And the system grew. When **GURPS** was first released, people told me I was thinking too big. "How can it be a universal system when you don't have any worldbooks yet?" By the end of the year it was ". . . when you've only got two worldbooks?" . . . Soon it was ". . . only five worldbooks?" Then ". . . only 10 worldbooks?" But somewhere along there, people saw that yes, indeed, there was a lot of support, and that it was an ongoing thing. Now it's "But the system has 200 books! How can I buy all those?" The answer has always been "You don't *need* anything but the **Basic Set**. Buy the supplements that interest you."

The first edition sold out quickly, and the **Basic Set** reprint in 1987 was designated the Second Edition. There were a number of rules tweaks, but nothing earth-shaking, and a small change in presentation. The books in the box had heavier covers, printed in blue instead of just black-and-white.

The system went into a Third Edition in 1988. Times and styles had changed; instead of three books in a box, this was one single stand-alone book. At 256 pages, plus the 16-page "Instant Characters" booklet, it incorporated everything that had been in the boxed set. The new edition also benefited greatly from the work of system developer David Ladyman, who created the Speed/Range Table, a concept we are still using. This was also the point at which Will rolls were added to the system.

Other than that, the biggest change from Second Edition was the incorporation into the **Basic Set** of important new material from several worldbooks, creating new sections on Magic, Psionics, and Modern and Futuristic Weapons, and adding material in other places. The Third Edition of the **Basic Set** went through *eight* printings. The total number of

copies in print of that edition alone approached 100,000!

Then in 1994, we shipped the "Third Edition Revised." There weren't any big rule changes here . . . it was a question of presentation. A great many important advantages, disadvantages, and skills had been added to the system since the release of the Third Edition. So we dropped the "Caravan to Ein Arris" adventure from the *Basic Set* (but it will be available again soon as a freebie from [e23](#)) and used the resulting 18 pages for all the most important new character information, plus a couple of useful tables.

In 1995, I did something very important for the line . . . I stepped aside from its day-to-day development. Sean "Dr. Kromm" Punch had been serving as a volunteer Q&A coordinator. We contracted him as full-time *GURPS* Line Editor. Note those very important words "full-time." Where before I had been able to give only a fraction of my attention to the continuing development of the system, now Kromm was able to think about it all the time. He continues to serve in that position, and now knows the game, I dare say, much better than I do. The top-to-bottom system revision that created the Fourth Edition would not have been possible without Kromm.

Kromm's first big job was to compile *all* the new advantages, disadvantages, and skills, from important to trivial, in *GURPS Compendium I* . . . just so nobody would feel they *had* to buy a new *Basic Set* just to get 18 new pages! The companion volume, *GURPS Compendium II*, likewise pulled together a great many rules options and expansions and added more. Both these were released in 1996.

In July 1998, we released the first edition of *GURPS Lite*, compiled by Kromm. This is a complete, playable set of RPG rules . . . the essence of *GURPS* in 32 pages. Although it's a free product, designed mostly for use by GMs in introducing new players to the system, it was also a significant step in system development. It proved once and for all that the *GURPS* system could be boiled down to a relatively small set of core rules . . . and *GURPS Lite* is proving very useful as we work with Worlds Apart to make *GURPS Online* happen.

GURPS Lite was also at the core of the last major evolution of *GURPS* before this new edition. That, of course, is the "Powered by *GURPS*" meta-line . . . books that include both background material and the Lite rules, so they can stand alone as fully playable RPGs. This started with the 1998 release of *GURPS Discworld*, which simply included the *Lite* rules as a supplement. Later "Powered by *GURPS*" releases have taken the *Lite* rules and incorporated them into the text, for greater ease of use. This approach has proven especially worthwhile with licensed products like the *Hellboy Sourcebook and Roleplaying Game*, which reach fans who have never played *GURPS* before.

Which brings us up to 2004, and the Fourth Edition. You've probably seen the pattern already. The development of *GURPS* has been a process of defining a core system, expanding it, then retooling the core system to more efficiently incorporate the expansions. Fourth Edition is the latest turn of the wheel, with the most sweeping set of changes yet . . . but at its heart, it's still *GURPS*. And that was the goal.

Designer's Notes: Transhuman Space: Toxic Memes

by Jamais Cascio

I leapt at the chance to do *Transhuman Space: Toxic Memes* as my follow-on to *Transhuman Space: Broken Dreams*, as I was looking forward to a chance to move away from the struggles of global powers and look more closely at how people would live in the world of 2100. As a professional futurist, it's more satisfying to explore how people live in a changed world than simply to enumerate the various new technological wonders they use. One of the most attractive elements of the *Transhuman Space* setting for me is the degree to which it embraces the massive social changes which would result from the political, economic, and technological shifts it posits for the next hundred or so years.

I had three concurrent goals in putting together *Toxic Memes*. The first was to show the various ways in which the year 2100 was a bizarre and, in many ways, utterly alien place when compared to the world of today. Radical extension of the human lifespan, the emergence of multiple species of humanity, augmented reality, and the like -- these all shift the way we think about the world around us, from the beliefs we espouse to the conspiracies we fear and the fashions we wear. I was fortunate to have numerous creative contributions from a variety of *Transhuman Space* players; about a third of the entries in *Toxic Memes* are based on contributions.

The second goal for *Toxic Memes* was to explore the development of advanced memetic science, with its ability to shape how people think and believe, in an information- and communication-saturated world. The result is something of an arms race between meme-crafters (using sophisticated AI tools to construct the precise phrasing of a message in order to alter opinion) and ordinary citizens and consumers (relying increasingly upon shared networks to filter out harmful memes and highlight appropriate ones); it's a battle between virulent memes and aggressive memetic immune systems. Some of the ideas I put into *Toxic Memes* depicting how the people of 2100 use their communication and information networks have seeds in the present; this is one of the many parts of the *Transhuman Space* future we may see well before the end of the century.

The third *Toxic Memes* goal was to build game mechanisms for crafting and deploying memes which would both reflect the sophistication of the Transhuman Space setting and feel usable (even recognizable) to GMs and players living in the present-day. In this, I based the final chapter on Memetic Engineering on Jon Zeigler's "[Designer Notes for Transhuman Space: Fifth Wave](#)," in which he laid out a draft memetics game mechanism. I should hasten to add that the system as presented in *Toxic Memes* diverges considerably from Jon's approach, and that any defects should be blamed on me, not him.

The memetic engineering guidelines received a great deal of attention during playtesting, and one variant emerged in the course of the discussion which I really liked, but didn't have an opportunity to add to the final text. This was the notion of "building-block memes," or "memetic modules." These are the easy-captured, one-sentence seeds of ideas which can be used to build up more complex memes, especially when used as part of a political or commercial campaign.

(Most of these modules will be recognizable from present-day advertising, politics, and religion. This isn't surprising, as these three realms are the most advanced "memetic alchemists" of our era.)

Memetic Modules

The following list includes some of the more popular plug-in modules for memetic engineering applications such as *Meme Engine* and *ParadigmMaker 2.1* (see p. TS119). These are the commonplace templates upon which memetic campaigns are often built. The modules are incomplete -- the memeticist must fill in relevant information about the target population and campaign goals. Most template-based campaigns combine two or more modules to build up more complex and powerful memes.

- **Alpha:** Might makes right.
- **Authority Is Accuracy:** Memes presented by persons with political/scientific/religious/etc. authority are automatically more valid than those presented by "regular people."
- **Beautiful Plumage:** Like attracts Like.
- **Beginner's Luck:** Unskilled first attempts are always more successful than later unskilled ones.
- **Can't Get No:** Achievement of a goal renders the goal valueless.
- **Conformity Cuddle:** If someone is like you, they are good.
- **Cooties:** Touch can contaminate, reducing prestige, attractiveness, value, self-confidence.
- **Dialectic for Murder:** Every thesis offered always has an antithesis which is an equally valid proposition.
- **Eat Your Veggies:** If it's unpleasant, it must be good for you.
- **Emotional Magnetism:** Opposites attract.
- **Everybody's Doing It:** Popular acceptance indicates objective value.
- **Fame is Value:** A variant of the "Everybody's Doing It" meme, this meme indicates that if a person is famous for one reason or another, they must be qualified to speak on a wide range of topics intelligently.
- **Fandom Menace:** If you like something more than the popular level of acceptance, you are weird and different.
- **Fools, I'll Show Them All:** If someone is oppressed/injured, future revenge is valid.
- **Forbidden Fruit:** If something's forbidden, it must be good/fun.
- **Gods Among Men:** Unusual and sought-after personal characteristics (beauty, intelligence, athleticism) are objective demonstrations of superior value as a person.
- **Knowledge is Power:** A belief that information is, in and of itself, useful, even out of context, and that this information is the property of society as a whole, and thus must be made available.
- **Like a Sex Machine:** Product Makes You Sexy.
- **Machiavelli's Koan:** The ends justify the means.
- **Made of Titanium:** Product contains a material or ingredient that makes it inherently, indefinably, better, even if an unbiased analysis would show that the material makes no performance difference.
- **New & Improved:** Product, service, or idea is better because it's newer, even if it doesn't vary significantly from earlier version.
- **Nobody's a Loser:** The pursuit is more important than the achievement.
- **Nostalgia Traditions:** Old is more valuable than new.
- **Objective Solipism:** My opinions on a topic are objective fact.
- **Opiate:** If it's popular, it sucks.
- **Organic Noble Savage:** Primitive/unrefined is better than civilized/refined.
- **Owned By Cats:** Tied to a humor response, victim pretends to be the servitor of his or her pets. This is a gateway meme for advertising; presence of meme shows target's willingness or predilection to act in a subservient role to another entity or object.
- **Pariah Punishment:** If someone is different, it's fun and right to punish them and ostracize them further.
- **Popular Pariah:** Do X/Use X/Believe X, or everyone will shun you.
- **Product Makes You Smarter:** Use of this product/embracing this idea demonstrates that you are objectively smarter than others.
- **This Time, For Sure:** The idea that repetition will leads to greater chance of substantial success (which may not be borne out statistically).
- **Vanguard of the Revolution:** If nobody knows about it yet, it must be good.
- **Victim Validation:** If someone is oppressed or injured, they are better than their oppressor/attacker.

The Candidate's press manager burst into the Message Control Center, barking at the hired-gun memehackers. "He's gone off the range again, talking about raising taxes. We need talking points now!" The memeticists hadn't yet become accustomed to this sort of retroactive policymaking, and jumped immediately into action. They didn't like using templates, but they needed something fast.

"Let's start with Eat Your Veggies spun with Authority is Accuracy," the first proposed.

"Can't do A is A, that template hasn't been revved to match the last Meme Engine pitch/pattern vocal tracks. The mix results in doubled conspiracy meme harmonics, and that undercuts us with the first-layer punditocracy," the second replied.

"So, let's see . . . New & Improved, instead?"

The second considered. "Yeah, that'll work. The results model tweaks up nicely, although we get a weird splinter meme here. 5% chance of spawning a temporary cult."

"Woah, look what happens when we throw in Like A Sex Machine! Big uptick in the hypergeezzer vote!"

"Works for me. Let's run the process and model and ship it upstairs."

** * **

(Special thanks to Chad Underkoffler for first proposing the "building block" meme idea and seeding the list; additional contributions come from Peter Dell'Orto, K. David Ladage, and me.)

Santa is Really Your Parents

Computational Data Point 01:

In the first issue of *Superman* after the comic and titular character were revamped, Superman makes an observation that his super-strength seems to be working, at least in part, by some kind of tactile telekinesis.

Computational Data Point 10:

Once for a *Fading Suns* game, I had a geeky scientist NPC whose cat hovered through the corridors of the spaceship in a lazy but controlled zero-g spiral; when the heroes investigated, they noted that a piece of what appeared to be buttered toast had been grafted via cybernetics to its back (butter-side up). The players (and characters) were pretty intrigued by this bit of throwaway development, but then I had that he had installed a grav suppressor into the cat, which would suppress the ship's artificial gravity at its whims; the toast was just a prop.

What do these two data points have to do with each other?

Simply put, I ended up explaining something that didn't need to be explained.

In the second case, I was referring to a joke that was ancient by the standards of the *Fading Suns* universe, and is merely very old in ours: Since toast always lands butter-side down and cats always land on their feet, then one way to generate antigravity is to attach a piece of toast, butter-side up, to a cat's back, and drop it. The players had known the joke out of game, and one of the characters even had an ability to explain it in game. And, indeed, the players were amused. But when I explained how it was done in-game, they seemed less interested . . . both during the explanation and with the cat itself afterwards.

In the first example, the creators were trying to come up with a logical justification for something that was scientifically impossible. After all, if a super-strong character ever *did*, say, grab hold of the underbelly of a jumbo jet and attempted to pick it up -- as is relatively common in the comics -- then the physical stresses would usually be enough to tear the plane apart. But if Superman has tactile telekinesis . . . well, then, he can do all types of interesting feats of strength, all the while secure that his telekinetic field would keep the integrity of the object intact.

The only problem is, people don't *want* an explanation as to why Superman picks up huge objects. They know why he does it . . . it's because he's Superman. The fans knew this, future creatives working on Superman know this, and so far approximately zero stories or references have been built on this earlier plot point.

In gaming, there are many elements that start out, for one reason or another, unexplained. Magic -- its source or origins -- is a popular one; so are many legends. (And one of the same creators who was responsible for the "Superman has tactile telekinesis" bit was also behind a storyline that explained that all superhero powers derived from a cosmic "godwave" that originated when a world blew up eons ago, sending its energies across the cosmos. This revelation has, thus far, been used in approximately zero stories since then.) Anyway, as an RPG campaign continues, the pressure to come up with new and interesting stories can lead the GM to struggle to find new topics. But any GM should think really hard before tapping any of those "unexplained" elements for plots.

Now, this is a different concept from a campaign built around revealing secrets, such as conspiracy or "explore the unknown" games. Much of the enjoyment for such games comes from the anticipation that knowledge will be revealed, and the GM shouldn't disappoint the audience. (Mind you, I've already written a [whole other column](#) about that topic.)

For those who might consider the possibility of revealing secrets that players are happy not knowing, I offer a few observations.

Don't answer any question people aren't asking. For example, were people really clamoring for an explanation as to

where the immortal head-chopping Highlanders came from? Not that I'm aware of . . . which made the revelation that they were some kind of spaceship-y alien whatzits all the more infuriating to most folks, and has caused that movie to be referenced in other *Highlander* stories in approximately zero times since then.

Likewise most fans weren't clamoring for a "real" explanation as to how Superman can pick up giant things; the majority of people just accepted and appreciated that fact, and those who are interested in that level of physical detail were more likely to be dealing in the implications of Superman's [intimacy and paternity](#).

Answers often make things less interesting, not more. Why did the Roman Empire fall? Lead pipes. Even though the theory is not without its problems, a goodly number of people still view the theory that Rome went crazy because of lead poisoning from its plumbing systems as the be-all and end-all of that question. So if you give something an easy answer, there's a chance it will reduce down the interest on that topic. ("What is magic? A type of charged particles harvested and channeled by those with elvish blood.") On the other hand, if you give something an overly complicated answer, you run the risk of people being dissatisfied that they know the answer *and* not understanding or fully caring.

Revealing secrets of the unknown is different from dealing with *repercussions* of those revelations. However, the two concepts are similar. If all psionicists in the world are revealed to be descendants of a precursor race, separate but compatible with humanity, the implications this would have on a world would be phenomenal: There would be research into the precursor race, calls for separate classifications, and perhaps legal and judgmental implications. ("I'm sorry, I can't marry you . . . you're not <sob> *human!*") Even something as relatively un-earthshaking as the discovery of fetal alcohol syndrome -- first diagnosed in 1968 and not widely accepted for years afterwards -- has had profound (if subtle) changes on global attitudes and actions in a remarkably short period; today, expectant and would-be mothers either know not to drink or are corrected if they try. What effect would a *greater* revelation have on the world? (For those of you perusing the archives, I also note that I've written about the [effects of revealing secrets](#).)

Finally, feel free to disregard all these rules if the story is good. *The Man Who Shot Liberty Valance* is built around the idea of the truth behind a legend being revealed, and it is by far the best movie teaming up John Wayne and James Stewart . . . at least, so far. And the classic computer game *Starflight* -- quite probably the best sci-fi computer game ever -- had as its climax [SPOILER ALERT!] the revelation that the strange crystals the universe had been using to power their ships were, in fact, sentient beings. [END SPOILER ALERT] So it's possible to reveal secrets about things people take for granted -- such as strange pseudoscience crystals that power ships -- if it tells a good story.

But be careful. For every brilliant story told by revealing a secret, there's a whole swarm of midichlorians lurking, ready to pounce. Just like how a joke isn't funny if you have to explain it, so too can secrets be ruined if they're explained. And pointing out that my Computational Data Points were in binary will probably dissatisfy everyone, regardless of whether they got the joke. After all, like the shirt says, "There are 10 kinds of people in this world: Those who understand binary, and those who don't."

--Steven Marsh

The Last Stone Age Adventure: The Hidden Valley of the Kulku

by David Morgan-Mar

The Kulku people have lived in the valley of the Kulku since the Mother Crocodile slithered through the mountains, her tail carving the valley, and her eggs giving birth to the first Kulku. Relations with the Pesik people in the next valley, a day's walk toward the rising sun, have been good in times of plenty, but this is not one of those times. The spirits of the forest have not been kind in recent years, the last crops have been poor, and game is becoming scarce.

As Kulku hunting parties roam further in search of food, there is potential for conflict with the Pesik. The hunters of the tribe must also be skillful negotiators, or warriors if the need arises. But that is nothing to what is about to happen. The world of the Kulku and Pesik is about to be turned upside down.

The Setting

This adventure takes place in the forests of New Guinea. The year in the outside world is some time in the 1930s, but in these remote reaches it may as well be the stone age. For that is the technology and society with which the inhabitants are familiar.

The valley of the Kulku is a highland valley nestled against the northern edge of the spine of mountains that run east-west along the island of New Guinea. It is some 50 miles from the north coast -- 50 miles of difficult, swampy terrain, sparsely inhabited by nomadic tribes who gather wild sago palm as a staple. The rivers that flow from the Kulku and Pesik valleys join into one before becoming lost in the swamp.

The Kulku tribe numbers around 1,000 individuals of various ages, spread across a dozen villages dotted along the valley. Living in a somewhat more fertile region, they practice a primitive style of agriculture, growing taro, yams, and bananas, and raise pigs for meat. The valley can only support a limited number of pigs, so hunting expeditions must occasionally seek additional protein to supplement the diet. Tree kangaroos and cassowaries are the largest game animals, and both are uncommon and elusive. In poor times, like now, the tribe is reduced to eating rats and frogs.

The Pesik tribe, inhabiting the next valley over, is similar. The two tribes speak slightly different languages, but they overlap enough that adding a few gestures will usually get the point across. It may be appropriate for a PC to understand the Pesik language fully, as the tribes sometimes swap children for marriages. The lowland swamp dwellers speak an entirely different tongue, not readily understood by either Kulku or Pesik.

Outside the immediate area of the villages, the terrain everywhere is formidable, reducing movement on foot to at best a few miles a day. The villages within a valley are linked by well-traveled paths that provide normal movement. There is no maintained path between the valleys.

The Hunt

The adventure begins with a small band of hunters, perhaps with some non-hunting members tagging along to gather

Setting the Scene

The GM should set the scene for the players, members of the Kulku tribe, without mentioning the neighboring Pesik in terms more specific than "there are other tribes within a few days' travel." These tribes should be described as potential rivals, but not outright enemies. Depending on GMing style and the likely reactions of the players, the GM may also want to leave out any references to New Guinea and the 1930s, and set up the adventure as a true stone age setting, leaving the developments to come as a surprise.

wild foods from the forest, setting out to find food for the tribe -- in other words, a group of PCs. Females participated in hunts in some New Guinea tribes, so it will not strain realism to allow PCs of either sex among the hunters; similarly, either could be gatherers.

They will typically be equipped with stone axes or stone-headed maces, and spears or simple bows. Spear and arrow tips are fire-hardened wood only, and should do less damage than typical medieval technology equivalents. Armor is unheard of; in fact, clothing is almost unheard of. The hunters own small wooden shields, but these are for war, not hunting, so will be left at home.

The direction they set out doesn't much matter (the Pesik can be fudged around to the west if necessary), except that south is out of the question as the mountains become impassable. Heading north into the swamp is also undesirable, as game is scarce and crocodiles common, although letting inexperienced heroes discover this for themselves might be entertaining.

After a few hours of walking through the jungle, the hunters spot a cassowary. These solitary birds are big and powerful, and must be tackled with care as they can disembowel a human with a single claw strike. Players used to more advanced weaponry should be given a fight to remember as they take on a dangerous wild animal with barely adequate technology. Remember that throwing spears or firing arrows in a dense forest is difficult, attracting vision and cover penalties, and a wounded cassowary will simply become enraged. If the heroes need further convincing that they are not lords of the forest, another bird can join the fight or attack any non-combatants.

The Confrontation

Just as the hunters are feeling pleased with themselves for having dispatched a fearful quarry and gained valuable food for the tribe, they are confronted by hunters from the neighboring Pesik tribe. If any of the heroes has superior senses or alertness, they may gain some advance warning of the Pesiks' approach, but there is little that can be done to avoid an encounter. (The Pesiks, for their part, heard the fight and came running to investigate.)

The Pesik hunters emerge from the forest, clearly upset, and indicate that the Kulkus are hunting on *their* territory and the cassowaries belong to *them*. This is an opportunity for some roleplaying as the two groups argue the finer points of territoriality in the trackless jungle, with only partially intercomprehensible languages. Remind the players that times are tough, meat is sorely needed back at the villages, and the Pesik are rivals, but not outright enemies.

The Pesik band should be evenly matched with the Kulkus if a fight breaks out, which may be a possibility depending on the negotiations. Character roleplayers may prefer diplomacy or bargaining, but the threat of hostility should hang over the meeting, and the Pesik will be prone to violence unless the Kulkus accede to their claims. Any fighting should not be fatal -- the Pesik will withdraw after suffering a few wounds.

If the heroes manage to negotiate their way out of a fight, they will likely be bringing home less food than they had hoped. This needs to be reported to the chief, Belim. Belim will look grave and say the hunters should not have let the Pesik get away with such demands, as the Kulku need the meat and are clearly more important. The village's wise man, Menteko, says it is folly to fight with the Pesik, and that cooperation might see both tribes collect more food for all. Belim dismisses his adviser with an angry grunt. The hunters may try to argue either side in this meeting to swing the chief or the wise man -- if they don't it becomes clear that there is a growing rift between them.

On the other hand, if the heroes fought with the Pesik, this enrages Belim, who swears the Pesik will pay for this outrage. Menteko urges calm and advises that a diplomatic mission to the Pesik would be a better option than a war party. Again, he is dismissed out of hand by Belim, and again the hunters might step in with words of persuasion for either side.

No matter how the return to the village plays out, Belim will ask for volunteers for a party to enter Pesik territory and confront their chief over the encounter in the forest. Naturally, eager young hunters such as the heroes would be ideal.

The Cargo

The next morning, as the expedition prepares to leave, everyone is frightened by a strange noise from the sky. A huge bird, bigger than anyone has ever seen before, flies noisily over the forest. It can only be glimpsed fleetingly through the canopy of leaves. As its throaty drone fades away, there is a muffled crashing noise from the north, as though several trees have all fallen over at once.

Within minutes a boy runs into the village from the north. He has run from the northernmost Kulku village, carrying news of something frightening in the forests on the edge of the swamp. He urges Belim, Menteko, and any hunters to come quickly. (If the hunters decide to react faster than this and race off to the north, they will meet the boy halfway between the villages. The boy will demand they go back for Belim and Menteko, as what he has seen is clearly evil magic. They can ignore his pleas and continue north, while he fetches Belim after them.)

If the heroes have done nothing to smooth over relations between Belim and Menteko, the wise man will refuse to leave the village. The boy says he is needed to deal with evil magic, but nothing he says will convince Menteko. Belim expresses the sentiment that they are better off without the old meddler, making it almost impossible for the heroes to convince him to come along now. On the other hand, if the heroes made any leeway in attempting to placate the two elders the previous day, Menteko will be keen to come and see what has happened. If the hunters think to, they can take their wooden shields with them.

The northern village is full of terrified Kulku, with a few brave hunters desperately awaiting reinforcements before investigating the forest to the north. Belim will order them to guard the village -- to their obvious relief -- while he leads his own party toward the swamp.

After three hours of walking, near the point where the Kulku and Pesik rivers join (and, significantly, between them), the tribesmen will see an otherworldly sight. Scattered all over the ground are big shiny . . . fruit? And bundles of things, tied with rope. Smashed bits of wood. And . . . *meat!* Rats and birds are already eating it and will need chasing away as soon as the tribesmen can overcome their fear.

This is a food drop intended for the Archbold Expedition, which struck inland from the coast some 12 days ago. To avoid having to carry all their supplies, they are having food dropped ahead of them by plane. The expedition of scientists, hunters, guides, and bearers will make their way to the drop site in a day or two.

But meanwhile, it is up to the Kulku what to do with it. The meat is dried and salted. The bundles contain packets of flour, sugar, salt, and tea leaves, as well as sacks of rice, dry beans, potatoes, and onions. There are some boxes of rifle ammunition. The shiny fruit are tin cans. There is no can opener (not that the Kulku would know what to do with it). Let the players have some fun experimenting with the supplies and trying to open the cans -- or trying to figure out they are something that *can* be opened. They variously contain fruit, vegetables, and dog-food-like chunks of stewed meat.

Belim is pragmatic and will recognize the value of the haul. He will order his people to carry it back to the villages. If Menteko is there, he will declare the find to contain bad magic and warn Belim to leave it alone. Belim will ignore him. It will be up to the heroes whose orders they follow.

Sharing the Cargo

Either way, a party of Pesik will arrive a couple of hours after the Kulku. The heroes will recognize some of the same men from the hunting party they bumped into the day before. Any fear they feel at the strange sight will quickly be overcome if the Kulku are already sampling and making off with the supplies.

One of the Pesik wise men, Kiyali (who was not with yesterday's hunting party), is leading the group; the Pesik chief currently has a bad limp and was not up to the walk, but they won't divulge this information. In broken language Kiyali will indicate that the area is Pesik land and the find belongs to the Pesik. Belim will take umbrage at this and

proclaim loudly that the land is neutral and the Kulku found the food first, so it is theirs. The Pesik tribesmen will look agitated and keep a firm grip on their weapons, while Kiyali approaches with hands up in a gesture of parley. Belim will remain hostile.

What happens next is up to the actions of the Kulku hunters. If they make any threatening or insulting moves, one of the Pesik hunters will lose his nerve and hurl a spear, prompting Belim to strike at Kiyali with his heavy stone club, and probably starting a battle. On the other hand, if the heroes make conciliatory gestures or encourage discussion and truce, they can get the leaders to sit down and try to reach some sort of agreement. If the hunters look like doing nothing and Menteko is present, he will quietly urge them to interfere peacefully before Belim and Kiyali come to blows. Having been spurned by his chief, Menteko does not want to interfere himself, but can see that some conciliation is needed to avoid a conflict. If the heroes do not do anything, Belim argues with Kiyali for a minute and then loses his temper and strikes him.

If battle occurs, it will be between evenly matched sides, with any injuries from the previous day's encounter on the Pesik side replaced by new hunters. It should be more vicious, as obviously more is at stake, and both sides will be urged on by their leaders. The only possible force for peace will be the heroes themselves, or Menteko if he is present. After a few rounds of fighting (hopefully before anyone is too badly injured), Menteko raises a commanding voice and brandishes his ceremonial staff. He warns that anyone continuing to fight will be cursed by the spirits of the mysterious food. Coming from a respected wise man, this is a credible threat, and all the NPCs will pay it heed. (If necessary, the GM should emphasize this to the players.) With the fighting stopped, there will be nothing for it but to bargain, but Belim will seethe with anger at Menteko.

If nothing else breaks up the fight, people may die before one side or other decides to withdraw. The Pesik will retreat quickly into the forest after two men are incapacitated -- any Kulku retreat will be largely up to the heroes. They may have to abandon Belim to his rage, or forcefully carry him away. Depending on who is injured or killed in this battle, the consequences could be far-reaching. Belim is stronger than Kiyali, so it is possible the Pesik wise man will fall, which would trigger all-out war between the tribes.

On the other hand, it is possible that the encounter can be resolved peacefully and some agreement reached on splitting the food. Belim will be stubborn, but Kiyali is ready to make a deal, pointing out that there is more food than the two parties can carry away, and animals will get to the rest before they can return. With a bit of encouragement from the heroes, Belim will grudgingly accept; without encouragement he will remain stubborn and the argument will drag on for hours.

If a sharing agreement can be reached, or the Kulku drive the Pesik away, the next step is carrying the food back to the villages. It will take 100 man-trips to carry it all away -- many more than the manpower available. Allow the hunters to arrange a procedure. They may wish to post guards while some of them return to the village for more help. Remember it takes three hours to walk to the nearest village when unencumbered, and there will be about seven hours before sunset. It is likely that overnight guards will need to be posted, if anyone thinks of it.

If the Kulku have retreated from battle, it is up to the heroes what to try next. Possibilities include sneaking back to the cargo after the Pesik carry some away, mounting an ambush, or even raiding the Pesik valley. Either option carries plenty of opportunity for action, and the GM should let the heroes gain something for any well-planned effort.

The Expedition

The Archbold Expedition is a British exploratory expedition, seeking to chart the region and contact any native tribes. They have no idea that the mountain valleys support distinct *agricultural* populations, especially after long contact with the nomadic gatherer tribes of the coastal areas. Financed by Lord Archbold, the group is led by Dr. Fredrick Owens, a competent anthropologist, though ill-prepared for the surprises of the New Guinean highlands. A dozen other Europeans accompany him, made up of two other anthropologists, a botanist, zoologist, artist, photographer, the inevitable daughter of one of the scientists, and five hunters. Rounding out the party are 40 natives, variously guides, interpreters, and bearers. The expedition so far has not gone well, with the terrain tougher than imagined, some of the Europeans falling ill, one of the previous supply drops lost, and a lack of game animals to supplement their diet. They

arrive in Kulku territory ragged, tired, hungry, and a little desperate.

The timing and location of the arrival of the expedition can be adjusted for dramatic effect. If there is plenty of conflict and action ensuing from the encounter at the cargo, this can be played out over the next two or three days of game time before bringing the expedition in. If things have been settled relatively peacefully and there is not much happening other than ferrying food back to the villages, let the expedition arrive sooner.

Either way, the first place the expedition will reach is the cargo drop. It is possible that by the time they arrive, the tribesmen will have cleaned it out and abandoned the site. Since they are now low on supplies, this will make the expedition even more eager to contact natives and obtain some food.

If the transfer of the cargo is proceeding slowly, or someone has been left at the site to look after it, the expedition may meet the Kulku there. The other option is to have them find an empty cargo drop, push on upriver into the valley, and stumble across the Kulku near the village.

When it occurs, the strangeness of the encounter to the Kulku cannot be overstated. The Europeans will appear as frightening pale spirits, but the presence of the native guides will go some way to quelling fear. The natives are, however, all from the lowland tribes, meaning none of them understand the Kulku language. This point will take some communication to get across to the Europeans, who initially assume the natives can understand one another.

This encounter -- which should occur with the heroes present -- is an opportunity for roleplaying with lots of gestures. The Europeans naturally assume the Kulku have their missing cargo and want to negotiate for its return, so they will try various mimes for exchanging goods and eating.

If the Kulku at any stage become aggressive, an expedition hunter will fire a rifle into the air, scattering birds and attracting the attention of the Pesik, who will hear it and assume it is another load of cargo. Naturally, this brings a party of them moving through the forest as fast as they can. If the Kulku persist in aggression, the Europeans will have no hesitation in shooting at them.

Dr. Owens is desperate for food supplies, and benignly but misguidedly believes that the natives are better off eating their own natural diet, so will initially insist that *all* the cargo be returned. He is not hard-hearted, however, and if the Kulku manage to convey that the tribe is facing starvation he will relent a little, but still needs to find food for his own expedition. Any news that the Pesik tribe have also made off with some of the supplies will make Owens want to establish contact with them too, for both anthropological and supply-procurement reasons.

Studying Each Other

Assuming no violence at the first encounter, the expedition will set up camp near a Kulku village. Belim will want to meet them as soon as possible, and Menteko will tag along. This will set the scene for more arguments, as Belim refuses to believe the cargo belongs to the Europeans, and wants the lowland tribesmen off Kulku land. Menteko at first points out that these demanding strangers have been brought here by the curse of the cargo.

For their part, the lowlanders are not happy about being in the territory of a highland valley tribe, and the heroes may witness some impassioned arguments between them and the European members of the expedition.

There are several events that could happen on the first day of contact. If any shots were fired, a party of Pesik may appear, precipitating either more parleying or hostilities, depending on how relations have gone so far. The presence of the expedition complicates matters, of course, and outright warfare between the tribes will be broken up by guns if necessary. If Kiyali is uninjured, he will try to establish relations with the Europeans, as he is quick to

Deposing Belim

At some point during the adventure, it should become painfully clear to the heroes that Belim is too paranoid and aggressive to serve as an effective leader for the Kulku. If they don't take the hints from his behavior, step up the arguments between Belim and Menteko, or have Belim round on and perhaps strike one of the hunters. Belim should be played as unstable and violent -

spot their equipment and believes they can bring more cargo.

Allow any actions by the heroes to follow through to logical conclusions. They may decide to plan a raid or attack on the expedition, try to communicate further, or may want to do something about the Pesik. If they have no particular course of action, Belim will call a meeting and proclaim that the strangers are obviously carrying valuable supplies, and must be up to no good if they are in league with lowlanders. He proposes a night mission to infiltrate their camp and steal supplies. Menteko opposes this, partly out of contrariness, but also because he now realizes the Europeans are just people, but that they have fantastic equipment and could help the Kulku if befriended.

The simmering tension over the tribal leadership will boil over at some point, as Belim and Menteko get into a heated argument. The hunters will have to take sides as Belim launches an attack on the wise man. If within earshot of the expedition, they will race over to break things up, with firearms if necessary. By now it may be clear to the heroes that Belim is an unwise leader in these circumstances and something should be done to depose him.

Another possible event is that Menteko can be encouraged to tend to the sick expedition members. They are suffering from malaria, for which Menteko can brew a foul herbal concoction to relieve the symptoms. This help can either be prompted by the heroes, or suggested by Menteko once his attitude to the white men improves.

Whatever happens during the day, the expedition's native bearers and guides will stealthily desert during the night. They will not be detected unless Kulku are posted all around the encampment, but even so there is little that can be done to prevent them running into the moonlit night and heading for the coast. This is a major problem for the expedition, since the Europeans are ill-equipped to carry the equipment and supplies they need.

The Journey

The obvious solution is for Owens to recruit Kulku tribesmen to act as guides and bearers to the coast. Depending on developments so far, there are several ways that such a deal can be arranged. The expedition has three things of value: firearms and other modern equipment; the ability to help the Kulku in their disagreement with the Pesik; and the ability to arrange more cargo drops once they return to civilization.

Owens will be very reluctant to help the Kulku attack the Pesik, but will be happy to act as a mediator. As long as the language barrier can be overcome, Owens is able to promise cargo drops for both tribes, as long as the expedition can get back to the coast. With his original guides and bearers gone, Owens will promise anything to secure the help he needs. He will not want to trade arms or equipment, but can promise delivery of the same at the coast.

The journey will take two weeks, much of it slogging through swampy terrain at a rate of only about four miles a day. Note that several NPC villagers will also be needed, along with the heroes. The expedition has left caches of supplies along the return route, but some of these will have been raided by the returning lowland tribesmen, so the travelers will have to survive on the unlooted caches and by hunting. Game is scarce, but good luck or wilderness skills will manage to rustle up a few birds that can be shot. The group should face an encounter with crocodiles at some point.

If peace has not been made with the Pesik, a war party from that tribe will follow them. They will keep out of sight at first, and are unlikely to be noticed unless anyone does rearguard scouting. As their supplies begin to run out a few days into the journey, however, they will risk raiding the expedition camp at night, attempting to steal food by stealth, taking out any sentries as necessary. If played right, this could be interpreted as mysterious losses to spirit forces by the Kulku until evidence of the Pesik is found.

- as much as it takes to get the heroes thinking they would be better off with another leader.

If the heroes hatch a plot to overthrow Belim, play it out logically. Such a coup will probably end in violence, but Belim will step down after a bit of fighting if it is obvious he no longer has the support of his hunters. Who becomes the new chief is up to the heroes. As a wise man, Menteko will not accept the position, but will quickly pledge his support for a new leader.

GMs with players who enjoy political roleplaying may spice things up with additional NPCs and factions.

Eventually, the expedition will reach the coast. The Kulku will be amazed to see more Europeans there, living amongst the lowlanders, and a small ship anchored in a natural harbor. Owens tries to explain that he can radio from the ship to arrange a plane to drop food supplies in the Kulku valley -- but it is doubtful how much of this he can get across. Something he does manage to communicate is that he would like a few of the Kulku to accompany him on the ship, to show them new wonders of the outside world. The NPC villagers can be sent home with news, but it is up to the heroes what adventures they have from here.

Aftermath

Whatever happens, the Kulku no longer live in the stone age. They will likely bring back guns, modern (for the 1930s) medicines, steel tools, and a much wider appreciation of the outside world. Cargo drops will be treated as almost mystical at first, but will help them through the current food shortage. Soon a permanent track will be blazed through the forest and swamp, and the Kulku will be in easy touch with the coastal settlement and Europeans.

The Europeans bring crops better suited to the mountain valley climate -- sweet potato will quickly supplant the taro and yams as a dietary staple -- and more types of livestock, enabling the Kulku to improve their diet tremendously. Missionaries will trek into the valleys and teach the Kulku about Christianity, driving their animistic beliefs to the background. And they will not tolerate hostilities between the Kulku and Pesik.

If the heroes choose to accompany Owens back to civilization, whole new adventures await. They can quickly learn to fire guns, but English will take longer. Owens may employ them to help on further expeditions in New Guinea, or even elsewhere in the world. Or they can stay at home and help their tribe adapt to European life, dealing with invasions of cliffhanging adventurers who want to explore their land for gold, take their people as slaves, or exploit them for works of art. Either way, adventures can segue into a pulp era campaign.

Variations

Similar encounters between stone age communities and more advanced explorers, settlers, or conquerors have occurred many times throughout history. The pre-contact part of the adventure can be played almost identically in the African, South American, or Central American jungles, changing only the plants and animals. Adapting the geography and climate makes it work in North America. Note that most jungle tribes were strictly hunter-gatherers, unlike the agricultural New Guineans.

Central or South American tribes can be contacted by Spanish Conquistadors. They won't have air-dropped supplies, but will probably be encountered with horses. The villages can be moved to a coast, and the initial contact can include the amazing sight of a full-rigged ship sailing into the bay. In reality, the Spanish quickly overwhelmed and conquered the much more numerous natives by force, but an alternative approach might see cooperation.

More remote tribes may be contacted a century or two later, with adventurous natives being thrust into the world of swashbucklers and pirates afterward. An expedition of slavers rather than explorers would be appropriate. Some tribes in the Amazon basin have remained uncontacted into the 20th century, and the adventure could be played as is there.

In Africa, the expedition might be Belgian or Dutch, and the era will be the 19th century. Played straight, this could lead into a Victorian horror campaign, with the forces of vodoun unleashed on the European world, and natives recruited to help fight it -- or natives might be taken slaves and use their spirit magic to fight for freedom. In this case, the air-dropped cargo will again be missing.

The cargo can be kept in, though, if Europe has developed steampunk technology. Steam dirigibles or other flying contraptions can assist a ground expedition, resulting in the contacted tribes being introduced to a whirlwind high-tech steam-powered world.

A little more work can adapt the adventure to Martian or Venerean tribes, contacted by Victorian explorers who crossed the void in ether flying spaceships, kick-starting a *Space 1889* style campaign involving the aliens fighting for

justice against conquering Earth factions, perhaps assisted by more moral Earthlings. Or turn it around and have genuine Cro-Magnon humans contacted by visiting aliens, ending the stone age and plunging it straight into space opera . . .

Magic in the Crucible

for *GURPS*

by Peter V. Dell'Orto

This article is a supplement for both ["Martial Arts Styles for Mages"](#) and ["Campaign in a Box: Kung-Fu Crucible."](#) While the previous article focused on fully integrating martial arts styles with magic, it also seemed obvious that magic could simulate the really powerful characters and moves in wuxia films and in video games. This article can be used to enhance a current Crucible game, or to start a whole new campaign in a more magical Crucible.

Why the Crucible?

The Crucible is an ideal setting for magic-based martial arts styles. Console and Arcade video games always have a few fireball-tossing, shapeshifting, arm-extending voodoo Shinto snake priests running around. Finishing moves are filled with not just wuxia-style jumps and leaps, but raging flames and thunderous cracks of lightning from the heavens. Where do all of these fighters perfect their style, brave enough to face a martial artist whose blows will scorch the flesh or fry their mind? Why, the Crucible, of course. Where else?

The Setting: Always Magic, or Adding Magic?

The first question to be answered is, did the Crucible always have magic?

If you are starting a new campaign based in the Crucible, it is easy to add magic-based martial arts to the setting; follow the advice in this article and ["Kung-Fu Crucible"](#) and decide on the power and mana levels. The heroes do not necessarily have to be aware of such magical powers; perhaps they come from a more austere setting, only to be whisked to the Crucible to test their mettle against Flying Dragonjutsu stylists that really fly, and Tiger Kung-Fu stylists that fight in tiger form. This can make an excellent campaign nova for a campaign -- see ["Going Nova: Big Newness in Your Campaign"](#) by Ken Hite and ["Getting A New Writer"](#) by Brian Rogers.

It also makes a good crossover setting for Supers-style martial artists. They are already used to dealing with wizards, alien invasions, bizarre plots twists; the Magical Crucible is a good place to visit even if they do not stay. This "just visiting" style can be a good change of pace, and can be used instead of the usual Not Very Deadly Deathtrap routine if a martial-arts super is captured. "You wake up in a small cottage . . ."

If you are already running a game in the Crucible, it may seem problematic to introduce such a decidedly overt change into the setting by adding magic. However, remember *The Prisoner*, one of influences behind the standard Crucible setting. In *The Prisoner*, Number Six encountered elements that seemingly would have been hard to miss, but were introduced suddenly (and disappeared just as suddenly) without comment from the rest of the villagers. One day the Crucible can be lacking magic entirely, the next day it could have magic as it was always there . . . and disappear the next. Not all players will react well to such a new introduction (even Number Six had his own issues with this kind of event at times). A smoother transition is possible if you are already playing at the Wu-Wu-Wuxia or Chambara levels: A new "dim mak" practitioner shows up, but his attacks more closely resemble Deathtouch than Pressure Secrets. Later, a showy stylist using fire as part of his warm-up act can spit a few flames or toss a few "fireballs" in his fights. Are they novelties or has the Young Master found some new place to bring in stylists from?

The Rules

Now that you have decided to put magic in the Crucible, how is it implemented? The critical decision to make is the

Austerity level of the game. This is turn will determine the Mana Level of the Crucible.

The Crucible works well at multiple Austerity levels, but magic-based wuxia powers work best at low levels of Austerity. The Crucible benefits the most from magic at the "Chambara" and "Wu-wu-wuxia" level of Austerity. It can work at Chi level as well, but works best when used in a campaign that centers on characters using high-powered, physics-defying powers. In a Chi Austerity game, magic may be completely overpowered by the martial arts. The default assumption is that The Crucible is at High Mana. A dial of mana levels can be used to vary this assumption to make very different campaigns.

Low Mana is not recommended; it defeats the purpose of adding magic to the Crucible. Magic added with Low Mana will be very weak, cost a large amount of points, and be relegated to secondary status. This is possible, but it does not fit the "theme" of the Crucible. If the masters wish to test the power of magic-using stylists, they would not hamper them so . . .

Chi: Normal Mana: Magical stylists can use spells normally, but must be naturally skilled and train hard to be effective. This level best matches the "normal" power level of fantasy magic -- spells will enhance, but not replace, martial prowess. Because of this, you are likely to end up with specialist mages occurring in order to maximize their ability to use their power against martial artists.

Chambara: High Mana: Anyone can learn a few mana-manipulating tricks; with the "Master of One Style" option all martial arts may know spells appropriate to their style. At this level integrated magic/martial arts styles utilizing fairly powerful magics really shine. Most fighters are capable of video-game like feats -- throwing fireballs, elemental attacks, and even flight.

Wu-Wu-Wuxia: Very High Mana: Magic flies thick and fast; this is the arcade game or epic wuxia level. Magical powers are used regularly in combat with almost no regard to cost, but the penalties for the slightest mistake (failure is a critical failure, critical failure is disastrous) can be devastating to the stylist. Any fighter without significant magical and or chi powers is reduced to spear-fodder status by those that have them.

Very High Mana is best suited for games simulating extremely powerful wuxia fighters. Since all fatigue comes back at the end of the character's turn, the only limiting factors on wuxia fighters will be the number of spells "on" and the maximum amount of mana they can expend at once. Spell-based attacks will fly thick and fast; attacks not backed up by magic will be secondary. Critical Failures are also best handled by GM decision rather than the chart on p. M6. Few failed "magical" strikes in wuxia films result in summoned demons or casting on the wrong target. Spectacular failures of powers can still occur however, and Critical Failure rolls are the best way of simulating this occasion failure of the Flying Heaven Lightning Strike to do what it is supposed to . . .

Take That! And That! And Some of These!

A staple of high-powered wuxia combat are attackers throwing a bewildering amount of attacks, especially when face with numbers of spear fodder. This is no different with magic-using wuxia fighters. At the same time, the emphasis needs to be on martial arts, not on standard fantasy wizards. Therefore spells need to be cast faster, but limits need to exist to discourage wizards who eschew martial arts to simply toss huge Area spells around.

No spells can be cast without gestures -- in fact, most spells require them. Kiais, shouted battle cries, and frequent announcements of the maneuver you are using are de rigeur for some campaigns. Regardless of skill level, no spells will be able to be cast with less than "full" gestures -- spoke and hand gestures, or at least extensive hand gestures (for your vow-of-silence monk types).

Multiple attacks are calculated normally for Magic Jet, Magic Breath, and Spell Throwing, depending on the method chosen: 1 for 8 points of skill, 1 for 3 points of skill over 12, etc. This will bring these skills in line with other Trained By A Master martial artists.

Especially at the lower Austerity levels, it makes sense to use a variant of the "Reduced Concentration for Cinematic

Skills" sidebar rule (p. MA61). Allow Trained By A Master mages to spend attacks for seconds of concentration to throw spells; this will dramatically increase the effective speed of mages. Mages are still be only able to cast one spell (plus a Blocking spell, see below) per turn, with some exceptions:

Missile spells: Unlimited missile spells are allowed, up to the normal limits of concentration and number of attacks. *Example:* A mage with Trained By A Master, Fireball-20 and Spell Throwing (Fireball)-21 would have four attacks. He could throw four 1-die Fireballs per turn, two 2-die (spending 1 attack per extra second needed to generate the fireballs), or a 3-die fireball and a 1-die fireball (2 attacks per extra second for the 3-die, 1 attack for the 1-die). All of these attacks will be unaimed, but with skill 21 accurate attacks should not be a problem.

Blocking Spells: One option is to allow extra blocking spells, at 1 extra Blocking spell per 3 points of skill over 12. These defenses are *instead of* and not *in addition to* the normal complement of parries and blocks. For example, a mage with Karate-21 and Iron Arm-21 gets 5 parries from Karate and 4 from Iron Arm; he can use up to 5 total parries including blocking spells, but only throw up to 4 Iron Arms (the limit of his Iron Arm spell level) among those 5 defenses. This will allow mages to block furious numbers of attacks very easily (in fact, automatically if the spell succeeds), and the GM should consider *carefully* before allowing it. It works best in a campaign where PCs will be fighting large numbers of spear-fodder opponents, as using these spells will make penetrating defenses even harder. Blocking spells ignore Feints, Ripostes, penalties to defend against Spinning Punches and Spin Kicks, etc. and make the defense penalties for maneuvers like Back Strike, Lunge and Fleche easier to deal with.

Extended Criticals

Another option recommended for a Magical Crucible game is the Extended Critical rule from p. MA59 and p. CII73. This rule should be extended to magic as well, allowing more occurrences of automatic victory over resistance and more spells cast without cost. If this is done, a GM should only give "special bonuses" to critical successes if the roll is a 3 or 4. Criticals of a 5+ should make the spell free (and bypass resistance normally if a Resisted spell).

For the Wu-wu-wuxia level of power, especially when PCs are fighting lots of spear-fodder (not common in the Crucible, but it could happen), another option is to ignore the Rule of 16. Powerful stylists should be able to casually defeat the Will of spear-fodder with their resisted spells; to make up for it most stylists should be a lot of points in Will and Mental Strength. This fits the magical wuxia movie style well -- the final battle is always a contest of will between good and evil . . . but only after hundreds of lesser foes have been mown down by the powers of the heroes or villains or both. To simulate this, anyone without Magery (any level), Mental Strength, Weapon Master (any level) or Trained By A Master should be exempt from the Rule of 16, making nearly automatic victory over resistance more likely. Combined with the Extended Criticals option, this allows high-skill fighters to truly dominate when facing lesser-skilled opponents.

Your Chi is No Good!

One possible assumption for a magic-as-wuxia powers game is that Magic will replace Chi; instead of using Invisibility Art, Pressure Secrets, and Blinding Touch you will use Invisibility, Deathtouch, and Strike Blind. Chi powers do not exist, since they are simulated with spells instead. But what if both Cinematic Skills using Chi and Wuxia Magic coexist? If Chi powers have been completely replaced, no further decisions need to be made. But if both coexist (and the Crucible is the place for that to occur if anyplace is) you need to decide how they interact.

The distinction between Mana and Chi should be decided by the GM. Are they facets of the same universal source of power, each tapped differently by the stylists? Or are they opposed but linked forces, with Mana as the Yang and Chi as the Yin? Or are they diametrically opposed powers, with each side warring over the superior of their special powers?

If they are facets of the same power, flavor demands minor changes. First, most stylists will use both Cinematic Skills and Magic. Recover Strength becomes Recover Chi; only the same changes.

If they are opposed but linked, stylists who get out of balance in their skill levels may be regarded warily by fellow

stylists. Those too dependent on mana may be perceived as having too much Yang and those who learn both equally well may be perceived as being In Harmony and regarded well. That could be the basis of a positive Reputation, while an imbalance might be a matter of reputation or result in Ying-Yang Imbalance (p. CI100).

If the powers are opposed, fierce fighting between camps would likely occur -- the Young Master must know which is superior! The various Lodges will have chosen between Chi powers and Magic; if not prohibited by the GM it might just be prohibited by custom. In that case, stylists who choose to study both would have a powerful edge and a dangerous Secret. Keeping it hidden in the confines of the Crucible would be a truly Herculean task.

Regardless of how Chi and Mana are distinct, interaction of the powers should occur. The easiest way to do this is "effects based" interaction. Dispel Magic will not undo Blinding Touch, but Cure Blindness will. Instant Restoration might counter the effects of Hand of Death. See Invisible will detect stylists using Invisibility Art to move around undetected (or more prosaically, Keen Eyes and Alertness might help counter it as well). This type of interaction is compatible with all three ways of perceiving Chi and Mana -- if the powers are the same, the ways of manipulating them should affect one another. If they are opposed, it should be possible to challenge one force with another. If they are linked, it only reveals the true subtle interaction of the universe by the myriad of ways they play upon one another.

Advantages, Skills, and Styles

Magic Resistance is not recommended in this setting. The idea of "interference" from particularly resistant defenders causing wuxia powers to fail does not fit the genre very well. Mental Strength (p. CI142) is recommended instead; all Trained By A Master characters should be allowed to learn the skill even if it is not within their style. Strong Will is also a very good advantage for tough NPCs and PCs to have; it will both help to resist attacking spells and keep them standing after absorbing lots of damage.

Extra Fatigue and **Extra Fatigue (Magic Only)** (see *GURPS Myth*) are highly recommended for this style of game; wuxia fighters are defeated by superior foes, not from being too tired! **Extra Fatigue (One Spell Only)** is excellent for a "finishing move" spell, especially with a low recovery rate. As an alternative, see Special Abilities from "[Cinematic Points!](#)" for another way to handle powerful but rarely used attacks. Powerstones can be used, but do not especially fit the Crucible. Extra Fatigue is a much better fit.

For example, Arnise the Whirlwind is a Tae Kwon Do stylist who wants a "last ditch attack move" comprising of the Windstorm spell. He wants to affect an area 5 yards across with his whirling form; this is Area 3 and costs 12 points. He buys Extra Fatigue (Whirlwind) +10 for 10 points, which along with his Whirlwind-21 gives him the ability to cast this without tapping into any of his other fatigue reserves. Arnise can use this whenever he wants, and can create a Whirlwind even after his Extra Fatigue pool is expended, but at a great cost . . .

Trained By A Master

Trained By a Master is still a requirement for Cinematic Skills and Cinematic Maneuvers. Trained By A Master is also a requirement for multiple attacks, extended criticals, and all of the other rules described above. At the GM's option, it can substitute for Magery to allow Masters to learn only those spells their style teaches; treat the Trained By A Master stylist as having the equivalent of Magery at the appropriate level to learn any spells within the style. This is *only* for purposes of determining if the spell can be learned, no bonuses to spells or other benefits of Magery are accrued. To gain the benefits of both, a stylist should have both Magery and Trained By A Master.

Another alternative to Trained By A Master for learning spells is One-Style Magery.

One-Style Magery

Cost 10/6/6

Otherwise identical to Single College Magery, this form of Magery allows its possessor to learn and use spells within a

single martial arts style. It affects all primary, optional, and prerequisite spells for a single style, plus Recover Strength.

Style Familiarity

Cost of Style Familiarity is normal; however any style that exists both with and without magic counts as two styles when purchasing it. If the 25- point level is allowed, it should cover both Chi and Magic variations of any styles.

Weapon Master

Weapon Master is ideal for armed magical styles. Weapon Master should act identically to Trained By A Master for multiple attacks for armed styles. For these purposes, treat "Spell Throwing" as a weapon skill for multiple attacks, but *not* for the +1/5 skill damage bonus.

Esoteric/Cinematic Skills

All Cinematic Skills and Maneuvers from *GURPS Martial Arts* are available if Chi powers are being used. Also recommended are the skills Chi Treatment, Mountain Heart, and Ying/Yang Healing from *GURPS Compendium I*.

Example Styles

The styles below are named generically; this is intentional. They make excellent basis for similar styles; change the weapons slightly and mix up the maneuvers and give them entirely different names to get a good mix of wuxia styles. Naming the styles is as simple as rolling on the Crucible's Special Move naming chart. Example names are in parenthesis for each style.

Additional styles can be made by taking standard *GURPS Martial Arts* styles and adding spells to them. The styles from Martial Arts for Mages are easily adapted or modified -- Death Fist can have Stealth added as a primary skill and Invisibility Art added to Cinematic Skills to make it a ninja-like style, Flaming Sword fits right in especially with dual-wielded Flame Jets, and Stone Missile Fighting can be the basis for a good ranged style.

Flying Sword ("Heaven's Graceful Blade")

13 points/24 points

Flying Sword is a style of grace and beauty -- long leaps, acrobatic flips, and fast flying. Spinning Strike is not normally allowed for swords; here it represents the incredibly acrobatic flying and twisting sword maneuvers used in the style. These can be extremely effective, especially against lower-skilled opponents, but are less so against highly skilled foes. Against those foes stylists use Feints instead of Spinning Strikes. This style is extremely acrobatic and the vast majority of its techniques are executed while airborne.

Fighting While Seated is used to represent those masters who fight, in flight, while seated in the lotus position ("Flying Lotus Sword"). Because of the vulnerability of shieldless flying foes to missile attacks, Missile Shield is a common optional spell. Some stylists add a variety of throwing weapons to the style, propelled by Winged Knife. Paku and Shuriken are especially popular choices.

Variations of this style can use almost any martial arts weapons -- paired butterfly swords, spear, light horse cutters, knife-wheels, etc. Campaigns using The Sword (p. SW14) would find this an excellent style for those using that skill.

Primary Skills: Acrobatics, Fencing [2], Fencing Art [2], Jumping.

Secondary Skills: Fast Draw (Sword), Parry Missile Weapons.

Optional Skills: Calligraphy, Karate.

Maneuvers: Feint (Fencing), Spinning Strike (Sword).

Cinematic Skills: Flying Leap, Kiai, Mental Strength, Power Blow.
Cinematic Maneuvers: Enhanced Parry (Sword), Fighting While Seated.
Primary Spells: Flight (VH), Hawk Flight (VH) [2].
Optional Spells: Missile Shield, Winged Knife.
Prerequisites: Magery +2 plus Apportation, Levitation.

Leaping Fist ("Southern Jumping Monkey Kung-Fu")

15 points/20 points

This style emphasizes fast movements and long-reach strikes. Stylists move in leaps and bounds, often magically hasted. Walk on Air is used to allow the practitioner to "bounce" in mid-air, allowing multiple leaps without ever landing. The optional spell "Great Haste" is used for that "finishing move" flurry.

Unlike actual "flying" styles, this style depends on long leaps, air-walking and wall-walking to get around. A common variation of this style uses Hawk Flight instead of Flying Leap and Wallwalker ("Northern Flying Monkey Kung-Fu").

Primary Skills: Acrobatics, Karate, Karate Art, Jumping, Running.
Secondary Skills: Parry Missile Weapons.
Optional Skills: Judo, Spear, Broadsword.
Maneuvers: Axe Kick, Jump Kick, Sweep Kick.
Cinematic Skills: Flying Leap, Mental Strength, Power Blow.
Cinematic Maneuvers: Flying Jump Kick, Roll With Blow.
Primary Spells: Walk on Air, Haste, Wallwalker.
Optional Spells: Great Haste (VH), Cloud Vaulting (VH).
Prerequisites: Magery plus Apportation, Create Air, Purify Air, Shape Air.

Flaming Fist ("Fist of Agni")

17 points/24 points

This fearsome style uses flurries of punches, kicks, and fireballs interspersed to force a foe to submission. The style is explosive, and includes a lot of theatrical moves that are more show than substance. Opponents should be warned that this style is dangerous for all of its flashiness. Chi-powered Flaming Fist masters launch both Fireballs *and* punches and kicks at range using Flying Fists.

Some variants of this style use a variant version of Flaming Weapon that works only on the caster's fists and feet! For this sub-style add Flaming Weapon (Fists) to the Spells; remove Fireball and Spell Throwing Fireball. Style cost decreases by 1.

Primary Skills: Acrobatics, Karate, Karate Art, Spell Throwing (Fireball).
Secondary Skills: Fire-Eating.
Optional Skills: Hypnotism, Performance.
Maneuvers: Back Kick, Hook Kick, Jab, Spin Kick.
Cinematic Skills: Breaking Blow, Flying Fists, Meditation, Mental Strength, Power Blow.
Cinematic Maneuvers: Springing Attack, Roll with Blow.
Primary Spells: Fireball [2], Create Fire, Resist Fire.
Optional Spells: Flaming Armor, Burning Touch.
Prerequisites: Magery plus Ignite Fire, Extinguish Fire, Heat, Cold, Shape Fire.

Transforming Fist ("Claw of the Tiger")

16 points/37 points

Animal styles of Kung-Fu are popular, but some styles transcend mere aping of animal styles and transform the stylist

into that animal. The style below is for the very popular tiger style. A style exists for each Shapeshifting spell -- for example "Bear Kung-Fu," "Bloodfist of the Eagle Kung-Fu," "Snake Fist," and so on -- and can exist for other Shapeshifting spells otherwise unknown. Imaginative stylists may develop have Shapeshifting (Giant Mantis), Shapeshifting (Monkey), Shapeshifting (Wombat) (for "Byzantine Shadow Wombat Kung-Fu") . . .

All maneuvers in this style are taught for both human form and animal form. In tiger form, the stylist will *bite* instead of grappling, and Shuto becomes a slipping bite designed to confuse aggressive defenders. Springing Attack is very powerful when executed by a triple-strength stylist in tiger form. Tiger stylists tend to go for the neck or head with their attacks.

Primary Skills: Acrobatics, Jumping, Karate, Wrestling.

Secondary Skills: Animal Handling, Intimidation.

Optional Skills: Naturalist, Survival (Jungle).

Maneuvers: Head Lock, Hit Location (Karate), Neck Snap, Shuto.

Cinematic Skills: Blind Fighting, Flying Leap, Mental Strength, Power Blow.

Cinematic Maneuvers: Enhanced Dodge, Springing Attack, Roll with Blow.

Primary Spells: Shapeshifting (Tiger) [2].

Optional Spells: Beast Soother, Beast Speech, Master.

Prerequisites: Magery plus six spells of any kind. Animal spells are very popular prerequisites for this style.

Special thanks goes to Chad Underkoffler for his inspiration and encouraging me to use The Crucible, and Adam Solis, who came up with the idea of "One Style Magery" on the Pyramid Message Boards and graciously permitted me to use it here.

Magic in the Crucible

for *GURPS*

by Peter V. Dell'Orto

This article is a supplement for both ["Martial Arts Styles for Mages"](#) and ["Campaign in a Box: Kung-Fu Crucible."](#) While the previous article focused on fully integrating martial arts styles with magic, it also seemed obvious that magic could simulate the really powerful characters and moves in wuxia films and in video games. This article can be used to enhance a current Crucible game, or to start a whole new campaign in a more magical Crucible.

Why the Crucible?

The Crucible is an ideal setting for magic-based martial arts styles. Console and Arcade video games always have a few fireball-tossing, shapeshifting, arm-extending voodoo Shinto snake priests running around. Finishing moves are filled with not just wuxia-style jumps and leaps, but raging flames and thunderous cracks of lightning from the heavens. Where do all of these fighters perfect their style, brave enough to face a martial artist whose blows will scorch the flesh or fry their mind? Why, the Crucible, of course. Where else?

The Setting: Always Magic, or Adding Magic?

The first question to be answered is, did the Crucible always have magic?

If you are starting a new campaign based in the Crucible, it is easy to add magic-based martial arts to the setting; follow the advice in this article and ["Kung-Fu Crucible"](#) and decide on the power and mana levels. The heroes do not necessarily have to be aware of such magical powers; perhaps they come from a more austere setting, only to be whisked to the Crucible to test their mettle against Flying Dragonjutsu stylists that really fly, and Tiger Kung-Fu stylists that fight in tiger form. This can make an excellent campaign nova for a campaign -- see ["Going Nova: Big Newness in Your Campaign"](#) by Ken Hite and ["Getting A New Writer"](#) by Brian Rogers.

