponents. In spite of the name GMs might want to allow Super Normals to purchase DR usable only against unarmed attacks. Punches or kicks rarely hurt heroes. Enhanced Dodge, Block and Parry are also useful. Super Normals often had training in various useful fields. Mr. Terrific, Man of a Thousand Talents is an example of the Super Normal.

Non-powered adventurers were common, and many had ridiculously high skills or attributes. The difference between Combat Monsters and Super Normals is how many points go to non-combat skills. Combat Monsters are usually found in frontline adventures; if a character is going to put all his points into combat skills, then the life of a heroic serviceman in the European or Pacific Theatre is the place for him. Air Heroes are Combat Monsters who sink some of their points into aircraft.

The Gimmick was another trademark of the Golden Age. Many Characters built their concept around a signature gadget. Most gimmicks weren't lethal; they usually provided their users with an advantage that would let them close in to pummel armed opponents. Thus the Sandman used a gas gun, while Doctor Mid-Nite used bombs that spewed darkness. Most Gimmicks rarely invented other devices. A Gimmick could take the Trademark disadvantage with his gadget, representing a compulsion to use it in every situation. Gimmicks can buy maneuvers to offset hit location modifiers or Fast Draw skill with their devices.

Pure Gadgeteers were uncommon. Many had powers or were skilled combatants who built gadgets on the side. Many gadgets were plot devices built for a single story and never seen again. For example, the Golden Eagle is an accomplished combat pilot and inventor. He has built a device to make his plane invisible to radar. He also has a secret lab where he experiments on new radar devices. Using his "strato-radar" he detects rockets from Mars that are scouting Earth for invasion. The only advantage of "strato-radar" over normal radar is that it can detect the Martian rockets, and the GM might logically make that ability a freebie or discount (given that it only serves to further the plot). The GM may require devices to be built with either the Fixed or Can Be Hit disadvantages. Plot devices could be built with a massive discount or as one shot wonders that need extensive reworking or rare substances to be re-used.

There are a few variations of basic characters that give them a period feel.

The Flying Hero

There were quite a few mystery men who had flight as their major ability. They might fly with mechanical wings or have the super advantage of Flying. It is very easy to dismiss the Flying Hero as a passe concept. In the 1940s flight was still fairly new and had great allure and mystery. If flight is relatively uncommon among supers then the Flying Hero could contribute to a team as a messenger, scout or point man. Around city buildings a Flying Hero comes into his own. In the 1940s there were no police helicopters; a Flying Hero might be the only person capable of high altitude rescues or chasing the Evil Mastermind's escape plane. Flying Heroes were seldom high-power characters, usually being Gimmick or Super Normal variations. They had very high Dexterity and Dodge scores and some could be built as Combat Monsters. Most flying heroes carried some sort of weapons to even the odds in a fight. Many fliers fought with the savagery and skill of birds of prey, making Combat Reflexes or even Berserker fitting. Hawkman and the Black Condor were winged heroes.

The Patriotic Hero

All World War II mystery men were patriotic. The Patriotic Hero is at the far end of the spectrum. Patriotic Heroes were often Super Normals, Tanks, or Combat Monsters. They wore distinctive costumes that embodied the flag or some other American icon. While they beat up Nazis the usual way, they also upheld American values such as free speech and fair representation. They were the special nemesis of fifth columnists, profiteers and others who would betray the American dream.

Patriotic Heroes had great recognition and high reputation scores. They frequently had loads of military and government contacts and allies. Their Patriotism might be a Higher Purpose or border on an Obsession (or Odious Personal Habit!) and give them extra levels of Will, the Fearless advantage, or even Hyper-Strength or Hyper-Reflexes

when facing enemies of America. Many of these charismatic heroes became team leaders. Captain America and the Flag were Patriotic Heroes.

The Dead Hero

Some normal humans who died found their sense of duty allowed them to return from death as powerful spirits. Dead Heroes were rare, and unless the entire group would like to go with this type there should only be one to a campaign. Dead Heroes varied widely in power; some were permanently invisible and insubstantial. Others could become solid and visible at will or were only visible to a faithful sidekick (keeping a faithful sidekick out of a Mental Hospital might make a good adventure). Some were invulnerable to conventional harm while others could be hurt if they were solid (though presumably not killed). Most were somewhat grim and fatalistic but others rarely acknowledged they were dead. Almost all of them did have a driving mission that bound them to the Earth, which could be bought as an Obsession or Sense of Duty.

Some live heroes also had ghosts as allies. They provided advice or in some cases super powers to their living friends. They might also provide a last minute rescue if the chips were really down. The Spectre was a Dead Hero and the spirit of a colonial ancestor aided the Fighting Yank.

Building Characters

Several advantages and disadvantages are very appropriate to all Golden Age heroes. Daredevil, Fearless and Unfazeable simulate ridiculous courage. Characters should also purchase some level of Luck or Serendipity. Mystery men were often in the right place at the right time and Fate seemed to favor them.

Very Rapid healing and Very Fit are also useful for the more action oriented heroes.

Almost every hero had a sidekick or comic relief character. Most sidekicks were Super Normals or had their mentor's powers at a much lower level. Even the Lone Avenger had a sidekick. They could be bought as Allies or another player could volunteer to play a sidekick. Sidekicks almost always had the Youth disadvantage. They often had Combat Reflexes and a Martial Art to make up for their small size.

Secret Identity was a popular advantage for supers. Except for Overconfidence, mental disadvantages were uncommon for mystery men, who seemed to have both oars in the water all of the time. The angst-ridden troubled hero became popular years after the Golden Age ended. Codes of honor also fit some heroes. The Gentleman's Code works well for Patriotic Heroes.

Karate and Judo were only popular in America after the war. Most mystery men would use Wrestling or Boxing to make attacks and Acrobatics to Dodge. Mystery Men who want to learn Oriental Martial Arts should pay for an Unusual Background. GMs may allow boxers to buy the Trained by a Master advantage and use their Boxing to make Chambara style attacks. Some mystery men could hold off a whole mob with their fists. Boxers Trained by a Master should be allowed to buy Enhanced Dodge, Parry and Block.

Some supers used formulas to gain powers, putting a time limit or a number of charges on their powers. Others had a magic word or artifact that let them turn into their heroic identity. This could let mundane thugs occasionally get the drop on a hero. Powers with charges or limited duration tended to fizzle out at the worst times.

Campaign Style

Campaigns set during World War Two II to address the role of the characters in the war. In a realistic campaign the characters are probably on the home front fighting mundane but dangerous criminals and spies. If they operate abroad they would probably be used as commandos. After all, an artillery barrage will kill a flaming man as easily as a normal soldier. Most attacks by a super at this level will fall short of what a machine gun could do. Stealth and surprise are

necessary to win battles. Many Golden Age characters fit this concept.

Four-color campaigns have more leeway. Many supers are immune to small arms fire, although tanks and heavy weapons will still be tough to handle and will require ingenuity. Many four-color characters stuck to home front stories because their writers did not want to mix their fantasy with the seriousness of the conflict. One question this raises is why supers of this level do not change the course of the war. A team of supers might not be able to take on a tank division but they might be able to infiltrate Hitler or Churchill's headquarters to assassinate or capture the top brass. It is possible that governments would order supers *not* to act directly in the War; a slain or captured super would be of great value to the enemy for propaganda or research. If supers existed for some time before World War II, national treaties may also restrict them from entering combat. Some supers would be more valuable at home. A telepathic hero wouldn't be a combat machine but would be handy for catching and interrogating spies. A hero who controls flames will be more useful in London during the Blitz than in the Commandos.

It is difficult to explain why Cosmic characters don't intervene and end the war. Perhaps there are an equal number of Cosmic level supers on the Axis and Allied sides resulting in a stalemate. Cosmic beings could have superiors and intervention above a local level is forbidden.

Campaigns that simulate the actual comics would be as Cinematic as possible. The Allies were the good guys and the Axis the bad guys without exception. Heroes were rarely hurt and almost never killed. GMs might want to use the Optional Rule: Stun Damage or Damage Reduction (p. SU84) at least for hand-to-hand combat.

Gun toting crooks and spies can be a problem for heroes who like to settle things with their fists. GMs should create opportunities for them to surprise and ambush armed attackers. The GM can also make minor criminals and henchmen roll versus Will to avoid being stunned by the sudden appearance of a super.

Taking on tanks or experimental mecha can also be a problem. Most tanks possess armor that will shrug off punches by anyone whose strength is not in the thousands. Supers with electrical, magnetic, or flame attacks can bypass armor to some degree. However, supers with their strengths in the hundreds must usually overturn tank or rip open hatches to assault the crew. As a Cinematic rule to recreate tank busting without having characters with ungodly high attributes figure an attempt at tank crushing as a STR vs. STR Contest. The effective strength of a vehicle equals the minimum strength needed to lift it using Extra Effort. If the super wins the contest the vehicle must make a HT roll or be destroyed. In a four-color campaign the crew bails out unharmed.

The comic book version of World War II is definitely TL (6+n). In the comics scientists created intelligent robots, genetic modifications and energy weapons. Small elite units could receive some TL8 gear, perhaps a dino laser and a few jetpacks. In general increase weight and volume of high-tech components by 50% per tech level over 6.

TL9 devices are unique prototypes. Their loss would set some research program back years or derail it completely (scientists in the comics always keep terrible notes). TL9 robots and cyborgs are worthy opponents for most supers and probably the result of a one in a million experiment or accident. The same guidelines hold for biotech. This is not to say any of this gear is problem free; it can be bulky, unreliable or require exotic materials ("Curses! My flying disc requires a hundred gallons of mercury to fly!"). Inspiration for weird science creations can be found in various research projects (*GURPS Weird War* is one source) the Allies and Axis were working on. Nikola Tesla worked on many unusual projects during his life, including energy weapons. The comics themselves that featured killer robots, mechanical moles, flying tanks, and wheel-bodied juggernauts.

Golden-age campaigns can assume "real-world" comic books were propaganda. Mystery men view their sanitized and idealized published adventures with amusement or contempt. Allied mystery men sometimes lost and get hurt or killed. Combat is lethal, and heroes have to use their wits to stay alive. The government will replace supers who are killed with doubles to avoid damaging morale. Instead of Axis characters being caricatures, they are as competent and brave as their Allied counterparts. Supers are tough enough to destroy an enemy squad single-handed, but are not impervious to heavy weapons. Super Normals and similar characters would probably carry sidearms at least. Characters must decide whether to live by ideals or just get the war over with as quickly as possible.

The Kraken

by Stephen Dedman

Krakens, also known as Triskeles and Tripods, are hunter-killer von Neumann machines, doomsday devices activated in the last throes of the war between two Precursor races. The war was so destructive of both races that little is known about either, but one side seems to have specialized in bio-tech, the other in robotics.

The Kraken were actually created by the biotechnologists, using designs stolen from the robots. They are made of living metal, and when complete, are equipped with nanofacs (pp. UTT21-22) and cannibal nanokits (p. RO69) that enable them to reproduce themselves as well as regenerating. They are programmed with relatively simple orders; their first law roughly translates as "Go Forth and Multiply," their second as "Destroy the Enemy," and their third, "Do minimum harm possible to lifeforms except in defense of yourself and other Kraken."

To the Kraken, anything with a power source equivalent to a D cell or larger, or any metallic construction weighing more than 15 lbs, is automatically an enemy unless it identifies itself as another Kraken. Conveniently, these "enemies" are also the Kraken's "food" -- the building materials for replacement parts or new Kraken. Krakens will automatically attack any large metal object -- spraying it with their cannibal nanokit if it is large enough to be formed into one or more complete Krakens, or disabling it and taking the metals to a cache until it has gathered enough to form another Kraken. They will approach larger "enemies" (300 lbs+) by stealth if possible, and attempt to retreat if they take more than six points of damage. Kraken usually fight singly, though sometimes two or three (never more) may team up to attack a large "food source" such as a vehicle, building, or M-type asteroid: they're designed for commando raids against supply lines rather than all-out assault on hard targets.

Kraken will not ordinarily attack humans -- but few humans realize this, because they will attack robots, cyborgs, people wearing battlesuits or armored vac suits, or anyone carrying a sufficiently heavy or powerful weapon (e.g. anything with more than 14 lbs metal and/or a D cell or larger -- Heavy Blast Rifles, Military Dinosaur Lasers, Assault Chainguns, etc.). They have also killed people by attacking and disabling their vehicles, especially aircraft, spaceships, and boats. The Krakens' creators used mostly biogadgets, bioships, and other living structures (see pp. BIO105-111), so the Kraken may be unaware that they are endangering lifeforms when they chomp holes in helicopters and submarines.

Intact Kraken won't be found in Warehouse 23, though parts of one (or more) might be -- at least, until they come into contact with enough metal to regenerate themselves completely and escape, in search of food and enemies. Any part of a Kraken weighing ¼ lb or more contains enough nanoids to re-create its entire body in time (27 hours to go from one hit point to fully operational, given enough metal). Putting a Kraken fragment in your safe with your coin collection is definitely a bad idea.

It takes two hours and 14 minutes for a Kraken cannibal nanokit to turn 134 lbs of metal into a Kraken; 378 hours, 46 minutes (about 16 standard days) for a Kraken with nanofac to create and assemble the components to make another Kraken; and 1,136 hours 18 minutes (about 47.5 standard days) for a Kraken to create another nanokit inside its nanofac. A Kraken can also use its nanofac to create extra weapons and defensive equipment such as Pulsar Pistols (40 hrs, p. RO28), Force Shields (30 mins, p. UT77), Personal Force Screens (20 hrs, p. UT78), or grenades (various, p. RO25).

Kraken are designed for *Space*, *Supers*, and *Atomic Horror* campaigns, but they may be useful in other settings.

Kraken (TL13)

A Kraken looks fairly harmless to anyone familiar with robots -- a metallic egg with three arms that serve as legs when it's not flying (hence the alternative names Tripod and Triskele). A retractable fourth tentacle-like arm and solar panel -- resembling a black poppy or inverted umbrella -- also sprout from the head when needed, adding to the comic

effect. It can, however, bring up to three of its weapons to bear on one target, quickly reducing it to junk.

Brain: Small brain with neural net, hardened, and +2 DX Booster options (.5 lbs, .01 cf, \$5,000, 70 points), Complexity 7, 10,000 gig memory.

Sensors: Basic sensors with deaf, microscopic vision, no sense smell/taste, peripheral vision, spectrum vision, telescopic zoom x4, and Three-in-One options (.325 lbs, .0075 cf, \$2,000, 88 points).

Communicator: Basic communicator with Long-range radio and Mute options (4.55 lbs, .91 cf, \$1,300, -3 points).

Arm Motors: Three ST 13 arms (each 1.3 lbs, .26 cf, \$ 1,300, .065 KW). One ST 8 arm with retractable, extra-flexible, and micro-manipulator options (.8 lbs, .016 cf, \$12,000, .04 KW, 40 points.)

Thrust propulsion: One reactionless thruster with 5 KW motive power and 100 lbs of thrust with vectored thrust option. (5 lbs, .25 cf, \$500, 5 KW.)

Contragrav: Contragravity generator with 150 lbs of lift (\$500.75, 10.075 lbs, .2015 cf, .15 KW).

Weaponry: Forceblade (1.5 lbs, .03 cf, \$750, LR3); Grav beamer (1 lb, .02 cf, \$1,000, LR3); Plasma Torch (4 lbs, .08 cf, \$187.5, LR4). Weaponry costs 15 points.

Accessories: Spraygun (1 lb, .05 cf, \$50), usually loaded with cannibal nanokit; Suitcase nanofac (30 lb, .6 cf, \$60,000); one set of integral mechanical tools (10 lbs, .2 cf, \$200), one set each of integral armory and electronic tools (each 2 lbs, .04 cf, \$400).

Power: Power requirement 5.835 KW. Energy bank using rE cell (20 lbs, .2 cf, \$2,000, 20 points) with 630,000 KWS stored power. Endurance 29 hrs 59 mins 29 secs if using contragravity and thrust. Retractable solar panel, 5 sf (2 lbs, .04 cf, \$300) provides .4 KW during daylight.

Subassemblies: Four arms (three near base, radial symmetry; retractable arm in head); head with full rotation.

Arm Design: First arm houses ST 13 motor, Plasma Torch, and armory tools (.38 cf). Second arm houses ST 13 motor, Grav beamer, and mechanical tools (.48 cf). Third arm houses ST 13 motor, Forceblade, and electronic tools (.33 cf). Retractable arm houses ST 8 motor and spraygun (.066 cf).

Head Design: Houses sensors, retractable solar panel, and retractable fourth arm (.1135 cf).

Body Design: Houses Brain, communicator, rE Cell, Contragravity, Reactionless Thruster, Suitcase nanofac, and waste space for head rotation (2.1942 cf).

Surface Area (with solar panel retracted): ST 13 arms 4 each; retractable arm 1.5, head 1.5, body 10, total surface area 25.

Structure: Living Metal (45 points), Light frame. (12.5 lbs, \$2,500.)

Hit Points: ST 13 Arms 6 points each; retractable arm 2 points; head 1 point; body 7 points. Total 28 points.

Armor: DR 22 Metal (8.25 lbs, \$165, LR2, 100 points); radiation shielding (12.5 lbs, \$125, LR6, 10 points); sealed (\$250, LR6, 20 points); thermal superconducting (1.5625 lbs, \$1562.5, LR3, 10 points).

Statistics: Design weight 133.4625 lbs (.0667 tons), volume 3.5647 cf, price \$94,690.75. 6'3" tall when walking on hands. Body ST 66, arm ST 13 or 8 (179.5 points); DX 13 (30 points); IQ 11 (10 points); HT 13/28 (105 points). Air Speed in contragrav-assisted vectored thrust flight (with arm retracted) 86.6, can hover (45 points). Legality rating 3. Point cost (without software): 152 points.

Software: Armory/TL13 (Beam Handguns)-14 [2]; Astrogation/TL16-[3]; Beam Weapons/TL13 (Force)-16 [4],

(Flamer)-16 [4]; Brawling-13 [1]; Combat Reflexes [15]; Datalink; Electronics Operation/TL13 (Sensors)-16 [3]; Flight-14 [4]; Force Shield-12 [1/2]; Force Sword-14 [4]; Free Fall-14 [4]; Full Co-ordination/2 [100]; Guns/TL13 (Flamethrower)-15 [2]; Mechanic/TL13 (Robot)-16 [3]; Prospecting-16 [3]; Scrounging-17 [3]; Stealth-13 [2]; Tactics-15 [3]. [158.5 points].

Adventure Seeds

Space: Metal Fatigue. The heroes are on a starship when it receives a distress call from a party of xeno-archaeologists in the jungles on the low-iron planet Ngorongoro. Ngorongoro is a restricted world because of the Precursor ruins, which these scientists have been exploring, and its dangerous wildlife. The scientists' pick-up is due in a month, but the distress call informs the PCs that a Precursor robot has attacked their base, destroying their perimeter defenses, aero-jeep, food processor, and vapor canteen. The only human casualty so far has been Dr. Lee, who shot at it with their laser rifle -- now also missing.

If the PCs try to rescue the party, they'll have to run the gauntlet of Kraken who've already left the planet en route for the asteroid belt, find a clearing large enough for a landing area, and hack their way through the jungle until they meet up with the scientists. The more heavily armed and armored they are, the more likely they are to be attacked by the Kraken; the less they wear and carry, the greater the risk from the local wildlife. After they rescue the scientists, they'll have to escape from Ngorongoro without taking any Kraken with them to wreak havoc on populated worlds -- assuming the robots don't cannibalize their ship en route.

Supers/Atomic Horror: Steel Life. Chen, an absent-minded gadgeteer, discovers the head and arm of a Kraken. A day later, it's fully restored and has begun eating his car. By the time the PCs are alerted, Kraken are devouring a junkyard, and have to be stopped before they spread out to attack nearby railway bridges, airports, and military bases. Unfortunately, some unscrupulous weapon manufacturers are determined to capture one in working order -- at any cost.

Fantasy: The Sword in the Stone. A fortified monastery is threatened by an oncoming well-equipped Megalan force - Heavy Cavalry, Heavy and Medium Infantry, and a few Iron Golems. Local legend has it that the late great geomancer Skeyn trapped a mighty demon with an Entombment spell a century before, but warned that if the demon were to see sunlight again, it would regain all its powers. The demon (a Kraken) was said to be able to fly, breathe fire hotter than the hottest forge, cut through stone, and crush the hearts of heavily armored men with a silent spell from 30 yards away -- but to have never harmed a monk, woman, child, or unarmed man.

The PCs are ordered or paid to unleash the demon -- which requires them find the spot where Skeyn entombed the Kraken, dig a tunnel allowing it to escape, and lead it into the path of the Megalan force. They may still need some way to protect them from wolves, bandits, and Megalan scouts.

Frightful Fiends

Three New Creatures For Fantasy d20 System Games

by Richard Farrese

A wise man once said, "if you meet a shadow fiend, don't run; you're as good as dead." But the unwary would be wise to avoid the dark troll or the unfortunate as well.

-- Morthendar the Wise

Dire Troll

Huge Giant

Hit Dice: 10d8+80 (125 hp)

Initiative: +1 (Dex)

Speed: 40 ft. (8 square)

Armor Class: 21 (?2 size, +13 natural), touch 8, flat-footed 21

Base Attack/Grapple: +7/+21

Attack: Claw +13 melee (2d4+8)

Full Attack: Two claws +13 melee (2d4+8) and bite +11 melee (1d8+4)

Space/Reach: 10 ft. / 20 ft.

Special Attacks: Rend 4d6+12, uncontrollable rage

Special Qualities: Damage reduction 3/--, darkvision 90 ft., low-light vision, regeneration 5, scent

Saves: Fort +15, Ref +4, Will +3

Abilities: Str 27, Dex 12, Con 26, Int 4, Wis 6, Cha 4

Skills: Listen +4, Spot +5

Feats: Alertness, Iron Will, Multiattack

Environment: Cold mountains

Organization: Solitary, pair, band (1-2, plus 1d4+2 ordinary trolls), or pack (2-4, plus 2d4+4 ordinary trolls)

Challenge Rating: 10

Treasure: Standard

Alignment: Always chaotic evil

Advancement: By character class

Level Adjustment: +7

Description

A dire troll is a huge giant driven completely mad by a rare disease that afflicts only their kin. One troll out of 100,000 is born with this ailment, which is known as "the blood that boils" among their people. The disease seems to strike at random, but it most commonly appears within members of the same bloodline, usually skipping several generations before arising again.

This affliction makes the troll grow unnaturally fast, becoming much bigger than the other members of its kin and reaching adulthood within two years of its birth. The creature thus affected becomes stronger and much more prone to violent behavior than the average troll -- which is already a cruel and remorseless creature. The downside, however, is that the troll's brain cannot cope with the accelerated growth of its body, and the poor soul afflicted by the disease quickly loses its mind in the process. Although not completely senseless, a dire troll is unable to grasp the intricacies of languages. They communicate by grunting and gibbering senseless words, which are often wrongly interpreted by their peers. The blood that boils also affects the dire troll's ability to control itself in battle. In the heat of combat, a dire troll cannot tell friends apart from foes and will often attack both without mercy or remorse.

In troll society, members touched by this disease are considered blessed. To most trolls, these creatures have been chosen by the gods to serve some unknown cause, and their constant gibberish is nothing less than their way of communing with their deities. In truth, these fiends are mad beyond reason and may not be cured by any means.

Because of their privileged status, some dire trolls live with other members of their families for a while, but this association is usually short-lived as their maddened minds often push them to commit patricide or fratricide. Sometimes, trolls are forced to rally against a dire troll bent on killing them, forcing it into exile or slaughtering it themselves. When this happens, the actions of the dire troll are regarded as a challenge from the gods; one that only the strong can survive.

Dire trolls look exactly like their mundane counterparts, but they are much bigger. Thick yellowish drool issues from their constantly grinning mouths and their lips seem to be moving ceaselessly, as if praying to some unknown power. Although they appear unable to make sense of their environment and cannot communicate with others, dire trolls that live for many years can, with time, learn a profession. A dire troll character's favorite class is barbarian.

Combat

A dire troll's madness drives it to uncontrollable bursts of rage. In combat, these fiends are recklessly deadly and always fight to the death. Because they do not understand their own limits and are incapable of sizing up their opposition, dire trolls sometime find themselves in perilous situations, and many among them have been bested by greater foes -- some dragons, in fact, have taken a particularly zealous pleasure in keeping the dire troll's population in check.

Although they are usually encountered alone, some dire trolls have been known to lead bands of lesser trolls (or follow these mundane cousins) into battle.

Damage Reduction (Ex): Dire trolls are blessed with a thick hide that absorbs a portion of the damage dealt to them. They have damage reduction 3/--.

Rend (Ex): If a dire troll hits with both claw attacks, it latches onto the opponent's body and tears its flesh, automatically dealing an additional 4d6+12 points of damage.

Regeneration (Ex): Fire and acid deal normal damage to a dire troll. If a dire troll loses a limb or body part, the lost portion regrows in 3d6 minutes. The creature can reattach the severed member instantly by holding it to the stump.

Uncontrollable Rage (Ex): When a dire troll engages an opponent in combat, it automatically enters a frenzied state not unlike the barbarian's ability to rage. While in this frame of mind, the dire troll gains a +8 enhancement bonus to both its Strength and Constitution scores, but suffers from a -4 penalty to its Dexterity score. Effectively, its enhanced Constitution bestows it with an additional 4 hit points per Hit Dice of the creature (so a typical dire troll benefits from an added 40 hit points while in this state), but unlike temporary hit points these are not lost first.

The dire troll's rage is totally out of its control and stays in effect for as long as there are living targets within sight, be they friends or foes. If only friendly creatures remain, the dire troll must succeed at a Will saving throw (DC 20) to break the rage. A failed save means that the creature is forced to continue to attack. When it is engaged in battle against companions, the dire troll is allowed another Will save every minute until it finally shrugs off the effect of its rage, kills everyone in its path, or is itself incapacitated or destroyed.

Dire Trolls As Characters

Dire trolls possess the following racial traits.

- +16 Strength, +2 Dexterity, +16 Constitution, ?6 Intelligence (minimum 3), ?4 Wisdom, ?6 Charisma.
- Huge size: ?2 penalty to Armor Class, ?2 penalty on attack rolls, ?8 penalty on Hide checks, +8 bonus on grapple checks, lifting and carrying limits is four times that of a medium-sized character.

- Space/Reach: 10 feet / 20 feet.
- A dire troll's base land speed is 40 feet.
- Darkvision out to 90 feet and low-light vision.
- Racial Hit Dice: A dire troll begins with ten levels of giant, which provide 10d8 Hit Dice, a base attack bonus of +7, and base saving throw bonuses of Fort +7, Ref +3, and Will +3.
- Racial Skills: A dire troll's giant levels gives it skill points equal to $13 \times (2 + \text{Int modifier, minimum } 1)$. Its class skills are Listen and Spot.
- Racial Feats: A dire troll's giant levels give it three feats.
- Natural Weapons: Claw (2d4) and bite (1d8).
- Special Attacks (see above): Rend (damage $4d6 + 1\text{-}1/2$ times Str modifier), uncontrollable rage.
- Special Qualities: Damage reduction 3/--, regeneration 5, scent.
- Automatic Languages: Giant. Bonus Languages: Common, Orc.
- Favored Class: Barbarian.
- Level Adjustment +7.

Shadow Fiend

Large Outsider (Evil)

Hit Dice: 12d8+48 (102 hp)

Initiative: +4 (Improved Initiative)

Speed: 40 ft. (8 square)

Armor Class: 16 (?1 size, +15 natural), touch 9, flat-footed 15

Base Attack/Grapple: +12/+18

Attack: Bite +18 (1d8+9)

Full Attack: Bite +18 (1d8+9) and two claws +16 (1d6+6); or great spear +18/+13/+8 melee (2d8+6)

Space/Reach: 5 ft. / 10 ft.

Special Attacks: --

Special Qualities: Darkvision 120 ft., deeper darkness, light sensitivity, shadow blend, shadow meld, shadow walk

Saves: Fort +12, Ref +8, Will +9

Abilities: Str 23, Dex 11, Con 18, Int 19, Wis 13, Cha 15

Skills: Animal Empathy +15, Bluff +17, Handle Animal +15, Hide +11, Intimidate +17, Listen +18, Move Silently +15, Sense Motive +14, Spot +18, Wilderness Lore +16

Feats: Alertness, Blind-Fight, Improved Initiative, Multiattack

Environment: Any

Organization: Solitary, pair, hunting party (2-5, plus 1d6 shadow mastiffs), hunting pack (5-20, plus one 15 HD elder, plus 2d6 shadow mastiffs), or clan (20-60, plus 2d4 15 HD elders, plus one 25 HD ancient, plus 4d6 shadow mastiffs)

Challenge Rating: 9

Treasure: Standard

Alignment: Usually neutral evil

Advancement: 13-18 HD (Large); 19-33 HD (Huge)

Description

Shadow fiends are tall, emaciated, humanoid-looking beings that appear to be made out of pure shadow. Their alien features are constantly cast in darkness -- unless they are standing in direct sunlight or are under the effect of a sunlight spell, in which case their pitch-black skin is exposed. A close inspection of a shadow fiend's face reveals a wide jaw, a thick flat nose, and a ridged forehead unlike any other creatures of this world. Small holes on the side of the shadow fiend's head serve as ears and tiny horns protrude just above them, giving the outsider's head a demon-like profile. Within deep recesses burn bright yellow eyes reminiscent of a wildcat or mountain lion. These eyes are as intense and determined as those of the vilest devils.

Hailing from a plane of shadows, these unearthly creatures are ruthless hunters of unfathomable power. Able to manipulate the shadows around them, shadow friends are especially hard to see. Because they can travel through

shadows, they can appear almost anywhere -- an ability that makes them especially deadly in combat, since they relish surprising their prey.

Shadow fiends speak their own language, which no one on this plane understands -- or so it is believed. Some scholarly monks from a remote abbey have devoted their lives to the study of all creatures hailing from the same dark plane as the shadow fiends and the shadow mastiffs. These monks might know the secret tongue of these weird outsiders.

Combat

By nature, shadow fiends are hunters. Originating from the same world as the outsiders known as the shadow mastiffs, these highly intelligent beings train the dog-like creatures to serve them as loyal hounds. They use shadow mastiffs to guard their territories and -- most especially -- to help them hunt. Occasionally, a single shadow fiend hunts with a pack of shadow mastiffs, but most often they hunt in parties or packs.

Shadow fiends are prone to combat. However, because of their sneaky ways and their shadow-related abilities, they usually use stealth and cunning in battle. They seem to especially enjoy emerging from a shadowy corner to catch their preys unaware.

When attacking a large group of creatures, they try to slay the weakest opponents first, often targeting the most lightly armored foes as well as those already wounded. If they are caught in a battle they might lose, shadow fiends do not hesitate to retreat, often using their shadow walk ability to cheat death.

Deeper Darkness (Sp): This outsider can summon deeper darkness three times every day. This ability function as per the spell of the same name as cast by a 15th level sorcerer.

Light Sensitivity: Shadow fiends live in a world of darkness, where they are constantly cast in deep shadows. When they journey out of their native environment, it is to hunt. When exposed to daylight or a daylight spell, a shadow fiend suffers a ?6 circumstance penalty on all attack rolls as well as a ?3 circumstance penalty to all saving throws for one full round. After this initial round, these penalties are each reduced to ?1 and remain in effect for as long as the creature is exposed to daylight.

Shadow Blend (Su): This supernatural ability is always in effect, giving the false impression that the shadow fiends are made out of pure living darkness. During any conditions other than full daylight, a shadow fiend can disappear into the shadows, giving it nine-tenths concealment. Artificial illumination, even a light or continual flame spell, does not negate this ability. A daylight spell, however, will.

Shadow Meld (Su): This supernatural ability allows the shadow fiend to merge its body and the items it carries with the surrounding shadows. The surface in which the creature can sink must be completely covered in shadows and large enough to accommodate its body, in all dimensions. While merged, the shadow fiend becomes one with the shadows, gaining temporary invulnerability. In this state, the outsider remains aware of the passage of time as well as the events that go on around it, but it is impossible for others to discern the shadow fiend from the darkness with which it is melded. Only another shadow fiend can locate one of its kin while it is merged in the shadows.

It takes one full round for the shadow fiend to sink into the darkness and another full round to resurface from it. This ability may be used once per day and lasts a maximum of one hour for each two Hit Dice the shadow fiend has (so a typical shadow fiend can remain merged in shadows for six hours). If the shadows into which this strange outsider has melded disappear -- through either normal or magical means -- the shadow fiend's presence is automatically revealed.

Shadow Walk (Su): Shadow fiends are experts at manipulating the ambient darkness and one of their most impressive talents is their ability to travel from one shadow to the next. This supernatural ability functions as the transport via plant spell except that the journey must take place between one shadowy area to another and the range is limited to one mile. Shadow walk may be used a number of times per day equal to the shadow fiend's Constitution modifier (so a typical shadow fiend can use it four times every day).

Unfortunate

Medium-Size Undead

Hit Dice: 8d8 (36 hp)

Initiative: +1 (Dex)

Speed: 30 ft. (8 squares)

Armor Class: 19 (+ 1 Dex, +3 natural, +5 breastplate), touch 11, flat-footed 18

Base Attack/Grapple: +4/+6

Attack: Claw +6

Full Attack: Two claws +6 melee (1d6+2); or longsword +6 melee (1d8+2)

Space/Reach: 5 ft. / 5 ft.

Special Attacks: Darkvision 60 ft., disquieting moan, spell-like abilities

Special Qualities: Stench, unnatural aura, undead traits

Treasure: Standard

Alignment: Always neutral evil

Advancement: 9-15 HD (medium-size)

Description

The unfortunates are unnerving undead creatures that haunt the remote areas of the world. Once part of a powerful humanoid race that dominated the face of the planet, these frightful beings fell into derision, destitution, and despair millennia ago, and soon afterwards their once world-spanning empire was completely obliterated. None knows how these beings called themselves, but historians who studied the dramatic fall of their wondrous civilization dubbed them "unfortunates." Today, vestiges of their technologically advanced empire can be found throughout the world, but none of these people survived the great cataclysm that befell them.

Most sages, historians, and troubadours speak about the fall of the unfortunates in riddles, revealing strange facts and unlikely rumors about these humanoids that lived and died long before the birth of mankind. Although none knows the true reason behind their extinction, the violent upheaval that befell them destroyed everything the unfortunates had built (leaving only ruins) and killed every last one of them in the process. Some unfortunates, however, did not journey to the Underworld with the rest of their peers, but instead transcended unto the undeath state. These beings still roam the planet today, and the traveling adventurer would do best to avoid the disquieting undeads.

Appearing much as they did during their lifetimes, the unfortunates resemble powerfully built elves, with elongated facial features, prominent pointed ears, and wide empty eyes. Their skin, which has now turned into a bluish gray hue, is flaking, much like a leper's. They wear a variety of rotted clothes and suits of armors in dire need of repair, and those unfortunate that were rich during their lifetime occasionally carry magical weapons. Rotting from the inside, these undeads emanate a powerful stink that discourages even the bravest of heroes.

Unfortunates can be found anywhere in the world, but they are most likely to be encountered in dark grottos, abandoned ruins, and large underground dungeons in remote areas . . . places that had once belonged to their kind.

Combat

Although they were once a highly civilized and kindly people, in their undead state the unfortunates exist only to

destroy. Extremely protective of their lairs -- which are often in the remains of buildings from their fallen empire -- unfortunates usually attack on sight, revealing their presence to all intruders daring to invade their private abodes. They attack savagely and without mercy -- almost like cornered animals -- using no particular tactics aside from those that derive from their special abilities.

Occasionally, unfortunates might roam the territory outside of their lairs, and some might be encountered in the wilderness. They rarely venture far from their homes, however, for fear of losing the only thing of value to them. Aware of the beauty, worth, and history behind every work of art, jewel, gemstone, coin, weapon, and armor, the unfortunates bury the riches they stole from their prey under mounds of earth or rocks deep within their lairs.

Disquieting Moan (Su): The unfortunates can emanate a low-pitched moan capable of frightening the boldest of foes. All living creatures that hear this moan, which is reminiscent of confused faraway voices uttering gibberish in a weird language, must succeed at a Will save (DC 17) or become frightened for 2d4 rounds. A frightened creature cannot do anything but run away from the unfortunate for the duration of the effect. After the disquieting moan effect dissipates, the creature thus affected must attempt another Will saving throw (DC 17). With a successful save, the victim has mastered its fear and can confront the unfortunate again, but a failed save results in the victim suffering from a ?4 morale penalty to all attack rolls, Will saving throws, and AC when fighting an unfortunate for the remainder of the day.

A creature that successfully saves against this effect may not be affected by any unfortunate's disquieting moan for a 24-hour period. This is a supernatural, sonic, mind-affecting ability.

Spell-like Abilities: 3/day -- cause fear, chill touch, inflict light wounds; 1/day -- scare, vampiric touch.

Stench (Su): The stink of death and corruption surrounding these creatures is sickening. Those within 10 feet of an unfortunate must succeed at a Fortitude save (DC 14) or be wracked with nausea, suffering a ?2 circumstance penalty to all attacks, saves, and skill checks for 2d6+2 rounds.

Undead Traits: Immune to mind-influencing effects, poison, sleep, paralysis, stunning, and disease. Not subject to critical hits, subdual damage, ability damage, energy drain, or death from massive damage.

Unnatural Aura (Su): Both wild and domesticated animals can sense the unnatural presence of an unfortunate at a distance of 120 feet. They do not willingly approach nearer than that and panic if forced to do so; they remain panicked as long as they are within that range.

Pyramid Review

Disaster! 1PG Survival Adventure!

Published by [Deep7](#)

Written by Todd Downing & James Stubbs with Gavin Downing, Michelle Downing, Ron Dugdale & Colin Fisk

Cover by Todd Downing

13-page 664Kb PDF document; \$3.95

Disaster! 1PG Survival Adventure! is one of publisher Deep7's older *IPG* titles that has been updated in the wake of the release of [The IPG Companion: A Toolkit For Deep7's Beer & Pretzel's RPGs](#). Indeed this is Version 3 of *Disaster!*, which has been tidied up and given new material that can be used in conjunction with *The IPG Companion*. As its title suggests, the theme of this *IPG* is disaster, specifically the disaster movie of the 1970s, though of course, there is nothing to stop its contents being run in the here and now.

Thus we are in the era of funk and disco, atop *The Towering Inferno*, upside down and capsized in *The Poseidon Adventure*, due to crash land at *Airport '77*, and once off the jumbo jet, shaking all over from the *Earthquake*. Then again, *Disaster!* could be run to the electronic vibe of the latest Technotronic soundtrack, all while the cast is fleeing at *Speed* from *Dante's Peak*, before getting caught in a *Twister*. But really, *Disaster!* is a tribute to the silver screen oeuvre of Irwin Allen.

In comparison with other *IPGs*, *Disaster!* casts the player characters as fairly ordinary folks. In keeping with the genre, foremost among these are members of the Emergency Services: the police, the fire-fighting crews, and the paramedics. Even so, they do not play a main role in all of the scenarios given in *Disaster!* Although only 11 occupations are included on the *IPG's* Background Table, it would be very easy to create more, to match either what a player wants or the demands of the scenario. As with other *IPG* titles, character generation in *Disaster!* is quick and easy, and should never take more than five minutes total.

The referee's advice boils down to keeping the game moving along, ensuring that the popcorn is always fresh, and making sure that the scenario is served with a dollop or two of cheese . . . the latter, of course, because *Disaster!* is a 70s-set game. And because the genre is that of the disaster movie, casualties -- even of the PCs -- should be high. To offset this, players are encouraged to create more than one character.

One thing that the *IPG* line and ruleset never really addressed is the subject of first aid and medical treatment. The "State of Emergency" rules page given in *Disaster! v.3* cover both, including medical care plus the effects severe bodily trauma, bleeding, and infection. The vehicles and crew of both the Emergency Medical Services and the Police are also listed. They are in-line with the vehicle rules from *The IPG Companion*.

[SPOILER ALERT!]

The first of the six scenarios in *Disaster!* is "Sandstorm!" written by Ron Dugdale. This has the players cast as guests at the opening of El Dorado, a resort deep in the deserts of Texas. When the area is subject to a freak sandstorm, this turns into a desiccated nod to *The Poseidon Adventure* in which the players must escape from within a pyramid-shaped hotel that is now buried in sand. Gavin Downing's "Flight 666!" is a tale of aerial hijacking, terrorism, and cascading disasters that is more tightly scripted; although it is well done, it is probably best not run in a contemporary setting.

The Towering Inferno gets the nod in Michelle Downing's "Disco Inferno!" Here the cast are the guests, gatecrashers, and employees at New York City 's newest nightclub atop a fully computer-controlled skyscraper. It is New Year's Eve, and when the festivities take a nasty turn in the streets below, the building locks down in the interests of everyone's safety. Unfortunately a fire starts up, and in the ensuing panic, everyone has to get out of the building. "Firestorm!" and its sequel "Reactor!" draw from (again) *The Towering Inferno* and *Dante's Peak* for their inspiration. Both are by Colin Fisk and take place in Irwinville, a small town surrounded by forest in the Rocky Mountains. In the first scenario, a forest fire threatens the town, but what saved Irwinville in "Firestorm!" turns out to be the danger in "Reactor!" These two scenarios work better for their small scale and for being a pair. This allows time for the players to grow attached to their characters, all before they fall victim to the disaster.

The final scenario is James Stubbs' "Incubation!" The derailing of a military train results in the contamination of a small town's water supply, and in a nod to films as diverse as *Outbreak*, *Resident Evil*, and *12 Monkeys*, the town is quickly beset by zombies and quarantined by the US Army. "Incubation!" could be run using *Disaster!* or even Deep7's *Shriek: the Game of Teen Horror 1PG*. This crossover highlights the further possibility of running the scenarios in *Disaster!* using Eden Studio's *All Flesh Must Be Eaten RPG*. Indeed, the game's *The Book of Archetypes* could provide all the ready-to-play characters they need without having to resort to the throwing of dice.

[END SPOILER ALERT]

In order to run *Disaster!* a GM has to handle the pacing of two opposing elements inherent to the genre. One is the desperate and dangerous nature of the action and the disaster, while the other is the over-blown and convoluted nature of the relationships between the characters, done in the style of an Aaron Spelling production or (in the modern era) a Jerry Bruckheimer film. Together the two elements embody the cheese factor that permeates *Disaster!* -- though this a factor that will be need to be held in check if a scenario is not to slip over in to parody a la that of *Airplane!* A GM should also give careful consideration to the sensibilities of his players before running "Flight 666!" as some may find its subject matter distasteful in this day and age. One or two of the other scenarios in *Disaster!* might be regarded as a little underwritten, though this is offset by our familiarity with the genre. Conversely, the genre is not one that is familiar to roleplaying, so *Disaster! 1PG Survival Adventure!* fills a niche previously left empty, doing so in an entertaining and pleasing fashion.

--Matthew Pook

Pyramid Pick

Attika

Published by [Rio Grande Games](#)

Designed by Marcel-André Casasola Merkle

Graphics by Manuel Casasola Merkle

full-color boxed game with 22 game board tiles, four shrines, 15 wooden amphoras, four player storage boards, 120 building tiles, 60 landscape cards, & rulebook; \$32.95

When you first pull this Rio Grande game out, be prepared for the inevitable snickers and cheers of "Attika! Attika! Attika!" Simply accept that this must be done; once the players have gotten it out of their system, you can get down to business.

The object of *Attika* is to be the first player to connect two temples with a line of your structures or, barring that, to get all your tiles onto the board. *Attika* is designed for two to four players.

The shrines are small cardboard stand-ups on their own hexagonal bases. These abut the game board tiles. Game board tiles are macrohexes -- that is, they are hex-shaped and comprise seven smaller hexes for play. The boards are placed randomly to form the initial playing surface, and each is peppered with landscape symbols showing hills, water, etc. These match the landscape cards; everything you build has a cost in resources, paid by the landscape symbols you build on or by the cards in your hand.

Your buildings are kept face down in four stacks, one with all the main buildings and three with the ancillary structures. Each player has a storage board (not to be confused with the playing boards on the playing surface), a play mat that shows all these buildings grouped into related sets. You have, for example, one section called Roads that contains all the streets and another called Shipping made up of harbors and ships. These are depicted on your mat like a flowchart. A main building sits at the center of the chart, and arrows point to the other buildings in the set. Once you have the main building erected, anything it points to is a free build providing it is placed adjacent to the "parent." Some of these buildings have their own arrows, and done right, this can lead to building several things in a row for little or no cost. (Decentralized builds will cost you extra resources.)

On your turn, you have two options: Draw tiles from the stacks and place them on your storage board (if you don't have the landscape cards to build them) or on the game board (if you do); or take tiles from the mat and build them on the game boards. You're limited to two draws from your stacks, but you may build three that are already waiting face-up on your storage board. Every draw or build you choose to forego earns you a landscape card. Buildings are placed one to a hex, and may be placed anywhere on the board you choose.

If you draw the last counter in one of your tile stacks, you get to draw and place a new macrohex somewhere along the edges of the existing board. Since most of your opponents probably spent the better part of the game trying to disrupt your temple connections, the right placement may reopen a strategy that had been cut off. When you complete an entire set of buildings (everything in the Shipping flowchart, for example), you are given an amphora; these little wooden jar counters can be turned in for another landscape card, draw, or build.

The only noticeable omission is a way to keep track of the buildings you've already built. If there were some way to indicate at a glance what had been played so you didn't spend several moments double-checking to see if another tile draw is worthwhile, it would speed things up a little. Some coins to cover the finished buildings might help, though it

seems against the grain of such an elegant design. The fancy wooden extra-action tokens get used (though rarely) and yet they don't get used: they are awarded but are usually expended in quick succession (you might simply take to using the extras to cover the mat spaces of those buildings in play).

The graphic design in *Attika* is just as simple and graceful as the play; the building pictures are spare, the resource cards functional, and the mats clear. The pieces are all fine quality, and everything is in glorious color. Like many Rio Grande Games, the box has a large black plastic insert that is form-fitted to accept all the bits and prevent them from sliding about and getting mixed up in storage. With plenty of free-flowing strategy packed into a simple set of rules that will appeal to fans of *Settlers of Catan* and similar family-friendly fare, players will have other reasons for chanting "Attika!" the second time you take it off the shelf.

--*Andy Vetromile*

Dork Tower!

Dork Tower!

Morality Bites?

There's an odd paradox in gaming. On the one hand, players like to believe that the world in which their characters adventure is somehow as "impartial" as our own. Players generally don't like the idea of a world existing entirely as a subjective whimsy:

Player: "I kick down the door!"

GM: "Oh, no! You've angered the great god Egress, and your leg splinters into a million pieces!"

On the other hand, players are likely to admit that the game universe *does* exist at one person's whim - namely the guy behind the duck blind . . . the one with the hastily scrawled maps on Pepsi-stained graph paper. And if he decides the door gods have been angered, there isn't a whole lot that can be said otherwise.

Obviously that's an extreme example, and to a large extent games try to work around this contradiction in their own ways. For example, it could be argued that combat rules are merely an extension of attempts to create an impartial gaming universe. After all, if the GM participates with the same zeal for preserving his NPCs as the players do, then the resulting outcome should be fairly impartial within the confines of the rule set. (In actuality, most game systems favor the players in this regard, since the fact that they only have one character each to focus on means they know more of the "tricks" of what works and what doesn't for their characters. But that's beside the point.)

However, the GM is in charge of a *lot* more than tactical combat; he comes up with everything else about how the game world reacts and presents challenges. And possibly the most interesting aspect of this power is how it can manifest itself with the GM's worldview, either how he believes the game world should react or how he believes the "real" world should be. And this perception has the power to significantly alter the game.

For example, let's say the GM believes that, in any crime, there is always *some* piece of evidence that will remain behind that can allow the whole misdeed to be unraveled. So long as the heroes are the ones solving crimes, this facet should serve them well. However, if the party starts *committing* crimes, then this outlook might serve to make the PCs' lives a nightmare. Despite whatever preparations the PCs made and whatever precautions they took, the GM might have an NPC who discovers the one bit they forgot, the one avenue they left open, the one "lucky" break necessary to cast suspicion on the PCs. And then he might use that to complicate the criminals' (and players') lives. How this plays out can determine the extent of the problem. It might be fun for the players to encounter a complication resulting from their seemingly successful crime . . . or it might be completely obnoxious if, against all odds, Officer Fate Accompli keeps stumbling on *exactly* the clues necessary to continue dogging the PCs.

(For those who are wondering how folks could view something seemingly objective as a belief, I would say that people don't even realize what they're saying is a matter of faith. For example, our "crime-can-be-unraveled" GM might defend his actions by saying things like, "There are always clues" or "There's no such thing as the perfect crime." He may even point to real-world cases where the single tiniest bit of information led to the discovery of a massive crime, such as *The Cuckoo's Egg*. These statements provide the justification necessary to allow his actions, even if they seem unrealistic or unreasonable to the players.)

However, the larger - and possibly more common - situation where the GM's and players' view of the world may clash is over outlook and morality. For example, consider any of the following platitudes:

- Good will triumph over evil.
- No good deed goes unpunished.
- Any good deed will be returned seven times over.
- Violence is never the answer.
- Might makes right.
- Fortune favors the bold.
- Love will find a way.
- Crime does not pay. (This is an overarching restatement of the "No such thing as the perfect crime" GM, above)

If the GM follows any one of those to an extreme, it will radically alter the game world.

For example, the old West End Games *Star Wars RPG* had as one of its tenets that no player could continue playing a character who is evil, unless it was for the purpose of illustrating how he might come back to the light. (Any PC who was too far gone was supposed to be given up to the GM as an NPC.) Likewise any campaign focusing on the bad guys either had to end up with them turning to the Light Side, or ultimately getting their butts kicked.

Think about the implications of that. If the game's philosophy was followed, then it would be impossible to be in a campaign where the bad guys get everything they want *and* remain evil. So if a GM who adhered to this outlook sat down at the table with a bunch of unsuspecting players who were looking forward to donning Darth Vader helmets and lopping off limbs with lightsabers, then *someone* was almost certainly going to be disappointed.

Other games have their own imposed moral outlooks within the game; some even have game mechanics behind them. (White Wolf's World of Darkness series is the quintessential example, but there are others.) But even in these games it's possible for the GM to impose his own beliefs. For example, *Vampire* has as one of its core mechanics the Humanity trait. Basically, the more inhuman you act, the more inhuman you become; eventually the vampire becomes a slathering beast (and, again, an NPC).

Now, when I run *Vampire*, I tend to believe the most interesting stories come out of the conflict presented by this mechanic; a small child has just witnessed you drinking someone's blood, and is running to tell the police . . . do you take the expedient path and kill to protect the secret, or do you take a harder path and try to resolve things while clinging to your old human beliefs?

However, I've also played in games that were more "realistic"; situations where one is forced to wrestle with one's humanity were rare, unless someone acted blatantly towards such trials. And I've also seen games where the players and GM discarded the mechanic entirely, allowing themselves to fully revel in being blood-sucking monsters.

Even in the context of the same game, these matters can wildly affect the outlook of any specific campaign. In mine I just decided that it would be neat to have a child witness the crime; I figured that, unless the PCs ensured that nobody could witness the attack, it would be more interesting just to have it happen. In the realistic campaign the GM might assign a one-in-10 chance that someone witnessed it. And in the monstrous campaign the GM might not bother at all . . . unless he thinks the players might enjoy "encountering" a kid. Regardless, a player who was expecting to get away with attacks unscathed would likely be disappointed in my game, and players who want interesting complications are not as likely to enjoy the other two.

Although I don't think I've ever heard it discussed, I suspect many GMs consciously or subconsciously have at least one maxim or worldview that they impose on the game. In fact, I'd argue that even an attempt to have an entirely *objective* game world is its own worldview; in the literary world, such a game might be called realistic or even naturalistic.

In a future installment I'll talk about how these issues might be recognized and, if there's a problem in the game, overcome. But for now I hope it will be enough just to notice the possible complication . . . in this case, the guy with the plastic Darth Vader helmet kicking open doors.

Transhuman Martial Arts

by Peter V. Dell'Orto & Werner H. Hartmann

The solar system of *Transhuman Space* is a place of wonder and technological progress. But it is also a place of inter-group and interpersonal violence. The martial arts have been in constant development for thousands of years, and 21st century was no exception. Numerous martial styles were developed, refined, and taught as man moved off planet. Here is a small sampling of some martial arts that have developed throughout the 21st century and into the early days of the 22nd.

Martial Arts in the 21st

In the first decades of the third millennium the body of techniques collectively known as "martial arts" developed itself into three different directions. The largest, and commercially most successful, was the amalgamation of various martial art techniques and styles with moves from aerobic and dance classes. This resulted in the creation of what would later become known as "fitness arts." Practitioners of these styles are primarily interested in the workout effects of their training and waste little to no thoughts on self-defense -- though there have been some tragic cases of delusional belief in the actual combat value of their chosen sport. The second major direction was somewhat classical: self-defense.

Especially in areas with a strong tradition of strict gun control, many citizens felt the need to learn some ways to protect themselves against physical violence. Like in the latter half of the 20th century, most dojos draw paying customers by offering a variety of "quick and dirty" (or often just quick) self-defense courses, which in turn were derived from certain techniques of the dojos main martial arts (often some form of Karate, Jujutsu, Tae Kwon Do, Hapkido, Escrima, Kickboxing, or Wing Chun).

"Serious" practitioners of traditional martial arts still existed, and often made their living by teaching those self-defense courses, but new styles of any significance were not developed in this environment.

Invention and creativity, however, could be found in the third important area of martial arts development in the 21st century: full-contact blood sports. Born out of the Mu Tau and "Mixed Martial Arts" bouts of the 1990s, such "meatfights" became more and more popular all over the globe between 2010 and 2020 -- even if they were still illegal in many areas. Since many fighters in those days came from a criminal and/or streetfighting background the "creativity" shown in their fights was of a rather primal and brutal conviction, thus keeping the lessons from those tournaments out of any "real" dojo for decades to come. Some of those techniques came full circle during the 20s, 30s, and 40s when civil unrest and wars in various parts of the world -- but especially in Central Africa -- saw the reintroduction of those brutal fighting maneuvers to the urban battle fields of the 21st century.

The true motors of inspiration for the martial arts in the 21st century -- manned space travel, the colonization of deadly environments with non-standard gravitation, and life in small pressurized habitats -- needed almost 50 years for ignition and lift-off. Then, between 2040 and 2080, dozens of new styles seemed to appear all across the solar system, though only a handful of them were really successful on this scale. Many of those styles were also born out of social and political unrest, mainly on Mars and beyond. The Ares conspiracy, the Duncanites, and the bloody history of the Martian Triads are probably the most widely known of these conflicts.

Today, at the dawn of the 22nd century, the "fitness arts" of the 21st have almost completely vanished: thanks to modern biomod citizens of 4th- and 5th-wave nations no longer have any need for them, and those living in poorer areas of the world usually have more urgent needs. Also classical martial arts tournaments in styles like boxing and kickboxing went the same way out like almost all other spectator sports when confronted with upgraded, uplifted, or biomodified contenders. Martial arts as "arts" like many forms of T'ai Chi and kata demonstrations in karate, however, are alive and kicking - as are the deadly and illegal blood sport fights that can be found almost anywhere in the solar system. Dojos that teach martial arts for self-defense still exist but are more common on Mars and in 3rd and 4th wave nations than in the secure and wealthy 5th wave areas of Earth. However, the military forces of the solar system *all*

teach martial art techniques to certain units, and all professional law enforcement personnel -- be it on Earth or beyond -- can be expected to know some form of hand-to-hand combat.

Cinematic Martial Arts in *Transhuman Space*

Cinematic martial arts are canonically non-existent in *Transhuman Space*. The martial arts have always had legends of special abilities attached to them. In the past, masters had many powers attributed to them. Due to the nature and inherent limitations of modern media the public awareness of the distinction between cinematic and realistic martial arts techniques has grown significantly over the past few decades. While InVid productions often feature more outrageous stunts than even the most extreme wuxia movies of the early 21st century, the popular slinky recordings of bloody meat fights are forced almost by definition to present the utmost in realism. A realism that, if rumors are to be believed, results in a small-but-profitable black market in "death match" slinkies. However, even when faced with bleeding facts, humans like to believe the improbable, so that legends and urban myths about "secret techniques" of classic and modern martial arts are still strong and widespread memes. The Cinematic Skills and Cinematic Maneuvers listed can be used for inspiration about the legends ascribed to these new styles. Perhaps in some *Transhuman Space* campaigns, some of these fictional depictions are true . . .

The Styles

The following styles are a sampling of the more important and widespread styles in the early 22nd century as well as a couple of the more unique. This is not a complete listing -- many styles, sub-styles, and syncretions of 20th century styles have emerged.

Bantu Boxing (Bantujutsu) -- Warriorstyle

16 Points

Primary Skills: Boxing, Judo.

Secondary Skills: Body Language, Breath Control, Law, Tonfa, Staff.

Optional Skills: Karate, Meditation (M/H), Autohypnosis, Style Analysis, Sumo Wrestling, other weapon skills.

Maneuvers: Arm Lock [2], Breakfall, Choke Hold, Finger Lock, Ground Fighting (Judo), Head Lock, Hit Location (Boxing), Jab, Neck Snap, Piledriver, Riposte (Boxing), Roundhouse Punch, Slip.

Cinematic Skills: none.

Cinematic Maneuvers: none.

Common Advantages: Combat Reflexes, High Pain Threshold, Toughness.

Common Disadvantages: Intolerance (racial)

Useful Biomods: Bio-Booster, Bone Stimulation, Cell Regeneration, Jointwork, Muscle Reinforcement.

Bantu Boxing -- Chiefstyle

16 Points

Primary Skills: Staff, Short Staff, one of Axe/Mace, Broadsword, Main-Gauche or Tonfa.

Secondary Skills: Body Language, Breath Control, Law, Throwing, one weapon skill not chosen as primary skill.

Optional Skills: As for warriorstyle.

Maneuvers: Aggressive Parry (for two primary skills), Back Strike (Staff), Close Combat (for two primary skills), Feint (Staff), Hit Location (for all primary skills), Off Hand Weapon Training (for Short Staff and the other one-handed primary weapon skill), Retain Weapon (Staff), Sweeping Strike (Staff).

Cinematic Skills: None.

Cinematic Maneuvers: None.

Common advantages: As for Warriorstyle.

Common Disadvantages: As for Warriorstyle.

Useful Biomods: As for Warriorstyle.

Bantujutsu was founded by the famous African martial artist Charles "Croc" Makombo in the 2030s and 40s. He was born somewhere between 1990 and 2000 in Paris. He migrated to NYC in 2018. After a very promising career start in professional Boxing and Mu Tau, he astonished the fans by joining the Central African rebel forces of Colonel Thomas Lefevre in the Congo crisis of the 2020s. He soon became one of the leading figures of the war and was the trainer and commander of Lefevre's personal guard, the Simba. It was thought that he died with the rest of Lefevre's troops in an ambush in 2029, but he reappeared in Montreal in 2041 where he opened a dojo. In 2072 he moved to Marseille, where he opened his second dojo. Over the next 30 years he taught and perfected his new style, which he forbid to be taught to whites or Asians.

On August the first 2086 Makombo retired and left the dojos and his martial art to his nephew Anthony Proudhomme. On August the third 2086 Makombo apparently died while swimming in the Mediterranean sea, but his body was never found. Anthony Proudhomme opened the dojos to students of all ethnic backgrounds, including whites and Asians. Some of Croc's senior students still grumble about this "perversion" and "selling out of" the style to this day . . .

The Chiefstyle version of Bantujutsu will only be taught to advanced students (First Dan or higher) of the Warriorstyle. Bantujutsu is a style that emphasizes physical power, and as such tries to take advantage of a combatant's larger size, body mass, and sheer strength whenever possible. As a result many practitioner's of this style possess a very powerful physique -- either by birth, training, or design.

Among Bantujutsu students exists a rumor about a secret third Bantujutsu style, the Witchdoctor, or Shamanstyle. If this style exists -- and what it consists of -- is left to the GM.

Freefighting

10 Points/29 Points

Primary Skills: Brawling, Free Fall, Judo, Vacc Suit.

Secondary Skills: Acrobatics, Jumping, Shortsword.

Optional Skills: Climbing, Fast-Draw (Knife or One Handed Sword), Karate, Knife.

Maneuvers: Arm Lock [2], Disarming, Knee Strike.

Cinematic Skills: Blind Fighting.

Cinematic Maneuvers: Binding, Enhanced Dodge, Roll with Blow, Sticking.

Special: Normally, vacc suits give a -1 to all DX- based skills and DX rolls. This training includes combat-familiarization which eliminates the penalty to all combat-oriented rolls and the Free Fall skill; the cost is 2 character points.

Common Advantages: G-Experience, 3-D Spatial Sense.

Useful Biomods: Bone Stimulation, Jointwork, Prehensile Tail Graft, Tenjin Biochemistry, Testicle Tuck.

"Freefighting is a simple style meant to tie up and immobilize an opponent. You don't want them drilling a hundred holes into the computers on the bridge with his gun while you tumble around doing jump kicks -- take his weapon away and make him stop!"

-- Sgt. Donald Oldham, US Marines Force Recon HTH instructor

"Freefighting" developed during the mid-21st century amongst long-term low- and no-gravity dwellers. Emphasis in this version of the style is the ability to tie up an opponent quickly with an aim to subduing. Basic punching and kicking techniques are included, and combinations often have strikes aimed at stunning a foe long enough to allow a solid hold to be gained. Training in taking away dangerous weapons -- specially those dangerous to sensitive components -- is emphasized.

Some variations include training with knives to get a quick disabling strike. Shortsword covers use of the baton; advanced stick-fighting techniques are eschewed in favor of simple strikes. Many variations on freefighting exist, much as the name itself implies. "Freefighting" variations on many major martial arts (including especially Escrima, Jujutsu, and Pao Chuan) and fusion styles have also been developed. An interesting fact of this specific style of Freefighting is that a small (but skillful) group among its students, who live permanently in microgravity, had their legs replaced by an additional pair of arms. Those practitioners replace Knee Strike with the special Shuto (lower

arms) maneuver (detailed below). This additional maneuver must be learned separately from and in addition to Shuto.

This style does not contain a large body of cinematic techniques, although legends about fabulous moves pulled off by practitioners of the style are common in popular entertainment. This maneuvers often emphasize the practitioner dodging and weaving with ease -- often using spectacular low-g acrobatics -- while tying up foes with handy cable or cable ties, all the while never losing contact with the foe. Optionally, instead of the Cinematic Maneuver "Binding," a practitioner can pick up the Handcuffing maneuver (see p. C59).

Hishôjutsu ("Flight Art")

13 Points/22 Points

Primary Skills: Acrobatics, Freefall, Jumping, Karate.

Secondary Skills: Shortsword (for Boomstick), Judo, Vacc Suit.

Optional Skills: Short Staff, Performance, Brawling.

Maneuvers: Drop Kick, Feint [2], Hit Location (Sword or Karate), Jump Kick, Kicking [2].

Cinematic Skills: Blind Fighting, Flying Leap, Light Walk, Power Blow, Push.

Cinematic Maneuvers: Acrobatic Kick, Flying Jump Kick, Roll with Blow, Springing Attack.

Special: Practitioners of this style suffer no DX penalty on Free Fall and combat skills while wearing a spacesuit. This is worth 2 points, calculated into the cost of the style. They may also base their Feint maneuver on their Acrobatics skill, if it is higher than their Karate skill.

Note: It is highly recommended to allow Hishôjutsu practitioners access to the styles' cinematic maneuvers, even in a realistic campaign, at least if they are fighting in free-fall or in an environment with less than 80% of their home gravity. This raises the "realistic" cost of the style to 17 points.

Common Advantages: Combat Reflexes, Increased G-Tolerance, G-Experience

Useful Biomods: Jointwork, Nerve Boosting, Tenjin Biochemistry

This style was founded in the 2060s by Paul Sayama, a young master of mixed heritage (his father was German-Japanese, while his mother was of Chinese-Brazilian heritage), who practiced Shorinji Kempo, Wushu, Capoeira, and Savate. He lived on Mars since 2056 and opened his school in Port Lowell in 2063. He worked as a farhauler until 2061, which, together with the increasingly tense situation on Mars since 2058, inspired him to develop techniques to take advantage of the possibilities of a low-g environment. Hishôjutsu in action is a very spectacular style, with lots of wide-ranging jump kicks, somersaults and leaps -- but the training also includes the use of tools as improvised weapons, precise attacks on vulnerable parts of the body (or a vacc suit) and the use of the boomstick, a short rod with an explosive charge at the tip. His style became an almost immediate success, and while there are still martial artists on Earth, who like to belittle Hishôjutsu as a "circus style," today there are enough practitioners of Sayama's art from Luna to the Belt, who will gladly show them that on *their* turf Hishôjutsu reigns supreme.

Military Zero-G

19 Points

Primary Skills: Free Fall, Karate, Knife, Judo, Shortsword, Vacc Suit.

Secondary Skills: Climbing, Jumping.

Optional Skills: Garrote, Short Staff, Stealth.

Maneuvers: Arm Lock, Aggressive Parry Kick, Choke Hold, Close Combat (Knife), Disarming [2]; Head Butt, Head Lock, Knee Strike, Neck Snap, Retain Weapon (One of Pistol, Rifle, or Knife).

Cinematic Skills: None.

Cinematic Maneuvers: None.

Special: Normally, vacc suits give a -1 to all DX-based skills and DX rolls. This training includes combat-familiarization which eliminates the penalty to all combat-oriented rolls and the Free Fall skill; the cost is 2 character points.

Practitioners of this style can learn the other two Retain Weapon specialties at their discretion.

Common Advantages: G-Experience and Combat Reflexes.

Common Disadvantages: Since this style is taught to special operations troops, disadvantages common to Special

Operations troops such as Fanaticism or Sense of Duty are common. See GURPS Special Ops pg 50 for other appropriate disadvantages.

Useful Biomods: Bio-Booster, Bone Stimulation, Muscle Reinforcement, Nerve Boosting, No-Shock Glands.

Military Zero-G developed out of standard military hand- to-hand training as a pragmatic style meant as quick-and-dirty elimination techniques for use in low- or no- gravity situations. Practitioners are expected to close with and attack opponents with great aggression. The style assumes the stylist will be attacked while closing the gap -- kick-jamming techniques, arm locks, and leg grappling are taught to counter such moves. There is no body of cinematic techniques associated with this style. The entire style is centered on getting in tight with your opponent and hammering him or choking him into submission -- or death. The style includes knife, stick, and "boomstick" techniques and counters. The style above is the form used in the US Special Operations community -- variations or similar styles are used by many other military and security forces. Those units and forces without the time to dedicate to this level of training often use Freefighting instead. Some styles still teach limited "sentry removal" techniques, but these are largely legacy maneuvers in an age of high-tech surveillance.

Shan Chuan (Killer Fist Kung Fu)

23 Points/27 Points

Primary Skills: Brawling, Boxing, Karate.

Secondary Skills: Body Language, Physiology, Wrestling.

Optional Skills: Lifting, Running, Stealth.

Maneuvers: Aggressive Parry (Boxing, Brawling, or Karate), Aggressive Parrying Kick, Axe Kick, Eye Gouging [2], Ear Clap, Ground Fighting (Brawling or Karate), Head Butt, Hit Location (Brawling or Karate) [2], Hook Kick, Jab, Knee Strike, Rabbit Punch, Riposte (Karate or Boxing), Roundhouse Punch, Shin Kick, Shuto, Slip, Stamp Kick.

Cinematic Skills: Breaking Blow, Power Blow, Pressure Points, Pressure Secrets.

Cinematic Maneuvers: None.

Common Advantages: Combat Reflexes, High Pain Threshold, Toughness.

Common Disadvantages: Bloodlust, Bully.

Useful Biomods: Bio-Booster, Bone Stimulation, Cell Regeneration, Muscle Reinforcement.

It is hard to find the true roots of this style -- which includes dozens of schools today. It probably developed out of Muay Thai, Bando, some "external" Kung Fu forms, as well as some modernized Pancratium schools and simple Streetfighting techniques. The school described above was founded during the 2040s and 2050s by Dr. John Yueh, an American-Chinese physician. Shan Chuan -- sometimes called "Kill Fu" by both fans and detractors alike -- concentrates solely on the quick and dirty infliction of a maximum amount of damage to the opponent. Students even study anatomy to learn about the best ways to cripple and kill their foes. Students also show a marked preference for speed- and strength enhancing biomods.

There are also schools which concentrate on the use of body-mass and wrestling techniques (Wrestling becomes Primary, Sumo becomes an optional skill, add Choke Hold, Head Lock and Neck Snap to maneuvers, and add Piledriver and Immoveable Stance to cinematic maneuvers and skills), or on devastating kicks (drop Riposte, Rabbit Punch, and Roundhouse Punch, add Kicking, Jump Kick and Sweeping Kick to maneuvers).

While most "legit" practitioners of "Kill Fu" use their skills only in meat-fighting contests, there are also those who have certain real-life applications for this style. Rumor has it that some families of the Maple Syndicate keep teams of Shan Chuan trained Spartan bioroids as enforcers and personal bodyguards . . .

Equipment

Spacer Boomstick [Shortsword or Short Staff]

Type	Malf	Amount	Reach	RoF	Shots	Wt.	Cost	LC
cr	sw	1				1.2	\$50	1

cr		thr	1			
expl.	14	4d(10)!	1	1	1	

! plus 1d concussion damage, doubled for direct contact.

This is the basic boomstick: a short rod, similar to an Escrima stick, with a small impact-detonated explosive charge at the tip. These types of boomsticks are often improvised by terrorists and beltors, who like to use some steel pipes with slightly modified (roll Armoury-3) 15mm HEAT ammo from recoilless rifles to build them.

Spacer Panzerstick [Shortsword or Short Staff]

Type	Malf	Amount	Reach	RoF	Shots	Wt.	Cost	LC
cr		sw	1			1.3	\$100	0
cr		thr	1					
expl.	ver(c)	8d(10)!!	1	1	1			

!! plus 8d concussion damage, doubled for direct contact.

These are professionally made boomsticks, of a type used by -- among others -- the Foreign Legion. They can also be had (for \$140) in a Limpet version with a dial at the lower end of the stick to select detonating times (0 to 11 seconds).

Spacer Burnstick [Shortsword or Short Staff]

Type	Malf	Amount	Reach	RoF	Shots	Wt.	Cost	LC
cr		sw	1			1.1	\$50	1
cr		thr	1					
spcl.	ver(c)	spcl	1	1	1			

These nasty variant of the boomstick is useless against heavily armored opponents, but can come quite handy against unarmored foes, if you don't want to kill them outright (or fast): the heads of these sticks are filled with a dose of Nanoburn (THS p. 158) , which will affect only the person hit by the stick. The can also be had with other type of nanogas -- just change cost and LC accordingly.

Rolling Your Own: Freefighting Concepts

Many styles have been modified into a Zero-G or "Freefighting" variant. The extant term for this is "using Freefighting Concepts." A bewildering variety of styles have had such variants developed, ranging from Chin Na and Escrima to Tae Kwon Do and Wing Chun Kung Fu.

The simplest way to make a Freefighting variant is to add Vacc Suit and Free Fall to the Primary Skills of a style, increasing the cost by 2 points. However, some maneuvers may be less useful against a Vacc Suited foe or in a low- or no-gravity situation. For example, Freefighting styles can make use of grappling -- indeed, "standing" grappling techniques are excellent in Zero-G situations -- but the Ground Fighting maneuver is usually omitted. Other maneuvers that are often omitted include Cat Stance, Eye-Gouging (less useful against Vacc Suit or Goggled foes), and Face Attacks. Maneuvers such as Drop Kick and Jump Kick are sometimes added, as they are more useful in situations where the risk of a painful fall is practically eliminated.

Other New Styles

"Sifu Bruce Lee once said ' . . . unless a human being has three arms and four legs, there can be no different form of fighting. Basically, we have only two hands and two feet.' In the 22nd century, I'm a afraid this is something a fighter can no longer safely assume."

--anonymous JKD instructor.

As Bantu Boxing and Shan Chuan demonstrate, the 21st century is also rife with "new" styles -- often deliberate syncretions of multiple older styles. Styles that take advantage of new biomods, unique abilities of bioroids and bio- or even cybershells may have developed. In addition, after a century many styles developed only recently in the 20th century may have developed in new and surprising ways in the 21st century. For example, instructors staying true to Bruce Lee's concept of Jeet Kune Do will likely have turned it into a very different style to accommodate biomods and variable gravity.

Rules

Shuto (Lower Arms)

Designed for spacers who have replaced their legs with additional arms, this maneuver is identical to the Shuto maneuver (see MA54) however it is executed with the lower arms. Shuto (lower arms) has an additional -1 to Parry (total -3); however Parrying Kicks are executed normally against them (no penalty). This maneuver is distinct from the Shuto maneuver and must be learned separately from it. Very few styles use this maneuver, and finding an instructor can be very difficult. On the bright side, spotting which instructors will not know the maneuver can be rather easy.

Retreating in 3-D

Retreats can be executed in three dimensions in micro- or zero-gravity environments. This means a combatant can retreat "up" or "down" as well as back or the side. This technique is a basic part of Free Fall training. The defender must still move away from the attacker, but can move "up" or "down" a hex as well as moving back -- thus bringing the number of potential retreat hexes from 3 to 9. There is no roll required, but this cannot be attempted with a default Free Fall. All normal limitations on Retreating apply. This can be combined with Acrobatic Dodge (p. B108).

'Tis But A Scratch!

More Non-Generic Damage Rules For GURPS

by Stephen Dedman

There are many ways of knowing whether you're in a movie or the real world. Can you open every door instantly with a credit card? Do all cars explode if they're shot or roll over? Are all Asians trained in martial arts? And the real give-away -- does everyone who survives a fight emerge unbruised and unblemished, with their hair perfectly in place and only a few strategically placed rips in their clothing?

If you're a fan of the cinematic style of roleplaying, a la *Charlie's Angels* movies, the Roger Moore James Bond films, and the rules on p. B183, then you probably don't want the complication of more realistic wounding rules. Indeed, the Flesh Wounds rule is designed to get around this (at least for PCs), and especially if used in combination with the generic damage in the Basic Combat system (pp. B95-101), means that which does not kill you, doesn't really matter very much at all. If this is your preferred option, go straight to Part 2 of this article.

If, however, you'd like to make combat in your *GURPS* games a little more realistic, keep reading.

Idea #1: Unlucky Breaks -- An Optional System For Non-Generic Damage

These rules are designed to be used in conjunction with the effects of crippling injuries in the advanced combat system (p. B127) and the detailed hit location rules from *GURPS* (p. CI52). They make combat more damaging without being more lethal, and may make characters hesitate before starting a fight, leading to more opportunities for negotiation and roleplaying. They may also slow down campaigns by requiring more healing time between adventures, enabling PCs to spend more time "hitting the books" and spending character points on learning new skills or improving the old ones (Bruce Lee did much of the research for Jeet Kune Do while crippled in a hospital bed).

Merciful GMs may also decide to use these optional rules as an alternative to killing PCs outright -- ruling that a head wound has caused epilepsy or temporary amnesia, or lung damage from mustard gas has left a PC Very Unfit rather than Very Dead.

In this system, most hit locations can suffer Crippling Injuries if damage exceeds a particular level -- usually equal to HT after multipliers (p. CII53). Recovery from these Crippling Injuries uses the rules on p. B129.

Hit Location Crippling Injury

<i>Brain</i>	"Crippled" by taking damage equal to more than HT after multipliers. Possible lasting or permanent effects include Amnesia (p. CI86), Epilepsy (p. B28), Flashbacks (p. CI90), Migraine (p. CI82), No Depth Perception (p. CI82), or reduced IQ.
<i>Face</i>	A face that takes damage equal to more than ½ of HT (ignore multipliers) will be bruised or scarred, which will reduce Appearance to Unattractive until the injury heals. Multiple wounds may reduce Appearance further.
<i>Nose</i>	A nose that takes damage equal to more than ½ of HT after multipliers may be bruised or broken, which will reduce Appearance to Unattractive until the injury heals. Other possible lasting or permanent effects include No Sense Smell/Taste (p.29) or Unfit (p. CI85, must breathe through mouth).
<i>Jaw</i>	"Crippled" (broken or dislocated) by taking damage equal to more than ½ of HT after multipliers. Possible lasting or permanent effects include Mute (p. B29) or a speech defect equivalent to Stuttering (p. B29).
<i>Neck</i>	As if the risk of a crushed throat or instant decapitation wasn't enough, a

blow to the neck that does damage equal to more than HT after multipliers may also cause lasting or permanent crippling effects -- Disturbing Voice (p. CI81), Mute (p. B29), or Quadriplegic (p. CI83).

Torso Attacks to the front of the torso may break ribs or damage internal organs; attacks to the back (or blow-through damage) can do the same, and can also result in damage to the spine. Any blow that does damage equal to more than HT may cause any of the possible lasting or permanent effects: Bad Back (p. CI80), Delicate Metabolism (-20 point level, p. CI81) Lamé (Paraplegic) (p. B29), Unfit or Very Unfit (from a punctured lung or similar injury; p. CI85), or reduced HT.

Vital Organs Like torso but more so, thanks to multipliers.

Groin "Crippled" by taking damage equal to more than ½ of HT after multipliers (rupturing, amputation, or just extreme sensitivity that makes any contact too painful to contemplate). Possible lasting or permanent effects are Eunuch (p. B28, human males only) or Sterile (p. CI84).

Example of combat: Kim Yip is walking home from a party when Rex, a slammer (p. UTT91) addict, runs past her and grabs her bag -- which contains her keychain, cell phone, and pepper gas as well as her credcard. She chases the addict to the pedestrian bridge, where he turns around draws a small balisong knife. She's unarmed and unarmored, apart from her light leather jacket and hard boots, but she was in a bad mood already, and she has a green belt in jujutsu (Judo-13, Karate-13), the High Pain Threshold advantage, and the Overconfidence disadvantage. Rex's dose of slammer has given him the High Pain Threshold and Combat Reflexes advantages and Bloodlust disadvantage; he also has the Bad Temper and Bully disadvantages whether he's drugged or not.

Kim aims a kick at Rex's groin, but this is only a feint; her real target is his knee. She does 4 points of damage -- not enough to cripple his leg (his HT is 10), but enough to anger him. He slashes at her face, but she parries the blow and grabs his wrist in an arm lock. She attempts a Disarming maneuver, but fails, and Rex head-butts her in the nose -- an all-out attack doing +2 damage for a total of 6 points. Kim's HT is 11, so this is HT/2; though she makes the HT rolls to avoid knockout and becoming stunned (thanks to the +5 bonus from her High Pain Threshold), her nose begins to swell. Enraged, she twists his knife arm, doing 6 points of damage and crippling it. Rex drops the knife, but Slammer has reduced his IQ to 7, so he's not smart enough to quit. He delivers a roundhouse punch, assisted with brass knuckles, for a total 7 points of damage to Kim's jaw -- enough to cripple it. Kim makes her HT roll not to fall unconscious, then uses judo to throw him -- over the edge of the bridge.

Rex falls 5 yards, landing on his head (see p. B131) and taking 9 points of damage. Subtracting DR of 2 for his skull and 1 for his cloth cap, then multiplying $\times 4$, that's 24 points to the brain. He's automatically knocked out, makes his HT and survives, but suffers a crippling injury -- a fractured skull and brain damage. Fortunately for him, Kim calls for an ambulance once she's retrieved her cell phone.

Each has to make two rolls on HT, using the rules on p. B129 -- Kim for her nose and her jaw, Rex for his arm and his head. Kim makes her first roll, so her nose is only temporarily injured (the swelling will go down when she recovers the 12 hit points she's lost), but the second roll is a 14, so the injury to her jaw is lasting -- it's broken, and won't heal for 1d-3 months. Rex makes his first roll, so his arm is only temporarily crippled, but his second is a 16, so he's taken permanent injury to the brain. Rather than reduce his IQ still further, the GM decides the lesions give him the Epilepsy disadvantage.

Idea #2: Brawling and Blowthrough -- An Optional Rule for Less Lethal Combat

The following rule is suggested as an option to the unrealistic "Stun Point" rules (pp. CII151-152) for cinematic play, with the added advantage that it requires no extra bookkeeping. Assume that all crushing damage in excess of the victim's total DR and hit points is turned into knockback damage *unless* the victim (or the body part hit) is somehow prevented from being knocked in that direction; never hit a head that doesn't have freedom of movement! As with Stun

Damage, the GM can set the rate at which damage points are converted into knockback -- 1 yard for every 8 points, 4, 2, or even 1, depending how exaggerated you want the combat to be. This is particularly suitable for four-color Supers campaigns, but it also suits bar brawls in cinematic Old West, Cliffhangers, or Martial Arts games. Whether this rule also applies to bullet damage is up to the GM.

Combat example: Mount Fuji (ST 188) punches a tough yakuza kickboxer (HT 12, DR 1), doing 42 points of damage. The GM rules that rather than Fuji's fist going right through the kickboxer's torso, the extra 29 points of damage should be converted to knockback at 1 yard for 4 points. The thug goes flying across the street, taking 1d-2 falling damage.

Fuji then deals with the kickboxer's annoying twin by crushing his foot with a stamp kick. The foot doesn't have freedom of movement, so it takes full damage - but after taking 4 points (HT/3), all excess damage goes through to the concrete floor. If Fuji had done the same thing to the thug's head, he would have crushed his skull.

Idea #3: Healing and Surgery -- More Optional Rules

Unlike the rules for First Aid and Physician skills, the rules for Surgery skill on p. B56 are not expanded upon in other chapters. First Aid is useful immediately after for preventing bleeding or for minor wounds. Physician skill is needed for treating disease, poison, and for any hit point damage that couldn't be fixed by the initial First Aid (or by Healing spells or ultra-tech drugs, depending on the campaign). In many *GURPS* campaigns, however, Surgery is treated more as a Professional Skill than something likely to benefit a party after combat.

A possible use of Surgery is to reduce the recovery time for crippling injuries: pinning broken bones, wiring jaws, using cosmetic surgery to hide scars, etc. On a successful Surgery roll, a surgeon can reduce the number of months that a lasting crippling injury takes to heal, dividing it by the number by which he made the roll. GMs may rule that the minimum period of healing remains one month, though (optionally) a critical success may reduce a lasting injury to a temporary one.

Surgery may even reduce a permanent crippling injury to a lasting one -- though this depends on the injury and the TL of available medicine. For example, a surgeon with late TL7+ skills and equipment may be able to use microsurgery to re-attach a severed hand or foot, but unable to repair a damaged spine that has caused quadriplegia. A surgeon from an earlier TL will, at best, be able to preserve enough of the limb to attach a prosthetic; a surgeon at late TL8+ may opt for replacing the entire body, putting the brain into a clone or cyborg. In cases where a "miracle cure" is required and a limb or other body part has not actually been lost, only a critical success will reduce a permanent injury to a lasting one -- but repeated attempts at corrective surgery (though possibly expensive and not without hazard; see below) may be made until a successful treatment is found.

A critical failure on Surgery for a lasting injury should lengthen recovery time; reverse the process above. For a permanent crippling injury, a critical failure on Surgery at TL5 and below may prove fatal, by leading to gangrene or other infection, or releasing marrow or bone chips into the bloodstream. At TL6+, the worst possible result should be that the body part requires amputation and replacement: only if the surgeon also has a critical failure on Physician is the patient in danger of dying.

Idea #4: The High Cost of Living

The economic impact of lasting injuries will vary enormously from game world to game world (or even from country to country, as it does today) and individual to individual. The typical costs for medical care at TL8+ listed in *GURPS Space* (p. S88) show how quickly an injury or illness could bankrupt a character with no medical insurance, and that doesn't factor in lost income for characters unable to work (particularly the self-employed).

GMs who want to use this to cripple a PC financially as well as physically may be able to do so; bad debts can be a useful tool for persuading PCs to go on insanely dangerous but potentially profitable quests. GMs who don't wish to add insolvency to injury (or do the necessary bookkeeping) can find several ways to pay off all or most of the cost of hospitalization, healing spells, bionics, etc.

In TL7+ campaigns, hospital insurance will be available in many societies (see *GURPS IOU* and *GURPS Autoduel*), and may be considered a part of normal living expenses (though not necessarily for the self-employed). Some countries will even provide hospital care free or at a token cost, particularly to victims of crime.

A PC with the Patron advantage is likely to have all medical expenses and lost income covered by the Patron, particularly if the injuries were suffered while the PC was on Duty. This is also likely to be true of anyone with the Clerical Investment, Legal Enforcement Powers, or Military Rank advantages.

Heroes without any of these advantages may be able to rely on charities, particularly if they are devout followers of the appropriate religion, or have a good reputation.

In certain circumstances, PCs may be able to recoup their medical expenses by suing the people who injured them, or by selling their story to the media. This may even prove extremely profitable, enabling them to leave the hospital wealthy as well as healthy, and ready to be injured all over again.

How do Experts get Experience?

by Brian Rogers

The *d20 System*, as applied to most dungeon-crawling fantasy games, lacks a mechanic for non-adventuring advancement. Yes, there are wonderful charts for populating urban centers with NPCs, but no guidance on how those people trained or how they might improve. Non-adventuring and NPC improvement can be an issue, so we need an easy mechanic for finding NPC experience. After all, it's clear that the local cobbler doesn't kill a few goblins to improve his shoemaking skills!

Here's an option: Performing NPC class activities well enough for seasonal economic survival is a CR 1 award. Seasonal success is a Difficulty Class 16 check vs. the most appropriate skill (usually Craft or Profession). It brings experience points and sufficient funds to make a living with profit enough for some discretionary spending and savings. Failure means no experience and no funds, wiping out any savings and diminishing the standard of living. Failures that don't follow successful seasons mean debts and a serious loss of social status, as befits the campaign world.

How NPCs approach these seasonal checks determines how rapidly they advance.

Most NPCs work in small *Groups*. We'll assume a group of four is standard, scaling it to the average adventuring party. This is a small family farm, a master and apprentices, the sheriff and his deputies or the local lord and his retinue. These groups pool their skills, using the Cooperation rules to boost their chances of making the seasonal check. For 1st-level characters, this raises a single NPC's +4 bonus to +8 (with a +4 themselves, on average only two of the three cooperating characters succeed on the test). With attribute bonuses or skill synergies an average group has a +10 modifier. This gives them a 75% chance of success per season. Pooling their efforts cuts into individual experience awards but greatly reduces their risks.

Some NPCs prefer to work alone, taking greater risk for potentially greater benefit. GMs can assume that *Loners* have at least a +1 attribute bonus for their chosen skill, giving a 1st level character a +5 skill, or a 50% chance of seasonal success. Such characters will advance more rapidly, but will likely spend their lives in and out of debt.

We also need to factor in how the NPC approaches risks. The average NPC is *Cautious*, and never tackles challenges more difficult than those required for survival and modest comfort. Such people always take the standard CR 1 seasonal test, seeing their success chance improve as they slowly gain levels. *Cautious* NPCs max out at 9th level, as per the *DMG's* suggestion that CR1 challenges are no longer worthwhile risks past 8th level. Of course, given the rate at which a *Cautious* NPC gains experience, this will only be an issue for *very* long lived races.

Some NPCs are more *Ambitious* in their risk-taking. Engaging in more challenging activities (high court politics, commissions from six-fingered men, etc.) increases both the CR and difficulty: each +1 difficulty equals +1 CR. This increase balances out skill improvements, so the *Ambitious* NPC will always have the same risk he had at 1st level. Undertaking such risks naturally leads to greater rewards: *Ambitious* NPCs gain levels faster and receive rewards greater than survival and modest savings. Of course, failing at these levels has greater risks as well: an aristocrat's CR 1 seasonal failure means disfavor at court or new debts and promises. A CR 6 failure leads to exile to a distant, uncomfortable post, if not prison or death!

This gives us four types of NPCs: *Cautious Groups* who make up the majority of the population, *Cautious Loners* with their periods of feast or famine but greater life experience, *Ambitious Groups* who become dominant forces in their area if their luck holds out, and *Ambitious Loners* who are the best in their fields and are very nearly adventurers in their solitary pursuit of challenge and perfection. This chart provides the years required to reach a particular level, as well as Human age at that point. (Humans become Venerable at age 70, and have a maximum age of 110.)

Years

<i>Cautious</i>	<i>Cautious</i>	<i>Ambitious</i>	<i>Ambitious</i>
-----------------	-----------------	------------------	------------------

Level	Group	Human	Loner	Human	Group	Human	Loner	Human
1	0.0	16	0.0	16	0.0	16	0.0	16
2	4.4	20.4	1.7	17.7	4.4	20.4	1.7	17.7
3	16.9	32.9	6.2	22.2	11.1	27.1	4.2	20.2
4	40.5	56.5	14.5	30.5	20.0	36.0	7.5	23.5
5	77.5	93.5	27.4	43.4	31.1	47.1	11.7	27.7
6	130.1	*	45.2	61.2	44.4	60.4	16.7	32.7
7	200.1	*	68.6	84.6	60.0	76.0	22.5	38.5
8	306.6	*	101.8	*	77.8	93.8	29.2	45.2
9	486.6	*	154.8	*	97.8	*	36.7	52.7
10	*	*	*	*	120.0	*	45.0	61.0
11	*	*	*	*	144.4	*	54.2	70.2
12	*	*	*	*	171.1	*	64.2	80.2
13	*	*	*	*	200.0	*	75.0	91.0
14	*	*	*	*	231.1	*	86.7	102.7
15	*	*	*	*	264.4	*	99.2	*
16	*	*	*	*	300.0	*	112.5	*
17	*	*	*	*	337.8	*	126.7	*
18	*	*	*	*	377.8	*	141.7	*
19	*	*	*	*	420.0	*	157.5	*
20	*	*	*	*	464.4	*	174.2	*

As the chart shows, Humans working in *Cautious Groups* reach Venerable while at 4th level (higher than the *DMG's* estimate of Commoners only reaching 2nd-3rd level, but not by much). Capping *Cautious* at 9th means longer lived races have higher level NPCs, but not lots of 20th level NPCs. This makes sense; a *Cautious Group* of middle aged elves will be 4-7th level, making them skilled compared to their 3rd level human counterparts, but facing stagnation without greater challenges.

This system abstracts monetary rewards, as it is unlikely you'll track the funds of every NPC on a seasonal basis. The permutations for number of people involved, division of shares (a farm commune might divide equally, while a master would keep the profit while his apprentices get room and board) and recent failures make such a system very difficult. The Profession skill states weekly incomes of ½ the skill check in GP, which makes a good baseline for liquid assets. Assuming this is a CR1 test, multiply the amount earned by the NPCs level for Ambitious types. In either case, skill checks of less than 10 indicate a recent bad patch with the gold being replaced by copper. Unskilled laborers and apprentices likewise carry copper.

Linking level to age and risk-taking is logical; 30-year-old NPCs should command respect from 17 year old freshly-minted PCs . . . at least until young heroes have a few levels under their belts. These rules also provide a benchmark for PCs gaining levels during extended down time. A Fighter made a knight and local lord advances differently depending on whether he has a reliable advisors (*Group* or *Loner*) and whether he oversees a peaceful setting or a violent political border (*Cautious* or *Ambitious*). A few seasons of failed rolls might send your Rogue-turned-bartender back out into the field, or indicate to the order that perhaps the young Cleric's calling really is in defending, rather than promoting, the faith. What better excuses to join their Fighter comrade on the border for a new round of adventure?

Angel Roleplaying Game: Corebook

Published by [Eden Studios, Inc.](#)

Written by C. J. Carella with Tommy Brownell, Jeremy Hunt, Robert Jonsson, Jack Kessler, Jarrod Moschner, Andy Peregrine, Barbara Pollack and Robert "Hendersonman" Wood

Illustrated by C. Brent Ferguson and John Hodgson

258-page color hardcover; \$40.00

In December 2003, Eden Studios brought another good year to an end with the release of the *Angel Roleplaying Game: Corebook*. This, in its own way is a spin-off to roleplaying's best-licensed RPG of 2002, [Buffy the Vampire Slayer Roleplaying Game](#), just as the *Angel* television series is a spin-off to the highly popular *Buffy the Vampire Slayer* series. Where the latter has already come to an end after seven seasons, *Angel* is still on (for now) with four seasons already under its belt. Again designed by Eden stalwart, C. J. Carella, who also created the *Buffy the Vampire Slayer Roleplaying Game*, this RPG treatment covers the first three seasons only. In that time, *Angel* has grown away from its roots and shown itself to be a very different animal in comparison with *Buffy the Vampire Slayer*. It is much darker in tone and feel, with less of an emphasis upon growing up and female empowerment, and more about an adult world in which the protagonists must deal with demons within and without. Unlike *Buffy the Vampire Slayer*, vampires play a lesser role in *Angel*, with the cast interacting with, and often fighting the demon population that lives just outside of the bright lights of Los Angeles. Nor is there a "Big Bad" to face and combat each season, but rather a number of no less dangerous threats and adversaries over the course of said season. Yet prevalent throughout the series to date has been an organization that happily facilitates the existence of evil both in L.A. and literally throughout worlds beyond, Wolfram & Hart. Unfortunately they have the power, the contacts, and the knowledge to get away with this, and were it not for the fact that Angel Investigations is prepared to fight the good fight, they certainly would and still look like a highly successful corporate law firm into the bargain.

Given the differences between the two series, it is no surprise that the *Angel Roleplaying Game* is very different in comparison with the *Buffy the Vampire Slayer Roleplaying Game*. At the same time, there are a number of similarities, not least in appearance and mechanics. The look of both books is similar, but the *Angel Roleplaying Game: Corebook* uses more sombre shades as opposed to the perkier, more intense color scheme of the *Buffy* line. The book makes excellent use of photography throughout this book and what little original artwork there is, even though it does not match the quality of the *Buffy* line, is decent enough. Naturally, the text is strewn with extensive and appropriately used quotes from the series, (including a personal favorite -- Spike's narration on Angel's action at the beginning of the episode, "1.3 In the Dark").

There is no change in the mechanics powering the two games; still an ultra-streamlined version of Eden's house rules, the Unisystem, other versions of which underlie every one of the publisher's other games except for *Conspiracy X*. What this means is that both the *Buffy* and *Angel* RPGs, along with their supplements, are inherently compatible, and with a little effort upon the part of the Director (as the referee is termed), can also work with, or draw upon, Eden's other RPGs.

The first major difference comes in the types of characters available to play. First, of course, players can be the employees of Angel Investigations and their associates, and full character sheets are given for each, along with their

statistical adjustments from one season to the next. This includes the obvious characters such as Angel himself, Cordelia, Wesley, and Gunn, as well as Fred, Lorne the insightful bar host; the half-demon Doyle; ex-police detective Kate Lockley; Angel's son, Connor; and The Groosalugg, the warrior champion from the dimension of Pylea, where Cordelia was also briefly a princess. Playing the cast is the easiest method of getting started, but alternatively, players can select from one of the archetypes that model various aspects of the series.

A few of the 12 echo particular characters, like the Barbarian Queen, a leader from Pylea trying to find her way in this dimension and reminiscent of the Groosalugg; the Psychic Supermodel who is similar to Cordelia; and the Barrio Defender, who is much like Charles Gunn. Others are all new, and include the Apt Pupil, trained as a magical enforcer by an evil teacher, but now freelancing for the good guys; the Crusading Biker, repentant and on a holy mission; the half-demon Demonic Investigator with a fascination for the occult; the Demon Gangsta with violent tendencies; the Former Cultist blessed with telepathy; the Pyro Girl; the Reformed Assassin; the Rogue Demon Hunter; and the Undead Champion. This last not a zombie, but a spirit able to switch from one body to the next in service to "The Powers That Be," and in game terms, possesses the Revenant Quality. The Rogue Demon Hunter is a nice play upon the first appearance of Wesley Wyndham-Pryce in the first season, being not a hunter of rogue demons (to quote Cordelia, "What's a Rogue Demon?"), but a rogue demon that hunts others of its kind.

The other option is to have players create cast members of their own design. This is a simple process: Determine the character type, and then spend a set amount of points on Attributes, another set on Qualities and Skills, with more points available if the player chooses to take one or more Drawbacks. Each character type determines the points to be spent on the various character elements, but where *Buffy the Vampire Slayer Roleplaying Game* has its White Hats, Heroes, and Experienced Heroes, the *Angel Roleplaying Game* has its Investigators, Champions, and Veterans. Of the television cast, Angel is a Veteran character type, Charles Gunn a Champion character type, and Cordelia Chase an Investigator type. In the course of the three seasons so far, many of the cast have progressed from this to be experienced or very experienced characters of their type. The difference between the two series types is that characters in the *Angel Roleplaying Game* have more points to spend on Attributes, Qualities, and Skills as well as having more Drama Points to play with throughout the game.

Both games use the same skill set, and a fair number of the same Qualities and Drawbacks, but unsurprisingly, the *Angel Roleplaying Game* adds a lot more of its own. These reflect the series' more adult nature and setting. They include Cop/Detective, Criminal/Wise Guy, Demon Hunter, Ex-Watcher, Occult Investigator, Rank, Screwed-Up Adolescent, and so on. There is not anything akin to the Sorcery Quality of the *Buffy RPG* as this game is more about the supernatural than it is about magic, and with a modicum of time, research, and effort, anyone can cast a spell. Only a few spells are given, along with a note of the episodes they appeared in, but there is nothing to stop a Director referring to the *Buffy RPG* supplement [The Magic Box](#) for more.

Since demons play such an important role in the show, it is no surprise that the *Angel Roleplaying Game* devotes space to those shown on the show and to both players and Directors creating their own. By selecting the Demon/Half-Demon Quality a player can take a demon that fights for the forces of good, choosing from a species already given, such as the half-Brachen Doyle or Lorne, who has turned his back on his Deathwok origins. Alternatively, they can create an entirely new species, building a package from the many supernatural abilities listed, which is then purchased as a Quality.

Beyond the many, many singular adversaries described in the game, the *Angel Roleplaying Game* provides rules for creating all manner of organizations. These start out with asking the why, when, and what -- goals, history, and current status of such an agency, before assigning a total point value to spent on its various ratings. These include an agency's size, clout (criminal, financial, governmental, and supernatural), and the size of its quarters, security (physical and supernatural), facilities, and weapons. The *Angel Roleplaying Game* gives four examples, beginning with Angel Investigations and Gunn's Gang, and then going to bigger fish such as Wolfram & Hart, and also a medium-sized, non-canon group, The Morningstar Foundation (outwardly a philanthropic and scholarly organization, it helps humanity not just through its charitable work, but also through its paranormal research and monster hunting with the goal of helping "humanity realize its potential free from fear, ignorance, and tyranny"). In the main, these rules are for use by the Director, but in some instances, the players could also participate in the creation process, for example by forming a detective agency similar to that of Angel Investigations.

For the Director the advice given focuses upon the creation of their own series and how to support it with the construction of seasons and episodes. This starts out right at the beginning of the book, with an analysis of the *Angel* series season by season, both from a roleplaying and a Director's standpoint. There is also a discussion on putting together a cast of characters, including the suggestion of having the players take the roles of young lawyers at Wolfram & Hart. The advice addresses a problem inherent to the *Buffy the Vampire Slayer Roleplaying Game*, that of having a cast consisting of one powerful character and several weaker sidekicks -- in other words, of a Slayer and the various members of the Scooby gang. This is partly handled through the Drama Point system in that game, but in the *Angel Roleplaying Game*, there is room for characters of equal ability to be in the same cast. This is in addition to the fact that the characters are more capable anyway.

Also included is a short guide to the notable occult locations and inhabitants of Los Angeles, from the East Hills Teen Shelter and David Nabbit, financial wizkid and potential patron, to Jenoff's Demon Casino and Captain Daniel Holtz, time-traveling vampire hunter. This along with "A Guide to Angelspeak," and the rest of the Director's support, is finally put into practice with a ready-to-play episode, "Blood Brothers, Part One." As the title suggests, this is the first part of a scenario, one that will be completed with the release of the *Angel RPG Director's Screen*. Although there are notes on how to complete the episode without purchasing this first supplement, the fact that they will need to do so in order to get the most out of "Blood Brothers" will be a detraction for many. The adventure has the cast dealing with a botched summoning ritual that they themselves interrupted, and the ensuing consequences. It nicely feels like an episode from the series and calls upon one or two of the cast members to flex their roleplaying skills.

Fans of the *Angel* television series will find much to enjoy in the *Angel Roleplaying Game*, though doubtless they will find it lacking the depth they might find in more dedicated guides. Of course it is written as a game, but not one designed with the neophyte roleplayer in mind. They would be better off starting with the *Buffy the Vampire Slayer Roleplaying Game*, and then coming to the *Angel Roleplaying Game* as a spin-off. The point is that although they use the same light mechanics, the *Angel Roleplaying Game* is a very different beast. It is darker in tone, examines more adult themes and calls, for its characters to take a moment or two for personal reflection. Indeed these factors combined with its default set-up make the *Angel Roleplaying Game* more of a traditional horror RPG, while its cinematic playing style sets it apart.

In making a final comparison between the *Angel Roleplaying Game* and its antecedent, *Buffy the Vampire Slayer Roleplaying Game*, the more traditional feel of this new game and its darker feel, means that it does lack the "wow" factor of its sister -- both in its arrival and the anticipation leading up to that. But this does not mean that it is a poor game, or one that will not be appreciated by the fans of both series. After all, coming from the pen of C. J. Carella, it is no surprise that the *Angel Roleplaying Game* is nothing less than a solid adaptation of its source material.

Pyramid Review

Loco!

Published by [Fantasy Flight Publishing, Inc.](#)

Game design by Reiner Knizia

Graphic design by Brian Schomburg

Edited by Christian T. Petersen & Darrell Hardy

Full-color boxed game with 30 cards, 25 tokens in five colors, & rules sheet; \$6.95

While board games in the current market get bigger and come with heftier, more involved components, card games seem to be getting smaller, faster, and easier, and none of them seem to suffer a loss in playability from the miniaturization process. *Loco!*, a new card game from the combined efforts of Reiner Knizia, Fantasy Flight Games, and Esdevium Games, keeps the ball rolling.

The object of the game is to collect the most points by taking the most valuable tokens by the end of the game.

Loco! utilizes five colors, matched to both the playing cards and the accompanying chips. These 25 tokens are separated by color before the game begins and placed in the center of the table in five little color-coded piles. The cards are dealt out to the players, and play goes clockwise.

The deck contains a full suit of six cards in each color; these are numbered one to five, plus a Loco!/zero-value card. On a player's turn, he plays a card from his hand to the table, and places it next to the chip pile of the same color (red cards beside red tokens, etc.). He then takes a token of any color from one of the piles (not necessarily the same color as the card he played). If you play the Loco! card, you must say "Loco!" or you lose your token draw.

When, in a later turn, a player plays a card of the same color (he plays a blue card and someone has already laid a blue one down), he partially overlaps the first card with his new card. Players continue to stagger cards in this fashion until someone has played the sixth card of any one color. The sixth card ends the game, and points are tallied.

The most recent card played on a token stack determines how many points a chip of that color is worth; for example, if a red four is the last red card in line, every red chip is worth four. Since Loco! cards are worth zero, playing them last renders the tokens in that stack worthless. The game therefore requires you to step lightly, giving weight to your investment in a stack while trying to reduce the value of your opponents' chips. The highest point total wins. The rules also suggest playing a round for every player present and using the overall total for scoring.

The game is for two to four players, but it works better with more. It may be unlikely one player will receive all six cards of a color in a single deal, but it does happen, and the odds increase with only two participants. A whole suit doesn't guarantee a win, but even then cards are randomly removed from the deck before the deal so there's always an element of uncertainty about whether your opponent has the cards you want or they just aren't in the game.

There isn't much to be said about the game's graphic presentation. The tokens are solid plastic, the rule booklet is small but concise, and the cards are colorful and bright with big, solid numerals. They come in a little box that's conveniently pocket-sized (well, breast or coat pocket, anyway), so you can take it on the road. On the other hand, there's just enough material that it's awkward to repackage when play is over. Having that 25th token makes it one

token too big for the components to be squared off neatly, so the last token gets layered atop the card deck. A ziplock sandwich baggie won't be as pretty, but it may do the job if the owner tires of sliding the pieces in and out of the box.

Learning the rules is lickety-split, and a game -- even a round of games -- takes mere minutes. It's involved enough that parents will find it a worthy pastime, but simple enough that they can play it with their kids. It's a good exercise for teaching math and getting the young 'uns thinking. Reading the rules gives you an idea how much there is to consider in play, but until you're in the game it won't fully hit home how challenging all those make-or-break decisions can be.

The game only has one real failing: That's all there is. It isn't that it has low replay value, but even with the clever strategies it may grow tiresome before too long. More importantly, it's really little more than some playing cards and poker chips. Save for the fifth color, you might already have the components on hand. It seems petty to complain about paying "all that money" when *Loco!*'s price tag doesn't break double-digit dollars, but this is the sort of thing that might work better as a free giveaway to entice people to the Fantasy Flight website.

Still, if you want someone else to do all the heavy lifting for you, *Loco!* is a quick and thoughtful front-lobe workout that comes in at a nice price.

--Andy Vetromile

Our Lady of Bisociation: The Snake Goddess of Boston

"No one knows -- that is, those who must know do not say -- just when or where this figure was found or how it escaped from under the watchful eyes of the Cretan authorities."

-- Mariana Griswold van Rensselaer, "A Cretan Snake Goddess" (1916)

Epimenides the Cretan famously said, "All Cretans are liars," connecting Crete and paradox forever. But was he merely paying homage to the Great Goddess of Minoan Crete, who in her bisociative way, may not have been a Great Goddess, or even a Goddess -- or even of Minoan Crete? One of the most famous depictions of the Goddess is [this statue](#), in the Museum of Fine Arts in Boston. She proudly displays her breasts in Minoan fashion, and holds out the sacred snakes who serve her. A splendid piece of chryselephantine (gold-and-ivory) miniature, she has decorated catalogs and histories, informed myth and anthropology, and stands alone in the museum and as Boston's "rarest treasure." However, the Snake Goddess of Boston twists into the spotlight from some extremely murky corners indeed. Let's follow her coils, and see where in this labyrinth they lead.

"More cannot be said; but none need regret that the Knossian Goddess -- so admirably reconstituted -- should have found such a worthy resting-place and that she stands to-day as a Minoan 'Ambadress' to the New World."

-- Sir Arthur Evans, *The Palace of Minos*, vol. iii (1930)

Mrs. Henrietta Fitz, a renowned Boston collector, purchased the Snake Goddess for the Museum (for \$950) on July 28, 1914, the day that World War I broke out in Europe. The specifics of the purchase remained murky, as both American and Greek law forbade the trafficking in museum-quality artifacts. By the Museum's hundredth anniversary in 1969, however, the heat was sufficiently off that a curator could reveal a dramatic tale. An impoverished Cretan peasant, on his way to America, befriended "a Greek-speaking Boston lady" on shipboard. The mysterious woman, who apparently possessed a vast store of archaeological knowledge, recognized the shattered ivory and gold fragments the Cretan peasant showed her "in a cigarette tin" and urged him to sell them to the Museum, with which she happened to be connected. He did so, and the Museum's expert restorers pieced together the dramatically modern-looking figure of the Boston Snake Goddess to global acclaim, including the above-mentioned endorsement from the archaeologist Sir Arthur Evans, the great discoverer of Knossos.

"According to information believed to be reliable, it came from Crete, but no details as to the time, place, and circumstances of its discovery have been ascertained."

-- Lacey Caskey, curator of the Classical Department, Museum of Fine Arts, Boston, in the *American Journal of Archaeology* (1915)

To put it mildly, that story was a tissue of lies. In his compellingly readable *The Mystery of the Snake Goddess*, Getty curator Kenneth Lapatin spells out the real transactions involved, as uncovered in letters, journals, and ship records of the time. There was no female Boston archaeologist in Greece or Crete during 1913-1914, for example. American dilettante archaeologist Richard Seager charmed his way into Evans' company on Crete starting in 1903. Seager obtained the badly damaged Snake Goddess there from someone he identified only as "Jones" (you call this archaeology?), who wished him to sell her to an American museum. Seager transported her to New York in June of 1914, and turned her over to his friend, the respected archaeologist Bert Hodge Hill. Hill's connections with the Museum of Fine Arts in Boston ensured that its classical curator, Lacey Caskey (to whose son Hill was godfather) would buy the piece, using Mrs. Fitz as the seller of record and donor of the purchase price. Shady practice, and conspiracy to boot.

But still nobody doubted the Goddess. The statue was a masterpiece seemingly designed to Minoan specifications, as laid out in Evans' unpublished (but hardly secret) theories of Minoan religion and culture. These theories may have spread both outward and backward, to the world of fashion and into history itself. His lectures and early photographs of "reconstructed" Minoan sites inspired the Spanish designer Mariano Fortuny to create the "Knossos scarf," and the flowing lines Evans saw in Minoan frescoes showed up on the covers of *Vogue* in due course. Some observers, not least Evelyn Waugh, felt the influence went rather the other direction: that Evans was painting his own deeply felt aesthetic into the archaeological record. Evans, who had lost his mother at the age of six, invented a matriarchal

empire and dressed it in the fashions of the day. The interplay between Evans and fashion (both intellectual and couture) is unveiled in Evans' famous "malarial dream" in midsummer 1906 on the steps of the Grand Staircase at Knossos in which he saw "the Priest-King" and "the great ladies, stoled and corseted" march past him. This, suggests one unkind source, may have been inspired by a similarly ecstatic experience enjoyed by the dancer Isadora Duncan, who, while visiting Knossos "could not contain herself and threw herself into one of her impromptu dances" on the same staircase earlier that year.

"Although absolute proof for or against the authenticity of the Goddess is elusive (and probably illusive), the combined evidence of history, style, imagery, technique, and science suggests that she, like the fifteen other unprovenanced 'Minoan' statuettes presented in these pages, is a modern work."

-- Kenneth Lapatin, *Mysteries of the Snake Goddess* (2002)

So the striking affinity between the Goddess and (at the time) leading archaeological opinion becomes a sword that cuts both ways. Still less promising is the mounting evidence that Evans' own personal "restorationist," the Swiss painter and sculptor Émile Gilliéron, may have been involved in (or even masterminded) a massive artifact forgery ring on Crete described by, among others, Sir Leonard Woolley, the excavator of Ur. Gilliéron's involvement would, for example, explain how the Goddess came to so closely embody Evans' theories. And later excavations haven't backed her up where they might. For example, the carefully double-drilled eye sockets of the Goddess simply do not appear in Greek (or Minoan) artworks of known provenience before the 2nd century B.C. The gold bands on the statue are far purer than the gold in other Mycenaean and Minoan artifacts, which are debased with silver. Finally, carbon-14 tests on ivory fragments taken from the same "cigarette tin" that putatively held the Goddess give dates between 1420 and 1635 -- not modern, but not Bronze Age, either. "Jones" or Gilliéron (if they were not the same man) had easy access to older ivory in European warehouses, or might have re-used Turkish ivory from other locations in Crete. But still, the Goddess remains inviolate -- there's no definite proof that the tested fragments came from her original body, or that two sets of fragments might not have mixed together in the Goddess' serpentine path to Boston. Hence, although the weight of the evidence tends toward the forgery theory, we're still left with a mysterious woman, who may or may not be handling serpents.

"And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them."

-- Mark 16:17-18

At the same time that Sir Arthur Evans was digging up, or creating a market in -- or invoking -- the Serpent Goddess, the words of the Gospel of Mark flashed into the head of a bootlegger named George Went Hensley in Grasshopper Valley, Tennessee. In midsummer 1909, he brought a rattlesnake down from White Oak Mountain and founded the Church of God With Signs Following, a Pentecostal movement that lasts to this day. To the noise of cymbals and ecstatic prayer, snake-handling congregations take up serpents to test their sinlessness and to discover the true anointed among them. The movement has outlasted Hensley's death (from snakebite) on St. John's Day, 1955, although even at its peak it had only a few thousand devotees. Modern Snake-handling Pentecostals describe the sensation as "fading into the white," a high "ten thousand times better than" cocaine, and in an oddly Lovecraftian phrasing, "joy unspeakable." This ecstatic experience, of course, recalls the sacred madness of [Dionysos](#), who has his own serpentine qualities. Further, in his enigmatic play *The Bacchae*, Euripides describes snake-handling among the Maenads, the female followers of Dionysos: "First o'er their shoulders they let stream their hair . . . girdling [their clothing] with snakes that licked their cheeks." Alexander the Great's mother Olympias also handled serpents, according to Plutarch, and traces of snake-handling appear across the classical world in Egyptian coronation rites and the Oracle of Delphi alike.

"The figure of the Mother . . . lent itself easily to later abstractions. Themis is one of the earliest, and she attains a real personality; her sisters Eunomia and Dike are scarcely flesh and blood, they are beautiful stately shadows. The 'making of a goddess' is always a mystery, the outcome of manifold causes of which we have lost count."

-- Jane Ellen Harrison, *Prolegomena to the Study of Greek Religion* (1903)

And every so often, they can be traced to a goddess. Without translating Linear A, we don't know who or what the Minoans worshipped, but 300 years later they wrote in Linear B and worshiped Potaida, "the lady," eventually perhaps

masculinized as "Poseidon," god of the sea. Potaida may have been a generic title, however, and there are lots of "ladies" in Cretan myth. Later writings give only their names: Britomartis ("bright maiden"), Diktyнна ("the net-maker"), Eileithyia ("she-who-is-coming"), and interestingly Laphria ("she-who-disappeared"). One unknown goddess, the Mother of the Mountains, appears on one shattered seal in Knossos flanked by [griffins](#), in an interesting parallel to Hittite depictions of the night-goddess Shaushka, who we've already tapped as an [Amazon](#) patroness. The Amazons themselves have some odd connections with the island, from the emblems on the [Phaistos Disk](#) to the strange golden nailhead in the Snake Goddess' breast, reminiscent of the supposed Amazon custom of mammary mutilation. Diktyнна herself strongly resembles the Egyptian net-goddess [Neith](#), goddess of weaving, represented by a golden cobra and identified by the Greeks with Athene and the Phrygians with Cybele.

Our whole cast appears onstage together during the Trojan War, when Neith/Athene aided the Greeks, and Britomartis/Artemis impeded them, while Penthesilea and her Amazons fought for Troy for ten long years. No doubt the votive images of the goddesses drank deeply of blood and incense during the struggle. But after the war, something happened. Agamemnon refused to sacrifice to Athene, blaming her for extending the war; Diomedes desecrated Penthesilea's body. The Snake Goddess withdrew; Apollo took over her Oracle at Delphi, and Aesklepios mastered the [snakes](#) of dream and healing. The worship of She-Who-Disappeared disappeared even from the archaeological record. Only [Lamia](#) was left, to suckle at the breasts of her worshippers and steal their children by poison and under cover of night. In the dark of the moon, she could peek out, running with the wolves as [Berchta](#) or whispering secrets into the ears of [Shakespeare](#) and [John Webster](#). And then something happened. Perhaps the spade of Sir Arthur Evans, piercing the sacred labyrinth of Knossos on the vernal equinox, March 23, 1900, opened a crack in history. Or perhaps the earthquake during the November birth festival of Tiamat (subterranean female serpent of chaos) in 1906 acted as a minor [reality temblor](#). (Another such quake rocked the island on Hecate's May feast day in 1508, right in the middle of the Goddess' carbon-dated history.) From Knossos to Kentucky, visionary and ecstatic experience began summoning these entities (facets of a single Goddess? heads of a single Hydra?) back into the world. But unlike the invasions of Dionysos, or the breeding program with Alexander, with this iteration the Snake Goddess worked more subtly, uncoiling through images and dreams, slowly convincing her unwitting cult that she existed.

"How nice the Lady was so well received. I hope She will like her new surroundings as in my possession She was rather a worry and you never know about Goddesses, their temper is so uncertain and she might have thought fit to visit her displeasure, at being so dragged about, on my head."