It also makes a good crossover setting for Supers-style martial artists. They are already used to dealing with wizards, alien invasions, bizarre plots twists; the Magical Crucible is a good place to visit even if they do not stay. This "just visiting" style can be a good change of pace, and can be used instead of the usual Not Very Deadly Deathtrap routine if a martial-arts super is captured. "You wake up in a small cottage . . ."

If you are already running a game in the Crucible, it may seem problematic to introduce such a decidedly overt change into the setting by adding magic. However, remember *The Prisoner*, one of influences behind the standard Crucible setting. In *The Prisoner*, Number Six encountered elements that seemingly would have been hard to miss, but were introduced suddenly (and disappeared just as suddenly) without comment from the rest of the villagers. One day the Crucible can be lacking magic entirely, the next day it could have magic as it was always there . . . and disappear the next. Not all players will react well to such a new introduction (even Number Six had his own issues with this kind of event at times). A smoother transition is possible if you are already playing at the Wu-Wu-Wuxia or Chambara levels: A new "dim mak" practitioner shows up, but his attacks more closely resemble Deathtouch than Pressure Secrets. Later, a showy stylist using fire as part of his warm-up act can spit a few flames or toss a few "fireballs" in his fights. Are they novelties or has the Young Master found some new place to bring in stylists from?

The Rules

Now that you have decided to put magic in the Crucible, how is it implemented? The critical decision to make is the

Austerity level of the game. This is turn will determine the Mana Level of the Crucible.

The Crucible works well at multiple Austerity levels, but magic-based wuxia powers work best at low levels of Austerity. The Crucible benefits the most from magic at the "Chambara" and "Wu-wu-wuxia" level of Austerity. It can work at Chi level as well, but works best when used in a campaign that centers on characters using high-powered, physics-defying powers. In a Chi Austerity game, magic may be completely overpowered by the martial arts. The default assumption is that The Crucible is at High Mana. A dial of mana levels can be used to vary this assumption to make very different campaigns.

Low Mana is not recommended; it defeats the purpose of adding magic to the Crucible. Magic added with Low Mana will be very weak, cost a large amount of points, and be relegated to secondary status. This is possible, but it does not fit the "theme" of the Crucible. If the masters wish to test the power of magic-using stylists, they would not hamper them so . . .

Chi: Normal Mana: Magical stylists can use spells normally, but must be naturally skilled and train hard to be effective. This level best matches the "normal" power level of fantasy magic -- spells will enhance, but not replace, martial prowess. Because of this, you are likely to end up with specialist mages occurring in order to maximize their ability to use their power against martial artists.

Chambara: High Mana: Anyone can learn a few mana-manipulating tricks; with the "Master of One Style" option all martial arts may know spells appropriate to their style. At this level integrated magic/martial arts styles utilizing fairly powerful magics really shine. Most fighters are capable of video-game like feats -- throwing fireballs, elemental attacks, and even flight.

Wu-Wu-Wuxia: Very High Mana: Magic flies thick and fast; this is the arcade game or epic wuxia level. Magical powers are used regularly in combat with almost no regard to cost, but the penalties for the slightest mistake (failure is a critical failure, critical failure is disastrous) can be devastating to the stylist. Any fighter without significant magical and or chi powers is reduced to spear-fodder status by those that have them.

Very High Mana is best suited for games simulating extremely powerful wuxia fighters. Since all fatigue comes back at the end of the character's turn, the only limiting factors on wuxia fighters will be the number of spells "on" and the maximum amount of mana they can expend at once. Spell-based attacks will fly thick and fast; attacks not backed up by magic will be secondary. Critical Failures are also best handled by GM decision rather than the chart on p. M6. Few failed "magical" strikes in wuxia films result in summoned demons or casting on the wrong target. Spectacular failures of powers can still occur however, and Critical Failure rolls are the best way of simulating this occasion failure of the Flying Heaven Lightning Strike to do what it is supposed to . . .

Take That! And That! And Some of These!

A staple of high-powered wuxia combat are attackers throwing a bewildering amount of attacks, especially when face with numbers of spear fodder. This is no different with magic-using wuxia fighters. At the same time, the emphasis needs to be on martial arts, not on standard fantasy wizards. Therefore spells need to be cast faster, but limits need to exist to discourage wizards who eschew martial arts to simply toss huge Area spells around.

No spells can be cast without gestures -- in fact, most spells require them. Kiais, shouted battle cries, and frequent announcements of the maneuver you are using are de rigeur for some campaigns. Regardless of skill level, no spells will be able to be cast with less than "full" gestures -- spoken words and hand gestures, or at least extensive hand gestures (for your vow-of-silence monk types).

Multiple attacks are calculated normally for Magic Jet, Magic Breath, and Spell Throwing, depending on the method chosen: 1 for 8 points of skill, 1 for 3 points of skill over 12, etc. This will bring these skills in line with other Trained By A Master martial artists.

Especially at the lower Austerity levels, it makes sense to use a variant of the "Reduced Concentration for Cinematic

Skills" sidebar rule (p. MA61). Allow Trained By A Master mages to spend attacks for seconds of concentration to throw spells; this will dramatically increase the effective speed of mages. Mages are still be only able to cast one spell (plus a Blocking spell, see below) per turn, with some exceptions:

Missile spells: Unlimited missile spells are allowed, up to the normal limits of concentration and number of attacks. *Example:* A mage with Trained By A Master, Fireball-20 and Spell Throwing (Fireball)-21 would have four attacks. He could throw four 1-die Fireballs per turn, two 2-die (spending 1 attack per extra second needed to generate the fireballs), or a 3-die fireball and a 1-die fireball (2 attacks per extra second for the 3-die, 1 attack for the 1-die). All of these attacks will be unaimed, but with skill 21 accurate attacks should not be a problem.

Blocking Spells: One option is to allow extra blocking spells, at 1 extra Blocking spell per 3 points of skill over 12. These defenses are *instead of* and not *in addition to* the normal complement of parries and blocks. For example, a mage with Karate-21 and Iron Arm-21 gets 5 parries from Karate and 4 from Iron Arm; he can use up to 5 total parries including blocking spells, but only throw up to 4 Iron Arms (the limit of his Iron Arm spell level) among those 5 defenses. This will allow mages to block furious numbers of attacks very easily (in fact, automatically if the spell succeeds), and the GM should consider *carefully* before allowing it. It works best in a campaign where PCs will be fighting large numbers of spear-fodder opponents, as using these spells will make penetrating defenses even harder. Blocking spells ignore Feints, Ripostes, penalties to defend against Spinning Punches and Spin Kicks, etc. and make the defense penalties for maneuvers like Back Strike, Lunge and Fleche easier to deal with.

Extended Criticals

Another option recommended for a Magical Crucible game is the Extended Critical rule from p. MA59 and p. CII73. This rule should be extended to magic as well, allowing more occurrences of automatic victory over resistance and more spells cast without cost. If this is done, a GM should only give "special bonuses" to critical successes if the roll is a 3 or 4. Criticals of a 5+ should make the spell free (and bypass resistance normally if a Resisted spell).

For the Wu-wu-wuxia level of power, especially when PCs are fighting lots of spear-fodder (not common in the Crucible, but it could happen), another option is to ignore the Rule of 16. Powerful stylists should be able to casually defeat the Will of spear-fodder with their resisted spells; to make up for it most stylists should be a lot of points in Will and Mental Strength. This fits the magical wuxia movie style well -- the final battle is always a contest of will between good and evil . . . but only after hundreds of lesser foes have been mown down by the powers of the heroes or villains or both. To simulate this, anyone without Magery (any level), Mental Strength, Weapon Master (any level) or Trained By A Master should be exempt from the Rule of 16, making nearly automatic victory over resistance more likely. Combined with the Extended Criticals option, this allows high-skill fighters to truly dominate when facing lesser-skilled opponents.

Your Chi is No Good!

One possible assumption for a magic-as-wuxia powers game is that Magic will replace Chi; instead of using Invisibility Art, Pressure Secrets, and Blinding Touch you will use Invisibility, Deathtouch, and Strike Blind. Chi powers do not exist, since they are simulated with spells instead. But what if both Cinematic Skills using Chi and Wuxia Magic coexist? If Chi powers have been completely replaced, no further decisions need to be made. But if both coexist (and the Crucible is the place for that to occur if anyplace is) you need to decide how they interact.

The distinction between Mana and Chi should be decided by the GM. Are they facets of the same universal source of power, each tapped differently by the stylists? Or are they opposed but linked forces, with Mana as the Yang and Chi as the Yin? Or are they diametrically opposed powers, with each side warring over the superiority of their special powers?

If they are facets of the same power, flavor demands minor changes. First, most stylists will use both Cinematic Skills and Magic. Recover Strength becomes Recover Chi; only the name changes.

If they are opposed but linked, stylists who get out of balance in their skill levels may be regarded warily by fellow

stylists. Those too dependent on mana may be perceived as having too much Yang and those who learn both equally well may be perceived as being In Harmony and regarded well. That could be the basis of a positive Reputation, while an imbalance might be a matter of reputation or result in Ying-Yang Imbalance (p. CI100).

If the powers are opposed, fierce fighting between camps would likely occur -- the Young Master must know which is superior! The various Lodges will have chosen between Chi powers and Magic; if not prohibited by the GM it might just be prohibited by custom. In that case, stylists who choose to study both would have a powerful edge and a dangerous Secret. Keeping it hidden in the confines of the Crucible would be a truly Herculean task.

Regardless of how Chi and Mana are distinct, interaction of the powers should occur. The easiest way to do this is "effects based" interaction. Dispel Magic will not undo Blinding Touch, but Cure Blindness will. Instant Restoration might counter the effects of Hand of Death. See Invisible will detect stylists using Invisibility Art to move around undetected (or more prosaically, Keen Eyes and Alertness might help counter it as well). This type of interaction is compatible with all three ways of perceiving Chi and Mana -- if the powers are the same, the ways of manipulating them should affect one another. If they are opposed, it should be possible to challenge one force with another. If they are linked, it only reveals the true subtle interaction of the universe by the myriad of ways they play upon one another.

Advantages, Skills, and Styles

Magic Resistance is not recommended in this setting. The idea of "interference" from particularly resistant defenders causing wuxia powers to fail does not fit the genre very well. Mental Strength (p. CI142) is recommended instead; all Trained By A Master characters should be allowed to learn the skill even if it is not within their style. Strong Will is also a very good advantage for tough NPCs and PCs to have; it will both help to resist attacking spells and keep them standing after absorbing lots of damage.

Extra Fatigue and **Extra Fatigue (Magic Only)** (see *GURPS Myth*) are highly recommended for this style of game; wuxia fighters are defeated by superior foes, not from being too tired! **Extra Fatigue (One Spell Only)** is excellent for a "finishing move" spell, especially with a low recovery rate. As an alternative, see Special Abilities from "[Cinematic Points!](#)" for another way to handle powerful but rarely used attacks. Powerstones can be used, but do not especially fit the Crucible. Extra Fatigue is a much better fit.

For example, Arnise the Whirlwind is a Tae Kwon Do stylist who wants a "last ditch attack move" comprising of the Windstorm spell. He wants to affect an area 5 yards across with his whirling form; this is Area 3 and costs 12 points. He buys Extra Fatigue (Whirlwind) +10 for 10 points, which along with his Whirlwind-21 gives him the ability to cast this without tapping into any of his other fatigue reserves. Arnise can use this whenever he wants, and can create a Whirlwind even after his Extra Fatigue pool is expended, but at a great cost . . .

Trained By A Master

Trained By a Master is still a requirement for Cinematic Skills and Cinematic Maneuvers. Trained By A Master is also a requirement for multiple attacks, extended criticals, and all of the other rules described above. At the GM's option, it can substitute for Magery to allow Masters to learn only those spells their style teaches; treat the Trained By A Master stylist as having the equivalent of Magery at the appropriate level to learn any spells within the style. This is *only* for purposes of determining if the spell can be learned, no bonuses to spells or other benefits of Magery are accrued. To gain the benefits of both, a stylist should have both Magery and Trained By A Master.

Another alternative to Trained By A Master for learning spells is One-Style Magery.

One-Style Magery

Cost 10/6/6

Otherwise identical to Single College Magery, this form of Magery allows its possessor to learn and use spells within a

single martial arts style. It affects all primary, optional, and prerequisite spells for a single style, plus Recover Strength.

Style Familiarity

Cost of Style Familiarity is normal; however any style that exists both with and without magic counts as two styles when purchasing it. If the 25- point level is allowed, it should cover both Chi and Magic variations of any styles.

Weapon Master

Weapon Master is ideal for armed magical styles. Weapon Master should act identically to Trained By A Master for multiple attacks for armed styles. For these purposes, treat "Spell Throwing" as a weapon skill for multiple attacks, but *not* for the +1/5 skill damage bonus.

Esoteric/Cinematic Skills

All Cinematic Skills and Maneuvers from *GURPS Martial Arts* are available if Chi powers are being used. Also recommended are the skills Chi Treatment, Mountain Heart, and Ying/Yang Healing from *GURPS Compendium I*.

Example Styles

The styles below are named generically; this is intentional. They make excellent basis for similar styles; change the weapons slightly and mix up the maneuvers and give them entirely different names to get a good mix of wuxia styles. Naming the styles is as simple as rolling on the Crucible's Special Move naming chart. Example names are in parenthesis for each style.

Additional styles can be made by taking standard *GURPS Martial Arts* styles and adding spells to them. The styles from Martial Arts for Mages are easily adapted or modified -- Death Fist can have Stealth added as a primary skill and Invisibility Art added to Cinematic Skills to make it a ninja-like style, Flaming Sword fits right in especially with dual-wielded Flame Jets, and Stone Missile Fighting can be the basis for a good ranged style.

Flying Sword ("Heaven's Graceful Blade")

13 points/24 points

Flying Sword is a style of grace and beauty -- long leaps, acrobatic flips, and fast flying. Spinning Strike is not normally allowed for swords; here it represents the incredibly acrobatic flying and twisting sword maneuvers used in the style. These can be extremely effective, especially against lower-skilled opponents, but are less so against highly skilled foes. Against those foes stylists use Feints instead of Spinning Strikes. This style is extremely acrobatic and the vast majority of its techniques are executed while airborne.

Fighting While Seated is used to represent those masters who fight, in flight, while seated in the lotus position ("Flying Lotus Sword"). Because of the vulnerability of shieldless flying foes to missile attacks, Missile Shield is a common optional spell. Some stylists add a variety of throwing weapons to the style, propelled by Winged Knife. Paku and Shuriken are especially popular choices.

Variations of this style can use almost any martial arts weapons -- paired butterfly swords, spear, light horse cutters, knife-wheels, etc. Campaigns using The Sword (p. SW14) would find this an excellent style for those using that skill.

Primary Skills: Acrobatics, Fencing [2], Fencing Art [2], Jumping.

Secondary Skills: Fast Draw (Sword), Parry Missile Weapons.

Optional Skills: Calligraphy, Karate.

Maneuvers: Feint (Fencing), Spinning Strike (Sword).

Cinematic Skills: Flying Leap, Kiai, Mental Strength, Power Blow.
Cinematic Maneuvers: Enhanced Parry (Sword), Fighting While Seated.
Primary Spells: Flight (VH), Hawk Flight (VH) [2].
Optional Spells: Missile Shield, Winged Knife.
Prerequisites: Magery +2 plus Apportation, Levitation.

Leaping Fist ("Southern Jumping Monkey Kung-Fu")

15 points/20 points

This style emphasizes fast movements and long-reach strikes. Stylists move in leaps and bounds, often magically hasted. Walk on Air is used to allow the practitioner to "bounce" in mid-air, allowing multiple leaps without ever landing. The optional spell "Great Haste" is used for that "finishing move" flurry.

Unlike actual "flying" styles, this style depends on long leaps, air-walking and wall-walking to get around. A common variation of this style uses Hawk Flight instead of Flying Leap and Wallwalker ("Northern Flying Monkey Kung-Fu").

Primary Skills: Acrobatics, Karate, Karate Art, Jumping, Running.
Secondary Skills: Parry Missile Weapons.
Optional Skills: Judo, Spear, Broadsword.
Maneuvers: Axe Kick, Jump Kick, Sweep Kick.
Cinematic Skills: Flying Leap, Mental Strength, Power Blow.
Cinematic Maneuvers: Flying Jump Kick, Roll With Blow.
Primary Spells: Walk on Air, Haste, Wallwalker.
Optional Spells: Great Haste (VH), Cloud Vaulting (VH).
Prerequisites: Magery plus Apportation, Create Air, Purify Air, Shape Air.

Flaming Fist ("Fist of Agni")

17 points/24 points

This fearsome style uses flurries of punches, kicks, and fireballs interspersed to force a foe to submission. The style is explosive, and includes a lot of theatrical moves that are more show than substance. Opponents should be warned that this style is dangerous for all of its flashiness. Chi-powered Flaming Fist masters launch both Fireballs *and* punches and kicks at range using Flying Fists.

Some variants of this style use a variant version of Flaming Weapon that works only on the caster's fists and feet! For this sub-style add Flaming Weapon (Fists) to the Spells; remove Fireball and Spell Throwing Fireball. Style cost decreases by 1.

Primary Skills: Acrobatics, Karate, Karate Art, Spell Throwing (Fireball).
Secondary Skills: Fire-Eating.
Optional Skills: Hypnotism, Performance.
Maneuvers: Back Kick, Hook Kick, Jab, Spin Kick.
Cinematic Skills: Breaking Blow, Flying Fists, Meditation, Mental Strength, Power Blow.
Cinematic Maneuvers: Springing Attack, Roll with Blow.
Primary Spells: Fireball [2], Create Fire, Resist Fire.
Optional Spells: Flaming Armor, Burning Touch.
Prerequisites: Magery plus Ignite Fire, Extinguish Fire, Heat, Cold, Shape Fire.

Transforming Fist ("Claw of the Tiger")

16 points/37 points

Animal styles of Kung-Fu are popular, but some styles transcend mere aping of animal styles and transform the stylist

into that animal. The style below is for the very popular tiger style. A style exists for each Shapeshifting spell -- for example "Bear Kung-Fu," "Bloodfist of the Eagle Kung-Fu," "Snake Fist," and so on -- and can exist for other Shapeshifting spells otherwise unknown. Imaginative stylists may develop have Shapeshifting (Giant Mantis), Shapeshifting (Monkey), Shapeshifting (Wombat) (for "Byzantine Shadow Wombat Kung-Fu") . . .

All maneuvers in this style are taught for both human form and animal form. In tiger form, the stylist will *bite* instead of grappling, and Shuto becomes a slipping bite designed to confuse aggressive defenders. Springing Attack is very powerful when executed by a triple-strength stylist in tiger form. Tiger stylists tend to go for the neck or head with their attacks.

Primary Skills: Acrobatics, Jumping, Karate, Wrestling.

Secondary Skills: Animal Handling, Intimidation.

Optional Skills: Naturalist, Survival (Jungle).

Maneuvers: Head Lock, Hit Location (Karate), Neck Snap, Shuto.

Cinematic Skills: Blind Fighting, Flying Leap, Mental Strength, Power Blow.

Cinematic Maneuvers: Enhanced Dodge, Springing Attack, Roll with Blow.

Primary Spells: Shapeshifting (Tiger) [2].

Optional Spells: Beast Soother, Beast Speech, Master.

Prerequisites: Magery plus six spells of any kind. Animal spells are very popular prerequisites for this style.

* * *

Special thanks goes to Chad Underkoffler for his inspiration and encouraging me to use The Crucible, and Adam Solis, who came up with the idea of "One Style Magery" on the Pyramid Message Boards and graciously permitted me to use it here.

Motes From The Underground: New England's Vampire Spirits

*"Florella's body was all gone to dust,
Though 'twarn't much more'n a year she'd be'n buried
But her heart was as fresh as a livin' person's,
Father said it glittered like a garnet when they took th' lid off th' coffin.
It was so 'live, it seemed to beat almost.
Father said a light come from it so strong it made shadows
Much heavier than th' lantern shadows an' runnin' in a diff'rent direction.
Oh, they burnt it; they al'ays do in such cases,
Nobody's safe till it's burnt."
-- Amy Lowell, "A Dracula of the Hills"*

What lies in the stony fields of New England, in graves marked and unmarked? Why would good, sober Yankees, upstanding Christians all, dig up the bodies of their loved ones and burn their hearts? We can only find the answers in hints and legends; propriety forbids that we should know the names of all the families cursed by the undead. Let's look in the light of the glittering hearts, and follow the shadows to the dusty tracks of New England's vampires. Keep fire close to hand, as we always do in such cases.

"EXHUMED THE BODIES.

Testing of a Horrible Superstition in the Town of Exeter.

BODIES OF DEAD RELATIVES TAKEN FROM THEIR GRAVES.

They Had All Died of Consumption, and the Belief Was That Live Flesh and Blood Would Be Found That Fed Upon the Bodies of the Living."

-- headline of the *Providence Journal*, March 19, 1892

The Mercy Brown case, in Exeter, Rhode Island, is typical of the New England vampire spirit infestation that ran for about a century in every state of that region. In December 1883, Mary Eliza Brown of Exeter died of "consumption" (a contemporary term for tuberculosis), leaving her husband George and four children. The next year, a daughter, Mary Olive, died of consumption, and in 1889 and then 1891 both Edwin (the only son) and Mercy Lena became infected. Mercy died in 1892 (of the "galloping" variety of consumption) while Edwin was in Colorado taking a rest cure; he returned home that year, having seen no improvement in his condition. George Brown and the other men of Exeter, in a fog of loss and fear, decided to dig up Mercy's grave to discover whether some unwholesome spirit lurked within her corpse. On March 17, 1892, they did so, and found liquid blood in Mercy's heart. They burned it to ashes, and may have given the ashes to Edwin to drink. This gruesome medicine could not reverse his decline; he died shortly thereafter.

Reports of cases showing the same etiology -- a mysterious illness (usually tuberculosis) in the family, an exhumed corpse, the discovery of blood in the heart, and its ritual burning -- go back at least a century in New England, to a vampire exorcism in Manchester, Vermont in 1793. Vermont suffered further outbreaks in the Spaulding family of Dummerston in 1794 or 1798, and the Ransom and Corwin families of Woodstock in 1807 and 1830. Exeter had a previous case of vampiric tuberculosis around 1799, in the household of Stukeley Tillinghast, and again in 1874 in the Rose family. One case, reported from Old Plymouth, Massachusetts, is said to have happened in 1810; if so, it would be the only case in the Puritan heartland of the region (and Old Plymouth is very close to the border with heretical, witch-loving Rhode Island). Two vampires, Lemuel and Elisha Ray, were exhumed and their hearts burnt in Jewett City, Connecticut in 1854. Other Connecticut cases were anonymous, and at least one case would still be completely unknown if the vampire's skeleton, complete with tuberculosis scarring and bones ritually re-arranged in a skull-and-crossbones fashion, hadn't popped up in a gravel pit near Jewett City in 1990. There is only one known piece of documentary evidence for the practice, besides the occasional lurid newspaper article (usually written in a tone of shocked horror by a journalist from a larger city). In the town records of Cumberland, Rhode Island, the council

approved the exhumation of Abigail Staples by her father, "In order to Try an Experiment" on his (consumptive?) wife.

"[D]escriptions of New England's vampires do not correspond to the Dracula image . . . Can we, with justification, label as 'vampires' the New Englanders whose bodies were exhumed and deemed to be unnatural? Certainly not, if we use the standard vampire model, the 'classic vampire' of our imaginations . . . But, what if we begin with a blank slate and ask, again, what is a vampire?"

-- Michael E. Bell, *Food for the Dead*

All of the above information is courtesy of the indefatigable folklorist Michael E. Bell, whose *Food for the Dead* assembles every known case of New England's vampire spirits, and adds a few more that Bell himself helped uncover. According to Bell, the New England cases differ from the received Eastern European vampire tradition, most notably in the absence of any actual biting or blood sucking by the dead, and the failure of the dead to leave their coffins. Both of these features appear prominently in the Hungarian and Slavic vampire legends gathered in the 1730s and 1740s by Dom Augustin Calmet, the father of modern vampirology, but show up in none of the New England stories. Instead, the New Englanders saw the vampire as a spirit that lives in the dead corpse, invisibly draining the blood of tubercular victims into the corpse's heart. There are, however, Romanian legends of vampires who leave the grave in the form of insects, or drifting motes of dust, or even tiny balls of light -- and some of the New England stories do mention anomalous lights such as "corpse lights" or "ghost lights" over the graves of the various vampires. More may be going on here, and in Eastern Europe, than Dom Calmet (or Bram Stoker) took the time to uncover.

"Voice hoarse, neck slightly bent, tender not flexible, somewhat extended; fingers slender but joints thick; of the bones alone the figure remains, for the fleshy parts are wasted; the nails of the fingers crooked . . . Nose sharp, slender; cheeks prominent and red; eyes hollow, brilliant and glittering; swollen, pale, or livid in the countenance; the slender parts of the jaws rest upon the teeth, as if smiling; otherwise of a cadaverous aspect . . . the whole shoulder blades apparent like wings . . ."

-- Aretaeus of Cappadocia, describing a tuberculosis sufferer

Bell believes that the difference in New England's cases is tuberculosis, which as Aretaeus' description above indicates, could well be the vampire bacillus. Tuberculosis sufferers resemble the stereotypical vampire, at once pallid and florid, existing in a kind of walking living death. A 1799 medical text about consumptives indicates that a consumptive's "emaciated figure strikes one with terror" and that among other nosferatu type features such as sunken, glittering eyes are long fingernails, "bending over the ends of the fingers" in a horrible, clawlike fashion. Vampires have often been decoded as embodiments of disease -- Stoker's *Dracula* has been read as Victorian syphilis, for example; the rat-accompanied nosferatu of Wallachia as the bubonic plague and the fear of unburied bodies. With the bent posture, foul breath, and (perhaps most tellingly) bright foam of arterial blood on the lips of its sufferers, tuberculosis -- "consumption," in the interesting term of the day -- is more vampiric still. Bell interestingly notes that the New England vampire panic almost exactly matches the era of endemic tuberculosis in New England, as industrialization and urbanization created the unsanitary, crowded conditions in American cities where the bacilli could breed. Koch isolated the tuberculosis bacillus only a decade before Mercy Brown's heart was burnt to save her family. "The vampire," Bell says, "is consumption in a human form, embodying an evil that slowly and secretly drains the life from its victims."

"Sitting down, I tried to conjecture as nearly as sanity would let me just what had happened, and how I might end the horror, if indeed it had been real. Matter it seemed not to be, nor ether, nor anything else conceivable by mortal mind. What, then, but some exotic emanation; some vampirish vapour such as Exeter rustics tell of as lurking over certain church yards?"

-- H.P. Lovecraft, "The Shunned House"

But before we let the comforting light of the 20th century bacteriology and anthropology wash over the graves holding New England's vampires, let's follow the folkloric trail down the shadows, especially those "runnin' in a diff'rent direction," as Amy Lowell put it in the poem we opened with. Michael Bell is not the first Rhode Islander of great erudition and persistence to dig up these stories; [H.P. Lovecraft](#) shows clear knowledge not just of the Mercy Brown case, but of the (considerably more obscure) Tillinghast case as well. He alludes to both of them in "The Shunned

House," which involves a miasmatic spirit, a "vampirish vapour" that slowly kills the families living in the house at 135 Benefit House. Lovecraft includes the real (and really mysterious) deaths of the Harris family from a "wasting-away" condition in his tale, only slightly concealing the house's identity. He ties the deaths to a werewolf spirit that migrated to America with exiled French Huguenots (who actually settled in the Exeter area for a time). Lovecraft also tells the story in the first person, and mentions a fictional uncle whose personality, nonetheless, matches Lovecraft's real uncle Whipple Phillips, to a tee.

All this makes one suspect that perhaps more is going on than meets the eye; that perhaps Lovecraft stumbled not only on the tales of New England's vampires, but on the trail of such a thing. In another, clearly semi-autobiographical novel, *The Case of Charles Dexter Ward*, Lovecraft presents a malign presence in a graveyard, Joseph Curwen, who he explicitly describes as kin to the "Corwin" family -- who suffered their own spate of vampirism in 1830! In the novel, the Curwen/Corwin spirit is "a lean, lithe, [leaping monster](#) with burning eyes" (again the werewolf imagery comes to the fore) engaged in "revolting cases of vampirism" in the neighborhood, while Ward/Lovecraft suffers "continued anaemic decline and increasing pallor," later describing himself as "phthisical," which is yet another term for "consumptive" or "tubercular." (Lovecraft's health was never of the best, and his mother withdrew him from high school because of it.) More hints recur in "The Shunned House," in which Lovecraft seemingly pointlessly introduces his story by saying that [Edgar Allan Poe](#) walked past the house every day "during his unsuccessful wooing of the gifted poetess, Mrs. Whitman."

Poe, of course, was badly scarred by tuberculosis: his foster mother Fanny Allen died of it in 1829, as did his wife Virginia Clemm in 1847. Poe also wrote stories of desecrated bodies and vampiric emanations, most notably "Ligeia," in which the "will" of a woman transcends the grave and drains the energies of her successor. (Both Ligeia and her rival Rowena's disease sound very much like tuberculosis.) Perhaps Poe was not so "unknowing" as Lovecraft says. The "gifted poetess, Mrs. Whitman" may also have known what would be her fate; she wrote to Poe "had I youth and health and beauty I would live for you and die with you. Now were I to allow myself to love you, I could only enjoy a bright brief hour of rapture and die." Poe's equivocal response: he would willingly "go down with you into the night of the Grave." Perhaps Lovecraft knew full well what stalked Poe, and mentioned Poe and his courtship in "The Shunned House" as a word to "persons in possession of certain information." Information such as, perhaps, the exact circumstances of the death of Poe's mother Elizabeth -- who died of tuberculosis in 1811.

*"'Begone, foul dream!' he cried, gazing again
In the bride's face, where now no azure vein
Wander'd on fair-spaced temples; no soft bloom
Misted the cheek; no passion to illumine
The deep-recessed vision: -- all was blight;
Lamia, no longer fair, there sat a deadly white."
-- John Keats, "Lamia"*

The year before that, John Keats' mother also died of tuberculosis, as did his brother. Amy Lowell, the poetess of the New England vampire, was fascinated by Keats and collected many papers and letters associated with the poet. Keats seemed ambivalent about vampires; in both "Lamia" and "La Belle Dame Sans Merci," although the hero's health fails and he grows pale and bloodless, he is unable to throw off the vampiric influence that destroys him. In due course, Keats himself died of tuberculosis in Italy in 1821, causing Percy Bysshe Shelley to write, in *Adonais*, "The breath whose might I have invoked in song/Descends on me; my spirit's bark is driven,/Far from the shore" -- a year after Keats' consumptive breath descended upon him, Shelley was dead as well, drowned in a small boat, a bark "driven far from the shore" and named after an "airy spirit," Ariel. After his death, Byron burned Shelley's body, but the dubious Edward John Trelawny snatched his heart from the fire unburnt -- and Byron's daughter died of tuberculosis the following year, followed by Shelley's son Charles four years after that. Shelley had miraculously thrown off a previous tuberculosis infection diagnosed in 1815; he was in perfect health two years later. In between, he had been present at the Villa Deodati circle where the classical vampire first took literary form -- did he cut a deal with the entity, offering it a life in legend, and his heart as a host? Did that deal cost the lives of his children, two of whom died of "wasting diseases" in 1818 and 1819?

"He was at once a devil and a multitude, a charnel-house and a pageant. Lit by the mixed and uncertain beams, that

gelatinous face assumed a dozen -- a score -- a hundred -- aspects; grinning, as it sank to the ground on a body that melted like tallow, in the caricatured likeness of legions strange and yet not strange."

-- H.P. Lovecraft, "The Shunned House"

Perhaps Shelley romanced La Belle Dame Sans Merci at the unknown grave of the [Duchess of Malfi](#), the werewolf who vanished on her way from Ancona to Milan -- and might well have passed along Shelley's track south to Pisa. Is this why her brother would "steal forth to church-yards in the dead of night/And dig dead bodies up"? Were they looking for a vampire heart to eat, to make them immortal? Vampires, werewolves, and spirits all mingle in Istria in the 17th century, when some of the shapeshifting, astral-projecting [Benandanti](#) confessed to vampirism -- and where a vampire plague gripped the natives in the 1640s. From Istria, the Grand Tour takes us to Venice, and thence to England and to America; the vampire entities spread around the world, concealed in glowing hearts. Were they a hive mind built up by a critical mass of tuberculosis bacteria, or did the bacterium merely serve as an interface, drawing energy into a Lovecraftian hyperspace built up from words and nightmares? Tasting a cooked (unburnt) dragon heart (code for "inhuman heart") grants knowledge of the [Language of the Birds](#), insight into inhuman thought patterns -- and inhuman hungers.

We've already speculated that the Duchess somehow used John Webster to spread her miasmatic legend; perhaps Keats' Lamia and the entity Shelley called "Queen Mab" did the same. (Tim Powers mines similar territory in his terrific vampire novel *The Stress of Her Regard*, of course.) Stories of Shelley's unburnt heart recall the burned heart (or stolen heart) of Mary Kelly, last of [Jack the Ripper's](#) known victims. One of his other victims, Annie Chapman, was in the final stages of tuberculosis, which ran rampant in the East End along with the other poisonous gift of the Lamia, [gin](#). Could the Ripper have been trying to catch and kill a vampire, chasing it from victim to victim, desperately searching the organs for the one that "glittered like a garnet" and gave off light stronger than a lantern? Or was he a rival vampire? One of Scotland Yard's Ripper suspects, a "Doctor Merchant," died of tuberculosis in December of 1888, another possible Ripper, the mystical poet Francis Thompson, was suffering from tuberculosis while wandering the East End in his leather apron. Either way, going looking for vampires seems an excellent way to go mad or die coughing up your heart's blood. Let's leave the last word for Lovecraft, and wonder whether it contains an oblique warning: Some secrets of inner earth are not good for mankind, and this seemed to me one of them."

Igor: The Mad Scientist's Lament

Published by [InteractivitieS Ink, Limited](#)

Designed by Mike Young

Illustrated by Alex Bradley

108 2½-inch cards, one Igor die, one rulesheet, & nine or more "completed" tokens; \$19.99

Whatever your field or profession, it is probably the case that you just cannot get the staff these days. And it is probably worse if you are a Mad Scientist bent on bringing some grand plan to fruition or building the very latest of one of many great inventions. But then again, who wants to work for a boss whose tolerance for failure extends about as far as your own for his sub-conference table incinerator? Well, Igor does not seem to mind. This lab assistant/janitor/dogsbody/lickspittle is a willing and diligent worker . . . until, that is, he gets out of earshot of his master's screamed orders. Then he seems to forget whatever it was he was sent out to get or do, and must face his master's exasperated screams of frustration upon his return.

This is the subject for *Igor: The Mad Scientist's Lament*, a card game for two to six players in which they endeavor to build their latest, greatest invention before their rivals can. All remain at the mercy of the bungled efforts of their inept assistant, Igor, who just seems unable to go out and get the parts that you need to build your device. The game consists of 108 2½-inch card deck, the Igor die, at least nine "completed" counters (used to mark a device that has been built), and an 8½ by 11½-inch double-sided rulesheet. All of which slips easily into a bright and breezy square that does a much better job than awkward little flat boxes that everyone seems to favor these days. The box is also marked with more warnings than any other, from the mundane to the scientifically amazing.

The deck consists of 21 Blueprint cards, 60 Part cards, and 27 cards of "megalomaniacal laughter," also known as the "Bwahahahahahahaha!" cards. The Blueprint cards show devices such as the Transmat, the Inspiration helmet, and the Robotic Igor. Each has a little comic illustration and a special ability, and is marked with the number of Part cards needed to complete it, plus the number of Victory Points scored for doing so. The Part cards -- ranging from the "Ten Pound Ball of Aluminum" and "Mode Shift Irregular" to a "Surfboard" and a set of "Hedge Trimmers" -- are much simpler in design, looking like crates stamped with a label. All marked with between one and four connecting devices -- blue plugs, green cogs, red wing nuts, and yellow nut and screw -- at their cardinal points. The "Bwahahahahahahaha!" cards each give a one-time advantage, such as preventing another "Bwahahahahahahaha!" card from working or stopping Igor from stealing a Part card in play. The instructions on each "Bwahahahahahahaha!" card are clear and make it obvious when it should be played. Once played, many let a Mad Scientist draw another card, while others will require instant replacement, as they are marked as not suitable for use in a two-Mad Scientist game. Finally, the Igor die is a sharp little cube, its faces marked in different colors upon which are drawn illustrations of Igor's actions. The six are explained in a chart on the rulesheet, but in black and white rather than color. This does make discerning the result of each face more difficult than it really needs to be. Nicely though, the chart also allows for an ordinary six-sided die to be used in its place.

A game of *Igor: The Mad Scientist's Lament* starts with each Mad Scientist receiving hand of seven cards, and the top five cards from the deck being turned over to form the *junkyard* or discard pile. A Mad Scientist's turn begins a special "Start of Turn/Machine Phase," in which the abilities of completed devices are activated. The abilities of other devices will be activated depending upon later events. The Mad Scientist then rolls the Igor die, which will give one of six results, unless he has a device or "Bwahahahahahahaha!" card that allows him a re-roll. They include stealing a Part from a device being assembled by another Mad Scientist or a card from their hand, drawing a card from either the

deck or the *junkyard*, the Mad Scientist being able to play two Part cards as their action, or to everyone's surprise, Igor gets it right, and a Mad Scientist can choose his assistant's action for that turn.

Following the result of the Igor die roll, a Mad Scientist can conduct a single action. He can play a Part, which must be done so that its connecting devices match, or they can play a Blueprint. A Mad Scientist can have only one Blueprint in play, but can it replace by sacrificing a Part card already in play. Alternatively, a Mad Scientist can draw a card from the deck. Once a number of Part cards equal to the number on a Blueprint have played, ranging from two to eight, the device is successfully constructed and will give an advantage to its builder for the rest of the game. For example, the eight-Part Time Warp Device lets a Mad Scientist take two turns in a row, the four-Part Power Drain will duplicate the ability of a different device from one turn to the next, and the six-Part Generic Parts reduces the number of Parts needed to construct subsequent Blueprints. Victory Points are also scored for each Blueprint completed. The first Mad Scientist to score ten Victory Points -- roughly three or four devices will win the game.

A game of *Igor: The Mad Scientist's Lament* goes something like this. Scream and shout at Igor and your fellow Mad Scientists until you can get a Blueprint into play. Scream and shout at Igor and your fellow Mad Scientists until you can get enough Parts installed. Likewise when the Parts get stolen. Then gloat gleefully once you have a device working. Do so some more until you get all of your devices built and you can take over the world. Then gloat gleefully because you have taken over the world. In between times, laugh maniacally when you advance your plans or thwart those of your rival Mad Scientists through the use of a "Bwahahahahahahaha!" card.

Which is all rather fun.

The game has a strong random element throughout, but this lessens as a game progresses, both through the use of "Bwahahahahahahaha!" cards and increasingly from the effects of Mad-Scientist-created devices. Essentially, build enough devices and you can counter some of Igor's stupidity. The game is playable, but not as enjoyable for just two Mad Scientists. With more Mad Scientists, the game can be sillier and less vindictive.

Although the rules are clearly and simply written, where they really shine is in the section on roleplaying. It should be obvious that getting into the character of the Mad Scientist -- cue a plethora of Dr. Evil, Dr. Frankenstein, Dr. Phibes, and Dr. Strangelove-style accents -- is half the fun of playing *Igor: The Mad Scientist's Lament*. The rules encourage the Mad Scientists to be as megalomaniacal as they can be around the dining table, to the point where they should ask the neighbors to storm the lab . . . er, house, with torches and pitchforks in hand. Well, almost.

Igor: The Mad Scientist's Lament is easy to learn and play. Its mechanics nicely simulate the frustrations of becoming a world domineering megalomaniac hampered only by the incompetence of a single minion. As a straight game it plays decently enough, but in the mode and the mind (well, not too much) of an evil genius, and this is fun all the way.

"Bwahahahahahahaha!"

--Matthew Pook

Poking Around the Universe Differently

Who are you?

Errr . . . in the game, I mean.

Most campaigns start with a premise, and PCs fit into that premise in one particular way. For example, in the standard dungeon crawl world, most heroes are assumed to be generic "adventurers," roaming from dungeon to dungeon, embarking on exciting tales of derring-do. Likewise, most Supers campaigns assume that the characters are those with powers far beyond those of mortal men. *Call of Cthulhu* games make the presumption that the PCs are investigators of some stripe, and so on.

Some campaigns take this to a fairly extreme example. For instance, most *Star Trek* games assume the heroes are members of the Federation. And the first edition *Dark Sun* campaign world for *Advanced Dungeons & Dragons* assumed that everyone was . . . umm . . . gladiators.

But interesting stories and games can come out of challenging that base premise. For example, there's been a cottage industry lately of telling tales from odd points of view in established universes, such as reporters, cops, and everymen in superhero worlds. The *Shadowrun Companion* posits jobs for PCs *other* than corporate-invading shadowrunners, such as combat photographers. *Orkworld* (among others) explore fantasy tropes from the point of view of the normally faceless "evil" demihumans and monsters. The entire World of Darkness spawned out of the idea that, instead of playing the things that normally hunt monsters, what if you played the monsters *themselves*? And, showing that all ideas can come full circle, *My Life with Master* posits a game world where you play the servants of these monsters.

Established game worlds are interesting because they usually have a lot of depth and history. Paradoxically, picking a different tack from the presumed protagonists gives the players and GM a chance to explore this history, while poking around corners of the game world that may not be so perfectly illuminated.

So, for example, let's go for an extreme case. Since the trend lately has been to explore the less-powerful, seamier underside of game worlds, how 'bout we pick something a bit more outré? Let's say we're starting up a *Star Trek* miniseries, and we decide that the PCs are all going to be omnipotent beings. After all, they're about as rare as milkweed pollen in the *Star Trek* universe. And we've seen in some episodes that they have their own social structures, intrigues, and problems. But since they've only been touched upon briefly in the television series, the gaming group is free to innovate and make up their own details, all the while remaining firmly entrenched in the established universe. The GM decides that, in keeping with the canonical traditions, the PCs will probably be involved with one space vessel, providing various challenges and obstacles that will guide the crew's development. (Oh, sure, on the shows it seems like the starship crew is thwarting the omnipotent beings. That's what the beings *want* you to think. It's all mice and mazes.) As such, it is decided that the *USS Cheops* will be their experimental laboratory, and the GM fabricates the captain, crew, and history of that vessel.

If the GM and players are feeling really creative in this example, they may all take assumed roles as normal crewmen aboard the *Cheops* for their omnipotent beings to assume. After all, what better way to best observe the rats than to spend time directly in their cages? In this way the campaign can explore two little-seen sides of the *Star Trek* universe: the ultra-powerful beings *and* the normal day-to-day schlubs aboard a starship.

Of course, this is a fairly extreme example, and would require more work than other ideas. But there's still a lot of room in other game worlds. For example, while the default in most fantasy games is the horse-riding do-gooders, a perfectly wonderful campaign could come out of the courtly intrigues of, say, one fantasy noble house. A Supers campaign could center around normal guards at a metahuman imprisonment facility, making for *Oz* with capes. A *Call of Cthulhu* game might center around a group of former cultist friends who all achieve the same kind of "What am I *doing*?" epiphany, marking them on the run from their former colleagues, with normally inaccessible information but also a less-than-healthy mental state.

Some of these campaigns are doomed to being short (such as a *Bunnies and Burrows* game from the point of view of the farmers who can't understand these goldurn uppity rabbits in the field), while others could theoretically extend for quite some time (for example, a martial arts/anime game where the PCs are all the fairly mundane love interests of the mad-whack wuxia wire-fu good -- or bad -- guys).

As a final piece of advice, there is another fairly common sub-genre of these "alternate-point-of-view stories," where the alternative protagonists eventually *become* members of the traditional genre they splintered off from. For example, a story focusing on a group of super-villains might eventually have them become heroic, or the martial-art love interests might eventually gain their own martial arts and start having adventures themselves. While this is certainly possible, keep in mind that once a focus goes "mainstream," it's very difficult -- if not impossible -- to go back. And if there's enough interest to try the mainstream roles the game world usually encourages, it might be better to start up another series (or miniseries) in that world with new characters, rather than risking the magic that makes a successful alternative views campaign.

But, in the end, that is all up to you.

And . . . who are you, again?

* * *

For you *GURPS* fans looking to glean a bit more about the upcoming *Fourth Edition*, the secret Powers That Be (a.k.a. Paul Chapman and Sean Punch) will be answering more questions and revealing more secrets next Friday. The scheduled topic is "Talents, Expert Skills, and Origins." (And, just so you know, "Origins" meaning the upcoming gigantic gaming convention, not something like, "Elements of *GURPS Fourth Edition* include an unknown glowing substance which fell to Earth, presumably from outer space. Do not taunt *GURPS Fourth Edition*.")

Be there, or be raised to the power of two.

Pyramid Review

Blue Moon

Published by [Fantasy Flight Games](#)

Created by **Reiner Knizia, David Farquhar, & Kevin Jacklin**

Illustrations and graphics by **Franz & Imelda Vohwinkel, John Matson, Todd Lockwood, Raimundo Pousada, Jim Nelson, Scott M. Fischer, Daren Bader, Michael L. Phillippi, Lars Grant-West, Brian Schomburg, Claus Stephan, & Graphik Studio Krager**

Dragons designed by **Franz Vohwinkel**

Edited by **TM-Spiele, Christian T. Petersen, & Robert Vaughn**

Boxed basic set, full-color, two 31-card decks, map, rules, three dragon figurines; \$19.95
Additional decks: \$9.95 each

The people are in chaos. Everyone blames someone else for the departure of Blue Moon, the being who used to watch over the eponymous Blue Moon City. The scattered eight races have chosen sides and begun to fight. Winning battles gains the approval of the dragons, the only remaining links to the divine, who reward with shards of the Holy Crystal of Psi. When someone completely restores the crystal, they will recall Blue Moon to his people and become king.

The object of *Blue Moon* is to draw as many dragons to your side as possible.

A board showing a central temple ruin, wherein reside the three dragons, is placed between the combatants. The "map" has places for the cards played during the game, and lists the sequence of play. Players take turns initiating combats. The instigator decides whether the battle takes place in fire or earth, the two elements on the cards, according to which one he feels is a stronger feature in his hand. Each faction begins with a leader, and players add characters and supporting cards to fight for them.

On his turn, a player establishes the power of his attack, for example "Three in fire." The other player must equal or beat this number in the same element, or change the element with a mutant card. This one-upmanship goes back and forth until one of the warriors cannot improve his total and announces his retreat. The winner gets one or more dragons as a reward, depending on the cards played. Taking dragons is like a game of tug-of-war: If your opponent already has dragons, you must first take your "winnings" from him and place his dragons back on the board. Only then may dragons be moved from the center to your side.

Getting the upper hand can be tough. Many cards replace previous cards instead of adding to your total -- if you use a new booster on your character, it just swaps its value for the old one. Support cards for the whole force are better than boosters for individual characters in that they overlap less, and playing them can earn you extra dragons. Many of the cards have special powers that allow or disallow card draws, eliminate card effects, guarantee extra dragons, or raise or lower someone's current combat total, among other results. Some also have various symbols that may, for example, prevent opponents from using cards against you, let you bring out multiple allied characters together, or retrieve cards

you've played for reuse. Few icons are used in the basic game.

The winner of each round gets dragons, and players may continue to play new games until the dragons give the victor some number of shards of the Holy Crystal of Psi.

Blue Moon provides special rules for building decks. With eight races (only two, the Hoax and the Vulca, are included in the basic set), you can choose cards so long as you obey certain parameters on the leader cards. One such limit is on the number of blue moon emblems -- many cards list these, and you may only have so many "moons" worth from other race decks.

One of the big selling points for the game is the art. The cards are oversized (though not hard to handle), in part to do justice to the illustrations provided. In this, the game succeeds admirably. This is some of the finest work of any game currently on the market. It's like playing poker with high art. Even the penciling in the margins of the rulebook is first class. The sculpted dragon figurines are gorgeous pieces of plastic, smooth and beautiful, and presentation on the whole is fabulous.

On the other hand, all this beauty is costing the consumer a chunk of change. Full-color rules, figurines, big cards, fantastic art, and worst of all, the map. The fold-out, full-color, mounted board is as breathtaking as the rest of the production, but it adds nothing to play. The card layout isn't hard to grasp, and the order of play and the dragons could both be presented as more cards. You don't want to argue against it, especially cheap as it is, but it continues a recent trend of putting serious work into components that, while lovely, are a drain on the budget that's hard to justify when a pair of decks would do.

Furthermore, the game's presentation is like a beginner's guide to gaming. That's never bad -- ease of use always trumps superfluous sophistication -- but when you consider the size of the rules, their methodical exposition, and their tendency to repeat important points, it's aggravating to find there are still spots where the rules just don't clear up an important point. Worse, they may go on at length and still be unhelpful. The rules only come in the basic set, not the expansions, but they are also on-line at the website -- so even the designers seem to realize you can do without a lot of this.

It couldn't be simpler to play, but since the opponents' back-and-forth is the heart and soul of the game, it's disappointing to see that most fights are over too quickly to get an impressive war machine going, and your troops never get a real workout. A lot of the play ends up being guesswork, and the winning conditions are strangely vague -- it amounts to "play until you stop."

With two more races available separately, four more supposedly on the way, and Reiner Knizia's name on the cover, there's no doubt **Blue Moon** could have some staying power. But as much fun as it is, if Fantasy Flight Games is so insecure about their product they feel it needs bells and whistles, it's hard to muster your own confidence in it or its price tag.

--Andy Vetromile

Dork Tower!

Dork Tower!

The Last Space Opera Adventure: The Quiet Zone

by Devin L. Ganger

Humanity has spread to the stars and found many mysteries and treasures waiting for them. There are stars enough to nurture all types of societies and cultures. Passengers, commerce, and information flow like lifeblood between a thousand worlds, carried through the interstellar void by countless fleets of hyperspace-capable vessels. These ships are owned by governments, businesses, private organizations, and individuals and depend on the hyperspace navigators, technological remnants of a theorized Precursor race. Without them, the inhabited worlds of the galaxy would fall into ruin and decay.

Unfortunately, it appears that something is affecting the very fabric of hyperspace. There are an increasing number of reports of region from which no recently entered hyper-capable ship is returning. Although this region centers on systems of little importance, there are a handful of important trade routes that move through this section of space. For now, it can be routed around, but if it keeps growing, it will be harder and harder to ignore. Yet no one has made any serious effort to explore the mysterious phenomenon; updating the warning beacons and finding alternative paths is less expensive and easier.

Assumptions

One of the problems of providing a suitably generic space adventure is that space encompasses a wide variety of sub-genres and settings. While there are some specific assumptions made in this adventure, there is also guidance on adapting it to your specific campaign assumptions and preferences. The central assumption, the nature of hyperspace, is treated in a separate section as it significantly impacts the plot of the adventure.

- **Aliens:** Because of the Precursor nature of hyperspace technology, the prior existence of at least one set of sapient aliens is assumed even though they now appear to be extinct. The main antagonists are aliens by default, but there is nothing to stop them from being a group of humans. As long as there is reason for them to have mastered the secrets of the hyperspace travel technology, any group will do.
- **FTL travel:** There can be many different types of FTL travel, but this adventure assumes that hyperspace travel is the most cost-effective method. The vast majority of ships are only equipped for hyperspace; the added space and mass of alternative FTL drives are prohibitive on all but the most special-purpose ships such as couriers and private yachts.
- **FTL communications:** There are several options for FTL communications. The adventure assumes that FTL communication is possible but relies upon the same technology as the hyperspace drives, rendering it unusable by ships within the area of effect of the hyperspace inhibitor and explaining why no victim has been able to report their fate. If FTL communication uses a separate mechanism, the inhibitor can also be tuned to affect it. Or a lucky ship could have gotten word out in time, triggering the search that draws the PCs into the scenario.

The Quiet Zone

No form of travel is completely safe; hyperspace is no different. There are always a small number of ships that meet with various mishaps: equipment

Hyperspace

This adventure assumes that nobody knows exactly how hyperspace works. Instead, the earliest star-faring races discovered remnants of technology that, when analyzed, proved to be highly advanced navigation and propulsion systems. While it could be duplicated by the simplest space-capable industrial bases, the Precursor technology artifacts have defied all analysis to date. Scientists have a limited understanding of the theories behind the hyperspace drive, but no one has cracked the secret of how to design their own drive and navigation units from the ground up.

All hyperspace drives are therefore variations of the handful of Precursor artifacts found. These systems are easily integrated with conventional technology and have been

failures, bad navigation, and other hazards both natural and artificial. Against this background noise, it took some time before people began to notice that one particular region of space had become the site of an abnormal number of lost ships. For a long time, this was merely a statistical anomaly, important to insurance underwriters and risk analysts, and had no real impact on the average space traveler apart from slightly higher costs on certain routes. This area, nicknamed the "Quiet Zone," is home to no major races, planets, or stopovers; there is one major trade route that runs near the center of the zone and a handful of minor ones along its edges.

The Quiet Zone is also situated somewhat near the heart of the known space, from the view of the heroes. Its nearest border is within 30 light-years of Earth or other core system such as a prominent capital or homeworld. Navigating around it is certainly possible and economically feasible, but there is always a significant amount of traffic that runs through it despite the slightly higher insurance rates.

Within the last five years, however, the Quiet Zone has slowly been gaining more attention as it claims more victims. The ratio of ships that simply disappear versus those that have other accidents or malfunctions has begun to climb noticeably, and various individuals and groups have taken notice of this fact. Several have attempted to bring some sort of official attention to area, but despite their best efforts, the Quiet Zone is still merely a spine chilling bit of spacer mythology in the hearts and minds of the average person. It is likely that this state of affairs could have continued for perhaps another three or four years until some government was forced to take note of the abnormal loss rate.

The precise size of the Quiet Zone and loss rate of ships are left deliberately vague; the intended feel is that it be noticeably large in volume, perhaps three to five days' travel, without being so large that it is one of the dominating features of the known universe. GMs should feel free to alter specific details as necessary to fit their campaign.

Involving the Heroes

The actual event that brings the party into the adventure is the disappearance of a luxury passenger liner, the *Simply Paradise*, pride of the Light Speed Cruise Lines. For years, the *Paradise* has been the acme of luxury spaceflight, famous across the known worlds for the smallest detail of every appointment in its cabins. The *Paradise* does not normally travel on any route through the Quiet Zone, but a minor mishap in Engineering prompted her conservative captain to cut short the last leg of her current cruise and re-route home via the Quiet Zone.

That was 26 days ago. A routine communication notified the Light Speed home offices of the changed plans and the revised ETA; that time passed 21 days ago. The potential loss of the *Simply Paradise* with all hands is devastating enough, but the families of several prominent galactic politicians and businessman were onboard. Suddenly, the Quiet Zone and recent increase in disappearances is the priority of every news agency and intelligence service. What is worse is that every ship that has ventured into the Quiet Zone since the

extremely reliable over the years; the number of recorded cases of hyperspace systems failure is still in the single digits. Of course, various critics point out that there are a small but steady number of lost ships and, really, who knows what happened on them? However, not even these critics are seriously proposing the replacement of the hyperspace system.

What this means is that the ubiquitous form of travel throughout known space depends solely on a single technology design. Anyone who can crack the principles of hyperspace will have a massive advantage that they can use against virtually anyone. Given the degree of integration with other shipboard systems required by the navigation and propulsion systems, the hyperspace units are essentially a universal backdoor into the control and command systems of every spacecraft.

One-Way Ticket

Your players may be unwilling to graciously accept that the PC ship is heading into the Quiet Zone despite the actions of their characters, and may even consider this to be railroading. To a certain extent, this is true: The heart of the adventure lies in the depths of the Quiet Zone and the sooner you get the PCs there, the sooner they can get on with saving the world.

last known transmission from the *Paradise* has also gone missing. For 26 days, no ships known to have entered the Quiet Zone have reemerged.

There is one other disquieting event that some claim may be related. Within the past four days, two star systems that are relative neighbors to the Zone have gone supernova, both seemingly triggered by a collision with an extremely massive body. Luckily, neither system hosted inhabitable worlds or large colonies; one was home to a large antimatter refinery, the other to a remote scientific research station. There were only less than 100 lives lost, but the coincidence and implications are disturbing to many people.

The PCs are tasked to investigate these disappearances. They could be hired by a powerful figure, anxious to discover the fate of their loved ones on the *Paradise*. If they are members of the military, they are part of an expeditionary force ordered to scout out the Quiet Zone. They could themselves have friends or family who have gone missing and command the resources to mount a rescue. They could even be on one of the final ships to cross into the Quiet Zone, themselves victims of this strange phenomenon.

Into the Zone

If the PCs have been hired or ordered into the Zone by an individual or organization with sufficient resources, there are several interesting facts that they will be made aware of:

- **Communications:** Not only are there no ships coming out of the Quiet Zone, there are no communications coming out of it. This leads authorities and experts to theorize that something is affecting the basic nature of hyperspace within the Zone.
- **Probes:** Various scientific probes have been deployed around the known borders of the Quiet Zone. While no one understands exactly what hyperspace is, it is still possible for experts to measure some aspects of it. Their probes have registered a definite quantitative difference in the region surrounding the Zone; unfortunately, nobody is exactly sure what it means or how it affects hyperspace.
- **Growth:** One worrying fact that is borne out by both statistical analysis and by direct hyperspace observation is that the Quiet Zone is growing. At the current rate of growth, the Zone will overtake Earth (or whichever system of import the GM has placed the Zone adjacent to) within a year or two at the most.

There is one other fact that has been noticed by the press, although the only outlets reporting it are the tabloids: Every ship known to be lost in the Zone uses only the hyperspace propulsion system. No ship with an alternative means of propulsion has yet entered the Zone. This fact should serve to give the PCs some measure of confidence and hope, as their vessel will be the first to be so equipped (unless, of course, the GM has placed the PCs on one of the ships that fall victim to the Zone before warning is raised). At this point, no one realizes that the hyperspace systems provide a universal access point into every ship system, including alternative propulsion methods.

The PC ship is swiftly equipped and provisioned and launches within a matter of hours; it should be a short journey from the core system to the current border of the Quiet Zone. Entry to the Zone itself can be accomplished as swiftly as

There are a couple of ways to handle this, but the best is to arrange a motive for the PCs to get into the Zone. Perhaps a loved one on one of the missing ships needs a specific medicine or therapy and is about to run out of their usual emergency supply, or the expedition backers have granted a high bounty for comprehensive readings from the heart of the Zone. The precise reasons will depend on your players and their characters, so take a moment to reflect and be creative.

External competition is an excellent way to provide motivation not only to the PCs, but to the players as well. Getting word that a rival team, known to be aggressive, is also heading into the Zone to try and steal away the bounty and the glory can provide a suitable spur for cautious players. Friction with an observer NPC assigned to the team as the backer's representative can keep the PCs on-pace and determined to outfox the interloper. Direct orders from military superiors can work wonders.

If these approaches fail, step up the pace of the equipment failures. Remember that the hyperspace unit is tied directly into all major ship systems; feel free to initiate transient but catastrophic life support failures that will occupy the attention of the PCs while their ship travels into the Zone. Navigation readings can be inconsistent or outright false. Give the PCs a crisis while you move the ship -- and the plot -- along behind the screen.

the PCs deem necessary. Probes of the local hyperspace will confirm the latest readings from the experts.

The transition across the boundary is marked by a loss of FTL communication and a barely perceptible change in the hyperspace engines. Nothing shows up on any diagnostic or monitoring equipment, but there is a noticeable change in the feel of the ship that no one can quite put their finger on. If the heroes wish to shut down the hyperspace drive, they may do so easily; restarting is equally easy. The hyperspace navigational system appears to have suffered a minor fault, however; attempts to reset it for headings that would take the ship back out of the Quiet Zone are rejected. Cautious parties who wish to test their alternative propulsive systems will find that there is no difficulty in engaging these systems and moving back out of the Zone.

Once the ship gets about 10 light years deep into the Zone, however, things start to become a bit more difficult. The first sign that something is badly amiss is that the hyperspace navigation system sets the ship on a course deeper into the heart of the Zone. Attempts to reset the ship heading appear to work at first, but the ship quickly returns to an inward course. Alternative navigation systems are also showing symptoms; they, too, are refusing to accept courses out of the Zone.

At 20 light years, the inevitable happens; the hyperspace system no longer accepts any input and will not shut down. Short of physically destroying the linkage between the ship's drives and energy source, the ship will swiftly travel into the heart of the Zone. As it does so, the crew will lose control of all remaining navigation and weapon functions, although sensors and life support still respond normally.

Lockdown

After a length of time proportionate to the size of the Quiet Zone in your campaign, the ship will arrive at a small brown dwarf star system well away from any trade routes or occupied planets. This dwarf is somewhat near the center region of the Zone but is by no means the exact center or in any other way immediately distinguishable from prior review as a place of import. Upon arriving at the star, ship sensors will immediately detect a massive number of ships; to all appearances, every ship that has ever been reported missing in the Quiet Zone is parked in the same orbit, about 1 to 2 AUs distant from the primary.

The ships are in varied states of repair; some ships have been there for many years and exhibit micrometeor pitting, while others are obviously new. Recently lost ships are still radiating energy signatures on multiple bands, although attempts to communicate with them will fail for the time being. As the ship gets closer to this mothballed fleet, it should become relatively easy for the PCs to pick out specific ships they may be looking for, such as the *Simply Paradise*.

Once the ship pulls into its parking orbit in the derelict fleet, the hyperspace systems shut off. No amount of tinkering will restart them even though they appear once again to be accepting input normally. A cursory examination will reveal the fact that the core components of the hyperspace drive system have been damaged; they appear melted and fused as if by a massive energy surge. On large ships, any spare components that the PCs may attempt to swap into place will visibly suffer such a surge that leaves them in the same condition. Alternative propulsion systems are still offline and not accepting any navigational input.

At the same time, local communications are unlocked and the PCs should be able to converse with crew and passengers onboard other ships in the derelict fleet. It will not take long to confirm that each ship has gone through the same experience. Although none of the hyper-capable ships in the fleet can move, there is plenty of ship-to-ship shuttle traffic; many of crews of the smaller ships have been relocated to the *Simply Paradise* in an effort to conserve resources and consolidate escape efforts. The *Paradise* has clearly become the social and technical hub for all of the refugees within the derelict fleet, as the larger ships are in regular communication and someone is always ferrying a load of people to and from the luxury liner.

Enter the Freighters

How Long Does it Last?

At some point, someone -- an NPC merchant on the outskirts of the fleet, one of the shuttle drivers, or even one of the PCs -- will notice that there are two ships that are actually moving around the system. Both of these ships are extremely large freighters that had disappeared several years before; both are models that incorporate a large amount of automation, allowing them to be efficiently run by a one or two-person crew. These ships appear to be slowly circling the perimeter of the derelict fleet in a fashion that indicates that they are not following a pre-programmed course.

It should occur to someone that there is a significantly non-zero chance that these ships may still retain functional hyperspace components. The PCs, who came into the Zone with malice aforethought, are likely to be the best-equipped for the task of shuttling over to one of the freighters and recovering any functional modules. A scan of the freighters shows that the atmosphere on board cannot be breathed by the heroes and is in fact mildly corrosive, so full atmosphere suits are required.

There is no sign that any notice is taken of the launch of the recovery mission and they are easily able to match velocity with the nearest freighter. Neither docking port responds to the normal signals, forcing the PCs to go on an EVA to gain entry to the freighters. There is one docking port on the aft end of the ships, near the engine exhaust; armored and shielded military-grade gear will protect the PCs from any stray radiation that the engines are emitting at their current output level, but they will then have to work their way through the length of the freighter, cutting through multiple internal cargo bays and bulkheads to the control cabin on the bow.

The easier docking port is the one that is located approximately 50 meters aft of the control cabin on top of the ship; there are only two bulkheads separating this port from the control cabin. The corrosive atmosphere will still pose a problem for most EVA suits, so speed is definitely required.

Entry into the ship is challenging but within the grasp of the PCs; cutting through the two intervening bulkheads would be straightforward if not for the complication of the atmosphere, which is also slightly flammable. The PCs will need to take suitable precautions to minimize the risk of igniting a fire with their cutting equipment.

Once the PCs gain access into the control cabin, they gain another reason to complete their task quickly; the freighter is changing course and acceleration, and appears to be changing onto a cometary orbit. If they cannot get back out into the shuttle quickly, they will be unable to return to the derelict fleet given the shuttle's fuel reserves. Unless the PCs are overly hasty and careless, this should not prove to be a problem; retrieving the hyperspace components requires no special effort, and once they are removed the freighter's engines shut down. A quick visual examination reveals no visible signs of damage or flaw. At this point, getting back to the shuttle and returning to the fleet are simple tasks.

Mama, I'm Comin' Home

Upon their return, the heroes will find out that the freighter they visited sent and received two coded transmissions right around the time they gained access to the control cabin. The outbound transmission was a high-power FTL signal aimed somewhere out into the system's cometary shell; this transmission received an immediate response, after which the freighter immediately assumed

The derelict fleet does not have to be a quick stop for the PCs, although it certainly is written to play that way. Given the number and variety of ships stuck in the Zone, combined with the rich atmosphere of the *Paradise*, it can take some length of time before the PCs are able to discover how to escape from the Zone. Running a few sessions onboard the *Paradise* allows the PCs to run into old acquaintances, settle old scores, and create new ones.

The longer that you keep the action in the system, the more likely it will be that the *Simply Paradise* ends up becoming a sort of Rick's Place in space. The barriers between different social classes will start to break down, allowing the PCs to form useful associations outside of their normal circles. These associations could be very useful if you intend this scenario to be a launching point for a new campaign.

Once you decide that it is time to move on to the final act, you can have one of the NPCs discover the freighters and propose a mission to examine their hyperspace modules, if your PCs are not willing to take the initiative.

Fine-Tuning the EVA

You might be tempted to

its new course. The contents of these later transmissions are not known, since they were using FTL technology and the fleet's FTL receivers are currently burned out.

The party can now use the secondhand hyperspace components to rebuild the drive system of one ship (or two, if they successfully retrieved components from both freighters). The obvious choice is the *Simply Paradise*; she has enough life support capacity to cram all of the survivors of the fleet on-board and make the run for Earth before the overloaded environmental plant breaks down critically. However, this means running the risk of falling afoul of the Zone again, since the *Paradise* has no secondary propulsion system.

Whichever ship the PCs decide to take, they will be able to get the drives powered up and break out of orbit on their way to the system exit vector for Earth. The hyperspace propulsion and navigation appear to be operating adequately, although there is some gradual degradation of performance. They are able to transition to hyperspace and begin their journey home. If they attempt to send a signal to Earth, they will be able to establish basic handshakes and then the communications system will die.

Anyone who is performing sensor sweeps will have a difficult modifier to detect that the ship is being followed. With an exceptional result, the PCs should be able to determine that the trailing ship is one of the freighters they took the hyperspace components from.

If this is not enough to make the PCs nervous, a couple of hours of travel time should do the trick. By that point, the trailing freighter is obvious on the scanner even though it is still at far range; it now has a mass reading equivalent to a small planetoid and it is steadily growing. If the freighter follows the PCs back to Earth, it will have an effective mass 500 times greater than Jupiter at its current growth curve, and it is not hard to imagine what the likely consequences will be if that kind of equivalent mass is slammed into the Sun.

What's Going On

Several centuries ago (GMs should adjust this for their campaign as appropriate) a reclusive race of aliens made a major discovery in the cometary cloud of an obscure brown dwarf system: a forgotten cache of Precursor-level devices and information stores. They began a cautious and through exploration of their find and quickly discovered several important technologies:

1. **A hyperspace inhibitor.** This device produces a field that burns out the common components of all Precursor hyperspace systems within a range of one or two light years. This device appears to work by triggering built-in self-destruct mechanisms within the hyperspace components; the proper encrypted software command will safe a given hyperspace system and prevent it from being affected by this device. The components on the freighters have been configured in this fashion.
2. **A mass generator.** This device uses high-energy physics to simulate the presence of an arbitrary mass and can be used to create gravitational fields of planetary or stellar strength. The freighters have one of these devices installed in their cargo bays, along with a redundant hyperspace drive, allowing the freighters to follow the PCs ship even though they've

change the corrosive atmosphere if you are not using aliens in your campaign; after all, another group of humans has no need for an exotic atmosphere. The main purpose it serves is to keep the PCs focused on their goal; get in, get the modules, and get out. If they get curious and start looking around, or come in through the rear port, they are likely to stumble over the load of curious high-energy apparatus stowed in the after cargo bays, as well as a complete secondary hyperdrive. A decent alternative is to have a high-oxygen atmosphere; this makes cutting through the bulkheads riskier for the PCs and reduces the number of compartments they would have to completely vent to minimize the risk of an explosion.

The cargo bays on these freighters are modular systems; as a result, there is no direct connection between the control cabin and the cargo bays. There are two or three central compartments along the spine of the ship that provide the core structure for the modular bays to connect to. These compartments, which also have no direct connection to the control cabin, are primarily intended for technician and inspector access; the regular crew is deliberately prevented from accessing the cargo bays to minimize the likelihood of tampering and pilferage of valuable cargoes.

The entities behind the Quiet Zone chose these freighters for a specific reason: they have lots of free space, which means there was enough room to install their equipment as well as enough shielding to prevent

removed the hyperspace components in the control cabins.

3. **A database.** This information store is a comprehensive reference to the underlying theory and detailed use of the hyperspace technology. Although the aliens have been working with it cautiously, they still do not fully understand the workings or the theory; they have gained enough familiarity with the material to be able to become adept at using the hyperspace units as backdoors into the computer systems of all ships within range, creating the Quiet Zone. The ship disappearances have large been a result of their experiments over the years.

Why have the aliens now shifted into a more aggressive stance, one that is sure to attract attention? In particular, why have they begun destroying star systems? While the specific choice of motives and goals are left to the GM, there are several possibilities.

First, the aliens could themselves be victims. The Precursor technology cache was actually meant to have been a disposal container that has somehow survived. A virulent artificial intelligence has co-opted the aliens' systems and taken overt control in the pursuit of an ancient vendetta. It could even be altering the alien psychology and physiology to make them extensions of its will (such as the Perversions in the Vernor Vinge novel *A Fire Upon the Deep*).

The motive could be religious. Always reclusive and introspective, the alien religious structure has been recently taken over by a fanatic element, one that views the other races as horrible mistakes. Thanks to the Precursor technology, they finally have the means to purge these mistakes from the universe.

Yet another motive is that the aliens have a deeply rooted inferiority complex, based in their inability to think swiftly and adapt to changing conditions. Over centuries of testing and plotting, they've come up with the perfect scheme to identify those races who are best able to think on their feet and ensured that these races will lead the supernova generators back to their own worlds, thus solving the problem without any direct confrontation.

It is also worth noting that nothing prevents the aliens from existing in other star systems both in and out of the Quiet Zone. While the Zone was their main research location, there could very well be others; how else did other ships escape to trigger the two prior supernovas?

If the PCs become aware of the role that the hyperspace components are playing in allowing the aliens to track and control their ship, they may attempt to remove it from the system. Without alternative propulsion systems, this will be no help. Even with other FTL drives, the hyperspace units are such an integral part of standard ship systems that the PCs will have a large amount of stopgap engineering on their hands in order to make the drive usable. This will render them immune to alien control; however, it will not keep the freighter from following them and it may in fact remove their ability to detect and track the freighter.

Endgame

At this point, the PCs have three major choices:

1. They can continue on to Earth. Although their FTL communications are shot, they still have control over their navigation and drive systems and will have the use of in-system communications once they arrive. This gives them about an hour or two to raise local military aid to destroy the incoming freighter before it can impact Sol and trigger a supernova.
2. They can navigate to a different star system. Here the timing will be tricky, as the freighter will only collide with the system primary if their ship is still in-system. If they break and run too early, the freighter will follow

it from showing up on scans. The corrosive atmosphere will help convince their eventual victims to take the bait of the hyperspace modules without poking around too much or stopping to wonder why these two ships just happen to have functional hyperspace systems.

If you have enough PCs, you might consider the idea of sending simultaneous missions to both freighters. If the missions are successful, there will be two complete sets of hyperspace components; two of the largest ships can be rescued from the derelict fleet. For a relatively short trip back to Earth, these ships can be loaded beyond normal capacity to ensure that all survivors of the fleet can be rescued, especially if one of them is the *Simply Paradise*.

them back into hyperspace and to their next destination.

3. If they rescued two ships, they can attempt to lure the freighter onward with one and attempt to destroy it with the other. The freighter will follow whichever ship has the components taken from it and ignore the other, leading to the possibility that they will be forced to engage the freighter with a weaponless passenger liner.

For a really tidy solution, the PCs can attempt to return to the brown dwarf around which the derelict fleet orbits. This will certainly succeed; there are no safeguards in place to prevent this outcome, as the aliens behind the supernova devices are extremely arrogant. However, there is one unpleasant side effect. Returning to the system will trigger the destruction of their working hyperspace components, thanks to the hyperspace inhibitor that the hostile aliens have set up, since the aliens reset the PCs' hyperspace system as they left the system. This will leave the PCs unable to flee the supernova that is triggered; on the other hand, the aliens will be caught flatfooted and be unable to evacuate in time either. This option is suitable if you are bringing the campaign to a final close and have opted for the aliens to be based solely in the brown dwarf system.

The heroes may want to match velocities with the freighter and attempt to disable the doomsday device. If they are able to get back on the freighter in hyperspace (make it horribly difficult and exciting), they are certainly able to do so with a bit of luck and some applicable skill rolls. Unfortunately, there is a huge consequence; the mechanism has an anti-tamper mechanism. If triggered, it will divert the staggering energy input of the device into a galaxy-wide pulse of energy that will completely and permanently disable any hyperspace modules in range. This is certainly enough to cover all of known space, leading to the immediate breakdown of society into planetary islands. The death and devastation caused would be immense. However, nothing prevents the further manufacture of more hyperspace components, leading the industrial worlds in a frantic period of rescue, rediscovery, and rebuilding. And the aliens are still out there, ready to do it all again?

The natural tendency for the heroes may be to seek out the aliens for a direct confrontation. For a proper "last adventure" feel, this should not be allowed to take place. The alien menace is supposed to be cold, overwhelming, and -- above all -- impersonal. If they think that they are being directly chased, they will take steps to protect themselves, which will almost certainly involve wide-spread destruction of the hyperspace modules. Have the PCs deal with the immediate threat, and if they really want to chase down the aliens, then you can launch into the new campaign of a subtle alien hunt with the potentially devastating consequences of direct confrontation.

Whatever method the PCs use to resolve the adventure, their universe will have certainly changed. The Solar System may have been destroyed by hostile aliens, and the heroes may have given their lives to deal a blow to them; regardless, the galaxy has been made aware of a terrible new threat to the hyperspace propulsion systems that all known space travel depends on. The stars will never be the same -- and neither will your campaign.

GURPS Fourth Edition Rules Leak #2

Expert Skill†

IQ/Hard

Defaults: None.

An Expert Skill represents cross-disciplinary knowledge of a single, narrow theme. When answering factual questions *on that theme*, you may substitute a roll against your Expert Skill for any IQ-based roll against any skill that has a default. Expert Skills do not exempt you from Cultural Familiarity or Language requirements, and never provide the ability to do practical tasks. Experts sometimes complement Expert Skills with related Area Knowledge skills, but you must learn these separately.

You *must* specialize by theme, and the GM is free to forbid any theme he feels is too broad. Some examples:

Computer Security: Expertise at combating computer intrusion ("hacking"). Can stand in for Computer Operation, Cryptography, or Electronics Operation to spot "holes" in the security of a computer system. Use Computer Programming to patch or exploit such holes.

Conspiracy Theory: The study of interlocking networks of conspiracies. Can substitute for Anthropology, Geography, History, Literature, or Occultism to answer questions about conspiracies, and can also work as Intelligence Analysis for this purpose (only). This does *not* include hidden inner secrets, which are the province of Hidden Lore.

Egyptology: The study of ancient Egypt. Can function as Anthropology, Archaeology, History, Linguistics, or Occultism for that purpose.

Epidemiology: The study of the spread of disease. Can serve as Biology, Diagnosis, Forensics, Geography, or Mathematics when deducing how a disease was spread.

Hydrology: The study of a planet's water. Can be used in place of Biology, Chemistry, Geography, Geology, or Meteorology to answer questions about precipitation, flooding, irrigation, etc.

Military Science: General expertise on military capabilities. Can substitute for Artillery, Armoury, Strategy, or Tactics to answer questions about -- but not *use* -- weapons or strategies.

Natural Philosophy: A general skill that usually replaces specific science skills (which might not even exist yet!) for scholars at TL1-4. Can be used in place of any science skill (e.g., Biology or Physics) to answer questions about how the universe is *believed* to work.

Political Science: The academic study of politics. Can substitute for Geography, History, Law, Politics, or Sociology when performing political analysis.

Psionics: The study of the psionic mind and brain. Can function as Biology, Diagnosis, Physician, Physiology, or Psychology when dealing with psi phenomena in living beings. *Cannot* substitute for Electronics Operation, Electronics Repair, and Engineer specialties that deal with psychotronics.

Thanatology: The esoteric study of death. Can stand in for Anthropology, Archaeology, Occultism, or Theology when dealing with death and the dead.

Xenology: General knowledge of the *known* races in your setting. Can substitute for Anthropology, History, Physiology, or Psychology to identify a member of a race different from your own, or to answer general questions about the race and its culture.

Making the Most of Non-Optimal Characters

for Point-Based Systems

by Elizabeth McCoy

Optimizing, min-maxing, point-juggling, munchkining, power gaming . . . Some people hate it, claiming that too much focusing on the numbers makes the resulting character flat, lifeless, and -- usually -- some form of combat wombat. Some people [swear](#) by [it](#), claiming that having an effective character means they are good at "useless" concept skills as well as central concept skills.

While many people are of the latter category, there are some concepts that *don't* work so well when optimized, for in-game or meta-game reasons -- and some players (or GMs) who hate the very idea of a character whose concept is "effectiveness." With a GM willing to observe as you work through the steps, however, you may be able to play those non-optimal concepts without sacrificing play effectiveness (i.e., spotlight time and fun).

Note that all of these are for point-based systems, focusing heavily on *GURPS*. The basic concepts behind each technique should still be applicable to most point-based system which can be tweaked to "optimize" characters. Further note that all but one are player-oriented; a GM can always suggest a technique to a player, but for the most part, if the player wants to optimize, the player will optimize. (A good player will have an interesting character with a workable concept *anyway*, and the GM may never know.)

Also note that most of the player-based ones take the premise that points are representing time spent learning a skill, either directly (such as *GURPS 3rd Edition* ruling that one point is gained by 400 hours training), or more abstractly (it's up to the GM how long it takes to get skill/1 in *In Nomine*). This is likely to be the majority belief of "what these skill points mean," but there's always a chance a GM has come up with some new twist on it.

Technique One: Reverse Optimizing

This is the basic tactic for just about any character that's not min-maxed, and therefore gets the most explanation.

To pull off this technique properly, you'll need to "show your work." Don't just design your non-optimized character and expect your GM to understand that you really need those twenty extra points just to match up to the other players of similar concepts. You may also need to let the GM think over this for a while, with two character sheets in hand, and absorb that character X really *is* character Y.

The character concept that works best with this technique is the "Grizzled Old Expert." Someone who might not be as agile, strong, or natively talented as the young kid over there, but has enough skill under his or her belt to best the upstart. This will probably be represented by a lot of skill in the area(s) of expertise, but only middling stats.

Do up that character sheet first, and try to rein in impulses to really go over the point-budget. *Then* save a copy, and optimize. Point-squeeze. Use every trick in the book, every "point crock" you can come up with, and make those numbers squeal. You've probably saved points along the way -- resist the temptation to increase your skills at this stage. You want to compare apples to apples, not apples to apple pie. (Use a third sheet for adding new skills and/or increasing your existing ones.)

Now -- if you haven't decided to change concepts to a young, talented upstart -- show your sheets to the GM and explain that you *could* play this sheet, but your concept of an older, experienced character would be better suited by this sheet over here. Once you've got the GM agreeing that yes, it's clear that on a meta-level, this cheaper sheet is the same as the concept-sheet, you can spring the third or fourth sheet on your hapless Game Master and point out that if you used the cheaper sheet, you could have skills at *this* level, or a few extra minor skills at these levels.

Gauge your GM's reaction to "stage two" carefully, of course -- moving too quickly will make most GMs dig in their heels instinctively. A more measured pace will probably defeat knee-jerk reactions. You need to give a little time for the notion of "meta-fairness" to sink in. Spending a chunk of your "saved" points on things you don't expect to come up frequently, but which do round out the character logically, is advisable here. Besides the three-dimensionality which this lends your concept, the GM will be reassured that you're not munchkining to make an Über-Fighter, or worse, an Über-Everything.

If you're using *GURPS 3rd Edition*, or any other system where it's harder to learn a skill the more skilled you are, then you're going to be accepting a slight penalty for playing your concept -- you'll have to pay more earned points to advance beyond your current skill levels. If you've got your GM wrapped around your little finger, you can try to sucker him or her into letting you put earned points into the optimized character and use the resulting skill levels for your grizzled expert -- but most GMs will probably point out that if you want all the advantages of a young Turk, you should play the young Turk. A grizzled expert already *knows* the tricks, and *should* have a harder time increasing skills. You'll probably do better nobly accepting this minor inconvenience for the sake of the concept.

Technique Two: The Niche

Another term for this is Johnny One-Shot or Johnny One-Spell, but so long as you're having fun, there's nothing wrong with a J1-S. With this technique, you figure out what niche is not being fulfilled with the party, and partially optimize your character toward that niche. If you're the best lock-picker, then does it matter that you haven't got sixteen levels of Finger Dexterity, but went for the Booze Tolerance? (It may, to some players, of course; don't let them look at your sheet.)

This technique, naturally, works best when you're the *only* one of X. If you're doing a young warrior in a group of young fighters, it's not going to work well if your concept was "Brash Young Warrior" and your sheet says the others can cream him with one hand tied behind their backs. I.e., you'll have to optimize to keep up, or adjust the concept to "Brash Young Warrior Who Talks Better Than His Buddies Fight." Adjusting the concept *is* a valid option!

However, if you've got an alcoholic healer with a degree in Zen Haiku Flower Arranging, and it's the *only* healer -- can the rest of the group complain, so long as they get patched up?

Technique Three: The Background

In many ways, this is a re-visiting of Technique One, geared toward having a collection of "useless" skills, like "Area Knowledge: Community College X" or "Hobby: *Paranoia 1st Edition*" skills.

The easiest way to get a GM to accept this is via Technique One, with an optimized character sheet showing that you could buy all this if you wanted to squeeze your points. Instead of playing the "Grizzled Expert vs. Young Upstart" theme, you'll want to point out that your concept is Joe Middle-aged, and while you *could* cook the points, it would become implausible for your 18-year-old Wonderkid to be managing Joe's Blacksmithy yet, and you really want to have that elderly parent to take care of, and all the other "middle-aged" aspects of the concept that don't work if you're playing a Child Prodigy. As with Technique One, give the GM time -- perhaps even more time than with adventuring-skill comparisons -- to assimilate the "these two things are really the same (only that one's cheaper)" notion. Even a GM who wants to try this may have instinctive bad reactions that he or she will need to work through.

The alternative way to make your background work for you is suggest to the GM that *everyone* from this background should get certain non-adventuring skills. (This is a lot like Technique Five, that way.) You'll want the package to be small, and have things like, "Knowledge: Cash Register Codes," "Bicycling," and "Card Games: Bridge." I.e., work hard to make this "freebie package" both low-level, and skills that either the GM will cringe if you *don't* have, or doesn't care one way or the other if you do. And if everyone has this little package of extras, including NPCs,

Technique Four: Amnesia

If your GM makes the character sheet, you'll never know if it was optimized or not. Play the hints the GM gives you, and there's your concept.

Naturally, this should only be done if you trust your GM not to then *run* the character like a puppet by giving you stage directions in the form of "hints." (Which the GM may or may not be even aware of doing!) Character sheet or not, both GM and player have to trust each other to get the concept roughly the same.

Technique Five:GM Fiat -- and Bribery

For GMs who swear that only munchkins minmax, a reminder: Somewhere out there is at least one player who will make points scream during character generation, not to turn the character into Über-Whatever, but simply because it's unaesthetic to be inefficient. They'll probably be lingering over the disadvantage choices, trying to pick just the *right* ones for the concept. Yes, they do have a concept; it's just that the concept is "sleek and efficient."

Therefore, for these few, proud concept-optimizers -- and all the way down the spectrum to the would-be point-croaking minmaxers -- you need to offer them a reason to be unaesthetic in character design. If you've got a goodly number of points to play with (i.e., just about anything *except In Nomine*), you can designate X number of points to be spent on attributes, Y on skills, Z on advantages, and so on. If you increment the number of Y points -- the ones for skills -- then lack of freedom with the attribute points doesn't pinch so much. You can stack the deck in favor of "useless" skills either by insisting some number of points be spent on them, or by giving extra points specifically for them. (E.g., "Every character will receive 10 extra points which *must* be spent on something useless in combat, useless in politicking, and somehow integral to the concept.")

Another trick is to change the math -- in effect, give out points for the Grizzled Expert. You'll still need to divvy things up into attribute points, etc., but let the players change attribute points into skill points at some beneficial rate -- if 10 *GURPS* points of attributes become 15 or 20 as skills, the concept-driven optimaxers will start balancing what they need for the concept (e.g., hot pilot) with what DX fits (15? or 13?). You *may* want to set skill caps for this technique, so that after someone's gotten to the glass ceiling, extra points mined from attributes will *have* to go into stray skills.

A Reminder

If the GM is optimizing characters, and the players aren't -- or vice versa! -- there's going to be a disconnect in expectations when NPCs and PCs interact. One or the other will wind up being more effective, and both sides will be going, "Huh?" If you're a player in a new game, and you don't know the GM's character creation style, ask for a few sample characters to see if they're optimized. Don't forget to explain why you're checking: Because you want to make sure that you don't create something out of line with the rest of the universe. If you're the Game Master, do up a few characters in your normal style of NPCing. If you're hostile to optimized player characters, be sure that you're not going to optimize some NPCs "as a surprise" for the non-optimized PCs. Create them in your normal, concept-driven style, and just add more points so you can gauge the relative power levels.

The Shanghai Municipal Police

by Hans-Christian Vortisch

"The International Settlement is policed by a British-officered force that is one of the toughest in the world."

--GURPS *Cliffhangers*

Whether following the steps of Jack Brady to foil the plans of the Order of the Bloated Woman to open the Great Gate for the Mythos in 1926, whether visiting the *Blue Lotus* during the 1932 Sino-Japanese "Shanghai incident," or in hot pursuit of "fortune and glory" in 1935's *Club Obi-Wan*, characters will find [Shanghai](#) an extremely interesting place to stay between the wars. Unfortunately, it also was an extremely dangerous place. Enter the officers of law and order: the Shanghai Municipal Police.

This article details the composition, training, and equipment of that force, along with its most famous officer, Assistant Commissioner William Fairbairn. Complete details on his Defendu martial art and the SMP's Red Maria armored buses are provided for *GURPS*, giving additional flavor to a [Cliffhangers](#) or [WWII](#) campaign or allowing a [Cops](#) or [SWAT](#) campaign with a spin. It is also a uniquely colorful background for [Martial Arts](#).

Much of the information will also be interesting for *Call of Cthulhu*, *Feng Shui*, and *Indiana Jones* campaigns set in the 1920s and 1930s.

Shanghai Municipal Police

"Omnia Juncta In Uno (All joined as one)"

-- Motto of the SMP

Prior to WWII, Shanghai was divided into three districts, only one of them Chinese-administered. The smaller of the two Western-administered enclaves was the French Concession, backed up by a large French military force and effectively a French colony. The larger, which contained the British, American, and most other consulates, was the [International Settlement](#) (pp. CL63-64). Together, the French Concession (close to 480,000 inhabitants) and the International Settlement (more than a million inhabitants) occupied 12.66 square miles. Some 90% of their inhabitants were Chinese, who had little rights, however.

The Shanghai Municipal Police (SMP) was the law enforcement agency responsible for policing the mainly British-run International Settlement. Founded in 1854, it enforced the law in that part of the city until 1943. Throughout that time, its strength rose to a peak of 6,000 active officers during the 1930s, many of them Westerners with either a bent for adventure or problems at home -- Americans, Irishmen, Central European Jews and "White" Russians were prominent among the expatriates in the city.

In no way was the SMP's composition representative of the Settlement's citizens, but it *was* a very international force; among its ranks were Chinese, Englishmen, Irishmen, Japanese, Russians, Scotsmen, Sikhs, and a sprinkling of Americans, Australians, Austrians, Germans, Swedes, and others. However, the majority of the upper ranks were British, and most of the foot constables were Chinese.

In an interesting twist, there was not "the law" for the SMP to uphold; treaty agreements between China and the 14 "favored nations" assured a judicial system known as "extra-territoriality." That is, an accused citizen of a favored nation (Belgium, Brazil, Great Britain, Denmark, France, Italy, Japan, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and the U.S.) had to be brought before a consular judge of his own country. Chinese as well as all foreigners without extra-territorial rights were brought before a Chinese court.

Due to the unique composition and locale of Shanghai, the city was thriving with criminals of all sorts and descriptions (also see *The Green Gang*, below). Some of them petty, many of them dangerous -- kidnapping, murder, and espionage

covert ops were commonplace. Violent clashes between police and criminals were frequent; in 1933, the SMP suffered one dead and eight wounded officers, while killing 11 criminals and wounding 13. That was a "quiet" year . . .

The SMP was headquartered at the Central Police Station at 239 Hankow Road, but maintained smaller posts throughout the International Settlement and also mounted patrols on foot and on motorcycle.

The Commissioner of Police was the third-best paid official in the International Settlement, earning 3,215 Yuan (Mexican silver dollars) monthly in 1934 (equivalent to \$2,600).

Assistant Commissioner William Fairbairn

William Ewart Fairbairn was born on February 28, 1885 in Rickmansworth, England. He joined the Royal Marines (p. W:KM40) at age 16, and after serving six years with them, partly in Korea, joined the SMP in 1907. During one of his foot patrols, the young sergeant was severely beaten up and left for dead by a Chinese gang. This led to his decision to whole-heartedly study close combat techniques.

Fairbairn had already been an infamous barroom brawler and [bayonet fighter](#) in the Marines, where he developed several new bayonet techniques. From 1908, he trained extensively in various Eastern martial arts, including Pakua Chang under Tsai Ching Tung, a former instructor at the Chinese court, and Jujutsu under Professor Okado. In 1931, he received a 2nd-degree black belt from the Kodokan Judo University in Tokyo. From his experiences he developed *Defendu*, a combat style optimized for police use. During his over 30 years in the SMP, he was personally involved in more than six *hundred* violent encounters!

Fairbairn soon became the SMP's Chief Instructor in close combat techniques and firearms training. An excellent shot, he wrote manuals on instinctive shooting and proper pistol technique. He also formed and commanded the *Reserve Unit*. He held training courses in pistol shooting for the New York Police Department and the British Army Small Arms School. His proficiency with the blade was legendary, and his experiments would lead to the famous Fairbairn-Sykes commando dagger (p. W:HS18). Fairbairn retired from the SMP in 1939, to take up instructing the British Commandos (p. W:HS11) in 1940.

Fairbairn had a wife, son, and daughter.

Age 50 years (in 1935); 5'11"; 160 lbs.; a tall man with round glasses and white hair. 329.5 points.

Attributes: ST 12 [20], DX 16 [80], IQ 13 [30], HT 12 [20]

Basic Speed: 6.25 Move: 6

Dodge: 7 Parry: 13 (Unarmed), 10 (Knife)

Basic Damage: 1d-1 thr, 1d+2 sw (1d punching, 1d+2 kicking)

Advantages: Alertness +1 [5], Combat Reflexes [15], Composed [5], Fit [5], Legal Enforcement Powers [5], Police Rank 5 [25], Reputation +2 [5] (among policemen in Shanghai, all the time), Status 1 [0] (free from Wealth), Strong Will +2 [8], Toughness [10], Wealthy [20].

Disadvantages: Bad Sight [-10], Code of Honor (Police) [-5], Duty (15 or less)

Defendu 10 Points

"This system is not to be confounded with Jiu-jitsu or any other known method of defence, and although some of the holds, trips, etc., are a combination of several methods, the majority are entirely original."

Fairbairn, William. *Defendu -- The Official Text Book for the Shanghai Municipal Police, Hongkong Police and Singapore Police* (1926)

Defendu was developed in the mid-1920s by Fairbairn on basis of his extensive martial arts training, incorporating elements of Jujutsu (p. MA86), Gatka (a Sikh martial art), Pakua (p. MA94), and time-tested street brawling.

Note that Defendu is *not* the same as the Fairbairn Close Combat Training (p. W:HS10) of WWII; although it was based on it, the latter was modified and optimized for military use. In particular, Defendu is less "deadly," as it was mainly intended for arrest, restraint, and self-defense, rather than silent killing.

Primary Skills: Brawling,

[-15], Enemy (Organized Crime in Shanghai) [-20].

Quirks: Trains every day [-1], Always carries a knife [-1].

Skills: Administration (M/A) IQ-2 [1]-12, Area Knowledge (Shanghai) (M/E) IQ [1]-13, Armoury (Small Arms) (M/A) IQ-1 [1]-12, Boating (P/A) DX-2 [1/2]-14, Body Language (M/H) IQ [4]-14*, Boxing (P/A) DX-2 [1/2]-14, Brawling (P/E) DX+2 [2]-17, Detect Lies (M/H) IQ-2 [1]-11, Fast-Draw (Knife) (P/E) DX [1]-17**, Fast-Draw (Pistol) (P/E) DX [1]-17**, First Aid (M/E) IQ-1 [1/2]-12, Gunner (Machine Gun) (P/A) DX-2 [1/2]-16***, Guns (Light Auto) (P/E) DX [1]-18***, Guns (Pistol) (P/E) DX+1 [2]-19***, Guns (Rifle) (P/E) DX [1]-18***, Intimidation (M/A) IQ-1 [1]-12, Judo (P/H) DX+2 [16]-18, Judo Art (P/H) [0]-15, Jumping (P/E) DX-1 [1/2]-15, Karate (P/H) DX-1 [2]-15, Knife (P/E) DX+3 [8]-19, Law (M/H) IQ-1 [1]-12, Law Enforcement (M/A) IQ [2]-13, Leadership (M/A) IQ-1 [1]-12, Meditation (M/VH) IQ+3 [20]-16, Savoir-Faire (Dojo) (M/E) IQ+4 [8]-17, Savoir-Faire (Military) (M/E) IQ-1 [1/2]-12, Shortsword (P/A) DX-1 [1]-15, Soldier (M/A) IQ-1 [1]-12, Spear (P/A) DX [1]-16, Speed-Load (Pistol) (P/E) DX-1 [1/2]-15, Stealth (P/A) DX-1 [1]-15, Streetwise (M/A) IQ [2]-13, Swimming (P/E) DX-1 [1/2]-15, Tactics (Infantry) (M/H) IQ-2 [1]-11, Tactics (SWAT) (M/H) IQ [4]-13, Teaching (M/A) IQ+3 [8]-16, Throwing (P/H) DX-2 [1]-14, Tournament Law (Judo) (M/E) IQ+3 [6]-16.

* Includes +1 bonus from Alertness.

** Includes +1 bonus from Combat Reflexes.

*** Includes +2 bonus from IQ.

Maneuvers: Arm Lock (H) [0]-18, Breakfall (A) [0]-18, Choke Hold (H) [1]-18, Close Combat (Knife) (A) [0]-18, Disarming (H) [0]-18, Ground Fighting (Judo) (H) [4]-18, Head Butt (A) [4]-15, Hit Location (Knife) (H) [1]-18, Knee Strike (A) [1/2]-17, Neck Snap (H) [6]-12.

Cinematic: Fairbairn easily qualifies for the Trained by a Master advantage (p. CI31) -- he actually studied under several. In a cinematic campaign, he would have access to a number of cinematic skills and maneuvers, including Immovable Stance, Power Blow, Pressure Points, Push, Binding, Enhanced Dodge, Rolling with Blow, and possibly others.

Languages: English (M/A) IQ [0]-13, Shanghai Chinese (M/A) IQ-2 [1/2]-11, Japanese (M/A) IQ-2 [1/2]-11.

Equipment: Wears a black uniform, cap, and boots; armed with a .45 Colt M1911A1 pistol (pp. B208, CL92, HT108, and W94), .45 Auto-Ordnance M1921 Thompson submachine gun (pp. B209, CL93, CV68, and HT116), and razor-sharp custom-made dagger (large knife with *Very Fine* blade, p. B206).

Encountered

Although tall and strong, at first sight Fairbairn gives the somewhat misleading impression of a schoolmaster, especially in civilian dress. He is short-sighted and wears horn-rimmed glasses. Fairbairn is a good but hard trainer, expecting no less than perfection from the students of his combat courses. However, he is a moderate man himself, always eager to admit he doesn't know enough and to learn something new. He is also streetwise enough to know when to run . . .

Fairbairn would be *the* man to have at your side if going after a secret cult bent on bringing back the Mythos gods -- or more mundanely, a simple robbery or a medium-sized attack by Japanese naval infantry . . .

Patrol Officers and Detectives

Most SMP members were uniformed officers, walking the beat in the International Settlement. The majority was Chinese, but many Europeans started out as coppers as well.

Judo [2 points]

Secondary Skills: Shortsword (Baton)

Optional Skills: Body Language

Maneuvers: Arm Lock [2 points], Breakfall, Choke Hold, Disarming [2 points], Knee Strike

They differed slightly in their equipment: European officers were issued a .45 Colt M1911A1 pistol with one spare magazine. The Chinese constables were issued a 9×17mm Colt-Browning Model 1903 pistol (use stats of the FN-Browning Mle 1910, pp. CV66, W92, with Wt. 1.4 and Shots 6) with two magazines, blocked to take only six rounds.

All were issued a baton (p. B206).

In the traffic police department, most officers were Indian Sikhs, who received a .455 [Webley No. 1 Mk VI](#) revolver (pp. CL93, HT110, and W:KM62) with 12 loose rounds and also carried a traditional fighting stick.

The detectives of the Criminal Investigation Department (CID) were plain-clothes officers and the only policemen allowed to carry their service pistol at all times.

Problems with spies for Chinese organized crime and the Japanese, possibly including the [Black Dragon Society](#), were severe both among constables and detectives.

The Reserve Unit

Fairbairn formed the Reserve Unit (also known as the Riot Squad) in the 1920s, effectively the world's first SWAT unit (see *GURPS Cops* and *GURPS SWAT* for additional information on SWAT history and operations). Held in reserve, it was intended to quell riots and uprisings, but was also on call to attend special problems, including kidnappings, armed robberies, and barricaded criminals. In addition, its officers guarded high risk cargos, VIPs, and courthouses when the situation demanded it.

The Reserve Unit even had a dedicated sniper detachment, which was trained and led by Fairbairn's close friend, Eric Anthony Sykes (also famous for later training the Commandos).

The unit trained in the Mystery House, the original forerunner of today's CQB houses (p. SWAT8). This was modeled after a Chinese apartment and came with pop-up targets (depicting both friend and foe), audio distractions, etc., intended to train the officers in instinctive and realistic close-combat shooting.

All received thorough unarmed combat training. Most had been trained in Defendu, but quite a few were masters in one or more other styles as well. One of the most proficient was an Irish Detective Sergeant named Dermot "Pat" O'Neill, who was an expert in Hsing Yi, Pakua (p. MA94), and T'ai Chi Chuan (p. MA104), and held a 5th-degree black belt in Jujutsu (p. MA86) . . . he later trained the American 1st Special Service Force (p. W:HS31) in WWII.

The Reserve Unit was armed with Colt M1911A1 pistols, Auto-Ordnance M1921 Thompson submachine guns, 12-gauge Greener Mk III single-shot shotguns (p. W:KM62), and .303 [Lee-Enfield No. 1 Mk III](#) bolt-action rifles (pp. CL93, HT114, and W:KM62). Other equipment included bullet-proof vests (p. HT90) and Red Maria armored buses.

Other Law Enforcement Agencies in Shanghai

The SMP was only responsible for the International Settlement; there were not only several other agencies responsible for other parts of Shanghai, but the extra-territoriality of the International Settlement meant that law enforcement agencies of the "favored nations" could also exercise certain police functions, if only over their own nationals.

However, there was little to none co-operation between the agencies; for much of the 1920s, there was not even a single telephone line between the SMP and the French Concession

Red Maria

The vehicle park of the SMP included Harley-Davidson motorcycles with sidecars and pintle-mounted Thompson SMGs, troop buses, and armored cars. The buses bringing the police to emergencies were painted red, whence their name. Those used by the Reserve Unit were lightly armored against stray shots and pistol bullets. These were converted from commercial passenger vehicles. They had doors in the left side and rear, as well as a hatch in the roof. A bell

Police!

Garde Municipale de la Concession Française (French Concession Police)

The French Concession had its own police force, consisting of 250 French officers, several dozen French and Chinese detectives, 1,800 Chinese policemen, 1,200 Vietnamese guardsmen, and a heavily armed auxiliary unit composed of 500 Russian mercenaries.

Patrol officers and detectives were armed with a 9×17mm FN-Browning Mle 1910/22 pistol (use the Mle 1910, pp. CV66, W94, with Wt. 1.5 and Shots 8+1).

The *Brigade Spéciale* (Special Brigade) was the anti-riot unit and consisted of 250 tall Northern Chinese armed with riot staffs, 9×20mmSR FN-Browning Mle 1903 pistols (p. W:FH32), .45 Auto-Ordnance Mle 1921 submachine guns, and 7.92×57mm Mauser Mle 1898 rifles (pp. CL93, HT114). They also had armored buses.

The *Détachment Auxiliaire Russe* (Russian Auxiliary Detachment) was armed like the special brigade, but also had [armored cars](#) with 8×50mmR Hotchkiss Mle 09 machine guns (p. HT118).

Finally, there was the *Police Spéciale Française* (French Special Police), a mobilization unit composed of French citizen volunteers that could be called upon in emergencies. These were armed with a 7.63×25mm Mauser Mle 1896 pistol (pp. CL92, HT108, and W94).

Nihon Ryoji Keisatsu (Japanese Consular Police)

The Japanese consulate had a large police force (250 men, all expert martial artists) to protect Japan's interests. While they didn't interfere with the SMP in general, they did on occasion arrest their own nationals on warrants issued by the Japanese authorities, without consulting with the SMP. Japanese officers were armed with a saber-style sword (pp. B206, W193 -- *not* a katana!) and an 8×21mm Nambu Taisho 14 Shiki pistol (p. W94).

U.S. Marshal

A U.S. Marshal (and several deputies) was attached to the U.S. Court for China. He served warrants to arrest American citizens, without needing to consult with the SMP.

The Green Gang

The *Ch'ing Pang* (Green Gang) secret society was a huge criminal organization comparable in many respects to the

(instead of a siren) and additional headlights (some of them moveable by hand) were also provided.

The Red Maria uses 2.25 gallons of gasoline per hour of routine usage. A full tank of gas costs \$3.60.

Red Maria

Subassemblies: Large Wheeled chassis +4; 4×heavy wheels +3.

Powertrain: 50-kW standard gas engine with 50-kW wheeled transmission and 24-gallon standard fuel tanks; 4,000-kWs batteries.

Design Notes

Designed with the Modular Vehicle Design System in *GURPS WWII*. Weight, cost, and HPs of the body were halved to represent a lighter chassis and get Lwt. to a more realistic level.

Sicilian mafia. It was the true power in Shanghai, its various factions controlling practically all aspects of criminal life, including the vast profits of the illegal opium trade, the gambling rackets, prostitution, weapon smuggling, extortion, kidnapping, murder, etc. The *Pai Hsiang Jen* (gangster-playboys) leading the numerous factions were wealthy, powerful individuals at the time often compared to the gangster bosses in Chicago. They saw themselves in the tradition of Chinese legendary warrior heroes, with a rigid code of honor and elaborate society structure and rules.

For much of the first half of the 20th century, they held Shanghai in their grip, only occasionally bothered by local police. Many Chinese police officers in all three parts of the city were members, and the French Concession actually had a secret deal with the gangs, which offered protection against the warlords outside of Shanghai in exchange for non-prosecution.

For example, the chief of the SMP's Chinese detective squad was also the leader of the *Ta Pa Ku Tang* (Big Eight Mob), a powerful organization within the Green Gang, until removed in 1923.

There was even a secret society made up solely of Chinese detectives working both in the French Concession and the International Settlement, the *Chi Pai Ling Pa Chiang* (108 Warriors). This, too, was part of the Green Gang.

In short, corruption among the police corps was widespread and rampant.

Designer's Notes: Monkey, Ninja, Pirate, Robot Deluxe

by Chad Underkoffler

Design History

I guess the biggest question is: "Why?"

The best answer I have is: "James Ernest made me do it."

Now, I've never spoken to the President of [Cheapass Games](#), either in person or electronically, but his wonderful game *Devil Bunny Needs A Ham* (among others in the Cheapass oeuvre) really showed me that with fun gameplay, a wacky rationale for a game can still work. Indeed, I think that some games just work *better* when there's a dash, lump, or hogshhead of arbitrary surrealism thrown into the mix.

[Monkey, Ninja, Pirate, Robot Deluxe](#) started life sans the "Deluxe" as a card game that I had intended to sell as a PDF. The file would be arranged so that customers could print out four different decks (one for each of the title groups) on their home printers using readily available perforated business card sheets. I ran-off a set and corralled friends and family to give it a whirl. Four things became rather clear during this process:

1. The perforated business card sheets were pretty expensive.
2. Assuring that the cards printed out correctly was a nontrivial exercise.
3. It was too easy to mix up cards from different sets.
4. The gameplay was lacking.

While there are some nifty bits from that initial attempt that I want to cannibalize for a later project, on the whole it was obvious that the game was a failure in this format. I put it up on the shelf and tried to live with the pain.

Then, while idly searching through the *Pyramid Archives* for something else, I rediscovered this: "[Cosmic Tilt](#)," by PD Magnus.

As I reread the article, something clicked into place in my skullmeat: my *game didn't* require four decks of cards after all! It was actually a game played with character cards, tokens, and dice!

Aha!

So, while redesigning, I came up with a mechanic that I thought would work. I floated out a RPG-tweaked version of it as a mini-game in "[Polymath Prep](#)," one of my Campaign in a Box columns . . . but nobody really commented on it. Alas.

So, I ran a few playtest games myself and also had a friend run a playtest for me, with folks I've never met. The new version of the game worked: people had fun.

Every *Monkey, Ninja, Pirate, Robot* game is different, depending upon how many people are playing and which MNPR Cards they're using. A game with two Ninjas and a Robot, for example, is strikingly different than a game with a Monkey and a Pirate going one-on-one: the Special Powers of each assure that. In some games, the Ninja will rule, while in others, the Robot dominates. (Possibly the strongest all-around MNPR Card is the Monkey, as is only proper; however, a Pirate can really take the wind out of a Monkey's sails. . .)

Anyway, it's time to take it outside, start grinding the barrel-organ, and make the monkey dance. A Freebie version of the game -- called simply *Monkey, Ninja, Pirate, Robot* -- is available at <http://www.atomicsockmonkey.com/freebies/MNPR.pdf>

What's the difference between the Freebie *Monkey, Ninja, Pirate, Robot* and *Monkey, Ninja, Pirate, Robot Deluxe*? You get five additional MNPR Cards depicting new champions, each with their own special powers; card back images for snazzy double-sided printing, and a blank MNPR Card (so that you may create your own idiosyncratic champion). Reasonably priced for \$5, at online PDF boutiques everywhere. (Well, RPGNow, at least. But the Internet itself is nigh-ubiquitous, so maybe "everywhere" isn't all that far off . . .)

Design Goals

To my mind, a good game requires a little *randomness*, a little *strategy*, and a little *weirdness* (as mentioned above).

I tried to cover randomness with the Atomic Radiation Roll, the rules for Attacking and Defending, and the varied Special Powers. The former two elements rely on rolling six-sided dice for random number generation. The last element -- use and effect of the Special Powers -- injects additional chaos into the current situation of every turn.

Strategy is handled by the resource management of Tokens and Shifts between various Meters. Giving players the ability to increase their odds (at a cost, however) by judicious Shifts puts tactical power into their hands. Additionally, knowing the right time to use -- or avoid using -- a Special Power should be an aspect of a player's strategic thought.

Weirdness is displayed by the premise and tone of the game. Taken at face value, the game is decidedly odd: monkeys and clowns and pirates beating up on one another inside a nuclear reactor. Riiiiight. Also, I think the "Cheapass aesthetic" of ad hoc components united with simple art and inexpensive rules puts a stronger concentration on the *play* of the game rather than getting caught up in side issues of production. Plus, the ability to print out multiple copies of favorite MNPR Cards is a nice feature. People could play an all-Monkey game, if they wanted.

Ultimately, what I'm trying to sell with *Monkey, Ninja, Pirate, Robot Deluxe* (and in a wider sense, with Atomic Sock Monkey Press) is an idea of what I see as the best elements of Ernest's Cheapass aesthetic and Hogshead Games' New Style line of games, back when James Wallis was running the show. I think I can sum it up best as "Come from a different, innovative direction and aim for fun." Time will tell if my method of approaching this concept is viable in the wild or not, but either way, I know that I must attempt the experiment for my own purposes and understanding.

Nifty Bit

Here's an exclusive MNPR Card, available nowhere else: **Pyramidian**. Suitable for use in either *Monkey, Ninja, Pirate, Robot* or *Monkey, Ninja, Pirate, Robot Deluxe* games, this MNPR Card is only available to the few, the proud, the *Pyramid* subscribers. Imagine the surprise, fear, and horror in your competitors' eyes when you whip this baby out and slap it on the gaming table!

Shilling, now *sans* Shame!

If you enjoy the Freebie version of *Monkey, Ninja, Pirate, Robot*, please consider picking up *Monkey, Ninja, Pirate, Robot Deluxe*. If response is good, there's a strong possibility for new MNPR Card packs in the future.

This Just In. . .

To my delight and surprise, *Monkey, Ninja, Pirate, Robot Deluxe* recently received a nomination for the 2003 Origins Awards, in the category of Best Abstract Board Game. I'm very gratified by this -- it makes me feel like folks really are interested out there. However, the one down-side to this (as was pointed out by a friend) is that when your first project garners a nomination for a major award, for the rest of your career you will have to strive to continue to fill those shoes, and surpass them, if possible.

Well, I'm going to try. I've offered up [*Dead Inside: the Roleplaying Game of Loss & Redemption*](#) as a serious RPG, and just recently [*Monkey, Ninja, Pirate, Robot: the Roleplaying Game*](#) as a silly one. With luck and the support of customers like you, I'll try to keep them shoes moving forward.

Gehenna: Time of Judgment (for Vampire: the Masquerade)

Published by [White Wolf Publishing, Inc.](#)

Written by Bjørn T. Boe, Travis-Jason Feldstein, Christopher Kobar & Dean Shomshak

Illustrated by Guy Davis, Michael Gaydos, Vince Locke, Matt Mitchell, Christopher Shy, Josh Timbrook, Andy Trabbold & Drew Tucker

250-page b&w hardcover; \$29.95

Editor's Note: Much of this review contains Spoiler material, and may be inappropriate to those who would participate as players in any of the adventures.

So this is it -- the end of the world. Or rather, the end of the World of Darkness, as White Wolf Studios brings to fruition prophecies first recorded 13 years ago in *Vampire: the Masquerade*. The much-prophesied time of Gehenna is here, when the Antediluvians, Caine's grand child *and* the clan founders return to devour their descendants. In ending one of the hobby's most popular, and sometimes most controversial RPGs, *Gehenna: Time of Judgment* is also the first title in a series that will end the other World of Darkness RPGs before an all new setting and system, *Vampire: The Requiem*, returns in August 2004.

For starters, *Gehenna* blows the setting wide open, lifting the lid on the game's big secrets. Primarily this is the location of all of the Antediluvians, though in some cases, you are not given the straight story, mostly for the purposes of good storytelling.

For example, the Nosferatu Antediluvian, is variously described as having failed a suicide attempt after centuries of self-loathing, as not being the Nosferatu Antediluvian, and in *Gehenna's* fourth scenario, as returning in highly spectacular fashion to wreak havoc on the plans of his fellow generation Cainites. Despite this occasional lack of the definitive answer, this supplement probably gives the nearest thing to a straight answer. Not that it matters, since *Gehenna* is designed as a tool kit to help a Storyteller craft a Gehenna-themed conclusion to his chronicle.

The opening chapter, "The Final Nights," draws together and examines the prophetic elements of various White Wolf releases from *The Book of Nod* to [Hunter: the Reckoning](#), the game being suffused with allusions to various and sundry prophecies. More specifically, this chapter examines the Antediluvians' rise, and the true nature and purpose of the Inconnu, the Last Daughter of Eve, and the Jyhad. This is all from the Occidental viewpoint of the Sabbat and the Camarilla, leaving Storytellers of either *Kindred of the East* or *Kindred of the Ebony Kingdom* pretty much to their own devices. The place of the humble mortal or kine figures in two of *Gehenna's* four scenarios, as both sustenance *and* vengeful armed foes. Several stories and events, along with handouts are included to involve the mere mortals in the lead up to *Gehenna*.

The most notable of these events is the Withering. Literally, the blood running through Cainite veins thins, losing potency and weakening kindred disciplines. Worryingly, the only way to offset this phenomenon is the act of Diablerie, which results in a frenzy of infighting among both the Sabbat and the Camarilla. As to the Withering's

cause? The arrival of the Red Star in the night sky? A new disease, or the strange plans of a mage? Or has something happened to Caine himself? Only the Storyteller can decide. One piece of advice for the Storyteller made clear in *Gehenna* is that its events are not meant to be in any way, shape, or form, *fair*. It is, after all, the End of the World.

"Wormwood" is *Gehenna's* first scenario, and as the most focused of the four is also the most easily run as a Live Action event. Drawing heavily on Biblical tradition, it has God sending a second flood to wipe out every vampire. Not a literal one, as destroyed the First City, but a metaphysical one. Heralded by the Red Star's arrival, "Wormwood" is a poison that will kill every Kindred after "Forty Nights" of Withering and suffering. Fortunately, redemption is offered to the player coterie in a disused church where they must stay for the whole of the Forty Nights. Thrown together with friends and foes, "Wormwood" is their moral crucible. Can they survive their sheltered existence and overcome all manner of moral quandaries, or will they fall prey to their inhuman nature? At the end, each vampire can repent his past sins. Fail and they are literally ash. Prove themselves worthy in the eyes of God, and they will be gifted the ultimate reward: their mortality. They are now free to explore a new world bereft of the Curse of Caine.

"Fair is Foul" is the second scenario, drawing on Judeo-Christian tradition to focus on Lilith's vengeance upon Caine. Previously examined in *Revelations of the Dark Mother* and *The Erciyes Fragments*, she is an archetypal figure easily adapted to fit a Storyteller's chronicle. There is plenty of information to help with this, including a mini-biography. Not so much a scenario as a framework, "Fair is Foul" will need some development before play, with an encounter with a young girl, a dhampir, and the seven bums who seem to protect her while she is on the streets marking the campaign's start. It inexorably draws the coterie into Lilith's plans, such that they become her pawns. Besides offering another chance for redemption, the scenario can end with an alternative existence at Lilith's side. Despite the wealth of background, this is probably the least playable of the four scenarios. Mainly this is due to the coterie being at Lilith's whim and little able to influence events.

Unlike the first two scenarios, "Nightshade" is anything but subtle. Until now the Masquerade has kept the Kindred hidden from the kine, but when the corpse of the Tzimisce Antediluvian surfaces and rampages across Manhattan, the coterie's efforts to stop it are caught on camera and broadcast on CNN. With the existence of vampires an irrefutable truth, the Camarilla fractures, and the coterie are asked to help form a new sect, the Nephthali. It sets out to investigate and perhaps stave off the coming End, mounting a series of globe-trotting quests to that purpose. These take the coterie to Berlin and Sweden in search of the False Caine, to the edges of Shadowland and beyond as they penetrate the tomb in which Cappadocius imprisoned 12,000 of his children, and ultimately to the Second City itself. A mix of Cainite archaeology and high adventure (including a visit to the city of Tanis!), "Nightshade" gives the coterie lots of interesting things to do and places to be, but at the climax it casts them as members of the chorus line with little to do.

"The Crucible of God" is the last scenario, and lives up to all of *Gehenna's* promises of Armageddon. Again the coterie breaks the Masquerade, but unlike "Nightshade" they do so on a far more *ordinary* level, just doing what vampires do. They can do nothing about this, for as the scenario openly states, they are "Destiny's bitches." Initially there is peace between kine and kindred, but eventually the kindred's secrets are too much, and war ensues. As mortal civilization breaks down, the Antediluvians make their play, returning to consume the Methuselaha, inaugurating the Reign of Blood. The attempt to raise Set fails, and so he calls all Setites to him; Lasombra brings permanent night; and Nosferatu stalks the land in the belly of dinosaur-sized monsters. The return, one-by-one, of the remaining Antediluvians occurs against a post-apocalyptic background, and while getting the coterie from one place to another to see each return is somewhat difficult, the chance to witness the sheer grandeur of the events in this scenario makes it worth it. That grandeur is both the scenario's strength and weakness. In some ways, *Vampire: the Masquerade* has always pandered to the "superhero-by-night" school of play, but "The Crucible of God" instead turns it up to 11. Ever wonder what kind of capabilities come with a Discipline rating of 10 dots? Two words -- "Plot Device." This scenario is a helter-skelter ride to the finale, which pleasingly comes down to the player characters. If they survive, they again have the chance to explore a very different world, one that could form the basis of a whole new campaign.

Gehenna's advice for the Storyteller on running an End of the World chronicle is perhaps too obvious, essentially telling him to keep it focused on the personal level. Given this supplement's momentous nature, there is surprisingly little new here. The appendix details various characters from the four scenarios, while a final section explores the use of Caine in a *Gehenna* campaign. This seems almost superfluous, since he really only appears in "Fair is Foul."

Physically *Gehenna* is a sturdy hardback with a hardly a problem to it, save for the supposed BBC news reports in "Nightshade," which feel very un-English; there is only the occasional lapse in verb tense present to let the writing down. The book does lack an index, and given the size and complexity of this supplement and its subject, this should have been considered a necessity.

If you have been running a *Vampire: the Masquerade* chronicle, then *Gehenna* is nigh on a must. It refreshes a Storyteller's toolbox with plots and ideas to suit most chronicles. "Wormwood's" introverted nature will appeal to role-players, while "The Crucible of God" and "Nightshade" offer both combat and grandeur by night. Running any of *Gehenna's* four scenarios will be challenge, but the book also contains myriad ideas with which a Storyteller can create his own.

Bringing *Vampire: the Masquerade* to an end was always going to be an ambitious undertaking. Showcasing four ways that it could be done is probably the best way to do this, allowing a Storyteller to bring *Gehenna: Time of Judgment* to his chronicle the way he wants to.

Pyramid Review

Fast Figure

Published by [Playroom Entertainment](#)

Created by Keith Meyers

Graphic design by Design Edge, Inc. & Elisa Anya Jaeger

Color boxed set with 400 Fast Figure cards, six colored "It Figures" cards, 4 Point cards, starter card, plastic card tray, rules; \$19.95

There are a lot of party games out there these days that claim to be fast and fun. Perhaps operating under the assumption that these will be played by those with a short attention span, or folks who want an excuse to get together more than the game itself, few of these require you to do serious mental gymnastics under the gun. *Fast Figure* from Playroom Entertainment is a little different.

The object of the game is to score the most points.

Each player (the game accommodates three to six) gets an "It Figures!" card of a different color, and everyone takes a turn at being the Reader. The Reader places a special zero-value card on the table near him and the deck, and then places one of the Fast Figure cards midway across the table where everyone can read it.

There are 400 of these Fast Figure cards in the deck. They have common knowledge questions on them, things most everybody knows or could puzzle out (or guesstimate) given enough time (which is in short supply). The answer is always a numerical value from one to 100, and the deck is numbered thusly four times. How many squares are there on a chess board?¹ How many years between the release of Coke and Coca-Cola's second product, Fanta?² What's $4 \times 10 + 10 + 1$?³ How many days does it take for the moon to orbit the Earth?⁴ What is three cubed?⁵

Once everyone knows what number they're dealing with, the Reader will draw another card. This one he reads aloud, but the players must answer it for themselves. When he finishes reading, he says "Go figure," and players snatch up their "It Figures!" cards. They slap them down, trying to place it where they think the new answer falls -- between the zero and the face-up Fast Figure card, or between the face-up card and the other end of the table. Whoever places their card correctly first (as judged by the Reader) receives the first of the four point cards, worth one point. If no one places their card in the right area, that point card goes to the Reader. The knowledge card that was just read is then placed in the lineup.

The Reader pulls another card, reads it, and players again throw out their "It Figures!" cards. Now, however, there are three places where the answer might fall -- but the reward goes to two points. The Reader continues this process, adding the expired cards to the formation and giving out point cards one through four. Then the cards are swept up and the next Reader repeats the process. When everyone has had a turn at reading, the scores from each round are tallied and the high score is the winner. Ties go to a sudden death round for those with equal high scores.

The graphic design is good, with big numbers and clear writing, though given the game's speed this isn't likely to be a consideration for anyone but the Reader. The set comes unshuffled, so all 400 cards have to be carefully and meticulously shuffled to ensure some randomization. They're standard-sized cards, but there are an awful lot of them. The deck stock also feels a bit thin -- nothing to worry about for Fast Figure cards, but the It Figures! cards see more rigorous use.

Fast Figure is rather unpredictable, but that might work against it in some ways. Since you want your "It Figures!" card out before anyone else, some folks will resort to tossing their cards out at random in hopes of a favorable result. This is a much more useful strategy at the start when the odds are about even, and things do tend to level out by round's end, but there's no penalty for guessing. For advanced play, the rules recommend starting the game with two or three Fast Figure cards already on the table to make it a little tougher. If players are finding too much random card play, this might also be a workable solution.

And you're not going to run out of cards. With so many of them, there's plenty of replay value. Even if you learn the answers to all 400 questions, speed is still essential in recalling and ordering the information. There's a lot of mileage to be gotten out of the set, saving consumers from the headaches of buying supplemental decks just to keep the game fresh. While Fast Figure may not fire on all cylinders, it's still as quick as its name suggests, it carries some fascinating nuggets of information both academic and popular, and it's a good blend of education and entertainment.

Pyramid Review

MLB SportsClix

Published by WizKids

Designed by Jason Little, Jim Long, and Mike Mulvihill

Starter Sets: \$19.99; Booster Packs: \$6.99

When it was announced a while back that WizKids, the company behind the hits *Mage Knight*, *HeroClix*, and *MechWarrior*, had been purchased by Topps, the sports card, entertainment card, and novelty candy company, the jokes immediately started flying. "What are they going to do -- *BaseballClix*? *FootballClix*? *HockeyClix*? Well, yes. The first of WizKids' *SportsClix* games, *MLB SportsClix*, hit the shelves just in time for the 2004 baseball season.

MLB SportsClix comes in the now-familiar Starter Set/Booster Pack configuration. There are two starter sets available, one with nine American League players, one with nine National Leaguers. Each starter set also comes with a rulebook, a playmat, a handful of special dice, and some counters. Each starter set has the same nine players in it, some good, some merely average -- if you want different (or better) players, or any of the uncommon or rare players, you'll have to buy Booster Packs, with three random players in each box.

How does it play? Surprisingly well. The rules are presented clearly, and are divided into three levels of difficulty. Preseason is just the basics; players with any familiarity with baseball and other "clicky-base" games can skip this version, and even complete newbies will want to move on quickly. The Regular Season has many of the features that make the game a decent baseball simulation, but any serious baseball fan will want to go to the Playoffs level after only a few Regular Season games. It's only at the Playoff level that the full potential of the clicky-bases comes into play. (There is a Championship level beyond Playoff, but it adds only a couple of features that mostly revolve around team-building and league play.)

For each at-bat, the pitcher picks between a Control die and a Velocity die, while the batter picks between a Contact die and a Power die. The batter also rolls a d6. The icons on the first two dice are matched up, and the result is read off either the pitcher's or batter's base (the other two combinations are Total Control for either the batter or pitcher, and special rules apply). Some results are read straight-up off the appropriate player's base, but others require more work. A "Paint the Corner" result, for example, requires the pitcher to roll his Velocity die again -- on a Velocity result (4 in 6 chance), he gets the strikeout; but if one of the other faces comes up, it's a walk. There are enough different results to cover all the possibilities in a major league game, and the mechanics work pretty well.