-- letter of Richard Seager to Bert Hodge Hill, June 29, 1914

Evans, at any rate, remained convinced. Seager, he said, "saw the fragments" of the Goddess "together with a good deal of dust of decayed ivory . . . shortly before the Great War." That phrase, the "dust of decayed ivory" strikes me as not dissimilar in some respect to the "essential saltes" that [Lovecraft](#) (whose whereabouts during the same period are suspiciously undocumented) describes as necessary for blasphemous resurrections. And is it purely a coincidence that ivory is the "gate of lies," through which emerges false dreams? Be that as it may, a number of ivory Goddesses on the pattern of the Boston figure suddenly appeared "shortly before the Great War," turning up in collections in France, Italy, Britain, and Canada. (A German archaeologist, one Georg Karo, was offered a duplicate Goddess in autumn 1914, but temporized -- and Germany lost the War. One shudders to think of the carnage had the Goddess been on both sides, as she was at Troy.) Evans, mysteriously, received a near-duplicate ivory Goddess in the 1920s that he never published, and that did not appear among his effects -- unless it is the very effeminate "Boy-God" currently held by the Seattle Art Museum. Did Evans attempt to mask the Goddess in male robes, just as he had draped Knossos in the silken scarves of his imagination years before? Was he hiding history from the Goddess as Thetis hid Achilles from the Trojan War, in transvestitism and sexual confusion?

Seager himself seemed awfully diffident about his role in the Goddess' emergence, refusing to take even a minimal finder's fee for his role in the transaction (whatever it was) or even let the museum reimburse his train fare. Even more strikingly, he wrote an anguished letter to Evans in 1915 protesting the Goddess' hamfisted "restoration" in Boston while pleading with Evans not to "quote me too much as I don't want to get my name mixed up with Her." But he could not stay away from the court of his Dark Lady; while on a boat returning to Crete from Egypt a decade later Seager suddenly sickened and died almost the moment he came on shore, on May 12, 1925. The Goddess was apparently not sated by his death. Isadora Duncan, who had danced entranced on the Goddess' staircase, was wearing her long, trailing Knossos scarf in an open-top convertible at the moment the full moon passed its peak, on the Ides of

September (the month of Hecate), 1927. It tangled in the wheel of her car, suddenly pulled taut as the car rolled forward, and strangled the dancer in the coils of the Goddess. Which is where we came in.

Pyramid Review

The Encyclopedia Cthulhiana: A Guide to Lovecraftian Horror, Expanded and Revised Second Edition (for Call of Cthulhu)

Published by Chaosium

Written by Daniel Harms

428-page black and white paperback; \$17.95

As any fan of H.P. Lovecraft's fiction (or that of his literary heirs) knows, the so-called "Cthulhu Mythos" is a sprawling collection of loosely connected tales and references. With the proliferation of such stories, keeping track of who's who and what's what in the Mythos can be a rather cumbersome task. Enter *The Encyclopedia Cthulhiana*, a concise yet methodical summary of the creatures, things, places, and personalities found the stories of Lovecraft and his followers.

The encyclopedia begins, as any collection of Mythos material should, with a brief history of Lovecraft's creations and of the work of those who came after him. Exactly what material should be included in the Cthulhu Mythos (a term coined, as the book explains, by Lovecraft's disciple August Derleth) is a matter of great debate. Should the creatures imagined by other authors but that Lovecraft never mentioned, such as Derleth's Elder Gods, be included? What about subjects of stories which are clearly Lovecraftian in style but contain none of Lovecraft's own creations, such as Donald Wandrei's *The Web Of Easter Island*? Mr. Harms address these concerns by stating:

"For the purposes of this book, I defined 'Cthulhu Mythos' as a collection fictional monsters, books, places, people, and other elements appearing the work of Lovecraft and others. It might help to think of Mythos stories as existing in a web strung together with these terms. For instance, Lovecraft's 'The Call of Cthulhu' contains allusions to Cthulhu, the *Necronomicon*, and Professor George Gammell Angell. All stories which include the same elements connect up with 'The Call of Cthulhu,' and are thus part of the Mythos. . . . In this book, I've tried to look for the most important connecting elements and to cover them as fully as possible."

Following these introductory remarks, the main body of the text consists of 362 pages of descriptions of Mythos entities. Each element receives a concise but descriptive entry, which range in length from a single sentence in the case of Jupiter to seven pages in the case of Nyarlathotep. Each entry also includes a list of the sources from which that entry was compiled. These citations include gaming material, which is denoted with (G), and the original source, which is marked with (O). While these sources are not an exhaustive list of occurrences, they do constitute the primary and most definitive sources of information on the topic. (For those who require a more complete list of works in which these various elements occur, *A Cthulhu Mythos Bibliography And Concordance* is recommended.) This section is a 150 pages longer than in the first edition.

Each entry also provides a list of references to other entries in the book, and it here that the author's concept of a web of ideas is put to good use. For example, the entry on Irem, a lost city somewhere in the Arabian Desert, refers to an artifact known as the Silver Key, whose entry explains that it was used by Randolph Carter. From Randolph Carter's entry, paths lead to Arkham, Kadath, Leng, and a number of other destinations. Following these trails of references may be the best way to read the book, as it paints an accurate picture of how these diverse elements are related.

While the book attempts to be comprehensive in its scope, some things get more consideration than others. Unsurprisingly, more detail is given to Lovecraft's works than any other author's, and the majority of the characters from his stories have their own entries. These range from the well known, like Randolph Carter, to the obscure, such as Castro (an elderly sailor captured during a raid on a Cthulhu cult in Lovecraft's "Call of Cthulhu").

This new edition of the book also provides diagrams for a number of the various symbols, signs, and runes that occur in Mythos stories. It also explains where these representations come from. For example, the Elder Sign is never described in any of Lovecraft's stories. August Derleth created the popular star-shaped version of the symbol, unaware that Lovecraft had drawn his own version in one of his letters. The book presents both and explains their histories. In situations such as this, where real-world information is introduced, the relevant text is set off from the main body of the entry by square brackets.

The *Encyclopedia Cthulhiana's* several appendices provide information that is better presented in a longer form than the entry format allows. Included are two sections about Lovecraft's most famous creation, the *Necronomicon*. The first provides a rough timeline of the book's numerous historical appearances, while the second gives a list of locations and owners of the various copies over the years. Finally, the book includes a timeline of the Mythos universe, stretching from the arrival on Earth of the first Old Ones, 4.5 billion years ago, to the far future and the last days of Earth. Each of these appendices provides references in the same format as the main body entries. The book concludes with a select bibliography of Mythos stories and pointers to further information.

For readers of Mythos fiction, the book is a useful resource for unfamiliar or forgotten creatures, places, and things. For *Call of Cthulhu Keepers*, this book is an invaluable reference. It can be a tedious chore to keep track of (or remember) all of the entities Investigators might summon, people they might want to track down, artifacts they might find, or places they might have traveled. *The Encyclopedia Cthulhiana* is an excellent reference guide to the Mythos. It even includes statistics for itself in a *Call of Cthulhu* game. Mythos fans with seven weeks and 2d6 SAN to spare won't be disappointed.

--Paul Tevis

Random Thought Table: Looking Out For Outlooks

[Last week](#), I pointed out a problem, which I shall restate and recap now.

Let's say you wake up one day and you discover you're in a Steven Spielberg movie . . . except you don't realize you're in a Steven Spielberg movie. And so you're muddling along, as best as you can; the camera zooms in on your face as you look at things, the John Williams score twiddles somewhere between "emotionally stirring" and "obnoxiously omnipresent." And all along, you're missing two vital pieces of information: First, scientists are either quirky incompetents or jackbooted thugs. Second, never, ever trust a German.

(That is, admittedly, following the examples of *E.T.*, *Jurassic Park*, *Close Encounters of the Third Kind*, *Back to the Future*, two-thirds of the Indiana Jones series, and *Saving Private Ryan*, which taught the lesson that, if you save a German's life, he will come back and kill your friends. *Schindler's List* may or may not confirm this theory more, but it's currently sitting in my "DVDs I just bought" stack.)

Anyway, the point is, one's presentation of a game world can contain rules of behavior and morality that are neither obvious, written, nor possibly even planned.

But what can you do about it?

Well, obviously the easiest and most obvious thing to do is for the gaming group to talk about it. For example, if you are in a gaming group where the GM believes "Love will find a way," but the player would rather play an angsty "Alas! I've lost my love!" character, he may only need to tell the GM that, although his character may complain about him never being reunited with his love again, the *player* is perfectly happy in exploring that. Then there won't be the awkward moment where the GM provides what he thinks the character wants, will secretly disappointing the player.

And sometimes it's just enough to point something out to a gaming group for it to be thwarted, especially if it's subconscious. For example, the GM may be unknowingly following a "No good deed will go unpunished" philosophy not because of any desire to punish the characters, but because the PCs are generally trying to do good things based on what the GM presents, and the GM -- being stuck for other story ideas -- is using that as a springboard for other complications. Once he realizes he's doing it, he can try to get more ideas from other sources. (This is similar to the tenet I was unconsciously following in *Supers* for a while -- "Anyone innocuous but interesting the PCs encounter will return as a supervillain." As soon as the players pointed to one quirky character and mumbled -- correctly -- that "Oh, he'll be back soon. He's gonna turn into a bad guy," I realized what I was doing and took steps to shake up the formula.)

It might be possible to use other techniques, depending on the issue involved and the comfort level of the players. You might be able to restructure the principle so that everyone can be happy. For example, let's say the GM has a tenet that killing sentients is wrong. (In the interest of disclosure, this is one I tend to follow . . . which is why most standard Fantasy dungeon crawls don't have much appeal for me.) If the players *really* want to play a hack-n-slash game, it might be possible to reach a compromise. Speaking for myself, for example, I've approached this in a few different ways. First, when I'm running traditionally games with high expectations of killing, I tend to allow and encourage nonlethal combat techniques. In the Mayfair *DC Heroes* game, for example, most combat -- including gunfights -- were assumed to be nonlethal; it required a conscious decision by one side or the other to enter killing combat . . . *and* the other side could choose to remain attacking nonlethally (and get bonus character points for doing so). In this way the players have all the freedom they would have in other games, while having real incentives to behave as I would prefer.

Likewise "Fortune favors the bold" is a philosophy that's easy to codify within a game. In fact, if the GM wants to make that bias possible while removing it as a general consideration (since not all the players believe it), it should be easy to make it a toggled rule that only applies to certain players. For example, the GM might offer each player the choice of having "safe" or "daring" characters; safe ones are played straight within the game rule system (assuming a non-cinematic game) while daring ones might get a set of modifiers that cancel each other out . . . say, +3 for all

"bold" actions while receiving -3 for all "safe" actions. Theoretically the bonuses the character gets will be offset by the increased danger he places himself in. (Of course, this example *does* assume that there's no corresponding tenet for a player to chose, such as "The safe way is the right way." While it's possible the GM might offer an inverse -3/+3 bonus/penalty, it might be too much to ask him to offer a completely contradictory worldview.)

I also try to determine why a gaming group would be drawn to one behavior or another. For example, to return to our "Killing is wrong" philosophy, most gaming groups I've encountered prefer killing their adversaries not because they're playing psychopaths, but because it makes intuitive sense -- if you kill that group of goblins in the first room by the dungeon exit, you certainly don't need to worry about them attacking you again on the way out. So, if this is the case, just make it known (either in game or out of game) that heroes who incapacitate bad guys *won't* have any further problem with those creatures. And then I stick to that promise.

Alternatively, it might be possible to restructure the game so that the GM changes. For example, I've discerned that I don't like the idea of killing sentients in games because I don't subscribe to the premise that a race of intelligent beings can somehow be inherently "evil" (and thus safe to kill). But a game like *Earthdawn* has as its premise that the only things the heroes are most likely to kill are other-dimensional horrors that *are* inherently evil. This distinction is enough to "trick" my moral compass; I can run an *Earthdawn* game with the understanding that the heroes can kill the designated embodiments of evil, yet needlessly slaughtering more mundane opponents will have repercussions.

Or suppose that the GM follows "Good will triumph over evil." If the players are really interested in playing an evil-based campaign for a change of pace, the GM might be able to allow it, with the understanding with the gaming group that this will be a finite series. He may allow the PCs to accumulate power and resources by any means necessary, all the while causing trouble for the forces of good *and* other evil groups. Then, at the end of that series, the GM may put them in a position of they can get everything they want . . . if they do something *really* evil. And then, if they do, the GM can declare that series over, and have the next batch of PCs in that game world have the *first* batch of PCs as their primary adversaries (the GM having taken control of them, of course).

It's also possible to take a cue from G-rated movies and Saturday morning cartoons and simply "pan away," leaving events up to the GM's and players' imaginations. For example, the Indiana Jones series follows the philosophy that, for the most part, the PCs don't ever *know* if they've killed anyone. Bad guys get shot and fall down (and out of the action), but there's no shower of blood or gore to confirm the death. Or they fall off bridges into the river below; it's easy to envision they sink like stones to a watery grave, or they might flail and swim momentarily for a few frames before the camera pans back to the action. Regardless, the GM can be vague in describing actions he and his players disagree on, so long as each side can envision the scene has he likes.

And, finally, if no compromise or communication works, it may be necessary for certain gaming groups not to play certain games, or to even avoid playing together at all. For example, if one player feverishly believes "All good deeds will be returned seven times over" and the GM adamantly believes "No good deed will go unpunished," then there may be no real way for those two to be resolved. The player will continue doing good deeds, because that's what he's compelled to do, while the GM will continue to punish him because that's what he believes. In that case, there may be no other choice but to go separate ways.

But this is an extreme case, and can hopefully be corrected in other ways. If it's a problem for the game, ask the players for ideas . . . or ask *other* gamers or groups for ideas.

Just don't trust the Germans or scientists to hold the answers.

--Steven Marsh

Lock, Stock, and Five Smoking Hitmen

An Adventure in One-Shot for *Feng Shui*

by Michael Dewar

A dark fable of the Mafia Underworld, a tale of greed and death as hard and cold as the barrel of a .45 semiautomatic, with a liberal base in Tarantino-style action, "Lock, Stock, and Five Smoking Hitmen" details the violent exploits of a group of Chicago nicotine-addicted hitmen who risk their (relatively) stable employment for the ultimate haul: \$12,000,000 on an antique steam train running from Chicago to New York.

This isn't meant to be a happy story. This is a story about five men who kill people for a living, and the way that money splits them apart and causes them to endanger their own lives in the hope of obtaining it. If at least one hitman doesn't die in the attempt, you've missed out on half the impact of the story. This isn't *Ocean's Eleven* -- it's *Reservoir Dogs*.

The Plot

The hitmen are hired to "take care" of the former accountant of mob boss Winston "Big Win" Pestoni. However, when they run said accountant to the ground, the accountant pleads for his life, offering them \$12,000,000 in exchange. It seems Big Win has been secretly dealing with Russian gun-runners -- very against Mafia policy. The accountant found out, thus the hit.

However, the accountant also knows that money heading north to pay the Russians is leaving on a train tomorrow. The shipment is in absolute secrecy, with minimum security, since Big Win is terrified the other bosses will find out, and is trying to keep things low-key.

All the hitmen have to do is get the train, get the money, and get out. Easy.

The Five Nastiest Killers in Chicago (A.K.A the players)

Tim Price -- Professional English Hitman

"There are two ways this can go: the hard way, or the fatal way."

Type: Killer

Melodramatic Hook: Secretly wants to retire

Attributes: Bod: 6, Chi: 0, Mnd: 8, Ref: 7

Perception: 9

Skills: Deceit +2 (10)

Driving +3 (10)

Guns +10 (=15)

Gangland Politics +2 (10)

Fast-talk +4 (12)

Martial Arts +2 (8)

Schticks: Hair-trigger neck hairs: 2

Lightning Reload: 2

Carnival of Carnage: 1

Weapons: Desert Eagle .357 Magnum 11/3/10+1

2 extra clips

Sean Caspian -- Daredevil Irish Hitman

"Ah, shaddup, ya twit. What Captain Wordsmith means is: [BLAM! BLAM! BLAM!] . . . yer're dead. Right, Pricey?"

Type: Killer

Melodramatic Hook: Addicted to the adrenalin rush, secret death wish

Attributes: Bod: 7, Chi: 0, Mnd: 6, Ref: 8

Speed: 10

Skills: Deceit +2 (10)

Driving +3 (10)

Guns +10 (=15)

Gangland Politics +2 (10)

Martial Arts +4 (11)

Schticks: Both Guns Blazing: 3

Carnival of Carnage: 1

Weapons: Dual Beretta 92fs (chrome, of course) 10/2/15+1

4 extra clips

These two gentlemen are the most infamous of Chicago's gunmen. They've worked as a team for years and they're close as brothers -- and argue nearly as much.

They're total opposites in temperament and bicker constantly -- even in the middle of a firefight. Tim Price is marginally more experienced than his partner and rather more calm. He's a Londoner, born and bred, and speaks with a cockney accent. In contrast, the Irishman Sean Caspian is a wild, devil-may-care fellow, with all the stereotypical craziness that his nationality is famous for. More friendly and fun-loving than his reserved partner, he is nonetheless a brutal killer underneath the ready Irish charm.

Tim Price is lean and of average height, with short dark hair and brown eyes. He always sounds vaguely exasperated with the world in general and with Caspian in particular. Sean Caspian is of similar size and build, but his reddish-blond hair and sparkling blue eyes make him a far more striking figure than his partner. He has an easy smile and a great (if inappropriate) sense of humor. He has a blood red convertible (his pride and joy) which the partners use as transport.

Both killers dress similarly, in dark jackets and jeans with plain t-shirts. Caspian smokes Marlboro cigarettes (lighting them with a battered silver Zippo), and Price routinely bums them off him. This is a source of longstanding argument between the two.

Sanchez -- Paranoid Mexican Sharpshooter

"What if the guy has bodyguards? What if they're armed? What if they're expecting us? What if -- [BLAM!]. Oh. He didn't have bodyguards, he wasn't armed and he definitely wasn't expecting us. But he might have been, you know."

Type: Sharpshooter

Melodramatic Hook: Terrified of Carnagan

Attributes: Bod: 5, Chi: 0, Mnd: 6, Ref: 7

Skills: Deceit +2 (8)

Driving +3 (10)

Guns +10 (=16)

Gangland Politics +2 (8)

Sneak +5 (12)

Lockpick +3 (10)

Schticks: Eagle Eye: 3

Signature Weapon: 1

Fast Draw: 1

Weapons: Super Ruger Redhawk 12/3/6
12 rounds loose in pockets

Sanchez makes an unlikely assassin. He's a weedy Mexican with bad skin and greasy brown hair, and in fact looks more like a street-scum snitch than a hired killer. That's what makes him dangerous.

His twitchy eyes never miss a shot, even though his favored weapon, the Super Ruger Redhawk, is so large that it looks as if the recoil could knock him flat. Seeing such a small man with such a large gun, one might be tempted to laugh.

If one wanted a high caliber round between the eyes, that is.

Despite his unquestioned skill, Sanchez is extremely paranoid and nervy, at times seeming to literally buzz with tension. This makes him unpopular with others in his profession, since his constant whining and complaining merely add to the stress of an already stressful existence. It doesn't help that he smokes foul-smelling rolled cigarettes to calm his nerves. No one's ever asked him what he puts in the cigarettes, but the smell could kill a famine victim's appetite.

Jonathan "Carnage" Carnagan -- Psychopath with a Continent-sized Chip on his Shoulder
"This is my friend, Mr Shotgun. I don't have any other friends. Why is that, do you think?"

Type: Big Bruiser

Melodramatic Hook: Crazy as a heavily-armed fox

Attributes: Bod: 11, Chi: 0, Mnd: 5, Ref: 7
Toughness: 12

Skills: Deceit +2 (=7)

Driving +3 (10)

Guns +3 (=10)

Gangland Politics +2 (7)

Martial Arts +5 (=12)

Intimidation +6 (11)

Schticks: Inevitable Comeback: 1 (Uses toughness to replace Magic score)

Signature Weapon: 1

Weapons: Sawn-off shotgun 13/3/2

20 more shells loose in pockets

Meat cleaver +3

Dynamite (4 sticks)

Jonathan "Carnage" Carnagan is not a hitman. He lacks the restraint to be a hitman. Carnie (as he is called by people with a serious death wish) just kills people for money. And the people standing behind them. And the people in the same room. Hell, he'll just blow up the entire building for kicks.

Most major figures in the underworld treat Carnie not unlike a violent wind-up toy. Wind him up, point him in the right direction, and listen to the screaming and watch the blood spray. You may need to buy an umbrella.

Carnagan is a seven-foot monstrosity with a brutish face, long dirty hair and a Southern-accented voice that sounds like he gargles with broken glass. He wears a long brown trenchcoat (stained dark in places) and smokes thick cigars. Oh yeah, and carries a couple of sticks of dynamite in each deep coat pocket. Just in case.

"Frenzied" Freddie Ferdito -- Italian Triggerman with a Hair-Trigger Temper:

"Are you eyeballin' me? Are you eyeballin' me? [BLAM!] What do you mean, he wasn't eyeballin' me? He sure as hell was! Why are ya lookin' at me like that . . . hey, are you eyeballin' me?"

me, pal?"

Type: Maverick Gunman

Melodramatic Hook: Trying to control his hair-trigger temper

Attributes: Bod: 8, Chi: 0, Mnd: 5, Ref: 7

Skills: Driving +3 (10)

Guns +9 (=14)

Gangland Politics +5 (10)

Martial Arts +4 (=10)

Intimidation +3 (8)

Schticks: Both Guns Blazing: 1

Weapons: Dual Heckler & Koch MP5Ks 11/3/30

2 extra clip

Freddie shouldn't be here. He's not a trained killer like the others, or even a card-carrying nutcase like Carnagan. He is, however, the Don's nephew, and so Big Win feels obligated to give him a slice of the action. Freddie could have been a big man in Chicago. His personal drive and close familial relationship to Big Win could have made him a major player. Unfortunately, Freddie has a little self-control problem.

Carnagan may be a psycho, but at least he's consistently dangerous. Freddie is perfectly pleasant -- until someone cuts him off in traffic, or interrupts him in conversation. Or breaths noisily. Then Freddie erupts in an avalanche of rage and violence which lasts until he's done some serious damage, managed to regain his tenuous self-control, or been forcibly restrained.

Freddie is slightly below average height and very sensitive about it. He has short blond hair and a fairly belligerent air to him. That's nothing compared to when he gets annoyed, though. When his temper is stoked, he screams obscenities through gritted teeth and his normally-pale complexion flushes deep red. Oh, and he tends to kill things.

He smokes cigarettes in a long thin cigarette holder, which he thinks makes him look distinguished. It doesn't, but no one dares tell him that.

Pasta and Pistols -- Briefing

The call comes for each of you. It's a formula of sorts, a specific structure of words and sentences -- nothing directly incriminating, but the meaning is clear.

"Mr Pestoni requests the pleasure of your company at Mazarotti's at 9 PM. He has a business proposition of some delicacy that he wishes to present you with. The client is a personal friend, and Mr Pestoni wants to make sure he is taken care of properly."

So here you are, sitting across from Chicago's most infamous mob boss: Winston "Big Win" Pestoni, slumped in a wheelchair, spit dribbling down his collar. Big Win had a stroke last year, so now he rides about in that motorized go-cart all the time.

Big Win's nose twitches and one eye opens. The eye blinks and then its companion opens. Big Win's posture and body language never changes -- unsurprisingly -- but you can feel his attention focus on you. "Boys," he rasps. "A . . . pleasure to see you all here. It's rare to see such . . . celebrated individuals together in one place at one time. And everyone's still breathin', too."

"Someone done me wrong, boys. And what hurts me, is that this somebody is very close to me. You all know Benny Balancesheet, my accountant?" Benny's a tiny little guy who looks exactly like what he is. A boring little putz who does numbers all day long and balances ledgers in his dreams every night. You can't even imagine him being brave enough to mess with the Don. "Well,

Benny has done me great personal injury. So, in turn, I wish to do him great personal injury. I want him taken care of. With extreme prejudice. Kapish?"

Big Win doesn't really want to share much more than this with the hitmen -- the less they know, the better for his purposes.

If asked exactly what Benny did, Big Win claims he caught the accountant skimming off one of his numbers rackets.

He does have one lead on Benny, though. Benny has a weakness for women of Spanish descent, and his girlfriend Maria, a Mexican hooker, keeps a house in one of Chicago's nastier barrios.

Pestoni has one other request. He doesn't want them to go looking for Benny tonight; he wants them to wait until sunrise. He wants people to see the hitmen together, see them find Maria and let them hear the gunshots. This is a message as well as a contract.

Accountants and Ammo: Tracking Down Benny

It's especially hot today, the kind of heat which saps your energy, makes you slow. Makes you dead, in this line of work.

You hunker down in the car as it rolls slowly down the streets of the barrio. It's a real dirt hole -- the smell of urine and old tequila seems as pervasive as the blazing sun. In the road ahead of you, a couple of skinny Mexican kids are playing soccer, but they scatter as the car approaches. In fact, the entire street seems deserted.

It's like that all the way to Maria's house -- empty streets, no one daring to look outside. When the players finally reach the house, it looks much the same as any of the other run-down buildings they've passed.

This single-story house might once have been cream-colored, but now it's yellowed and decaying. Unlike many of the houses in this street, it does have its own garage, attached to the side of the house, and someone has at least attempted to coax life out of the four square meters of garden in front of the door. The windows are shielded by thick brown blinds -- it must be pretty dark inside.

If the hitmen knock, the door is answered by Maria, Benny's girlfriend. Maria's a stunner -- a delicate, doe-eyed beauty with long dark hair and deep golden skin. Unfortunately, she has a temper that rivals Freddie's in its intensity. She's a virulent anti-smoker, and her first action, should any of the characters be smoking, is to snatch the offending butt from their lips and grind it into the dirt.

She speaks heavily-accented English, but reverts to Spanish when she's angry.

Maria's living room is surprisingly up-market. There's a thick leather couch in the center of the room with a widescreen TV in front of it and DVD rack beside it -- all probably presents from her boyfriend. Family photos line the walls, but you notice that none of the pictures have Benny in them. To the left is a small bathroom that looks as rundown as the rest of the house -- obviously Benny hasn't gotten around to renovating this part of Maria's house. The kitchen to the right is equally unattractive; a huge bag of shopping lies on the floor, its contents scattered around in no particular order. Directly behind the TV is a small white door, hanging half-open. It appears to lead to a tiny vegetable garden out back.

Any mention of Benny will provoke a display of truly incandescent rage. According to Maria, she and Benny broke up a week ago. She hasn't seen him since, and doesn't want to, thank you very much. In fact, if the players have identified themselves as hitmen, she'll offer them 20 dollars to shoot him in the groin, just for her.

This impressive display of feminist rage is all faked. Maria is angry with Benny, but she's angry because he's hiding

out in her garage next door, too scared to rent a hotel in case Pestoni finds him. Lurking behind the small white door to the vegetable garden is Tommy Two-Tone, a mobster Benny has paid off, waiting to pop the players if they aren't convinced by Maria's performance.

There are several clues to Maria's lie, any of which can be noticed by a player succeeding on a Perception roll against difficulty 8. First, the toilet seat in Maria's bathroom is up, not down. Second, the shopping bag in the kitchen contains far too much food for Maria alone to eat. Third, there is a cigarette-filled ashtray on top of Maria-the-Militant-Non-Smoker's TV. Finally, especially successful players may notice that the white door to the garden is quivering in the breeze -- but the air is dead calm.

In the event the players notice none of this and are totally taken-in by Maria's story, you can always have Benny trying to sneak out of the garage when they leave.

Regardless, if there's any hint that the players have figured it out, or if they start to behave aggressively towards Maria, then --

The white door at the back of the room seems to tremble slightly -- and then bullets rip through the wood. They whiz past you, shattering windows and punching holes in the walls.

Tommy Two-Tone empties a full nine-mill clip through the door. Sensible hitmen should take cover at this point. Tommy is considered to be behind 50% cover hiding behind the door (difficulty penalty of +2 to hit) -- while the door covers much of him, it's really quite flimsy.

Interesting locations for the players to dive behind include:

- **The leather sofa.** Great cover, plus when hit by bullets, it puffs white stuffing into the air to create a nice snow effect.
- **The kitchen.** Unfortunately, it doesn't have a very good angle on the door, but imaginative players can throw knives, canned food etc. at the hapless Tommy.
- **The TV.** Regardless of whether or not anyone's hiding behind it, a missed shot HAS to plow through this unlucky appliance, causing a dramatic rain of sparks and a corresponding shriek from Maria.
- **The bathroom.** A good position, and particularly cunning players may be able to angle the mirror on the bathroom cupboard so they can see the door without needing to poke their heads out of cover.

Finally, however, the players bust into the vegetable garden.

The garden is a tiny little pile of dirt with a few veggies stuffed into the grime. It was surrounded by a wire fence once, but the fence is peeling back and has huge hole in it. There's a door to your left, which must lead into the garage . . . WHAM! The door slams open into your face!

Benny, cowering in the garage, makes a break for it. Any character right near the door may literally get banged on the nose as it slams back and he tries to scramble through a hole in the fence. He'll try to get away from the house and run to a junkyard he knows a few blocks down. He's got a car stashed there, hidden among the junked vehicles.

If any of them shoot at Benny and hit him, just let it be an incapacitating wound of some kind. Finally, as they bring Benny down and stalk towards him . . .

*Benny whimpers as he tries to crawl backwards, never taking his eyes off you. "Hey, listen. You don't wanna shoot me, guys. I've got a really good reason why you shouldn't . . . hell, I've got 12 **million** reasons not to shoot me! Just listen, okay? I've got a really sweet deal for you boys . . ."*

Obviously, there is a risk that the hitmen may decide to shoot him and ignore his deal. There's not much you can do to prevent this, but if they go into the garage afterwards, they'll find all the documents Benny was working on -- evidence of Don Pestoni's deal with the Russians and information about the money train.

But with any luck, the players will hear Benny out.

Benny heaves a sigh of relief, and mops his forehead with his shirt sleeve. "Did the boss say why he wanted me dead?"

The players can give whatever excuse you had Pestoni make.

Benny smirks. "I figured that's what he'd say. It's bulls---. I found about somethin', somethin' big, and he's decided that he doesn't want anyone else to know about it. The somethin', I mean."

He leans in conspiratorially, his beady eyes meeting yours. "Big Win's been dealin' with the Russian Mob, boys. He's been buyin' arms from them, despite the fact that all the other crime families are at war with them Russkie scum. He's goin' behind the back of all the other bosses so he can buy weapons cheap. But that ain't all. The Russian's are demanding payment, so Big Win is sending up the money he owes them. It's goin' north, by train, I don't know where. Twelve million dollars. And 43 cents. On one train, with minimal guard. Big Win can't put too many people on the train, 'cause that might make the other bosses wise to his little scam.

"And best of all, if that money goes missin' then Big Win can't do nothin'. He can't send anybody after the thieves, since that would mean explainin' what the money's for. And that would get him dead."

It's a perfect scheme -- or so it appears. Benny's got all the background info he could gather locked up in Maria's garage. It's mostly ledgers and paperwork from the Don's files, all of which would be extremely useful to your average accountant but only useful to your average hitman as a sedative. However, Benny does know that the train is leaving tomorrow, and even has a brochure. The train's some antique reconstruction which Big Win's cousin owns.

The brochure is headed "The Chicago Steam Experience" in a font that looks at least 50 years out of date. Below the heading is a grainy black-and-white photo of an old steam train which looks like Thomas the Tank Engine's older, rustier brother. "Genuine old-style steam engine, lovingly restored!" the brochure burbles. "Entertain friends and family on this delightful ride! Special discount for parties of four or greater!"

"The money's gonna be right in the back, the luggage compartment," Benny whimpers. "The Russians sent down two of their enforcers to keep an eye on it. Alexis and Marx Goravich -- the Brothers Goravich, they call 'em.

"You've heard of the Brothers Goravich. They're mean as hell -- the Russian Mob's private boogiemen."

The brochure includes a detailed map of the train, as well as the route it travels from Chicago to New York.

Steam Shootout: The Great Train Robbery

Armed with their new intel (and lots of guns), it's time for the hitmen to plan the actual robbery:

- **Getting Onboard:** There are still plenty of seats available, and they're dirt-cheap. "The Steam Experience" is just as unpopular as Benny makes it out to be. It is probably possible to sneak onboard, but it hardly seems necessary. There are no metal detectors at the train platform, though there are railway guards.
- **Equipment:** Should the hitmen want to pick up extra guns, Mission Impossible-type gear, explosives, nuclear weapons, etc., it's completely up to the GM what is available within the given timeframe. Remember, the hitmen only have a few hours to plan, so it's easy to just say that their usual gun suppliers need more time. It is quite possible they can do the robbery with their starting gear and nothing else.
- **The Tunnel:** About an hour-and-a-half into the journey, the train goes through a tunnel. Since the train is an authentic steam model, it has no interior lights, so there's a total blackout for about five minutes. Perfect robbery opportunity.
- **Stopping the Train:** If the players want to stop the train to unload the money, they'll need to get the driver's compartment at the front and pull the brake directly. This is an old train -- there aren't emergency brakes like a modern subway train.
- **On-Board Security:** According to the brochure, "Albert, our Helpful Conductor" is the only security the train has. Of course, this doesn't include whatever the Russians have put there.

The Train

The piercing whistle of the train hails you as you walk down the platform towards it, pushing through the crowds of people attempting to board other, more-normal forms of transport. There's something kind of magical about the way the train looms ahead of you, smoke pouring from it into the air, like someone lighting the world's largest Cuban.

It brings back happy memories of old movies you saw as kids, and an almost spiritual feeling of nostalgia fills you.

Okay, enough of the sentimental stuff. Time to shoot some people.

1.Driver's Compartment

At the front of the train is the big black steam engine proper. Just in front of the driver's compartment is the furnace which powers the train, which is constantly fed by the driver's sweating assistant. The assistant isn't just sweating from

the heat, though. Fear also plays a factor, because the regular driver has been locked in a closet and replaced by a Russian bruiser, just in case someone might try to interfere with the running of the train. Like say, some greedy hitmen-turned-robbers.

Past the furnace and through another door is the driver's compartment. The engine room is so noisy that the driver can't hear any arguments or fights that go on outside, for example as the hitmen beat his assistant senseless.

Dramatic tension being what it is, the driver is aware of anyone at the door -- he can see their reflection in the dials in front of him.

Dmitri, the Russian Answer to Oddjob

Attributes: Bod: 11, Chi: 0, Mnd: 5, Ref: 5

Skills: Guns +6 (11)

Martial Arts +7 (12)

2. First Class

This is basically just a long passage with cabin doors on either side. There's hardly anyone in first class, except one elderly couple who're both deaf as posts. If there is any violence here, they bang loudly on the walls and complain about noisy honeymoon couples.

Should the players bust into a cabin, or have bought one, they'll find quite a nice little bed, a tiny bathroom, and a bottle of chilled champagne. Yes, they can use the champagne to make a Molotov cocktail if they *really* want to. But is that any way to treat good champagne?

3. Generic Coaches 1-3

Much like first class, these basically consist of long corridors down which characters can have dramatic firefights and cabin doors running down each side. There are a few guests in these coaches, and the third coach area also has a pair of Russian mobsters leaning against an open window sharing a cigarette. Your hitmen should be able to identify the type 50 meters away -- shifty body-language, heavy accents, and bulky coats with strange lumps.

Generic Russian Mobsters

(unnamed character)

Bod: 6, Chi: 0, Mind: 5, Ref: 5

Guns: 10, Martial Arts: 8

Weapons: Ingram MAC-10 10/4/49

4. Open Seating

This is an especially long coach. The people in here sit on benches opposite one another, like on a subway. Nothing much is happening; the passengers just sit and stare at one another with that slightly embarrassed way people do on trains. Albert, the conductor, meanders from passenger to passenger, checking their tickets with a spectacular lack of enthusiasm. Albert is 70-something and talks like each word is being pulled from him by force.

5. Generic Coaches 4 and 5

You know the formula by now. Long corridors, cabin doors. There are several rooms full of Russian Mobsters, playing cards and drinking Vodka to while away the journey. As many Mobsters as the DM feels are appropriate can be found here.

Generic Russian Mobster

(unnamed characters)

Bod: 6, Chi: 0, Mind: 5, Ref: 5

Guns: 10, Martial Arts: 8

Weapons: Ingram MAC-10 10/4/49

6. The Dining Cart

The people who built this steam-powered white elephant must had limited imaginations -- the dining cart is white. Just white: white tablecloths and walls and seats. It hurts the eyes. And is also really tacky. A retired couple sit at a table in far corner, gazing with near-blind eyes at the scenery, and a bored businessman picks at his food a table away. The only table vaguely active is host to a gaggle of school children, 15 or so, all clustered around a pretty young woman who looks about ready to kill them all.

"Miss, when are we going to eat?" "Miss, can't the train go any faster?" "Miss, can we see the furnace?"

Just past the retired couple, the hitmen can see the door that leads to the baggage cart. There are plenty of seats, and one over-tired waiter will attempt to poison them with substandard food and flat champagne. The kids view any stranger with great excitement, and will wander over to ask the hitmen arbitrary and annoying questions.

7. The Baggage Cart

No passengers are supposed to be allowed into the baggage cart, so the hitmen can't simply waltz in. There's a big sign saying, "No Entry" and more importantly, the waiter in the dining cart will refuse to let them go. If he's unavailable, the children, seeing the sign, will start up an annoying chorus of complaints instead.

So it is effectively only possible for the hitmen to get into the cart by causing a disturbance -- either if they pull out their guns and threaten whoever's telling them not to enter (screams and gasps ensue), or if they simply ignore the waiter/children and a shouting match ensues.

The baggage cart is lit by a few naked bulbs hanging from the roof. They don't so much provide illumination as make the darkness clearer. There are five big shelves in the center of the cart like bookshelves in a library, all packed with suitcases and packages and bags. All too small to carry the cash.

Resting in a rough pile in the back corner are several large wooden crates, piled up.

The crates have been nailed shut, but there's a crowbar leaning against the wall next to them. Unfortunately, the hitman opening the top crate will have to put his gun aside in order to lever the box open. Wood cracks like a gunshot as he slowly works the crowbar under the lid and pulls it away and sees . . .

As the lid falls away, you are bathed in a gentle yellow radiance. Your own stunned reflection stares up at you, repeated a dozen times in a dozen smooth gold ingots. And this is only the first box . . . there must be over a ton of gold here!

Needless to say, this is a serious, and unexpected, problem. It'll take at least three hitmen to carry each crate, and there

are four crates in total. Benny knew the payment was coming through, but he didn't know the currency to be used, and that puts a major wrench in whatever robbery plan the players have worked out.

In the aftermath, this should clearly be the point at which the whole robbery goes sour. Up until this moment, let the hitmen have it fairly easy. The Russians are caught by surprise, the passengers too terrified to move . . . but now the mobsters in the cabins start coming out in force, and the passengers start to panic.

Of more immediate importance, though, are the pair of Russian hitmen watching those players in the baggage cart. The Brothers Goravich have been staying here, watching the gold. When the door opens, they hide among the shelves, but now that the hitmen are standing dumbfounded at the sight of their golden haul, they strike!

Depending on how vicious you are feeling, you may grant the Russians an automatic hit on the hitmen standing over the gold (his back is totally to them). His own blood splatters the gold as they shoot him in the back and open up on the rest . . .

More mercifully, you may have a tell-tale creak give them away and let the hitmen dive for cover as they open up. This gunfight should be a nasty, bloody affair. The Brothers are the best killers the Russian Mob has to offer, and they have surprise on their side.

After the first furious blast of gunfire, they fade away, ducking down between the shelves, forcing those hitmen who survive to cautiously peer around corners and clear corridors walled in by bags. The Russians use their superior cover to full advantage, climbing onto high shelves to ambush from above, or pulling out bags to create peepholes in the shelves through which to fire. The Brothers have been killing together for years, and their familial bond creates an almost psychic link between them. They're creepy, black-eyed angels of death, and the characters should be convinced they're probably about to die.

The Brother Goravich, Bloodthirsty Brother Assassins (Identical Stats)

Attributes: Bod: 7 Chi: 0 Mnd: 5 Ref: 7

Guns +10 (=15)

Martial arts +5 (12)

Schticks: Both Guns Blazing (1)

Eagle Eye (1)

Weapons: Pump-Action Shotgun 13/3/8(Alexis)

Ingram MAC-10 10/4/49 (Marx)

As this gunfight begins, the rest of Russians on the train make a concerted effort to seize control, keeping the other hitmen from going to the aid of those in the baggage cart . . .

The rest of the gunfight can play out as you choose -- the hitmen pinned between the Brothers Goravich and the bulk of the Russian mobsters. The dining cart makes a great location for a major fight, with tables to shelter behind, glasses to shatter, and screaming children to protect/use as bodyshields (depends how truly ruthless the hitmen are).

And yes, they can use champagne bottles as Molotov cocktails. What are you, obsessed?

Speaking of explosions, Carnie's dynamite can add an interesting dynamic to the scene. He's got enough to do some serious damage, maybe even to split the train in two. Unfortunately, explosions start fires, giving them another dramatic hazard to avoid.

The story does focus on the corrupting influence of greed, and the inherent lack of trust between criminals, but it doesn't have to be a total bloodbath either. While letting these none-too-pleasant gunmen get away scot-free and live in the Bahamas isn't exactly a morally-uplifting ending, you can find try to find a balance between the two extremes.

Regardless, it'll be an experience they won't forget.

Why Won't You Die?

Narrating Death in *HeroQuest*

by Roderick Robertson

In *HeroQuest*, the rules state that death cannot result from a die roll, only a deliberate action. The narrator is given some guidelines, but still questions remain: "What is 'helpless' and what is not? Is an injured foe helpless, or even an impaired one? If I used my parting shot to injure them, can I then kill them, or have I blown my chance? What if he surrenders, can I kill him once I have him in chains?"

The life or death decision is ultimately up to the narrator, who should look at a number of story factors when determining if the villain should die.

What type of character is the soon-to-be-deceased? Is this a minor character? No problem; let him die. You might not even need to worry about whether faceless minions are alive or not after the heroes go through them like a dose of salts. Villains with more influence will have more impact if they are killed: feuds, outlawry, bounty hunters, the cultural equivalent of the FBI's Most Wanted . . . not to mention the mess it might make of your carefully laid plot!

What is the situation of his soon-to-be death? Does he still have a sword in his hand, or has he surrendered and now has his hands tied behind his back? Is he asleep, or under the influence of drugs or alcohol? The more helpless he is, the easier it is to come down on the side of death. Perhaps the death of a character is foreordained, and the question is more "What will he do before he dies?" than "Will he die?" For example, a player says: "I'll shoot the guard at the door with my bow, killing him before he can give the alarm." On a complete success, the guard not only doesn't raise the alarm, his body is never found, leading the villains to suspect that he let the heroes in and then ran off. On the other hand, on a complete failure he not only raises the alarm before he dies, but manages somehow to further discommode the hero -- locking and barring the door, or giving an accurate description of his attacker before he gasps his last breath, or a patrol just happens to see him fall and so is ready for the heroes.

What are the cultural ramifications of the killing? Is life cheap? Will the family want revenge or simple wergild? Will the authorities become involved? These are things that the hero would know, but the player might not. A narrator should ensure that the player knows what is the cultural norm. No Heortling will blink if a Humakti kills his opponent, nor will trolls be surprised if a Zorak Zoran berserker fails to observe the protocols of surrender. But a death during a simple cattle raid could involve the hero's clan in a decades-long feud. Every culture has some value that it places on the lives of its members, and often a different one placed on the lives of "outsiders." Before the decision can be made, the player needs to be aware of what his hero already knows.

How determined is the player that the villain die? Does he know the game ramifications of what he is doing? Make sure that he understands what is at stake per note 3. If he still wants to kill the son of the King/General/High Priest/Crime Boss/whatever, even when he knows the consequences, let him. But be ruthless about the revenge taken by grieving friends and family. It can add a whole new subplot to the game as the hero (and his friends) have to keep one step ahead of death squads and bounty hunters!

Finally, does it make sense? You've brought your opponent to -8 AP after a successful parting shot. According to the rules: "His body, pride, or spirit is bruised, bashed, and cut; maybe he has just lost the will to continue. A little time or treatment and he will be as good as new." Depending on the factors above, the narrator has to make a choice. Is this helpless enough to allow the player to say, "I kill him"?

Dice or No Dice -- the Mechanics of the Death Blow

The narrator holds the lives of all the characters in his hands. But there are ways, and there are ways, to kill off a

character.

A character in a particularly helpless situation (tied up, dead drunk, etc.) might be killable with an automatic success: after all, no self-respecting hero can fail to kill a helpless character like this. A faceless minion might also be an automatic kill. No one really cares about him anyway (which is why he is a faceless minion instead of a named character!).

A character in a not-really-helpless situation, or one that has more "game presence" than a faceless minion, may need a die roll to deliver the death blow. You can run this as a simple contest -- on any level of victory, the villain dies. The narrator should probably give the villain "choice of weapons" in the contest -- on the theory that he knows what is about to happen, and tries one last ditch effort to save his own life. The villain can try almost anything: Pleading, ransom, a revelation ("I am your Father"), a sudden bolt for the door, or a grab for a weapon.

Player: "I pull out my knife and cut his throat."

Narrator: "As you pull out your knife, your victim says 'Wait! My ransom is 2,000 Lunars!' You can decide to take his offer, but if you still want to kill him, you have to beat his 18 in Ransom. Oh, and you have 'Greedy,' right? Well, it will act as a negative modifier to whatever ability you use to resist him."

If the hero is defeated in the contest, the narrator has to determine not only why the villain wasn't killed, but what ongoing effects, if any, might come of it. Results should match the ability the villain used. Pleading and whining may make the hero too disgusted to kill the villain, and he might even release him with: "Get out of my sight, you worthless worm." Ransoms may actually be paid (if the villain is honorable), or not (and the hero might have a greater resistance to that sort of plea in the future -- once burned, twice shy). "I am Your Father" might introduce a new supporting character for the hero or give him a new goal in life (rehabilitate daddy, avenge the family name by killing daddy, find his real daddy). Bolting for the door would result in the villain successfully evading the hero, and grabbing a weapon might bring on a new fight -- treat it as if the villain had made a final action and succeeded.

Finally, some villains are too important to allow a simple death. In the style of pulp adventures, soap operas, and superhero comics, unless you see the villain's body burned before your eyes, can you really be sure that he's dead? (Especially in Glorantha, where Resurrection is a distinct possibility.) In this case a Hero Point may be necessary to ensure that the villain is "morally, ethic'ly, spiritually, physically, positively, absolutely, undeniably and reliably Dead."

At the Other End of the Sword -- Death to Heroes!

The villains and narrator characters of Glorantha are not the only ones who face death. The player heroes can also feel the cold breath of the grave. In this case, the narrator must make the decision for the villains. Not only whether they will kill or not, but if they will, how will they go about it? A simple knife across the throat, or a death trap in the best tradition of Batman villains? A narrator should never simply kill a hero -- always allow the hero a chance to escape, even if only a small one. Nothing frustrates players so much as when their heroes suffer Death by Narrator Fiat with no hope of reprieve. A narrator can use the methods detailed above, or simply "hold the prisoner until we get the gallows built," allowing a rescue or escape attempt. If the player or his friends can't come up with a plan, and all else fails, then the long march to the gallows and dancing the hempen jig may be all that's left for the hero; but at least you gave him the opportunity.

Finally, always allow the hero to sacrifice himself for the good of others. The true hero will hold up the collapsing tunnel roof to let his friends escape . . . even though he knows that he won't get out himself; or will hold off the Chaos monstrosity long enough to let his friends close the door . . . with him on the wrong side. These are things that a true self-respecting hero should succeed at, even (or especially) if it means his death. You probably should not even need to make them roll dice for it; self sacrifice for the sake of others is perhaps the one thing no self-respecting hero should ever fail at. As narrator, your job is not always to make the decision, but sometimes simply to respect it.

The Ratpire

by Elizabeth McCoy

She woke up in the clearing, with him standing over her. He smiled, the light of a fanatic in his eyes. "And now you will join our glorious revolution!" he declaimed.

It was best to humor insane kidnappers. She made herself smile back, nodded, said, "Yes, I'm delighted."

*And then she was shrinking, twisting, turning into something **strange**.*

With a horrified squeak, the sleek brown rat skittered into a nearby rat-hole, while the man laughed behind her.

While there are many kinds of vampire, most of them drink blood. Despite being undead -- no pulse, no need to breathe, and all the other usual signs -- the "Ratpire" does not. It's not entirely clear *what* he feasts upon, except perhaps the psychic anguish of his "brood." His undead nature is transferred to his victims not by a bite or exchange of bodily fluids, but by securing their consent (forced, lying, or genuine) and transforming them into rats.

The Ratpire is also, apparently, ravingly insane. He believes himself to be a Robin Hood figure at the best of times, a Scarlet Pimpernel figure other times, and a noble revolutionary the rest of the time. At least once a month -- and often nightly -- he gathers his rat-brood and gives "ringing, rousing" speeches. In truth, they are incoherent yammerings against the establishment or some powerful business of the moment, but most of his brood are so traumatized and afraid of the Ratpire that they react as he expects.

He rarely leads his brood against any given enemy. Rarely, however, does not mean never. When his tunnels are truly full to overflowing with his undead rat-brood, he will lead the squeaking horde to the target, past defenses, and let them rampage as only a swarm of undead rats can. Even assuming that they are not driven back by their target's defenses, many of them tend to die in such raids. The attack ends when the Ratpire, bearing some single target of his anger, calls the brood away again, back to the meadow -- where he will force the agreement of his new victim and change him (or her) into a rat as well.

The Ratpire is a tall, hairy, swarthy man. He looks more like a wild man given clothing than a rat. He strides about with all the confidence (or hubris) of a hero. He is charismatic enough, his voice ringing enough, to impress many people -- until they pay attention to the fact that his inspired oration is actually anti-establishment ravings with no logic to speak of. He is frighteningly strong and fast, but not inhumanly so. He can change, whenever he wishes, into a large, gray rat. He also has no interest whatsoever in anything sexual; male, female, he cares not for anything carnal, but only if they will listen to his ranting.

The Ratpire's brood are were-rats. Their first transformation lasts approximately 24 hours, and after that, they can change into rat form at will. They can only change into human form if they are:

- Underground,
- In darkness (no more than a candle or lantern), or
- At night.

Any one of those three conditions is enough. (The Ratpire's lair includes a cavern large enough for his brood to assume human form -- the better to listen to him rant and rave.)

Besides gaining the power to transform (a process taking a few seconds), a member of the brood has what they call "Ratsight." They can choose not to invoke it, but it requires no concentration or energy to do so. When they do, they see their human forms (their own and others') superimposed over their rat-forms. They hear their squeaks and whiffles

as human voices, understandable even if they would normally be speaking different languages. And while their little paws are still paws, they somehow become more cunning and dexterous while Ratsight is invoked, as if the thumbs they see are actually half-there. They can even carry things and run upright, though more slowly.

Onlookers without Ratsight will only see rats behaving oddly -- though it will be clear enough that they're doing something unnatural if they've got a bundle in their forepaws and are running on their hind legs!

Natural rats, mice, and other animals (including owls) avoid the Ratpire and his brood; they *smell* wrong. A cornered animal will still fight, but half-heartedly, and trying to escape whenever possible. Normal humans notice nothing different about a human-formed brood-member, though. They are masters of the night only between the walls and under the floors.

The power the Ratpire holds over his brood is part psychological and part supernatural. He cannot command them nor force them to obey by his will alone, but many of them will do his bidding in the hopes that he will be able to free them from their undead were-rat state, and let them walk in the sunlight again. And he *can* force them into rat-form. He can also, when they are in rat form, cause their eyes to shrivel in their heads like little gray beads and fall out, blinding the unfortunate rat until he (or she) regains the Ratpire's favor. Even then, they'd better still have the eyes to reinsert.

He can only transform a "willing" victim -- but that "willingness" can be an outright lie, a babbling agreement, or anything else of that sort. Between the initial transformation and seeing what happens to those who get to defiant (blinding), not to mention the "immortal undead" part changing the world around them unrecognizably, most of the brood are gibberingly mad.

The brood lives in burrows (and a cavern) in a meadow. This is where they return in the day, this is where the Ratpire takes his victims, and -- no matter how inconvenient -- this is where their "headquarters" is. Only if it is utterly destroyed will the Ratpire lead his brood -- or at least what's left of it -- away to dig new tunnels and a new "auditorium" cavern.

The Ratpire in Different Genres

Fantasy

The Ratpire has some limited spells -- in *GURPS* terms, he might have One-College (Animal) Magery, or be a Starmage, or both. He's also made a deal with a demon, and his soul is forfeit. But that doesn't bother him, as he plans to live forever. (Unlike many undead, the brood's souls are *not* automatically damned or destroyed upon death. Not that they know that, of course, and may act as if they were already damned.)

Though strong and fast, more sturdy than he looks, the Ratpire is killable. Whether this will free his brood from their curse is up to the GM. That might be sufficient, or they might need to go on some further quest to find the ritual that will sever the last influence of the demonic pact.

Modern Fantasy/Horror

The Ratpire was a powerless lunatic, until he found an old book, an old ritual, and called up that which he could not put down. "Fortunately" for him, the ancient spirit was interested in giving him power. In return, he sends his brood to steal ancient artifacts and tomes, hiding them away in their burrows. And the Ratpire studies, his eyes glowing with unnatural light as the spirit he hosts researches how to gain more power . . .

And as he does, the brood sets up items of power in places of power, to prepare a giant summoning circle . . .

Ultra-Tech

The Ratpire was once a bio-sciences expert, until an employer too good to be true stole his research and left him without the fame and fortune he deserved. Government lawyers didn't help him, no one helped him. No one but the strange old crone he met while waiting for a shuttle, that is. She knew of a strange location, hidden deep beneath the city in the maintenance tunnels and sewers where only (suspiciously healthy) vermin went.

Though she shared the secrets of her own braintape and robotics research with him, his thirst for revenge was transformed. He could have used his robotic rat body to sneak into his former employer's headquarters and reveal how he was wronged -- but he didn't. He wanted nothing less than the overthrow of the entire establishment!

Now he kidnaps people and locks them within the special chambers his crone benefactor developed, placing their minds within rat-robots and holding their time-protected bodies hostage. The crone herself, though, is not dead -- she's merely in suspended animation . . .

In Nomine

The Ratpire is not, actually, an undead. He's a spirit from a dream who somehow taps into the dreams of rats -- he is the Ratcatcher, who entered into assumption combat with a Russian Revolutionary Vampire dream-spirit, and emerged with an even more twisted Image. Rats dream of him with terror, and that feeds him Essence. Now humans dream of him with terror as well.

His brood is primarily composed of ethereal spirits and figments, but a few twisted dream-shades are now in their ranks, as well as two demonlings. His powers allow him, and his brood, to enter dreamscapes and take them over. Sometimes, he can even pull the confused dreamer into a form of lucid dreaming, collapsing their dreamscape around them . . . in rat form, to run with the horde after their Ratpire master.

He aspires to godhood, in his twisted way, with his worshiping rat subjects to provide the energy he needs. He does not follow Beleth, Demon Princess of Nightmares, though his "recruitment" of dreaming "servants" is often nightmarish.

Until someone sees how he rules his ratling brood, he seems to be a relatively "harmless" lunatic. After, however . . . Well, there's a reason Uriel went on a Purity Crusade against the ethereal spirits, and the Ratpire -- though not yet existing for that -- exemplifies that reason.

Haut-Cornet d'Antares

Designed by **Kenneth Hite**
GURPS Fourth Edition Stats by **Andrew Hackard**

Ever since the armies of the Han warlords conquered Europe a century ago, the court of France (and the other, lesser, courts of Christendom) has removed to the new worlds: Mars, Venus, and the Americas. King Louis XXV reigns from Haut-Paris, on the banks of the Martian Grand Canal; his cousins and relations rule the other provinces from Louisiana to Marianne (the rich and decadent spice entrepot in the Venusian jungles). This far-flung Realm is knit together by the Jansenist Order, founded by disciples of Cornelius Jansen, the Bishop of Ypres who discovered "the methods of Necessary Grace" -- psionics -- and published them posthumously in 1638. The Order helps guide and develop inventions, from the steam-car to the crystalwave communicator to the Pascal Drive that propels space frigates between the three planets. It also administers hospitals, performs numberless good works, and trains the royal guards (the only ones permitted to wield the deadly force sword invented by Father Lucien George of the Order in 1799) in the disciplines of Necessary Grace while attempting (with some occasional success) to instill in them morality and respect for righteousness.

One such occasional success, Haut-Cornet Louis d'Antares of Her Majesty's Martian Guards, while on patrol in the Tharsis Mountains, uncovered a ring of slave traders protected by a powerful count. As he investigated further, he discovered that the count was the tool of a hidden figure of vast power, known only as the Voice of the Phantom. This dark entity planned to somehow "shut the gates of the City of God," ending the Jansenist Order's ability to obtain Necessary Grace, by spreading vile practices throughout the court and aristocracy, eventually enmeshing the King himself in their toils. Fortunately, Queen Angeline remained unspoiled by such debaucheries, and with her aid and protection, d'Antares was able to weed out the worst elements from court in a series of duels, social coups, and dramatic showdowns over poisoned wine. With information gathered from the disgraced courtiers, d'Antares tracked the Voice of the Phantom to a hidden fastness in the Gobi Desert, in the center of the Han domains.

The high desert of the Gobi proved little hardship to one used to Martian night patrol, and d'Antares managed to infiltrate the fortress using passwords and signs learned from the Voice's acolytes in Haut-Paris. Once inside, he rescued a number of prisoners from the dungeons, thinking only to profit from the confusion of their escape. Instead, he discovered that they were guardsmen themselves, of an Order called ISWAT, who had tracked the Voice to "this Earth" (which they called "Reality Cyrano") after It had escaped a "quantum prison" somewhere. Rallying them to his Queen's cause, d'Antares led them to the heart of the fortress and, with his aid as a focus for certain Masters of the Jansenist Order (who by this time had also gone over to the offensive against the Voice of the Phantom), they banished the Voice back to its rightful incarceration. On the advice of the General of the Order, Queen Angeline decreed that d'Antares should become her personal liaison with this ISWAT, to keep a watch on the Voice of the Phantom and to guard against any and all other dangers that might threaten the Realm from outside its natural timeline.

Devious Doors

by S. Deniz Bucak

Are you tired of saying "You see a wooden door"? Here are some trapped and magical doors to liven up a *d20 System* fantasy adventure.

Barbarian Catcher: Set in a recessed alcove, this door has a thin veneer of wood over its steel body (DC 25 spot check to notice it isn't actually wood.) Attempting to smash or open the door sets off the trap. Pointed steel bars shoot out of both sides of the alcove, trapping (and damaging) the intruder, while hot oil or green slime pours from the ceiling.

Game Stats: CR 6; mechanical; manual reset; DC 22 Reflex save for 1/2 damage; 4d6 damage from the bars, 4d6 damage from oil if pinned, no save possible if pinned. No damage from oil if not pinned. See *DMG* for effects of green slime. A pinned character can make a DC 20 Strength check each round to try to escape. Each attempt causes 2d6 damage. Or another unpinned character can free him with a DC 25 disarm traps check. Search DC 25 Disable Device DC 25; DC 30 to break the door; Open Lock DC 25.

Market Price: 20,400 gp.

Thief Catcher: A concealed 10×10 ft. trap door is in front of this door. Anything that's inserted into the keyhole (such as a lockpick set or a "spare" key the dungeon owner might leave lying around) triggers the trap door, which leads to a 30' pit with spikes at the bottom. After six seconds the trap door closes again and locks, capturing whoever is in the pit. The true keyhole is concealed on the wall next to the door.

Game Stats: CR 4; mechanical; touch trigger; automatic reset; DC 20 Reflex save avoids; 30 ft deep (3d6, fall); multiple targets (10×10 area); pit spikes (Atk +10 melee, 1d4 spikes per target for 1d4+3 damage each) Search DC 21; Disable Device DC 20. Opening the trap door after someone has fallen in requires a DC 20 Open Locks roll (-4 to the roll if it is being opened from the inside. This also requires a DC 16 Balance roll.) : hidden bypass (DC 20 Search to find, DC 25 Open Locks, 23 Break DC);

Market Price: 8,000 gp.

Wizard Catcher: When someone attempts to open this door without first saying the password, either through a knock spell or through picking or breaking the lock, the intruder is turned to stone. The door is usually stone with a scowling medusa face carved into it.

Game Stats: CR 7; magical device; proximity trigger: no reset (one shot version) or automatic; spell effect (flesh to stone, 11th level wizard, DC 19 Fortitude save); Search DC 31; Disable Device DC 31. The door is Arcane Locked (DC 35 Open Locks DC 33 Break).

Cost: 3,300 gp 264 XP (one shot) or 33,000 gp 2,640 XP (automatic reset).

Whisperer: When the party stops in front of this door they will hear indistinct muttering and the clanking of arms and armor. Then a gruff voice will say in Draconic, "Quiet! They're right outside." The noises will stop after that. The whisperer is designed to scare away a low-level party from an otherwise unguarded room.

Game Stats: CR 1; magical device; proximity trigger (Alarm); automatic reset; spell effect (Ghost Sound, 1st level wizard, DC 11 Will save negates); Search DC 25; Disable Device DC 25.

Cost: 250 gp 20 XP.

False Door: Designed to delay intruders until guards arrive this "door" is just a wooden façade and will not open. If destroyed it reveals a blank wall behind it. The false door is coated with a potent glue and anyone who touches any part of the door will be stuck to it.

Game Stats: CR 1; mechanical; touch trigger; manual reset (glue must be re-applied); DC 15 Reflex save to avoid being glued. If a character is stuck to the door, it takes a DC 17 Str check to break loose. Otherwise the character cannot move and takes a -2 to attack rolls and a -4 to Dex. Search DC 20; Disable Device NA; Hardness and hp as a wooden door (18 Break DC Hardness 5 HP 15.)

Market Price: 500 gp.

The Guillotine: When this door is opened, unless a hidden catch is pressed, an iron blade falls from the middle of the doorway. The person opening the door either takes damage or, if he leaps out of the way, may be trapped as the blade blocks the doorway.

Game Stats: CR 4; mechanical; location trigger; manual reset; DC 20 Reflex save avoids; 4d6 damage; Search DC 25; Disable Device DC 25; DC 20 Open Locks check to open the door or DC 23 to break. If the character makes the save, roll randomly to see which side of the door he ends up on. If he does not make the save, he is trapped under the blade. It takes a DC 20 Strength check to raise the blade or a DC 25 Disable Device check.

Market Price: 12,800 gp.

The Treasury Door: A sliding panel covering a window to the room on the other side is at eye level in this door. The window has an illusion cast on it, so that when the players look through it they see a counting table with a ledger and stacks of gold and silver coins on the table. On a bookshelf in the back of the room are several more ledgers. Several bags of coins are on the floor. There is actually a monster on the other side of the door, which is fed through the window. The door is enchanted so that no sounds from the monster inside can be heard through the door. Unless the characters detect the illusion, the monster will catch them flat-footed when they open the door. A character with escape artist can actually fit through the window (DC 15). To the other characters he will seem to disappear and they will not be able to hear cries for help or sounds of combat.

Game Stats: CR Monster CR +1; spell; spell trigger; automatic reset; spell effect (permanent illusion, 11th level wizard, DC 19 Will save negates, silence); Search DC 31; Disable Device DC 31.

Cost: 1,000 gp 80 XP for silence, 760 gp for NPC spellcaster to cast permanent illusion.

The Memory Door: A gargoyle carved into the lintel of this door observes all who enter. When a command word is spoken, the gargoyle can recite the names of all those who have passed through it in the last week and the time and day they went through.

Game Stats: CR 3; magic device; proximity trigger (alarm); automatic reset; spell effect (detect thoughts, 3rd level Wizard, DC 13 Will save negates, magic mouth); Search DC 27; Disable Device DC 27.

Cost: 2,000 gp 160 XP

The Screamer: The screamer is enchanted to sound an alarm when opened, unless a password is spoken.

Game Stats: CR 1; magical device; proximity trigger (Alarm); automatic reset; spell effect (Ghost Sound, 1st level wizard, No save); Search DC 25; Disable Device DC 25.

Cost: 250 gp 20 XP.

The Separator: This magical door teleports every other person who passes through it to a locked chamber where guards or a nasty monster is waiting. Passing back through it in the opposite direction teleports you to a different room than the first. Alternately it can be set to teleport everyone after the first person to pass through the door (perfect for the villain's get-away route).

Game Stats: CR 10; spell trap; proximity trigger (Alarm); automatic reset; spell effect (Teleport Circle, 17th level wizard, No save); Search DC 34; Disable Device DC 34.

Cost: 1500 gp 4,540 XP.

The Gateway: Covered with engraved scenes of other lands, this magical brass door is connected to several other identical doorways that can be anywhere in the world or even on other planes. Anyone wishing to go through to the other doorways can speak the appropriate command word, then step through the door and be teleported there. An campaign can be based on exploring a network of gateways with the players having to complete adventures to find the command phrase to take them to the next door. Or it can be used as a plot device to get the players across long distances quickly.

Game Stats: Wondrous Item. Strong conjuration; CL 17th; Craft Wondrous Item, gate.

Market Value: Price 82,000 gp.

The Tapestry: This woven tapestry depicts a life-size door. When the tapestry is hung on a wall and a command word is spoken, it merges into the wall and the door becomes a permanent door leading to the other side of the wall. This magic item can only be used once.

Game Stats: Wondrous Item. Moderate Transmutation, CL 9th, Craft Wondrous Item, passwall.

Market Value: Price 2,500 gp.

The Possessed Door: This is an iron door with a demonic face embossed on it. The face is animated by an actual demon magically trapped inside the door. The face can see, speak, and use any spell-like abilities the demon may possess (except teleportation). The demon is charged with deciding for whom to open the door. It is protected by the hardness and hp of the door (usually 10 hardness, 60 hp), as well as any damage resistance it might have. Damage is applied to the door first, then to the demon. Once the door has taken enough damage to be destroyed, the demon is freed and may either attack the players or depart (at the DM's choice).

Game Stats: CR: as Demon +2 Wondrous Item. Moderate Necromancy, CL 9th, Craft Wondrous Item, magic jar.

Market Value: Price 10,000 gp.

The Living Door: A dense briar forms a wall in the forest. Part of the briar is obviously formed into a door, but living branches of the briar block the way. There is no lock to pick, and any attempt to shoulder it open inflicts 25-AC points of slashing damage to the attacker (as per *wall of thorns*). The party can attempt to persuade the briar, using diplomacy and a Speak with Plants spell, or a Druid can use his pass without trace ability to go through the door.

Game Stats: CR 5 Wondrous Item. Moderate Conjuraction, CL 15th, Craft Wondrous Item, wall of thorns, Intelligent Int 10 Wis 14 Cha 10 Neutral.

Market Value: 5,000 gp

Calendar Door: These doors are enchanted to only open at specific times of the year. They are magically hardened and very hard to lockpick.

The entrance to the temple atop Mount Wasnor is one example of a calendar door. This massive stone door has a carving of the constellations on it that changes to match the season. It only opens when the light of the full moon falls on it during the winter solstice (approximately every 112 years, for 1d6 hours). During this time a druid must perform the Rite of Winter's Appeasement in the temple, or legend has it that Spring will not return to the lands below the mountain until another full moon occurs on the winter solstice. Frost Giants often try to prevent the ritual from being performed.

Game Stats: DR 20/Magic HP 100 DC 40 to pick the lock. Wondrous Item Strong Abjuration, CL 11th, Craft Wondrous Item, stone skin, contingency, arcane lock.

Market Value: 100,000 gp.

Pyramid Review

Dungeons: Vault of the Fiends

Published by [Atlas Games](#)

Designed by Thomas Denmark with Morgan Gray

Illustrated by Thomas Denmark with Ben Van Dyken

110 full-color cards, 9½ by 10-inch 4-page rules sheet; \$19.95

Last year's [Dungeons: Tomb of the Lich Lord](#) was one of the nicest entries into the dungeon crawl genre of board games. Certainly, its rules contained one of the cleverest mechanics seen in the genre for quite a while. As players explored the dungeon with their heroes, they accumulated Glory and Peril Points. A player could then use his Glory Points to give his hero Boon and Treasure cards, and to activate his special ability, while the other players could in turn spend their Peril Points to slap Bane and Encounter cards on that hero during their turn. In this way players take on the roles of both heroes and the Dungeonlord during their turns. Sequels to the game were promised, but these failed to appear after its publisher, Citizen Games, went into dissolution. Thankfully, *Dungeons: Tomb of the Lich Lord* did not go with it, and the game remained in the hands of its creator and designer, the artist, Thomas Denmark. Even better, *Dungeons: Tomb of the Lich Lord* found a second home in the arms of Atlas Games, who have not only re-published the original game in a second edition, but also released the first of several planned sequels.

The background for *Dungeons: Vault of the Fiends* explains that a twisted mage has been banished for his pursuit of heinous experiments. Bent on revenge, he has continued his sordid efforts from within the walls of an impenetrable vault. The result of these experiments are the horrendous fiends of the title, and with these rampaging through the countryside, the people are calling out for heroes courageous enough to enter the vault and put an end to the scourge of both mage and his creations.

Although *Dungeons: Vault of the Fiends* is a standalone game, it is in the main the same game as its predecessor, though with a twist here, and a tweak there. Thus like *Tomb of the Lich Lord*, it is designed for between two to four players, aged twelve years and up, plays like a board game, but comes packaged as a card game, and is won by completing three quests. A game should last approximately 20 minutes per player involved. Physically there are a couple of changes. Gone are the red and green tear-apart counters used to represent Glory and Peril Points, replaced instead by easy-to-use Tracker Charts that fit onto the back of a card. On the other side of the Tracker Cards is either a Turn Summary for the game or reference notes for the game's many symbols. There are six such cards, meaning that there are two left over if the maximum number of players is involved. The inclusion of six Glory/Peril Tracker cards also means that the game could be played with six heroes.

This possibility is further supported by the inclusion of six heroes from which to choose. They include an Elf Assassin, Human Beastmaster, Drakan Sentinel, Gnome Illusionist, Dwarven Runecaster, and Ork Shaman. The choice is split between fighter and spell-casting types, each with their own special ability. For example, the Drakan Sentinel is a fearsome warrior with the ability to literally scare monsters away, while the Illusionist is able to prevent a monster from attacking. Unlike in *Tomb of the Lich Lord*, none of these characters have balanced stats, each preferring to favor two out of the three (Melee, Magic and Speed).

Dungeons: Vault of the Fiends fully consists of:

- Six Hero cards
- Two Cut-Out cards

- 62 Adventure cards
- 20 Map cards
- 14 Quest cards
- Six Tracker Cards

Some preparation is necessary to play. This only consists of taking a pair of scissors to the two Cut-Out cards, which then gives the game its stand-up figures. If there is a problem with these, it is that they store very poorly in the box after to play. In addition, a pair of six-sided dice is needed, as well as two tokens (such as glass beads) for each player. These are used as markers on their Tracker Cards.

The turn order in *Vault of the Fiends* has been slightly altered from its predecessor. After the Reset phase, the current player takes the role of Dungeonlord and spends his opponent's Peril Points to play Encounter and Bane Cards on other heroes. The effects of these cards have to be resolved immediately. A new Map Card is drawn and added to the dungeon, and then the current player's hero is moved. For each new room or passage card the hero enters, they earn both Glory and Peril Points, with the former being spent to gain both Treasure and Boon Cards. If in the right location, a hero can attempt to complete the quests detailed on their Quest cards, or the Global Quest, which *any* hero can attempt. Resolving combat and overcoming threats is a simple process, needing a single die roll, plus the appropriate attribute (as indicated on the Quest, Bane, or Encounter cards). Success will bestow a hero with more Glory or other effects, while defeats will earn them more Peril Points. At the end of their turn, a player discards one card and refreshes back up to a total hand of five. Completing a Quest will usually gain a hero an increase in the level as well as other benefits.

The first major tweak in this incarnation is the inclusion of "Pumpable" monsters, designed to represent a danger to a hero whatever their level. For example, the Iron Golem's attacks always remain on par with a hero's level, while the Enchanted Golem can have its attack pumped up by the expenditure of more Peril Points. The second tweak is a more dynamic playing environment, with actions of a hero in one location having an effect in another area. A hero can, for example, spend Movement points in the Black Cyst location to turn on or off the effects of the Fiery Chasm and the Transdimensional Gate. Although these two tweaks do make a nice addition to the game, there aren't too many of the representative cards. A third addition to the game are passageways with Hazards, which are no danger in themselves, but increase the effectiveness of any traps played by the Dungeonlords. Further, players can keep more monster cards in their inventory to play during their Dungeonlord phase, and both monsters and heroes can now counter attack under certain circumstances.

These changes to the game's play, combined with a rewritten rules sheet, help to give *Vault of the Fiends* a more fluid and interactive style of play that of *Tomb of the Lich Lord*. This still takes place over a tightly designed set of Map cards that consist of only eight corridors and 12 rooms. Offsetting this small area are Bane cards with the Warp and Shift effects that can move heroes and locations around the map. Alternatively, both games could be combined to provide a larger playing space -- necessary if more than four players are involved -- although doing so would weaken the flavor of *Vault of the Fiends*. This is strongly expressed through all of the cards in the game, and not just the Map and Encounter cards. Drawn and painted by Thomas Denmark, all have the chemical and mechanical feel of a laboratory to them. If that feel has any comparison, it is with the *Fighting Fantasy* solo adventure books, several of which have been recently republished and redesigned as *d20 System* adventures.

The rules also include a number of options for advanced play. These include different methods of building the map, looting the bodies of dead heroes, allowing players with dead heroes to re-spawn at the map's entrance with a new hero, and introducing wandering monsters to the game. *Vault of the Fiends* can played as a campaign game in the mode of *Dungeons & Dragons*, with one player taking on the role of the Dungeonlord, and the others working their heroes together as a party. There is even the possibility for play with each participant tailor-making his own set of Peril and Glory decks. This option, however, requires the use of more than one copy of *Dungeoneer*.

Owners of the Citizen Games edition of *Dungeoneer: Tomb of the Lich Lords* will get the very most out of *Vault of the Fiends*. This is because the sequel offers them a redesigned and much improved set of rules, which can also be used with their version of the earlier game. That a second edition can improve the first without invalidating it should be an indication of the soundness of the core *Dungeoneer* design. To this *Dungeoneer: Vault of the Fiends* adds more

options, more interactivity, and more fun.

Graphic design by Cathleen Quinn-Kinney & Linsey Sieger

Bobblehead design and sculpting by Tom Meier

Full-color boxed game with 30 answer cards, 200 double-sided quiz cards (400 quiz questions), divider card, 100 plastic scoring tokens, Michael Feldman Bobblehead, & rules sheet; \$19.95

Out of the Box has made its name with small but clever and original games that are as much mental exercise as they are entertaining pastimes. That's what makes *Michael Feldman's Whad'Ya Know?*, a trivia quiz game, such an odd choice for their newest release.

Based on the popular quiz show run by Michael Feldman on public radio, the object of the game is to be the first to reach a predetermined number of points by answering questions.

Four to 10 players take turns playing the host; only the host is allowed to play with the included Bobblehead Feldman figurine. The two players on either side of the host are the contestants, and the remaining players are the audience.

The host pulls one of the question cards out, announces the category, and reads the question. Categories include Science, People, Places, Odds 'n' Ends, and Things You Should Have Learned in School. Each query offers three answers, and members of the audience must each secretly choose an answer with the A, B, and C cards they've been given. When everyone has selected one, the answers are revealed and the audience may now discuss the question with the contestants.

The audience will try to get the contestants to agree with their answers, though the contestants need not do so, nor even wait for discussion. Once both contestants have also selected answers, the host reveals the right answer and points are awarded.

Anyone, contestant or audience member, who answered correctly gets a point. If the contestants both got it right, they and anyone who also got the correct answer scores an extra point. But if the contestants got it wrong, and they both supplied the same wrong answer, they score nothing -- and any audience members who gave the same wrong answer get a point. This means if you can convince the contestants to agree with your answer, particularly one you know to be wrong, you can gain points while depriving them of the same.

Tokens are given out for players to keep score. The more players you have, the fewer tokens needed to win and vice versa. Whoever reaches a predetermined total first wins. The numbers can be adjusted for a longer or shorter game, but an average game lasts about half an hour.

The game looks nice, the irony being that illustrator-by-trade John Kovalic had a heavier-than-usual hand in the game's design, and his drawing abilities were required the least. Hopefully consumers like bright colors and exaggerated designs, because the box seems to mimic a lot of Mr. Feldman's fashion sense, right down to the touristy button-up shirts. If there are any other visual holes in your mental picture in need of filling, the Bobblehead will take care of those. It's a nifty little Feldman statuette, and it's been sculpted with a loving hand (though it makes him look awfully old).

Then again, this could feed into the price tag. *Whad'Ya Know* costs the same as any of their other long-box games, but if they dispensed with the amusing but not-at-all-necessary Bobblehead and the scoring tokens (there's nothing here that can't be accounted for with good old pad and pencil), it would all fit into one of their small-size boxes (like *My Word!* and *Gold Digger*), possibly at a greatly reduced cost.

There are 200 quiz cards in the deck, with a question on both sides (the game even thoughtfully includes a divider card to keep previously asked questions separate from the fresh quizzes). The game is a party game -- or so the top-end 10 player limit would suggest -- but the scoring system seems to keep the number of cards needed for play fairly stable. Nonetheless, a few supplemental card sets like those for *Apples to Apples* would be a welcome sight in any upcoming releases announcements. The questions themselves appear to be designed to provoke more discussion than decision. There are a number of "What percentage of . . .?" questions only a statistician could love, and many obscure bits of information that earn the name "trivia."

By offering such questions, Out of the Box Publishing keeps up that level of player interaction that their more mechanically intellectual properties have fostered so handily. Even the trivia provides more trivia on each card in case the arguments didn't get heated enough.

While not as surprisingly clever as some of the items on the Out of the Box manifest, *Michael Feldman's Whad'Ya Know?* is still a good variation on the umpteen iterations of *Trivial Pursuit* and friends. It adds strategy and player communication to the venerated trivia genre, and even at its inflated price it does so for less than the seemingly standardized \$30-plus price tags on typical party games.

Big Threats Don't Wait Their Turn

In a lot of cases, I suspect that GMs -- myself included -- make things too easy on players. And a lot of this, at least as far as my perceptions go, has to do with my childhood naiveté about our President of this fair country. (I also find myself drifting back to those simpler times of civic thought as I consider that it's another eight months before our country's upcoming election, now in its 40th month of campaigning.)

Anyway, as a kid, I was fairly interested in the news. And I'd hear about some big event or another -- for example, I think there was some kind of crisis in the Middle East when I was a child -- and I'd wonder, "Why doesn't our president try to solve that problem?" And the next night there would be another crisis (unrest in some other country), and I'd think, "Why doesn't our president solve that problem, too?" And so on.

It took me many years to realize that, really, it's a big world . . . and there are *lots* of crises. And even if the President wanted to try tackling all the big problems of the world (the wisdom of which is laughable itself), there simply isn't enough time; if he takes a few days to attend some "Stop Venutian Robots" conference, then that's a few days he's not tackling the "Peruvian Mutant Rat" problem. And so on. Assuming an inhumanly full working schedule, he could only work a maximum of 1,461 days in his term. There are simply too many things going on for the President to try to solve them all.

In looking over my notes and thinking back to past adventures, I realize that the universe is often too kind and considerate. On both a macro and micro level, heroes tend to face difficulties in a nice, linear order. Once they solve Plot Point 1, things move orderly to Plot Point 2, with a possible junction to Plot Point 3 or 4. The seeds for Adventure C are sown in Adventures A and B, and so on. But not only is it possible for more than one thing to go on, it's likely. (At present I've got two weeks to juggle three *Pyramid* issues, two seekret projects, two freelance deadlines, two plays, a "radio" group, my Day Job, and an out-of-town excursion. I am, in a word, near-panic.)

Now, I've talked about complications on a [micro level](#) before; the heroes need to choose between, say, a loved one in a burning building or capturing the Bad Guy before he escapes. But it also applies on a macro level; sure, it's bad if the Forces of Chaos have a big, elaborate plot, but it's even *worse* when the Legions of Order and the Agents of Nihilism also have their machinations proceeding apace. And the legendary realistic wargame *Fortress America* chillingly presaged a nation beset by . . . ummm . . . yellow pieces, blue pieces, and red pieces. I think Saddam Hussein, was involved too. *Fortress America* was also uncannily accurate in its prediction that, no matter how bleak and dark things get, we won't be bothered by Canada.

A lot of game worlds establish multiple threats, but I've seldom seen an individual campaign that took advantage of these multiple threats at the same time; the only one that actively encouraged it that I can recall was *Torg*. I suspect there are a number of reasons behind this. First, ramping up the heat from multiple fronts presumes a campaign that's going to run for a *looooooong* time; it's not terribly satisfying to create four different grandiose threats, only to have the campaign fall apart two adventures later. Second, such a campaign may become as bleak as the real world seems at times; if the world is nothing but an unending procession of problems, only some of which can be solved, it's possible to lose interest; after all, most gamers roleplay to *escape* the confines of the real world.

Such a campaign also requires extensive notes (certainly better than I can [usually manage](#)); after all, if the world is going to appear dynamic and active, then there needs to be an actual progression of plots and events, *especially* against those threats the PCs don't bother with.

And, finally, the heroes may simply not *care* about multiple threats. This is especially true if the players aren't given much control over what kind of missions they tackle next; what difference does it make if rubber-suited monsters, nanites, and ninja are all a threat in the city, if the heroes' involvement to the Anti-Ninja Task Force precludes their choosing which threat they want to tackle?

So let's tackle these in order, shall we?

There obviously isn't much you can do about the length of the campaign, outside of everyone who is part of the game being honest when it comes to the level of commitment they're going to put into it. In my experience, I note that most campaigns I've been involved with have been pretty polar; they either fall apart after two or three sessions (or else it was a [miniseries](#) designed to last that long), or else they go on for a year or more. In general I'd recommend that GMs interested in having multiple threats should avoid turning up the heat *too* much for the first few sessions, until everyone is sure that it's going to be a long-running campaign.

While it's true that a gaming campaign with too many complications *could* become bleak, it doesn't have to. In general I'd point out that most game worlds have other groups that seek to counteract threats; if the heroes can't tackle a problem themselves, then someone else can pick up the slack, at least for *really* big threats. But in most of my campaigns I have an unwritten rule that the heroes will generally do a better job than NPCs . . . not unlike most "automation" buttons in computer strategy games. And if the GM can make the game world more open and available to the heroes, then they can tailor the campaign to their own interests . . . thus negating any ennui of being in a game universe too much like the real world.

Taking comprehensive enough notes can be a problem, and I'm certainly not the right person to ask for advice in that regard. However, I will point out that an easy bit of advice is to create [timelines](#) for each of the major factions; by knowing how the game world will advance (without the heroes' involvement, of course), it's easy to drop hints about what the various groups are doing, and what the consequences of the heroes' actions or noninvolvement will be. It might also be worthwhile to make three timelines for each faction: an "optimistic" one, where things go exactly as they might like; a "baseline" one, where their setbacks and fortune tend to cancel each other out; and a "pessimistic" one, where the faction has been dealt setbacks, either by the PCs or other factions. If you start at the "baseline" timeline, then you can toggle back or forth to the others as the heroes get involved (or get others involved).

Now, how can a GM get the heroes involved and emotionally invested in multiple threats? The answer to that is simple, and is the same as the micro level; make sure the heroes have some control and options. In the same way heroes in a crisis might choose between maneuvering to an explosion across town or continuing to investigate their current crime scene, so too should the players have some kind of choice regarding what threat they want to tackle next.

In some campaigns this is easy. If the PCs are a roaming band of heroes, either on the back of a horse or in a starship, then they're free to choose what threat they want to tackle next. But some game worlds make it difficult to accommodate such freedom, especially if the heroes work directly for an agency or have similar duties. In a lot of campaigns it's easy to tweak the rules and make the heroes "special," somehow. For example, *In Nomine* assumes that the PCs are distinguished, and thus report to their archangel or demon prince superiors directly. And while a space opera campaign might revolve around a Space Fleet that typically assigns missions to its ships, it might also allow a limited number of ships *<koff koff> the heroes' <koff koff>* to operate outside the bounds of the normal bureaucracy.

As another option, however, it might be possible to structure a campaign so that the players participate as both agents *and* those making the decisions. The advice I offered before about giving players [multiple characters](#) can apply here. What if the PCs are playing not only a band of Questing Knights in *Fading Suns*, but also the high-level government officials and diplomats that assign those missions in the first place? Parts of the campaign can resemble a traditional squad-level action-packed adventure, with the PCs dealing with individual crises, while other parts would show the interactions, decisions, and politicking that are behind what crises to tackle. It could be akin to *Mission: Impossible* meets *The West Wing*.

And everyone knows that *The West Wing* is more fun than many bits of the real world . . . such as presidential elections.

Dragon Planet: Part One -- The Trade of Kings

A GURPS Space Adventure

by Stephen Dedman

For this adventure, the GM will need the *GURPS Basic Set*, *GURPS Compendium I* and *II*, *GURPS Space Third Edition*, and *GURPS Ultra-Tech*. *GURPS Robots*, *GURPS Ultra-Tech 2*, *GURPS Biotech*, and *GURPS Vehicles* may be useful, but are not essential. The adventure is designed for 100-point characters and set in the TL10 universe described in *GURPS Space* (p. S132), but can easily be adapted to any *Space* campaign, including the *GURPS Traveller* universe, or to a *Supers* or *Time Travel* (Alternate Worlds) adventure.

The PCs should, between them, have the skills needed to crew a small starship, including Pilot, Astrogation, Engineering, Mechanic, and Gunner. Other useful skills include Free Fall, Vacc Suit, Tactics, Fast-Talk, Survival, and, of course, combat and medical skills.

A House Divided

The adventure begins with the player characters on Nangodai, a frontier world dependent on the black market for its economic survival.

Nangodai was a promising and populous agricultural world until a mutated virus began killing off its imported crops and the animals that ate them. Left with barely enough food to feed its own people, and prohibited from exporting any biological material for fear of exporting the disease, Nangodaian farmers began looking for other sources of income. The world had little mineral wealth or strategic value, but it could offer land cheaply to people who could afford to import food and luxuries. Soon, many successful criminals owned estates there, and the world's black market was notorious across the frontier. Nangodai survives on docking fees from pirate and smuggler vessels, and high sales taxes on hotels, restaurants, and other businesses. It's one place where almost anything can be bought and sold, which is presumably why the PCs are there.

Shortly after arriving on Nangodai, the heroes will meet Sergeant Vijay Singh. Singh is nominally a vice cop: he spends most of his on-duty hours making sure that Turaimugan's brothels are safe and don't cheat their customer's too outrageously, and half his off-duty hours protecting visiting criminals from bounty-hunters and assassins. He's old enough to remember Nangodai's more law-abiding days, and when he hears that one brothel has imported slaves, he decides that this is taking tolerance too far. He asks a male PC to visit the brothel, the Perfumed Garden, and ask for Astrid.

According to the rumors Singh has heard, Astrid is a pale-skinned, blue-eyed slave from Ahto, a restricted world. He instructs the PC that if the madam offers him another girl, he should insist on a natural blond with fair skin (all native Nangodaian are brown-skinned, dark-haired, and dark-eyed). Singh, a fair judge of character, will choose a PC who he thinks he can trust -- and also one that won't arouse much suspicion in a moderately expensive brothel (preferably one with Lecherousness, average or worse appearance, and Streetwise at 10+). He will also ask him to carry a pen with a built-in digital mini-camera to take some pictures of the girl, and an attache case which contains a concealed bioscanner. As long as he comes back with useable pictures and data, the vice squad will pay the Perfumed Garden's extravagant fees.

The Perfumed Garden is one of the most expensive of Turaimugan's many brothels; the exterior, foyer and corridors look more like a small but classy hotel, and all of the women have attractive or better appearance (most of them bodysculpted). If the madam has a poor or better reaction to the PC, she will show him all the Perfumed Garden's available women -- including Astrid and Emily -- but warn him that the "imports" are twice as expensive as the locals. On a bad or worse reaction, she will be suspicious, and will not show him any of the Ahtoan women, and deny any

knowledge of them.

Photographing the girl with the pen-camera will require a roll on Photography/TL10 or default at +1: Singh will encourage the PC to take as many photos (by clicking the top of the pen) as possible. The madam will insist on searching the attache case before letting the PC carry it into the bedroom: fortunately, the bioscanner is well concealed, and Singh has thoughtfully filled the case with women's clothing. The bioscanner is pre-programmed; all the investigator has to do is remember to press a button.

The scan and photos will confirm that Astrid exists and is not a robot; a roll on Physiology/TL10 or Forensics/TL10 will confirm that her bioscan is consistent with her coming from the low-tech, low-iron Ahto. Once he's established this, Singh will ask the party if they'd like to join in on a raid on the brothel: he's already blown his budget by sending a PC in undercover, but he can offer them the use of a police safe-house or a police car for the duration of their stay.

Raiders will be equipped with stunners, Light Clamshell Cuirasses (DR 30), and Light Infantry Helmets (DR 25) and visors (PD 2, DR 8): Singh will allow the heroes to wear their own armor, but not weapons (PCs who want to carry concealed weapons will have to rely on their Holdout skill). The three largest party members will be assigned the job of securing the entrance, the cloakroom (mostly weapons storage), and the fire escape, while Singh and the others search the premises.

Most of the brothel's staff and clients are unarmed and will put up no resistance, except for the madam (who Singh will arrest after he finds the slaves) and the bouncer. Once he has the madam and the slaves, Singh will apologize to the clients for the disruption, and he and the heroes will leave.

Forbidden Planet

Shortly before the PCs leave Nangodai, they will receive a call from Singh, who will say that he's taking a leave of absence from the police and thinking of going offworld; could he book passage on their ship?

If they agree to meet him, Singh will explain that he's been suspended because of his unauthorized raid on the brothel. He will also say that he's established that three of the women there -- Astrid, Emily, and Ulla -- were indeed kidnapped from Ahto, and all told the same story. A group of slavers, the Dragonlords, first came to their islands a few months ago, and announced that they would be taking an annual tribute of the seven most attractive young women. Villages that didn't cooperate were burned. After these three women selected, someone gave them a sleeping potion, and when they woke up, they were naked in a strangely clean and well-lit room, which Singh suspects was a medical clinic. They were then auctioned, and the madam bought the three of them. They don't know what happened to the other women, or who the Dragonlords are.

Ahto (Singh tells the PCs) is a restricted world; there's a research center there, presumably studying the marine life, but scientists are the only people permitted to stay there. It was colonized by people from Earth who wanted to live a medieval lifestyle, and any high-tech items are forbidden: the researchers are supposed to call the Patrol if any unauthorized ships land on the world. Slavery and abduction, Singh adds sourly, are also forbidden. He wants to know what's going on, and asks the heroes to take him to Ahto. According to the files, the research base has a landing strip -- at least, it does during low tide -- and he can pay standard passage.

If the PCs ask Singh what he intends to do on Ahto, he will reply that he hopes to find out why the Patrol hasn't been able to stop the abductions, and he won't know what to do next until he has an answer to that question.

If the heroes don't agree to take Singh to Ahto, or to go there themselves, the adventure is over. If they do, the first sign that something is wrong will be obvious within a few hours of their arrival in the system: though the beacon from the research station can be detected with a roll on Electronics Operation (Communications or Sensors) at +2, there is no other reply to the party's communications.

Ahto's useable land is limited to a small group of volcanic islands near the equator. Most other islands, except those under the ice-caps, are underwater for at least a few hours a day because of Ahto's extremely high tides. Even the

landing strip at the research center (treat as a Class I starport) is underwater for all but two to three hours each night, and the sealed surface is only 150 by 100 yards. The automated beacon broadcasts the tide table, announces when it's safe to land, and plots a flight plan from the north (so the ship won't have to fly over the other islands).

If they land at the Mount Aramis research center, they will find it abandoned: not even a corpse remains. The center is a small, high stone tower atop an island roughly a mile long at low tide, and half as wide. The building is designed to resemble a small monastery, and everything in the gatehouse and most other rooms is either of TL3 manufacture or a well-done TL10 fake . . . but carefully disguised solar panels provide power for a microframe computer, hidden surveillance cameras, a Planetology lab, a large vapor canteen, a long-range communicator, a clothing fabricator, a gourmet food processor, a diagnosis table, and an automedic. All of these ultra-tech items are either well disguised (such as the diagnosis table) or hidden in inner rooms protected by doorwards; the windows of these rooms, if any, are opaque from the outside.

A quick search of the tower will reveal that it was designed to be home to up to 12 "monks" -- not all of them male. It seems to have been hurriedly abandoned and hastily picked over for valuables. There are no small, useful items left apart from a medical pouch and a refill for the automedic. There are also no weapons, except for some kitchen knives and a few other tools. The looters have also left a construction foam sprayer, a decontamination aerosol, 100 yards of 3/8" biphasic rope, eight monks' habits, and six two-man inflatable rafts (2 lbs, hold 480 lbs).

After looking around for half an hour, Singh will open his Forensics kit and examine some of the furniture, walls and floors: any PC with Forensics skill will be welcome to join him. A roll on Forensics at -4 will reveal traces of blood from at least five people, as well as burns that can only have been made by lasers. Psychometry will reveal much the same.

A roll on Electronics Operation (Sensors) will reveal that there are no spaceships in the system except for their own . . . but a mostly wooden sailing ship, roughly 35' high, is approaching the island from the south. At its current bearing and speed (about 8 mph) it should reach the island the next day.

Hacks

Most of the computer software, except for tidal and astronomical databases, are locked by passwords (Computer Hacking -6 to open). Anyone who gets into the computer systems will discover that several gigabytes of information were deleted four standard months ago, but data from some automated sensors are still being recorded. An hour's Computer Operation and a roll against Research skill will reveal that the day before the data deletions, sensors detected a 1,600-ton ship entering the system, approaching the planet, and entering an equatorial orbit. A few hours before the deletion, a 25-ton ship dropped from the larger ship, then landed near the research station. After the time of the deletion, there are no more manual entries onto the computer, only automatic ones from sensors in orbit, on the moon, or at various points in the ocean.

A calendar, undeleted, indicates that this happened 27 days after the last scheduled landing by a Survey Service ship, when five researchers left, three replacements arrived, and a backup copy of all data on the computer was made.

The 25-ton ship returned to the mothership two hours later, returned the next day, and made another 11 trips between the mothership and the island until the mothership left the system five weeks later. No other ship has entered the system between its leaving and the heroes' arrival. The calendar indicates that the next scheduled Survey Service ship is due in five weeks.

An inventory of supplies for the tower reveal that two stunners, a variable heavy laser pistol, an ice gun, two monowire survival knives, an environment suit, two wet suits, two artificial gills, two medium-range communicators, a GPS unit, a Pressure Tent (Base), an electronics mini tool kit, two multiscanners, a micro computer, a biosampler, and several small cameras are missing (the researchers' personal items are not listed).

The computer also has detailed maps of Ahto and a sketchy history (Area Knowledge-14), copies of the Great Book (illuminated Latin facsimile and plain-text English translation), and an Interpreter program with databases of Latin and

medieval French. All of these files were copied to disc a day after the deletion.

A Call for Help

Shortly after midday (high tide), the wooden ship will lower a rowboat, which will tie up to the island's jetty. A sailor in a bronze cuirass and pot-helm -- the first mate, Francisco -- will knock on the door, saying (in Latin) that they have wounded men in need of the monks' help.

If any of the PCs have stayed on Mount Aramis to meet the crew of the wooden ship, they can either open the door or a foot-square panel which will enable them to talk to the sailors without admitting them. The mate will react with suspicion to unfamiliar faces, and even more to any displays of high tech: like all devout Ahtoans, he believes the commandment in the Great Book that any weapon powered by anything more than the strength of a man's arms is a creation of the Devil (-1 to reaction rolls, with a further -1 for every TL above 4). However, because the men need healing that only the "monks" can provide, the party may be able to win him over with medical technology.

Of the eight surviving wounded men, three have severe burns, while the others have what look like normal medieval combat injuries: only examination of the wounds and/or their armor and a roll on Forensics will reveal that the one who has lost his right arm has been cut with a weapon sharper than TL3 could possibly produce -- probably a monowire-edged blade. All of the patients have infections caused either by the weapons or the TL4 medical aid they've received.

The three burns victims have taken 20-30 points of damage, and the man with the missing arm, 18 points; all are lucky to be alive. The others have taken 11-16 points, mostly cutting or impaling wounds.

As per the usual agreement with the "monks," Francisco provides a small amount of food and answers questions in exchange for the healing. Though suspicious of offworlders, he will be more helpful if the PCs can convince him that they didn't kill the monks.

Francisco's ship, the Nina, is the fastest in King Arvin's small navy. Two of the wounded men are Arvin's soldiers, the rest are villagers from Xyston. When a Dragonseer disappeared on Xyston, the Dragonlord retaliated by sending a squad of soldiers and his dragon to loot and burn a village a few miles from Arvin's castle. It was the first time Arvin (or Francisco) had seen the dragon, which killed at least 20 people, not counting the six who died on the voyage to Mount Aramis and the women and children who simply disappeared. A few of Arvin's soldiers tried fighting some of the Dragonlord's raiders, but they had better armor and swords than any of Arvin's men.

Francisco has never seen the Dragonlord himself; as far as he knows, the Dragonlord has never been to Xyston. The tales he's heard say that not only does he command a dragon, he is part dragon himself, more than eight feet tall, invulnerable to weapons, and able to hurl fireballs, cast spells, and see through the eyes of his messengers.

Francisco may be persuaded to take the party back to Xyston (good or better reaction, using modifiers above), but will not suggest it. He will not knowingly allow any ultra-tech equipment -- especially ranged weapons -- onto the ship, and if he finds any after they set sail, he'll throw them overboard. The monks' habits left in the quarters give +4 to Holdout.

Under the Sea

Although it doesn't come into play in this adventure, the research base on Mount Aramis has been set up to monitor a Precursor artifact located on the ocean floor, and all the data that has been deleted concerns this artifact. This is the real reason the planet is restricted.

The artifact, inside a force-field bubble, is a mystery because any probe -- manned or unmanned -- that gets within half a mile disappears completely. Whether it is disintegrated, transported, frozen, or travels in time is unknown, but it may be a convenient way of disposing of greedy villains who find a map of the artifact's location and foolishly try to retrieve it. It may also provide a hook to bring the party back to Ahto for another adventure.

Singh will not accompany the heroes to Xyston, preferring to remain at Mount Aramis and wait for someone to return, rather than risk corrupting the low-tech Ahtoan culture.

The voyage to Xyston aboard the roundship will take two hideously uncomfortable days (70 hours): the PCs will not be expected to help crew the ship, and when not suffering from sea-sickness, will be able to talk to the sailors to learn more about Ahto. None of them know any more about the Dragonlord or the dragon than Francisco does, though some may claim to: the Compulsive Lying disadvantage is rather more common on board than Truthfulness. The only ones to have seen the dragon at close quarters are the burns victims, two of whom swear they fired arrows that bounced from its scales: they describe it as being 30' to 36' long, with huge gray wings, and two great clawed feet that can crush a knight and a horse in a second. Its scaly hide is mostly gray-green, shading from pale sea-green to near black, and it flies faster than anything they've ever seen move.

The Seven Lands

Apart from Mount Aramis, there are only seven islands on Ahto large enough at high tide to be habitable (with tillable soil, permanent fresh water, etc.). In order of population, these are Spathos, Claidh, Falchio, Katara, Xyston, Kamax, and Bolo: their respective rulers are King Hadrian, King Matthias, Prince Kane, Queen Erika, King Arvin, Prince Odon, and Prince Camer. Kane has sworn allegiance to his uncle Matthias, Odon's son Nardo has married Hadrian's daughter Laura, and Camer is loyal to Erika. There is no overall monarch, because none of the kings has ever succeeded in building a large enough fleet to rule the other islands, and the other kings would ally against anyone who tried.

The Great Book of Ahto is a slightly modified Latin Christian Bible, with the Book of Revelations replaced by a third "testament" beginning with the Book of Rebirth, which tells of a second great flood that drowned the high-tech demon-haunted world. A few hundred people fled to the tops of mountains, which became the Seven Lands -- the ancestors of all living Ahtoans. While the Ahtoans have legends of dragons (and stranger monsters), no-one alive remembers seeing one before the Dragonlord first came to Claidh, and everyone assumed they were extinct and that the stories date back to before the flood.

Ahto has no native land animals and only a few shore plants. While the sailors believe (or claim to believe) in great sea-monsters, the most frightening any have ever seen are sea-wraiths, translucent white squid-like creatures which occasionally grow to human size. (Sea-wraiths, which have IQ 5-7, are also the official explanation for Ahto's Restricted status).

The native dialects of Ahto defaults to the campaign common tongue (English, Standard, Universal, etc.) and sometimes each other at -1; high-status individuals also speak medieval French, and the educated (literate) and well-traveled speak Latin. Because metal is scarce and valuable in the Seven Lands, most coins are copper: a copper farthing (.50c) is about the size of a thick dime, with a hole in the center; 400 weigh a pound. The penny (\$2) is about the size of a quarter, also pierced with a hole; 100 weigh a pound. Sailors rarely see silver florins (\$48), much less golden royals (\$960). If the PCs need money and haven't brought anything they can sell, they can try gambling (dice) with the sailors, or other ways of raising money in Port Luisa.

The Nina will moor in Port Luisa, capital of Xyston, which is a town of about 600 people, most of whom work in either the fishing fleet or King Arvin's small castle. Like most Ahtoan towns, Port Luisa is mostly built of stone, brick, and concrete, with thatched or slate roofs: hardwood and iron are precious, and only used when nothing else will do. The streets and people are not quite as filthy as in real medieval towns -- the Great Book contains rules on antisepsis, sanitation, dental hygiene, etc.; treat Ahtoan medical skills as TL5 -- but they smell much worse than the heroes will be used to. It's early winter; temperatures range from highs of around 40° to night-time lows of about 20°. Light rain is common during the day, while nights are dry but cloudy.

Finding information about the Dragonlord in town will be difficult: the only townspeople who know any more than the sailors are the king, his knights, and the Dragonseer.

Dragonseers, Francisco will tell the heroes, are Ahtoans trusted to deliver messages to and from the Dragonlord: they

also serve as tax-collectors and spies. One or two live in each palace, usually sitting beside the throne, but occasionally they have to travel to outlying villages, usually accompanied by a few veteran soldiers.

If Arvin's major-domo has a good or better reaction to the PCs, he will arrange a brief audience with the king. King Arvin is sure that the Dragonlord must have allied himself with another ruler in exchange for a safe haven (true), and he believes that it's King Matthias (incorrect). The Dragonseer and some sailors from other ships in Port Luisa know that the Dragonlord has a refuge in Kamax, but they don't know whether it's the only one, or where the dragon hides. No-one else in Xyston has any better information on the Dragonlord or dragon's whereabouts.

One result of meeting with Arvin is that the Dragonlord will become aware of the party much sooner even if the Dragonseer is not present, as the Dragonlord has bugged the throne room.

If the PCs' ship is in a geostationary orbit above the Seven Lands, it can try scanning for the dragon. There's a 1/6 chance on any night that the dragon will emerge from its cave; if so, it can be detected with passive sensors with an Electronics Operation (Sensors) roll at -5. (From above, the dragon is well camouflaged against either the sea or the forests, and it also takes advantage of cloud cover.) Tracking it back to Bishop Rock will take 1d+1 successful rolls: a failure means the dragon has disappeared and can only be detected again with a critical success.

If the heroes want to lure the dragon and/or Dragonlord out of hiding, they can do so with an obvious display of ultra-tech capability, or an attack on a Dragonseer: combining the two would be even more effective, but both would be firmly discouraged by most Ahtoans, especially those who've seen evidence of the dragon's wrath (such as Arvin and Francisco). Disapproval will probably take the form of an angry mob armed with farming implements, or a knight and a squad of veterans.

Enter the Dragon

Three local days after they come to Ahto, two things will happen. A Dragon Knight, Thanos Flint, will arrive at Port Luisa on a roundship (the Gudrun) to investigate the disappearance of the Dragonseer (he will also bring the gear for a new Dragonseer, as well as a squad of armsmen). A few hours later, another roundship (the Kira) will arrive at Mount Aramis with another patient -- this one a young woman, Giselle, who claims to have escaped from the dragon's lair.

If the PCs are in Xyston and have done anything to draw attention to themselves, Flint will come looking for them -- backed up by a Dragonseer and one veteran soldier for each PC on the island. Flint's intention is to capture two heroes for interrogation -- preferably attractive women -- and kill the others. The party may try to hide or run, but Flint carries a multiscanner (disguised in a hollowed-out book) to try to locate any power cells, chemical slugthrowers, genetically modified humans, etc. Eventually, the PCs will probably have to fight Flint, but they may be able to choose the time and place.

Giselle will be unconscious when the Kira arrives at Mount Aramis, and is at -11 HT and 0 ST, but when she revives, she will tell the heroes where the Dragonlord and his knights take their female captives: Bishop Rock, a natural stone tower off the coast of Kamax, near Prince Odon's castle at Mornharbor. She will describe the tower, her captors, and her escape, as best she can: see Part II.

If the PCs have left Mount Aramis but Singh remains there, he will relay this information to them (if they've remembered to take communicators, of course). If they take no other action, the Gudrun will arrive at Mount Aramis four local days later, and Flint will demand entry. If they don't open the door (2" wood reinforced with bronze: DR 4, 26 hit points), Flint's men will begin hacking it down with boarding axes. His boarding party consists of two knights with monowire-edged thrusting broadswords and BPC armor, and eight veterans (two with boarding axes): though not expecting much resistance, Flint will fight to the death rather than fall back. If Flint and the knights are defeated, the surviving veterans will retreat to the boat and try to escape.

If Flint is defeated, the heroes will notice that his arms and back are heavily tattooed (including a crucifix on his back and a map of Treasure Island on one buttock). If Singh or a PC with a Law Enforcement background examine the tattoos and Flint's face, they will recognize him as "Captain" Thanos Flint, a lieutenant of Malik Dragunov, a criminal

so notorious that he isn't even welcome on Nangodai. The Special Justice Group is offering a \$25,000 reward for Flint alive (10% for proof of his death); the reward for Dragunov is \$100,000. And Dragunov, at 8' tall, fits the description they've heard of the Dragonlord. This is enough to overcome Singh's reluctance to leave Mount Aramis, and he asks the PCs if they'd like to accompany him on an attack on Bishop Rock.

End of Part One . . .

Nangodai (Suuriyan I)

Planet type: Terrestrial

Diameter 5,600 mi.

Density 6.7

Gravity .86

Composition: High-Iron

Axial tilt 15°

Seasonal Variation: Minor

Length of Day: 35 hours

Length of Year: .23 Earth years (57.6 local days).

Atmosphere: Pressure standard (.88)

Type and Composition: 78% Nitrogen, 20% Oxygen (terraformed)

Climate: Earth-normal

Temperatures at 30° Latitude: Low 59°; Average 80°; High 101°

Surface Water: 55%

Humidity: 35%

Primary terrain: Rough

Mineral Resources: Gems/Crystals absent

Rare Minerals absent

Radioactives ample

Heavy Metals plentiful

Industrial Metals ample

Light Metals scarce

Organics plentiful

No moons

Biosphere: Dominant life form: imported terraforming fauna, marine animals, crops, humans, domestic animals.

Civilization: Population 48,000 (PR 4)

Tech Level: 10

Control Rating: 2

Society: Sanctuary, with figurehead Representative Democracy

Starports: Class II at Turaimugan

Installations: Black market; Pirate base.

Economic/Production: Service.

Star Name: Suuriyan

Type: K7V (Dim Orange Main Sequence)

Biozone: 0.5 -- 0.6

Inner Limit: 0.0

Number of Planets: 4

Planet	Orbit	Distance	Type	Diameter	Density	Gravity	Atmosphere	Notes
(Empty orbit)	1	.3						

Nangodai	2	.6	Detailed above					
Chakaram	3	.9	Gas Giant	84,000	1.5	2.88	Hydrogen	14 moons, 7 moonlets
Aniyuuku	4	1.5	Rockball	6,600	3	.45	None	1 moonlet
Aisaana	5	2.7	Hostile ter	4,200	6.5	.61	Thin	HF

Ahto (Epsilon Catus II)

Planet type: Terrestrial

Diameter: 8,800 mi.

Density: 4.5

Gravity: .9

Composition: Low-Iron

Axial tilt: 28deg;

Seasonal Variation: Minor

Length of Day: 28.7 hours

Length of Year: 3.96 Earth years (1209.5 local days).

Atmosphere: Pressure thin (.66)

Type and Composition: 77% Nitrogen, 21% Oxygen

Climate: Chilly

Temperatures at 30° Latitude: Low & 22deg;; Average 44°; High 66°

Surface Water: 97%

Humidity: 59%

Primary terrain: Mountainous islands

Mineral Resources: Gems/Crystals scarce

Rare Minerals absent

Radioactives absent

Heavy Metals scarce

Industrial Metals scarce

Light Metals ample

Organics ample

1 large moon (Waterdwarf)

Biosphere: Dominant life forms: marine plants and animals, imported crops, humans, domestic animals.

Civilization: Population 7,900 (PR 3)

Tech Level: 4

Control Rating: 4

Society: Factionalized Feudal

Starports: Class I at Mount Aramis

Installations: Government research station; Nature Preserve.

Economic/Production: None.

Note: Restricted (potential sapient marine lifeforms). TL3 enclave.

Star Name: Epsilon Catus II

Type: G2V (Bright yellow main sequence)

Biozone: 0.8 -- 1.2

Inner Limit: 0.0

Number of Planets: 5

Planet	Orbit	Distance	Type	Diameter	Density	Gravity	Atmosphere	Notes
Kiputytto	1	.6	Hostile ter	5,900	6.9	.93	CO

Cast

Sergeant Vijay Singh

Singh comes from a long line of cops, and is as honest a cop as Nangodaian society will tolerate. He can and will ignore "victimless" crimes as required (especially when they're committed by his fellow cops), but never violent ones. He is unusually scrupulous about gathering evidence and has never framed a suspect, but he's not an angel: he and his fellow cops have "executed" some criminals rather than see them jump bail and escape offworld.

Age 45. Dark brown complexion, long black hair under blue turban (DR 1), neatly trimmed black beard and mustache, dark brown eyes; 6'1", 150 lbs.

ST 12; DX 10; IQ 12; HT 12. Move 5. Native gravity .86 G.

Advantages: Charisma/1; High Pain Threshold; Legal Enforcement Powers [10]; Panimmunity; Reputation (honest cop, +1 to his community, recognized on 7 or less).

Disadvantages: Code of Honor (Cop); Dependents (Generic: Ex-wife, children and large family, appear on 6 or less); Disciplines of Faith (Sikh); Duty; Secret (-20); Sense of Duty (fellow cops and innocent people).

Quirks: Coffee addict; Runs a mile every morning, even if it's laps of a starship corridor; Mild thalassaphobia; Dreams of joining the SJG.

Skills: Administration-11; Beam Weapons/TL10 (Blaster, Neural)-14, (Stunner)-13; Breath Control-10; Broadsword-10; Criminology-10; Diplomacy-10; Detect Lies-10; Driving (Car)-11; First-Aid/TL10-11; Forensics/TL10-11; Guns/TL10 (Tangler)-13; Interrogation-11; Judo-10; Karate-10; Law-11; Leadership-10; Professional Skill (Law Enforcement)-13; Research-11; Running-12; Shield-9; Shortsword-12; Streetwise-11.

Maneuvers: Arm Lock-12; Elbow Strike-10; Kicking-9; Knee Strike-10; Spin Kick-9.

Gear: Tight-Beam Blaster Pistol with Neural setting; Neurolash I; Electronic handcuffs; Medium communicator; Pocket pack; Light clamshell cuirass; Nightshades; Light infantry helmet; boots; uniform. Off-duty, wears leather jacket over pants, shirt, and light monocrys vest, and carries sonic stinger. His luggage includes his police equipment and a Criminology kit.

Ahtoan slaves

Most of the Ahtoan women the Dragonlord has abducted and used as slaves are Status 0 from farms or fishing

villages. All are fair-skinned. Astrid is 18, golden-haired, blue-eyed, 5'7" and 130 lbs. Emily is 16, auburn-haired, green-eyed, 5'7" and 130 lbs. Ulla is 17, black-haired, green-eyed, 5'6" and 120 lbs.

Giselle is 19, with strawberry blond hair and gray eyes; 5'3" and 125 lbs. The daughter of a Mornharbor tavern-keeper, she has learned some skills from her clients, that helped her to escape -- including Acrobatics-10; Acting-10; Holdout-10; Pickpocket-10; and Stealth-11.

ST 10; DX 12; IQ 10; HT 12. Move 6

Advantages: Beautiful or Very Beautiful.

Disadvantages: Illiteracy; Primitive (TL3). The three rescued from the Perfumed Garden -- Astrid, Emily and Ulla -- also have Addiction (Barbiturates).

Skills: Agronomy/TL3, Animal Handling or Fishing-10; Area Knowledge (Ahto)-10; Brawling-12; Cooking-10; Language (Standard)-10; Merchant-9; Running-12; Sex-Appeal-11; Swimming-10.

Madam

Vina Karup once had ambitions to become an actress and singer, but when Nangodai's economy collapsed, she found herself looking for a way to make a living. She became an exotic dancer, but her acting skills and a knack for business helped her rise through the profession. She has been the Madam at the Perfumed Garden for 13 years.

52 years old. Olive complexion, off-the-shelf good looks, dark eyes, black hair. 5'5", 125 lbs.

ST 10; DX 12; IQ 12; HT 11. Move 5.

Advantages: Attractive appearance (bodysculpted); Fashion Sense; Implant communicator; Longevity; Panimmunity; Voice; Wealth (Comfortable).

Disadvantages: Callous; Greed; Intolerance (Men); Sterile.

Quirks: Mild necrophobia; Secretly gives money to the arts; Thinks gardening is better than sex; Sells drugs, but never uses them.

Skills: Accounting/TL10-12; Acting-13; Administration-11; Advertising/TL10-13; Appreciate Beauty-10; Area Knowledge (Turaimugan)-13; Bard-13; Beam Weapons/TL10 (Neural)-14; Brawling-12; Carousing-12; Courtesan-13; Dancing-12; Detect Lies-11; Diplomacy-12; Erotic Art-12; First Aid/TL10-12; Flower Arranging-12; Gardening-13; Holdout-12; Judo-12; Knife-12; Merchant-14; Poisons/TL10-10; Politics-12; Psychology-11; Running-10; Savoir-Faire-14; Scrounging-12; Sex-Appeal-14; Singing-13; Streetwise-14; Whip-11.

Gear: Nerve Pistol with Type I and II settings, in custom concealed holster; tailored middle-class medium arachnoweave suit (PD 2, DR 8; PD 1, DR 2 vs impaling, 2.5 lbs); neuronc handcuffs (on belt); pheromone spray; boots.

Bouncer

Chander, the brothel's bouncer, is the madam's nephew; he is absolutely loyal to her, and very protective of the women.

22 years old. Scarred dark brown face; bald, with black mustache and goatee; dark brown eyes; 5'11", 160 lbs. Native gravity .86 G.

ST 13; DX 13; IQ 9; HT 11. Move 6.

Advantages: High Pain Threshold; Toughness/1 [10].

Disadvantages: Bully; Proud; Sense of Duty (Perfumed Garden employees); Status -1; Unattractive.

Skills: Beam Weapons/TL10 (Sonic)-13; Boxing-14; Filch-11; Intimidation-11; Karate-15; Knife-13; Running-9 [0.5]; Survival (Urban)-9 [1]; Wrestling-13.