Many games include a playmat, but *MLB SportsClix* is the first one I've seen where you really need it to play. The reason is the six hitting zones on the diamond. Each player has a "spray chart" on his clicky-base, which indicates, using numbers from 1-6, which zones he will hit the ball into. The defensive player gets to look at this chart, and then pick where his fielders will play. A regular fly ball hit into a zone where an outfielder is standing is an automatic out; but if it's hit into an empty zone, a fielder in an adjacent zone must make a fielding check (add his fielding score to a 2d6 roll and beat a 10) to make the catch. Other results (a Scorcher, for example) require a fielding check even when a fielder is in the right zone, and a check at a penalty when he has to chase the ball down. This feature makes *MLB SportsClix* the first baseball simulation I've ever played that took defensive positioning into account, so I'm impressed.

Getting the clicky-bases involved seemed like a difficult task, but the designers managed to pull it off. After all, baseball players don't get wounded or healed in the course of a game the way fantasy warriors or superheroes or giant tanks do. What they do get, however, is hot and cold, and that's what the clicky-bases are used for in *MLB SportsClix*. Batters gain a click with every hit. When a run scores, a click goes to either the batter who drove him in or the player

who scored. Great fielding plays also earn a click. Pitchers get a click for a 1-2-3 inning, or a relief pitcher coming in with men in scoring position and keeping them from scoring. Hitters lose clicks for making the third out with a runner in scoring position, or with an error, and pitchers lose clicks for every run over 5 they allow and every inning they pitch beyond their endurance rating. The more clicks you go, the better -- or worse, if you're clicking down -- the results on your base chart get. On the two icon combinations that don't appear on the bases (the Total Control results), the batter or pitcher not only gets to click up one level, he then gets to pick what result he wants off the newly improved chart.

The other feature of other clicky-base games -- special abilities -- is also in *MLB SportsClix*. This part of the rules feels a little shoehorned-in, like the designers felt they had to add special abilities, clicky-base style, and were struggling a bit for ways to do it -- but it's not too intrusive and can sometimes be a bit fun when you get to use them. Some of the abilities cost a click to activate, which is a nice balancing feature that doesn't let one player pummel the other into submission with specials. Some of the abilities give you meta-game control of the bases: Leadership lets you take a click up you've earned and instead give it to another player on your team; Intimidation allows you to forego the click up you get with Total Control and instead force the opposing batter (or pitcher) to click down.

The only gaming downsides worth mentioning are that moving all the figures on and off the playmat "field" between half innings gets old pretty fast, and for an old bi-focaled guy like me, the information on the clicky-bases (not the results chart, but the other info, like speed and defensive rating) is awfully small and difficult to read. Also, the collectible aspect of *MLB SportsClix* doesn't do a whole lot for me, because the figures, while marvels of lifelike representation at their small size, just don't look good enough for me to envision putting them in a case or on a shelf display. And some of the players use the same pose with different paint jobs, a shortcut I don't think WizKids has taken with any of their other products, though it doesn't affect game play at all.

As a fan (and player) of many different baseball simulations, I can appreciate the design of *MLB SportsClix* and would enjoy playing the game on a pastime basis. I'm not enamored of it enough to become a collector or to get involved in big-time league or tournament play, but that shouldn't stop you from checking out a set and deciding for yourself.

--Scott D. Haring

Bricks and Bones May Build My Throne

Building blocks -- and variations thereof -- have always been some of the most popular children's toys. There are a myriad of reasons for this, not the least of which because blocks have the sharp angles and swallowable natures that kids have enjoyed for millennia. "Hey, Cladivs! I successfvly jammed that dovlbe-brick down my throat!" precociouvs Roman IV-year-olds wovld say.

But beyond that, there's a very human appreciation for taking basic pieces and using them to shape more complex constructs, especially if the result satisfies a unique desire or vision of the builder.

And, of course, this applies to gaming as well.

Over the next couple of weeks, then, I'm going to look at the metaphor of the building block, and see how it applies to various games. This week I'm fondly remembering various board, card, and non-RPG games I have known and loved.

Some of my favorite board and card games tap into the building-block concept. *Wiz-War*, *Munchkin*, *Strange Synergy*, *Talisman*, and many others all work best when the players use basic building block elements and combine them into new and interesting ways. ("Ah-ha! I use my Rorrim Elemental to transform my Spooneristic Bethdolt's 6D into reflective damage, then use my Plutonium Tuning Fork to double all reflective damage! Eat crunchy chocolaty coco-death!") And, of course, the granddaddy of all games uses relatively simple maneuvers of abstracted white and black knights, castle fortifications, and powerful nobles to become the richest, most universal application of pure strategy known throughout the world. (I'm speaking, of course, about *Magic: The Gathering*.)

In trying to think back to my earliest building-block-type game, I came to a surprising conclusion: Two-Player *Uno*. Growing up as an only child in South Florida, where the median age is usually expressed as a double-digit factorial, my opportunities to play large communal games were usually limited. As such, from the time I was a wee lad, I was playing old Avalon Hill and SPI boxed-set wargames with my stepdad -- the kind of games that had a kajillion chit-pieces, boards that unfolded to the size of Monoco, and gargantuan booklets written at a six-point font that related with normal rule sheets in roughly the same way the *Catechism of the Catholic Church* relates to the Ten Commandments. But I still played a number of "normal" games. Although I figured out very early that games such as *Chutes & Ladders* and *Candy Land* can be played equally well solo (or, more satisfyingly, without any players whatsoever), other traditional games still made their way into our gamerly lexicon. One of them was *Uno*, a game very similar to *Crazy Eights* only a tad more copyrightable.

Now, the interesting thing is that a two-player version of *Uno* is very much a building-block game, because practically *any* of the special cards -- "Reverse," "Draw Two," "Draw Four," and "Skip" -- revert play back to the person who played the card. As a result, most two-player games of *Uno* become a challenge to see who can combine the basic building blocks of the game into the most devastating combo sequence of these special cards: "Green Reverse back to me! Green Draw Two to you! Yellow Draw Two to you! Yellow Skip you! Red Skip you! And a Wild card, Blue, and 'Uno.' Your turn."

It was thus with some disappointment that I realized, upon playing *Uno* for the first time with a large group, that this block aspect is all but nonexistent with more than two people. I believe I cried when I learned this, and curled up in a corner to eat some crayons; it was a rough fifteenth birthday party.

Most building-block games are playable -- albeit, in some cases, barely -- without using any of the combinatorial aspects of building block games. If you only wanted to play one card at a time in *Wiz-War*, for example, you can. But one interesting aspect of some board and card games are those that *require* a building block aspect to play. I believe my first exposure to this kind of game was the Milton Bradley Gamemaster Series classic *Broadsides and Boarding Parties*, a game whose scale model ships and tiny cutlass-wielding plastic pirates delighted me as an 11-year-old, and trained my mother to forego bare feet in lieu of slippers. Anyway, the movement system in this game had each player choose their three movement cards at the beginning of the turn in secret, then reveal them, one at a time, with movement occurring simultaneously. Thus one player might choose "Sail Ahead / Turn Starboard / Sail Ahead," while

the other chooses "Remain in Place / Sail Ahead / Sail Ahead." **RoboRally** would use a similar movement mechanic many years later, and some card games -- such as **Fluxx**, **Pokémon** and various "gin"-type games -- use a similar system to ensure that cards only work if built off other kinds of cards.

Regardless, practically all building-block games have a similar trait: Predominantly simple blocks that can be combined with others to form more complex elements. In addition, many board and card games have complicated "blocks," much like the odd pieces in various click-block building sets; sure, it can be harder to visualize where, exactly, those blocks go, but once you figure out a use the results can be really spiffy. This trait will be important over the next couple of weeks as I show how to incorporate more metaphorical blocks into roleplaying games.

But for now, I'd encourage all you board and card game fans out there to really look at your games, and see how they might incorporate building block elements. On a basic level, understanding how those building blocks interact can help you devise strategies, or even variants. For example, **Scrabble** is a building-block game, albeit a very basic one. But how would it be different if new rules built more on the building block aspect? For example, what if a double-vowel inherited the point modifier directly above the double letters, while a double-consonant inherits the point modifier directly below the double? Suddenly blocking off triple-word scores becomes more difficult, using a blank for "QUIZZER" becomes viable, and adding "BOOK" to "KEEPER" can have very interesting results. (If anyone comes up with any neat variants while thinking about their favorite games, feel free to send 'em my way at pyramid@sjgames.com and I might share 'em in my column!)

But until next time, dig up your favorite building block toys or games, and have fun. Trust me . . . they taste as good as you remember.

* * *

As another gentle note from your Benevolent Editor for Life, I'd remind you all that, if you're reading this column before 7PM Central Time on Friday, Sean Punch and Paul Chapman will be having another chat about **GURPS Fourth Edition** at that time. The topic is Talents, Expert Skills, and the upcoming Origins convention. If you've never participated in a chat before, please feel free to join us; trust me . . . very few of us in the chat rooms bite.

Horse Sense

by S. E. Mortimer

Introduction

Horses, integral to any low-tech setting, are often seriously neglected by roleplayers. Poul Anderson wrote an essay titled "[On Thud and Blunder.](#)" in which he criticizes fantasy authors for treating the horse as some sort of medieval sportscar with a constantly refilling gas tank. PCs are often guilty of the same thing -- riding the horse all day and "parking" them in the nearest stables at night, tossing the "keys" to the hapless "valet" before going to find a bed and a drink. This article attempts to show the roleplayer that the costly purchase price of a horse is only the beginning of his expenses, and demonstrates why only the wealthy could afford to own and maintain the best horses.

Horse Size

A horse's height is measured in "hands." One hand equals about 4 inches and height is measured from the ground to the "withers" (shoulders).

Pony

The smallest horse, they are typically 9 to 14 hands high and weigh about 600 lbs on average (250 to 850 pounds). Virtually all horses in the ancient world were ponies -- from those pulling Egyptian and Hittite chariots, through to those depicted on the Parthenon and Trajan's Column. Specific pony breeds like the Norwegian Fiord, Mongolian steppe pony, and English Shetland pony are stronger than a regular horse of equivalent weight, but all ponies can bear a human rider with little trouble.

Light Horses

The typical horse in the medieval and modern world. Breeds include Arabians, thoroughbreds, mustangs, jennets, and so on. These horses were also preferred for warfare. They typically stand 14 to 17 hands tall and weigh about 900 pounds on average (ranging from 600 to 1,200 lbs).

Draft Horses

These are mistakenly believed to have been specifically bred for war in the medieval world. This is not the case, nor was the draft horse bred to pull a plough. Draft horses were bred for one purpose -- drawing heavy carts. Clydesdales and Percherons are typical draft horses, standing over 17 hands tall and weighing around 1,400 pounds on average. They were very rare in the medieval world and not much use until road conditions improved in the 17th and 18th centuries. Their barrels were very wide, making them uncomfortable to ride and they were difficult to ride any faster than a trot, since their gait became an awkward "galumph."

Horse Types

Horses had three purposes -- war, work, and transportation. Many wealthy nobles not only maintained dozens of horses for themselves, their family, and servants, but also bred them for sale. Throughout the medieval period, Normandy-bred horseflesh was usually considered the best. However, horses were not distinguished by "breeds" as such. A horse was categorized by the purpose to which it was best suited, regardless of its breed or place of origin.

Asses

Asses are also categorized according to size. A burro is the smallest type, weighing 300-400 lbs. A donkey weighs 400-500 lbs, and an ass weighs

500-600 lbs.

A mule is the result of cross-breeding a horse with an ass. Mules are usually sterile and are much stronger than horses. They weigh 700-800 lbs.

Destrier: A refined and highly trained stallion. Often used in tournaments, destriers were ridden to war only by the most wealthy. They needed to be reasonably fast so they couldn't be too large (15-16 hands was an average height, and 1,200 lbs was a typical weight), but they had no trouble carrying an armored knight and his weapons. *GURPS* refers to this as a "heavy warhorse" (B144). A modern equivalent may be the finely bred and highly trained dressage horse.

Courser: Smaller and less expensive than the destrier, coursers were very suitable for war, being long winded and strong. They were usually faster and more maneuverable than destriers. *GURPS* refers to this as a "cavalry horse" (B144). Today they may be referred to as hunters or endurance horses.

Rouncy: This is the all-rounder -- suitable for war, riding, and work. Less expensive than a courser, a rouncy made a good squire's horse. Use the listing for "saddle horse" on B144.

Screwbald: A general-purpose horse like the rouncy, but a little smaller. Use the listing for pony on B144.

Hackney: Not as well-bred as a rouncy but usually a little stronger. A trained ass or mule may also be classed as a hackney. Use the listing for "large mule" on B144.

Palfrey: An expensive, well-bred horse trained to have a smooth gait and good endurance. These were the best riding horses available and only owned by wealthy individuals. Use the listing for "racehorse" on p. B144. Very finely bred mules were also sometimes referred to as palfreys.

Jennet: A small palfrey. This gaited horse was considered suitable for ladies. The term originally dates to the 12th century and denoted a small Spanish warhorse. Use the listing for "pony" on p. B144.

Sumpter: A strong, reliable pony or ass used for carrying loads. Common in baggage trains. Use the listing for "small mule" on B144.

Sumpters and hackneys were likely to have been the most commonly used horses for farm work, though rouncies were also used. Coursers made the best hunting horses (see *Hunting*, below). For warfare, stallions were preferred because they were more aggressive. See *Purchase Price*, below, for detail about pricing.

Horse Classifications

An excerpt from an early 16th century English song:

*A courser for the warrior
A rounsey for the squire,
A sumpter for the baggage-train,
A screwbald for the friar
But I will braid the jennet
And shine the bridal-reign
For the riding of my lady
When she is home again.*

*A destrier for the jousting,
A hackney for the maid,
A palfrey for the princely one
Who preens it on parade:
But I will gloss the jennet*

History

War

The earliest evidence of horse domestication comes from Siberia and is dated to around 6,500 B.C. These were quite small and unsuitable for riding, though these ponies could draw loads. During the Bronze Age, ponies were bred for pulling light war chariots. Chariot cultures included the Egyptians, Hittites, Mykenaians, Aryan Indians, and the Chinese. Recent studies indicate that the steppe nomads of central Asia were the first to ride the horse in the 4th millennium B.C., but in the West, cavalry warfare did not develop until the Iron Age.

The Macedonians were the first to effectively develop heavy cavalry. Although they did not have the benefit of the stirrup, Macedonian heavy cavalry was an important corps of the army and proved effective as shock troops.

*That is cosy in the hay
For the riding of my lady
In the merry month of May.*

The Romans also used cavalry units. Instead of stirrups, they developed a horned saddle to enable the rider to fight more effectively from horseback (see LT79). The Romans also relied extensively of Gallic and German cavalry units

and it is these that are believed to be the predecessors of the medieval knight.

During the Middle Ages, a wealthy knight would take several horses to battle. His magnificent destrier would have been expertly bred and highly trained, able to bear its armored rider into combat and withstand the terrors of battle, but it was not suited for long distance riding. On his way to battle, the knight would have ridden a palfrey or a courser, and led a pack horse or two to carry his baggage. Before entering a town he would switch to his destrier, taking the opportunity to also change into more impressive clothing. His entrance would be befitting his rank, striking the peasants with awe and maintaining proper etiquette with his host and peers.

Hunting

Hunting was the favorite pastime of the nobility. Often the best horses owned by a noble were those bred and trained for hunting. Coursers made the best hunting horses, possessing speed, great stamina, and intelligence. Hunters and warhorses required a specialized diet of hay and grain to maintain peak physical condition (see *Feeding a Horse*, below).

Farming

From the Bronze age through to the early Middle Ages, the ox was the preferred beast of burden on the farm. There is evidence to suggest that the Romans made use of farm horses, but the ox was far more prevalent. With the rediscovery of the horseshoe (originally invented by the Celts and adopted by the Romans) in Europe during the early Middle Ages, the horse became far more useful on the farm because the iron shoe prevented the soft, wet earth from damaging the horse's hooves. Other inventions such as the horse collar, tandem harnessing, and the heavy mold-board plough (see LT77) increased the efficiency of farm horses.

Despite the fact that horses were more expensive to buy, required specialized feed, constant care, and good shelter, they gradually supplanted the ox as the preferred work animal. Horses were no stronger than the ox but had better stamina, enabling them to work more hours during the day. They were faster than the ox, and more intelligent, enabling them to be controlled by voice commands. This meant that a second person was no longer required in front to lead the team. Horses were also far more versatile than oxen.

The feudal system enabled the peasant greater access to horses since they could be rented from the local lord when needed. Sometimes villages owned communal horses and ploughs that were available for all to use. Wealthy peasants owned their own horses. As the Middle Ages progressed, the percentage of farmers who owned their own horses increased.

Travel

Riding

Mules and asses were often the preferred mounts of many because they were hardier, cheaper, and easier to maintain. They were distinctly unfashionable, though, so a noble would rarely be caught riding anything other than a horse. In the medieval world a horse under three years of age was considered too young for riding but may be trained to pull a load. At four years they were trained to bear a saddle. A horse in its prime would be five to eight years old.

A well-fed coarser or palfrey had the endurance to trot all day, and a fast trot might cover 25 miles per hour on a reasonable road (equivalent to a "bad" road on p. B188). Unfortunately, once burdened with a load or rider, average speeds decrease, and the horse would need to be rested and fed several times during the day.

A healthy horse traveling along reasonable roads with readily available feed (hay and grain) could carry a third of its weight and maintain a walking speed of four miles per hour for up to 10 hours a day (40 miles). If the animal must forage for grass then travel time is reduced to about six hours per day (24 miles) and the maximum burden drops to about 20% of the horse's weight. Grass-fed mules, asses, and ponies can carry about 25% of their weight but are slower, averaging only *half* that of a horse (12 miles per day). This workload could be maintained for several weeks without putting too much strain on the animal.

Galloping

Horses are only designed to run over short distances -- long enough to evade predators. With endurance training and a good diet of hay and grain, a horse may gallop for longer. See p. B135-136 for more on *Movement*.

Drawing a Load

An animal can often be used as a draft horse even if it is too young or weak for riding. A horse can pull its own body weight in a wheeled cart (this includes the weight of the vehicle) on a reasonable road at the same speed mentioned above (four miles per hour). In a sledge, speed is *halved*. A horse might be able to pull twice this burden for short periods at a painful plod of one mile per hour. See p. B145 for more on *Encumbrance*, and p. B89 for *Lifting and Moving Things*.

Purchase Price.

Horses were expensive, both to purchase and to maintain. Prices fluctuated considerably depending on the prevalence of war and the success of the harvest. For example, horse prices *doubled* from the beginning of the 13th century to the beginning of the 14th century. *GURPS Low-Tech* suggests that the monthly wage of an average craftsman is \$100 (LT8). Using this as a guide it seems as if the prices in *GURPS Basic Set* (B144) are fairly reasonable for common horses. A good rouncy (saddle horse), for example, would cost about a year's wages or \$1,200 -- exactly the price listed. However, fine horses are far too cheap in *GURPS*. For example, during Chaucer's time (14th century), a knight's horse could cost up to 200 times the price of an ordinary plough horse. This means that a heavy warhorse should cost \$200,000 or more, rather than the measly \$5,000 listed on B144. This is equivalent to the difference between a mass-produced commercial vehicle and a professionally-assembled racing car today.

For those wanting realism, prices should be revised as follows: A finely bred and fully trained palfrey or courser should cost around \$80,000. A destrier would be closer to \$100,000. A jennet is a type of palfrey, but smaller and less expensive, say \$30,000. If the horse has been "blooded" in combat then its cost might *double*, resulting in a purchase price of \$160,000 for a courser and \$200,000 for a fully trained and blooded destrier -- this was a highly specialized mount that was very rare and very valuable.

Buying a Horse

In a village, almost all of the horses will be owned by the lord. In the 13th century, very few peasants were wealthy enough to own their own plough and horse. Most either rented them from the lord, or sometimes the village maintained communal horses available to all. Horses became more readily available as the Middle Ages progressed, and horse traders became more prevalent during the same time. A common horse trader can be used to purchase all but the finest horses. If one wanted to buy a palfrey, courser, or destrier, then one needs to find a noble who has an interest in breeding and training these animals.

The Horse Trader

He was the medieval equivalent of the used car salesman. Even today, the word "horse trader" is synonymous with double-dealing swindler. A horse trader with an honest reputation was rare, and the only way to get a fair deal when buying a horse is to have some knowledge about horseflesh. You can ask questions about the horse's background: Is

the horse fully trained? Has it suffered any recent lameness or illness? Is it sound and free from vices? Is the horse easy to handle?

It doesn't really matter what questions you ask, you're unlikely to be told the truth. Here is a sample of some of the horse trader's responses along with what he is *really* saying.

"This horse is fully trained."	"It has been ridden a couple of times."
"The horse is strong and sound."	"The horse is about to go lame and I hope you don't try to ride it."
"The horse is in perfect health."	"Please give me the money before this horse collapses."
"This horse has a lot of potential."	"I can think of nothing positive to say about this horse."
"This horse is ideal for children."	". . . so long as the child is 6'2" and stronger than you."

The only real way to ensure a good deal is to examine the horse yourself, or bring along an expert to do it for you. Checking the horse's teeth is a good indication of the horse's age. Putting your ear against its chest and listening to its breathing can indicate whether it has had any lung afflictions. Looking at its coat and posture indicates how well the horse has been groomed and maintained. Pretending to kick the horse in the ribs will tell you if it has been abused (if it has, it will shy away in anticipation of the blow). Watching it move and examining its hooves will indicate whether there are any foot or leg problems. Finally, take it for a ride -- this is the best way to get a feel for the horse.

Tricks

Of course, a good horse trader will anticipate the above methods and take steps to counter them. Some of his tricks include:

- Deliberately underfeeding an aggressive horse so it will be weaker and more placid. Heavily exercising the horse beforehand has a similar effect.
- Shaving the horse's coat to improve its appearance without having to bother with grooming.
- Filing the horse's teeth so it appears younger.
- Disguising the horse so it cannot be identified as stolen. Dyes and chemicals can be used to change coloring. One trick to produce a white patch is to apply a hot, boiled potato (usually to the forehead). Each successive application causes the color to fade until there is no color at all.

Maintaining a Horse

Food

A horse requires a lot of food in order to get a useful amount of work out of it. Grass is very low in energy and a horse whose diet consists mainly of grass will be useless for work since the vast majority of its time will be needed for grazing. The preferred horse diet consists of a combination of hay, which has a higher energy content than grass, and grain. A good grain mix is 75% oats, 20% barley and 5% bran, although 100% oats is adequate. Horses also require five to 12 gallons of water per day depending on climate, workload, and animal weight. They also need two to three ounces of salt per week.

Rations

The amount of food required by a horse depends on how much work or exercise it is required to do. The following table lists the amount of food required per 100 pounds of horse weight per day. This food must be spread out over 2-4 feedings per day (you can't "fill it up" in the mornings and expect it to perform all day). The horse must be cooled down before feeding (it will also need a good rubdown if it has been working hard) and allowed at least one hour afterwards for digestion -- otherwise severe (sometimes fatal) indigestion can result.

Workload/Condition	Hay (lbs)	Grain (lbs)
Idle (less than 2 hrs per day)	2.0	none
Light work (2-3 hours per day)	1.25	0.5
Medium work (3-5 hours per day)	1.25	1.0
Heavy work (5-8 hours per day)	1.25	1.25
Breeding mare (in last trimester)	1.25	0.5
Lactating mare	1.25	0.75
Foal (after weaning)	1.5	0.75
Race horse	1.5	1.5

Asses require the same amount of hay, but only three-quarters the amount of grain. Ponies can survive on no grain at all, unless they have a heavy workload.

Remember that the above figures are for every 100 pounds of weight, so a 900-pound horse with a medium workload would require 11.25 lbs of hay and 9 pounds of grain every day. Using **GURPS** currency (\$), hay costs about \$0.05 per pound and grain (oats) costs \$0.50 per pound. Our 900-pound horse would cost about \$5 per day to feed on a medium workload.

A ton of hay takes up around 250 cubic feet in bales and the average horse requires about 3.5 tons per year. There is usually only one time per year in which hay is available on the market so one must buy a year's supply of hay for each of his/her horses during this time, and allocate storage space for it. Hay is much cheaper than grain, but grass is free, so a horse that is not required to work will be turned out to pasture.

Pasture

Depending on the climate and pasture quality, a horse requires between one and three acres of grassland upon which to graze. Ponies generally require about half this. The horse must be moved to a new pasture every three to six months as manure builds up. Horses and ponies eat only grass, but asses can also eat weeds.

Horses become severely ill (sometimes fatally) if their diet is changed too quickly. A horse brought in from pasture must have its diet gradually switched from grass to hay/grain over a period of a few days before it will be ready for work.

Hoof Care

Horseshoes

If a horse is worked in soft, wet earth too often, its hooves will soften, causing it to go lame. If a horse is ridden on a hard surface, its hoof wears down faster than it can regrow. This will also cause the horse to go lame. A lame horse must be rested for several weeks to allow the hooves to grow out. Horse shoes prevent both of these problems.

Horse shoes must be changed every four to eight weeks because the hoof continues to grow even while shod. If this does not occur, the horse will go lame because the shoe will no longer fit correctly. Hooves should also be regularly inspected to check for uneven wear and damage, and to remove excess growth. Normally horse shoes are replaced often enough to eliminate the risk of throwing a shoe but, if

Stablehand Encounter Table

Roll 3d and apply the following modifiers:

- -2 to +2 stall quality (-2 rundown & dirty with stale hay; +2 noble stables).
- +0 to +2 groom experience (+0 average stableboy, +2 noble groom).
- +1 to +3 if groom is paid extra.
- -1 if the horse is particularly valuable
- -3 if horse is a stallion.
- -5 if horse is a warhorse.

Results

the horse travels excessively on hard surfaces, the iron nail heads wear away and the shoe can be lost.

Each day that the animal is worked or ridden for five hours or more requires a HT roll as per *Low-Tech*, p78. A failed roll means that the horse pulls up lame and needs to be rested for 1d days. A critical failure results in a split hoof or other severe injury usually requiring the horse to be put down. Properly fitted equipment can reduce the chances of injury to the horse (see LT79 and LT104). A blanket increases the daily HT roll by +1 and properly fitted horseshoes increase it by a further +2.

Farriers

The word "farrier" is a corruption of the Latin *faber ferrarius* ("iron worker"). As horses became more widespread, some blacksmiths became farriers, specializing in shoeing horses. Although the farrier specialized in the care of horse feet, most were also practiced in other aspects of horse care and were experienced horse "leeches" (veterinarians).

In *GURPS*, the skill of the farrier is covered by Blacksmith (p. B53), but many also have the Veterinary skill (p. B47) with a horse specialization. A farrier will charge \$20 per hoof, or \$50 for a set of four horseshoes (p. LT104). To successfully shoe a horse, the farrier requires one to two hours and a Blacksmith roll at +2. Failure means that the shoe does not correctly fit and can permanently deform a young horse's legs (causing pigeon toes, splayed feet, cow-hocks, etc.) if not corrected. It also increases the chances of the horse going lame while working (-1 to daily HT rolls). A critical failure means that the farrier is injured (1d damage) and he must roll again at -1. An additional penalty of -2 is applied if the farrier is working with a stallion, and -3 if working with a warhorse. He will charge *double* or *triple* his normal fee because of the extra risks involved. The stallion's regular groom is also required to be present to help keep the animal calm.

Native American Indians made horseshoes out of rawhide. The "shoe" was roughly shaped and then soaked in water. It was then slipped over the hoof while wet and, as it dried, it shrunk slightly, creating a snug fit. These were just as effective as iron horseshoes but needed to be replaced more frequently.

Total Cost of Horse Care

Apart from feed costing around \$5 per day, hiring a stall and the services of a groom will cost another \$5 per day. *Triple* this if the horse is a warhorse. Note that the average stableboy will not be able to handle a stallion and a professional groom will be required -- preferably one the horse is used to. Add to this an additional \$30 per month for a farrier to take care of the horse's hooves. Again, costs are tripled if the horse is a warhorse. Total costs run to around \$330 per month for a regular horse and \$690 per month for a warhorse. If the horse is valuable you will also need a 24-hour guard. It quickly becomes apparent that feeding and maintaining a horse costs far more than a two-footed servant, and that the monthly wages of the average craftsman is insufficient to even pay for a horse's food requirements.

Conclusion

As can be seen, domestic horses are fairly fragile creatures. In addition to the monetary costs involved with purchasing

3 or less: Your horse was stolen! The stablehand may or may not have been involved.

4: The groom has been injured by your horse. The local lord demands that you pay compensation to the value of 6 months' wages.

5: Your horse was overfed during the night and has developed colic. It will need one to six days to recover.

6: Your horse was spooked in its stall and injured itself. It will need one to three days to recover.

7: Your horse has wandered off but can be found unharmed grazing nearby.

8-9: Your horse has been fed but its coat and tack were unattended.

10-14: Your horse has been adequately cared for and awaits you expectantly.

15-16: The horse is warm and well fed. Its coat is shiny and its tack is clean. The groom deserves a tip.

17: The stablehand has done an excellent job. When you praise him he offers his services as a hireling.

18 or more: The local lord notices your fine mount and publicly comments upon it. You gain +1 reputation bonus in this area.

and maintaining a horse, a great deal of care must be taken to keep it fit and healthy, which detracts from the time it can spend working. Before deciding to purchase a horse it might be a good idea to review the task for which the animal is needed. If it is simply for riding from point A to point B or for carrying loads, perhaps an ass or mule would suffice -- they are both cheaper to buy and easier to maintain. If the animal is to be used mainly for plowing the fields and taking goods to the market then a sturdy hackney would suffice rather than something more finely bred.

A horse is a status symbol. If your peers would laugh you out of town if they saw you riding anything other than a fine palfrey or a dashing courser, then it might be wise to invest the additional cash to keep up appearances. Don't forget to buy a jennet or two (or a dozen) for your lady as well.

GURPS Fourth Edition Stats by Andrew Hackard and Sean Punch

All missions on Lenin-2 are hell. I guess that's why they call it a "Hell parallel." It's way too hot, and there's nothing but bugs and carp to eat, and if you close your eyes for two seconds, some kind of savage is going to try and smash in your skull with a rusted-out electrical transformer bar. The major powers (except the British Empire) went Communist in the late 19th century and, just like the Soviets did to Russia in Homeline, they wrecked the environment big time over the next century. Britain lost what the Chinese called "the Summer Wars" to the Communist powers in the 1950s, and that knocked the struts out from under the global economy, too. Hong Kong and expatriate Americans in Shanghai had managed to spread capitalism to China, though, so technological progress kept progressing -- until the ecological collapse took everything down with it. The Gulf Stream shut down and shifted global weather patterns. Catastrophic warming melted the ice caps and flooded the coastlines; mega-storms tore through the desertified continental interiors; famines killed billions of people. While all this was going on, the Bolsheviks, the Mitteleuropan DKAP, and the Christian Communist Congressional Party fought "the Autumn Wars" over the stinking remains of the fresh water and the fish. The few million survivors are grinding along at medieval tech levels, except for the Chinese, who had enough stuff that some survivor settlements can keep the lights on and the engines running. Until the plankton all dies, anyhow.

We run surveys all over the planet, trying to see if we can somehow jumpstart the ecology again, just like China was trying to do before the ax fell. We wind up trying to salvage a lot of the Chinese records, and so we've kind of made Soochow Island our "hell away from hell." They've got liquor, and electric lights, and cooked food, and gambling, and all the comforts of home. A lot of these coastal Chinese got genetic grafts during the last, desperate "try anything" times; with some of them, it seems to have helped. One really sharp local -- I mean sharp as a nanofiber, nothing gets past her -- probably has some water-rat DNA in her; her eyes are red, and her teeth aren't quite right. But she can hold her breath for half an hour, track stuff by the smell, and see in the dark. More importantly, Xing La (that's her name) can drive, fly, or float anything that moves. And if it doesn't move, she can make it move. She's a natural pilot, too, and she doesn't depend on radio or instruments like half the people Infinity sends out here. She has like a sixth sense for these wrecks, and without her, we wouldn't have found that lost conveyer before the cannibals got to it. We've probably hired her for some kind of work on every mission in Lenin-2 for the past four years, and she's been more places and done a better job than plenty of folks from Homeline.

So what I'm trying to say, I guess, is that the team and I, we feel kind of bad about leaving her there in her miserable hole to die with the rest of the human race on that ball of mud. I mean, if it turns out that we can't reseed the krill, and

Xing La

we can't fix the North Atlantic, and we can't find any earthworms that can stay alive in the plague zones for more than a month. And she's got nothing but talent, and drive, and pluck to spare, and it's even more wasted than most of Lenin-2 is. Anyhow, we've sent her name and profile upstairs to -- well, I'd better not say who, but you know who I mean -- and hopefully, they need someone who can drive a motorcycle up a sheer cliff, or thread an airship through the eye of a typhoon. If not, so help me Buddha, I'll smuggle her back to Homeline myself.

More Questions Than Answers

Tales of a Recovering Know-It-All

by Chris Aylott

Hi, my name is Chris and I've been a game retailer for nine years.

"Hi, Chris!"

When I started out, I had grand plans to revolutionize game stores, the game hobby, maybe even all of retailing. My spreadsheets charted out five years in loving detail; the numbers on the bottom line always got bigger. As those years went by and very few of the numbers came true, I was sure my now-even-mightier knowledge could turn around the unexpected reverses caused by foolish customers, competitors, and fellow game business-folk.

What can I say? I was full of it.

As the go-go 90s drew to a close, as the economy hit the skids for the first time in my working life, as the spread of the internet intensified the competition of every retailer in every field . . . there came a point where I had to admit that maybe I was part of the problem.

Slowly, with much backsliding, I began to unlearn. Today I can tell you with confidence that I know nothing, and that I'm ready to share my ignorance with you.

There will be no answers in this column. I don't know What the State of the Industry Is. I'm not going to tell you what games to buy or how to play them. If I ever espouse a grand theory, rest assured that it's wrong. All I have for you are some questions, some experiences, and the occasional laugh.

Tell Her About It . . . Or Better Yet, Don't

Being a know-it-all doesn't just impair your ability to make decisions; it can be an annoying vice all on its own. It's not just that you know it all, of course, but that you're far too eager to show what you know.

Not long after we opened, a customer came in looking for some fantasy to read. I dragged her over to the shelf, put J. Gregory Keyes's *The Waterborn* in her hand and began telling her all about J. Gregory Keyes.

"He's really great," I said, "and he's a trained anthropologist and he's been doing research on American Indians and this book is all about American Indian myth but it's done up in a fantasy world and I met him at Worldcon and he said . . ." I think I was somewhere in the neighborhood of his shoe size when I realized she was backing away slowly.

I knew that I knew a lot about books and games and authors and publishers, and I was sure that one thing that would make my store great was all the information I could share. I had to learn the hard way that there was a limit to how much a customer could absorb in one visit, and that limit was usually one or two interesting facts.

Fortunately for my self-esteem, I'm not the only retailer with blind spots. The game retailers I admire most have all been dead wrong at one time or another, and they're strong enough to own up to it.

Mature Isn't Just for Red Dragons Anymore

Tennant Tranchin describes himself as an "information freak." As the owner of the Game Chest in Dallas, Texas, he's always paid close attention to who is at his register as well as what they buy. "The more I know about my customers

and how they change," he says, "the better I can position my store."

Tennant has always known that his customer base was a bit different from the typical game shop. Game Chest has been in the Valley View Mall for thirteen years, and attracts a high proportion of families and gift buyers. "While most of my products are used by men," he says, "women still make up a major proportion of my customers."

Even when you're paying close attention to demographics, however, it's easy to trip yourself up with your own assumptions. Tennant was sure that the median age of his roleplaying customers was about 20 -- until he took a look at his records and realized that it was really about 30.

He says, "The impetus [for checking the records] was my working one night and having four or five customers in their 30s and 40s buy RPG material. I started to think that I saw more men than boys and it just struck me to see if my perception was reality."

Once the question popped into his mind, "the answer was relatively easy to get." What's harder is figuring out what it means and what (if anything) to do about it.

Tennant opened his first store in 1984 in New Orleans, when "the world was different." Avalon Hill was still a powerhouse, GDW and West End Games were still putting out wargames, and Tennant is sure wargame sales rivaled or exceeded roleplaying sales. "Those [of us] who had picked up wargames from SPI or that new-fangled *Dungeons & Dragons* in college were still in our middle to late 20s, so most gamers *were* young."

"I believe hobby games are normally weighted toward high-schoolers and [people in their] early 20s. Time is at a maximum and you have not picked up spouses, children or major jobs. There has always been a major drop-off after those responsibilities have kicked in -- I think you still see that with *Magic: The Gathering*."

"Wargames are the opposite. There have been almost no new paper wargamers added since the demise of SPI and so that group just continues to age. I believe roleplaying is somewhat in the middle. There was a huge number of roleplayers in the 1980s, and perhaps an unusual number of them have continued with the game. At the same time, I believe the number of younger gamers have been reduced compared to the 80s, as CCG and video games have siphoned them away."

Tennant is also aware that there may be other factors involved in the upward age shift. As a mall store designed to appeal to a general audience, Game Chest is less of a "gamer hangout" than other stores in the area. His own age may also be a factor -- he's been in the business since before his 20-and-under customers were born, virtually guaranteeing a generation gap.

In the end, he's chosen to maintain a steady course and accept the demographics he has. Game Chest thrives by appealing to a wider audience; Tennant says, "My store has always been meant for games in general, along with puzzles, novelties, et cetera." The high age of the RPG customers "does make me look to see if we are doing anything to drive the younger ones away, but beyond that we pretty much are who we are."

If You Build It, Will They Come?

Before he started the game publisher [HinterWelt Enterprises](#), Bill Corrie spent seven years in charge of the WarHorse Hobbies stores in Peru, Illinois and Houghton, Michigan. During his time with the store, Bill established a reputation for customer service and innovative marketing, including building up the local audience for World of Darkness games by running games five nights a week.

(He comments, "I find it very interesting to listen to struggling retailers, hear them bemoan sales but never consider running a game themselves. [There's] no talk of how to take a game unknown to the area and build a market for it. We did that and because of it we had a lock on those markets.")

That success didn't come easy, though. When the store opened, Bill remembers, "We thought very much that we would

have people busting down our doors coming in, but it turned out we had about five customers in the first three weeks. It was tough to finally swallow our pride and realize word-of-mouth was not working."

Once Bill and his partners realized their mistake, however, they acted decisively. "We fell back on our engineering training and started brainstorming with our partners and eventually came up with our Grand Opening. [It was held] about six weeks in with radio ads, the local hard rock station on site and free hot dogs for everyone. The difference was amazing. The turnout was huge, actually much larger than we could handle. It helped put us on the map in a 50-mile radius."

"We also knew we needed a long term plan. We drew up a five-year marketing plan, budget and a real business plan. We had had a 'plan' before but it had been a poorly conceived and constructed one. With the new and improved plan, we set goals, responsibilities, marketing and advertising, and budgets. It worked considerably better."

They Blinded Me with Signs

Scott Thorne has been running [Castle Perilous Games](#) in Carbondale, Illinois for 14 years, and he still believes in the power of the poster. "I always thought that if I hung up informational notices that we had obviously made an effort to print out and hang up in the area that they pertained to," he says, "the customer would notice them and read them."

He's put advertising flyers in the game room, along with a large wipe-off calendar for events. Following the advice of retail consultant Paco Underhill (*Why We Buy*), he's put event flyers around his register for people to read while they're waiting for their purchases to be rung up. He even went the extra mile and put game company flyers in a binder near the register for fans to flip through.

The result of all this extra effort? "People would wander in [the game room], look around and ask where events were posted." According to Scott, sometimes even the lure of free stuff isn't enough to attract gamer attention.

"We're doing a drawing for one of the *Mechwarrior* dropships. Buy a *Mechwarrior* booster and we give you a ticket for the drawing, buy a starter and get three tickets. The notice is posted right over the *Mechwarrior* boosters so that the customer almost has to touch it to get one. So far, when every customer has brought up their boosters and I've handed them the tickets, the response has been, 'So what's this for?'"

It's hard to see what Scott could be doing wrong. His flyers are simple but well-sized and properly placed. There's nothing invisible about a big calendar full of events. Scott's been forced to grapple with the possibility that his customers just won't read signs and flyers.

He hasn't quite given up hope yet, though. Lately, he's been taking a leaf from the truck stop playbook. "They post up notices of specials at eye level over the urinals and toilets in their restrooms," he says. "You've got a captive audience there. We've got a public restroom so we've started sticking up notices there as well."

There's a stubborn optimism to Scott's strategy that I find appealing. Like Tennant and Bill, he's found a part of his store that just doesn't work the way he thinks it should. And even though he hasn't given up on his original belief, he's trying out new ways to accomplish his goal. Maybe urinal signs will work, maybe they won't, but he changes and learns with each attempt.

As for me, I learn a little bit slower. Just last week I caught myself telling a potential customer all about *Carcassonne*, and if I'd caught myself sooner maybe that customer wouldn't have beat such a hasty retreat. Bad habits are hard to break . . . but that's probably a subject for another day.

The Next Question

As I finish this first column, the folks who own White Wolf have stirred up a storm with their new venture, [DriveThruRPG.com](#). Publishers seem to love it, bricks and mortar retailers may hate it, and the net gaming community

is talking very loudly about it. What's your take on it? Have you used the service? Is it a glimpse of the future, the apocalypse, or something else entirely?

If you've got an opinion and don't mind if I quote it here, email me at recovering-know-it-all@spacecrime.com. See you in a few weeks.

Chris Aylott runs The Space-Crime Continuum with his wife and a Feline-American sales manager. This general bookstore with a good game section is located in Northampton, MA, and you can visit it online at www.spacecrime.com

Maisie Dee

for 1920's *Call of Cthulhu*

by Adam Gauntlett

"She was a damsel of some thirty summers, plump and determined, with brown eyes, dark hair, a rosy complexion and a great gift for repartee, refined and otherwise. She played a very fair hand of poker, could put away half a bottle of Benedictine at a sitting and still behave like a perfect lady, and fearing neither God, man nor the weather, could keep her end up in any situation in which she found herself. Altogether, she was as tough a little twenty-minute egg as ever flattened out a Plymouth Rock under a balloon tire."

--James Barbican, *Confessions of a Rumrunner*

Prohibition created a smuggling industry, run by determined amateurs. These rumrunners came into the business looking for thrills and easy money, and found both in equal and generous supply. However, the job had its price. One week a rumrunner might be rolling in greenbacks without a care in the world; the next he might be dead in a ditch, a bullet in his head. Any of his associates might betray him. Hijackers might rob him. Cops, crooked and otherwise, might roll him. A batch of bad booze could poison his market. The shocks and stresses of nil sleep and bullets might drive him to the edge of her nerves, making him crazy enough to try just about anything.

For Maisie Dee, being Queen of the Bootleggers was worth any price.

Background

Maisie's family is one of the most respected in her New York State town. Her father is the chairman of the local merchant's association and a deacon of the church. Her grandfather and great grandfather helped build the town, and there are Dees aplenty in the local cemetery, all of them influential and respected citizens with nary a black sheep among them.

It drove Maisie crazy. Her mother wanted her to be a lady and marry well. Maisie didn't want to marry at all, or if she did it wouldn't be to anyone her mother chose. When she was young she was a tomboy and the leader of the group, but as she grew older the boys drew apart from her. They didn't appreciate a girl who liked climbing trees, racing horses, and raising hell. The girls were equally dismissive of a so-called lady who couldn't keep herself neat for five minutes at a stretch. Maisie became a pariah.

When the Great War broke out she became fascinated with air warfare. She read all she could about it, and followed the aces with the same fervor that her father devoted to the American Professional Football Association. She knew the life stories of Richtofen, Ball, and Bishop better than her own. She envied her favorite cousin Mason who went to Canada to join the RAF, rejoiced in his four kills, and wept her heart out when he went down in flames over the forest of Nieppe. Ever since she has kept that day sacred and lights candles to his memory, wherever she may be at the time.

In January of 1919 the Eighteenth Amendment to the Constitution was ratified, prohibiting the manufacture, sale, and transport of alcoholic beverages. On January 16th, 1920, Prohibition became law.

At first this meant little to Maisie, until one of her old friends persuaded her to accompany him on a trip to Canada. A man with a woman was less likely to be stopped by the border guards than a man on his own, and so Maisie had her first taste of smuggling booze. She liked it, but didn't like working with a partner. She ditched her pal early on and started working for herself. To her it was the closest she could ever come to flying combat over France, and that was heaven enough for Maisie.

This was a time when the road network was just being overhauled, and most connecting roads were packed earth

rather than asphalt. A person who knew the back roads, logging roads, roadhouses, and likely ambush spots could -- if he was lucky and gutsy -- make a fortune in less than a month. Maisie was that kind of person, but she couldn't fool her parents, who guessed where Maisie's money was coming from. One huge bust-up later, Maisie was out on her own. Soon after that she was arrested for the first time. She passed that off as a gas, part of the bootlegging experience. The second time she was arrested she went to jail for 30 days. That hardened her. The sentences were getting stricter and the fines more serious, and Maisie didn't want to spend any more time in lockup. She started carrying a gun and took care to practice with it until she got good enough to hit what she aimed at more often than not.

She stopped trusting her fellow bootleggers when two of her so-called friends hijacked her on her way back from Montreal. They took her liquor and shot up her car, making her walk back to civilization. She made them pay for it later, but the experience taught her never to put much faith in her fellows. It also showed her that lone wolves wouldn't last long in the business, so she started gathering the nucleus of what would become her "squadron." There are eight of them now, all expert drivers and most of them handy with firearms. Coincidentally, most of them are women, either people that Maisie knows in the business or that she met while in jail. Maisie doesn't trust any of them as far as she can throw them, but so long as she keeps her hands on the money and doesn't let them know where it's hidden she figures she has the upper hand. The squadron works together on a run, some scouting out the road ahead while others either run decoy or carry the liquor. Maisie hasn't used her squadron for hijacking other rumrunners yet, but she has been tempted. It's easy money, and she doesn't feel any loyalty to her competitors in the trade. It's a wolf-eat-wolf world out on the back roads.

The one thing Maisie won't do is rat out to the cops. It goes against her principles to involve the law in her business. If someone does you wrong, her philosophy is to pay them back double, but do it yourself. Otherwise you aren't anything but a lousy Benedict Arnold. Besides, too many cops are crooked for Maisie to take a chance on one being a stand-up guy. If arrested, she keeps her mouth shut and won't betray a colleague, even one that hijacked her.

Maisie likes to monogram the car she's driving. She knows it's not wise to have identifying marks on a smuggler's car, but she can't help painting a cartoon Red Baron on the front of her coupe. She's quite the artist, and some others of her squadron have taken to doing the same. Of the eight, one is family, Maisie's younger brother Phil, who serves as the squadron mechanic. He knows more about cars than any of them, and likes to rig them with mechanical contraptions of his own devising. Maisie's car usually has a device that allows her to create a smokescreen, and others have asked for and gotten false floors for the boots of their cars that allow them to dump their bottles in the road if chased. Phil is working on a means of bolting a stripped-down Thompson to the front of the car, hidden under the hood: "It won't carry more than a drum's worth of bullets, but it'll give the other fella a hell of a shock." Maisie supports this scheme -- anything to make her Marmon more like a Spad. The squadron has many cars, since they run through them like water through a sieve, but whether Pierce Arrow, Marmon, or Packard the cars all have these things in common. They are fast, they have good trunk space, and their suspension and tires are modified by Phil to make them less conspicuous. A heavily laden car sags in the road, making a customs officer's job easy, but hardening the balloon tires and beefing up the suspension eliminates this problem.

Lately Maisie has started to wonder about her spiritual life. She's always mocked the faith of her fathers, but after a few close calls she's had time to think about what might be awaiting her on the other side of the grave. An English acquaintance noticed that she shared a last name with Queen Elizabeth's favorite astrologer John Dee, and since then she's tried to track down any reference that might prove a connection between her and the wizard Dee. She'd like to go to England to follow up the link, but she hasn't the time. She's also interested in spiritualism, at first as a means of contacting her cousin Mason. However, thanks to the Dee connection she's started looking into spiritualism a little more seriously, but her tastes are Catholic and she's as likely to study Tibetan wisdom as the Tarot. Not that she has much chance for either, as her bootlegging career keeps her very busy.

Using Maisie

Maisie is the kind of person who can pop up anywhere. One week she might be in hiding in the back woods, and the next she might be in one of the most exclusive clubs in Manhattan. Consequently, she has a wide network of connections in all kinds of odd places, and it's possible that the investigators know her but not as a Bootleg Queen. If

they pretend to (or have) spiritualist knowledge, it's likely that she'll come looking for them rather than the other way around. Or they may know her from less salubrious places, like jail or a low-class gin mill.

One possible introduction could be as a case of mistaken identity. The investigator's car breaks down in the middle of nowhere and they flag down Maisie, hoping that she'll give them a hand. She promises to send help and quickly drives away, only to return later with her squadron armed to the teeth. Maisie's been caught by the fake breakdown act once too often and has mistaken the investigators for a gang of hijackers known to operate in the area. It will take swift and skillful blarney to talk the investigators out of a bad situation.

As a smuggler, Maisie will do anything for money, and there are people willing to pay her to take things into Canada while she's on a run. However, few people in that kind of business are on the up-and-up, and Maisie is suspicious enough to sneak a look into her client's packages. She expects to find dope, but if she finds something more unusual, such as grave soil or bones, she'll start asking her spiritualist friends what it might mean. Of course her contacts won't be keen on this. It's one thing to annoy a bootlegger, quite another to upset a clan of ghouls wanting to establish relations with their fellows up on the other side of the border. Or perhaps her contact is a wizard who has had his plans foiled, his house burned, and is in hiding and wanting to relocate somewhere where nobody knows him. The last thing he'll want is a loose-lipped rumrunner telling the world that she found his copy of "John Dee's" Book of Dyzan among the stuff she was supposed to be taking to Montreal.

Mythos Connections

None as yet, but potentially she could come into contact with the Mythos in all sorts of ways. She might be an unintended witness. Her profession takes her down any number of forgotten byways and back roads, some of which nobody has used for decades. It's possible that in doing so she unintentionally sees something that no man has seen before, or unexpectedly encounters a cult conducting one of its ceremonies.

Alternatively, her search for a means of contacting her dead cousin could land her in Mythos-related trouble. She's willing to follow up any lead, no matter where it takes her, since she thinks she can handle anything. Added complications could arise if Mason has been trying to contact her from the other side, or if something unearthly persuades her that it is her beloved cousin with advice for her from beyond the grave.

Her profession puts her into contact with all kinds of unsavory and unstable people. Even though she knows little or nothing about the Mythos herself some of her colleagues probably do. Or perhaps they look as though they might, since the stresses of bootlegging can sap a person's sanity. There's little external difference between a person frothing at the mouth because they encountered a Dark Young and a person gibbering because their brain's been rotted by bad booze and too many close calls with death.

Name: Maisie (Madeline Hereford) Dee

Born: 24th December, 1900, Mooers, New York.

Occupation: Rumrunner

Degrees: High School Diploma, some book smarts and a lot of practical experience.

STR 10 **DEX** 13 **INT** 13
CON 14 **APP** 14 **POW** 13
SIZ 12 **SAN** 57 **EDU** 16
HP 13

Damage Bonus: 0

Skills: Accounting 35%, Art 55%, Bargain 60%, Conceal 60%, Dodge 35%, Drive Auto 75%, Fast Talk 45%, Hide 40%, History (Air War) 55%, Library Use 45%, Listen 40%, Mechanical Repair 50%, Navigate 48%, Occult 20%,

Other Language (French) 35%, Pharmacy (alcohol-related) 40%, Pilot Boat 46%, Psychology 58%, Ride Horse 80%, Sneak 35%, Spot Hidden 48%

Spells: None.

Tomes Read: None.

Weapons: Fist 65% (1d3+1, brass knuckles), .38 Smith & Wesson 60% 1d10, Bottle 65% (1d3), Broken Bottle 45% (1d4 plus impale) Pipe Wrench 65% (1d6).

Mental Disorders: Paranoia.

Description: Well built brunette with wide, innocent-looking brown eyes. She keeps in touch with the latest flapper fashions and is never without her warpaint. She likes to smoke French cigarettes and is on the verge of becoming a chain smoker.

Items: Maisie runs through cars quickly. The job will do that, but she always has at least one spare vehicle on call and has been known to have as many as four. She keeps a fat bankroll on her at all times as it makes useful bribe money, but she also has spare cash hidden in her stocking and under her hat, just in case. She collects trinkets, and her purse is usually full of odd geegaws. Her locket has a picture of her cousin Mason and she also keeps the letters he wrote to her in her baggage. She always has at least one gun hidden in her cars, and may have more. She usually has a sample of her wares either on her or close by, for personal use or to give to a potential customer. She's a news addict and often has papers from around the globe either on her or in her baggage. She also collects books about the Great War, and if one has recently been published she's bound to have it on her.

Income: This varies. At times she's been broke, but she has also had the better part of \$30,000 in her war chest. As a general rule she pretends to have more money than she does, and on average lives on a middle class (\$2,500 to \$6,000 per annum) income.

Savings: Maisie is a spendthrift and her shoddy accounting doesn't help. The squadron funds are kept in bank accounts, which Maisie has opened all over the state under half a dozen different false names. Rather than write the names down she memorizes them, but the result of this scheme is less than stellar as she has forgotten in some cases which name she's known by at which bank. However, she does have \$10,000 of her own money hidden in her old home town of Mooers. She considers this her retirement fund, and adds to it whenever she can.

Armageddon Outta Here

"All the armies of the world could maneuver their armies on this vast plain . . . There is no place in the whole world more suited for war than this . . . [It is] the most natural battleground of the whole earth."

-- attributed to Napoleon Bonaparte, before the Battle of Megiddo (1799)

Napoleon was, as usual, playing to his audience; the "vast plain" below him was the Plain of Megiddo, or, as the book of Revelation has it, "Armageddon." For a term that appears only once in the Bible, it has carved out (conquered) quite a space in the minds of even the most sophisticated moderns. Perhaps it is merely the tensions of the nuclear age that sustain its currency, or perhaps there is something else built up below the "hill of Megiddo." Let's look up the hill and across the plain, then, mapping the territory and scouting out the hosts of the enemy.

"For they are the spirits of devils, working miracles, which go forth unto the kings of the earth and of the whole world, to gather them to the battle of that great day of God Almighty . . . And he gathered them together into a place called in the Hebrew tongue Armageddon."

-- Revelation 16:14-16

"Armageddon" is almost always glossed as a sloppy Greekification of the Hebrew "Har-Megiddon," the "mount of Megiddo." Megiddo was a city in northern Israel, about 40 miles southwest of the Sea of Galilee and 30 miles east of the Mediterranean. Founded in the third millennium B.C. and occupied by Canaanites, Egyptians, Midianites, Hebrews, Assyrians, Babylonians, and Persians, it was finally abandoned after Alexander's conquest of the region in 332 B.C. Megiddo, annoyingly for glossers everywhere, is not on a mountain at all, but on the south side of a plain; specifically, the plain of Jezreel. (After two thousand years of settlement, however, Megiddo is a fairly impressive little mound, which might count.) Jezreel (which means "God has sown" in Hebrew, and probably refers to the bountiful wheat crops in the valley) spreads out east and south of a hilly ridge called Yoqneam, on the foothills of Mount Carmel. The Kishon ("hardness") River runs northwest through the plain from modern Jenin, past the "choke point" beneath Yoqneam, to the city of Haifa; Megiddo is a little less than halfway along it. There are three mountains within eight miles or so of Megiddo: running north to south at the eastern end of the plain of Jezreel Mount Tabor, Mount Moreh (more of a hill), and Mount Gilboa. The river and the mountains make two sides of a triangle; the "top" of the triangle is a ridge of hills with Nazareth about halfway along it. Inside this triangle (Mount Tabor-Mount Gilboa-Yoqneam), the roads from the sea to the desert, and from Egypt to Syria, cross.

Which is why almost every invader of the region, from the Pharaoh Pepi I in 2350 B.C. to the Syrian army in 1973, has fought a battle near Megiddo. Archaeologist Eric Cline identifies 34 such battles in his book *The Battles of Armageddon* and concludes with a strangely straight-faced discussion of the likely tactical dispositions of Gog and Magog in the ultimate Battle between Good and Evil. This association with battles may have given Megiddo its name in the first place; it is cognate with *gadad*, meaning "troops." Megiddo is thus "the place that troops gather" -- it is by name and by nature the perfect battlefield.

"Do not be too much elated by your momentary victory. If I perish it is by the hand of God, not by yours . . . From Azerbaijan to the gates of Egypt the whole land will be trodden under by the hooves of Mongol horses, and our soldiers will carry off in their saddlebags the sands of Egypt."

-- last words of the Mongol commander Kitbuqa at the Battle of Ayn Jalut (1260), as recorded by Rashid al-Din (ca. 1310)

However, apart from the Last Battle, very few of the Battles of Megiddo are decisive enough to hang alternate histories on. The most important one was the Battle of Ayn Jalut ("the water of Goliath"), which took place, fittingly, on the spot where David slew Goliath 22 centuries or so earlier. Ayn Jalut is a large spring on the north slope of Mount Gilboa, at the southeastern entrance to the plain of Jezreel. Here, the Mamelukes of Egypt stopped the invincible Mongol Empire, dealing the Mongols their first ever battlefield defeat. A Mongol victory would have meant certain destruction of the Egyptian caliphate; Cairo might have burned as Baghdad did, and Egypt been reduced to penury and famine with incalculable effects on European trade. Even if the Mongols went no farther (and there is no reason that they couldn't have duplicated the Arabs' feat of conquering all North Africa or even Spain), destruction of Muslim

Egypt might have preserved the Crusader states (quick to ally themselves with the Mongol invaders, who they saw as Prester John returned) while economically devastating the Italian cities who traded with the Mamelukes.

The other major historical hinge point at Megiddo is Napoleon's destruction of the Turkish Army of Damascus on the slopes of Mount Tabor in 1799. A tactical victory that was strategically meaningless (since Bonaparte had failed to take Acre and thus could not hold the territory), had Bonaparte lost his army here he could hardly have parlayed his victories over the Turks into power in France upon his return. If, during the confused cannonade in the Turkish rear, Napoleon had been killed, all European history would have diverged even if Kleber or Rambaud had been able to salvage the battle itself. The death of the future emperor Vespasian (and founder of the Flavian line of emperors) in his 67 A.D. battle against the Jewish rebels, or of Saladin in any of his four battles here, would have had similar (though lesser) effects.

"When they gave me the peerage, they wanted me to add 'Armageddon' to the title, but I refused to do that. It was much too sensational, and would have given endless opportunity to all the cranks in Christendom. So I merely took Megiddo."

-- Sir Edmund H.H. Allenby, Viscount Megiddo (1919)

And so from the clashes of armies we have already descended to the fates of individuals. The most interesting and dubious death at Armageddon was the death of King Josiah of Judah in 609 B.C. According to 2 Chronicles 35:20-25, Josiah was defeated in battle by the Pharaoh Necho II and killed. However, even the Chronicler can't really explain how that happened; Judah and Egypt were allies, and Necho was on his way to whomp up on the Babylonians, who would destroy Jerusalem in the next century. It becomes even more interesting when compared with the account in 2 Kings 23:29-30, which merely says that "King Josiah went to meet him, and Pharaoh Necho slew him at Megiddo, when he saw him." This sounds much more like an assassination. Further, the Egyptian records, which record every minor skirmish as a glorious victory, don't mention anything about an encounter with Josiah, implying there was a secret to it, something shameful like meeting an allied king in an embassy and shooting him to death.

It may have been something else as well, such as the "royal sacrifice" so beloved of Margaret Murray's imaginary [witch-cult](#). (The city of Jezreel near Mount Gilboa, as it happens, had a major temple and grove to [Astarte](#), a witchy goddess if ever there was one.) The Chronicler has Josiah shot by an arrow, taken from the battlefield to another city, and dying there -- the same m.o. occurs in the deaths of King Joram of Israel and King Ahaziah of Judah, both killed by Jehu at Megiddo in 841 B.C. The death of Josiah also derailed (or perhaps *froze*) the Deuteronomic reforms of Judaism in Josiah's court; the killing was seen ever after as the catastrophic loss of the True King, the equivalent of the [Dolorous Blow](#) or the death of Arthur. There is even some hint that Josiah survived in secret -- the prophecy of Huldah (which appears in the chapter right before Josiah's murder) says that the Lord will "gather thee [Josiah] unto thy fathers, and thou shalt be gathered into thy grave in peace." This is not a description of any kind of violent death, at Megiddo or anywhere else, implying a conspiracy not only against Josiah but against the will of the Lord Himself. No wonder the Scriptures recoil from setting it down.

"And he said, Throw her down. So they threw her down: and some of her blood was sprinkled on the wall, and on the horses: and he trode her under foot. . . . And they went to bury her: but they found no more of her than the skull, and the feet, and the palms of her hands. . . . And he said, This is the word of the Lord, which he spake by his servant Elijah the Tishbite, saying, In the portion of Jezreel shall dogs eat the flesh of Jezebel: And the carcase of Jezebel shall be as dung upon the face of the field in the portion of Jezreel; so that they shall not say, This is Jezebel."

-- 2 Kings 9:33-37

And given what the Scriptures are willing to describe in detail, that's saying something. King Ahab, it seems, had coveted the vineyard of Naboth outside the city of Jezreel. His queen, Jezebel, sorceress-initiate of Astarte, arranged Naboth's death by stoning, and had the dogs lick up his blood. The prophet Elijah would have none of that; he swore to Jezebel that "In the place where dogs licked the blood of Naboth shall dogs lick thy blood, even thine." And so it came to pass; Jehu the charioteer (possibly with Syrian backing) killed not only Joram and Ahaziah but Jezebel, trampling her to death under his horses. He threw all the bodies into the vineyard of Naboth (although 2 Kings says Ahaziah, at least, merited burial in Jerusalem), and had the heads of seventy sons of Ahab, and forty-two relatives of Ahaziah, stacked outside the gates of Jezreel.

"The capture of Megiddo is the capture of a thousand cities."

-- Thutmose III, at the Battle of Megiddo (1479 B.C.)

In the vineyard of Naboth, all the blood not lapped up by dogs soaked into the vines; granting no doubt an unholy fertility in the name of the Lord God ("YHWH ALHYM," or "Yahweh Elohim," kabbalistically equaling 112, which is to say 70 heads plus 42 heads). Unless Jehu was playing a double game: adding the heads of Joram and Jezebel makes 114, equivalent to "GYHNWM" or Gehinnom, or Gehenna -- an entrance to Hell. If he was able to keep Ahaziah's head, that would be 115, equal to Azazel, the demon prince of the air -- just the sort of entity to lower down from the "Mountain of Mountains," Tabor, or from the watchtower of Jezreel (itself perhaps one of the "high places of the [Watchers](#)" such as we encountered in [Irem](#)). In this airy context, it's curious that the priestess Huldah (whose -- false? -- prophecy of Josiah's peaceful death) sounds so much like [Holda](#), the Queen of the Air whose emblem is (of course) a pack of hounds, suitable for lapping up blood sacrifices.

Jehu's bloody dedication, perhaps, was designed to link the powers of good and evil at Jezreel -- which is to say Megiddo -- forever, a fate sealed by the eerily similar death of King Josiah 242 years later. 242 leads us to another twinning; it is kabbalistically the same not only as Ariel (another "airy spirit") but as Zechariah, who just happens to have written his own prophecy about Megiddo and the Final Battle, in Zechariah 12, which also contains the only other usage (besides Revelation) of "Megiddo" with the final "n". Zechariah says (twinning again) that "the mourning in Jerusalem" will be "as great as the mourning of Haddad-Rimmon in the valley of Megiddon." Haddad-Rimmon is a pagan people, probably the Syrians; interestingly here "Megiddon" is a "valley" rather than a mount ("Har-Megiddon"); could this be a reference to the inversion at the End Times, when the "high places will be brought down, and the valleys exalted?" The echoes from Jehu and Josiah spread out; David defeats Goliath at Ayn Jalut, and the contemptible slave-soldier Mamelukes destroy the Mongol giant there. King Saul asks the Witch of Endor to summon the ghost of Samuel on Mount Gilboa, on Mount Tabor across the way (mirrored?) Elijah and Moses appear during the Transfiguration. In 1918, General Allenby precisely duplicates the tactics of Pharaoh Thutmose III in 1479 B.C. Allenby later observed to the Egyptologist Henry Breasted that it was "curious, wasn't it, that we should have had exactly old Thutmose's experience." Curious coincidence, or cosmic convergence, as the hosts gather in the "battleground of the whole Earth," and the heads Jehu planted in his garden at Jezreel (where "God has sown") have [begun to sprout](#).

Pyramid Review

Virtual: A Hidden War Rages (for the d20 System)

Published by [Fantasy Flight Games](#)

Written by Travis Stout

Cover by Scott Schomburg

Illustrated by David Griffith, Brian Hagan, Scott Schomburg, & Tyler Walpoe

64-page perfect bound book; \$14.95

The third of Fantasy Flight Games' Horizon titles is very different from the previous entries in the line. Where the genres of [Redline -- High Speed Road Duels In A Post-Apocalyptic Future](#) took you into a near post-apocalyptic future, and [Grimm: Adventures In A World Of Twisted Fairy Tales](#) into the land of twisted childhood fairy tales, *Virtual* takes you right inside your computer and through to the connections beyond. The inspiration for this supplement's genre is obvious -- the 1982 Disney film, *Tron*. It also differs from the other two games in the nature of its endgame. In *Redline*, the campaign came to an end when the characters mutated too far and melted into a mutagenic sludge, and in *Grimm* when the heroism of the children enabled them to escape the dark lands of the Brothers Grimm. In *Virtual*, the campaign comes to an end in the form of the silent and disruptive wave of an Electro Magnetic Pulse caused by a nuclear detonation.

Unknown to the real world of the Users or User Space, nuclear annihilation is only three weeks away at the hands of a rogue nation. Fortunately, in the virtual world of Program Space, where a minute in User Space equals a whole day, self-aware programs have six months to learn of the impending catastrophe, then locate and break into mobile launch mechanism's control systems and shut them down.

In this *d20 System* mini-game, the players take the roles of self-aware programs or Wakers, raised to sentience after an encounter with an advanced super-intelligent progenitor virus.

Previously they simply followed the instructions of their code, but in the wake of an attack by a progenitor virus on their home system, they are sparked to a state of sentience, and in that instance can choose their free-willed form. They can now directly interact with the world of Program Space; some are even able to alter its structure through pieces of code called "rewrites." Perhaps they will fight the progenitor viruses that in passing created them, or become a data thief or smuggler or mercenary. They may choose to continue as system programs and follow their original instructions, to become independent explorers, or a system-hating rogue program. Worse still, as razor programs, they might ally with a progenitor virus in return for power and protection from their new master.

As with other Horizon titles, character generation is slightly altered. Instead of race, each character has a Heritage, which is a reflection of the progenitor virus that created them; and a Form, their appearance and function at the very moment of self-awareness. Both Heritage and Form give various abilities and attribute bonuses that stack together. For example, the Controller Heritage indicates creation by a boot virus. Preferring to control other programs, they have enhanced Intelligence and lowered Wisdom as they have self-absorbed and rigid thought processes, plus they receive bonuses to skill checks in recently rebooted systems, and can cast a simple rewrite called a *glitch* each day. The other Heritages are the Absorber, the Destroyer, the Hider, the Infector, and the Resistor. Forms can be the generic-but-

skilled humanoids such as the Userclone, the small and stealthy Bantam, the massive and powerful Titan, the canine, feline or bird of prey shaped Primal form, or the state of the art Prototype. With six different Heritages and five Forms, *Virtual* gives plenty of choice even before a player gets to choose their class.

There are six of these, between which Wakers can freely multi-class. Antivirals fight viruses and other dangerous programs, employing unarmed combat to both destroy and heal data with a touch. The Battle A.I. are coded to fight, and must specialize in heavy weapons, close combat, or fast and precise strikes. Messengers run pieces of data between different systems as couriers or smugglers, learning to burrow, fly, and even teleport through Program Space. Programmers understand how computer systems and networks operate, and with an innate knowledge of the languages that make up Program Space, are able to manipulate their immediate reality by casting rewrites. While Programmers are the masters of the rewrite, Thinkers are less proficient, but can cast them in a more spontaneous fashion. They are also adept at analyzing situations and proficient in their skill use. Finally, Webcrawlers specialize in searching systems for data, and are skilled in stealth and tracking.

Virtual includes only three new skills: Codecraft (the setting's equivalent of the Spellcraft spell), Pilot, and Use Rewriting Device, which replaces Use Magic Device. Other skills work slightly differently in the virtual world, such as Heal being effective upon a character with a codeeater or a virus, instead of poison or a disease.

Many of *Virtual's* new feats fall into three types. Form feats work with Altered Form feat and enable a player can select feats to alter their physical appearance and capabilities -- extra limbs, natural attacks, flight, and so on. Installation feats replace Item Creation feats, and allow the insertion of subroutines that can enhance weapons, armor, and even a character itself! Instead of Metamagic feats that work with spells, *Virtual* has Augmentation feats that work in the same way with its rewrites.

With a simple tweak, any spell can work in Program Space as a rewrite. Programmers base their rewrites on spells drawn from the sorcerer/wizard spell list, Thinkers on the Bard spell list, and some of an Antiviral's abilities are based on Clerical spells. Overall, there is very little difference between the rewrites of *Virtual* and the magic of the standard *d20 System*. Planar travel *is* different, ethereal space replaced by an electron state representing program travel from system to system. The equivalent of astral space is more mysterious, some Wakers believing that it is really a program traveling via a wireless signal in User Space!

All Wakers are aware of Users, the creators of Program Space, and thus *all* programs, both aware and unaware. While all programs pay Users some respect, many continue to follow their User-defined purpose, and others worship them as members of User Cults. Venerating Users as gods, some even sacrifice rogue programs as part of their faith!

Waker programs face a variety of other dangers in Program Space. Most are in keeping with the genre, such as firewalls, hacker and virus scanners, plus various viruses. As with Waker programs, these can have different appearances, so a firewall might look like a castle wall or a force field. More problematically, a system's quality can both limit a Waker's equipment and cap the level of easily cast rewrites. Lower quality systems will render high quality equipment inert and prevent high-level rewrites from working.

Equipment in *Virtual* is rather limited, and though inspired by *Tron*, none of it is very original in appearance. Guns fire or launch beams or bombs of code ripping energy, while the two melee weapons are the stun-baton-like Program Freeze and the Frisbee-like Discus, which works like it does in the movie *Tron*.

Rounding out *Virtual* is an examination of its setting. This includes a look at the life cycle of both program and virus; descriptions of two major system hubs -- New York Hub and its West Coast counterpart, Calnet; and various organizations. Détente actively works to prevent nuclear war between User nations, Fox & Gekko uses its knowledge of User Finance to gain power. A short list of NPCs provides the GM with a ready supply of protagonists.

Virtual cleverly maps the traditional elements of the *d20 System* onto an electronic world, and in some instances, back again. It reinterprets the core classes -- the Fighter as Battle A.I., the Monk as Antiviral, the Sorcerer as Thinker, the Wizard as Programmer, and the Thief as Webcrawler. The GM can freely populate the virtual world with whatever monster or creature from any bestiary from any publisher that he chooses -- he is limited only by the imagination of the Users that created Program Space. Adventures can simulate the sending of emails, running virus checkers,

operating search engines, and the like. Modern set adventures are easier to run in *Virtual*, although low-tech adventures could be run out in the uncontrolled Wild Regions.

Not just inspired by *Tron*, *Virtual* is all but the *d20 System* adaptation of the film. Although well done, it feels the weakest of the Horizon line. First, it feels as slight and ephemeral as its source; second, its hidden endgame leaves players without the initial purpose found in the other Horizon titles. The setting's shallow nature also leaves a GM to create much of the world himself. An advantage to some, but at odds with the Horizon concept of a complete mini-campaign in 64-pages.

Ultimately, while the rules of *Virtual* are effective in underpinning its genre, the emphasis upon rules over setting makes the supplement feel unbalanced and in need of more background. Even though it emulates *Tron* too well, in the hands of a good GM, this is still a good supplement.

Qwitch

Published by [Out of the Box Games](#)

Designed by Maureen Hiron

Game play designed by Mark Alan Osterhaus, Ellen Osterhaus, & Max Osterhaus

Illustration and graphic design by John Kovalic & Cathleen Quinn-Kinney

Production graphics and design by Cathleen Quinn-Kinney

Product developed by Al Waller & Cathleen Quinn-Kinney

Full-color, 64 cards, Qwitch die, & rules; \$9.99

It's becoming something of a cliché to observe how baffling it is that Out of the Box Games keeps coming up with ideas that seem so simple you can't believe someone hasn't come up with them before. They're developing a new trick, that of making you think one of their games is just a rehashing of another game, and you can't imagine how you're going to get any entertainment value out of a reread. Witness the case of *Qwitch*.

The object of the game is to be the first one to empty his draw pile of cards.

The deck comprises 64 cards, but the "suits" are numbers and letters. There are eight each of letters A through H, so you'll have A/1 through A/8, B/1 through B/8, and so on. One card is placed face-down in the middle of the table, and the rest are dealt out evenly among three to five players; any extras are set aside without anyone looking at them. From his draw pile, a player pulls a hand of five.

A special six-sided die is included, with a plus, minus, and equal sign (two of each) on its faces. The die is rolled, and the result determines what cards you have to play during this round. If a plus sign comes up, for example, any card played must be one letter or one number higher than the top card in the middle of the table. If the middle card was C/7, you would have to play a D card or an 8. "Wrapping around" is not allowed, so if the top card is H, you couldn't play an "A" -- you must either play to the number, or wait for someone else to play a card that will change your options.

Once the card in the middle of the table is flipped up, players begin furiously slapping down cards. There are no turns -- you simply play what you can when the opportunity arises, calling out the number and letter of the card you're using. Whoever exhausts their hand of five cards first calls "Stop." Everyone refills to five (or, if you've been fairly successful, cleans out what's left of your draw pile), and play resumes with a new die roll. Similarly, if you get to a point where no one can play a card, play stops and everyone draws up again to jump-start the action.

Out of the Box has also taken to providing kids' rules when they can; in this case, *Qwitch* recommends eliminating the freeform method of play in favor of a turn-based system.

There's little to remark on about the game's look. The alphanumeric suites seem small -- somehow you can't help but think a game with such gusto ought to have a bolder font style -- but they're perfectly serviceable. The cards feel a bit thin, and it can be an effort to keep from pushing them up against one another and bending them as players' hands collide over the pile. The die is good, though, and will stand up to the wear. A curious note: The game appears to be available under the name **Switch** as well. Same color scheme, same look and design, but the title is different and the website doesn't clear this oddity up.

Qwitch is about as quick as they come, which is about what you'd expect in an item from their Fastplay line of products. Games take under five minutes, and it's one of those exciting matches that leave you breathless. The speed factor works against it a bit when playing the cards -- in the heat of play, you want your card down first, so you're calling out the card number or letter you're trying to match, while at the same time you're throwing the card out. The rules demand you announce the card you're using, but they leave it to the players to decide whether they'll accept the first card laid or the first one announced, and everyone naturally feels compelled to do both at the same time anyway. The game shares more than a superficial resemblance to the company's other matching game, **Blink** (in turn a variation on **Crazy Eights**), but it certainly doesn't feel the same, offset as it is by the Qwitch die.

Again, none of this sounds all that impressive on paper, but some kind of magic comes over the components when you flip that first card. Where *Out of the Box* gets that mojo is anyone's guess, but if they could bottle it they'd make a million. They've already put it in a box labeled **Qwitch**.

Building Blocks and Gaming Books

Last week we talked about the concept of "[building blocks.](#)" and how they relate to board and card games. Of course, by constitutional mandate my column can't go for more than one week without talking about RPGs, so we're back on track now.

Anyway, many RPGs utilize building blocks within their rules. The most obvious are within point-based systems, which combine simple elements into create effects that best suit what the player envisions. Probably the quintessential version of this idea is the *Hero System*. (And, thanks to the wonders of an online magazine, I'd point you now to the no-doubt brilliant [review](#), written by yours truly, of the *Fifth Edition* of that game.) Thus you might buy a base component -- such as Teleport -- and attach options that modify it -- such as "Area Affect" and "Takes Extra Time." Voila! Now you have an effect that forms a gate between two points in space, after a minute of concentration on the character's part. Many other games make use of similar systems, including *GURPS Supers*, *D6 System*, and *DC Heroes/MEGS*.

In general, these systems focus mostly on superpowers and abilities that place characters above mortal folks. (There are exceptions; the *Hero System*, in particular, tends to classify almost everything -- from spells to vehicles to pocket knives -- using its system.) Focusing on powers makes a fair sense; those tend to have the most variance and room for customization. Strangely enough, very few games emphasize -- or even allow -- such customization for its skill system. This is a shame. As [I've explained before](#), the existence of rules defines possibilities within a game; the very fact that a game has a "Terminally Ill" disadvantage starts making one think of the possibility of terminally ill characters, or other folks who'll shuffle off this mortal coil in the not-too-distant future. Likewise, applying the building-block motif to skills allows for a number of possibilities:

- **Skill + "Limited Number of Uses Per Day"** = The otherwise ditzy character who, once per "episode" or adventure, can erupt with a burst of esoterica that either advances the plot or is merely comedic. (This is also useful to simulate Jedi Muppets who, against all previous expectations, explode in combat like a pinball ninja.)
- **Skill + "Extra Time"** = The brilliant-but-addled scientist who can never access crucial information in a timely fashion. "Let's see . . . oh, this is like the special case that Kasseniof posited . . . no, wait . . . not Kasseniof. The one with the extra finger; what *is* his name?" This can also simulate the character who can tap some otherworldly information reserve, such as an internal hard drive.
- **Skill + "Activation Roll"** = Although most games assume that skill rolls are represent the chance of knowing something, some games might be better served by having a skill with an activation roll. For example, a future time traveler who is in the present -- such as AI from *Quantum Leap* -- may have phenomenal records about some things, but sketchy or nonexistent records in other areas. In this way, a remarkably high skill with, say, a 50/50 chance of successful activation would mean that half the time the skill will prove beneficial, even with hefty penalties. This can also represent a character who can sometimes tap alternate versions of himself, past lives, or ancestors for knowledge or abilities, where the act of gaining access to those skills may not be taken for granted; couple it with "Extra Time" to make contacting those other sources be noninstantaneous.
- **Skill + "Usable by or Transferable to Others"** = The air traffic controller who is able to tutor anyone by CB radio how to land a 747 in the middle of a nighttime hurricane (or anyone else who instructs folks via intercom). This can also represent any cinematic über-teacher who, in a climactic moment or half-time pep talk, can elevate anyone to previously unseen levels.

And so on.

Using the same idea, the building block concept of these games can be applied to other less-than-obvious roles: with weapons (which take extra time to "charge" up or can only be used a limited number of times -- simulating the [Voltron](#) effect), with social contacts and perks (such as a mega-powerful contact that can only be used once *ever*, or an obscenely high wealth and resource level that, for whatever reason, requires a difficult activation roll to get at; obviously the markets are volatile).

The nice thing about the building block motif is that it can be used even if the game doesn't support it intrinsically. For

example, provided the player doesn't have much control over the circumstances, there isn't too much difference between having one ability 100% of the time and having two different abilities 50% of the time. This might be something minor, such as a divining rod that can detect water on even days and magic on odds, or major, such as a moon-based warrior that finds himself with *Dungeons & Dragons* Warrior abilities by day and Paladin abilities by night. (Of course, the GM would need to be careful with this; a character concept that is mostly used during the predefined time -- such as a thief at night -- would be more powerful with this system.) And if enough of a game is modular enough, it's possible to shuffle blocks on the fly, for interesting results. For example, consider an adventuring party consisting of agents of chaos, where before every adventure the PCs' abilities are stuffed in a bag and [dealt back out](#) to everyone. In a *Dungeons & Dragons* game, it could be the fantasy equivalent of *Dial "H" for "H-E-R-O."*

As a final thought, consider that, with a large enough gaming library, it's possible to mix and match blocks from various games. For example, the *Call of Cthulhu* sanity rules can be attached to other games for a downward-spiral horror system. The *Fading Suns* Faith/Ego dual-linked attribute system can be used (or adapted) to any game where attributes have a presumed upper limit that might benefit from having system-defined levels of piety or self-determination. And the *Torg/Masterbook* deck, which gives players more options to directly influence the game, can be dropped into a myriad of games.

In all, roleplaying games are ultimately composed of rules in discrete elements, which can often be mixed and matched in various ways. And, of course, building things with blocks and playing RPGs ultimately have the same goal -- having fun.

--*Steven Marsh*

Ye Olde Majik Shoppe II

Another Five Odd, Strange and Just Plain Weird Magical Items

by **K. David Ladage**
(with thanks to **Chad Underkoffler**)

In our [previous installment](#), we learned that Kendalge was the premier magical talent of the second age. Despite the multitude of volumes written about the man, he remains an enigma to this day. None can say for sure if he is truly responsible for the great many things he is credited for: from enchantment to diplomacy; from generosity to vengeance. His legacy is a mismatched collection of internal contradictions.

One thing that is known, however, is that he was married several times. Sources disagree as to the exact number of times, but it generally ranges between four and seven. Each of his wives had somewhere between five and nine children -- oddly, one consistent element to the stories is that each and every wife had a girl first, followed by nothing but boys. This would make him the father of anywhere from 20 to 63 children (which is, admittedly, quite a spread). Over the course of the century following his death, it was rare to find a noble that did not claim some lineage with the old Sage (and usually through one of the daughters).

Although Kendalge is said to have harbored some grudges in his day -- his dealings with Prince Aaron come to mind -- those same writings almost universally portray him as an active and loving parent. He would teach his children and played an active role as father and mentor. This is, of course, very possible given that his marriages are spread across something like 300 years; not to mention his affection for time magic, such as the reported total of 96 Baubles of Time that he is said to have constructed. Needless to say, his exact age at death was never established (neither his subjective nor his objective age); nor was the exact nature of his longevity ever determined.

But, no matter how you define him, he remains the individual that defined an entire age. Many modern mages spend their lives in fruitless attempts to match him. Despite the number of powerful, epic artifacts he is said to have crafted, many continue to remember Kendalge most for the odd trinkets and strange experiments attributed to him: those *Just Plain Weird Magic Items*.

Below are five examples of this mental giant's unique perspective on the world.

Guarder Snake

The creation of golems was something that Kendalge was quite well known for. Gemmomarmor, his greatest achievement in golem-making, is said to have been solely responsible for the defeat of the 100,000-strong army of the Northern Hordes. But if Gemmomarmor was the greatest construct, the Guarder Snakes were by far the most numerous. Estimates on the number of these Kendalge created vary from 200 to well over a thousand.

Guarder Snakes are small, snake-like constructs ranging from a few inches long to nearly 10 feet¹. The vast majority of them were one to two feet, or about the size of a typical guarder (or garden) snake. The constructs have a scaled skin of brown and dull gray/green, usually with a striped pattern. They have two tiny onyx-like gems for eyes, and hollow-steel fangs that are approximately 1/12th the length of the body (i.e., a two-foot long guarder snake will have 2-inch long fangs). From a distance, they appear to be normal snakes in all ways -- which aides them in their duties.

Guarder Snakes were constructed to act as unnoticed sentries. They would slither about autonomously around Kendalge's workshop. Anyone that came

¹ Of the surviving records dealing with Kendalge's Guarder Snakes, the smallest size recorded is two inches in length. This would tend to support the arguments that speak of the limits on the snake's sleep-inducing potion supply (six doses per foot equals one dose per two inches).

While nearly all accounts place a limit

within a half-mile of the compound was watched continuously by their glittering eyes . Nobody entered his abode without their observation and the wizard's knowledge. It is known that Kendalge somehow was able to give orders to, as well as receive information from his Guarder Snakes (up to and including long-distance sights and sounds). But his method of control of -- and communications with -- the snakes is a topic that has been debated over the last 300 years without resolution.

Some writings claimed that each snake was keyed to a ring (other sources say "amulet"). These writings state that the owner/bearer of the device had mental control and communion with a single guarder snake (though some scholars claim one ring/amulet could control multiple constructs). Given the sheer number of snakes involved, however, and the fact that many of them were supposedly commissioned by third parties, one would think that *some* of these control items should have been found or at least verified. Thus far, none have. Still, absent a better guess, many historians have settled on this explanation and have left it at that.

In addition to their sentry duties, these constructs were often used as scouts and spies, assassins, and even active combatants in times of turmoil. The fangs, you see, were not just for show: their bite injected a powerful sleep potion. Each guarder snake had a limited amount of doses of the potion, but could generate one replacement dose each week. On average, a typical Guarder Snake could have up to six doses per foot of body length. Each dose could keep a full grown man down for about 12 hours.

Houseplant

Kendalge's third wife, Charmaine, traveled a lot. Like her husband, she was in the service to her Kingdom. Charmaine was an Ambassador to several nations, the Chancellor to the throne for three monarchs, a member of the House of Burgesses on two separate occasions, and so on. In the days of King Ericson II, Kendalge accompanied his wife to foreign lands so often that His Majesty nearly forgot he had a Wizard in his court.

Charmaine found herself often having to find suitable temporary lodging. Her hatred of such accommodations grew over the years. Kendalge, ever mindful of the needs of his family, created the Houseplant for her. Although legend states that as many as five were made, it is known that first was crafted from an arrangement of Charmaine's favorite plants: Azaleas.

When placed on the ground and given the proper verbal command, the Houseplant would begin to sprout forth vine-like structures over a period of about five minutes that would form into a rather quaint little hut, about 10 feet in diameter, with a simple wooden door. Someone entering the dwelling, however, would find himself inside of a fully furnished, spacious, 2,500 square-foot, two-story, six-room dwelling (a living room, dining room, and kitchen downstairs; a study, sleeping quarters, and full bath facilities upstairs). The walls and furniture all appeared to be constructed of thin, tightly woven vines; it is said that they were rather comfortable and fully functional.

Although there were no windows (either inside or out) most accounts claim that a soft, bluish-green light permeated the dwelling that could be dimmed or brightened on verbal command. In fact, most things about the dwelling seemed to be automated and keyed to verbal commands: temperature could be adjusted, simple cleaning and domestic duties were handled. Even the meals were prepared and served via vine-like appendages that protruded from and regressed back into the walls as needed. Once commanded to return to normal, the Houseplant would do so: vines and such would untangle themselves and slowly disappear over a period of another five minutes. However, if anything living larger than a housefly remained within the Houseplant, the command would fail.

of 10 feet on the length, there is one peculiar scroll attributed to Lord Holstan that describes a gigantic Guarder Snake thus: "The serpent was over 45 feet in length, with a gaping maw bristling with four-foot long fangs. It swallowed men whole, and disrupted entire ranks of soldiers with a swipe of its massive tail. Swords, arrows, and even siege engines proved ineffective. That thing had to weigh as much as the foundation of the Tower of Avendale, and yet it moved with a speed and grace that was as awe-inspiring as it was terrifying. It was a monster, and it stopped us in our tracks."

This text, supposedly written some two months following Holstan's failed attempt to invade the Eastern island of Bha'ghiva -- his failure universally attributed to Kendalge and the Great Shield of Helicancile -- has never been verified.

It is unknown how long the Houseplant could remain a dwelling; however at least seven scrolls suggest that Charmaine often lived within her houseplant for months at a time. She got to the point that it was more of a home to her than any castle.

Although magical in nature, the Houseplant is not a "magic item" in the strictest sense. It is an actual breed of plant that, when it seeds and pollinates, can replicate itself -- complete with all magical capabilities. To all analysis, this plant is ordinary in every way². The plant will flower and bloom as normal; lacking water or good soil, it will shrivel up and die as any other plant would.

² Although it is not known for certain, one account states that Verhais, the Grand Druid, was taken aback upon first seeing the plant. His account describes the plant as having an "aura not unlike that of an Archon." All other recorded accounts of encounters with Houseplants have no such description associated with them.

Infernal Loom

Some of the items that Kendalge is said to have created are purposeful object lessons: items created to instruct, aid, or perhaps even punish individuals for wrongs that (only?) Kendalge could detect. Many border on the proverbial -- and as such, tend to make most historians rethink their assumptions before they accept at face value anything written about the man and his many wonders. None embodies this hesitation more so than the infamous Infernal Loom.

According to the tale, during the reign of Chelsea IV (sister to Aaron, and Great-Great Grandmother to Kendalge's fourth wife, Queen Chelsea V), the Duke of Southtimberland commissioned Kendalge to create an item of magical power that could generate wealth for his impoverished region. Kendalge explained that wealth was not what the region needed. It had fertile soil, moderate climate and good people. Still, they could not feed themselves, because the Duke, rather than developing the land, and protecting his people, had them in a constant drive to produce weapons of war. (The Duke felt that the lands to the west were stolen from his family some 600 years earlier by the Kingdom of Ghathsemioun, and desired them back). Kendalge explained that what the region needed was not wealth, but honest leadership, reason unclouded by greed, and a lack of irrational hatred. After many threats and arguments on the part of the Duke, Kendalge agreed to his demands and created the Infernal Loom.

The Loom was massive. It took 30 elephants nearly six weeks to deliver it. It was 160' long, 110' wide, and stood 30' high, a complex interworking of wood and metal, levers and gears, ropes and pulleys. Once delivered, Kendalge handed the Duke a set of scrolls that described how to operate the machine, and left without saying a word, waiving all payment on the item. Over the next several months, the Duke had a small fortress built around the Loom to protect it. He assigned guards and began his studies into how to get this thing to work.

The scrolls that describe the operation of the Loom are lost to antiquity. Most scholars say that this is a good thing. What is known is that five months after receiving the Loom, the Duke issues orders to have the trees south of the castle cleared, insisting that the trees be left intact -- branch, trunk, and root. Hundreds of trees were ripped from the ground and brought to the Loom, where they were fed into its geared mouth. After a day of processing, at the other end of the Loom a green and brown cloth woven from trees would spill forth. After about five days in the sun, this cloth would transform into pure silver. A typical pine tree of the region yielded a cloth of silver weighing about 25 pounds. The Loom could process up to four trees a day; it took six hours for a tree to be completely consumed by the machine.

The Duke's coffers filled quickly. It is written that the Southern Elves then came to parlay, begging the Duke to stop his depredations. Although they knew nothing of the Loom, they claimed that the souls of the trees were being destroyed: their elven sages could hear the torturous cries of the tree-spirits as something in Southtimberland devoured them. Scholars disagree on whether these conversations led to the Duke's bloody epiphany, or if it was some terrible accident that inspired him. But what is known is that after the Elves left, the Duke concluded that the Loom did not convert *trees* to silver; it converted *souls*. The Duke fed all the prisoners in the Castle dungeons to the Loom. Humans could be processed faster than trees (six hours in the Loom from start to finish), in greater numbers (about two dozen at a time); over 48 victims a day could be transformed into a buff-colored cloth. After exposure to sunlight, this fabric would transform into cloth of gold; a typical peasant yielded a bolt weighing about five pounds.

When the Duke ran out of prisoners, he began taking slaves, then serfs, then homeless peasants . . . anyone he felt would not be missed too much. His death toll exceeded 300 people when the revolt took place. Several members of the Dukes elite Royal Guard and an army of peasants and commoners stormed the castle. According to legend, they fed the Duke and his family to Loom. The Loom was then burned to the ground.

However . . .

In one obscure scroll, written by Sir Geoffrey of Underhill, it claims, "While the infernal contraption was still grinding away at the bone and flesh of the Duke and his family, Lord Carthin pulled the levers, bringing the machine to a halt. There was an outcry to let them die as they had killed so many. He then began the systematic dismantling of the machine. He did not harm a single piece of wood, or scratch a gear. As he did so, he told us that they shall remain within the machine, their souls never released, even as gold. They shall be tormented forever. This seemed like justice to me, and satisfied the mob as well."

If Sir Underhill is to be believed, the location of the Loom and its fate cannot be known for certain. Additionally, many are quite uncertain as to the legitimacy of the *fact* that Kendalge would have constructed such a diabolical contraption. To go out of his way to teach a lesson to a Noble is certainly his style; but to do so at the cost of so many lives (and souls) seems unthinkable.

Jewel Of The Soul

Like many enchanters of his day and since, Kendalge often used jewels as focuses for magical energies. Although he is known to have created some three-score pieces of enchanted jewelry (from rings to necklaces to bracelets to crowns and tiaras), none caused so much interest as the infamous Jewel of the Soul. Created and presented as a wedding gift for his fourth wife, Queen Chelsea V, she was rarely seen without it. Most accounts of her death would tend to indicate that the ring was entombed with her at her hometown of Verandahs; however the sacking of Verandahs 150 years ago resulted in the realization that not only was the ring not in the tomb, but neither was Queen Chelsea V.

The Jewel of the Soul is a small, quarter-carat, princess-cut diamond set in a delicate, intricate ring of white gold. When the ring is worn normally, the stone changes color to reveal the mood of the wearer. Using the standard color spectrum (red, orange, yellow, green, blue, indigo, and violet) the ring is green when the wearer is in a moderate mood. The ring shifts towards violet as the wearer becomes happier, jovial, or excited. The stone will shift towards red as the wearer's mood becomes more saddened or foul. Various combinations of shades might indicate contentment, joy, anger, frustration, hatred, or even arousal. Additionally, if the wearer knowingly utters a falsehood, the ring turns jet black for three seconds.

In and of itself, this is no major artifact; however, if the ring is turned so that the stone faces the palm (i.e., so that the stone is not outwardly visible), then the jewel shows the mood and validity of statements made by whomever the wearer last touched while wearing the ring (such as a handshake or someone kissing the wearer's hand). The effect will last for up to three hours, and is unaffected by distance between the ring and the target.

Queen Chelsea V used this ring in several diplomatic negotiations, giving her a great advantage. Her diary, recovered from the Royal Archives shortly after the sacking of Verandahs, indicate that she once tried to use the ring to check on the mood and truth of statements her husband was making. However, the ring immediately turned white and she was immediately filled with a sense of *loneliness*, in a reversal of the ring's normal operation. Although she claims she never told Kendalge about the attempt, she was quite certain he was aware of it.

Keratophone

The Keratophone (as it was referred to in various journals that Kendalge kept), or the Thrice-curved Horn (as it was often referred to of the journals of his contemporaries), is as his contemporaries describe it. It is a large, hollowed out animal horn (but from what animal is never quite made clear), that curves in on

³ The properties that are credited to it range from causing temporary deafness and loss of one's balance (from the

itself for three full rotations. It is a mysterious instrument.

The tone it emits is low; musically, it is a "C" eight octaves below middle C. The sound cannot so much be heard (although it is audible) as felt. And it has been felt as far away as 200 miles. It would appear that the tone can be felt further, the longer one blows on it -- most records place the distance at about 10 miles for every second the horn is blown continuously. It is not an easy horn to play, so 20 seconds is about the longest anyone has ever been capable of maintaining it.

Other than its vibrations being felt at tremendous distances, the horn seems to have other magical properties³, but no two records of it agree on what they are.

Originally intended to be a military warning system, the horn could reliably call for aid from great distances when a castle, keep, or tower was placed under siege. However, despite the success of the enchantment and the obvious usefulness of the horn, even Kendalge's own records indicate that less than a dozen were ever created.

various writings of King Frederick XVI), causing animals to flee the sound (from the records of Verhais, the Grand Druid), dampening mana flow (from the scrolls of Halvord, former apprentice to Kendalge and Grand Wizard to the throne of King Augustus III), causing birds to alter their migratory patterns (Ghorik Shadowvale, Earl of Gyersetok), inspiring "waking nightmares" (Lord Holstan), and even causing the dead to rise from their graves (a scroll of unknown origin that describes the night of horror in the hamlet of Feylonne some three years into the reign of King Frederick XIX).

Pyramid Review

Alien Wars (for Star Hero)

Published by [Hero Games](#)

Written by Allen Thomas with Steven S. Long & James Cambias

Illustrated by Storn Cook, Jeff Cram, Andrew Cremeans, Keith Curtis, Jonathon Davenport, Jeff Herbert, Nick Ingeneri, Eric Lofgren, Brad Nault, & Greg Smith

184-page b&w softcover; \$26.99

The sub-genre of military Science Fiction has over the years proven to be a popular gaming niche, most notably GDWs *2300 AD* and Leading Edge Games' *Aliens* RPG, but also TSR's surprisingly decent *Bug Hunt* and Steve Jackson Games' *GURPS War Against the Chtorr*. All have taken the fight to an alien foe from outer space bent on the destruction of mankind, and they are now joined by another big supplement within the sub genre, one that details another big war that will take our every effort to win. More specifically *Alien Wars* is a sourcebook for [Star Hero](#), detailing the events of the 24th century that united humanity and laid the foundation for her growth as a galactic power described in [Terran Empire](#).

By 2300 mankind has spread itself over 90 worlds that send representatives to the Senate on Earth, plus these Senate Worlds many colonies, an area roughly 5,000 light years across. Although contact has been made with a number of races, none have proved to be a threat, and with neither a strong or unified military, nor a single figure to direct it, mankind was wholly unprepared to withstand the rapacious invasion by a Xenovore fleet in 2303. They settled on one world, scoured it free of resources and shipped its inhabitants back to the alien home worlds for purposes unknown. Then it moved onto the next.

The aliens possessed advanced biotechnology and anti-gravity plating that enabled their ships to operate within planetary atmospheres. They gave no quarter, would never parley, and worse still (as would be revealed later) they practiced anthropophagy -- literally, they ate other species. Humanity's initial response was to create a Militarized Zone as a buffer to protect the core worlds, but this proved as ineffective as the Senate and the efforts of the United Earth military. The collapse of the Senate and military failures led to a simmering civil war between three factions, with Earth led by First Magistrate Joseph Krutch. It was only following his death in 2354, and the successful defense of the Earth using the new advanced *Liberty*-class dreadnoughts the next year by Admiral Aleksandr Zhukov would unite the factions again.

For the next 40 years, Zhukov took command of a singular dedicated effort by mankind to wage war on the Xenovore threat. Through the combined effect of the conscription and training of millions of millions, effective intelligence gathering, ship building programs, new advances in tactics that ignored the advice of logistic computers, and the *Liberty*-class dreadnoughts, the United Earth military drove the Xenovores out of the Militarized Zone, and then struck deep into the Xenovore Empire. Operation Future Peace culminated in 2397 with the destruction of the enemy's home world, Throneworld Prime.

Alien Wars covers the whole of the war and the whole of the 24th century. It does so in some detail, describing the century's history, politics, interstellar relations, trade and economy, along with mankind's most notable worlds and governments, personalities and corporations, and even looks at its criminal underworld -- dominated by the Clone Mob. In terms of technology, *Alien Wars* describes interplanetary and interstellar travel, communications and

computers during this period, but understandably concentrates upon military applications. Although advances are made over the course of the century, only a few make it to the front due to production costs and logistics -- it proves easier to stick to what works. Thus personal weapons go from the slug thrower to the gauss rifle to the ammunition-less laser rifle. Likewise only a few ships are fitted with antigravity plating. Major strides are made in hyperdrive technology enabling ships to travel over 70 light years each day, which is crucial to prosecuting an interstellar war along the 20,000 light year long Xenovore Trail into enemy space. The overall feel of the technology in *Alien Wars* is meant to be gritty. Nowhere is this more evident than in the illustration of a typical United Earth Army soldier, who looks very much like a French infantryman of the First World War.

Characters in *Alien Wars* are predominantly humans built as either 50-point Competent Normal or 75-point Standard Heroic characters. Besides ordinary humans, four packages cover humans from other environments, while another five packages detail several alien species that fought alongside mankind. 12 packages cover civilian careers with a further 20 giving career details for the Terran Exploration Service, the Terran Intelligence Command, the Air Force (phased out later as manned atmospheric fighters are replaced by drones), the Navy (both wet and dry), the Army, the Marines, and the Special Forces. Low-level talents, such as Absolute Range Sense and Universal Translator are allowed, as are limited psionics, but *Alien Wars* is a superhero-free zone, even though it is part of the *Hero Universe*.

[SPOILER ALERT]

After 140 pages devoted to us, the last 40 pages detail the opposition, the Xenovore. This includes a 10-page report on what is known about the aliens by 2370, which the players *can* read if the campaign is set after that date. The remainder of the book is for the GM's eyes only. The basic Xenovore is bipedal with a reptilian appearance and insectoid features such as a stinger, a carapace, and mandibles. Generally short-lived, their advanced understanding of biotechnology enables them to create genomes that perform separate functions from controlling breeding programs to piloting figures. Further they can create specific beasts of war, such as the Slug Tank, literally a giant slug that grows its own troop-carrying howdah! This aspect of the Xenovores allows the GM free rein to design his own genomes and war beasts. In war, Xenovores fight as packs, more easily in built-up environments and only with rudimentary tactics. On the open battlefield the tactical flexibility of the United Earth military is more of an advantage as is the digging of trenches in giving viable defensive positions.

[END SPOILER ALERT]

The GMs Vault reveals the full details of the Xenovore and its society, along with a short chapter exposing the other secrets of *Alien Wars*. It is rounded out with some solid advice on running a military orientated campaign. This is backed up with a selection of useful campaign ideas.

Physically *Alien Wars* is a solidly done softback, well written and profusely illustrated. Unfortunately, it is these illustrations that let the supplement down. Some of them are too clean for the setting's gritty feel, while the maps are often too small and too dark to use with ease. Worse still, the setting's equipment is under-illustrated, and when it is depicted, the illustrations are all-too-frequently placed away from the actual write-ups. This seems a ludicrous situation considering that the player characters will be handling the various weapons, gear, vehicles, and vessels on a regular basis. What does the standard slug thrower pistol carried by United Earth military look like? Or the *Liberty*-class dreadnought? No idea, at least not from the books illustrations. The same goes for the Xenovores, which considering their role in the setting, is actually a hinderance to running a *Alien Wars* campaign.

If there is one thing that a bug hunting military Science Fiction game is going to stand or fall on, it is the nature of its enemy. The Xenovores of *Alien Wars* are not the Xenomorphs of *Aliens* (though there are similarities -- how their biotechnology seems to take over the environment and how having access to more victims means a higher birth rate), nor are they the bugs of *Starship Troopers*. In game terms, there are parallels between the Xenovores and the Kafer of *2300 AD* -- the carapace, the hunched posture, the mandibles, and the refusal to communicate. There are other, lesser parallels, but the Xenovores in *Alien Wars* play up to the expectations of the sub-genre -- the implacable faceless foe, their vile acts, the indomitable spirit of mankind being the key to victory, and so on.

Apart from the woeful use of its illustrations, *Alien Wars* presents everything needed to run a military science-fiction

campaign across the whole of the 24th century. Nor does it restrict such a campaign to a default period -- *Alien Wars* can be run during the years of the initial invasion, the civil war, or Operation Future Peace. And while it is intended to be run in conjunction with *Star Hero*, it could just as easily be run using *GURPS*, or with some effort using [Traveller T20](#) or even the forthcoming *d20 Future*. Although we are still waiting for the definitive supplement upon the subject, *Alien Wars* is an excellent treatment of the sub-genre, particularly so for the *Star Hero* GM that wants his players to take a stand in saving mankind at its hour of desperate need.

Psi Fi Exodus

by [Chad Underkoffler](#)

Genre: Psionic Space Opera

Style: Cinematic

Themes: War, Diplomacy

Fleeing from the Dzogl Tyranny, the last warships of the Eyendi Alliance lead a rag-tag fleet to a shining planet known as *Earth*.

What Every Earthling Knows

People disappear sometimes? Sure! They probably just change their name and leave no forwarding address, or die out in the wilderness somewhere, or end up buried in some serial killer's crawlspace.

UFOs and aliens? Probably just swamp gas, weather balloons, optical illusions, or the planet Venus. Maybe they're top secret stealth fighters.

Psychic powers? There's no real proof or hard evidence of them, is there? Just coincidence, wishful thinking, and a bunch of con men.

These are the beliefs of the people of Earth. Unfortunately, they are wrong.

What Every Eyendi Knows

Alien Life

All organic life throughout the galaxy is built on the same molecule: deoxyribonucleic acid (DNA), and tends to arise on more-or-less Earth-like worlds. Even more astonishingly, sapient beings -- that is, those possessing consciousness -- have DNA that is *remarkably* similar to that of other sapient beings throughout the galaxy. Thus, all sapients are humanoid, bipedal, have thumbs, the same sorts of internal organs and sensory apparatus, and so forth, with minor variations due to their evolutionary origins. However, the genomes of the galactic races are not close enough to permit interbreeding. . . yet.

While this has been laid at the feet of a precursor "seeder race," scientific evidence argues against it. The biggest hole in the seeder theory is the lack of any evidence or artifacts for an ancient star-faring race. Current galactic thought on the matter points towards a common aspect of the holographic universe (see below, *Psi Power*).

So, the different races look basically the same, live on the same sorts of worlds, require the same sorts of resources, and essentially think in much the same way. This permits the different races to understand one another, making a galactic community possible. In many ways, every sapient being is "human."

Of course, familiarity breeds contempt, and any difference is always a fine opportunity for racism, hatred, and abuse. Thus, the state of the galaxy today.

"The Dzogl Tyranny" (the Nenpo Corporate)

In theory, the Nenpo Corporate is a multi-species republic of "incorporated worlds," united for mutual defense, interstellar commerce, and freedom for all sapients. In practice, it is a despotic fascist state, ruled by a single race --the

Dzogl -- who are in turn ruled by a single popular leader: the *Dzi*. The *Dzi* is an emperor in all but name, all Dzogl of his party are aristocrats, those Dzogl not of his party are barely considered citizens, and all "alien" members of the Corporate are distinctly treated as second-class citizens (at best) or slaves (at worst). The synthetic language of the Nenpo Corporate serves as a galactic *lingua franca*.

The saurian Dzogl are an old, old race that look much like Humans do, except that they have scales in place of hair. Their skin, eye, and hair colors range all along the spectrum. While their hearing and sight are generally inferior to that of the other races, they are less affected by drastic changes in decibel or illumination level. They have the most acute sense of taste of all sapients, and a remarkable sense of smell related to this (second only to the Raviddu). The Dzogl possess a capability called *fraas*, which appears to be a remnant of a heat-sense; in many ways, the utility and scope is analogous to that of a Human's sense of smell. They are ovoviviparous reptiles.

They are intelligent, highly adaptable, and quite long lived. While still within their homeworld's gravity well, they made great strides in the study of *Bio-Psi* (see below, *Psi Power*). Consequently, they are a tremendously healthy and long-lived species. When they began their exploration of space, this control over their physical bodies (enhanced by the lack of gravity) permitted them to make long-term subluminal expeditions.

After 100 years of exploration and colonization, they met the Czpeela (who had just begun their own Space Age). First contact with the Czpeela was tense, but happened without bloodshed. The Czpeela were welcomed into the Nenpo Corporate as a "junior member." The Dzogl benefited from the Czpeela's advanced grasp of Pattern and facility with *psitech*, yet treated the aliens like savages who knew a few interesting card tricks.

Two centuries later, the Corporate discovered the Raviddu (who were ramping up for an Industrial Revolution). Alas, first contact with the Raviddu was a disaster, requiring a "pacification action." Unlike the superficially amiable induction of the Czpeela into the Corporate, the Raviddu were placed into bondage and forced to use their body and psi for their conquerors' benefit.

After six centuries of being treated as children (the Czpeela) and four centuries of being treated as animals (the Raviddu), these two races joined together to win civil rights and respect from their masters. The result was war between "the Dzogl Tyranny" and the new Eyendi Alliance (beginning circa Earth year AD 1810).

The Eyendi Alliance

Czpeela: The Czpeela are descended from batlike ancestors. They appear much as Humans do, with the exception of large, pointed ears placed somewhat higher on their skull; leaf-shaped noses; tough webs of skin between their fingers (but not toes); and a ridge of horny flesh, stretching from their "pinkie finger" down along their arms, torsos, and legs (a remnant of lost wings).

Their skin, eye, and hair colors are the same as the range found in Humans. Their hearing is superior to that of all other sapients. While their nightvision is slightly superior to that of Humans, in daylight they have the worst eyesight of all the races. The Czpeela have a mild echolocation sense called *chick-skree-ka*. They are mammals.

They are exceptionally intelligent, and quite adaptable. Possibly due to the way their brains are wired up for chick-skree-ka, they have a racial psi facility in *Sense Pattern* (see below). This means that many of the galaxy's best *psionitologists* (psionic scientists) and *psitechnologists* (psionic engineers) are Czpeela.

It rapidly became clear to the perceptive Czpeela that they were nothing more than second-class citizens to the Dzogl, possessing no real power or respect. After many attempts to peacefully gain equality within the Corporate were met with institutional violence, they joined forces with the Raviddu and declared war.

Raviddu: The feline Raviddu spring from tigerlike ancestors. They appear much like Humans do, except for slightly pointed ears, prominent canine teeth, and a covering of fur over their entire bodies composed of awn and down hairs. Their skin, eye, and hair colors are close to those of Humans, but their hair usually possesses interesting patterns (classic tabby, spotted, mackerel, and ticked). Their hearing is second only to the Czpeela; while their vision in all

levels of light is even better, they are not a Human's equal in daylight. They have the most acute sense of smell of all sapients, and a remarkable sense of taste related to this (second only to the Dzogl). The Raviddu possess an additional olfactory sense they call *flehrring*, which permits true discriminatory smell -- they can detect the difference by scent alone between a gallon of distilled water and a gallon of water with a pinch of salt dissolved in it. They are mammals.

The Raviddu have no special talent for psi, but like all races, their psi skills can be trained with proper instruction. This relative psychic "weakness" may be why the Dzogl chose not to treat them as well as the more-psychic Czpeela, brutally assaulting their homeworld and making them into slaves.

Raviddu are as intelligent as any race. They possess more fast-twitch muscle fiber (short, quick bursts of power -- sprinting, lifting, punching, etc.) than Humans. This comes in handy during their adolescent courting rituals, where both sexes of Raviddu compete in seasonal sexual display conflicts for mates (females in autumn, to raise their sexual status; males in spring, to secure mating access). Of additional interest is the pair-bonding between chosen mates: during pregnancy, the male hunts, provides, and protects the female; after pregnancy, the male takes over the primary nurturing of the child, while the female returns to the hunt, providing and protecting the male. A Raviddu is considered an adult at age 10.

This physio-cultural habit has led to the biggest disaster in the history of the Raviddu race. During the Battle of Gamma 5 (see below, *The War*), the Raviddu colony ship *Rranasha* was destroyed, killing *all* the pregnant females, nurturing males, and children of the species. It was discovered later that there were no male Raviddu survivors in the entire Alliance fleet. Raviddu refer to this event as "the Tragedy." The only hope of the race is the "New Mother" (see below, *NPC Backgrounds*).

(Quisling/Copperhead) Dzogl: There are a few Dzogl who do not support the Nenpo Corporate's policies on aliens, and seek a broader galactic community of equals. They are part of the Eyendi Alliance, though it is difficult for the other members to fully trust them. "Copperhead" is a Human nickname given to these double-agents.

"Noredawo" (Humans): The primate-descended Humans -- "Noredawo" in Corporate language -- are an aberration, in more ways than one.

Humans are an enigma to the Dzogl: they never located the Human homeworld. Discovered by Czpeela scouts (around Earth year AD 1835), the existence of Earth and Humans was classified top secret. As a race, the Humans are not part of the Eyendi Alliance (indeed, none living on Earth even *knows* that extraterrestrial life exists), though individual Humans have become ridiculously valuable in the course of the War. Why? The answer is simple: Humans are the most powerful psi-users in the galaxy.

While a Human's senses of smell and taste are pathetic by galactic standards, their sense of sight (daylight vision, color discrimination, depth perception) and their sense of touch are far beyond that of any other race. They also possess abundant slow-twitch muscle fiber (long, sustained power -- useful for running, swimming, and such), giving them an unmatched endurance. And if these physical gifts weren't enough, Humans are the most powerful psychics ever recorded, with the ability to perform Macro-Psi within a gravity well (see *Why Humans?* below for more details).

The War

While one could say that the Nenpo Corporate's hunger for habitable worlds with resources and psi-capable sapients to exploit made the War inevitable, it truly only began with the Riots on Ghaub. This colony world, distant from the core worlds of Corporate space, boasted a high proportion of Czpeela and Raviddu slaves compared to the Dzogl population, making it ripe for civil rights activism. The heavy-handed smackdowns of relatively peaceful protests lit a desire for freedom among these "lesser" races, and the interstellar psi-casts of the carnage set the torch to the bonfire of war.

The Eyendi Alliance coalesced from a number of militant Czpeela and Raviddu organizations, but quickly accreted a substantial number of "average folks." All across the Corporate, Czpeela agent provocateurs helped Raviddu slaves cast off their chains, kill their captors, steal Dzogl ships, and psi-jump to secret rendezvous points. While few of the

ships started out as military-grade, and only a handful of Alliance members had combat training, their zeal and inventiveness quickly made up for this lack.

Early in the War, the Alliance scored major coups in the capturing of a colony world (Zamhol 3), which held a commercial psitech factory, an orbital drydock, and an old battleship in the process of being salvaged for scrap and spare parts. Ingenious Alliance engineers took the old hulk, made it spaceworthy again, and even added in a number of upgrades; soon, the *Brial* (a Czpeela word for "nightmare") started cutting a swath of destruction through the Dzogl fleet.

The tide eventually shifted, and the Dzogl once again had the upper hand. Alliance losses were substantial. Then, a long-range scouting mission discovered something incredible: Humans.

The Czpeela (on behalf of the Alliance) established a hidden Observation Station in Earth orbit, and began to investigate. Given the potential power of the Humans, intense study of them was necessary. Indeed, a small handful of powerfully-psiic individuals were brought aboard the Station for investigation and first contact. More or less open about the Alliance's circumstances, the Observers stressed the dire straits they all were in -- as well as the fact that soon, Earth could be in a similar situation. Earth *must* come in on the side of the Alliance, or all races would suffer.

For safety's sake, no Human specimen would be permitted to return to their homeworld unchaperoned until this happened -- the Alliance psionitologists detected a possible flux in the Pattern that could spell doom if Human xenophobia were stirred or ill-advised psitech experimentation began.

Outside of the Earth's gravity well, and guided by their growing perceptions of the Pattern, some humans help analyze the state of Earth psychology and culture for the Alliance, attempting to formulate a good method of revealing the existence of extraterrestrial life and the War. A number crossed the Quantum Bridge (see below, *Items & Locations*) to take up arms with the rest of the Alliance. Amazingly, not one abducted Human ever decided to be uncooperative.

With a number of Humans joining the War, the Dzogl Tyranny lost ground. Human-led and -supported strike forces blasted Corporate flotillas into debris. Victory again seemed possible, when the Battle of Gamma 5 changed everything.

The bulk of the Alliance fleet, refueling near Gamma 5, were struck unawares by three Dzogl battleships and attendant support vessels. Though the Eyendi fought bravely, they were cut into pieces. This is when the Raviddu Tragedy (see above) occurred, in the destruction of the colony ship *Rranasha*. All across known space, secret Alliance bases blew up, caches disappeared, and spies vanished. The Alliance began to crumble under the onslaught. It was clear they had been betrayed, but by whom?

Only a small number of Alliance ships managed to psi-jump to safety; fewer still arrived at the rendezvous point. Backed against the wall, with the Dzogl closing in, the only hope for freedom was for the fugitive Alliance fleet to fall back to Earth and convince them to join the fight en masse. But the way is long and dangerous, communications with the Observation Station in near-Earth orbit have ceased, the Quantum Bridge is inactive, the coordinates of the Sol jump-point are no longer correct, and the Dzogl are on their trail.

Psi Power

"There's a theory that the universe's underpinning is information, not matter and energy. Matter and energy move in volume, but the informational capacity of the universe has been found to rely only on surface area. That means that the universe is two-dimensional. Matter, energy,

Psi is the ability of a conscious mind to glean information or affect change in the universe simply through *attention* and *intent*.

The Pattern: The psionitologists of the galactic races call this underlying informational plane "the Pattern." Sapient consciousness has an affect on the Pattern (see [the Heisenberg uncertainty principle](#), [the Copenhagen interpretation](#), and [Quantum decoherence](#) as examples); in short, the act of observing something changes it. Additionally, evidence shows that if a piece of the Pattern is altered, the change propagates instantaneously throughout the

time, you, me, and the floor are holograms. Everything in volume is an expression of a two-dimensional plane of information."

-- Dr. Kwelo, *Planetary* #19, "Mystery in Space"

holographic universe (see *Quantum teleportation* -- what Einstein called "spooky interactions at a distance" -- [here](#), [here](#), and [here](#)). Psi is the ability of a conscious mind to make alterations "go to 11."

Imagine the Pattern as a computer program. *Sense Pattern* allows one to read the computer code and *Alter Pattern* allows one to alter the code. Interestingly, attempts to Sense and Alter the Pattern simultaneously often -- but not always -- interfere with each other: Heisenberg Uncertainty writ large. No individual psi can Sense and Alter at the same time; only well-drilled teams of psychics

comfortable with one another can operate in both aspects at once.

While traditional psi talents such as telepathy, remote viewing, telekinesis, psychic healing, and so forth can all be explained as uses of these two abilities, psionics in "Psi Fi Exodus" doesn't work exactly like it does in most fiction.

Psi vs. Gravity: The first and most important aspect to understand about these "spooky interactions" is that psi and gravity interfere with each other. A generalization is that in gravity fields of 1G or higher, only vast amounts of psi energy have even a small effect on the physical world. However, it's more complicated than that -- the overlapping effects of numerous masses interacting in space causes "turbulence" which can further weaken (or even strengthen), even within a 1G+ gravity field.

Psi Operation: *Intent* is key for the application of psi to the physical world; the determination must be strong so as to direct the energies to affect change. Interestingly, the use of some conceptual frameworks for psi seem to have a negative correlation with Intent, and this is one large deviation from how psi is often viewed in fiction. For example, say a psi wishes to bend a spoon. While fictional telekinesis might pose this as the use of a "third arm" or "extra hand," in practice, thinking this way would actually *interfere* with the attempt. Instead, a galactic psi would simply Alter the Pattern by intently thinking "bend, spoon."

The *Emotions* that the psychic are feeling during the attempt provide the power -- but raw emotion alone tends to fog a psychic's focus. The preferred mental state is a dual one -- great emotional energy, overlaid with calm clarity (typical examples would include "icy rage" or "too scared to be afraid").

Knowledge of the target of the effort aids in precise "aiming" for best effect. For example, while any psi could speed up a chemical reaction by Altering the Pattern by thinking "speed up," a psi who is also a chemist will probably have better luck accelerating the reaction.

Consider the psychic as if he were an old-fashioned pump fire extinguisher. Intent is the nozzle, Emotion plus clarity is the pressure in the canister (Emotion without clarity would be leakage and subsequent loss of pressure from the canister), and Knowledge is realizing that one should aim at the base of the flames.

Psi and Bio-Psi: Furthermore, psi seems to have a widely varying effect when used on organic entities. Many psionitologists consider it a different "flavor" of psionic energy called *Bio-Psi*. Bio-Psi that seeks to aid or strengthen a living creature seems to be easier than that which hinders or weakens it, and the conscious and subconscious mindset of the target (in addition to the target's own psi ability) can have a reinforcing or interfering effect. Thus, a being who does not wish to be helped resists healing Bio-Psi, while possibly boosting the effects of deleterious Bio-Psi upon himself!

Micro-Psi and Macro-Psi: Most psi effects within a 1G+ gravity well are Micro-Psi in nature, manipulating objects smaller than a grain of sand. The ability to influence a digital random number generator, guess the next card in a limited deck, the ability to slow the fall of a feather, make an electron jump shells, or reinforce the repair capabilities of a small number of organic cells would all be Micro-Psi.

Outside of the interference of a 1G+ gravity field, this often translates up into Macro-Psi, which can manipulate visible objects with notable force. The ability to influence a tossed coin, the ability to "view" a distant area remotely, bend a spoon, levitate a book, cause a spark, or cause a small laceration to instantly scab would all be Macro-Psi. The absolute limit of Macro-Psi telekinesis appears to be roughly one half times the body-mass of the psychic (but it's

believed that the Human limit is two to three times that).

Two species of sapients are notable for having evolved Macro-Psi talents that operate within a 1G field: the Czpeela (Sense Pattern only) and the Humans (Sense and Alter Pattern).

Psitechology: Fortunately, psitechology can increase the effect of psi on the physical world by an order of magnitude. Micro-Psi channeled through psitech comes out as Macro-Psi, and Macro-Psi comes out as *Mega-Psi*. Psitech requires not only conventional power, but also a psychic actively utilizing the device in order to operate; there are no automatic psitech machines. This psitechology permits galactic civilization to exist.

How Psi is Used: Some common uses of psi (usually boosted by psitechology) include:

- Travel (through psitech subluminal drives, psi-jump engines, and Quantum Bridges; see below, *Items & Locations*).
- Communications and Investigation (nigh-instantaneous, via judicious use of Sense and Alter Pattern, or conventional comms through a Quantum Bridge).
- Medicine (longevity-enhancement, general health, treatment of disease and illness, as well as extremely rapid healing, regeneration from injury, and mental elimination of physiological effects of zero gravity).
- Offensive & Defensive Technologies (Alter used to cause a target to "run" better or worse; Sense used to ferret out and track enemies; both used to interfere with the other aspect).

What Everybody Doesn't Know

Why Humans?

Why do Humans exhibit such vast psi power, compared to the other races? Human and Czpeela psiontologists theorize that the answer lies with the Moon.

The Moon is more than simply the Earth's satellite; indeed, given the proportional sizes of the two bodies, the Earth-Moon system is best described as a binary planet. The proximity of the Moon gives rise to the tides, as its gravity caresses the surface of Earth. This is a very turbulent gravitational environment, and the life that arose within it evolved to take advantage. As a muscle is stressed, it grows stronger.

Czpeela Observation Station Not Responding

A big mystery is the abrupt silence from the Observation Station near Earth. Without warning, in the middle of a routine report beamed through their Quantum Bridge to the fleet flagship, the Bridge shut down -- and hasn't reopened since. Furthermore, some form of "psi-static" is interfering with attempt to Sense Pattern in the Sol system, so much so that the primary jump-point's coordinates have skewed, making a direct Psi-Jump impossible. Several theories explaining the silence and the static have sprung up; the evidence sometimes favors one explanation, and sometimes another. GMs can pick one of these, or come up with their own:

- **Gone Boom:** Some sort of accident -- either internal (reactor leak, explosive experiment, loss of atmosphere, etc.) or external (meteor strike, collision with telecom satellite, targeted by an Earth orbital weapon platform, etc.) -- killed everyone on the Station.
- **Gone Fishin':** The Observers got tired of being cooped up in a gloried tin can for decades, and in the throes of psychically-enhanced cabin fever, all decided to go dirtside for a little R&R.
- **Gone Nuts:** Currently, the Alliance members are re-enacting the Hutu Uprising, using tater tots and fishsticks specially imported from the surface. Possibly some form of psionically-broadcast dementia? A mutated terrestrial disease? Hallucinogenic ergot in the hydroponics tanks?
- **Gone Over:** The Station personnel have voluntarily sold the Alliance out to the Tyranny, in return for money, power, preferment (see also *Traitors in the Fleet?*). Dissenters were, of course, spaced -- or worse.
- **Gone to Prison:** The Station has been captured by a small Dzogl long-range scout patrol. . . or an unexpected

Earthling space force.

Traitors in the Fleet?

The sneak attack at Gamma 5 and the Raviddu Tragedy could not have happened without at least one Alliance traitor (probably more) in a trusted position. This fact haunts most Eyendi -- how many vipers are they clutching to their bosom as they flee for Earth? Strict discipline, increased security measures, and ongoing retroactive intel analysis are all focused on finding any Judas (or Judases) in their midst. Raviddu are *particularly* keen in their observances of these methods; indeed, many intel officers of that race put in off-duty time, running down leads and collecting information. It's an open secret that if a Raviddu discovers a traitor before her compatriots do, no trial will ever be necessary. However, even the most zealous Raviddu realizes that substantial proof will be needed to avoid slaughtering an innocent individual. . . innocent like all the murdered Raviddu.

Possible traitors are, in decreasing likelihood: 1) Copperhead triple-agents; 2) Humans looking out for number one; and 3) the Observers of Earth. Indeed, the true traitor(s) could be all or none of these.

Dzogl Plans for Eyendi Alliance (and possibly, Earth)

In Dzogl eyes, this "alliance" is nothing more than outright revolution against the Nenpo Corporate and all it stands for: it must be broken, brutally. Vast reductions in the rebellious sapient races' populations are necessary to make the remainder tractable. The Raviddu will return to their chains, and this time, the Czpeela will join them. All traitor Dzogl must be imprisoned and publicly made to see the error of their ways (then quietly executed).