Maneuvers: Arm Lock-13; Back Kick-14; Choke Hold-12; Elbow Strike-14; Head Lock-10; Hit Location (Karate)-13; Jab-11; Jump Kick-14; Kicking-15; Knee Strike-15; Neck Snap-11; Roundhouse Punch-11; Spin Kick-15.

Gear: Stunner; Leather jacket over heavy monocrys vest; small balisong knife; hard shoes (+1 to kicking damage); sap gloves; jeans and shirt.

Francisco

Born poor and fatherless, and orphaned at six, Francisco has worked hard to become steersman and second mate of the Nina. He's respected by his men and liked by his captain, and now rarely leaves the ship except to attend church and visit taverns.

Age 42. Scarred, leathery face; short gray beard and hair; brown eyes. 5'10", 145 lbs. Native gravity .9 G.

ST 12; DX 11; IQ 11; HT 11. Move 5.

Advantages: High Pain Threshold; Toughness (DR 1).

Disadvantages: Honesty; Primitive (TL 4); Sense of Duty (to ship and to Xyston); Unattractive.

Quirks: Always polite to women; Incompetence (Sex-Appeal); Dislikes horses; Speaks to cats in Latin and believes they understand it; Doesn't gamble.

Skills: Bard-10; Brawling-12; Broadsword-13; Detect Lies-11; Intimidation-10; Knife-12; Languages (English)-11, (Latin)-9; Leadership-10; Merchant-10; Meteorology/TL3-12; Navitation/TL3-12; Savoir-Faire-10; Scrounging-12; Seamanship/TL3-14; Shiphandling/TL3-13; Survival (Island)-11; Swimming-10.

Gear: Cheap thrusting broadsword; small shield; small knife; Bronze cuirass; Bronze Pot-Helm; Greaves; Boots; Gauntlets; belt pouch with 1d pennies and 2d farthings.

Thanos Flint, Dragon Knight

"Captain" Thanos Flint has been one of Malik Dragunov's most trusted associates for half his life, and has nearly as bad a reputation as a monster. When Dragunov's empire started to collapse, Flint decided to join him in his scheme to take over Ahto and export slaves to Nangodai, which enables him to indulge his sadistic tastes on a large harem of young women.

Age 49. Weathered complexion, graying brown hair, hazel eyes, heavily tattooed arms and back; 5'11", 165 lbs. Native gravity 1 G.

ST 13; DX 12; IQ 12; HT 12. Move 6.

Advantages: Combat Reflexes; G-Experience; High Pain Threshold; Panimmunity.

Disadvantages: Bully; Enemy (Special Justice Group, appears on 6 or less); Overconfidence; Pirate's Code of Honor; Reputation, -3 to Law Enforcement professionals and Bounty Hunters, recognized on 10 or less; Sadist.

Quirks: Loves stories and films of swashbuckling era; Sings when drunk; Intolerance (robots).

Skills: Astrogation/TL10-13; Beam Weapons/TL10 (Blaster, Neural)-16; Boating-11; Brawling-13; Broadsword-14; Detect Lies-10; Electronics Operation/TL10 (Sensors)-11; Fast-Draw (Sword)-13; Fast-Talk-12; First Aid/TL10-10; Free-Fall-12; Garrote-12; Gunner/TL10 (Missile Launcher)-14; Interrogation-13; Judo-12; Knife-13; Language (Standard)-12; Leadership-11; Navigation/TL10-12; Riding (Horse)-11; Piloting (Dracomech)-12; Savoir-Faire-11; Seamanship-11; Shortsword-13; Streetwise-13; Swimming-11; Tactics-10; Vacc Suit/TL10-12.

Gear: Fine Thrusting Broadsword with Monowire edge; Neurolash I; BPC Half Plate (PD 4, DR 29, 35 lbs) over Medium Arachnoweave suit (PD 2, DR 8; PD 1, DR 2 vs impaling, 2.5 lbs); Medium Communicator; IR contacts; small pouch with 1d royals, 2d florins, and 2d pennies.

Dragonseer

Dragonseers are the Dragonlord's spies, envoys, and tax-collectors. Dragunov and Flint recruits them from Ahto's underworld: most are former pimps and fences who worked as thieves or thugs in their younger days. Though they are well-paid and mostly live in the luxury and safety of Ahto's palaces, they are loyal to Dragunov as much from fear as from gratitude.

ST 11; DX 10; IQ 11; HT 11. Move 5.25

Advantages: Wealth (Comfortable or better).

Disadvantages: Duty; Greed or Lecherousness; Primitive (TL3).

Skills: Acting-10; Area Knowledge (Ahto)-12; Brawling-10; Detect Lies-11; Diplomacy-10; Fast-Talk-11; Intimidation-11; Interrogation-11; Knife-11; Languages (Standard)-11, (French, Latin)-9; Merchant-13; Poisons/TL3-10; Riding (Horse)-12; Running-9; Savoir-Faire-10; Shortsword-10; Stealth-11; Streetwise-12.

Gear: Decorated armbands with hidden one-shot gas tubes (produces a one-hex cloud: right contains paralysis gas, left nerve gas); Small knife; Leather jerkin (sleeveless) with light monocrys lining; Medium Communicator; Small pouch with 1d florins, 2d pennies; upper class clothing; boots.

Knights

ST 13; DX 10; IQ 10; HT 12. Move 5.5

Advantages: Combat Reflexes; High Pain Threshold; Status/2+; Wealth (Comfortable or better).

Disadvantages: Code of Honor (Chivalric); Duty (to King or to Dragonlord, always on); Primitive (TL3).

Skills: Administration-10; Area Knowledge (Ahto)-10; Armory/TL3-10; Brawling-10; Broadsword-15; Fast-Draw (Sword)-12; Heraldry-11; Knife-12; Languages (French)-10, (Standard)-9, (Latin)-8. Leadership-11; Riding (Horse)-13; Savoir-Faire-11; Tactics-11.

Gear: Good Thrusting Broadsword; Stiletto; Half Plate; Medium Shield; small pouch with 1d florins, and 2d pennies. Knights who have performed well in the service of the Dragonlord may have Monowire-edged broadswords and/or BPC armor.

Veterans

Every king has a few of these fighting commoners to serve as sentries or petty officers in the levies. They are not as well trained or equipped as Knights, but may have seen more combat. Every roundship will also have at least one Veteran, with arms and armor, in its crew.

ST 12; DX 10; IQ 10; HT 11. Move 5.25

Advantages: Combat Reflexes; High Pain Threshold.

Disadvantages: Duty (12 or less); Primitive (TL3); Semi-Literacy. Veterans chosen by the Dragonlord are likely to have disadvantages such as Bad Temper, Bloodlust, Greed or Lecherousness.

Skills: Axe/Mace-12; Brawling-12; Broadsword-14; Crossbow-13; Detect Lies-10; Fast-Draw (Sword)-12; Gunner/TL3 (Ballista or Catapult)-12; Knife-12; Language (Standard)-10; Leadership-9; Savoir-Faire-9; Scrounging-12; Stealth-10; Survival (Forest)-11; Tactics-8.

Gear: Cheap thrusting broadsword; small shield; small knife; TL2 Bronze cuirass (p. CII42), Helmet (p. CII40) and Greaves (p. CII46); Shoes; Gauntlets; Personal basics: if prepared for battle, they carry **ST 12** composite crossbows (3d+2 imp; see p. CII22) and quivers. The veterans on the Kira have BPC helmets (PD 3, DR 27, 2.75 lbs).

Recruits

These are the army's raw and green troops; most are young and fresh off the farm, and in any battle on Ahto, they outnumber veterans 10 to one. These are foot soldiers, but the template can also be used for villagers, young sailors, tavern brawlers, etc. Most Ahtoan archers will have similar statistics and equipment, with a longbow and quiver instead of a spear or axe, and Bow skill of 12-14.

ST 11; DX 10; IQ 10; HT 10. Move 5.

Disadvantages: Duty (6 or less); Illiteracy; Poverty (Poor); Primitive (TL3).

Skills: Axe/Mace-11; Brawling-10; Knife-9; Language (Standard)-10; Running-8; Seamanship-9; Spear-10; Thrown Weapon (Axe or Spear)-10.

Gear: Spear or Axe; cheap small knife; Cloth armor; leather helm; shoes.

Different Callers of Cthulhu

by **Loki Carbis**

Looking at the inevitable fate of the Mythos Cultist, a sane person would have to ask why so many people find it such an attractive lifestyle. I mean, we're all familiar with totally bluggo foaming at the mouth nutsos, but that's just your plain vanilla Mythos Cultist. They can't *all* be mad, right? At very least, they can't all have started out mad. But what could induce a reasonable, intelligent person to devote themselves to the Outer Gods? Well, maybe they're just not all mad in the same way.

Individualizing the cultists your investigators encounter in this fashion will make them all stand out a little better, and prevent the boredom that can result from putting down one insane cultist after another.

This article looks at a few of the other reasons people might get involved with the Mythos, and which particular entities each type is likely to find themselves invoking. Also included under each heading are notes regarding type of activities each type gravitates to (read: plot hooks) and fictional examples of the type drawn from both Mythos and non-Mythos sources. The information here should be useful in almost any horror or conspiratorial game -- it is not limited to *Call of Cthulhu*.

The Criminal

There are those for whom worldly power isn't enough, or those willing to look outside the normal bounds for shortcuts to worldly power. These cultists tend to be among the most rational -- they think of themselves as businessmen making deals, and try not to think too hard about the deals they make and the things they make them with. At the end of the day, for these cultists, it's all about power. Their involvement with the Mythos provides them with ways to do what they want more easily, whether it's disposing of rivals (a Hunting Horror makes a great hit man) or merely becoming respected (or at least, feared) by those around them.

Criminals are very particular about who and what they work with; they want to know what's in it for them. Nyarlothotep is a common choice -- he's the most approachable and (by human standards) the most rational.

Examples:

- Tiger Transit, from *Delta Green: Countdown* (a borderline case that also qualifies as Political)
- Benny Solomon, from *Promethea* by Alan Moore and John H. Williams.
- Alex Abel and the New Inquisition, from *Unknown Armies* and *Lawyers, Guns and Money*
- The Nazi agents from *Raiders of the Lost Ark* and *Indiana Jones and the Last Crusade*

The Jaded

Some people have had too much of pleasure, and even of pain. Their atrophied palates crave something even more exotic -- and all the better if it has a whiff or more of danger. Such people are among the most amoral of cultists, since they have often reached a point where the only thing that matters is the satisfaction of their own whims. Even power is more a means than an end, valued not for its own sake, but for its ability to make things happen. The Jaded tend to be wealthy and powerful members of society, sometimes even celebrities. As such, they engage in relatively little cult activity other than exceedingly decadent orgies. However, it is not unknown for a group of Jaded to stage live hunts for human prey, or even abduct innocents for their entertainment. Nearly any type of cultist can become Jaded if they survive long enough, but the Criminal is the most likely too. Entities likely to attract the worship of the Jaded include the King in Yellow, Hastur, and Shub-Niggurath. Also, the Jaded are prone to experiment with unusual sexual acts and drugs -- the potential connections to many of the groups in *Delta Green: Countdown* should be obvious.

Examples:

- Any character from *The Masque of the Red Death* by Edgar Allan Poe
- Most characters from the movie *Society*
- Most characters from *Coldheart Canyon* by Clive Barker

The Lost

Unknown to the modern world, the Lost are whole tribes or societies that have worshipped one or another of the Great Old Ones from time immemorial. Typically, they are devoted to one or another member of the Mythos to the exclusion of all others. Most servitor races fall into the category, especially the Deep Ones and the Tcho-Tchos. Most of them will be technologically inferior to modern society, although they are almost always superior in magical skill and might. Once such a tribe becomes less lost, they often become Political or Criminal, or both.

Almost any of the greater entities is a suitable object of worship for a group of Lost cultists. Occasionally, a lesser entity, such as a shoggoth or Deep One may find itself worshipped by such a group.

Examples:

- The native tribe in the original *King Kong*
- The Sand Dwellers and the Serpent Men
- The Morlocks from *The Uncanny X-Men* comics (not so much lost as rejected)

The Mad

The Mad are the classic variety of Cthulhu cultist; they're doing it for reasons no one would ever understand, and they won't stop unless you kill them. But the Mad don't always work together -- a deranged but spiritual serial killer might also be Mad. Nor are the mad always gibbering freaks. Sometimes they can be sophisticated, highly educated and perfectly capable of passing as normal in human society, at least for a while.

The Mad are the one type of cultist that could be worshipping anyone -- or anything. Since they are not rational, there is no need for any rational justification for their choices. What they get out of it is the divine ecstasy of communion with their (real or imagined) god.

Examples:

- John Doe, from the movie *Se7en*
- Jason Voorhees, from the *Friday the 13th* movies
- The Whateley family

The Political

Sometimes, a cult can be a secret society with other goals that has acquired a veneer of worship. Many of the native uprisings of the colonial era fell into this mould -- an explosive mixture of spirituality and nationalism. Although such groups have become less common in the modern era, there are still a few of them. For a political cultist, the worship of an entity is either an important part of their cultural heritage, or a symbol of their aspirations. (Those for whom it is a means to an end are classified as Criminal rather than Political in this schema.) Political cultists are the only kind who are idealists.

Which entities are worshipped will depend a lot on the cultural background of the group. Note that such groups will almost always be ethnically or religiously determined. In this, they are much like the Lost, except that they are a part of the modern world.

Examples:

- Majestic-12 from *Delta Green* (a borderline example that qualifies as Criminal too)
- The Skoptsi from *Delta Green: Countdown*
- The Congolese natives from *Than Curse The Darkness* by David Drake
- Tyler Durden, from either the book or the movie of *Fight Club* (Durden may actually be some sort of Mythos entity)

The Questing

The Questing are usually people who've had an experience with the Mythos but don't realize the true nature of their experience; they are a danger to themselves and everyone around them. In their maniacal desire to learn the truth, they may well become increasingly amoral. More than any other type of cultist, the Questing believe that knowledge is power, and are likely to deal with any entity who can lead them to greater knowledge, or read any tome, no matter how blasphemous or forbidden. (For this very reason, many of them become ghouls after reading "The Ghoul's Manuscript.") A Questing can show up nearly anywhere doing nearly anything so long as it is connected, however tenuously, to their quest for knowledge.

The Questing are not drawn to particular entities *per se*. Rather, they are drawn to the blasphemous tomes of forbidden lore, or the arcane reaches of science. The entities they get involved are thus whichever ones they find there.

Examples:

- Herbert West, Re-Animator.
- Fox Mulder from *The X-Files* (the very archetype of the modern Questing)
- Professor Challenger from *The Lost World* and other stories by Sir Arthur Conan Doyle
- Most characters in the *Hellraiser* movie series

The Rebellious

Usually young and not fully aware of what they're messing with, the Rebellious are generally clueless. The first successful summoning they do usually ends with whatever they've called up either killing or maddening them. The real danger posed by the Rebellious is more mundane. Since they often believe in all the gaudy ritual of the Hollywood version of black magic, they're likely to abduct young virgins for sacrificial rites. They also engage in blasphemous vandalism -- if you ever saw the Yellow Sign inexpertly spray-painted onto a subway wall, it was probably put there by one of the Rebellious. This type works better in more modern day games, not being quite so prevalent in the 1920s or 1930s. On the other hand, there are always places to find them: Weimar Germany in the twenties, or the USA during the Reconstruction, for example. Rebellious often mature into other types of cultist, especially Criminal, Political or Vengeful.

Entities favored by the Rebellious are the big names of the Mythos -- reputation rather than actual power or nature is what attracts the Rebellious. Cthulhu is the most likely object of worship, although Nyarlathotep has been known to amuse himself by toying with Rebellious cultists, often appearing as "Satan."

Examples:

- Jonathon, Andrew and Warren, the self-proclaimed "evil geniuses" from the sixth season of *Buffy the Vampire Slayer*
- The young witches from *The Craft*
- The fans of the Vampire Lestat, from Anne Rice's *Vampire Chronicles*. (These fans would also qualify as Unknowing.)

The Unknowing

Among the most sympathetic of cultists, the Unknowing don't realize what they're doing. Maybe they're a new age cult that thinks Bast is a benevolent goddess. Maybe it's a single Unknowing with mental problems whose dementia inadvertently benefits the entities of the Mythos. Whatever it is about them, they're doomed, but not through any fault of their own. Indeed, Unknowing cultists can be allies of the investigators, or even members of the party: there's nothing stopping them from being heroes before they meet their tragic end.

Almost any entity will work for the Unknowing, so long as they do not realize the true nature of the entity. Nyarlothotep is an excellent choice for the role -- set-ups like this seem to appeal the beast's twisted sense of humor. Other likely candidates include Bast and Nodens.

Examples:

- Charles Dexter Ward
- Londo Mollari from *Babylon 5* (in the first two seasons; he later becomes Vengeful)
- Any character who welcomed the aliens in *Independence Day*

The Vengeful

Vengeful cultists are always interested primarily in the acquisition of power, with which they intend to smite their foes. They can be further divided into two types: Those who contact entities to make deals for power; and those who utilize servitor entities to strike at their enemies directly. The former tend to gravitate to Nyarlothotep, and to various imprisoned entities of the Mythos, many of whom will make such deals in order to effect their freedom. The latter most often avoid dealing with the Outer Gods and Great Old Ones, instead learning the various summonings and bindings they need to control various servitor creatures.

Examples:

- Sutter Kane, from *In The Mouth of Madness*
- Dr Anton Phibes, from the movie *The Abominable Dr Phibes*

Obviously, as some of the examples above show, these distinctions aren't hard and fast. Some cultists may fall into more than one category; Unknowing and Questing is a likely combination, for example. A Rebellious who survives their own foolishness may well become Vengeful or Mad. And nearly any cultist will eventually become Jaded after long enough in the service of the Mythos.

All That Slithers

The Snake and Serpent Toolkit for the *d20 System*

by Owen K.C. Stephens

*Author's Disclaimer: I am not a herpetologist. In regards to snakes I'm at best a slightly educated layman. While an effort has been made to produce accurate information regarding snakes, the focus of the article is to provide a toolkit for building interesting animals and monsters for **d20 System** games, rather than a primer on any real-world creatures.*

Snakes and serpents are mainstays of fantasy and adventure gaming. In mythology, snakes can represent knowledge, power, health, or rebirth. They can also represent death, evil, and deceit. In adventure fiction snakes are frequently the focus of major action scenes as dangerous predators in the wild or guardians of a temple's treasures. Unfortunately, in the core *d20 System* rules, snakes are represented by only two types (constricting and poisonous, with no differentiation between poison types) and a few sizes. While few snakes are actually venomous or constrictors, focus on these two types is understandable as they make the best foes. However, no allowances are made for spitting snakes, snakes with blinding strikes, or snakes that simply fall outside the norm.

This article allows a GM to custom-build snakes to fit his adventures. Familiarity with the basic rules of monster design and creation (as outlined in the 3.5 edition *MM*) is crucial, as issues like the die size of an animal's hit dice are not covered in this article.

While true snakes should fall into a realistic range of abilities in order to remain of the animal type (even strange snakes from lost civilizations or alien worlds), a snake-like magical creature (hereafter referred to as serpents) can also be designed using this toolkit. Serpents may also have other supernatural abilities (ice-based poison, mesmerizing gaze, stone scales), but the range of such possibilities is so great no article could hope to outline them all.

The Basics

Snakes are legless reptiles closely related to lizards. Legless lizards (such as glass lizards and worm lizards) also exist that are very similar to snakes, but these are technically different creatures. Snakes are known to vary in size from Fine (such as the 4.25-inch thread snake) to Huge snakes as long as 32 feet (one example of Reticulated Python found in Celebes, Indonesia). In the *d20 System*, snakes are assumed to be coiled when figuring space and reach, which is why a 32-foot-long snake takes up a 15-foot space. In fantasy settings a serpent could certainly grow to tremendous length, allowing for Gargantuan or Colossal serpents.

Many species of snake are venomous (meaning they inject venom with a bite), as opposed to being poisonous (which means they are dangerous to eat). Snake venoms vary from being mildly toxic to lethal, and some snakes have venoms deadly to some species but not humans. Most venomous snakes must bite an opponent to inject venom into the bloodstream, though some snakes have primitive fangs unable to inject venom (the snake must hold its target until venomous saliva gets into the bloodstream) and a few species are able to spit venom at a target at range.

The base CR of a snake is equal to one-half its hit dice (minimum $\frac{1}{3}$, round up). This assumes it has either one standard poison bite or a constriction attack and falls in the typical ranges (given below) for speed, AC, attacks, skills and feats. Each category gives a CR modifier for values outside the normal range, as do the special ability and special quality entries.

Type: Snakes are animals. Serpents are magical beasts. (If using the 3rd edition rules, a snake that doesn't represent any real-world type, or a beast with an Int of 2 or less and no supernatural powers, may be a beast.)

Hit Dice: Snakes can have anywhere from ¼ HD to 12 HD depending on size (as listed below). CR is calculated directly off hit dice. For serpents with 15 or more hit dice, add only +1 CR for every 3 HD above 14.

Size	Minimum Hit Dice	Maximum Hit Dice
Fine	¼	2
Tiny	½	4
Small	1	6
Medium	2	
Large	4	
Huge	4	
Gargantuan*	12	
Colossal*	24	

*Snakes of this size fall into the realm of the theoretical, and are most appropriate for games not set in the real world.

Speed: A Tiny or smaller snake has a 15 foot base speed, while bigger snakes have a 20 foot base move. A snake can have up to double this speed, which is worth +½ CR.

Not all snakes can swim, though the *d20 System* core rules gives all of them a swim speed. A snake can either have a 15-foot or 20-foot swim speed or none. Swim speed has no affect on a snake's CR unless it cannot swim in a water-heavy environment, in which case it's worth -½ a CR.

Not all snakes can climb well enough to qualify for an innate climb rate, though the *d20 System* core rules gives all of them a climb speed. A snake that does have a climb speed has the same climb rate as its base move.

A serpent may move twice as fast as a snake, which is worth +½ CR (for a total of +1 CR if this is four times the snake's listed base move) for each increased rate of movement.

Armor Class: A snake's AC is based on its Dex and size modifiers and its natural armor bonus. The normal natural armor range for a snake is ½ its hit dice, modified by size (as listed below). A natural armor bonus up to 2 higher is worth a +1 CR adjustment, and a natural armor bonus up to 5 higher is worth a +2 CR adjustment. A natural AC bonus at least 2 less than the standard lowers CR by 1.

Size	Natural Armor Bonus
Fine	+2
Tiny	+2
Small	+3
Medium	+3
Large	+2
Huge	+2
Gargantuan*	+2
Colossal*	+2

*Snakes of this size fall into the realm of the theoretical, and are most appropriate for games not set in the real world.

Attack: All snakes have a bite attack. Damage dealt is determined by size and whether or not the snake is a constrictor, as detailed below. All snakes add 1½ times their Str modifier (if positive) to bite damage.

In the real world, non-poisonous snakes tend to have underdeveloped teeth rather than the impressive fangs of the poisonous breeds. A snake with neither the venom nor constrictor abilities that has a bite at least two sizes weaker has its CR lowered by 1.

Size	Bite Damage	Constrictor Bite Damage
Fine	1 pt.	1 pt.
Tiny	1 pt.	1d2

Small	1d2	1d4
Medium	1d4	1d4
Large	1d4	1d6
Huge	1d6	1d8
Gargantuan*	1d8	2d6
Colossal*	2d6	2d8

*Snakes of this size fall into the realm of the theoretical, and are most appropriate for games not set in the real world.

Special Attacks:

The standard CR ratings for a snake assume the snake has either a poison bite or the constrict ability. A snake may have both, with the listed CR adjustments. A snake with neither has its CR cut in half (after all other calculations).

Constriction: A constrictor snake has the constriction special attack, allowing it to automatically deal damage with a successful grapple check. Damage dealt is the same as the snake's bite damage (though it's bludgeoning damage). Constrictor snakes also gain the Improved Grab ability, allowing a snake that hits with its bite attack to start a grapple as a free action without provoking an attack of opportunity. If it wins the grapple check, it establishes a hold and can constrict.

Constrictor snakes have increased bite damage and higher Str scores (as detailed in the entries for attacks and ability scores). Adding the constriction ability to a venomous snake is worth a +2 CR adjustment.

Intimidating Display (Ex): Snakes have a number of possible ways to make themselves seem more intimidating, from hoods, hissing and bright scale patterns to rattles and aggressive postures. A snake with the intimidating display ability can make an Intimidate check to demoralize opponents against all targets within its threat or strike range as a standard action. The snake makes a single Intimidate check, and it is opposed by each target's level check (as described in the Intimidate skill). Most snakes with an intimidating display also have a racial bonus to Intimidate (ranging from +2 to +8), and gain Intimidate as a class skill.

Intimidating display adds +½ a CR to a snake.

Spitter: Some snakes spit their venom, allowing them to hit targets at range. A spitter fires its poison at a target's face, though it is equally effective if it gets into a wound. This attack requires a ranged touch attack. An uninjured character may make a Reflex save (DC 10 + snake's Dex mod + ½ snake's hit dice) to prevent the venom from entering his eyes. An injured target cannot avoid the poison in this way.

The poison has the same attributes as the snake's normal toxin (see venom, below), but also has secondary damage of permanent blindness. The maximum range a snake can spit its venom is based on size, as determined by the chart below. A target with waterproof covering on its eyes cannot be blinded by this attack.

Being a spitter is worth a +½ CR adjustment.

Snake Size	Venom Range
Fine	10 feet
Tiny	10 feet
Small	15 feet
Medium	20 feet
Large	30 feet
Huge	40 feet
Gargantuan*	50 feet
Colossal*	60 feet

*Snakes of this size fall into the realm of the theoretical, and are most appropriate for games not set in the real world.

Strike (Ex): A snake's strike is a special charge it can make once a round. The snake may either strike as a standard action, or as an attack of opportunity, but it may only make one strike each round. Thus a snake that strikes during its action cannot use the strike as an attack of opportunity until its next move. A snake's strike has a listed range (which cannot exceed its base move), which is the maximum distance it can make a strike from. A snake may strike even after taking a move action (the snake is not be restricted to moving in a straight line, and can strike without making any previous move, unlike a normal charge).

A snake threatens all the squares it can strike into if it hasn't used its strike yet in the round. Thus a snake with strike (20 feet) threatens all creatures within 20 feet, allowing it to either attack on its round or take an attack of opportunity against creatures that provoke on within its strike range.

A snake gets the +2 attack bonus when striking, but does not take the -2 penalty to AC. A snake may only make its strike against targets within the listed range. The snake does not provoke attacks of opportunity from targets by moving out of their threatened areas from movement taken during a strike.

Having a strike is worth a +½ CR adjustment.

Toxin Potency (Ex): Snake venom often has little to do with size, as some of the deadliest snakes in the world are among the smallest (or at least not among the largest). Snakes may have toxin potency of +1 to +6, which increases the save DC of all poison attacks made by the snake (see *Venom*, below).

Toxin potency increases a snake's CR by ½ the value of the potency bonus.

Venom

Snake venom is highly modified saliva with proteins and enzymes that make it harmful to creatures when it enters their bloodstream. Not all snake venoms are created equal. In addition to having varying degrees of lethality and potency, different snake venoms work in totally different ways. The complexities of all different venom types are beyond the scope of this article, but the following information is as accurate as a layman's understanding can convey to other laymen.

Realistically, snake venom should have an onset time that varies by species, seriousness of the bite, and size and activity of the target. To simplify game stats the following toxins are written in the standard initial damage/secondary damage format used by the *d20 System* core rules. More realistically, a GM may decide to vary onset time by species, and allow poison to deal its secondary damage at each multiple of this onset time, based on target size. For example, a GM creating the white mamba snake could decide it has a poison onset of 15 minutes, and deals secondary damage every 15 minutes after that to a maximum of 8 times for a Medium size target, +2 times for each size below medium, -2 for every size above Medium. These rules make poison easier to deal with magically (as the onset time is longer), but also make it far deadlier if untreated (though secondary damage can be as low as 1 ability point for multiple-secondary damage poisons).

A venom may note it doesn't affect some species with a parenthetical statement. A creature of the listed type is immune to the poison in game terms; the venom may cause slight swelling, but nothing worth game penalties. A poison may also note it only works against certain creatures in a parenthetical statement, in which case all creatures not of the listed type are immune. A snake with venom that doesn't affect the most common PC races has its CR reduced by 1.

If a snake doesn't have true hollow fangs, but instead just grooved fangs, it can't get much venom into a victim with a single bite. A snake of this type has (grapple only) noted after its poison attack. The target of such a snake's bite need not make a save vs poison unless it is successfully grappled during a bite attack.

The base save DC of a snake's venom is figures as 10 + ½ snake's HD + snake's Con modifier. A snake's venom may be particularly potent if the snake has toxin potency.

A venomous snake normally has only one kind of venom. A snake may add another venom type (even if it's a constricting snake) at a cost of +1 CR per poison type added.

Cardiotoxic: Cardiotoxic venoms slow and stop the heart.

In game terms cardiotoxic venoms deal primary damage of 1d6 Con and 1d6 Str, and secondary damage of death.

Cytotoxic: Cytotoxic venoms attack tissue directly, causing irritation, pain and swelling.

In game terms, cytotoxic venoms deal primary and secondary damage of 2d6 hp. Additionally, the great pain of the bite causes a victim of a cytotoxic bite to suffer a -4 penalty to all attack, skill, and ability checks, as well as saving throws, until the poison is neutralized or has run its course. A Concentration check (DC 20) allows a victim to overcome this penalty.

Hemotoxic: Hemotoxic venoms attack the victim's blood, breaking down capillary walls and destroying red blood cells. This causes swelling and hemorrhaging, which is both damaging and painful. Hemotoxic venoms can cause gangrene, degrade motor skills, and require an affected limb be severed.

In game terms, hemotoxic venoms deal 1d6 Con as primary and secondary damage.

Neurotoxic: Neurotoxic venoms attack the body's neurons, preventing chemical signals (neurotransmitters) from going from neurons. All a creature's sensations and actions (muscle control, respiration, hunger, anger, etc.) are controlled by neurotransmitters. The toxins do this either by targeting neurons that send messages within the body, or by blocking neurons designed to receive these messages, or both. These toxins can cause pain (often described as a burning sensation), paralysis, respiratory failure and death.

In game terms, neurotoxic venoms deal primary damage of 1d6 Dex and secondary damage of 1d6 Dex and paralysis for 1d4 × 10 minutes.

Special Qualities

Arboreal: An arboreal snake must have a Climb speed. When moving through foliage (including tree branches) an arboreal snake moves at its climb speed as if flying with perfect maneuverability.

Being arboreal is too minor to be worth a CR adjustment.

Scent: All snakes have the scent ability. Snakes smell by flicking out their tongue to pick up a scent, then running it over a sensory organ located in the roof of their mouth.

Tremorsense: Snakes can pick up vibration in the ground. In most species this ability is too crude to qualify for tremorsense, but it's possible for a very sensitive snake (usually smaller ones) to qualify for the ability. Tremorsense is an extraordinary ability that allows the snake to detect and pinpoint any creature or object within 60 feet in contact with the ground.

Tremorsense is worth a +½ CR adjustment.

Abilities: The standard abilities of a snake are based on size, as defined below. A true snake can't vary by more than 4 points from any of these abilities, and every 4 point increase in abilities is worth +½ CR adjustment. Constrictor snakes are considerably stronger than typical venomous snakes, and have the Str listed in parentheses. This is part of the construction quality, and the CR value of it is covered under the constriction entry.

To remain an animal, a snake can't have an Int of more than 1. Snakes have low Con scores because their organs are all (of necessity) elongated and cramped for space. A snake has only one full-sized lung, and may not have a second lung at all. They tire easily, and even large snakes aren't particularly tough. A true snake can't increase its Con score by more than +2.

A serpent can vary its abilities by any amount with the same CR adjustments.

Size	Str	Dex	Con	Int	Wis	Cha
Fine	2 (11)	17	11	1	12	2
Tiny	4 (13)	17	11	1	12	2
Small	6 (15)	17	11	1	12	2
Medium	8 (17)	17	11	1	12	2
Large	10 (19)	17	11	1	12	2
Huge	16 (25)	15	13	1	12	2
Gargantuan*	22 (31)	15	13	1	12	2
Colossal*	28 (37)	15	15	1	12	2

*Snakes of this size fall into the realm of the theoretical, and are most appropriate for games not set in the real world.

Skills: The class skills for snakes are Balance, Climb, Hide, Listen, Spot, and Swim. As animals, snakes get 2 + Int Mod skill points per hit die (minimum of 1 per hit die). Snakes receive a +4 racial bonus to Hide, Listen and Spot checks, and a +8 racial bonus to Balance checks. A snake with a natural Climb or Swim rate receive +8 bonuses to those skill, and may always take 10 with those skills.

Serpents are magical beasts, and also gain 2 + Int Mod skill points per hit die (minimum of 1 per hit die). A serpent without the snake's racial skill bonuses receives a -1 CR adjustment.

A snake may have a greater than usual racial bonus to a skill. A snake particularly well camouflaged for its environment, for example, may receive a +8 bonus to Hide checks. For every two skill that receive a greater bonus (no more than +4 higher than normal) the snake receives a +½ CR adjustment.

Feats: All animals and magical beasts receive 1 feat, +1 feat per 3 hit dice. Snakes and serpents generally take their feats from the following list: Agile, Alertness, Blind-Fight, Improved Initiative, Iron Will, Lightning Reflexes, Run, Skill Focus (any class skill), Stealthy, Toughness, Weapon Finesse, Weapon Focus (bite).

Though a few snakes are given Endurance in the core *d20 System* rules, a true snake's low stamina should prevent any from having this feat (along with Great Fortitude). Replace it with Power Attack if the snake qualifies for it, or Weapon Focus (bite).

A snake may receive bonus feats. Every 2 bonus feats are worth a +½ CR adjustment.

Challenge Rating: The CR of a snake or serpent can be determined by using the formulas given in each entry. Since no CR system is perfect, the GM should compare his final creature to other monsters of the same CR to make sure it's in keeping.

It's possible to have a very high CR venomous snake that isn't much threat if spotted by a party at a distance. Such snakes should depend on stealth to get near a group and then strike. Once a snake's venom is running through a PC's veins, the threat of the encounter is realized even if the snake is quickly killed.

Sample Snakes and Serpents

The following creatures were all built using the rules in this article.

Coral Assassin

Small Animal

Hit Dice: 6d8 (28 hp)

Initiative: +5

Speed: 20 ft. (4 squares), climb 20 ft.

Armor Class: 22 (+1 size, +5 Dex, +6 natural), touch 16, flat-footed 17

Base Attack/Grapple: +4/+0

Attack: Bite +12 melee (1d2-2 plus poison)

Full Attack: Bite +12 melee (1d2-2 plus poison)

Space/Reach: 5 ft./5 ft.

Special Attacks: Intimidating display, spitter (15 ft.), strike (15 ft.) venom potency (+6)

Special Qualities: Scent

Saves: Fort +5, Ref +10, Will +3

Abilities: Str 6, Dex 21, Con 11, Int 1, Wis 12, Cha 2

Skills: Balance +14, Hide +10, Intimidate +6, Listen +6, Spot +6

Feats: Skill Focus (Hide), Weapon Finesse, Weapon Focus (bite)

Environment: Any desert

Organization: Solitary

Challenge Rating: 7

Advancement: 7 14 HD (Small)

Coral assassins are deadly desert snakes whose coloring causes them to blend into the shifting sands of their homeland. They normally feed on small lizards and insects, but when food is scarce have been known to bring down a horse. A coral assassin also attacks when it feels threatened. Unfortunately they often feel threatened when Medium or larger creatures move close to their hiding place,. Resulting in travelers being bitten before ever realizing they're in danger.

Skills: In addition to the normal snake bonuses, coral assassins have +8 racial bonus to Intimidate checks.

Poison: A coral snake's poison is both cytotoxic and heomtoxic. It has a save DC of 19, initial and secondary damage of 1d6 con and 2d6 hp, and the great pain of the bite causes a victim to suffer a -4 penalty to all attack, skill, and ability checks, as well as saving throws, until the poison is neutralized or has run its course. A Concentration check (DC 20) allows a victim to overcome this penalty.

Dirt Snake

Large Animal

Hit Dice: 9d8+3 (43 hp)

Initiative: +3

Speed: 20 ft. (4 squares), swim 20 ft.

Armor Class: 19 (-1 size, +3 Dex, +7 natural), touch 12, flat-footed 17

Base Attack/Grapple: +6/+10

Attack: Bite +12 melee (1d4)

Full Attack: Bite +12 melee (1d4)

Space/Reach: 10 ft./10 ft.

Special Qualities: Scent

Saves: Fort +6, Ref +11, Will +4

Abilities: Str 10, Dex 17, Con 11, Int 1, Wis 12, Cha 2

Skills: Balance +10, Hide +9, Listen +9, Spot +9, Swim +10.

Feats: Alertness, Lightning Reflexes, Skill Focus (Hide), Toughness

Environment: Any temperate

Organization: Solitary

Challenge Rating: 2

Advancement: 10 18 HD (Large)

Dirt snakes are dull brown in color, and can grow to be 20 feet long. They aren't a serious threat to prepared humanoids, though a child or someone badly injured might be at risk. They are surprisingly tough, and an unprepared individual is best served by fleeing such a creature. Dirt snakes are mostly scavengers, eating carrion and small injured rodents.

River Serpent

Gargantuan Magical Beast

Hit Dice: 14d10+31 (108 hp)

Initiative: +2

Speed: 20 ft. (4 squares), swim 40 ft.

Armor Class: 17 (4 size, +2 Dex, +9 natural), touch 8, flat-footed 15

Base Attack/Grapple: +14/+36

Attack: Bite +24 melee (2d6+15)

Full Attack: Bite +24 melee (2d6+15)

Space/Reach: 20 ft./20 ft.

Special Attacks: Constrict 2d6+15, improved grab

Special Qualities: Scent

Saves: Fort +10, Ref +11, Will +5

Abilities: Str 31, Dex 15, Con 13, Int 5, Wis 12, Cha 2

Skills: Balance +11, Hide +11, Listen +10, Spot +9, Swim +11

Feats: Alertness, Blind-Fight, Power Attack, Skill Focus (Hide), Toughness

Environment: Any freshwater

Organization: Solitary

Challenge Rating: 8

Advancement: 15 28 HD (Gargantuan)

River serpents are voracious, aggressive predators that attack anything smaller than themselves, including rafts and canoes. They are equally comfortable on land and in water, though they prefer to hunt in rivers large enough to allow them to maneuver.

Constrict (Ex): On a successful grapple check, a river serpent deals 2d6+15 points of damage.

Improved Grab (Ex): To use this ability, a river serpent must hit with its bite attack. It can then attempt to start a grapple as a free action without provoking an attack of opportunity. If it wins the grapple check, it establishes a hold and can constrict.

Pyramid Review

The Psychic's Handbook (for d20 System)

Published by [Green Ronin Publishing LLC](#)

Designed by Steve Kenson

Edited by Dale Donovan

Art by Todd Lockwood, Drew Baker, Jonathan Kirtz, Kent Burles, & James Smith III

80-page b&w softcover; \$16.95

It's not entirely clear in what order Green Ronin is trying to present its products, but it's covering its bases. The psionic creature collection *Monsters of the Mind* came before its related setting, *Mindshadows*. Now that there's a place to set the game and a book of foes to put there, [The Psychic's Handbook](#) finally gets around to giving Green Ronin's version of how mental abilities ought to work.

To be fair, this latest volume draws a distinction between the psionics of the original *Dungeons & Dragons* game and *Mindshadows* and its own psychic powers, but the differences are fairly cosmetic. Both are still powers of the mind, but they aren't managed in the same way.

Part of Green Ronin's Master Class series, the book starts with the psychic, the basic class for having psychic powers. A character must have the Psychic Ability feat to have and learn additional psychic feats and powers. Unlike *d20 Modern*, which treats psionic powers like spells in many ways, *The Psychic's Handbook* treats psychic powers as skills. A feat that gives you access to psychic skills is called a talent; once you've bought the Telepathy talent, you can buy ranks in any of the skills that sit under it, like Domination and Empathic Projection.

By default, psychic powers are the purview of the psychic class and its associated prestige classes. Any other class may purchase the appropriate talents and skills, but psychic abilities will always be considered cross-class skills for those characters.

The powers are fairly standard literary fare. Telepathy, telekinesis, pyrokinesis, and psychokinesis are all present and accounted for. There are a few other esoteric items like Dreamwalk (which the book likens to astral projection), and Psychic Weapon that allows you to wield a weapon made of psychic energy. There are powers to let you drain or implant memories, feelings, or character statistics, and a slew of Psychometabolism powers that give you control over your bodily functions.

Not all feats are simply doorways to getting the skills. Some allow you to fine-tune the use of your powers, such as Apport Arrows that lets you teleport an incoming missile out of midair; or Mind Trap, which gives you a reactive attack against another psychic attempting to invade your mind. In the same vein as metamagic feats, there are metapsychic feats that boost the power of -- or defray the cost of using -- psychic skills. You can increase the range of powers, target more people with a mental attack, or reduce the effort required to summon your abilities. The effort is strain, and strain is taken as normal, nonlethal damage to the character.

The prestige classes fall mostly into two categories: those who concentrate on one or a few psychic powers as their shtick, such as Pyrokinesis, healing powers, or Psychometabolism; and psychics who hunt, usually seeking rogue

psychics, demons, ghosts, and other psychically attuned beings.

While there's not much to stop the reader in his tracks in the psychic skills and feats sections, the campaign suggestions are a different matter. It discusses some creative ways to use the powers listed, and how to make the abilities a part of the plot instead of just a tool for fixing the bad guys' wagons. The use of psychic skills in combat, especially when mentally "grappling" a foe, gets a lot of text, and there are scads of rules that significantly change the use of psychic powers. Whether you want them to be easier to use or harder, the book has your number.

The problems of having psychics wandering your game world -- from finding murderers with a quick mental scan to chopping up enemies at a distance with a telekinetically wielded axe -- are deftly handled. How-tos (and how-not-tos) are mixed in with psychically involved groups that may hunt, help, or even worship those with great mental strength. Throw in some psychic equipment, psychic creatures, and constructs, and some fabulous material on psychic viruses, and you have a fairly complete view of how to run a campaign based on these powers or how to effectively mix them into an otherwise-unrelated game.

The artwork is a pleasure to view, and it uses evocative pencil drawings to provide creative stimulus without being too obvious or fanciful. A few of the boxed sections come dangerously close to losing bits of text in the swirling vortex pattern, and some of the section and subsection headers could be a bit more distinct, but the book's look is overall quite favorable.

With clearly defined rules that read well and sound like someone actually considered all the angles when meshing (and testing) the material, *The Psychic's Handbook* takes a popular subject and makes sure the *d20 System* has a workable, worthwhile set of guidelines for putting them to good use.

Pyramid Review

50 Fathoms (for Shane Lacy Hensley's Savage Worlds)

Published by [Pinnacle Entertainment Group](#)

Written by Shane Lacy Hensley

Front Cover by Zeke Sparkes

Rear Cover by David Deitrich

Illustrated by Cheyenne Wright

144-page b&w hardcover; \$29.95

Some years can be defined by their genre, a happenstance that can come about by design, such as everyone releasing World-War-II-related games and supplements in 2001, and by synchronicity in 2003, with a treasure chest full of pirate-themed releases reaching the shelves of your local and virtual games emporia, all helped along with the blockbuster movie, *Pirates of the Caribbean: The Curse Of The Black Pearl*. Which gives the gaming consumer a welter of choice when it comes to running up the Jolly Roger and sailing the Seven Seas in search of plunder. Living Games provided a fantastical approach for the *d20 System* with the release of *Pirates!*, while Deep7's double reprint of *Shriek/Bloode Island 1PG Double Feature* gave us the fastest and most accessible choice. Green Ronin Publishing, in addition to continued support for their [Freeport: City of Adventure](#) with the scenario anthology [Tales of Freeport](#), brought out what was arguably the best treatment of the genre, [Skull & Bones: Swashbuckling Horror in the Golden Age of Piracy](#). This combined a detailed and realistic look at the Golden Age of Piracy with a dark streak of voodoo, again for the *d20 System*.

The last of 2003's piratical releases again gave a fantastic treatment of the genre, but rather than being a generic supplement whose contents could be applied to any setting, *50 Fathoms* comes with a setting of its own and both a campaign *and* a plethora of adventure hooks to support that setting. *50 Fathoms* is a source and campaign book for [Shane Lacy Hensley's Savage Worlds](#), the pulp-action orientated generic RPG based on [The Great Rail Wars Miniatures Battle Game](#), the miniatures skirmish rules for the *Deadlands RPG*, again written by Shane Lacy Hensley. It is the second release for *Savage Worlds*, following on from *Evernight*, the campaign in which the characters save their home from an alien invasion. Where [Evernight](#) involved the traditional elements of fantasy roleplaying, elves, dwarves, and so on, *and* it was also traditional in its pre-structured and plotted format, *50 Fathoms* is something of a move away from such traditions. In this it combines elements of the film *Waterworld*, time travel, an alternative world, magic, *and* piracy! And although *50 Fathoms* comes with a plot, its structure is very loose and only partially pre-plotted.

The setting is Caribdus, a once-prosperous world made up of small continents that in the last 13 years has had much of its surface drowned under 50 fathoms of water. Natives of Caribdus say that the source of this is the Sea Hags who caused continuous rain to fall then, and do so to this day. They were once three sisters, triplets accused of dark sorcery and tried in their home city of Ograpog. As they were sentenced to death by drowning, the trio cursed both their homeland and their king. When they died, it began to rain, not stopping since.

The Sea Hags now have their lair in the Devil's Cross which lies at the center of the Flotsam Sea. This is a region some 60 leagues in radius, battered by constant storms and rife with scurvy pirates, horrors from the deep, and ships

crewed by ghosts. Drawn into the area is a morass of flotsam and jetsam, the wasted remains of a drowned world.

While the Flotsam Sea is the home to a great evil, it is perhaps the source of Caribdus' salvation. Visitors from another world say that a mysterious crying girl drew their ships into fierce storms, and when they emerged they found themselves in the Devil's Cross. They have come from a world with a variety of nations and from across three centuries of history -- from 1500 to 1815. They include Spanish Galleons, Chinese Junks, English Men o' War, and Dutch Merchantmen. It is said that a stranger from Earth will come to save Caribdus.

Caribdus is now home to the British East India Company, the Pirate King, Blackbeard, Quakers of New England (who have settled in Dunwich, no less), the Spanish Guild of New Madrid, and -- worse still -- the Inquisition, led by Tomas De Torquemada. His hatred of this new world's strange magic has made the profession of elementalists a dangerous one indeed.

Thus with *50 Fathoms*, it is possible to play anybody from Earth between the years 1500 and 1815 who might have reason to be aboard a ship, as crew, passenger, soldier, slave or merchant. On Caribdus they can explore a new world, trade cargoes, turn to piracy, hunt for whales, search for the salvage or treasure of a ruined world, or even become a Questor and seek to end the Sea Hags' curse. Unlike Earth, Caribdus is home to several races, most very different. The Atani are tall, thin glider folk, who live in the only remaining tree top city in the last un-drowned Carroway forest. The Doreen, or "gray folk," are semi-aquatic sea hunters capable of holding their breath for up to 15 minutes and the natural enemies of the Kehana. These are sharp-clawed and toothed fishermen who like to eat their food live, "raw and wriggling." The Grael are squat and powerful gray-skinned humanoids protected by a thick layer of blubber; given to brawn rather than brains, they can also hold their breath for a long time. The Kraken, tall humanoids with red skin and squid-like features are a mysterious and aloof lot, with a natural talent for magic. The Masaquani are the dominant race on Caribdus and are like humans, but with a greater variety in skin and hair color as well as body types. The leading Masaquani nations prior to the flood were Ograpog and Kiera; though only the former survives, the rivalries between their two peoples continue to this day. Red Men are savage and brutal Neanderthal barbarians. Hated by all, but sometimes forcibly mating with humans or Masaquani, the results are Half-Ugak, tough, strong, yet clueless creatures popular with pirate crews because they follow orders. Finally, Scurillions are an arch-mage-created race, crabs given sapience. They are unsocial creatures, but with the pincers, shell, and telescopic eyes of the crab and a keen mind for numbers that makes them capable navigators, accountants, scientists, and quartermasters.

There are essentially two major changes to *Savage Worlds* character generation for *50 Fathoms*. The first is designed to encourage a reckless and daring style of play and allows players to select a Seasoned Edge rather than just the Novice Edges normally allowed during the generation process. The other change is that the Arcane Background, which in the basic game includes Magic, Miracles, Psionics, Super Powers, and Weird Science, but is here restricted to Magic only. At the time of creation, a magic-using character specializes in any one of the four elements and gains access to a limited selection of spells. Water Wizards are popular aboard ship for their ability to heal, provide clean water, and control sea creatures, while Fire Mages are feared for their destructive spells, some of which can burn a ship to the keel. Earth Mages cast defensive spells and can help a party survive the rigors of exploring the thousand isles, and Wind Wizards are adept at keeping a ship moving or becalming a foe. With only 10 spells, an elementalists will quickly run out of options, but can go on to master another element and then another. This is difficult, and in game terms comes with a small penalty, but eventually it can pay off. A mage can learn all four elements and thus become an Archmage. There is only one of these known in Caribdus, Tressa the Red.

In keeping with the reckless nature of *Savage Worlds*, *50 Fathoms* moves briskly through all you need to play. Everything is covered, from buying and selling goods and equipment, rules for handling, managing, and fighting with ships, and a guide to the elemental magic of Caribdus. And the players' section is rounded out with a gazetteer of the Thousand Isles and a short guide to pirate lingo.

The remainder of *50 Fathoms* is given over to the Captain's Log, and is specifically for the GM. It begins with a more detailed history of the last 13 years or so, and then gets to the real difference between *50 Fathoms* and the average campaign. *50 Fathoms* is designed to be what is called a "Plot Point" setting rather than as a linear campaign. Instead of the linear campaign, *50 Fathoms* provides further information on the many locations across the Thousand Isles, some of these accompanied by blocks of text marked with a crossed arrow symbol. They indicate the presence of a

"Savage Tale" linked to that location, the block of text giving a short description of the Savage Tale and a page number. Turning to that page finds more information about the lead given in the location, which can be as long as a quarter-page to two whole pages or more. There are over 40 of these Savage Tales, but *50 Fathoms* is not just a setting and a collection of semi-random encounters.

There are an additional nine encounters or adventures which are the Plot Points of *50 Fathoms*. Marked in the location descriptions with the symbol of a skull wearing an eye-patch and a tricorn hat above crossed knife and pistol -- *50 Fathoms'* equivalent to *Savage Worlds'* Smilin' Jack (though he does appear to indicate the settings' wildcard NPCs) -- they are specifically tied into the back story of the setting. When played in order, these Plot Points, beginning with a simple foraging trip into the jungle for a ship's crew in "Maiden Voyage," takes the player characters on a long journey back and forth between the Thousand Isles, which will hopefully end with the defeat of the Sea Hags.

The advice for the GM is not to push these Plot Points, and to let the players dictate much of the action, running a Plot Point adventure as and when the campaign calls for it. The loose structure supports this, and is aided by notes on random encounters and subplots. The result is something of a hybrid born of the linear campaign and the source book.

Physically *50 Fathoms* is a well-done hardback up to the standards of *Savage Worlds* and *Evernight*. The layout is clean and tidy, benefiting by the interior "AAAART" (sic) of Cheyenne Wright. But there are a couple of problems with *50 Fathoms*. First is the map, which is printed in black and white, and on a single page at the front of the book, where its placement is just enough to make it awkward to use when running a game. It also feels very constrained at only one page and really should have been placed as a double-page spread inside the front and back covers. This could have afforded it more detail and possibly allowed it to be rendered in color. The second is more irritating, and is one that also beset Hensley's *Evernight*.

Where *is* the introduction? How do you use this book? What is this book about? These are not questions properly answered in *50 Fathoms* until pages 74 and 80. Why does the author keep the whole concept of *50 Fathoms* hidden until halfway through the book?

Putting this odd failing aside, *50 Fathoms* is a well-executed realization of what is the campaign/sourcebook hybrid. Its pulp action treatment of piracy and the Golden Age of Sail makes for an easily accessible playing style and the combination of familiar history injected into a fantasy world makes the Thousand Isles of Caribdus just as accessible. The generic nature of the *Savage Worlds* rules means that *50 Fathoms* could as easily run with other generic systems such as *GURPS* or *Fantasy Hero*. Other choices include *7th Sea* or *Skull & Bones*, though these would require some work to model the setting's fantasy elements.

Of all the pirate-themed supplements and RPGs published in 2003, *50 Fathoms* is the most self-contained, offering both a setting and a loosely structured campaign through which the players are free to set sail for any direction that they want.

Murphy's Rules

by Greg Hyland

Murphy's Rules

A-Hunting He Will Go: Herne the Huntsman

*"There is an old tale goes that Herne the hunter,
Sometime a keeper here in Windsor forest,
Doth all the winter-time, at still midnight,
Walk round about an oak, with great ragg'd horns;
And there he blasts the tree, and takes the cattle,
And makes milch-kine yield blood, and shakes a chain
In a most hideous and dreadful manner."*

-- William Shakespeare, *The Merry Wives of Windsor*, IV:iv:24-30

So rarely is William Shakespeare a reliable source for anything that it is with some trepidation one notes that he is the earliest -- and only -- reliable source for the 16th century Berkshire legend of Herne the Hunter. *The Merry Wives of Windsor* was first performed at Windsor (on the illuminated date of May 23, 1597) before the Queen and her court, and Shakespeare filled this "made to order" sequel with authentic local lore for the authentic local lords. The Earl of Sussex supposedly saw the ghost of Herne during the reign of Henry VIII, and obviously sightings continued down to Shakespeare's day. Elsewhere in the play we read that Herne's Oak lies hard by a Fairy Pit, another local landmark within Windsor Forest that shows up on maps (though not always labeled as such) down to the 18th century. Herne's Oak was, in fact, a specific oak widely regarded as haunted and somehow tied to the English throne (being, after all, in the forest of Windsor Castle). It became a minor tourist attraction in the centuries following Shakespeare's play, and was cut down by mistake in 1796. Later, a different oak nearby was identified as Herne's Oak; this one blew down in a storm in 1863. The superstitious Queen Victoria had it replaced with a different oak, itself removed when the true site was rediscovered, and replanted, by Edward VII in 1906. In the modern era, Herne has been seen most recently by a Windsor Castle guardsman in 1976, and was blamed for the death of a prankster in the forest in 1962. Other sightings are reported going vaguely back to 1910 or so -- or around when Edward replanted the Oak in the proper spot.

Herne, according to the consensus legend, was a royal huntsman or gamekeeper in Windsor Forest. Through some mischance, he incurred the royal wrath and, wearing antlers, hanged himself from the oak tree with a chain. His body disappeared in a lightning strike, but he returns on midwinter nights to roam and wreak havoc. The most famous version of the story, in W. Harrison Ainsworth's late Gothic (1843) historical novel *Windsor Castle*, casts Herne as the chief huntsman to King [Richard II](#). He saves the king's life from a charging stag, but falls mortally wounded. A local wizard named Philip Urswick conveniently rides by and promises to heal Herne, requiring antlers be tied to his head. For murky reasons, in the process Urswick deprives Herne of his skills at hunting. Herne, driven mad by his fate, hangs himself with his royal chain of office, still wearing the antlers Urswick affixed to his skull.

"He who has once closed hands with Herne the Hunter cannot retreat. . . . And now to the chase. I promise you it will be a wilder and more exciting ride than you ever enjoyed in the king's company. To the chase! To the chase, I say!"
Sounding a call upon his horn, the light instantly reappeared. All was stir and confusion amid the impish troop -- and presently afterwards a number of coal-black horses, and hounds of the same hue, leashed in couples, were brought out of one of the side passages. Among the latter were two large sable hounds of Saint Hubert's breed, whom Herne summoned to his side by the names of Saturn and Dragon . . . The whole scene seemed to dance around him; the impish figures in the lake, or upon its bank, assumed forms yet more fantastic; the horses looked like monsters of the deep; the hounds like wolves and ferocious beasts; the branches of the trees writhed and shot forward like hissing serpents; and though this effect speedily passed off, it left behind it a wild and maddening feeling of excitement."

-- W. Harrison Ainsworth, *Windsor Castle*

And, in Ainsworth's telling, Herne emerges to lead the Wild Hunt. This [spectral band](#) of huntsmen, horses, and hounds roams the earth (or flies across the sky) hunting the souls of the wicked (or witches, or the unshriven, or anyone outside) and generally raising Hell. The band might be ghosts, or fairies, or humans cursed with immortality, or all three. The Wild Hunt rides during the winter (especially on [Twelfth Night](#)), when Herne walks, and the Huntsman is occasionally depicted as wearing horns, or antlers like Herne. The Hunt's ride traditionally ends on [Walpurgisnacht](#), at the close of winter, and in some versions of the story, the Huntsman is a Huntswoman such as Berchta, Herodias,

Diana, or Venus. However, in most versions, the Huntsman is male -- emphatically so, given the phallic headgear -- and identified variously with King Arthur, Gwynn ap Nudd, Dietrich of Bern or "Wild Edric" (the German and Saxon versions, respectively, of Theodoric the Great), Cain, the Devil, the [Wandering Jew](#) (who, like Herne, is sometimes said to bear a chain and walk in circles), King Herod, Roland, Charlemagne, Valdemar of Denmark, Sir Francis Drake, the archangel Gabriel, or St. Hubert, patron saint of huntsmen.

*"I am called Grim,
I am called Gangleri,
Herian and Hjalmbéri,
Thekk and Thrídi,
Thund and Ud,
Helblíndi and Har . . .
By one name
I never have been called,
since among men I have gone.."
-- Odin, in the Poetic Edda*

Although Ainsworth seems to be the original source conflating Herne with the Wild Huntsman, it's not impossible that some prior connection between the two figures exists. Some 20th-century Herne sightings do include the sound of hounds and horns, for example. Ainsworth might well have stumbled upon some now-forgotten archive or local tale while doing research -- or have availed himself of the magical insights of his good friend the Rosicrucian novelist Edward Bulwer-Lytton. Because the most common leader of the Wild Hunt, bar none, is Odin or Wotan, or Woden, or Wod. (Herne and Odin also have the whole hanging themselves from trees thing in common.) And Odin, as it transpires, is known as Herleke (meaning "commander of the host") and Herian ("warrior"), among his other titles. Herleke became Herlechine in medieval France (from whence, oddly enough, came [Harlequin](#), after suitable domestication), and perhaps ties in with the mythical Saxon King Herla who leads a troop of undying horsemen out of Fairyland, but Herian became Horn in Jutland. Coming at it from a different angle, a series of reliefs and carvings depicting a cloaked rider (occasionally holding a snake) dates back to perhaps the 4th or 5th centuries B.C. in Thrace and the Danubian countries generally. Known to archaeologists as the "Thracian Rider" or the "Danubian Rider God," he was known to at least one group of worshipers (in the Greek colony in Ptolemaic Egypt) as Heron. (One meaning of the word *herne* is "heron," a bird kept near Windsor Forest.) Two key attributes of Odin, of course, are the cloak and the horse -- could Heron be the true name of Odin the Unnameable?

*"Those antlers are nigh on a hundred years old. If you want the man who killed that stag, you'll have to dig him up."
-- Edward of Wickham (Jeremy Bulloch) in the "Lord of the Trees" episode of [Robin of Sherwood](#)*

People looking for other derivations for Herne needn't travel to Thrace. "Herne" may come from the Anglo-Saxon *hyrne*, meaning corner, or angle, or curve -- something like, say, antlers, or a horn (*horn* in Anglo-Saxon, conveniently enough). Hence, Herne may merely be "the horned one" -- which would equate him, perhaps, with another antlered figure, Cernunnos. This name (meaning "horned one" in Gallo-Roman) was carved over an antlered, bearded god bedecked with torcs on an altar stone discovered beneath Notre Dame in Paris. The name has been applied to similar antlered gods depicted in the Celtic world from the Gundestrup Cauldron in Denmark to a Roman mosaic in St. Albans, England. Interestingly, like the "Thracian Rider," the Gundestrup antlered god is clutching a peculiar horned snake which the inventive Eric L. Fitch, in *In Search of Herne the Hunter*, considers eerily similar to the "chain" borne by Herne. From the complex of snakes, gods, oaks, and lightning, one can hunt in all manner of directions. Erichthonios, the snake-legged (as in some depictions of Cernunnos) founder of Athens, who planted sacred oaks and invented metal-working (which ties both to Herne's chain and to sometime Wild Huntsman St. Hubert, also the patron saint of metal-workers) was killed by lightning. Asklepios, the snake-handling healer, was disintegrated by lightning (just like Herne's body was) but still [appears](#) in (ghostly?) dreams. Further, his Latin name, Aesculapius, seems cognate with *aesculus*, the winter oak.

"[S]uddenly -- in a lightning flash as it were -- 'fear came upon me, and trembling, which made all my bones to shake'. To all appearances it was a perfectly insane and abject terror, without ostensible cause, and only to be accounted for, to my perplexed imagination, by some damnéd shape squatting invisible within the precincts of the room, and raying

out from hi fetid personality influences fatal to life."

-- Henry James, Sr., *Society, the Redeemed Form of Man*

Henry James had the above experience -- "in a lightning flash as it were" -- in May of 1844 (the year after Ainsworth's successful invocation of Herne as the Wild Huntsman). He eventually identified it as a type of spiritual encounter known to Swedenborg as a "devastation" or "vastation" -- a brush with some vast, unknowable elemental entity. Interestingly, his vastation came in a hunting-lodge in Windsor Park perhaps a hundred yards from Herne's Oak. Windsor Park (specifically Herne's Oak) is at the nexus of a pair of ley lines, one of them (the Devil's Highway) a common site for Wild Hunt encounters, as well. The oaks at Windsor go back to Anglo-Saxon times; they give their name to the county. (Berkshire derives from *bearuc* or "bare oak.") Tacitus tells us that the Semnones, "the most ancient" of the Germans, committed human sacrifice in a wood, "consecrated by . . . ancient terror" as the residence of the god and the heart of their kingdom. (Interestingly in Herne's context, the Semnones believed you could only approach the sacred wood wrapped in a chain.) The pagan Saxons might equally well have hung human sacrifices to Odin from the oaks of royal Windsor in midwinter -- and in May, when Henry James had his vision. May is Beltane month, when as the book of Ezekiel reminds us, Baal feasted on the "slain men . . . under every green tree, and under every thick oak." Odin, of course, is Valfodr, the Father of the Slain, who ride with him at the end of the world.

"His voice had risen to a scream. 'Frank, Frank, a terrible and unspeakable deed was done in the beginning. Before time, the deed, and from the deed --' He had risen and was hysterically pacing the room. 'The deeds of the dead move through angles in the dim recesses of time. They are hungry and athirst!'"

-- Frank Belknap Long, "The Hounds of Tindalos"

So what is Herne? Is he another ragged Harlequin [scarecrow](#), in the forest of the unknown god, a messenger from Outside that warns the kings of England when death and war are afoot? Perhaps he is an Outsider himself, flashing across the sky with his Wild Hunt, "taking cattle" and mutilating them ("making the milch-kine yield blood") like his fellow Greys (the color of Odin, after all) do in the American Southwest. If so, perhaps he connects to the "serpent tailed" fireballs seen above Windsor Castle in 1783, the year Herne's Oak gave its last acorns -- messages home? Reinforcements? Spawn? Perhaps the oak is a shoot from Yggdrasil, the World-Tree, reaching across planes and dimensions. Philip Urswick, the cloaked rider, the "wizard" who cures, dooms, and creates Herne, is interesting in this context -- Urswick might mean "Urd's Field" or "the Field of Fate," and "Philip" is, of course, a "lover of horses." The Horseman in the Field of Fate -- sounds like the Wild Huntsman to me. Is Herne, like Odin, "myself made offering to myself"? Herne, the "angled one" is the living gateway from Outside to England, folded upon himself and self-begotten, a loop in time stalking in Moebius circles around the zero point. For now, his chain holds, but the Hounds of Herne are hungry and athirst, and the old Oak is dead.

Character Creation? It's in the Cards

I had something of an idea today for an alternate way of starting a campaign that I'm itching to try. But, given that I'm locked in a tower, forced only to write and dance for your amusement -- <Dance, Editor-Boy! DANCE!> -- I don't know if I'll ever have a chance. So I'm throwing it out there for you all; hopefully someone will be able to use it for their campaign. It's more of a protoidea, with a bunch of variations that might serve some games better than others.

In general I've noticed there are usually two camps of character "creation" I offer in my games. The first type is the anything-goes approach found in practically every system; whatever kind of system you want to make, so mote it be. The second is pregenerated characters, where I supply the characters to the players (perhaps tailoring them to their preferences, suggestions, or desire).

The former is very straightforward and makes a lot of sense; logically, gamers are most likely to get into their character if they are exactly the ones they want to play. Unfortunately, it has problems. It can be very difficult to design adventures and subplots for disparate characters; characters can step on each other's toes ("We're both playing one-of-a-kind renegade ninjas?!"); and the characters as created may not line up with the GM's desires -- a band of diplomats doesn't do much good in a campaign devoted to dungeon-crawling.

The latter, although admittedly rare in my campaigns, also makes a lot of sense. I'm able to hit the ground running, with interesting stories and plots for everyone; I can make sure the whole range of abilities I want the players to have (*and* what abilities I don't want them to have); it's more work for the GM; and players may not enjoy their characters.

What to do, then? ***What to do!?!?***

(That's rhetorical, by the by . . . but I'm sure you figured that out.)

Anyway, I realized the two views aren't necessarily incompatible. For example, players often figure out the whole "range of abilities" thing, and will work among themselves to make a balanced party. Many players making a Supers team make sure there's someone who can fly or teleport, someone who can do ranged attacks, someone who's sneaky, etc.; those in a Fantasy game make sure there's a healer, a magician, a cavalier, an acrobat, a unicorn . . . Hmm. I think I got distracted. Anyway, players often work toward balance themselves.

Unfortunately, players only have a small piece of the puzzle; although they may stumble across several aspects of the GM's advantages in creating characters, they don't know, for example, what abilities or plot elements are useful to the GM to make the best gaming environment possible.

The obvious fixes I've considered to this previously are not terribly useful. For example, if I ask a player to take, say, a child as a dependant for his character before the campaign starts, it won't have anywhere near the impact when <gasp!> that kid becomes entangled as part of the larger plot. And it doesn't solve the problem of players wanting PC abilities that I'm not comfortable with them having -- or with too many characters having -- because it can unbalance certain plots.

What to do, then? ***What to*** . . . oh, you know the drill.

Anyway, my idea is to incorporate more of a game aspect into the act of character creation itself. For example, let's take a basic example. Let's assume a game with four players, and four groups of broad abilities: Advantages, Disadvantages, Backgrounds, and Skills.

Let's say that the GM knows what kind of Advantages will make the game work best, Disadvantages that will feed the most interesting stories, Backgrounds necessary for the long-term campaign, and Skills required for survival. And he notes them all as he might normally when creating pregenerated characters. Only he doesn't assign them to characters; he writes each sub-ability on an index card. So the stack of Advantage index cards might be:

- Luck
- Danger Sense
- Combat Reflexes
- Immunity to Poison
- High Charisma
- ...

The Disadvantage stack might resemble:

- Secret Hunted (mildly powerful)
- Claustrophobia
- Dependant (spouse or significant other)
- Code Against Killing
- Combat Paralysis
- ...

and so on.

At the time of character creation, a player chooses one ability from the stack that looks interesting to him, then passes the stack on; the next player chooses an ability, and so on. (Ideally there are as many different ability stacks as there are players, so that each player gets first dibs on one type of abilities.) Then the player gets to build his character using the abilities he picked.

This system has a number of interesting properties. First, players have the challenge of creating a character with abilities they normally wouldn't pick, or wouldn't choose together, hopefully resulting in characters that are different and interesting. ("Hmm . . . how do I explain that I have demolitions, military contacts, Luck, a code against killing, *and* a young daughter?") Second, it ensures that any plot elements the GM needs to advance the campaign are pre-seeded, *without* the players being suspicious (or at least as suspicious); the GM would be wise to seed in mundane elements that he doesn't plan on using in the plot, just to keep the players from getting too suspicious about what will or won't be used. In short, it's an interesting compromise between the "anything goes" method and the GM-prepared model.

Now, there are any number of ways to tweak this basic method. First, the GM might seed some abilities more than once if he wants multiple characters to have them (such as Firearms). Second, the GM might create a list of possible "everyman abilities": those abilities that players can buy (or get points from) in addition to the ones they drew. These could be the common kind of abilities that the GM doesn't mind if players have (such as Dodge), or those that might flesh out characters additionally (such as Hobby skills).

More intangible elements can be added, as well, that don't have any game effect but may (or may not) be important to the campaign. For example, many tales revolve around characters who keep journals or historic records (such as Gabrielle in *Xena: Warrior Princess* or That One Guy in *13th Warrior*). If this is important to the campaign, then the GM might include "Keeps meticulous notes or a journal" as a pickable index-card ability. Or "environmentalist." Or "owns a house downtown." Or "always has a pet." (Of course, the GM should be clear as to what he expects if there's any ambiguity; is the player expected to keep notes, or is it something the character is assumed to do?)

For games that can support it, it might be possible for this to be the *entirety* of character creation. For example, in a **Fudge** campaign the players might pick from a communal pot of abilities: Luck (Good), Agility (Excellent), Hunted (Fair), Jetpack (Remarkable) and so on. Any ability that isn't chosen is assigned its default value (for example, Poor for Abilities in **Fudge**) The players get their abilities as they go, and each tries to assemble their stack into an interesting character. This might also be a good way to allow players new to roleplaying to create a character that's interesting, while not overwhelming them with the typical reams of possibilities the standard game offers. ("Hmm . . . would it be cooler to be able to arrest people with police powers, or to own a psychic cat? Hmm . . .")

Finally, it's possible to increase the gamery aspect of this idea by introducing a bidding system. For example, like many game systems, all **GURPS** abilities have a point value associated with them, and all characters are built on a

certain number of points. So what if all character abilities are put up for "auction" (perhaps drawn at random by the GM), with the base price being the ability's regular cost, and the players can then bid more character points for that ability? If both Ted and Alice *really* want the 30-point version of Luck available, then they might be willing to spend more character points for it; eventually, Alice may overbid Ted by offering 52 points for that ability. (Contrariwise there may be some abilities *none* of the players want, and the GM may need to expect to offer them for fewer points, or even put them aside and assign them randomly to players once the bidding/creation process is done.

Sometimes introducing something new and different to character creation can be just the kick an experienced troupe needs to create a truly memorable campaign, while providing options for character development *and* the elements necessary for the GM to craft memorable adventures.

And if you all try this advice and it doesn't work out . . . well, at least I know I'm locked safe in a tower, where I know you can't get me. And I've even got these protective leg irons!

--*Steven Marsh*

Dragon Planet: Part Two -- The Bloody Tower

A GURPS Space Adventure

by Stephen Dedman

Kamax

If the heroes decide to go to Bishop Rock in search of Malik Dragunov, they will first have to get to Mornharbor on Kamax, 260 miles from Mount Aramis, 340 miles from Port Luisa. A roundship with an experienced crew can travel these distances in two and three days, respectively.

Steerage passage on a roundship from Port Luisa will cost a florin (\$48) per passenger per day, with food \$6/day extra; a contest of Merchant skills may alter this by up to \$10 either way.

If the PCs are at Mount Aramis, they may be able to persuade Flint's surviving sailors to sail them back to Kamax: Intimidation is most likely to succeed if the party defeated Flint and his knights. If there are no surviving sailors, or too few to man the ship, they may have to try to sail it themselves -- using defaults if they don't have Seamanship skill, with a -9 modifier for a Tech Level 6 lower than their own.

Landing a spaceship on Kamax may be possible, but not easy: even with much of the land fallow, the rough terrain offers few good landing places. For a vehicle with a Size Modifier of +5 or less (e.g. an ultralight), a suitable landing place may be found within 1d-1 miles of the city. For a spaceship with a Size Mod of +6, the nearest landing area will be 1d+1 miles away; double this distance for every +1 increase to Size Modifier after this (e.g. a 200,000 cf ship would have to come down 8d+8 miles from the city). Crossing the remaining distance overland has its own hazards: most Kamaxians react as badly to ultra-tech as other Ahtoans, and Prince Odon's knights and veterans will suspect any strangers of being spies from other realms.

A spaceship with a LMass of less than 62.5 lbs per cf may come down on the water: GM's decision whether it floats the right way up.

Bishop Rock

Giselle can give the heroes the following information about Bishop Rock:

The rock is a pillar of stone shaped (mostly) by wind and waves, one of several which protrude from the reef near Kamax's west coast. Its name comes from its resemblance to a squat chess-piece, which is best seen from offshore. It stands about half a mile out to sea from Mornharbor, where the tides rise and fall up to 18'. The tower is about 100' tall at high tide, and nearly 60' across at its widest point. A cave near the top, facing out to sea, is the dragon's lair: fortunately, Giselle says, the dragon was eating when she crept out, and didn't notice her. She tried to climb down the face of the tower, but fell when a third of the way down. The only way she knows to get in, except by flying, is in the basket that the Dragonlord's aides lower down when a boat brings supplies.

From listening to people in the tavern, Giselle knows that a boat visits

the rock every second day, about an hour before sunset. It carries food for the dragon, and sometimes items for the Dragonlord. The dragon eats carrion: fish not sold at market, dead horses, even paupers and still-born babies picked up by the dead cart. A large horse will feed it for two or three days: it eats bones, hooves, hair, intestines . . . the whole animal.

This huge domed cave (Level Five), about 50' in diameter and 22' high, contains the dragon, its food, the crane that

lowers and raises the basket, some "strangely shaped rocks" (fragments of M-type asteroids to feed to the minifac), a generic ST 20 exoskeleton, and a dismantled arcuballista (p. CII37) with 100 bolts. Two artificial gills, a televiewer with infrared option, a fusion flight pack, a long-range communicator with neutrino receiver, a spinarete, a construction foam sprayer, an autograpnel and a rocket piton hang from a rack near the entrance: Giselle will not be able to describe any of these devices in a meaningful way, or remember them well enough to draw them.

The Dragonlord, his three lieutenants, and their captive women eat "strange dishes that come from a magic chest" (a gourmet food processor) in a smaller chamber underneath the top cave. This level (Level Four) also contains the women's cage (four connected modular cages, p. UT62, with a voiceprint scanlock), one large bed (surrounded by a hospital-style curtain, with a holocom and a privacy field in the headboard), a sonic shower, a chemical toilet, a large vapor canteen, an automedic, a table, four chairs, and three locked containers: one of these contains cosmetics and women's clothing; another holds a medscanner, a medical pouch, a neural inhibitor, and assorted drugs and medical supplies; and the third contains two Type I Neurolashes, four pairs of neuronic handcuffs, 2d chem grenades, 20 gyro cassette for the rocket carbines, and rechargeable power cells. The women in the cage have envirobags with heating units (p. S71), but no clothing.

The room on Level Four is roughly circular, about 40' in diameter with a 12' ceiling. It has four narrow windows, scarcely more than arrow-slits; these admit most of the light during the day, but during the nights, these are covered with blackout curtains, and cold lamps are used to light the rooms. There are also several "thin black boards" (E type solar panels, p. UT8, used to recharge the power cells), placed near the arrow-slits to catch the sunlight.

A staircase leads up into Level Five, and down to another room which Giselle has never seen. She has seen the Dragonlord and three companions, and the four women they hold captive, but no one else has entered the chambers she's seen in the time she's been there. She suspects (rightly) that the caves were carved out as a refuge for a former lord of Mornharbor Castle, but suited the Dragonlord perfectly. In exchange for this refuge, the Dragonlord has given Prince Odon better swords and armor for his army; Giselle has heard rumors that he's also promised him a larger kingdom.

This is all that Giselle knows, and more than any of Flint's crew can say, except for Flint himself. If the investigators successfully interrogate Flint and ask the right questions, they can get most of the following information (except for the contents of Dragunov's closet and the traps in Level One) as well.

The natural stone walls of Bishop Rock vary from six inches to six feet thick (DR 8, 90 hit points per 6"). The crane lowers a basket, 4' by 4' by 3', that can hold 800 lbs; the winches can raise this at five yards/turn. When the boat comes past in the evening, it's about 90 feet from the cave down to the deck (if they try to climb this without equipment, treat as a vertical stone wall).

The cave entrance is not the only way into the tower; there's a four-foot-high doorway on Level One, at the base of the eastern wall, but that's only accessible -- and barely visible -- for about an hour when the tide is at its lowest (around midnight). The low tide exposes a natural causeway (about 1,200 yards of very bad road) between Odon's castle and this doorway; a gate, locked and barred, blocks off a tunnel that leads into the castle. Flint has never used the causeway, which was meant as an emergency escape route from the castle, and doesn't know how well the castle end is guarded: nor does he know about any security measures Dragunov may have put in place at the tower end. He knows that a spiral staircase leads down from Dragunov's room in the tower, but he's never been down it to see what's there.

Level Three is home for the Dragonlord's lieutenants, the Dragon Knights - Flint, Ramos and Vermeer. It's elliptical, about 39' by 30'; the floors are smoothed over with construction foam and covered with fur rugs, and the walls are decorated with pornographic pictures. The room contains three bunks (each with an Omniblaster pistol under the pillow), four chairs, a table, a large closet, a holo projector, a sonic shower, a chemical toilet, and a large vapor canteen. The closet is divided into three compartments, each containing one Rocket Carbine with one clip of nerve gas CHEM rounds and one clip of HEX; 10 cassettes each of CHEM and HEX gyrocs; a skinsuit; a thermo suit; a military wet suit; an air mask with a CBR filter and mini-tank; a chameleon cloak; and a tube of ablative foam, as well as several suits of more conventional clothing. Stairs lead down to Level Four, and up to the barracks. There are four

arrow slits, looking approximately northeast, northwest, southeast, and southwest. An infrared motion detector with an effective skill of 16 sits at the end of the bed.

Dragunov's room occupies all of Level Two -- an elliptical room about 36' by 24'. It contains most of the usual furniture from a standard starship cabin: bed, desk, two chairs, closet, holo projector, and a sonic shower. All are modified for his 8' frame. The floors and some of the walls are smoothed over with construction foam, but the only attempt at decoration is a print of a naked woman and a red dragon. The room also contains a minifac (p. UT83) which produces the weapons and armor they've used to bribe Odon, as well as luxuries for their own use, and a teaching suit (p. UT61) with Broadsword program. The contents of Dragunov's closet are the same as his lieutenants'. Stairs lead down to Level Four, and up to the barracks. There are two arrow slits -- one looking east out to sea, the other west towards Mornharbor. An infrared motion detector with an effective skill of 16 sits at the end of the bed; a small computer with Accounting, Interpreter, Medical and Word Processing software, French and Latin dictionaries, maps of Ahto, a copy of the Great Book, and an extensive library of fantasy novels and medieval history texts sits on the desk.

Level One is a rough cylinder about 22' around and 24' high, with a staircase spiraling around the walls. At the top of the stairs is a one-inch-thick wooden trapdoor reinforced with bronze and bolted; DR 3, 16 Hit points. Forcing or breaking the door will transmit an alarm to Dragunov's communicator.

The doorway into Level One from the causeway is only 4' high by 3' wide; there is no door, but there is a four-strand monowire spiderweb (p. UT62) strung across the doorway. On the bottom step, disguised with a thin layer of sand, is a Tangler mine (p. S79). Roll Traps/TL10 to detect either of these measures. Level One is otherwise empty, and has no arrow slits; a sensor set into the underside of the trapdoor will sound an alarm if it detects a light source brighter than reflected moonlight inside Level One. If the heroes set off any alarms once inside the tower, it will lose them the advantage of surprise and give Dragunov and his henchmen time to arm and armor themselves.

If the party is trapped in Level One, or retreat back across the causeway, remember that the tide rises by about one foot an hour from midnight to midday. (The traditional method of execution in Mornharbor is to be chained to a pier at sunrise and let the tide drown the accused: the Great Book maintains that the water will spare an innocent man, but this has never happened.)

Avenues of Approach

There are three ways to Bishop Rock: by air, by land (the causeway), or by sea.

Air: Heroes may decide to fly into the cave using backpack parawings, fusion flight packs, etc.: the entrance to the cave is too small for anything over Size Mod +3 (Size Mod +2 if the dracomech is in the cave), and gives a -5 modifier to Piloting or Parachuting. Worse still, the dracomech is programmed to fire on any unidentified intruders; fortunately, it uses the stun cannon inside the cave rather than the flamethrower. It will also raise an alarm, bringing Dragunov or one of the Dragon Knights running.

Land: If the heroes try to use the causeway (during the one hour per night when it isn't underwater), they will first have to swim or wade for 150 yards through water four feet deep to reach it. The path, one hex wide, leads straight out from the cliff under the castle; climbing down the cliff from the castle is even more difficult and hazardous. There are no sentries watching the causeway from either the tower or the castle: Prince Odon would rather not draw attention to it, and Dragunov doesn't consider it a problem. However, if the PCs try using flashlights, they will be noticed by the castle's guard, who will alert the Dragonseer, who will use his communicator to alert Dragunov.

Heroes trying to move stealthily along the causeway should roll Stealth once (with modifiers on p. B67); if any of them fail, or aren't bothering to use Stealth, they will be detected, and the dracomech will come flying around the tower and into firing range just as the leader is 7 hexes from the doorway. Unable to either hover or to stand on the narrow causeway, the dracomech will fire its flamethrower once at a four-hex-long area (2d fire damage per hex) near the center of the group, then fly up to the top of the tower and perch there, giving the heroes two turns to run (or dive) for cover before it fires again.

Sea: Those who don't wish to use the causeway may swim out to Mount Bishop at any time, then attempt to climb the tower or swim underwater and enter through the doorway on Level One. The drawback to this method is that swimmers can not carry much in the way of weapons or armor.

An alternative to this is to take a boat. The most common boats in Mornharbor are the wooden rowboats favored by the fishing fleet (each roundship also carries one). These are PD 2, DR 3, Body HT 200, and can move at 14 mph with a full crew of 10 oarsmen. Empty mass is 2,230 lbs; cargo space is 28 cf and maximum load is 4500 lbs (2.25 tons) including crew; draft is only 2.5', which enables them to approach the tower safely at any time during the day. At night, when the tide is lower, even experienced pilots will be reluctant to negotiate the reef and will demand a florin as fee and two royals (\$1920) as security, before they do so. Heroes who take a rowboat and attempt to row from Mornharbor at night without sonar, Danger Sense, or similar precautions will have to make two rolls against Boating skill, with Vision modifiers for the darkness; failure on either will mean the boat has hit a rock, taking 1d-1 damage.

A rowboat probably won't attract much attention unless the PCs use a flashlight or some other obvious ultra-tech item, in which case the castle sentries will notify the Dragonseer, who will alert Dragunov, who will send the dracomech out to attack the boat.

Climbing the tower may be risky, but it will enable heroes to avoid the traps of Level One and fire into Levels Two, Three and Four through the 6" wide arrow-slits (grenades would be even better than most guns and beam weapons). These are too small for even a skinny human character to use as an entrance, but they may be suitable for a small alien or robot.

The party may also choose to reach the tower in the supply boat. The crew may be tricked or intimidated (treat as four Veterans with Boating-13), but not bribed. Playing dead and hoping to be thrown onto the dead cart, and then into the basket, is not recommended; the crew dismembers the bodies before leaving port, to make the pieces easier to handle.

Hauling the Loot

Dragunov will not surrender under any circumstances. If the heroes enter the tower via Level One and seem able to capture him, he will retreat to Level Five to attempt to escape to Odon's castle (using the Fusion Flight Pack, on the back of the Dracomech, or by whatever means seems most likely to succeed); if they attack from Level Five, he may grab an artificial gill and escape through Level One. He will not commit suicide, but he will take suicidal risks rather than be handed over to the SJG (treat as having the On the Edge disadvantage). If he reaches the castle, he will lead Odon's troops in an attempt to re-take Bishop Rock.

If the heroes manage to defeat Dragunov, his lieutenants, and the dracomech, and take control of Bishop Rock, they should be able to get one boat-load of loot (4500 lbs, minus the weight of the characters and their gear) out of the tower without too much difficulty. Large items from Levels Two, Three and Four, such as the minifac, food processor, modular cage, closets, beds, etc., will have to be dismantled before they can be removed from the rooms; this is an easy but time-consuming job for anyone with Mechanic/TL10 skill (though re-assembling some items may require Electronics/TL10). Singh is only interested in capturing Dragunov and releasing the slaves; his personal code of honor does not allow looting, and he will try to dissuade the PCs from doing any. They may decide to come back for seconds without him -- but this may not be as easy as it sounds.

If the "corpse" of the dracomech is visible from the castle, Prince Odon will begin blockading the tower soon after sunrise. He will commandeer the three roundships in the harbor, crew them with his own veterans and arm them with medium ballistas (p. CII38). The castle's own arcuballistas and catapults do not have the range to reach Bishop Rock, nor will they pose much threat to spaceships, but they may prevent anyone else from Mornharbor reaching the tower to loot it.

If the dracomech's corpse is not visible, the Dragonseer will wait until sunset before persuading the crew of the supply boat to take him and a couple of experienced burglars (Dai Blackthorn, p. B214, would be ideal) to the tower to investigate. If the Dragonseer's thieves find the tower unoccupied, they will begin to loot it of those items they

recognize as valuable. Prince Odon, who has spies of his own watching the Dragonseer, will learn of this before midnight and send two of his best knights (with BPC armor and monowire-edged swords) and eight veterans across the causeway to the tower at low tide, giving them orders to kill the Dragonseer, bring any treasure they find back to the castle, and ready the arcuballista on Level Five. Odon's navy will then blockade Bishop Rock soon after sunrise.

Odon's troops will hide all of Dragunov's gear that they can remove from Bishop Rock and can't find an immediate use for. If the heroes try to bargain with Odon for these items, the Prince will ask for military assistance: he expects the rulers of the other kingdoms to unite against him because he collaborated with the Dragonlord. What form this "assistance" takes will depend on how much he thinks the heroes value the gear: it may range from him asking them for weapons and/or training in their use, to demanding that they destroy the other kings' castles and/or fleets. If the heroes refuse, Odon will make it very dangerous for them to stay on Kamax . . .

If Singh learns that Odon is keeping two offworld women (Nata and Tomiko) in his harem against their will, he may try to rescue them. He is unlikely to succeed at this without the party's help (the harem is protected by TL10 security measures provided by Dragunov, and Tiffany and Kona are ordered not to let the others leave), and may need to be rescued himself . . .

Return of the Revenge

After 33 standard days (22 Ahtoan days) from when the heroes first land at Mount Aramis, a ship of Dragunov's pirate fleet, the *Revenge*, will enter the system to collect tribute and to deal with the survey ship it expects to arrive two days later. When the crew receive no replies to their communications from Dragunov, they will land at Mount Aramis to investigate.

If Singh and/or any of the PCs have reported the situation on Ahto to the Survey Service, the Patrol, the Navy and/or the Special Justice Group, there will be a small force of battlesuited space marines waiting at Mount Aramis, and at least two corvettes hiding on or behind Ahto's moon, ready to ambush the pirates. If they don't report, and can persuade Singh not to (assuming he's survived), they can attempt to capture the pirates themselves -- but the pirates may have them outnumbered and outgunned. (If you need to rescue them, have a small fleet of Navy and/or Patrol ships arrive in the nick of time, and tell the heroes that the SJG was tipped off).

Cast

Dragonlord (Malik Dragunov)

Malik Dragunov grew up poor on a collective farm on Anastasia, where the only breaks from the boredom were his school library's collection of fantasy novels and holoventures. Dragunov became obsessed with dragons, kings and swords, but he wasn't content to simply read about them; he studied swordplay, and practiced with vibro-machetes and baseball bats. At 17, with too long a criminal record for the local militia, he joined a troop of mercenaries, and soon became notorious for his ruthless treatment of enemies and civilians. He turned to piracy and gunrunning, and attracted a small band of followers and a much larger group of enemies. He was on the run when he heard about Ahto, and decided it was better to be king over a few thousand people (while running a small quota of slaves to Nangodai to buy offworld luxuries) than executed in front of a few billion.

52 years old, but looks about 40. Pale skin, dark blue eyes, bald; tattoo of dragon coiled around torso. 8', 380 lbs.
Native gravity .9 G.

ST 13 (15); **DX** 14; **IQ** 13; **HT** 13. Move 6.

Advantages: Ambidexterity; Attractive; Bionic Arm (ST 15, with concealed Hand Flamer); Charisma/2; Combat Reflexes; Cool; High Pain Threshold; Panimmunity; Voice; Wealth (Wealthy).

Disadvantages: Bad Temper; Bloodlust; Bully; Enemy (Special Justice Group, appears on 6 or less); Fanatic (self);

Gigantism; Language Talent/1; Longevity; Megalomaniac; Reputation, -4 to Law Enforcement professionals and Bounty Hunters, always recognized.

Skills: Acting-13; Bard-17; Beam Weapons/TL10 (Flamer)-17, (Blaster)-16; Brawling-14; Broadsword-16; Chess-13; Climbing-14; Fast-Draw (Sword)-15; Fast-Talk-13; First Aid/TL10-12; Guns/TL10 (Gyroc)-16; Heraldry (Ahtoan)-12; History-11; Interrogation-13; Intimidation-16; Judo-15; Knife-14; Languages (Standard)-14, (Arabic, French, Latin, Russian)-12; Leadership-14; Literature-11; Politics-14; Riding (Horse)-13; Piloting/TL10 (Starship)-14; Savoir-Faire-12; Scrounging-13; Sex-Appeal-15; Shortsword-14; Streetwise-15; Swimming-15; Tactics-14; Two-handed Sword-15.

Quirks: Proud; Collects more books than he has time to read; Fascinated by Catherine the Great; Pretends to be chivalrous, but would rather cheat than lose; Despises democracy and socialism.

Gear: Fine Thrusting Bastard Sword with Monowire edge; BPC Half Plate (PD 4, DR 29, 35 lbs) over Medium Arachnoweave suit (PD 2, DR 8; PD 1, DR 2 vs impaling, 2.5 lbs); Chameleon Cloak; Blackout gas grenade; Sleep gas grenade; Medium Communicator; Infrared contact lenses. If not expecting combat, wears Arachnoweave suit, leather gloves, and boots.

Dragon Knights

The Dragonlord's lieutenants, Gordon Ramos and Raul Vermeer, were genetically engineered to be soldiers, then trained as guerrillas, on Lugh during its long civil war. Though not blood relatives, they look and think alike enough to be brothers. (The most obvious difference is that behind their nightshades, Ramos's eyes are dark brown and Vermeer's blue.) When the war finally ended, both joined Dragunov's platoon, and are as fiercely loyal to him as they are to each other. Neither will attempt to escape unless they're sure the other is already dead.

41 years old; brown complexion, razor-cut dark brown hair, clean-shaven. 5'11", 170 lbs. Native gravity 1.08 G.

ST 13; DX 12; IQ 11; HT 12. Move 6.

Advantages: Alcohol Tolerance; Combat Reflexes; G-Experience; High Pain Threshold; Neural-interface implant; Panimmunity.

Disadvantages: Bully; Callous; Enemy (Special Justice Group, appears on 6 or less); Pirate's Code of Honor; Pyromania; Reputation (-3 to Law Enforcement professionals and Bounty Hunters, recognized on 7 or less).

Skills: Beam Weapons/TL10 (Blaster)-16, (Neural)-15; Brawling-13; Broadsword-14; Carousing-13; Demolitions/TL10-12; Detect Lies-10; Electronics Operation/TL10 (Sensors)-11; Fast-Draw (Pistol)-13, (Sword)-12; Fast-Talk-12; First Aid/TL10-10; Free-Fall-12; Gambling-11; Garrote-12; Guns/TL10 (Gyroc)-14; Gunner/TL10 (Flamethrower)-14, (Sonic)-13; Judo-12; Knife-13; Leadership-11; Riding (Horse)-11; Piloting/TL10 (Shuttle)-13, (Dracomech)-12; Savoir-Faire-11; Shortsword-12; Streetwise-13; Tactics-10; Vacc Suit/TL10-12.

Quirks: Intolerance (Pacifists); Preference for redheaded women.

Gear: Fine Thrusting Broadsword with Monowire edge; BPC Half Plate over Medium Arachnoweave suit; Medium Communicator; Nightshades. If not expecting combat, wear they wear Arachnoweave suit, leather gloves, and boots.

Prince Odon

Prince Odon is an unremarkable Ahtoan aristocrat: uncharismatic but shrewd, and saner than some. While not as popular as his late wife nor as thoroughly hated as his late father, he has the respect and loyalty of his soldiers, who are the best equipped (and best fed) on Ahto. Dragunov chose him as an ally because of this, and because he was more ambitious and less hidebound than the other rulers.

As well as arming and flattering him, Dragunov has pandered to his weaknesses by supplying him with offworld luxuries, including food and women. Odon's harem consists of Nata, a homesick Nangodaian lured from the Perfumed Garden (see Part One) with false promises; Tomiko, a 7'7"-tall Light-worlder abducted from a zero-g dance troupe; Tiffany, a Lemon Angel android bought on the black market on Galt; and Kona, an Eros-series bioroid.

44 years old (looks 50+); pale complexion; graying blond hair, beard and mustache; ice-blue eyes. 5'9", 195 lbs.

ST 11; DX 10; IQ 12; HT 9. Move 2.

Advantages: Alcohol Tolerance; Combat Reflexes; Status/6; Wealth (Wealthy).

Disadvantages: Bully; Code of Honor (Chivalric); Dependent (Son, 75-point character); Gluttony; Greed; Obsession (increasing his family's dominion); Overweight (45 lbs encumbrance); Primitive (TL3); Stubbornness; Unfit.

Quirks: Proud; Likes exotic women.

Skills: Administration-14; Area Knowledge (Kamax)-14, (Ahto)-13; Armory/TL3-10; Brawling-10; Broadsword-12; Carousing-11; Detect Lies-13; Diplomacy-14; Economics/TL3-10; Fast-Draw (sword)-11; Heraldry-13; History (Ahto)-10; Languages (French)-10, (Standard)-9, (Latin)-8; Law (Ahtoan)-11; Leadership-13; Politics-13; Riding (Horse)-11; Savoir-Faire-14; Strategy (Land)-13; Tactics-12.

Gear: Fine Thrusting Broadsword with Monowire edge; Heavy fur robes (DR 1) over BPC Breastplate (PD 4, DR 29, 9 lbs) and Medium Arachnoweave suit; Boots; Small crown (gilded steel set with pearls; PD 2, DR 4, 3 lbs).

Ahtoan Slaves

The three women the Dragonlord has abducted and kept as a harem for himself and his lieutenants are Status 0 -- unmarried teenage peasant girls from farms or fishing villages. All are traumatized by their treatment, particularly by the sadistic Flint; though not willing to trust any strangers, they will give whatever help they can to anyone they see attacking Dragunov and his lieutenants. Ada is a blue-eyed redhead; 5'7" and 130 lbs. Isabel is a brown-eyed brunette; 5'4" and 110 lbs. Zuri is blond and green-eyed; 5'6" and 125 lbs.

ST 10; DX 12; IQ 10; HT 12. Move 6.

Advantages: Beautiful or Very Beautiful.

Disadvantages: Illiteracy; On the Edge; Primitive (TL3).

Skills: Agronomy/TL3, Animal Handling or Fishing-10; Area Knowledge (Ahto)-10; Brawling-12; Cooking-10; Language (Standard)-10; Merchant-9; Running-12; Sex-Appeal-10; Swimming-10.

Dragon/Dracomech

This is the TL10 Dracomech from *GURPS Vehicles 1st Edition*, with the mind disruptor replaced by a Stun cannon. It resembles a classical wyvern: reptilian head, leathery wings, snake-like body and two clawed limbs. Powered by a carnivore bioconverter, it eats 700 lbs of meat -- half a horse or four large people -- per Ahtoan day, and can regenerate damage at 10% of HT every 24 hours. It has two cramped internal seats for a pilot and gunner (womb seats with neural interface sockets), but its complexity 5 minicomputer has autonomous operation, personality simulation (complexity 4), gunner (sonic), melee, and tactical vehicle operation software, giving it an effective IQ of 10 and combat skills at 14. (Giselle was able to escape because the dracomech had no orders to stop anyone leaving; instead, it called Dragunov to ask for instructions, its usual response to unexpected events.)

The dracomech has a 200 cf organic body (30' long, HT 375); its head is a limited traverse turret containing a TL8 Heavy Flamethrower and a Heavy Stun Beamer (HT 50). Its arms have ST 200, HT 125, and claws: they do 21d

impaling or 23d cutting damage. Its ornithopter wings have HT 188; its top speed is 135 mph, stall speed 38 mph (it can't hover), acceleration 9 mph/sec, deceleration 15 mph/sec. It can also run at 45 mph, acceleration 7 mph/sec, deceleration 20 mph/sec . . . but it can't swim.

The dracomech is well protected with ablative armor: PD6/DR250 on the front and underside, PD6/DR200 elsewhere except for the wings and head, which have PD6/DR100. It's more than a match for any TL3 weapon, even siege engines, or for a group of TL10 PCs with no heavy weapons (though missiles with shaped-charge warheads can hurt it) -- but once outside of its cave, it's an easy target for spaceship weapons capable of groundfire (see p. S138). In Space Combat terms, the dracomech has cDR2 (turret and wings are CDR1) and no effective attack (with a ceiling of 5400 yards, it can't even ram an orbiting spaceship).

Mass 5142.5 lbs; Size Modifier +3, Radar Signature -2, IR Signature +4, Acoustic Signature +1. Human-spectrum and passive IR sensors in turret. 47.4 cf cargo space; 2 man-days limited life support.

Heavy Flamethrower: Malf crit.; Damage/Type, 8d/sec fire; SS 15; Acc 7; 1/2D n/a; Max 100; RoF 1; Shots 20.

Heavy Stun Beamer: Malf ver.; Damage/Type, roll HT-5 to avoid stun; SS 15; Acc 13; 1/2D 1,000; Max 2,000; RoF 1. 100 shots.

Black Sails Over Freeport (for the d20 System)

Published by [Green Ronin Publishing](#)

Written by **Brian E. Kirby, Robert Lawson, William Simoni, & Robert J. Toth**

Illustrated by **Toren "Macbin" Atkinson, Mario Fiorito, David Griffith, Ramsey Hong, Ralph Horsley, Chris Keefe, Steve Lawton, Britt Martin, & Joseph Wigfield**

Cartography by **Todd Gamble, Hal Mangold, & Rob Lee**

256-page b&w softcover; \$18.95

Big adventures for *d20 System* are not all that unusual, but formatting them as anything other than trilogies definitely is. The latest exception is *Black Sails Over Freeport*, a mammoth campaign crowbarred into the confines of its 256-pages. This makes it by far the biggest release for Green Ronin's pirate-themed *d20 System* setting, [Freeport: City of Adventure](#). Indeed, a prospective GM for this campaign will get the most out of it by having both the *Freeport: City of Adventure* sourcebook, and its supplement, [Denizens of Freeport](#) at hand.

Black Sails Over Freeport is designed for a party of four characters, of roughly 6th level. From the book's artwork, it is obvious that the four default characters for the campaign should be those first given in [Death in Freeport](#). Of course, they should have gained some experience by playing though both the original . . . *in Freeport* trilogy and various adventures from [Tales of Freeport](#) in order to get to 6th level. That said, the book does not include anything in the way of default characters.

[SPOILER ALERT!]

At the heart of *Black Sails Over Freeport* lies the relationship between two gods, Harrimast, the city's great god of piracy, and his first mate, Yarash. Simply, the latter embodies all that is evil in piracy, while the latter embodies all that is "good." Worshippers of Harrimast are the kind of pirate with a sense of honor, a notion of romantic adventure, and at least an ounce of mercy; while Yarash's followers are anything but, being the scourge of the seas, their brutal acts turning the foam blood red. Appalled at his lieutenant's growing power and the actions of his followers, Harrimast punished Yarash. In return, he swore revenge, and took as loyal servants five cunning pirates who had been on the losing side in the act of betrayal that ensured the very survival of Freeport. Known as the "Full Fathom Five," their reign of terror upon the high seas again threatened the very safety of the city, which was exactly what Yarash wanted. With the aid of a repentant from amongst their number, the then current Sea Lord of Freeport lured the remaining four members of the Full Fathom Five into an area known as "Hell's Triangle," and then trapped them in this graveyard of ships. Their master, whom Harrimast had condemned for his treachery, joined them, and together their existence passed from fact to legend.

In the century or so since, both Yarash and the Full Fathom Five have been all but forgotten -- helped by authority's successful efforts to suppress all knowledge of these events. Occupying the minds of Freeport's citizens are events upon the mainland -- a brewing war between the barbarian and Elven nations, and at home, with the influx of Orc

labor, brought into to rebuild Milton's Folly, the building at the center of the . . . *in Freeport* trilogy. While the natives complain at the drop in wages this has caused, the Orcs grow increasing militant in their demand for Orc rights. In this, the portrayal of the city's Orc population is drawn from Green Ronin's first RPG, *Ork!* For the player characters, the adventure begins with a random Gnome pressing a scroll case into their hands and asking them to protect it until he can reclaim it. Eventually, they will learn that inside the case is a map showing the location of Yarashad, a mythic island within the Hell's Triangle that is rumored to be home to a large treasure hoard. All they need is a certain magical item that will get them safely into Hell's Triangle and a ship that will get them there. Of course, they will not be the only ones interested in either the map or the item, a certain band of cultists believing that both will be helpful in releasing their imprisoned master.

Black Sails Over Freeport is divided into three long acts. In the first part, the party is chased back and forth across the city as they assemble everything they need for a voyage into Hell's Triangle. There is opportunity for combat, investigation, and roleplaying as they learn more about their destination and its history, foil the efforts of the cultists, encounter the most anonymous man in Freeport, and free an Orc from a prison hulk. In this they will have the aid of an academic who dabbles in a little treasure hunting on the side, though his lack of adventuring experience will prove as much a liability as his scholastic skills are useful.

As the second act opens, the party will have made their to the center of Hell's Triangle, and discovered the existence of four islands, each now home to the remaining members of Full Fathom Five. Each member also possesses an artifact that when together will unlock the legendary treasure hoard. The longest and most involved of the three acts; this middle section is where the campaign comes into its own. Both the islands and their masters are very different, each member of the Full Fathom Five now being an undead creature with over a century's worth of brooding behind them. Their islands are personal fiefdoms each with a different flavor, all four consisting of the same format: an island full of abused and used natives, beneath which lies a dungeon lair. The characters have the freedom to investigate the islands in whatever order they choose, and the other undead pirates will often intervene with raids of their own.

There are some very tough encounters to be found on and under the islands, many of which are in the Effective Level range of 12 to 15. This may prove to be a problem considering that the player characters start at sixth level. The design for each island is also where the campaign is at its silliest. Over the course of the four islands, *Black Sails Over Freeport* references *Star Wars: Attack of the Clones*, *Zardoz*, *Planet of the Apes*, *Soylent Green*, *The Terminator* trilogy, *The Island of Doctor Moreau*, and *She*, among many others. In places, what starts as mere homage in drawing upon these sources verges on the ham-fisted and threatens to undermine the tone of the campaign. This is in addition to some possibly equally silly encounters -- a bored vampire who is more interested in conversation than sucking blood, a pair of Ghast chefs that believe the player characters to be the next on the menu, an attic full of monsters masquerading as giant toys, and even a lump of stone that has fallen from the sky and is a dead ringer for *Warhammer Fantasy Roleplay's* Chaos-mutation-inducing "Warpstone."

With all four artifacts in hand, the island of Yarashad is finally revealed to the party. Getting onto the island is tough enough, but at the center lie some incredibly powerful challenges that will test the characters to their utmost. Hopefully they will have gained enough experience and levels to deal with an Effective Level 20 encounter. The payoff is worth it, as the party will literally sail away with enough loot to set them up for life; roughly 25,000 GP in coins and gems, plus items worth another 55,000 GP came from one player's rolls.

This though, is not the end of the campaign, as events have continued apace in Freeport while the party has been away. The third act finds the city threatened by both the barbarians and the Elves for not coming to the aid of their particular side, the Orcs actively pushing for their rights, and the cultists preparing a new plan to bring Yarash back from his confinement. This is a much shorter section and should be run at a frenetic pace as events escalate around the heroes. These begin with the Orcs going on the rampage and the barbarian fleet assaulting the city, before the good folk of Freeport strike back at the remaining barbarian ships. At this point, the cultists strike and Yarash arises. Stop this from happening and the characters gain an incredible prize: a one-time boon from Harrimast.

[END SPOILER ALERT]

Physically, *Black Sails Over Freeport* is very well done, neatly laid out and organized for ease of use. Its three acts

are comfortably broken up into a series of scenes that are accompanied with suggestions for experience awards for roleplaying -- both good *and* bad. Although it is profusely illustrated, not all of the artwork is worth having been included, and these pieces really do detract from the book's busy gray layout. Fortunately, many of the other illustrations are excellent and really do help the DM visualize a particular scene. The cartography is excellent throughout, as befits a Green Ronin publication, although in places it is a little cramped. Considering the size of the campaign, it is no surprise that the last 50 pages of the book is taken up purely by the statistics for the NPCs. In addition, another five pages are given over to player handouts. One major omission from the book, especially given its length and scope, is the presence of an index.

Black Sails Over Freeport is not without its share of problems, but these are not insurmountable. In particular, there is no indication as to the experience point gain from one act to the next, or from one scene to the next. This is necessary because of the difficulty of some of the encounters, especially in the second act.

[SPOILER ALERT!]

Also, the plot lacks clarity -- it seems all too convenient that Yarash is able to break free after the characters have effectively foiled the efforts of the cultists in the first act. Plus the serpent men, a prominent though hidden facet of Freeport throughout previous adventures, suddenly make a grab for power out of nowhere in the third act. There is almost the feeling that the whole point of act two is to get the characters away from the city just to set up the finale.

[END SPOILER ALERT]

The three acts *are* very different, with the first being the most similar to other ***Freeport*** adventures, the second the strangest *and* the one most like any other ***d20 System*** adventure, and the third being a perhaps too busy conclusion. Finally, there is the feeling that while the campaign has the scope and grandeur of a ***Call of Cthulhu*** campaign, it is a pity that ***Black Sails Over Freeport*** is not as Mythos influenced as were those early Freeport adventures.

Despite these problems, ***Black Sails Over Freeport*** offers a lot within its pages. There is an investigation to conduct, plenty of roleplaying opportunities, a swathe of interesting foes to smite, several mini-wilderness and mini-dungeons to explore in the form of the four islands, and an über-big bad to take down in the climax of the story. And since these are all arranged in a series of decently sized scenes that can be played in just a few sessions, there never seems to be a moment when the campaign has the chance to lose momentum. ***Black Sails Over Freeport*** should keep any Freeport campaign going for months to come and while it may not be perfect, certainly sets the standard for the big ***d20 System*** campaigns to beat.

Wreckage

Published by [Fantasy Flight Publishing, Inc.](#)

Designed by Barry Stockinger

Developed by Kevin Wilson & Darrell Hardy

Edited by Christian T. Petersen & Robert Vaughn

Art, graphics by Scott Nicely, Jesper Ejsing, & William McAusland

Four cars with speedometer and needle sets, initiative counters, and four decks of seven steering cards each, 38 damage cards, 18 equipment cards, 32 hit counters, three mine counters, eight gas can counters, 14 obstacle tiles, spinout tile, combat and movement ruler, full-color components, b&w rules in six languages; \$19.95

It seems the gaming world owes a debt to Steve Jackson Games that won't easily be repaid. The whole Mad Max-esque cars and guns fighting genre seems to borrow, probably by necessity, from *Car Wars*. And Fantasy Flight? Their tabletop arena game *Wreckage* is the second product under their banner (the first being the Horizon line's *Redline RPG* world) to milk the setting's ideas.

The object of the game is to be the first player to pick up three fuel cans, or to be the last car still running.

The game is for two to four players, and each chooses one of the four colored cars. Each car is rated for Acceleration, Handling, and Structure. The cars are all double-sided, with a different vehicle on each side, so players have to choose which arrangement of stats they'll go with for that game. The player takes the deck of movement cards that match their vehicle's color, and then everyone takes turns selecting items from the equipment deck.

These devices give you some sort of advantage during the game. Weapons are the most direct means to do damage to your opponents, but you can also get armor, movement boosters, or enhancements like turrets. Once decked out, the cars are set up in a standard format -- with everyone pointed at the obstacles and fuel cans at the center of the playing surface -- and initiatives are determined.

Turns are split in two, so you will move and attack once each in initiative order, then repeat the order. Speed determines who acts first. On your turn, you move and perform any attacks available to you. If you move over a fuel canister, you pick that tile up and put it with your vehicle's display. You play steering cards to decide what maneuvers are available to you in each of the two rounds, and both must be placed face-down at the start of the turn. If your card choices later put you on a collision course, you could be in trouble.

Most of the steering cards are standardized -- each deck has a "turn left" card, a "turn right" card, a "repeat" card (which means you want to perform the maneuver from the first card a second time), etc. Each car also has two special movement cards, unique to that deck. The purple car has the ability to jump, for example, while the green vehicle can pull a bootleg. Everyone gets a slight advantage, movement becomes a little less predictable, and players who miscalculated their moves may have a way out. A "ruler" provided with the game shows movement segments, so players can set the stick beside their car and slide the counter the proper number of car lengths forward. It also has a

crook in one end that rotates the car for a left- or right-hand turn.

To attack someone, you must be able to get line of sight to the target and they must be in range. The other side of the movement ruler has segments marked off to determine how far apart opponents are; if the stick crosses an obstacle, Line of Sight is blocked. When a weapon is fired, draw a number of cards equal to its damage value from the damage deck. These cards show zero to three little "bang" symbols, and these are compared to your structure and any armor you've equipped your car with; exceed your structure and the vehicle is eliminated. Some cards list critical hits, randomly removing a movement card from your movement deck and limiting the maneuvers available to you. Others may spin you out, changing your vehicle's facing.

You may choose to repair a point of damage or regain the movement card of your choice by making emergency repairs. Instead of executing your steering card, you trade two cards out of your hand for whichever form of damage you decide to repair. A pricey exchange, but you may prefer forever circling the arena with left turns to not being able to slow down as you head for a wall. Anyone who suffers a fatal blow places any fuel cans collected beside his last known position for others to scavenge.

The system in *Wreckage* is blunt but workable. The game eschews fine detail for fast, practical mechanics. Even without the fine print of *Car Wars*, the addition of just a few rules like the special steering cards, emergency repairs, and hairpin turns gives a tactical depth to the game that increases the replay value. And, in the Fantasy Flight tradition, the colorful components are easy on the eyes.

The rules make good sense (though the order of their presentation could be a little more precise). What isn't immediately obvious is the question of arena size -- there's a specific layout to the basic game, but if this sits at the center of the average living room table, there will be too much space to maneuver outside the cluster of obstacles in the middle. In other words, you'll have to play the game a couple of times before you can come up with some house rules for arena layouts (there's just the one in the book) that won't result in a game that takes ages to complete.

Some of the inclusions seem a bit gaudy given their purpose. The damage cards are a pretty extravagant and heavy-handed way of determining damage, and there ought to be a less elaborate way to keep track of things than hit counters and a speedometer with a cardboard needle. There isn't a substantial savings in playing time when compared to *Car Wars* -- a game still takes about an hour -- but getting the game started is much faster with the streamlined vehicle creation system. Foregoing the profusion of choices and options of that game, *Wreckage* still offers an involving and demanding tabletop experience.

Primary Sources

The Zombie Survival Guide

Published by [Three Rivers Press](#)

Written by Max Brooks

Illustrated by Max Werner

272-page b&w softcover; \$12.95

The *Zombie Survival Guide* is not a roleplaying game sourcebook, but it reads like one. It describes a detailed setting complete with enough plot hooks to hang a campaign on. The setting is Max Brooks' interpretation of the zombie horror story. His premise? The world has been infested with a virus that turns the living into the living dead. The governments and population of this setting are mostly unaware of the danger. Ancient stories of corpses reviving, attacking, and consuming the flesh of their victims are regarded as folklore. Modern reports of outbreaks in remote areas are dismissed as the product of overactive imaginations. The threat of civilization being overwhelmed by the living dead is growing and only the prepared will survive.

The book is presented as a parody of military survival manuals. The layout and illustrations are done in the same, simple style. It covers the subject of surviving zombie attacks using a dry and technical tone. This tone is important to the mood of the work and is maintained throughout it. This is the *Zombie Survival Guide's* strength and weakness. Max Brooks uses a particular blend of dark humor and horror. There are no laugh-out-loud comments or tongue-in-cheek passages. He treats the subject with such an earnest and serious tone that the book becomes believable at times. This tone also gives the book a farcical quality. Unfortunately, the length of the book may mean that the underlying joke gets stale for some readers.

Adapting Max Brooks' setting as a roleplaying campaign is relatively straightforward. The source material provides a great deal of depth in the form of historical accounts and pseudo-science. Player character types could range from ordinary people simply trying to stay alive to those who have dedicated their lives to studying and fighting the zombie threat. The *Zombie Survival Guide* describes varying levels of zombie attacks, from an isolated incident to a worldwide infestation leading to the fall of civilization. The players could find the campaign slowly escalating from destroying a few zombies in a lonely spot to fleeing the cities as they are overrun to a struggle to survive in a full-blown post-apocalyptic game.

The book itself could be dropped into an existing horror campaign. The PCs have a few encounters with walking, flesh-eating corpses. The zombies prove to be resistant to most attacks, but the PCs eventually destroy them. A couple of sessions later and a PC receives a copy of the *Zombie Survival Guide* as a gag gift. The details given in the book are an exact match with the creatures they ran into. But the book is clearly marked "humor" and was written by Mel Brooks' son. How reliable is the information within its pages? If the tactics in the book are real, they offer a good chance of victory. On the other hand, that helpful-sounding advice could seal the party's fate if the book is nothing more than a work of fiction. And if the information in the book is real, how did Max Brooks acquire it? How much do his parents know? A trip to New York might be needed to find the answers. This could kick off a new and slightly quirky chapter in a horror campaign.

Alternately, a GM could just throw these zombies at a team of trained undead hunters and watch their well-practiced plans fall apart. The living dead of the *Zombie Survival Guide* are created by a virus, not magic. Max Brooks even provides the pseudo-scientific explanations to prove it. This makes them immune to attempts to dispel them or drive them off using magic. Even worse, they are proficient at tracking prey by smell and hearing. The players will have to

scramble to find ways of dealing with packs of tireless hunters that want to consume their flesh. Like all good B-movie monsters, however, these zombies do have weaknesses. First, they are mindless rotting corpses with poor coordination. Outrunning them is not a problem on open, level ground. Second, destroy a zombie's brain and that zombie gets put down for good. The *Zombie Survival Guide* helpfully recommends a number of weapons for this application.

The final chapter of the book is of particular interest to GMs running a historical or time travel campaign. It chronicles all of the known zombie attacks throughout history. Encountering zombies as a soldier of the Roman Empire or the French Foreign Legion adds a new twist to a zombie horror story. Zombie infections are offered as the reason why ancient Egyptians removed a subject's brains during mummification. The book also provides a few details on an organization of zombie hunters in feudal Japan and of a Cold War zombie research project in Siberia. This provides even more depth to the setting and offers up a number of adventure seeds for GMs. The *Zombie Survival Guide* is also useful outside of the horror genre. Much of the advice given on escape, defense, and creating a citadel against zombie attacks is handy for modern day campaigns. The book suggests that the best way to prepare against an all-out zombie attack is to travel from a secure home (with a 10-foot tall concrete fence, a well-stocked armory, and plenty of emergency supplies) to an isolated location (with more fortifications, weapons, and supplies) in a suitable vehicle (with good gas mileage, off-road capability, and plenty of cargo/passenger space). In other words, to live like certain kinds of player characters.