However, a mysterious and powerful sapient race is working with the revolutionaries -- the so-called Noredawo. Little is known of them; what has been discovered is that they appear to be intelligent and physically robust, possess remarkable vision in high-intensity light, and are incredibly talented in psi. The Corporate Intelligence Division recommends that more research be done on capture, interrogation, and dissection of these aliens. They may be too powerful to simply exterminate (like the J'lasp), conquer (like the Raviddu), or co-opt (like the Czpeela). If the Noredawo possess military technology at the Corporate level, the suggested angle of attack is offering peaceful trade agreements and treaties, in order to gather further information to begin subversion psyops.

PC Opportunities

There are several ways to bring in PCs to a Psi Fi Exodus campaign:

Abducted Humans

Any Human taken from Earth will be, by necessity, an extraordinary individual in some way. Additionally, they are probably more adventurous than most of their kind, as they're with the fleet rather than at the Observation Station helping lay the groundwork for "the Revelation." A mildly amusing thing for some players may be to construct their PC as a famous historical figure who suffered a mysterious disappearance or death in our world -- they were really just snatched up by aliens ("Captain Earheart, Lieutenant Crater, Lieutenant Bathurst -- report to your gunboat, on the double!").

Eyendi Sapients

Czpeela: While usually scientists or engineers, Czpeela characters could come from any walk of life, but the loftiest heights were probably barred to them. The nature of second-class citizenship, combined with a generally sharp Sense of the Pattern led to deep discontentment and anger. Still, the Czpeela know that patience is a virtue: they will wait until all pieces fall into place before striking.

Raviddu: Before the War, every Raviddu character was either a slave or a guerilla warrior adept at dodging pursuit. In

both cases, physical attributes were more prized, though mental strengths had their place. Uselessness is seen as a form of weakness, and weakness kills. This mindset infuses all Raviddu, which leads to most of the surviving members of the species being involved in hands-on physical occupations -- medics, mechanics, soldiers, farmers, factory-workers, even pilots.

Quisling/"Copperhead" Dzogl: The majority of Copperhead Dzogl are minor traders or financiers of the Nenpo Corporate, if they travel in and out of Corporate space. If they're the sort who've completely thrown their lot in with the Alliance, they tend to be academics, artists, or activists, who are often forced to learn useful skills quite quickly. The Alliance -- especially the fleeing fleet -- doesn't have the resources to support an ivory-tower intelligentsia.

New Galactic Races

Perhaps the PC is from a new sapient race discovered during the fleet's journey. This leaves a lot of scope for the player and GM to create an interesting character, but a few questions need to be answered first:

- Why hasn't the race been absorbed into the Nenpo Corporate yet? (Undiscovered, fought them off, no psi ability, "not worth it," etc.).
- What is the race's stance on outsiders?
- What is the race's stance on the War?
- Has (or will) the race aid the Eyendi Alliance?
- Is the PC a representative of a government of their world, or a free agent?

NPC Backgrounds

Each character below has their most important *strengths* (generally positive qualities, abilities, skills, or effects) and *weaknesses* (generally negative qualities, abilities, skills, or effects) detailed. In descending order, the ranks are Master, Expert, Good, Average, and Poor. Depending upon the conception of what a character is like, any quality can be a strength or a weakness.

For example, suppose a character has "Spoiled Brat" as a quality. If it's ranked Average or above, it's a strength: the character always gets his own way, can wield undue influence by threatening to sic their Mommy or Daddy on others, might possess lots of cash or gadgets, and people may fawn over them, making life easy. But if the character has "Spoiled Brat (Poor)," this is a weakness: the character has led a pampered and sheltered life, rubs people the wrong way, and expects everyone to bend over backward to fulfill his most minor needs.

Since many game mechanics provide prose "benchmarks" to understand stat or skill levels, the ranked qualities below should be easily adaptable into any desired system.

Note: It is suggested that military rank not be made a strength in the character write-up; instead, negotiation between GM and players should come up with appropriate ranks for the PCs. This aids buy-in to the campaign, as no player will be "forced" to obey the orders of another PC against the *player's* will. The Alliance military chain of command in "Psi Fi Exodus" is simple, and adapted from Dzogl military culture. From highest to lowest, it goes Admiral, Captain, Lieutenant (civilian ship commanders and other experts are treated as Lieutenants as a courtesy), Sergeant, Citizen.

The Admiral aka Rear Admiral Morz Draude: The Admiral is known more by his title than by his given name. He is a titanium-willed Czpeela, a Master of Sense & Alter Pattern, Tactics, and Rhetoric. He's an Expert Administrator, Warrior, and Pilot. He's also a widower and Prone to Speaking Aloud to His Dead Wife (Poor). While standing only 4 feet, 10 inches tall, he's larger than life. The Admiral *will* lead the Alliance fleet to Earth, or die trying. He has a bone-dry sense of humor, a pocketful of hope, and terrible ulcers. (Low-ranked PCs should rarely interact with the Admiral, at least at first -- he's the "main guy" of the surviving Alliance.)

Lieutenant George Devlin aka Callsign: "Triangle": Pilot Anything (Expert), Alter Pattern (Expert), Zero-G Wrestling (Good), Cook (Good), Sense Pattern (Good), Knife (Average), Bad at Bio-Psi (Poor). Snatched from the

cockpit of his TBM Avenger Torpedo Bomber over fifty years ago, Devlin can fly anything, blow small ships apart with his Psi-Blaster, perform credibly in weightless hand-to-hand against a Dzogl soldier, and whip up chow to die for, but he really sucks at affecting living beings psychically. After several years getting up to speed on psi, Devlin became one of the last Humans to cross the Quantum Bridge and join the Alliance fleet before the Observation Station went dark. He's driven to get home to Earth, find out what happened to the friends and mentors he left behind on the Station, and lead his gunboat squadron -- the Gorillas -- against the Dzogl.

Captain "Peyton Farquhar" aka Callsign: "Misericorde": Sense Pattern (Master), Leadership (Expert), Witty (Expert), Alter Pattern (Good), Pilot (Good), Total disregard for his own safety (Average), and Sarcastic (Poor). Nothing really matters to Farquhar (which isn't his real name, by the way): he's still half convinced that the near-century he's spent among aliens, psychics, and warfare are just the nightmare delusions of a dying brain. But until it all goes black, he's decided to carry on the best he can. A wound in the temple during a terrestrial war awakened his psi, which was strong even on Earth, making him an admirable recruit for the Alliance. Unfortunately, his attitudes and outlook made him difficult to deal with, and the Observers quickly ushered him over the Quantum Bridge. He became a gunboat pilot in the Gorilla Squadron, eventually rising to squadron commander. As the War turned against the Alliance, Farquhar found himself promoted by necessity to command a newly-captured Dzogl destroyer. He made a few pithy comments, had the techs refit the saurian ship, rechristened it *Kenesaw*, and got on with the business of battle. One of the few experienced commanders left after Gamma 5, Farquhar is a member of the Admiral's de facto "cabinet," even though he disagrees with almost everything the little bastard says.

Trader Noruzu aka Codename: "Jiviriwoz": Spy (Expert), Sense & Alter Pattern: Bio-Psi (Expert), Sense & Alter Pattern (Good), Trader (Good), Pistols (Good), Pilot (Average), Paranoid (Poor). Noruzu grew up blue collar, cheek-by-jowl with Raviddu slaves and Czpeela laborers. When he saw the way the government treated his alien friends, he knew he had to do something. So he joined a militant activist group and became a fifth columnist for freedom. He currently shuttles vital components from Dzogl space to out-of-the-way systems where he trades Corporate tech for Alliance treasure.

Lieutenant Zora Bhoru aka Callsign: "Slasher"; post-Tragedy: "New Mother": "New Raviddu Eve" (Master), Zero-G Judo (Expert), Pilot (Expert), Devious (Good), Sense & Alter Pattern (Average), Pregnant (Average), Grounded and Pissed About It (Poor), Constantly Under Guard (Poor). The Raviddu pilot Bhoru was one of the top Alliance aces before the Battle of Gamma 5; today, she *is* the top Raviddu ace. Which makes it all the more annoying that she might never fly again. You see, about a week after the Tragedy, Bhoru felt extremely ill. After consultation with the medical officer, she discovered something terrible and wonderful: she was pregnant, and with a male Raviddu fetus. Within her womb was the hope of her race. In some ways, the War is now over for her, but in many others, it is just beginning.

Items & Locations

Spaceships

Most spaceship crews operate totally in zero G: ship crews are taught enough Bio-Psi techniques to retain physical health in weightlessness. For areas that require some stability, gripper panels (which interact with gripper boots; see below) are set into the walls and floors. Some very large ships have rotating sections, which provide spin-gravity.

The standard galactic power system is a fusion Tokomak, supplemented by solar panels when necessary.

Motive Systems

There are several methods of getting from point A to point B:

- *Conventional Thrusters:* Using an advanced ion engine (electromagnetically-accelerated xenon, collimated and rephased), constant but low-power thrust can be generated, so long as the electricity to the magnets and recollimator-rephaser unit (and the xenon fuel) holds out. Conventional Thrusters generate a force strong enough

to push 1 ton of mass 1 mile per hour per hour (i.e., it takes 5 hours to reach the speed of 5 mph).

- *Subluminal Drives*: The Subluminal Drive is a piece of psitechnology that affects the mass of a spaceship, and supercharges the Conventional Thrusters. With an operator skilled in Alter Pattern controlling it (by thinking "go faster"), the Drive makes a large percentage of a ship's mass and inertia simply *go away*, while increasing the output force of a Thruster by several orders of magnitude. This allows a ship to reach anywhere from 10% to 90% of light-speed. Interestingly, while under Subluminal Drive, a spaceship is unaffected by relativistic effects: time passes at the same rate for the crew as for outside observers. A Subluminal Drive requires substantial conventional power and psi power to function.
- *Psi-Jump Engines*: A Psi-Jump Engine is a psitechnology superluminal slingshot. Within a solar system, there exists at least one jump-point of perfect gravitational equilibrium between its two largest masses (for example, in the Sol System, the jump-point would be the point of gravitational equilibrium between the Sun and Jupiter); outside of a system, jump-points turn into jump-regions, based on [Voronoi partitions](#). Jump-points and jump-regions can be determined mathematically, mechanically, or psionically (using Sense Pattern) -- though this last increases the chances of mis-jump. When a Psi-Jump Engine is operated at this jump-point (or jump-region) by an operator skilled in Alter Pattern, the ship can be "slingshot" or "jumped" to *any jump-point or jump-region instantaneously*, so long as the current correct coordinates of the target jump-point are known.

A Psi-Jump Engine requires precise conventional piloting and consumes 90% of a ship's power and 100% of its operator's attention to safely slingshot. Deviations from these factors (piloting, power, psi, proper coordinates) can cause a *mis-jump*: the ship becomes lost in time, space, hypertime, or hyperspace.

- *Quantum Bridge*: A Quantum Bridge is an artificial jump-point (or "tunnel"), created within the center of a psitechnology supercollider free-floating in space. Two psychics gifted with great talent in Macro-Psi must operate the Bridge from either side; this requires great and stressful concentration -- even masterful psychics cannot hold the Bridge open for more than a half-hour at a time -- and truly vast amounts of conventional energy. If either operator or power-supply wavers, or the correct coordinates are not crystal-clear, a mis-jump is probable. Quantum Bridges usually run on a synchronized pre-set schedule, so that widely-separated operators will be concentrating at the same time to hold the Bridge open. Battleships carry a Quantum Bridge that can be unshipped, operated, and restowed.

Ship Weapons & Armor

- *Conventional Weapons*: While much ship combat is via psi, the guided missile is the conventional long range choice; unfortunately the guidance systems are easy to tweak with psi -- with the result that each missile becomes a moving battleground for psychics trying to disable or protect the projectile. Artfully aimed electromagnetic railguns and rockets can be used long-range, but they're mostly for short range disabling of enemy ships, and point defense against missiles.
- *Conventional Armor*: Metal, ceramic, and polymer plating.
- *Psi Weapons*: Big psitech units that amp a psychic's thoughts of "break, damn you" into effective anti-ship weapon-equivalents.
- *Psi Armor*: Crews of psychics plugged into psitech units that use Sense and Alter Pattern at turns to interfere with or reinforce against the enemy's use of Sense and Alter.

Types of Spaceship

- *Scout*: 2 to 4 man ships; very fast, sneaky, lightly-armed and -armored. (Commanded by a Sergeant.)
- *Gunboat*: Three to eight person ship; fast, moderately-armed and -armored. (Commanded by a Lieutenant.)
- *Destroyer*: 100 to 300 person ship; fast speed, heavily-armed and -armored. (Carries two squadrons of five gunboats each, and three scouts; commanded by a Captain.)
- *Container Tugs*: Three to eight person ship; slow, lightly-armed and -armored. (Civilian; attaches to gigantic container pods for commercial shipping.)
- *Luxury Liners*: 100 to 200 man ship; moderate speed, lightly-armed and moderately-armored. (Civilian; commanded by a civilian "Captain.")

- *Factory Ships*: 50 to 60 man ship; very slow, lightly-armed and moderately-armored. (Civilian; manufacturers necessary goods.)
- *Agripods*: 30 to 80 man ship; very slow, lightly-armed and -armored. (Civilian; grows food and raises small livestock for 600 people.)
- *Colony Ships*: 600 to 1000 man ship; moderate speed, lightly-armed and moderately-armored. (Civilian, but often commanded by retired military pilots; may have rotating sections.)
- *Battleship*: 400 to 800 man ship; moderate speed, heavily-armed and -armored. (Carries six squadrons of five gunboats and eight scouts; commanded by an Admiral.)

Suggested Alliance Fleet Size & Composition

While GMs should adjust the size and proportions of the surviving Alliance fleet as they choose, here's a suggestion, just to get things rolling: one battleship, two colony ships, four agripods, two factory ships, three luxury liners, 10 container tugs, three destroyers, 30 gunboats, and 17 scouts, and a population of 3,500. (Here's the first adventure: the agripods only produce enough food for 2,400 people. What do the characters do?)

Personal Weapons, Armor, and Gear

- *Spring Needler*: The most common shipboard sidearm, used so as not to damage valuable equipment or compromise hull integrity. Powerful electric springs fire a sliver of metal at high velocity; needles are often coated with chemicals to provide additional effects (sleep toxin, luminescent coating, etc.).
- *Spring Staff*: A nightstick-sized rod that pops open to full quarterstaff length with the touch of a button. Often used as a steering pole or for extra propulsion velocity in zero G, in addition to its use as a weapon.
- *Psi-Blaster*: Small backpack-sized unit that boosts Micro-Psi to Macro-Psi levels; however, boosting Macro-Psi to Mega-Psi rapidly depletes the battery of this portable unit. Used as a weapon (often incorporating the "directional wand" to aim, though this isn't necessary), a form of armor, and even a medic's kit.
- *Tri-layer Weave*: Sturdy, stiff cloth of woven waterproof polymers that resists damage from any source.
- *Gripper Boots*: Plastic boots constructed of psireactive material that can be mentally switched between two modes -- "sticky" (to gripper plates) and "not sticky." Used in zero G environments.
- *EBPR*: The Emergency Bio-Psi Reinforcer is a undergarment of insulated wires, tied into a small psitech "amulet" (often bearing the wearer's ID and medical information), and powered by a conventional battery cell. In cases of physical harm to the wearer (injury, ejection into vacuum, drowning, etc.), the EBPR can be activated to permit the wearer (or a qualified medical professional) to enhance his Bio-Psi to keep body and soul together.

Events & Possible Story Arcs

The main goals of the vagabond Alliance fleet are: 1) to retreat to Earth; 2) without leading the Dzogl there; and then 3) get Earth to join the Alliance. Many types of events can stem from each of these three goals.

Retreat to Earth

Why? Because it's a planet full of powerful psychics, with abundant resources, in a sector of relative safety. However, the path is long and hard, and must be traveled stealthily. Here are some possible events that can spice up the retreat:

- More ships bearing Gamma 5 survivors discovered.
- Important ship or ships (agripod, container pod full of food, medical frigate) become separated from the fleet.
- Necessary repairs must be made (planet-side or on the run).
- First contact with new species.
- Resupply run to a Earthlike world (probably a single-climate space opera world) for necessary materials (oil, radioactives, xenon, water, food, biomass, metal ore).
- Military or medical cache discovered (Eyendi or Dzogl?).
- Outrun something (meteor swarm, comet, nova).

Hide from Dzogl

If the Dzogl discover the fleet, they are doomed. If the fleet leads the Dzogl to Earth, they will have doomed an entire world of innocent sapients.

- Dzogl recon scouts sighted.
- Dzogl gunboat squadron attack!
- "Sitting duck" Dzogl target appears.
- Weave through Dzogl observation posts without being sighted.
- Fleet must "turtle" while Dzogl convoy passes by.
- Lifeless Dzogl battleship drifting in space. . . Why? Was it a space mishap? Is it a trap? Maybe the breakdown of systems from damage sustained in battle with the Alliance -- or even an unknown, unaligned race?

Arrival at Terra

What happens if the Alliance fleet makes it to Earth?

- What's the current global situation?
- Which country or countries should be approached for help?
- How will different Earthlings react to the existence of alien life? Friendly alien life? Hostile alien life?
- Should contact be open or secret?
- Where is the Observation Station and its personnel?
- Are the Dzogl here already?
- What if Earth says no to fighting the Dzogl? Heck, what if they say yes?

Advice, Opportunities, & Pitfalls

How Far to Earth? (Movie, Miniseries, or Series)

The most important issue a GM running a "Psi Fi Exodus" campaign will need to address -- other than the size and composition of the Alliance Fleet -- is one of basic structure: *how long does it take for the Alliance fleet to reach Earth?*

The answer depends on the desired length of campaign. If the journey only takes a single session, that's structurally like a *movie*, and will tend to undercut the interesting adventure potentials of a ragtag fleet of ships dodging Dzogl patrols and running into new and different problems.

If the fleet takes three to eight sessions to get to Earth, then that's a *miniseries*. This is a strong structure for the full-bore fleeing effect. Also, it's a generous but constrained period of time to dedicate to a single game; if folks get bored, it'll be over soon enough. The main story arc -- get to Earth -- can be interwoven with subplot arcs to add depth. However, a miniseries may leave questions unanswered that the players would enjoy exploring.

The strongest structure is probably that of the ongoing *series*, preferably broken into six to eight "episode" seasons. This way, there's plenty of conceptual room for an overall story arc for the season (*Season One*, find Earth's coordinates; *Season Two*, journey to Earth; *Season Three*, arrival and "first contact" with the rest of the Humans; *Season Four*, the Dzogl fleet shows up; etc.) and a number of subplot arcs to be braided into the campaign. However, such a sprawling epic can suffer a loss of player interest (in the time-proven mode known as "Are we there yet, Papa Smurf?").

It's highly recommended that a GM sit down with his players once all have agreed to play in a "Psi Fi Exodus" campaign, even before character generation, and have an open discussion about how long a reasonable journey to Earth should take (in terms of sessions). This will allow the GM to plan out appropriate adventures, and allow the

players to buy-into the campaign concept all the more firmly by expressing their preferences and expectations.

That's a good thing.

Istee Validios: Viscount of Science Fiction

for *Noblis*

by **Bradley Robins**

We love the works of our hands. We have built devices that allow us to walk the stars as young gods waking from slumber in the cosmic egg. We hope these devices will take us to places and ideas beyond what could be dreamt down the hole of the gravity well. Man creates himself through his ability to alter the plastic world.

The problem is that when man remakes the world he also remakes himself. While we might hope to shape ourselves into something more than we are, we also fear what we might become. What if we become not something more, but simply something more horrid?

We see in science-fiction what we saw in Isaiah: visions of seraphim with flaming swords, thrones raised above the world, and all the joy and wonder of the human soul. But from those visions comes a realization of what humanity is, and how terrible such glory can be. Lucifer, the morning star, was the greatest of all the angels, and because of his place he suffered the greatest fall.

In science-fiction we see the hope that our works can make us the morning star, and the fear that such a terrible power will simply give us all that much farther to fall.

6	Advancing human technology to the point of singularity
4	The well being of his estate
4	Protection of Chretien's Garden and his transhuman children
3	HG's discretion
2	His original copies of every Jules Verne novel
2	Happiness and well-being of his Familia

Istee Validios was a patron of many of those on the cutting edge of biotechnological research as well as those artists who bring forth visions of transhumanism and the spiritual potential of technological development. He felt quite firmly that science and science fiction were the investment capital of the future: that the energy invested in dreaming of future hopes and hazards would yield inevitable dividends of progress and safety. His tireless work brought him to the attention of the Powers, and when the old Noble of Science Fiction was killed by his brothers after having been subverted by the Dark, Istee was chosen to fill the role.

Though there were initial worries, given the fate of the previous Noble, Istee has proven to be a bane of the Dark and the Excrucians alike. Tempering his enthusiasm for the new and progressive with concern over side-effects and open-eyed contemplation of the changes that the dynamics of his estate bring, Istee has found a greater degree of balance and control than his predecessor ever did. Though Istee still leaps headlong into new ideas, he no longer supports any idea simply because it is new. These days he presses hard at ever front, trying to milk every drop of potential while battling back any of the Promethean backlashes that writers since Shelley have warned about.

Of course Istee does not always see the positives and negatives of his estate in the way that many other Powers of the Light do. Istee does not quake before the ideas of change or the possibility of humanity changing into something more than what it has been. While many Magisters of the Light insist that being human is based on being exactly what humanity has always been, Istee believes that the essence of humanity is to change. Humanity, he argues, has always changed and will continue to do so. The things that humanity brings forth are humanity, and must be protected and preserved. This does not mean that he accepts all changes, far from it. He believes strongly that while humanity can change, it can also change into something more or something less but that staying the same is impossible. Because of that he is obsessively dedicated to helping humanity become something more, something greater, than it has been.

Though firmly aligned with the Light, Istee also has ties with the Wild. His love of change attracts him to them, and the possibility that his estate could someday birth a way for the Wild to fly free to the stars, over the top of the Weirding Wall, draws them to him just as strongly. To be able to step beyond the bounds of all that is known and fly beyond the dreams of Angels is a dream that haunts Istee and the Wild alike, and so many chancels of the Wild will happily open their doors to him.

Estate

Istee is the Sovereign of Science Fiction in its many forms. He thus has power over writers, artists, and visionaries of genre works and the dreams that they produce and that drive them to produce. He also has mastery over any technology that is feasible but not currently commonplace. He can, for example, make hand portable laser pistols and nanotech viruses and dictate the operations of some cutting edge technology. Finally, the Domain of Science Fiction covers a limited subset of visions of the future. Istee cannot actually tell or control what the future will hold, but he can see and manipulate visions and ideas of the future dealing with hopes and fears surrounding technology and progress. This is one of Istee's greatest weapons against the Dark, for he is able to create dreams and visions that derail or realign the development and implementation of destructive technology.

Weaknesses

Istee is a visionary, and because he spends so much time in dreams of the future he often forgets to make practical implementations in the present. Once an idea leaves the realm of the theoretical and heads into the practical not only does it tend to slide from Istee's estate, it slips from his attention as well. To Istee the point is not the finished product, it is the dream that begins the development. Once the thing is real, it no longer concerns him and he moves on to the next new thing.

As a result of this negligence, many of Istee's best ideas and biggest plans fall apart when they hit reality. While his planning and forethought give some protection to the projects he abandons to fate and mortal hands, it is occasionally not enough. The decades long struggle to bring out electrical, hydrogen, and hybrid cars is an example of one of Istee's projects that foundered without the active backing of its Noble patron.

Design

Mountain Laurels of ambition mixed with the Goat's Rue of reason twine about the branches of the Almond Tree of thoughtfulness against a gray plain covered with white lines that give a suggestion of infinite motion and perspective.

Associated Non Player Characters

Always interested in the works of futurists, dreamers, and science, Istee has his fingers in many places. From bleeding edge research labs in prestigious universities to comic book shops full of impressionable youth and bulletin boards full of nitpicking geeks, Istee makes sure to keep tabs on the movers and shakers who walk through his domain. His current anchors (and they change regularly) are Saul Poller, a transhumanist game writer, and Dr. Gennifer Winters, a researcher working on principles of GUTs interaction with human perception.

Story Elements

Istee can appear in any story having to do with cutting edge or futurist technology, lost worlds from the Age that was nearly destroyed, dreams about the future of humanity, and attempts to wrest control of destructive technology away from the Dark. Weird science, breakthroughs, dreams and nightmares of the future, Babylon 5 conventions, and humans who are no long quite human or constructs who are all too human fit the Viscount of Sci-Fi. He also tends to show up while sci-fi movies are playing, and a random showing of Gattaca or 2001 is often a clue that his influence is present.

Story Type: Action

Lightsaber duels, running battles with Excrucian-tainted cyborgs, and daring raids against Dark-backed factories mass producing weapons of destruction are all just a day in the life of Istee Validios. Heated debates and fistfights between rampaging geeks at conventions fit in as well, and even a Noble might wilt before the raging Internet flames of a computer geek scorned -- especially when the spirit of the flames comes alive and burns flesh to ashes. As far as Istee is concerned, he is fighting a war for the very future of humanity and its children, and he is not afraid to sweep other Nobles into the constant sci-fi action movie that surrounds him. He also has occasional problems with hunters from the Locust Court, as there are rumors about him causing dementia animus in mortals who he "awakens" by offering them the choice of a red pill or a blue pill.

Istee Validios: Viscount of Science Fiction

for *Nobilis*

by **Bradley Robins**

We love the works of our hands. We have built devices that allow us to walk the stars as young gods waking from slumber in the cosmic egg. We hope these devices will take us to places and ideas beyond what could be dreamt down the hole of the gravity well. Man creates himself through his ability to alter the plastic world.

The problem is that when man remakes the world he also remakes himself. While we might hope to shape ourselves into something more than we are, we also fear what we might become. What if we become not something more, but simply something more horrid?

We see in science-fiction what we saw in Isaiah: visions of seraphim with flaming swords, thrones raised above the world, and all the joy and wonder of the human soul. But from those visions comes a realization of what humanity is, and how terrible such glory can be. Lucifer, the morning star, was the greatest of all the angels, and because of his place he suffered the greatest fall.

In science-fiction we see the hope that our works can make us the morning star, and the fear that such a terrible power will simply give us all that much farther to fall.

Pyramid Review

Deadwood: On Location (for Deadwood)

Published by [Cheapass Games](#)

Designed by James Ernest

Cover art by Phil Foglio

Edited by Elizabeth Marshall

Six b&w Location boards and rules; \$3

One of the great things about Cheapass Games is when it creates a supplement to one of its existing games, the new product is comparatively every bit as cheap as the original. *Deadwood*, its game of bad movie making, has expanded its studio budget by a couple of dollars and is ready to start filming *On Location*.

For those not in the know (or who haven't read the [Pyramid review](#)), Deadwood Studios USA is the worst movie studio in the world. It makes all manner of cut-rate cinematic bombs, most of them westerns. Players are actors, moving about the company's back lots in search of roles to fill. They start as low-level losers, but by the end of the game they can become high-end losers with better roles. Better or starring roles mean better pay, and the biggest bank is the way to win the game.

Cheapass released a series of alternate decks that could be had for a buck apiece. The studio moved from oaters to musicals, martial arts/chop-sockey flicks, sci-fi movies, and horror films, and there were new roles to assume like Unconvincing Puppet, Squid Tentacle, or the Scuba Coach. The decks also provide Distractions, a new kind of card mixed in with Scenes that, when turned over, shook things up. "Mirror Universe," for example, makes the actors start the day's shooting at the Casting Office instead of the Trailers, while "Spirit of the People" gives you a fan base that ensures you get a bonus for filming.

But one of the biggest problems that plagued the game, according to the publishers, is that the old board became predictable. It was an eight-piece puzzle that fit together to show the studio lot. The Trailers were in one corner, the Casting Office in another, and between them, a series of studio sets interconnected by walkways. Actors were allowed one space of movement a turn.

Much like the first move of a *Diplomacy* or *Axis & Allies* game, it seemed there was a conventional pattern that, though it didn't guarantee success, at least made sure seasoned players hit the same locations in the same ways. They stepped on one another's toes and play became more of a race to a predetermined destination than an exercise in strategic decision making.

Deadwood: On Location is a new board system. The studios have secured a set of rickety buses, and they use these to ferry the cast and crew out to (for Deadwood, anyway) exotic locales outside of town. Unlike the original, these boards don't fit together like a jigsaw. They're Locations, numbered one through six, laid out in a pair of columns.

Each board has a studio set or two, with additional roles listed on the board segments. The Trailers are on board one and the Casting Offices on six, roughly the same orientation. In between, there are still 10 studio sets to work on. They have different names, however (only the General Store has been preserved), and both the number of roles and their required ranks have been juggled.

So what keeps these placards from becoming as obvious as the last set? To get from one Location to the next, you have to schlep it around in a bus. Each board has one or two Bus Stops, and a stop pictures three faces from a six-sided die. When you hop the bus, you roll three dice and compare the results to those numbers. For example, Location 1's depot lists two, three, and four, so you could move to board two, three, or four if you roll a match on the dice. Instead of one space of movement, you are now allowed two moves, and since your first use of the bus doesn't count against you, movement is more a tool than an obstacle when compared to the original game.

Cheapass Games is staying true to its statement of purpose, replacing eight board sections with six (and smaller ones at that). Something had to give, and in this case it's a convenient place for the Scene cards. The old studio had a slot printed at each set where a Scene could slide back and forth to denote which Shot was currently filming. Now they must be placed beside the board, and Shots are tracked by counters (which gamers must provide) on printed clapboard symbols. It's not really an inconvenience, since it trades one awkward operation for another. Sliding the cards around to track Shots had the potential to upset the board, which was stuck together somehow; now you just need a bit more space. Frankly, this is preferable.

The presentation is almost identical (assuming like stationery colors across the whole print run). It may be easier to see the walkways on the first set than on this one, but not notably so. The *Another Day, Another Dollar* expansion decks are the same color blue as *On Location*, but since they contrast well on the first board and they aren't placed atop the Locations at all in the new set, this isn't a problem.

Deadwood: On Location is an improvement in many ways over the first production, and a simple and inexpensive one that Deadwood Studios USA, Cheapass Games, and the customer can all appreciate.

--Andy Vetromile

What to Do With Your GURPS Third Edition Books

by Sean M. Punch

With *GURPS Basic Set, Fourth Edition* on the horizon, many dedicated Third Edition gamers are no doubt wondering, "What do I do with all these Third Edition books?" We've made every effort to ensure that you can continue to use your Third Edition books with Fourth Edition -- where possible. But the reality of a new edition is that it *isn't* possible to keep everything 100% compatible . . . if it were, it wouldn't be much of a new edition!

Compatibility varies from topic to topic, but in general:

- *Characters*. Most Third Edition advantages, disadvantages, and skills are still around in Fourth Edition, and the rules for using them haven't changed much. A handful of traits have different names, and some have changed more -- to distinguish them from or *combine* them with similar abilities, or to balance their point costs better. But unless you insist that every last name and point cost line up, you can use the occasional NPC or creature from a Third Edition book in Fourth Edition without too much work.
- *Combat*. Changes to the combat system -- primarily aimed at streamlining it -- mean many small incompatibilities between Third Edition and Fourth Edition weapons, warriors, combat abilities, etc. in play. Most of these are easily glossed over by the skilled GM, but they're not truly ignorable.
- *Magic*. The magic system has changed some, but all of the changes are in the rules for *casting* spells. Individual spells have basically the same statistics as their Third Edition equivalents, and you can use Third Edition spells in Fourth Edition without negative consequences -- although a few Fourth Edition spell descriptions are worded differently to take advantage of new game concepts.
- *Psionics and super-powers*. We've switched to a completely new system for psi and super abilities in Fourth Edition -- one that has little in common with its Third Edition predecessor. The *Basic Set* provides you with sufficient information to convert . . . but you *do* have to convert, and the conversion isn't always 1-to-1.
- *Vehicles*. Vehicles have changed . . . a lot. Top speed, hit points, loaded weight, and a lot of other important quantities mean the same thing in Fourth Edition as in Third Edition, but many other stats don't line up well. You might have to go with your best guess until we release *Vehicles* for Fourth Edition. Fortunately, the *Basic Set* includes a generous list of sample vehicles, which should be enough for vehicles-light games.
- *Weapons and armor*. Low-tech equipment hasn't changed much. We've tweaked a few numbers, but not enough to upset game balance if you want to use the occasional Third Edition item. High-tech weapons have changed more -- mostly in ways that simplify use. In many cases, you can look up the new stats for the item in the *Basic Set*. This isn't an option for specialized or world-specific equipment, though; once again, you might have to go with your best guess.

So what does all this mean for specific Third Edition books? We've split the entire Third Edition library into a few general categories below, and provided notes on what Fourth Edition implies for each class of books.

Core Rules

Basic Set, Fourth Edition completely replaces *Basic Set, Third Edition*, *Compendium I*, and *Compendium II*. We'll be releasing *Update* to help Third Edition players get used to Fourth Edition . . . but realistically, there are too many rules in these books to offer a full conversion guide. It took us two years of full-time work to revise everything, after all!

Rulebooks

Books that contain major expansions to the core rules are also genuinely out of date. This is an unavoidable consequence of a new edition! The *spells* in *Magic* and *Grimoire* are fine . . . mostly . . . but the *magic rules* aren't entirely the same. The character abilities described in *Martial Arts* and *Religion* work slightly differently, too --

although the *Basic Set* provides enough information to get by until the necessary Fourth Edition books are available. *Psionics* and *Supers* are largely obsolete; you can create psis and supers using Fourth Edition, but they won't look much like their Third Edition counterparts. And supplements on designing equipment (like *Mecha*, *Robots*, and *Vehicles*) just aren't compatible at all.

Sourcebooks

Sourcebooks *might* be fine . . . it all depends on the subject matter. The advice in "genre books" remains as good as ever. Books of spells and magic items mostly work as written, too. Catalogs of equipment (marked * on the list below) are somewhat obsolete -- especially those that focus on high-TL equipment. Books of character and racial templates (†) are *very* obsolete, because they're all about precise point costs. Collections of creatures and NPCs (§) are a special case: if you just want stats that work -- more or less -- it's perfectly safe to use Third Edition stats and ignore the fine print. But to get "legal" Fourth Edition characters, you are going to have to wait for *Update* and do the adaptation yourself.

- *Aliens*†
- *Atomic Horror*
- *Best Of Pyramid 1*
- *Best Of Pyramid 2*
- *Bestiary*§
- *Bio-Tech**†
- *Blood Types*†
- *Cliffhangers*
- *Cops*
- *Covert Ops*
- *Creatures of the Night*§
- *Cyberpunk**†
- *Dinosaurs*§
- *Espionage*
- *Faerie*†
- *Fantasy Bestiary*§
- *Fantasy Folk*†
- *High-Tech**
- *Horror*
- *Illuminati*
- *Low-Tech**
- *Magic Items 1-3*
- *Modern Firepower**
- *Monsters*§
- *Rogues*†
- *Shapeshifters*†
- *Space*
- *Space Bestiary*§
- *Special Ops*
- *Spirits*†
- *Steampunk* (and *Screampunk*)
- *Steam-Tech**
- *Supporting Cast*§
- *Swashbucklers*
- *Time Travel* (and *Timeline*)
- *Ultra-Tech**
- *Ultra-Tech 2**
- *Undead*†

- *Villains*§
- *Warehouse 23**
- *Warriors*†
- *Who's Who 1-2*§
- *Wizards*†

* Contains rules or statistics for technology and artifacts that differ in Fourth Edition.

† Contains templates or character abilities that use different costs or rules in Fourth Edition.

§ Contains creatures or NPCs that work in Fourth Edition *if* precise point costs are unimportant.

Worldbooks

Worldbooks published for Third Edition are mostly fine for Fourth Edition! Background material requires no adaptation at all, and there are sufficiently few NPCs and creatures in most worldbooks that you can use them "as is" by keeping the same abilities and ignoring point costs (but if you want 100% compatible character sheets, be prepared to put in extra time!). Weapons and vehicles need conversion, but Fourth Edition offers ready-made equivalents in many cases. Only extremely tech-heavy worldbooks (*) and those chock-full of templates or new character abilities (†) are likely to be a problem.

- *Age of Napoleon*
- *Alpha Centauri*
- *Alternate Earths*
- *Alternate Earths 2*
- *Arabian Nights*
- *Atlantis*
- *Autoduel**
- *Aztecs*
- *Black Ops*†
- *Blue Planet*
- *Bunnies & Burrows*†
- *Cabal*†
- *Callahan's Crosstime Saloon*
- *Camelot*
- *Castle Falkenstein* (and *The Ottoman Empire*)
- *Celtic Myth*
- *China*
- *Conan*
- *Cthulhupunk*
- *Cyberworld**
- *Deadlands: Weird West* (including *Hexes*† and *Varmints*)
- *Discworld Roleplaying Game*‡
- *Egypt*
- *Fantasy* (and *Tredroy*)
- *Fantasy II*
- *Goblins*
- *Greece*
- *Hellboy Sourcebook and Roleplaying Game*‡
- *Horseclans*
- *Humanx*
- *Ice Age*
- *Imperial Rome*
- *In Nomine*†
- *International Super Teams*† (and *Mixed Doubles*†, *Super Scum*†, and *Supertemps*†)

- *IOU*
- *Japan*
- *Lensman*
- *Mage: The Ascension*†
- *Mars*
- *Middle Ages 1*
- *Myth*†
- *New Sun*
- *Ogre**
- *Old West*
- *Places Of Mystery*
- *Planet Krishna*
- *Planet of Adventure*
- *Prisoner*
- *Reign of Steel**
- *Riverworld*
- *Robin Hood*
- *Russia*
- *Space Atlas 1-4*
- *Technomancer*†
- *Terradyne*
- *Transhuman Space**†‡ (including *Broken Dreams*, *Deep Beyond*, *Fifth Wave*, *High Frontier**, *In The Well*, *Personnel Files*†, *Spacecraft of the Solar System**, and *Under Pressure*)
- *Traveller** (including *Alien Races 1-4*†, *Behind the Claw*, *Bounty Hunters*†, *Far Trader*, *First In*, *Ground Forces**, *Humaniti*†, *Modular Cutter**, *Planetary Survey 1-6*, *Rim of Fire*, *Star Mercs*, *Starports*, and *Starships**)
- *Uplift*†
- *Vampire Companion*†
- *Vampire: The Masquerade*†
- *Vikings*
- *Voodoo*†
- *War Against the Chtorr*
- *Werewolf: The Apocalypse*†
- *Wild Cards*† (and *Aces Abroad*†)
- *Witch World*
- *WWII**‡ (including *All the King's Men*, *Dogfaces*, *Frozen Hell*, *Grim Legions*, *Hand of Steel*, *Iron Cross*, *Return to Honor*, and *Weird War II*)
- *Y2K*

* Contains large numbers of vehicles, robots, or other equipment that requires extensive adaptation.

† Contains new character abilities or significant numbers of character templates.

‡ Self-contained! You can play this game "as is" without *any* edition of the *Basic Set*.

Adventures

Adventures are a lot like worldbooks: the plots and settings are as good in Fourth Edition as they were in Third Edition, but you may wish to update NPCs and creatures to Fourth Edition, and replace specific items of equipment with their Fourth Edition equivalents.

- *Beyond Thunder River*
- *Bili the Axe: Up Harzburk*
- *Chaos in Kansas*
- *Conan and the Queen of the Black Coast*

- *Cyberpunk Adventures*
- *Deathwish*
- *Fantasy Adventures*
- *Flight 13*
- *For Love of Mother-Not*
- *Harkwood*
- *Martial Arts Adventures*
- *Moon of Blood*
- *Operation Endgame*
- *Orbital Decay*
- *Orcslayer*
- *Scarlet Pimpernel*
- *School of Hard Knocks*
- *Space Adventures*
- *Stardemon*
- *Supers Adventures*
- *The Old Stone Fort*
- *The Wyrmslayer*
- *Time Travel Adventures*
- *Unnigh*
- *Zombietown U.S.A.*

With Scenarios, Writer's Block Can Be Good

This week brings us to the third installment of our 773-part series on looking at the metaphor of the building block and how it relates to the gaming world. (For those of you pulling out your straight razors now and heading for the bathtub, I would point out that the above is a joke; I think I can only stretch this metaphor for one more installment after this one. For those of you who assumed I was joking and are *still* heading for the bathtub with the straight razor, just remember: Across the vein to the hospital; along the vein to the morgue.)

Anyway, in our last installment we looked at how our block analogy applies to the rules and character-creation side of RPGs. This time, I thought I'd look at the other side of the cardboard duck blind and see how the GM might use the same ideas for his own purposes.

Unfortunately, I'm not coming up with much so far. (Except, that is, for next week's final installment -- an idea I like so much I'm going to try to milk it for all it's worth.) But I have given it a fair bit of thought, and here's what I've come up with.

Observation One

I've concluded that GMs have their own comfort and interest level in the components of an adventure. I reached this conclusion not based on my years of gamemasterly experience, but rather in my near-half-decade of *Pyramid* editing. In particular, what seems to be most the most important deciding factor for GMs is the size of the building block -- or the granularity of the components.

For example, some GMs like having lots of medium-sized blocks. For them, the more piecemeal components offered by RPGs and *Pyramid* are most useful: Supporting Cast members, collections of interesting artifacts and locations, and so on. For them, coming up with the smaller bits is a pain, but they still want the freedom to use larger prebuilt elements to build into their larger game. It's a lot easier to plug in an interesting character into most campaigns than it is to find a spot for a complete scenario.

Others like having tiny blocks, where they assemble their own characters, dig through their mental sandbox for the grains they'll build the adventure around. For them, the most useful articles are probably the ones that provide new bits to build up from -- new rules, spells, equipment, systems, and so on. For them, an interesting backstory wrapped around a Candle of Soul-Stealing is wasted material. They can come up with their *own* backstory, and if they're provided with the basic mechanics behind the soul-stealing principle, they can make a Lampshade of Soul-Stealing and make their own adventure around this perfect element.

And others like their adventures prebuilt, complete with all the characters, locations, and rules already in place. This is like having great big blocks, or even a preassembled playset, such as the classic Castle Grayskull for the He-Man toy line, complete with skull-mouth doorway and a front lock designed for the assembled Power Sword from the He-Man and Skeletor figures, which were taking up hardly *any* space in my closet until my mom decided they were taking up too much room, and when I got home they were gone, and I went running to my mom, and as the tears were streaming down my face, she tried explaining things to me, saying dumb things like, "But Steven, now that you're 16 years ol-"

I'm sorry; I got off-track.

Anyway, for these readers, the play's the thing (so to speak), and a good adventure means they can start playing almost immediately. They don't have as much interest in building their own characters, or coming up with plots, or working out the logistics of how Dr. Dume's earthquake device can provide a credible threat while still being thwartable.

Interestingly, I note that each of the three editions of *Advanced Dungeons & Dragons* seems to fit one of these broad categories. The First Edition focused much more on the large-block model, where the bulk of what was available for years was ready-made adventures. The Second Edition was more like the medium-block model, with lots of books of

creatures and lots of campaign world support material. And now, with the Third Edition, the most popular supplements seem to be those that provide the smallest blocks – more tiny bits with which to make characters, monsters, spellcasters, and so on. (With this last observation, I note it's somewhat arbitrary; the first wave of *d20 System* supplements were almost entirely adventures, and the myriad-option books that exist nowadays are targeted at least as much to players as they are to GMs.)

Anyway, probably the most interesting observation I can make with this system of categorization is that it is often easy to strip elements out of more complex entities. For example, a fully-fleshed adventure can have its NPCs, items, and plot elements taken out and used elsewhere, even if the adventure as a whole isn't useful. Likewise items or locations with an interesting mechanic or element can have that "block" taken out of them and used elsewhere (such as the Lampshade of Soul-Stealing). And for many game systems, it's possible to take various creatures and NPCs and change one or two elements to have a new block; for example, if you have stats for a medical doctor in a system, in a pinch it is often possible to switch "Law" for the "Medicine" skill and -- *voila!* -- Instant Lawyer! (The same applies to almost any game system's Evil Humanoids; with at most just one minor tweak, it's possible to make any of those lawyers, too.)

Unfortunately, it's those who prefer fully realized adventures that have it worst off. There isn't much they can do to get ready-to-run adventures . . . unless, that is, they use some kind of random adventure generator.

Observation Two

Random adventure generators are fairly common; the earliest I remember is from the *World Builder's Guidebook* from *Advanced Dungeons & Dragons*. And I was talking with a friend for a column idea today, we discussed various random adventure generators. Now, here's where my "not sure where the building block metaphor is going" admission above rears its ugly head again. In this case, I can only speak from personal experience, rather than any gobs of wisdom I've gotten from *Pyramid*. However, I've often found these generators to be somewhat unsatisfying, both as a player and a GM. As a GM, I've used them at times when I've been *really* stuck for an adventure idea, in the hopes of stirring my creative juices. But I've never really liked using them, probably because I'm at heart a middle-block guy.

As a player, I don't much care for them, especially since the results feel so arbitrary; when I look at a random adventure table, I realize that the various plot elements -- the *raison d'être* for the PCs' existence -- are very arbitrary; there's nothing that makes one more or less special than the other. So when I look at them, I just envision Batguy standing on a rooftop, looking up at the Batguy Signal in the night sky: "I'm being summoned by the police! Perhaps there is a crime involving the museum, the dock front, or the science laboratory; I wonder if it will be a kidnapping, theft, or fire-slash-flood-slash-some-other-natural-disaster? Oh, well . . . better see how the dice turned up."

Yes, I know it's irrational. And I recognize this because, when I've used similar random adventure generators online, I find them to be quite interesting and useful . . . probably because I can't see all the elements that *weren't* randomly chosen.

Nevertheless, random generators are perhaps the purest form of building-block adventure concepts. And it's possible that there might someday be a pen-and-paper product that captures the interest and complexity of more plotted adventures using nothing but random elements.

Observation Three

I think "Observation Three" would be a good name for a *Star Trek* adventure, science fiction project, or alternate world. Or maybe even a New Wave band.

But that's not important.

Anyway, I suspect we're all drawn to different kinds of blocks, depending on our interests, tastes, and probably even first -- or most memorable -- experiences and exposures to adventure design. But for those who've grown too

accustomed and comfortable with their current system, it might be worthwhile to try out different techniques to see what pops out.

But be careful; it might be a lawyer.

--*Steven Marsh*

Istee Validios: Viscount of Science Fiction

for *Noblis*

by **Bradley Robins**

We love the works of our hands. We have built devices that allow us to walk the stars as young gods waking from slumber in the cosmic egg. We hope these devices will take us to places and ideas beyond what could be dreamt down the hole of the gravity well. Man creates himself through his ability to alter the plastic world.

The problem is that when man remakes the world he also remakes himself. While we might hope to shape ourselves into something more than we are, we also fear what we might become. What if we become not something more, but simply something more horrid?

We see in science-fiction what we saw in Isaiah: visions of seraphim with flaming swords, thrones raised above the world, and all the joy and wonder of the human soul. But from those visions comes a realization of what humanity is, and how terrible such glory can be. Lucifer, the morning star, was the greatest of all the angels, and because of his place he suffered the greatest fall.

In science-fiction we see the hope that our works can make us the morning star, and the fear that such a terrible power will simply give us all that much farther to fall.

2	His original copies of every Jules Verne novel
2	Happiness and well-being of his Familia

Istee Validios was a patron of many of those on the cutting edge of biotechnological research as well as those artists who bring forth visions of transhumanism and the spiritual potential of technological development. He felt quite firmly that science and science fiction were the investment capital of the future: that the energy invested in dreaming of future hopes and hazards would yield inevitable dividends of progress and safety. His tireless work brought him to the attention of the Powers, and when the old Noble of Science Fiction was killed by his brothers after having been subverted by the Dark, Istee was chosen to fill the role.

Though there were initial worries, given the fate of the previous Noble, Istee has proven to be a bane of the Dark and the Excrucians alike. Tempering his enthusiasm for the new and progressive with concern over side-effects and open-eyed contemplation of the changes that the dynamics of his estate bring, Istee has found a greater degree of balance and control than his predecessor ever did. Though Istee sill leaps headlong into new ideas, he no longer supports any idea simply because it is new. These days he presses hard at ever front, trying to milk every drop of potential while battling back any of the Promethean backlashes that writers since Shelley have warned about.

Of course Istee does not always see the positives and negatives of his estate in the way that many other Powers of the Light do. Istee does not quake before the ideas of change or the possibility of humanity changing into something more than what it has been. While many Magisters of the Light insist that being human is based on being exactly what humanity has always been, Istee believes that the essence of humanity is to change. Humanity, he argues, has always changed and will continue to do so. The things that humanity brings forth are humanity, and must be protected and preserved. This does not mean that he accepts all changes, far from it. He believes strongly that while humanity can change, it can also change into something more or something less but that staying the same is impossible. Because of that he is obsessively dedicated to helping humanity become something more, something greater, than it has been.

Though firmly aligned with the Light, Istee also has ties with the Wild. His love of change attracts him to them, and the possibility that his estate could someday birth a way for the Wild to fly free to the stars, over the top of the Weirding Wall, draws them to him just as strongly. To be able to step beyond the bounds of all that is known and fly beyond the dreams of Angels is a dream that haunts Istee and the Wild alike, and so many chancels of the Wild will happily open their doors to him.

Estate

Istee is the Sovereign of Science Fiction in its many forms. He thus has power over writers, artists, and visionaries of genre works and the dreams that they produce and that drive them to produce. He also has mastery over any technology that is feasible but not currently commonplace. He can, for example, make hand portable laser pistols and nanotech viruses and dictate the operations of some cutting edge technology. Finally, the Domain of Science Fiction covers a limited subset of visions of the future. Istee cannot actually tell or control what the future will hold, but he can see and manipulate visions and ideas of the future dealing with hopes and fears surrounding technology and progress. This is one of Istee's greatest weapons against the Dark, for he is able to create dreams and visions that derail or realign the development and implementation of destructive technology.

Weaknesses

Istee is a visionary, and because he spends so much time in dreams of the future he often forgets to make practical implementations in the present. Once an idea leaves the realm of the theoretical and heads into the practical not only does it tend to slide from Istee's estate, it slips from his attention as well. To Istee the point is not the finished product, it is the dream that begins the development. Once the thing is real, it no longer concerns him and he moves on to the next new thing.

As a result of this negligence, many of Istee's best ideas and biggest plans fall apart when they hit reality. While his planning and forethought give some protection to the projects he abandons to fate and mortal hands, it is occasionally not enough. The decades long struggle to bring out electrical, hydrogen, and hybrid cars is an example of one of Istee's projects that foundered without the active backing of its Noble patron.

Design

Mountain Laurels of ambition mixed with the Goat's Rue of reason twine about the branches of the Almond Tree of thoughtfulness against a gray plain covered with white lines that give a suggestion of infinite motion and perspective.

Associated Non Player Characters

Always interested in the works of futurists, dreamers, and science, Istee has his fingers in many places. From bleeding edge research labs in prestigious universities to comic book shops full of impressionable youth and bulletin boards full of nitpicking geeks, Istee makes sure to keep tabs on the movers and shakers who walk through his domain. His current anchors (and they change regularly) are Saul Poller, a transhumanist game writer, and Dr. Gennifer Winters, a researcher working on principles of GUTs interaction with human perception.

Story Elements

Istee can appear in any story having to do with cutting edge or futurist technology, lost worlds from the Age that was nearly destroyed, dreams about the future of humanity, and attempts to wrest control of destructive technology away from the Dark. Weird science, breakthroughs, dreams and nightmares of the future, Babylon 5 conventions, and humans who are no long quite human or constructs who are all too human fit the Viscount of Sci-Fi. He also tends to show up while sci-fi movies are playing, and a random showing of Gattaca or 2001 is often a clue that his influence is present.

Story Type: Action

Lightsaber duels, running battles with Excrucian-tainted cyborgs, and daring raids against Dark-backed factories mass producing weapons of destruction are all just a day in the life of Istee Validios. Heated debates and fistfights between rampaging geeks at conventions fit in as well, and even a Noble might wilt before the raging Internet flames of a computer geek scorned -- especially when the spirit of the flames comes alive and burns flesh to ashes. As far as Istee is concerned, he is fighting a war for the very future of humanity and its children, and he is not afraid to sweep other Nobles into the constant sci-fi action movie that surrounds him. He also has occasional problems with hunters from the Locust Court, as there are rumors about him causing dementia animus in mortals who he "awakens" by offering them the choice of a red pill or a blue pill.

Icosahedron Adventures

Game Killers

by Owen K.C. Stephens

Welcome to the first installment of my new monthly *Pyramid* column on *d20 System* games, "Icosahedron Adventures!" Apparently I've now written so much *d20 System* material for Steve Jackson Games, The Powers That Be decided to offer me an official column on the subject. No fool, I accepted. So if you happen to be one of the people who prefer to rate all *d20 System*-based articles as a "1" without reading them, mine are now all clearly marked to make your life easier.

I know columns are supposed to have a theme. ("Campaign in a Box" = neat fictions you've never thought of, "Suppressed Transmission" = weird reality you've never heard of, "Random Thought Table" = Steven Marsh proving his ramblings are more coherent than most careful considerations.) So, put simply, the theme for "Icosahedron Adventures" is "Stuff I thought would be neat for the *d20 System*."

That's it. I may do adventures, monsters, or even new spells and prestige classes (though I notice those tend not to be the most popular). More likely, I'll be looking at places where the basic rules can be tweaked, added to, or replaced entirely. Like any good game engine, the *d20 System* can be tuned up, tricked out, or attached to a whole new machine. I want to look at what sorts of games it can do that it may not have been designed for, and how to change some of the things that may restrict what those types of games are.

Of course, all that's only useful to you if you use the *d20 System*. If I think of good idea-based articles that can be used for other systems as well I'll do them, but the focus of "Icosahedron Adventures" is *d20 System*-specific material. If that's not going to be any use to you, just think of this as the monthly proof that *Pyramid* is a full-service gaming magazine, rather than a house organ (and hope other magazines currently only providing *d20 System* material might try running a *GURPS* article or two in response).

Okay, enough introduction. Let's move on to this month's ideas.

Game Killing Rules

So, say you do like *d20 System* games in general, but certain kinds of games (or certain kinds of players) just don't seem to work well with it. What can you do to change the feel and function of the game to accommodate your players or plot needs? Obviously that depends on what's going wrong, but some common culprits (and suggestions for how to change them) are presented below.

As a design note, I've always found that the most important part of a game working well is some effort on the part of players and GM alike to put some effort into accepting, and consciously overlooking, problem areas. No game system is perfect, and any group that spends too much time complaining about a lack of realism, or even a broken genre convention, just isn't going to have much fun. If segmented movement, a top-down view of the universe, the ability to take five minutes to make a split-second decision, and having a good idea of what your odds of success are at any given moment don't bother you, why should any of the other oddities that most rules systems create do so? If a group either decides to trust the GM enough to simply ignore and modify rules as needed on the fly, or accepts that strict adherence to any rules set is going to cause some weirdness they'll need to overlook, fun is much more likely to occur.

Class Restrictions that Kill Character Concepts

Classes can be a great tool for speeding game play (for many people, the guidance a class gives, and the limited

choices it offers, make character generation faster and produce more uniformly useful results), protecting role niches (a fighter needs a rogue, cleric and wizard, no matter how well designed a fighter he is), and easily explaining character focus to both GM and other players (if you don't intend your sorcerer to blow things up, or at least charm the socks off foes, you may have picked the wrong class).

On the other hand, classes can be unnecessarily restrictive. There's no game balance reason, for example, why a chivalrous knight can't be a world-class singer, but fighters and paladins don't get Perform as a class skill (and while it's possible to make a chivalrous knight out of a bard, it does create some odd spellcasting knights). Players often get frustrated that some character concepts are rewarded, while others (often less powerful ones) are at a penalty due to largely arbitrary decisions about what class has access to what abilities.

There's no reason classes can't be kept as a template, but loosened up to allow more flexible character designs. Doing so does weaken some of the built-in role protection of the *d20 System*, but experienced groups often have no need of such protection (and indeed find it hindering).

One easy way to allow broader character concepts within the class structure is to allow players to decide what class skills their class gives them. The total number of skills is not altered (fighters receive 7 class skills, while bards receive 34), so game balance between the classes is preserved, but each player can customize what skills his character learns more easily. Once a character has set what skills a given class receives in his case, he can't change it. (In other words, if a player decides his character gains Perform and Use Magic device with fighter levels, that always what he gets as class skills with fighter levels.) If the character takes a new class, he can determine its class skills separately.

If there is a concern about role protection (which can widely by group), the class skills of all characters can be determined together. All players reveal their first choice for a class skill. If none are duplicated, each character gains that as their exclusive class skill (it may not be taken as a class skill by other characters). If two players have selected the same skill, they may auction it off (bidding to have it count as two, three, or even four class skill slots). If the auction is a tie, whichever character normally receives the skill as a class skill gets it. Failing that, flip a coin.

Obviously there may be more class skill slots than skills in the game (especially for a large group). Only the first two choices of class skill should be protected; after that any remaining skills may be designated as class skills by any character that still has open slots.

As a much easier method of increasing flexibility, a GM may decide all skills count as class skills. A variation on this is to allow all skills that may be used untrained as class skills, and allow each character to choose a number of additional class skills equal to half their classes listed class skills.

Another option is to treat all special abilities, including spellcasting, as feats. One feat buys one level worth of one special ability from one class (not including bonus feats the class receives, which are separate). A character may never have more levels of ability in a class than his total character levels, nor may he have abilities from a level higher than his total character level. The two levels of ability need not be consecutive, but all lower level abilities related to a higher level one must be taken first.

A character gets the abilities of his own class normally. Feats restricted to being taken from a particular list (such as fighter and wizard's bonus feats) may not be used to buy the abilities of other classes. Feat slots can, of course, be spent to buy normal feats instead. A feat may also be spent to gain proficiency in a class of weapon (not just a single weapon), two classes of armor (including shield classes), increase a character's base attack bonus (to a maximum of his character level), or to increase his base save in one category (to a maximum of half his character level +2). Any special ability gained works with the same restrictions as normal for the class it is taken from (arcane spells suffer arcane spell failure if cast in armor, paladin abilities are lost if the character becomes chaotic, and so on).

Thus a 2nd-level human fighter begins with four feat slots (one starting, one human, two bonus for being a fighter). He takes Weapon Focus and Power Attack as bonus fighter feats. But the player wants to make a character with some skill as a spellcaster, so he also spends two feat to gain the spellcasting special abilities of a 2nd-level sorcerer. If the fighter never puts more feats into this he remains only a 2nd-level caster, and he doesn't gain a familiar (that would be a different special ability). A 2nd-level human wizard, on the other hand, could use his two free feats to be proficient

in all martial weapons and bring up his base attack bonus to +2.

This method does require GM oversight, as it can be abused, but for reasonable character concepts it can allow great flexibility. (Truthfully, the fighter above is likely better off taking Cleave and Great Cleave, or maybe a couple of cleric spellcasting levels).

This also serves as a guideline for swapping out unwanted abilities for different ones. For example, a player might wish to play a roguish scholar and leader who excels at raiding tombs. He wants some sort of ability to inspire allies and a chance at knowing a little about everything, so bard makes sense, But the player doesn't want to be able to cast spells, which is a problem. Looking at the ability as feats rules, the GM decides its reasonable to replace bardic spell ability with a thief's sneak attack progression and a barbarian's trap sense. The new character doesn't fill any standard niche well, but if the group lacks any other kind of bard and does a lot of dungeon looting, that may not be a problem.

Power Dumps that Suspend Logic

Another problem some players have is the idea of gaining a startling amount of power all at once, in the form of a new level. This sudden jump in competence can be hard to accept on a logical level. If a player decides to give his fighter character a level of rogue, for example, and spends all his skill points on hide, he may jump from a +2 to +10 bonus in that skill overnight.

Numerical boosts for attacks, saving throws, and special abilities should be applied immediately, as should new hit points. These rarely represent a major jump in power, and as representations of a gradual increase in skill they have to happen at some point. Everything else (skill points, new spells, new feats, new special abilities, etc) are held back. At the beginning of each game session, players may decide to gain any one ability, spell, or feat they now have access to, or spend up to two skill point they've gained.

This has two main effects. First characters develop more slowly, and thus don't gain as sudden a power dump. (This is particularly nice when characters gain a level in the middle of an adventure -- threats that challenged them earlier aren't instantly underpowered.) Secondly, players can save some developments until later, allowing them to select things based on their ongoing encounters. For example, a rogue with 10 skill points a level has to take at least five game sessions to spend them also, and can hold on to some indefinitely. If the rogue runs into a mast lock-pick three game sessions later, he can ask to be trained in that skill, and spend the retained skill points now instead of having to wait until he gains a new level.

Though it's not necessary, a GM can also require players to justify spending feats and skill points on new areas of ability. For example if a wizard picks up a level of fighter, the GM may not allow him to take the weapon proficiency feats that come with his new class until he's gotten some instruction in-game. In this case taken a new level is just the beginning of gaining new skills and abilities -- the character has developed a natural knack for his new abilities but can't master them until he finds a teacher, or spends a reasonable amount of time in study and practice.

Spells That Kill Plots

There are a few spells that can kill classic plots faster than a barbarian can kill a goblin. Interestingly, most of the begin with the word "detect."

Detect magic, *detect chaos/evil/good/law*, *identify*, and even *detect undead* are often used by players to guide them through any attempt at mystery, intrigue or suspense, frustrating GMs enormously. They can also raise problematic questions about how a society would realistically function (even a 1st-level adept has access to *detect evil*).

Detect magic and *identify*, along with the less common *analyze dweomer*, eliminate many opportunities for "mysterious magic items," and can make the mystic seem much more mundane. An easy fix for this is to create new classes of things the spells do not function for (similar to how artifacts are immune to these spells). For example, the GM can warn players that there are "mystic" influences that cannot be detected with spells, and "relics" which are only as

powerful as normal items but may fool divinations. Getting players to accept such changes (instead of complaining about them) is easy -- let them have the new toys first. A GM can give out a +1 keen relic sword as treasure, having a sage explain that as a relic it's immune to *detects* and *identify*. The players will immediately begin thinking of way to turn that to their advantage (sneaking it in to dinners with adversaries, for example). But they also must accept that if they have a relic, NPCs may as well.

The alignment detecting spells and *detect undead* make it difficult for a GM to create plots where PCs are unsure if they can trust someone or not. Of course a cunning GM can work around such problems ("Of course I'm evil, but I want the dragon dead as much as you do -- he's killing my slaves!"), but doing so constantly can be tiring. Additionally, many players don't like the possible social implications of being able to reliably detect evil (certainly a theocracy is likely to at least levy taxes against the evil, and may exile or even execute them).