Overall, the *Zombie Survival Guide* provides that "I want to run this" sentiment that a good setting should. The fact that it is not, in fact, a roleplaying supplement and that GMs will have to create their own stats should not distract from this point. It is also a darkly humorous piece of horror fiction in its own right. However, the relentless way that Max Brooks refuses to break character may wear on some readers.

Murphy's Rules

by Steven Marsh

Murphy's Rules

Confessions of a Non-Gamer

When the idea of switching regular features among the regular contributors came up, I thought it was a nifty idea, but it made me a little nervous too. It was suggested that I write Steven Marsh's Random Thought Table column. It made me nervous because, although I've now done a heap of work here at SJ Games, I feel like a gaming outsider. What could I possibly write about? The brilliant Mr. Marsh suggested that I write about just that . . . being a gaming outsider.

A great idea, but I have to make a confession. I'm not really a gaming outsider. I'm more of an ex-gamer.

All through high school I played games. Things like *Star Frontiers* (I was too much of an iconoclast to play *Dungeons & Dragons*), *Paranoia*, and something called *Car Wars*. I ended up working part-time in a comic and games store, and we played things like *Star Fleet Battles*, *BattleTech* (or was it *MechWarrior*? I can't tell the difference) and *Call of Chthulhu*. In college a friend of mine and I discovered *Warhammer 40,000* and *Blood Bowl*, and pretty much, for about four years, every Saturday, we gamed (actually, both of us being in school for art, we spent way more time painting miniatures and making scenery than actually getting around to playing!). Then my friend moved to England, and I never played games again.

And somehow, I lost my ability to understand games. I remember a friend of mine trying to teach my how to play *Magic* when it first came out. I couldn't understand a word he said as he explained the game. We gave up. Around the same time I dug out *Blood Bowl* to play again, having fond memories of trolls throwing goblins to the end zone, and I couldn't even understand the simplest of movement rules. I think video games spoiled me.

Fast forward 13 years, and I've been dragged back in to the world of gaming by my good friend Mr. John Kovalic. He suggested that I take over on *Munchkin Fu* and Mr. Jackson liked my art enough that *bam!* I'm a gaming "professional" now.

Oddly enough, years ago I tried to get into gaming illustration. In high school I sent my portfolio to West End Games in hopes of working on *Paranoia*. Didn't hear back from them. In retrospect, no big surprise. Then, at some point after college, I was at a gaming convention, I showed my portfolio to some game companies (a much better portfolio from having worked professionally in animation and comics) and I was told that there is no interest in the kind of art I did in gaming. No cartoony humor in gaming! Go away!

Working on *Munchkin Fu* was interesting for me. As I worked on the game, I didn't have a clue of how it would work or be played. When friends came by, and I showed them the art, they'd ask how the game worked and I have to say I didn't have the faintest idea. I didn't find this to be a problem . . . I thought it was kind of funny! Same thing happened on *Ninja Burger*, and currently, the same thing is happening with *Burn In Hell*.

So as the release of *Munchkin Fu* approached last spring, John Kovalic suggested that I join him at Origins. My first game would be out for the show, and I'd get a chance to meet my "co-collaborator," Steve Jackson.

I arrived in Columbus for the show, and after a struggle of just getting my name badge, I found my way in. Just as I got there, two big boxes full of brand new *Munchkin Fu* sets arrived. There was much excitement, and previously unknown to me, I found out just how popular the *Munchkin* line was. I've worked in comics for more than a decade, and sometimes it's like pulling teeth trying to sell a two-dollar comic book, but here's a \$25 game flying off out of the box! Exciting!

I sat down and before me was the fist person in line, clutching his brand new copy of *Munchkin Fu*. I asked him if he wanted me to sign the box, or some cards. He looked at me like I was an idiot.

"No! I want John Kovalic to sign it."

"Oh," I said, "well, John won't be here for about 20 minutes, and he didn't work on that game. I did."

The poor boy was in shock. He leaned in to look at my name tag. Then he looked at the name on the box. Then looked back at my name tag. Oh no, it seemed I was right. He sighed, and in the most disappointed tone of voice, said "fine . . ." and tossed the box to me.

"Fantastic. I've only been here 15 minutes," I thought to myself, "and I'm ready to leave." And the day really didn't get much better.

John eventually arrived at the table, and I think he signed more copies of *Munchkin Fu* than I did. I was met with nothing but disappointment from the *Munchkin* fans; I had people tell me how much they did not like my art, and I thought, "Wow. I drove six hours for *this*."

At the end of the day I announced that I was ready to make the six-hour drive home that very night. John convinced me to stay and give it one more day at least. Things would get better.

He was right. The next day people came by and told me that they had played the game the previous night and they really liked it, and they really liked the art. People had favorite cards that they wanted me to sign. Things were better. John still signed a lot of copies of *Munchkin Fu*, but at least they wanted me to sign it, too!

So that was my first convention as a "gaming professional."

Less than a year later and I get invited to WarpCon in Ireland. They want to fly me there and they'll pay for all my expenses. I was in shock. I worked in the comics industry for 13 years, and I never get flown anywhere . . . I'm in gaming less than a year, and next thing I know I'm in Europe! And I figure, they're paying to bring me there . . . so they're surely not going to treat me like garbage!

WarpCon was great. The people were so nice, and they knew who I was! I played lots of games and had so much fun that by the end my traveling partner, Mr. John Kovalic, was pointing and laughing at me "Ha ha! You're a gamer now!"

A couple weeks later, after I got home, I found out a local gaming store was planning their yearly convention. I went in and asked if they would want me to go to the show and help them sell copies of *Munchkin Fu* and *Ninja Burger*. I was met with nothing but skepticism over the fact that somebody that lives in their city could possibly work for Steve Jackson Games. It was more or less suggested that I'd have to bring in the original artwork for them to see to prove I worked on these games. And besides, they have a guy who wrote a *Star Trek* novel coming, so they wouldn't really need me there.

"Wow," I thought, "a couple weeks ago a show that required me taking a plane wants me . . . now the show I could ride my bike to doesn't want me."

I mentioned all this to a friend of mine the other day and he said, "Isn't that the way . . . you have to go to Europe to be appreciated!"

One last convention story. I do a lot of illustration work for LEGO. Last summer I was a guest at a LEGO convention (of all things!). The very first person that came up to my table said, "Oh rats; I forgot to bring my copy of *Munchkin Fu* to get you to sign!"

So maybe I have to go to Europe or non-game conventions to be appreciated. Still, I'm not discouraged. While I may not be at the local show, I'm sure I'll see some of you at some show this year, and in years to come. While John may not be 100% right with his declaration that I'm a gamer now, I don't really feel like a non-gamer anymore either!

--Greg Hyland

Designer's Notes: *GURPS Basic Set, Fourth Edition*

By Sean Punch

First, a confession: In 2002, if you had asked me as a *gamer* whether I thought that a Fourth Edition of *GURPS* would ever happen, I would have said, "No." Third Edition was (and remains!) an excellent game, and with all those supplements printed over the years . . . well, I truly believed that there was too much inertia to overcome.

But as the *line developer*, I knew that all those supplements had made *GURPS* into a patchwork -- a game built up by accretion. I had made an effort to avoid this since taking up the mantle in 1995, but *GURPS* was bigger than me or anyone else. So when Steve gave Fourth Edition a green light in the spring of 2002, I had already been thinking about what I would do were I to create a new edition.

What *I* wanted was only half the picture, though. Before I could write a single word, I had to consult my oracle: *GURPS* players. I pored over Steve's 13-year-thick file of comments on Third Edition, as well as similar correspondence I had received in my seven years as line editor. That represented the bulk of customer input to *GURPS'* designer and caretaker over the course of its lifetime.

Armed with that knowledge, my next move was to design a Web poll that would ferret out what *current GURPS* players felt was important. I based the questions in equal parts on the correspondence, SJ Games staff input, and of course my own ideas as a *gamer and a developer*. Then the poll went live . . . and garnered over 4,000 responses!

In mid-2002, David Pulver and I sat down and reduced the correspondence, the poll results, and our personal visions of the project to a list of desired changes to the Third Edition. From that, we created an outline. We divided this up and got to work.

The task was daunting, to be honest. We had to take apart the *Basic Set, Third Edition, Compendium I*, and *Compendium II* (over 400,000 words of text!) and revise and reassemble it all -- in the context of 16 years of *GURPS* canon -- in about a year. And the result had to be playable and *fun*.

This wasn't easy, especially since David and I were working from opposite ends of Canada! It involved a lot of long-distance time . . . not to mention caffeine. To stay focused, we kept our list of changes and our outline nearby. And whenever we felt we *had* to deviate from the plan, we bounced the idea off the other guy for a reality check. Throughout, we held three guiding principles in mind:

1. Make *GURPS* more scalable. Scalable to power level, technology level, the physical size of the heroes . . . everything.
2. Cut out excess *required* detail to make *GURPS* more accessible to those who prefer to ignore the rules and get right to the game.
3. Add more *optional* detail to give tweekers more knobs to fiddle with to get things "just right."

By mid-2003, we had a first draft that fit the bill.

To stay on schedule, we had to forgo a public playtest (sorry!) and ask a group of staff, former staff, freelance writers, and senior MIBs to review our draft. Review it they did. For months, David and I had *bursting* inboxes! We made a lot of adjustments and plugged a lot of holes. It was nearly as much work as the text revision, but it was important to both of us that the assembled experts genuinely liked the end product.

After that, I gave the manuscript a final pass and handed it to Andrew Hackard for a good edit. Then the finished book went to Steve. As the original designer, Steve didn't have to ask for final approval -- we actively bothered him for it, in order to benefit from his experience and wisdom. And sure enough, Steve found a lot of little errors (and a few big

ones!) and asked us to clean up some unclear turns of phrase. Then the text was *really* done.

More than two years after we started, we were finished. Finished, that is, except for the page design, layout, art, cover . . . all those major details that writers like me tend to take for granted. That's a lot of hard work, and it's still work in progress, but the results look good! I think **GURPS** fans are going to love it.

Situation Conspiracy

by David Morgan-Mar

Genre: S.C. (Secret Conspiracy/Situation Comedy)

Style: Televisual (Small Screen Cinematic)

Fidelity: Amazingly low. No, lower. Keep going. That's it.

Themes: Aliens, Cabal, Comedy, Conspiracy, Cosmic Horror, Faerie, Science Fiction, Undead

Campaign Setting and Background Information

Maple Street is a normal-looking cul-de-sac in an attractive middle class suburban neighborhood, containing just eight homes. The neighbors all get along well, and there never seem to be any disturbances of note. But visitors to Maple Street get an odd feeling about the place. Something there is just not quite right. Strange things can be seen out of the corner of the eye. Time sometimes unaccountably seems to go missing. Acquaintances of the residents drop in for a visit, and leave unable to remember anything that has happened.

What Everybody Knows

It's the 1970s. The world is just like ours was back then. The residents of Maple Street are all average citizens. There's nothing to see here, no indeed.

What Everybody Doesn't Know

Middle America is about to become the front in a battle between advance forces representing several different supernatural, otherworldly, and ultraterrestrial factions. Strangely, coincidentally, almost *comically*, they have all chosen Maple Street as a safe, inconspicuous location for their bases.

The Residents

1 Maple St. -- Darren and Samantha Stubbins: Darren is an advertising executive. Samantha is a witch, one of a powerful cabal of magic-wielding individuals who seek to use their control over mystical forces to subjugate humanity and rule the world.

2 Maple St. -- Mrs Black and her boarders, Tim O'Hare and his Uncle Morton: Unknown to Mrs Black, Morton is a Martian scout gathering intelligence for an impending invasion by forces from the Red Planet. Tim, having been promised amnesty in return, is his willing assistant in fitting in with Earthling customs and helping him out of situations in which Morton's origin might be discovered.

3 Maple St. -- Mrs Carolyn Myer: Carolyn is a widow, who lives with her two children, Jonathon and Candy. They have a dog, Scruffy, and a housekeeper, Martha. Also living at 3 Maple St. is the ghost of Captain Daniel Grigg. Grigg manifests only to the family, and is in the process of seducing Mrs Myer so he can have a mortal willing to do his bidding. His ultimate goal is to release hordes of spectral undead upon the Earth.

4 Maple St. -- The Adamcescu Family: Recent immigrants from Romania, the Adamcescus consist of parents Gomaz and Marticia, children Tuesday and Dugsley, Uncle Festar, Marticia's mother "Grandmama" Eudorae, and the butler Lurtch. The Adamcescus are all vampires, while Lurtch is a reanimated construct made by sewing together parts of separate bodies. Their aims are to maintain a veneer of normality over the larger neighborhood so as to ensure a

constant food supply, and to slowly spread their affliction throughout America.

5 Maple St. -- Wilbur and Carol Potts: Wilbur is an architect and Carol is a former dancer. Their house has a small barn out back, which houses Wilbur's horse, Mister Ted. Mister Ted is an Unseelie talking horse, with the ability to confuse and dazzle humans with his speech. He plots to open gates between the mortal plane and the Faerie Realm, allowing Unseelie to spread into and take over this reality.

6 Maple St. -- Major Tony Nielson: Maj. Nielson is an astronaut employed by NASA. Everyone on Maple Street thinks he lives alone. His friend Maj. Roger Haley frequently visits, giving rise to neighborhood speculation that the pair is gay. In reality, both majors have been enslaved by a powerful djinni who manifests in female form. This malevolent spirit, known as "Janie," lives in a bottle in Nielson's living room. She aims to use the men to release fellow djinn who were bound to servitude millennia ago and unleash their wrath upon humanity.

7 Maple St. -- Mindy McDonald and her boyfriend Murk: Mindy works in her father's record store. Murk is a shape-shifting alien from the planet Urk, on Earth to collect information about humans as a potential slave and food species for the bloodthirsty, slaving Urkans.

8 Maple St. -- The Brody Family: Mike and Carol Brody formed a blended family when they married, both bringing three children from a previous marriage. Together with Alice, their housekeeper, they form a household of nine, numerologically representing completeness and the whole universe. Mike is an architect, who designed the Brody house with sacred geometry to tap into the mystical power of other planes of existence and form a gateway through which creatures of non-Euclidean dimensions may travel. The Brodies aim to use this netherworldly influence to reduce humanity to pawns in their quest for ultimate cosmic power.

Currently, none of the residents of Maple Street suspect that the other seven houses contain anything other than a normal, average, Middle American household. In fact, the leaders of each group are completely unaware that the other factions even exist, and would dismiss talk of such a thing as patent nonsense. Uncle Morton knows there's no such thing as magic, for example, and Mike Brody knows the idea of aliens on Earth is ridiculous.

However, things *have* been getting a little weird around Maple Street lately. All the families receive visitors from time to time, and they sometimes go away confused, scared, missing chunks of their memory, possessed, or not at all. It's just starting to get strange enough that a few people are beginning to get suspicious that all is not what it seems in Maple Street.

PC Opportunities

Perhaps the most obvious role for a group of heroes is opposing *all* the factions in Maple Street. This is a tough task, and will require resourceful and clever individuals, preferably backed by some sort of exotic abilities or a powerful organization.

Investigators will begin in the dark and try to uncover clues revealing what is happening in Maple Street. Suitably powerful investigators might then turn into:

Defenders of humanity will be called in once some sort of authority realizes what is going on -- or part of it anyway -- and decides that action is necessary to stop the threat. These could be ultra-competent individuals, members of a vast organization devoted to defending humanity, or normals thrown in way above their depth, depending on the campaign style.

On the other side of the coin, there are a lot of factions at work, and it is possible for PCs to become involved in supporting any one of them. Anyone working for one faction will be more or less opposed to most of the others. There are a few possible alliances amidst the chaos, and cementing an alliance may be the key to overcoming seemingly impossible odds and emerging victorious.

PCs could become involved with a faction either by wilfull recruitment, threats, blackmail, or work for hire. Each of the factions has the resources and powers to make either of these an option, if applied creatively enough.

Recruits will be at least minimally aware of the faction they are working for, but they should begin ignorant of the existence of the others.

Coercees will be unwilling participants in a plot to destroy (or at least seriously damage) human civilization. They may begin unaware of any unnatural forces, or could be coerced after having witnessed them. The second revelation would be learning what those forces are planning. At this point, heroic characters might try to rebel and fight against their oppressors, while less moral ones may spy opportunities for later power grabs.

Employees may begin thinking they are on to a good thing, as the wages will be generous. The jobs might seem a little unusual, but for the pay, who's complaining? Over time the jobs will get weirder, until one involves something obviously illegal, immoral, or downright illogical. This may lead to some discreet investigation, and what will the staff do when they discover they are working for unnatural forces of evil?

NPC Backgrounds

The characters below have their most important *strengths* (generally positive qualities, abilities, skills, or effects) and *weaknesses* (generally negative qualities, abilities, skills, or effects) detailed. In descending order, the ranks are Master, Expert, Good, Average, and Poor. Depending on character conception, any quality can be a strength or a weakness. For example, suppose a character has "Spoiled Brat" as a quality. If it's ranked Average or above, it's a strength: the character always gets his own way, can wield undue influence by threatening to sic Mommy or Daddy on others, possesses lots of cash or gadgets, and people generally fawn over him, making life easy. But if the character has "Spoiled Brat (Poor)," this is a weakness: the character has led a pampered and sheltered life, rubs people the wrong way, and expects everyone to bend over backward to fulfill his most minor needs.

Samantha Stubbins: Samantha is the nominal leader of a secretive cabal of witches and warlocks numbering perhaps a hundred members. She has Magical Powers (Master), but spells require long, intensive, and carefully prepared rituals to cast. Magic is subtle and the effects manifest mostly as events that might have happened anyway, or could be written off as coincidence or luck. For example, Samantha could manipulate a lottery or make someone be hit by a car, but could not throw balls of fire from her hands. She doesn't want to rule the world overtly, but merely wishes to place controlled puppets into positions of power. Since magic is tiring, she also uses her Beauty (Expert) and Coercion (Good) on husband Darren to get him to produce subversive advertising campaigns designed to further her goals.

Darren Stubbins: Darren is Smitten (Poor) with his wife and Clueless (Poor) about what she is doing. He knows she is a witch, but believes she would only use her powers for good. He is Expert at Advertising and Fast Talking, and will do his best to get other people to understand that Samantha is a normal housewife. He is incapable of believing Samantha is up to no good.

Uncle Morton: Uncle Morton appears completely human, but is a native of Mars. He is an advance intelligence scout for the Martian Interplanetary Invasion Force. He observes Earthlings so that he can form reports that will be the basis for Martian military operations when the invasion fleet arrives. He currently does not have a need-to-know on the timing of the invasion, but suspects it will be sooner rather than later. Morton has several otherworldly powers such as Invisibility (Good), Levitation (Expert), Telepathy (Expert), and Telekinesis (Good). He has access to several superscience gizmos that operate with Average reliability, and can radio messages back to Mars. His scout saucer, however, was damaged on landing and he is attempting to repair it.

Tim O'Hare: Tim is a newspaper reporter (Expert Journalism skills). Morton has convinced Tim with displays of high-tech and weird powers that Earth doesn't stand a chance against the Martians. Tim cut a deal to help Morton in exchange for being allowed to live after the invasion. Morton has no intention of keeping the bargain, but uses Tim to help gather intelligence. Tim's job is helpful in researching Earthling military strength and preparedness. Not one to be a hero, Tim's major problem is Spinelessness (Poor).

Captain Daniel Grigg: A wilful undead human spirit, Captain Grigg has been embittered by the years he has spent wandering the mortal coil seeking eternal rest. Now that Carolyn Myer has rented his house, he has a means of seeking vengeance on the world. In order to call forth legions of other ghosts, he needs Carolyn to track down and abduct a skilled medium. Finding one is the problem. Grigg is Insubstantial (Master) and Invisible (Master). He can Materialize (Master) at will, but has trouble Affecting Material Objects (Average). When materialized he is Handsome (Expert). He is Bound (Poor) to the grounds of number 3 Maple St and has a Short Temper (Poor).

Carolyn Myer: Carolyn is a struggling freelance magazine Writer (Good). Unfortunately, she is Naive (Poor) and Romantic (Poor). She thinks Captain Grigg is dreamy and is ready to do his bidding.

Gomaz Adamcescu: The head of the Adamcescu vampire clan, Gomaz is Charismatic (Expert) and has built up considerable Savoir-Faire (Master) over his thousand years of unlife. Gomaz led his family to the New World to seek fresh hunting grounds -- Romania, and most of Eastern Europe, is already overrun with vampires. The Adamcescus are now preying on the occasional visitor to Maple Street, and prowling further afield at night. As vampires, Gomaz and his family are all capable of Shapeshifting Into Bat Form (Good) and Wolf Form (Good) and are Invulnerable (Master) to everything except Standard Vampire Weaknesses (Poor) (sunlight, holy symbols, garlic, running water, wooden stakes, etc.). Gomaz plans to use his Infectious Bite (Expert) to spread vampirism and Domination (Expert) over infected victims to build a power base in America.

Mister Ted: Mister Ted is a faerie horse, placed on Earth by members of the Unseelie court as part of their plot to prepare the mortal realm for faerie invasion. He resembles a mortal horse, but speaks English with a Glib Tongue (Master), can create Glamours (Expert) at will, affect mortals with Good Luck or Bad Luck (Expert), and Communicate With Animals (Expert). His weaknesses are a Vulnerability To Iron (Poor) (he doesn't wear horseshoes) and being an inveterate Trickster (Poor).

Wilbur Potts: Wilbur is an Architect (Expert). He is currently under the mesmeric influence of Mister Ted's Glib Tongue, and will follow the horse's orders to the death. He will vehemently deny that his horse can talk, or is anything other than a normal palomino, and will actively work to cover up any such accusations or evidence.

Carol Potts: Carol is ignorant of Mister Ted's abilities. She thinks her husband is a bit eccentric, but is very Tolerant (Master) of this. She could be persuaded that something really odd is afoot if presented with enough evidence, but it will take a lot to convince her Skepticism (Poor).

Janie: Janie is a djinni who normally resembles a Beautiful (Expert) woman dressed in a pink harem costume. Appearance is deceiving, however, as she is Proud (Poor) and has a Bad Temper (Poor). Added to her powers of Smoke Form (Master), Shapeshifting (Good), and Mind Control (Good), this makes her extremely dangerous. Janie's main weaknesses are Overconfidence (Poor) and Vulnerability To Solomon's Seal (Poor). She has enslaved Maj. Nielson and Haley to help her in her quest to find and release other djinn, and to ultimately break the power of Solomon's Seal and release *all* bound djinn back into the world.

Major Tony Nielson: Maj. Nielson is an Astronaut (Master). Unfortunately, after a mission splashdown he found an antique bottle on a desert island. Removing the strangely sealed stopper, he found himself under the influence of the newly released Janie. Nielson is now Mind Controlled (Poor) and has no self will of his own. He acts normally, except for prowling antique stores and garage sales looking for weird artifacts.

Major Roger Haley: Maj. Haley is an Astronaut (Expert) and also Mind Controlled (Poor) by Janie. He frequently visits Tony's home to receive new orders from Janie.

Murk from Urk: In his native form, Murk is a 9' tall hairy alien with dagger-like fangs and a constant drool. In this shape he Causes Fear (Expert). He is able to Shapeshift Into Human Form (Good), but if he gets angry or hungry he switches back. He eats humans and once a week becomes Ravenous (Poor) until he feeds. Murk keeps Mindy alive so that he has a long-term study subject to learn human habits and to gather information for him and explain human affairs. By himself, Murk constantly Misunderstands Human Actions (Poor). Murk's eating tactic so far has been to befriend someone, invite him over to the house, eat him surreptitiously, shapeshift into his form, and leave the house, so as to allay any suspicion by Mindy.

Mindy McDonald: Mindy is a Sales Assistant (Average). Unfortunately, she is Good-Hearted (Poor) to a fault. She knows Murk is an alien but is, so far, completely unaware that he is not a friendly human-shaped alien. She believes helping him to understand human society and nature will make him a better alien and will lead to friendly relations between Earth and Urk. If confronted with the truth, she will freak out, as she is Unable To Cope With Horror (Poor).

Mike Brody: Mike is the undisputed head of the Brody household. He is an Architect (Master) and also skilled at Sacred Architecture (Master). He also has Master level knowledge of the Cosmic Realms and Ultraterrestrial Gods And Entities. All his family and their housekeeper Alice are willing assistants in Mike's hermetic activities. Together they perform rituals to summon and bind extradimensional entities to do their bidding. The goal is nothing short of world domination. Mike's only weakness is that he is prone to Boring Moralizing (Poor) when attempting to interact with people outside the family and convince them that nothing odd is going on.

Carol Brody: Carol is outwardly devoted to Mike, but hides a Secret Desire To Usurp Him (Poor). She has Expert knowledge of Cosmic Realms and Ultraterrestrial Gods And Entities.

The Brody Children: These are, from eldest to youngest: Greg, Marcia, Peter, Jan, Bobby, and Cindy. They all have Good knowledge of Cosmic Realms and Ultraterrestrial Gods And Entities.

NPC Interactions

The default condition is that all the eight factions are mutually opposed. However, the value of an alliance is indisputable and some households lean more naturally together:

- *Samantha Stubbins and Mike Brody.* The power of magic joins these two. They could potentially teach each other a lot, and their styles and goals are similar, but ultimately each wants sole dominion over humanity. If they joined forces, each would seek an opportunity to stab the other in the back at first convenience.
- *Uncle Morton and Murk.* Being based on technology, these two form a natural team. The Martians want Earth for its mineral wealth and sunny outlook; the Urkans want the humans for fodder. A match made in heaven.
- *Captain Grigg and the Adamcescus.* Both being undead, they can probably relate fairly well. Their goals are not really incompatible either.
- *Mister Ted and Janie.* These are both seeking to unleash malevolent spirit entities on to Earth. They could conceivably cooperate, and neither's goal really threatens the other.

Other alliances are possible. The GM should simply keep in mind the factions' goals and judge any potential interactions on a case-by-case basis.

Items & Locations

1 Maple St.: The Stubbins house is kept spotlessly tidy inside and out. There is nothing unusual to be seen, unless a visitor enters the study. This room is painted black, and has several obviously mystical decorations: charms, candles, brazier, wax dolls, a large stone altar topped with a wavy-bladed knife and a gold chalice, etc. Samantha uses the study to prepare and cast spells. She has told Darren she uses it as a sewing room, so he avoids it and has no idea what is in there.

2 Maple St.: Mrs Black lives upstairs in this two-story house, her residence accessed by an external wooden staircase on the side. The lower floor is inhabited by Tim O'Hare and Uncle Morton and is an obvious bachelor home with tacky gray-green Formica kitchen fittings. Of most interest is the garage, which contains the parts of Morton's non-working flying saucer. Only the radio works, and has a direct link to Martian military command. If anyone should operate this they will be greeted by a gurgling voice speaking Martian (with no appreciable time delay). Responding in any language other than Martian will result in the connection being cut off at the other end. Cinematically skilled mechanics or gadgeteers may be able to repair some of the saucer's flight systems. Also littered around the garage are several differently shaped ray-guns. These have various strange effects if used, but are generally not fatal.

3 Maple St.: Captain Grigg's former and present home is a stone country cottage that looks a little out of place amongst its more modern neighbors. Ivy covers the walls, which have fittings of naval brass, and the whole is decorated in a nautical style. The nautical theme continues inside, especially in the upstairs parlor, in which an oil painting of Captain Grigg in a sea jacket and cap watches over a brass telescope mounted on a stand. A barometer on the wall indicates not air pressure, but Grigg's mood, reading "Stormy Weather" when he is angry and "Fine" when he is calm. Anyone sensitive to psychic impressions gets a strong sense of foreboding in this room. The telescope has a field of view including the back yards of numbers 2 and 4.

4 Maple St.: The Adamcescu house might be the oldest and is certainly the most run-down on the street. Its steeply pitched rooves look as if they are about to collapse. There is a belfry, which seems to be infested with bats. Buried in the basement are several exsanguinated corpses -- the remains of door-to-door salesmen and similar callers. The basement floor is loosely packed earth. (Investigators with suitable resources could identify it as *Romanian* earth.) The bedrooms upstairs all contain coffins instead of beds. During daylight, the Adamcescus are always home, usually resting in their coffins, but they will rouse if someone knocks on the door or enters the house. The windows are shuttered and no direct sunlight reaches any part of the interior. At night, Lurtch remains home while the vampires roam the neighborhood to feed.

5 Maple St.: The Potts home has a somewhat rural feel to it, with a broad porch and rustic motifs decorating the immaculate sky blue walls with white trim. The yard is larger than any of the other properties, containing Mister Ted's barn behind the house. Mister Ted has bamboozled Wilbur Potts into assisting him to build a stone circle in the back yard, which will form a gate to the Faerie Realm and allow the Unseelie to enter the mortal world en masse. So far, three huge granite monoliths have been delivered and planted in the turf, with five more required. Wilbur has told the neighbors that he is landscaping the back yard to allay suspicions over the cranes required to hoist the rocks over the house.

6 Maple St.: Maj. Nielson's house is a drab-looking bachelor pad, in need of a bit of upkeep. Previously a diligent home-owner, Maj. Nielson has neglected such things as mowing the lawn and cleaning the gutters ever since he fell under Janie's control. Inside, the house shows an unexpected feminine touch to the decorating, which may simply confirm any belief that Nielson is gay. Sitting inconspicuously on the mantelpiece is an antique bottle and, next to it, a fitted stopper. The stopper displays an intricate device (the Seal of Solomon) and can be used to seal Janie in her bottle. In her arrogance, she has not bothered to get rid of it.

7 Maple St.: Mindy's home is a narrow, two-story, gabled affair with an old fashioned coal cellar door in the side. The interior of the house is unremarkable, except for the attic room in which Murk sleeps. This is littered with bits of unidentifiable orange (alien) fur and dried pools of drool. It also contains Murk's egg-shaped spacecraft, in working order. Getting it to power up or beep is easy, but operating it properly would take either a lot of study or luck. In the cellar are large mounds of alien excrement, containing ground human bones, gold teeth, wristwatches, etc. It is not obviously excrement -- it has almost no smell and is fairly clean, considering. Mindy did have a ginger tom cat, but he disappeared a few weeks ago and she would like to find him, although showing her his bones in the cellar might not be a good idea.

8 Maple St.: The Brody house has an indefinable air of oddness about it. It looks like a quirky modern architecture design, but some of the angles just seem somehow *wrong*. Nothing you could put a definite finger on though. Mike Brody has designed the house to focus sacred architectural energies and act as a conduit for extradimensional power. The walls and fixtures around the living room form a pentagram and it provides large bonuses to summoning and binding cosmic entities within it. Someone with mystical knowledge examining the floorplan in detail might spot the pentagram. Unusually for a house this size, the children are forced to share only two bedrooms -- one for the boys, one for the girls. The sacred architecture dictates a vast living area with little left over for bedrooms.

Events & Possible Story Arcs

The broad story arc available will involve some or all the following:

- Someone starts to get suspicious of events in Maple Street.
- Someone investigates and uncovers evidence of one or more of the terrible secrets of the houses.
- The households become aware that their neighbors are potentially dangerous rivals.
- All hell breaks loose.
- The heroes resolve things somehow. Maybe. If not:
- Malevolent spirits and cosmic entities are released on Earth, two alien invasion fleets arrive, and other unpleasantness.

At some point within this sequence, the following may occur:

- Authorities of some sort arrive to "clean up" the problem.

The "someone" who investigates could be an agent outside Maple Street or a person working for one of the factions. An outside agency discovering one or a few of the truths hidden in Maple Street will catalyze discoveries between the households as well, either before or after the authorities arrive to sort things out, depending on the nature of the findings and the covertness or otherwise of the investigations. If, on the other hand, the factions begin finding out about each before any external authorities do, things will start to get messy quickly and the first external response will be isolation and damage control rather than investigation.

Some different options are outlined below:

Investigators

External authorities are interested in finding out what is going on in Maple Street. Local police are likely to be the first ones involved, perhaps on the trail of a missing door-to-door salesman, following up a complaint about untidy house maintenance, or seeking what someone in the next street claims was a wolf. This could quickly escalate to FBI involvement, if evidence of serial killings, kidnappings, or anything *weird* comes to light.

PCs could be either local police, involved with initial doorknocking and then caught up in the whirl of an FBI case, or the feds called in when the police chief decides his boys need help.

Damage Controllers

This is a job for ultra-competent individuals with some serious backing. There may be a super-secret arm of the federal government with immense reserves of black funding, equipment the likes of which won't be seen on the streets of Tokyo for another 50 years, and arcane or secret knowledge of the existence of supernatural forces, aliens, and alternate dimensions. This agency lies in wait for just such an outbreak as this, as it has since Roswell. Or the Jersey Devil sightings. Or the Salem witch trials...

They just never expected it to all hit the fan in one street at the same time. These guys are going to have their work cut out for them. Rather than going in all guns blazing, this will require some surveillance and possibly infiltration. If the heroes can sow discord and get some of the factions to wipe each other out, the mess will be that much easier to clean up. Assuming the world is still in one piece.

Or it could be the Army or Marines, special ops or SWAT teams, or just regular FBI agents in way over their heads. These sorts of teams will recruit as much paranormal and scientific knowledge as they can -- also potentially good PCs.

Faction Members

For whatever reason, the PCs are aligned with one of the factions, at least initially. Play the campaign straight for a while and have them assume the neighbors are indeed normal. Then they can either be the initial investigators into something odd, or have their suspicions raised when police and the feds start poking around the house next door. This

should lead naturally into uncovering the truth and setting off a major turf war between the groups. At some point, the PCs may switch sides, if their faction leader will let them.

Advice, Opportunities, & Pitfalls

Situation Conspiracy can be played in widely varying styles:

Sitcom

The set-up as written is based on well-known situation comedies, with a twist. The twist can serve to make the setting even more humorous, with slapstick outcomes as the various factions pit their mystical and technological jujitsu against one another. In this style of play, emphasize the outlandish silliness inherent in the premise. Play up the sitcom stereotypes and tropes:

Mundanes don't know what's going on: Introduce other characters from the relevant series to throw spanners into the works: Darren Stubbins' boss, the Brody's butcher. These people will stumble onto weird things and those in the know will need to somehow convince them that everything is normal. This is a good job for anyone working with the factions. Or the PCs could be outsiders like Maj. Nielson's staff psychiatrist or the nosy woman across the cross-street from the Stubbins house. They might slowly piece together what is happening, only to have the local police utterly disbelieve that a witch is living at number one and plotting to control the world.

Embarrass people: Mister Ted likes to order risqué magazines on Wilbur's credit card -- naturally the neighbors see them being delivered. People can be turned into animals by magic or ray-guns, and when they turn back they will be up trees, or sniffing someone's posterior. Men can dress as women for all sorts of reasons. And never miss an excuse to have someone locked out of the house in nothing but underwear.

Incompetence: Whatever can go wrong will -- and it's usually someone's fault. General klutziness is fine, but what about flubbed spellcasting, Martian gadgets that backfire, ghosts who forget to dematerialize as they walk through walls, vampires who fly into walls as bats? Don't be afraid to have someone fall off a roof or drop a monolith on the neighbor's place.

A final word on the sitcom style: It may help to change the NPC names back to what you're familiar with. It'll make them easier to remember and the comedy will flow faster.

Dark Humor

Played a little straighter, Maple Street can be humorous on the surface as the PCs discover just who is living in each house, and take a sinister turn when they realize all is not what it should be. The approach here is that the sitcoms are giving us the cover story and each of these families hides a dark secret. These secrets are something to be fought, but with confidence.

Let the PCs be capable of reacting: Without extraordinary powers or resources, mundane investigators really don't stand a chance against Maple Street. Heroes of the campaign should be out of the ordinary: parapsychologists who have some understanding of magic, spirits, and undead; gadgeteers with weird science technology; or members of an organization capable of securing such support. They can be hidden from or looked down upon by society -- until they are needed to save it.

Play the factions off: Squabbles between different brands of evil are perfect for highlighting the fact that Evil Never Pays and Good Will Triumph. Ideally, the PCs can instigate rivalries between the factions. There should be some collateral damage that needs attending to, but this is a good way to help even the odds.

Don't overwhelm: With so much nastiness in the area, it can be tempting to throw everything at the heroes at once. But hold back. Let them break in and investigate the saucer in Morton's garage in the middle of the night without having a

half-dozen Adamcescu vampires show up and attack. Unless you think they can handle it, of course. But revealing the surprises hidden in the houses one by one is more dramatic and tense than throwing it all open at once.

Serious

Finally, Maple Street can be the core of a gritty, deadly serious campaign aimed at saving (or dominating) the world. Push the comedic elements far to the background and emphasize the fact that the world is a more mysterious and dangerous place than most people know. Elements of horror and dark conspiracy should come to the fore here. Murk from Urk will be a hideous slathering beast rather than a "man in a suit" type alien, and the Adamcescus will be extremely competent and dangerous vampires. And the cosmic horror of the Brody house will be enough to push some investigators over the edge.

Disguise the NPCs: As things stand, anyone who grew up with syndicated television from the 1970s will recognise most, if not all, of the NPCs by name. For a serious approach, change the character names to ones that won't trigger instant recall of the TV series. A phone book or book of baby names will help if imagination fails. Things can be made more strange and unfamiliar by portraying the NPCs differently to their TV counterparts. They almost need to be anyway, given their motives and abilities here. If this is done right, nobody should suspect where these households come from until the battle is over and the players are a gibbering mess thanking their lucky stars to have survived such a gruesome and tough campaign.

Ditch some of the families: Eight competing factions is more than enough for anyone but the best-equipped and most powerful saviors of mankind. To make things easier, revert some of the families to mundane households with no secrets. This can make the investigation phase trickier, as the agents need to find out who to oppose and who to rescue, rather than carpet-bombing the street. The mundanes will need to be sheltered from the truth too, and could be used as pawns or shields by the remaining factions.

Form a cabal: Competing factions in the one street? Maybe it makes more sense for these guys to all be working together. Splitting up the spoils is something they can argue about later, but in the meantime they will form a dangerous alliance against any external threat.

* * *

Thanks to Chad for agreeing to the swap and providing the character ability explanation, and to Steven for suggesting this crazy swap in the first place. And to the folks on the PyraMOO who wondered why I was asking odd questions about sitcoms and Hitean weirdness with barely a breath in between, yet still contributed to my research.

The Jester

An Article About Kidding Around for *d20 System*

by Owen K.C. Stephens

A jester for April Fool's. Okay, okay, it's hardly an original idea. A lot of magazines have done jesters for April issues. I own those old issues too. But so far, I haven't seen a jester for the *d20 System*. There's probably one out there. (Let's face it, with the number of *d20 System* books out there's probably one of everything *somewhere*. Need a prestige class for one-handed dwarves with dwarfism? If a real publishing company hasn't done it, some fan netbook has.) But since I haven't seen it, I can blithely pretend it's an original idea and write up the way *I'd* like to see a jester done.

The first thing I can rule out is a prestige class. I mean, what's so prestigious about being a jester? Sure mimes are kinda scary, but what character strives to *become* a mine? ("Hmmm . . . I could learn *fireball*, or Man in a Cage . . ."). Okay, so mimes are a really bad idea. Let's ignore them for the rest of the article.

Most classic RPG jester tricks could be simulated with feats, but that leads to players cherry-picking useful abilities for their characters ("My fighter is taking pie-throwing, so I have a cheap ranged weapon.") without picking up the "role" of court fool. That just leaves writing up a new core class -- 20 levels of silliness allowing characters in a campaign of any level to play the fool.

The following class is designed to be balanced and usable, but not serious. I suspect most GMs know whether they're going to allow a jester PC into their game, or have any use for a jester NPC, without ever looking at the write-up. A serious game with the right players can survive adding a jester, but for the most part jesters are for casual or even beer-and-pretzels level games (I certainly needed pretzels to write the thing up).

Jester

Jesters are people who depend on comedy to survive. They may be court fools, village idiots, stand-up comedians, class clowns, or just cut-ups. They can't be mimes. Mimes don't get their own character class. Jestors are often surprisingly well-trained, brought up as apprentice jesters for years before being given their own floppy feet and stupid hat. There are entire academies dedicated to the art of jesterism, with hundreds of years of experience honing the skills of comedy. Kings and emperors petition such academies for jesters worthy of royal court, and such patronage can be the cause of political backstabbing and epic conflict.

Other jesters buy a joke book from the back of a comic.

A jester fills the same roles as bards and monks -- that is, they're a class no one will have taken yet so you can make a character that doesn't do the same things as everyone else's. An npc jester is likely to annoy players just short of enough for them to kill him, but is a great way to kill time while the GM looks for his real adventure notes. A jester is likely to kill a serious game, and thus is often seen as a harbinger of doom.

Monsters, especially monstrous humanoids and giants also have jesters, who are often used as shock troops to pacify and terrify enemy kingdoms. Most famous of these are the half-ogre Harlequin Brigade, who were so fond of puns that they were eventually struck down by the gods themselves. This was the intent of the Harlequins, who thought the idea of gods being so annoyed they'd kill jesters was, itself, ironically funny at a legendary level. Few monstrous jesters ever hope to reach this level of infamy, but even so the sight of a green dragon in an orange wig and ill-fitting suit or a hill giant with polka dot furs and a pinstripe club are enough to strike terror into the hardest of heroes.

Table 1-1 Jester Level Progression

Level	Base Attack Bonus	Fort. Save	Ref. Save	Will Save	Special
1	+0	+0	+2	+2	Only when it's funny, play the fool
2	+1	+0	+3	+3	Cavort
3	+2	+1	+3	+3	Gag
4	+3	+1	+4	+4	Parody
5	+3	+1	+4	+4	Faking it
6	+4	+2	+5	+5	The Art
7	+5	+2	+5	+5	Master Fool
8	+6	+2	+6	+6	
9	+6	+3	+6	+6	The Art
10	+7	+3	+7	+7	
11	+8	+3	+7	+7	One-liner
12	+9	+4	+8	+8	
13	+9	+4	+8	+8	Master Fool
14	+10	+4	+9	+9	
15	+11	+5	+9	+9	The Art
16	+12	+5	+10	+10	
17	+12	+5	+10	+10	Grand Master Fool
18	+13	+6	+11	+11	
19	+14	+6	+11	+11	
20	+15	+6	+12	+12	The Killing Joke

Class Rules

The game rules for playing a jester are listed below:

Health: In games using hit points, jesters receive 1d8 hit points plus their Con modifier at each level. In games using some other form of health points a jester should receive fewer than a dedicated soldier, but more than scholars, rogues or technicians.

Skills: A jester's class skills [and the key ability for each skill] are Balance (Dex), Bluff (Cha), Climb (Str), Concentration (Con), Craft (Int), Diplomacy (Wis), Disguise (Cha), Escape Artist (Dex), Forgery (Int), Gather Information (Cha), Handle Animal (Cha), Hide (Dex), Jump (Str), Knowledge (local), Listen (Wis), Move Silently (Dex), Open Lock (Dex), Perform (Cha), Profession (Wis), Ride (Dex), Sense Motive (Wis), Sleight of Hand (Dex), Speak Language (None), Spot (Wis), Swim (Str), Tumble (Dex), and Use Rope (Dex). In games using new or unusual skills, a GM should add any skill with a key ability of Dex to the jester's class skills.

A jester receives a number of skill points equal to (10 + Int modifier) at each level. Skills are a jester's greatest strength, and he needs a lot of them.

Proficiencies: A jester gains proficiency with all simple weapons and all martial light weapons. The jester may select any one non-exotic weapon to start proficiency with as well. A jester is proficient with light armor, but no shields.

Laugh Points: Many of a jester's most useful talents require the expenditure of a Laugh Point. Being really, mystically funny is exhausting, and even jesters can't do it all the time. The jester's pool of Laugh Points represent how much unused, really funny material he has at his disposal. When a Laugh Point is used, it's gone. The jester can earn new Laugh Points, but those spent are permanently lost. This both limits how often the jester can use powerful abilities, thus maintaining game balance (as if anyone allowing a jester into their game care about game balance), and prevents the jester's player from using these powers so often it's annoying (which is realistically far more important).

Whenever a character gains a new jester level, he automatically gains a number of Laugh Points equal to his new level. Additionally, if a jester's player says something that makes the GM laugh (unless the jester is an NPC, in which case making the GM laugh is creepy and earns nothing) or makes 75% of the players laugh, he earns a Laugh Point. A jester may never have more than twice his level in Laugh Points at one time.

This system means funny players have an easier time playing jesters, which may not be balanced but should prevent jesters played by power-gaming stick-in-the-muds. And, more importantly, is funny.

Only When It's Funny: Jesters are inspired to great accomplishments when they're trying to do difficult things for a

laugh. A jester trying to do something funny, even if it's also effective, may burn a Laugh Point to add +2d6 to a skill check, ability check, or saving throw. The jester may only do this a number of times per day equal to his Cha modifier.

Of course if the jester's player is right, and the action really is funny he's likely to get the Laugh Point back. If it's not *really* funny, the player is down a Laugh Point, which is punishment enough.

Play the Fool: A jester is very adept at acting like an idiot, and has little difficulty convincing others it's true. Whenever a jester makes a Bluff check specifically to convince people he's stupid, clumsy, foolish, confused, lost, not paying attention or misunderstanding something, he gains a bonus equal to his jester level.

Faking It: Anything a jester can't do, he can pretend to do. A jester can make a special Bluff check to *appear* to be succeeding at any Craft, Knowledge, or Profession check, or even a Bardic Lore check. No material is produced, no money is made, and no actual information is gained, but observers must beat the Bluff check with either a Sense Motive check or a check on the actual appropriate skill the jester is faking in order to realize no real work or information is accomplished.

Cavort: A jester in light armor or no armor may take a standard action to make a Perform (Dance) check. The result of the check becomes the jester's AC until his next round.

Parody: A jester is a master of making fun to both shame and amuse. A jester may spend a Laugh Point to do a particularly striking parody. The parody can have any one of the following affects:

- **Laugh It Off:** The jester can grant any one creature who can hear and understand him a second saving throw against any effect that causes him to suffer a morale penalty or a fear effect.
- **Political Commentary:** A jester may force any one creature who can hear and understand him to make a Will save (DC 10 + $\frac{1}{2}$ jester's level + jester's Cha modifier) or have its Leadership score be reduced by 1. A jester may only target the same creature once per level (the jester must gain a new level before targeting the same creature).

Creatures without the Leadership feat should note the penalty, since they'll suffer it if they ever take the feat.

Because humor often doesn't translate well, creatures of another type (though not those of other sub-types) than the jester gain a +2 bonus to their Will saves.

- **Shame:** The jester can force any one creature who can hear and understand to make a Will save (DC 10 + jester's level + jester's Cha modifier) or be shaken for 1d4 rounds.

Because humor often doesn't translate well, creatures of another type (though not those of other sub-types) than the jester gain a +2 bonus to their Will saves.

The Art: Jesters are not all the same. Each learns one or more difficult tricks to help amuse people and survive the harsh, cruel world that is they typical *d20 System* campaign. At 6th level, and again at 9th and 15th, the jester may choose one of these tricks, known as The Art. Once chosen, a trick of The Art may not be changed.

Comedic Capacity: A jester with this power can burn a Laugh Point to cause any sack or bag to act like a *Hew's handy haversack* for 1 week. He can burn 2 Laugh Points to double the capacity of any vehicle (wagon, ship, even a horse) for one leg of a trip (GM's discretion).

Patronage: The jester manages to suck up to one person of importance well enough for that person to become the jester's patron. The patron is within 3 levels of the jester (determined randomly), and socially important. The jester gains x4 the monetary benefit when making a Perform or Profession check for the patron or at an event the patron arranged for, gains a +4 bonus to all Cha checks made with groups that seek the patron's favor, and gains minor legal and social protection from those who do not wish to anger the patron.

In a modern-era game, the patron likely gets the jester his own TV show, which has a 75% chance of being cancelled

each season.

Pie Throwing: The jester can throw anything roughly the size, shape and consistency as a pie with a 10-foot range increment. Such objects never do more than 1 point of damage, though they can be poisoned (poison pie is normally only used by dark Clowns, such as the lich Bozo-Dur).

A jester may burn a Laugh Point to force the target of a pie to make a Ref save (DC 10 + $\frac{1}{2}$; jester's level + jester's Str modifier) or be blinded for 1d6 rounds.

Rage: The jester may burn a Laugh Point to force any one creature who can hear and understand or see him to make a Will save (DC 10 + $\frac{1}{2}$; jester's level + jester's Cha modifier) or be so enraged it can take no action other than those designed to cause the jester harm for 1d4 rounds. (The target is not forced to harm the jester, it simply isn't allowed to take any other kind of action).

It's worth noting that a jester who uses the rage Art on a target that can only see him likely makes a gesture not acceptable in polite society.

Because insults often doesn't translate well, creatures of another type (though not those of other sub-types) than the jester gain a +2 bonus to their Will saves.

Something Funny: This Art allows a jester to cast prestidigitate a number of times per day equal to 3+ his Cha bonus.

Surprise: A jester with this Art can, by burning a Laugh Point, do something so startling and unexpected (pull a rabbit out of a hat, have birds explode out of a pie, shout like a monkey with no warning, etc.), that one selected target that can see and hear him must make a Will save (DC 10 + $\frac{1}{2}$; jester's level + jester's Cha modifier) or be flat-footed until its next move.

Master Fool: At 7th level the jester gains a bonus Skill Focus feat with any jester class skill. He gains this bonus again at 13th level.

Gag: A gag is anything funny. A jester may define a gag as a joke, a silly face, a pratfall, or even an unfortunate biological noise.

You may not use mime for a gag.

By expending a Laugh Point, a jester may use a gag to force one target to make a Will save (DC 10 + $\frac{1}{2}$; jester's level + jester's Cha modifier). If the target fails, it's LOL for 1-4 minutes (see New Conditions, below). Because humor often doesn't translate well, creatures of another type (though not those of other sub-types) than the jester gain a +2 bonus to their Will saves.

One-liner: A one-liner is a sudden, unexpected vocal comedy similar to a gag. While a gag can be anything funny, a one-liner must be spoken. Thus it is language-dependent, and the target must be able to hear the jester.

By expending a Laugh Point, a jester may use a one-liner to force one target to make a Will save (DC 10 + $\frac{1}{2}$; jester's level + jester's Cha modifier). If the target fails, it's LMAO for 1 minute (see New Conditions, below). Because humor often doesn't translate well, creatures of another type (though not those of other sub-types) than the jester gain a +2 bonus to their Will saves.

A jester may take a standard action to make a Sense Motive check opposed by the target's Bluff check or Will save. If the jester wins he gets a "read" on the kind of humor the target likes, granting a +2 to the one-liner's DC.

Grand Master Fool: At 17th level the jester is so funny his powers no longer grant a +2 bonus to creatures of other types, nor is any creature required to understand him for any ability other than The Killing Joke (see below).

The Killing Joke: The killing joke is legend among jesters. It's a joke so funny that those who hear it are killed. In

truth the killing joke isn't quite so powerful. Only the most powerful of archjesters ever manage the killing joke, and they realize that each killing joke must be tailored to a specific target.

A killing joke has all the limitations of a one-liner (see above). The jester must spend two Laugh Points for the killing joke, and may only use it once per day. The target must make a Will save or be dead (for specific limitations on being dead, see New Conditions, below).

New Conditions

This article defines a few new conditions, to make humor more standardized within the *d20 System* framework. A GM may choose to make spells or feats that refer to these conditions, or write up magic items using them (clown nose of humoring, for example, or the cursed silly hat).

LOL (Laughing Out Loud): A character laughing out loud is so amused he -must- make noise. The character laughs, snickers, claps or slaps his knee. It's impossible to Move Silently while LOL, and in fact the character grants a +10 bonus to the Listen checks of creatures trying to hear him. (Since Listen checks suffer penalties from distance, this is actually game-mechanically relevant.)

Unless specified otherwise, a character is LOL for 1 minute.

LMAO (Laughing Mightily At Others): A character LMAO is laughing so hard he takes penalties to all actions. In addition to the drawbacks of LOL, the character takes a -2 penalty to all skill and ability checks, attack and damage rolls and saving throws.

LMAO is a greater version of LOL. A character already LOL who suffers an affect that makes him LOL is instead LMAO.

Unless specified otherwise, a character is LMAO for 1 minute. The character then must make a Will save (DC 15) or be LOL for an additional minute.

ROFL (Rolling On Floor Laughing): A character rolling on the floor laughing cannot take any actions other than one 5-foot adjustment each round. The character is not considered helpless, but does lose any Dex bonus to AC.

ROFL is a greater version of LMAO. A character already LMAO who suffers an affect that makes him LMAO is instead ROFL.

Unless specified otherwise, a character is ROFL for 1 round. The character then must make a Will save (DC 20) or be LMAO for an additional minute.

Dead: The core rules of the *d20 System* do define the condition of being dead. However, interestingly, the only mention about limitations the character suffers is that his soul leaves his body. The condition doesn't specify the character is unable to take actions.

For purposes of this article, a dead character is considered an inanimate object, unable to take any action, give information, have its mind read, or do anything a lump of steak the same size and shape couldn't do.

Designer's . . . uh, Managing Editor's Notes: *GURPS All-Star Jam 2004*

By Andrew Hackard

The question I get asked second-most often about this book is "Will there be a *GURPS All-Star Jam 2005*," to which I can only answer "We'll see, but I sure hope so."

The question I get asked *most* often is "What were you thinking?" This article hopes to answer that question.

* * *

When we were looking at the 2004 schedule, we realized we needed another *GURPS* book early in the year. After discussing all the various ideas that were kicking around from our top authors, I had a brainstorm -- ask nine of them to write 10,000 words on whatever topic they wanted. (I *did* veto a couple, I will admit, mostly for a decent mix of chapters in the book.) No one said no -- and Beth McCoy roped Walter Milliken into helping her out, probably by using a Song of No Dinner For You -- and several of them pulled out ideas they'd had which were too big for *Pyramid*, too small for even a small *GURPS* book, blew the dust off, and said "I've been waiting for this chance my whole life, Mr. Trump."

Er, wait, that was tonight's "The Apprentice." Perhaps I should wait to write this until I'm done watching TV . . .

As the chapters came in, I assigned them to whichever editor looked the most bored, or wandered by my office first, cackling madly as I imagined their attempts to reduce each and every chapter by 25%. Because, you see, overcome with excitement, *every single author* asked for permission to exceed wordcount, and (when that permission was denied) did it anyway. Those scamps!

(I should note that I'm writing this on April 1. Some of the previous paragraph, therefore, is not *entirely* accurate. April Fools!)

We pulled out the +5 Machetes of Word-Whacking and got to work, knocking each chapter back under the 10-kiloword threshold while not losing too much content in the process. Many thousands of syllables died at our hands, but in the end, all the surgeries were successful, and we had nine leaner, meaner chapters for our trouble.

Layout proceeded apace; we tested a new page design with *All-Star Jam* (you may have noticed) as stealthy prep work for the [GURPS Fourth Edition](#) layout, and made sure to put the new font (New Aster, at 90% width, as if any of you cared) through its paces. And then, we had to get art.

It's at this point that I sent a very odd request to our authors: would they supply a photograph for our cover artist to use as reference? They complied, more or less willingly, and when they saw Greg Hyland's cover sketch, most were amused. But they didn't know the half of it . . . we didn't tell them that we were having Greg do the interiors as well. I had a ball writing the art specs (be sure to hunt for hidden or not-so-hidden pyramids!) and working the authors in as much as I possibly could. I think this book is something special, and I wanted to be sure that its illustrations were equally, um, special. From some of the comments I've been hearing, we succeeded.

(And it's worth noting that no author has actually *complained* about their portraits -- at least, not to me. That's not an invitation, guys.)

* * *

Back to that first question, about next year's book . . . there are certainly some very fine *GURPS* authors who weren't included in this volume. Sean Punch is probably the most glaring omission, but now you all know why he didn't have

time to contribute this year. With luck, he can squeeze us in for 2005. I'd love to see what Bob Schroeck, Michael Suileabhain-Wilson, or Chad Underkoffler would do with 10,000 words and near-total freedom, too. So I think the chances of an *All-Star Jam 2005* are pretty good, especially if fan reaction continues to be as positive as the early returns have indicated. And I can't wait to get started on it. Thanks to everyone who embraced my wacky idea, to all the authors who contributed, to Greg for turning my dumb ideas into brilliant drawings, and to all of you for making it possible.

The Man

for *GURPS Voodoo*

by David Moore

"Fairfax will tell you the same thing I have. We're not authorized to do things like this."

"Who is? Who makes the decisions?"

"Well, a committee would make a decision in a case like this."

"One man. You go high enough, you always come to one man. Who?"

-- Mr. Carter and Porter, *Payback*

Since Al Capone and Don Corleone, the criminal superboss has been a compelling force in the popular imagination. *Daredevil*, both as a lawyer and as a vigilante, struggles against the powerful and shadowy Kingpin while *The Crow's* Eric Draven discovers that his killers' orders ultimately originated with the cruel and incestuous Top Dollar; Keyser Soze slips out from under the police's noses in *The Usual Suspects* and the Mariachi hunts the drug lord Buco in *Desperado*.

There isn't a hustle, a racket or a hit that takes place where he doesn't see a piece. If you work the city -- drugs, girls, fraud, network -- odds are you answer to somebody, and that guy answers to somebody too. But it all ends with *him*. Everyone knows it, but no one says anything about it; not if they value their skins. He's a stressed pronoun and a raised eyebrow. The police can't touch him, not that it'd do any good: he's got the DA and the judges in his pockets too. Sure, the feds went in once or twice, but all they ever got were his lieutenants. *He* always got away, only to resurface somewhere else. He's the top dog, the boss of bosses. The Man.

Of course, there's no such thing. Organized crime is an oxymoron; sure, there are gangs and outfits, but the idea of one guy being able to control every criminal in a city is ridiculous. It's a myth, an urban legend. An idea.

But then, ideas have power . . .

Il Capo tutta di Capo

"What happened to you and your girlfriend back there . . . I ordered that building cleared. Hell, nothing happens in this city without my say-so."

-- Top Dollar, *The Crow*

Like a Voodoo loa or Hermetic god, the Man is an idea, the belief in which is so deep and widespread that it has become real. Encountered individually it has the traits of a spirit, but this is a *manifestation*, an expression of the archetype given form. It appears in a city where the urban legend of a criminal mastermind or overlord has taken root. Building on that legend, the manifestation finds and assumes an influence over every criminal operation or gang it can, promoting the groups it has gained access to and squashing those that stay outside its influence, until it makes truth of the legend.

Although the idea is general, the manifestation is specific; he (or she!) will have a name, and a biography, although the details may be hazy and fantastic, and not consistent between tellings. The story may co-opt the name and details from the career of a real criminal or boss from the city's history, but this is a separate being, not a ghost. A few features are common to all such biographies: the Man is a foreigner or outsider who has either arisen only recently or been operating for an outlandishly (but not supernaturally) long time; he will defy physical description, with the possible exception of a single trademark feature such as a scar or tattoo; he will be a recluse that no one can recall meeting, although everyone has anecdotes about unfortunates who have done so; and he is known for a singular cunning, cruelty and determination -- everyone will know at least one story of a terrible punishment he has meted out, or a

vengeance he has extracted.

For all that, the Man is sometimes, especially if he has been established a long time, a servant of the community. His patronage may extend to churches or schools, or charity groups. He may even enforce a kind of ethical code among his agents; for instance, declaring children, married women, or priests "off-limits." This, of course, is simply a more subtle form of control, making locals side with his organization over the police or invading gangs, but can still result in good; manifestations of the Man have been known to drive Corruptors and In-Betweeners out of a city, and to stamp out the more wantonly destructive crimes.

Lieutenants

"Gather your soldiers. You're on for tomorrow night. No sweat."

"Is the Man in?"

"He's taking a meeting."

-- Grange and T-Bird, *The Crow*

One distinctive feature about the Man's organization is that he himself is never seen or heard from. His orders are given by his trusted lieutenant or mouthpiece, and his reach is felt in the contacts he has, the people he uses. These lieutenants, of course, are Initiates or Mediums who commune with the manifestation and channel it; the orders they pass on come to them by spiritual contact or are given directly through them, the spirit possessing his servant to speak to individual soldiers.

The strangest thing about these Initiates is that they *don't realize it*. Communications from the spirit are remembered as phone calls or passed messages, rather than dreams or visions. Rituals appear to both their performers and ignorant observers as phone calls (usually to other, lesser spirits, who execute the ritual's effects), bribes and deals; and they work as well as the rituals of Vodoun and Gnosticism because this, as far as the ritualist is concerned, is *how things get done*. Sacrifices to the Man and to the other spirits he uses are in the form of cash, drugs and the occasional spilling of blood; the tools of ritual magic are guns, phones, cash, dark glasses and suits, although superstitious symbols like crucifixes or luck charms may make their way into the lieutenant-Initiate's repertoire.

There may be a network of such lieutenants in the city, running separate crime rings and never meeting face-to-face; only the manifestation, taking reports from each lieutenant and giving orders in turn, knows everything that's going on. Or there may be just one lieutenant, running "his employer's" affairs. He becomes in truth what the Man is believed to be, albeit always thinking himself only a messenger and valued second-in-command.

The Man in the Shadow War

*"King Willie says, 'Not only do I have to kill you, but I have to take your soul.' Voodoo magic, man. f***ing voodoo magic!"*

-- Gold Tooth, *Predator 2*

As far as possible, the Man avoids the Shadow War. Arising from the belief systems of neither the Voodoo Societies nor the Lodges, he has no interest in either faction. An individual manifestation might have no objections to making temporary deals with either side, but generally speaking the Man finds that getting involved with their struggle is more trouble than it's worth. Nor is he a Corruptor, although he *uses* corruption to forward his goals. He was created out of a belief in a controlling force, and control implies ownership. The Man cherishes and jealously guards what's his, and what would be the point in controlling a decaying city? Most frustrating, the Man's agents and Initiates are often completely unaware of his nature, or even of their own powers, which seems to put them "beneath the radar" of more consciously-involved Initiates (see *Ignorant Initiate*, below).

None of this prevents him from becoming part of the War from time to time. Any of the major factions may seek to gain influence in a given criminal community. Warily eyeing the other groups as they do so, they may be completely unprepared to find this independent spirit power already entrenched and with no intentions to budge. Also, while the

Man is not an active Corruptor, his actions -- violent crime, prostitution and drug-trading, among other things -- often further their goals nonetheless. A Corruptor spirit may move into a city where a manifestation of the Man is in place and operate for years without ever being noticed. Gradually, the manifestation may be subverted until he becomes a Corruptor himself, serving the enemies of humanity. Alternatively, the manifestation may find himself sharing his city with a Devourer In-Between (p.VO102), which is far more likely to result in a war to extinction; Devourers are highly territorial.

The Man in the Campaign

The obvious use for the Man is to make his syndicate a focus for an adventure or campaign. The players are police or private investigators, led by a case or bust onto the trail of the city's rumoured superboss; the ensuing investigation draws them into a citywide network of allegiances and pay-offs, but the Man himself remains elusive, always just beyond their reach. Meanwhile, threats, attacks, attempted bribes, or interference from corrupt cops or DA officials dog their steps. Federal agents from the DEA, Treasury, or the FBI's Organized Crime Task Force may claim jurisdiction over the case, causing friction with the PCs who are trying to get to the heart of the case before being pulled off it. Or the players could be feds themselves, clashing with local corruption and maverick cops while struggling with their unfamiliarity with the city.

Alternatively, the players could be criminals, knowingly or unknowingly the crime lord's employees or rivals. A plot to squash a rival group, cement control of a neighborhood or remove a troublesome official will hint at the extent of the Man's organization; as they discover more about who (and what) the crime boss is, they have to decide what they're going to do with the information. An interesting variant on this is to have one of the PCs as the boss's lieutenant-Initiate; the growing realization that his employer isn't strictly real, and that the orders he passes on are taken by spirits rather than living soldiers, can be a major source of horror in the story (think Tyler Durden in *Fight Club*). In any case, police or criminal games with the Man should avoid overt signs of the supernatural, at least to begin with. The superboss's information and influence should beggar the imagination, but not initially defy explanation.

Adventure Seed: A turf war between a Mafia family and a Chinese Triad is discovered to have been engineered by the two groups' seconds-in-command, hinting at them being agents of a common interest. They are found to be working for a mysterious crime lord, who hopes the war will weaken both families and pave the way for staging a take-over of the neighbourhood. He has promised the two seconds-in-command leading roles in the new order.

In an "aware" *GURPS Voodoo* campaign, with Initiates and In-Betweeners as PCs, the Man can work as one of several forces at work in a city. Vodoun Initiates from the Protectors or Loa Lords (pp.VO21-22), or Hermetics from the Schismatics (p.VO32), are frequently involved in the underworld and crime scenes, rooting out rival Initiates, Corruptors and In-Betweeners who exploit and feed off the people. Seek and ye shall find, of course; an Initiate looking for rival supernatural forces in a city may mistake traces of the Man for something else. Hunting him will be a frustrating search, though; his Initiates tend not to show up, and his organizations are excellent at evading that kind of attention. Much of the drama of the game will arise from misdirection. As in the "cops n' robbers" game suggested above, the PCs shouldn't initially realise what it is they're dealing with; while they will be quicker to suspect the supernatural, proof of this, and of the exact nature of the enemy, will be hard to pin down.

Whatever the structure of the campaign, the PCs' goal will generally be to oust the manifestation and his crime ring. This will be a difficult proposition; even if they have the resources to combat spirits, the Man is more than one spirit -- he is an idea, an archetype. Unless the legend itself can be squashed, another manifestation will form around the core of the story. The ideal would be to persuade the people of the city that the crime lord has been killed or arrested; but with escape being as simple as dematerializing, and no corpse to show, either of these would be a challenge. After destroying the manifestation itself, defeating the Man may involve the unsavory business of framing someone else and offering him up for the authorities or the morgue.

Adventure Seed: A PC *vodounista* is asked by residents from the projects to investigate an apparent haunting. Speaking to the ghost, the players discover that he'd been agitating to expose corruption in the local council when he'd been killed, apparently in a mugging, by local youths. Helping the ghost find rest will involve uncovering the conspiracy he believes led to his death; and their investigation suggests a shadowy figure, possibly with spiritual

assistance, behind it all. Perhaps the Lodges are up to their old tricks?

Manifestations

"Did he say Keyser Soze? He saw Keyser Soze."

"He says he knows his face. He sees it when he closes his eyes."

"Ask him what this Devil looks like."

-- Metzheiser and Bodi, *The Usual Suspects*

Minor Manifestation

ST 12; DX 11; IQ 14; HT 12.

Move/Dodge: 6/6; Will: 18; Alertness: 16; Fatigue: 25

Moderate Manifestation

ST 18; DX 12; IQ 16; HT 14.

Move/Dodge: 7/7; Will: 21; Alertness: 18; Fatigue: 50

Major Manifestation

ST 25; DX 13; IQ 18; HT 15.

Move/Dodge: 8/8; Will: 25; Alertness: 19; Fatigue: 70

When the Man materializes or appears in dreams, he always appears as a normal human, never overtly supernatural. Specifics like age, nationality, coloring, and sex vary between manifestations, although commonly they have a single highly distinctive feature -- like a scar or tattoo, a missing eye, or being obscenely overweight -- that is constant to a given manifestation. When he has to appear to a minor member of his organization or to the public, the Man may appear as a silhouette or shrouded figure, seen across a room or on a rooftop; this both saves on fatigue and helps to preserve his secrecy.

Special Powers: The Man is always uncannily aware of the power structures and hierarchies that surround him. By spending 2 fatigue and succeeding at a Quick Contest (the Man's Alertness versus the target's Will), he will know to whom someone answers or where his orders originated, even if the agent himself doesn't.

Effects of Possession: The Man possesses his servants only rarely, preferring to work indirectly through orders and messages; when he does need to take direct action, however, he prefers to possess an expendable agent as long as needed, and then abandon him to the authorities or rivals once he's finished. The Man *never* grants Spirit Warrior status; possession is always absolute, and the host never remembers the time he was controlled.

Initiates

"We're associates of your business partner Marsellus Wallace. You remember your business partner, don't ya?"

-- Jules Winnfield, *Pulp Fiction*

Much of the regular work of the Man's syndicate is handled by living men and women. At the top of this network are the boss's prized seconds and lieutenants. Materialising to issue every order and receive every briefing, and providing all the spiritual support in person is tiring, so the crime lord coaxes his closest servants into Initiation, teaching them a form of ritual magic and giving them powers and advice. The lieutenants perform curses to remove rivals and blessings to promote their agents, or summon spirit "thugs" and "spies" to rough people up or gain information.

In spite of this, the lieutenant-Initiates never fully realize what they are. The Man's system of ritual magic, called

Ritual Magic (Street Dealing) (M/VH), has Streetwise-12 as a prerequisite; its ritual tools are phone calls, coded phrases, cash and drug bribes and threats. The ritualist creates and maintains the illusion that all he is doing is mundane (see below), that his orders are being carried out by human agents and soldiers rather than spirits or his own ritual power. The Paths most often used are those of Luck, Protection or Spirit, although there is no technical limit on which Paths or Rituals may be learned and used.

Limitation: Ignorant Initiate -20%

This limitation, taken on the Initiation advantage (pp.VO58-63) and on any advantages taken with Initiation as a prerequisite, indicates that the Initiate doesn't know he has any power. He will usually not believe in spirits himself, and is fully capable of summoning and manipulating them while preserving this belief. Essentially, the character suffers from a severe Delusion (p.B32), without getting any extra points from it. The Initiate can buy and use any Ritual or Power, but must be able to rationalize it as a mundane act, most often through a human agent, although minor effects can be put down to strokes of luck. This limits what can be achieved and, more importantly, how quickly; achieving someone's death in a car-crash could be believed over a two-day period (contacting an agent to sabotage the car), but even a wildly successful ritual couldn't kill someone on the spot. It is effectively impossible for an ignorant Initiate to acquire Fourth Level or higher Initiation.

On the plus side, the Initiate's ignorance acts as a kind of defence against detection. Any of an Initiate's normal powers to detect a fellow Initiate, or to deduce an Initiate's involvement in an apparently coincidental event, is at 2 to detect an ignorant Initiate. In a city with several supernatural interests at work, this makes it likely that attention will be deflected to another group or faction.

An ignorant Initiate may eventually be persuaded of his powers; this should be roleplayed out, but the Initiate should be strongly resistant to acknowledging the truth. In this case, the limitation may be bought off with earned points, and both Powers and Rituals used normally. It is possible to continue using Ritual Magic (*Street Dealing*) after paying off the limitation.

The Man in other Settings and Systems

The idea of a crime lord being a spirit, totem, or archetype can, with a certain amount of adjustment, work in any modern or near-future setting with gothic or fantastic elements.

Shadowrun: While the magic of *Shadowrun* is flashier and more overt than the subtle powers of *GURPS Voodoo*, the urban setting of the game is very similar. In this game, the Man is not an individual spirit entity at all, but a totem. His lieutenants are shamanic conjurers, who invoke city spirits that manifest as gang members and informants. Alternatively, the Man is himself a Free City Spirit, with a network of lieutenant-shamans serving him.

The Man could begin play as the PCs' regular employer, a powerful and mysterious "Mr. Johnson" whose actions gradually reveal his plan to secure Seattle's underworld (or that of the game's local city) under his control.

Vampire, Werewolf, Mage: Another gothic horror game set in a largely urban setting, the *World of Darkness* games fit the concept well. The Man is an Umbrood spirit, granting his servants Fomori powers and Sorcerer paths as he binds them tighter into his service. Alternatively, the "lieutenant" who is really in charge of it all is a Marauder mage and the Man is his avatar; his ignorance of his own powers constitutes his Quiet.

Vampire PCs might see him as a rival, or a threat to the Masquerade. Mages might see him as a potential enemy or danger to the people, or Technocrats might want to remove dangerous elements or rivals. Werewolves would likely see him as a Wyrms spirit or corruptor. In the *World of Darkness*, they might be right . . .

GURPS Psionics/Black Ops: The Man doesn't have to have a separate existence at all! The "lieutenant" is a powerful unconscious psychic with a Split Personality and a Compartmentalized Mind. The Man is his alternate personality, projecting itself out of him as a telepathic or psychokinetic illusion, manipulating events and spying on rivals, and appearing to him in dreams or as a voice over the phone.

The Company wants to find out who is manipulating the criminal community in the local city. Is it a Grey plot, or the work of the Lodge, or MIND? What, in the end, does the mysterious manipulator want? When they find out who it is, do they try and bring the "innocent" lieutenant in for counselling and training, or terminate him?

Pyramid Review

Raising Up (for Call of Cthulhu)

Published by [Chaosium, Inc.](#)

Written and illustrated by Dr. Michael C. LaBossiere

54-page b&w tape-bound softcover; \$13.95

Raising Up is the third book to be released as part of Chaosium's Miskatonic University Library Association Monograph series. The series was begun in late 2003 with the physically flawed, though still interesting *Parapsychologist's Handbook*, with the intention of countering the lack of releases for *Call of Cthulhu*. 2004 has already seen the release of another Monograph, *End Time*, also by Michael C. LaBossiere, making *Raising Up* his second contribution to the series. Where *End Time* detailed mankind's near future after we have left the Earth to explore the worlds and moons of our Solar System, particularly the colonies on the Moon and Mars, *Raising Up* is a much simpler and more traditional release for *Call of Cthulhu*.

What LaBossiere, best known for his contributions to GDW's *Challenge* magazine, presents in *Raising Up*, is the Miskatonic University Library Association's first collection of scenarios in the form of a five-part mini-campaign. Upon initial reading, it appears to be set in the game's classic period of the 1920s, but by the second part and its mention of an MP3 player, it is clear that *Raising Up* is set firmly in the here and now. At its core lies not some planet threatening foe or cult, but a single individual, one Reginald Preston, a reclusive academic, who despite being confined to a wheelchair, has set his mind to becoming both a dedicated student and foe of the Mythos. Little able to actively confront its manifestations due to his infirmities, Preston can at least conduct research and direct the more physically able.

[SPOILER ALERT!]

This is where the player characters come in, their having come to Preston's attention after he has learned of their exploits in facing the Mythos. *Raising Up* opens with "Part One: The Bookstore," in which he asks them to visit a bookshop where he was to collect a new tome from the owner, Don Wedenberg. Unfortunately, he found Wedenberg dead on the floor and was forced to flee at the sight of a strange creature, the like of which he has never seen before. This is an effective little mini-encounter, serving to introduce Preston, who will prove to play a major role in the rest of the mini-campaign. Its new Mythos being is also a nice addition, being a minor creature similar to that of those seen in the film *From Beyond*. The one thing it does leave hanging, is what should be done with the body of the late Mr. Wedenberg.

Slightly less successful is "Part Two: Player of Hell," wherein one of his students is terrorized by what Preston suggests to be a vampire. Not the traditional Balkan vampire, but a vampire nevertheless. This factor may be off putting for those Keepers that prefer to have their *Call of Cthulhu* games unadulterated by non-Mythos creatures. Better still is "Part Three: The Bone Dealers," that has Preston direct the investigators to take the fight straight to the Mythos, though in the form of a somewhat backwards and backwoods enemy. They have the feel of the protagonists from *Texas Chainsaw Massacre*, though without the forestry implements.

Where Parts One, Two, and Three were confined to the United States, "Part Four: Tomb of Ash," takes the investigators to Egypt, where they must confront a far more ancient danger, though one that is currently confined within the walls of a tomb. This is a threat that they do not want let loose, and while getting inside the tomb is a dangerous and mortifying task, they have the aid of two Egyptian scholars, one of whom has contacts that can provide an occult solution.

For "Part Five: Putting Down," the party return home to deal with more threats unearthed by Preston's research. This is the final part of *Raising Up*, and unlike the previous four parts is not so much a mini-encounter, but rather more a fully fledged scenario. That said, it is described as consisting of a of encounters. After the events in Egypt, Preston has decided to become a little more active in his search for Mythos-related activities and learns that across New England, there has been an increase in the number of grave robberies. Worse still, he tells the player characters that the graves are those of reputed witches and wizards! This leads to a number of encounters across the region before a final showdown on a small island off the coast.

[END SPOILER ALERT]

Given the number of scenarios that the author has written, it is no surprise that *Raising Up* feels very sound. It neatly counters a problem inherent to many scenarios for *Call of Cthulhu*, that of the never before heard of relative or contact turning on the investigators' doorstep to get them involved in something dark, only for them to either die in the process, or end up as being the villain behind nefarious deeds of the scenario. By having Reginald Preston appear on such a regular basis, the players -- invariably a suspicious lot -- can grow to trust him and perhaps look upon him as both contact and friend. Should the Keeper so decide, Preston could very serve as a patron to less experienced group.

Despite the soundness of the campaign, it does feel as if the meat is a little taut upon its bones. In places it could benefit from a little more development, not to say fleshing out. Particularly in the last part, where the writing does suffer from a sense of haste and would have been better had the various missions been more fully detailed. Also it could have been made more explicit that the campaign is for the modern ear at the very least, if not the inclusion of suggestions to adapt it back for use for a twenties set campaign. While the inclusion of a vampire in Part Two may not be in keeping with the Mythos, it does mean that *Raising Up* might be more suited to less stringent settings, such as the forthcoming *Pulp Cthulhu* or *Cthulhu d20*. It is also suited to even more monster-busting RPGs, such as [Buffy the Vampire Slayer Roleplaying Game](#) or the [Angel Roleplaying Game](#).

One definite advantage with *Raising Up* is its loose structure, which means that each of the five parts can be pried apart to be run as single one-off scenarios, or extended with the insertion of other "assignments" given out by Preston. The anthologies *Last Rites*, *Secrets*, or *The Stars Are Right* would all be useful in this regard, as would a number of scenarios found on the Chaosium website, also written by Michael LaBossiere. With some effort, it could be adapted for use with *Delta Green*.

Part of the conceit for the Miskatonic University Library Association series of Monographs is that the layout and editorial duties have been left up to the author. Where that proved to be a handicap for *The Parapsychologist's Handbook*, it is not so for *Raising Up*, where the layout is clean and tidy, and the typographical problems turn out to be merely bothersome. The few illustrations it contains are decent enough, but more so with the depictions of the campaign's two new Mythos beings. The maps it does include are perfunctory, but at least they provide a basic idea of the areas they cover.

Another problem with *Raising Up* is that of its cost. It is a slim book, which, when combined with the fact that it is only available direct from Chaosium's website, makes it expensive to have shipped outside of the USA.

Raising Up is probably best run by a more experienced Keeper, for a group comprised of less experienced players and investigators. Despite it needing more fleshing out, *Raising Up* represents a sound addition to the Monograph library.

BESM d20/d20 Mecha Character Folio

Designed by Jeff Mackintosh

Art by Jason Chan & Niko Geyer

16-page b&w softcover; \$4.95

Given how coarse the *d20 System* can be, something as intrusive and potentially complex as giant robots seems like it would be tough to interweave with the rather blunt mechanics. Showing his usual penchant for elegant system design, Dave Pulver and his crew match the two almost flawlessly.

There's a dearth of setting material here, so readers are going to have to come up with their own (though there are a few worlds already published that make liberal use of mecha). Alternately, the sizable bibliography lists a mess of TV shows, manga, and movies to get the creative juices flowing. What the book does have is a few tips on what typical *d20 System* fantasy characters might be doing with mecha or one of their cinematic offshoots. From there, they expand the character classes (the mecha pilot or commander) and add feats and skills that put you behind the wheel (or keyboard, or joystick) of the big machines, or leave you in charge of the batteries of firepower with which they're equipped. Chief among the class feats is Mecha, each level you get gives you more Mecha Points, for use with the mecha design system.

The design system will be fairly familiar to readers of Guardians of Order products, though with less concentration on levels. Depending on the size of the mecha, you have a base speed, a base number of hit points, and other statistics, all of which may be bought up in standard increments. Give it the power of flight, let it burrow under the ground, or let it

ply the space lanes. Exotic abilities from the genre haven't been forgotten, like turning invisible and combining with other robots. To reduce those prices and point totals, defects can be added. Maybe you catch fire easily, or the machine doesn't have the robotic equivalent of hands.

Weapons are constructed separately and comprise a series of choices on what form the weapon will take and with what qualities and restrictions it will be imbued. Is it a slug thrower? Does it toss canisters of gas, and are the fumes meant to obscure or damage? Does it fire in a straight line, or does it have a cone effect? Maybe the penetration is reduced, or the weapon is an oversized axe that, once thrown, must be retrieved.

The system isn't limited to big robots, though. Any vehicle can be duplicated, including mundane things like motorcycles, sailing ships, and the family car. Further, stable headquarters floating in space or sitting atop a mountain can be created and they'll still have access to equipment, defenses, and weapons.

Once the mecha is built, there are plenty of ways to merge it into the campaign. You can decide everyone works for the military and is assigned their vehicle, but the relative value of the machine you build can be made a part of the story. Maybe you want everyone to be able to buy one outright, or perhaps they have to pay it off, or they steal it, or use the *d20 Modern* buying system. All these methods are simple, but they all come with their own set of advantages, disadvantages, and connections. *d20 Mecha* actually helps the GM characterize his setting and makes just-plain-rules into useful tools.

The combat transition is remarkably smooth. Traits like Move actions, flat-footedness, and even the interaction of the crew with the outside world while hidden inside their metal skin carry over simply, workably, and with little fuss. There are a number of special cases -- to be expected when your device may have three or four movement types and can step on a gas station -- but rather than include pages of involved calculations, they offer a few simple steps and three levels of action. Splitting the activity up like this helps when adjudicating a running human and a running two-story mech . . . or it may be more accurate to say it helps GMs *avoid* having to combine different scales in awkward ways during combat.

The Character Folio, released concomitantly, isn't just for *d20 Mecha* but for *Big Eyes, Small Mouth d20* as well. Only a couple of pages are needed for the character sheet per se, but there's space for recording the statistics for your mechs and vehicles as well, including their weapons. If you're not playing a mech game those two pages may be lost to you, but you still have space to write up your Items of Power on another page. There's also room for your goals, allies, history, adventure records, advancement, name, date of birth, social security number, ice cream preferences . . . well, maybe not, but the FBI doesn't keep records this thorough. The folio does provide almost as much inspiration for character development as it does space to list it in.

With the usual refreshing brevity that characterizes many of their releases, Guardians of Order has expanded everyone's *d20 System* library manifold with *d20 Mecha*, a simple and utile set of guidelines.

--Andy Vetromile

The Temper of Names

for *d20 System*

by **Brian Rogers**

Aaaah, coming to see if anything you've scrounged has value, eh boy? What's that? Plundered from lacedons under the docks? Well, the Azure Sea holds many secrets. Let's see what you have here, starting with the sword . . .

Arthur Pendragon has Excalibur. Severian carries *Terminus Est*. Corwin owns Greyswandir. Thorin Oakenshield bears Orcrist. Elric is cursed with Stormbringer. Rand Al'Thor draws Callandor. Latro wields Falcata. Your *d20 System* hero has . . . Sword +2? For a warrior seeking glory, an unnamed blade is a *Brand of Mediocrity*. His weapon is as important as his honor, as much a part of him as his hand, and as crucial to his legend as his victories.

So how do you get a named weapon? You could comb through old scrolls and listen to bards for hints to their locations, or do what any true hero would do: Go forge one in the fires of your own legend! Name Weapon is an Item Creation feat allowing combat classes (Barbarians, Fighters et. al.) create their own magical weapons.

Name Weapon [Item Creation]

You can name one or more weapons, investing them with part of your personal legend.

Prerequisite: 3+ levels in classes receiving d10 or higher hit dice.

Benefit: You can create any magic weapon whose prerequisites you meet. Enhancing a weapon requires using the weapon in a suitably heroic act, then officially naming the weapon in a naming ceremony. This ceremony lasts one day per each 1000 GP in the price of the weapon's magical features. To enhance a weapon you must spend 1/25 of its feature's total price in XP -- preferably earned in the aforementioned heroic act. The naming ceremony requires raw materials whose cost equals half the feature's total price. The weapon to be enhanced must be a masterwork item. This is a Spell-like ability.

As with Craft Magic Arms and Armor, the character's level must be at least three times the enhancement bonus of the weapon, and the weapon must have at least a +1 enhancement bonus before it can gain any other special abilities. While this feat is similar to Craft Magic Arms and Armor, you can't use Name Weapon to create magic shields or armor, repair broken weapons or to enhance weapons that you have not carried in battle. You can't own more than one weapon you have personally named at one time -- the feat needs a strong sense of legend to operate, and multiple namings dilute that legend. Finally, Name Weapon has different prerequisites than Craft Magic Arms and Armor, since fighter types invest their legend through acts rather than spells.

Prerequisites

The Masterwork Weapon

See the tang mark? Forged by the dwarven smith Rurik Gorunn before the Dwarvish Diaspora. Legends say that his blades need sharpening only once every 11 years.

Why must it be a masterwork weapon? Only the finest weapons can sustain the power of legend. Named Weapons need to be distinctive: their name etched on them in ancient runes, sinuous carvings on their haft or jewels of great price on their pommel. Legends will not form around less august weapons, so take some time to describe your weapon's appearance -- be it one of gilt and flash or purely functional beauty.

The Heroic Act

This is the blade that Richard Ironmantle used in his duel with the Ogre barbarian Grunek the Mighty, clearing the caravan routes south of Molvar before he was yet 18 summers old.

In order to name your weapon, you have to use it in a suitably heroic act, usually besting a powerful opponent in fair combat. Specifically you must single-handedly defeat a creature whose challenge rating is equal or greater than the level required for the weapon's enhancement (three times the weapons enhancement bonus).

This can be quite difficult, since a monster's challenge rating indicates its threat against a party of adventurers, but it is this act of valor that powers the Name Weapon feat. You can get indirect help from allies before the battle (such as receiving a *Bull's Strength* spell from a wizard companion), but they can neither attack your opponent nor cast spells on you once the battle is joined. The DM is the ultimate arbiter of what actions qualify as interference. This fight need not be to the death, but your victory must be sufficient to earn full experience for the encounter.

In a mechanical sense, the PC is paying for spell costs of weapon enchantment with Experience Points. As such, the PC doesn't get experience for the heroic act -- or more precisely he does, but it is immediately spent on the weapon.

The Naming Ceremony

After that battle Ironmantle named the blade Dittany, indicating his passion for Elana, a local nobleman's daughter with estates of that name. The festival of naming lasted days, during which the soldiers drank much wine, bards immortalized the battle, and Richard played courtier to his beloved.

The naming ceremony ties the weapon, its name, and the character's legend into one unbreakable knot. The specifics vary depending on the nature of the character and her legend, but one thing is certain: it is pricey. Costing half the value of the magical weapon in gold pieces, naming ceremonies have a bare minimum cost of 1000 GP. While a spellcaster's cost indicates equipment and obscure magical resources, a warrior's funds emphasize his legend.

You and your DM should determine what expenses your character's specific naming ceremony requires: a barbarian may spring for a drunken party through several bars in the foreign quarter; a fighter could employ bards to craft tales of his and his weapons prowess; a paladin might donate the money to his temple, spending the time in fasting and prayer. All heighten the character's -- and the weapon's -- unique legend.

Reaffirming the Name

Richard achieved permission to wed his beloved after he used Dittany in single combat to slay the White Dragon of Watchtower Hill. During the course of their wedding he commissioned songs be sung reaffirming the blade's legend, and the celebrations lasted 16 days.

You can reaffirm the name of a weapon you have already named, thereby increasing the strength of its legend and its magical power. You have to repeat the steps of the Named Weapon feat, including a new suitably heroic act for the new enhancement. The cost of reaffirming the name is reduced by the amount you spent last time you named the weapon, in both gold pieces and experience points. Thus Richard Ironmantle raised his weapon's bonus from a +1 (from defeating a CR 4 Ogre at 4th level) to +3 (from defeating a CR 9 adult White Dragon at 9th level), but only had to pay gold and experience based on a cost of 16,000 GP (18,000 for a +3 weapon, less the 2,000 he spent at 4th level to give the weapon a +1). This is to give PCs a reason to hang on to a named weapon rather than discarding it and naming a new one for a greater enhancement.

Special Abilities

Ironmantle later appears in the records of the church. After a battle with the Ghost-Priest of Zief he financed the construction of a temple and spent two full weeks in prayer for the god's divine favor, so that his sword might touch his

new foe . . .

You can also use Name Weapon to grant special abilities. This has the same level requirements, time cost and experience cost for a warrior as for a spell-caster, as listed in the DMG. Rather than a spell prerequisite, the PC must confront and defeat an opponent whose nature the GM deems suitable for the special ability (such as a Ghost for Ghost Touch, or a Fire type creature for Flaming)

New Wielders

Ironmantle passed Dittany to his son, Armis. He died somewhere in the High Forest, and Dittany vanished for 70-odd years. It appeared in the hands of the ranger Robin Westlake, taken from a Daemon Chieftain. After she drove the Fiend H'len'e from the High Forest, the woods Sylvan inhabitants joined her in a month of celebration and regrowth, reaffirming Dittany's legend.

New wielders can use all of a named weapon's abilities, just as if it were any other magic weapon. If the new wielder has the Name Weapon feat, she can reaffirm the name of the weapon as if she were the original wielder. This means she must meet the prerequisites for any new weapon abilities, but gains the benefits of the previous investments of experience and gold. Heroes have every reason to seek out named blades, as they not only give magical powers but can be improved at a lower cost. As the weapon passes from wielder to wielder, its legend grows.

Notes for the DM

Using the Name Weapon feat in your game increases the amount of work required for some magical weapons, but it acts as a great device for involving the PCs in your world's history. As PCs learn a weapon's legend -- its previous wielders and their enemies, the quests they undertook and the monsters they slew -- the game world becomes fleshed out and alive. PCs also have another way of leaving an enduring legacy: during the next campaign your players may well find knights questing for the weapons they made famous in your last one.

Better still, each previous naming acts as an adventure seed. Is the original owner's family looking for their heirloom? Is the last owner still searching for his blade? Has the weapon been tied to the defense of a particular township, who now expect its wielder to defend them?

Robin of Westlake? Unfortunately she was lost when her ship burned to cinders on the Azure Sea. It's rumored the Daemon Chieftains were responsible for that raid, and the Ghost-Priest has agents seeking Dittany. Nice blade you have there, son. Lock the door on the way out, and please don't tell anyone you came here.

Magog and Glory

"And the pub roars again and the man at the piano begins thumping out the Internationale and the words come into the large man's mind, unasked . . . and the sweat of herded humans has the stench of hard labour, and Gog feels the horror like acid in his mouth and he opens his teeth and howls."

-- Andrew Sinclair, *Gog*

Called to the spires of Cambridge last summer, I was asked to transmit some secret, some shadow under the town to invoke the genius loci and invite its attentions to our gathering. I took Sherlock Holmes' advice, and pored over large-scale maps of the territory, where I discovered the giants in the Earth. Madmen (and magic?) revealed them to me, I revealed them to the convention, and now I reveal them to you. Let us obey the injunction of the prophet, then, and turn our face towards Gog.

"I could never learn how these hills came to be called the Gogmagog Hills, unless it were from a high and mighty portraiture of a giant wch the schollars of Cambridge cut upon the turf or superficies of earth within the said trench, and not unlikely might call it Gogmagog, which I have seen but is now of late discontinued."

-- John Layer of Cambridge (c. 1640)

Specifically south -- of Cambridge, for the nonce -- to the Gogmagog Hills, now seemingly incongruously topped by a golf course. The name dates back to 1576 at least, from which point we have a wealth of directions to follow. The more prosaic will follow the spiral earthworks of the Wandlebury Camp atop the hills to the word "hodmandod," apparently once a local coinage for "snail," which strikes even my skeptical eye as ridiculously unromantic. Far more likely is some combination of the Biblical names Gog and Magog, and the giant Goëmagot. The latter worthy was slain, according to the impeccable testimony of Geoffrey of Monmouth, by the Trojan hero Corineus, albeit in Plymouth harbor rather than in the low hills of Cambridgeshire.

From whatever Celtic sump or Monmouth misprint "Goëmagot" springs (for instance, the very interesting-sounding "Tomb of Gourmailhon" in Brittany, guarded by a mysterious goatlike beast), it rapidly became conflated with the Biblical names. The combatants Corineus and Goëmagot became "Gog and Magog" (or Gogmagog) in Plymouth and elsewhere, especially in London, where Brutus was supposed to have made the suddenly twinned giants his doorkeepers. Two giant statues greeted King Henry V on his return to London from Agincourt, and a "Gog and Magog" (replacing those burnt in the Blitz) stand today in the Guildhall in unbroken succession.

Returning to the Hills, we find mention of a giant (or giants) buried there in oral history going back at least a century. A chronicle of 1604 compares a different giant to the one "carved on the turf" of the "Hogmagog Hills," whose teeth were dug out of a well in Cambridge. Unfortunately, the chalk giant vanished when Wandlebury was enclosed in the park of Lord Godolphin around 1730. The Cambridge antiquarian T.C. Lethbridge attempted to "reconstruct" the giant outline in 1954 by hammering a sounding bar into the hillside and tracing the soft, chalky spots -- about as good an idea as it sounds like. Notwithstanding, Lethbridge (if not conventional archaeology) found the outline of a warrior (Gog?) and a female figure with three horses, who he identified as "Magog," the female version of the fearsome giant and original of all moon or horse goddesses everywhere from the Celtic Matrona to the Hindu Maha-devi.

"There is but little ground for debate; but that the prophecy of Ezekiel, relating to Israel's last enemy, points conclusively to Russia . . . It is very probable this name has been given to the state because the population descends in a great measure from Magog, and Gog seems to be an abbreviation of the name Magog, and is applicable to the chiefs of this empire. The names of the three states that compose this empire are mentioned in Scripture word for word -- 'Son of man, turn thy face towards Gog, of the country of Magog, the prince of Rosch, Meshech and Tubal;' Rosh is Russia -- Meshech Muscovy -- and Tubal Tobolsky . . . It is thus almost established by evidence, that Russia is the country of Magog, and that Nicholas, or one of his successors, is the Gog announced by the prophet, and that there is reason to believe that the latter days are not far off . . ."

-- Dr. John Thomas, *Eureka* (1861)

But if you ask a different stripe of crazy person, you get an entirely different answer. Magog is quite self-evidently

Russia, you see, stemming from the prophecy in Ezekiel 38-39. For those not up on your minor prophets, Ezekiel warns Israel of an invasion from "the north quarters," from the "land of Magog" led by our old pal Gog. Gog will assemble the armies of Magog, which stretches over a number of countries last heard of in Genesis 10 but roughly identified with the territory north of Syria in the Caucasus Mountain chains. (If you're worried, the Lord will clean Gog's clock for him, so that comes out all right.) As early as Josephus, Magog was identified with "Scythia" (the modern Ukraine and southern Russia); a Bishop Lowth in 1710 and the Hebrew scholar Wilhelm Gesenius in 1835 both identify Magog as Russia. After the Soviet revolution, of course, identifying the Gog-led enemies of Israel (and, hence, of God) as the godless Commies was a piece of cake, and various fundamentalists leaped to do so. Although Hal Lindsey has backed off his predicted apocalypse since 1989, Tim LaHaye and others are still right in there swinging with the Menace From Magog.

"How many earth mounds have been found filled with bones of our ancestors? Whenever I read of these, I think of Baba Yaga and her oven. She bakes us and feeds upon us, she puts us back into the womb and disposes of our material form . . . [T]his is why we hear of these horror stories about Baba Yaga. We're afraid she will come and take us away. She'll grind us in her mortar and pestle and make us into food."

-- Eliza Fegley, "Thoughts on Baba Yaga"

And when we think of fearsome female giants, and Russia, what name comes to mind but Baba Yaga, the child-devouring ogress of the waste places? She has breasts of stone and teeth of iron, flies about in a giant cauldron (or mortar), and lives in a bizarrely inaccessible hut (on fowls' legs) in the black depths of the forest. Only those who approach neither on another's errand nor on their own can enter, and she gives to them fire within a skull. She's usually etymologized from the proto-Slavic word *jega* ("fright" or "disease"), or from the Lithuanian verb *engti* ("to strangle"). Some folk, looking abroad, find her name cognate with the Old High German *hagazissa* (from whence we derive "hag" in English), or coming from the Persian lunar demoness *Jaki* (or *Jeh* or *Jahi*). Let us, in the spirit of the place, propose another possibility -- perhaps "Yaga" comes from "Gog" (of likewise murky roots), making the "ma Gog" the "mother Yaga," or "Baba Yaga." Like our Magog carved in Cambridge, she has three horses (morning, noon, and night); just as Magog has three allies (Persia, Libya, and Ethiopia) in Ezekiel. (These triple allies also match the "white, red, black" colors of Baba Yaga's horses.) Sure, it's a stretch. But isn't it interesting that such a stretch in either direction leads back to the devouring Mother Russia -- and perhaps through "white" czarism, "red" communism, and the modern "black" neo-fascism of the Russian right?

"[H]e was eager, earnest, and, it seemed at the time, as indeed throughout his life, decent and virtuous. But as he explained to his Soviet secret masters, the Black Country changed all of that." -- Anthony Cave Brown, *Treason in the Blood*

And another Cambridge fixture also found his way to Mother Russia -- perhaps with the help of Magog under the hills? In a crucial letter to his father (the peculiarly mystical-minded St.-John Philby, whose idiosyncrasies Tim Powers points up in the brilliant novel *Declare*), Kim Philby mentions a mysterious "Hungarian" with whom he roamed the "Black Country" before throwing in his lot with the Soviet Union. Orthodox biographers identify the Hungarian as the artist (and possible Soviet agent) *Szigetti Szucs*, and the "Black Country" as the depressed industrial Midlands -- but the letter itself has disappeared from the archives. Could Philby have used "Hungarian" as a code for "Magyar" -- for "Magog"? Could the "Black Country" be the initiatory waste land beneath the giantess' mound, the kurgan guarded by bones and only accessible (says Baba Yaga's story) by one who neither approaches on his own, nor is sent by another? In short, by someone with a double agenda -- a spy?

One last word from Ezekiel 39:6: "And I will send a fire on Magog, and among them that dwell carelessly in the isles." Kim Philby and his Cambridge circle certainly did "dwell carelessly in the isles." There were four "Apostles" (of what deity?) who turned traitor at Cambridge -- and there are four Mag's (or Meg's) hills ("breasts of stone") within four miles of the Gogmagog Hills. Queen Elizabeth forbade Cambridge scholars to gather in the Gogmagog Hills -- did she know what other queen lurked beneath them? Perhaps [Christopher Marlowe](#) (also a spy, also a Cambridge student, also of liminal sexuality) visited those hills 350 years earlier, to find the same offer of "fire within a skull" made to him by Magog. Was his Tamburlaine simply an Elizabethan Gog, an offering made to placate the goddess beneath the hills? Kim Philby, of course, kept the cannibal crone fed more efficiently -- with the blood of British agents. Perhaps that's why he died at the ripe old age of 76 -- at 2 a.m. on Bendidea, the holy day of the "northern horse goddess"

Bendis, celebrated in ancient times by a midnight horse race through the black country of the night.

Tipping the Scales (Or at Least Remembering Them)

Having gone out of town for a week, I had the "pleasure" of dealing with the airline system again. (I find dealing with airlines to be one of the most stressful and frustrating affairs in the universe. I think the "high point" of this latest excursion was when I learned that, if I wanted to fly from Atlanta to Pennsylvania, it would be cheaper to drive to Tallahassee first, and then fly *back* to Atlanta, instead of traveling directly from the Atlanta airport. This is "efficiency." I can tell how much it bothers me because I use a lot of "pointless" quotation marks, even though I normally find them "annoying.")

But I "digress."

Anyway, as part of that journey, I found myself for the first time in the Chicago O'Hare International Airport. And, having a 45-minute layover, I expected this to be plenty of time. After all, since I'm a fairly in shape fellow with a lot of energy, how bad of a walk could there *possibly* be?

I'm sure my fellow Pyramidians who are better traveled than I know the folly of this idea.

So as I walked from my arrival gate to my transfer gate, I realized I had been walking at a brisk pace - often along moving sidewalks - for 25 minutes straight, and not only had I not reached my sidewalk, but I was still in the *same building*.¹

By far the cruelest moment of this trek was when I thought I'd reached my destination, having seen the sign indicating my gate . . . only to learn that it was, in fact, at the bottom of an escalator about another 50 yards away.

Anyway, to tie it all together back to gaming, I note that this is a perfect example of the concept of "scale." I was first introduced to this idea with West End Games' *Star Wars RPG*. In one of its GM advice chapters (I think) there was a section where the GM was encouraged to keep players aware of the scope of the *Star Wars* universe. In it, there was a sample transcript where the players encounter a Star Destroyer while in an X-Wing Fighter, and the players decide to attack it; the GM, in an effort to show the relative threat levels of what they're up against, takes a piece of paper and draws a triangle as large as the piece of paper. Then he puts a tiny dot off to one side; the triangle is the Star Destroyer, and the dot was the PC's vessel. The heroes wisely decided to fly away.

RPGs have an incredible advantage over other forms of entertainment, in that they exist almost entirely in the minds of the players. However, RPGs also have an incredible *disadvantage* . . . they exist almost entirely in the minds of the players. And if everyone doesn't have the same rough idea of the game world, it's easy to lose sight of fairly significant elements. For example, as a younger lad, I remember being disappointed when I learned that the *Enterprise-D* was "only" 641 meters long; if someone had pointed out that this makes it longer than five football stadiums, I probably would have been very impressed. (And if my country had been properly indoctrinated into the wonders of the metric system when I was a child, I might have a more intuitive grasp on what a "meter" is as well. But I'm off-topic again.)

Most of the time scale isn't a big deal, especially when everyone's dealing with concepts they're already familiar with. A modern jumbo jet itself is so large that really thinking about its size can take one aback; however, since most gamers have at least seen one and probably even been on one, the GM can use one as a backdrop and not be afraid that its size and scope will be lost.

But for other ideas and measures, having *something* the gaming group can latch onto will go a long way toward making sure a scene has a desired impact. For example, the jumpgates lurking at the edges of solar systems of the *Fading Suns* setting are the size of moons; an early plot idea I concocted involved an accident where two ships collided as they jumped through the gate. While not impossible (I suppose), I had nevertheless been unaware of the exact size of the gates until well afterwards . . . and I probably would have avoided a complication that required two small vessels to be in the same spot near a moon-sized object. (Then again, I suppose it's no more implausible than combing over Canada to [search for clues](#).)

For those looking to reinforce or reintroduce a sense of scale, then, I toss out the following ideas:

Always work in terms of familiar items. There's a reason the football stadium has become the unit of measure for many large numbers; since most Americans have been in one (or at least been near one or seen one on television), it's easy to conjure that as a means of giving context. Likewise drawing the giant triangle and the tiny dot immediately evokes a sense of scale, as does the classic *Ghostbusters* line, "Well, let's say this Twinkie represents the normal amount of psychokinetic energy in the New York area. Based on this morning's reading, it would be a Twinkie 35 feet long, weighing approximately 600 pounds." Any kind of actual real-world item can help bring the description down to terms the heroes can understand.

Also consider other familiar scales to draw emotional pull. For better or worse, the 58,000 American deaths from the Vietnam War are often used as a measuring stick for other kinds of fatalities. Given that such real-world statistics can be seen in poor taste, it might be good to try to work them in via in-game references. For example, if there was a particularly bloody war in the campaign world, that might be a good yardstick to refer to other events in the game; if nothing else, it would help give the players an idea of how the rest of campaign's citizens are reacting to an event.

And don't forget game terms. Since gamers often dwell in the world of numbers and rulebooks already, bringing those numbers back to the players can serve up large concepts in discrete units they already know. For example, in *GURPS* terms, my O'Hare jaunt was approximately 1,600 combat rounds.

Avoid simile or metaphor. While similes and metaphors seem to imply a concept of scale, usually they feel and sound more like hyperbole instead of fact (and fact is what's required to make scale work). For example, saying, "This sword's sharpness makes other weapons seem like pudding" is easy to ignore or dismiss. On the other hand, saying, "This sword could hack through an arm made entirely of steel more easily than a regular sword could cut through flesh" puts a real-world measure on the sword's effectiveness. In addition, this example places emphasis on the subject, not the rest of the world; the rest of the gaming group will probably have an easier time envisioning a metal-cutting weapon than pudding swords.

Don't forget that scale applies to just about anything. As the sword example above shows, scale doesn't just apply to size. Anything significantly outside the norm of human perception might benefit from having it brought back down to earth. You can apply scale to morality ("His soul is so dark that he could save a burning school full of children every day for a year, and still the scales would not be balanced"), information ("If all of human knowledge could be condensed into a haiku, the Oracle of All could be a book two inches thick of nothing but haikus"), or life spans ("For every day you have lived, Immortalus has existed for a year" might give the heroes pause. And then there's the classic Tom Lehrer line, "It is a sobering thought . . . that when Mozart was my age he had been dead for two years."). Just about anything that's *almost* beyond the scope of human comprehension can be boiled down to some scale element that the players can hopefully understand.

RPGs are often, at their core, epic. Unfortunately, the epic nature of those games can make it difficult for players to relate to the Big Things that make such games really interesting. Fortunately, with just a bit of thought, it's usually possible to anchor the game.

And if nothing else, it will give you something else to think about on the half-hour sprint to your next flight.

* * *

For those of you who are curious, I was out of town because I was attending [MEPACON](#), a small convention in Scranton, Pennsylvania. It seemed well-attended for a small regional con, and everyone was pleasant and helpful, while the event itself seemed well-organized. (Although, yet again, I did *not* have enough players to run "[The Kensington Codex](#)." I do believe the next convention I attend will require . . . drastic measures.) They also had a huge auction, where I lost out on both lots I had particular interest in, and acquired several books that made me question my assertion of, "Any RPG is worth a dollar." I got to try a demo of *Age of Mythology*, which was surprisingly fun, and I may try to snag a copy when I have free time and spare money (both of which seem almost as mythical as the game's subject matter).

So thanks to the good folks at MEPACON for their hospitality, and I recommend folks in the northeastern United States may want to check out their site periodically and see when their next event is.

--*Steven Marsh*

* * *

¹ Technically, Chicago O'Hare seems composed of several sub-buildings, one of which is connected to the others with a tunnel. Whether this adjunct building counts as part of the "same building" I'll leave to pedantics. Regardless, this tunnel had a beautiful [neon light show](#) on the ceiling that made me glad I've never taken LSD.

Librarian's Love-Child in World Domination Horror

Conspiracies and Paranoid Delusions in *GURPS Discworld*

by Phil Masters

Note: This article first appeared, in very slightly different form, in issue 23 of Valkyrie magazine.

It's pretty much a cliché to say that anything that is *believed* to happen on our world probably happens somewhere on the Discworld. One way to explain this is to say that the Discworld stories are parodies and satires of things and ideas in the real world, and so their targets have to be fitted into the Disc somewhere. Another is to say that the Disc is literally shaped by perceptions and beliefs, and its inhabitants tend to think like human beings anywhere else, so what people we know believe, they can be painfully sure is real.

Well, up to a point, anyway. Not only do many Discworlders believe things that are diametrically opposite to what other Discworlders believe, but most of them, being human, believe several things that directly contradict each other. The Disc and its obligingly flexible region of local reality do their best to make all of these things true at onceⁱ, but there are limits. Sometimes, Discworlders manage to believe things which are in fact complete rubbish (and which remain complete rubbish for quite a long time).

Anyway, Discworlders are as credulous and paranoid as human beings in any other universe, so of course they believe in conspiracies. The more ambitious among them even try to start their own conspiracies, or at least to track down the better existing ones and sign up. As someone once observed in our world, the real point about conspiracy theories isn't that the theorists want to expose and destroy the conspiracy; it's that they want to join them.

"Sensible" Conspiracies

In fact, just like anywhere else, there really are some quite straightforward conspiracies on the Disc. That's in the sense that, when a bunch of people with a certain amount of power get together, they are often shrewd enough to realise that, if they pool that power, it makes even more power, and gives them a better chance of stopping anybody else from taking it away from them. Of course, the snag with people like this is that they can't always resist double-crossing and back-stabbing and trying to keep something just for themselves, but the shrewder of them can keep things going for a good few years.

Several examples of this can be found in the novels, although many of them hit the snag that there are people around who are better at this politics stuff than them, and the really dedicated passwords-and- secret-doors conspiracies are mostly run by people who are too hung up on the style to get the substance right. *Guards! Guards!* covers this ground in some detail, and you can't find a much more hopeless bunch of conspirators anywhere than the Elucidated Brethren of the Ebon Night (though, as the book shows, even hopeless conspirators have their uses, up to a point). More viable Ankh-Morporkian conspiracies appear in *Feet of Clay* and *The Truth*, and the often- conspiratorial court politics of the Agatean Empire are depicted in *Interesting Times*.

Away from the complexities of the big city, conspiracies have less need to remain under cover, and might be described more as "movements"; the vampires of *Carpe Jugulum* and the werewolves of *The Fifth Elephant* are, functionally speaking, conspiracies, and they have their secrets, but (aside from what the werewolves get up to in relation to some of their neighbours) they don't have the full conspiratorial tendency to lurk in dark shadows plotting against the powers-that-be.

One other sort of "realistic" conspiracy is organised crime, which certainly happens on the Disc -- at least in good-sized cities like Ankh-Morpork. However, thanks to the Patrician, Ankh-Morpork's Thieves' Guild is now too public, *too* organised, and much too complacent to conspire properly about anything, while the Assassins' Guild is far too busy earning lots of money and preserving the proprieties to plot very much. The situation in other cities is unclear, but most have a tendency to follow Ankh-Morpork's lead whenever possible. There are hints that the nearest thing to a properly sinister *underworld* conspiracy is the Brecciaⁱⁱ, but trolls, while pretty good at keeping secrets, are less talented when it comes to complicated plotting.

Curiously enough, there is a little, much-denied evidence that one of the most effective truly international conspiracies -- or at least, sneaky secret organisations -- on the Disc is the infamous but seemingly innocuous Fool's Guild. Admittedly, this mostly consists of a bunch of depressive clowns who spend their time memorising tired old comic routines, but there are suspicions that those members who get jobs as court jesters may act as spies in their employers' courts, reporting back to the guild-house in Ankh-Morpork. What the Guild does with this information would be another question.

Big-Time Conspiracies

Full-strength, world-spanning conspiracies, able to twist the fates of nations, keep entire populations in the dark for centuries, and employ really cool agents with snappy dress sense and the ability to wear dark glasses indoors without falling over the furniture, are rather harder. To begin with, the Disc is, broadly speaking, a low-tech society. While the best conspiracies on our world are sometimes supposed to go back thousands of years, the fact is that a conspiracy without radio, fast transport, and clever monitoring devices is a bit restricted. It has to limit its operations to a small region, or build a network of highly capable and *trustworthy* sympathisers -- and in the latter case, it still has the problem of communicating with them. When your messages are limited to the speed of a good horse or a fast sailing-ship, coordination is a real problemⁱⁱⁱ. And watching anyone who might threaten your conspiratorial plans, so you can give them an accident before they start making trouble, is also a challenge without modern technology.

Of course, there are a few groups on the Disc who can get round these sorts of problems. The first are the wizards, who have all sorts of scrying and telepathy spells, amongst other advantages. A properly-organised wizardly conspiracy could be a real menace. However, anyone reading that last sentence should grasp the problem with this idea; "wizards" doesn't really belong with "properly organised." Well, not much of the time, anyway. There are some hints that, on occasion, wizards *have* worked together to make life difficult for other people, but the odds are that, mostly, just when they were getting somewhere, the back-stabbing started. Anyway, these days, Unseen University exists as a sort of anti-conspiracy; an organisation which makes sure that any wizardly inclination to get organised is channelled into harmless academic politics.

Similar comments apply to the idea of witches running a conspiracy, but with less serious back-stabbing and more obsession with local concerns. Witches just aren't the conspiratorial type, at all^{iv}. A solitary *bad* witch might try organising a small conspiracy with herself at the top, but that's about as far as it goes.

Or, lastly, there are the gods. They, too, have supernatural communications, and some of them also have omniscience^v, which makes tracking people who are against you that much easier. However, in general, the divine game-plan doesn't really work in terms of secret conspiracy; what gods need isn't a network of hidden followers, it's lots of serious, full-time *worship*. A really smart high priest might come up with the idea of a conspiracy to serve the religion's purposes, but getting the logic through the head of the irascible dim-bulb up on Dunmanifestin is probably going to be too much like hard work. Also, a religious conspiracy would probably have to be run by a single deity; gods are at least as bad as wizards when it comes to proper long-term cooperation. For that matter, if and when any rival deities twigged what was going on, they'd probably be all too quick to blow the secret wide open to their own worshippers. There may be a few conspiracies *within* some larger religions, and perhaps some secret organisations whose job is to carry particular religions into hostile territory, but that's as far as it's likely to go.

So Discworld conspiracies will have to make do with limited resources, in a world that doesn't necessarily feel right

for their sort of operations.

Mysteries and Monsters

It would be tempting to bring the full paranoid paraphernalia of UFOs, numbered Warehouses and Areas, and all the other *X-Files* furniture into a Discworld game, but there are a few snags here, too. At least with the UFOs, anyway. The Disc is, when all's said and done, a fantasy setting, and dragging in SF/modern-day stuff like spacecraft tends to spoil the effect.

And no, people being abducted by flying carpets wouldn't be the same. Abductions by Krullians on board discs produced by *Fresnel's Wonderful Concentrator* (see *The Colour of Magic*, or p.DII144) might come closer -- the Krullians are just about weird enough to go in for something like that, if they have a reason. Still, it's all a bit too *obvious*. The best idea might be to go back to the genuine pre-modern version of alien abduction, and have Discworld characters being abducted by elves. *That* should worry your players quite significantly, if they've read *Lords and Ladies* and they've got any sense.

Other stuff is more feasible, but for the same reason, it may lack the necessary edge of weirdness. For example, yes, you can have cryptozoology -- weird creatures living on out-of-the-way bits of the Disc. But the trouble is, that's not going to surprise anyone. We *know* that the Disc has yeti, giant sea monsters, bat-winged demons, and miniature people living underground. They can be interesting to meet, but it's quite likely that the PCs have been there and done that. The same goes for signs from the gods -- though Discworld gods rarely bother with ambiguous calligraphy in root vegetables. When they really want to communicate with their worshippers, they come round and shout at them^{vi}.

Which leaves the really silly and surreal stuff; rains of frogs, perhaps. Well, C.M.O.T. Dibbler could probably find a use for them^{vii}, but you'll need a plot for them to connect to. The snag with a lot of Forteana is that it doesn't *go* anywhere.

It might also be interesting to bring in a few True Believers or Mystery Investigators. Many Discworlders are gullible enough to believe anything, and it's been proved countless times that any strange or dramatic events in inhabited areas of the Disc rapidly bring in hordes of rubberneckerers and trigger a mass of rumours, many of them with as much as 5% truth content. This sort of lunacy can provide a nicely comic element for a Discworld scenario, and sorting out which rumours are near enough to true to be worth following up, or saving idiotic bystanders from being abducted, trodden on, incinerated, hypnotised, turned into zombies, or terminally immersed in frogs, could keep PCs happy for hours.

Most full-time believers are likely to be rather nerdish and clueless, making them a minor nuisance at best and a menace to themselves and others if they ever get close to anything really important. There might be some fun in bringing on one who's got more clues than most, a degree of social and physical competence, and even decent looks and dress sense; in short, a Discworld Fox Mulder. Again, taking this concept too close to the original would probably be too much of an anachronism to work, but bold GMs might give it a go. Working out how to get the scenery right would be a lot of the problem; do Discworld lanterns produce a bright, focussed enough beam to cut through the mandatory darkness in the crucial search scenes? And could he find enough people who *didn't* believe in his theories, so that he could feel nice and persecuted?

Tabloids

One thing that the Disc has acquired recently is newspapers; see *The Truth* and "[Freedom of the Press: Journalism in GURPS Discworld](#)." Among them are some full-strength loopy tabloids. Of course, the universal fact about these sorts of tabloids is that the things they talk about are deranged and unlikely -- which means that, on the Disc, their stories have to be very, very eccentric indeed. The novel shows something of the history of the first such tabloid, which had its own peculiarities, but GMs might want to assume that the idea is just too interesting not to be repeated or to spread.

After all, a tabloid doesn't *have* to employ reporters who actually get out of the office; it just has to find someone who's good at making stuff up. That, however, isn't as easy as it sounds, especially if the paper wants to last for more than a

couple of weeks; even tabloid readers may notice and get a bit bored if the paper starts repeating itself too obviously. In fact, in the end, it may be *easier* to send people out looking for real stories, and maybe polishing them up a little bit -- especially on the Disc.

This raises two possibilities from the game point of view; PCs can use the tabloids as information sources, or they can work for them. The former is a gag that's been used before (including in the movie *Men in Black*), but it's still basically sound. PCs who go to this source *first* when they have a mystery to solve would probably be over-optimistic, and would certainly have to wade through a lot of rubbish to find the useful nuggets, but tabloid reports or the reporters might provide some handy indirect clues, and GMs wanting to drop some huge and convenient plot short-circuit^{viii} can always say that the PC with the lowest Status has just picked up his favourite newspaper, and there on the front page is the answer to the current mystery^{ix}.

PCs working as field reporters for a Discworld tabloid could have a distinctly *interesting* time of it. Remember, they don't have to find out the *truth*, or show any sense of responsibility to the public interest -- but they do have to keep their readers and editor happy. If some of them have some kind of latent conscience, they may sometimes see about solving problems and preventing the things they investigate from destroying the world; also, any particularly literal-minded trolls or dwarfs in the group may take their editor's instructions literally, which could cause trouble. They could also pursue certain venerable journalistic traditions^x with as much enthusiasm as any (more) respectable reporter. This could certainly make a change from more traditional modes of fantasy adventure. Or, if the headline turns out to be **Dragon Found in 10' by 10' Room**, maybe not.

It should also be said, especially if tabloid reporter PCs resort to making things up, that the Discworld is an informal sort of place, without much in the way of libel laws. This is fine so long as no-one makes the mistake of picking on someone their own size, or bigger -- but if you annoy somebody who is capable of getting their own back, it is expected and normal for them to do so. Hint: running the headline **I'm the Love-Child of the Unseen University Librarian**, while good for a couple of thousand extra sales, would certainly be bad for your health. Even if he is the nearest thing you can find to bigfoot without straining your expenses budget.

Ankh-Morpork and Lancre

The major venues of the many Discworld novels *can* serve as locations for conspiratorial plots, but GMs will have to deal with the legacy left by numerous novel plots.

Ankh-Morpork is, in fact, a boiling cauldron of conspiracies, but not many of them are very impressive. There are a whole mass of cults and secret societies, many of them aiming to bring down the Patrician and take over the city (and perhaps the world). The snag is, most of them are made up of the sort of embittered inadequates who indulge in fantasies like that, and quite a few are monitored more or less directly by the Patrician at any given time. He tolerates them as a harmless channel for some people's dangerous ideas. In any case, he's far too smart to try persecuting them; that would just mean that the members would have their paranoia confirmed, and it would teach the slightly smarter ones to hide and scheme rather better.

Occasionally, a conspiracy gets lucky -- or very unlucky -- and acquires something that enables it to threaten the *status quo*; see *Guards! Guards!* for an example. At other times, one arises which has the brains, resources, and luck to represent a serious threat to the Patrician; *Jingo* shows the city's leading figures operating as an informal conspiracy to this end, while *Feet of Clay* and *The Truth* have small, secretive groups which come up with fairly smart plans. The only snag is, even if such conspiracies can neutralise the Patrician, they have to deal with the increasingly competent City Watch and various other groups who the Patrician has ensured don't want too much change -- at least, not on someone else's terms.

PCs who get mixed up in conspiratorial plots in the city should probably either seek to work against the conspirators, or hope that the Patrician classes them as an amusing diversion or a useful tool. Still, it's just possible that some groups in the city are working at right angles to the Patrician's concerns, perhaps manipulating events elsewhere on the Disc, or focussing on magic or religion -- areas in which Lord Vetinari does not seek to intervene much. For that matter,

Vetinari himself may use a few semi-competent conspiracies to handle non-urgent matters that don't affect the city too directly. In *Illuminati* terms, he could be on good terms with the Disc's equivalent of the Gnomes of Zurich; it's the local counterparts of the Servants of Cthulhu who'll be in trouble if he notices them.

Lancre, the other recurrent setting for the novels, is really too small a place for proper conspiracies, and anyway, Granny Weatherwax wouldn't approve. Still, it might be fun to run a few threads of conspiracy theory through that part of the world. Who knows what the dwarfs on Copperhead Mountain get up to on the quiet? After all, they've been making money (and not spending it much) for centuries. King Verence seems rather unwisely determined not to ignore the subject of international politics, which may mean a few secret negotiations and treaties, some day. (Perhaps he could lend use of the castle to someone trying to conduct secret negotiations "in a good cause.") And with all the Ogg and Weatherwax family members who've gone off from this place to make their fortunes over the years, *anything* might have come back here and ended up in a cupboard somewhere. (Perhaps one of the crumbling towers of the oversized Lancre Castle is actually the Disc's nearest approximation to Warehouse 23?)

Also, if anyone *is* interested in Discworld cryptozoology, Lancre would be as good a place as most to start looking. The high forests and valleys have their share of rare species, some of which slipped over the Ramtops after things got a little rough in Uberwald recently^{xi}, and almost anything could slip in through the caves beneath the castle, or through the Dancers (the local standing-stone circle) if people are *really* unlucky. There don't *seem* to have been reports of giant hairy humanoids, long-necked lake monsters, or more than the occasional two-headed calf, but perhaps it's just that no-one has asked^{xii}.

GURPS Discworld Also Locations

Part of the objective with chapter 5 of [GURPS Discworld Also](#) was to provide a set of locations on the Disc that could be used for some plausibly Discworld-style stories, but without the baggage of the novels' usual settings. Some of them have some potential for conspiratorial or general-weirdness plots.

In fact, *Wadi El-Rukl* is actually run (secretly) by a conspiracy, and its geopolitical situation makes it a natural location for plots of intrigue, espionage, and triple-crossing -- all with that old *Arabian Nights* flavour, of course. The problem for PCs here might be to survive long enough to get the hang of what's going on, especially as the local version of cryptozoology would mostly relate to genies, which, while not *usually* malicious, have unhealthy amounts of power. Still, players can at least be assured that the conspirators trying to kill them will be immensely polite and subtle about it.

By contrast, *The Brown Islands* have plenty of scope for weird cryptozoology -- every island can have something different in the way of unexpected wildlife, from were-sharks to giant apes with a taste for blondes -- but rather less for proper conspiracies. The urban communities are all quite new, and are highly disorganized and prone to excessive amounts of quaffing and swashbuckling. Still, there could be scope for building *new* conspiracies here, working from the ground up; there are fewer established power-groups likely to interfere.

New Smarlhanger is most likely to import its conspiracies, however unknowingly. It's another new community -- or rather, a large community newly built on the basis of something older and smaller -- but it's a natural focus of attention for groups such as Uberwaldian vampires or werewolves, Sto Plains merchants, and the Semaphore Company. All would want agents in place there, watching the growing economy, keeping an eye on the semaphore system, and listening for rumours from any and all directions. PCs could be employed as such agents (but not necessarily told all the details, or indeed who they are working for), or could get caught up in the intrigues and secret wars of the different groups as they begin to collide.

Lastly, there's the "Cart Wars" community of Fourecks. Okay, this isn't really conspiratorial territory, but no worries. Perhaps a conspiracy from somewhere else on the Disc could move to the Last Continent, and try to set up a secret base in the Outback. It'd be a bloody stupid thing to do, but *they* might not know that; battles between low-tech Men In Black and irritated cart warriors could certainly get fairly weird.

Scenario Seeds

Blood Will Tell

In that age, it is written, the Great God Om did manifest on the Disc in the guise of a brazen bull. Or perhaps it was an eagle with feathers of silver and gold. Something like that, anyway. And as he passed through the lands of the heathen, he did find one Righteous Man among them, who he did lift up, saying, You Help Me And I'll Help You . . .

Once, centuries ago, the city of Quirm (see p.DI22) was the capital of a mighty kingdom, and its kings were famed for their wisdom and justice. Well, that's one version of the story, anyway. Another says that it was a small kingdom, and most of the kings weren't complete idiots^{xiii}. But whatever the case, there are, as usual, people who would rather live in the past than fix the present, and who dream of that lost age of glory.

The funny thing is, in this case, most of them aren't even based in Quirm. The legend of the Palaeoquirmian Dynasty seems to have a strange appeal far beyond the borders of the old kingdom -- whose inhabitants are, in fact, mostly rather too laid-back, or too obsessed with cheese manufacture, to take much interest in the idea of pursuing lost glories. It seems to be mostly people in other places who would like to see the Palaeoquirmian Kings restored; one possibility is that they're just smart enough to realise that the Old Days where they live were pretty bad, but they can still delude themselves that the Old Days *somewhere else* were great.

To add to the complications, this legend has somehow become entangled with the spreading religion of the Great God Om. It is said, among certain rather heretical Omnians, that Om travelled to Quirm during one of his visits to the material world, centuries ago, and that he founded the Palaeoquirmian Dynasty, or blessed its founder, or something. Now, some of those same Omnians have formed a secret society, dedicated to finding the Lost Palaeoquirmian Heir, and restoring him to his rightful glory. That have fanatic zeal, access to some of the resources of the Church of Om, and a *few* sympathisers in or around Quirm who wouldn't mind cushy jobs in a new government.

This is a bit like those odd people who think that Captain Carrot is the rightful king of Ankh-Morpork, despite his efforts to make sure that no-one can prove it. However, the differences are (a) There's religion involved here (and some of the people involved would quite like to take the Church back to its fine traditions of setting fire to other people), and (b) *No-one* knows who the Lost Palaeoquirmian Heir might be -- though a few people think that they have some idea.

PCs could get mixed up in this plot as witting or unwitting agents of the conspiracy, of the government of Quirm (who are just beginning to find out enough to get worried), or the Church of Om (Orthodox Reformed Division), who know that heretics are at large, up to something, and purloining money from Church funds. (But how high up does the corruption run?) If the GM is feeling really malicious towards one PC, or a PC has some unexplained stuff on his character sheet that fits, the conspiracy could "identify" that PC as the Lost Heir. After all, PCs are forever suffering minor strange events (wild coincidences, rains of fish, surviving battles with mighty wizards) which could, in another light, be taken as Signs and Portents^{xiv}.

One Stone on Top of Another

Conspiracies love pyramids. It's something to do with the symbolism; all that mass of stone, looking wonderfully solid but actually riddled with secret passages and ancient secrets^{xv}. This makes places like Djelibeybi and Tsort favourite subjects of conspiratorial myths -- although there aren't necessarily more actual conspiracies there than anywhere else.

That raises the possibility of PCs being hired to run, or at least guard, expeditions to those places to investigate the crucial dimensions of a pyramid or two. Read up on some of the stranger things believed about the Great Pyramid in our world if you need some *really* silly ideas.

Alternatively, the amazingly incompetent architect "Bloody Stupid" Johnson doubtless built a few pyramids around the Sto Plains, by way of decorative follies^{xvi}. While it's hard to imagine Johnson as a member of even the most third-rate

conspiracy, his handiworks could have their uses; someone might have convinced themselves that they have some arcane significance. The PCs could be hired by a nobleman to investigate the bizarre people who keep sneaking round his garden with tape-measures and theodolites.

Then again, if Johnson *really* screwed up his sense of dimension and proportion during one of his building projects, the resulting building could find itself being used as a temple by a *really* deranged, depraved, Lovecraftian conspiratorial cult.

"They don't get more non-Euclidean than this . . ."

Anarchy in Ankh-Morpork!

Small gods are always good for Discworld game plots, and some of them may be tangled up with conspiracies. Unfortunately, they aren't always noted for their sanity.

This could give a GM an excuse to bring in a more Discordian, irrational sort of conspiracy. A group whose motivations are driven by the commandments of a god with a room-temperature IQ and unstable desires could act in a completely incomprehensible fashion. However, totally irrational opponents just feel boring, silly, and frustrating after a while, so eventually at least, such a group's actions should display an underlying theme.

"Destroying the universe" or "bringing down the established order" might be one option; after all, such a cult would attract members from among the disaffected and reflexively rebellious members of society, and small gods are *always* on the lookout for theological niches -- groups of worshippers not already claimed by bigger gods. Admittedly, those sorts of people are already catered for, to some extent, by the Disc's scattering of demon-worshipping cults, and maybe the odd mad group dedicated to the Things from the Dungeon Dimensions. But wanting to be evil, or mindlessly nihilistic, is one thing; claiming the support of *thinking* nihilists and ideological anarchists is quite another.

Such a chaos cult would probably usually represent an adversary for PCs, especially if it went in for dangerous pranks or outright terrorism. On the other hand, faced with highly organised evil -- a tyrannical ruler, say, or a rival conspiracy dedicated to *control* -- it could make a tricky ally, or even a weird sort of patron. Either way, its biggest asset would probably be the direct assistance of its god, frantically determined to ensure that the cult survives to continue feeding it belief. But how reliable is the worship of a bunch of people who swear that they don't believe in *anything*?

* * *

ⁱ For a reasonably sensible value of "true."

ⁱⁱ The (supposed) trollish secret society run by the likes of the notorious extortionist and loan-shark Chrysoprase.

ⁱⁱⁱ This, by the way, raises the question of what some people might be doing with the long-range semaphore system (described in *The Fifth Elephant* and later novels, and in *GURPS Discworld Also*). It's very new, and it has a limited data transmission rate, but still, it has possibilities.

^{iv} Most of the time, anyway. Although some people might get the unpleasant sense that most of the witches in the world form some kind of loose conspiracy to an uncertain purpose.

^v Up to a point, anyway.

^{vi} Though some, it must be said, are barking enough to indulge in ambiguous and pointlessly indirect communications methods out of sheer divine perversity. If you can think of a plot involving messages from Offler the Crocodile God showing up in the chunks of turnip in an authentic Ankh-Morpork Klatchian curry, run with it. "Can't you see what this MEANS?!"

vii Inna Bun.

viii Perhaps by way of an intervention from The Lady, or someone almost as powerful and whimsical.

ix Unkind GMs can then have that answer be wrong. (Why the heck should anyone trust a *tabloid*?) But that would be very cruel. Especially if it, say, sent the PCs to Fourecks.

x Getting drunk and fiddling expenses. Passing off your bar tab as "Travel and Dry-Cleaning" is especially recommended.

xi They're not, for the most part, strictly speaking, *endangered* species. Some of them were at one stage, but after Mustrum Ridcully left this part of the world to train as a wizard in Ankh-Morpork, they breathed a collective sigh of relief and stopped having to worry quite so much about crossbow- bolts.

xii Or thought to offer the locals money for their stories. You can find out all *sorts* of things that way, very few of them true.

xiii Except for the last one. It's usually the way.

xiv If someone's been crazy enough to take the Disadvantage *Weirdness Magnet* (and the GM has let them get away with it), that could be a good excuse. Equally, if they've got a Secret Patron, this sort of conspiracy would be a good candidate. This may also be the place to mention the Advantage Illuminated, which can be very handy, but which would probably give a PC *and* the GM a lot of migraines in a *Discworld* game.

xv Well, that's one theory, anyway. Another would be that any builder who spends half his time with one trouser-leg rolled up, plotting world domination, is probably incapable of anything more interesting in the way of designs.

xvi Or perhaps some of them were meant to be used as boot-scrappers or speed-bumps on someone's drive, and he got the scale wrong, as usual.

Iotha

Designed by Kenneth Hite
GURPS Fourth Edition Stats by Andrew Hackard

On whichever world Iotha grew up, the forests were tall, and old, and within them walked the elves, her people. Being elves, they knew that details of worlds changed, and they taught her how to find the spoor of those changes and cross with them. Although she never learned to open the doors of shadow and shift, she learned to spot the gateways and trackpaths left by those who did. Upon her 400th birthday, then, she packed up a good longbow of yew, and a lyre, and one or two secret things of her own, and set out upon her Time of Wandering, resolved to travel beyond the Forest of Arden and out into the worlds beyond.

For the first few decades, she merely found doors and roads to other worlds much like her own, with their own elves and orcs and dwarves and giants. Elves she greeted, orcs she hunted, dwarves she bargained with, and giants she slew. As she kept traveling, though, she found more and more of the worlds contained men, of whom she had heard stories, but which she had never seen. They were as fascinating as the songs her mother sang her as a girl, every one of them a Tamlin or a Thomas the Rhymer to her eager eyes. Although among the elves she was counted plain, the men seemed to delight in her as much as she did them, and once or twice she put off her travels to dally with one for the year and a day of tradition.

But in addition to a gift for love, in the worlds of men Iotha also discovered a gift for archery. Matchless at butt or target, on hunt or in battle, she gained a reputation on any world where she stayed for long. Other archers sought her out, and she defeated them in contest after contest. Sometimes their jealousy made them her enemies; sometimes their envy made them her acolytes. Only once, on a world with very few elves left in it, did she find a man who was her equal with the bow. First, she pursued him and his men through the greenwood, angry that he dared to equal her at a skill in which she took an un-elvish pride. But he did not grow jealous, and did not cower; he stalemated her at contests, and held her fast by her own vows. Then, she grew to love him, not just as a man or as an archer, but as a hero. She bided a time with him, and would have stayed forever but for her knowledge that his heart belonged to another maid, kept prisoner by an evil sheriff. So once more, she sought out a pool that flowed through worlds, and left Sherwood forever.

In her new world, she could renounce the forest and dwell in the cities -- in fact, there was little forest left even had she not felt heartsick. In concrete, glass, and steel, she hardened her sensibilities as she had hardened her heart. The city she found to live in was split by a great wall; on one side was freedom, and music, and passion. On the other was none of these things, only a gray cloud that made freedom lies, and music discordant, and passion furtive. Fortunately, her city held men who valued archery, only they used mechanisms of subtle device instead of bows. So she learned the rifle, and the laser sight, and the ways of the hunt practiced in the city. She hunted men, the gray men from the other side of the wall, and gained a reputation in her new world as a deadly assassin. The greatest sniper from the other side of the wall marked her as his own, and they tracked each other through the cities and across the barbed wire borders and into fields and frozen forests. Finally, in the Black Forest, she killed him, and took his weapon as her only trophy, for it was made on the Moon by the gray men, and weighed less than her bow.

But she was back in the forest, and so she went to another world, where a war raged in the ruins between men and leathery things. But almost before she could join the fight, she saw another hero emerge from nothingness, with his comrades, wearing uniforms of green and black. The hero saw immediately what must be done, and although Iotha killed one or two of his enemies from cover, she mostly watched wide-eyed as he and his company destroyed the stone from heaven and its batlike guardians with fiery blasts and weapons even mightier than the moon-rifle she bore. When they returned to their world, she followed them, and although her hero pretended surprise at her appearance, she knew that he had seen her and loved her from the first, much as she loved him. He spoke for her to his comrades, the bold ISWAT, and she joined them at his side.

Old Costumes, New Henchmen

Motivations and Spins On Henchmen Villains

by **Brian Rogers**

Crack the binding on a supers game and you'll find a new world that often looks suspiciously like the old worlds. Many strongly resemble the Marvel or DC universe: The unstoppable flying paragon, the midnight detective, the alien-gifted telekinetic, the speedster scientist, and the warrior woman rub shoulders (or share bodies) with the World War Two super-patriot, the wisecracking outcast teenager, the family of powered explorers, and the heroes the world hates and fears.

Why? You can't blame the game designer's lack of creativity; published comic universes also cannibalize the genre. The iconic clarity of DC's Golden Age heroes (and their Silver Age counterparts) and the personal energy of Marvel's Silver Age define American super-heroes. These tropes are what players want to see, emulate, and play. As GM you have to find beloved tropes for your villains -- without boring the players with the same old thing.

There's a trick to presenting the players with [what they want, but not what they expect](#). Here are three villains who do just that, all using the classic trope of "Plotting Villain with Henchmen" with twists making the henchmen different from traditional greedy thugs or [self-loathing hunchbacks](#). All three are suitable from the early pulp period to the modern day, from beat cops to investigators to mid-range superheroes.

"I have a Question." -- The Inquisitor

Anand Queri moved to Empire City to work at a criminal defense firm and there discovered his talent for ferreting out secrets prosecuting attorneys didn't want revealed. This branched into providing tabloids with scandalous headline fodder. Queri never lied, and failed to see why people who didn't follow the rules should hide their crimes. Combining his firm's resources and his tabloid connections, Queri started a career as a master blackmailer: The Inquisitor! His first step was gathering information on a stable of skilled, tough men (and one woman, on whom his hold is particularly strong) to act as his field agents. Failure to do exactly what they're told would have distressing consequences.

While not violent, the Inquisitor loves being in control, and loves knowing secrets. He never frames anyone; he only targets the honestly guilty and sees himself as an impartial force for justice. That this is itself illegal doesn't bother him. He is a good side plot for heroes with secret IDs, those who break the law, or PCs who use extreme violence while claiming a good-guy image. Hypocrisy draws his attention, making him a stick for getting PCs back on the straight and narrow. If a hero does catch his eye, he'll dig up any dirt they have, then send a taunting video or arrange a personal meeting (backed by some tough Questions and an escape route).

Servant (8) Miss Howe, 80 CP with Skeleton in Closet (3) and Recurring Nightmares (2).
Wealth (1)

Skills

It's also possible that PCs will encounter the Inquisitor in his civilian ID: any criminal hiring Wall, Stone, Craft, Shelly will have Queri on his side. The heroes will see the prosecutor's case shredded as the defense raises questions about all their witnesses. If PCs take the stand, Anand will research their backgrounds as well. Who knows what he'll dig up?

The Inquisitor is a tall (6'2") thin Indian man with a London accent wearing classic upper-class British clothing (including bowler, umbrella, and fresh orchid in the lapel). The bowler has an attached domino mask. He is a brilliant investigator with an instinct for finding and exploiting weaknesses, be they physical, social or psychological. While not a skilled combatant he can quickly judge opponents and take advantage of flaws. He carries a small pistol to threaten his victims and hold off muscle bound brutes, but his main combat skill is pressuring combatants into working for him: the Questions (nicknamed Who, What, Where, When, Why and the delectable Miss Howe) can bloody their knuckles on anyone foolish enough to try escaping his control through violence.

The Questions

These henchmen exemplify loyalty via fear: the Questions' dread of revelation is enough to overcome any aversion to foolish outfits (The Questions wear question-mark shirts and jackets with their "nickname" emblazoned on the back, while ski masks hide their identities) and criminal acts. Since the Inquisitor has a wide stable, most are called infrequently enough that they hope that this is the last one: one more favor and they'll be free. Hope springs eternal.

Fearful henchmen pose interesting problems for heroes. They might expect the henchmen to go calmly after a few hits, but the Questions will never go quietly -- such capture is only slightly preferable to their skeletons being revealed in the Daily Rumor, making them desperate men. Likewise, the heroes might think captured Questions would willingly spill everything, but they would be wrong. They don't know where to locate Queri, but do know that even his death wouldn't stop his revealing their secrets. Untangling such a web is certainly more challenging than a punch in the jaw.

"Your beauty inspires, my darling" -- The Muse

Larry Olive is the greatest stage actor of his generation, in a generation that increasingly embraces cinema. Bored by the roles available and annoyed by the lack of recognition, his talents lead inevitably to crime. The theater world's glitterati (as well as money unjustly flowing through movie studio coffers) provide plenty of dramatic and rewarding acts, the authorities make lovely comedic walk-ons, and the public? Enthralled. Olive knew he'd need a supporting cast, so after many casting calls he recruited nine aides from the loveliest, and best connected of Empire City's debutantes. Drawn to him like moths to a flame, he loves them all in his own fashion.

The Muse is a [theme villain](#) obsessed with theater. He's also a riddle villain, providing hints to show the public the

Agents (4) four loyal 30 point followers, his Chorus.

Combat Technique (4) Blindfight, Block Ranged, Concealment, Lightning Reflexes

Defense Combat Mastery (6)

Divine Relationship (8)

whole play rather than unconnected acts. The money doesn't matter, as Olive lives comfortably and could be quite wealthy if he wished. No, the play's the thing. The Muse desires a repartee with the local heroes: he'd prefer rooftop dialogues before his cunning escape, but will accept cat-and-mouse conversations via the newspapers or radio. He makes a fine villain for anyone in the silver-age idiom, and his Chorus -- in their diaphanous robes with lovely, innocent faces -- should make any true hero hesitate to strike. (By the rules of chivalry, *heroines* can freely clock Chorus members . . .)

Again, it's possible the heroes know Olive socially. He's deeply involved in theater and often appears at galas and evens out the table at dinner parties. This likeable theater devotee persona gives Olive access to the visible stage while he prepares in the wings. Players may quickly identify him as the Muse, but fans of the form may enjoy the "I know but my character doesn't" conversations concerning recent rooftop exploits over canapés at the opening.

Olive is an attractive, charming man dressed as appropriate for the scene. The Muse radiates charisma and favors a variety of bright, weapon concealing costumes, hiding his disguised features under a Grecian dramatic mask.

The Muse is a master actor, seducer, disguise artist, and fencer who packs a mean right hook. He's also lucky as sin, and strange coincidences often help him succeed or escape. He plans obsessively but knows how to improvise, making the best of any situation. His evasive combat style and razor sharp senses makes him hard to capture or surprise. Combine his ability with his distracting (and just a little bit dangerous) Chorus and he's the equal of any one hero or even a small group.

The Chorus

These henchmen do it for love: drawn to Muse's irresistible charisma they freely join his dashing crimes. Wearing revealing robes and trusting that their paramour (and their families) would never let them come to harm, these escapades are a lark. Chorus members have retired and be replaced, and the group sees itself as a criminal sorority. (You could darken this Silver Age romp by emphasizing the implied sexual relations and emotional dominance between the Muse and his henchmen, or internal battles of lust and jealousy within the Chorus.)

Loving henchmen have their own problems for the hero: They are usually in over their heads, unaware of the dangers they face by their beloved's side. Violent questioning is difficult and un-heroic, and while emotional measures are time consuming. Reason doesn't matter so much as passion, and that makes them both duplicitous and determined. While the Chorus hides behind their social status, other loving henchmen might have defenders in social services, and the act of convincing a loving henchmen not to return to a life of crime is a task worthy of real hero.

Wanted (2)

Sadko Petrovitch was born in Russia's turbulent 1918, and everyone predicted he would live to be one hundred. He immigrated to Empire City in 1935, having confidence that his broad shoulders, sharp mind, and linguistic aptitude would open America's doors. He was wrong; after months of hard labor and growing resentment he stumbled into a crime in progress, where a shotgun cut Sadko's life short by 82 years. The river meant to be his grave spat him back up as a Zalozhniy, a Slavic disquiet dead, fated to walk the Earth for his allotted span with unnatural strength and hatred of the living. While he once worked alone, he found his oratory sufficient to mobilize a rag and bone army: the lost and outcasts who listen to his preaching against those who have what he does not, thinking he speaks of comfort when he means life.

Zalozhniy's goals and motivations are simple -- he hates the living and wants to see them dead. Sometimes individuals are targets of his wrath, other times he causes indiscriminate havoc, but he is most dangerous when he gathers his rag-and-bone army in a scheme of mass destruction. If any heroes stop him, he focuses on them in later incarnations until they finally lay him to rest. This makes him a viable campaign villain for even a more powerful hero: while someone like Superman or Sentinel easily outmatch Zalozhniy's physical form, ending the threat is no easier for him than for a pair of maverick cops (and lacking much by way of armor, the maverick cops can stop his body if they just unlimber enough firepower).

It is unlikely the heroes outside of a magical street campaign directly know Sadko, though they know of him; he has become a legend in Empire as the ghost of the Bowery bums, the monster in the sewers, and his birth identity is part of the legend.

Sadko is a large, broad-shouldered, blunt-featured man, looking normal save for the hole in his chest (thus he affects heavy coats). Stopping his body literally means reducing it to ashes, so after battles he appears in various states of disrepair while his wounds close. His spirit looks like his body with an opalescent glow.

Zalozhniy is the undead. He cannot be killed until his fated time or until some other means is found to lay him to rest. His physical form is incredibly strong but not well-armored -- while he shrugs off pain, destroying his body is just a matter of time and firepower. Doing so doesn't solve the problem; within a month his spirit reforms, and while that can only touch the densest of materials, nothing stops him from plotting or raising another army. After six months as a spirit he can regrow his body exactly as it was. More distressing than his longevity and obscene strength is his resistance to and dampening of local magic. Successfully

targeted magic causes him extra pain, so a powerful sorcerer can defeat him if he can be found; magical divination or psionic powers cannot read his mind, trace his past, or predict his actions. Zalozhniy can also sense the living. Heroes may not see him coming, but he can feel their approach.

Famous - the Ghost of Empire's Bowery (1)
Less Capable - Agility (1)
Less Capable - Luck (1)
Marked - hole through chest where heart should be (2)

The Rag and Bone Army

These are the henchmen of hate. Empire City has a constant influx of foreign and lost, and even the small percentage drawn to Zalozhniy's message gives him a regenerating army willing to lash out against their "oppressors." Mostly unskilled, many are also deranged, and will attack without regard for safety when ordered. Zalozhniy is presented as an equal opportunity hate-monger with supernatural trappings.

Unfortunately, hate is an all-too-common motivator for henchmen, and it makes them hard to predict or contain. While they may be as deluded as loving henchmen and as desperate as fearful ones, they are the most difficult to question or reform. The only real way to end the threat is to prevent their recruitment, and this means removing the causes of their hate: in Zalozhniy's case it revolves around protecting immigrants and ending inner city poverty. While such a battle equates to bailing out the ocean for heroes used to flying above the rooftops, hate-filled henchmen should make clear that it is a battle worth fighting.

New Ways of Battle

Fighting Styles for the *d20 System*

by Anthony Phraner

One of the more interesting things that can be done with prestige classes in the *d20 System* is the creation of distinctive and unique fighting styles. This article contains five new styles suitable for most campaigns. Four of the styles, Five Elements Master, Practitioner of the Forms, Speed Fighting, and Stick Dance use weapons that are common to almost all game worlds, and with a few tweaks are quite appropriate as Advanced classes in a *d20 Modern* or a futuristic setting.

Five Elements Master

"I thought I was strong and tough when my father made me attend the School of the Five Elements. I thought I knew all about combat. I was wrong."

--Lord Gerin Toll

Students of the Five Elements School believe the world is composed of five primal elements: Earth, Water, Air, Fire, and Spirit. By mastering each of these elements as part of their combat training, students seek to become both better in battle as they become more spiritual. The elements are mastered in the reverse order of flexibility; the more yielding an element, the later it is mastered.

Level	BAB	Fort	Ref	Will	Special
1	+1	+2	+0	+0	Master of Earth
2	+2	+3	+0	+0	Master of Water
3	+3	+3	+1	+1	Master of Air
4	+4	+4	+1	+1	Master of Fire
5	+5	+4	+1	+1	Master of Spirit

Requirements

Base Attack Bonus: +5.

Knowledge: Elemental Philosophy 3

Feats: Dodge Endurance, Mobility, Toughness, Weapon Focus (Any)

Hit Dice: d8

The Five Elements Master's skills (and the key ability for each skill) are: Bluff (Cha), Craft (Weapons) Climbing (Str), Jump (Str) Knowledge (elemental philosophy)(Int), Sense Motive (Wis), Swimming (Str) Climb (Str)

Skill Points at each level: 2+Int modifier.

Weapon and Armor Proficiency: Five Elements Masters gain no weapon or armor proficiencies.

Special Abilities

Master of Earth (Ex): The Master of Earth gains the unyielding strength of the element of Earth. When this ability is mastered the character gains 1/4 Damage Reduction. This stacks with any levels gained in other classes. In addition,

any rolls to avoid being tripped, disarmed, slammed, or otherwise forcibly moved are at +4.

Master of Water (Ex): The character learns to flow with attacks. He gains a +2 bonus to reflex saves. This stacks with the lightning reflexes feat if appropriate. Also if an attacker rolls a 1 on a melee attack against the Master of Water an attack of opportunity, may be taken immediately against the attacker.

Master of Air (Ex): The Master of Air gains a +2 bonus to AC if entering or leaving a threatened area. This stacks with the mobility feat. Continuous training gives the Master of Air the Run feat, and a 5' bonus to movement. The movement bonus stacks with other appropriate abilities. If the player has the Run feat, the abilities stack.

Master of Fire (Ex): The Master of Fire gains a reckless enveloping attack style. Up to five points of AC may be substituted on a one for one basis for a bonus to hit on a single attack. The penalty to the armor class lasts for the next round. This ability may not be used with Expertise, Fighting Defensively, or Total Defense.

Master of Spirit (Ex): The Master of Spirit gains a +2 Bonus to Will saves. The bonus stacks with iron will. Also if a will save is failed while in combat the master of spirit may re-roll, one time only.

Master Archer

"The Archers were all lined up, bows in hand. When they fired, Oh gods. The sky was a storm of shafts. There was nowhere we could hide they couldn't find us."

--From *Memories of the Great War*, a compendium of war stories

The bow is among the deadliest weapons of the ancient world. Feared by noble and commoner alike, the bow can deliver silent death at great range. The Master Archer trains many years to perfect his craft but those are years well spent. With a bow in hand few foes can withstand him.

Level	BAB	Fort	Ref	Will	Special
1	+1	+2	+0	+0	Shooting Through
2	+2	+3	+0	+0	Become the Arrow 1
3	+3	+3	+1	+1	Long-Shot
4	+4	+4	+1	+1	Become the Arrow 2
5	+5	+4	+1	+1	
6	+6	+5	+2	+2	Become the Arrow 3
7	+7	+5	+2	+2	Arrow Storm
8	+8	+6	+2	+2	Become the Arrow 4
9	+9	+6	+3	+3	
10	10	+7	+3	+3	Perfect Shot

Requirements

Base Attack Bonus: +6.

Feats: Weapon Focus (Any Bow), Far Shot, Improved Critical (Any Bow) Point Blank Shot, Precise Shot,

Hit Dice: d8

The Master Archer's class skills (and the key ability for each skill) are: Craft (Bows and Arrows) Hide (Dex) Move Silently (Dex) Spot (Dex) Wilderness Lore (Wis)

Skill Points at each level: 2 + Int modifier.

Class Features

Weapon and Armor Proficiency: Master Archers are proficient with all bows (not including crossbows) and one martial melee weapon, usually a Short Sword, Long Sword, or Hand Axe.

Special Abilities:

Shooting Through (Ex): Any target that can be affected by a critical hit takes an additional 1d6 damage.

Become the Arrow (Ex): As the Master Archers skills increase he gains the ability to ignore an opponents cover. Each level of become the arrow reduces an opponents cover by 1 step to a minimum of zero.

Long Shot (EX): The Master Archer gains the equivalent of the far shot feat. This stacks with his regular far shot feat.

Arrow Storm (Ex): The character gains the rapid shot feat. If he already has the Rapid shot feat the character may make an additional attack as part of a full round action but all attacks that round are at -5.

Perfect Shot (Ex): The master archer may ignore any miss chance do to blinking, displacement or other magical effects. He still suffers any to hit penalty.

Practitioner of the Forms

"You come here to learn to fight," the old master said flatly. 'Good. But I am not going to show you how to fight.' A few of the students looked confused. One, a little man in dun-colored trousers and tunic, spoke up: 'Then what are you going show us?' The old man grinned. 'How to win.'"

The Forms are a system of systemic armed and unarmed combat. It is a very rough art, concentrating on basic combat augmented by blows and attacks to vital areas of the body.

The deadliness of the training and the intimate knowledge of the body (and how to wreck it) means that many of the Practitioners are excellent healers by necessity

Level	BAB	Fort	Ref	Will	Special
1	+1	+2	+2	+0	Killing Blow
2	+2	+3	+3	+0	Killing Grapple
3	+3	+3	+3	+1	Throw of Break
4	+4	+4	+4	+1	Breaking Open
5	+5	+4	+4	+1	Master of Opportunity

Requirements

Base Attack Bonus: +5

Feats: Combat Reflexes, Improved Unarmed Combat, Improved Disarm, Improved Trip

Hit Die: d10

Skill points per level: 2+Int modifier

Class Skills: The Practitioner of the Forms class skills (and the key ability for each skill) are Balance (Dex), Bluff (Cha) , Heal (Wis) Jump (Str), Sense Motive (Wis) Spot (Wis), Tumble (Dex)

Weapon and Armor Proficiency: Practitioners of the Forms do not gain any weapon or armor proficiencies

Special Abilities

Killing Blow (Ex): All hand-to-hand damage done by the Practitioner may be lethal or subdual at the player's choice. Also by spending one attack of opportunity the Practitioner may add 1d4 damage to any attack. This ability does not work on creatures immune to crits.

Killing Grapple (Ex): Also if a Practitioner is unarmed or armed with a weapon 2 size categories smaller than he is and an attack of opportunity is spent the character may make another attack. This is treated as a Killing Blow ability. This may be done only once combat and does not cause the loss of a grapple

Throw or Break (Ex): At 3rd level, a Practitioner gains a +2 with competence bonus with the improved trip ability and the improved Disarm ability

Breaking Open (Ex): By Spending 1 attack of opportunity he may subtract his Level in Practitioner of the Forms from his opponent's armor class. This may only be done once per opponent per round.

Master of Opportunity: The character gains his Int bonus in additional attacks of opportunity. This does stack with Combat Reflexes

Stick Dancer

"The worst memory I have of the rebellion were those drums pounding into the night and the wild dances. We thought ourselves kind because we let them dance. Little did we know they were hiding terrible secrets."

--A Slaver's Journal

A people enslaved who long for freedom will find a way. For one group of people, the way was the stick dance. Since overt martial training was forbidden, the Stick Dancers continued the fighting traditions of their people and gave the enslaved a way to fight back.

Level	BAB	Fort	Ref	Will	Special
1	+1	+2	+2	+0	Dance of Defense
2	+2	+3	+3	+0	Sweeping Dance
3	+3	+3	+3	+1	Even in Chains
4	+4	+4	+4	+1	Shatter Dance
5	+5	+4	+4	+1	Killing Dance

Requirements

Base Attack Bonus: +5

Skills: Performance (Dance) 4 Perform (Drumming) 3

Feats: Improved Unarmed Combat, Weapon Focus (Staff or Club), Dodge, Mobility, Skill Focus (Perform, Dancing)

Hit Dice: d8

Class Skills: The Stick Dancer skills (and the key ability for each skill) are: Bluff (Cha), Craft (Any) (Wis), Disguise (Cha), Escape Artist (Dex), Jump (Str), Tumbling (Dex), Perform (Dance), Profession (Int)

Skill Points at each level: 2 + Int modifier

Weapon and Armor Proficiency: Stick Dancers are proficiency with simple weapons, Nunchaku, Kama, Tonfa, and the Scythe

Special Abilities

Dance of Defense (Ex): If the Stick Dancer fights defensively or takes a full defense while lightly armored or unarmored he gains an additional +3 Bonus to his AC.

Sweeping Dance (Ex): The character gains the Improved Trip Feat.

Shatter Dance (Ex): The Character gains the Improved Disarm Feat. If he already has Improved Disarm he gains the Sunder feat.

Even in Chains (Ex): The Stick Dancer takes no penalty for being restrained with any unarmed to hit roll. If his hands are restrained he may attacked with unarmed combat as normal. In addition, he gains a +2 competence bonus with Escape Artist.

Killing Dance (Ex): The deadly ability may be performed a maximum number of rounds per day equal to the level in Stick Dancer plus his Con mod. During a Killing Dance a feint can be performed as an attack. Also during this deadly display all attacks are at +2, unarmed attacks do killing damage and all damage done with club, staff, or unarmed Combat is shifted up 1 die.

Speed-Fighting

"The first time I fought a speed fighter was the last time. I am no slouch with a blade or my fists but the ugly misses was so fast I didn't have a chance. That'll be the last time I underestimate a woman."

--Sarn Thorm, Mercenary

The key to understanding speed fighting is knowledge of its basic doctrine: The relentless attack. A good speed fighter never stops and is always in motion, trying to overwhelm his opponents. Even the defensive moves are fast and aggressive in nature. Most of the students of this style are known for their reckless bravery and furious combat styles.

Level	BAB	Fort	Ref	Will	Special
1	+1	+2	+2	+0	Swiftness of Motion
2	+2	+3	+3	+0	Furious Attack
3	+3	+3	+3	+1	Offensive Storm
4	+4	+4	+4	+1	Defensive Storm
5	+5	+4	+4	+1	Surge of Speed
6	+6	+5	+5	+2	Uncanny Speed

Requirements

Base Attack Bonus: +6.

Feats: Dodge Endurance, Improved Initiative, Improved Unarmed Combat, Mobility

Hit Dice: d10

Class Skills: The Speed Fighters class skills (and the key ability for each skill) are: Bluff (Cha), Climbing (Str), Jump (Str) Ride (Dex), Sense Motive (Wis), Swimming (Str)

Skill Points at each level: 2+Int modifier

Weapon and Armor Proficiency: Speed Fighters gain Simple Weapons, Martial Weapons Proficiency and Light Armor Proficiency.

Special Abilities

Swiftness of Motion (Ex): The Speed Fighter gains a bonus to his initiative equal to his level in the Speed Fighter class.

Furious Attack (Ex): If using a full attack action the character may make an extra attack at -5.

Offensive Storm (Ex): As a free action the speed fighter may declare one enemy he is in melee with as the target of an offensive storm. The target loses dexterity and dodge bonuses to AC equal to the characters levels in the speed fighter class. If the targets bonus is reduced to 0, the target is considered flatfooted for purposes of special abilities. Use of this ability does not provoke an attack of opportunity. An Offensive Storm is draining and may be used a number of times per day equal to the constitution modifier +1 (minimum 1).

Defensive Storm (Ex): This ability is identical to and stacks with the expertise feat Surge of Speed. The character may take an extra partial action a number of times per day equal to speed fighter level + Dex modifier.

Uncanny Speed (Ex): If using a full attack action the character may take an extra attack at -2.

Pyramid Review

Link:West

Published by [Link Media Inc.](#)

Written by Rodney Brazeau & Lee McIlmoyle

System designed by Mark C. MacKinnon & Jeff Mackintosh

Edited by Rodney Brazeau

Art & Graphics by Lee McIlmoyle, Rodney Brazeau, & HandsOn Graphics

112-page b&w softcover; \$19.95

Nothing seems to say "western" more these days than adding a hint of the supernatural to the American Frontier. *Link:West*, a new RPG from Link:Media Inc., also adds that touch to this game but little else.

Link:West is a world that superficially mirrors ours in the 1860s (or thereabouts -- there's a lot here that isn't clear). The planet's history has played out much differently, even as early as 2000 BE (Before the Exodus). After a series of power exchanges involving the rise and fall of guilds, city-states, and guild-states, the execution of a teacher who spoke for the people prompted a revolution that left the Guilds scrambling to reestablish a real peace. They now contend with emerging governments.

Even with the massive changes to Earth's history, we get Euroboros (the game's equivalent of Europe -- the setting is full of bits of clever wordplay like this). From here, sailors caught in a freak storm accidentally discovered Amerius. Unlike our colonial origins, the established eastern cities of this new land are smaller or less developed, and more of the country has a frontier feel (though much of the setting is left deliberately vague).

The rest seems to be what you'd expect from the genre. The Indians here are more properly called the Incans, having swept up from South America, and they're still at odds with the White Man. Small towns spring up in the middle of vast areas of desolation, offering our heroes a land to tame and a home from which to do it. The default campaign setting is the greatest of these cities, Tumbleweed, a town in the Arzon Expanse dominated by the shadow of the Spire. The Spire is a great mesa atop a looming tower of rock whose purpose and summit are enduring mysteries (it sticks out of a river-carved canyon called "The Great Big Hole" -- poets these frontiersmen are not).

Every game that boasts magic has to have its bogeyman, and for *Link:West* it's The Dark. The Dark (also Darklings, Darkness, and Dark Lords, resulting from Dark Dealings) live in deserted cities and feed on bioelectric energy (most prevalent in native shamans and savvy Sourcerers). Their attacks infect humans and force them to go through the Darkening, a slow process of degradation that turns them into Darklings. First we're told anyone who gives in to The Dark is lost and becomes NPC, then the authors tell us PCs may become the Risen. The Risen are those who have passed through the other side of this whole process and who may now reinfect Darklings and turn them back into people . . . but the Risen may become reinfected by their contact with The Dark.

Very little information is given about the background, and much of what there is comes in the form of expositional fiction. The first such piece is about a criminal investigation in Euroboros where steam-based technology holds sway

and there's some sort of queen or noble in charge. The second, set in Amerius, shoves all the dramatis personae of Tumbleweed together in haphazard fashion. The town isn't detailed much from a cultural standpoint, but at least there's a cast of characters for the GM to use as plot hooks. The setting is almost impossible to describe beyond that -- the details are that sparse.

The belief systems of the native population are written up, and the authors bend over backward so far to avoid any potential offense to these peoples they can almost touch their heels. Yet the next section is a brief comparative theological/magical essay, and all manner of religion is dealt with here in an almost flippant manner. The magic of this world, thought the stuff of myth by folks in general, stems from "The Source"; hence "Sourcery." It gets two pages of space (you're supposed to use the powers in character creation to duplicate magic), and most of that goes into what Sourcery isn't.

The mechanics are the strange hybrid that resulted from the combination of the *Tri-Stat* and *d20 System* used by Guardians of Order -- strange, that is, for any game that isn't *Silver Age Sentinels*, et al. While ostensibly a melding of mysticism and the Old West, the game plainly offers most of the strange options of its parent game -- GM control is needed, or *Link:West* could easily turn into a superhero version of frontier life.

The editing is slack, but then it's edited by one of the writers. It's small wonder the game is so unfocused and confusing: No fewer than six companies have had a hand in it to one extent or another, and the writers don't list their own company the same way twice on the cover page. HandsOn Graphics did the uninspired cover, and the interior art is cartoonish or else looks like hatched retouchings of decent period pictures (provenance unknown -- it could all be part of the artist's style, or they might be clipart with retouchings).

Flowery but uninformative writing, nebulous setting details, stilted flow from a lack of editing, liberal extractions from a publicly available host-system document with little attention to context -- given its overwhelming problems, it's not surprising *Link:West* is an underwhelming product.

--Andy Vetromile

Pyramid Review

ABUSE: the Final Insult

Published by [Eos Press](#)

Designed by Greg Stolze

Graphics by Carlos Samuel Araya

80-card deck, two rule sheets; \$9.95

ABUSE: the Final Insult is the first all-new release from new publisher, Eos Press. Designed for two to four players per deck, this is the card game of dishing out slanderous quips, barbs, and insults to your opponents before they can do it back to you. Play is simple: Participants create their insults from the cards in their hands and then lay them down on the table. The insulted might be able to reply with an equally sharp riposte, but the way to win is to hand out the slander, in the process reducing both the size of a hand and its value by the end of a round. In other words, players win for sinking the lowest and delivering the most insults.

ABUSE consists of 80 cards and two single-sided sheets of rules marked "1" and "2," all done in red, black, and white. The cards are divided into 24 Start, 32 Link and Special, and 24 End cards. The various card types are boldly designed and clearly marked, with the white text of the insult laid over a black number on a red background. Start, Link, and Finish cards are also marked with a mixture of red and white arrows that must line up when making a sentence. Finish cards are marked with a fist symbol, while Comeback cards, used to block incoming insults and to strike back with a riposte, are marked with a double fist symbol. Furthermore, cards have that word on them and are used to link one sentence to another. Their use is the only way a player can deliver more than a single insulting sentence on their turn. Blank cards work as wild cards and enable a player to insert a suitable word or phrase into a sentence. One-Liner cards have both the start and finish symbols on them, and are self-contained insults that do not need linking to any other cards. They do, however, work perfectly after a Furthermore card has been played.

At the start of the game, each player is dealt a hand of seven cards, and the top card of the Draw Pile is turned over face up to form the start of the Discard Pile. On their turn, a player can choose to take either the top card from the Discard Pile or the Draw Pile. If they take from the latter, another player can take the top card from the Discard pile, but must take a second card from the Draw Pile as well. The current player then attempts to lay down a sentence, beginning with a Start card, followed by none, one or more Link cards, and ending with a Finish card. This must be done so the colors and directions of the arrows on the cards match from card to card. As it is laid down, the sentence is directed at another player and read out with as much glee as the situation demands. Examples, with breaks marked with a "--," include: "Your greasy granny -- is -- bowel-looseningly -- duller than a sack of rocks" and "Your taste -- can eat my shorts."

Of course the targeted player might be able to respond with a Comeback such as "Say it, don't spray it!" or "Gosh, it's almost like it's trying to speak!" A Comeback blocks an insult, but the insulting player can riposte with his own Comeback leading to an exchange of them. If the insulting player wins the exchange, the insult is delivered and they get to discard a card from their hand. The insulted must draw an extra pair of cards to add to their hand. If a Comeback card blocks the insult, the insulting player keeps their insulting sentence.

The game continues in this fashion until one player manages to empty their hand of all cards. They are now out, the round ending with that player scoring no points. The other players then add up the value of the cards held in their hands and these are noted down on a scorepad. After a total of five rounds, or more if the players agree, the game ends, and the player with the lowest score is declared the winner.

The most obvious fact about **ABUSE** is everyone needs to have a thick skin and a sense of humor in order to play. At the same time, the insults are understandably generic and perhaps not as cutting as some players might want. More problematic, we found it difficult to put a sentence together, though the deck being given a very thorough shuffle may offset this. It also becomes more difficult to lay down a sentence as a hand size decreases. The rules are clearly written, except for two points. They do not explain what happens when a player cannot lay a sentence down -- we just had the player pass on that turn. Nor do they explain what happens to an insult once it is successfully delivered. Does it end up on the Discard Pile or in the insulted player's hand? We went with the latter, but this raised the problem of a player just reassembling the same insult, which was not all that fun. These problems could have been offset with the inclusion of an example of play, but none is given, although there is plenty of room on the back of each rule sheet.

ABUSE: the Final Insult has a subject that will appeal to most gamers -- slandering the heck out of each other! It is not unplayable, but players will need to decide upon some house rules that cover the game's omissions. Either that, or wait for the errata.

--*Matthew Pook*

Dork Tower!

Dork Tower!

The Illusion of Freedom (or, the Freedom of Illusions)

One of the biggest appeals of most RPGs have is that they provide complete freedom and opportunity for their players; anything is possible, and the entire gaming world is an oyster, entirely open to the heroes.

Which is, of course, a complete and utter lie.

Most games simply can't handle unfettered freedom. Or, more correctly, most GMs and/or players can't handle unfettered freedom. I note this by looking at most space RPGs. Space is, almost by definition, one of the most expansive game settings available. If there are lots of other explorable worlds out there, and the PCs are able to hop back into their spaceship and wander off to another world at any time, then there's theoretically not much to keep them in line. The problems of fleshing out any location on Earth are multiplied by the number of worlds out there. These problems are compounded even more so by trans-dimensional, time-traveling, or cross-world campaigns. (Let's see . . . the work of fleshing out one game world times infinite worlds is . . . um . . . lots and lots!)

This is why most established science fiction games have some structure to limit the available sandbox the heroes have to play in. Most *Star Trek* and *Star Wars* campaigns limit adventures to whatever missions the PCs' governing body assigns them to. And I believe FASA's original *Doctor Who* RPG recommends most adventures begin with a TARDIS malfunction or other calamity that strands the heroes at their current date and place. (I can't be more certain because my copy is currently in the bottom of a locked filing cabinet stuck in a disused lavatory with a sign on the door saying "Beware of the Leopard.")

Other games, however, offer more seeming freedom; the typical fantasy campaign, for example, seems to offer the entire world to the players, letting them choose where they want to go next. But even these are deceptive, as I shall show momentarily.

So what is freedom, then, in an RPG, and how can it be presented and limited? Here are some broad categories based on various campaigns, as well as how to incorporate some of the ideas into your own games.

Some games relish having a fairly small, controlled environment. Campaigns such as *Over the Edge*, *GURPS Prisoner*, and "[The Hole](#)" are usually built around the idea that the heroes have complete access (more or less) to the entire explorable world, but their freedom is limited to that sole sandbox. This is actually one of the easiest and most fun campaign types, but it isn't terribly popular among publishers. (I suspect it's because game companies realize small, controlled settings mean they can't release jillions of sourcebooks.) Smaller settings mean the players (and characters) have a greater stake in adventure outcomes; in a town-to-town wandering fantasy campaign, there can be a subconscious realization that, if things get *really* bad, the PCs can wander off to the next town . . . an impossible option if the PCs are trapped in one spot!

Fortunately, although rare in published campaigns, it's also possible to incorporate ideas of the small, controlled setting into other games. All that's necessary is to give the heroes access to a setting that's large enough to be interesting but small enough to be contained and controllable. For example, although *Deep Space Nine* and *Babylon 5* games are theoretically set in the vast milieu of space, they can be structured around one setting (a space station) which can be much more fully mapped, explored, and quantified. The analogy in a fantasy setting is often the fully detailed city, such as Green Ronin's *Freeport* setting.

Regardless, in small, controlled settings the freedom generally comes from the heroes' unrestricted options . . . within the confines of the game world. And it's possible for a campaign to start with a controlled setting, and then "release" the PCs into the wild once the players and GM are more comfortable with a broader game world. But this isn't necessary; it's entirely possible to tell entire campaigns' worth of stories in one locale, just so long as it's interesting enough. And it's a good way to breathe some new life into a familiar campaign; a *Torg* campaign is *much* different if it revolves around one city and its heroes, trying to keep the multiversal war from corrupting or destroying it.

Another option to curtail PC freedom is by controlling access to broader areas. For example, the *Fading Suns* game

has a campaign universe of worlds connected by a "jumpweb." Traveling to each of those other worlds requires a "jumpkey" -- a physical object that is strictly controlled by a guild. So if the GM wants to initially limit players to, say, a trading route of three worlds, all he needs to do is make sure the PCs only have access to those three keys. This technique is easy to transplant to many space settings; so long as the coordinates, hyperspace access codes, or similar McGuffins are rare or controlled, it is easy to keep the heroes in a more controlled environment. Of course, the GM should also be prepared for those McGuffins to be the most sought-after elements of the campaign, especially if the players like their freedom. In this case it can be a simple matter of talking with the players: "I won't be able to handle it if y'all run slipshod around the universe!"

This technique is much harder to use in modern or fantasy games, since there are few logical reasons to restrict access to other parts of the world. ("Sorry; before this ruined road can be ridden on, it requires . . . err . . . the Horse Code of Power!") On the other hand, it *can* be used to limit game worlds with other-dimensional or other-worldly elements; perhaps the heroes can't access the Abyss unless they know the right ritual or have the proper runic stone.

Another common limit for most games is scope. In a fantasy campaign, for example, most starting campaigns are limited to horseback travel, which is a quantifiable and guessable quantity; if the GM draws, say, the circle representing a weeks' journey by horse around the starting city, then to start with he only needs to worry about detailing explorable elements within that circle. Of course, this doesn't work for many campaigns; in space settings, for example, traveling to the other side of a world is often trivial. And in games like *In Nomine*, it's intrinsically part of the setting that the PCs will be able to explore three levels of reality at once. But in some campaigns, it's possible to limit "freedom" to that which the heroes can access easily.

And it *is* possible to structure a campaign around near-unlimited freedom on the part of the PCs. Only one of two things is required in that case (although having both can be useful). First, if the players structure the game such that their characters only enter a new or "unfamiliar" part of the game world at the end of an adventure, this will give the GM a chance to make up or research the new section before the next game. Second, it's possible for a game world to have enough published information to allow near-unfettered access . . . presuming the GM owns all the material, of course. Of established game worlds, the only ones I'm familiar with that might provide enough information would be the *Forgotten Realms*, *Traveller*, and maybe *Dragonlance* and *Shadowrun*. But, thanks to the Internet and other research techniques, any modern setting would be pretty easy to allow much more freedom; although I don't know anything about Monaco, if the players decide their heroes go there then I can learn enough to wing it in an afternoon.

However, probably the most popular option to keep most game freedom in line is the organization, which tells the PCs where to go and what to do. Whether it's a Federation, an Archangel, or a Council of Elders seeking help, adventures of this sort come directly from an outside source. In this case, freedom -- such as it is -- is either limited by downtime (which is similar to the horse-circle limit above: "You have two weeks before your next mission" means the heroes can only go places that are a week's travel each way) and/or the freedom to solve missions as they see fit. For example, if subspace radio requires a week to send messages each way, then the heroes will have at least two weeks before they can seek clarification . . . and in the interim they're forced to muddle along and wing it as best as they can.

There are other ways to limit freedom, and I might come back to this topic some day. But these broad categories should hopefully give you some ideas to work with, and mixing up various approaches to controlling otherwise broad settings can make a campaign feel new and different.

And, to quote *The Prisoner*, "Feel free!"

--Steven Marsh

LudiCROUS -- The Sport of the Future!

by [Chad Underkoffler](#)

Genre: Sports

Style: Action and/or Silly

Themes: Adaptation, Challenges

Are you bored by the same old humdrum athletic competitions? Do you love reality TV? Are you sick of watching and ready to participate? Well then, LudiCROUS is what you've been waiting for!

Get canny. Get crazy. Get in the game.

Developed by the renowned genius Dr. Leonardo Wilmar (see "[Polymath Prep](#)"), *LudiCROUS* -- meaning "the game of Chaotic Recapitulation Of Unified Sports" -- ramps up both the physical and the mental challenges of athletic competition. And you, the viewer, are a necessary component of the experience!

What Everybody Knows

Everybody knows that wacky old Doc Wilmar made the name up as a joke, but it's a "ha, ha, only serious" sort of joke -- Wilmar was quite open in his hopes for LudiCROUS. Disheartened by the emphasis on the physical aspects of popular sports and the overemphasis on highly-specialized skills (that rarely even translated well to other athletic endeavors), the good doctor decided to create an activity that could fully engage the adaptive abilities of the body *and* the mind.

Using the wide-variety of tools available to his incredible intellect, he developed LudiCROUS to fill that perceived need.

The Rules

There's really only one main rule for LudiCROUS, and that's *Rule 1*.

Rule 1: The rules can change at any time.

Everything else is negotiable. The *Rulesmongers* (see below) of each competing team meet three days before the Match to hammer out the "game contract," which spells out any and all pre-existing changes to an inherited ruleset or even formulates a completely new game from the bottom up. This is called the *pre-Match* in LudiCROUS slang.

Rule 1 changes may range from the shape or size of the field, to the number of teams (or number of players on a team), to elimination of rules, changes to how goals are counted, imposition of new penalties, alterations in the scope of rules, and so on. Most importantly, the limits of in-play implementations of Rule 1 for the Match must be spelled out: who has the right to change a rule (coaching staff, player, Spectators), how the rule is vetted (Referee acceptance, Spectator votes, impartial judge decision, automatic acceptance, etc.), and how many uses of Rule 1 are permitted (one per minute, three per period, one per game, etc.). The three day time period of the pre-Match also -- in theory -- permits the local LudiCROUS Globe (see below) to be reconfigured so as to support the game, and the participating teams can put in a little specialized practice.

During League play, a formal *Rules Judge* will preside, acting as a referee and interpreter of events stemming from Rule 1s.

Types of Game

That being said, there are two main types of LudiCROUS Match: *inherited games* and *new games*.

Inherited Games: Inherited games begin with the rules of an established game or sport -- baseball, chess, curling, football, jai-alai, hockey, Parcheesi, poker, soccer, weightlifting, etc. -- and alter them. Some examples that have done quite well include *pentaball* (baseball played on a pentagon rather than a diamond), *three-way soccer* (played on a triangular field), and *dojo chess* (where, to take a piece, a karate bout must be won in the target square).

New Games: New games are usually constructed from a toolbox of elements:

1. *Ground Rules:* What is the basic type and goal of the game?
 - Capture the Flag
 - Combat
 - Hit and Catch
 - Hit the Goal
 - Hunt and Avoid
 - Physical Contest
 - Some combination of the above

For example, basketball, hockey, soccer, and football could be defined as basically Hit the Goal sorts of games, while boxing and chess would be Combat; baseball, jai-alai, and tennis would be Hit and Catch; freeze tag and "get the guy with the ball" would be Hunt and Avoid, etc.

2. *Field Rules:* What is the nature, shape, and construction of the field or arena upon which the game is to be played?
3. *Player Rules:* How many players does a team have? Are there established specialized positions (pitcher, quarterback, goalie, dealer, etc.)?
4. *Gameplay and Scoring Rules:* What are players allowed to do? What are they not allowed to do? How do they score points? What happens after that? Are any actions penalty-worthy? What form does a penalty take?
5. *Equipment Rules:* Is there any special equipment that must be used in play? Any specific rules that govern that use?
6. *Rule 1 Rules:* The outline of who, what, when, where, why, how much, and how many of the rules above can be changed in play. "Can't be changed during the Match" is an acceptable choice, if both teams' Rulesmongers agree to it in the pre-Match. However, the "boilerplate" agreement for Rule 1 Rules in League Play (see below) goes something like this:
 - Three Rule 1s per game subunit (quarter, period, heat, inning, round, etc.).
 - Rule 1 implementations cannot directly "unimplement" another Rule 1 use.
 - Rule 1 implementations can be "unimplemented" by a two-thirds majority vote of the total number of *Spectators* of the Match; however, goals scored or advantages won under the stricken Rule 1 are not "erased." (Spectators are those officially registered through the LudiCROUS League.)
 - Rule 1 implementations have a one-minute (or other reasonable amount of time for the game) period of "immutability" where its effect cannot be compromised by another new Rule 1 use, but compromises caused by interacting with an existing Rule 1 are possible.

Styles of Game

The three most popular styles of play for a LudiCROUS Match are distinguished by the Rule 1 Rules. These are: *boilerplate*, *freak-for-all*, and *sadomatch*.

Boilerplate style means that Rule 1 works as detailed above.

Freak-for-all means that any player may create a new rule at any time during play (a related but more limited form of freak-for-all is called *fair-for-all*, and only permits one rule per player to be created, until all players have created a rule).

Sadomatch style Matches permit any Spectator to submit a rule to his fellow Spectators for consideration, which will be implemented if it receives a two-thirds majority of the votes cast within a five minute review period. (A rare form of sadomatch, used with small groups of official Spectators, is called *voxpop-alyipse*, where only the Spectators may call for new Rule 1s, which are implemented without the need for voting.)

Guidelines and Examples for Using Rule 1

The most important thing for LudiCROUS participants to keep in mind when using Rule 1 is to phrase the change as a *rule* that is widely-applicable to all Players, a substantial class of Players, the playing field, or the equipment used in play. Good rules will generally have some effect on all participants; bad rules provide unreasonable penalties or advantages to a small number of participants. Ultimately, the acid test of a suggested rule is if the rule will make the Match more interesting (requiring greater strategy) or more fun.

"Players named Avery Ritter cannot score points!" or "The player with the highest number of at bats must bat while wearing a blindfold!" are probably bad rules -- both are aimed at messing with a single player in a petty fashion. However, "Players with an E in their name score negative points!" and "Players will be blindfolded every other time they are at bat" are more acceptable -- nearly everyone suffers (or benefits) under these rules, and game tactics can be changed to ameliorate the damage from (or take advantage of) them.

Here are some examples of Rule 1s for each of the game elements listed above (in *Types of Game*):

- **Change Inherited Rules:** Baseball innings have four outs. No punting in football. Boxing counts go to five.
- **Change Field Rules:** Set areas of the field become Opposite Zones (where Players must do everything "backwards"; this sort of Rule 1 almost always involves the oversight of the League's Rules Judge) or Song Zones (where players only retain possession of the ball/puck if they sing). Increases or decreases in size of the playing area. Addition of pits, snares, or obstacles to field.
- **Change Player Rules:** Soccer goalies cannot use their hands during odd-numbered minutes of play. Baseball batters never run after hitting the ball, they must have a designated runner.
- **Change Gameplay and Scoring Rules:** All penalty shots are taken between periods. Negative scoring: each football Team starts with 100 points, loses points by scoring goals, and the Team closest to zero wins. Chess rooks may only move four spaces.
- **Change Equipment Rules:** Capes must be worn for the duration of the game. Cricket batsmen must use tennis rackets instead of bats. Badminton birdies have integral micro-jets, which activate randomly.
- **Change Rule 1 Rules:** Add a corollary to an earlier Rule 1. Reverse an earlier Rule 1 completely. Mandate that no further Rule 1s can be put into play.

Depending upon the Match, a new Rule 1 can be announced over the loudspeakers in the Globe, displayed on the scoreboard(s), or left hidden until a Player violates it.

Here are some examples of the types of LudiCROUS Matches that are fairly popular:

LudiCROUS Example 1 -- Ratmaze Paintball: Ratmaze Paintball is in essence Capture the Flag played in a 100 yard long, 20 yard wide, and 3 yard high hedge maze, with two (or more) teams of six Players. A Player can continue playing even if they've "lost" one arm and both legs, but loss of all limbs or a torso shot takes him out of the game. Each Player is equipped with a compressed-gas paintball gun (the field captain gets two, and the flag-guard gets a paint-shotgun instead). Games last for six hours, or until one team wins, whichever comes first.

LudiCROUS Example 2 -- Keepaway Freak-for-all: Also known as "Get the Guy With the Ball" (among other less-savory names), Keepaway can be played as a Team or an individual sport. In either case, victory goes to the Team or Player with the longest time of possession of the ball. It is usually played on a circular turf field 20 yards in radius in hour-long matches. Rule 1s in Keepaway generally revolve around setting up different Zones (Backwards, Dancing, Freeze, Hopping, Humming, One-Handed, Shakespeare, etc.) or adding obstacles. Messing with the ball is also popular -- depending upon the capabilities of the setting, balls could get heavier, slipperier, or hotter as they are held by a Player, resetting to normal (or not) when dropped or stolen. When you add in the Freak-for-all -- all Players can make

new rules at any time -- aspect, it becomes clear that Keepaway is a game for those who are both nimble in mind and body.

LudiCROUS Example 3 -- Starball Sadomatch: Starball starts with baseball, and twists it. Instead of a diamond, the base paths are in the form of a star (see diagram). This adds another base (Fourth Base) and five sub-bases (Alpha, Beta, Gamma, Delta, and Epsilon). Any member of the fielding team can use a sub-base to automatically out a runner, and runners can tag-back to a sub-base if necessary; however, a runner cannot stand on a sub-base while another Player is batting. Each Team fields ten players (a pitcher, a catcher, four basemen, three outfielders, and one infield rover). The Sadomatch variant of Starball, where Spectators submit Rule 1s, is quite popular among the fans -- though less-so with Starball Players. (And no Team has agreed to play a voxpop-alyse Starball game in over a decade, after the Richmond Rutiles fiasco.)

Field

Joy "Clyde" Slaughter ran like a madwoman, swerving wildly, and the visiting Team's flag fluttered in her hands. Paintballs from the pair of enemy scouts following behind splattered into the wall in front of her. She ducked down the next left, then pounded down the next right, making for home base.

The Defensive Coordinator's voice came over her helmet radio. "Clyde, from where you are, go second left first right. Thor, go left, left, third left and cover her."

"Roger-wilco."

"Okie-doke."

The Rulesmonger, Magnus Sontag, came on the air. "Joy, okay, at the T turn left and make for the red tiles. When you hit 'em, start singing something from your favorite Broadway show. Just like in practice."

"Gotcha!" She ran, riffling through her memory for something appropriate. Enemy paintballs began zipping past her again as the enemy players caught sight of her fleeing back. She flinched involuntarily from one that grazed her ear, making it sting. Then, like a hymn from above, she heard the distinctive double-whine of Thor's pistols discharging. The big man's voice crackled through the static: "You're clear for now, Clyde. Move it!"

The grating loudspeaker voice said, "Two kills for the Rhinos, Avery 'Thor' Ritter."

*"Thanks!" she cried into her throat mike as her turned left at the T and . . . no red tiles.
"Magnus!"*

At that moment, the loudspeaker said, "Red area is now an Invincible Show Tune Zone," and the path in front of her suddenly went crimson.

Joy took a deep breath, and started belting it out. "One! Singular sensation! Every little step she takes. . ."

Six enemy paintballs stung her like angry bees, but she just walked on, invulnerably, singing all the while, until she could hand off the flag to Rocky.

Rule 1 Stats

An interesting element of LudiCROUS is that the statistics for coaches, players, and official Spectators involved in Rule 1 implementations are tracked alongside the more typical sports stats of home runs, yardage, lap times, etc. Abstruse calculations give points -- and may lead to the same prestige and regard that other sports numbers grant -- for successful rules implementations, the number of points/goals scored under those rules, the number of Match-winning points under those rules, successful unimplementations, and so forth. Indeed, there are Spectators who are more famous than professional Rulesmongers and players, due to their stats!

LudiCROUS Teams

So, where do LudiCROUS Teams come from? And who makes up the Team?

Sponsor: Professional League teams are always sponsored by a larger, more powerful entity. Depending upon the underlying setting, the Sponsor of a Team could be anything from a Baron, to a city government, to a corporation, to a school, to a diocese (or entire religion), whatever. Sponsors provide the initial capital for teams, and may make up the difference when receipts don't match expenses. Also, the Sponsor sets where a Team's "Home" is.

Team Name: Every Team has a unique name, generally incorporating that of their Sponsor and/or Home; alliteration is pretty common, as are names that lend themselves to licensable logos and icons. Examples could include: Baron Gurlak's Grindstones, Pittsville Pilots, RexCorp Rhinos, Sylvania Tech Songbirds, Fawley Diocese Franciscans.

Coaching Staff: Each Team has a *Head Coach*, who is responsible for dealing with the Sponsor, managing the rest of the coaching staff, and overall strategy. The *Offensive Coordinator* deals with training and play decisions relating to achieving accomplishments (goals, points, yardage, etc.) against an opposing Team. The *Defensive Coordinator* deals with training and play decisions relating to denying accomplishments (goals, points, yardage, etc.) to an opposing Team. The *Rulesmonger* has primary responsibility for negotiating the foundation rules of the game during the Pre-Match, shepherding Rule 1 changes through the required authority (Referee, Spectator votes, judge panel, etc.) during a Match, studies the Team's capabilities that might be tapped for new Rule 1s, analyzes opposing Teams' Rule 1 vulnerabilities, runs Rule 1 drills during practice with the Coaching Staff and Players for adjusting to sudden rules alterations (both their own and likely ones of their opponents), and arranges suites of possible "plays" for Player-directed Rule 1s. (Also, see *Team Staff Level* below, for other staff position ideas.)

Players: Players are the highly-skilled, multifaceted grunts who thread the strange mazes of games generated by the intersection of Ground Rules and Rule 1s. They tend to be above average people, in mind, body, and spirit, who can adapt quickly to changing circumstances: perfect adventurers.

Drones: Sometimes, a Team doesn't have enough Players to fill the needed positions in a game. That's when Drones come in. In some settings, they're just random passersby grabbed off the street, made to sign a contract, and

given a uniform and a check for their participation. In others, they're magical constructs or robotic automatons, controlled by a *Dronerunner*.

The LudiCROUS Globe

If the setting and genre allow it, LudiCROUS Matches can be played in a Globe -- the next level in sports arena architecture, like if the Epcot Sphere and the Astrodome had a kid. A sphere provides the maximum space within for any number and types of games. The floor level and surface can be changed simply, and "wild walls" and modular units can be quickly shifted into place. Various technologies (lighting, "weather" systems, antigravity, psionic static, etc.) can be employed within its confines to wreak even crazier changes, yet keep people inside and outside contained and safe.

PC Opportunities: Levels of Play

A LudiCROUS-focused adventure or campaign can be played on several levels:

Official Spectator Level

This level of play is probably best if LudiCROUS is not the focus of a campaign, instead serving as a background element. PCs can be followers of specific LudiCROUS Teams -- or play pick-up games of their own with buddies or schoolmates. No big whoop, the game just takes the place of football, soccer, or golf in the campaign. Globes can be settings for other adventures; perhaps the coaching staff of the local Team might hire the PCs to keep an eye on their players, the visiting players, or help bug the room set for the pre-Match rules meeting.

However, if one or more PCs are really tried-and-true "Ludites," they may own season tickets to their local Globe. Heck, they may be registered as official Spectators (which could allow them to garner some sort of response and standing -- even allies and enemies! -- in LudiCROUS fandom). Indeed, a well-regarded official Spectator with decent stats could be "scouted" as a Rulesmonger for a new expansion Team (leading into the *Team Staff Level* of play; see below)!

Player Level

In this level of play, PCs are Players on a LudiCROUS Team. Down in the trenches, they are the ones swinging the bat, blocking the puck, carrying the ball, capturing the flag. It is their actions and reactions that determine victory or defeat!

A fine LudiCROUS campaign can deal with the Players on a Team, traveling from Match to Match in their tour bus (wagon train, jet plane, hovercraft, spaceship, etc.), solving mysteries and raising hell along the way. Or perhaps they each do their own thing, having their own adventures, until they receive the Ultrapriority LudiCROUS call on their Team Communicators, and have to assemble in a faraway city to play for the big bucks!

Additionally, PCs on the Player Level might have extra duties, responsibilities, positions, or roles to fill:

Field Captain: The Field Captain is the nominal leader of the Players, and is expected to help manage them (on and off the field) and serve as their representative to the Team Staff and Sponsor (and the players' union). A Captain may have authority in recommending or enacting Rules 1 changes during play in certain Matches.

Goalie: The Goalie protects the Team's goal/flag/scoring area, in games that have those. Goalies often serve as

Alternate Captains or a Captain's "executive officer."

Team Staff Level

At the Team Staff Level of play, each PC is a member of the Coaching Staff, with all the commensurate responsibilities and authority. They also, during a Match, may control a number of sub-PC Players -- think of Grogs in *Ars Magica* or pawns in chess. On smaller Teams (or with smaller PC groups), Staff roles may be doubled- or tripled-up.

Campaign play would be more strategic, dealing not only with the nitty-gritty of Matches, but also arranging and running training sessions, analyzing opposing Teams' methods, mediating Player-Sponsor disputes, making the Team budget work, adapting to whatever alterations the Sponsor wishes to make to the Team, keeping a tight rein on Players who want to party-hearty after winning a spot in the playoffs, etc.

Here are some of the possible positions on a Coaching Staff (see also above, *LudiCROUS Teams* for more ideas: *Head Coach*, *Offensive Coordinator*, *Defensive Coordinator*, *Rulesmonger*, *Special Teams*, *Dronerunner*, *Manager*, *Spectator Wrangler*, *Team Doctor*, etc.).

Meta-Team Level

Simply, each player controls an entire Team: its Staff, Players, and Drones. While the Meta-Team level of play can reduce the one-on-one player-character identification, it can add a certain *Civilization*/wargame flavor to the proceedings, making for excellent one-off games in the beer 'n pretzel vein.

NPC Backgrounds

Each character below has their most important *strengths* (generally positive qualities, abilities, skills, or effects) and *weaknesses* (generally negative qualities, abilities, skills, or effects) detailed. In descending order, the ranks are Master, Expert, Good, Average, and Poor. Depending upon the conception of what a character is like, any quality can be a strength or a weakness.

For example, suppose a character has "Spoiled Brat" as a quality. If it's ranked Average or above, it's a strength: the character always gets his own way, can wield undue influence by threatening to sic their Mommy or Daddy on others, might possess lots of cash or gadgets, and people may fawn over them, making life easy. But if the character has "Spoiled Brat (Poor)," this is a weakness: the character has led a pampered and sheltered life, rubs people the wrong way, and expects everyone to bend over backward to fulfill his most minor needs.

Since many game mechanics provide prose "benchmarks" to understand stat or skill levels, the ranked qualities below should be easily adaptable into any desired system.

The RexCorp Rhinos

Sponsored by the multinational conglomerate RexCorp Industries, the Rhinos are a strong, veteran LudiCROUS Team on a hot streak towards another Final Match -- and maybe their fourth World Championship victory. Their equipment (field and training) is more than adequate, their coaching staff is top-notch, and their Players are well-paid and highly-skilled. They are the Team to beat.

Head Coach Michael Sands aka Peppy. In his youth, Peppy Sands was a stellar LudiCROUS Player -- some say that he's the reason that Sylvania Tech made it to the College Finals three years running. Alas, the tragic accident during the Final Match of his junior year ruined his shot at the pros (or so he believes). A short, stocky, eye-patched mass of muscle, Peppy's sturdy exterior cloaks a nimble and insightful mind. He's an excellent Coach (Expert), Still in Shape (Good), and Smarter Than He Looks (Good); he also possesses Gruff Wisdom (Good), One-Eye (Average), and a Trick Back (Poor), which "goes out" on him at intervals. He also smokes stinky cigars.

Offensive Coordinator **Benjamin Orchid aka Oni**. Even though he'd be a fantastic field Player, Oni never liked getting sweaty too much. Fooling around in a Globe with friends was one thing, but putting in the work to play for the school Team seemed silly. Still, he's a huge fan, and held the highest Official Spectator rank for several years. He consistently turned down staff position offers until his mother fell ill, then he joined up with the Rhinos. He's a fantastic Tactician (Expert) and has a Photographic Memory (Expert); he's also skilled at Game Theory (Good) and Computer Modeling (Average). Unfortunately, his lack of experience with the physicality of professional play makes him Dismissive of Player Concerns and Limitations (Poor), which has occasionally led to problems on the field and off.

Defensive Coordinator **Patricia Annalee Weisel aka Stonewall**. Stonewall Weisel has three great things going for her as a Defensive Coordinator: she's Paranoid (Average), Compulsive (Average), and Sneaky (Expert). A Player for the Pittsville Pilots until her pregnancy, she was an adequate scorer, but a *tremendous* spoiler. Concerned for the safety of "her Guys and Gals," she bends her efforts at Defensive Analysis (Expert) to protecting them and their Team goals. While this helps the Team while they're in the Globe, it often becomes Maternal Smothering (Poor) in the locker room and beyond.

Rulesmonger **Magnus Sontag aka Redbear**. Redbear Sontag is an inveterate fiddler: messing with x to see what y's will pop out, overclocking a to get more b, taking apart a q and labeling all its bits, that sort of thing. Under laboratory conditions, given sufficient analysis time, and left to compile a complete dossier on an opposing Team, no one can beat Redbear's understanding of Rule 1 Strategy (Master). Unfortunately, under a time crunch, he has Trouble Improvising (Poor). He's a decent Negotiator (Good) and okay at Communicating Training Needs (Good) to his fellow staff during the Pre-Match crunch practices. This means that so long as the Rhinos are participating in a fairly standard Match, he'll do well. However, if a proposed Rule 1 throws him for a loop (in the negotiation or in play), he'll be a little slower than he should be in advising the Players how to react. He's an Aficionado of Fine Wines (Good).

Avery Ritter aka Thor. Avery is a big, Strong (Master) guy who's Funny (Good) to boot. He loves LudiCROUS, and takes advantage of his minor celebrity to serve as a Spokesperson for a Number of Charities (Good) in addition to offering support with his money. Unfortunately, when he gets mad (especially when his buddy Clyde -- see below -- gets injured), he gets a little Crazy (Poor), exhibiting the classic berserker-type symptoms: all brawn, no brains, and heaven help whoever gets in the way.

Brittany Summers aka Slinky. At age 12, she won Olympic Gold as a gymnast. It was all downhill from there. You can drink a lot on multi-millions of endorsement money -- and people are so willing to cover their eyes (while still peeking through their fingers) at the bad behavior of the wealthy and famous. It took Brittany a decade to hit rock bottom, and a decade and a half to climb back up with the help of LudiCROUS. She won't slide again. Today, she's still quite Agile (Expert), and a helluva Dancer (Expert). Brittany Understands the Rules (Good) and has a Sarcastic Wit (Good), but is no standout in the physical clinches -- she's barely adequate at Judo (Average). As a Recovering Alcoholic (Poor), she has to fight the lure of the bottle every day, and only the game keeps her sane.

Captain Nelson C. O'Reilly aka Rocky. Captain O'Reilly is one of the most highly-decorated Marines to ever serve in the Corps. The details of his court-martial (and subsequent Honorable Discharge) over the Muir Affair remains a mystery -- an Ultraviolet Clearance enigma. Always a fan of the game, "Rocky" turned to LudiCROUS the day he got booted out, and hasn't looked back. Rocky has superhuman Perseverance (Master), able to fight through any pain and adversity when pursuing a goal. He's a warrior -- in addition to his Marine (Expert) training, he holds Multiple Black Belts (Expert). Unfortunately, his Stoicism, harsh manner, and unwillingness to appear weak make him Unpopular (Poor) with Team-mates and fans alike.

Doctor Dawson Richards aka Brainy. When Sylvania Tech forced Doctor Richards onto sabbatical after his "episode," the genius mathematician found himself at loose ends. He began to amuse himself with constructing logical problems out of Rule 1s. On a whim, he tried out for a minor league Team, and easily made it. His stellar play quickly drew the attention of some important scouts, and before the season was out, he got promoted to the majors. He basks in his newfound celebrity and wealth, and worries about the day when he'll no longer be able to cut it on the field. Richards is a world-renowned Mathematician (Master), skilled in many sorts of Games and Gambling (Expert), and is in Decent Shape for a Man His Age (Good). While quite Charming (Good), he's unfortunately also Narcissistic (Poor)

and Suffering from a Mid-Life Crisis (Poor) -- and all three are what probably led to his little "episode."

Ysabel Blanco aka Lucky. Ysabel Blanco is a salt-of-the-earth type of woman, ready for anything. Somewhere in that gray area between "Soccer Mom" and "Grandmother," she took up LudiCROUS at the YWCA to keep fit. She ended up being surprisingly good at it. While Athletic (Good), the talent that makes her a professional Player is her uncanny Common Sense (Master), which allows her to easily and smoothly adjust to any Rule 1 as if it had always been in play. She also possesses "Wild Luck" (Expert/Poor): sometimes things go outrageously well for Ysabel, and sometimes they go ridiculously bad, sometimes both within a span of seconds.

Joy Slaughter aka Clyde. Joy Slaughter is a youngish, never-married, bubbly ball of fire. She worked her way through a UCLA Drama degree on a LudiCROUS scholarship, and performed superbly on both the boards and the turf. She met Thor (see above) in school, and they've been fast friends ever since. Blessed with Perfect Timing (Good) and Cuter Than Hell (Good), she's a fine Actor (Good) and a better Comedian (Expert). She is Sporty-Squared (Expert), and a dab hand at any field sport you care to name. Her biggest flaw, however, is she's a Spotlight Hog (Poor), which often interferes with being a Team Player. Still, let her show-off a bit or call a Rule 1 from the field, and she'll play well with others. Mostly.

Events & Possible Story Arcs

Work (Over) The Crowd

In Matches that rely on Spectator votes to pass new Rules 1s, social engineering becomes critical. The Rulesmongers need to have Spectator Wranglers "working the crowd," urging them to support the Team's efforts and block those of their opponents. While all Teams use overt Wranglers (like mascots, cheerleaders, dancers, etc.), and most use covert ones (ticket-holder "plants" and such), one Team has started pulling really dirty tricks -- like having their covert Wranglers carrying subsonic broadcasters (to make the watchers in the visitors' stands irritable and headachy), addition of mild laxatives to the stadium food at away games, and arranged "disturbances" at Official Spectator venues during important games.

Promoted to the Majors

Like in the *Official Spectator Level* section above, a new Team -- the Mersey Magnets -- has reached out to a Spectator with high stats to join their Staff as Rulesmonger. There's something odd here though: the highest stat of Spectator Rudyard Jones is his astronomically-high count of last-minute losses through Rules flubs he initiated or supported. In all other regards, Jones is a decent rules crafter and evaluator, but not the sort of guy you call up for the big league. Why are the Magnets doing this? Is it an error in their scouting process? Are they hoping that with the proper training, Jones' record can be turned around? Or do they have something devious in mind?

Endorsement Bling-bling

A Player is sought after as a spokesperson for Rooty Rite Cola, and the manufacturer is ready to drive dumptrucks full of money up to the Player's door. Initial negotiations go very well: Rooty Rite is willing to bend over backwards to land the Player. However, on the day of the contract signing, a news report comes out that the drink may contain a dangerous additive. While there's no direct proof of any hazard to Rooty Rite drinkers, the media are having a field day. Also, the Rooty Rite people become even more generous to the Player, adding 50% more money and perks to the endorsement contract . . . though they become strangely reticent when asked about the additive foofahrah. What does the Player do: take the money and make the commercials? Or does he turn down all that loot?

It's All Fun And Games Until Someone Loses an Idea . . .

The simplest sports plot complication ever: the playbook for the upcoming Match -- containing all the analysis of the opposing Team's playstyle, recommended offensive and defensive plans to take advantage of strengths and

weaknesses, and the meanings of the Team's code words and cadences -- is now missing. Has it been stolen? Just misplaced? What does the Team do?

Advice, Opportunities, & Pitfalls

Sports Advice

*Spanning the globe to bring you the constant variety of sports . . . the thrill of victory and the agony of defeat . . . the human drama of athletic competition. This is ABC's **Wide World of Sports**.*

Compared to other genres, that of Sports seems to have been somewhat neglected in the RPG industry, with only a few contenders taking the field. While the reasons for this exclusion are probably worthy of a separate article, this section aims to give advice on how to include athletics as a defining feature of a campaign, rather than merely as an occasional scenario.

In short, there's very little that's different, conceptually, between a PC-NPC brawl in an alley and a PC-NPC brawl on the ice in hockey. The big difference is the primary goal of the brawl: in a standard RPG fight, the PC goal tends to be to drive off or kill the NPCs; in a hockey match, the brawl is incidental to the main action -- the play of the game. This is not a tough mental adjustment to make. For example, say a PC is carrying a vial of antidote to save Tru Tessheart while being chased by ninjas on motorcycles. Is this so different from a PC speeding through a maze carrying the opposing team's flag as they splut! paintballs at him?

The two watchwords of Sports are *competition* and *sportsmanship*. Players test themselves, individually and as a Team against folks very much like them, also individually and as a Team. It's just the goals -- and the stakes -- that are different. And the manner in which those goals are pursued -- with fair play and courtesy in mind -- is vitally important.

Adaptation Advice

As A Theme: One of the primary themes for campaigns involving LudiCROUS is that of *adaptation*. When a Rule 1 throws play for a loop -- what do the characters do? How do they adjust to the change? What sort of Rule 1s do they put into effect in response?

Adaptation is how we learn, live, and triumph. . . and LudiCROUS is designed to encourage and train the human ability to do just that.

To Specific Genres: All things considered, the *Internal Cyberpunk* genre -- where everything happens inside a virtual reality program -- is probably the best underlying setting for a LudiCROUS game: all rules changes and their responses can be enacted quickly and easily, no matter how odd or abstract ("Blue-eyed players score negative goals!" might cause the Defensive Coordinator to have to hurriedly recode the eye color of some players on their Team) and everyone can watch easily just by plugging into the feed.

The *External Cyberpunk* (chrome, cybereyes, and wired reflexes), *Fantasy*, *Science Fiction*, and *Supers* genres all also can support the more radical changes of Rule 1s required in a LudiCROUS Match with a little tweaking. Big robotics, magic spells, ultratechnologies, or superpowers can elide many of the "realities" of explaining how to instantly fill a football stadium-sized area with water (or fog, or cotton candy, or . . .).

A *Realistic* or *Modern-Day* LudiCROUS game is very possible, if major configurations to the Globe are minimized during play (perhaps reserved solely during the pre-Match negotiation). After all, Rule 1s work best as alterations to player behavior: that's what makes them fun!

Ludi-League Play (Campaign)

Making LudiCROUS the core of a campaign is easy -- just follow a season's worth of major league play (10 Matches). Then, from all corners of the world, the top 16 Teams (evaluated on an arcane calculation of win-loss ratio and overall Team stats) compete in the playoffs. The ultimate winning Team of the playoff elimination tournament's Final Match becomes the World Champion Team. Generally the sharpest and most skilled Spectators are in attendance, trying to use their inputs into the Final Match to further enhance their standing. This is their last chance to do so for the season, and the holders of the top Spectator stats are announced and rewarded at the closing ceremonies, alongside the leaders in Player and Team stats.

Quick and Abstract League Play

Instead of laboriously statting out several NPC Teams worth of Players and running every LudiCROUS match in the League, here's a quick and abstract method to generate wins and loss for all NPC Teams:

Give each Team a Team Skill Level: If a Team is made up of talented *and* experienced Players, give them a Level of 3. If a Team is made up of talented *or* experienced Players, give them a Level of 2. If a Team is just all-around average, give them a Level of 1. If a Team sucks, give them a Level of 0.

Give each Team a Specialty in one (or more) Types of Ground Rules: Each Specialty in a Type of Ground Rules that a Team is equal to one additional Level when they play in a Match of that Type.

LudiCROUS Match Type: Randomly roll for a general Match Type:

1. Capture the Flag
2. Combat
3. Hit and Catch
4. Hit the Goal
5. Hunt and Avoid
6. Physical Contest

Home Team Advantage: Playing on your own turf is worth one additional Level.

Weather Report: Perfect weather is worth one additional Level for all Teams, Bad Weather subtracts one Level from all Teams, and Horrible Weather can end a Match.

Streak Modifier: If the Team won their last game, add one Level. If the Team lost their last game, subtract one Level. If the Team tied their last game, no effect.

Roll 1d6 for each Team and Add Their Total Levels. Highest score wins; ties are ties.

So, let's say that two NPC Teams -- the RexCorp Rhinos and the Lincoln Logsplitters -- are playing against each other in Lincoln, NE. The Match type is Hit and Catch, and the Weather is average.

- The Rhinos are fairly talented (Level 2), have Specialties in Hit and Catch (an additional Level) and Hit the Goal, and won their last Match (an additional Level), for a total Level for this Match of 4.
- The Logsplitters are okay (Level 1), have a Specialty in Combat (no effect), have the Home Team Advantage (an additional Level), and tied in their last Match (no effect), for a total Level for this Match of 2.
- Both Teams roll and 1d6 and add their levels -- let's say: the Rhinos get 4+4=8, and the Logsplitters get 5+2=7.
- The Rhinos win!

Infinite Opportunities For Alternate Infinities!

"Every single event is the offspring not of one, but of all other events prior or contemporaneous, and will in its turn combine with all others to give birth to new: it is an ever-living, ever-working Chaos of Being, wherein shape after shape bodies itself forth from innumerable elements. And this Chaos, boundless as the habitation and duration of man, unfathomable as the soul and destiny of man, is what the historian will depict, and scientifically gauge, we may say, by threading it with single lines of a few ells in length!"

-- Thomas Carlyle, "On History"

Thomas Carlyle was openly contemptuous of the notion of "scientifically gauging" History, of measuring the span of "all other events prior or contemporaneous" with lines and grids and rules and charts. However, Thomas Carlyle wasn't writing **GURPS Infinite Worlds**, so he had that luxury. I, by contrast, have to give it the old college try, and figure out how to organize the "ever-working Chaos" that is not just one History, but all of them. Fortunately, most of the decisions have already been made; we know that the various alternate histories clump together in a small number quantum field states in no very predictable pattern. Although this core system of the Infinite Worlds has been laid out since 1991 and **GURPS Time Travel**, there are other ways one could set things up. In the infinity of possible worlds, there must be alternate Infinite Worlds, too. Herewith, a little design discussion for those of you running or preparing such games; it's not complete, but it seems fairly comprehensive. Who knows? Some of it may show up in **GURPS Infinite Worlds** after all, if the historical branches break right, or if I need two thousand words to fill a chapter and avoid entering the hellish dystopia where Ken misses his deadline.

"Several hundred alternate worlds are now known. They are spread through an 8-dimensional space in a pattern which seems almost predictable. These worlds are divided between a number of different energy levels, or quanta. It is easy to reach a world on the same quantum, hard to travel outside your own quantum. We're on Quantum 5 (Q5). We can reach Quantum 4 and 6 fairly easily, Q3 and Q7 with difficulty."

-- Steve Jackson and John M. Ford, **GURPS Time Travel**

The first way to organize a passel of alternate Earths is by means of an *arbitrary map*. In an arbitrary map, you take your worlds and place them solely with regard to your larger game plan. Which worlds can communicate with or reach each other, which worlds are connected and how, and so forth, is fixed by world-design fiat. If you don't want the Nazi Earth to invade the Gandhi Earth, don't let them touch. If you want the Nazi Earth and the Roman Earth to be implacable rivals, let both of them touch a passel of rich, neutral worlds. If you want their struggle to be a Cold War proxy-fight, they can't reach each other; if you want it to be a World War multi-global strategic conflict, they can reach each other once they've conquered the intervening worlds. You assign the worlds according to the logic of the setting and the story, and then make up an explanation to suit yourself.

This is how the Infinite Worlds system works; as laid out in **GURPS Time Travel**. Homeline is safe from its worst enemy, Centrum, because Centrum is three quantum levels away, and you can only travel two quanta away from your own reality. Reich-5 is in a quantum that Centrum can't reach -- this prevents an alliance between the two, and avoids harsh decisions about aiding one or the other enemy. The "neutral worlds" that can go either way -- the "echoes" -- lie between Homeline and Centrum. The explanation for the arbitrary map doesn't have to be technobabble about quantum field strengths or energy barriers. You could lay out a multiverse in an enormous mansion, with each room leading to another world, but only worlds in the same wing or on the same floor could interact. (Butlers and other servants can go to all the rooms, and one can bribe servants to bring messages to, or hide cameos in, rooms you theoretically can't reach.) Any system in which the only real determinant of which worlds can reach each other is the GM's intentions is an arbitrary map system.

"Sectors are areas of paratime on any level in which the prevalent culture has a common origin and common characteristics. They are divided more or less arbitrarily into sub-sectors. Belts are areas within sub-sectors where conditions are the result of recent alternate probabilities."

-- H. Beam Piper, "Police Operation"

The next order of alternities is the *somewhat arbitrary grid*. With this kind of system, worlds that share certain

independently-determinable characteristics will be "closer" to each other than worlds that don't. You get some of this in Roger Zelazny's *Amber* series, as "shadow walking" depends on moving "toward" specific features of the landscape and shifting the others "away." All the worlds with green suns and blue humans are "next to" each other in such a system, and you have to travel some distance in one "direction" to get yellow suns and brown humans and still "farther" before you get to red suns and pink humans. H. Beam Piper's Paratime series divides the five Levels (which are fairly arbitrary, but seem to roughly equate to technical progress in the past) into Sectors such as the Alexandrian-Punic, Indo-Turanian, Aryan-Transpacific, Europo-American, and so forth. These depend on the "prevalent culture" in that Earth, as defined by the Paratime Patrol. On a meta-game level, the Sector is defined by the GM but interpretable (to some extent) by the players. Within those sectors, he has various sub-sectors apparently clustered around major "world-historical" events within a prevalent culture. We hear about the "Hispano-Columbian Sub-Sector" in the Europo-American Sector, and the "Styphon's House Sub-Sector" in the Aryan-Transpacific Sector. Less world-shaking (or more recent) events make up Belts; the "Hitler Victory Belt" might eventually become a Sub-Sector, if it turns out to affect very much over the long term. If most Nazi Germanies fall apart in 1989 and leave the U.S. to pick up the pieces in Europe and fight al-Qaeda in the 21st century, though, it might not.

To get a somewhat arbitrary grid, the GM needs to determine what decides proximity. Defining an x and y axis (which will, again, be more or less arbitrary GM fiat) can start things off. Here's one option: Postulate two axes, of Western civilization (x) and Eastern civilization (y). The negative end of x (the left margin of the grid) is the Irish or Gallic anarchies, mystical and tribal and poetic. The positive end of x (the right side of the grid) is the Roman Empire, imperialistic and trans-national and logical. On the y axis, the positive end (the top of the grid) is the Ming Dynasty, inward-looking, conservative, and pious. The negative end of the y is the Song Dynasty, diasporic, innovative, and commercial. A global Taliban would be in the far upper right; samurai Japanese worlds would be in the upper left (perhaps the Maya would be in the far upper left); the Indian statelets would be in the lower left (a hippie-libertopian America, or a [Pirate Republic of the Coast](#), might be in the far lower left); a dominant Venetian Republic would be in the lower right, and so forth. Add a z-axis for "reality." A positive z value is overt psionics, then magic, then high-fantasy and gods; a negative z value is scientific departures -- meteor impacts, alternate plate tectonics or climate, and finally intelligent dinosaurs at the bottom. A Hollow Earth might be a high, magical z or a very low "divergent planetary formation" z.

"I do not know whether there are parallel futures, but I do know that there are many pasts leading up to that time from which I have come. Not all of them are accessible. The sideroads have a way of reverting to wilderness when there are none to travel them. Do you not know that Time is a superhighway with many exits and entrances, main routes and secondary roads, that the maps keep changing, that only a few know how to find the access ramps?"

-- Roger Zelazny, *Roadmarks*

Even less arbitrary than that is the *tree of worlds*. This system uses history as its trunk, with alternate realities "branching off" at the appropriate point. Even if the branches [vary wildly](#), the organizational scheme is intact and relatively transparent to the players. If the timeline is a superhighway, as in Zelazny's *Roadmarks* or my old [alternate Autoduel setting](#), there are off-ramps at 1588 and 1776 and 1861 and 1940 and so forth, each one of which might lead to a road that itself branches off. A road, a river, or a literal trans-world Ygdrasil can become the central "passageway" from place to place. Players always know where the alternates are, because they can drive (or float, or climb) to them and see for themselves; they can always find an alternate if they need to, unless the GM flat out refuses to let a world where the Bantus migrated north into Europe (diverging around 150 AD) exist. The GM can decide that the off-ramps on the north side of the road lead to "para-scientific" worlds, and the off-ramps on the south side of the road lead to "magical" ones, or any other scheme, to add a little bit of spice to matters.

The [Empire State Building](#) makes a fine variant on the "mansion plan" arbitrary map, adapted for the tree of worlds. For those who know the sequence of buttons to push, the elevators take people up and down through time. The 101st floor is the 21st century A.D., and so forth down to "street level" and the beginnings of human cities in the 80th century B.C. (What's in the basement? Dinosaurs.) Express elevators whisk travelers past the dull Neolithic, letting commuters off in Cheops' Egypt (55th floor), Confucian China (74th floor), or Shakespeare's London (96th floor). They can walk down the corridors to "branch offices" opening onto alternate Earths, or to subsidiary elevator banks running a few floors up and down these new timelines. The GM can still decide where the office doors eventually open (in a city, one hopes, regardless), and which tenants have their own stairway keys, and so forth. Along those same

lines, a GM could introduce a "Reality Subway," with stops at various key points along the timelines. Take the Purple Line from Alexandria to Samarkand, switch to the Brown Line, and ride it to Mongol-occupied London. The GM can re-impose some control by only picking a few transfer stops where lines cross, making the cross-time commute from Pharaonic Pittsburgh to Nazi Sydney nearly impossible at rush hour.

"Just how many corners d'you think the world has?' . . . 'None, because it's a sphere. More or less, anyhow.' . . . 'A sphere's a concept, a limiting case; so they don't say no corners, they say it's got an infinite number. And Steve, know what? Every which one of those corners is a place. Places that were, that will be, that never were save that the minds of men gave them life . . . touching and mingling with every place at many points.'"

-- Michael Scott Rohan, *Chase the Morning*

The subway map, and any other version of the tree of worlds, still depends on lines. If a world isn't connected up by a line, it can't be reached. The *open pattern* infinity removes that. Once you've found the secret to cross-time travel, you can go anywhere you like. The GM in such cases is reduced to deciding how many people can find that secret, and what kind of cargo they can bring. If the Nazis can bring Das Afrika Korps across the worlds, that's one kind of game -- if they can only bring Hanna Reitsch, Ernst Udet, and Adolf Galland, because only Legendary Airmen can fly the Infinite Sky, that's another.

One version of the open pattern is the open nexus; rather than a "journey" between worlds, it's more of a "doorway." The open nexus is a single location that touches all the worlds, and can let people travel between them through it. Sometimes it's in the same location (the Bermuda Triangle? Stonehenge?) in every world, sometimes it's just "in the city's old neighborhood" with the city varying from world to world. Neil Gaiman's Worlds' End Inn, where all the worlds cross over, is such a place, as is the Horatio Club from *GURPS Time Travel*. (A place where people from all the worlds can meet, but they have to go back to their own world, like Callahan's Crosstime Saloon, or Poul Anderson's Old Phoenix, doesn't really count for our purposes.) The location is usually violence-proof, or else the Nazis would always be attacking it. It's usually neutral, or else you couldn't ever have bad guys follow you through infinity. It's almost never under the control of the PCs, because that would be just too scary for words.

But a GM might want to let PCs pick their own destination. Possibly everywhere is connected to everywhen, and you just have to find a nearby gate using the Map from *Time Bandits*. Or perhaps, for those who know the right dockyards, you can sail out on the Sea of Infinity and set a course for anywhen. Cold currents lead into the world of rational logic; warm currents into magic and wildness. An east wind blows you to worlds where India, China, or Japan set the global pattern; a west wind blows you to Roman, Alexandrian, or Spanish worlds; the south wind takes you to Malay-flavored alternates, or those spiced with the Maya, the Inca, or Zimbabwe; the north wind blows you up to the Dutch, the English, the Americans, the Russians, and the Germans. If you arrive at dusk, you arrive at the culture's twilight -- America in 2200, Rome in 450 (or Rome-4 in 1450). Arrive with the noon tide, and you catch them at the flood -- Naziwelt in 1970, the Glorious Caliphate in 800 A.H. Arrive at dawn, and you have a chance to assist at the birth of Vinland, or snuff out Leninism in its cradle. All I ask is for a tall ship, and a timeline to steer her by. Sail on! Sail on!

Pyramid Review

Cthulhu Dark Ages

Published by [Chaosium](#)

Written by Stéphane Gesbert, Lynn Willis, Brian M. Sammons, & Charlie Crank

Edited by Charlie Crank, David Mitchell, Lynn Willis, Hannes Kaiser, Frank Heller, & Brian Courtemanche

Based on the book by Pegasus Spiele

Art and graphics by François Launet, Stéphane Gesbert, Andy Hopp, David Grilla, Meghan McLean, Björn Lensig, Gero "Zodiak" Pappe, & Kostja Kleye

176-page b&w softcover; \$23.95

Since the strange alien gods that populate the fiction of H.P. Lovecraft are themselves timeless, you ought to be able to play an RPG about them no matter the setting. Perhaps spurred on by the success of those White Wolf products set during the period, Chaosium has provided players with *Cthulhu Dark Ages*, a self-contained roleplaying book. The bad news is that anyone in the (ahem) dark about this time period isn't going to come out feeling much smarter about it than they were going in.

The self-contained part is on-target. The Basic Roleplaying System (or BRP) is included, and contains all the rules you need for period equipment and character creation. Modern chaff has been removed, and there are numerous occupations written up with suggested skills and possessions. You have combat and action resolutions (and a Resistance Table with errors aplenty), and a magic system that encompasses some suitably disturbing spells. It isn't a replacement for the core book, since some sections have been left out for space concerns or because they were anachronistic.

The Mythos are covered in pages of creatures foul and fantastic. The author has tried to arrange it all in some sort of order, apparently using the hierarchy of the source materials, but it's still awfully confusing trying to tell an Old One from a Great Old One. Other things just don't track: Satan is included, but apparently only so the writer can elaborate on the evolution of the name. It's not surprising there are no statistics for him, Loki, or Leviathan (Cthulhu and Co. are not in the book themselves), but you don't get any clues as to how they'll behave in the game, either, even if they're just working behind the scenes for a cult (and Loki, it says, hasn't even got a following). It's not like the rest of the bestiary comprises a bunch of pushovers, so why the reluctance to put more of these creatures to work antagonizing the investigators?

The Dark Ages information feels a little flat. It touches on a lot of important material like timelines and the major contemporary sites and countries, but there's little atmosphere. In fact, there's not much commingling of the real world and the secret history that characterizes Lovecraft's work -- most of it is deliberately presented separately. This wouldn't be so bad, making sure the keeper knows where fancy ends and textbook history begins, but mixing the

themes ought to be a key part of such a tome and we're left to fit the pieces together alone.

The writing tries too hard in many places, but it does make the subject painless. Here again, however, most of what we find could just as easily be covered by what you'd find in a . . . *For Dummies* book on the subject or even a decent webpage, and though there are limitations of space, the time and place described are the book's raison d'etre. The book should be striving to give a feel for this mysterious age, and instead it comes across like a list of bulleted items.

[SPOILER ALERT!]

The included adventure, "The Tomb" (which accounts for a full quarter of the page count) puts the player characters on the road to meet some monks at the small town of Laa, only to find they or someone close to them may unwittingly possess something the dark forces desperately wish to acquire. People disappear from the roads, cloaked figures loom at the edge of one's vision, and the party is accused of a horrible crime. Before they're finished, most of the surrounding countryside may be depopulated.

[END SPOILER ALERT]

It's all illustrated with art that is suitably Lovecraftian -- which is to say, some of the graphics are of low-quality, like something scribbled in a high-school notebook, and yet, in an odd way, they work marvelously. The maps for the adventure are simple, but there are some strange, important twists to the "dungeon" layout, and the fact that it's missing some reference letters does not bode well. This accounts for the minority of the material, and the bulk of the adornment is queer and creepy (and thankfully foregoes the strange little silhouettes that show up in many of the older Cthulhu books). The page design, we are told, is taken from the original German version of this game put out by Pegasus Spiele.

The author knows what's workable in this time period. He suggests accepting certain popular misconceptions about the period rather than slavishly detailing every pitfall and prejudice of the setting. This doesn't excuse the lamentable shortage of good, practical GMing advice, though, and such oversights are only made plainer by the fact that Gesbert is a talented writer with terrific story seeds and a malignant imagination that could set the world of Lovecraft on fire if he budgeted his word count better.

Had Chaosium instead removed the system material and made this a supplemental volume to the line -- and there's no telling what was necessary to license the book from the original company, or if Pegasus had already made this cross-pollination agreement when borrowing the Chaosium material -- *Cthulhu Dark Ages* would have been an easier pill to swallow. As it is, only a fan whose tastes are as tightly targeted as the book's title would suggest stand to benefit from picking this item up.

--Andy Vetromile

Last Ticket Off Bataan

An adventure for WWII-Based Games

by Jason Reade Weiser

Introduction

The adventure below is based upon the last stages of the fighting on Bataan. For obvious reasons, if your GM hasn't run this scenario, then you really should stop reading now to preserve surprise. Some aspects of the scenario, such as the presence of the *Pelican*, are fictionalized to make this a challenging scenario, rather than an unsatisfying rehash of the Bataan Death March.

Synopsis

The players will have to brave shellfire, air raids, and the chaos of a collapsing army to escape Bataan before the surrender. The adventure will see the players use what means they can to get to Marivales and will have to beg, borrow or steal their way onto a Navy ocean-going tug, and end the adventure with a flock of Japanese Zeroes trying to sink them and their ticket out of Bataan.

The End (But Not for Our Heroes)

The players should start off attached to A Company, 57th Infantry (Philippine Scouts). The date is Tuesday, April 7th, 1942. It's okay for the heroes to be of mixed backgrounds, or even services, as by this point, anybody who's well enough -- a relative term considering the amount of food and medical help available to USFIP (US Forces in the Philippines) -- is in the line with a rifle. At least one character should be mechanically inclined. Worse, ammunition of all types is in short supply and many of the men's uniforms are rotting off their backs. Many of the men's spirits are low, but there is still a measure of fight left in the 85 men left in the Company. But the worst-kept secret on Bataan is that this Japanese assault is going to be the one that finishes matters here on Bataan. Marauding Japanese Zeroes and dive-bombers range the roads and rear-areas at will. And when they aren't pummeling the hapless American and Philippine troops, then the Japanese artillery is. Ammunition is down to 5 rounds a man on average, and the grenades and mortar bombs are World War I surplus (so the odds of misfires or malfunctioning are significant), when they are available. Anti-Tank weapons are in short supply and the two light tank companies on the peninsula are lucky to have 10 running tanks between them by this point, what, with gasoline practically nonexistent.

The first thing the protagonists should notice is the groups of Filipino troops streaming south in no semblance of order; the traffic is mostly on foot. Many are dazed, without weapons or officers, their blue denim uniforms in rags. Have the PCs witness one MP attempt to stop a group of them, only to have the dazed Filipinos look at him blankly, as if nothing he said mattered, and continue south.

Word should soon come down to break camp and prepare to move north to launch a counterattack against the Japanese advance. It should be painfully obvious to the PCs, as well as their Company Commander, Captain Alex Cross, that this is insane and would be rather a short fight. Within minutes, he gives the order for all remaining ammunition, food, and medical supplies to be distributed by the First Sergeant, and tells the remains of his company to scatter and try to save themselves. At this point, the GM should feel free to give the players extra equipment, within reason, as everything is in short supply on Bataan and this was the Company's "emergency hoard." Filipinos are given discharge papers, to better help them "fade away" and hide from the marauding Japanese. Captain Cross takes the Company Jeep and drives to Battalion Headquarters, presumably to see if any transport can be had for the remaining Americans south to Marivales. He and his driver will not be seen alive again.

The characters have been left to their own devices in a chaotic situation, with the mobs heading southwards getting more panicked and desperate. Seemingly every inch of the roads is being strafed and bombed or simply blasted by artillery. Men are fighting and in some cases, shooting each other for a place on a truck headed south.

At this point, PCs may either search their memories (which should be difficult) or ask around and investigate (which should be easier, depending on contacts or roleplaying abilities). If successful, they remember that an ocean-going Navy Tug, the *Pelican*, is at Marivales waiting to take on Army Nurses from General Hospital Number 1 at Corps Headquarters Area in Marivales for Corrigador. Perhaps they could convince the skipper to get them the heck out of the Philippines? Hey, McArthur left, why not them?

The first problem is that it's 10 miles from where they are to Marivales, all of it under shellfire and air attack. The second is, who says there aren't any other guys on Bataan with the same idea? As a GM, you really shouldn't allow our heroes too much time to make up their mind. Punctuate the time factor by having some shells land nearby and kill a few extras. Don't hesitate to use fright check or similar morale rules during this; the players are portraying folks who have been blasted, bombed, and starved for months, not to mention they are probably suffering though malaria and dysentery; a car backfire could be enough to spook them at this point. If that fails to motivate our heroes to move, then you can start to have the foot traffic dry up, and for them to hear a *lot* of motor vehicle traffic headed right for them. (If this doesn't give the players a big hint, then maybe their characters deserve to spend four years in a Japanese POW camp.) By now, the players should have joined the pell-mell flight south, and they should see that all is chaos and it is moving at a snails pace. Even officers and MPs can't stop the flood along the East Road to Marivales. Civilian and military traffic is intermingled and it's all moving very slow, which makes an excellent target for Japanese gunners and pilots. Have the heroes suffer a few close calls, and be liberal with the fright checks.

After this, the heroes come across a broken down Navy duce and a half, with a party of sailors from the *Pelican*.

Serendipity

The truck was fetching a 15-foot length of copper tubing from a forward supply depot for the ship's boilers. The trouble began with a group of very angry MPs stopping the truck in the midst of a strafing run by a pair of Zeroes, which promptly shot up the vehicle. Mercifully, the tubing was unscathed, but the truck's radiator and engine has seen better days . . . not to mention the goo that was the unfortunate driver. (Make a fright check for the heroes the first time somebody peers inside the truck cab.) The MPs say they will fix the truck, and they can, but only if the Navy shore party ditches the tubing and gets them and some buddies of theirs (20 in all) on the truck and to Marivales. The Chief Petty Officer in charge of this detail (an old salt by the name of Charton) is not buying this, and one can see by the way he is fingering his .45 that he is ready to shoot the MP Sergeant and be on his way. However, the .50 cal that is trained on his truck by the MPs is rather dissuasive. Enter the heroes into this situation. What do they do?

- **Side with the MPs:** This isn't the brightest idea, since, without that tubing to fix the boiler, the *Pelican* is going nowhere fast. Such a decision would probably only lead to everybody being stranded on Bataan, and eventual Japanese captivity.
- **Side with the Sailors:** This should depend on whether or not the players make the connection that the shore party is from the *Pelican*. If they do, the MPs might get violent out of desperation. A lot of persuasion rolls or good roleplaying might be needed to allow leveler heads to prevail.

Either way, this situation could get ugly, very fast.

Assuming the players do manage to resolve the situation, one way or the other, all the while not getting hit by occasional Japanese artillery or strafing runs, it should be easy to fix the broken radiator line and clean up what was left of the driver from the cab. There won't be much space in the back of the truck, between the four sailors and the copper tubing, but the truck has some fairly nice running boards, so they can hang on to that, for dear life (with appropriate physical abilities). But then this leads to the next problem, when the heroes get to Marivales that evening.

Marivales, Hell on Earth

When the PCs get to Marivales, things should be unmitigated chaos. The GM should describe large groups of beaten, dispirited men milling around without weapons, looking as if the bottom has fallen out (and considering the near-constant Japanese bombardment, it's not hard to imagine why). The various headquarters have small bonfires going, with staff members burning documents by the bushel, the pyres lighting up the night sky and inviting all sorts of unpleasant attention from the Japanese. As the truck pulls into Marivales, a very harried-looking American officer strides up to the heroes with a party of several armed MPs in tow. His name is Captain Jack Harris, and he has got a real problem: He has to blow the main ammunition dump on Bataan. It's in a cave against the cliffs overlooking Manila Bay on the Corrigador side. The trouble is, he doesn't have enough hands to blow the dump. If pressed, Captain Harris will volunteer that he had heard from Corps Headquarters that General Jones was going to send a parliamentary to seek terms from the Japanese tomorrow. "Whatever happens, we can't let the damn Japs have the dump, and I haven't got enough guys to set all the explosives . . . and as for recruiting some of these scarecrows," -- he waves his hands at the milling soldiers -- "forget it! They barely know where they are, let alone have the presence of mind to be using any explosives."

Blowing the dump should be a straightforward set of demolition roles, but this can be complicated by more strafing runs and shellings by the Japanese. None of the heroes should die during this, unless they are incredibly unwise or unlucky, or it's dramatically appropriate. However, just as the explosives go off, matters are complicated by an earthquake. (This did, in fact, happen when they blew up the ammo dump in real life.) Again, the heroes should have to rely on their wits and physical prowess to survive both the blast with tons of ammo cooking off) and the earthquake. How difficult this is can vary, but to set the stage for drama the GM may have the soldiers get involved in trying to succor the wounded and dying in this unholy mess. Once the dump is blown, have Captain Harris shake their hands, weeping like a child and saying, "Thanks fellas; now get the hell out of here before the Japs get you, too."

With that, he walks off, unbuttoning the flap to his .45's hip holster, and goes down a short rise; it isn't long before the report of a .45 is heard. The heroes should take the hint and move posthaste for the *Pelican*.

All Aboard!

By this point our heroes should be all too eager to get off Bataan; however, so is everybody else. Point out that Americans are trying all kinds of sea-going contraptions (with varying degrees of success) to make the journey to the "Rock" (Corrigador). Once they board the *Pelican*, they should be assigned to assist on one of the amidships .50 Caliber mounts to make up for crew casualties. The skipper of the *Pelican* is Lieutenant Rodger McMillan, a dour, cigar chomping, red-haired Irishman who is fighting his tug like a destroyer, and is eager to get away from Bataan before General King surrenders the whole kit and kaboodle to the Japanese.