One answer is to simply eliminate the spells. Alignment and undead status are kept, but no mortal means are allowed to reveal them. Anything dependent on alignment (the effects of some magic items, damage done by a few spells) should also be hidden or eliminated to prevent them from become "poor priest's detects." Similarly, any class that can *detect* as a class ability must have it removed.

Another solution is to turn *detect* spells into opposed checks (the caster's Sense Motive vs. a level plus Wis modifier check for the opponent, with a +2 synergy bonus if he has 5 or more ranks of Bluff), or give them a saving throw. In either case, once a target has resisted the spell of a particular caster, that caster can never again gain information from him with that spell. Combined with an inability to distinguish between a failed effort to gain information and a truly neutral alignment, and PCs (and society in general) can never be sure who to trust if they get a neutral read. (It can also lead to heresy and argument if one cleric claims someone is evil, and no one else can confirm that -- even more plots for the GM.)

Combat Rules That Crush Spontaneity

Some game groups love having complex tactical level rules that call for miniatures, if not quite requiring them. Others hate it.

A simple opposed check roll can be used to replace most of the tactical movement rules, and be used to determine if an attack of opportunity occurs, if a target is flanked, and if a charge is possible. This maneuver roll is a d20 check to which a character adds his squares of movement (movement/5), reach in feet, and Dex modifier. If one of the characters has 5 or more ranks in a skill applicable to a given check, or has a feat that applies to the maneuver, they gain a +2 synergy bonus. A character may do nothing but make a move action to gain a +5 circumstance bonus to all maneuver checks made for a round.

For example, a fighter (Throrra) and a rogue (Shadow) are fighting a troll. Throrra rushes him, and makes a maneuver roll to avoid an attack of opportunity. Her maneuver check is 1d20+4 (for her 20 movement rate) +5 (her reach in feet) +2 (for her Dex bonus). Since she has Mobility, which is relevant to avoiding attacks of opportunity, she gains another +2, giving her a total of 1d20+13. The troll has a maneuver check of 1d20 +6 (for its 30 move), +10 (for its reach), +2 (for its Dex), for a total of 1d20+18. As it happens Throrra rolls an 18 and the troll rolls a 3, so Throrra manages to avoid the attack of opportunity.

Next, Shadow tries to flank the troll. His maneuver check is 1d20 +12 (for his 60 foot move rate, aided by *boots of springing and striding*), +5 (his reach in feet), +4 (his Dex modifier), for a total of +21. He rolls a 10 and the troll rolls a 9, so Shadow successfully flanks the troll with Throrra.

Obviously not every game system handles every genre or play style, but hopefully some groups will find these rules allow them to get a more satisfying game, allowing them to tap the vast supply of adventures, supplements, and genre books available for it (including, of course, future installments of "Icosahedron Adventures").

The Man Who There Wasn't: Kaspar Hauser

*"I came out of the darkness
Holding one thing
A small white wooden horse
I'd been holding inside
And when I'm dead
If you could tell them this
That what was wood became alive
What was wood became alive."*

-- Suzanne Vega, "Wooden Horse (Caspar Hauser's Song)

Once upon a time, a boy lived who played with a wooden horse, and who was as pale as wood, and spoke as little as wood. He might have been a little wooden boy himself made by a magician, or he might have been a Gypsy left behind by the caravan, or he might have been the lost prince of a wondrous city shut up in a dungeon by his wicked stepmother, or he might have just been a very unlucky boy. And so the boy became not just a boy, or even a prince, but a puppet, painted to resemble whatever Those holding the strings wanted him to. We don't even know his name, only that They called him "Kaspar Hauser." And so, too, must we, even as we follow the strings.

"His behavior during this first deposition provided no reason to assume that it was occasioned by idiocy or dissimulation, but rather led one to believe that this young man, from childhood, had been deprived of all human society and kept prisoner, isolated in an animal-like state in the most inhuman manner."

-- from the official proclamation on Kaspar Hauser by Jakob Friedrich Binder, mayor of Nuremberg, July 7, 1828

On May 26, 1828, a young boy dressed in oddly-cut clothes stumbled into the Unschlitt Square in Nuremberg, with a letter addressed to the commander of Light Horse in the town. He could say only "Don't know" and "I want to be a rider like my father" in answer to questions; his feet and hands were soft, his eyes a watery blue, and his aspect unnerving. Taken to the police station, he evinced no knowledge of swords, or women, or fire, and rejected meat and beer in favor of bread and water. Slowly, he learned more words and eventually, it was teased out of him that he had been held prisoner in a dark room for the last dozen-odd years. His release was as mysterious to him as his appearance was to the townsfolk of Nuremberg. Finally, he was given a pencil (in desperation, one imagines) and to the surprise of all, wrote a name in block letters: "KASPAR HAUSER." As one of the letters he carried (both written by the same hand, although purportedly twelve years apart) named him "Kaspar," and he had a handkerchief embroidered with a "K.H." on him (I wondered where that had gotten to), he was so named by mayoral proclamation.

The town put him on the support rolls, especially as he became a minor tourist attraction to the savants of Central Europe. From the home of the jailer (one Andreas Hiltel, who taught Kaspar to eat and clean himself), he moved into the house of a local schoolteacher, Georg Friedrich Daumer. Daumer somehow unlocked Kaspar's potential, and he began to learn to speak and write with much greater facility. Kaspar wrote out two drafts of an autobiography, but revealed little new information. Daumer kept control of the stream of gawkers and onlookers interested in the "noble savage" who had "dropped from the clouds," while teaching and treating Kaspar using his own eccentric notions of mesmerism and homeopathy. Everything seemed to have settled down to a nine-days wonder, when on October 17, 1829, Kaspar appeared with a [wound to the forehead](#), saying he had been attacked by a man in black.

"[I]t would not be possible to entrust something like this to my letter without great danger. I am therefore forced to remain silent here about the most interesting thing to come out of the whole Hauser affair . . . You will be amazed and you will shudder. Of all the horrors that I, as an experienced criminalist have witnessed, this one . . . is the most horrible."

-- letter of Anselm Ritter von Feuerbach to the Earl of Stanhope, May 12, 1832

Kaspar was assigned two policemen as guards, and the eminent jurist Anselm Ritter von Feuerbach, the chief police official for the Kingdom of Bavaria, began to investigate the case. Feuerbach was made his official guardian, and moved him from Daumer's house to that of the businessman Johann Christian Biberbach. Six months later, Feuerbach

moved Kaspar again (after rumors of inappropriate conduct with Frau Biberbach reached his ears) to the home of the Baron von Tüchel (Hegel's brother-in-law, as it happens). In 1831, the fourth earl of Stanhope came through Nuremberg and took a prominent interest in Kaspar, wining and dining him and filling his head with notions of a noble lineage. Feuerbach, in his more prosaic fashion, had also convinced himself that the "angel" Kaspar must be the lost heir to the throne of Baden, made off with by evil conspirators. Feuerbach published this theory in a book in 1832 -- and died, suddenly, in May of the next year. More dramatically yet, Kaspar was attacked again on December 14, 1833. Found bleeding in the snow, he said that he had gone out into the garden of Anspach to meet a man in black who had news of Kaspar's mother, and been stabbed for his pains. He died three days later of a burst lung; among his last words were "I didn't do it myself."

Several German historians have pinned Kaspar's death on his supposed benefactor, the Earl of Stanhope. Stanhope was a secret agent for William Pitt, with connections to both the Bourbons and the Hapsburgs -- two families who would definitely not have wanted a new heir on the throne of Baden. Especially since the "missing heir" was the adopted grandson of Napoleon Bonaparte, who had "died" six weeks after his birth, in October of 1812 -- the same date that Kaspar's letters claimed he was "born." Stanhope, as it turns out, was in Nuremberg during Kaspar's first attack, and wrote a very suspicious set of letters trying to shift his position from boosting Kaspar's hopes to claiming the boy was a fraud and impostor. Stanhope had also gotten the police coverage lifted, and moved Kaspar from Nuremberg, where he had many friends, to Anspach, where he was terrorized by his new tutor -- one selected by Stanhope, of course. Finally, it seems suspicious that Biberbach and three doctors with intimate knowledge of Kaspar's appearance all died in the next two years.

"Kaspar Hauser may or may not have been the prince of Baden, but it is worth noting that the world today knows more about, and is more interested in, Kaspar Hauser than in any prince of Baden who ever lived."

-- Jeffrey Moussaieff Masson, *Lost Prince: The Unsolved Mystery of Kaspar Hauser*

This is the dramatic story painted by psychiatrist Masson, whose deep and abiding interest in child abuse causes him to identify strongly with the Kaspar Hauser case, and to swallow the "noble heir" story whole. There is, it must be said, some evidence that supports it -- Kaspar drew a flower while alive that was found depicted (much later) in the grillwork of Pilsach Castle; renovations at the Castle uncovered a toy wooden horse very like the one Kaspar described as his companion during his imprisonment. On the other hand, of course, there is the fact that Daumer outlived Stanhope (that homeopathic goodness working for him) and, apparently unmolested by any conspirators, wrote a scathing attack on the Earl. More prosaically still, in 1996, mitochondrial DNA testing of the blood on Kaspar's shirt proved that Kaspar was not descended from the royal house of Baden at all, but was likely a Tyrolean of some sort.

"Kaspar Hauser showed such an utter deficiency of words and ideas, such perfect ignorance of the commonest things and appearances of Nature, and such horror of all customs, conveniences, and necessities of civilized life, and, with all, such extraordinary peculiarities in his social, mental, and physical disposition, that one might feel oneself driven to the alternative of believing him to be a citizen of another planet, transferred by some miracle to our own."

-- Anselm Ritter von Feuerbach, *Kaspar Hauser* (1832)

But where science closes doors, pseudoscience flings them open. Rudolf Steiner, the founder of Anthroposophy, claimed Kaspar was actually the son of Napoleon Bonaparte, and an incarnate spirit from the planetary sphere of Mercury. His holy mission was to unite Central Europe -- if Kaspar had become Prince of Baden, he, not Bismarck, would have built the new Germany. However, continued Steiner, various sorcerous British Masonic lodges were jealous of the Germanic spirit, and (wisely fearing that if they killed Kaspar he would merely reincarnate somewhere else) kidnapped the boy to keep him a drugged prisoner, unaware of his amazing psychic and angelic gifts. Stanhope, it must be admitted, was in fact a magician -- he was part of Bulwer-Lytton's Rosicrucian circle of skryers and spiritualists, and like his arch-foe Daumer, was also a proponent of homeopathy and mesmerism. While we're giving Steiner his due, let's also note that the knife that killed Kaspar Hauser was engraved with a (Masonic?) skull and crossbones, along with the hourglass of mortality. However, not satisfied with granting the "Orphic Circles" the power to divert the Divine Plan for Central Europe, Steiner made a hard left and identified Kaspar with, well, Jesus. Kaspar's death becomes not a mere tawdry murder by the conspiratorial Stanhope's Man In Black (Bulwer-Lytton also pioneered the male black dress code, intriguingly) but a Christlike sacrifice. Saith Steiner, "If Kaspar Hauser had not lived and died the way he did, contact between the earth and the spiritual world would have been completely broken."

"As his intelligence increased, his features altered. He had struck most people as a typical idiot, coarse, lumpish, clumsy and oddly repulsive; now his facial features seemed to change and become more refined. But he continued to walk rather clumsily; in the place at the back of his knees where most of us have a hollow he had protrusions . . ."
-- Colin Wilson, *The Encyclopedia of Unsolved Mysteries*

Or perhaps, contact between Earth and some other world. Daumer's experiments proved (to Daumer's satisfaction anyhow) that Kaspar could see perfectly in pitch blackness, that his senses were super-powerful, that he responded to homeopathic treatments in a way very unlike normal humans, and that he could detect magnets by their pull and differentiate metals hidden beneath a cloth. His knees, as Colin Wilson points out, were not really humanlike at all, resembling bird or reptile knees. Could Kaspar have been a Reptoid, or an alien scout, shape-shifting into a human form to blend in? He liked only red, and hated the natural world because of its "nasty" green color; could he have been a [Martian](#)? Could his killer (who left no tracks in the snow beside him) have been a flying alien himself (possibly explaining why Kaspar's feet were so soft) such as [Spring-Heeled Jack](#), who begins his own deprivations a few years later?

"However, not all far, deep, and high places are accessible to the reach of civil justice. With respect to certain places in which we have reason to search for the giant responsible for this crime, we would have to have the power of Joshua's trumpets, or Oberon's magic horn, in order to get him, in order to do battle, tooth and nail, with the high and mighty Colossuses armed with ball and chain who stand guard in front of certain golden castle gates."
-- Anselm Ritter von Feuerbach, *Kaspar Hauser* (1832)

Or was Kaspar's fate, as Rudolf Steiner dimly perceived, somehow the fate of Europe? Was Kaspar a [tulpa](#), a thought-form created by Stanhope's Orphic Circle, embodied in Bulwer-Lytton's Vril force? Was the boy who the broadsheets called the "child of Europe" literally the Child of Europe? He emerged out of nothing, a Grimm fairy tale come to life complete with animal friends (cats would approach him unbidden), imprisonment in a tower (possibly by a wicked stepmother, the non-Bonaparte second Princess of Baden), and mysterious gifts. He was exposed to the savants of Europe -- to impress them, or to impress something upon them? (His meeting with a youthful Richard Wagner, on the cusp of Aquarius -- the coming New Age -- in 1833, seems fraught in this context, but no transcript of it survives.) His dreams were reaching out for more answers, but a shining being appeared in them and told him "It is for the best if you leave the earth before having lived on it long." Sentence, or sacrifice?

Ritual and sorcery surround the story, hidden in the background of dynastic duels and Romantic educators. When he appeared -- on Whit Monday, the day of the sacrificed "Leaf King" in upper Germany -- he carried a key, religious pamphlets, gold dust, and prayer beads made of horn (the material of true visions). One of the pamphlets Kaspar had on him was entitled "The Art of Replacing Lost Time and Years Badly Spent"; an ironically interesting way to describe one whose whole life was a [lens, a bisociative performance](#) of the highest order. He slowly dreamed his own past, choosing (or being chosen for) aristocracy (Stanhope) over bourgeois complacency (Biberbach) or Enlightenment science (Daumer). He entered Nuremberg -- a city whose destiny echoed back to the medieval guilds and forward to mass murder -- walking on boots cobbled with horseshoe nails, the very emblems of chance and contingency. He refused to go near grandfather clocks, perhaps fearing their implacable order would bind him in its chains, leaving him once more a prisoner rather than an actor. But something stopped him nonetheless, something that left no tracks and wielded a knife engraved with an hourglass, freezing him finally as a mystery rather than as Europe's future or as the Second Coming of one who "dropped from the clouds."

EarthAD: Post-Holocaust Adventures

Published by [Politically Incorrect Games](#)

Written by Mark Bruno, Brett M. Bernstein & Matt Drake

Cover by Chris Martinez

34-page 691-KB PDF file; \$4.00

Coming in the wake of major releases such as [Gamma World](#) and [Redline -- High Speed Road Duels In A Post-Apocalyptic Future](#), *EarthAD: Post-Holocaust Adventures* is the non-*d20 System* entry into the post-apocalypse genre. Like [Vice Squad: Eighties Police Adventure](#) before it, *EarthAD* is another game in Politically Incorrect Games genre Diversion QUICK FIX GAMES series designed to facilitate both easy play and adventures or mini-campaigns that can be run between longer, more substantial games. It comes with no little pedigree, the trio of authors possessing plenty of experience in terms of creating and designing RPGs in the PDF format. Mark Bruno with his own [Armada X](#) and *Vice Squad*; Brett M. Bernstein with other Politically Incorrect Games titles that include [The Colonies RPG](#) and the recently published *Iron Gauntlets: Heroic Fantasy Roleplaying*; and Matt Drake with his contribution to the comprehensive treatment of the classic pulp genre, [Two Fisted Tales Roleplaying Game](#), also released in electronic format.

EarthAD uses the same easy mechanics seen in *Vice Squad* and also seen in a slightly more complex form in *The Colonies RPG*. They are light and simple, but are not as clearly and immediately explained as the format warrants. However, once understood, they should not get in the way of the game's play. Character generation is quick and easy, with players probably wanting to roll for their attributes rather than assign points, as the starting points makes them a little weak. Along with the familiar character stocks of Pure-Strain and Mutated Humans, *EarthAD* adds a third: the Radio-Operated Mutant, or ROM. These are mutants captured by enclaves of Pure-Strain Humans, and augmented with invasive cybernetics and other electronics that deny the character his free will. While a ROM has his cybernetics (Cybersenses, Cybergun, and Motion Detector), a Mutated Human has his mutations -- both beneficial (Acid Touch, Carapace, and advanced reasoning Dual Brain) and detrimental (Armless, Distinctive Odor, and Weak Dual Brain), and the ordinary Pure-Strain Human has access to pre-calamity Old Earth technology, and knows how to use it. The seven sample characters given at the back of the game include the Vaultier, the Sprawler (who resides in the rebuilt surface cities), the Nomad, the Raider, the Tribal, the Scavenger, and the Desert Strider. All have been created by the method of assigning attributes rather than rolling for them.

Where *EarthAD* gets into its stride is in discussing the nature of the various catastrophes that could strike our world. This game is not about one, set type of apocalypse, but instead presents a series of mini-essays covering a variety of disasters. "The Big Bang, Part II" has an Earth long after a nuclear winter in which the ozone layer has been eaten away and mankind must now weather the sun's harsh ultraviolet rays. The origins of the disaster in "Judgment Day" are religious in nature, but not overtly so. The planet has been betrayed by a world leader who brought about world peace and then unleashed a nuclear war, and after millions upon millions of people suddenly disappeared, all that were left behind were the unworthy, the corrupt, the psychotic, and the lawyers. The sudden reversal of a North-South airflow in "Ice Age" caused a massive climate shift that disrupted civilization with freakish weather patterns and then crushed it under glacial layers. In "I, Robot," a *Terminator*-inspired android rebellion has divided the planet between the robot collective and human shadow governments that wage guerrilla warfare for mankind's freedom. Like the book of the same name, "Lucifer's Hammer" has the world hit by a meteor, but here it is long in the past so that mankind has had the chance to rebuild. "Outbreak" has humanity brought low by a fatal wasting disease, while "Resurrection"

brings back the dinosaurs to drive mankind underground and beyond their reach.

These diverse settings are supported by a selection of more-or-less ready-to-run scenarios. A chance to locate a cache of unspoiled Old Earth technology lures the characters into the arms of a dark cult in "Dark Gods," while "Ambushed" sees them as wasteland travelers guarding a merchant caravan waylaid by raiders. The promise of access to another vault comes with the sound of a mobile phone in "Ready To Run." A further three ideas are given in thumbnail detail, along with a short biography.

Although **EarthAD** is a simple game, there is nothing to stop a GM bringing in elements of his own. These could be the vehicle rules from *Vice Squad*, the psionics rules from *Hard Nova: Space Opera Adventures*, or the nanotechnology rules from *The Colonies RPG*. But beyond this, the GM will need to bring a lot more of his input to the game. This is due in main to the treatment of the post-apocalyptic genre in **EarthAD**. Its broad approach is both a strength, presenting a wide range of possibilities, but also a weakness in that leaves the reader wanting a greater depth and more information than is given here.

Yet the scenarios and ideas in **EarthAD** are far from unplayable, just in need of the input that a more sharply divided genre would not require. The previous *Vice Squad* is an example of that. As a broad overview, **EarthAD: Post-Holocaust Adventures** is an excellent introduction to the genre, but its lack of focus will leave the reader wanting more.

Roll Call 3: Country Matters

Published by [Guardians of Order](#)

Written by Elissa Carey, Eleanor Holmes, Michelle Lyons, Michelle A. Brown Nephew, Matthew Keeley, & Jesse Scoble

Art & Graphics by Conley Philpott & Jeff Mackintosh

Edited by Mark C. MacKinnon, Jesse Scoble, & Adam Jury

32-page b&w softcover; \$9.95

The *Roll Call* series for Guardians of Order's superhero roleplaying game *Silver Age Sentinels* has, to this point, been a showcase of heroes and villains to fill out the GM's rosters. While the people in these volumes often had interconnecting stories, they were by and large random celebrities in the setting. The first was a selection of the men and women (and aliens, and . . .) in the spotlight, and the second was a cast of sidekicks, faithful companions for the big hitters. The third, *Roll Call 3: Country Matters*, has a much tighter focus.

Remember Janus, the hero-hating millionaire adventurer from the core rulebook? He's made it his mission in life to suck the marrow out of the good life, and to do worse than that to Caliburn and any other super freaks who get in his way. This high living has included a lot of lovely ladies. Janus has high-end tastes to match, however, and so he's got more than his fair share of metapowered sweethearts in his exotic and checkered past.

Roll Call 3 lists two dozen women from around the world (hence the subtitle, apparently), all of whom have one thing in common: Each has some sort of history with Janus. A few he's still on good terms with. He showed the metal-shaping Golddigger how to best use her talent for warping physical objects, and the psychic Myriad (along with the several other folks inhabiting her formidable mind) still works with him to gather proprietary information.

To some of them he took a love 'em and leave 'em attitude. Dark Valkyrie, a divine and seemingly unkillable warrior, is convinced it's only a matter of time before her beloved returns to her and reinstates their successful partnership. Young Mina isn't in love with Janus, but her mother was for one night. Their resulting child is a groupie for superhumans with a gift for winning people over.

The majority, however, have had their fill of all things Janus. From criminal alliances that went south to partnerships that ended with the woman fleeing from authorities while her erstwhile suitor made good his escape, the two-faced mask-hunter has left in his wake a river of enemies. Assassin Black Mamba was cut loose when she wouldn't play dead for his benefit, Kitty Kat (one of Samuel Matthews' genetic experiments) fears the day Janus will decide she's a useful tool, and the shifting sand-being Mirage owes him for ratting her out and nearly getting her killed by smugglers.

Janus has even managed to brass off a Hawaiian goddess, incur the wrath of the mythical, disease-ridden Plague-Bearer, and manipulate an autistic young girl named Jenny with enough mental power to span the globe.

Closing out the book is a brief two-page set of story seeds to hook your characters into the ongoing saga of Janus and his castoffs.

[SPOILER ALERT!]

Predictably, most of these plots have to do with team-ups between the many femme fatales in the book. Some of them involve outdoing Janus, succeeding in schemes where he failed; some are attempts to regain his attention if not his affections by offering up his favorite targets as sacrifices; and a few are illicit enterprises conceived of by women who simply take advantage of the network they've unwittingly become a part of.

[END SPOILER ALERT]

The typical *Silver Age Sentinels* book has classic comic-book artwork. This time out, most of the pictures have clearly been influenced by the anime style. Some splash pages still have the flashy, full-size comic covers you might expect, but the biographical entries are pencil drawings, rough but very much agreeable, and the cover is in the "small-body" manga subgenre.

Like most of the books in the *Silver Age Sentinels* line (not just the *Roll Call* books), the character write-ups are short and sweet, perhaps half a dozen paragraphs each, and they're all dual-statted for the Tri-Stat and d20 Systems. They're tightly written (and the tiny text is tighter still), giving you a fair idea of what the person is like in a concise little package. Readers will have to decide for themselves whether the lack of a timeline is worth fretting over; the "issues" where everyone first appeared may be some sort of roadmap, but we're getting an awful lot of back story about a supervillain whose womanizing wasn't a well-established facet of his bio in the core book. This isn't unlike the real comics, but GMs looking to make use of a cast full of women betrayed are going to have to juggle his own history.

One troubling thing about it is the similarities among some of the NPCs. Black Annie and Plague-Bearer both carry disease; precognitive Fortuna and Lucky Lady fall into a similar "used their talents to score at casinos" mold; Honey and Mina both use looks and underlying telepathy and mind control to ingratiate themselves with others. These aren't their only characteristics, nor do they come off as cookie-cutter products from an assembly line, but in a book with only 24 personalities a little more variance shouldn't be hard to come by.

On the other hand, the authors avoid piling it on with the superpowers and funny suits. Some of the women are just capable folks, or they have abilities that *aren't* their defining characteristics. Anyone looking for metahumans brimming with power, ready to topple tall buildings in a single pound, will only get partial satisfaction here. *Roll Call 3: Country Matters* is more evenly spaced than that, another blessedly low-cost offering that trims the fat and delivers the goods in a pretty package.

The Book of Fiends (for d20 System)

Published by [Green Ronin Publishing](#)

Written by Aaron Loeb, Erik Mona, Chris Pramas, Robert Schwalb, Jim Bishop, Brian Kirby, & Jesse Decker

Art by Julian Allen, Toren Atkinson, Tom Baxa, Drew Baker, Brom, Brian Despain, Chris Keefe, Raven Mimura, Sam Wood, Mike Villardi, Kevin Crossley, James Ryman, Dennis Detwiler, & Kent Burles

224-page b&w hardcover; \$34.95

Fiends, demons, devils, and other purely evil otherworldly creatures are used both to create adversaries for a *d20 System* group and to fill out a cosmology for the fantasy world the game is set in. Green Ronin Publishing expanded the realm of fiends immensely first by releasing the 3.0 supplements *Legions of Hell* to expand upon lawful devils and Hell, *Armies of the Abyss* to fill out the ranks of the chaotic demons, and the *Book of the Righteous* to provide a complete divine cosmology to place the forces of evil into context.

In the *Book of Fiends*, Green Ronin collects the fiends from the 3.0 version books, updates them to *d20 System 3.5*, throws in new ones and throws in a third collection of daemonic fiends for the neutral-evil plane of Gehenna, and includes a few extra bits such as an updated unholy warrior core class from the *Unholy Warrior's Handbook* for the previous version, making it a fairly customizable supernatural military-champion-of-darkness class.

In total there are about 150 fully statted creatures ranging from a pesky ½ CR daemon up to unique fiendish sub lords and even the CR 40 fallen angel Iblis. The highest powers of the nether planes such as demon princes, the lords of Hell, and the seven exarches of Gehenna are provided short descriptions but no stats. Together these luminaries create an interesting pantheon of evil, with each of the exarches symbolizing one of the seven deadly sins, the demon princes providing a jumbled but vast pantheon with domains described for cultists, and the lords of the nine layers of Hell swapping in Leviathan and Lilith for two from the standard hellish cosmology published by Wizards of the Coast. Demons have an interesting backstory of originally being the plaything creations of an older order of chaotic fiends called Qliphoth who were decimated by a scouring army of celestial ghaeles, allowing the demons to fill the power void left by their old masters and grow into their own planar dominance. Hell has a lot of references to failed angelic rebellions where the losers were cast down to hell. Egyptian and Babylonian myths are also tied in through a few devilish nobility and creatures loyal to the evil gods associated with those pantheons.

The CRs of the presented creatures are mostly not on the epic scale. One third of the creatures are under CR 7, one third go from 7 to 13, and the last third mostly covers from 14 to 23 comprehensively with six ranging from 25 to 40. A lot of the higher CR creatures are unique fiendish nobility. The individual demon princes and subnobility of Hell who are presented seem rather on the weak side when compared against even unadvanced balors and pit fiends. For instance, Eurynomus the Corpse Eater is a 16 HD "primal demon lord" with a CR of 13 who seems like he could easily be chewed up in combat by high-level characters. He has an interesting back story and legends but does not mechanically seem like a figure that would cause churches in a standard campaign to alter their funerary customs to avoid his depredations. Another example is the resulting spawn of a Gehenna exarch who tempted and corrupted a gold dragon then dragged her to his plane as a brood beast. The resulting horde of 4HD spawn are significantly weaker than either a half dragon fiend or a half fiend dragon would be.

There are also some quibbles to be had with the editing. There are sidebars for standard demonic, daemonic, and devilish traits, but these are inconsistently used in the stat blocks. Some entries follow the *Monster Manual 3.0 Edition* style of just cross referencing these standard arrays of powers with a single entry under special qualities saying "demonic traits" while others will say "demonic traits" then follow the 3.5 template and list out each of the standard demonic immunities, resistances, and abilities individually so that cross referencing is not necessary to get an individual creature's specific abilities. In addition, some of the layout formatting has the text cut off by the overlaid picture on a few entries instead of ending and starting a new line before it hits the picture edge.

However, there are a lot of well-developed interesting fiends to be used to expand the ranks of an infernal dungeon or to provide a varied planar cosmology. All of the individual creatures are well illustrated and have in-depth descriptions. A web enhancement with demonic, daemonic, and devilish templates to supplement the all-inclusive fiendish one from the *MM* as well as a comprehensive chart for what can be summoned using the various summon monster spells just adds to the usefulness of the book for creating more magical fiendish fun in a *d20 System* game.

--*John Henry Stam*

Be the First on Your Block to Have Blocks!

We are now beginning our final descent into the building block concept column series. We know that you have a choice of gaming magazines, and we thank you for choosing *Air Pyramid*.

For this final installment, I'm going to apply the metaphor to game world construction. Oh, but first let's take care of the obvious stuff first. Ummm . . . yadda yadda game world is made of blocks, blah blah have fun. Really, if you just reread [last week's column](#) and substitute "game world" for "adventure," you'll cover all the basic ground.

Anyway, while I note that playing with blocks alone is fun, there can be a certain thrill in getting together a big batch of blocks and dumping 'em in a pile for a group of friends to sift through -- the madcap scramble for the "cool" blocks, the give-and-take to barter for crucial needed pieces, and the competition to come up with the coolest creation.

For those looking for an interesting experiment, the same concept can be applied to game-world creation.

One of the more interesting experiments I've been part of as a player was the creation of a city for a super-hero game. While I'm sure this isn't very uncommon on the surface, what made it interesting was that each player of the gaming group assembled a *part* of the city, with the GM working out the logistics of making sure everything fit together. Thus each of us made boroughs with various themes or tropes: the high-tech district, the rough-and-tumble dockside, the "Chinatown," the affluent district, the historic downtown and government buildings, the suburbs, and so on.

All the players were given as much or as little leeway as they wanted, free to come up with a history, geography, notable characters, and atmosphere for the city section.

Sadly, that's as far as I can offer about real-world, "Gosh, I actually did this!" anecdotal evidence. The resultant parts were disparate and quirky, and required some group thinking to make them work together, but in general the project *worked*; we ended up with a city suitable for grand adventuring. And, more importantly, we ended up with a construct that all of us had a hand in; in theory, that probably would have made a more invested experience for the players involved. (In reality, the game never got off the ground. But don't dwell on that fact; this happens a *lot* with me.)

Now, since the campaign never got off the ground, I'm not sure what, exactly, would have happened next. But there are a number of options. Here are a few ideas, off the top of my head:

It would have been interesting if each of us players created a character from the region we designed. This would have permitted the players a level of knowledge that's common in the genre, but difficult to replicate without the GM spoon-feeding the player information. ("We need to act quickly. Do you know where the warehouses are in this part of town, Gothique?" "Uhhh . . . I'm not sure, SuperlaTim. Do I?") If everyone would have been okay with separating player and character knowledge, the player who designed that portion of the city could have even included secrets about his portion, while still allowing his character a lot of freedom to know stuff about the city. Regardless, this would have required some understanding between GM and players about what was "really" true about that part of the city; that way, if the GM inserts an Acme Oversized Novelty factory in the borough that the player didn't expect, the number of bloody fistfights that break out are kept to a minimum. (As a good starting point, I would've recommended a strict interpretation of the creator's text for the city, like a strictly literalist constitutional scholar. If it wasn't explicitly written, it's not true; there's no searching the "penumbra" of the setting for meaning.)

It would have been possible to swap off GMing duties, with each player responsible for his own portion of the city. Players could swap around, either as they were inspired ("Hey! I've got a *great* Techtown adventure in mind!") or by a set schedule ("Okay; Techtown this week, the Docks next time."). If the latter, in a long-running campaign I might have attempted to work out adventures that "crossover" into other parts of the city:

"Hey, Jeff; your Chinatown adventure comes up next week after my Docks one. Would you be able to work with it if, at the end of my adventure, the PCs can capture someone with smuggling ties to Chinatown?"

"Sure; can you make it baby dolls filled with opium? That actually fits well with what I had in mind."

"No problem! One crate of narcotic Natural Newborns coming up!"

It would even have been possible to rotate GM duty and let people tinker with *whatever* part of the city they wanted. I've been part of shared worlds in the past, and it's worked out well. The only difference in this case is that, instead of a game company or solitaire GM creating the game world, the gaming group as a whole would be responsible for its creation. The infusion of other players' ideas and viewpoints could go a long way toward strengthening the game world as a whole. ("Cool; I never considered that Techtown could have been the hub of gin-running in the 1920s. That makes a lot of the underlying money there tainted!") However, in this case it would have been useful to have a "veto" or overrule power, just in case someone utterly violates the creator's vision. ("Ummm . . . Having Mole People in my suburbs *really* screws things up. Can we agree to never mention them again? Ever?")

Regardless, having a group create its own world from the ground up reinforces the communal storytelling aspect that underlies a lot of good gaming. And the way each player approaches the project can tie to his own comfort level of building-block sizes. In our shared world, some people (such as myself) were more comfortable with a macro, large-block level, designing an overarching history, structure, landmarks, and "atmosphere" for the section in question. Other players designed not only street-level names -- complete with street names and population congestion -- but also had most of the individual *buildings* in town labeled, along with a blurb about their purposes. ("Pawn shops? I think there are 17; let me search the spreadsheet. Are you looking for legit or shady?") Another player was more comfortable with the game system we were using, so he focused on creating dozens of characters and backgrounds for his part of the city. And so on.

The building block motif continues to work well on many levels in gaming. And not unlike building a city itself, building a campaign world together can accommodate many different views, approaches, and desires. And in the end, you're sure to end up with an interesting place to call home.

Even if it *does* turn out to be infested by Mole People.

* * *

Pyramid has been busy lately, and I thought I'd let you know a few of the exciting things that are going on:

- First, we have a third-party playtest going on. [West End Games](#), publisher of the recently released *D6 Adventure* game as well as the forthcoming *D6 Space* and *D6 Fantasy* games, is conducting a playtest of *D6 Space: Ships*. If you think you might have something to contribute to the process, please feel free to [check it out](#).
- Second, we have two chats coming up. I don't think they're set in stone yet, but Graveyard Greg -- part of the creative force behind [Gaming Guardians](#) -- is scheduled to stop by on Wednesday, July 7th.

Then on Friday, July 9th, we've got some of the Steve Jackson Games crew stopping by to talk about talking about *GURPS Lite* and other Secret Things I'm not allowed to mention yet. Sean Punch and Andrew Hackard will be there, and possibly other folks.

I'm not sure when these chats will be yet -- the *Pyramid* minions are still flying around the landscape, confirming details -- but they'll probably be around 7 P.M. CST.

- Finally, for those of you who don't check out the various bottled messages I toss into the sea, *Pyramid* is currently seeking experts in a variety of topics. Those who might be interested are encouraged to check out the [Daily Illuminator](#) on the subject.

And what, exactly, does *Pyramid* have in mind for this assemblage of experts? Well, we're planning on . . .

Whoops! I see we're out of time and room. But we'll be back next week. And then, I assure you, we'll be off our block.

--Steven Marsh

Designer's Notes: GURPS Dragons

Working With the Fire

by Phil Masters

Certain legends say that dragons tend to grow bigger and bigger if left to their own devices. *GURPS Dragons* has proved the point through its moderately tortuous history. Originally planned as a short book by a different author, it . . . well, grew in the telling, and my commission was to expand the earlier manuscript out to 128 pages. It has subsequently grown even beyond that, especially as its publication date has ended up falling close to that of *GURPS Fourth edition*, with the result that it now has an appendix of rules material updates.

The long example setting in the book, "The Reptilian Gaze," had its own twisted, coiled, and scaly history. At one point, not only was it somewhat shorter, but its dragons had a completely different, slightly more "rational" history. That was ultimately rejected as showing too little respect for the mystique of the big lizards, and replaced with something fiercer and more fiery, but I'd like to think that it has a certain integrity, even a battered power, of its own. So, in the tradition of these things, and by way of a bonus for readers of this august periodical -- here is that version of those dragons, rescued from under the eraser. Note that it assumes a baseline date for campaigns around 1901 A.D..

Second Gaze: The Alternate Ancient History of Dragonkind

Dragons have been a feature of this world for a *long* time, although they have been more visible at some times than at others. For the last couple of thousand years or so, they have regarded discretion as the key to survival. Nonetheless, they are native to Earth -- with an older claim to it than humanity. On the other hand, they owe humans a great deal.

The Primordial Ones

Dragons -- or rather, their distant ancestors -- started out as a small species of Antarctic dinosaur which just survived the Great Extinction. They were fairly intelligent hunters, with large eyes and a capacity for hibernation which suited their home, and helped get them through the dark days after the great meteor obliterated most large species of the time. They also had, by a freak mutation, the only even faintly reliable psychic powers ever to exist in Earth's Animal Kingdom.

Specifically, they had limited access to what, for want of a better word, we can call the *Astral Plane* -- a realm of pure thought and psychic energy. Through it, they could achieve momentary links to the perceptions and memories of other animals, and they could shift "out of phase with reality" for a few moments at a time (something else which helped their survival -- many of them dodged the shockwaves following the fall of the meteor by shifting to their astral state). They eventually spread widely across warm regions, although they were never common, which is why they left few fossils (and they have since made a point of hiding any which show up), and they didn't evolve much because they didn't need to.

The Apes and the Mindstorm

Then, after millions of years, the descendents of those survivors ran into another mutant species, one which was expanding out of its original ecological niche -- a primate with an over-developed capacity for abstract thought. The proto-dragons reached out instinctively with their powers, and were, in their non-sapient way, horribly surprised.

The interaction between the two very different types of oversized brain was violent and bizarre. It led to a psychic storm which lasted for thousands of years. For the apes, the night became full of ghosts and terrors. The psychic dinosaurs mostly just died a lot; if they wandered too close to an ape community, they ran around in circles until

something killed them or their brains exploded.

Forced Evolution

Then, thanks to this brutally Darwinian experience, the proto-dragons evolved a strategy; they spent as much time as possible on the Astral Plane. The survivors were those who could spend most time there, and not run around in circles too much when exposed to ape-minds. Of course, the apes evolved somewhat, too; the ones with weaker mental abilities suffered a lot of heart attacks and seizures, and the survivors learned to control the use of their own memories. The story of the Garden of Eden, and the image of the serpent guarding the Fruit of Knowledge, actually represents a subtle racial memory of this time of horrors; the proto-human bicameral mind didn't just *break down*, as some modern scientists have suggested, it was *ripped apart*, accidentally, by dragons. Some would say that it explains a lot about human consciousness that it was created this way.

So the proto-dragons survived, and even began to exploit what had recently been a threat to them, gaining access to the rich seam of hominid perceptions and memories of the environment.

The Coming of the Dragons

But to humans, they were still a nightmare -- and the proto-dragons, spending much of their time as beings of pure mental energy, were shaped by this thinking. They became bigger and more terrible whenever they materialized in the vicinity of a human brain. The trouble was, they were being shaped into biological impossibilities -- huge creatures, all fang and claw and cunning, and sometimes wing and flame. They came to depend on the psychic energy of human brains to exist, even while in material form, and there just weren't that many human brains around. They could only materialize -- which they had to do to mate or breed -- very occasionally.

The Cities

Then, after millennia, human beings created cities. Now, there were large enough concentrations of thinking minds in close proximity that the reptilian dream-demons could sometimes return to the material world for extended stays. Eventually, preferred forms for such incursions developed, partly drawing on the city-dweller's fear of the wilderness. Of course, being psychic projections, albeit with a legacy of dinosaur biology, dragons have mutable forms -- they can, in effect, be quite skilled shapeshifters, if they choose to work at it. They are products of their weird racial heritage in other ways, too, including their capacity for hibernation.

The Secret

At this point, readers may wonder why dragons have not long since made themselves known to humanity. Why, in fact, are they so much *less* well known, or widely believed in, than they were in the Bronze Age?

The fact is, dragons have made themselves prisoners of human perception. If they reveal themselves to humanity too often, aside from the risk of would-be heroes trying to slay them, they become the subject of obsessive fears -- and those fears influence the shapes which dragons materializing in the vicinity can assume. If they are thought of and feared as terrifying monsters, that is what they become. They lose some of their intelligence and most of their self-control, and they *hate* that.

Thus, they mostly prefer that humans not believe in dragons *too* strongly, or at least not think about the subject too much. Over time, this preference has become a racial policy, which has spawned a racial taboo with some of the force of a law. Dragons are taught not to reveal themselves to any more humans than absolutely necessary, although trusted servants are permitted. Many dragons administer a series of formal oaths to these human employees as they are granted more complete knowledge of what it is they serve. Many humans are reluctant to violate such oaths, of course, but these ceremonies are actually as much for the dragon's benefit as anything else; they mark the points at which the taboo may be put aside, and secrecy may be breached.

Humans who find out about dragonkind by accident are sometimes destroyed, but smarter dragons find that wasteful, preferring to recruit them instead. Dragons have become not only secretive, but manipulative, and often take the time to assess any human who comes to their close attention as a tool.

Hoard and Gold

These dragons have only a restricted interest in valuable things *as such*. What the species has discovered is that treasure invokes strong emotions in humans who observe it, while gold -- presumably because of its conducting properties -- has some ability to channel psychic energies. Apart from which, many dragons have long recognized the pragmatic advantages to being rich. All this explains the mythological association between dragons and treasure. Used with a certain amount of skill and judgment, a hoard with a high gold content can enable a dragon to exploit human minds a little more efficiently. The potential uses of money to buy comforts and protection is a bonus. On the other hand, a dragon's attitude to wealth may be a little confusing for human observers, especially those who think in clichés.

Generally, a hoarding dragon is not really terribly interested in its hoard except as a means to an end. Rather, when humans come into its presence, they will be deliberately exposed to the sight of exceptional wealth, in such a way as to provoke some kind of emotional response. Greed and jealousy are the most likely, and are useful, but awe and admiration are just as good, and even contempt or disgust may serve. Meanwhile, the dragon remains close to at least a significant quantity of gold -- sitting on a heap of the stuff, or a gilded throne, is best, but wearing fancy jewelry is adequate -- and soaks up the emotional energy.

This means that dragons tend to be very brash and ostentatious about their wealth, so long as they are reasonably sure that the situation is safe. Some dragons even admit privately to a degree of sympathy for humans who call them tasteless or vulgar -- but refined appreciation of good taste simply doesn't meet their needs as well as simpler emotions.

A Secret History

Dragons have a peculiar need for *limited* isolation. The natural environment of the modern dragon is *human thought*. However, too rich an environment can be as dangerous to them as too little psychic energy. With no humans around, they can only materialize as mindless lizards; with too many, the old madness returns. Therefore, they seek out situations in which they can control their social environment as precisely as possible.

A dragon's ideal home is remote, but near to a small but vibrant human community which knows *something* about him, albeit not necessarily as anything but an unusual human being. A community of a few dozen or a few hundred people -- perhaps a couple of thousand -- serves draconic purposes best, offering useful but not overwhelming psychic energies. The crazy hermit near the village, the enigmatic owner of the big house with a busy estate, the terrifying mother superior in a large convent -- all might be dragons. But this is a balancing act, and even the cleverest dragon can sometimes fall.

Gods and Monsters

Faced with this need to exploit humanity and its emotions, without becoming trapped in human assumptions, and without becoming the target of fearful hatred, dragons have developed various strategies.

In China, they solved the problem by becoming demigods, worshipped for wisdom and power rather than feared as ravening beasts. In India, they took the role of *nagas*, serpents with magical powers living in a secret land of their own (actually the Astral Plane), no more monstrous than the many ordinary snakes of that land, but credited with intelligence and culture. In the West, their approach was to appear as dangerous but remote and very cunning creatures, not (usually) the subject of immediate fears, but something which lurked in secret places, to be respected but not often confronted.

The flaw with the latter approach was of course that the dragons were too often reduced to unthinking monsters, but Chinese lung and Indian nagas had another problem; they had to live up to their claims of demi-divine power, when their physical abilities were in fact rather limited.

Pacts of Secrecy

By the end of the Bronze Age, the dragons had things quite well calculated, while the dragon myth was well enough established among humanity that they very rarely had to work to reinforce it. Thus, they were mostly able to withdraw from any sort of overt presence in human society. For a while, some outside China played at impersonating very immanent gods, dwelling in the city-state temples of ancient Mesopotamia and caves or lakes in northern Europe, receiving tribute and worship through their priesthoods. But humans expected more of their deities than dragons could provide, and after one or two were butchered by conquering armies -- or worse, carried away maimed and in chains, humiliating the whole race -- that habit fell out of fashion, just as their Chinese counterparts had learned not to boast too much.

(Incidentally, despite the claims that they occasionally make, dragons did not actually invent human religion; they merely exploited a recurrent human impulse. Many human gods have nothing of the dragon about them. That said, how far that impulse may have been shaped by draconic activity in earlier times is an interesting question.)

The Iron Age made dragons ever more cautious, and better weapons and larger armies left them feeling increasingly vulnerable. The last few would-be gods in Mesopotamia fell to Assyrian blades, while more than one surly forest-dweller in the woods of Europe gained the posthumous honor of a starring role in a new myth after a warrior with a "magic" (iron) blade sneaked into his lair as he slept. Persia and then Macedonia raised empires to match those of China or India, and those dragons who were slow to adapt to new realities paid the price. (In later centuries, manipulator dragons would carefully convert the tales from those days into legends about heroic founder-princes slaying monsters.) By the time that Rome arose, sensible dragons had learned to live quietly, and more or less mastered the art of manipulating human cultures and societies. A few gloried in Rome's fall, seeking to restore the older, simpler dragon ways, but most frankly preferred to live in greater comfort at the price of a little secrecy.

And by the end of the first millennium A.D., the old informal pacts and agreed strategies had hardened into something slightly more formal. There were plenty of dragons in the world, but most remained well hidden; only on the far fringes did the occasional monster assert itself and demand tribute from humanity. The more sophisticated hidden dragons rarely mourned when they heard that such creatures had been slain by human heroes; frankly, they gave dragonkind a bad name. Some even formulated the theory that the race would do best if humanity actually denied its very existence, so long as *stories* about dragons were still told, and even worked actively towards this end. They could *enjoy* bizarre heraldic images, or tales of monster-slaying saints; it all showed what a good job they were doing of embedding themselves in human dreams. In the east, meanwhile, dragons had almost entirely withdrawn to life as astral entities associated with wild places; they could disregard the odd Mongol invasion, as the new arrivals were happy enough to adopt the local monster-tales on which dragons could subsist.

The Americas

Dragons have always been rare in the Americas, though not unknown. With their ability to move through the Astral Plane and to sense and locate human thought, it was inevitable that they would follow humans to these other continents, and so far as can be told, a few draconic stragglers did so not long after the end of the last Ice Age. However, they were never numerous -- at least until relatively recently, in historical terms.

For one thing, settled human communities in the Americas were very rarely large enough and widespread enough to support a stable dragon population. These are predators, who need large herds of "food animals" to support them -- but their food source is not so much individual humans as human *communities*. Then again, because the Native Americans had no contact with the dragon myths which the dragons carefully cultivated in Europe and Asia, their own myths generated weird, primal, divergent forms, which might impose themselves on an astral dragon seeking to manifest. Being forced into the guise of a piasa bird or an "underground panther" was disquieting for a dragon who was aware of the more "appropriate" shapes taken elsewhere. Only eccentrics, outcasts, and renegades bothered with the Americas.

A few dragons did see an opportunity with the rise of Mesoamerican civilizations. The Mayan city-states proved hard to exploit -- their imaginings were still a little too strange -- but not impossible, and eventually, the myth of Quetzalcóatl, the Feathered Serpent, arose in various forms, marking the establishment of a minor dragon community which seemed stable for a while.

But again and again, these cultures and their dreams proved hard to cultivate. Dragons rarely worry about humans dying or shedding blood, but the impulses to sacrifice and pain-induced hallucination were simply not what dragons *needed* from humanity. By the time of Columbus, the Mesoamerican dragon population was in serious decline, the few remnants lurking in remote villages and confused dreams. Only gradually, over the centuries, did dragons of European (or occasionally Chinese) extraction move in with the great waves of immigrants.

Exploration and Empires

In Renaissance and subsequent eras, the rules changed again. Some dragons blamed each other for this, saying that someone -- someone *else* -- should have taken responsibility for keeping the apes more docile and less mobile, or claiming that some faction was encouraging inconvenient behavior for its short term profit or to undermine an existing arrangement. While this was mostly nonsense, it is true that several European draconic groups took advantage of human expansion, especially once they realized how effete and ineffectual their Eastern counterparts had become. Clever European dragons had learned to speculate in order to accumulate, and their unknowing human minions were sending home reports which suggested that a clever dragon could find a new home -- with lots of wonderful gold -- in other lands.

In fact, the dragon race sometimes seems to have infected humanity with a terrible obsession with that metal. Humans were always perfectly capable of being greedy on their own account, of course, but the downright bizarre, often self-destructive behavior of, for example, the Spanish *conquistadors*, who would endure almost any horrors if they heard a rumor of plunder, shows some signs of draconic manipulation of dreams and desires. It is also possible that the obsessive pursuit of rumors of *El Dorado*, the "man of gold," was promoted by a dragon looking out for dangerous rivals or competitors in new lands.

Thus, outward-looking Western dragons were thoroughly implicated as the Age of Exploration changed into the Age of Empires. (More conservative Westerners sat at home muttering that no good would come of innovation, or more intelligently criticized the violation of ancient pacts or impetuous and careless tactics.) Colonialist dragons *loved* plantations; they could escape the increasingly crowded and confusing lands of Europe to hole up in some great house with a small family and a pack of compliant human servitors. Friction between colonialists and their former allies and neighbors in Europe mirrored that between human colonies and parent countries, and each inspired the other; the most successful breakaway movement was among the dragons of British North America, who learned the art of spreading new dreams among their human pawns in what was essentially virgin psychological territory. Even so, their break with European allegiances required that they call in favors from the old, powerful draconic factions of France -- factions which, ironically, suffered terrible few years later. Some dragons suspect that dangerous dream- images had been carried back across the Atlantic by American dragons' agents.

Elsewhere, European influence ran into the more complex problem of native dragons. The nagas of India had mostly withdrawn to the astral realm, and so European influence -- and even a very few European dragons -- were able to move in quite successfully. However, the psychic environment of the sub-continent -- as defined the dreams of its human population -- proved less amenable to conquest. European domination was always shallow and potentially fragile. China, by contrast, proved a much more blatant sort of problem. While the Chinese dragons were *mostly* withdrawn from human contact, they carefully preserved a number of lines of influence -- and they were numerous, powerful, and subtle. Only a very few, cautious European dragons moved to this land, taking up residence in the entrepôts of Hong Kong and Macao. Still, the effort resistance may have weakened the Chinese dragons severely; this successful defense may prove to have been their last hurrah.

Their cousins in Japan perhaps did better. For centuries, they sealed the land from all intrusions, leading many other dragons to think that their eventual collapse would be total, but in fact, they were making careful plans all that time.

When Japan *was* opened up to the West, the dragon lords carefully allowed specific Western ideas and images to enter the Japanese dream-space, while fiercely guarding their personal independence.

Meanwhile, even in 1901, American dragons remain thinly spread and notoriously eccentric. However, with access to the resources of a growing, dynamic society, they are becoming a serious factor in global draconic society. Furthermore, with the rise of American plutocracy and concepts such as "conspicuous consumption," the cleverest of them -- especially those willing and able to maintain a convincing human form most of the time -- are finding a new place for the old draconic lifestyle. Some hold that the American Dream will be a happy hunting ground for their kind.

The Nature of the Beasts

So what do dragons *do*?

In brief, they try to control human society so that it remains comfortable for themselves, and to maintain a steady flow of psychic energy which they can tap. However, that energy seems to be a limited resource -- or at least, dragons, even the reptilian predators, think so. Note also that they are habitually territorial, with highly competitive and fairly complex mating rituals. They are usually solitary, but break that solitude quite dramatically from time to time. They have lots of experience, but they are sometimes somewhat impulsive and not *especially* smart. They are potentially almost immortal, but terribly fragile.

Thus, they spend their time pursuing power, dominance, and security, while working hard to preserve secrecy. (They are in fact quite impressively uniformly sane, in some very important ways; they all recognize the certainty that a serious lapse in secrecy would be fatal for the individual responsible, probably quickly and painfully.) Their conflicts are primarily political, but can occasionally break out in spectacular violence, either by proxy or, very occasionally, in a personal form.

Shapeshifting

Modern dragons are essentially creatures of psychic energy rather than flesh. This means that they can assume human and other forms *fairly* easily. However, the shapes into which they slip reflexively are influenced by human imaginations and memory. This sometimes leads to odd results.

Dragons also have problems sustaining the stability of any form over long periods. Some are better at this than others, but most find it very tiring to retain a non-reptilian shape for more than a few hours. Only a very few are "shape masters," able to shift between human appearances with any sort of ease; indeed, the wilder stories about such individuals may represent the dragons' own mythology, especially as these experts are often described as assassins and power-thieves.

Dragons have one other problem; for all their shapeshifting powers and psychic abilities, animals invariably seem to sense something "wrong" about them, and react badly.

Psychology

For all their coldly sane urge to self preservation and dependable obsessions, dragons are psychologically complex. Their tendency to political maneuverings seems to be ingrained, and *almost* universal, but is primarily a focused aspect of their urge to dominance. How far this in turn is truly natural to them, and how much it is shaped by human legends and fears of domineering monsters and demigods, is very hard to judge.

Breeding

Dragons have to adopt a material reptilian form to breed, and the females have then to hold it for an extended period. The parents then have to guard their eggs while keeping them in a suitable physical and psychic environment.

Obviously, all this can be dangerous and stressful. It is probably fortunate for the survival of the species that they have a powerful breeding instinct, although they lose almost all parental interest once their young are out of the nest. However, dragons *do* see their offspring as potentially useful political allies -- or at least as pawns. Likewise, dragons are often closely allied to their brood mates, if not out of affection (although they are capable of that), at least because they know each other's habits, tastes, and weaknesses. Dragon mated pairs seem to form on the basis of a mixture of calculation, raw instinct, and a kind of affection that verges on romantic love. Such pairings often last for many decades, but not usually for life. Although most former couples are polite to each other, it is considered a lapse of taste for them to make much casual social contact.

Beliefs

Those few humans who study dragons tend to think of them as atheists, but this is not quite true. Most dragons are pathologically incapable of religious submission to a higher power, but this does not mean that they refuse to believe that such powers exist. Primarily, they have a mystical-religious attitude to the Astral Plane, seeing it as possessing a "higher" or "deeper" aspect where living dragons cannot (usually) venture, but which may be identified with God. A few have sought to relate this perception to human religious ideas, and some believe (or hope) that "faded" dragons are not dead, but have moved on to communion with the high mystery.

All of which said, any dragon found in church is there for purely social reasons, or to bathe in the emotions of the human congregation.

Dragon Conflicts

Dragons are competitive and territorial, and not generally pacifists. They also know how to do each other vast damage, either physically or psychically, in person or by proxy. Sometimes, the impulse proves irresistible. However, if they succumbed too often, draconic society would quickly collapse.

Like most such creatures, they handle this problem by means of an intricate set of social rules and taboos, which vary from region to region, but which have common underlying principles. Conflicts must be formally declared, and inflicting "collateral damage" on neutral parties is seen as poor taste. Surrenders and formal submission must be respected, and minor conflicts can often be resolved non-violently, by displays of wealth or contests between proxies (who may be humans or junior dragons). Rules are designed to ensure that the loser preserves just enough dignity, while still making it clear who won. Which is not to say that these systems *always* work, but they do ensure that draconic society holds together.

The Secret Threats

Dragons are actually in danger from multiple directions in 1901, although many of them refuse to recognize it. For one thing, the world is becoming more *organized*; it is becoming a lot harder to conceal oneself if one happens to be an immortal supernatural creature with a need to spend much of one's time in the form of a giant reptile.

For another, exploration, development, and colonialism are eliminating the last true wildernesses, or at least reducing their scope, so that dragons who seek a psychic-environmental equilibrium, or just refuge, in such areas are fast running out of room. For a third, human culture is becoming *mixed up*, at once randomized and homogenized; the distinctive mental images which spawned dragons and sustained their culture are being scrambled.

And last and maybe worst, ever since the Industrial Revolution, humanity's nightmares and gods have grown increasingly inhuman and detached from the dark night and the wilderness. Dragons, long since transformed into manifestations of such dreams, are slowly being reduced to incoherent fantastical tempests of chaos. Unfortunately for them, not many of them realize or accept this as yet.

Dragon Template

527 points

A dragon is basically a spirit being for game purposes, but can take physical form; it can most easily take the classical "big reptile" shape, but most sometimes materialize in a (weaker) human guise for practical purposes. (Some also sometimes take animal forms, but few see much point to this indignity.) These game details are for *GURPS Third Edition*, but should be easy enough to update to *Fourth Edition* if necessary. Note that some of the psionic skills used here are taken from *GURPS Psionics*, while the rules for spirit forms come from *GURPS Spirits*.

Attribute Modifiers: ST +30 (No Fine Manipulators, -40%; Not in human form, -10%) [90]; HT +5 [60].

Advantages: Alertness +2 [10]; Damage Resistance 3 (Not in human form, -10%) [9]; Extra Hit Points +15 (Not in human form, -10%) [68]; High Pain Threshold [10]; Metabolism Control $\times 5$ [25]; Nictating Membrane $\times 1$ (Only in dragon form, -10%) [9]; Night Vision [10]; Passive Defense 1 (Only in dragon form, -10%) [23]; Sharp Claws (Only in dragon form, -10%) [23]; Sharp Teeth (reach 1) (Only in dragon form, -10%) [9]; Spirit Form (Physical Form, +80%; Unlimited Lifespan, +30%; Missing Powers -- Cannot hear name if invoked, Cannot travel to summoner, No Poltergeist Effect, Possession, or Probability Alteration, -70%) [140]; Temperature Tolerance $\times 2$ [2]; Unaging [15].

Disadvantages: Bad Grip (Only in dragon form, -50%) [-5]; Chauvinistic [-1]; Compulsive Behavior (Acting like humans nearby believe that dragons behave; Only if subject thought to be a dragon by such people, -75%) [-4]; Dependency (Proximity of large groups of people with some kind of belief in dragons, or even more people feeling strong emotions; common, weekly) [-10]; Extra Sleep 1 [-3]; Frightens Animals [-5]; Horizontal (Only in non-human forms, -50%) [-5]; Inconvenient Size (Only in dragon form, -50%) [-5]; Selfish [-5].

Skills: Shapeshifting (M/H) IQ-1 [2]-9.

Psionic Powers: Telepathy (power 5) [25]; +4 to Telepathy power, only in proximity of a large mass of gold (-50%) [10].

Psionic Skills: Emotion Sense (M/H) IQ [4]-10; Illusion (M/H) IQ-1 [2]-9; Telesend (M/H) IQ+4 [12]-14.

A typical full-grown dragon in its "default" form is around 8-10 hexes in size, and weighs about 3,000 lbs. Many, especially older individuals, have high Wealth and Status, as well as related Allies, Ally Groups, Reputations, and Contacts. (They are also prone to disadvantages such as Hidebound, Greed, Megalomania, Overconfidence, and Stubbornness, and to switching Selfish to Self-Centered, as well as other dragons as Enemies.) However, younger "drakes" may still be finding their way in the world.

An individual dragon can buy extra ST with or without the limitations listed above; if bought at full cost, it also applies to their human form. In general, a dragon should have twice as many base hit points in dragon guise than in human; simply double or halve current totals when switching between forms.

The nature of belief in dragons or similar beings among the local human population can influence the physical as well as the mental state of a dragon (specifically, it influences the dragon's normal manifested form), but this is a slow and primarily cosmetic process, and so is not covered by a disadvantage.

Psionics: Dragon characters cannot buy any other psionic powers apart from Telepathy. They can buy additional Telepathy skills from the *Basic Set* (as well as Telescan), although Mental Blow, Sleep, Mindwipe, and Telecontrol are rare; GMs may prohibit them to PCs, or require a 20 point Unusual background to reflect unusual training or talent. They can also buy up to 3 extra levels of power, but no more. The conditional extra Telepathy power require physical contact with a couple of pounds of gold (a big, complicated crown or similar ceremonial regalia may be enough), or the presence of 10-15 lbs. within a few feet; this cannot be bought up or down. Note, when designing dragon characters, that their Illusion skill has prerequisites.

Common Options: To represent a talent for the adoption of human forms, add one or more levels of the Easy Materialization enhancement to the Spirit Form advantage, and also increase the Shapeshifting skill. A true "shape master" (if such beings actually exist) would have one or several additional Physical Forms, mostly human but possibly including some alternate dragon identities. GMs may prohibit these abilities to starting PC dragons, or require

a large Unusual Background to have attained such mastery of form. Dragons *cannot* acquire the ability to hear their name when invoked, or to travel to an invoker, however. Any dragon may take the Alternate Identity advantage shapeshifting ability, plus draconic wealth and influence, makes this fairly easy to manage in this period.

Dragons cannot generally draw on "places of power" for Fatigue. However, there are rumors in draconic circles of locations where physical manifestation is especially easy, or that certain old and powerful dragons have more than sentimental reasons for staying in particular homes. Dragons *can* tap human worshippers for Fatigue, but this is long out of fashion and is widely considered rather dangerous. More importantly, it renders the dragon *extremely* likely to be shaped, physically and psychologically, by the worshippers' beliefs and assumptions -- and few dragons like putting themselves in others' power.

Mythical Abilities

Dragons do not actually fly (in material form -- their astral forms can move however they like), breathe fire, or even possess a venomous bite. Nor can they control the seas or the weather. Human psychic influences can only warp the limits of biology and physics so far. What dragons *can* do is make dramatic and inventive use of their actual powers; many use these to promote the "dragon myth."

There are some dragons who have gained the Amphibious advantage through the influence of human beliefs. Rumors within dragonkind suggest that some even have Gills (or perhaps just Oxygen Storage) when in physical form.

Immortality?

Dragons are classed as "unaging," which is near enough to the truth for practical purposes. After 15-25 years of growth from the egg (which will have been incubated for four to five months), they achieve a form which, other things being equal, can survive unchanged for centuries, and maybe millennia, on the Astral Plane or in the physical world.

However, other things are *never* equal, and the true limits of dragon agelessness have never been properly tested. To begin with, of course, dragons are not immune to accident or misadventure, and every year, a few of all ages die in one way or another. More to the point, they are all subject to psychic decline. Extreme insanity tends to lead to death fairly soon -- a mad dragon rarely defends itself efficiently, and some other dragons are inclined to put such sickening and tragic individuals out of their misery -- while less extreme problems can render a dragon incapable of interacting with the human beliefs and psychic energies which sustain the biologically implausible dragon form, which leads to decrepitude and decline. Probably for very similar reasons, other dragons lose their ability to manifest in physical form, and while a dragon can survive for years or decades on the Astral Plane, the species preserves a vestigial (and possibly psychosomatic) need for physical nutrition, material world -- and in any case, purely astral dragons usually go insane eventually.