The nurses haven't arrived and McMillan isn't happy; he's pacing the weather bridge of his tiny command when the air raid siren goes off. This time it's three Zeros coming from the north, and they've spotted the *Pelican*. Run the air attack with the Zeroes making two strafing passes; these should be tense, and the GM shouldn't hesitate to kill off members of the crew or damage the ship. However, the heroes should have a chance for some payback. On the last strafing run, 20mm cannon shells shatter the bridge, and it becomes a maelstrom of broken glass. Any characters that are able to do so should be encouraged to run to the bridge, perhaps by the Pharmacist's Mate grabbing at them and screaming, "Help me, dammit!" The bridge ladder is a mess, and is hanging precariously onto the deckhouse. The heroes should once more need to rely on physical abilities or clever plans to make sure they don't collapse the ladder. The door to the bridge is open, with the interior of the bridge being nothing more than a charnel house of the dead and dying. (Again, fright checks in suitable systems would be very appropriate here.) Lieutenant McMillan is holding his intestines in after a piece of glass disemboweled him. He is dying, and there is nothing anyone can do for him. He grabs the nearest hero and whispers to him, "Save my ship; take her to Australia." As the Lieutenant dies, the engineering officer, Lieutenant (JG) Forster comes up from below to take command. Once the heroes inform him of McMillan's wishes, he looks out on the burning Bataan and the mess of the bridge, and sighs. "Well, we're a tug, not a warship, and this is no place for us." He then sets course south.

What occurs after this? There are a number of personalities, but the stage is set for a rip-roaring trip through Japanese held territory to Australia.

Bibliography

- *The Fall of the Philippines*. Morton, Lewis, US Army Center For Military History, 1989 Version. A very good, if dry, guide to the facts of the 1941 campaign. In between the dry recitation of facts, it's easy to see the horror and the heartbreak.
- *Corrigador: The End of the Line*. Morris, Eric, Stein and Day Publishing, 1981. A more human account of the horror of the campaign, and a look at an American "Stalingrad" where the army wasn't so much beaten as starved out.
- <http://members.aol.com/bcmfofnm/> -- A website dedicated to the New Mexico National Guard's 200th Coastal Artillery (Anti-Aircraft) who were among some of the real "Battling' B*****s of Bataan" and memorializes those who did not survive the battle, or the subsequent captivity.

*Dedicated to the real "Battling B*****s of Bataan." Thanks for enduring the unendurable. We will always remember.*

Arthur Rainmaker, Psychic Playboy Detective

for *GURPS*

by Mark Gellis

Arthur Rainmaker was born to a wealthy family in New York in 1890. At the age of 27, he joined the United States Air Service, and became a fighter pilot. In the winter of 1918, he was shot down over France by a German pilot. He survived the crash, but spent several days in a coma before recovering. He returned to active duty and did well, managing nine confirmed kills by the end of the war.

What Arthur did not tell people was that he had somehow developed psychic powers. He had always had a good sense for people, but now he could sense things that simply could not be explained away just by being "a good judge of character." He had always been lucky, but he now seemed to have *extraordinary* good luck. If he really concentrated on something going right, it was very unusual for it to go wrong. If he was in danger, he usually knew it (and he knows that this had saved his life on more than one occasion). If he looked someone in the eye and concentrated, he could tell what they were thinking. Eventually, he even learned how to "travel in the astral plane," leaving his body behind and observing things and people at a distance.

After the War, Arthur returned to New York and rejoined the family business. His family owns a large and well-known department store in mid-town Manhattan.

Arthur, the youngest of three brothers (of his three siblings, only his sister is younger than he), does not expect to inherit the bulk of the family fortune, but knows that he has a place in the family business as long as he wants it.

He is not an outstanding businessman. He enjoys being wealthy but really he is not particularly interested in running a business, which was one reason why he enlisted in the first place. He is, however, competent, and his extraordinary luck has kept him from having any extraordinary failures. (In fact, depending on when a campaign is set, it is likely that his luck has helped prevent him from suffering any catastrophic losses in the Crash.)

His real love is flying. He owns a two-seater biplane and often spends his days off cruising the skies above the Hudson River or Long Island. He also enjoys using his astral powers to wander where no aircraft can take him, "walking" among the clouds, spying on the city's street life, or plunging into the waters that surround Manhattan. In fact, he has helped solved a number of crimes by making anonymous phone calls to the New York City Police after seeing something or someone dumped into the East River.

He also enjoys solving mysteries and having other adventures; he has, more than once, considered "chucking it all" and making his way to South America or the Far East and working as a troubleshooter and pilot-for-hire. Not surprisingly, he has done some reading on his own about how the criminal mind works and about strange phenomena. (Obviously, psychic powers are possible in a campaign world where Arthur appears, but the GM will need to determine how common they are and whether other supernatural elements exist.) He has become a competent amateur detective and the police know he can usually be counted on.

And, not to put too fine a point on it, when Arthur is not working or solving mysteries, he likes having a good time, which in his book usually takes the form of gambling, or seducing beautiful women. He is especially good at the latter because he is quite willing to use his psychic abilities to find out what a woman wants and what she thinks of him.

Arthur can be a bit annoying at times. He is a genuinely extraordinary individual, and he knows it, which means he sometimes thinks he can handle anything. He is also stubborn; even when he is wrong or outgunned, it is hard for him to give up. The fact that his psychic abilities so frequently give him a jump on the bad guys really does not help; he has gotten away with so much, so many times, he is likely to think he can take on just about any challenge.

Despite his failings, Arthur Rainmaker is one of the good guys. He is basically a decent man; it is simply that his brush with death has made him less willing to fight temptation. He firmly believes that one should eat, drink, and be merry, because it is quite possible that tomorrow (or even tonight) one may die. On the other hand, while he does not feel compelled to serve humanity by stalking the darkened alleys of the city, seeking out criminals to thrash and then deposit, neatly bound and gagged, at the local police station, he would certainly not abandon someone who was in urgent need of help. In fact, his love of adventure usually makes him more than willing to step in and offer assistance.

He keeps his psychic abilities secret for fear of embarrassing his family. He believes if people ever learned about his abilities they would consider him a freak. (He also thinks people would stop playing poker with him if they knew he could read minds, even though he has never used his powers to cheat at cards.) People do notice that he seems to be able to tell things, uncover secrets and solve mysteries, know if there is danger, and so on, but he does not make a big deal of it. He simply says he is "just lucky," or "a good judge of people," and lets it go at that.

He is troubled by nightmares, often reliving being shot down over France, falling, trying desperately to keep his plane under control, but finally crashing. He often sees the faces of fellow pilots who did not survive the War. And sometimes he sees other faces, watching him, studying him. He does not recognize them, but they fill him with dread.

Using Arthur in a Campaign

Arthur could get involved in a campaign in a number of ways. He and the PCs might be independently investigating the same mystery and, once they know about each other, decide to join forces. Or Arthur might hire them to assist him in solving some really big mystery that he has (amazingly) figured out even he cannot tackle on his own.

Introducing him to a group of heroes should not be difficult. First and foremost, his love of mystery and adventure would encourage him to introduce himself to those investigating dark perils to modern civilization. In addition, it is possible that the characters might meet him through one of his other passions, such as flying or gambling. He is likely to come across as a bit cocky, a wealthy amateur who sees solving mysteries or fighting criminal masterminds as a lark. This might annoy some PCs, but it will soon become clear that, while he is no Sherlock Holmes, he can pull his own weight as an investigator.

Another way to get Arthur involved is if any of the player characters are attractive and female. Arthur knows what he likes, and he goes after it with a passion. He is usually quite suave, and he does know how to show a lady a good time, so there is no reason why his attentions will be considered odious. If he does not give up the first time he is politely discouraged, some women may be annoyed, but others may find it flattering.

It also possible that the player characters might seek out Arthur, rather than the other way around. Mutual friends or allies (including police, newspaper reporters, or wealthy uncles that the heroes did not even know they had) might point them in his direction, suspecting that he might be able to help them crack a case or bring a particularly dangerous foe to justice.

One adventure seed would stem from his nightmares. Arthur often sees faces that he does not recognize. What if they are not simply the product of a tortured imagination? Are they ghosts that he can somehow detect with his astral powers? Are they others with psychic abilities, trying to make contact? Or are they are something else, something monstrous? Whatever they are, they seem to be drawn to him.

Another possibility is if one of Arthur's family were kidnapped or attacked. In this case, he would not only investigate the crime but hire others to assist him. His siblings are all capable individuals, and do not appear often enough to count as DNPCs, but he is quite fond of them and would drop everything to help them if any of them were in danger.

Using Arthur does present GMs with one special challenge. He is a potent ally because of his psychic abilities. The fact that he is wealthy and debonair, a pilot, a capable amateur detective, and a good shot with everything from a pistol to a machine gun does not hurt, either. The trouble is that he might overshadow the PCs. He can serve as a mechanism for gathering a critical clue, help the heroes finish off a dangerous foe, or even serve as a rival for the romantic attentions of a female player character or NPC, but a GM has to be careful to make sure he is not the one who is

always saving the day. He is, after all, only a supporting character.

Alternate Versions

Arthur Rainmaker is designed with the Cliffhangers era in mind, but he could be used in any 20th-century setting with minimal changes. Depending on the campaign, the Rainmaker family might be situated in London or Los Angeles as easily as in New York. Arthur could have served in the Pacific, Korea, Vietnam, or the Persian Gulf instead of Europe, and might know languages spoken in those regions of the world instead of French or German. Finally, depending on the era, his Light Airplane skill might be replaced with Heavy Airplane or High-Performance Airplane.

Another variation would be to assume that Arthur had "chucked it all" and was operating an independent airline in some isolated corner of the world (this is probably the only business about which he is likely to be passionate). This version of Arthur Rainmaker would have about five or ten extra points in Piloting (Heavy Airplane) and additional Language and Area Knowledge skills.

This version of Arthur Rainmaker could be used to develop a variety of adventures. He might hire the player characters to protect important passengers or help him retrieve valuable cargo from an isolated crash site. Or, he might have learned of some mysterious treasure rumored to be hidden in the jungles of some Pacific island; he is willing to provide the player characters with equipment and transportation, but only if he is allowed to join the expedition. Arthur and the player characters might also be affected by the ambitions of some warlord or dictator. And, finally, there are those dreams. Arthur thought he could escape them by leaving New York, leaving his old life behind him, but the nightmares are getting stronger now, the strange faces leering at him out of the dark. But who are they? And what do they want? The only thing Arthur knows for sure is that they are planning something, something terrible, and it will not be long before they make their move. Will Arthur turn out to be the key to thwarting some monstrous conspiracy or is he simply going mad? Only the GM knows for sure.

Arthur Rainmaker in *GURPS*

Male; Age: Late 30s to early 40s; 5'11", 170 lbs.; Hair: Brown, Eyes: Brown; Normally, he will be wearing a good suit and driving an expensive car like a Cadillac LaSalle.

ST: 11/12 [10] **DX:** 13 [30] **IQ:** 13 [30] **HT:** 11 [10]
Speed: 6.00 Move: 6 Dodge: 7 Parry (Brawling): 10
Damage: Punch 1d-2; Kick 1d; Thrust 1d-1; Swing 1d+1.

Advantages: Absolute Timing [5]; Charisma +1 [5] Combat Reflexes (Fright Check: 15-) [15]; Danger Sense [15]; Extra Fatigue +1 [3]; Extraordinary Luck [30]; Fit [5]; Reputation +1 (Competent amateur detective, recognized by certain police officers and others who follow such things in the newspapers; this can be treated as "Small Group, Sometimes Recognized") [1]; Status 2 [5]*; Voice [10]; Wealth (Very Wealthy) [30]

*Cost modifiers: Wealth

Disadvantages: Lecherousness [-15]; Nightmares [-5]; Overconfidence [-10]; Secret (Psychic powers) [-10]; Stubbornness [-5]

Quirks: Enjoys adventures [-1]; Loves flying [-1]; Will not use telepathy to cheat at cards [-1]

Weirdness Starts in Your Own Backyard

There's a way you can tell if you're watching cheesy science fiction movie.

Okay . . . outside of the silhouette of the robots in the front row. Or the existence of catchwords like "phantom" or "menace" in the title.

No, a hallmark of a cheesy science fiction movie is visiting a locale that is the pinnacle of anything, or something impossibly . . . well, *impossible*. You know:

- The edge of the universe.
- A Dyson sphere.
- The center of the galaxy.
- The heart of the data matrix.
- The beginning of time.
- A battle station the size of a moon.
- Orson Welles' secondary snack bar.

These places usually have certain things in common: The laws of time and space break down, visuals are represented by the latest in special effects, and just about anything is possible (at least, anything the creators think of).

A moment's thought indicates *why* these are interesting locales. Most fantastic genres, but especially science fiction and space opera, get a certain amount of their narrative thrust from providing a sense of wonder and amazement, especially when boldly going where no one has gone before. And what better way of instilling a sense of amazement with something that you've *really* never seen before?

The problem is, once you've been to the Nexus of Reality or even the Universe's Tallest Mountain, it's awfully tough to come up with an encore. And, in my opinion, these settings all fail on some level (for me) because they show the creators don't trust their sense of setting.

Now, I've discussed settings [before](#), including ways to make them more [organized](#). But there's a secret that some writers and GMs use to spice things up . . . a secret I will withhold to make you all anticipate things a bit longer.

So, for some illuminating background, let's once again turn to that pinnacle of storytelling: the *Star Wars* series. <HRRGLHT!> <thud>

Sorry; my internal organs tried to expel themselves through every orifice in an effort to end my existence. It happens.

Anyway, imagine you're Luke Skywalker. You want to get off your dirtball planet, see the galaxy, and eat paste on *other worlds!* This old guy shows up with a weird story and you decide to follow him, knowing that you'll be seeing interesting places any time now.

And, sure enough, you soon find yourself in a very interesting place. It's a bar, and, in fact, it's the most wretched hive of scum and villainy in existence.

And the Mos Eisley Cantina has been about 20 minutes from your front door all this time.

Now, it's possible that ol' Obi Wan hadn't really canvassed the galaxy, in search of the most vile tavern. After all, the Jedi are [pretty lazy](#). But the point remains; the Mos Eisley Cantina is a pretty interesting place, and it wasn't all that difficult to get to.

And this is an extrapolation of the mysterious secret I alluded to seven paragraphs ago. See, creators know that using impossibly grand settings and locales is an unnecessary "cheat"; you don't need to send characters to the Vortex of

Absolute Zero, because interesting locations are *everywhere*.

I'm sure we've all had an experience similar to this: You're someplace unfamiliar, and you enter a store, building, or attraction that piqued your curiosity . . . and you realize you're well off the yellow brick road, and the winged monkeys are closing fast.

Once, while driving from Montana back home to Tallahassee, we stopped at a restaurant in . . . darned if I remember. Some flat square-ish Midwestern state. Oklabraska, I think. Anyway, having driven all day, we stopped in a family-dining-style restaurant. It was a Sunday, and it was around 4 P.M. We were asked if we wanted to eat at the buffet. We looked at the buffet. There were 12 kinds of meat, macaroni and cheese, and nothing else. Every tray had an odd crust, well beyond the usual buffet pale, that resembled how I envision I would look if I spent six hours in a [tanning booth](#).

My companion and I decided against the buffet, and ordered something from the menus. I ordered something suitably meatless, while she ordered a steak, rare.

Five minutes later, the chef came out. At least, my sanity can only *assume* he was the chef. He was a large, scary-looking guy, with an indeterminate number of teeth in abnormal positioning, wearing a white apron covered in light brown stains that I assume were blood, hopefully belonging to nonsentients. He also carried a knife. He looked as if he had escaped from a Stephen King novel by questionable means. He came over to our table -- we were the only ones in that part of the restaurant, so we knew he was coming for us -- and, in an indeterminate Midwestern accent, asked, "Who ordered the steak?" His question had far too much menace in it, and I immediately and instinctively pointed to my companion; I sold her out so fast, I'm convinced I would have pegged her as Spartacus if the need arose.

Having found his target, he continued: "You ordered it rare?" She answered in the affirmative. "You know what that means, *right*?" Again, she answered in the affirmative, although I had images of "rare meat" involving a squirming, writhing mass, wailing in some anguished, forgotten tongue. "Well, okay," he continued. "I just wanted to make sure you know what rare was, you know. Just wanted to make sure." And then he wandered back to his kitchen.

We breathed a sigh of relief, ate our meal, and bid a hasty retreat, content to drive as quickly as possible away from that state. (The steak, my companion reported, was quite tasty.)

So, what was supposed to be a mundane meal turned into something of an adventure. And, in a gaming universe, no doubt that encounter *could* have been something much more interesting.

Not every encounter needs to be a weird, wonder-inducing odd-fest. But just about any circumstance can be a chance to introduce such elements, without needing to pull out extreme universe-bending concepts. Who needs to create a pocket dimension when the train station conductor is a man of infinite [quirks](#), or the location itself is a Heathrowian labyrinth? In a universe with modest magical or paranormal effects, boring places can become equally compelling. (For those looking for ideas, I can recommend Hayao Miyazaki's *Spirited Away* to show you just how weird settings with real-world trappings can be.) And adventures can also happen in places most normal characters (or at least most normal gamers) might never consider:

Most towns have at least one small museum or other educational tourist-type place; quite often the curator is *the* foremost expert on some esoteric bit of knowledge, especially for items of regional interest. Dealing with the museum, the curator, or the quirks of the town can be an adventure unto itself.

Perhaps an NPC with vital information is at a church, mosque, or synagogue, and the PCs need to be respectful of the unfamiliar customs and traditions to make the best of the encounter.

As shown above, any restaurant or social gathering place can be totally strange and awe- (or terror-) inducing.

And anything can serve an alien function different from its original purpose. (For example, in a fantasy campaign I once had the PCs kidnapped and taken to the "astral plane." In reality, it was an abandoned warehouse, decorated with shiny ribbon and bits of scrap metal, and a large painted sign that said, "ASTARL [sic] PLANE." When the heroes

finally escaped and made a report about where they were, they were able to say, "The astral plane" . . . although not with a straight face.)

As a bonus setting-building tip, it's also possible to take locations that *should* be alien and wonder-inducing and make them completely familiar. Douglas Adams did this with the Restaurant at the End of the Universe, the dining facility at the end of time that, while interesting, still had many of the trappings and customs of a typical modern dining experience. Perhaps it's an exotic, foreign town that welcomes the PCs with open arms . . . or a subterranean village that has somehow heard of the heroes . . . or an alien world that has built its culture based on the *Star Trek* franchise. Regardless, following the "[unexpected the expected](#)" mantra, sometimes having something *not* live up to its awe-inspiring potential can be the most interesting choice.

Regardless, once the heroes have been someplace impossibly fantastic, it can be difficult to make mundane locations exciting. Instead, instilling locations that *should* be mundane with a sense of the fantastic can go a long way toward making each gaming session memorable.

But if you're in the City on the Edge of Forever, just don't order your steak rare.

Dead Inside: The Roleplaying Game of Loss & Redemption

Published by [Atomic Sock Monkey](#)

Written by Chad Underkoffler

Cover by Steve Archer

Illustrated by Chris Cooper & Chad Underkoffler

122-page black & white perfect bound book; \$25
or 7.3 meg PDF from [RPGnow](#)

Chad Underkoffler is best known in these parts for his *Campaign in a Box* column series, but he has also contributed to a number of supplements for [Unknown Armies](#), *GURPS*, and [Gamma World](#), and he also runs his own small press publishing company. Through the amusingly named Atomic Sock Monkey, he labors on a number of "SEKRIT PROJEKTS," of which the first major title to see release is *Dead Inside: The Roleplaying Game of Loss & Redemption*. "Loss" because our protagonists -- the player characters -- have lost, misplaced, sold, had stolen, or indeed never *had* a soul; and "Redemption" because this game is all about getting it back. Not through acts of greed, brutality, and lethality, but by being nice, and by confronting personal weaknesses.

Each player character starts in the same situation. One day he wakes up feeling empty and hollow -- quite literally, for that void is where his soul once rested. Just its shards remain to remind him of what they once had. Very quickly someone will be able to tell him what is going on, that they are "Dead Inside," bodies without souls. With their soul gone, their eyes are no longer shielded from the strangeness of the world around them, which will now feel cold and unwelcoming. Further, ordinary folk, their souls intact, instinctively know that there is something lacking about the "Dead Inside." Fortunately, the friendly voice can tell them that their Soul can be regained. Some methods can cause Soul Decay, such as eating a Ghost (a soul without a body) or stealing another soul. Other methods, such as buying it back, finding the Soul Egg it is trapped in, or working with other Dead Inside to help others and thus cultivate a new soul, all take a lot longer, but do not engender Soul Decay.

For the most part, this does not take place in Real World, but in the Spirit World. Accessed by gates -- either created on the fly, or located at particular times and places -- the Spirit World is a warmer, more attractive place to a Dead Inside. In parts though, it is not always a friendlier place. At its heart is The City, a Dali-esque fusion of Toontown and the Dreamlands, where the Dead Inside will find friends, allies, enemies, and other dangers. This is surrounded by four archetypal landscapes: Mists, Sea, Wood, and Wastes. The nature of these can change depending upon the mood and personalities of those traveling through them and how they treat the environment around them. Beyond the Spirit World lies the Source from whence all souls originate, while its counterpart, the universe consuming Voids on the far side of the Real World.

Once shown or told, a Dead Inside instinctively knows how the fabric of the Spirit World can be altered and manipulated to a variety of different effects. These include abilities such as Change Landscape and Self, Dream-leap, and Second Sight, and powers such as Change Others, Create Object, and Healing. Mastering any of these is a different affair, and many require the sacrifice of a small part of the soul. This is especially so in the Real World where using these abilities is more difficult. They also learn how to trade for simple everyday goods and services, from

snacks to train tickets, with small copies of their memories.

Character generation in *Dead Inside* is a relatively simple affair. After deciding upon a concept and how his character lost his soul, a player assigns ranks to several qualities. These can be skills, professions, advantages, or innate abilities, and can be as broad or as narrow as the GM allows. One quality must be a weakness rated at Poor, while others can be rated Average, Good, Expert, or Master. They have a personality type; a virtue, an indication of their spiritual strength; and a vice, where they might be tempted to stray. In addition, a special quality ranks their character type, which in the game's default set-up is Dead Inside and starts at Average. This rank is a measure of their skill with the various powers and abilities. They also begin with a single Soul Point. Thus a Crime Scene Investigator could be quickly defined as Expert [+4] Forensics, Good [+2] Law Enforcement, Good [+2] Esoteric Trivia, Poor [-2] Partial Deafness; Type: Average [0] Dead Inside; Personality: Thoughtful, Virtue: Integrity, and Vice: Despair.

The process creates a character for the author's "Prose Descriptive Qualities" or PDQ system. The task resolution is so very simple that it might also be labeled the "Pretty Darn Quick" System. A roll of 2d6 plus any appropriate quality ranks is made against a difficulty value set by the GM, while opposed rolls are made for Conflict Resolution. This can cover physical and spiritual combat, and social interaction, with the loser suffering damage directly taken from their quality ranks. At the end of any conflict, characters recover a d6's worth of damaged quality ranks. Essentially, the system abstracts the effects of damage, nor does it emphasize any particular form of Conflict Interaction over the other two. The design of the PDQ system also means that *Dead Inside* could be run using *Fudge* as much as the mechanics given here.

From their starting rank of Average [0] Dead Inside, a character can progress in ranks to Master [+6] and beyond to ensoulment. This may mark the culmination of a closed *Dead Inside* game, but in an open-ended campaign, a character can become a Sensitive (a body with more soul), and then a Mage (a body with twice as much soul). From there they might be able to become an immortal, but this is outside the scope of this game. Conversely, should they lose Soul Points, a Mage can backslide back through Sensitive and down to Dead Inside. They then have to progress back up, but worse still, if a Poor [-2] Dead Inside, Ghost, or Zombie (a dead body without a soul) should backslide in this way, they "Husk." Literally they collapse into being a monster known as a "Qlippoth," and now connected directly to the Void, they also become an NPC.

The key to improvement, whether improving quality or type ranks, lies in the acquisition of Soul Points. While every Dead Inside begins the game with a single Soul Point, as they gain more the players will need to maintain a careful balance, between burning them to fuel abilities and powers and keeping them for character improvement. Acquiring Soul Points is in principle, simple -- helping people. In actuality, it is more than just helping old ladies across the road, clearing a neighbor's path of snow, or placing more than a dollar in a beggar's tin.

Soul Point gain -- and loss ? is governed through the mechanics for Soul Cultivation Ticks and Soul Decay Ticks. Players are encouraged to both justify and role-play their actions in the face of tests against the game various virtues (Courtesy, Fortitude, Generosity, Hope, and Integrity) and vices (Avarice, Cowardice, Cruelty, Despair, and Hypocrisy). Primarily, these will be against a player's listed virtue and vice, which will change as the game progresses. Successful tests against a vice or virtue will gain a Dead Inside a Soul Cultivation Tick against the appropriate virtue or a Soul Decay Tick against the appropriate vice. Gain five Soul Cultivation Ticks and a Dead Inside will be awarded a Soul Point, gain five Soul Decay Ticks, and they will lose a Soul Point. A "Virtue & Vice Check Flowchart" provides a handy guide to the GM on Soul Cultivation. At the same time as the ticks measure Soul Point loss or gain, they perform a second function in monitoring how a player role-plays their Dead Inside, and in particular their listed virtue and vice. Essentially, what they monitor is how "good" or "moral" a Dead Inside's actions are.

Besides the guidelines for Soul Cultivation, the author provides plenty of help to run a game of *Dead Inside*. The advice covers the creation of magical or enchanted items; trade and commerce in the Spirit World; playing the game with evil or skeptical characters, or with a mix of character types; overseeing character creation; and perhaps most importantly judging interaction between characters and Imagos. These are fundamental archetypes that at a personal level are usually a reflection and a complement to a Dead Inside's psyche. This is their "Shadow," not necessarily their evil counterpart, but an amoral one that gain the Soul Points lost to a Dead Inside's Soul Decay. While usually helpful, it should not be forgotten that they are driven by base instinct. Other Imagos are more strange, and do not seem tied to

a particular individual.

The advice also goes right back to the basics with a discussion of how to assemble a gaming group to play *Dead Inside*. Done in a somewhat chatty style, it is perhaps *too* basic for some, but others might welcome this short refresher on the subject. From this it goes on to look at the specifics of scenario and campaign design, which is bolstered by the adventure, "Brave New Spirit World." Intended for play with *Dead Inside* characters only, this introductory scenario is a closed affair, ending when the characters have ensouled themselves. It also does an excellent job of showcasing the game in play.

The book is engagingly and intelligently written, especially so the color fiction, which while helping to set the scene and tone for the game, comes to an end all too soon. If the look of *Dead Inside* is marred by anything, it is its artwork. The predominately scrawny, scratchy style does little to effectively convey the strangeness of the author's creation. The captured images of the radio alarm clock are better, the bright red digital readout altered to say words such as, ".HE:LP," ".SO:UL," ".HO:PE," and ".GA:IN." These possess both a starkness and an unreality to them that captures the feel of the game very well.

Inspired by sources as diverse as Neil Gaiman's *Neverwhere* and *The Sandman* comic series, *Little Nemo*, the films *Dark City* and *Spirited Away*, *Dead Inside* feels like a reinterpretation of White Wolf's *Wraith: the Oblivion* by way of *Nobilis*. Pleasingly, the author is not shy about listing or discussing these inspirations in the solidly informative bibliography. Despite such influences and comparisons, *Dead Inside* stands very much as a game of its own, one that joins the recent [My Life with Master](#) in being a post-World of Darkness RPG.

Further, in comparing both of these self-published games, it is clear that both enforce (and in *Dead Inside's* case, also rewards) a particular type of behavior through their mechanics and game play. However, *Dead Inside* contains more possibilities and is more open-ended, with potential for play with characters as either Sensitives or Magi. To get there, its directed behavior is that of being good, or even moral . . . a rare occurrence in *any* RPG. The back cover of the book boldly asks, "got soul?" In reply, and because it what the game encourages the players to get and justify, it is very clear that *Dead Inside: The Roleplaying Game of Loss & Redemption* does indeed have Soul.

Pyramid Review

VIPER: Coils of the Serpent (for Champions)

Published by [Hero Games](#)

Written by Scott Bennie & Steven S. Long

192-page b&w softcover; \$26.99

There's nothing quite as satisfying in a superhero game as walloping a horde of evil minion types. It's even better when they're all wearing the same color . . . usually green, for some reason. A serpent motif? Even better!

VIPER is Champions' default villain group, spawning dozens of villains over the game's history, and providing a steady stream of cannon fodder to plot everything from bank robberies to world domination. In 1993, Hero Games released a sourcebook for VIPER, outlining the members of that evil organization and a number of ways for them to be used in a game.

Of course, that was 10 years, three companies, and one edition ago. So now the reconstituted Hero Games has produced a new VIPER supplement for use with *Hero System 5th Edition*, with *VIPER: Coils of the Serpent*.

VIPER's history and leadership has been revamped for the new version. The origin of the organization is somewhat less silly this time around, but not significantly. Instead of VIPER being the minions of a slacker space probe, they serve an African snake god, which is a little better. Sure, it's not quite "ex-Nazis," but it'll do.

Excessively clever origin aside, VIPER evolves in a fairly straightforward manner. The book provides some info that would be helpful in using VIPER and its forebears in a historical context (Pulp-, WWII-, Silver-, and Disco-Age games), although a few examples of equipment or vehicles for historical settings would have been nice. However, *VIPER: Coils of the Serpent* is designed to present the organization for a modern setting, and it does a fairly good job of that.

The biggest difference between this book and the original is the focus. The original had info on VIPER agents and equipment, and a lot of details on the super-forces VIPER employed. So many super-villains worked for VIPER that it became a little supers heavy. The original *VIPER* sourcebook, for example, had almost 80 pages of super-villain stats. This revision covers Dragon Branch (which houses all the super-powered individuals) in 20 pages . . . and the two books have almost identical page counts.

The supers include a few standard *Champions* villains (HalfJack, Ripper, & Oculon), as well as a revised Viperia. The improvements to Viperia are almost shocking. While the previous version was somewhat sub-par, the new one is a great character. The art, stats, and history are all improvements on the original, and make her a great threat to any superhero or team.

So what did they add instead of characters and adventures? Why, information about VIPER, of course! VIPER agents are expanded upon, with dozens of package deals allowing the construction of forces from the greenest grunts (no pun intended) to the elite Golden Serpents. There's also a list of equipment, from knives to pistols, rifles, flamethrowers and other implements of personal destruction. The chapter lists a selection of defensive equipment and personal transport devices as well as vehicles. These seem okay, although the Dragon Jet is a little clumsy-looking. There's a quick reference chart for the various weapons, which is useful, although it would have been better located in an appendix, rather than the center of the book.

Lots of information is included on the care and feeding of a VIPER nest, as well as several sample nests and info on

their leaders. The package deals for the various VIPER specialties are a nice variety. There are a number of standard combat specialists (snipers, melee/martial arts specialists, and knife fighters), in addition to technical and intelligence packages. Intelligence VIPERs handle interaction with the media and organized crime, or are specially trained to perform surveillance. Technical agents handle, as probably seems obvious, technical jobs such as computers and medicine. One technical package of interest is the Crime Evasion Specialist, an agent whose job is to destroy evidence left behind at the scene of a crime. It might have sounded a bit better as Crime Scene Eliminator, but that's a bit too much a cheesy pop culture reference.

Each of the divisions has a basic level I package, and level II packages that build on top of those. On top of those, there are some "special" VIPER package deals. These include biologically engineered semi-super agents, a package for nest leader, a serpent mage package, magician VIPERs, members of the Serpent Cult, and a package for VIPER ninjas.

The GM info for running VIPER is also useful. It takes certain source/game issues, such as hostage taking and over-enthusiastic telepaths, and explains how to avoid related pitfalls in their use. There are also guidelines for running agent battles that don't take longer than some Hollywood marriages. The GM chapters also include information on how to run VIPER in various genres (Champions, Pulp, SF, Fantasy) and as heroes (including the "VIPERs in the Dust" campaign). The Super Agents genre is handled in little more than a sidebar, which is somewhat disappointing. It also seems more oriented to being a G.I. Joe-type game, rather than a S.H.I.E.L.D. or UNTIL type game.

The book is reasonably clear of gaffes, although the division patches includes one for Moccasin division, of which there is none. The index also needs a little work, since none of the divisions are mentioned in it. The margins are a bit on the generous side, although a lot of the art is placed into the margins, and there are a fair number of sidebars. In all, **VIPER: Coils of the Serpent** is a worthy successor to the original VIPER sourcebook, and is an obvious choice for those looking to add this organization to their games.

--Justin Mohareb

Class Feats

by Owen K.C. Stephens

Feats are a great way to specialize characters. Two fighters of the same level can be radically different, if one has Power Attack and Cleave and the other has Point Blank Shot and Precise Shot. Feats allow characters to specialize and bend the normal rules of the game.

However, most feats are designed for specific roles, rather than classes. Any high-Strength character that expects to get into melee combat is going to find Power Attack useful. A ranger and a fighter may look a lot alike if both are focusing on two-weapon fighting, or if both are depending on ranged weapons. For some games this blurs the lines between classes, and makes characters seem less distinct. Only a few feats, such as Weapon Specialization, Spell Mastery, and Extra Turning are limited to one or two classes.

The idea of class-specific feats can be very helpful for giving characters options to be different from other PCs. It also allows two characters of the same class to focus on different aspects of their abilities, while maintaining game balance. This is especially useful in a campaign with multiple characters of the same class.

Many of these feats are inspired by abilities from older fantasy RPGs, allowing players to make *d20 System* characters act more like classes from a decade or two ago. Others are inspired by popular fiction, or the author's frustration at the limitations of a given class. These feats are at the upper end of power for feats, though none are truly unbalancing. If a GM wishes to tone down their appeal, each can have additional minor feats added as prerequisites (especially feats that just give skill bonuses).

A GM can limit feats' availability even more than they already are to create further specialization. For example, Mage Sight might be available only to wizards, while Witchlight is given solely to sorcerers, or only clerics of a particular church might gain access to Holy/Unholy Beacon. This is a good way to make different orders, guilds, and even kingdoms distinct from one another.

Class Feats

Barbarian Feats

Danger Sense	Barbarian 2+
Strapping	Barbarian 1+, Con 15+, Endurance
Surge of Strength	Barbarian 1+, Str 15+
Uncanny Senses	Barbarian 5+

Bard Feats

Hornblower	Bard 7+
Mage Sight	Bard, sorcerer or wizard 1+
Old School	Bard 1+
Sway the Masses	Bard 1st Level, Cha 15+

Cleric Feats

Begone	Cleric 5+, Wis 15+
Cloistered Priest	Cleric 1+
Holy/Unholy Beacon	Cleric 1+

Druid Feats

Animal Tongue	Druid level 1+ or cleric with animal domain 7+
Hearty Form	Druid 5+, Str 15+
Mighty Form	Druid 5+, Con 15+
Skilled Form	Druid 5+, Wis 15+
Swift Form	Druid 5+, Dex 15+
True Form	Druid 5+ Level, Wis 15+

Fighter Feats

Armor Specialization (heavy)	Fighter 4+, Armor Specialization (light), Armor Specialization (medium)
Armor Specialization (light)	Fighter 4+
Armor Specialization (medium)	Fighter 4+, Armor Specialization (light)
Armor Specialization (shield)	Fighter 4+
Weapon Group Focus	Fighter 6+, Weapon Focus
Weapon Group Specialization	Fighter 1+, Weapon Group Focus

Monk Feats

Free Fall	Monk 4+, Dex 13+
Hard Style	Monk 4+, Power Attack, Str 13+
Soul Strike	Monk 10+
Wall of Fists	Monk 6+, Dex 15+, Deflect Arrow, Snatch Arrows
Weapon Kata	Monk 4+, Weapon Familiarity
Weapon Style	Monk 4+, Weapon Familiarity

Paladin Feats

Foe Sense	Paladin 6+, Wis 13+
Healing Touch	Paladin 6+, Wis 15+
Stalwart	Paladin 9th or blackguard 5th, Cha 15+

Ranger Feats

Arcane Hunter	Ranger 4+
Greater Companion	Ranger 4+
Pathfinder	Ranger 4+
Terrain Focus	Ranger 1+, Wis 13+

Rogue Feats

Backstab	3d6+ sneak attack
Hide in Plain Sight	Rogue 17+
Tricks of the Trade	Rogue 5+, Cha 13+

Sorcerer/Wizard Feats

Mage Sight	Bard, sorcerer, or wizard 1+
Warder	Sorcerer or wizard 7+, able and eligible to summon a familiar
Witchlight	Sorcerer or wizard 1+

Feat Descriptions

Animal Tongue [Special]

You have learned the speech of animals.

Prerequisites: Druid level 1+ or cleric with animal domain 7+

Benefit: You may speak with animals, as if you always had a *Speak with animals* spell in effect.

Arcane Hunter [Special]

You have learned both arcane and divine magic while delving into the mysteries of the wilderness.

Prerequisites: Ranger 4+

Benefit: When you take this feat, you may add one spell of a level you can cast from the sorcerer/wizard spell list to your own spell list. You may prepare and cast this spell as an arcane spell, though if you wear light armor you may ignore arcane spell failure. At every second level after taking this feat, you may add one additional spell to your spell list. You may never have more arcane spells of a given spell level than you do of the level below it. Thus an 8th-level ranger taking this feat must select a 1st-level arcane spell, and cannot take a 2nd-level spell until 10th level.

Armor Specialization (heavy)

You have learned to use all heavy armor more effectively.

Prerequisites: Fighter 4+, Armor Specialization (light), Armor Specialization (medium)

Benefit: When wearing heavy armor, you gain a +3 dodge bonus to AC.

Armor Specialization (light)

You have learned to use all light armor more effectively.

Prerequisites: Fighter 4+

Benefit: When wearing light armor, you gain a +1 dodge bonus to AC.

Armor Specialization (medium)

You have learned to use all medium armor more effectively.

Prerequisites: Fighter 4+, Armor Specialization (light)

Benefit: When wearing medium armor, you gain a +2 dodge bonus to AC.

Armor Specialization (shield)

You have learned to use shields armor more effectively.

Prerequisites: Fighter 4+

Benefit: When carrying a shield (other than a tower shield), you gain a +1 dodge bonus to AC.

Backstab [Special]

You have learned to strike deadly blows from stealth.

Prerequisites: 3d6+ sneak attack

Benefit: If a target is unaware of you, you may make a sneak attack even if they aren't flanked or denied their Dex bonus to AC. You must be able to make a Hide check (so your target cannot be observing you, even casually) in order to backstab. As a standard action, you can make both a Hide and Move Silently check as part of a single melee attack. If you beat both the target's Listen and Spot checks, your melee attack gets your sneak attack dice. Note that creatures normally immune to sneak attacks are still unaffected, even by a backstab.

Normal: A character normally doesn't gain sneak attack dice unless his target is flanked or denied his Dex bonus to AC.

Begone [Special]

You can use divine power against foes of your religion.

Prerequisites: Cleric 5+, Wis 15+

Benefit: A cleric with this feat chooses one type of creature from the following list -- construct, dragon, elemental, fey, giant, magical beast, monstrous humanoid, ooze, outsider, or plant. The cleric may use a turn or rebuke undead check against creatures of the chosen type to turn them. This counts as a use of turn or rebuke undead. Creatures can only be turned, not rebuked (even if the cleric rebukes undead), and are treated as if they were 4 hit dice higher for all turning purposes. To turn creatures with SR, the cleric must make a successful caster level check.

Creatures turned cannot be destroyed, no matter how few hit dice they have.

Special: This feat may be taken more than once. Each time, the cleric chooses a different type of creature.

Cloistered Priest [Special]

You have turned your back on the trappings of violence, dedicating your energies to meditation and divine power.

Prerequisites: Cleric 1+.

Benefit: The Cloistered Priest feat grants a cleric an additional domain spell at each spell level, and casts all domain spells at +2 caster level. However, this additional power comes from an act of faith -- forgoing the use of armor. If the cleric wears anything that grants an armor bonus (including magic items, though not spells), he loses the additional domain spell per level until he gains an atonement.

Danger Sense [Special]

You often know when danger lurks.

Prerequisites: Barbarian 2+

Benefit: Any time a surprise round occurs, you may make a DC 10 Wis check. On a successful check you get to act in the surprise round.

Foe Sense

You can feel the presence of certain kinds of evil.

Prerequisites: Paladin 6+, Wis 13+

Benefit: A paladin with Foe Sense can use his detect evil ability to detect one specific kind of enemy, chosen from the following list -- aberrations, dragons, giants, humanoids, magical beasts, monstrous humanoids, outsiders, undead. This is part of the detect evil ability, and the paladin learns the number and location of the foes, but nothing else. Only evil foes of the chosen type are revealed.

Special: This feat may be taken more than once. Each time, the paladin chooses a different type of foe to detect.

Free Fall

Your ability to land without injury is amazing.

Prerequisites: Monk 4+, Dex 13+

Benefit: You may use your slow fall ability even when not in arm's length of a wall. You also gain a +2 bonus to all Jump checks.

Greater Companion [Special]

You have a more powerful than usual animal companion.

Prerequisites: Ranger 4+.

Benefit: When determining what animal companion you may have, your effective druid level is equal to your full ranger levels.

Normal: A ranger normally determines his animal companion from half his ranger levels.

Hard Style

Your fighting style involves many hard, powerful blows.

Prerequisites: Monk 4+, Power Attack, Str 13+.

Benefit: You may make a single unarmed attack as a standard action. This attack is treated as if it is a two-handed weapon (giving x150% your Str bonus to damage, and affecting your damage bonus from Power Attack).

Healing Touch

You are imbued with additional healing powers.

Prerequisites: Paladin 6+, Wis 15+

Benefit: The paladin may choose to have his weekly *remove disease* ability do one of the following things instead -- *cure serious wounds*, *lesser restoration*, *remove blindness/deafness*, *remove curse*, or *remove paralysis*. Each use takes one of the weekly *remove disease* uses.

Hearty Form [Special]

Your great Constitution stays with you when you assume a new form.

Prerequisites: Druid 5+, Con 15+

Benefit: When you assume a form with wild shape, you gain a +4 innate bonus to your Con, as well as 2 temporary hit points per hit die.

Normal: A druid normally takes the Str, Dex, and Con of a typical example of a form assumed, and his hit points do not change.

Hide in Plain Sight [Special]

You can escape the most severe scrutiny.

Prerequisites: Rogue 17+

Benefit: As long as you are in an urban setting (not in wilderness), you can make a Hide check even if being directly observed.

Holy/Unholy Beacon [Special]

You can turn/rebuke more powerful undead.

Prerequisites: Cleric 1+

Benefit: You gain a +2 bonus to your turn or rebuke check, as well as your turn or rebuke damage.

Hornblower [Special]

You have learned to combine martial and bardic talents.

Prerequisites: Bard 7+.

Benefit: You may cast bardic spells in medium armor without making an arcane spell failure check.

Mage Sight [Special]

Your innate magic allows you to see well in the dark.

Prerequisites: Bard, sorcerer or wizard 1+.

Benefit: You gain darkvision. If you already have darkvision, you gain low-light vision. If you already have both, your darkvision's range is increased by 50%.

Mighty Form [Special]

Your great Strength stays with you when you assume a new form.

Prerequisites: Druid 5th Level, Str 15+

Benefit: When you assume a form with wild shape, you gain a +4 innate bonus to your Str.

Normal: A druid normally takes the Str, Dex and Con of a typical example of a form assumed.

Old School [Special]

You come from an ancient tradition of bards who combine arcane and divine power.

Prerequisites: Bard 1+.

Benefit: When you take this feat, you may add one spell of a level you can cast from the druid spell list to your own bard spell list. You may select and cast this spell as a divine spell, using your Wis modifier to determine its save DC. At every second level after taking this feat, you may add one additional druid spell to your spell list. You may never have more druid spells of a given spell level than you do of the level below it. Thus a 1st-level bard taking this feat must select a 0-level druid spell, and cannot take a 1st-level spell until 3rd level.

Pathfinder [Special]

You can ably lead others through difficult terrain.

Prerequisites: Ranger 4+

Benefit: A ranger with this feat can guide others through rough or difficult terrain by finding the easiest path. If the ranger takes a standard action and makes a DC 15 Survival check, he gives any ally within 60 feet a +3 circumstance bonus to Climb, Jump, Swim, and Tumble checks for the round.

Skilled Form [Special]

You've learned to act as an animal does when you take its form.

Prerequisites: Druid 5+, Wis 15+

Benefit: When you wild shape into a new form, you gain any two skill bonuses or feats it has.

Special: This feat may be taken a second time, granting the druid up to 4 skill bonuses or feats of a form he assumes.

Normal: A druid normally does not gain any skill bonuses or feats of a form assumed with wild shape.

Soul Strike

You have learned to infuse your unarmed blows with your alignment.

Prerequisites: Monk 10+

Benefit: A good-aligned monk with this feat deals good damage with unarmed strikes. An evil-aligned monk deals evil damage with his unarmed strikes.

Stalwart [Special]

When wielding an aligned weapon, you become resistant to opposing magic.

Prerequisites: Paladin 9th or blackguard 5th, Cha 15+

Benefit: When you are holding a holy weapon (if a paladin) or an unholy weapon (if a blackguard) you gain Spell Resistance equal to your levels in paladin/blackguard + your Cha modifier. This SR only applies to spells with an opposed designator or opposed moral alignment (i.e.. A paladin's SR applies to spells and spell-like abilities with the Evil descriptor or cast by an evil foe, while a blackguards works vs. good).

Special: This feat may be taken more than once. Each time it is taken, it increases your SR by +2.

Strapping [Special]

You are able to survive harsh conditions for long periods of time.

Prerequisites: Barbarian 1+, Con 15+, Endurance

Benefit: You can operate on one half the normal amount of sleep, food and water without penalty for up to a week. After a week, you begins to suffer normally. You must have a week of rest and plentiful sustenance before you can use this ability again.

Surge of Strength [Special]

You are capable of amazing feats of Strength.

Prerequisites: Barbarian 1+, Str 15+

Benefit: Whenever you make a Str check to break or bend something, or a grapple check to escape a pin or grapple (but not for any other grapple check) you gain a +6 bonus.

Sway the Masses [Special]

You can convince crowds to think differently with your performances.

Prerequisites: Bard 1st Level, Cha 15+

Benefit: You may attempt to sway the mood and attitude of a crowd. This requires a use of your bardic music ability, and takes a full round action to begin. You make a Perform check, and treat it as a Diplomacy check against all characters hearing or witnessing the performance. If attempting to sway a crowd in your favor, this simply has a chance to change their attitude in your favor (see diplomacy). If you wish to sway the crowd for or against some other idea or individual (against new taxes, in favor of Baron Sweagan, etc.) you take a -10 penalty to the Perform check, and targets are considered initially hostile to the idea or person.

Once you've changed a crowd's mood, it stay changed as long as you keep playing (a standard action). If you play for 10 minutes, any creature brought to a Friendly attitude must make a Will save (DC 10 + ½ your bard levels + your Cha modifier) or have it's attitude changed until another effort is made to sway it.

Swift Form [Special]

Your great Dexterity stays with you when you assume a new form.

Prerequisites: Druid 5+, Dex 15+

Benefit: When you assume a form with wild shape, you gain a +4 innate bonus to your Dex.

Normal: A druid normally takes the Str, Dex, and Con of a typical example of a form assumed.

Tricks of the Trade [Special]

Along with everything else you've picked up, you;'ve learned a little magic.

Prerequisites: Rogue 5+, Cha 13+

Benefit: This feat allows a rogue to cast a limited number of sorcerer spells. The rogue chooses three 0-level spells from any spell list, and may cast any combination of them to a total of three castings per day. The rogue's caster level is half his rogue level.

Every other three levels the rogue adds one 0-level spell and one casting per day.

True Form [Special]

When you assume a form with wild shape, you gain more of its qualities than most druids.

Prerequisites: Druid 5+ Level, Wis 15+

Benefit: When you wild shape into a new form, you may gain any two of the following special qualities if the form assumed has them -- blindsense, blindsight, hold breath, ink cloud, jet, low-light vision, scent, sprint.

Special: This feat may be taken a second time, granting the druid up to 4 special qualities of a form he assumes.

Normal: A druid normally does not gain any special qualities of a form assumed with wild shape.

Uncanny Senses [Special]

You can sense the unnatural forces of magic and the undead.

Prerequisites: Barbarian 5+

Benefit: A character with uncanny senses can smell magic and the undead. Treat this as the scent ability, but it only applies to magic auras (those which can be detected with a *detect magic* spell) and the undead (creatures of the undead type).

Wall of Fists

Your ability to block arrows is unsurpassed.

Prerequisites: Monk 6+, Dex 15+, Deflect Arrow, Snatch Arrows

Benefit: You can deflect a number of ranged attacks equal to 1 + your Dex bonus (using the Deflect Arrow feat and subject to all its other restrictions). You may only snatch one (using the Snatch Arrow feat and subject to all its other restrictions).

Warder [Special]

You have bonded with a warrior who defends you.

Prerequisites: Sorcerer or wizard 7+, able and eligible to summon a familiar.

Benefit: You gain a special cohort rather than a normal familiar. The cohort's level is determined using the rules of the Leadership feat, though you automatically gain the bonus for great renown and having special powers. If you are a wizard, you use your Int modifier rather than your Cha to determine your leadership score.

Your warder cohort may only have barbarian, fighter, monk, ranger, rogue and paladin levels, and must be the same alignment as you. Since the cohort is similar to a familiar, it gains the alertness, share spells, empathic link, deliver touch spells, spell resistance and scry on familiar special abilities just as a familiar would (based on the sorcerer or wizard's level), though not any other familiar abilities or augmentations.

If a warder cohort dies, the caster suffers the same effects as if a familiar has died. A warder cohort may not be replaced for a year and a day since its death.

Weapon Group Focus [Special]

You have learned to use all the weapons of a given group more efficiently.

Prerequisites: Fighter 6+, Weapon Focus

Benefit: Choose one weapon group (listed below) for which you have Weapon Focus with at least one weapon. You gain the benefits of Weapon focus with all the weapons in the group you are proficient. For weapons you are not proficient, you suffer only a -2 non-proficiency penalty.

Weapon Groups

- *Axes*: Dwarven waraxe, battleaxe, handaxe, greataxe, throwing axe.
- *Blades*: Dagger, gauntlet (spiked), kukri, punch dagger, rapier, scimitar, short sword
- *Bows*: Shortbow, longbow, composite shortbow, composite longbow, crossbow (hand), crossbow (heavy), crossbow (light), crossbow (repeating).
- *Flails*: Flail Heavy), flail (light), net, nunchaku, spiked chain.
- *Great Blades*: Bastard sword, greatsword, falchion, longsword
- *Maces*: Club, greatclub, hammer (light), mace (heavy), mace (light), morningstar, sap, warhammer.
- *Polearms*: Glaive, guisarme, halberd, ranseur.
- *Scythes*: Kama, kukri, scythe, sickle.
- *Spears*: Javelin, lance (heavy), lance (light), longspear, shortspear, trident.

Weapon Group Specialization [Special]

You have learned to use all the weapons of a given group more effectively.

Prerequisites: Fighter 1+, Weapon Group Focus

Benefit: Choose one weapon group for which you have Weapon Group Focus. You gain the benefits of Weapon Specialization with all the weapons in the group.

Weapon Kata

Your fighting style closely incorporates a weapon.

Prerequisites: Monk 4+, Weapon Familiarity

Benefit: Choose one weapon your are proficient with that can be used with your flurry of blows ability. When dealing damage, replace the base damage of the weapon with your unarmed damage.

Weapon Style

Your fighting style incorporates an unusual weapon.

Prerequisites: Monk 4+, Weapon Familiarity

Benefit: Choose one weapon your are proficient with. You can use your flurry of blows ability with this weapon.

Terrain Focus

You are particularly familiar with a few forms of terrain.

Prerequisites: Ranger 1+, Wis 13+.

Benefit: You may pick a number of terrain types equal to your Wisdom bonus. You are very familiar with these types of wilderness, and gain bonuses when in them. The types are -- arctic, desert, forest, hill lands, jungle, mountain, ocean, plains, subterranean, and swamp. Within that wilderness type, you gain a +2 competence bonus to all Climb, Handle Animal, Hide, Knowledge (nature), Move Silently, Swim, and Survival checks.

Special: This feat may be taken more than once. each time, the ranger may select additional terrain types equal to his Wisdom bonus. Bonuses gained do not stack.

Witchlight [Special]

You can summon light at will.

Prerequisites: Sorcerer or wizard 1+.

Benefit: You can cast light at will as a free action, as long as you have a least one spell still available. You don't use the available spell, you simply must have some arcane energy left.

Stranger Synergisms

More Goodies for *Strange Synergy*

by Joe Taylor

The super-powers combat game *Strange Synergy* offers a staggering number of power combinations with its 100 Power Cards. Despite the variety it offers, most people who play the game quickly think of new powers, new teams, or new variant rules that would make the game even cooler. Almost everyone immediately thinks of other game maps they already have that *Strange Synergy* could be played on. The game even thoughtfully comes with markers for two extra teams that are left undefined.

Below you will find new variant rules, new team powers, and new Power Cards. Incorporating these into your *Strange Synergy* games will require some ingenuity, since additional figures, team cards, and power cards are not provided. Index cards can easily serve as Warrior Cards, new Gadgets can be hand-drawn and cut out (or existing unused Gadgets can serve as substitutes), and almost anything of the appropriate size can serve as a warrior's figure. New powers can also be written on index cards, but these will be obviously different than the Power Cards that come with the game; in fact, it would be nearly impossible for homemade efforts to duplicate existing Power Cards well enough that they could be shuffled together and dealt out without anyone knowing who got some of the new powers. A simple way around this is to go ahead and print the new powers on index cards (or whatever you like) and deal one out to each player, then deal out only eight Power Cards from the original set. Some of the new powers also require markers that do not exist in the original game -- notably "Flying," "Fallen," and "Shrunk" markers -- which can easily be produced by hand.

New Teams

Strange Synergy comes with flags, bases, figures, and Warrior Cards for four different team colors (red, green, blue, and yellow). It also comes with a base and flag for hypothetical orange and purple teams. Below are optional team powers for the four existing teams, and two different team powers for the orange and purple teams. In games that use more than one set of colors (with two green teams, two red teams, and so on), this allows teams with the same color to have different powers.

- **The Pirates (orange):** The Pirates draw an extra power card at the start of the game.
- **The Changelings (purple):** The Changelings can rearrange their powers. The player can swap any number of non-gadget power cards between his warriors on a one-for-one basis. This requires a strike by one warrior involved.
- **Gang Green (green):** These anthropomorphic plants regenerate 1 hit point at the end of any turn during which they do not move. This only heals damage, it does not allow them to exceed their starting number of hit points (though it can heal hit points provided by Power Cards as well).
- **The Gadgeteers (blue):** Once per turn, the Gadgeteers may add or subtract 1 to any roll they make involving a gadget. They may also pick up one gadget per turn without using a strike.
- **The Psychics (red):** Their impressive mental abilities allow them to add 1 to any Mental damage their powers inflict. They can choose for their basic strike to do 1 Mental damage, rather than Hard damage.
- **The Mutants (yellow):** For any attack power that is a Super-Power or Mutation, add 1 to the damage it does.
- **The Undead (orange):** When your warriors die, they become Zombies on your next turn, under your control. An Opponent with the Wake the Dead power can use the power to take control of one of your Zombies on a roll of 4+ but the effect only lasts one turn.
- **The Sorcerers (purple):** Add 1 to the to-hit roll of any Magic power. For any Magic power that does not require a to-hit roll, add 1 to its range, or increase its area of effect by 1 per side.

Map Hazards

Fans of *Frag* may want to add hazards to the map. Whenever a warrior first moves into a square containing a hazard, roll one die. On a 5+, the warrior managed to avoid it, otherwise, he suffers the effects of that hazard.

- **Flames:** 1 hit of Energy damage.
- **Spikes:** 1 hit of Sharp damage and lose the rest of your movement.
- **Acid:** Roll one die: 1-3 = 1 hit of Sharp damage, 4-6 = 2 hits of Sharp damage.
- **Ice:** You fall down! Lose the rest of your turn and place a Fallen marker on the warrior. A fallen warrior must spend 1 square of movement to stand up (remove Fallen marker) or 2 if he is still on a patch of ice and may then move normally. A fallen warrior is still subject to random movement and knockback, and may teleport, but when he arrives at his destination, he is still fallen.

When incorporating the new powers described below, it is possible to have more than one hazard occupying the same square. The hazards interact in the following ways:

- **Fire and Ice:** These cancel each other out. Remove both hazards from that square.
- **Acid and Ice:** These cover each other up; apply only the effects of the hazard on top.
- **Acid and Fire:** The flames consume the acid, resulting in noxious fumes. Remove both hazards from that square, and place a Smoke counter there instead. Any attacks through or in that square subtract 2 from their roll to hit. Remove the Smoke counter after one turn.
- **Spikes and anything:** You now have flaming, icy, or acid spikes, depending upon the mix. Apply the effects of BOTH hazards to any warrior that fails to avoid them.

Walls

Some players will want to use or create other maps to fight on. For maps that replicate buildings and similar structures, you may wish to include rules for breaching walls. Unlike obstacles which occupy map squares, walls run along the line between squares. A warrior on one side of a wall is unaffected by powers unleashed on the opposite side -- if a wall would block the line of sight between two warriors, those warriors cannot use powers on one another. Only Hard or Energy attacks can breach a wall. Mental attacks don't harm inanimate things and Sharp attacks merely poke holes through them. For Strikes that require a roll to hit, add 2 when targeting a wall. If a wall runs along the edge between squares, it is considered to be 'in' any square it touches. If a wall takes 3 or more hits from any single attack, it is breached on that square -- place a marker on it. A warrior may now move through the breach normally. To simulate tougher or weaker walls, raise or lower the damage required for a breach.

New Powers

GRENADA LAUNCHER

Gadget, Magnetic

Strike

Range: 6

Energy (1-3)

Auto

You have an unlimited supply of grenades and may launch one per strike. A grenade may be shot 6 squares in a straight line. A grenade may be launched into a square with a warrior, but not into a square with a solid obstacle.

Wherever a grenade lands, it explodes, doing 1-3 damage to all warriors within the 3 × 3 area around the target square. In addition, all warriors within the 3 × 3 area are knocked one square away from the target square. Warriors ON the target square roll randomly.

SHRINK RAY

Gadget, Magnetic
Strike
Range: 4
Special
4+

Your victim shrinks to one-half his normal size! Place a SHRUNK marker on him. At the end of his turn, the victim may roll one die, on a 4+, he regains his normal size. While shrunk, his movement, the range and area of any powers, and the damage his strikes do are all reduced by half (round down). Unless the warrior is a Mad Scientist, while Shrunken, he may only carry one gadget (Mad Scientists can carry two while shrunk).

ACID STREAM

Mutation
Strike, Defense
Secret
Range: 4
Sharp (1-2)
4+

You can shoot a stream of powerful acid from your body. If you shoot this stream at a warrior, you hit on a 4+ and roll one die. On a 1-3, the strike does 1 damage, on a 4-6 it does 2.

You can also shoot your stream at up to 3 squares in your range. The stream automatically hits. Place an acid counter on that square.

You take no damage from acid.

PYROMANIA

Super-Power
Strike
Secret
15 × 15 Area
Special
Auto

You can spontaneously create fires. On a turn in which you do nothing else you can place flame counters on up to three squares within your range. They will last until the beginning of your next turn. If you create a flame hazard in the same square as a warrior, he must immediately roll a 5+ or take 1 Energy damage.

KUNG-FU MASTER

Skill
+Strike, Defense
Secret
Range: 0 or 1

You are a master at hand-to-hand combat. Your basic strike hits on a 2+ and you may employ diagonals for your basic strike. You may parry Hard strikes directed against you. Roll a die after the strike hits. On a 4+, the strike is parried and has no effect.

JUMP

Skill
Move
Secret

Hard (1)

You can jump long distances. When jumping, you can only move in a straight line, but you may move one extra square. You leap over any warriors or hazards (though not obstacles such as pillars) and only physically occupy the squares you jump from and land in. You may land in a square occupied by another warrior -- if so, you may attempt to land on him. The victim may attempt to dodge by rolling a die. On a 4+, you fail to land on him, but still end up in the same square. If he does not successfully dodge, you inflict 1 Hard damage on him as you land. This does not count as a strike.

ICE SLICK

Super-Power
Strike
Secret
Range: 7
15 × 15 Area
Auto

You may use a strike to place up to 3 ice patches on any square within a 15 × 15 area not occupied by an obstacle or warrior.

You may also strike to place a single ice patch in the same square as any warrior within your range. That warrior must roll 5+ or fall down.

"I AM YOUR FATHER"

Special
Strike
Secret
Mental (1-6) & Special
Range: Infinite
Auto

You reveal to one warrior in your range that you are, in fact, that warrior's father (regardless of whether or not this is actually true). That warrior is automatically stunned (place a Stunned marker on him) until the beginning of your next turn, and suffers 1-6 Mental damage. Discard this power card after use.

REVIVE

Magic
Special
Secret
15 × 15 Area
4+

When a warrior dies within your area of effect, you may immediately attempt to bring him back to life. On a roll of 4+, you succeed and may spend 1 hit to instantly revive the dead warrior. He is restored to life with all the powers he had at the time of his death, and half his starting hit points (round up). Zombies cannot be revived.

EXTRA LIFE

Bio-Mod
Special
Secret

When you lose your last hit point, you may reveal and discard this card to have all your hit points restored.

EXOPORT

Super-Power
Special
Secret
9 × 9 Area

You have the ability to teleport other people and objects. On a turn in which you do nothing else, you may attempt to teleport any warrior (including yourself) or unowned gadget within your power's area to any other square in that area. Pick what you wish to teleport, the target square you wish to teleport it to, and roll one die; on a 4+ the teleport was successful. However, this method is less precise than the regular Teleport power. Roll for random movement to determine how far from the target square the victim actually arrives. This can place something outside your normal Exoport range. If a gadget would have been teleported into an obstruction, the teleport fails and the gadget stays in place. If a warrior is teleported into a solid object, he dies and any gadgets he had remain in his original location.

SURPRISE

Special

When you assign this power to a warrior, draw another Power Card and place it on top of this one, face-up. At the end of each of your turns, you must discard the power card on top of this one and draw a new power card. Assign the new power to this warrior and turn it face-up (even if it was secret). This does not count as a strike.

JINX

Magic
Special
Secret
5 × 5 Area

You may strike to attempt to jinx those around you. All warriors within your 5 × 5 area must roll one die. Unless they roll a 6+, they are Jinxed (place a Jinxed counter on them) until the beginning of your next turn. A Jinxed warrior subtracts 1 from all his to hit and damage rolls. Anyone attempting to hit a Jinxed warrior may add 1 to their roll.

TINFOIL HAT

Gadget, Magnetic
Defense

While wearing the Tinfoil Hat, you are immune to Mental damage, Confuse, Bewilder, Mind Control, Soul Swap, and stunning attacks.

ENTROPIC FIELD

Magic
Defense
4+

A magic field surrounds you, making it difficult for other warriors to successfully strike you. If any strike that would cause you damage hits you, roll one die. On a 4+, the strike misses anyway.

TIME BUBBLE

Super-Power
Strike
Secret
Range 4
Special
4+

You can attempt to place a warrior within your range (including yourself) in a time bubble. Write down that warrior's

position on the map and then remove his counter from the board. He is now outside the space-time continuum and is unable to interact with our reality. At the beginning of your next turn, that warrior reappears in the same place on the map where he was before.

MACHINE GUN

Gadget, Magnetic
Strike
Range: 6
Sharp (1-6)
4+/5+/6+

When you strike with the machine gun, it shoots three times. The first shot hits on a 4+, the second on a 5+, and the third on a 6+. Each shot does 1-6 Sharp damage if it hits. All shots are directed at the same target.

FORCE FIELD

Super-Power
Defense
Secret
Area: 9 × 9

On a turn in which you do nothing else, you may project a force field around any warrior within your 9 × 9 area (including yourself). Place a Force Field marker on him (or just use a Statue marker). Until the beginning of your next turn, that warrior is immune to Hard, Sharp, and Energy damage. However, that warrior is also trapped inside the Force Field; he may not move and may not strike to cause Hard, Sharp, or Energy damage.

VAMPIRE

Mutation
Strike & Special
Range: 0, 1
Sharp 1
4+

You have vampire fangs that drain life force from other warriors! On a successful strike you cause 1 Sharp damage. If your target loses a hit point, you gain one hit point at the same time.

CLOAKING FIELD

Gadget, Magnetic
Defense

You have a cloaking device that obscures your exact location. Any attempt to strike you is at a 2 to the roll.

SPINES

Bio-Mod
+Strike
Range: 0, 1
Sharp 1

Your body is covered with pointy spines. Whenever you perform a basic strike or are involved in a collision with another warrior, add 1 Sharp damage to any other damage you cause.

X-RAY GLASSES

Gadget, Magnetic
Special
Range: 6

Your X-Ray Glasses allow you to see all your enemies' powers -- even secret ones! On your turn, you may look at the secret powers of any one warrior in your Range (this power is not blocked by obstacles or walls). This does not count as a strike.

VENOM

Bio-Mod
+Strike
Secret

Your strikes that cause Hard or Sharp damage except for strikes with Gadgets poison your victim. Place a Poisoned marker on him. At the end of his turn, he must roll a die; on a 1-3, he loses one hit. If the warrior has any hit points healed remove the Poisoned marker.

SOUL SWAP

Magic
Strike
Secret
Range: 3
Special
4+

You can attempt to swap your soul with that of another warrior! If you succeed, you control that warrior's body and he controls yours. His counter now represents you (and visa versa), you have his powers (including team powers) and he has yours (including this one). You have the hit points of his body and he has the hit points for yours. You each still act during your own team's turn as before. Your victim wasn't expending the swap, though -- place a confused marker on him until the beginning of your next turn.

LIGHTNING

Magic
Strike
Secret
Range: 6
Energy (1-6)
4+

You can shoot magic lightning bolts. If your target is magnetic or is holding a magnetic gadget, your roll to hit him is at +2.

MAGIC MISSILE

Magic
Strike
Secret
Range: 8
Energy 2
Auto

When you fire the magic missile, it moves up to 8 squares in any (non-diagonal) direction. It cannot go through obstacles. The first warrior whose square the magic missile enters automatically takes 2 Energy damage.

Flight Powers

The following rules and powers add a new dimension to *Strange Synergy*: the ability to fly. Power cards which allow flight are considered to be a fifth category alongside Attack, Defense, Movement, and Special powers. With these

extra powers, the following rules governing flight must also apply.

Any warrior in flight should have a Flying marker placed on him. Though the warrior remains on the board, he is, conceptually, now considered to be above it. When a character is flying he is not considered to be an obstacle, nor does he consider other warriors to be obstacles. A flying warrior is not harmed by any hazard he flies over. Movement while flying is determined by the text of the Flight power card. Power cards which affect normal movement do not apply to flying movement; while flying, any Movement powers are effectively canceled.

When targeted by a ranged power or basic strike, a flying warrior is considered to be at a range of one extra square. For example: if a flying warrior is 3 squares away from a warrior on the ground who is trying to hit him with a Flame Blast (Range: 3). Because he is flying, the first warrior is considered to be 4 squares away, and out of range. Another example: a flying warrior can only be hit by a basic strike from a warrior on the ground if they are both in the same map square. However, to a flying warrior, the ranges stay the same (a flying warrior CAN perform a basic strike from one square away, even though a warrior on the ground could not hit him back). Powers that effect an area also effect flying warriors normally. Flying warriors cannot pick gadgets up off the ground.

Any strike which normally causes knockback has a chance of knocking a flying warrior to the ground. If the flying warrior rolls a 1-2 on one die, he falls to the ground, taking 1 Hard damage on a roll of 1-3. If a flying warrior must roll for random movement, a result of "1" means that he falls to the ground. If a flying warrior is susceptible to Magnetism powers, he can be pulled directly down. If a flying warrior is Stunned or turned into a Statue, he automatically falls (roll for damage as above). A warrior who is Frozen while in flight, stays in the air. If a warrior is killed while flying, his body falls straight down.

Now for some flying powers:

- **HOVER (magic)** -- Taking off and landing each requires 1 movement. Your flying speed is only 1 square per turn.
- **BAT WINGS (bio-mod)** -- You have giant wings and can fly. Spend 1 turn's movement to take off or land. Your flying movement is 3 squares.
- **ANGEL WINGS (Mutation)** -- You have giant wings and can fly. Spend 1 turn's movement to take off or land. Your flying movement is 3 squares.
- **SUPER FLIGHT (super-power)** -- Use your strike to take off; landing is free. While flying, your movement is 6 if you move in a straight line, 2 otherwise.
- **HYPER FLIGHT (super-power)** -- Use your strike to take off. Your movement while flying is 4 squares per turn. Landing is free.
- **CAPE** -- (Gadget) You take off by moving two squares in a straight line. Flying movement is 3 squares per turn. Landing is free.
- **RING OF FLIGHT (Gadget, Magic)** -- You may take off and land for free. Your flying movement is equal to your regular movement.
- **JET PACK (Gadget, Magnetic)** -- You may use your strike to activate or deactivate the Jetpack. When activated, the warrior is Flying and moves 2 squares per turn. The only way a warrior with a Jetpack can land is if he deactivates it, or he is pulled down with Magnetic powers.
- **HELICOPTER BEANIE (Gadget)** -- Spend all your movement to take off or land. You have a Flying movement of 1 square per turn.
- **AERIAL ACROBATICS** -- You are adept at flying. While flying, any attempts to hit you with a ranged power are at -1. You may fly diagonally. At the beginning of the game, go through the undrawn Power Cards and take the first Flight power you find. If you go through the deck without finding one, take the top two cards from the deck and pick one of them to keep. You can still keep this card.
- **STRAFE** -- While flying, if you spend all your movement to go in a straight line, you may strike at any point along that line and continue moving. At the beginning of the game, go through the undrawn Power Cards and take the first Flight power you find. If you go through the deck without finding one, take the top two cards from the deck and pick one of them to keep. You can still keep this card.
- **DIVE BOMB** -- While flying you may strike by flying into the same square as another warrior. You automatically land and collide with him, doing 1 Hard damage for each square you moved in a straight line

before hitting him. He is knocked back 1 square and takes damage if he hits an obstacle. At the beginning of the game, go through the undrawn Power Cards and take the first Flight power you find. If you go through the deck without finding one, take the top two cards from the deck and pick one of them to keep. You can still keep this card.

- **HEAVENLY GRACE** -- You may employ diagonals when you move and strike, but only while flying. At the beginning of the game, go through the undrawn Power Cards and take the first Flight power you find. If you go through the deck without finding one, take the top two cards from the deck and pick one of them to keep. You can still keep this card.

Strange Synergy with Two Sets

If you and a friend both have a copy of the game, you can use these optional rules to employ them both in a large game for five to eight players (or even 12 players if you use the orange and purple teams). With this many teams, the standard map would get too crowded. If you don't wish to create your own, larger map, you simply use each map from the two sets. Rather than comprising one large board, though, the two maps each represent a separate environment (whether you consider them to be arenas, pocket dimensions, or whatever). Warriors can move between the two maps by stepping from a square at the edge of one board to the corresponding square on the other board. For example, a warrior standing on square A, 1 of one board could step into square A, 1 of the other. As an option, players can agree to impose other restrictions on cross-map movement as well, such as not allowing teams to cross until only one is left on each map, or requiring a warrior take no other action on a turn he moves between maps.

With up to six teams, each team can still have a different color. With more teams, players will either have to find a way to represent additional colors, or double up on existing ones. Having two teams with the same color can not only be confusing, but can pose an unfair advantage to teams needing to capture that color flag. An even number of players allows for games where all the colors in play are duplicated. Teams sharing the same color can either compete or cooperate, leading to negotiations and back-stabbing. Of course, the game could do away with flags in favor of a "last team standing" approach.

Special thanks to Brian, Eric, Kirk, Jamie, and Rob.

The Hunter's Society

by Peter V. Dell'Orto & Bob Huss

The Hunter's Society, or "Bounty Hunter's Guild" as it is called by non-members, is a society of big-game hunters and bounty hunters alike. Members of the Hunters Society style themselves as the greatest of hunters -- seeking and taking the biggest game. In a fantasy world, this is decidedly dangerous. Some members have deemed the most dangerous game to be sentient, and hunt humans (and their kin) as readily as others hunt monsters and prized animals. As a result of this mixed bag of targets, the entire society has gained the reputation as being willing (and able) to hunt anything . . . or *anyone*.

Setting

The setting for the Hunter Society assumes a "generic" fantasy environment -- monsters, human and non-human races, and at least a small number of armed bands of freebooting adventurers. The local government is assumed to be later feudal, with free cities, guild-based governments and Byzantine politics. Keeping those assumptions in mind, it can be adapted for most worlds easily. Stats are included for *GURPS*, but the Hunter's Society concept and organization is easily portable to other games systems and worlds -- especially *d20 System* worlds full of treasure-hording monsters and adventuring parties of various alignments.

The Society

History

The Hunter's Society is a combination "big game" hunting association and bounty hunting group. The Hunter's Society dates back to an informal circle of exceptionally adventurous hunters. "The Circle" consisted originally of seven hunters of great skill. They sought only the biggest, most dangerous game, and brought them down for sport and glory. Renowned for their hunting talent, they began to attract other would-be hunters (often influential nobles) seeking them as guides, instructors, and partners. After many years of this, they were contacted by a very high ranking lord for a serious problem -- helping track down the murderer of the Heir. Although the group had never hunted a man before, the challenge (and perhaps the potential reward) was too tempting to pass up. The Circle tracked down the killer and returned him to justice. In return, they were rewarded with a Patent to form a Guild. The Hunter's Society was officially born.

Over a century later, the Hunter's Society has undergone some changes. The Hunter's Society has stayed partly true to its "big game" hunting roots, but its renown in the Case of the Heir led to more bounty contracts. At first, these were regarded as exceptional and unusual. Eventually, the Hunter's Society simply added high-value bounty contracts to its normal "hunts." Bounty contracts have become a staple of their operations, so much so that the Hunter's Society is now known about equally well by the nickname "Bounty Hunter's Guild." It is said that if anyone will hunt a given target, they will -- dangerous bandits, renegade wizards, marauding dragons . . . anything.

Operations

The Society does not act as a group. Rather, its headquarters acts as a gathering place for like-minded hunters, a place to swap information and find fellows for dangerous expeditions, a place to make your brags and show your trophies. If special weapons are needed to take down specific prey, headquarters is the place to go to locate it. If you need to know what poisons work best on young dragons, some at the headquarters might know. The main headquarters is the common base and touchstone for Hunter's Society Members between, or getting ready for, jobs.

The Society can be contracted directly, although they will find out about any locally posted contract within 24 hours at

the most. The Society pays a small reward for notice of new contracts, so local informants, street urchins, and the like quickly pass on any information they get.

Actual hunts are largely conducted by members only. Some members like to have a lot of backup, hiring local toughs, professional mercenaries, or merely bringing along their personal guards (common amongst the rich and/or noble members of the Society). Members of the Society form their own groups. The Society has a mix of loners (such as Red Markmann, below), loose-knit groupings of hunters, and a few tight-knit groups that never hunt apart.

When hunting game, the Hunters will act as would be expected of any other type of safari -- they will bring appropriate gear and weapons, pack bearers and animals to move supplies, and anything else needed to bring down (or bring *back*) their chosen prey. When hunting Bounties, members will typically move in much smaller groups.

While big game is often hunted with lethal force, Bounties are typically worth a reward only when alive. Therefore, with few exceptions, Hunter's Society members are not duelists, nor are they assassins. Typically they will approach their bounty like a hunter approaching game -- with care, stealth, and with an aim to a quick takedown. A Hunter's Society member will not barge into a room, announce the impending arrest of a dangerous Barbarian Hero, and then fight it out. Nor will he assassinate someone in their sleep. The Hunter will instead try to choose the most vulnerable moment of the Bounty and quickly eliminate any possible resistance -- whether through displays of force, sleeping agents or other non-lethal attack, or actual physical subdual. Only if a Bounty is wanted "dead or alive" will he or she warrant immediate lethal attack.

Hunter's Society members stay fairly closely within the local laws. This is done out of convenience rather than an inherent sense of honor -- if there is not actually enforcement of local laws, most members will ignore them in pursuit of their target. Members exceed those laws to a degree that varies with the individual. The influence of the Society is quite strong, and as a result Society members are given much more slack than non-members by law enforcement. In some types of campaigns, this may lead to members being given Legal Immunity or Law Enforcement Powers of some type, or even allow them to "deputize" local militia or law enforcement to help them carry out an arrest!

Membership in the Society

In order to join the Hunter's Society, one must be sponsored in by a current member. According to the charter, this is to "require a potential member to gain the trust and respect of an Esteemed Hunter." One would normally gain this trust and respect by joining a hunt as a junior member or by demonstrating a sufficient skill at hunting on one's own. In practice, this usually means a new member is a friend of a current member. Actual skill at the hunt is the only way to gain rank and to survive the dangerous hunts required to impress one's fellow members, however.

A GM running a later "decadent" or degenerated Hunter's Society can make skill at hunting secondary to skill at Politics and/or Administration . . .

Membership in the society carries a small annual fee -- \$100 per year, due annually on the anniversary of the member's successful application.

Rank and Insignia

Hunter's Society members wear distinctive crimson cloaks. These cloaks are often reversible with a darker color (hunter green and black are common) to make them useful in "the field." They also wear rank badges -- a cloak clasp is most common, although rings and amulets are not unknown -- showing the symbol (and name) of their rank:

Ranks

- 0: Goshawk
- 1: Eagle
- 2: Falcon

- 3: Hippogriff
- 4: Griffon
- 5: Royal Griffon (as Griffon, but with a silver mane)
- 6: Roc
- 7: Dragon (in silver)
- 8: Grandmaster of Dragons (in gold)

Rank in the Hunter's Society is purchased as Administrative Rank. The cost is 5 points per level for ranks 1-8. Ranks 0-6 are the membership levels; Dragon and Grandmaster of Dragons are the ranks of the highest administration of the Guild. Those without any interest in administration never rise higher than "Roc." There is only one Grandmaster of Dragons, who heads a council consisting of Six Dragons. This Council of Dragons is based in the main Headquarters of Hunter's Society. Smaller sub-headquarters in other cities are typically run by a Hunter of Roc or Royal Griffon ranking, depending on the size of the city and the guild membership there. The Council of Dragons makes all of the decisions for the direction of the guild. Normally, this means setting fees, dealing with city politics, vetting special contracts, and so on. In a conspiracy-heavy campaign, a dark cabal of secretive old men with draconic titles directing a loose-knit society of bounty hunters is a campaign plot waiting to happen.

As a Patron, the Hunter's Society is a "reasonably powerful organization (assets worth 10,000 times starting wealth)." It has great wealth and a sizeable membership of skilled hunters. The Hunter's Society also is capable of putting pressure on local law enforcement and political organization on behalf of its members. The total base value is 20 points. They are typically available *Fairly Often* (9-), although in a campaign based in the same city as their Headquarters the frequency would be more like *Quite Often* (12-). For high-ranking members (rank 6+) frequency can be as high as *Almost All of the Time* (15-) to represent their ability to call on fellow members or assets of the organization on virtually no notice at all.

Skills, Advantages, Disadvantages -- Members of the Hunter's Society will almost always have a high level (often 16+) in Tracking, Shadowing, or both. Stealth is practically required for hunting game, and is very useful for creeping up on a bounty! Members will also typically learn Survival, Area Knowledge (of their main operation area, or that of their primary quarry), and other Outdoor and Animal skills. Those that concentrate on actual game instead of bounties will also find skill 15+ in Animal Handling very useful, as it gives a bonus when fighting animals. Combat/Weapon skills, especially non-lethal weapons skills like Blackjack, Bolas, or Lasso, are very common. Unarmed combat skills are very common amongst those who mainly hunt other men.

Advantages such as Alertness and Single Minded can be very useful to a Hunter's Society member in tracking down their target. Any combat advantages -- especially Combat Reflexes -- are useful if the prey resists or tries to ambush the hunter! Disadvantages unlikely in Hunter's Society Members include Laziness, Distractible, Unfit, or other disadvantages that reduce the ability of the Hunter to track and bring down his chosen game.

Headquarters

The headquarters of the Hunter's Society is a three-story red brick building at the very end of the Street of Guilds, which ends at the beginning of High Street, the beginning of the High Quarter. Hanging on bronze chains from a bar are a pair of signs, one below the other. The top sign is on a green field, and is a pair of deer's antlers and a griffon. Underneath is a black sign with an arrow and a sword crossed over a gold coin.

The first floor of the headquarters is poshly decorated. The door is heavy oak with a brass knocker; the main floor is a few feet below street level and upon entering you need to descend down six steps to reach the "main floor." The room opens to the right on a red-carpeted area with plush chairs surrounding small round tables. The room smells heavily of smoke. To the far right is a "bar" where visitors can check in. The first floor has a large glass window array and a cloakroom. Mounted on the walls are the heads (and sometimes claws, tusks, etc.) of particularly fierce creatures -- lions, tigers, giant reptiles, tusks of elephants and giant boars, etc. Non-members are never allowed past the first floor. The second floor features a bar for members, as well as featuring a meeting room and large "board" listing all posted contracts. The third floor is the meeting area for the Dragons. Both levels are very well decorated, and are richly furnished.

Example Member

Crag "Red" Markmann is an example of a very high-ranking and skilled Hunter's Society member. He has been a member for over two decades. He specialized in hunting humans, especially wizards and dangerous warrior types. He is very skilled and dangerous. Most members are much less capable; Red makes an excellent mentor for less experienced Society members or a dangerous foe for criminal PCs.

Crag "Red" Markmann

274 points

Age 36, 5'8", 215#, Red hair, beard, and mustache. Ruddy complexion, rosy cheeked.

ST 14 [45]; **DX** 14 [45]; **IQ** 12 [20]; **HT** 12 [20].

Speed 6.5, Move 5.

Advantages: Administrative Rank 5 (Hunter's Society) [25]; Combat Reflexes [15]; Comfortable [10]; Fit [5]; Patron (Hunter's Society, 12-) [40]; Toughness DR1 [10].

Disadvantages: Light Sleeper [-5]; Obsession (Never let a bounty escape) [-5]; Sense of Duty (Hunter's Society members) [-5]. Considers himself a "fair man"; Tries to take on the toughest cases; Does not particularly care about money [- 3].

Skills: Area Knowledge (Home City)-13 [2]; Area Knowledge (Home Country)-14 [4]; Axe/Mace-15 [4]; Axe Throwing-16 [4]; Brawling-15 [2]; Broadsword-16 [8]; Knife-14 [1]; Shadowing-16 [10]; Shield-16 [4]; Stealth-15 [4]; Streetwise-12 [2]; Tactics-10 [1]; Tracking-12 [2]; Wrestling-14 [2]. Arm Lock-16 [1]; Knee Strike-15 [1]; Off-Hand Weapon Training (Axe Throwing)-15 [4]; Stamp Kick-14 [1].

Equipment: Red usually wears concealed armor of some kind -- typically Chainmail made into *Fine* Brigandine (per GURPS Low Tech, page 68) -- and boots. He carries a *Fine* quality Thrusting Broadsword with a single edge and a red leather hilt. He also carries a Large Knife and either a Hatchet or Throwing Axe (depending on his chosen target) and a Medium Shield. He usually carries some cord for binding his Bounties and a hood for blinding them (to make escape that much more difficult). If expecting combat, he will wear a Pot Helm and Gauntlets.

Red prefers to take his targets by surprise and get the drop on them. He will use Shadowing (and his Area Knowledge if in his home area) to follow his target and try to take them while sleeping -- typically using Wrestling, Arm Lock, and then tying them up. Despite his rank, Red is relatively poor. His low regard for money means he typically spends his money on improving his equipment, helping out fellow guild members, or on research and bribes in his next tough case. Red is very thorough in researching his targets, using street contacts, his fellow guild members, and his own observations while Shadowing his target.

Other Variations

As presented, the Hunter Society is for a generic fantasy setting. However, it can work equally well in a Space Opera setting. Simply swap out wizards, dragons, and magical weapons for psychics, space-creatures, and blasters. The idea of a society of big game hunters fits well in some Victorian Age settings -- Space:1889 particularly, with Venus promising especially big game.

Uses in the Games

The Hunter's Society can be used in many ways in the campaign. Here are three broad possibilities for taking the Hunter's Society and changing how PCs will interact with it.

- **The Good Guys:** In this variation, The Hunter Society are portrayed as heroic. They face dangerous monsters for the good of society. The glory and wealth is useful and desirable, to be sure, but there is a general sense that the Society members would do it even without those incentives. They also hunt down dangerous criminals that society cannot deal with on its own. They provide a useful service and are generally respected, trusted by the Powers that Be and their servants (the Watch, the Bureaucracy, the local Knights, or whatever). The PCs can either be allies, members (the Society makes a useful Patron) . . . or enemies. If the campaign is centered around criminal or renegade PCs, even a do-gooder Hunter Society can be a dangerous enemy. A "good guys" Society would be unlikely to hunt non-dangerous criminals as a matter of principle. They would be likely to hunt man-killing monsters and spend rather less time hunting purely as sport.
- **Neutrals:** As listed, the Hunter Society makes a good "neutral" party in a campaign. Its members are given no special benefit of the doubt as to their motives -- the public generally believes they do it for the glory and money, but regard it as a benefit to society much as any other soldier or adventurer's monster or criminal hunting. The Hunter Society is generally mercenary, equally hunting minor criminals and dangerous criminals, "sport" animals and dangerous man killer alike. PCs of any stripe could find themselves under the Bounty List thanks to enemies or the authorities. Regardless of guilt or innocence, the Hunter Society will be willing to track them down.
- **The Bad Guys:** In this scenario, the Hunter Society is nothing more than high-class scum. Either they are known as Bad Guys but are untouchable due to the wealth and influence of its members, or they maintain a veneer of respectability behind which they hide their more nefarious activities. Perhaps they are gathering rare animal parts to sell to shady wizards, using "bounty hunting" as a screen for hunting humans for sport or as a part of criminal (or Government) contract killings. The Hunter Society as a "front" works very well for an Assassin's Guild hiding in plain sight. A group of generally heroic PCs could oppose such a group, forced to deal with skilled but unprincipled hunters as well as the wealth and societal influence of the group. A group of evil PCs would do well with such a group as their patron.

d20 System Notes

Members of a *d20 System* Hunter's Society will tend to have levels in fighter, ranger, and rogue, as those are the classes that most closely fit the archetypal member of the Society. A few members might have levels in bard; that class's abilities could make for an effective hunter-of-men. The Society might have a few members with some spellcasting ability (and thus levels in spellcaster classes), but serious arcanists or divine spellcasters tend to be drawn to other groups. Berserkers don't make terrific bounty hunters, so barbarians aren't common in the Society, either. Monks are even scarcer, though a monk's abilities could make for a fairly effective manhunter. Paladin members are probably entirely unheard of.

Among the myriad non-core *d20 System* resources, Atlas Games' *Crime & Punishment* has perhaps the most usable information for bounty hunters; it even has a bounty hunter core class. Most of the variant ranger classes (like the wildlander from FFG's *Midnight* setting, or Monte Cook's [variant ranger](#)) are equally adaptable, as are prestige classes like the commando from Mongoose Publishing's *Quintessential Rogue*.

Important skills for members of the Society include Gather Information, Knowledge (Geography), Knowledge (local), Spot, and Survival, as well as the usual "adventuring" skills (e.g., Climb, Jump, stealth skills, etc.).

In terms of feats, track is nearly mandatory for any serious hunter, either of men or beasts. Feats like Alertness, Stealthy, Self-Sufficient, and the like can serve to increase a hunter's skills to truly impressive levels. Improved Unarmed Strike and Improved Grapple can make it much easier for a bounty hunter to bring their target in alive.

Crag "Red" Markmann: Male human male Ftr2/Rgr3/Rog3; CR 8; Medium humanoid; HD 2d10+4 plus 3d8+6 plus 3d6+6; hp 55; Init +3; Spd 30 ft.; AC 21, touch 13, flat-footed 18; Base Atk +7; Grp +10; Atk +12 melee (1d8+4/19-20, +1 longsword) or +11 ranged (1d6+3, masterwork throwing axe); Full Atk +12/+7 melee (1d8+4/19-20, +1 longsword) or +8/+3 melee (1d8+4/19-20, +1 longsword) and +6 melee (1d4+1, heavy shield); SA favored enemy (humans +2), sneak attack +2d6; SQ combat style (two-weapon combat), evasion, trapfinding, trap sense +1, wild empathy +3; AL N; SV Fort +10, Ref +10, Will +5; Str 16, Dex 16, Con 14, Int 13, Wis 14, Cha 11.

Skills and Feats: Climb +7*, Diplomacy +3, Gather Information +6, Hide +12*, Intimidate +4, Jump +7*, Knowledge (Geography) +6, Knowledge (Local) +8, Listen +11, Move Silently +12*, Ride +5, Search +8, Sense Motive +6, Spot +13, Survival +8, Use Rope +9; Alertness, Endurance (B), Improved Grapple, Improved Shield Bash, Improved Unarmed Attack, Point Blank Shot, Two-Weapon Fighting (B), Track (B), Weapon Focus (Longsword). * *Doesn't include armor check penalty, typically -2*

Possessions: The **d20 System** version should have equipment appropriate for an NPC of his level. The statistics above assume: +1 chain shirt, +1 heavy shield, +1 longsword, masterwork throwing axe, two *potions of cure moderate wounds*, a *potion of bull's strength*, a *cloak of resistance +1*, and about 2,400 gp in other useful gear.

The Great Rope Bridge

by Brian Rogers

Preparation

This adventure serves four to six adventurers looking for some extra cheese. It tastes best with a pulp setting, but can be modified to fit any game that lacks air transport into uncivilized areas.

Ingredients

The Bridge

It stretches 50 yards across a 200-foot-deep chasm, crossing a river inhabited by local predators. Just looking at it brings to mind questions about mortality and gravity, but with other passage days away in either direction, this aged wood and rope bridge is the only option. Every cinema goer knows what happens before the final reel. Every gamer's palm itches to hold the machete that sends this lynchpin of local trade plummeting to the rapids.

But not today. Today your job is to protect it. From people just like you.

The bridge is moderately secure. It is wide enough to support the largest local vehicle (up to a 1940s vintage army truck) if you keep the wheels straight -- deviation damages the ropes -- and smaller vehicles can pass safely. It supports the weight of the next-to-largest local vehicle loaded with local product, but not a full load of the largest vehicle. The moorings are secure, ropes are basically sound and only scattered planks are weak, meaning that only the truly unlucky will have all they're standing on collapse. Of course, individual planks will creak, splinter, break or slip into a long cinematic fall.

No matter how unsafe the bridge looks, the locals trust it. They must; it connects modernity on one side to the vast uncivilized jungle on the other. Without it, the jungle's resources are unobtainable to the civilized ports and cities. Without it distant missionaries and explorers would be cut off. The societal pressures on the bridge equal any physical burdens. The bridge must hold.

The Commission

This is where the player characters come in. Something important is happening soon, and the authorities need to be 100% certain that the bridge will still be there. Why?

- There are military forces massing. The troops could be needed to garrison a fort, move against a native cult or take some other one-time rapid action.
- During wartime, this bridge might be needed against the possibility of a retreat or flanking maneuver. It's not a target right now but in a month it could be critical.
- An exploratory expedition is en route, and it would be embarrassing to have their preparations undone at the first step. Cautious investors are looking to avoid that embarrassment.
- Explorers could be returning, or a mercantile caravan comes through periodically. In either case they have sent messengers ahead and have committed to the bridge route.
- An infrequent pilgrimage is due, and the church must ensure that the desired path still exists, or the faithful will be trapped (or worse, unsaved).
- No reason is given. The PCs' enigmatic employer promised high compensation with no explanation. This is guaranteed to ratchet up the paranoia.

Regardless, the heroes must make sure it is standing in one month. After that, their employers will either replace them with cheaper guards or no longer have such an overwhelming need to secure it. Getting there should be easy, but once there the PCs must wait, watching the great rope bridge sway and creak dangerously when crossed, knowing that in their hearts they really, really want hack it apart during a spunky kid sidekick crossing.

Note: these scenarios all assume that the guards camp on the civilized side of the bridge, and require some modification if they either split up or camp on the jungle side.

Cooking Tips

Translate the Recipe

Unless a PC speaks the local language they'll need an interpreter -- one local merchant will part with his middle son at an exorbitant rate (in advance) with the heroes' promise that he'll be returned unharmed. The boy is fluent in the local language and has a grasp of a civilized tongue (though perhaps a language that not all the PCs know), but has a disconcerting tendency to translate long local speeches as single sentences. The boy's trustworthiness and competence is left to the GM; if the players want genre tropes he'll become a snake-tongued betrayer or a beloved new sidekick. If not, he's a useful tool that elicits some suspicion and must be returned unbroken or the guard's profit margin is shot.

Heat Slowly

The PCs have several days of waiting, watching roughly 12 locals per day cross the bridge. Some are regulars, others cross and are never seen again. All will grudgingly fork over tolls if the players decide to make some cash (though word of this will get back to their superiors after it's over). The guards will notice looks of curiosity, resentment, fear, and suspicion, but questioning anyone reveals that the locals don't argue with armed bands: they'll be all smiles when approached. The guards should quickly realize that they aren't wanted, with increasing feelings that something is about to happen.

Despite the chilly reception, local merchants pester the guardians to buy, sell, or trade, offering up local wares, foodstuffs, alcohol, and spouses/liaisons. Players being players, they'll no doubt suspect poisons, traps, theft, assassination attempts, and con artists, but they're only partially right. First, the local alcohol is foul stuff that has a mild soporific for an extra kick, so guards will get drunk faster than expected and have hangovers that recall a Busby Berkeley dance number. Second, the most gregarious trader isn't returning for months, so he's willing to cheat the guards with cheap goods and clumsy rates of exchange, but won't risk outright theft. Finally, accepting locals as camp followers has ramifications, mentioned below.

The Spices Under the Sauce

Much as the guards might be worried about native attacks, the first sign of trouble comes from their countrymen: a group of three "civilized" people and their local guides, guards and diggers approach in the largest viable truck. The truck slows to a stop in front of the PCs and the three exit the cab.

The oldest, Professor Jenkins, starts speaking to the guards, happy to have contact with another person who speaks his language. Jenkins is an academic who'll gladly describe their expedition to a lost jungle temple, detailing the attendant advancements for scholarship. Before he reveals too much he is admonished by their driver, Smith, not to bore the guards. Smith has a square jaw, corded muscles and several weapons, and he starts corralling his companions back into the truck. Meanwhile the third occupant, Judy (obviously the Professor's daughter) has been taking photos of the bridge while fending off the advances of the expedition's greasy foreman, nicknamed "Happy."

If the guards don't warn Jenkins about the bridge's limits, Smith will declare it "too close to risk" and have Happy order the burly, shovel-wielding men to follow the truck on foot. If the players taken this opportunity to question the work crew, they'll learn "your countrymen are crazy, that they won't even make it to the temple and even if they did they'd . . ." This is when Happy shuts them up with a finger across the throat gesture. He ushers them across the bridge while

making unctuous good-byes to the guards. Within moments the workers are back in the truck and the Jenkins expedition vanishes into the jungle.

Smuggle in the Extra Sauce

Unbeknownst to the guards, the bridge is the route for a local band of drug traffickers (with the drug in question based on the campaign). The men occasionally sample their wares, and are prone irrational confidence when imbibing and to paranoia when coming down. Firmly convinced that the guards are there to catch them in the act (regardless of any evidence), they haven't moved any goods across the bridge. Now, late in their deliveries, they have conceived a desperate, cunning plan: They'll create a distraction on the civilized side of the bridge and then rush all three carts across *at the same time* before the guards notice. They'll vanish into the woods before the guards have any chance to follow them. Right.

At a perceived *great personal risk* the traffickers sneaked two of their number to the civilized side (assuming the guards even care about the locals, they might spot two shaky gentlemen crossing the bridge during the day; the men, if questioned, will complain of hangovers). However, on the other side they squabbled about the best form of distraction, and each has their own master plan.

The first hires the camp followers to distract the guards. This includes arguments, amorous advances, or anything that keeps the guards minds off the bridge. If the guards avoided attachments, the trafficker procures candidates at the closest village, alternately threatening and paying them to describe themselves as "gifts" from the gracious villagers. The traffickers have dangerous reputations, so the camp followers will stick around and try again even if thrown out.

The second lights a large fire in the jungle, hoping that the flames will distract the guards. This was the initial plan, so the bridge run starts shortly after the flames appear. The fire may burn out of control (1d6: 1-2 stays under control, 3-4 looks like it threatens bridge and camp, 5-6 actually threatens bridge and camp), but in any case it will cause camp followers to panic. The flames starts about midnight, or three hours after the camp followers start acting up.

At the sight of the flames, the traffickers try to rush way too much weight across the bridge at once. Guards on the jungle side have some chance of stopping them, but the traffickers will try to run them down. There are three carts, and once either two carts are midway across the bridge or all three are on the bridge at once, a single rope snaps. At that the horses panic and the front cart gets caught in the ropes. The next crashes into it a second later.

The GM should pull out a 20-sided die set at 20 (or some other visible method of tracking damage) and count down one number every 12 seconds of game time. Once the counter hits 0, the bridge collapses. Describe the increasing damage to the bridge as this chaotic spectacle continues. The guards have four minutes to get half the weight off of the bridge. Adding another six people or one mount speeds the countdown to one every six seconds. Adding another vehicle increases it to two every six seconds. What is needed is to either get the horses off the bridge, get the contents of the carts off the bridge, or somehow get one to one and a half carts and their cargo off the bridge. Of course, the panicked drug traffickers will both resist and flee, the fire might be approaching the bridge (if it does, it will do so in five minutes, and the horses will refuse to go in that direction) and the camp followers will be very much in the way.

Once the guards have rescued the bridge, leave the d20 out. They're barely halfway through the month, and the damage to the bridge won't heal on its own.

What to do with the Traffickers is a side question. If let go, they will flee and never be seen again. If handed over the camp followers' village, the locals will dispense justice. Still, if the guards want to hold them captive or discuss the morality of the situation, let them. The bridge remains, swaying, waiting for the next threat.

Just Add Water

Three days after drug trafficker fiasco the rain starts -- a heavy native rain shower that the locals say will likely last for four days. While the bridge can normally handle this downpour, if it has had its structure reduced to 15 or less it takes an additional one point of damage per day during the storm. The heroes can stop this damage but doing so requires

great personal risk out on the bridge in the rain. Any competent efforts will prevent damage. The locals will refuse to help and call them mad, saying no one goes out in the rains.

This means the guards should be surprised when a pair stumbles from the jungle with every intention of crossing the bridge, storm or no. This is a civilized missionary and a local, who has been poisoned and needs medicine. Of course, the planks give way underneath them, leaving the missionary dangling precariously as his companion collapses. A heroic rescue is obviously called for, which forces the heroes onto the bridge during the worst of the storm. Once across the missionary asks the use of a vehicle, but with or without further help the couple makes their way to civilization, the local wasting away before the guard's eyes.

The local's condition should be outside the range of any of the PC healers (or at least any such healers on the jungle side of the bridge). It also presages future events; he was damaged by contact with some local malevolent force that was disturbed by something. The wounded local will mumbles deliriously, which translates to something like "don't steal from the dead men."

Feeds 10,000 Damned Souls

Five days later (three days before the commission's end) the guards witness a disturbing sight: the Jenkins Expedition truck barreling out of the woods, heading straight for the bridge! Such a rapid crossing will certainly damage the bridge. Stopping the truck is as easy as getting in the way (and then backing up as the breaks fail to catch for a second).

Once they stop the truck, they find Professor Jenkins, wild eyed, at the wheel. Smith has a broken leg and arm and is being tended to by Jane. The Professor starts ranting about how they must keep moving, because the ghosts are following them. Smith issues perfectly sensible commands about crossing the bridge and cutting it down to keep them safe. Happy slips from the back of the vehicle (surprising everyone, who thought him dead in a temple trap) and grabs Jane, threatening her with a knife unless they get him away from the dead men. During this tableau, ominous drums start in the jungle.

The PC guards have several problems. Any minute an army of 200 zombies will pour out of the woods, intent on killing all of the Jenkins expedition except for Smith. They'll also kill anyone who try to stop them, which means that Smith will make himself a target and the PCs are likely to join him. The best tactical position for fighting these things is on the other side of the bridge, but that would undoubtedly destroy it. Smith is all for that; he *is* a pulp adventurer after all, and he's been dreaming about cutting the thing down since he saw it.

The zombie army appears to be an unstoppable thing, but a concerted effort from tactically minded PCs might defeat it. The Zombies are vulnerable to fire and salt, plus any faith-based powers the heroes have at their disposal. They attack in waves, with first 20, then a pause, then 40, pause, 60, pause then the final 80. The pause length is just enough time for the heroes to develop new plans and hunt for another item the zombies want -- one or two rounds in most systems. The Zombie's are magical in nature, and some will try to grab and kiss targets on the mouth, which is almost instantly fatal.

If the heroes turn their back on the Jenkins Expedition, they will try to escape across the bridge; just because the guards are willing to sacrifice themselves to save the bridge doesn't mean they have to! The Jenkins vehicle causes 2 point of damage to the bridge per six seconds, taking down ropes and tearing up planks, and take 12 seconds to cross. Once anyone but Smith reaches the bridge, the Zombies rush as a mass to reach them. This also damages the bridge, as the zombies don't subscribe to fire codes and 100 will try to cross at once. That does 1 point of damage per 6 seconds, and the zombies will take 24 seconds to cross. This gives the Jenkins people 12 seconds on the other side to cut the bridge down and send 100 zombies to their doom -- assuming the PCs don't stop them.

What the Zombie Army wants is anything stolen from the temple, and everyone but Smith has something.

- The Professor has a carved rock in his pocket that "will prove my theories about man's origins, and I'm not giving it up!" He will not hand the stone over, and it must be taken from him -- living, unconscious or dead.

Happy has a gemstone amulet under his shirt, which he'll give up if the PCs convince him it will stop the zombies. He also has a ceremonial knife in his boot which he has forgotten, but will remember when the situation looks bleak.

- Jane innocently insists that she took nothing, and in the strictest sense, she didn't. However, she has a roll of film in her bag and another half-shot roll in her camera under the passenger seat. The Zombies won't stop until they have those too.

Once the army gets what it wants, it shuffles back into the jungle to the fading sounds of drums.

Cleaning Up

Two days later is the end of the PCs' contract. Whomever they were waiting for arrives (though if it was more troops the GM might have them arrive early as a PC-saving coincidence. Likewise, if it wasn't more troops they might still turn up early as another complication if the PCs have it too easy). If the bridge is still there the guards will be rewarded, but if not they might find themselves with nothing but a chasm between them and some irate patrons . . . or worse -- on the same side!

Survivors of the Jenkins Expedition offer some thanks, but live in their own solipsistic world and spend most of their energy cursing this venture's wasted effort (or how their finds will set them up for life). They see themselves as this story's heroes, with the PCs just guards of above average competence. The Zombies naturally crumble to dust and blow away once killed, so the PCs have no evidence of the expedition's treachery, greed or stupidity to present to their employers.

Side Salad

Some players might decide to repair the bridge after the drug traffickers incident. This should be encouraged, but it's unlikely that the PCs have the tools they need. The local villagers have such tools, but they are hours away and not for sale; from the villagers' perspective, if the PCs are going to claim the bridge they should maintain it. They will follow orders to fix it, albeit with passive-aggressive loafing and incompetence.

Concerted effort by the PCs repairs one point of damage to the bridge every other day. If the PCs corral the villagers this improves to one point a day. There is only enough material to restore five points without cutting down trees and fashioning more ropes, which slows the repairs by half. The GM should ad-hoc any magical repairs, keeping them to at most +1 point per day.

Remember that the four-day storm comes just three days after the drug traffickers, and the Jenkins Expedition's return less than a week after that -- The PCs will be hard pressed to restore the bridge to pristine condition before the zombie army arrives.

Extra Spice

This is intended for a Pulp-era game with tough zombies and 1920's-30's technology.

Transporting it to a fantasy setting requires making the Jenkins vehicle a sturdy large horse drawn wagon, and Jane's camera becomes a bound sketchbook (with some loose sheet sketches in her bag). The Zombies should remain creditable threats, and not be eliminated by a few faith-based tricks or massive flame spells.

Similarly, a Victorian Exploration game requires converting the truck to a cart, but the photography equipment can remain, albeit bulkier.

In a no-magic game, the Zombies are a cult using the myth of the Zombie temple as a cover. Their strength and durability come from plentiful quantities of the same drugs the traffickers tried to move across the bridge. Their kissing attack is actually spitting out a poison to which they are inured -- it is this poison that has cursed the

missionary's friend.

If used in a Horror setting (such as Eden Studio's *All Flesh Must Be Eaten*), the victorious PCs have a new problem. the missionary's friend will have carried the zombie curse to the nearest city. How they want to deal with that is a story for another day.

Pyramid Review

Parapsychologist's Handbook (for Call of Cthulhu)

Published by [Chaosium, Inc.](#)

Written by Chris Jerome

Cover by Meghan McLean

Illustrated by Simon Monk and Jessica

110-page tape-bound b&w softcover; \$14.95

It is an unfortunate truth that Chaosium's release schedule has a rather elastic quality to it. Although there are several supplements promised for release in the relatively near future for *Call of Cthulhu*, devotees of the game have learned to be patient when waiting for the arrival of any such supplements upon the shelves at their local gaming emporium. Fortunately, Chaosium has decided to explore a new approach that plugs the long gaps between releases. This is a series of Monographs made available from the stacks of the Miskatonic University Library Association, the first being the *Parapsychologist's Handbook*, the second being the nearest to an official publication of the *End Times*, the campaign setting the dark and subtle future of mankind and the Mythos.

Each Monograph is *not* in fact an official release distributed through the normal channels. Rather, they can only be purchased directly from Chaosium themselves, and instead of being sent out as an electronic PDF document as is the current mode, each is printed out by Chaosium, tape bound, and then mailed out to the purchaser. Chaosium believes that each Monograph is worth the time and attention of *Call of Cthulhu* devotees, but as a publisher they lack the time to do anything more than read the manuscript through and check its suitability and interest. Should a Monograph prove popular, then they may actually give it a proper release. Which begs the question: If a Monograph *does* prove popular, and the publisher feels that it warrants proper publication, will the *Call of Cthulhu* fan want to buy it twice?

The other problem with this publishing method is the lack of time and attention given to the layout and style of the book. To quote the front of the *Parapsychologist's Handbook*, "Monographs published by the *Miskatonic University Library Association* are works in which the author has performed most editorial and layout functions. These are deemed by the trustees to offer significant value and entertainment to our patrons." To be blunt -- unfortunate, though necessary -- the trustees of the Miskatonic University should not have left any of the editorial and layout functions to the author. Both, in all honesty, are badly handled, and in terms of the editorial function, appallingly so! Inconsistent in terms of punctuation and grammar, that single read-through by the Chaosium staff was unquestionably enough to have spotted and highlighted all of this manuscript's herd of mistakes and inconsistencies. When you consider that this Monograph is the equivalent of a PDF document printed out and sent out by the publisher, then the *Parapsychologist's Handbook* is exceedingly pricey in comparison with the many titles currently available in that format, the majority of which possess infinitely superior production values. The book also suffers from the inclusion of some dreadful artwork, much of which feels inordinately out of place of this book.

If this Monograph suffers from slipshod production values -- with even the book's introduction appearing to begin mid-sentence -- there remains the question of the actual content. The subject matter is not an unfamiliar one to the *Call of Cthulhu* game, having been touched upon in countless magazine articles and also in a number of supplements. After all, even if the average group of investigators is prying into something as outré as the Cthulhu Mythos, they still looking into the paranormal in their own way. But the *Parapsychologist's Handbook* is the first supplement for the game that provides an in-depth treatment of the subject. This is for *all* three main eras of the game -- the 1890s, 1920s,

and *Cthulhu Now*; further, it is authored by an expert on the subject. Chris Jerome has worked as a psychic researcher, and brings his experience to the page in what is designed as a sourcebook for both the player (in creating and roleplaying an experienced parapsychologist character) and the Keeper (in creating and running adventures built around the science of parapsychology). The included material and rules is dual-stated, suitable for both [Cthulhu d20](#) and the standard *Basic Role-Play* version of *Call of Cthulhu*.

The first part of the *Parapsychologist's Handbook* covers the nature of the parapsychology campaign, actual investigations (how to approach and conduct one as well as what equipment to take), viable methods, and a number of different occupations. The equipment list is particularly well done, pleasingly illustrated in places with actual photographs. The highlight of these photographs is the one of the ghost hunter's toolkit assembled by the famous English ghost hunter, Harry Price. It also appears in the book's frontispiece at a much larger scale, which affords it some more detail; however, a much bigger reproduction, marked with the kit's contents, would have been even better. Both the advice on investigating psychic phenomena and using psychics in such an investigation turn out to be common sense, and is in some cases obvious if you think about it, but the inclusion is welcome nonetheless.

The various parapsychology occupations are a mixture of old and new templates. The Psychical Researcher is suitable for use during the 1890s and 1920s, whilst the Parapsychologist reflects a more modern approach. Both occupations employ the *same* template. The Ghost-Hunter is for investigators that are less inclined towards laboratory work, while the Parapsychologist -- Spontaneous Case Specialist is another take on the modern Psychical Researcher who works in the field. The other related occupations are the UFOlogist (useful also for a *Delta Green* campaign), the New Age Seeker or Wiccan, the Stage Magician, the Professional Fake Medium, plus the Psychologist and the Professor, which, along with the Ghost-Hunter, are taken from the *Investigator's Handbook, Vol. 2*. Not one of these occupations involves the use of psychic abilities or powers; their like is covered elsewhere in the book.

Chapters in turn are devoted to Ghosts and Hauntings, Investigating Poltergeists, and Spiritualism and Mediumship. How each is regarded and investigated during the three eras is covered, as well as the various types of phenomena that might be encountered, along with a timeline that runs right up to the modern day. These chapters can be read by the players and the Keeper, providing for the players enough information to role-play a parapsychologist investigator in a knowledgeable way, while also giving the Keeper an indication of the skills an investigator will require, and a fair degree of background material.

Particularly interesting is the chapter on Spiritualism and Mediumship, the movements for which will be popular and prevalent in campaigns set in the 1890s and 1920s. Besides looking at both types of Mediumship -- physical (table-turning, ouija board, ectoplasm and spirit photography) and mental (psychic surgery, automatism or automatic writing), it also gives several Spirit Guides for the art of Trance Mediumship. These are to be roleplayed as NPCs and are very colorful characters that play up to the archetypal clichés you would expect to encounter at a séance.

Psychical research need not be unorganized nor an amateur affair, and several investigative organizations are detailed to that end. Most notable of these is the SPR, or The Society for Psychical Research, founded in 1882, and its American counterpart, the ASPR (The American Society for Psychical Research), founded two years later. The means of joining the SPR and the ASPR are listed for all three eras, along with how to get published in the SPR's quarterly magazine, the *Journal of the SPR*. Further, Appendix B (and *not* Appendix C as it should be in the *Parapsychologist's Handbook*, but since there are actually two Appendix A's . . .) provides a list of many of the more interesting issues of both the Proceedings and the Journals of the SPR. Available on the Internet to SPR members, these might make more-than-plausible player handouts, but are here summarized and given possible skill increases should an investigator read them.

The use of the SPR should be roleplaying grist to the Keeper's mill, as should the many descriptions -- though not their game stats -- of some very interesting NPCs, ranging from the expected Sir Arthur Conan Doyle and Harry Houdini to the lesser known, such as Harry Price, Ghost Hunter, and the Physical Medium Eusapia Palladino. In particular, the investigators can become involved in the psychical politics of between the wars, when a schism in the ASPR led to the foundation of the Boston Society for Psychical Research. This split ties into the rules for differing worldviews or Paradigms of how the unexplained can be explained.

There are three such Paradigms discussed, the first being the Spirit Paradigm, a belief in the existence of the astral plane, of spirits that survive beyond death and that spirits can also be of a non-human origin -- spirits, faeries, demons, gods and the like. Opposing this viewpoint and denying the existence of spirits, is the Psi Paradigm, which argues that the paranormal cannot yet be explained by science. It should be pointed out that the magic of the Mythos falls under this Paradigm. In game terms, an investigator's Power attribute would reflect the strength of their spirit under the Spirit Paradigm, but under the Psi Paradigm it would be their latent psychic potential. The third paradigm is the Sceptic, which holds that all paranormal events are in fact delusions and its adherents actually investigate why people believe that they have seen something out of the ordinary. Even more radical is the Skeptic Paradigm, which simply states that any paranormal happening is impossible! Both Lovecraft and Houdini are Skeptics.

These three Paradigms predominate at different times, with the differences between the Spiritual and Psi Paradigms being the cause of the schism that struck the ASPR. Their use is of course, optional for the Keeper, but they can be used as a method of modeling the "reality" of their campaign. Even if the Keeper chooses not to use any of the three (or four), they can still be employed as a useful guide to how an NPC or investigator interprets the paranormal. Examples from a couple of Chaosium's campaign help illustrate how these Paradigms could work.

The latter half of the *Parapsychologist's Handbook* is for the Keeper's eyes-only. Besides guidance on creating and running parapsychological campaigns (including having the Keeper help out the paranormal investigator character with suggestions and ideas that an *actual* investigator would have), this is where the rules themselves are given. Essentially these are organized as counterpoints to chapters given in the earlier player's section. Thus in the chapter on "Parapsychology in the Lab," the rules detail how to simulate Zener Card tests, Drawing Tests, RNG (Random Number Generator) Tests and so on. The Paradigms are also applied to some of the phenomena, such as explaining poltergeist activity under both the Spirit and Psi Paradigms. Under either, the poltergeist would be modeled by using the statistics for the Ghost, and giving it a special power or two, such as telekinesis or pyrokinesis, or the *Levitate* spell. Alternatively, they might be modeled using statistics for Demons or Fairies (statistics are given for the Pixie for both game systems). Hoaxes and mistakes are also discussed, as well as how paranormal phenomena can be explained by the activities of Mythos entities -- the Lloigor and telekinesis, Fire Vampires and pyrokinesis and so on.

The Spirit Paradigm explanation for poltergeist activity is relatively easy to explain, whereas the currently accepted Psi Paradigm explanation -- RSPK or Recurrent Spontaneous Psychokinesis -- requires more work upon the part of the Keeper. RSPK explains poltergeist activity as an expression of PKE, or PsychoKinetic Energy, by a human mind that is having a nervous breakdown outside of its head. The Keeper will need to create and build a reason for this, developing a credible cast of characters with whom the investigators will need to interact with in order to get to the cause of the outbreak.

The *Parapsychologist's Handbook* also provides one more approach to the creation of psychic characters. Not as an occupation to be represented as a template, but rather as abilities beyond whatever job or training a character might possess. Like much of the rules given in the rest of this supplement, these are a very low-key affair and in many cases open to interpretation. The idea here is that these abilities are uncertain in their effect, and in some cases, might well leave the psychic open to influence or attack from Mythos entities. And of course, if R'yleh should rise or the frigid winds of Ithaqua gust around the psychic while they are in the Arctic North, then their sanity is likely to suffer . . . While how Mythos magic interacts with the paranormal is described, along with a number of new Psychic feats for *Cthulhu d20* (including Divination, Aura Reading, Psychic Self-Defense, Psychic Attack, and Astral Projection), there are no rules given for the use of psycho-kinesis nor telekinesis. These new *d20 System* feats are slotted into an appendix of their own, while the other appendices give a description of the many papers and journals published by the SPR, and a set of badly pixellated Zener Cards. More useful is the appendix of Sinister Seeds, seven decent adventure ideas ready for the Keeper to flesh out.

The *Parapsychologist's Handbook* is an excellent supplement, but one that is very much waiting to happen. True, it is full of fascinating information and ideas that could only have come from someone with experience in the subject matter. Yet it is seriously compromised by production standards so woeful that they might be seen as the grammatical equivalent of a mugging. There is nothing inherently wrong in publishing a book that has had such skills as punctuation, layout, and editing left up to the author, but this should never have happened in the case of *this* book. Chaosium may not have brought an editorial hand to bear upon the *Parapsychologist's Handbook*, but they at least

have read it through to verify the quality of its ideas and content. However, if the problems in presentation are so obvious, the equally obvious question has to be "Why did Chaosium deem the *Parapsychologist's Handbook* fit to publish in its current state?"

And further, given that state, how is the book expected to prove itself popular enough to warrant proper publication and distribution by Chaosium? And should it ever do so, why should the fans of the game have to buy it again in order to get the proper version they were expecting when they made their purchase? Of course, costs could have been reduced had this book been made available in an electronic format, rather than having only available on a print-to-order basis direct from the publisher's website. Thus, the purchaser would have able to buy the book on its own, and also negated the need for them to pay the printing, binding and cost of post and packaging.

Despite the relatively high cost of this supplement and its low production standards, the *Parapsychologist's Handbook* has the potential to be an excellent sourcebook for *Call of Cthulhu* -- for both the *d20 System* and the *Basic Roleplay* system. Of course, it needs an index, and several bibliographies would also help. Suggested subjects for these would include further reading upon the subject of parapsychology, the appearance of the paranormal in Lovecraft's writings, as well as its appearances in articles and supplements for *Call of Cthulhu*. Once done, the *Parapsychologist's Handbook* will be an excellent treatment of its subject, worth the time and interest of any gamer looking to add a credible dose of the paranormal to their campaign . . . not just for *Call of Cthulhu*, but any modern-day RPG.

--Matthew Pook

GURPS Fourth Edition Rules Leak #1

Here follows the first official leak of *GURPS Fourth Edition* rules text. It's an optional rule from Chapter 4, "Skills." More rules leaks will follow over the coming weeks.

Disclaimer: It is still possible, although unlikely, that this text could change between now and August.

Optional Rule: Wildcard Skills

The professor who has studied every science, the swordsman who can fight with any blade . . . cinematic fiction is full of heroes who know a little bit about everything in one broad area. The time required to list every last skill such a hero might need, and the difficulty of figuring out which skills to take (and which to use), might discourage many gamers from playing cinematic experts. Such broad expertise doesn't exist in real life, but it is all part of the fun of cinematic games!

A solution to this problem is "wildcard skills" or "bang skills": skills that cover extremely broad categories of ability. The names of these skills end in an exclamation point in order to distinguish them from normal skills; e.g., "Science!" is the skill of "all science." Wildcard skills include and replace all specific skills within their area. For instance, a hero could attempt a Science! roll whenever the adventure calls for a roll against Chemistry, Physics, or another science skill.

Wildcard skills that cover mainly intellectual pursuits are IQ-based, while those that pertain chiefly to physical actions are DX-based. Such skills have no default; to use them, you must spend points on them. Buy wildcard skills as Very Hard skills, but at triple the usual point cost. For instance, it would normally cost 8 points to buy an IQ/Very Hard skill at IQ level, so Science! skill at IQ level would cost 24 points.

The GM might choose to limit wildcard skills to those with a suitable Unusual Background -- perhaps "Cinematic Hero." This Unusual Background should never be available to sidekicks and random thugs! To give each hero a well-defined dramatic niche, the GM might wish to limit PCs to one or two wildcard skills apiece (preferably those that emerge naturally from their character stories).

Some examples:

- *Detective!* (IQ). Replaces Criminology, Detect Lies, Electronics Operation (Security and Surveillance), Forensics, Interrogation, Law, Observation, Research, Savoir-Faire (Police), Search, Shadowing, Streetwise, etc.
- *Gun!* (DX). Replaces all specialties of Beam Weapons, Gunner, Guns, and Liquid Projector, as well as all related Fast-Draw skills. Make an IQ-based roll for Armoury pertaining to these weapons.
- *Science!* (IQ). Replaces Astronomy, Bioengineering, Biology, Chemistry, Engineer, Geology, Mathematics, Metallurgy, Meteorology, Naturalist, Paleontology, Physics, Psychology, etc.
- *Sword!* (DX). Replaces Broadsword, Force Sword, Jitte/Sai, Knife, Main-Gauche, Rapier, Saber, Shortsword, Smallsword, and Two-Handed Sword, as well as related Fast-Draw skills. Use in place of such skills as Acrobatics and Jumping for physical stunts while fighting.

Pyramid Review

[Heroes Incorporated](#)

Published by [Quest Machine](#)

Designed by Sam Clifford

Graphic Design by [Creative Madhouse](#)

Art and Graphics by Carl Critchlow, Brandon McKinney, Anitra Nottingham, David Muro, Ric Kayanan, Jeffrey Jones, & John Bell

Full-color boxed set with 50 Research Cards, 12 hero cards, 12 hero markers, 12 Combat Tokens, 25 Action Markers, four Player Cards, six Gadget tokens, seven Crime Pawns, scoreboard, Crime Die, eight hero stands, four score pawns, eight combat dice, 25 block tiles, and b&w rules; \$39.99

With great power comes great responsibility. Every schmo with laser-beam eyes and the power of flight wants to rob the bank, usually over your broken body. Being a superhero is a tough business, and the *Heroes Incorporated* board game from Quest Machine emphasizes the "business" end of things.

The city of Megalopolis can only afford to hire one group as their official superhero team, so the test is to conquer the most crime the fastest. Whoever scores 36 Hero Points first, or has the most points when the Research deck runs out, wins.

Megalopolis is made up of blocks, tiles laid in a five-by-five square with the disreputable Crimeland at the center. Each of these has a Block Number from two to five, with clothing and furniture shops on the low end (not much percentage for crooks in knocking over a pet store) and city hall and research labs at the upper end.

Each player gets a pair of superhero cards and color-coded dice, Action Markers, and character stands (for holding the accompanying playing piece) so you can tell which heroes are teamed up together. The characters and a set of crime counters labeled A through G are placed on the tiles. The crime counters move one tile each according to the eight-sided Crime Die (if they leave Megalopolis, they'll return to Crimeland), and the heroes chase after them.

Each player gets four action tokens. Starting with whoever is first in Hero Points, you spend a token to draw a Research card, play a card, move a space, or attack a crime. Among other things, the cards allow you to improve your character, better your score, or get super-gear.

Movement for heroes is orthogonal (except for those who fly -- they can go diagonal). Once you're on a block, you can get into combat with the crime counter there. A hero rolls a six-sided die and, if he equals or beats the Block Number, he defeats the criminals. His die is placed on that block -- if it's still there when everyone is finished taking actions for the round, he gets the Block Number in Hero Points on the Hero Points Scoreboard. If another hero attacks the crime counter and beats the previous roll, his die supplants the old die. If it's a tie, they split the points.

One type of Research card is the Super Villain. Playing these cards doesn't cost an Action Marker, but they must be played when someone announces an attack, before dice are rolled. The Super Villains are tougher to beat than the rank-and-file criminals the heroes usually fight, and may have combat numbers of six to eight. This is when having

some character improvements or special gear comes in handy. Failure to beat the villain may entail something more than a spent token -- like the loss of a bit of equipment . . . and if the foe is tougher than anyone who already beat a criminal on that block, that hapless hero also loses his Hero Point award at the end of the round.

The superheroes come with superpowers, which change the tactics used to fight the crimes. Blasts, for example, allow a hero to attack into an adjacent block, while Magic lets you take the better of two rolls. Each hero has his own combination of abilities, and different pairings change a player's strategy. Character cards also have spaces for Power Ups or Gadgets gathered by the superhero during play. A hero's origin -- a broad classification covered by Tech, Mutant, or Chosen -- has various bonus and penalty effects in game play. Mutants have a harder time beating the villainous Evolver, for example, but they get a permanent combat increase if they stop a crime at Genicon.

Each player gets a Player Card; these have Action Marker spaces, and they reference all the powers in the game. There are also spots for bonus Action Markers. Some characters get to use more than the standard markers as part of their repertoire. Stampede has a bonus action from his Super Speed, and Shadowboxer's Detective ability lets him draw an extra Research card (others can only draw one per turn).

The box art is more like a fantasy painting with some drab gray background than a comic-book cover. The pieces in the rules are clearly comic-book material. The artwork on the cards looks a lot stiffer, but it's still (four-) colorful and conveys some of the steel-jawed moxie of superheroes. The equipment treads dangerously close to European standards, with wooden Action Markers and an oversized score track, but you get what you pay for (or vice versa).

Game play is smooth and the rules run just like you'd think. There aren't any outstanding concerns in the rules, and they're easy and clear enough that you won't need to reference them much at all after only a few rounds of play. For a game meant to give the look and feel of comic book adventures, *Heroes Incorporated* does feel a little by-the-numbers in some respects. Super Villains amount to little more than higher numbers on a flavorless card, the super battles are just a die roll, and the powers and abilities are fairly coarse in their definition.

But the game is first and foremost a strategy game, and while these shortcomings will infuriate the purists and nag at the fans, *Heroes Incorporated* is still a lively game with enough depth and strategy to keep folks coming back for more. With supplements in the works and plenty of room for tweaks and house rules, it's a family-friendly work that starts strong and can only get better.

--Andy Vetromile

Dork Tower!

Dork Tower!

Window Dressing

A couple of weeks ago my computer wasn't working right, and so I decided to try fixing it. Actually, it hasn't been working right for a couple of years . . . but the system instabilities had escalated to the point that it had begun crashing at times I found unreasonable, such as when I'd move the mouse, turn the computer on, or use the word "computer" in a conversation in another room.

So, after an extended weekend, I finally got the computer up and running. (I cannot stress the amount of hand-waving involved in the previous sentence. It's just shy of, "Germany thought about the possibilities of expansion in the 1930s, but was talked out of it a few years later." The actual process involved five trips to CompUSA, taking the computer utterly apart twice, digging up six-year-old testing equipment, reinstalling the OS four times, and three hours of phone support with SJ Games' über-ally Devin Ganger, who was convinced -- correctly -- that the fact my computer had managed to draw my blood *twice* was a sure sign that we would be successful.)

Now, I'm the kind of guy who has many loves, most of which are of the illegal, immoral, or fattening variety. But I confess a special place in my heart for a newly born (or reborn) computer. While my computers usually end up a morass of forgotten programs, ancient drivers, and random folders of incomprehensible data from long-forgotten projects, a new computer has none of those albatrosses. It is a blank slate, waiting for me to do whatever I want with it.

Anyway, this time around I found myself wanting a new interface. I didn't know *what* I wanted, but I just wanted something different. After poking around, I found a snazzy Windows program called [Talisman Desktop](#), which lets you completely change how the desktop looks, works, and acts. So, after some experimentation and reprogramming, I have a desktop that's to my liking, complete with snazzy panels, hidden "pop-up" buttons, useful accessible information and controls, and an Alex Ross-drawn Wonder Woman wallpaper. I also downloaded a theme that makes it look and work almost exactly like OSX's "Aqua" desktop, so the next time my Mac friends need to come over and use my computer, I'll get to freak them out.

(I suppose I should include my standard disclaimer about how this is all going to tie into gaming. Welllll . . . trust me. It will. I hope.)

Since I'm a contemplative kind of guy, I found myself wondering *why* having a different interface was so important. And I think I finally figured out the reason. I didn't want to go to all the trouble of fixing my computer just to have the same-old, same-old interface. *But* I also didn't want to be so exotic that I would consider installing, say, Linux onto my system. No, I wanted something that would spark my interest and give me new sparklies to look at and figure out, while remaining the same computer I've grown accustomed to under the hood.

And I realized how close this idea was to gaming for me.

Although the World of Darkness is ending . . . umm . . . today, I still remember when White Wolf released the first edition of *Mage*. I had just started working at my Friendly Local Game Shop, and it was the first new White Wolf game in a year. I was already familiar with *Vampire* and *Werewolf*, so I did what I almost always do with a new RPG: I flipped to the character sheet.

And there were many familiar elements of the typical White Wolf character sheet, complete with the usual skill and attribute lists, spots for background elements, and so on. But at the bottom, instead of the usual 10-pip linear sequence of empty boxes where the usual "Downward Spiral/My Life Sucks" information was supposed to be recorded, there were 20 empty boxes arranged in a *circle*, and the top half was labeled "Quintessence" while the bottom was labeled "Paradox."

In short, this character sheet (and the attached game) was giving me *exactly* the same sensations I got from my recent computer manipulation: It provided a sense of familiar while at the same time giving something new to "figure out."

At some point, many long-running games run into the problem of keeping the game fresh. Once the players know the rules, game world, and adventure styles inside and out, coming up with some new avenue to surprise or intrigue the group can be difficult. Many times, there can be a tendency or temptation to do something drastic, such as [blow up the world](#), [translate game systems](#), or switch to decaf. But often it's possible to add the "spark" back to a game with something fairly trivial.

For example, say the long-running game has just hit some kind of [milestone](#). What if the players each received a Duo-Tang folder or [bound booklet](#)? It could contain a summary of "what's gone before," perhaps an in-game listing of some loose threads that may (or may not) be picked up again, and a few pages of news clippings or rumors the players will have encountered.

Or maybe the heroes become the recipient of a mysterious sealed envelope . . . which contains week-long passes for a luxury liner (all prepared as a set of [props](#)). Perhaps one of the tickets has a personalized (but unsigned) message to one of the PCs, while the other one -- in an obviously different handwriting -- has a mysterious sequence of numbers that has nothing to do with the ticket. Regardless, even if the players have been on mysterious trips before . . . heck, even if they've been on a mysterious ocean cruise before . . . the odds are fair that they'll be more intrigued because this one has a prop. (And that sequence of numbers will probably be *much* more interesting to the players than if you'd just told them that they found it.)

Or perhaps between adventures you send the *players* a URL to a website, saying that someone sends that same URL to the characters. New information, clues, or foreshadowing of the next adventure or other subplots could be on there. Regardless, giving the players something to chew on in the middle of the week is a good way to keep them intrigued . . . even if it's the same information they'd get at the beginning of the next game.

Or you might tell the players that the next game session will take place in real time . . . and they need to let you know ahead of time what their characters would normally do on a Friday evening at 7 o'clock (or whatever time the players normally meet).

Or adding spice could be as simple as redesigning the campaign's character sheet, perhaps emphasizing a new game mechanic or angle. ("Why is there a 'Favors and Obligations' box on here now?!?")

In all of these cases, the GM has given the players something new and interesting to mull over, all the while keeping them within the "safe" confines of a game they already enjoy. Long-running games *become* long-running games because they're doing something right. As such, any radical changes should probably be avoided (unless everyone is sufficiently unhappy). But that doesn't mean it's not possible to provide the *trappings* of a new experience, while keeping the underlying game and experience the players enjoy.

And it can all be accomplished with a minimal amount of bloodshed on anyone's part.

--Steven Marsh

The Seven Bees

A Greed-Driven Organization for *GURPS Horror* and *Cabal* Campaigns

by Michele Armellini

Shadows Of The Past

The first hazy references to the Seven Bees hark back to Orphic Mysteries. Then, they remained unmentioned for centuries, but they were active under other names and cover groups, which is their standard *modus operandi*. The symbol of the Seven Bees is first described in connection with a palace that was razed down by crusaders in Constantinople in 1204. The symbol consisted then in six stylized golden bees on a white background, arrayed in three lines forming a wedge: the lower line with three bees, the middle with two, the upper with just one. The total is six, yet the building was known as "the Palace of the Seven Bees."

This apparent contradiction might be explained by an obscure reference Aleister Crowley reportedly made in 1905, stating that "The bees you see bring their golden gift, but the seventh bee, the one you don't see, brings the sting." This was just a casual comment, reported by an acquaintance; Crowley never put anything in writing about the bees.

A lucky researcher might unearth a letter mentioning "the bees, one of them an important Italian merchant" as providers of rare alchemical ingredients for Paracelsus in 1540. Also, a French diarist reports that Jacques Thibault, a discussed scientist, was about to publish a booklet about "*L'Ordre des Sept Abeilles*" in 1792, but he lost the manuscript, together with all his belongings, in a fire.

There are other oblique references scattered throughout history, and there's a pattern. They emerge as an unwanted consequence of some accident; and they quickly become dead ends -- often literally. Coincidentally (or not), Paracelsus was murdered within a year from penning that letter, and Thibault was ruined, discredited and interned.

What's Going On

Magic exists. Monsters exist. Apparently, a monsters' secret organization, called the Cabal, also exists. This might be an all-powerful far-reaching global conspiracy, or just a beleaguered mutual-aid society among freaks. The individual monster's main objective is probably just survival, which is understandable (but no less scary if the guy lives on human blood). What is known about their Cabal seems to imply that the organization is primarily interested in knowledge and power, but also in utter secrecy . . . which may be a limiting factor to the other two concerns. In a way, that's good for the ordinary humans. Indeed, we humans may believe in the history of the world as we know it only because those wizards have hunted knowledge for knowledge's sake and largely coveted it without using it too much. Similarly, those elder vampires mostly use their fearsome power among themselves. So, we can carry on with our short, petty lives (as long as we aren't unlucky enough to become snacks).

But there are beings that don't think that knowledge is power. To them, knowledge is *wealth*. It is a commodity, and the world is their market. They are the beings of the Seven Bees.

This incredibly ancient, self-serving, ruthless organization never wasted time in theoretical pursuits, nor played power games. They were out to make a profit, and they did it.

Just like the most powerful Cabalists, the top-ranking members of the Seven Bees realized long ago that immortality was the highest prize. They also saw that this kind of quest would be incredibly expensive. So wealth became their requisite tool; and the wealthier they became, the more they understood that their riches meant nothing if they couldn't enjoy them -- forever. So wealth was soon both a means and a motive.

Some of those beings have now achieved something closely resembling immortality; unbelievable longevity, or, in some cases, undeath. But the research for the real thing continues.

Diversification

Long ago, the secret masters of the Seven Bees established that occult knowledge could be applied to very mundane business, yielding a significant edge over those who were in the dark. This approach is nothing dramatic, and it can stoop as low as wizards or psychokinetics using their arts to cheat casinos; something a lofty Cabalist would hardly consider. Yet, this is probably the most profitable business line, providing steady, safe, and huge incomes day in, day out.

At the other end of the range, the Seven Bees will tackle an elder demon or challenge a vampire lord for their customers . . . if the price is right. There are six known business lines. Each is traditionally entrusted to one of the Six Hives (see below for more details).

Secrecy

A key tenet of the Cabal is secrecy. The less humans know about the occult, the better. Cabalists actively promote our ignorance. This is why we believe that ghosts are the stuff of tales.

The Seven Bees, however, are a commercial enterprise, and as such, they need publicity. The customers must be informed about their services and products! So, the Seven Bees routinely break the rule of silence. They don't do this foolishly; since their prices are outrageous, only a very limited circle can afford them, so there would be no reason to advertise the existence of vampires during prime time. Yet, they do let a few chosen ordinary humans know much too much.

So They Can't Be Cabalists

At least they cannot be *faithful* Cabalists, not being interested in maintaining the secret at all costs. It is perfectly possible that Cabalists, even high-ranking ones, are members of the Seven Bees, too. Having infiltrated the Cabal upper ranks would prove invaluable, and the Seven Bees probably have done just that.

So, this organization divulges the Cabal's most important secrets for gain, and, maybe, it has also infiltrated the Cabal itself. These are reasons for the Cabalists to become deadly enemies of the Seven Bees, if they are ever discovered. The Bees are well aware of the danger, therefore they enforce secrecy, but about themselves, not about the occult. Indeed, the organization works only through a labyrinthine network of fronts, cover companies, puppets and cut-outs. To this day, most Cabalists have never heard about the Seven Bees.

Of course, during the centuries, the Cabal happened to discover there were individuals, or small groups, bent on disclosing too much . . . and they dealt with these threats, swiftly and covertly. But they just struck the Seven Bees' outer layer.

Outer Structure

The organization layout resembles a cross between the typical "onion" of cults, and the cell-like structure used by spooks. The skin of the onion is made of "blind contacts." These are individuals, companies, or organizations that serve as conduits to the customers. All but the most experienced and gifted contacts *don't know* who they are working for. Their task is to canvass potential customers and to accept inquiries; if the customer is wealthy and his problem has anything to do, even remotely, with the occult, they will refer to their "controllers." They'll do that by means of complex, secure procedures whose purpose is to prevent the contacts from getting to know too much, thus becoming able to betray their controllers. Once a business gets going, the contact will know nothing more about it; he will pocket

his hefty commission and never ask questions. The contacts often have no occult knowledge whatsoever; many of them are encouraged to think they are just part of a fraud.

The next layer is made by many independent "fronts": companies, societies, or lodges that apparently do business on their own. They can range from an import-export company with offices all over the world, to a small three-person private-eye firm, to some sort of blandly occultist lodge. The fronts are better informed than the contacts. At the very least, their personnel know that some very weird things may happen in their business line; often, the owners or managers (the contacts' controllers) have a basic awareness of occult things. While the contacts only evaluate the potential customer's wealth, the fronts' first task is a rough estimate of the customer's requirements; they prepare a preliminary investigation, a feasibility study, and a tentative budget. Many relatively mundane transactions are entirely carried out by fronts. In other cases, the business at hand may be managed as separate tasks. If a customer needs dragon's blood, for instance, the front will take care of the commercial end and of a safe delivery; but the actual procurement will be entrusted to the next layer. A front's manager will have a safe way of contacting his supervisor.

The middle layer of the onion is made by surprisingly small "operative teams." They step in when the going gets tough. Each team is made by hand-picked, experienced, and/or very gifted individuals; most teams have one or two specializations. The team members do know that vampires exist. Indeed, a few of them *are* vampires. While still having a lot to learn about the occult, they are players to be reckoned with. They get utterly secret, sensitive, but relatively non-dangerous jobs, and after a while they consider them as routine; and they often get terribly dangerous, albeit very profitable, missions.

Each member also serves as supervisor for several fronts. They are paid very handsomely, but they also run terrible risks (death often being the preferable outcome when things go bad), and they spend a lot of time training.

At this level, references to the bees reappear, even though nobody ever says "the Seven Bees." For instance, "bringing home the nectar" means accomplishing the mission. Most importantly, each team's inner-level contact is called "the queen bee." Some teams have a closer relationship with their queen bee than what would be best for security. On the other hand, the queen bee isn't just a boss for the team members; she's a mentor, teacher, trainer and confidant. Wise queen bees, however, always keep their real identity a well-guarded secret.

Inner Structure

The inner structure is made up of the "families," or "hives." They all have a network of queen bees, apparently each one controlling no more than a couple of operative teams. Most queen bees are female beings; the organization believes that they are usually more pragmatic than males, who more often tend to wander off the profit-making and into worthless speculations or dreams of absolute power.

However, the exact structure of the hives beyond the queen bees is a secret. Possibly, there is another inner circle, the real owners of the hive; or maybe the queen bees are actually the ultimate leaders. Another possibility is that each Hive is a law unto itself. For instance, the Paoli Hive is said to have a Leader of Leaders, while the Hans seem to be run by a family board.

It is rumored that apart from the Six Hives listed below, there is a Seventh Hive -- the unseen one. It is probably tasked with troubleshooting, and it may be something of an "internal affairs department." Maybe it also takes care of the overall secrecy of the organization, and of settling inter-hive disputes. Nobody within the organization seems happy to speak about the Seventh Hive.

The Six Known Hives

Each of the Six Hives has its specializations and peculiarities.

Han Hive

HQ in Tokyo, major offices in Hong Kong, Taipei, New York, London

The Hans specialize in "applied thaumatology." This actually means practical uses of the occult, like the cheat-the-casino jig mentioned above, which made the Hans the richest family. Every day, relatively simple forecasts about the stock markets' fluctuations earn the Han Hive incredible amounts of money; some nice earnings also go to those savvy customers who chose their front companies as brokers. Insider trading, development plans, scientific research, political campaigning, every mundane endeavor can greatly benefit from foreknowledge, a little probability juggling, basic alchemy, supernatural influencing and so on. Also, customers availing themselves of *expert* consultants won't build tourist resorts on inter-dimensional fault lines.

The Hans' unofficial motto is "less nonsense, more business"; they solve problems by buyouts. They are maybe the least secretive of the Hives, and indeed more details are known about them than about all other families . . . unless it isn't all disinformation. For instance, it is known that they are indeed a "family" vaunting a common Chinese ancestral origin, and that they are mostly human mages, but willing to "adopt" gifted beings.

Mabrouk Hive

HQ in Dikarpas (Northern Cyprus), major offices in Beirut, Cairo, Istanbul, London

The Mabrouk family deals with "collectors' items." They are the traders of the organization, and they own a network of import-export, shipping, and wholesale front companies. They will buy and sell anything that's very valuable, from mundane diamonds, uranium, narcotics, arms, and priceless artworks, to occult objects such as alchemic ingredients, a copy of the *Necronomicon*, or actual magical items. The Mabrouks are great collectors themselves, and known for their artistic whims. Apparently the core of the Hive is made not by one, but by a few very ancient dynasties . . . including vampire lineages and werewolf clans. There seems to be much infighting within the Hive. Some priceless artworks that disappeared throughout history are sure to be found in the Mabrouks' vaults.

One of the families is rumored to be British, and to have infiltrated the Cabal's secret library within the British Library, in London. When encountering difficulties, they prefer the indirect approach: finding the subject's weak spot, or secret desire, distracting him with diversionary tactics, or confusing him by decoys.

Barrett Hive

HQ in Los Angeles. Major offices in Chicago, Washington, Paris

The Barretts' bread and butter is "pest control." They can sanitize haunted houses, cauterize infestations from the Abyss, and close demonic gates. They are the ones to call if one really needs anti-vampire bodyguards or anti-werewolf foresters. Of course, in certain jobs the best defense is the offense; so the Barrett Hive are considered as dangerous competitors by the Paolis, below.

The Barretts are somewhat looked down upon as the newcomers, and indeed most of them are less than 150 years old. They make up with efficiency and flexibility for what they lack in traditional clout; one can never know what to expect from a Barrett. They are very meritocratic, too, at every level.

Paoli Hive

HQ location unknown, but with fortress bases in Sicily, Corsica, Algeria; it has major offices in New York, Moscow, Shanghai

They take care of "active measures" (centuries ago, the term used was "scourge"). Ordinary killers sometimes aren't enough, especially if your enemy is supernaturally endowed. For the proper consideration, the Paolis will enter assassination contracts for anyone. "Search and destroy" missions are also a mainstay. But this Hive makes its greatest profit out of kidnapping; and their underground shelters have facilities for detaining terribly powerful entities.

The Paolis are notoriously paranoid, and they believe that any problem can be solved with a secret murder (or more);

their trademark is a seemingly accidental death. Therefore, very little is known about them. Certainly they seem to focus on exceptionally gifted humans; very few undead and monsters made it into their clique. They may be less refined than other Hives, but they are considered the most dangerous one . . . not counting the Seventh, of course.

Hood Hive

HQ in London, offices in all continents

The Hood Hive supports "free enterprise." They specialize in grand, long-term projects, contracted by filthy rich but mundane customers. If an incredibly wealthy eccentric lacking occult knowledge of his own wants the Holy Grail, his best bet is to fund the Hoods (as of now, they are carrying out exactly that quest, for three separate customers; they have been, it must be said, for more than three centuries). Building a Place of Power, locating and exploiting a Ley Line, creating magical items -- the Hoods have done all of this. It is rumored that in special cases they are not above keeping the final results for themselves, instead of delivering them to the paying customer.

The Hoods are eccentric snobs and somewhat less pragmatic than the other Hives. They seem to have an inner structure that replicates the outer one, with further layers, their queen bees being little more than team leaders. Most of them have little or nothing in common with mankind, which makes them the natural opponents of the Paolis. Their modus operandi is trickery and deception, but they aren't averse to elegant, deadly set-ups. Silvery, hooded capes are their trademark clothing, and when push come to shove, a foe will often find there's nothing under the cape.

Silva Hive

A split HQ between Mexico City and Rio de Janeiro, with offices everywhere

This hive provides "health services." Needless to say, their ultimate objective is immortality. But meanwhile, lots of rich old men would pay a lot for just a few years more, and they are the ideal customers: the Silva can milk them for as long as they can keep them alive. They have a multi-disciplinary approach, using mundane medicine, advanced transplanting, genetic meddling, clonation experiments, magic, alternate-dimension storage, memory banks, and, as a last resort, vampirism. The Silva charity clinics throughout South America provide plenty of nameless organ, blood, gene and body donors.

This Hive seems to be the less structured, possibly being just a loose federation of groups (maybe directly led by the queen bees); their scope is very limited, but they assume it's the most important venture within the organization. They come through as really self-confident and they know that what they can offer is interesting for almost anybody. Sometimes, enemies of this hive discover they have a rare disease that only the Silva can cure . . .

Inter-Hive Relationships

The Mabrouks often say that the other Hives are the best customers, and the worst. Indeed, security and secrecy aren't such an issue when offering your services to another Hive; but they will expect favorable prices, and won't be easily fooled.

So it is mostly tough but ongoing business. Everybody will tend to offer their specialty. It wouldn't be uncommon for a Hood project to be bankrolled by a Han-controlled bank and protected by a Barrett-sponsored security firm, possibly under supervision by a Barrett team. Of course both the Hans and the Barretts might want not just money, but also a share of the outcome. Fringe products and fringe areas will bear competition. For instance, a paramilitary task might be carried out both by the Paolis and the Barretts, and they are more likely to vie for such a contract if it is to take place, say, in Chile, where they both lack local offices.

Competition may sometimes turn nasty. Each Hive will usually play the game in its own ways, and, initially, the ones to lose will probably be the pawns of both sides: contacts and fronts, and no queen bee will cry for them. If the conflict escalates, an arbitrator will usually be needed; in some cases this may be a panel jointly appointed by the interested Hives, or by all Six; but in similar cases, the Seventh Hive is rumored to have barged in, too. In the past, queen bees

who went overboard in a inter-Hive dispute happened to disappear.

Patrons, Duties And Enemies

A Hive is an extremely powerful Patron, with unusual powers and reach. Its basic value is 40 points. It might provide equipment (+5/+10 points, see p. B24). For anybody below the level of operative teams, a Hive would be a Secret Patron (p. CI28, -5 points), taking great care to cover its traces, and it would only appear rarely (roll of 6 or less on three six-sided dice, halved cost). Note that a Secret Patron may well not really care for the characters, and this is only too true of the attitude of a Hive towards lowly contacts and fronts.

Queen bees and operative agents may also see, rarely, the intervention of their Hive in a Patron role, but it's not a secret for them. A controller or supervisor, a queen bee, or a faction within a Hive can also be Patrons (point value ranging from 10 to 25).

In any case, it would be perfectly possible that *no* Hive or queen bee ever acts as a Patron. They all tend to be coldly calculating bosses, ready to sacrifice their pawns.

The Seven Bees taken together can't be a Patron. The agendas of the various Hives are almost always conflicting, and seldom if ever they would unanimously help anybody.

Anyone working for the Seven Bees, either directly or indirectly, may well have a Duty (p. B39), also in the Extremely Hazardous form (p. CI78); the latter would especially apply to the operative agents.

A Hive can be an Enemy, worth -30 points. The Seven Bees as a whole are worth -40 points. They will appear rarely (halved value), unless somebody has something they really want. They will usually be Unknown Enemies (-5, p. CI77) for anybody not in the know about them, i.e., almost anyone. The Seventh Hive can also become a fearsome Enemy, always Unknown (basic value -45 points).

The Seven Bees And The Characters

PCs can serve the Seven Bees as unwary pawns, i.e. as contacts, for a low-power, high-paranoia campaign. They'll soon understand weird things are going on, but also that it would be safer not to ask too many questions; then they'll learn -- at their own cost -- that their employers have mighty enemies. They may soon find themselves on the run from powers they can barely conceive.

If the characters are mid-powered, they may start as operative agents; the party is one of the operative teams, the queen bee is the GM's mouthpiece. Better yet, the adventurers might start in one of the fronts: a private-eye firm, an occultist lodge. In this case, they know more than the iceberg's tip the average mundane citizen can see. They'll be gradually entrusted with more responsibility by their faceless supervisor, until they might be offered to become a team, or join one. The Hive they belong to may be chosen by the GM, taking into account the players' preferences; inter-Hive joint ventures can be used for a change.

For high-power campaigns, the characters are queen bees in the same Hive. There are their own teams to command (this probably rates as a group of Allies), and Hive agendas, backstabbing and politics to look after. They'll need to watch their backs against the Cabal, mundane busybodies, competitors from other Hives, and the dreaded Seventh Bee.

Of course, the Seven Bees may be used in a purely adversarial role, if the adventurers are Cabalists or mundane law-enforcement agents, or simply unwary researchers.

For the true maze-of-mirrors feel, the characters can be members of *both* the Cabal and the Seven Bees . . . but who are they double-crossing?

Adventure Seeds

Today

- *Curiosity killed the cat (Supers, Horror, Cops)*. The characters are well-known adventurers who get a lot of exposure to unusual, weird situations. A mysterious "middleman" contacts them. He offers nice commissions if, when encountering "seemingly supernatural occurrences requiring intervention" they'll just step back and call him in (they'd be recruited as contacts, see above). The adventurers being their usual nosy selves, they might well snoop around the middleman . . . a dangerous choice. Or they might accept, but then they'll be devoured by curiosity. Will they go back to the potential customer they reported, and start asking questions?
- *An offer we can't refuse (Horror)*. "Hi, Jack, it's me, got news from our Mister Smith. This time we're in it, big time. Yes, he'll employ us full-time, . . . wait till you see the cash he already gave me! Yeah, there's a catch, we can't go empty-handed . . . the Scepter of you-know-whom. OK, I know, you think it's jinxed, but don't forget Mister Smith is almost our only client by now, and he knows all of our little dirty secrets, too . . ."
- *First day on the job (Horror)*. The characters aren't beginners with the occult, but they aren't members of the Seven Bees, either . . . until now. A queen bee will lure them. She has had her team wiped out by the opposition, and she needs to react *now*. If the newbies are similarly defeated, not to worry: they knew nothing and were expendable, at least they'll have distracted the enemy. If they survive . . . well, they'll have proved they can be worth the effort of training them as a new team.
- *We're not alone (Cabal)*. The characters are up-and-coming young Cabalists, and they are tasked with investigating on a company named "Spirit Busters." If it's not a fraud, the party should make sure they don't divulge serious secrets. It seems they do. So the party will take care of them. But they'll also uncover intriguing clues. The company was just a front. Who's out there, not in the Cabal, and knowing so much about spirits? And why a senior Cabalist is suddenly so interested in their investigation? And who booby-trapped their car?

Yesterday

- *Ancient vaults (Swashbucklers, Age of Napoleon, Horror, Cabal)*. 1798. The French eagles are going to Egypt, and Napoleon will take the best French scientists and archaeologists with him! A Mabrouk search-and-retrieve team must infiltrate that scientific elite and see what they can plunder from the pharaohs' tombs. The Cabal is also present among those archaeologists. The Hood Hive is understandably interested in the pyramids. The local occult powers (the Djinn?) won't be friendly to all these invaders. Scimitars, muskets and illnesses provide more mundane dangers. And who knows what still guards those vaults?
- *Pushing the envelope (Steampunk, Horror, Cabal, Victorian Age)*. 1899. It's a great age for anthropology, ethnology, and other less reputable research fields, and London is the heart of it all. Lord Ramsey, a hard-nosed British administrator, comes back from his colonial post, bringing with him a group of beings that, he claims, will "widen the concept of humanity." His claims immediately become the target of a racist campaign. He'll present his "findings" at a Royal Society meeting, in a week. If they survive; yesterday, Lord Ramsey's country manor was burnt down. But is he alone in this, or is there a shadowy sponsor? What are those beings, who are their enemies? And can the Seven Bees make a profit either way (or both)?
- *Genetics is the key, is it? (Cliffhangers, Horror)*. 1934. Germany and the Soviet Unions are in friendly terms, formally. A German scientific expedition is leaving Tiflis for the highest Elbrus ranges, escorted by local guides, an advisor (a Communist Party official) and a military outfit for protection (the commander is a NKVD agent). The German scientists actually belong to the SS *Ahnenerbe* (ancestral heritage) department, tracking down the origins of the Aryan elite. But among them, there is a Silva team, interested in one aspect of the local genetic pool: longevity. There's a chieftain who still leads his men from horseback, and he's allegedly 92! Is this natural longevity, or . . . well, the other kind? The Silva researchers will need to keep their secret from both the Nazis and the Soviets; not that the warlike natives are particularly friendly with the Communists. The environment is forbidding, too. And what if there is another, competing expedition around?
- *Ending the embargo (WWII, Supers, Alternate Earths, Time Travel)*. October, 1941. Luckily the Secret Service heeded the anonymous tip and kept the President elsewhere yesterday, while two bullet-proof winged beings attacked the White House. This is a job for the Barrett Hive, though the Secret Service won't be happy about sharing the responsibility, and the FBI must not get wind of the new bodyguards' special abilities. Were the attackers Japanese supers? The Cabal is said to be in cahoots with isolationist, conservative cliques, and those things might have been gargoyle-like golems. What if the attackers were from a Paoli operation? Of course

they might come from anywhere -- or *anywhen!* Is there anybody who already knows what's going to happen in a couple of months? Is it true that the VP favors easing the oil embargo against the Japanese? Is the Han Hive siding with Japan?

Playable PC Enchanters for GURPS: The Crossbow Method

by William J. Keith

One of the most difficult types of wizard to play in *GURPS* is the Enchanter, a specialist in creating magical items. The time and energy required for enchanting most items make useful creations on the time scale of the typical adventure virtually impossible. Multiple sets of alternate rules are available on *Pyramid* to spur this process, but a wizard working under the standard *GURPS* system can be at a severe loss.

The easiest answer is one or more huge Powerstones, and a few friends to help. Unfortunately, "huge" gets expensive, beyond the means of most PCs, and hirelings (or hired Powerstones) are not necessarily available, especially in the wilderness. Still, a mage with a size 20 or 30 Powerstone, within the reach of various Wealth Advantages or a few points in starting equipment, can do a surprising amount of worthwhile work for his friends; the bulk of this article is taken up with a different method, but these low-energy applications are emphasized in the options list below.

A route to fast enchantment does exist in standard *GURPS*, but it can be obscure, difficult to master, and risky. The basic necessity addressed is a great deal of energy available on short notice for Quick and Dirty enchantment. Beyond this, helpful skills and materials can ease the process. The amount of energy the method generates could quickly become abusable even for non-enchanters, so suggestions are offered for GM controls.

The Crossbow Method

The core of the method is two spells from *Grimoire*: Draw Power/TL (any) at reasonable skill and Manastone at a minimum level of 17. The mage requires an energy source large enough to cast Manastone for the duration of the process. He also requires a stone of quality suitable for the Manastone spell, big enough to store the desired energy. The Repair spell is essentially a necessity; without it, hundreds of such stones are likely to be required, putting the process beyond the reach of all but the wealthiest enchanters in most game worlds.

Once these requirements are met, the method is simple. The mage casts Draw Power on the source, then casts Manastone repeatedly upon his chosen stone once per turn until it reaches the desired size. If a critical failure occurs and the stone is destroyed, he deals with any other consequences of the critical failure, casts Repair upon the shattered pieces of the stone, and begins again from scratch (since Repair does not restore the stored magical energies). A manastone of the desired size having been created, the mage uses the Quick and Dirty enchantment rules. Unlike using a Powerstone, several hundred Fatigue can be available to one caster and the process may be repeated in hours or days rather than months.

The name refers to the concept of storing energy and releasing it rapidly: "the capacitor trick," "the crossbow method," "the coiled spring," or "the geyser" are all possible names to distinguish this process from regular Quick and Dirty enchantment.

The Fine Print

Like everything in life, if it were that easy, everyone would do it. Most mages would enjoy hundreds of Fatigue to fling about, and enchanters that could do in a day what took another a year would quickly crowd out the previous market. The method entails several difficulties for which a wise enchanter will prepare and which GMs may use as controls.

- The process is *hard*. Enchant, Draw Power, and Manastone are all VH spells, and Draw Power in particular has numerous prerequisites. The course of study for the crossbow method is thus quite long.
- In the modern day, access to 2.16 megawatts may require industrial-strength power connections (or, in a world

where magic is nearly unknown, a willingness to commit an almost untraceable theft). Sufficient power may be within the budget of a private person at higher TLs. However, the lower-tech solution may be more palatable even at high TLs: a large waterfall, a windy day, a forest fire, or a volcano are all mentioned in Draw Power as suitable energy sources for lower Tech Levels, and probably will not have their energy legally claimed.

- A gem of sufficient size must be acquired. If the GM allows the use of flawless rock crystal or other semiprecious stones as manastones, stones of several hundred carats can be acquired at minimal expense. If precious stones are required, this rapidly gets expensive due more to rarity than weight: in the modern day, opals of several hundred carats, if for sale at all, go for hundreds of thousands of dollars, and diamonds even close to 100 carats are usually national treasures! The Wealth necessary to purchase these is far too point-costly for most games, though a Patron may provide such an opal (the "provides unusual equipment" trait) under strict conditions.

If a simpler solution is desired, magical methods of acquiring stones may affect their prices: the basic economic assumptions on the value of gemstones do not include methods of synthetic gemstone creation. If spells like Duplicate can create huge gems, any jeweler worth his loupe will check a large stone for magical creation. Such artificial stones may be considered effectively worthless as luxuries, and instead will be valued as magical objects based on the work and any raw materials it took to make them. Seek Earth spells may also aid mages of high skill to search for large stones suitable for manastones (and possibly too flawed for jewelry usage). The costs for basic Powerstones then assume that gem-quality natural jewels are used, and technical solutions may lower the raw material prices considerably. GMs interested in further research may wish to examine modern day news about technological syntheses of high-quality gems and their effect on gem prices, and decide how such stones may be suited for magic.

- The method will require time. Several hundred flawless castings of Manastone, of course, would require only a few minutes; the problem is that critical failures require the process to restart. Long runs will require good luck, in its guise as patience. Time for larger stones grows exponentially, and time saved over Slow and Sure shrinks.
- Critical successes are assumed to affect the job very little, but critical failures, using the standard table on p. B147, can cause damage, stun, cripple, or even summon demons. With high enough skill, stunning and crippling can be absorbed into average predicted times. Damage and demons are much more serious problems. A mage will expect to take an average of 1 damage in 7 critical failures. For large jobs, he will either need to find healing or pause work to heal. Demons will be summoned on 1 in every 216 critical failures; eight hours of relentless work will average this twice a day! The demon will likely cause a substantially longer delay than a mere explosion. Nearby friends or guards will help out here, unless the mage can dispatch a demon on his own at low risk to himself (hint: most heroes can't, and this mage will have spent quite a few of his points in learning the crossbow method, rather than fighting).

Assuming Manastone cast once per second and some rest time during the day, eight hours of work suffers 448 critfails, leading to 64 damage and 2 demons a day. This table lists the expected values of time spent, damage suffered, and demons summoned in making one stone of a given size:

Energy	Crit. Fails	Time	Damage	Demons	Comments
50	<1	2.25 min	1 in 7 tries	1 in 216 tries	Enough to make small items
100	6	5.75 min	about 1 hit	1 in 33 tries	
150	16	14 min	about 2	1 in 13 tries	
200	42	37 min	6	1 in 5 tries	
250	107	1hr 35min	15	1 in 2 tries	Moderately powerful items; even odds of a demon; most mages will have to rest or heal.

300	272	4hrs	39	1.25 per try	Demon more likely than not
350	693	1day 4hrs	99	3.2	About 64 damage and 2 demons a day from here up
400	1766	4 days	252	8.2	
450	4498	10 days	643	21	Slower than Slow and Sure if the mage must heal mundanely at 1pt/day
500	11454	25 days	1636	53	
550	29163	60 days	4166	135	
600	74256	150 days	10608	343	
650	189073	422 days	27010	875	

A 687-point stone would average 691 days of work, pointless for most enchanters when Slow and Sure works. Mages who do not relish the prospect of demon attacks and magical healing being a regular necessity in their profession will probably stick to creating manastones of 250 points at most.

Costs for pre-made "capacitors" are up to the GM. Keep in mind that for big jobs you're not only paying the enchanter for risky work, you're also paying his doctors (likely mages themselves) and several guards. Even an enchanter who sticks to 50-point stones will still have to deal with a demon every now and then.

GM Control Levers

Not many spells outside of the Enchantment College can use hundreds of Fatigue. Many can be maintained, though; having a battery of 100-300 energy can be handy when one needs to maintain a powerful spell for a long time without a Circle. One College which can use this much Fatigue to wonderful effect is the Weather College, wherein a single mage with 250 points of Fatigue can summon a storm to envelop a city (or a fleet) and lash it for hours. Other outlets exist. If such stones are available to your mage players, rest assured, they will find creative uses.

This sounds great for players, but can be wildly unbalancing for the game. The GM has several controls he can institute on the crossbow method, without changing any game rules.

1. **Availability of gems.** No 300-carat gems in the game world, no 300-point manastones. This implies that only *natural* gem-quality stones can be made into Powerstones and manastones. Smaller gems of 50-100 carats may still exist, and can still aid in several tasks an enchanter may find of game worth.
2. **The spells Draw Power or Manastone do not exist or are not widely known.** The interconvertibility of various kinds of natural energy, as in Draw Power, was a leap in physics theory which may not have happened in a fantasy world. Also, both of these are Grimoire spells, so they may not be well-known; the crossbow method may be a closely-guarded secret of a small circle of mages.
3. **Critical failures utterly destroy the stones.** The *Basic Set* does not describe just how a stone is destroyed. Perhaps a critical failure on Manastone or Powerstone turns the stone to vapor or energies that cannot be subjected to Repair. About the only way to get around this limit is by obtaining hundreds of stones at great cost. Still, manastones will be cheaper than powerstones of equivalent size, and an enchanter should be able to make a size 30 or 50 stone in a few tries. Happily, this much Fatigue can enable an interesting array of tasks for an enchanter.
4. **Demons get the hint.** An adventure-oriented plot twist: If a mage summons too many demons in a short time via critical failures, have new demons attack the caster hesitantly, or in subtle ways, with temptation and offers of service; or take one look at the caster and run away! Word about the enchanter has apparently gotten around

whatever realm demons come from, or he has somehow colored the energies from which demons are created; use any suitable theory of demon arrivals. This should disturb any "decent" PC mage, who would hopefully respond by limiting his creation of large batteries to important situations. Even if it doesn't, demons that run away and attack innocents nearby will disturb all but the most jaded folk, and probably give the caster a reputation (somewhat true) of being a demon summoner . . .

The Juicy Bits

So you've seen the theory and liked it, you've found the risks acceptable, your GM has pronounced the practice allowable, and your enchanter has sweated the training and taken all appropriate cautions (or just paid the money), and gotten his grubby little hands on a mouthwatering 250-point Manastone. What to do now?

One answer is, "make enchanted items." But which? There are enough options that an enchanter will still probably have to choose an area on which to concentrate; such a concentration results in a secondary area of ability where the enchanter can contribute to the party with normal casting. Spell Stones for these spells are one of the cheapest and most adaptable enchanted items an enchanter can make; carefully chosen spells given to one's friends can dramatically increase the party's versatility. Their single-use nature requires the mage to plan carefully to maintain the party's stock, but many take barely an hour to make with the crossbow method.

One last note: Even with a setting not suited for the crossbow method, the lowest-cost items allow a mage with a large Powerstone to enchant items of use to an adventuring group. (Thirty character points would buy a size 30 Powerstone in a medieval campaign, as would Filthy Rich.) Instead, a starting enchanter mage may want to quest for a Powerstone of sufficient size, truly coming into his profession when he obtains one.) With such a system, each large Powerstone would allow one 40-point item to be created each month, and a 1-Fatigue Spell Stone each 10 days. In civilized regions he may be able to "rent" the power from someone else's Powerstone: 30 points from a 30-point stone would cost \$1,200, as per the sidebar on p. B152.

Below are lists of services an enchanter mage can provide. The first list gives those services within reach of 40 Fatigue, such as a mage with a 30-point Powerstone and 10 Fatigue of his own. The second expands the first list and gives some selected tasks within reach of a 250-point Manastone. The first list is exhaustive, while the second is not; many moderately powerful spells can be enchanted into items with 250 Fatigue.

Smaller Jobs

- Scroll. Requires no particular energy. Scrolls take several days to write but are not particularly expensive; 1 character point or \$500 (assuming a 20-day work month for an enchanter making \$25/day) will buy 20 base Fatigue's worth of scrolls. An enchanter personally can use these as one-time sources of spells he does not know but might find useful; a few days' work in a lull during an adventure will allow him to lend spells he knows to other mages in the party. Even non-enchanters can do this, but an enchanter might do it as a regular moneymaker.
- Suspend Enchantment. Not a real item, but occasionally handy and an appropriate spell for an enchanter, which can make good use of a size 15-25 Fatigue stone.
- Hideaway for one-half pound and one cubic foot of space, with the item's weight still counting. A GM may insist that one pound is the minimum increment, however.
- Accuracy and Puissance to +1 on a missile, one missile at a time.
- Fortify and Deflect to +1 on armor, if the piece rules are used. Even such small missile and armor enchantments can perceptibly enhance the efficacy of fighters in the group over time.
- Penetrating Blade can be cast to +1 on a missile.
- Staff. Useful and a reliable moneymaker. Also makes a nice gift.
- Powerstone, one level at a time. (One-College Powerstones as well.) Useful for small magical items. With luck, maybe you can better your own property!
- Manastone. Useful even without the crossbow method.
- Seek Water. Possibly handy in dry regions.

- Inscribe.
- Knots, on a 2-foot string.
- Mystic Mark (permanent mark).
- Pentagram (to protect up to 4 hexes).
- Curse, to -1 on an item.
- Dull Nose, to -1 as a cursed item.
- Undo, immunity amulet version. Nice if magical thieves roam the streets.
- Tangle Growth, permanent effect.
- Voices (only 2 words, and no Link at this level. Could get irritating . . .).
- Talisman, to +1 protection (+2 if the caster can shell out 5 Body Hits in life force). Might make the difference, especially with a villain who likes to cast subtle spells.
- Spell Stone. With a 30-point Powerstone or Manastone and 10 points of his own Fatigue, an enchanter can create Spell Stones of spells with a 2-Fatigue casting cost or 1-Fatigue casting and maintenance cost. A wide selection of spells can then be used by non-mages in the party; appealing choices may include healing spells, protection spells, and many others.

Bigger Jobs

An exhaustive list of Enchant College spells is included, as well as some selected other spells. Note that Power requires 500 energy, but may reasonably be assumed fairly well-known among enchanters, allowing the PC and a hireling with 250-point stones to work together for a day to make much more useful "always on" items with 1 or 2 points of Power.

- Fortify, to DR +3 on armor by the piece (doing the front and back of the torso separately, assuming the back can be enchanted at 30% cost or less).
- Deflect, to PD +2 on armor by the piece.
- Lighten, at 25%.
- Accuracy and Puissance may be cast to +1 to any weapon and +2 to missiles with a Manastone. Bane may increase these.
- Cornucopia, for ammunition of up to \$5 in value.
- Bane
- Name, with name written
- Password, with password written
- Limit
- Link
- Remove Enchantment (like Suspend Enchantment, not an item enchantment itself, but an appropriate skill for an enchanter; can remove enchantments up to 2500 energy)
- Lesser Wish (!)
- Wish (!!)
- Clay Golem
- Hideaway (with Manastone, up to 2.5 pounds/5 cubic feet of extra capacity, or double this if weighed)
- Talisman (to the full +4)
- Amulet (greatly boosting the party's magical defenses in specific areas)
- Malefice
- Ensorcel (though only for a 1-Fatigue spell)
- Leak
- Dancing Shield (for a 1-lb. shield; unlikely)
- Penetrating Blade (to +1 on a non-missile weapon, or +3 on a missile)
- Ghost Weapon (on a 1-lb weapon)
- Quick-Aim (to +2, and +3 with a second casting)
- Graceful Weapon (on a 1-lb. weapon, unlikely to need it)
- Weapon Spirit (with very low IQ and no Voices)

Some other spells that can be enchanted with 250 Fatigue (many others work):

- Sense Foes (popular moneymaker in distrustful society)
- Hide Emotion (another popular one, in certain circles)
- Spark Cloud
- Fire Cloud
- Create Water (a handy traveling item)
- Create Food (pot version; another for travelers)
- Preserve Food (salable, and/or useful to adventurers)
- Illusion Shell on a small object
- The Light & Darkness College is particularly heavy with low-cost items.
- Blur (great for defense)
- Sunlight
- Continual Sunlight (permanent effect)
- Wall of Light
- Animate Object (permanent effect, up to 10 lbs)
- Link
- Spell Wall
- Keen Eyes, to +1
- Keen Ears, to +1
- Stop Healing (missiles)
- Conceal
- Force Wall, one hex at a time
- Hush (good for sneaking about)
- Silver Tongue (staff version)
- Create Fuel (container, to 2 pounds per day)
- Propel (enchanted device, at 12.5 tons or less)
- Magnetic Vision

Sample Enchanter PC

Carrick Stonecutter

100 points

Carrick apprenticed under a stiff Guild enchanter in his hometown and graduated to a decent living. He lived a settled life, picking up a few Earth spells to help the business but nothing like a footloose adventurer would have. Then the crossbow method was invented, and enchanters suddenly had the career of an adventurer opened to them. Carrick examined his life and found it wanting: excitement, luxury, and companionship. He spent a few years studying the method as well as some militant spells, to the dismay of his old teacher, and fell in with the first young adventuring group he found. He's rapidly learning that some fighting and woodlands skills were expected, and is doing his best to shake off a dangerous hesitation that grips him when violence threatens. Thank goodness the group hasn't journeyed by sea yet; Carrick is miserable when he doesn't have solid ground under his feet.

When starting out on a wilderness mission, he often brings a clay golem. He happily provides Spell Stones for Minor Healing and Stone Missile to his friends, and is considering expanding his repertoire of Earth spells and enchantments.

If creating a manastone away from his group, Carrick will summon an Earth elemental as an anti-demon guard, bargaining for services with Essential Earth. He'll use Minor Healing if badly damaged. Carrick's manastone is a magic-made 300-carat duplicate of an emerald from the monarch's crown with distinctive flaws added. Jewelers value it at \$7500 for magical labor; local laws forbid its resale and tax its possession at four days of work for the Crown each year.

Carrick is a 100-point starting character. Somewhat richer and older, with some of his ambitions for spells realized, he could be the Golem Master: a Patron to young mages, or a villain who emerges from seclusion with hundreds of

soldiers to terrorize a region, then vanishes into the earth to flee if confronted.

Age 40; 5'7"; 150 lbs.; dusty brown close-cut hair; brown eyes; an angular middle-aged man with a mercurial face.

ST 9 [-10] **DX** 9 [-10] **IQ** 13 [30], **HT** 10 [0]

Basic Speed 5, Move 5

Dodge 5, Parry 3 (mace), Block 4

Advantages: Literacy [10], Magery 3 [35].

Disadvantages: Impulsive [-10], Combat Paralysis [-15], Motion Sickness [-10].

Quirks: Wants to learn the fabled Earthquake spell; seeks a Wish enchanter to learn more about wishes; hopes to regain the respect of his former master; looking for a wife as well as a fortune; occasionally talks to rocks fondly. [-5]

Equipment: Standard traveling equipment, mace, small shield, large manastone (weight 2 oz, value \$7,500, details above) [7.5].

Adventure Seeds

- **The Diamond Eye of the Hurricane:** A national treasure (one of the few usable gems in this setting) is stolen by a circle of mages who threaten to wreak havoc on the countryside using devastating weather spells if their demands are not met. PCs may be tasked with recovering the stone, capturing the mages, protecting the populace, or many other roles.
- **The Golem Master:** A recluse emerges from years of isolation with a golem battalion of hundreds and revenge on his mind. The army will deal with the golems while you find and kill him so the threat will cease . . . but how did he do it? Many mysterious figures would like to know, or already seem to know and seem to want to keep the PCs out of it. Will the players learn the secret of his power? Will learning it empower their mage, or make him a target?
- **Environmentalists:** Down with demons! Down with explosions! Down with exploding demons! One too many horrors has been loosed onto an unsuspecting town, and a political movement is underway to make the crossbow method illegal due to its polluting side effects. Which side will the characters take? What will a crossbow-method enchanter do if his profession is criminalized? Consider using "[Playing to the Crowd](#)" to roleplay a referendum on the matter for some non-combat gaming.

Let There Be Magic

Non-Metamagic Feats for Spellcasters in the *D20 System*

by Owen K.C. Stephens

With a few exceptions, characters in the *d20 System* wishing to use feats to augment their spellcasting abilities must take metamagic feats. Since these feats change a spell's effective level, they are often perceived as knowing how to cast additional spells, rather than knowing how to do something different and interesting with spell abilities. This article provides numerous stylistic feats designed to allow a spellcaster to have the same breadth of style options as weapon combatants.

One way to use these feats is to have them restricted to certain kinds of spellcaster. For example, only sorcerers (who gain less benefit from metamagic feats) might be allowed access to them, or only arcane spellcasters. A GM could also restrict them to certain regions (the art of Spell Finesse might only be known in the far east) or certain groups (only members of the Guild of Blue Mages may take Spell Specialization with compulsion spells).

A GM can also use these as benefits for prestige classes he designs for his game. Since each feat is balanced against normal feats this allows him to easily grant a prestige class a few unique powers without unbalancing them. A class might even only grant access to the feats (such as a fighter gaining access to Weapon Specialization), without giving the feats out for free (allowing it to grant full use of spells per level and even special abilities such as wild shape, turning undead, or familiar advancement without being unbalanced).

Several of these feats list a minimum spell ability as a prerequisite. This is the ability score the character uses for spellcasting (Wis for clerics and druids, Int for wizards, Cha for bards and sorcerers). Although none of these feats are metamagic feats, a GM should seriously consider allowing characters that gain bonus metamagic feats to choose one of these feats instead.

Feats	Prerequisites
Blowthrough	Spellcasting ability 19+, Power Casting
Disarm Casting	Spellcasting ability 17+, caster level 7+
Exclusionary Targeting	Spellcasting ability 17+, caster level 9+, Spell Expertise
Far Magic	None
Favored Target	Spell ability 15+

Spirit Casting	Spellcasting ability 15+, Eschew Materials

Sneak Magic
Trip Casting
Two-Spell Casting

Spellcasting ability 17+, Spell Finesse
Spellcasting ability 17+, caster level 7+
Spell ability 15+, caster level 9+

Feat Descriptions

Blowthrough

You have learned to focus damaging spells through one foe and into another.

Prerequisites: Spellcasting ability 19+, Power Casting

Benefits: This feat allows you to alter the power of spells with defined targets, if those spells deal hp damage (such as *magic missile*). Once each round, if you do enough damage to a target of such a spell to drop him, any unused damage (ie damage in excess of what was required to drop the target) may be applied to a second target as long as the second target is both within 30 feet of the dropped foe and within the original spell's range. The second target is treated exactly as if he were the original target (and thus must be hit or is allowed a save, depending on how the spell works).

For example, a 6th-level sorcerer casts a *scorching ray* at an orc, hitting it and dealing 20 hp of damage. The orc has only 12 hp, meaning there are 8 excess hp of damage left in the ray. The sorcerer may target any foe that is both within 30 feet of the dropped orc (the maximum range of Blowthrough) and within 35 feet of himself (the maximum range of his *scorching ray*). He must make a ranged touch attack against the second target, since that is how the spell targets foes.

Disarm Casting

You have learned to disarm targets with spells.

Prerequisites: Spellcasting ability 17+, caster level 7+

Benefits: When you hit a target with a spell that deal hp damage, you may attempt to disarm him. Only one target of each spell may be disarmed, even if an area spell catches multiple targets. You choose an amount of damage dealt to the target which he does not take, up to a maximum of your caster level (and no more than 1 less than the damage dealt). Your disarm roll is 1d20 + damage not dealt opposed by the target's attack roll with the item to be disarmed. On a successful check, your target drops the item at his feet. The target cannot make a disarm check to disarm you, even if he wins the opposed check.

For example, an 8th-level bard casts a *sound burst* at a goblin and a kobold. He deals 8 points of damage, and chooses to attempt to disarm the goblin. The bard reduces the damage dealt to the goblin by 7 (his maximum, as the spell must deal at least 1 point), and then makes an opposed check of 1d20+7 against the goblin's attack roll. If the bard wins the check, the goblin is disarmed. Either way, the goblin takes 1 hit point and must save or be deafened (as normal for *sound burst*), and the kobold is affected normally.

Exclusionary Targeting

Your area spells can wrap around one target.

Prerequisites: Spellcasting ability 17+, caster level 9+, Spell Expertise

Benefits: When casting a spell with a defined area, you may exclude a single target caught within the area. If two or more targets are grappling, you cannot exclude any of them. An excluded target is not affected by the spell in any way.

Special: You may take this feat more than once. Each time you take it, it increases the number of targets you may exclude by one. If you can exclude all the targets in a grapple, you may do so, but you cannot exclude only some targets in a grapple.

Far Magic

Your spells have greater than usual range.

Benefits: When determining a spell's maximum range, your caster level is treated as being two higher.

Favored Target

Your magic has greater than usual potency against creatures of a specific type.

Prerequisites: Spell ability 15+

Benefits: Choose a creature type from the table below. (If you choose humanoids or outsiders as a favored enemy, you must also choose an associated subtype, as indicated on the table.) Your spell's save DCs are 2 higher against creatures of this type.

Special: This feat may be selected more than once. Each time it is taken, a different favored target must be selected. If a specific creature falls into more than one category of favored target, the bonuses do not stack.

Table 1: Favored Target Enemies

Type (Subtype)

- Aberration
- Animal
- Construct
- Dragon
- Elemental
- Fey
- Giant
- Humanoid (aquatic)
- Humanoid (dwarf)
- Humanoid (elf)
- Humanoid (goblinoid)
- Humanoid (gnoll)
- Humanoid (gnome)
- Humanoid (halfling)
- Humanoid (human)
- Humanoid (orc)
- Humanoid (reptilian)
- Magical beast
- Monstrous humanoid
- Ooze
- Outsider (air)
- Outsider (chaotic)
- Outsider (earth)
- Outsider (evil)
- Outsider (fire)
- Outsider (good)
- Outsider (lawful)
- Outsider (native)
- Outsider (water)
- Plant
- Undead
- Vermin

Greater Disarm Casting

You have improved your ability to disarm targets with spells.

Prerequisites: Spellcasting ability 21+, caster level 10+, Disarm Casting

Benefits: When using Disarm Casting, you gain a +4 bonus to your opposed check to disarm a foe. Additionally, you

may attempt to disarm two foes with a single spell, as long as they are both in the area.

Greater Ram Casting

You have improved your ability to bull rush targets with spells.

Prerequisites: Spellcasting ability 21+, caster level 10+, Ram Casting

Benefits: When using Ram Casting, you gain a +4 bonus to your opposed check to bull rush a foe. Additionally, you may attempt to bull rush two foes with a single spell, as long as they are both in the area.

Greater Trip Casting

You have improved your ability to trip targets with spells.

Prerequisites: Spellcasting ability 21+, caster level 10+, Trip Casting

Benefits: When using Trip Casting, you gain a +4 bonus to your opposed check to trip a foe. Additionally, you may attempt to trip two foes with a single spell, as long as they are both in the area.

Held Casting

You can complete all but the last element of a spell casting, holding the almost-finished spell for use later.

Prerequisites: Spell ability 15+, caster level 9+

Benefits: Once you have successfully cast a spell (met all its components and casting time, made any needed Concentration checks, survived any attack of opportunity for casting), you may opt to hold on to the spell rather than cast it. You may only hold one spell at a time, and may not cast any other spells while you hold one. Although having a held spell does not provoke an attack of opportunity, any event that would require a caster to make a Concentration check to cast a spell (such as taking damage or violent motion) forces you to make one at the same DC or lose the held spell. A held spell is obvious, and observers may make Spellcraft checks to identify it just as if they observed the spell being cast.

Releasing a held spell is a free action which normally must be taken on the caster's turn. However, a character with a held spell threatens his normal reach with it, and may cast it as an attack of opportunity against any foe that provokes one from him. This requires a touch attack. If successful, the target becomes the target of a targeted spell, or the center of an area spell.

Improved Far Magic

Your spells have much greater than usual range.

Prerequisites: Spell ability 15+, Far Magic

Benefits: When determining a spell's maximum range, your caster level is treated as being four higher. This benefit replaces (does not stack with) the bonus from Far Casting.

Improved Lasting Magic

Your spells have much greater than usual duration.

Prerequisites: Spell ability 15+, Lasting Magic

Benefits: When determining a spell's duration, your caster level is treated as being four higher. This benefit replaces (does not stack with) the bonus from Lasting Magic.

Improved Two-Spell Casting

You can easily cast two spells in rapid succession.

Prerequisites: Spell ability 17+, caster level 10+, Two-Spell Casting

Benefits: When casting two spells with Two-Spell Casting, your caster level penalties are reduced to -2 caster levels

for the first spell and -4 caster levels for the second spell.

Item Casting

You can replace an item's charges with your personal spell power.

Prerequisites: Spellcasting ability 15+, Craft Staves* or Craft Wands*.

Benefits: When activating a wand or staff, you may use a spell use instead of burning a charge. You must expend a spell of at least the same level as the ability to be activated from the staff or wand, and doing so provokes an attack of opportunity. You must be able to use the wand or staff, and must be able to fulfill all the requirements of the spell you power it with.

*From the *PHB*.

Lasting Magic

Your spells have greater than usual duration.

Benefits: When determining a spell's duration, your caster level is treated as being two higher.

Mounted Casting

You are adept at casting while riding.

Prerequisites: Ride 1+ rank, Mounted Combat

Benefits: When riding a mount, you never need to make a Concentration check to overcome vigorous or violent motion. Additionally, you gain a +2 bonus to any Concentration check you are required to make while riding.

Point-Blank Casting

Your magic is particularly potent at short range.

Benefits: When casting a medium or long range spell at a range of 30 feet or less, or any spell with a range greater than touch at a range of 5 feet or less, the spell's save DC is increased by 1.

Power Casting

You have learned to focus the power of certain spells.

Prerequisites: Spellcasting ability 15+

Benefits: This feat allows you to alter the power of spells with an area that deal hp damage and have a Reflex save for half (such as *fireball*). When casting a spell of this type, you may focus its power into a few motes, which deal more damage but are easier to avoid. You may boost the caster level of the spell when determining its damage by any value up to +5. This same value is deducted from the spell's save DC.

If you cast more than one spell in the same round (using *Quickened Spell*, *Two-Spell Casting*, or any other method), the other spells also have their DCs lowered, though they gain no benefit to caster level.

Thus a 3rd-level wizard with an 18 Int casting *burning hands* could boost the caster level to 5th when determining damage (doing the spell's maximum of 5d4), at the same time lowering the Reflex save by -2 DC to 13.

Ram Casting

You have learned to bull rush targets with spells.

Prerequisites: Spellcasting ability 17+, caster level 7+

Benefits: When you hit a target with a spell that deal hp damage, you may attempt to bull rush him. Only one target of each spell may be bull rushed, even if an area spell catches multiple targets. The target to be bull rushed takes half

damage (after any save). You make an opposed check of 1d20 + the spell's level versus the target's Str check. On a successful check, your target is pushed back a number of feet equal to what your roll beat his (with a minimum of 5 feet). The target is moved directly away from you.

For example, a 7th-level wizard casts a *call lightning* at a brigand. He deals 21 points of damage, but the brigand makes his Reflex save reducing it to 10 points. The wizard decides to attempt a bull rush, so the brigand takes only 6 points of damage. The wizard rolls 1d20 +3 (the level of the spell) opposed by the brigand's Str check. The wizard gets a total of 22, while the brigand manages only a 12. The brigand is moved 10 feet directly away from the wizard.

Spell Expertise

You have learned to rein in the area of your spells.

Prerequisites: Spell ability 13+, Dex 13+

Benefits: When casting a spell with an area defined in feet, you may reduce the area by any number of 5-foot increments (to a minimum of 5-feet) The type of area (burst, cylinder, spread, etc.) is not changed. For example, when casting a *fireball* you may reduce its area to a 15-foot spread, a 10-foot spread, or a 5-foot spread.

Spell Finesse

You have learned to cast spells using a different style than most of your spellcasting tradition.

Benefit: Choose one of the following ability scores Intelligence, Wisdom or Charisma. All your spellcasting calculations are now based on this ability, including maximum level of spell you can cast, spell save DCs, and bonus spells per day.

Spell Specialization

You are particularly adept with a particular kind of spell.

Prerequisites: Spell ability 13+, caster level 1+

Benefits: Choose a subschool of spell (calling, creation, healing, summoning, teleportation, scrying, charm, compulsion, figment, glamor, pattern, phantasm, or shadow). When casting a spell of the selected subschool your caster level is treated as being two higher.

Alternatively you may selector a descriptor type (acid, air, chaotic, cold, darkness, death, earth, electricity, evil, fear, fire, force, good, language-dependent, lawful, light, mind-affecting, sonic, or water). When casting a spell of the selected descriptor your caster level is treated as being one higher.

Special: This feat may be selected more than once. Each time, a different subschool or descriptor must be selected. The effects of this feat do not stack. A caster with both Spell Specialization (charm) and Spell Specialization (mind-affecting) gains only a +2 caster level (the better of the two bonuses) when casting a *charm person*, not a +3 caster level.

Spirit Casting

You can replace personal power for expensive material components.

Prerequisites: Spellcasting ability 15+, Eschew Materials*

Benefits: When casting a spell with a material component that costs money, you may ignore the component and instead spend experience. You must expend one experience per 5 gp of material component ignored. You cannot bypass foci with this feat.

*From the *PHB*.

Sneak Magic

You have learned to take advantage of surprised or unbalanced targets.

Prerequisites: Spellcasting ability 17+, Spell Finesse

Benefits: This feat allows you to alter the power of spells that deal hp damage (such as *burning hands*). When the target of such a spell is flat-footed or denied his dex bonus to AC, you deal an additional die of damage (of the same type the spell normally deals). Thus a target caught flat-footed by a Sneak Magic *burning hands* takes an additional 1d4 points of damage, while a target caught by a *ray of frost* would take an additional 1d3.

Trip Casting

You have learned to trip targets with spells.

Prerequisites: Spellcasting ability 17+, caster level 7+

Benefits: When you hit a target with a spell that deal hp damage, you may attempt to trip him. Only one target of each spell may be tripped, even if an area spell catches multiple targets. The target to be tripped takes half damage (after any save). You make an opposed check of 1d20 + the spell's level versus the target's Str or Dex check, whichever is better. On a successful check, your target is tripped. The target cannot make a trip check to against you, even if he wins the opposed check.

For example, a 9th-level druid casts a *call lightning* at an ogre. He deals 12 points of damage, and the ogre fails his Reflex save. The druid decides to attempt a trip, so the ogre takes only 6 points of damage. The druid rolls 1d20 +3 (the level of the spell) opposed by the ogre's Str check (+4 for the ogre's large size). If the druid happens to win the check, the ogre is tripped. Even though the *call lightning* spell lasts another number of rounds, the druid cannot make another trip attempt with it (though his future bolts from the spell deal full damage).

Two-Spell Casting

You can cast two spells in rapid succession.

Prerequisites: Spell ability 15+, caster level 9+

Benefits: You can cast two spells with casting times of 1 standard action as a full-round action. Your caster level for the first spell is treated as being 4 levels lower than usual, and your caster level for the second spell is treated as being eight levels lower than usual.

Pyramid Review

This Is Not Happening (for *When Darkness Comes*)

Published by [Twilight Creations, Inc.](#)

Concept, design by David Carl & Todd A. Breitenstein

Art by Dave Aikins

Developed by Kerry Breitenstein & Steve Donohue

Layout by Todd A. Breitenstein

Written by Todd A. Breitenstein, David Carl, Les Simpson, Robert Defendi, Heath Scheiman, & Jim Pross

Two full-color tiles, 24 full-color encounter disks, 64-page b&w rulebook; \$9.95

The steps Twilight Creations takes as it expands its Variable Tile System are tentative ones. With [The Most Dangerous Game](#), the company opened the door to espionage, joining forces with AEG and its *Spycraft RPG*. *This Is Not Happening* takes another baby step outside the comfortable cocoon, placing players in abstract settings like dream worlds and computerized virtual realities.

When playing these scenarios, Victory Points are replaced by Focus Points. These represent your ability to concentrate in weird, fluid environments, and may even allow you to manipulate reality. Players in a *This Is Not Happening* scenario start with a certain number of Focus Points, more if they have the Focused Mind skill. They can gain still more for each mission objective they achieve, and for opponents they overcome. Damage in the other worlds is suffered as Focus Point damage first, but that's not the primary use of those points. True, most of the Focus skills, based on Intelligence and Defense/Health, are aimed at causing damage to others or defending against and avoiding damage, but Focus also fuels Focus Abilities.

Focus Abilities are strange powers characters can use in the altered worlds; these are available to everyone. Some have effects outside the game tiles. Fate and Fortune powers change die rolls, and Blasts let you switch statistics like Intelligence and Strength in combat. Most are in-game fudges. If heroes want to pull off stunts a la *The Matrix*, they can jump across buildings, run fast, or avoid having to turn over potentially damaging encounter disks by running along the wall past them, all by spending a few FPs. There are also weirder abilities better suited to a dreamscape. You can flood the room with ectoplasmic goo, raise tendrils to ensnare opponents, and create or hide doors. There is also a selection of "standard" psychic powers, like telepathy, teleportation, and telekinesis.

And what better place to trash in your pseudo-*Matrix* than a high-security office building? The two new tiles match up, with elevators, stairwells, and even the parking lot all overlapping at the right places. Quarters are tight, so the Focus Abilities will be of great use. The rules and some accompanying scenarios recommend or use other tiles from other games, usually dropped in at random, to simulate that dreamlike, nonfigurative state. The game requires the use of the *When Darkness Comes* core game, and repeatedly suggests (but does not require) *The Most Dangerous Game*.

There are 24 new Encounter Disks to help establish the mood. Many of these are supposed to be only for use with

cyber settings and/or the dream worlds. Adversaries are accurately described: "The shimmery blue cyber-monster" is logic that's hard to argue, and the evil clown shows that someone in the design department is on the ball. Your Allies are crazy guys on street corners or Zen masters, and your tools boost your psychic abilities. Many scenarios use the portals (doors called up when the objective is met), and traps like cyber-hounds, clockwork cubes, and guardian systems (another nod to *The Matrix*, among other insular references) are some of the surprises waiting on the disks.

[SPOILER ALERT!]

The adventures -- six of them, including one meant to be run as a roleplaying experience complete with GM -- are almost unrelentingly bleak stories of people trying to evade one faceless bureaucracy or another. The first has scientists discovering portals to another plane -- if they can reach them, they'll be safe from their Big Brother-like sponsors. In the next, something must be stopped from killing off one skilled VR hacker after another. A group finds itself pulled into a box straight out of *Hellraiser*, while another tries to stop the release of a devastating computer virus. A serum has started turning people into mindless, identical slaves of the computer (yet another nod to *The Matrix*), and in the blowout GM adventure, government agents are ordered to track down their own computer contacts in a bid to find who is twisting the system to much grander purposes than simple data thefts and information worms.

[END SPOILER ALERT]

The editing continues to improve, though the text seems to be much larger than usual. The stories are decent introductions, if a bit old hat. There is no miniature included with this set, but the components included are still nice. It would be great if Dave Aikins could, just once, blow the art assignment so there'd be something new to say about his quality drawings, but buyers are stuck with his superior results.

This Is Not Happening comes in cheaper without the figurines, and given the inclusion of the zippy Focus rules, which represent a welcome and significant change in the available guidelines, this supplement is worth the price of admission. Only this time, you don't just watch, you get to play.

--Andy Vetromile

Pyramid Review

Chi-Chian the Roleplaying Game

Published by [Aetherco/Dreamcatcher Multimedia Inc.](#)

Written by Chris Adams, David Fooden, & Voltaire

Illustrated by Voltaire with Chris Adams & David Fooden

144-page b&w softcover; \$29.95

If you have been wondering what Aetherco have been doing since releasing [Further Information: A Gamemaster's Treasury of Time](#), a supplement for their acclaimed time-travel RPG, [Continuum: Roleplaying in The Yet](#), then look no further than the *Chi-Chian the Roleplaying Game*. Based upon, and set after the events of the *Chi-Chian* comic book and the animated web series broadcast on the [Sci-Fi Channel website](#), the RPG allows players to enter the strange creation of the artist, musician, and animator, Voltaire -- that of New York in the year 3049. Manhattan is a prefecture of the Japanese Empire, administered under Imperial command by Mimitsu Lines, Inc. It was bought for \$27 to protect Japanese interests in the wake of the New York/New Jersey War of 3000 that was the Republic of Americas' attempt to prevent the secession of the island. In the 50 years since, parts of Manhattan have been rebuilt in the classic Japanese style, and -- under the guidance of the company's leading scientist, Soma Mitsui -- also undergone several major changes. Giant worms core the big apple, providing clean and safe urban mass transport. X-Y Relax technology that gives women sole control of organic devices. But his biggest project was the installation of K-Seg, or "Kind Segregation," a system of social engineering that divides the city into four planes: Alpha, Beta, Gamma, and, Delta (which is below ground). Each is reserved for a different kind of person based upon their degree of spiritual development, rather than their creed, race, or wealth. The more emotionally developed they are, the higher the plane of their dwelling. The planes are separated by a barrier known as Smart Mist, which is impenetrable to those who are not enlightened enough. Of course, there is a way to sidestep this problem. The K-Seg Buffer is a device able to store and play the memories of a "nicer" person, allowing its owner to both ascend to the higher planes and to enjoy the memories.

Despite these changes, New York is far from being a paradise. Mimitsu Lines' security still has to keep the city safe from New Jersey, and it also wants to find the remaining secrets of the late Soma Mitsui. One of these, his last experiment, a giant robot with four arms ending in dragon heads, caused havoc and destruction among the populace with its appearance two years ago. Below the city a renegade order of monks, the Patahn Pahr, enslaved by a race of giant intelligent caterpillar moths that nest in their brains, seek to overthrow the matriarchy of Mimitsui Lines. Fortunately, the heroine of the comic book and daughter of Soma, Chizuru "Chi-Chian" Mitsui, still resides in the city where she works as a worm train handler. Though she keeps out of corporate politics, this has not stopped her from saving the city on several occasions, usually with the help of her friends and allies. They include Nahm, the wanted pirate broadcaster known as Siren; the robot sex toy/Tentacle Unit fusion, Sayoko-7; Sebastian, the Bach-loving, waltzing leader of the giant intelligent cockroaches that also live below New York; and Dr. Yoshimoto, the three-foot-tall pink teddy bear super toy scientist.

Players can choose to take any one of these characters, or create one of their own. The samples given for the ready-to-play scenario at the book's end include rich kids, cockroaches (who all speak with a Russian accent and are never effected by K-Seg), psychics, robotic sex toys, and even an Arab taximech driver (New York is served by these four-story tall humanoid shaped robots with the pilot and passenger compartments in their head). The process is simple; players having 120 Chi points to spend on eight stats, plus capabilities that range from special abilities and skills to unique items, status, and wealth with which to buy other equipment. All characters must have at least two tragic flaws

as well as a pair of memories for use when traveling through the Smart Barrier. Packages are given for playing both cockroaches and robots, but most characters will be humans, many of them from the Taino race. This is a general species that mankind blended into during the first few centuries of the third millennium, through a mixture of crossbreeding and genetic manipulation. Only with the return of descendants from the Solar System's various colonies did humanity rediscover their diversity, and for the last 150 years, they have been attempting to overturn the many years of the Taino period. After character generation is complete, any remaining Chi points are put aside in the character's Chi Pool. These are spent as luck or hero points to re-roll dice rolls during a game, and also used to improve the character. The GM or Sensei has final character approval.

The game system is simpler than the character creation process, which involves flipping back and forth selecting various options. Everything in the game has a value, whether it is a core statistic, ability, or a piece of equipment, and this is matched against a Difficulty Number on the Success Chart to give a minimum target number. 2d10 are rolled to match this target or get higher, with doubles re-rolled and added. Higher dice rolls will yield a greater number of successes. The system is light and fast, with combat working along the same lines.

But the bulk of *Chi-Chian the Roleplaying Game* -- some 50 pages -- is given over to an encyclopaedia description of the setting and its events. Together with the opening chapter's synopsis of the events portrayed in the comic and the on-line web comic, the book certainly lives up to its back cover description as being the ". . . official bible of the Chi-Chian universe." Indeed, there is a lot more to the setting than has been given here. For the sensei, there is a further explanation of the setting's secrets, write-ups of the comic's most notable characters and villains, and a short ready-to-play scenario that should not last more than two sessions. There is only limited advice on running a game, so this is not really a game for the neophyte referee.

Despite being only a 144-page book, it is very heavy. This is due to the heavy, glossy paper stock. The layout is very stark, being white text on black page. It is heavily illustrated with a wide selection of artwork taken from both the on-line and off-line comic. The standard of the on-line comic is better, but the singular look of the off-line art does grow on you. Overall, the effect works to give a very particular look to what is very different setting, one that is a fusion of the Goth and Manga art styles.

Chi-Chian the Roleplaying Game joins a small range of games, such as the recently published *a/state* and the older *SLA Industries*, where the cityscape of the setting figures as a character all of its very own. It also serves as an excellent resource for fans of the comic series, but there is so much information given in its pages that you do not really need to have read the comic to get into the setting. The light comic-book-style system also makes it suitable for use by new players, who, of course, could be fans of the comic. But the experienced GM and player looking for something a little more different, a melange of the Gothic, the Manga, and a dash of mecha, could look no further than the dark, weird world of the *Chi-Chian the Roleplaying Game*.

Murphy's Rules

Irregular Webcomic

by David Morgan-Mar

Irregular Webcomic

Irregular Webcomic

A Suppressed Primer

"So, first comes the house of man, and its construction, then the human body, its build and deformities; then justice, music, the church; war, harvest, geometry; the mountain, nomadic life and secluded life, astronomy, toil, and rest; the horse and the snake; the hammer and the urn which -- turned over and struck -- makes a bell; trees, rivers, roads; and finally destiny and God: This is what the alphabet signifies."

-- Victor Hugo, *France et Belgique, Alpes et Pyrenees, Voyages et Excursions* (1910)

This bit of experimental silliness has no real reason for existing, except that it's always kind of fun to play with narrative conventions. I especially like watching the poetic primer form bulge with fictive botulism, as the lines begin to quarrel among themselves and jockey for power over the poem. (To be perfectly honest, I also like the fact that I can write this kind of thing rather faster than the normal run of columns, as *GURPS Infinite Worlds* is not getting any less infinite.) I'm not exactly sure what anyone could use this for in a game, but then I didn't get to write [my traditional doggerel](#) on April Fool's Day, so Steven owes me one.

*"Einstein, disguised as Robin Hood
With his memories in a trunk
Passed this way an hour ago
With his friend, a jealous monk
He looked so immaculately frightful
As he bummed a cigarette
Then he went off sniffing drainpipes
And reciting the alphabet."*

-- Bob Dylan, "Desolation Row"

A is [Atlantis](#), which sinks at the start,

Built from [Bisociative](#) logic as art.

C is for [Crop Circles](#) -- cereal surrealism,

Dee is for Britain and [occult imperialism](#).

E is for Emerald, [Prester John's](#) concave treasure,

Fallen in [Footnotes](#) to Sir James George Frazer.

Growing in Graves, both [Glozelian](#) and Robert,

(**H**e was Haunted by [Hecate](#), whose dismal job it

Is ruling the waste lands, like [Irem](#) in Oman.)

Joined by those that yawned to warn [Julius](#) the Roman.

K is for Knighthoods, [Templar](#) or Hospitaller,

Led by Little [Green Men](#) (the Grey ones are Littler).

Mastered by [Madoc](#), their Maps, used by Dee

Named [Norumbega](#), the land of the free
Over the Ocean, just south of [Oak Island](#)
Planting Prieuré [grails](#) from line five to stop violent
Quakes by Qlipthoth that subduct hollow history,
Right under [Roswell](#), that mutable mystery,
Spawning the [Saucers](#) that probe and demean us,
Transporting Tesla, with [death-rays](#) from Venus.
Unless line three's [Uranus](#) Unleashes his will,
Ve all will be conquered with [Veapons](#) uff Vril!
While Wotan calls [Werewolves](#) from graves to the West,
X is for [Xulthtan](#), which [COUPLET SUPPRESSED]
You hardly need [Yeats](#) to find this ending barbarous:
Z[schaetzch](#) finds Atlantis, and we get ouroborous.

Can the Friends Justify the Fiends?

This past week I finished editing a secret project (which, no matter how many bamboo shoots are stabbed under my fingernails, I shall *not* reveal to be [D6 Fantasy](#)).

Anyway, in the course of editing this book, I ran across the following segment, dealing with priestly Miracles, all of which draw from one of three special skills: *divination* (telling the future), *favor* (helping people), or *strife* (hurting people):

What happens when a cleric wants to include skills dealt with by more than one skill? The gamemaster and player need to decide what the intent of the invocation is. For instance, a miracle that creates an undead helper endowed with the ability to lift objects and look for small items falls under *favor*, while one that resurrects someone in order to wreak havoc -- even if that means giving the undead the *lifting* skill to carry off objects or people or the *tracking* or *search* skill to look for them -- comes under *strife*.

Now, if you've just read the preceding, I'm afraid I must ask you to gouge out your eyes. Non-Disclosure Agreement and all that . . . you understand.

But that's beside the point. That paragraph immediately evoked an image that gave me the giggles for hours afterwards:

Todd the Happy Necromancer.

Oh, sure, most necromancers raise their undead legions to wreak havoc on the living, spread evil, and destroy all that is good. But not Todd! Todd uses *his* powers for good! Todd's animated corpses mow the lawn, give backrubs, and babysit youngsters. And you haven't lived until you've been part of a mostly-zombie game of Freeze Tag!

Anyway, the point is, that paragraph reminded me that perceptions are fairly arbitrary, especially when it comes to ends justifying the means.

Once you can mentally separate ends and means, a whole new world of possible motivations and plots opens up.

Of course, other games and stories already make use of this dynamic. For example, the idea of "Vampire/Demon/Other-Creature-of-Evil Who Struggles to Do the Right Thing" is a common trope. But the idea can extend to just about *any* motivation and outcome.

As an extreme example, in a Supers campaign you could have two characters who each have the ultimate goal of getting rid of crime. One works tirelessly to remove what he perceives to be the root causes of crime -- unemployment, lack of opportunity, social injustice, and so on. The other straps on assorted slug-throwing weapons and prowls the streets, mowing down those who are actively committing crimes.

While both people consider themselves working toward the same goals, each would probably view the other with suspicion and even antagonism, believing the other to be part of the problem. And they might *both* react with revulsion at another murderer who shoots those he *believes* are prone to crime. (And if the latter claims powers of precognition and tells the others he "knows" those he shoots are about to commit crimes, this could create another layer of ends-versus-means complications for them.)

From a player's point of view, this means that new and interesting character concepts can be conceived by looking at the ends *or* means. To tackle things from the "means" aspect, think about what PCs traditionally try to accomplish, and then think about alternate means of achieving that goal (or an alternate perception of the goal). For example, quite

possibly the best idea I ever heard in this regard was in the *Pyramid* chat room one time, for an *In Nomine* game.

This'll require a bit of background, but I'll try to keep it brief.

Anyway, *In Nomine* is about the battle between angels and demons on Earth, who often conflict to influence mortals' souls. One aspect of this struggle revolves around angels convincing humans to achieve their "destinies" -- or the best possible thing they can do with their lives -- versus demons leading mortals to their "fates," or the worst possible thing they can do with their lives.

One type of angel is the Elohim, supremely logical and emotionless beings who can calculate and determine the outcome of future actions because of their connection to the world. While it would be logical and, indeed, common for an Elohite to serve the cause of Destiny, this character concept instead revolved around the idea of an Elohite of Fate. The logic is: Are there some -- admittedly rare -- circumstances where the greater good can best be served by helping someone along toward their worst future? (For a classic example, the guy who shot Batman's parents was obviously fulfilling his fate, but the world has benefited a thousand times over from Batman using those shootings to fulfill his destiny.)

As a result, he was actively working for the demonic side, with both sides believing they were fulfilling their goals (and, of course, only the GM knowing for sure). Being supremely rational and emotionless, it was trivial to justify his actions; logically, the greater good *was* being served by his deeds, and there were incredible roleplaying possibilities from having a character whose ends were accomplished through *very* unorthodox means.

As other examples, a *Call of Cthulhu* investigator might accomplish a common goal -- "protect humanity from the forces of darkness" -- in an unorthodox way . . . perhaps by using fame to spread word of the peril, or magic to try to take the fight to the monsters directly, or science to create a fortified "bunker" where a small selected few can hide from the danger.

Interesting results can also be achieved from looking at traditional "means," and adjusting the "ends." For example, the comic book series *Thunderbolts* revolved around a super-team that did good and stopped criminals in the way that other super-groups did . . . but they were doing so because they were actually super-villains, and were gaining the world's trust so that they could turn against the world and conquer it at a crucial time.

(I should assure you now that the cornucopia of comic book references this week are pure coincidence, and *not* an effort to justify tax write-offs of outlandish comic shop expenditures for another year.)

Translating this idea to a traditional fantasy game, what if an adventurer is doing the traditional dungeon crawl thing -- not out of a desire to do good or protect the countryside, but because he is an ancient insanely powerful dragon, cursed to assume a puny human form until he can undo the curse? He may well think that an adventuring life is the best means of encountering a cure . . . after all, adventurers stumble across interesting artifacts and sources of power all the time. Ironically, in an ongoing campaign, even if the rest of the PCs found out, they might not *care*:

"Well, if we ever help put him in a situation where he can undo the curse, the world is doomed."

"Yeah, but what're the odds of *that*? Besides, he's been honorable so far, *and* he's incredible in a fight!"

Likewise, an adventurer might place himself in an adventuring life not because of any altruistic desire to save the world, but because he believes that dying in an adventuring life is a sure way to a paradisiacal afterlife. Or an adventurer might choose the life of a *Call of Cthulhu* investigator because he is a mediocre horror writer, and he believes that placing himself in frightening situations will improve his craft.

The GM can also use ends/means possibilities to provide alternate means and motivations in a campaign. Besides shaking up the players perceptions about various characters motivations and methods, it can also be used to provide plots. For example, what if the heroes are led to help a mysterious old man "save the world's children" . . . only to learn, well into the adventure, that his idea of "saving" them means "removing them from this world"? Or what if the PCs are forced to choose sides in a conflict of ends versus means, such as the one above about "how to rid the world of evil"?

Now, most unorthodox ends/means concepts require careful thought, consideration, and, in the case of PC concepts, almost certainly GM approval. Since they are so outré, they have the ability to disrupt a campaign and make things complicated. This is especially true if a concept requires on a certain worldview of the campaign; for example, the ***In Nomine*** example above is so noncanonical that no doubt even now Elizabeth McCoy, the game's line editor, is sending legions of zombies my way in an effort to deal with me.

Now, whether said zombies want to rend me limb from limb, or merely play a game of Freeze Tag <ahem> remains to be seen.

* * *

For those of you reading this on Friday:

If you're looking for the inside scoop on the upcoming ***GURPS Fourth Edition***, you should stop by the [Pyramid Chat Room](#) tomorrow at 7 P.M. CST, where Sean Punch will serve as the ringleader for a little discussion called "Skills and Techniques."

For those of you reading this on Saturday or later:

Wow! What an incredible discussion. Too bad you missed it; you should have heard the things we said about *you* . . .

The Last Steampunk Adventure: The Hidden Valley of Science!

by James L. Cambias

Editor's Note: The "Last _____ Adventure" series is designed to provide GMs with scenarios suitable for concluding a genre, transitioning a genre to a new premise, or providing an exciting "setting sun" one-shot.

*Despite the overarching title, genres represented by the "Last _____ Adventure" **may** continue having adventures published in **Pyramid**.*

We will be publishing adventures in this series throughout the month of May. If the series proves popular, it may continue beyond as an irregular feature. As ever, we invite your comments by either the [discussion groups](#) or by writing us at pyramid@sjgames.com

The Great War -- so long dreaded and hoped for -- has finally engulfed Europe. All the great infallible plans have failed to bring quick victory for either side. The giant Babbage engines planning strategy are continually stalemated by equally huge machines on the other side. Every superweapon has met a countermeasure. The machinery of warfare is becoming more brutally functional: the great dirigible cruisers with their gilded scrollwork and broadside cannon can no longer survive in the skies against lean monoplanes; the towering steam-titans and land ironclads succumbed to minefields, mud, and heavy artillery.

Society is showing the strain. Clockwork automata failed to turn the tide of battle -- too fragile and expensive -- but they are filling the factories with tireless workers, freeing up young men (and soon perhaps even young women!) to be cannon fodder on the front. Aerial bombardment and intercontinental shelling by super-cannons are forcing the people of Europe underground into dimly-lit "shelter housing" and factory bunkers. Some thinkers have begun to wonder if humans will become a subterranean race.

The Mission

The heroes are being assigned to a secret, risky mission which may break the stalemate and bring an end to the war before European civilization collapses.

Six weeks earlier, a British cruiser sank a German U-boat off the coast of South Africa. The submarine was destroyed, but the cruiser's boats picked up two survivors. One of them has been identified as the well-known German Arctic explorer Ernst Kreisler. The other is Herr Doctor Professor Karl Pfundt, of the Munich Technical Institute.

Kreisler has so far refused to say anything, but Pfundt was badly burned before rescue and has babbled while dosed with pain-killing drugs. Based on his ramblings, the notes Kreisler was carrying, and some hints from cable intercepts and agents in Europe, British Intelligence has determined what they believe the sub's mission was.

According to Pfundt (and corroborated by some other sources), there is an organization of scientists and idealists, called the Brotherhood of Science, devoted to promoting discovery and building a rational society. It was founded

Background Assumptions

This scenario assumes a relatively orthodox steampunk setting, with a technology base of TL (5+1) -- all the impractical steam-powered dreams of the Victorian Era were realized. Where "superscience" exists, it doesn't directly violate physical laws, but does allow unrealistically good performance.

Increasingly, however, the nifty

in Switzerland in 1849, shifted to London in 1863, then Paris in 1872, and finally in 1890 the members relocated to a base beyond the reach of any government: Antarctica. The Brotherhood is very wealthy from patent royalties, and apparently has pursued a policy of keeping its most potent discoveries out of the hands of those who might misuse them -- which at present describes both sides in the World War.

Kreisler's notes indicate the existence of a hidden rift valley in Antarctica, kept warm by thermal vents and sheltered by high mountains. A member of the Brotherhood discovered it in 1866, and in 1891 the organization began construction of a Citadel of Science there. The U-boat's mission was to either make peaceful contact with the Brotherhood of Science and secure them as allies for the Central Powers, or else seize the Brotherhood's headquarters and return its super-scientific marvels to Germany.

It seems likely the Germans will try again, so the British have recruited a group of seasoned explorers, intelligence agents, and scientific minds (i.e. player characters) to fly down to Antarctica as quickly as possible. Their mission: to strike an alliance between the British Government and the Brotherhood of Science, or (failing that) to prevent the Germans from accomplishing their mission.

Upper-class ladies and gentlemen are expected to volunteer out of a sense of noblesse oblige, and naturally anyone in uniform will go where ordered. Middle and lower-class civilians will be paid a stipend of £1000 each for undertaking the mission.

Transportation to Antarctica is aboard the Royal Navy aerial cruiser *Vigilant*. (PCs with their own intercontinental transport can use that instead.) The skies over Europe have become too dangerous for an airship like *Vigilant*, but she is still useful for long-distance ocean patrols -- and polar expeditions. If any of the player-characters is a military officer above the rank of Lieutenant (i.e. Military Rank 3 or better) he will be put in command; otherwise the *Vigilant's* captain is Lieutenant Louis Buckhollow.

HMS Vigilant

The *Vigilant* was built in the years before the war began, when it was still imagined that aerial cruisers would fight naval-style engagements in the sky. Originally she mounted a 240-cf turret below the body, holding a 105-mm naval gun. That has since been replaced by an internal bomb bay holding 1600 lbs. of bombs. For this mission the bomb bay is available for cargo to supply the expedition.

Vigilant is designed using TL(5+1) technology: in other words her systems are TL6, but are described as advanced versions of TL5 equipment. The "high-efficiency steam turbine" engines are actually TL6 turbocharged gasoline engines, the "incombustible hydrogen" lifting gas is helium, and so on. *HMS Vigilant* burns 144 gallons per hour of petroleum fuel.

Subassemblies: Body with Very Good streamlining +11 (2.28 mcf), three limited-rotation turrets [Body: LR and B] +2.
Powertrain: 3200-kW TL (5+1) high efficiency steam turbine with two propellers and 12,960-gallon self-sealing ultralight fuel tank.

Occ: crew of 15, space for 5 passengers
Cargo: 320 cf, 1 ton
Body

Armor	F	RL	B	T	U
Body	1NR	1NR	1NR	1NR	1NR
Turrets	2	2	2	2	2

TL (5+1) gadgetry is fighting a losing battle against less romantic but more efficient TL 6 gear. In effect, the steampunk world is getting brutally reality-checked.

Magic, psychic powers, and the supernatural either don't exist or are the preserve of a hidden elite and don't overtly affect events in the world or in this adventure. Historically, the Great War saw a tremendous upsurge in occult beliefs, and this can be mirrored in the campaign, even if the magic doesn't really work.

Weaponry

1 37mm Rotary Cannon [Tur: R] (335 rounds)
1 37mm Rotary Cannon [Tur: L] (335 rounds)
1 37mm Rotary Cannon [Tur: B] (330 rounds)
4 400-lb. Bombs [Body: U]

Equipment

Body: bomb bay, cargo space, 7 crewstations, electric signal lamp, fuel, foghorn, 20 hammocks, lifting gas (2,275,200 cf), TL5 precision navigation instruments, rotation space, steam turbine. Turrets: universal mounts, rotary cannon, 1 crewstation each.

The Voyage

The *Vigilant* proceeds south over Allied-controlled territory: Great Britain to southern France, across the Mediterranean, then south over Africa to Cape Town. The route is planned to avoid enemy air patrols, but the Germans or Austrians might have long-range machines ready to intercept the PCs over the Sahara.

At the final refueling stop in Cape Town, the party gets a cable from London: "BELIEVE GERMAN EXPEDITION EN ROUTE. NO DETAILS AVAILABLE." The Germans are in fact traveling aboard another U-Boat, proceeding along the coast of neutral South America to avoid Allied patrols. They have a slight head start on the British expedition.

From Cape Town the dirigible heads south. As the expedition approaches Antarctica, the weather gets steadily worse. The entire second day in flight is bad weather, requiring double normal control rolls for the pilot. The ocean below is dotted with pack ice and large icebergs, bobbing in the huge waves which sweep endlessly around the southern continent.

The Hidden Valley

The secret valley ruled by the Brotherhood of Science is located south of the Wohlthat Mountains in Antarctica, inland from the Princess Astrid Coast. It is a rift valley, trending generally east-west, 20 miles long, and about 4 miles across at its widest point. The valley is walled off on either side by tall mountains, rising to at least 5,000 feet; only the ends are open. The western end rises gradually to the ice sheet leading to the Ritscher Upland, but the eastern end opens onto a sheet of level ice leading to the coast.

The floor of the valley is well below the level of the surrounding ice sheet -- in fact, it's below sea level, protected from flooding only by the huge glacial dam which blocks the eastern end. Volcanic heat from dozens of geysers and thermal vents keep the valley warm; the average temperature is roughly comparable with that of Scotland or Quebec. During the months of June and July the valley is completely dark, all sight of the Sun blocked by the mountains.

From above, the valley is a startling contrast to the lifeless ice and wind-scoured rock of Antarctica. A layer of mist hangs at about 1,000 feet, and below that the explorers can make out green forests, grassland, and a steaming river.

The valley is not unprotected. To drive away unwelcome aerial visitors, the Brotherhood have emplaced a giant wind vortex cannon at the eastern approaches. Any aircraft not flying the Brotherhood's flag (dark blue with a stylized thunderbolt) will be fired upon. The vortex generator can fire indefinitely (RoF = 1), buffeting the craft with blast after blast of powerful winds. No airship can survive them very long.

The vortex cannon has a range of 14,400 yards; any vehicle hit by a wind blast must immediately make a control roll and a vehicle HT roll. Loss of control is resolved normally; a failed HT roll results in the loss of 10d body hit points, ignoring armor.

Either the *Vigilant* puts down on the ice sheet east of the valley, or she gets broken up by wind blasts. Either way, the PCs have to proceed on foot.

Creatures and Features

The hidden valley is a treasure-trove of species left over from previous eons. It does not have any dinosaurs, sadly (the volcanic activity is too recent for that), but it does boast saber-toothed tigers, carnivorous flightless birds, and giant ground sloths. The Brotherhood members have built an electrified barrier across the southern end of the valley to keep the more dangerous creatures away from the Citadel of Science.

A large party traveling in the valley will probably not be bothered by animals, but anyone who is walking alone should worry about being preyed on by sabertooths or dinornises.

The valley also contains ruins of vast stone buildings. The ruins have similarities to Egyptian, Mayan, and Tibetan architecture, and are all overgrown with vines and trees. Archaeologists from the Brotherhood have carefully inspected the ruins and removed any important artifacts; they are here just for "local color." Gamemasters wanting a longer adventure storyline can always assume the Brotherhood never quite got around to exploring the ruins, and stock them with monsters, traps, treasure, and ten-foot-wide passages. The ruins are also an excellent place for the German party to ambush the heroes.

The Citadel of Science

On a rise overlooking the lake in the center of the valley is the Citadel of Science. It is an impressive building shaped like a sphere with a pyramidal base, about 10 stories high. The base section is local stone, but the sphere is constructed of polished sheets of steel, flown in and assembled by the Brotherhood with the help of brain-augmented gorillas. The walls of the Citadel's sphere section have DR 50, the stone pyramid base is DR 100.

Power for the entire complex comes from geothermal energy, tapping geysers to drive steam turbines. The builders put in considerably more generating capacity than the Brotherhood currently needs, so assume the Citadel can provide unlimited amounts of electricity to power superscience death rays, force shields, or projects to alter the Earth's axis of rotation.

The Citadel is defended against aerial attack by a battery of solid-fuel rockets in a pop turret atop the sphere. However, the designers never imagined any force could reach Antarctica and traverse the valley. Other than its location and DR 20 steel doors, the Citadel has no defense against ground attack.

The Brotherhood of Science

If the heroes manage to reach the Citadel, they are met by a welcoming

Creatures

The hidden valley contains several potentially dangerous species which can enliven a journey on foot.

- **Dinornis:** Descendants of ancient flightless carnivores, these birds are fast and aggressive, attacking with sharp beaks and claws. **ST 15, DX 15, IQ 3, HT 14.** Speed 9. Weight 250 lbs. Bites for 1d cutting damage.
- **Giant Sloth:** The largest creature in the valley, the giant sloths are not aggressive unless provoked or attacked. In

committee led by the touchy genius known only as "Doctor X." X is suspicious of the new arrivals, and wants to simply take them prisoner. If any of the player-characters are scientists, inventors, or explorers, however, Doctor X is overruled by his colleague, the rather more jovial Professor Fogliano. "After all," he points out, "they have come a very long way, and it would scarcely be polite of us to simply lock them up without at least sitting down for a chat first." (If the PCs are inclined to put up a fight or otherwise make trouble, Dr. X has his electric pistol, Fogliano carries a more conventional Mauser automatic, and they have four brain-augmented gorillas as backup.)

Fogliano invites the new arrivals to remain as guests within the Citadel, and promises them the chance to speak to the Brotherhood. He gives them a brief tour of the Citadel of Science, obviously pleased with the opportunity to show off all the Brotherhood's technological marvels.

Within the Citadel

The Citadel has ten levels aboveground, plus extensive tunnels and basements cut into the basalt cliff on which it stands. The basements and lower levels are devoted to power production, storage, and fabrication shops. The members of the Brotherhood can produce just about any TL5 or TL(5+1) item in their workshops, subject to limits of size and available materials.

Above the workshops are laboratories, fully equipped for all branches of natural science. The current occupants of the Citadel are most interested in electrical devices, cutting-edge biology, radium power, and communication with the dead. Fogliano introduces the visitors to the scientists and nobody makes much effort to conceal what they're working on. Sufficiently smooth-talking characters with good memories could take home several revolutionary discoveries just by chatting up the researchers and listening to what they say.

The upper floors of the Citadel are used as living space, with comfortable accommodations for 32 people (single-occupancy; for a larger staff the Brotherhood can double up and fit 64). The ninth floor holds a library and the dining hall, while the top floor is the domed meeting-chamber for the leadership of the Brotherhood (it also doubles as a lecture hall).

There are a total of 30 members of the Brotherhood currently in residence at the Citadel. Of those, age, infirmity, or sincere pacifist beliefs leave only about a dozen capable of fighting in the event of conflict. Brotherhood members typically arm themselves with ordinary pistols (broomhandle Mausers are a favorite), but the Gamemaster can throw in any or all steampunk small arms he feels appropriate -- air-guns, electric guns, flame guns, gas guns, heat rays, prototype submachineguns, tangles, stunners, or whatever.

For extra muscle, the Brotherhood can command two dozen brain-augmented gorillas. The gorillas can't use any kind of guns or firearms (their hands are simply too big to hold them properly), and they are hypnotically conditioned to never use lethal force against a human. They can punch or wrestle intruders, or act as living shields for their masters in the Brotherhood. And of course the invading Germans don't know about the hypnotic conditioning, so a clever bluff using the gorillas might persuade the enemy to surrender without a fight.

Note that the Citadel is not self-sufficient. In particular, all food is flown in by the Brotherhood's stealthy supply airship, which comes once a month. Unless radio communications exist in the campaign, the Brotherhood members are starved for news (even if radio is in use, they will still be eager to get back issues of newspapers and scientific

a fight they use their massive claws. **ST** 40, **DX** 10, **IQ** 4, **HT** 14/40. Speed 5. Hide has PD 1, DR 2. Weight 2,000 lbs. Claws for 2d-2 cutting damage.

- **Sabertooth Tigers:** The other top predator in the valley, they use pack tactics while hunting, with one animal trying to drive prey toward a pair waiting in ambush. **ST** 30, **DX** 13, **IQ** 4, **HT** 15/20. Speed 10. Hide has PD 1, DR 1. Weight 600 lbs., size 2 hexes. Claws do 2d-2 cutting damage, teeth do 1d+2 impaling.
- **Berserk Gorillas:** Some of Professor Tuquier's experiments on brain augmentation didn't work as well as he hoped, and the result was a group of insane gorillas. Tuquier didn't want to kill the animals, so he released them into the jungle to see if they might recover. So far they haven't -- the berserk gorillas will attack anyone or anything they come across. Use the stats for the brain-augmented gorillas, below, but give them the Berserk and Bad Temper disadvantages.

journals).

Another Visitor

The PCs are not the only outsiders currently visiting the Citadel of Science. A German officer, Captain Augustus Von Macht, arrived on foot the day before. The Brotherhood won't put up with any violence between him and the Allied party.

Captain Von Macht is the advance scout for the German force of stormtroopers traveling south through the valley. He hasn't told the Brotherhood that, of course. Instead, he presents himself as another envoy like the British group, trying to persuade the Brotherhood to join his side in the war. (And Von Macht will make a sincere effort to win over the leaders of the Brotherhood by argument and persuasion -- at least until the stormtroops arrive.)

The Great Debate

The day after their arrival, the foreign visitors are invited to present their pleas to the Brotherhood's leaders, and observe their debates on the subject. (It may seem odd for outsiders to be allowed to watch such a crucial proceeding, but the simple fact is that the Brotherhood are an organization of mad scientists and have had nobody to rant at but each other for years now.)

It becomes obvious that there are several factions within the Brotherhood, with differing attitudes concerning the Great War and the best course for the scientists to follow.

The Interventionist faction wants to choose a side in the Great War and turn loose the organization's superscientific weapons to bring victory and peace. The Interventionists are subdivided into a pro-Allied camp (led by Philippe Tuquier, creator of the brain-augmented gorillas) and a pro-German camp (led by Count Fohn, inventor of the wind vortex cannon). The Interventionists spend as much time bickering among themselves, but can at least agree that the Brotherhood needs to get involved in the war soon.

The Reconstruction faction proposes to wait until the two sides have fought to exhaustion, then rebuild a better world. The leader of the Reconstructionists is Professor Fogliano. Usually he can command the support of whichever group of Interventionists thinks their side is currently winning the war.

The Revolution faction led by Doctor X wants to unleash the Brotherhood's weapons against both sides and topple the corrupt order which has created the slaughter. This group has some internal divisions about what form the new world order is to take -- the American members mostly want to see a kind of United States of the World, while the British supporters tend to be Socialists, and the Europeans are Anarchists.

Finally, the largest single group is the Nonintervention faction, which simply wants to remain uninvolved. Whatever fate the world brings upon itself, they don't want to be responsible.

The player-characters can affect the results of the Brotherhood's debate. Lobbying the leaders of the various factions, using Diplomacy skill or other means of persuasion might put together a coalition willing to support the Allies. Of course, Captain Von Macht is doing the same thing. Violence by the visitors is likely to sway support toward the Noninterventionists, so the heroes must be on their best behavior.

The outcome of the debate depends on how successful the outsiders have been at lining up support. If both the British and German representatives have failed to persuade any members, then the Noninterventionists prevail.

Brain-Augmented Gorillas

The gorillas are the creation of the brilliant neurosurgeon Philippe Tuquier. Each appears to be a large male lowland gorilla wearing a strange steel helmet. The helmet replaces the gorilla's normal skull, making room for brain tissue grafts giving it near-human intelligence.

ST 20, DX 12, IQ 9, HT 14/16. Speed 7. Hide has PD 1, DR 1; head has PD 2, DR 2. Weight 500 lbs. Punches for 2d-1 damage. The gorillas cannot speak, but can understand Esperanto, and have Gesture-10.

A New Problem

Just after the Brotherhood have made their decision, an alarm sounds. One of the brain-augmented gorillas has spotted the German storm troops approaching the Citadel.

There is a 40-man platoon of elite German storm troops (if the Gamemaster needs to reduce their strength, assume the Germans have lost some men along the way from animal attacks). They are led by Captain Springer. His orders are simple: capture the Citadel intact if possible, otherwise destroy it to keep the Allies from learning anything. Springer's men are all armed with Mauser 8mm bolt-action rifles, and have brought along a Maxim gun and 20 belts of ammunition. To blast into the Citadel they have 20 sticks of dynamite and a detonator. Captain Von Macht will immediately try to slip away and hide out inside the Citadel, sabotaging defenses and disrupting the Brotherhood as much as he can (assuming they haven't decided to join the Central Powers and open the doors to the soldiers without a fight). If the troops are defeated, Von Macht will try to destroy the Citadel by sabotaging the steam-pressure regulators on the geothermal tap system, setting off a huge steam explosion.

Depending on the outcome of the fight and the debate, the Brotherhood leaders may change their minds. If the Noninterventionists won the debate, then the attack will only confirm them in their suspicions of outsiders. British characters who helped defend the Citadel can use Diplomacy to persuade the Noninterventionists to change their minds. Certainly personal heroism in the battle will give the PCs positive modifiers on their Diplomacy skill rolls.

Getting Home

If the *Vigilant* was damaged, the Brotherhood members can lend their considerable resources to assist in repairing it. If it was destroyed, the adventurers and any surviving crew can return to South America aboard the Brotherhood's monthly supply airship.

German victory in the battle for the Citadel can mean the heroes must escape their captors and sneak through the dangerous valley to rendezvous with the *Vigilant* -- or somehow get across the mountains and then navigate through pack ice and the stormy seas around Antarctica to reach civilization. Merciful GMs can provide a British rescue expedition searching for the party.

The Postwar World

The shape of the postwar world depends on which faction prevails at the Brotherhood of Science and what kind of campaign the GM wants to run afterward.

If the Germans take the Brotherhood's headquarters or the pro-German Interventionists prevail, the armies of the Central Powers can use the BOS superweapons to conquer Europe or devastate all the Allied lands in a campaign of extermination. This can lead to an interesting postapocalypse campaign in the vein of H.G. Wells's *Things to Come*, or a game of resistance fighting in Europe under the iron heel of Monarchy.

The Brotherhood's Superweapons

The exact nature of the superscientific weaponry devised by the geniuses of the Brotherhood of Science is deliberately left vague, so that GMs can choose devices most appropriate to their campaign worlds. Some possibilities based on period fiction:

- **Antigravity:** A great choice if the GM wants to keep the steampunk feel for a postwar campaign, this allows real flying dreadnoughts and interplanetary travel. The Allies can levitate their battleships all the way to Berlin (or vice versa) and at last break the stalemate.
- **Atomic Energy:** "Radium Bombs" could end the war Hiroshima-style, or could create an irradiated postapocalyptic landscape complete with glowing craters and atomic mutants. But the mighty power of the Atom could also open up the Solar System (or the Galaxy) to rivet-studded spaceships and all kinds of Lensman-style adventure.
- **Death Rays:** Either an invisible beam of deadly radiation or a Martian-derived heat projector, this can penetrate any armor, blast defensive earthworks, and shoot any aircraft out of the sky. Although killing the enemy fast enough hasn't been a problem so far in the Great War, this

The pro-Allied faction will create an outcome more or less resembling real history: the Allies victorious but exhausted, Germany impoverished and seething with resentment. This sets the stage for a fairly orthodox Cliffhangers campaign, albeit one with much more superscience gadgetry.

The Reconstruction faction will build a world resembling the Utopian dreams of H.G. Wells -- armies abolished, peace maintained by an elite corps of aeronauts, and all the idiocies of the past swept away. This can either be the setting for heroic air adventures of the Brotherhood's Air Patrol, or a dystopian nightmare of superscientific tyranny.

Doctor X and the Revolution faction propose a much more radical restructuring of the world, along the lines followed by Lenin in Russia. Again, this can set the stage for an Orwellian campaign of heroic underground resistance, or Cold War espionage half a century early as a relatively intact America grapples with the Brotherhood's new order.

Finally, there is the possibility that the entire mission will fail, and the Brotherhood of Science will remain aloof from the world or get blown to smithereens. That can lead to several follow-up campaigns. Victory for one side or the other can set the stage for an orthodox Cliffhangers or European Resistance campaign as outlined above. Perpetual stalemate can produce a postapocalyptic setting. And if the giant Babbage machines and their clockwork minions finally decide to eliminate the human element altogether, the heroes can move right into a retro-Deco Reign of Steel campaign.

Variants

This scenario assumes the heroes are British, or at least are sympathetic to the British cause in the Great War. But in a gritty steampunk game, Great Britain may well be an oppressive oligarchy, ruled either by reactionary aristocrats or greedy tycoons. The PCs could well be fighting for freedom on the side of Germany! For a pro-German adventure, simply replace the Teutonic villains with English ones, and give the party a Zeppelin to fly south in. Refueling must be in neutral South America instead of British South Africa, but otherwise the expedition proceeds as normal.

A more interesting situation arises if the heroes are from neutral America, or simply don't support either side in the Great War. Their mission to contact the Brotherhood of Science could come from the peace-loving American Secretary of State William Jennings Bryan (acting on his own, without informing President Wilson), or from a band of American millionaires and inventors who want to make common cause with the Brotherhood.

Finally, the adventurers may be mercenaries, taking advantage of the unsettled world at war to make big profits. The British and Germans may both offer them large sums to locate the Brotherhood. The heroes can pick a side, try to get the two empires into a bidding war, or take both offers!

would certainly let the Reconstruction faction dictate terms to an exhausted Europe.

- **Force Fields:** Impenetrable barriers of invisible force can defend cities from aerial attack, shield troops, and stop the endless slaughter on the Western Front. A good choice for idealists hoping to bring peace. If the Brotherhood has force field technology, the Citadel is defended by a powerful one, but only against aerial attack.
- **Planetary Inverter:** The ultimate threat. Using their knowledge of physics and magnetism, the Brotherhood can shift the Earth's axis of rotation. Unless appeased they can bury all Europe under a new Arctic icecap. This is best if the Gamemaster plans a postapocalyptic campaign afterwards, since such a cool weapon simply has to be used.
- **Robotics:** If the campaign setting doesn't include automata, then the Brotherhood's Big Stick could be an invincible army of steel men, possibly armed with death rays or powered by atomic energy. This would be a great way to set the stage for a tyrannical world. If the robots turn against their mere mortal creators, then jump right into a pulp-style Reign of Steel campaign.
- **Space Travel:** A standard science fiction metaphor for transcendence,

spaceflight can lead into a Lensman-style game of pulp space opera, or just allow standard Cliffhanger-style characters to adventure on other worlds.

- **Stun Fields:** Another good choice for peacemongers, these would simply knock out everyone in a large area. Perfect both for stopping battlefield slaughter and for neutralizing an enemy government long enough for the People to rise against it.
- **Synthetic Men:** The Secret of Life Itself could allow one side to manufacture legions of unstoppable synthetic soldiers, or give the Brotherhood of Science an instant army to impose order. It could also allow the creation of a better race of humans, or a "Master Race" to exterminate their creators.

Non-Player Characters

Captain Augustus Von Macht

124 points

Captain Von Macht is a young German officer and a skilled mountain-climber and explorer. He is serving as pathfinder and advance scout for the German force sent to capture the Citadel. Von Macht is lightly equipped, with only a small pack for rations, a pair of binoculars, a Luger pistol and a Winchester repeating rifle.

ST 11 [10]; **DX** 12 [20]; **IQ** 12 [20]; **HT** 12 [20].

*includes +2 bonus from IQ.

Doctor X

150 points

Doctor X (his real name is unknown) is one of the Brotherhood's most outspoken and radical leaders. He is noteworthy for his passionate ideas about reforming the world and his metal hand. Disgusted by the folly and corruption of the world's governments, he advocates strong measures -- the Brotherhood must work to sweep away the old order and replace it with a new, scientific regime. In any combat situation he will lead the Brotherhood's forces. Doctor X is usually armed with an electric pistol of his own invention (use the standard TL9 electrolaser stats). With a lower DX and some appropriate physical disadvantages, this can represent other members of the Brotherhood.

ST 10 [0]; **DX** 12 [20]; **IQ** 14 [45]; **HT** 10 [0].

Advantages: Charisma +1 [5], Combat Reflexes [15], Gadgeteer [25], Patron (Brotherhood of Science, Fairly Often) [15], Reputation +2 (among scientists) [5], Wealth (comfortable) [10].

Disadvantages: Bad Temper [-10], Curious [-10], One Hand (Mitigated by clockwork prosthesis: -60%) [-9], Stubbornness [-5], Workaholic [-5].

Designer's Notes: GURPS WWII: Motor Pool

By Hans-Christian Vortisch

I have been a certified vehicle design geek ever since my little brother first brought [Car Wars](#) to our home. Almost 20 years later, I have "built" hundreds of vehicles, from bicycles to the *Millennium Falcon*, employing -- not necessarily in this order -- Lego, plastic model kits, and [GURPS Vehicles](#).

In 2001, Gene Seabolt, the former line editor of [GURPS WWII](#), approached me after having read some of my articles in *Pyramid*, and had me design most of the weapons of the Modular Vehicle Design System (MVDS). I also counseled him on other hardware aspects. Gene noticed my passion for detail, and while he often found my approach a bit *too* detailed and *too* complicated for the basic book, he apparently figured exactly this attitude would serve me well for the book on "Non-Standard Equipment," as it was then still called. We quickly established that only vehicles and the necessary new MVDS modules would go into it, requiring a new title: [GURPS WWII: Motor Pool](#).

I fiddled over a year with the outline, selecting the vehicles I needed or wanted to include. Due to discussion with Gene and the other authors in the line, I knew which vehicles would go into the other books, often leaving me with the less famous or less important designs, which nevertheless allowed me to delve into a lot of obscure detail. I also wanted to include many "odd" designs: one-offs, design freaks, obsolete vehicles, failed experiments. Finally, I wanted to cover a few generic things like a horse cart or a fishing boat, vehicles that are always handy to have and often overlooked. So the outline slowly evolved. I added, discarded, and added vehicle after vehicle. Many had to be dropped as I realized just how much space a decent write-up with variants and notes required, and others had to be cut down to half page-size. In the end, I managed to cram in almost as many write-ups as the book has pages . . .

During writing, I was struck by minor and major disasters including a half-year move to Brussels, Belgium (away from my personal library and the excellent public ones in Berlin), and a burglary and the fiendish theft of my laptop and latest backups with the manuscript and many notes and spreadsheets. Using older backups, handwritten notes, and bits and pieces I had sent around to friends for comments, I was able to reassemble most of the lost stuff, but not all; the whole affair cost me several months.

However, Brussels turned out to help me quite a bit in the end, as my day-job office was only a five minute stroll away from the Royal Belgian Army Museum with its excellent library (and a number of interesting displays). Field trips to Berlin's Luftwaffe Museum, the German Defense Technology Collection in Koblenz, London's Imperial War Museum, and the Royal Dutch Army Museum in Delft further unearthed invaluable information.

I am indebted to several people who volunteered to submit vehicle designs, despite knowing that I am difficult to satisfy and would end up meddling with their designs (being "anal-retentive," to quote Gene, and a "bullhead," to quote a playtester). These hardy souls included Michele Armellini, Enrico Negro, Kenneth Peters, and especially the untiring Brandon Cope. *Vehicles* guru Onno Meyer provided invaluable construction advice.

Time and again during writing, I would rely on the *Hellions* (an international and eclectic group of *GURPS* grognards) for comments, language or style edits, counsel, retrieval of lost files, or plain shoulders to lean on in times of problems. Thanks guys, I couldn't have done it without you.

The *Pyramid* playtest helped to plug some holes and lots of faulty calculations, and I have to thank veteran lead playtester John Freiler, who made sure everything went smoothly during the test.

Finally, I owe a lot to my editor and the man responsible for this whole show: Gene "I think you're suffering from too much information" Seabolt. The sheer breadth of his knowledge of the topic and his down-to-earth approach to both historical and game-specific issues is remarkable. And despite minor arguments over details (which accompanied our relationship from day one, and led to playful fights of sorts . . .), his input and guidance was invaluable. Together, we pulled it through.

But now for the goodies. In the spirit of "non-standard," I present you a couple of *real* oddballs:

DL 43 Nahuel

While externally resembling the M-4 Sherman (p. W102) and obviously being inspired by it, the Argentine medium tank DL 43 *Nahuel* (tiger in Araucano, a native Argentine language) was actually quite different. Entirely made in Argentina, it was designed by the Dirección General de Fabricaciones Militare starting in 1943.

Its designation DL 43 stems from U.S. derisions that Argentina was a "lion without teeth." When ten tanks made their first appearance in a parade in July 1944, planes dropped leaflets stating that these were Argentina's *Dientes de León* (lion teeth). The DL 43 entered service in the summer of 1944. However, only 16 were built as the U.S. eventually delivered M-4s to Argentina. They never saw combat in WWII, but might have in an alternate history -- perhaps with Argentina joining the Axis (as per p. W:WW15)?

The DL 43's engine is a modified Argentine copy of a French Lorraine-Dietrich aircraft engine. The main gun was originally planned to be a Swedish 75mm Bofors Mod 35, but there were not enough of these available, so the tank received a modified German 75mm Krupp Mod 09 field gun (compare p. W:GL30). A .50-caliber Colt-Browning Mod 38 machine gun (M-2HB, p. W97) is mounted coaxially. Two linked Danish 7.65mm DRRS-Madsen Mod 27 machine guns (RoF 8) with 32-round magazines are mounted fixed in the hull, fired by the driver, and another one installed in a flexible mount is fired by the hull gunner.

It burns 16.8 gallons of gasoline per hour at routine usage. Fuel and ammo cost \$955.

Tanque DL 43 Nahuel

Subassemblies: Large Tank chassis with Mild slope +4; full-rotation Medium AFV turret with Mild slope [Body:T] +2; tracks +3.

Powertrain: 373-kW turbocharged gas engine with 373-kW tracked transmission and 175-gallon standard tanks; 16,000-kWs batteries.

K+W C-3603

Switzerland remained strictly neutral during WWII. In order to protect this neutrality, it maintained a comparatively large and fairly well-equipped military. Its air force was busy during the war, intercepting and escorting Allied and German bombers and other aircraft that had lost their way into Swiss air space to the ground. This was a fairly common occurrence.

The Swiss air force had five main combat aircraft available for these operations: the K+W C-35 fighter (a Fokker copy), the K+W D-3800 fighter (a license-made version of the Morane-Saulnier MS.406-C1, p. W:RH42), the Messerschmitt Bf 109E-3 and G-6 fighters (p. W111), and the locally designed K+W C-3603. The latter differed from the four other patterns in being a multi-purpose aircraft optimized for reconnaissance and ground attack, but it was nevertheless used for many of the same tasks as the air superiority fighters.

The C-3606 had been designed by the Eidgenössische Konstruktionswerkstätte (K+W) at Thun from 1936, and finally entered service in 1942. It was the first aircraft entirely developed in Switzerland, earlier patterns generally having been foreign designs. Over 150 were built. They saw service until 1952.

The pilot fires the 20mm W+F-Furrer FM-K 38 autocannon (RoF 7) in the motor hub and the 7.5mm W+F-Furrer FIMg 29 machine guns (RoF 21) in the wings. He also releases any bombs carried. The gunner/observer fires the flexible twin FIMg 29 machine guns in the back. For ground attack, the C-3606 typically carried either 2×440-lb. bombs, 8×110-lb. bombs, or a mix of 16×26.4-lb. bombs and 40×6.6-lb. bombs. Alternatively, 2×62-gallon auxiliary tanks could be carried.

The C-3606 burns 33.6 gallons of aviation gas per hour at routine usage. Fuel and ammo (without bombs) cost \$75.

Mehrzweckflugzeug K+W C-3603

Subassemblies: Medium Fighter chassis +3; Light Fighter-Bomber wings +3; 3×retractable wheels +0.

Powertrain: 746-kW aerial turbocharged gas engine with 746-kW props [Body] and 135-gallon standard tanks [Wings]; 2,000-kWs batteries.

Pyramid Review

One False Step for Mankind

Published by [Cheapass Games](#)

Designed by James Ernest

Art by Phil Foglio & James Ernest

Full-color game with eight board sections, 33 City cards, 18 Rocket System cards, three Know-how cards, & six "Days of the Week" cards; \$7.50

Required but not included: 100 poker chips in four colors (red, yellow, green, gray), 40 counters per player, two six-sided dice, one button (or distinct token), & three paper clips (or one large clip) per player.

James Ernest has made a name for Cheapass Games by not providing more than the bare essentials for his works. Making a customer pay for dice every time he buys a game, Ernest has said, is a little like bundling a can opener with every tin of beans. In a game like *One False Step for Mankind*, however, you end up starving for components.

The best way to become, and stay, mayor in the Old West is to give the people a real show. The fad sweeping the countryside right now is the space program. Never mind that the whole enterprise hasn't a snowball's chance of working; people flock to see these crazy coots try to launch rockets into the stratosphere. Winning popular support gives you Influence, and the first politician to rack up 30 points worth of this valuable commodity wins the game.

The three resources are Influence, Food, and Gold. Influence comes from getting your rockets to work -- or at least, getting parts of them to work -- and from controlling towns throughout the West. Towns provide only static Influence, giving you a set number of points of the stuff so long as you continue to feed the people. On the other hand, they provide an avenue to getting Food and Gold from the Farms and Mines in the surrounding countryside, though they must also be used as a line of supply to those locations. Lose all your connecting towns, and opponents can jump your claims without a fight. Towns also attract new folks to town.

Without sufficient Food, you can't support your towns and you may lose them, their Influence, and their support for your claims. You also need Food for the parties you'll throw to entice crowds to come watch your space shots. Once you have an audience, you'll roll two six-sided dice three times, once for each system on your rocket. A rocket has Power Source, Guidance, and Life Support. At level one, you'll need to roll a 12 on a system, but if you do you get one Influence. You can spend Gold to research better systems; improving a system one level gets increasingly more expensive, but the roll required for it gets easier to make. If you have the best version of that component, you get a two-point Influence bonus; you also receive a Gold every time another player makes an improvement on that system.

If you don't have the Mines and Farms you need to finance your activities -- and the board can fill up quickly -- you're going to have to jump a claim. People come to towns and turn into tokens you place on your claims. Putting multiple tokens on a single location affords it better protection, though those tokens may instead descend upon a claim and outnumber it. Both players roll a six-sided die and add the result to the number of tokens in the fight to determine who keeps the claim.

This all gets pretty costly, so you have to maintain a close eye on all the interrelated resources. The map is made up of geomorphic panels that can be arranged in nearly endless combinations.

There's a lot to keep track of in this game, and so many things depend on how well you do other things. This isn't a

bad thing -- part of the appeal of the game is resource management and keeping all the balls in the air at once. The big issue is with the components. For once, James Ernest has shot himself in the foot with his policy of bargain-basement fun. The population tokens crowd the board everywhere but in the cities (each gold mine is about the size of a nickel, and farms about the size of a quarter), and bits of marked paper would be a nightmare for any playgroup with a head cold. Trying to find 40 different tokens per player is tough.

Poker chips are required. Yellow and green may be a common-sense match for Gold and Food, but how many people have yellow, green, red, and gray chips lying around? And gray is meant to represent several of *any* other color. This is a more visible way to mark one's resources (other players should always know how much Influence you have), but fumbling with the chips every time you have to spend Gold or make change is a royal pain, and in a game that already takes three hours it's merciless. You could use whatever alternate hues are sitting in your game stash, but then you have to agree on which colors will replace what, and write them down so you don't forget.

The Rocket System cards measure how advanced your equipment is, but having to attach a paper clip to these strips and slide or reattach them to keep up with your changing status puts an awful lot of strain on the pieces. Overall, it's best to simply keep track of everything on a scrap of paper; less visually appealing, but it's straightforward and saves folks from counting and recounting three stacks of chips.

The game is actually in full color, the first Cheapass game with full-color boards and cards. It's nice to see the company can do this while maintaining their low costs, and the game is a great exercise in strategy. It takes a long time, but that's as it should be in a game that allows for such long-term planning. To truly be effective, however, some rules clarifications on placing and moving population tokens are going to be necessary, and the components issue may cripple the enjoyment factor for many. Though well-configured as a strategy game, *One False Step for Mankind* is, ironically, a faux pas in other important ways.

Hero Force: 1PG Super Adventure!

Published by [Deep7](#)

Written by Mark Bruno, Todd Downing & James Stubbs

Cover by John Richardson

13-page 691Kb PDF document; \$3.95

Hero Force: 1PG Super Adventure! is Deep7's attempt to stretch their *1PG* concept in that most of outré and over the top of genres -- the superhero comic. In particular, its inspiration is the comic books of the 1960s and the Silver Age, when the outlook was bright, governments could be trusted, and heroes were truly heroic. Heroes had (and held to) ideals -- not for them the dark act of bloody murder that might besmirch their spotless reputations. Save that for the villains of the piece and the comics of the 1980s. No, in *Hero Force: 1PG Super Adventure!*, heroes believe in truth, justice, and the American way!

The game comes in the standard *1PG* format, using the clean and easy-to-use layout seen in the previous 10 or so titles. The difference, though, is that they have used an outside artist to provide the cover. This is well done, and echoes the Golden Age as much as it does the Silver Age. The same goes for the few pieces of internal art, which are also very good.

Fans of the *1PG* series will little different to the basics of *Hero Force* compared to any other of Deep7's games. The differences come in adapting the rules to the genre, but these are minor, merely a matter of renaming various stats and skills. The first big change comes in the form of the Hero Type and Origins Tables, both of which give the usual range of bonuses. The six Hero Types listed -- the Blaster, the Elemental, the Mentalist, the Mystic, the Vigilante, and the Gadgeteer -- are essentially your basic superhero archetypes. They also define the list category from which their powers come. Listed alongside the six entries on the Origins Table -- the Alien, the Construct, the Divine/Immortal, the Experiment, the Mutant, and dedicated Training -- are the names of familiar heroes that possess said origin. These are taken from the pages of both DC and Marvel Comics, so that for the Divine/Immortal, Thor and Wonder Woman are given, while the Punisher and Batman are listed for the Training Origin. Although the intention is to have players roll on each table, there is nothing to stop a player picking what they want to get a superhero that they are happy with.

Of course, superheroes can do fantastic things, and to account for this, the major change to the *1PG* mechanics comes in the form of a whole new scale laid over the basics. Powers come in levels that work as multiples of other factors in the game, most maximizing at Level 3. The exact multiple varies from power to power, so for example, each level of an offensive power can inflict five points of damage, whilst a Gadgeteer's armor power provides an armor value of 10 for each level. The scale is fast and simple, so that Power Level 1 of Flight is simple hovering, Power Level 2 is movement at subsonic speeds, and at Power Level 3, a hero can fly faster than the speed of sound and even beyond the gravity well.

How many levels a player can buy depends upon a combination of his character's Brains attribute and their Control skill. This factor is also what a player will roll whenever he wants to use his powers within the game. Thus most players will shove as many points as they can into their Control skill in order to load up on power levels -- usually four or five. Then they pick the powers from those listed in the category for their Hero Type. Apart from the Gadgeteer and the Vigilante, the other types can also select from the list of the Universal Powers as well as their own. Gadgeteers essentially build an armored and augmented power suit, while the Vigilante receives a number of weapons and a set of fairly weak armor.

Despite the extra layer that *Hero Force* adds to the game and character generation, the process is still quick enough in comparison to other games. The result is a light, and roughly defined, hero able to slug it out with the average villain, while the rules allow for a hero to take down a bunch of thugs in a swathe. At the same time, heroes still have only as many Blood (or hit) Points as the average Joe. This is likely to make the superheroes in *Hero Force* more vulnerable than in other RPGs of the genre, but at the same time, it is in keeping with the ethos of the *IPG* line, wherein characters invariably possess a throwaway quality.

There are only a couple of new pieces of advice given for running *Hero Force*, the remainder having been seen in previous *IPG* titles. This probably makes this game ill suited for use by those new to the line, or those who have little experience of the genre. This is not to say that *Hero Force* is poorly written; after all, the authors should have had plenty of experience by now! Rather, it is well-written, and it is clear from the five scenarios that they have a love of the Silver Age.

[SPOILER ALERT!]

The first of the five is James Stubbs' "Better Red Than Dead!" As members of Team Liberty, the heroes must thwart the plans of the Soviet super villain, The Red Menace, to steal a nuclear weapon and turn it on America. In Mark Bruno's "Trouble Down Below," another villain, Doctor Macabre, is kidnapping hapless civilians and turning them into mindless killing machines to take over the city. Galactus and Dr. Doom are the primary inspiration for Todd Downing's "This Earth Consumed!" in which members of Superforce investigate a series of strange earthquakes to discover the most powerful foe that they will ever face. It is so powerful, in fact, that no stats are given for him. James Stubbs' second scenario, "Shades of the Past," returns a Nazi super team from the final days of World War II to wreak revenge, while his third, "State of Emergency," is ripe for a crossover with Deep7's Irwin Allen tribute *IPG*, *Disaster!* Following a space battle over Earth orbit, wreckage from an alien space ship plummets into the ocean and threaten the heroes' home city with a tsunami. "State of Emergency" is more of an outline than a ready-to-play scenario, and unlike the other four will need some development before it can be run.

[END SPOILER ALERT]

Hero Force: IPG Super Adventure! has more the feel of Marvel Comics than of DC titles, more the Avengers than the Justice League of America. It also has the feel of TSR's original *Marvel Superheroes RPG* in the slickness of its character generation and its mechanics, though the greater vulnerability of the characters and the accepted possibility of superhero death is otherwise at odds with such a comparison. While *Hero Force* does not come close to being the best *IPG* title, it does serve to push the envelope of the basic *IPG* mechanics and the adaptability of the core concept. What *Hero Force: IPG Super Adventure!* really does is deliver an issue or two of four-color gaming old-time fans will get a kick out of.

--Matthew Pook

Sherred Ten-Birds, Amoral Nature Wizard

for *Big Eyes, Small Mouth*

by Jesse Lowe

Sherred Ten-Birds is a wizard of some small power whose trademark is the Staff of Ten Birds, and it is from this staff that he is named. Sherred concerns himself with the meeting place between humanity (or its equivalent in the setting) and nature. Whether he is for one side or the other in this equation is up to the GM; as written, he is simply an observer, and meddles only when it suits his whim.

Sherred's magic is characterized by occasional (and dramatic) nature spells, a recurring bird motif, and near-constant use of mundane skill to supplement magical puissance. He will often trade services for new knowledge, usually mundane or practical; he once tended a woodsman's sick child for two months in exchange for tutoring in the arts of the land. Despite his study of nature, Sherred's healing spells are not very strong, and he relies on herbcraft and natural healing when he has to. Likewise, he has guided raiding parties through apparently impenetrable wilds in exchange for a share of their ill-gotten gains.

In appearance, Sherred is a short man clad in a simple belted tunic and trousers of green, brown, or rust, carrying a sack slung over his shoulder. Depending on the season, he may also be wearing sandals, boots, or a cloak. He generally eschews the traditional wizardly robes and pointy hat. He is slightly scruffy looking and often gives off a woody aroma, similar to the local trees; should this become overwhelming, he will most certainly bathe. His beard and hair are a dark brown laced with gray, and his face is beginning to take on the wrinkles of age.

He appears weathered by sun and rain, and his hands are calloused. At all times, he carries a five-foot long staff of dark wood, carved in the shape of ten birds linked together. The birds, from bottom to top, are: sparrow, owl, woodpecker, dove, crow, duck, hawk, hummingbird, gull, and quail.

In short, Sherred Ten-Birds appears and acts as if he were a typical hedge-wizard. It is often a rude surprise for his adversaries when he exerts his unusual power, usually at the worst possible time for them. Either as a result of this unusual power, or as a result of his usual behavior, he has few enemies; Elspeth, a merchant he ruined, is chief among them, but is largely impotent. He has had more than a few clashes with the wizard Mondavi the Fat, who dislikes Sherred meddling in the tract of wilderness that Mondavi claims for his own, but the fat wizard is too lazy, as a rule, to pursue Sherred beyond his borders.

Likewise, he has few allies beyond the birds of the wood. He has an on-again, off-again affair with Lily, a woman who runs a hostel on the edge of his forest. Lily's hostel acts as a caravan stop and a place for hunters to rest, and is always under Sherred's protection, regardless of the state of their love affair at the moment. On the other hand, those who stay at the hostel and anger Sherred may find themselves seriously harassed later in their journey. Lily is a widow of Sherred's age, with two grown sons in the army. She is moderately attractive, has a sharp wit, and is an excellent cook (her sausages are the pride of the area).

As written, Sherred's motivation and goals are fairly simple: by exploiting his natural talent for magic and the power of the Staff of Ten Birds, he tries to live an easy life between man and nature, occasionally acting as a force for good or evil if necessary. However, all that's needed to make him a hero or a villain is a simple change in outlook; with his abilities, he could act as a tyrant bent on turning nature to his will and wiping out local settlements, or as a guardian of the rural folk against nature, red in tooth and claw, or as a mediator between two bitterly opposed forces.

Adventure Hooks

- **Lilies of the Field:** Bandits have raided Lily's hostel and fled into the urban areas beyond the forest. Sherred can

follow them, and will, but needs guides in the civilized regions. Luckily, the heroes are close at hand . . . They will not only need to find the bandits and bring them to justice, but also keep Sherred from inflicting his own idiosyncratic notions of fair play on the city folk -- as well as keep him out of trouble with the law himself. Given Sherred's independent outlook and power, this will not be easy, and will require more diplomacy than force. For added tension, the bandits have kidnaped Lily instead of simply looting her hostel.

- **King of the Wood:** Sherred, by virtue of his long dwelling in the forest, has managed to become its ruler in fact and name. A by-product of this is that he now draws power from it, and shares its life force. One of his nemeses, probably Elspeth, has learned this and plans to destroy the forest to get at Sherred. How the characters are drawn in depends on their nature. The obvious choice is to have the nemesis hire them to start forest fires or to guard a logging company. Sherred will react to any threat posed by the nemesis with brutal force, and is unlikely to negotiate. (For this scenario, add Place of Power 6 (6 points) to Sherred's stats; it provides 90 Energy Points for Sherred to draw on in addition to his own reserve.)
- **Nature's Bounty:** Lately, Sherred's less moral actions have come to the attention of local authorities, especially since he guided a band of elvish raiders into the King's private reserve. A large bounty has been placed on his head, dead or alive. To get it, though, the would-be bounty hunters must beard the lion in his den and confront Sherred where he is strongest. Likely obstacles Sherred will place in their path include a variety of traps (deadfalls, pit traps, snares, punji traps, etc.) as well as constant observation by Sherred's feathered friends. He will attempt to divide the characters, cutting out the weakest members and disposing of them when they are alone. His Summon Storm spell could be useful for this. Furthermore, since Sherred has no fixed abode, the characters may have to search the entire forest, under attack at any inconvenient time -- and Sherred can move very quickly thanks to his staff's shapeshifting powers. Of course, the heroes may think to lay a trap for the wizard at Lily's hostel, should they discover the connection between the two. This is likely to work, to some degree, but will deeply anger Sherred (and probably tick Lily off as well).

Stats

Sherred Ten-Birds is 50 character points, or 48 character points if skills are not used in the campaign. His skills were purchased using the Medieval Fantasy costs.

Body 5, Mind 8, Soul 9

Attack Combat Value 8, Defensive Combat Value 6,
100 Health Points, 115 Energy Points, Shock Value 20.

Attributes

Animal Friendship 5
Combat Mastery 2
Damn Healthy! 3
Energy Reserve 3
Magic 2 (20 power points)
Highly Skilled 2
Item of Power 3 (The Staff of Ten Birds)

Defects

Nemesis (Mondavi the Fat) 1 BP
Nemesis (Elspeth) 1 BP
Significant Other (Lily) 1 BP

Skills

Animal Training 5, Swimming 1, Stealth 2, Wilderness Survival 5, Wilderness Tracking 2 (40 skill points)

Equipment

The Staff of Ten Birds

Large, sturdy sack

Rope

Tunic and trousers

Boots or sandals

A few days worth of food.

Magic Spells

Awareness of the Ten Thousand Things (Heightened Awareness 2) (2 power points)

Summon Storm: summons a moderately strong storm that covers an area equal to a small town. (Environmental Control 3) (3 power points)

Body of the Oak: The caster of this spell takes on the aspects of the mighty oak tree, while retaining his own mobility and quickness. He doubles in size, gains great strength, and his skin becomes as tough as bark. (Heavy Armor 1, Size Change 3 [Growth only], Superstrength 1) (10 power points)

Sense the Uncanny (Sixth Sense 1 [Detect Magic]) (1 power point)

Shield of Leaves: Shered summons a wall of leaves to protect him. When cast, the caster must define the area the wall will occupy, which can be no larger than 10 square meters and no more than 5 meters away. The wall stops up to 15 points of damage. (Force Field 1) (2 power points)

Nature's Aegis of the Mind (Mind Shield 2) (2 power points)

The Staff of Ten Birds

Sherred's staff grants him the following powers. These are magical, but do not cost Shered Power to use. The staff may also be used as a standard quarterstaff.

Aviform: The bearer of the staff may assume the form of any of the birds on the staff at will and remain in that form as long as need be. While in bird form, the bearer may still speak. (Each bird form uses the same template, so this is represented as a single use of the Metamorphosis Attribute. The template is: Flight 1, Heightened Awareness 2, Natural Weapons 2, Diminutive 3 BP, Marked (bird) 2 BP, and Not So Strong 4 BP for a total character point adjustment of -1 points.) (Metamorphosis 1) (5 points)

Body of the Flock: When this power of the staff is used, the bearer (and the staff) transforms into a flock of birds. The birds are all of the same species, which must be one of the ten represented on the staff and must be native to the region in which the spell is cast. The most typical species are sparrows, crows, and hummingbirds. The flock consists of three birds for every Health Point the caster has at the time of casting. (Swarm 3) (6 points)

Bird Brain: The bearer of the staff can communicate mentally with any bird. (Telepathy 3, Birds only) (3 points)

Professor William Headley

Designed by **Kenneth Hite**

GURPS Fourth Edition Stats by Andrew Hackard and Sean Punch

Dr. William Headley was a prominent parapsychologist at Columbia University. He labored to separate the myths and lore of primitive man from the rational truth being uncovered by modern experimentation. But, in 1933, he discovered that his beloved scientific truths pointed to beings from primordial eras and unholy stars, beings that existed to ravage and kill not just mankind but the Earth itself. He dedicated himself to an unceasing war against these horrors, these Things Man Was Not Meant To Know. Slowly, he accumulated knowledge from the outer places of the world, from Spitsbergen to the Belgian Congo to the mean streets of Brooklyn's Red Hook district. He obtained tomes bound in mysterious leathers, and written in nonhuman scripts; in dreams and sorceries he gradually deciphered their secrets. He mastered many of the conventional magical arts, from Tarot divination to crystal-gazing, and collected artifacts of subtle and terrifying nature.

His slow mastery of forbidden lore allowed him to defeat the Things' minions here and there, and incidentally to clear up a number of other unpleasant supernatural occurrences. He began to get a reputation for solving seemingly motiveless crimes with his "unique insights into abnormal psychology." The New York Police Department came to rely on him for assistance with "the weird stuff" and the FBI called him in once or twice to help out -- unofficially, you understand. Every so often the crimes he investigated fit a pattern, one Headley had begun to associate with a vile German cult, tied to the Nazi SS, who worshiped the Ancient Ones. With the occasional "off-duty" FBI agent, one or two students, and a few trusted professional colleagues, Headley built a team of investigators who incrementally peeled back the skin of the onion, exposing layer after layer of the cult's activities and burning them out where they could. In 1941, he joined the OSS, working to stop Hitler -- and the Cosmic Entities his minions served -- from conquering the world.

After V-E Day, Headley managed to obtain much of the SS library from their cult center at Wewelsburg. These books told him of another world, a parallel Earth where the Ancient Ones had reigned and departed, leaving vital clues to their nature and weakness. Using spells from these grimoires, Headley opened a gateway to this devastated Earth, and stepped through to investigate the spoor of his hated foes. Much to his surprise, he discovered a team of explorers from yet another Earth (one they called "Homeline"), attempting to determine what had destroyed this one (which they called "Taft-7"). They were as surprised to see him as he was to see them, but foolishly disregarded his warnings about the Ancient Ones' cities, and the danger that still remained from their abandoned servitors. When the Things attacked that night, most of the explorers died horribly -- and the two survivors fled back to their own world raving in madness. Unfortunately, Headley realized that their flight had opened the path to their own world for the Things that had been trapped on this hellish Earth. He had to follow the explorers and warn their comrades that unimaginable terror would soon descend upon them. Once more, he constructed a gateway to cross the worlds, hoping against hope to find and prepare the rest of ISWAT before "Homeline" went the way of Taft-7.

Dork Tower!

Dork Tower!

A Treasure Worth Keeping

for *d20 System*

by **Brian Rogers**

One problem with the *d20 System* fantasy model is the structured increases in magic item power; the trading up of one item to another throughout the campaign. While most common with weapons, this also happens to wondrous items and other long-term magic: if you can only wear one cloak at a time, "upgrading" eventually comes into play. In many fantasy environments, the image of a hero hocking his *cloak of elvenkind* because he just scored a *cloak of the bat* is distasteful.

There is mechanical logic to the system, as magic items that are potent at the start of an adventurer's career generally matter less as challenges increase. In some fantasy, however, magic items are things of mystery: priceless and rare, heroes will touch only a handful and guard the ones they possess. Having a gray *bag of tricks* is great at low levels, but when facing a dragon being able to pop out a weasel is hardly an advantage. A truly mythical item must remain central to the adventurer whatever his level.

The [Naming Weapon feat](#) offers one possibility, but that's only for weapons. Living Room Games' *Earthdawn* offers an elegant solution in legendary items (which gain power as PCs piece together and recreate its history, awakening the artifact's potential through adventure), but with world specific mechanics. What's needed is a *d20 System* equivalent, where some magic items grow in power along with the character, where the *necklace of prayer beads* that's a small comfort at 1st level becomes a major relic at 17th.

The Iconic Magic Item

These are magic items that have limited power when discovered but become increasingly powerful in the hands of more experienced owners (or, alternately, over the course of the ownership). The basic idea is layering the powers of similar items into a single thing, with a mechanic to open up those powers when the rules suggest the owner would find the more valuable magic. Since the magic item disbursement guidelines are based on GP value, GMs should add the value of each power in piece by piece. That gives the relative value of the item at each stage of its development.

The attached chart (based on the "Starting Equipment for PCs Above 1st Level" table) assumes that an Iconic item should never account for more than half of the Player Character's total equipment value, and significantly less than that at higher levels. The "Get at Level" column shows the suggested value for all active Iconic powers: if an Iconic item's lowest level of power has a GP value of 1500 (between 1350 and 2700), it should likely be found by a 3rd level PC. If the next highest level of power adds 4000 GP of relative value, the PC should gain access to it sometime during his 5th level adventures.

Since an Iconic item puts the powers of several items into a single form (and hence reduces restrictions of weight, number of wearable items, etc.), it is consequently more valuable than its level of power suggests. Hence, the GP value of each power should be increased by 10% to find the Iconic cost.

Keep in mind that the following are just some simple examples -- reading the *DMG* with an eye for thematic or visual connections will reveal several other magic items that can merge into a single, increasingly potent additions to your hero's idiom.

Iconic Item Value

Iconic item	Get At Level
450	2
1,350	3
2,700	4
4,500	5
6,500	6
9,500	7
13,500	8
18,000	9
24,500	10
33,000	11
44,000	12
55,000	13
60,000	14
80,000	15
104,000	16
113,333	17
146,667	18
193,333	19
253,333	20

Iconic Necklace of Prayer Beads

The hierophant's skin was brittle and translucent, like the penmanship scrolls we'd scrape clean again and again. His grip was firm as his hand took mine, pressing the necklace into my palm. "You've proven yourself, lad. It's time for you to have these. Keep them safe." I had seen him work wonders while his fingers had worried these stones, and I wondered if my conviction would ever be that strong. He saw that in my eyes and continued, "I have faith in you, even if you do not yet have it in yourself. You will understand these, in time."

The *necklace of prayer beads* makes a great Iconic item, given the number of increasingly rare and powerful versions already in play. All the Iconic version does is mold all of those into a single necklace that grants the abilities of all the others once the wearer has faith enough to use them. This means a young and moderately inexperienced (5th level or less) divine spellcaster will start with access to the weakest of the necklace's powers. At 6th level in a divine spellcasting class, the next power begins to function, so that now the priest can cast *bless* once a day (the blessing bead) and have 10 minutes of increased spellcasting ability once a day (the karma bead). As the chart below shows, the necklace will keep giving new powers on a regular basis until the character reaches the highest non-epic levels of ability.

Iconic Prayer Beads	Power Cost	Iconic Cost	Get at Level
Blessing	1,500	1,650	3
Karma	5,000	7,150	6
Healing	10,000	18,150	9
Smiting	15,000	34,650	11
Wind Walking	30,000	67,650	14
Summoning	50,000	122,650	17

Iconic Bag of Tricks

Jack looked like a bumpkin, it was true. The word 'Commoner' defined his family, and left to his own he probably would have been as unexceptional as the rest. But when his land was claimed by an Ogre Mage, Jack managed to trick the giant into becoming a mouse, who was ravaged by Jack's tomcat and tossed into a cookpot. All that was left was this bag, and none of us ever knew what old Uncommon Jack would pull out of it when needful . . .

Like the *necklace of prayer beads*, the existing versions make a solid starting point for this item's powers. As with a standard *bag of tricks*, the owner reaches his hand in and feels furry lumps inside. Grabbing an animal of the desired power level requires taking 10 on a Knowledge (Nature) or Handle Animal check, with the DC set by the power level (the animals from a type 1 *bag* are DC 16, type 2 are DC 18, and type 3 are DC 21). Characters can root around in the bag as a full round action and make a standard skill check in hopes of pulling out something bigger, but the bag works best for those who possess a solid knowledge of animal lore (tying the *bag's* relative power to the character's level through skill bonuses).

Unlike the *necklace*, the existing versions aren't sufficient to make the *bag* relevant through high levels. Therefore, the Iconic *bag of tricks* mirrors the power's of other magic items. When the *bag's* owner can regularly (i.e. Take 10 to) make a Knowledge -- Nature or Handle Animal check at DC 24, he can pull out a force of badgers, rats, bears and horses to reinforce an existing structure or construct a new one, just like a *lyre of building*. Once the check reaches a 28, the owner can pull out 2d4+2 wolverines, brown bears or other CR2 creatures whose actions and duration mirror a *horn of Valhalla's* barbarians. Finally, if the owner's casual skill ever reaches 32, he has sufficient knowledge of the bag to step into it, bringing people along into the *bag's* pocket paradise as if it were a *rod of security*. Even if the creatures provided by the *bag* don't ever reach monstrous power, it's versatility is perfect for a ranger, barbarian or an ambitious [loner Commoner](#).

Iconic Bag of Tricks	Power Cost	Iconic Cost	Get at Level
Bag of Tricks 1	900	990	2

Bag of Tricks 2	3,000	4,290	4
Bag of Tricks 3	6,300	11,220	7
Lyre of Building	13,000	25,520	10
Silver Horn of Valhalla	51,800	82,500	15
Rod of Security	61,000	149,600	18

Iconic Cloak of the Bat

I wrapped the cloak around me, confident that it would conceal me from the guards. Once again I noticed how the fit was better than before, as if it had tailored itself for me. but this was the first time I felt it try to merge with my skin. I screamed in shock, and the only thing that saved me was that my shriek was so high that while the dogs went mad, the guards couldn't hear me. Dear God, what is this thing?

This takes the concept of an Iconic item and reverses it -- the full power of a *cloak of the bat* is reduced to its component parts, with the owner gaining access to each in turn the longer they own the item. When first discovered, the cloak grants the bonus to hide, and the wearer might mistake it for a similar *cloak of elvenkind*. As time passes (the GM can either set an actual timeframe or key it to the PC's level advancement) the cloak becomes more powerful, slowly granting increased protection when worn before the development of the flight and eventual polymorph. If the GM decides to keep this attunement a secret, the player might not even realize the improvements until some stressful circumstance initiates the flight and/or polymorph options.

This item makes a good example for inserting distinctive wondrous items whose base cost limits their appearance at low levels. Since the standard *cloak of the bat* doesn't have any powers past the polymorph, the GM might want to add additional abilities to the *cloak* for later levels (if the *cloak* follows a vampiric route, it might also act as *eyes of charming*; if morphogenic, the wearer's screech might function as a *chime of interruption*, and so on). The additional 10% Iconic Cost might be waived for that reason, though the fact that the Iconic *cloak* is likely to be encountered earlier in one's career than the standard version could be sufficient reason for the increased value.

Iconic Cloak of the Bat	Power Cost	Iconic Cost	Get at Level
Circumstance bonus to hide +10	2,000	2,200	3
Deflection bonus to AC +1	2,000	4,400	4
Deflection bonus to AC +2	6,000	11,000	7
Flight	5,500	17,050	8
Polymorph to Bat	8,500	26,400	10

Skilling Me Softly

Whenever I'm playing an RPG where my character has special abilities (psionics, super powers, or the like), I'll usually sink any experience points I have into buying or improving those abilities, as opposed to raising my skills or more mundane attributes.

(I also eat candy corn by biting off the white tip first, followed by the orange body, and then the yellow base, but that's beside the point.)

Anyway, I suspect the appeal in buying or improving those abilities is that it's easier, for me at least, to wrap my mind around them. New abilities add something to my character that I've never done before, while improving a skill just means that I'm doing something I've done all along . . . only slightly better. This is especially true in games where skills are represented by flat numbers or dice adds; what *is* the difference between First Aid-15 and First Aid-16? Or Melee Combat 2D+1 and Melee Combat 2D+2?

But if the second level of Telepathy lets me scan surface thoughts -- something my character couldn't do before -- well, *that* I can understand.

I suspect many games have understood and taken measures to address this incongruity. For example, the entire *d20 System* revolves around characters gaining abilities (which they call feats) that they didn't have before. Ironically, the upshot of feats is fairly logical and consistent; fighting-type feats let you deal damage more accurately or in greater quantities, while interaction-type feats let you more efficiently charm the pants off . . . well, things with pants.

And in a mathematical point of view, there isn't any difference (in most game systems) between a skill increase of +2, and a special ability that gives you +2 to the skill. But, psychologically, I suspect many gamers *like* looking at a character sheet with abilities that set them apart from normal folks; you don't have First Aid-16 . . . you have First Aid-14 and the Lifesaver advantage!

(As an aside, I also believe this is part of the reason behind humanity's tendency to bestow honorifics and labels on each other. What differentiates someone with a doctorate in psychology versus someone who's spent the same amount of time studying and applying psychological principles? Why, a sheet of paper that says other people think you're smart, of course! Mind you, I *do* feel obligated to point out that I say this as someone without a doctorate. But the Wizard agreed with my assessment, and he even gave me a ticking heart-watch as a memento.)

Is there anything that can be done to bridge this gap between abilities and skills within a game? Well, I think so. And here's what I've come up with.

Make sure it's understood what skill levels mean. Unfortunately, some games do a terrible job of explaining what a skill level represents, especially in systems where points don't have any limit. If a player can't mentally evoke the difference between a First Aid of 15 and a First Aid of 16, then raising the skill by that one point won't make much of a difference to him. I always appreciated White Wolf's Storyteller system in this regard; since skills are limited (for most folks) to levels of 1 to 5, it's easy to evoke what has changed for the character. Has someone raised his Religion score from 2 to 3? Well, that means he's gone from having a professional competency to a Masters-level one. If he ever makes it to level 5, that means he's one of the foremost experts in the world on Religion.

If a game system doesn't have a firmly established (and consistent) idea of what various skill levels mean, then just establish for the campaign what various benchmarks are. At the very least, good levels to establish are:

- Hobbyist
- Professional
- Doctoral
- World's Best

In open-ended skill systems, it might be worthwhile to cap skills at some arbitrary level (or else make additional levels beyond a certain point *very* expensive). That way, players can be assured that if they can raise their characters' Brawling skill to, say, 24, then that's as high as it can get; they are -- or are at least comparable to -- the world's best brawler.

Give some kind of benefit for certain levels of skills. Again, tapping into the "goodies" aspect of new powers and abilities, it might be possible to add benefits -- either minor or significant -- to certain levels of skills.

Again, the Storyteller system does this to a certain extent (at least, it did in the last version I played . . . who knows *how* it's changed in the past couple of years?). Upon achieving that fourth level of a skill, a character gets a specialization in the skill. Thus if our person with the Religion skill raised it to 4, he could have a specialization of "Death." In a situation where he needs to roll his Religion skill regarding knowledge or application of a faith's idea of death, he would get to reroll any 10s (giving him a chance at extra successes). It's not a huge benefit -- since it only comes up in situations where the specialization applies -- but it still helps differentiate a skill at 3 from one at 4. And it helps satisfy the "Oooh! Neat!" aspect of spending a bunch of experience points.

So perhaps reaching certain levels of having a skill in an RPG provides some minor ability that people without that level of skill lack. For example, maybe raising a First Aid from 15 to 16 gives a special point, which can be spent for a one-time bonus or reroll on a skill roll. Or, to steal the Storyteller idea, maybe a certain level will give a specialization, such as Poisons. This specialization might allow a reroll -- similar to many games' Luck-type abilities -- in situations where it applies. (If GMs want to limit this, they might say that it can only be used once a game session or the like.)

Make certain levels of skills required for certain applications. Let's face it; if one has a hypothetical skill of Mathematics at, say, 10 (which might be the equivalent of a high-school education), then no matter how well you roll you won't be able to solve a difficult Calculus-III-type equation. However, many games with skill levels don't allow for this possibility; it may be *difficult* to succeed with a low skill, but it can still be *possible* (especially if the game has die-modifying points or the like).

The "stick" side of the special ability "carrot," then, might be to say that certain levels of skill are required before some actions can even be attempted. For example, maybe First Aid-15 is required before some types of treatment are possible, such as trauma or massive wound care. This would give an incentive to raise that skill from 14 to 15. Alternatively, there might be a significant penalty for attempting skill roles that cross the boundary, or -- in a game with Karma, Willpower, or similar points -- it might require a special point expenditure to even attempt the more difficult roll.

So let's put it all together with a hypothetical game: *The System for Playing Roles Universally & Generically*. *SPRUG* uses a skill system for which the low-end of a skill is 10, and the top end is around 20.

The GM decides to use all the techniques I've suggested, because he knows nigh-infinite wisdom when he reads it.

He sets the maximum skill to 20; anything more than that will require a special point expenditure, and quite likely an extracted promise from the player to wash the GM's car for a year. He also decides that any value of 19 will make the person one of the world's most renowned experts in the field; this doesn't carry any game perks, but might entail a reaction bonus in situations where someone would be impressed by an expert in the field.

He sets the following levels, just to make sure he and the players are all on the same page as to what he envisions the skill levels to mean:

Hobbyist	10
Professional	13
Doctoral	16
World's Best	20

He decides that each skill level purchased above Hobbyist will bestow a Cheat Point. Each Cheat Point can be used to reroll *one* of the dice in the typical three-dice roll for that skill.

He decides that some activities will require a certain skill level to even be possible, going with the Professional and Doctoral levels; he decides that a player with one *less* than the required level can spend a Cheat Point to attempt the roll at no penalty, but otherwise it's at -6.

He also decides that one point *above* the Professional and Doctoral levels bestows a specialization, which allows a reroll of all the dice once a game session for that situation.

10	Hobbyist	Skill usable without default penalty
11	Hobbyist+1	+1 Cheat Point
12	Hobbyist+2, Professional-1	+1 Cheat Point, Professional skill check possible with Cheat Point
13	Professional	+1 Cheat Point; Professional skill check possible without Cheat Point or penalty
14	Professional+1	+1 Cheat Point; Specialization
15	Professional+2, Doctoral-1	+1 Cheat Point; Doctoral skill check possible with Cheat Point
16	Doctoral	Doctoral-Level skill check possible without Cheat Point or penalty
17	Doctoral+1	+1 Cheat Point; Second Specialization
18	Doctoral+2	+1 Cheat Point
19	Doctoral+3	+1 Cheat Point; Foremost Expert
20	World's Best	+1 Cheat Point

By using this system, the GM has helped to ensure that the player gets *some* kind of "goodie!" reaction to most skill levels, opening up new possibilities and opportunities for that skill in a similar way that buying a new level of Telepathakinesis makes new things possible. Only the 11- and 18-point levels bestow a minimal benefit. However, the 11-point level is easy to pass on the way to cooler things, and the 18-point level is probably of the most interest to someone who's interested in becoming a Foremost Expert (or better).

Of course, this kind of system is not without its problems. For one, it involves more bookkeeping. It also gives players more options (which they tend to like) and opportunities to disrupt the game (which the GM may not like). On the other hand, the Cheat Points *are* only usable one time, and so the absolute most any character would be able to use to influence one skill role is nine points. And it gives the GM some more control; if he knows the party's medic, with First Aid-16, is getting constantly overshadowed by another PC with First Aid-14 and Luck, he can ensure the medic gets a bit of spotlight by declaring a task to be Doctoral level; the medic is the *only* one who can make that skill roll.

In the general sense, GMs who use any of these techniques will also need to have a reasonable idea for the math involved; setting a skill maximum too low and then making skill rolls too difficult is a certain way to ensure that some tasks are impossible.

But, in all, many players seem to like it when they actually get a special ability when they spend a whole mess of experience points. For those kinds of games, it's often possible to accommodate the players fairly simply and without unbalancing things.

After all, by now you've spent the points necessary to be the World's Best GM.

* * *

Since I haven't mentioned it in a while, I'd like to take this opportunity to remind you all that *Pyramid* offers a free month to subscribers for every friend they get to subscribe! (Actually, I guess we offer it for any new subscriber . . . I mean, if you trick your archenemy into subscribing, you get a free month for that. *And* you can taunt him from afar over on the [discussion boards](#).)

All the details are online at <http://www.sjgames.com/pyramid/login/refer.html>. Remember: *Pyramid* is a community, and the only way we're going to grow big and strong enough to take over the world is if we get enough like-minded people to enjoy our offerings and fall under our spell. And I know how much you all want that.

(At least, you should, if these new subliminal banner ads are working right . . .)

The Last Cold War Spy Adventure

by Matt Riggsby

Editor's Note: The "Last _____ Adventure" series is designed to provide GMs with scenarios suitable for concluding a genre, transitioning a genre to a new premise, or providing an exciting "setting sun" one-shot.

*Despite the overarching title, genres represented by the "Last _____ Adventure" **may** continue having adventures published in **Pyramid**.*

*We will be publishing adventures in this series throughout the month of May. Last week we published "[The Last Steampunk Adventure](#)." In addition, our friends over at [JTAS](#) have gotten in on the act as well with their their own "Last Adventures" set in the **Traveller** universe. If the series proves popular, it may continue beyond as an irregular feature. As ever, we invite your comments by either the [discussion groups](#) or by writing us at pyramid@sjgames.com*

2:45 AM, August 18th, 1991. Apartheid is crumbling, Eastern Europe has thrown off Communism, and the world-wide web is *days* old. But those are the last things on the minds of a group of secret agents visiting South Africa when their phones start ringing off the hook.

Western intelligence has learned that Russia's missiles are no longer completely under Soviet control. A shadowy underworld figure known as Zed has programmed back doors into the antiquated missile control system, giving him control over an unknown number of ICBMs. A message to the Kremlin has threatened that unless he is given complete control over Siberia within three days, a missile will be fired at a random European city. Panicking hard-liners are already moving to depose a vacationing Gorbachev (using the traditional cover story that he has "fallen ill") to keep him from capitulation. It's up to the PCs to save the world.

The Briefing

Time is of the essence, so much of the agents' briefing will have to be done on the run. Drivers are being sent to bring the agents to the Capetown field office (possibly filling in information they have not yet received) before bundling them off to the airport. There is little time to ask questions and none to wait for answers.

The mission is easier said than done: Zed proposes to start launching missiles in three days (midnight of the 21st, local time) unless his demands are met. The missiles will go off unless Zed stops them, so killing him or destroying his headquarters will guarantee destruction, not prevent it. The agents are being sent to Victoria Falls, a tourist town in Zimbabwe near Zed's headquarters. The Capetown field office can provide personal weapons, surveillance equipment, survival gear, clothing, IDs, cash, and similar equipment. A range of civilian vehicles and accommodations can be provided once they reach Victoria Falls. More elaborate equipment can be requested but is unlikely to arrive in time. They are to infiltrate his compound, stop the missiles by any means necessary, and bring back the people responsible and any information about the Soviet missile system. They have a bit under 72 hours.

It's The End Of The World As We Know It

Obviously, espionage doesn't end with the Cold War, but the traditional enmity that defined the post-WWII world does. So does the Us vs. Them clarity of Communists vs. capitalists, even if the tactics employed in the struggle sometimes don't make "us" look that different from "them." This is the time of George Smiley and James Bond, of wars by proxy where two superpowers use other

Information on Zed is sparse and untrustworthy. Some time ago, the west's foremost authority on Zed was an MI6 analyst named Sarah Petrie. However, about five years ago, Petrie fled to join Zed's organization. She destroyed a great many files, and it is unclear how much inaccurate information she may have introduced into what remained. In sum, this is what the PCs' organization knows about Zed and his likely compatriots:

- **Zed:** Zed is an elderly Eastern European, possibly a gypsy or Jew. A WWII refugee, he hates both East and West (the Russians and Germans for taking turns destroying his home and the rest of the West for abandoning it to the Communists). He has spent most of his life in the Southern Hemisphere, settling in Zimbabwe a decade ago, putting him close to the sources of the diamond-smuggling operations he uses to fund his activities. He has become increasingly reclusive and has not been known to leave his compound for over a year, although it's certainly possible that he has left unobserved.
- **Kublai:** Kublai, an ethnic Mongolian, is Zed's right-hand man and personal bodyguard. He is a killer, a master of martial arts, and an excellent shot; knives are his favorite weapon, and he usually has several concealed about his person. He has been known to conduct business for Zed all over the world and command his thugs in the field, but in recent years has generally stayed close to the Zimbabwe compound. He rarely speaks, but he is believed to speak both Chinese and English with passable fluency, and perhaps a few other languages. Although generally indifferent to fashion, he is meticulous about keeping his beard and long moustache neat with a rose-scented moustache wax from France.
- **Sarah Petrie:** Remembered by her former colleagues as bookish and prickly, Petrie has apparently come out of her shell. With Zed's wealth behind her, she has developed a taste for designer clothes (in which she is, of course, stunning), swank parties, and, to put it politely, short-term relationships. She has also traveled extensively for Zed, taking care of tasks that require more subtlety than Kublai can muster, but is likewise currently in Zimbabwe. A gifted analyst, Petrie managed to talk her way into basic field agent training despite abysmally poor vision, so she's unlikely to be completely helpless in a confrontation.
- **Dr. Enrique Deguzman:** Zed's personal physician, Deguzman is a Cuban exiled by Battista's fall. He joined the Bay of Pigs invasion and was captured in its aftermath, undertaking a bloody escape to Central America a year later. As a result, he shares Zed's low opinion of both Communists and the western powers, and he has been employed by Zed for at least a decade. He shares Petrie's fondness for the good life, and they often attend the same social functions if they're in the same area, although rarely spending time together at them. He is talkative (usually about his passion for fine food or fine art) and an excellent dancer.

nations as pawns while delicately maintaining a balance of power under the threat of nuclear annihilation. Whether or not the PCs succeed, the balance will be irrevocably upset. It's just a question of how it all ends.

Zed's stronghold is an old colonial mansion in the wilds of Zimbabwe, a few miles up the Zambezi river from Victoria Falls. The land is officially kept as a private game reserve, but he is believed to have a small private army quartered there. Regular payments to the cash-starved Mugabe government keep all sides happy with the arrangement.

There's one more complication. The Russians, for obvious reasons, want control of their missiles back. There are not just one but two KGB teams either on their way or already in Victoria Falls to stop Zed's plan. One is being operated by Gorbachev loyalists, the other by hard-liners. One is a strike team, the other a group of highly-skilled general field agents. Their identities are, as yet, unknown, and it is unclear which team is working for which Soviet faction (and, indeed, where the loyalties of the individual team members lie). They might be a source of useful information, but control of the missiles should not be allowed to fall into their hands.

The PCs will be sent to Victoria Falls on a scheduled commercial flight leaving shortly after dawn. They will be met by a local operative (Christopher Tsvangi, undercover as a taxi driver), who may be able to provide them with currently unavailable information and equipment that can't be placed on the plane. Once the PCs have had a chance to ask a few questions, they are sent to the airport to catch their flight north.

Victoria Falls

Why would anyone come to an otherwise nondescript spot in the middle of

Africa? At a point along the zigzagging Zambezi river, there is a sudden drop into a deep gorge. The result is a spectacular waterfall over a kilometer wide and 100 meters high. The local name for the falls translates as "The Smoke That Thunders," from the noise of the falls and the plume of spray that rises from the falls year-round (even in the dry month of August) like a huge column of smoke. The spray is so intense that the falls, in the middle of what is otherwise a lightly wooded grassland, are surrounded by several meters of rain forest vegetation.

The three-hour flight is uneventful, so long as the PCs don't make trouble. If they bother to find out, their fellow passengers include a newlywed couple from France (Michelle and Edouard Masse) touring Africa, a recently retired German businessman and his son (the Fassbinders) doing the same, and three South African salesmen (Earl, Ted, and St. John Jones, no relation to one another), each with separate business in the town.

The PCs reach the Victoria Falls airport mid-morning; the tiny airport (one gate, no jetways) is about a half-hour drive away from the town proper. Most of the other passengers have already arranged transportation, so the PCs are mobbed by friendly taxi drivers and freelance tour guides; hooking up with Tsvangi might look questionable for a moment. However, if they're paying attention, they should be able to pick him out. He'll help them with their bags out to a large van and head off to town.

The town of Victoria falls is an international tourist destination, a square mile or so of hotels, tour operations, restaurants, bars, and souvenir shops, with residential villages and resort hotels trailing off into the bush. Agents won't stand out, no matter what their nationality. The river forms its northern and eastern border, just as it forms Zimbabwe's border with Zambia. Tsvangi will drop them at their destination if they've already arranged lodging or help with arrangements if they haven't.

Tsvangi also has news: Kublai, Petrie, and Deguzman are all in town today. They, along with a few men from the compound, have arrived for the apparent purpose of picking up supplies. Deguzman and Petrie have taken rooms at the Victoria Falls Hotel (see below). Deguzman is seeing the sights on a safari trip at noon, and both will be attending a party at the Victoria Falls Hotel that night. Tsvangi can get up to two agents on Deguzman's safari and all of them into the party at the hotel. They'd be fools to pass up the chance.

Safari

Most tourists view Africa's plentiful wild game from vehicles, but those with more exotic tastes can ride horseback or, in Deguzman's case, elephant-back. His mid-day recreation is an excursion through the bush riding tame elephants. Elephants are actually a very good platform from which to view wildlife; with a surprisingly silent tread, they're capable of getting much closer to wild animals than a motor vehicle. There are typically two riders and a driver on each, seated one in front of the other on a saddle like a long leather pillow. On this trip, a train of five elephants tours the bush for a few hours, beginning with a gourmet lunch al fresco and ending with drinks.

When the PCs arrive at the safari's base camp a half-hour's drive into the bush (assuming they decide to go), they find picnic tables set with tablecloths, silverware, and a feast being laid out by a staff clad in spotless white. Most of

Gadgets

Depending on how cinematic you want the adventure to be, some gadgets will be available. They might include:

- Small guns and explosives disguised as cigarettes, notebooks, binoculars, etc.
- An artificial gill that filters oxygen from the water, allowing unlimited time underwater.
- Fingernail-sized homing devices
- Self-igniting magnesium flares (useful for cutting through thin metal bars) disguised as pens or other small metal objects
- Ordinary-looking clothing made of an advanced bulletproof fabric

Who's Who

A lot of NPC names are floating around in this adventure, but only some of those NPCs are directly involved in events. From the plane, the Fassbinders are actually Casimir Yevirov and Ivan Koskov, part of the Soviet strike team. They are working with a Michael Shakala, a local

the other guests are already there: Deguzman, two Italian university students backpacking central Africa (Massimo Fresetti and Angelina Popono), the newlywed couple from the plane, an early middle-aged American couple from Iowa (the Gelmans of Des Moines, Bob and Marie, actually from Ankeny but Des Moines is the closest city that anybody's ever heard of so they always tell people they're from Des Moines . . .), their two bored teenaged daughters (Amber and Jennifer), and Dolores de la Joya, a stunning brunette chattering in Spanish with Deguzman (the PCs may remember seeing her at the hotel).

The PCs can be seated near Deguzman, but they'll have a hard time prying his attention away from his flirtation with the young lady. If they do, he'll happily discuss art and current affairs, but won't say much about where he lives or what he does; he'll only say that he's personal physician to an eccentric recluse. The most notable current affair, of course, is the news of the coup in the USSR. Deguzman scoffs at it, opining that the USSR will soon fall apart.

Soon enough, it's time to mount up on the elephants. Driver/guides take the elephants past a permanent ladder set up in a clearing, helping the guests on one at a time. A PC will have to make either a DX or IQ roll if he wants to end up on the same elephant as Deguzman.

It's a lovely day for a ride through the bush. The sky is clear, and the animals are moving slowly in the midday sun. About an hour into the trip, a shot rings out, destroying Deguzman's camera as he raises it to his eye. The other tourists panic and scatter for cover while the guides try to control the startled elephants. Deguzman himself is stunned, and the PCs may want to pull him off his mount before another shot.

A Vision or Hearing roll after the first shot will give the PCs a general idea of where the shot came from. A second shot (which misses Deguzman if the PCs move quickly) will allow them to pinpoint the shooter's location, in a cluster of trees atop a nearby hill. If they give chase immediately, they may see the fleeing gunman getting into a Range Rover at the base of the hill and taking off at high speed. If they have binoculars, they can get a license number. If they investigate after waiting for the shooting to stop, they'll arrive to see a cloud of dust marking where the Range Rover disappeared and a number of cigarette butts where the gunman waited. The cigarettes are dark brown with Cyrillic stamped on them: a popular Russian brand.

The tour guides will eventually gather up the scattered tourists and take them back to base camp for some much-needed drinks while the Zimbabwean police question them briefly. They blame the incident on none-too-bright poachers; Deguzman seems to know better, but won't say anything about it. Dolores puts herself in charge of taking care of Deguzman after his ordeal, making sure he has something to drink and his scratches from the exploding camera are bandaged. However, if the PCs helped him during the incident, he will take a moment to express his gratitude, perhaps mentioning that he can find work for men who are good in a tight spot. Not long thereafter, a car with tinted windows comes to retrieve him. Deguzman untangles himself from Dolores (not without making arrangements for later) and heads quickly for the car. Observant PCs will notice the car already has another passenger: Kublai.

Reception

The day's other big event is a black-tie reception at the Victoria Falls Hotel. The hotel is hosting the event in honor of Everard G. D. Pepperdale, a former British lieutenant colonel who retired to Zimbabwe and has set aside a large chunk of land as an animal preserve, for which he is being honored by fellow wealthy expatriots. The evening's events, commencing at seven PM, include some tedious speeches, the presentation of a plaque, and hours of dancing and drinking in the hotel's lavish ballroom and a buffet and conversation on the broad lawn.

KGB contact. Their strategy is to wipe out Zed's lieutenants and any other spy teams, leaving the field clear for a more direct assault. They don't know who the western or other Soviet team are, but will take out anyone who happens to be near their primary targets, just to be sure.

The second Soviet team is consists of Dolores de la Joya (actually Annissa Saminova), whose strategy is to get close to someone in Zed's organization, and Ted Jones (actually Yvgenny Romanov) from the plane, long undercover as a salesman of security gear. The second Soviet team has one significant advantage: They know the identities of at least a few of the PCs, so they'll be on the lookout for them. They'll try to distract or misdirect the PCs if they encounter one another, but won't resort to violence unless they have to.

Deguzman, in a well-tailored white tuxedo, is a bit reserved after his ordeal. His time is being monopolized by Dolores and they'll leave the party early (determined PCs might attempt a contest of Sex Appeal with Dolores to wrestle his attention away, but it won't be easy), but he'll share friendly words with PCs who helped him during the shooting that day. He'll feel them out on whether they've done dangerous work before; if they have, he'll suggest that they come out to "the hacienda" with him tomorrow . . .

Petrie, in a simple but flatteringly cut black gown and wire-rimmed pair of thick-lensed glasses, is in a very good mood and more open to conversation. She is flirting liberally but will focus on a sufficiently interesting conversationalist (win a contest of Sex Appeal or Carousing against a skill of 14 to be more interesting than other people; win another contest every 15 minutes of game time to keep her interest). Petrie won't talk much about what she does, except to mention briefly that she's in real estate; it won't take Detect Lies to show that she's using that as a euphemism. However, she'll be happy to talk about the latest music, fashion, movies, and theatre. Agents will find her intimidatingly bright and well-read.

Like a glowering statue, Kublai, clearly uncomfortable in a tuxedo, lurks around the edges of the party, nursing a drink and keeping an eye on both Deguzman and Petrie. If approached, he will feign not understanding whatever language the heroes use (if they speak Mongolian, he'll feign not understanding their dialect), but he will remember and be suspicious of anyone who does. At least one agent will be approached by an attractive young Russian, who will eventually want them both to drink to anyone and anything the two of them can think of, and at least one hero will be approached by an elderly expatriot, who will show far more interest than is suitable for a person of that age. They may, if they circulate a bit, see the Masses (the newlyweds from the plane), the older Fassbinder, and the Gelmans, looking out of place.

If an agent can successfully keep Petrie's interest for an hour, she'll suggest a walk to see the falls in the moonlight. The farther they are from the hotel, the more likely they are to be alone. She's clearly intending a romantic interlude, but events intervene. The path from the hotel to the falls goes down an overgrown slope and around a bend to the bank of the river immediately opposite the falls; there's a steep slope up to the left of the path, and a steep slope down to the river to the right, both covered with thick vegetation. As they pass the bend which puts them out of sight of the hotel, they are attacked by two people covered in black from head to toe. One is in front, the other behind, both expert martial artists, breaking from the cover of the thick growth of the falls. Petrie is their primary target, but they'll attack the PC as well. The path is only a few yards wide and there's no guardrail, so it will be easy for someone to go over the edge.

Before Petrie can be seriously hurt, another figure arrives. Kublai appears and joins the fight. He won't interfere to save a PC, but he will attack anyone who looks like he's even considering tangling with Petrie. Seeing Petrie on her way out, he decided to keep an eye on her in the open rather than Deguzman, who is in a relatively safe public place. Any other PCs who try to delay him when he heads for the outside will find themselves subject to a swift kick to a sensitive area. If they somehow manage to stop him, the agent with Petrie is on his own.

On finding themselves outnumbered (or, at least, overpowered) once Kublai appears, the assailants will attempt to flee, and neither Kublai nor Petrie will follow. If they manage to kill or incapacitate the attackers, they can discover that one is the younger Fassbinder (the other is their local contact). If they return to the party to look for the older Fassbinder, they'll discover that he has already gone.

Victoria Falls Hotel

There is perhaps no better place on the continent to have high tea and no finer place to in town to stay. Made possible by the opening of a train station directly across the street at the turn of the century, it is a low but sprawling (184 rooms) H-shaped building dripping with colonial-era elegance. The rear of the whitewashed building overlooks a huge, immaculate lawn and the deep gorge of the Zambezi just below the falls (which is just around a promontory and can be reached by a path from the hotel). The hotel contains three elegant restaurants, ballrooms, bars, a beauty salon, a plethora of on-site services, and broad hallways and luxurious rooms decorated with colonial mementoes.

If the PCs stay at the Victoria Falls Hotel (and why wouldn't they? It's the best place in town), they check in behind a memorably attractive Spanish brunette and in front of two of the salesmen from the plane.

Being attacked does not keep Petrie in an amorous mood. However, if the PC she was with proved a competent fighter or if she went over the edge and was rescued, she'll make an offer similar to Deguzman's to come to the compound the next day with the suggestion of lucrative employment.

The Compound

Sooner or later, the PCs should end up at Zed's compound. It lies 25 miles west of Victoria Falls along the Zambezi river, not far from where the borders of Zimbabwe, Zambia, and Botswana meet. If the heroes manage to befriend Deguzman, they can get a ride there in a truck full of crates of supplies and a handful of thugs in Zed's employ. They'll also meet Ted Jones again, here to fix a potential problem with an alarm system. If one of the agents befriends Petrie, he can ride along in her Porche (Deguzman brings Dolores in his own BMW).

The agents will have satellite photos showing the layout of the compound. A private dirt road approaches the compound from the south through a thicker-than-usual area of forest. An electrified fence, patrolled at irregular intervals by pairs of armed guards, stretches around Zed's compound through the forest, using trees as posts. The fence is designed to keep out large animals, so agile humans can probably find a way to climb surrounding trees and get over it.

The road ends at a lightweight gate, permanently manned by a pair of guards. Uninvited visitors will be turned away at the gate, no matter what their excuse, although if they can feign accident or injury, persuasive PCs may be able to arrange a ride back to town. If they're particularly insistent, Kublai and a few guards will come out to quiet them down. Permanently.

Immediately beyond the gate is an expanse of well-manicured lawn and a two-story, Georgian-style mansion. On the far side of the house are a number of outbuildings: a stable for horses; a garage with an assortment of light trucks, jeeps, and a Rolls-Royce limousine; a generator shed; fuel tanks; barracks for most of the guards; a satellite dish; a small boathouse on the river; and a few storage sheds for gardening equipment, spare weapons storage, etc. There is extensive underground construction as well: a backup generator, computer rooms, several laboratories, and a large control room from which Zed can oversee his organization's operations. The compound houses about 45 guards, four serving as unofficial sergeants, fifteen scientists and technicians, and a like number of cooks, janitors, and other support personnel.

When the caravan arrives, they'll see Zed watching from a balcony over the mansion's main entrance, but he doesn't come down to greet them. Any PCs in the party are given a better idea of what they'd be doing if they came to work here: Zed is described as an eccentric tycoon with many enemies. He needs a security detail willing to defend him against unscrupulous competitors so that he can work in peace. The job is potentially very dangerous and requires a certain flexibility, but it pays well and few if any questions will be asked. The agents are invited to stay the night to consider the offer. They'll be given a brief tour of the compound (not including the private and underground areas of the mansion, although they may see lab-coated technicians at a distance) and small private rooms in the barracks. If a PC has befriended Petrie, he'll be invited to a private dinner in her rooms.

The rest of the day is, if not quite their own, at least flexible. They will constantly be in the company of at least one submachine-gun-armed guard, although the guns are worn as a matter of course rather than as a threat. Any guards with a Good or better reaction to the PCs will happily describe the approximate number and jobs of personnel in the compound and volunteer the fact that Zed has secret labs under the mansion. The guards know that Zed is involved in criminal dealings, but they don't know their exact nature. No one, apparently, gets close to Zed except his inner circle.

Where's Christopher?

He's busy. He's on call to ferry the PCs around town, although he may suggest that they don't use him exclusively so that they're not seen together too often. He's also in touch with headquarters. The second morning (that is, the morning after the attacks on Deguzman and Petrie), he will bring news of the Russian teams. Each is composed of a pair of agents: One is two men, the other a man and a woman. At least one of the second pair may already be undercover as an employee of Zed's. If they're about to head off to the compound, he'll warn them that he can't go there himself without raising suspicions, but they might be able to arrange a meeting in advance. If they got a license plate number from the Range Rover driven by Deguzman's would-be assassin, he can tell them that it was rented recently by a Hermann Fassbinder.

The technicians occasionally hang out with the guards, but the computer techs are constantly busy these days. Deguzman has work to do, so Dolores borrows a horse for a short ride, accompanied by a guard so she doesn't get lost; PCs can join in if they desire.

At this point, things become complex and will remain so for the next two days. Ted Jones and Dolores are, of course, members of the Russian infiltration team. They have decided to divide responsibilities: Dolores will concentrate on figuring out how to stop the missiles while Jones tries to come up with a way to expose any PCs who may have infiltrated the compound with them.

The heroes will want to do some snooping on their own, and there are some interesting things to find. Dolores and Jones have small radios and a few weapons disguised as innocuous personal items (lighters, lipstick, etc.), which the investigators might, on close examination, recognize as Russian-made. A game of cat and mouse may develop: Dolores will try to find out what she can without disturbing Deguzman; Jones will keep an eye on the PCs' quarters, waiting for them to go looking around so he can search for anything incriminating; and Kublai, who doesn't trust *any* of the newcomers, will be up late just in case.

Zed's rooms are a combination of a luxurious suite and a hospital. His bedroom has medical equipment (oxygen tanks, EKG, etc.) hidden behind the antiques. His office, immediately adjacent, is filled with European folk art as well as newspapers and magazines (none is newer than two years old). The desk and filing cabinets are full of papers in total disarray. Zed's handwriting is almost entirely illegible, and what little can be read seems unhelpful, mostly mentions of unspecified enemies and revenge. Kublai's room, with weapons on every wall and in most drawers and cabinets, is across the hall.

Deguzman's rooms are as elegantly appointed as Zed's, although his office is full of medical journals. He keeps medical records for everyone, but Zed's records aren't with the others. His file is hidden in a secret compartment behind a painting on the wall. It will take some medical skill to decode, but his diagnosis is one of accelerating senile dementia. Deguzman's own room has a bookcase full of Latin American literature. A sharp eye will pick out one exception, a copy of Joseph Conrad's *The Secret Agent*, in which is hidden a sheaf of plane tickets taking Deguzman from Victoria Falls to Prague on the 22nd.

Petrie's rooms are, of course, just as comfortable. She likewise has plane tickets hidden (without Deguzman's sense of irony), these taking her to Warsaw on the 22nd. She also has a hidden wall safe containing correspondence with real estate agents through Eastern Europe. She has apparently been negotiating to buy property in her own and Deguzman's names. There are a number of computer printouts there as well. Someone with Computer Programming skill can tell that it deals with I/O and display of data for a missile control system. However, there's nothing that specifically deals with missile launch codes or firing the missiles themselves.

Bang Vs. Whimper

If Jones manages to find evidence of the PCs' identities, he'll tip off Kublai, or he might find some spies out on his own. Kublai will round them up and Zed will make a brief appearance to pronounce their fate: The treacherous foreigners won't survive any longer than the wicked powers they serve (he might, puzzlingly enough, refer to them variously as Communists and Facists, regardless of their actual political persuasions). He has the captives tied up and put in small boats which will be towed down the Zambezi towards Victoria Falls. The boats will be cut loose about five minutes upstream of the falls; going over will, of course, be fatal.

If confronted with plane tickets or computer printouts, Deguzman and Petrie will initially refuse to answer agents' questions and, if they can, call for guards, which will in turn lead to either a shootout or more spies being sent down the river. Under extended interrogation (if they can arrange it), Deguzman will reveal that he and Petrie are about to remove Zed and take over his organization, but he doesn't know the details, save that it involves recruiting foreign spies. Petrie will be tight-lipped, but as the deadline of the 21st approaches, she'll offer to stop the missiles if they kill Zed and Kublai. Indeed, she may need to approach them with that offer (see Twist Ending below) if the PCs haven't already discovered enough information to make them suspicious about the whole affair.

At the end, the Soviet strike team reappears. At the very least, the elder Fassbinder is on the loose. At sundown of the third day, he and anyone who escaped the fight at the falls two nights before will begin a methodical assault. Armed with sniper rifles and night vision gear, they will start taking out lights and anyone who moves or appears in windows. When they've done as much damage as they can, they'll move in with short-range weapons to kill who they can. If it comes to that, Dolores will reveal her identity to one of the PCs (making sure she's got the drop on him), proposing a temporary alliance to delay the strike team and find out how to stop the missiles.

Midnight approaches, and the Soviet strike team is trying to blast its way in. If they can make contact, Petrie (or Deguzman, if she's incapacitated) will approach the heroes with an offer: She can stop the missiles, but they'll have to get into Zed's control room. They need the PCs for cover, both going in and coming out. They'll have to bypass locks and potentially fight Kublai and 10 of Zed's best guards (and possibly fend off several technicians). In return, the heroes must let them go after the fight is over. The PCs need to make a decision, and make it quickly.

Twist Ending

Petrie will keep the heroes focused on fending off Kublai and the guards for as long as possible, but midnight will eventually come and go. If they capture Zed rather than killing him, his poor mental state will quickly become apparent. If at all possible, Petrie will attempt to escape the compound, so the agents may need to chase her down. But when the sun rises and CNN reports the end of the Soviet coup, she still has one more card to play if the heroes are inclined to arrest her.

Zed's mental condition, she reveals, has been deteriorating for years. Really, it should have been obvious to the heroes as well, she says. Demanding to rule Siberia? Putting spies in boats and shoving them down-river instead of just shooting them? Petrie detected his slow slide into senility and hatched a plan of her own. Rather than slave away in a tiny cubicle for a civil servant's salary, she had a chance for something far more exiting and lucrative. She knew enough about Zed and his organization to join it. Working with Deguzman, she started taking informal control of most of Zed's resources.

Two obstacles remained: Zed himself and Kublai. Zed's organization was still nominally loyal to him and she'd never have full control as long as he was alive. And there's no way she could kill him while Kublai lived, not without inviting immediate revenge. How could she take them both out? She could, she realized, do it by letting Zed do as he pleased.

Not long ago, Zed's organization gained partial access to the Soviet missile control system. Zed's impulse was to destroy the hated Soviets and Europeans at once, but Petrie talked him into something more profitable. Of course, she knew that this was a threat that no nation could ignore, and Victoria Falls would soon be swarming with spies ready to stop Zed. All she had to do was sit back and wait for them to remove the figurehead and his bodyguard; why else would she and Deguzman let strangers into the compound so easily?

And the missiles? There was never going to be a launch, because she never had that level of access. She fooled the system into making it *think* a launch was immanent, but why do something that would throw the world economy into turmoil? Petrie is bullish on the newly opened Eastern Europe, and she looks to make a bundle off it.

The immediate threat is gone (indeed, it was never there), but there's still a decision to be made. The heroes are still under orders to bring back what

New World Order

Now that the Cold War is over, what are the cold warriors to do? Yesterday's mortal enemies will be tomorrow's new friends, and the deep, dark secrets of the KGB will be readily available for purchase from apparatchiks-turned-entrepreneur.

In a way, it's an embarrassment of riches. Instead of Us vs. Them, a vast spectrum of enemies will soon arise: Russian gangsters, Columbian drug lords, Middle Eastern radicals, even neo-Nazis. The end of the Cold War takes the lid off of any number of problems that have been simmering for years.

But it's a brutal world as well. A few exceptions and some collateral damage aside, the spooks of the Cold War usually killed for a reason. The terrorists and criminals of the new millennium kill indiscriminately. Old-timers may have to struggle to adjust to a world where the man on the street is as much a danger as the trained professional. Or, at least, to missions in poverty-

information they can about the Russian missile system. The soon-to-be-former Soviets are still under orders to stop that information from falling into the hands of others. Can the agents convince their Russian counterparts that their orders have been rendered moot? Can the Russians convince the agents of the same? Or will there be one last small battle in the Cold War?

stricken backwaters far from the fleshpots of Europe.

NPCs

Only particularly relevant skills and abilities are listed here; the GM may flesh them out as desired.

Zed

Zed is a shadow of his former self. As late as the early 1980s, he might have been able to turn Petrie's limited penetration of the Russian defense net into something catastrophic. Now, it's just a false alarm.

ST 7; DX 10; IQ 14; HT 8.

Advantages: Multimillionaire.

Disadvantages: Absent-minded, Age (76), Megalomania, Bad Sight (Nearsighted).

Skills: Leadership-13, Strategy-13, Tactics-13, Streetwise-13, Intimidation-12, Engineer: weapons systems-11.

Kublai

Kublai knows nothing about Petrie and Deguzman's plan. All he knows is that large things are afoot. He is fanatically devoted to Zed and will defend him to the death, taking as many enemies with him as he can.

ST 14; DX 15; IQ 11; HT 13.

Advantages: Toughness (DR 2), High Pain Threshold.

Disadvantages: Unattractive, Bad Temper.

Skills: Judo-18, Karate-18, Knife-19, Throwing: Knife-17, Fast-draw: Knife-17, Guns: .38 automatic pistol-16, Guns: 9mm submachinegun-16, Stealth-16.

Sarah Petrie

Her thick glasses are a prop. She secretly arranged to have laser eye surgery, still an experimental procedure in 1991, and wears non-corrective lenses to fool potential enemies into thinking she still has that particular weakness.

ST 10; DX 12; IQ 16; HT 10.

Advantages: Beautiful, Strong Will +2.

Disadvantages: Compulsive Carousing, Greed.

Skills: Intelligence Analysis-18, Computer Programming-17, Streetwise-17, Fast-talk-16, Savoir-Faire-16, Judo-13.

Emilio Deguzman

Deguzman doesn't dislike Zed, but he knows a losing proposition when he sees it. He's quite fond of his luxuries and

will eventually, if sometimes reluctantly, sell out his companions if he gets a better offer.

ST 11; DX 11; IQ 13; HT 10.

Advantages: Attractive, Manual Dexterity +3.

Disadvantages: Greed.

Skills: Physician-14, Brawling-12, Savoir-Faire-12, Carousing-12.

Dolores de la Joya/Annisia Saminova

ST 12; DX 14; IQ 13; HT 11.

Advantages: Very Beautiful.

Skills: Acting-16, Fast-talk-15, Sex Appeal-16, Carousing-15, Stealth-15, Karate-15, Guns: 9mm pistol-16, Lockpick-15, Pickpocket-15, Climbing-14.

Ted Jones

ST 11; DX 13; IQ 12; HT 11.

Skills: Acting-14, Fast-talk-14, Stealth-14, Karate-15, Guns: 9mm pistol-15, Lockpick-14, Electronics Operations: security systems-14.

Gunter Fassbinder/Casimir Yevirov

This is the leader of the strike team. He is far more experienced and patient than his assistant.

ST 12; DX 12; IQ 13; HT 11.

Advantages: Combat Reflexes.

Skills: Guns: sniper rifle-18, Stealth-18, Guns: submachinegun-16, Karate-14, Stealth-16, Tactics-14.

Hermann Fassbinder/Ivan Koskov

ST 13; DX 13; IQ 11; HT 12.

Advantages: High Pain Threshold.

Disadvantages: Overconfident.

Skills: Guns: sniper rifle-16, Karate-15, Stealth-13.

Generic Henchman

Use this for Zed's henchmen; they're armed with submachineguns and pistols, and some hand grenades are available. Add Streetwise-14 and Scrounging-14 for Christopher Tsvangi and Karate-14 and Stealth-12 for Michael Shakala.

ST 12; DX 11; IQ 10; HT 11.

Skills: 1 Guns skill at 13, Brawling-12.

Dr. Elliott Jason Novatney

for *GURPS*

by K. David Ladage

The Lie

Dr. Novatney is, perhaps, the most successful genetic scientist in the world. He has written over two dozen articles in accredited journals from 1994 to present; however, you will find no published work with his name associated after 1986. Were you to find a well-stocked library and do the research, you would learn that Elliott Jason Novatney was born to Amanda Grace and Humphrey Alan Novatney in Rock Island, Illinois on September 7th of 1936. He moved three times before he landed in Alexandria, Virginia, where he graduated High School in 1954 with a C+ average. He tried to join the Navy in 1955, but was turned down after the entrance physical when it was discovered he was a bleeder (hemophilia type-A). Careful not to injure himself, Elliott took several low-impact jobs and worked his way through community college; transferring to the University of Virginia after four years, he graduated from the Pre-Med program in 1960. He then began his post-graduate work at Johns Hopkins.

Dr. Novatney's career was exceptional. By 1975, he was published six times, he was the Associate Director of Research at Johns Hopkins and remained the heir apparent, and (in his mind) was very close to a cure for Hemophilia. In 1976 his mother died of complications following a fall; she had simply lost too much blood by the time she reached the hospital. Elliott knew his mother had Hemophilia, as the condition is passed from the mother, although his family never discussed it. Without Amanda in his life, Humphrey died in his sleep 11 months later. Dr. Novatney took this rather hard.

His work suffered. In 1980 he was passed over for Director of Research, and so resigned his position at Johns Hopkins, opting instead to start over at the Bethesda Naval Hospital. By 1984 he seemed to have gotten his life back together. He met, got engaged to, and was ready to marry Helen Victoria Chase, when he was shot to death outside of a Georgetown restaurant. He was killed, according to the police report, in a mugging in which his assailant was angry when he discovered that Dr. Novatney had no cash on him. Helen Chase went back to New York where she eventually married into a wealthy political family. And that would be all that you might find a well-stocked library.

The truth, however, is not quite that simple.

The Truth

In 1980, Dr. Novatney was approached by several government contacts indicating that he was the top choice to head a secret government research project. He had taken the death of his parents hard, this was true, but it had not effected his work in any significant way. He was still on the fast track to becoming Director of Research at Johns Hopkins. Dr. Novatney, however, had no desire to work for the government (he had some offers from some rather lucrative pharmaceutical companies). He declined their offer.

Those same agents then arranged it so that, despite his record and qualifications, he was passed over for the Director's position. He fought the decision and lost. He was asked to resign after a heated argument with the hospital staff. Suddenly, he found himself almost unable to get work. Eventually, he discovered that this was due to the fact that he suddenly had a police record. After clearing this up, he managed to get a position with Bethesda Naval Hospital where he was again approached to head this secret government project. Realizing that they were not going to take no for an answer, he agreed.

Starting in 1984, Dr. Novatney began working on what was code-named Project: SIX. As a prominent and well-known

individual (not only for his medical research but for the fact that he was engaged to marry into one of the wealthiest banking families in the United States), he could not simply disappear from the public eye and continue to work on this project. So his death was faked and he was shuffled off to a top-secret lab in the Mid-West.

As his face was well known, Dr. Novatney did not leave the compound of the project very often for the first few years. By 1989, he was able to travel the Mid-West without much fear of recognition. The project was going very well. They had made many discoveries, advanced in the project's goals, and were no more than 15 years away from unmitigated success in 1990. But by that time, the resources needed to continue Project: SIX had grown beyond the government's ability to obfuscate.

Thus, the solution was obvious. An organization was formed (that had very few government ties) that would act as a front. This organization would siphon money from all sorts of sources and even handle a large portion of the research that was deemed "acceptable" to release into the public domain. It was a success. This front organization is called The Human Genome Project.

Project: SIX

The specific nature of Project: SIX is dependent upon the type of campaign you want to drop Dr. Novatney into. Regardless of the campaign, however, SIX is a ruthless organization dedicated to advancing the power and might of the United States government through genetic research. They will (and often do) kill innocent people in the name of scientific advancement. All in an effort to give the US the upper hand.

In each case, however, the role of Dr. Novatney should be one that rides the line between good and evil; between light and dark. No matter what evil the organization is doing, Dr. Novatney's (primary?) motivation is for the research into cures for genetic disorders -- such as his own hemophilia. He sees this as a win-win situation: The government gets something and the word gets something. Depending upon the campaign, here are a few possible goals and motivations for SIX:

- **Aliens Among Us:** In a horror or conspiracy campaign, SIX can be an organization studying captured alien life forms. If the Earth is involved in a secret interstellar war, the project could simply be to find weaknesses in the alien life that can be exploited. If not, perhaps the alien life forms have abilities and powers based upon their genetics that the government is attempting to duplicate in humans to build a new breed of super-soldier. SIX in this case could even be an acronym for the Scientific Investigations into Xenobiology (even if this is not the name that the government had in mind, it could be a name the members of the project use when they discuss it).
- **Meta-Human Gene:** In a super-powered (or psionics) campaign where the powers involved are genetic in nature (such as *Wild Cards*), SIX can be an organization that is attempting to artificially create the conditions needed to cause the meta-human gene to activate. Destructive testing of the subjects with chemicals, radiation, or what-have-you would not be uncommon. In a game where super-powers are not extant, but you wish to introduce them, this version of SIX could be used as well. Depending upon the level of advancement SIX has made, one could even add minor powers to various members of the team to simulate any stable gene-sequences they have discovered.
- **Super-Virus:** In a campaign that wants to deal with long-term goals of the characters, the idea of a genetically designed virus becomes possible. Imagine a virus that can target specific genetic patterns. Suppose the patterns that were being targeted were those that are common in the Middle East or Asia. Suppose this virus was being designed so that each batch could be "programmed" to go after a specific person so that a carrier agent could be infected with the virus but have no symptoms; yet by making contact with the target, they would contract a serious illness and die within 48 hours. The possibilities here are endless.
- **Thaumaturgy:** In a *Technomancer* campaign, Dr. Elliott Jason Novatney and his SIX organization could very well be the same (or even a competing) organization that ran "Project UMBER Regal" (pp. T54 and MO82). This would mean that SIX is involved in Genetic Thaumaturgy (T50); additionally, SIX would be trying to unlock the genetic codes that control or aid in the manipulation of magical energies -- attempting to create genetically engineered magi. If this is the case, then you may wish to add some level of Magery to the good Doctor's stats below.

Character Stats

Dr. Elliott Jason Novatney

392 points

Age 68, although he appears to be in his mid-50s; 5'9", 147 lbs.; distinguished gray hair, green eyes; gaunt looking man with long, bony fingers; in his lab he wears a tattered white lab coat, outside of his lab he is most often in faded jeans, simple tennis shoes and a silk shirt.

ST 9 [-10]; **DX** 10 [0]; **IQ** 12 [20]; **HT** 10 [0].

Advantages: Empathy [15]; High Technology +1 (Bio-technologies and Genetics only, -10%) [18]; Legal Enforcement Powers (international jurisdiction, not obligated to respect civil rights of others, able to kill with relative impunity) [15]; Patron (US Government, 12-) [60]; Strong Will +2 [8]; Wealth (Wealthy) [20]; Zeroed (only after 1986, -10%) [9].

Disadvantages: Duty (US Government, 15-) [-15]; Hemophilia [-30]; Megalomania [-10]; No Sense of Humor [-10]; Secret (faked death) [-10]; Sense of Duty (United States) [-10]; Stubbornness [-5].

The Book of Archetypes 2: Attack of the Archetypes (for All Flesh Must Be Eaten)

Published by [Eden Studios, Inc.](#)

Written by Evin Ager, Colin Chapman, Daniel R. Davis, Marla Davis, Judy Denton, Shari Hill, Thom Marrion, Sean Powers, Tom Redding & Derek A. Stoelting

Cover by Carlos Samuel Araya

Interior Illustrations by Travis Ingram

48-page 7½ by 9½-inch softcover; \$15

As the title suggests, *The Book of Archetypes 2: Attack of the Archetypes* is a sequel to [The Book of Archetypes](#) and is thus another supplement for Eden Studio's all-zombie RPG, [All Flesh Must Be Eaten](#). It is a second collection of characters that are ready to use, either by the players or as NPCs by the Zombie Master. Like the first volume, this is a slim little tome that brings together 30 new archetypes along with few new rules and items of equipment to go with them. The format is also the same: one archetype per page dominated by a solidly sized illustration that divides a character's statistics on the left and his personality on the right.

But *The Book of Archetypes 2* differs from its forebear in three important ways. First, it is fan-written, meaning that all of the archetypes were created to be played, rather than by the book. This might be a problem for some, but in a "cut to the chase, there's a zombie horde at the door," let's-get-playing-*now* sense, this really does not matter. Second, many of this book's archetypes were designed for use with *All Flesh Must Be Eaten's* three genre books -- [Enter the Zombie](#), [Pulp Zombies](#), and [Fistful o' Zombies](#). Third, this collection of archetypes is not as vile as the first, there being no sexual content or connotation present. The language is still strong in places, though.

Just over half of these archetypes fall into the generic category, not belonging to a specific setting. They include eight Norm types: the Club DJ, the Criminologist, the *Se7en*-inspired Homicide Detective, the Librarian, the Lost Child, the Sewer Dweller, and the all-too-British Stranded Aid Worker (complete with a cup of tea, cricket pads, and bat). The seven Survivor types are the overly efficient Administrative Assistant, the Aging Decker (who looks remarkably like the batrachian Frohicke of *The X-Files'* Lone Gunmen fame), the axe-wielding Thorazine-addicted Asylum Escapee, the Houdini-esque Escape Artist, the Mercenary, the *Aliens*-inspired Space Marine (complete with the adapted quote, "One question Sarge. Is this gonna be a real zombie encounter or is this another bug-hunt?"), and the Street Fighter. These are joined by five Inspired types -- the singing Camp Counselor who knows how to get the kids to handle the undead, the Miraculous Survivor accompanied by his invisible Spiritual Ally, the Reborn Druid Sage, the Reluctant Faith Healer, and the Voodoo Houngan.

The remaining archetypes are designed for the game's three genre books. They can be used as a ready-to-play cast, which is helped by built-in links between some of the characters. Thus for *Enter the Zombie* the book gives two playable Zombie types, the Disillusioned Martial Artist and the Old Crone; two Martial Artist types -- the Iron Head (who has an iron skull, not iron palms) and the Shaolin Soccer Mom (with the quote, "You cannot hope to stand against my Tiger Style Kung Fu . . . Timmy, stop hitting your sister!") -- and three Shooter types: the Chow-Yun-Fat-style Indentured Killer, the Olympic Marksman, and the Smuggler. Of these, the latter archetype and the Indentured

Killer have links to a crime boss in San Francisco, while two archetypes for *Pulp Zombies* have settled in Kokomo after a zombie manifestation in Chicago. These are the torch-singing Canary (Pulp Hero) and the Horn Player (Legendary Hero). The other *Pulp Zombie* archetypes are all of the Pulp Hero type, and are the Driver, the jetpack flying Aviatrix, and a second version of the Smuggler, this time of whisky rather than of people.

Yet a third version of the Smuggler archetype is given for *Fistful o' Zombies*, and, like the other seven, are all Survivor types. They include the Fastest Gun In The West, the Pinkerton, the Riverboat Captain, the Trail Boss, the Wild West Retired Sheriff, the Wild West Reverend, and the Wild West Zombie Rancher. Two of these, the Trail Boss and the Wild West Retired Sheriff, are clearly inspired by Clint Eastwood movies.

The very last archetype, the Young Apprentice, is best suited for *Enter the Zombie*, but like many of the archetypes given in this supplement could be used in other settings, or at least inspire the creation of characters for other settings. The Young Apprentice is also built using a character type new to *All Flesh Must Be Eaten*, but not to the UniSystem. Intended for the creation of sorcerer-type characters, the "Lesser Gifted" cast member type is adapted from the publisher's *WitchCraft RPG*, and is slightly more powerful than either of the Survivor or Inspired character types. "Lesser Gifted" is the main new addition to the game, the others including new Qualities and Drawbacks (such as Curious and Tireless), the Iron Head Chi technique, and three new Metaphysics: Spiritual Ally, Spirit Armor, and Invisibility. The new equipment includes brass knuckles, chain (though still *no whip!*), the katana, and the pulse rifle. Though the latter, much like the Lost Child's tricycle, is likely to find little use in most games.

If this supplement has bad point, it is not in the price, which *is* high for just a 48-page book. But then it is a 48-page book with a piece of art per archetype. Rather, that bad point is the inclusion of the Lost Child archetype, which few players are really going to want to play. Had it been given more points and perhaps the Spiritual Ally Metaphysic, then it might well have been more appealing. Otherwise, this collection is both a simple *and* a clever set of characters that is handily presented and quick to use. Simple because they can be used as is, clever because they are versatile enough to slip into, or adapt to the game's three genre supplements, or even find their way into Eden Studio's other UniSystem RPGs. Thus *The Book of Archetypes 2: Attack of the Archetypes* is as good as *The Book of Archetypes*, though with perhaps slightly less general usefulness, but lots of mix 'n' match.

--Matthew Pook

Pyramid Review

Carcassonne Limited Edition

Published by [Rio Grande Games](#)

Written by Klaus-Jürgen Wrede

Carcassonne: Full-color, 72 land tiles, 40 followers in five colors, scoring track, rules

The River: Full-color, 12 river tiles, rules

Inns & Cathedrals: Full-color, 18 land tiles, eight gray followers, six point tiles, six large followers

Traders & Builders: Full-color, 24 land tiles, 20 trade good tokens, 12 followers (pigs and builders) in six colors, cloth bag

Carcassonne: King & Scout

Written by Klaus-Jürgen Wrede

Illustrated by Doris Matthäus & Johann Rüttinger

Full-color, 12 land tiles, rules

Have you had enough of *Carcassonne* yet? The publishers sure hope not. They're still cranking them out, one game or supplement after another. The good news is, if you're a newcomer to the game, they have quite a deal for you. After releasing the initial game, the company went through a series of supplemental expansions, one of which was combined into the basic game when it was reissued. Further supplements since then have been combined into *Carcassonne Limited Edition*, a sort of Domesday version of the game.

The set, now in a gold box, contains the basic game and the expansion *The River*, both of which have been detailed in their own *Pyramid* [review](#). It also has the *Inns & Cathedrals* supplement (oddly it's called simply *The Expansion* in its page of rules), and *Traders & Builders*.

Inns & Cathedrals adds new land tiles, a set of gray "meeple" followers and counters for a sixth player, and six large-size followers, one for each player. The large meeples are used just as normal pawns: They gain points for a player and can be reused if their owner completes a structure. These oversized followers count double, however, when determining which players get the points for a set of contested tiles. New tiles are provided for tracking scores over 50.

The titular inns and cathedrals are two new structures pictured on some of the 18 new tiles. An "inn on the lake" always sits beside a road, and a thief who completes the road gets two points for each tile on that section. If that road is not closed off by the end of the game, however, he receives no points for that road (ordinarily a player would receive at least a nominal point award for even an incomplete road). The same is true of the cathedrals, which are placed inside cities. A knight completing such a city gets three points instead of two for the tiles and pennants, or nothing if he fails to finish the city. Since the players often received awards for incomplete structures in the original rules, this possibility for a zero score is an improvement that helps rectify that inequity.

The *Traders & Builders* supplement is a little more involved, and adds a good deal more to think about during play.

For trading, several tiles have been added to the mix showing city sections with a trade good -- wine, grain, or cloth. Players build and complete cities as usual, but if they complete one with a trade-good symbol, they get a matching trade-good counter. Whoever has a majority of counters at the end of the game scores an extra 10 points for each of the three commodities he controls.

The builder is another new follower, something like a chess pawn in silhouette, and each player receives one. It may only be placed on a road or city where the player has already placed a regular follower. If you extend that road or city with the tile you draw, you get to draw and play a second tile, and you may place new followers on it as usual. Finally, each player has a pig, for use with farmers. Although they do not count as another follower for purposes of determining ownership of a field, the pig will give a successful farmer an additional point per city the fields serve.

Traders & Builders provides a cloth bag for the tiles. Aside from storage, the color scheme on the backs of the many supplements and print runs may fail to match up closely enough in some sets. The bag can be used to draw tiles at random.

Although these additions drain *Carcassonne* of some of its original simplicity, the combined sets remain a fairly easy exercise. There's more to track, but greater opportunity to take charge of one's own game. There are multiple avenues to pursue, and if players decide they dislike certain elements they can easily subtract some while keeping others.

Since its release, *Carcassonne: Limited Edition* (and its sister game *Carcassonne: Hunters & Gatherers*) has been updated with a crossover supplement, *Carcassonne: King & Scout*. This 12-piece set offers five new tiles for *Hunters & Gatherers* and seven for the original game (yes, if you only own one of the two games, half this supplement will not be of any use).

Most of the tiles for *Carcassonne* are just added landscape tiles. The one that stands out is a city crossroads -- two cities on one tile, each crossing awkwardly over the other like a bridge over a river. The more substantial tiles are the king and the robber baron. Whoever completes the first city gets the king. From that point, whoever finishes a bigger city takes the king from that player. So long as bigger cities are built, this trade continues to game's end. At that point, the player in possession of the king gets one point for every completed city on the board, regardless of who built it. The robber baron functions in identical fashion, but his purview is completed roads. While they add another strategic consideration, the biggest contribution of these two tiles is to add a real sense of urgency to an already-competitive environment.

For *Hunters & Gatherers*, all the new tiles are meaty. They are doled out evenly to the players before play begins. The shaman allows the owning player to pull one follower per turn from the location where it was played -- whether that feature is completed or not -- and use it somewhere else. The other tiles must be played onto the board instead of one's normal tile play for the turn, and a tribe member must be placed on it, to remain on that feature permanently. The scout lets you discard your first tile draw in favor of a second draw. The hunter on the bridge can count toward the number of followers in a field on both sides of a river. The owner of the dug-out receives a bonus from the biggest lake in his river system every time a new segment of it is completed, regardless of who played the tile. Finally, agriculture scores one point per tile in its field. This last item is the only questionable inclusion, as it is easy for a field to quickly grow out of control, and hemming it in to limit that player's score can be a game-long endeavor.

The *Carcassonne* series entire remains one of the best values in gaming. Now, with all the original sets combined into one at a substantial savings (about \$13), and the new *King & Scout* set for both versions, the experience stays fresh with digestible, incremental improvements at bargain prices.

--Andy Vetromile

Pulpy Goodness

Feats to Emulate Over-The-Top Pulp Action and Adventure in the *d20 System*

by Owen K.C. Stephens

Pulp games tend to have less grasp on reality, and focus more on extreme adventure, larger than life heroes and villains, and the pacing of the story. The things characters do in a pulp style adventure can be emulated by allowing skill checks with high penalties for difficult actions, but this isn't particularly satisfying. The problem is that penalizing skill checks for difficult but in-genre actions doesn't make those actions a good idea -- far better to avoid the tightrope when sword fighting if your Balance check is at -5. A GM who wants to encourage pulpy attitudes needs to do something to reward them, or at least make them a reasonable choice for the player.

Pulp feats are designed to accomplish this. By making characters take feats to accomplish pulp style actions a GM can allow them to avoid the penalties that might reasonably be applied without giving everyone carte blanche to do anything. Players must design characters to fill a particular pulp niche, and take feats appropriate for that role. If a GM really wants to encourage pulp genre, players can be given one or two bonus feats which may only be used for pulp feats.

Pulp feats may seem unbalancingly powerful. They aren't, but only because everyone has access to them. A group where no-one dies because everyone has a Hat is balanced, if a bit odd. A GM may decide not to allow normal NPCs access to these feats, in which case PCs and noteworthy NPCs do gain a power boost, which is appropriate to the pulp era.

These feats should never be allowed in a non-pulp setting.

CINEMATIC DODGE [Pulp]

You can jump about so erratically it becomes very difficult to hit you.

Prerequisites: Dex 15+

Benefit: You may decide at the beginning of any round to start using Cinematic Dodge. Each round you use this feat, you must change your circumstances. For example, a character using cinematic Dodge might block foes' attack with a chair one round, jump onto a table a second round, duck behind some barrels on a third round, and defend himself with a beer stein on a fourth round. If a character fails to change his circumstances, he loses Cinematic Dodge for the rest of that encounter.

While using Cinematic Dodge, all attacks made against the character have a 50% miss chance, and all attacks that hit do only half damage. A character using Cinematic Dodge automatically fails any Concentration check. Additionally, any natural roll of 1 or 2 on any 2d20 check ends the character's move for the round, and fails.

Special: A character may only have one Cinematic feat.

CINEMATIC KNOWLEDGE [Pulp]

You are a walking encyclopedia.

Prerequisites: Int 15+, Max ranks in at least two Knowledge skills.

Benefit: Your internal store of information is vast. Whenever buying a rank in a Knowledge skill, you may choose one topic covered by that skill in which you are specialized. For example, a character with 5 ranks in Knowledge (nobility and royalty) could have 5 specializations -- Royalty of England, Nobility of England, Inheritance Laws, French Heraldry, and The Graystoke Family Tree.

Whenever making a knowledge check in an area of specialty, you roll twice and take the better of the two results.

Special: A character may only have one Cinematic feat.

CINEMATIC MOVEMENT [Pulp]

You can push yourself into a frenzy of activity, allowing you to accomplish amazing feats of acrobatics, but also putting yourself at risk of a catastrophic mobility malfunction.

Prerequisites: Dex 15+

Benefit: You may, at the beginning of any round, opt to begin moving cinematically. This means you suffer no numerical penalties to movement-based skill checks. This means that no matter what difficult circumstances you place yourself under, you do not take penalties to Balance, Climb, Jump, Move Silently, Ride, Swim or Tumble checks. This does not lower set DCS (a Jump check for distance is still increased), but you take no penalties for circumstances (carrying someone), spells (being slowed), or conditions (even if shaken).

A character may still be limited in ways having nothing to do with penalties. A character that is held cannot move at all, and no reduction of penalties changes that. Also a GM need not allow a maneuver he wouldn't allow at all under normal circumstances. (Something a GM would allow at a -10 penalty, such as Tumbling while carrying someone, may be performed without the penalty. Something the GM just wouldn't allow, such as Tumbling across a high-wire while heavily encumbered and hog-tied, carrying a glass of water, is still impossible).

When moving cinematically, and move-based skill check that results in a natural 1 or 2 on the d20 roll is a catastrophic failure. The character stops, loses the rest of his move, and is considered flat-footed until his next move.

Special: A character may only have one Cinematic feat.

CINEMATIC PERSUASION [Pulp]

Your ability to talk circles around people is next to magical.

Prerequisites: Cha 15+, Bluff as a class skill, max ranks of Bluff.

Benefit: Your gift of gab is extraordinary. You may make Diplomacy and Bluff checks in a single round. If you wish, you may make these checks cinematically, in which case your bonus is only your Cha modifier, and your foe's opposed check is based solely on his Wis modifier. However, you automatically fail on a natural roll of 4 or less, and even if you succeed the resulting change in attitude lasts only 1d6 rounds.

Special: A character may only have one Cinematic feat. A character who fails to buy maximum ranks of Bluff at each level cannot use Cinematic Persuasion until he has bought the skill back to maximum ranks.

DEDUCE! [Pulp]

You can jump to conclusions others don't see.

Prerequisites: Wis 15+, max ranks in Sense Motive.

Benefit: You can make deductions about a person, place, thing, or event. You may do this once per game session without cost (see below for using it more often). To do this, you may play a game of 20 Questions with the GM. (You may ask a series of questions which can be answered yes/no. The GM must truthfully answer always, never, sometimes, or don't know.)

You may use this feat more than once per session, but doing so costs 100 exp per additional use.

Special: A character who fails to buy maximum ranks of Sense Motive at each level cannot use Deduce! until he has bought the skill back to maximum ranks.

DON'T BE DEAD, DUDE [Pulp]

Prerequisites: Cha 15+

Benefit: You have such great faith that you can prevent someone from being dead, as long as you make the effort quickly. A character who is killed no more than 1 minute ago, and suffering no more than double his total number of hit points, can be brought back in this way. It requires 10 full rounds (starting within the 1 minute time limit) to revive the character, or three rounds if you make a DC 15 Treat Injury check and yell "Don't you give up on me!"

Characters killed other than through hit-point loss can be revived up to an hour after death, as long as their corpse was never closely examined beforehand.

You may only use this feat once in each lunar month, and only on characters with no more than double your levels or hit dice. Additionally, using it invokes an experience debt for you. The experience point debt is 1,000× the current level of the creature you revive. This debt is recorded separately on your character sheet. From now on, whenever you gain experience half of it goes to your exp total, and half goes to pay off your debt. Once your debt reaches 0, you accumulate exp normally. You cannot use this feat if you have an experience debt greater than your exp total.

HAT [Pulp]

You have a heroic hat. It may be battered, ornate, common, or extraordinary, but it definitely looks good on you.

Prerequisites: Character must have a head.

Benefit: Your hat is never taken from you under normal circumstances. You may be captured and strip searched, picked up by a tornado, run through a hail of bullets or ride a runaway tank off the edge of a cliff, but unless some other feat specifically says you lose your hat, it stays with you.

You may opt to take off your hat of your own free will, but you get it back as soon as you need it. As long as you have your hat, you feel more confident, giving you a +1 morale bonus to all Cha-based skills.

Normal: Most people's hats aren't this ubiquitous.

Special: With your GM's permission, your hat can actually be some other piece of personal apparel. Eyeglasses, lucky flasks, pocket-watches and gloves are all common "hats."

SIDEKICK [Pulp]

You're not the main hero.

Benefit: You can't die. No matter how bad things looked for you, the GM must come up with some way for you to have survived. The GM may decide to spare you immediately (you grab the edge of the cliff), in which case you may continue play normally, or he may spare you after a delay (you landed in the river, and are dragged out by a friendly

bear that mistakes you for her cub), in which case it may be a few scenes before you return to the group.

Your level cannot be higher than 2 levels below the lowest level PC. You gain exp normally, but can't level up if the lowest level PC isn't at least 3 levels above you. You are never mistaken for the hero. You are never the focus of attention some other PC isn't also receiving. The princess doesn't fall in love with you unless her older sister is in love with another PC, you aren't knighted unless everyone is knighted.

Special: You may abandon this feat at any time, though you can't replace the lost feat slot, and you can't ever take it again.

SPARE HAT [Pulp]

You have another hat, in case your first hat is lost.

Prerequisites: Hat.

Benefit: Even if a feat causes you to lose your hat, you keep it. This works just once, however, After that, you lose the Spare Hat feat, and do not gain a new feat to replace it.

Normal: Most people who lose their Hat feat must pay an exp debt to get it back.

SPIRIT OF J. CHAN [Pulp]

You're more Cinematic than most characters.

Benefit: You may take multiple Cinematic feats. You still can't use more than one at a time.

Normal: Most characters are limited to one Cinematic feat.

TIP YOUR HAT TO DEATH [Pulp]

Prerequisites: Hat.

Benefit: Any time an event results in your character's death, you may decide to survive. If you are in an environment that's immediately fatal, you also get moved to the nearest safe location.

However, surviving in this way causes you to lose your hat, and The Hat feat, unless you happen to have Spare Hat, or are willing to buy a new hat with an experience debt. The experience point debt of getting a new hat is 500× your current level. This debt is recorded separately on your character sheet. From now on, whenever you gain experience, half of it goes to your exp total, and half goes to pay off your debt. Once your debt reaches 0, you accumulate exp normally.

Normal: Without this feat, someone with the Hat feat just leaves a good-looking corpse.

TOO P-O'D TO WEAR A HAT [Pulp]

Prerequisites: Hat.

Benefit: You may decide you are too angry to wear a hat, ripping it off and casting it aside. This causes you to lose the Hat feat unless you have a Spare hat or take an experience point debt (see TIP YOUR HAT TO DEATH for rules on buying a new hat with experience points).

Because of your great anger, so great as to sever the hero/hat bond, you gain a +3 morale bonus to all actions taken in the encounter you cast off your hat. If you do it outside an encounter, you gain the bonus for the next 10 minutes per level or until an encounter met in that time ends, whichever comes first.

UBIQUITOUS LUGGAGE [Pulp]

There is some luggage that stays with you. No matter where you go, no matter what you do, it finds you.

Benefit: There is some luggage that always finds you within three days of you losing it. The total luggage volume cannot exceed one square foot per character level. No matter what seems to happen to your luggage, three days after you lose sight of it, it finds its way to you. It may float to your deserted island, be found untouched in a burned mansion, or be returned to you as a gesture to the Red Cross when you're in prison.

Everything in the luggage that isn't a living creature arrives relatively unscathed. However, nothing prevents people from watching you go through your luggage right after returning it to you, or stealing things from it when you know where it is. Also, your luggage may end up looking fairly disreputable, though it's never seriously damaged.

Normal: Most people can't even take an airplane trip without risking lost luggage.

WHIP MASTER [Pulp]

You can do things with a whip other's can't.

Prerequisites: Proficiency with whip.

Benefit: You threaten the area you can strike into with a whip (allowing you to make whip-based attacks of opportunity, including trip attacks). You act as though you had the Improved Disarm and Improved Trip feats when using a whip, and can make grapple checks with your whip to pin a target.

Additionally, you may use your whip like a 1-fingered hand if you make a successful attack. For example, if you hit the AC of a control panel, door knob, or candle, you can treat that object as though you were standing next to it and hand a hand with just one finger (flip a switch on the panel, open the door, snuff out or pick up the candle).

Normal: Whips don't threaten the area around them in the most current *d20 System* rules. The other stuff you can't do with a whip under any *d20 System* rules.

GURPS In Retrospect

By Steve Jackson

The launch of *GURPS Fourth Edition* will be yet another milestone in a path that has stretched now for nearly 20 years. Since the release of *Man to Man* in 1986, we've published around 200 *GURPS* titles, and there are more than a million copies in print. And that's just in English; the game has been translated into Japanese, French, Spanish, German, Italian, Korean, and Portuguese.

Our path will take some interesting turns before long. The online version of *GURPS* is coming along; that will open up the system to a lot of people who have never seen it before, and make it possible for old groups, split up by time, to resume their adventuring. But how did we get where we are today?

It started before there was such a thing as Steve Jackson Games. My first RPG system was *The Fantasy Trip*, published by Metagaming starting in 1977. It had its strong and its weak points, but I liked it. (And some people are still playing it today.) But all things come to an end. My relationship with Metagaming ended, and a year or so after that, so did Metagaming itself. For quite a while I harbored hopes of buying the rights to publish it myself . . . but that proved not to be.

Now, the original impetus behind *TFT* was, quite frankly, to create a playable combat system for *Dungeons & Dragons*. That combat system was *Melee*, and followed by the magic version, *Wizard*. At the time those minigames were created, there was no thought of building them into a complete roleplaying game . . . they covered character creation and combat, and that was it. The decision to write a whole roleplaying system around them was Metagaming's. Not, I hasten to add, that any arm-twisting was required to get me to work on it. To the contrary; it was the biggest, neatest project I'd ever had, and the more we used *Melee/Wizard* combat to resolve *D&D* battles, the more the shortcomings of the rest of the 1970s-vintage *D&D* rules grated on me.

Thus, *The Fantasy Trip*. And it had its day in the sun . . . but sometime in late 1982, I had to admit that there would never be a new edition . . . at least, not from me. Time to move on. So I started thinking about what the next evolutionary step might be. The goal of *TFT* had been well met. It was now possible to play out positional, tactical combat in a RPG. But I had a new goal. I wanted to create a system that would work for any background, any genre. A universal system.

TFT had been solidly based in fantasy. But it might have grown into a universal system (Metagaming had actually started to move in that direction, and while I was trying to buy the game back, I made many, many pages of notes on how that might be done. Alas, lost now . . . I looked for them a few years ago and could not find them.) But that was no longer an option.

Getting Started

Obviously, the new game would have to be significantly different from *TFT*, both for legal safety and because I didn't want to repeat myself. But there were a few points about *TFT* where I felt I'd gotten things just exactly right; I didn't want to change those for the sake of change.

- The game used only 6-siders, and in moderate numbers. No polyhedra, no huge munchkiny handfuls of dice.
- Character creation was point-based. As far as I know, *Melee* was the first RPG(esque) game to do that. By the early 1980s, of course, it was a standard.
- The game was skill-based, without classes or levels.
- At the same time, there were some significant issues with *TFT* . . . issues that I wanted to address, and that in the addressing would let me differentiate the new game from the old one.
- *TFT* skills were "Boolean" . . . you either had them or you didn't. If you didn't have Broadsword skill, a broadsword was just a piece of metal in your hand. I wanted to represent the real-world fact that you can *try*

almost anything, even if you haven't studied it, and that some skills will help you learn others. This, of course, became the **GURPS** default system.

- **TFT** lacked any way to represent "special abilities" . . . what we now know as advantages and disadvantages. (Incidentally, the **Hero System** was the first published game that I know of to extend point-based character creation to cover advantages and disadvantages. But that's not where I got the idea. Forrest Johnson had already written a *Space Gamer* article laying out the basic concept and giving advantages and disadvantages for **Melee/Wizard** characters. I bet he'd be delighted if he knew how many games had followed the trail he blazed.)
- The lists of skills and spells, which had seemed so long when I created **TFT**, proved not so long in practice. When campaigns ran for a year or more, experienced characters began to collect almost every ability they were eligible for . . . which meant that highly developed characters grew more similar rather than more distinct! Obviously, we needed more potential for character differentiation.

So I got started. There was a great deal of writing, and a great deal of rules tweaking, and eventually playtesting and more tweaking. Somewhere in there it became obvious that the combat system could be released first, as a game of its own. That's what happened. **Man to Man** was introduced at GenCon in 1985. And the gamers . . . both **TFT** fans, and those who had never seen **TFT** . . . liked it and wanted to know when the whole thing would be out. I was relieved, to say the least! The first supplement, **Orcslayer**, shipped before the end of the year. This was set in the fantasy world of Yrth, and introduced some characters that you'll meet again when **GURPS Banestorm**, the new Yrth worldbook, appears in 2005.

Onward to **GURPS**!

So **GURPS** became, not just the top priority, but very nearly the only priority for 1986. We started *Roleplayer*, a free newsletter for **GURPS** fans. SJ Games shipped only a single product in the first half of 1986 (**Dueltrack**, a **Car Wars** supplement). But that kept the doors open while we worked to finish the **Basic Set** and get it to the printers. I can clearly remember our "death march" to meet the final deadlines. We've had crunches since then, but never have so many people worked so long and hard . . . doing layout and pasteup until we couldn't see clearly, grabbing a nap under the layout table, and waking up to do it again.

And then came Origins and the release of the **GURPS Basic Set**. It was a boxed package, as was customary for RPGs in those days. It included the obligatory three books: Characters, Adventuring, and a pair of introductory adventures. And lo and behold, the gamers said it was good! And **Man to Man** was an Origins Award nominee at that same convention. By the end of the year, we'd shipped two worldbooks: **GURPS Fantasy** and **GURPS Autoduel**.