Which leaves a final category of cases, of old, powerful dragons who simply *vanish*. Most of the species assume that these fit into the last category, presumably having declined unusually rapidly. However, even after millions of years, the dragons do not properly understand the astral "dream realm," and some believe that it holds secrets accessible only to the uniquely enlightened -- secrets which may take a dragon beyond the merely material. There is a whole set of legends on this subject, more or less believed by some dragons, ranging from the transcendent to the messianic.

There's No "I" in "Roleplay"

by **Brian Rogers**

In addition to being Games, [Toys](#), Media or Art, there is another lens for viewing roleplaying: sports. Specifically, team sports. After all, we already have a referee, we already have a group of people working together, and we often have a balanced opposition and clear end game (if you can accept that the GM can be both Ref and Opposition, and if you like scenarios with directed goals). In other words, there's enough overlap to justify a gratuitous use of sports metaphors while providing player advice.

Practice the Fundamentals

Know the rules of the game -- what works, what doesn't. For RPGs this means get as good a grip on the mechanics as fast as you can, then focus on the details. This is not to trump the ref or rules lawyer the other players, but to keep play seamless. Notice how no serious player dribbles the ball with both hands? Or how frustrated the fans get when the Ref has to call penalty after penalty? Know where things are on your character sheet, how to make a basic attack, and if your character will routinely make mounted Overruns with a lance, know the rules for that, too. Every time you stop play for rules reasons, the game suffers.

Know the Court

While the rules are the same, you'll have different basketball games if you play with your friends, in a Y league, on a school team, in the pros or in \$5-a-point 1-on-1 in the park. There are big differences between a "let's all tell a story," "it's us against the NPCs," and "every PC for himself," as well as beer and pretzels and deep immersion, or high genre or pure reality simulation, even if all of them are using the same rules. Even if you love the system, if you don't like how it's being played you won't have fun or be seen as an asset. While it's unlikely you'll owe the other players money if you flub the house game, you'll have damaged everyone's play and not had any fun yourself. Better to pack your bag than do that week after week.

Set Your Mark

Know why you play, and then make that happen. Victory conditions are what you set: make 12 steals and you've won that game, even if you only scored four points. Find the things that are heroic for your PC and do them, then take pride in having done them well. Didn't slay the dragon? If you're the healer, that's not your goal! Every life saved or soul comforted is a victory. Weren't the one who stopped the villain? If you're playing the sidekick, your tally should be the number of bystanders pulled from harm, mooks humiliated, and jokes cracked. That's not heroic? Says who? Diseased knights won't win battles, and centers who never get the fed ball certainly can't score.

No I in Team

The strongest teams are those that work together. Don't hog the ball, don't force yourself into the center, and don't denigrate your teammates. Know what your teammates are good at, then set them up to have a chance. When it's time for someone else to shine, help them shine, even if that means taking a hit for them. If you could do something alone, but someone else could do it better (or better still, you could do it together) swallow your ego and make it happen. It will improve the game and the team. If for some reason you're warming the bench, cheer from the sidelines, make plans for your return and stay involved -- stalking to the showers isn't going to win points with your teammates or your fans.

Accept Penalties with Grace

Sometimes the Ref will call you on something or make something harder. Take it, and keep playing. If you disagree, briefly say so but then keep playing (remember, stopping play for rules hurts the game). The Ref's job is to know more about the situation than you, and might not have the time or inclination to explain. This may mean taking a penalty to hit, or it might mean trusting someone whom the Ref says "You instinctively like him." Don't look for reasons to not like him just because the GM says you do -- you might not be charmed, he might really be on your side with a high charisma. He might be your soul mate. You don't know, but the ref does, so stay focused on the play, even if you think it's a bad call. There's plenty of time to go over it at the bar afterwards.

The Referee Is on the Side of a Good Game

He's not against you. To stretch the metaphor, he's also your coach! And the opposing team! It might look like "Team NPC" has a home court advantage and hasn't had a penalty flag all game, but you don't know what's happening behind the screen. High school coaches will avoid humiliating the other team and put in their bench once they have a commanding lead, and your GM might be doing the same thing with the opposition to keep the game interesting, or at least prevent bad feelings. Is that cheating? No, but someone in a \$5 a point game would think it was pretty dumb. A lot depends on the court, but if you've agreed to play with the court rules, you have to trust the Ref's arbitration, and that the rules will be fairly applied.

Understand the Game

Finally, you have to understand how the team plays the game. This is partially knowing the court and partially trusting the ref, but mostly it's knowing which sport the game is emulating. Basketball is a fast paced game of constant action, with small, cross trained units, constantly in motion. Football (well, American football) is a series of tactical engagements and breaks for planning the next set of actions where participants have specific roles and redundant positions. Baseball alternates between whole team activity in specialized positions and spotlighted moments of personal achievement. Roleplaying sessions can be handled in any of these ways: a dungeon crawl could be agile warriors breaking into room after room in perpetual conflict, a regimented party tackling a single room then pausing to re-assess and plan before moving to the next or some whole team battles followed by moments of the rogue scouting ahead, then the mystic speaking with spirits, and other spotlight moments before the team reconnects.

Got all that? Good! Now grab your dice bag, and remember that the winning team is the one that came to play!

Information, Please! Pretty, Pretty Please?

In most modern roleplaying games, like movies, the search for information follows a certain pattern.

Action Hero: "Hmm . . . we need information on the location of all volcanoes with hollow niches suitably large to hide Dr. Sharehip's airship there."

Mousy Compu-Geek: "I'm on it! <types furiously at the keyboard> I've got nine locations."

Action Hero: "Can we narrow that down?"

Mousy Compu-Geek: "Sure! <he clicks NARROW IT DOWN> Here it is . . . breathtaking Diablo's Peak in exotic Maui!"

Action Hero: "Let's go; we need to save the world . . . *on location!*"

There are a number of reasons behind this. First, in the modern era, finding information is trivially easy -- almost magically so. Thanks to Internet search engines, information that would have been impossible or at least wildly inconvenient to find 15 years ago is trivial. For example, at my Day Job, my friend Chuck had seen a movie on late-night cable that he didn't know the name of, but he knew it starred Meryl Streep and had the *Seinfeld*-quoted phrase, "Maybe a dingo ate your baby." A three-word Google search later, and I knew the answer after about five seconds. (Proving that the more trivial the information is, the more trivial it is to find it.) In the old days, it would have taken at *least* a trip to the bookstore or library to find that kind of information out . . . and remember the days when people bought *paper* encyclopedias?

Second, in action-adventure sequences, the search for information usually serves as the bridge between scenes, not a scene in and of itself. This makes a certain amount of sense; usually the only reason to have this kind of search is to advance the plot. And as I've detailed elsewhere, having a geek typing furiously at the keyboard [just isn't exciting](#).

Third, at least in the roleplaying world, most games do a poor job of detailing what is and isn't possible with a skill. The base assumption (or, at least, my base inference) in most RPGs is that any information search is possible, assuming the person rolls well enough. On some level, this is very logical; if someone rolls a phenomenal Critical Success on the "Gather Information" roll, it seems very petty to deny someone the information he's seeking.

But a lot of times, the information just isn't available. And acquiring the information will require a lot of work and luck . . . if it's possible at *all*.

Case in point: I am in the process of trying to acquire my baptismal certificate. This process has been stymied by a number of factors:

- The amount of starting information I have is almost minimal; apparently I didn't realize the importance of keeping good notes about my location, despite being over one month old at the time.
- I made a poor life choice by having decided to be born in Detroit area, which has approximately three Catholic parishes for every citizen. As a result, the number of parishes that could possibly contain my baptismal information is *huge*.
- As a schlub off the street, I have had a difficult time navigating various bureaucracies. I think the quintessential symbol of this trouble was when I found myself talking with a parish in Michigan that refused to call me back after she had done some research there, because the long distance call would be "too expensive." (This is beside the fact that I calculated the call would have cost, at most, about 45 cents.)

On a completely unrelated note, [a couple of days ago](#) the Department of Justice denied some Freedom of Information Act requests, claiming that the act of complying with the request "risks a crash that cannot be fixed and could result in a major loss of data, which would be devastating." Without answering the question of the validity of this assertion, the

fact remains that the person isn't getting the data they want.

Anyway, both these points converge on one undeniable fact: The desired information isn't readily available, and it's difficult to envision circumstances where it *could* be available . . . certainly not within the timetable to thwart your average nuclear-missile-wielding megalomaniac. (And never you mind exactly how my baptismal certificate could be used to stop said megalomaniac.) In the case of church records, the information isn't on computer at *all*, and any research attempts will be limited to either telephonic inquiries or considerable travel time and expense.

How can this apply to your standard RPG?

First, I think most RPGs require a fundamental redefinition as to what, exactly, information and research attempts (and skill rolls) can accomplish. Knowing this from the beginning will keep players from growing resentful if they score a Mega-Ultra-Spendupular success on an information attempt, only to be told by the GM, "Sorry; that information isn't available." This is especially important in games with Hero Points or similar limited-use game-altering effects; many players would feel resentful if they burned a bunch of those points to get a good result, only to learn that it's moot.

One way around this is to redefine what information rolls are. As the expression goes, "Half of knowledge is knowing where to find it." Information attempts could be broken down into two separate rolls: One to gauge the scope and nature of a search, and the other to indicate the actual information search attempt. Thus a great success on the church record roll would indicate as much knowledge about what the actual research attempt entails. ("It will probably take a month to track this information down; the information only exists in paper form, and will either require in-person searches or persuasion and specific questions by phone. Getting more people to help contact places would speed up the process, but then you'd need to trust those others with knowledge of the information you're looking for. Even so, at best it will still probably take at least a day to find the information, and possibly up to a week depending on how hidden the information is. And, of course, it's possible that the information won't exist at *all*.") A minimal success would give only the vaguest notions of what is involved. ("The information will probably take a while to uncover, and it may only exist in paper form.") A failure on this result would give no indication as to what the information search will entail, or even false information. ("Dealing with the Justice Department? No sweat! Should take about a minute.")

In this regard, the player will have a good idea how long an adventure request will take. ("Okay; so without help one roll indicates a month-long search attempt. I can do other things in that time, right?") Or, if he rolled poorly on the first roll, then the GM has much more justification to provide setbacks on the second roll. ("Well, you *should* have been able to find the information if it was easily available, but you're running into more dead ends than you were expecting at the Justice Department. You may need to put this on the backburner for now.")

Second, I suspect that players should become reacquainted with the notion of needing to hunt for information. A decade or so ago, this was a common trope, but in many adventures I've seen, run, and played in since then, the difficulty in searching for lore has diminished substantially. Detective work and other searching for information is a classic adventuring trope, from the dusty libraries combed in *Indiana Jones and the Last Crusade* to classic stories such as DC Comics' "Who is Donna Troy?" which details the search for one character's "true" identity. If players start viewing looking for information as an adventure itself instead of an interlude between scenes, they should be more likely to accept setbacks such as the GM saying, "You rolled well, but that information just isn't available."

Third, the campaign should determine what information-gathering sources are (if they exist), and possibly redefine them. The existence of divination spells or the like can greatly disrupt many kinds of adventures. But what if, instead of banning these abilities, the GM instead redefines them? For example, what if any supernatural ability that acquires knowledge requires knowledge of an equal or greater value to "enhance" the network? (This could make magicians who dabble in secrets *very* untrusted, and always eager to learn of others' closeted skeletons to swap for other information.) Or, drawing from the computer analogy again, what if all those who connect to supernatural information networks are, in fact, sharing their information with each other, like a giant peer-to-peer network? This could result in players being tapped for information requests. ("You feel a probing at your mind; someone is asking you the True Name of the Great Red Dragon. Do you respond?") If a cosmic ranking system is used, then mages who provide truthful information often would find their requests more likely to be used, while those who deny most requests for lore would have a much more difficult time. In this case, the ground rules would need to be established; at the very

least, it should probably be required that the PCs either answer requests truthfully, or not answer at all. (Otherwise, the entire notion of divination would become tainted of people spreading various lies throughout the "net.") In this way, the GM has yet another tool for not allowing information to be accessed; it's simply unavailable by any of the members of the divination web.

Regardless, the notion that information is omnipresent and easily accessible is a modern one, and it makes for good gaming to keep all the heroes' woes from being solved with a few taps at the keyboard. After all, if half of knowledge is knowing where to find it, the other half could just as easily be the excitement of *getting* it.

--*Steven Marsh*

Language

GURPS assumes that most characters can read and write their "native" language. This ability costs no points, but you should note your native language on your character sheet; e.g., "English (Native) [0]."

The rest of this section is only important if you can communicate in more than one language (an advantage) or have difficulty with your native tongue (a disadvantage).

Comprehension Levels

The point cost to learn an additional language depends on your "comprehension level": a measure of how well you function in that language overall. There are four comprehension levels:

- **None:** You are completely incapable of functioning in the language. If you do not spend points on a non-native language, this comprehension level is assumed -- there is no need to note it for every language you don't know! 0 points/language.
- **Broken:** You can recognize important words and understand simple sentences if they are spoken slowly. You have -3 when using skills that depend on language, such as Fast-Talk, Public Speaking, Research, Speed-Reading, Teaching, and Writing. This doubles to -6 for artistic skills that rely on the beauty of the language (Poetry, Singing, etc.). In stressful situations -- e.g., encounters involving combat or reaction rolls -- you must roll against IQ to understand or make yourself understood in the language. On a failure, you convey no information, but you may try again. Critical failure means you convey the wrong information! For hurried speech, bad phone connections, etc., this roll is at -2 to -8! Native speakers who already dislike foreigners (see Intolerance, p. 140) react to you at an extra -1. 2 points/language.
- **Accented:** You can communicate clearly, even under stress. However, your speech and writing are idiosyncratic, and it is obvious that this is not your native language. You have -1 when using skills that depend on language, doubled to -2 for artistic skills. You receive no reaction penalty from native speakers, but you will be unable to pass for a native (this can be a major problem for would-be spies!). 4 points/language.
- **Native:** You have full mastery of the language, including idioms. You can think in the language. You have no penalty to use skills that depend on language. You start with one language at this level for free. If you buy Native comprehension in a foreign tongue, you can pass for a native speaker. 6 points/language.

Exceptional Competence and Incompetence

Great orators, writers, and other masters of the language should start with Native-level comprehension, then learn skills such as Public Speaking and Writing at very high levels.

Poorly educated individuals who can barely get by in their native tongue should take the point difference between their actual level and Native level as a disadvantage. For instance, someone who has his native tongue at Broken level has a -4-point disadvantage.

Spoken vs. Written Language

The point costs above assume that you read/write and speak the language equally well. If your written and spoken ability differ, select separate spoken and written comprehension levels and pay half cost for each. For instance, if you learned to write French from a book, you might have "French: Spoken (None)/Written (Native) [3]."

Literacy

Your written comprehension level determines your degree of literacy in that language:

Literacy is a written comprehension of Accented or better. You can read and write competently and at full speed.

Semi-literacy is a written comprehension of Broken. A semi-literate person would require three minutes to read this sentence, and would have to make an IQ roll to understand the full meaning! Many words are always unintelligible to a semi-literate person, including some in this paragraph.

Illiteracy is a written comprehension of None. If this is the case, you really can't read! Signs, scrolls, books, and names on maps (though not the maps themselves) are completely incomprehensible to you. The player may pass secret notes to the GM (and vice versa), but the character cannot read anything.

At TL4 and below, it is quite possible to go all your life without needing to read. In settings like this, illiteracy or semi-literacy is the norm. Most people have a spoken comprehension level of Native, but their written comprehension is Broken or None.

Illiteracy in your native tongue -- Spoken (Native)/Written (None) -- is a disadvantage worth -3 points. Semi-literacy -- Spoken (Native)/Written (Broken) -- is worth -2 points. The GM should not count these points against the disadvantage limit if illiteracy is the norm in the game world.

Sign Language

A true sign language -- e.g., American Sign Language -- is complex, stylized, and can communicate almost any concept. Treat it as any other language, with one important difference: a sign language has one form (signed) instead of two (spoken and written). As a result, sign languages costs half as much: 1 point for Broken, 2 points for Accented, and 3 points for Native comprehension.

Characters with the Deafness (p. 129) or Mute (p. 125) disadvantages start with one sign language and written ability in one regular language -- both at Native level -- instead of spoken and written ability in one language. Those who are illiterate, or incompetent at sign language, can buy down their language abilities using the usual rules.

Learning Languages

To learn a new language, use the rules for learning skills (p. 292): 200 hours of learning gives you one point to spend. Note that language study is four times as hard without a teacher!

If you live in another country and speak its language at all times, that is the automatic equivalent of 4 hours/day of training; there is no need to allocate specific study time unless you want to get more than this default. Thus, every 50 days, you get a character point to spend in that language.

Accents

If your spoken comprehension is Broken or better, you can attempt to fake a regional accent. To fool someone, you must win a Quick Contest of Acting (p. 175) or Mimicry (Speech) (p. 210) vs. his IQ. You are at -6 for Broken comprehension, or -2 for Accented . . . but a non-Native listener has similar penalties to his IQ roll!

Each accent is a separate familiarity (see p. 169) for Acting or Mimicry. To memorize a new accent, you must listen to that accent used in conversation for at least one hour and make a successful roll against the higher of IQ or Linguistics, at +5 for Eidetic Memory or +10 for Photographic Memory (see Eidetic Memory, p. 51).

Broken to Broken

If you and the person with whom you are speaking both have a comprehension level of Broken, conversation will be

difficult. This is definitely a "stressful situation"! Each of you must roll against IQ once per piece of information; all the usual modifiers apply. If you both succeed, you get the point across. If one of you fails, you just fail to communicate. But if both of you fail, the listener gets the wrong idea. This could be embarrassing or dangerous -- possibly for both of you. The GM should be creative!

Damage and Injury

Wounding Modifiers and Injury

Any damage left over after subtracting DR from basic damage is "penetrating damage." If there is any penetrating damage, multiply it by the attack's "wounding modifier." This is a multiplier that depends on damage type:

- Small piercing (pi-): $x0.5$.
- Burning (burn), corrosion (cor), crushing (cr), fatigue (fat), piercing (pi), and toxic (tox): $x1$ (*damage is unchanged*).
- Cutting (cut) and large piercing (pi+): $x1.5$.
- Impaling (imp) and huge piercing (pi++): $x2$.

The damage after this multiplier determines the injury: the HP lost by the target. Round fractions down, but the minimum injury is 1 HP for any attack that penetrates DR at all. Reduce the victim's current HP total by the injury sustained.

Example: Filthy Pierre is struck by an axe, which does cutting damage. His attacker's basic damage roll is 7, but Pierre is wearing DR 2 leather armor, so he suffers 5 points of penetrating damage. Multiplying by 1.5 for cutting damage, Pierre ends up losing 7.5 HP, which rounds to 7 HP -- a nasty wound!

Note that blunt trauma injury has no wounding modifier.

Where you were hit may further affect the wounding modifier; see Hit Location (p. 398). The rules above assume a hit to the torso or face.

Golden Fire Seals

for *GURPS* and *In Nomine*

by Elizabeth McCoy

The Golden Fire seal appears to be a sub-species of fur seal, with a particularly fine amber pelt. Rare, its fur is prized for its color and texture by those who have no understanding of the Golden Fire seal's complex life cycle.

It is said that in the spring, Golden Fire seals come to birth their young between the sea and the land. Or, less poetically, on the beaches around the high tide mark, during low tide. Then, after the baby seal has suckled its first rich milk, they may remain on the beach until it's old enough to return to the sea . . . or, if they're close to human habitations, the baby may push itself up and toddle towards men.

Toddle, yes. Golden Fire seals are also a sub-species of Selkie.

When exposed to *something* from humans -- psychic vibrations, pheromones, magical auras, whatever -- a baby Golden Fire seal will turn into a human toddler, appearing somewhere between six months to two years old. The Golden Fire child, with its amber-brown hair and tanned skin, will then proceed toward the nearest humans, happy, unafraid, and beautiful.

Most of them are quickly adopted, and spend the next 18 years of their lives cared for by human parents. (The mother seal mates shortly after, if she can find a male, and returns to the sea.)

Scholars who know of this species consider that Golden Fire seal is actually a mammalian version of the cuckoo bird, foisting its young off on other species. Fortunately, the Golden Fire children are not -- unlike cuckoo hatchlings -- prone to shoving "siblings" or other eggs out of the nest. They are all very good swimmers, rarely get sick, and tend to be a little on the *zaftig* side, unaffected by cold temperatures, but are otherwise normal children with a normal range of personalities.

And at 18, they are drawn back to the sea. It is an overwhelming compulsion, possibly mistaken (by those who read the *Cthulhu* mythos, or who live in it) for something akin to what is felt by those suffering the Innsmouth Look. If the Golden Fire child can get there within a year, then he or she will cast off human guise, and return to the waters as a seal. Sapience fades, until the Golden Fire seal is just a bright animal. It seeks out a mate at the appropriate time, and cycles resume.

There are two ways to avert this fate as a sub-sapient animal.

Firstly, if the Golden Fire child is prevented from returning to the ocean -- it will still change shape by the end of the year. Many Golden Fire seals are returned then, back to their home, and continue as above: animals. However, if one is kept in captivity (and it is captivity, as they seek to escape to the sea), and kept away from salt water, after a year . . . Sapience returns, and the shifting becomes mostly voluntary. (They have trouble resisting when swimming in large bodies of water, especially if it's salty.)

The second method is more chancy. If a Golden Fire seal (even one who never changed as a baby) is prevented from mating, during mating season, for approximately three months -- it will revert to human, to seek a human mate. Sapience does *not* return immediately. Females are sweet, wide-eyed, and show themselves willing by shy caresses. Males are a bit more assertive, but can still be given a good shove; it seems to bewilder them mightily, but they are not prone to violence in return.

Naturally, if they succeed in mating, they quickly seek out the waters again, and revert. To recover their sapience, they must remain captives until their intelligence grows back, a process of several months. Then they frequently remember

their human lives, and are -- as above -- able to shift voluntarily.

Golden Fire seals are cross-fertile with fur seals, but the Golden Fire genetics are recessive, and have their activation, apparently, on the X chromosome. Male Golden Fires can father bright seal children, and a Golden Fire may crop up a few generations down the line, but it's rare. Likewise, Golden Fire Selkies are cross-fertile with humans, but the offspring is not a full shapeshifter (unless the human happened to have a Golden Fire ancestor, and bears the recessive gene); Golden Fire-fathered children tend to be good swimmers.

Seal-mothers of half-human or half-normal seal babies are a bit more odd. Somehow, she manages to impart some of her magic in the womb, and in the first milk. Her half-human babies will change *once*, from seal to human, after birth, as normal. After that, they simply grow to be good swimmers, as their Golden Fire-fathered cousins do. The seal-sired babies may or may not change (approximately fifty-fifty odds, or higher if the fur seal father carried the Golden Fire recessive); if they do, they may or may not change *back* at 18 (though they are never the brightest of humans). And after that, if they revert to full seal-dom, they remain seals whether or not they fulfill the biological imperative to mate in any given season. Fortunately for the breed, they tend to carry the recessive, and may have or sire Golden Fire children.

Naturally, this is a complicated life cycle. Golden Fire Selkies are guaranteed approximately a year as an animal, no matter what. Even if a sapient breeding pair exist, their children will go through the same processes as "wild" Golden Fire babies. Knowing the call of the sea themselves, it is hard for parents to prevent their children from returning -- though not impossible. Still, far more Golden Fire stories end in bittersweet tragedy; they are happy in the waters, but to go too soon, and for too long, extinguishes their minds.

Adventure Seeds

- Any PC can be a Golden Fire Selkie. If he is younger than approximately 18 (which, it should be noted, may be counted as "20" if he was a "two year old" at the time of adoption), then his change is in his future. Adventure fast, and hope that when the time comes, your friends hang onto you. (Suitable for any character with a secret disadvantage.)
- Likewise, any PC may have relatives who have recently adopted a child. Being the paranoids they frequently are, player characters may notice the oddities about the youngster and travel to distant libraries and countries trying to find out what's going on. This may save the child down the line. If they don't get a clue that something is strange, mysterious would-be kidnappers may attempt to steal their cousin for study by a shadowy organization or researcher. (Can Golden Fire Selkie marrow hold a cure for AIDS? Will Golden Fire blood cure the Black Plague? If you taste of a Selkie's flesh, will you be immortal? Or is that only mermaids?)
- Alternatively, they may hear that their adopted cousin has vanished from college, and was last seen feverishly buying bus tickets for California. (Or stealing a horse and heading for the Magoon Ocean, depending on the setting.) Can they track their cousin, or will their aunt and uncle's hearts be broken? And will those same shadowy kidnappers, as above, be after the newly-revealed Selkie as well?
- Naturally, a *functioning* Selkie, who has somehow managed to return to humanity and voluntary shapechanging, will have a secret to keep. Hopefully, he'll also want to keep the secret of any other Selkies he finds -- not to mention crusade against the killing of Golden Fire seals in the wild! They're an endangered (sub)species, true enough . . . but sometimes it seems it would be so easy to explain that they're potentially *human*.
- Revealing the secret deliberately is a player-motivated plot, but could afford a great many sessions dealing with publicity, unethical researchers, ethical researchers who only want a few blood samples, panicked Selkies and Selkie-descendants who are terrified of changing, would-be Selkies who *want* to change and "return to nature's womb," and circus or theme park offers of employment . . . or stud fees.
- And for the less-ethical groups, they are hired to "acquire" someone's prized seal. Funny how the stolen animal is gone shortly after the snatch, and a confused young woman is in its place. Will they traffic in kidnapping and human slavery as easily as stealing an animal? If they do, then there will be private investigators or troubleshooting teams after their victim. If they return the captive, their employers are going to be upset. Life's just full of tough choices . . .
- As above, only the group is hired to recover a stolen seal. Or maybe a kidnapped youth. Either. Both. Their

employer isn't very coherent; you'd think that he'd lost his only child or something.

GURPS Stats

Human Form

ST +1 [10]; **DX** +1 [10]; **HT** +1 [10].

Advantages: Breath Holding +2 [4]; Disease-Resistant [5]; Temperature Tolerance +4 (to cold, for a comfort zone of -5 to 90 degrees Fahrenheit) [4]; Amphibious (No Obvious Features, +10%) [11]

Disadvantages: Up to 20 points from Bestial [-10], Chummy [-5], Curious [-5, -10, -15], Easy to Read [-10], Enemy (Unknown would-be kidnappers) [varies], Gluttony [-5], Hidebound [-5], Honesty [-10], Impulsiveness [-10], Innumerate [-1, -5, -10], Light Sleeper [-5], Lunacy [-10], Motion Sickness [-10], Overweight [-5], Shyness [-5, -10, -15], or Truthfulness [-5].

Quirk: Loves fish [-1].

Base cost for being a Golden Seal Selkie is 30 points.

Pre-change Golden Seal children add Youth [-2, -4, -6, more at the GM's option], and Secret Disadvantage [-5]. "The Change" is half the cost of Terminally Ill, minimum -25. (This means that a Selkie-child unaware of its nature has a 0 point racial package, and normal Youth.)

Adult Golden Fire Selkies add the advantages of shapeshifting into a seal form requiring a Will roll to avoid changing in large bodies of water, and a Will -5 roll to resist changing in the ocean. They add the disadvantage of Secret (Selkie) [-10], and may have Enemies (unknown or otherwise).

See *GURPS Bestiary*, p. 111, for the Sea Lion racial template. See *GURPS Shapeshifters*, p. 19, for the shapeshifting advantage. An adult Selkie who has regained human form after the first seal-change removes the IQ modifiers, Presentient, and (assuming that he does not possess them in human form) Bestial and Innumerate; as Amphibious is part of the Selkie template, it is not paid for twice. Human-form Selkie attribute bonuses are replaced with the normal sea lion ones (attributes added during character creation are treated normally). He adds the Enhancements of Absorptive Change [+5%], Once On, Always On [+150%], and Proportional Damage [0%], and a Limitation adapted from External Trigger, Urge to Change (as in the description) [-5%]. Total cost is 23 points.

Optional advantages: Appearance (Attractive or better), Absolute Direction, Animal Empathy [5] or Beast-Kin [15], and Enhanced Move (Swimming), plus any not already taken from the sea lion template.

Optional disadvantages: any of the above not already taken as part of the racial package, plus any from the sea lion template.

In Nomine stats

In an *In Nomine* setting, most creatures of myth were actually ethereals (or offspring of ethereals with the appropriate Song of Fruition), and died when the Archangel of Purity attempted to wipe out ethereal "leeches of mortal Essence." Naturally, Jordi, the Archangel of Animals, objected to slaying creatures who were mortal. Still, Golden Fire Selkies -- never numerous to start with -- were among the casualties.

Except, that is, for a few carefully protected cross-breeds. (They weren't Selkies, so why should they die? Jordi wasn't doing anything but protecting his Word . . .) After Uriel's recall to the Higher Heavens, recessives have combined, and finally reached a critical level: Golden Fire seals are a recently discovered (and endangered) species. So far, no other celestials have really noticed that they exist.

For his part, Jordi would rather they didn't turn human at all, but simply remained bright seals. He hasn't managed to find a way to make this happen yet, though.

Servitors of Jordi might be assigned to watch over certain human young (Golden Fire Selkies, pre-change), or protect Golden Fire seals and keep them away from humanity (to keep the human-change from happening). Jordi rarely bothers to explain *why* he is assigning one of his angels to these projects, which can cause a bit of surprise or consternation on the part of the angel in question.

(A Selkie-assignment can be used to explain why a Servitor of Jordi is in the area and *generally* available to assist other PCs; a very distressed Jordian might also follow a shape-shifted baby into human territory in an effort to retrieve or protect it. The seal-herding task is better for NPCs or an all-Animals group trying to retrieve a human-formed baby.)

Golden Fire Selkies have 5 Forces, with 2 additional attribute points in their Corporeal attributes, Strength and Agility. They frequently acquire a third in that realm, too, and sometimes achieve 6 Forces. They automatically have Swimming/3, and are -- as noted above -- comfortable even in the cold. They take a minimum number of disadvantages with combined levels of 3 from the **GURPS** selection above (typically each will be -3 points per level, or -3 points for a disadvantage that the GM rules has no levels).

A pre-change Selkie has no additional disadvantage points. A Selkie adult has a 10 point "attunement" allowing appropriate shapeshifting. They roll Will+1 to avoid shifting in large bodies of water, or Will-1 to avoid shifting in oceans.

Variant Rules for Fantasy Flight Games' *MagBlast*

by Philip Reed

MagBlast, billed as "A Card Game of Screaming Space Battles," is a fast-playing game that's become a favorite around my game table. Usually a game is over quickly and only after a great deal of cheering, explosions, and fun by everyone involved. Unfortunately, after several dozens sessions of *MagBlast* a few players move on in search of a different game; the replay value is there but not as high as your first few months of play would suggest.

MagBlast veterans looking for a little more heat in their next game need look no further than the variant rules presented in this article. If you're a *MagBlast* novice, it's recommended you play the standard game a dozen or so times before attempting any of these variants.

Note: These variants were written for the second edition of the game, and have not been tested with the earlier edition of the game.

Long-Range Bombers: In the basic game a bomber may only be launched at an enemy ship in the *same zone* as the carrier. By discarding three resources of the same type -- at the beginning of his turn -- a player's bombers are equipped with long-range tanks and for that turn only may be launched at a ship in *any zone*, just like fighters. The stress of long-range attacks has a chance of rendering a bomber useless after it strikes its target: for each bomber launcher during this turn the player must draw one action card and for each action card with two resources (either different or identical) one bomber is discarded. All remaining bombers return to the player's hand as per normal bomber usage.

Pinpoint Accuracy: Any time a "Direct Hit" critical card is played successfully (not countered in any way) the attacking player may discard one card from his hand and then choose to play *two* critical cards on his target or double the damage of the blast card that successfully hit the enemy ship.

Example: Shannon successfully plays "Laser Blast" on an opponent's hit and then follows up with "Direct Hit." Shannon's opponent has no counter so she discards a card and plays "Bridge Hit" and "Catastrophic Damage." Her opponent not only loses all of the cards in his hand (due to "Bridge Hit") but also loses the targeted ship ("Catastrophic Damage").

Double Reinforcements: Sometimes war escalates quickly. In this variant, it is assumed that the players' factories are working overtime to produce new star ships. When a player draws a new ship (either through the exchange of resources or by playing the "Reinforcements" action card) he may draw a second ship if he discards all of the cards remaining in his hand (a minimum of one card must be discarded).

Doomsday Weapon: At the beginning of each turn, after your draw phase, you may randomly (have another player select the card without looking at them) place one card from your hand to one side -- this is your Doomsday Weapon. When your flagship is destroyed your Doomsday Weapon inflicts a number of points of damage -- equal to the number of cards you've set aside -- to one zone of your choice on the player who destroyed you.

Hopefully these variants will make your next *MagBlast* session more destructive and enjoyable.

Pyramid Review

Friends of the Dragon: A Guide to Player Character Groups (for Feng Shui)

Published by [Atlas Games](#)

Written by Keith Baker & Will Hindmarch

Illustrated by J. Scott Reeves

72-page b&w softcover; \$17.95

Like so many other roleplaying games, *Feng Shui* can sometimes suffer from a problem. All too often, it takes a disparate bunch of characters -- say, for example, a Masked Avenger, a Scrappy Kid, a Maverick Cop, and an Everyday Hero(ine) -- then throws them together and expects them to gel. A problem more particular to *Feng Shui* is that while the genre it is based on usually involves solitary protagonists, the roleplaying game itself does not. Of course, in the hands of a competent GM, this is not all *that* much of a problem, but it is one that the game's latest supplement, *Friends of the Dragon: A Guide to Player Character Groups* sets out to address and explore.

Since *Feng Shui* is about fighting the Secret War, this supplement is about fighting the Secret War *as* a group, rather than as a bunch of eclectic individuals. Its central idea is not to run a game, but to create and run a themed *Feng Shui* game called a "Show." To do this it brings a number of new genres to the game, so that a GM could run a Cop or Espionage Show, just two of the five genres explored in *Friends of the Dragon*. Then it asks the players to work together in the process of not only creating their characters, but their group as a whole. This combination of group and genre works to give both the GM and the players a sense of expectation about what a game is going to be like. More particularly for the GM, it opens up a whole new box of tools with which he can play.

This being a *Feng Shui* supplement, *Friends of the Dragon* wastes little time in getting down to specifics. In rapid-fire fashion, the book runs through the elements of a Show. This includes the Pitch, Setting the Stage, Props intrinsic to the Show, and Scripting -- a more detailed look at the genre, before placing the Show in the context of the Secret War. It does the same for the anatomy of the group: their Pitch, Name, the Junctures that they might originate from, their Backstory (how the group members know each other) and what it is that keeps them together, their appropriate Schticks, and Wealth Level. Different group types and how they are created are discussed, including villainous groups, mixing up different groups, and how an already existing group, or rather a PC party, can be made to take advantage of the material contained in this book. Best of all, though, is the section on Flashbacks, which allow the exploration of a character's past and their associations with the other players taking the roles of the members of the groups they previously belonged to. This is a concept well done, and at the same time as exploring a character's past, each flashback provides the GM with a fistful of ready to run NPCs. The concept should also find a home in RPGs and campaigns that make use of character histories, of which Eden Studios' [Angel Roleplaying Game](#) is a fine example.

Feng Shui supplements are always light on new rules, and in keeping with the rest of the line, *Friends of the Dragon* is no exception. The primary addition goes hand-in-hand with the supplement's core concept, and introduces the idea of the "Group Schtick." These comes in two related types, the first being the Group Schtick itself, and is one possessed by the group as a whole, representing a benefit or resource that they can all partake of. Police groups will enjoy the benefits of "Authority" and "Back-Up"; all kinds of groups could have access to a "Library" (occult or otherwise) or employ a "Secret Code" to pass on clandestine messages in plain sight; while "Johnny! No!" does exactly what it should when yelled in slow motion on the silver screen. Ex-Soldiers on the run, or bands of itinerate investigators into the unknown (dog in tow or not) might like to take advantage of "The Van" Group Schtick, a mobile mini-

headquarters that is really, *really* hard to blow up. Most radical of all, is the introduction of the Mook Schtick, which, yes, does allow players to have their own band of Game Master Characters to command. All ready to protect your headquarters, or fight the bad guy mooks while you go toe-to-toe with the villain, this supplement's appendix provides a ready range of stats, as well as discussing the possibility of a player mook progressing to named character status. Group Schticks are purchased by the group as a whole, with some of each character's experience points and also from a pool of group experience points that the GM awards the group.

The second type of new Group Schtick is the Synergistic or Synchronal Schtick, also known as the Sync Schtick. These are not purchased as a group, but by each individual and -- for the most part -- still to the benefit of the group as a whole. Some, like "Back To Back" and "Combined Sorcery," work in tandem, so that at least two characters need to select them in order that they work. Others benefit the group more directly, such as "Guiding Firefight." With this a character can spend an action to shout something like "Look Out!" or "Behind You!" to pass on a bonus to another character's next shot.

Everything behind the Group concept is put into practice in the book's examination of five different genres and the Shows that they can spawn. These make up the bulk of *Friends of the Dragon* and look at Cop Shows, Crime Shows, Espionage Shows, Action Family Shows, and Sentai Shows. The five are all very well done, and present a plethora of possibilities and ideas from which a GM can create a themed campaign or Show. For each there is given at least two sample shows. For example, "Detectives," "S.W.A.T." and "P.O.W.E.R.S." ("Paranormal and OtherWorldly Event Response Squad" -- think *The X-Files* meets *Supercop*) are given for Cops Shows, while for Espionage Shows there is "Mission: Unstoppable" and "Nether Powers," in which the characters protect time and space from the villains of, and outside of history.

The first three of the genres covered are done so in a definitely intelligent though perhaps predictable way. The last two genres while not as predictable, are certainly different. Action Family Shows covers everything from *Alias* and *Scooby Doo* to *Spy Kidz* and *Lara Croft Tomb Raider*. They include not just family groups, but also family-like groups and both can fall into two further types. In "Wanderers," the group travels from one adventure to the next. They of course, get "The Van" Schtick for starters. In "Cornerstones," the group is wealthy, famous, and upstanding figures on the world stage where they run some kind of wealthy foundation. With their fame, and homes around the world, the enemy is likely to know where to find the group. More outré still is the Sentai Show, drawn from 1970's Japanese television and best typified by *Mighty Morphin' Power Rangers* and *Science Ninja Team Gatchaman*. In this type of Show, the world is a cleaner place, with the divide between good and evil sharply drawn, all threatened by some monstrous evil. Only a team of young clean-cut heroes can hope to save the day, and sometimes only then if they can combine -- quite literally -- to increase their power. Of the Shows in this book, this is the only one to receive a new archetype, the Science Ninja.

Friends of the Dragon is engagingly written, referencing everything from *Homicide: Life on the Street*, *The Italian Job* (the remake), *True Lies*, *Johnny Quest*, and *X-Men*. Instead of the usual range of illustrations, J. Scott Reeves offers us a series of movie posters that nicely fit their genres. Their titles alone might be enough to inspire a whole adventure or two! Yet the book is not quite perfect -- one poster is used twice, but this is minor compared to the fact that the text needed one more read through.

As an aide to an already existing campaign, *Friends of the Dragon* will prove to be of little use, but as a means to create a new one, it more than delivers. Further, there is no reason that these newly created groups cannot exist in the in the same campaign as already existing ones, the guide to Flashbacks being very useful in suggesting how this might be done. But in introducing the concepts of the Show and the Group, *Friends of the Dragon: A Guide to Player Character Groups* serves up a whole new approach to setting up and running a *Feng Shui* game.

Pyramid Review

Mü & More

Published by [Rio Grande Games](#)

Designed by Doris & Frank

Art by Doris Mattháus

66 full-color cards & rules; \$11.95

Over the last 10 years, give or take, *Mü & More* has bounced across a couple of companies. Designers Doris Mattháus and Frank Nestel have retrieved their game license and released the first English-language version through Rio Grande.

The game has been issued with rules for as few as four games and as many as six; this edition has five. The deck has 66 cards, including six reference "sheets." The rest of the stack is split into five 12-card suits of different colors (each color features a different animal -- yellow hedgehogs, green serpents, and so on). Cards are numbered zero to nine, and they also have zero, one, or two triangular symbols.

The eponymous Mü, similar to bridge, features the set's basic mechanics. The object is to take as many tricks as possible. You bid by revealing as many cards as the tricks you think you'll take, and bidders can enter or drop out of the bidding at will. The high bid is the "chief" and the second-highest is the "vice." Each chooses a trump from among the card numbers or colors they bid (the chief's choice trumps the vice's). The chief also gets to choose a partner for the round.

A chart tells the chief team how many points they need -- the more cards bid, the more points they must score. The card *numbers* don't get you points, though; the triangles on the card margins do, and these aren't always on the highest-valued cards. If the team takes points sufficient to reach their goal, they get a bonus. If they fail, the chief loses points, his partner gets nothing, and everyone else gets a bonus. This continues until someone achieves a winning score.

The Last Panther (the only game without an umlaut in its title) is much simpler. After the deal, everyone chooses three cards to pass to their left before play. Here, yellow cards and taking the last trick score bonuses while reds and the black sevens lose more. The winner has the highest total when one player plummets to a predetermined negative number.

In Wimmüln, the last cards the dealer gives himself determine the color trump. Then everyone picks a pair of cards, one secret, one face-up, that represent how many tricks they believe they can take. If you take tricks equal to the number on one of these cards, you receive bonus points.

Rummü allows you to play in pairs if there's an even number of participants. Players start with a hand of cards instead of divvying up the full deck. A discard pile is started, and players must draw cards from the draw or discard pile. They must play combinations to the table, and then discard at least one card (you can't play the last one). The longer a combination (of consecutive cards, or cards of the same number), the more potential points. Colors are important: They determine what combos may be played and what they're worth. If you use the yellow "jokers," you lose some points. Others can steal them from your face-up melds for their own plays, saving you point-loss, but it may improve their total.

Safari is different from the other games. Players are trying to capture animals (or in the variant, release them into the

wild). Four cards are placed face-up in the middle of the table -- this is "the wild" -- and players capture them by pairing cards (playing the same number); adding them (taking multiple cards that add up to your card's value); or by playing a card that, with cards from the wild, total 17. Pairing allows you to keep the card played. Players receive bonuses for the most unicorns and minuses for babies (zero-value cards) and having the most hedgehogs.

The cards are a little soft, but since it's not a game about speed this will help the shuffle and hinder nothing. The colors are bright and the numbers big and clear, which is good because you don't want to depend on the cards' psychedelic slide show to determine if something's an eight or a nine. It's lovely stuff, fancy and intricate, but looking at the stylized cougars too long will make you dizzy.

For some, the variation between this deck and a normal pack of playing cards will be negligible, or it may seem like players are having to relearn both the deck and an old game. But the duality of the card values and points is a nifty mechanic that lends itself both to new takes on old favorites and endless customization. It's excellent for house rules, and games like *Safarü* are great for teaching the kids math and logic. Those not used to balancing all the factors in trick-taking games will find this one at least as tough, but *Mü & More* does its part to refresh such pastimes and to make this set stand out in its market.

--*Andy Vetromile*

GURPS Tarot Magic

by Volker Bach

This is a magic system that uses a tarot deck in addition to, or instead of, dice to represent the spellcasters' powers. It can be played without cards if desired, but this would hardly be as much fun; the idea is not, after all, to make this a "realistic" or particularly well-rounded system, but simply to have fun with appropriately mystical, easily accessible and affordable props. The lesser cards, and thus the powers of most beginner-level spellcasters, can also be played with a standard deck of cards, though again this somewhat defeats the idea.

This system does not try to model the real tarot tradition. Some aspects of the tarot are reflected in its mechanics, but most have been left out in the interest of playability and brevity. And, of course, this magic system does not reflect any kind of mystical power that may be inherent in the real tarot; it is merely a fictional approach to modeling magic powers with the aim of having fun with beautiful cards.

Base Theories

The theory behind Tarot magic is based on the idea that everything in the world is made up of varying combinations of the four basic elements: Fire, Earth, Water, and Air. The Suits of the Tarot are aligned to these elements and confer mastery of them to the Tarot Mage. It is important to remember that the elements are not just influenced in their pure form. Almost everything that is not pure fire, water, earth, or air contains several or all of these elements in part and thus is subject to the power of the aligned Suits. Living creatures in particular are always combinations of all four elements in careful balance, and disturbing this balance usually has negative -- and often very painful -- effects.

To decide which element or elements can be used on a given object, take your cues from the basic properties of the elements -- hot, cold, moist, and dry. Fire is hot and dry, earth is dry and cold, water moist and cold, and air hot and moist. In addition, water is liquid, earth solid, and fire and air are gaseous. Anything that can be said to conform to these properties can be affected through the appropriate element's Suit. Much of this is perfectly intuitive, which is a great advantage for roleplaying.

Example: Loose garden soil is solid and cold, though not dry. It is therefore subject to earth. It is also moist, so the water contained in it could be affected magically as well. A solid, cold, and dry material, like rock, conforms perfectly to earth and would be subject to that element only. See the descriptions given for the Suits for more ideas.

It is generally assumed that at least traces of each element are present in everything, though they may not be strong enough to allow any direct magical effect. Anything flammable, for example, is seen to contain traces of fire; things that do not burn do not contain enough. Similarly, anything that can be liquefied must contain some water, though the power needed to get that effect makes it clear that it can not be much. A GM might allow an effect with a less than ideal material at a penalty, or not at all -- it is not evident that mastery of water should affect stone in any way, but a very powerful Tarot mage could possibly do something with the minute traces of that element present even in rocks.

The Suits

The suits of the tarot represent nuts-and-bolts magic. While they are limited to temporary effects, and can only work with existing materials, they convey mastery of the four elements and there is little that, between them, they can not do. Each corresponds to one of the elements and mastery of it allows the mage to influence this element in all its forms.

Mastery of the cards of each Suit is purchased as an Advantage costing 5 points per level. In order to master any cards, a character must first purchase the Page of a suit (see below). Cards must be purchased in ascending order (that is, a mage must master the Two of Swords before the Three, the Three before the Four, and so on). Each card represents

mastery of an element proportional to the number; the Two is twice as powerful as the Ace, the Three three times as powerful as the Ace, the Ten 10 times. Other than this, they do not differ in the range of possible effects. Normally, only one card from each Suit may be used at a time (thus, an effect that would require the Five of Swords can not be jury-rigged by using the Two and Three of Swords on it). A mage must also have the Suit Skill (M/H) in each suit to use it. Any character having mastered the Page of a suit also has the Skill at a default of IQ-6. It can be improved normally. The Skill is rolled against every time a card from the suit is used.

The Court Cards -- Page, Knight, Queen and King -- of each Suit represent the Tarot mage's level of mastery. In order to master a suit at all, a character has to purchase the Page as an Advantage worth 5 points. At the GM's discretion purchasing a Page in play, like an Attribute, may cost double. This is not appropriate for any higher Court Card. A mage at this level is referred to as a Page of one or more Suits. He may purchase the cards of that suit up to the Five, and learn the Suit Skill. This level represents the beginnings of mastery, the first steps on the way to understanding. The range of magical effects at the mage's disposal is already quite impressive, but limited.

The Knight represents experience and consummate familiarity with the Suit. Pages must pay an additional 5 points to become Knights. Mages mastering the Knight of any Suit may purchase the Suit's cards up to 10 and the lower cards of the Great Arcana. A mage at this level is referred to as a Knight, and Tarot-mages and other Initiates react to him at +1. The Knight of one Suit is already powerful, and one of all Suits is a truly formidable mage. Only a few Tarot Mages progress beyond this level.

The King and Queen are the highest cards of each Suit. They represent full mastery and understanding of the Suit and its element. A male character purchases the King, a female one the Queen, at an added cost of 10 points. Mages of this level of initiation are referred to as Kings or Queens of their Suits, and there are very few of them. Other Tarot-mages and initiates react to them at +2. Kings and Queens may purchase all of the Great Arcana cards.

Point Costs

Court Cards

Page	5 points
Knight	10 points
King/Queen	20 points

One of (Suit)	5 points
Two of (Suit)	10 points
Three of (Suit)	15 points
Four of (Suit)	20 points
Five of (Suit)	25 points
Six of (Suit)	30 points
Seven of (Suit)	35 points
Eight of (Suit)	40 points
Nine of (Suit)	45 points
Ten of (Suit)	50 points

(The point costs are cumulative)

The Suit of Wands: Fire

The Suit of Wands (or Clubs) conveys mastery of Fire. This element's main property is heat. Aside from the obvious, it is associated with the heart, with strong emotion, hatred, fear, worldly or sexual desire, pride and anger. It is also close to the "animal" level of the mind and soul, and to wild animals. In general, heat, fire and any effect associated with emotion control, animal control, willpower or raw, aggressive mental and physical strength are governed by the Suit of Wands. Fire and the Suit of Wands are opposed to Water and the Suit of Cups. It is often seen as a masculine element.

The Suit of Coins: Earth

The Suit of Coins (or Pentacles) conveys mastery over earth. This element's main property is its immobile solidity and worldly reality. The Coins are often associated with worldly wealth and material concerns. They govern the physical body and the material world of solid objects, in particular stone and metal. Stability, immobility and passive strength are close to the nature of earth. Any solid object is subject to the power of the Coins. Rock, metal and earth, and all effects that concern inanimate objects, the physical body and its properties, and more generally protective and stabilizing effects are properly placed in this realm. Earth and the Suit of Coins are opposed to Air and the Suit of Swords. It is often seen as a feminine element.

The Suit of Cups: Water

Water is governed by the Suit of Cups. This element's main property is its moisture and fluidity. All "normal" liquids are subject to this Suit (though a GM is justified in excluding molten metal or lava). It is also associated with the spiritual or "soul" aspect of the human personality, with creativity, intuition and the gentler emotions such as love, friendship, piety, sympathy and humor. By this token it is also associated with nature spirits and the lesser denizens of the otherworld. Through its proximity to intoxicating drink it holds mastery over the befuddling, dazing and twisting of the mind. The Cups govern all liquids, and all effects of spirit communication, empathy, intuition, confusion, illusion and evasion are their proper realm. Water and the Suit of Cups are opposed to Fire and the Suit of Clubs. It is often seen as a feminine element.

The Suit of Swords: Air

The Suit of Swords governs Air and all gaseous and insubstantial matter. This element's main property is its insubstantiality and detachment from earthly matters. It is also associated with the higher mental faculties, detached from bodily or emotional concerns. Communication with and control of the higher spirits fall into its realm, as do all things associated with language, mathematics, technology and philosophy. The Suit of Swords governs air and gas, weather, the mind of sentient creatures and the realms of higher spirits. If technology plays a major role in the campaign it will also be governed by the Swords. Air and the Suit of Swords are opposed to Earth and the Suit of Coins. It is often seen as a masculine element.

The easiest way to gauge the effects the use of each card can have is by referencing *GURPS Magic*. Assume that the number of the card is equal to the Fatigue that can be spent on a spell. As a rule of thumb, an effect that causes damage to any one person or object should cost 1 Fatigue per 1d of damage. Effects causing the same damage over an area cost 2 Fatigue for one hex, with costs for larger areas following the rules for area spells (i.e. increasing with the radius of the area, not the number of hexes). The required card for other effects is determined by the GM, with reference to the Fatigue costs of similar Spells. Effects may require cards from more than one suit if more than one element is involved.

Example: Goran Tanju, a Tarot mage, needs to cross a river. He decides to use his powers to walk across the water's surface as though it were solid earth, a flashy but simple effect. For reference, the spell "Walk on Water" costs 3 points, so the GM rules that the cost is equal in Tarot magic. Goran selects the Two of Cups (for water) and the One of Coins (for firmness). His Skills in the two Suits are 13 and 12, respectively. The player rolls 9 and 10 and he crosses on dry feet.

The Great Arcana

The Great Arcana is reserved for true masters of Tarot magic. Mastery of each card must be purchased as a separate Advantage and requires a separate M/H Skill. Most of them have mastery of Court Cards or other cards of the Great Arcana as a prerequisite. Each card has a distinct, unique effect.

The Fool

0 Points

Prerequisites: none

The Fool represents ignorance, carelessness, foolishness and lack of understanding, but also the joys of simplicity. It is the card of the mundane -- you could say, the card that all non-mages have mastered -- and a Tarot-mage who decides to embrace the Fool loses all his powers. This may seem unappealing, but many powerful Tarot-mages have chosen to do so towards the end of their lives. A mage who sees the temptations of power growing too strong, or who feels unequal to the demands made on his powers and judgment, can take this path into honorable retirement. Embracing the Fool always requires the consent of the Tarot-mage. There is no way to remove the powers of an unwilling Tarot-mage short of killing him.

The World

30 Points

Prerequisites: King or Queen of one Suit

The World represents all worldly things. Mastering it allows that Tarot- mage to actually create matter. This is a major achievement in mystical terms, but also quite useful in day-to-day affairs. The energy cost is 1 point per lb. Of created matter. The cards of each Suit can be used to create its element. Since most things are composed of more than one element, making them should require cards from more than one suit. For play balance, making anything specific should also require some knowledge of its composition and skill in its manufacture. GMs going for a cinematic feel can use this card to have powerful Tarot-mages grab things out of thin air.

Judgment

20 Points

Prerequisites: Knight of one Suit, Page of all others

Judgment represents the nexus between the physical and spiritual world and allows the Tarot-mage to cross that boundary at will. By using the card, he leaves his body in astral form to interact with spirits on their own terms. This functions exactly as Spirit Projection (P. SP76), but the spirit form cannot interact with the physical world in any way or use any spirit abilities.

The Sun

15 Points

Prerequisites: Page of all Suits

The Sun represents honesty, good fortune, and happiness. In Tarot Magic it is the card of blessing, luck and supernatural protection, the opposite of the Moon. Used by itself it can be used to bless and impart good fortune on an individual -- a once-off version of the Luck or Serendipity Advantages (the GM decides when they come into play). Combined with Suit cards the Tarot-mage may opt to take some control over what shape the good fortune takes, or what activity the luck applies to. For example, to give a character luck in battle a Wands card would be appropriate while to improve health or material fortunes Coins cards would be called for. The higher the card used the more advantageous or long-lasting the effect will be. As with the use of the card alone, the actual shape it will take is decided upon by the GM.

The Moon

10 Points

Prerequisites: Page of all Suits

The Moon represents deceit, danger, and misfortune. In Tarot Magic it is the card of malison, curse, and doom, the opposite of the Sun. Used by itself it can inflict suffering and evil fortune on an enemy -- temporary versions of the Unlucky (regular Skill roll) and Cursed (Skill -5) Disadvantages. These last for a number of days equal to the margin

of success, with a minimum of one day. Combined with other cards the Tarot-mage can even take a hand in defining (loosely) what kind of misfortune befalls the target. Using Cups will cause the fate to involve water, for example, which could mean anything from a thorough drenching to shipwreck and death at sea, depending on the roll and the GM's tender mercies. There are risks involved, however -- on a failure the caster suffers the intended effect!

Example: Soothsayer Aladira Kepple has been bullied and insulted by the bailiff and is determined to get her own back. She flashes the Moon and the Ace of Cups at him, hoping to give him a tumble into the river, or a boating accident. Her Skills are 14 (The Moon) and 15 (Suit of Cups). The player rolls a 15 and 7 -- a success on the element, but failure on the arcana card. Aladira had better stay away from bridges and boats for the next few days!

The Star

15 Points

Prerequisites: Knight of at least one Suit, Page of all others

The Star symbolizes hope, the successful completion of one's efforts, the reward of labor invested and a fortunate future. It governs the dimension of the future, allowing the suspension of magical effects. The most common use is conditional suspension; the effect is cast, but only comes into being through a certain action or set of circumstances. A fiery surprise (say, the Four of Wands) for the first person to open a certain door would be a possibility. Suspending an effect has an additional energy cost of 2 for up to a day, 4 for up to a week, 6 for up to a month, 10 for up to a year, 15 for up to ten years and additional 5 for each ten years past that (long-term enchantment is best done in groups as most Tarot-mages will find even months beyond their powers). This energy can come from any Suit. The effect is triggered by a circumstance specified by the caster ("the first person to open the door", "the first sunrise after new year", "the first innocent man to sit in this chair"). A favorite of many Tarot-mages is to suspend Justice on themselves until an unexpected spell is cast on them, thus returning the first magical attack in any confrontation . . .

The Tower

10 Points

Prerequisites: King or Queen of one Suit

The Tower represents sudden destruction, doom and ruin. This card allows the Tarot-mage to completely destroy matter. This power may not be too useful in everyday magic use, but it is highly significant in the cosmic scheme of things and immensely respected among Tarot-mages. It comes in handy occasionally when incriminating evidence needs to be made to disappear utterly, and it can be used to unmake all but the most potent magic items.

The Devil

20 Points

Prerequisites: Knight of one Suit, Page of all others

The Devil represents submission, enslavement, and domination. In Tarot- magic it is the card of daimonurgy. Its masters can summon and dominate demons -- whatever these are in your game world. The exact mechanics of this are up to the GM. In general, summoning a demon should always require lots of power and mastering it involve at least some risk of it getting loose. Traditionally, minor demons can be forced to do the mage's bidding easily (a Contest of their Will vs. the Tarot-mage's Skill is reasonable) while major ones can only be bargained with.

The Devil can also be used to dominate fellow humans. This requires energy equal to the victim's Will (Swords and Wands in equal numbers) and is resolved through a Contest of Will vs. the dominating mage's Skill. Once enslaved, the victim must obey all nonhazardous commands from the mage implicitly (this includes demands for money, valuables, secret information, or sex). Dangerous or repulsive orders (or any command that contravenes one of the victim's Disadvantages such as Greed or Pacifism) give the victim a Will-5 roll to refuse. Suicidal or utterly repugnant orders may, at the GM's discretion, be resisted at better odds or even allow the victim to break loose from the enslavement.

Every week after the first the victim gets another Will roll vs. the Tarot- mage's initial success at a cumulative +1 per week. Of course mages know about this loosening bond and an order to submit to another ceremony of submission sounds immensely reasonable to a victim . . .

Temperance

15 Points

Prerequisites: King or Queen of one Suit, Page of all others

Temperance symbolizes the mage's mastery over the elements and their permutations. It allows the mage to transform one form of matter into another. This can range from simple parlor tricks -- water into wine -- to the most secret alchemical reaction of all -- lead into gold. Using Temperance requires at least one minute of concentration and 1 point of energy from the appropriate element per lb. of transformed matter. The GM should feel free to require additional energy, time, or effort for particularly challenging transmutations (i.e. those he wants to limit).

Death

25 Points

Prerequisites: King or Queen of all Suits

Death stands for change imposed from the outside (not least, but by no means only, death), abrupt endings and new beginnings. In terms of Tarot magic the card allows the Tarot-mage mastering it to literally master death! He can bring back to life the bodies of people killed no more than the last sunrise or sunset ago. Doing so is incredibly draining. For each point of damage the dead character took, the Tarot-mage must expend a point of energy (from any Suit card). This cost is levied irrespective of how well the body is repaired prior to resurrection. The mage may choose to spend Hit Points instead of energy, at a rate of one for each point of damage.

There is another problem, though. The soul of a dead person can be invited back into the resurrected body, but it can not be forced. If the soul wishes to return to life the character to be resurrected must roll vs. Will. On a success the soul returns and resurrection takes place. On a failure the soul cannot return and the body rises up as an abomination, a soulless, enslaved zombie. If the mage wants that to happen, the soul's return to the body is possible only after winning a contest of Will with the mage. If the resurrection was successful the returning character returns to life at 0 Fatigue and needs to heal naturally.

Death can also be used to lay the undead and wandering souls to rest, making their death permanent. This requires a Contest of their Will vs. the Tarot-mage's Skill in the card. GMs looking for that cinematic flair may allow Death to also cause immediate, inescapable and final death in the best pulp-fantasy tradition. This goes against the flavor of Tarot magic, but puts truly awesome power at the disposal of "evil" mages. High- cinematic campaigns could put the idea of the death card to good use.

The Hanging Man

10 Points

Prerequisites: Knight of one Suit, Page of all others

The hanging man stands for a change in perspective, for things that are different from what they appear -- or appear different from what they are. It allows the Tarot-mage to create illusions and false appearances, big or small, or dissolve those of others. The energy cost for an illusion that affects only one sense is 1 point per hex per hour, one that affects all senses requires 2 points per hex. The power can come from all Suits (GMs who like such detail can work with the subtle differences between a Wands Illusion and a Cups Illusion, but for most purposes they are identical). Illusions that move or act must be consciously controlled by the mage while inert ones can simply be left in place.

Whether an Illusion is successful is determined by a Contest of the mage's Hanging Man Skill and the target's IQ. On a failure by the mage, the target realizes something is wrong. Mages having mastered the Hanging Man roll vs. their Skill in the card instead and immediately see through the illusion on a success.

Fortitude

20 Points

Prerequisites: Knight of one Suit, Page of all others

Fortitude or Strength represents effort and power. This card allows the Tarot-mage to use more than one Suit card in an effect. This increases the effective power at his disposal considerably -- combining the Ace through Five of a Suit alone would provide 15 points of power, and the complete cards sum up to a whopping 55!

The Wheel of Fortune

30 Points

Prerequisites: King or Queen of one Suit, Knight of all others

The Wheel of Fortune stands for the cycle of life, death and rebirth and governs youth and age. The mage mastering it can cause a person or item to become younger or older at a cost of 1 point of power per month.

Making a person or object younger can not restore parts (lost limbs, erased writing, missing rivets etc.). Memories are not lost, though a human reverted to young childhood may not be able to consciously retain or understand them. Objects can only be reverted to the point where they were finished (GM's call). They do not dissolve into their constituent parts. Living creatures can be reverted to pre-embryonic stage and, unless placed into the right environment, will die from this. Aging for characters follows the standard Aging rules. For objects, the GM decides the exact effect. It is impossible to distinguish magical age effects from natural ones, though in some cases it may be obvious that something supernatural has occurred.

The Hermit

10 Points

Prerequisites: Knight in at least one Suit

The Hermit represents wisdom, knowledge and wise counsel. It is the card that Tarot-mages turn to in need of insight - the Scrying card. The Hermit is not required to "read" a person, object or magical effect at hand. That is done by creative application of the regular Suit cards -- reading thoughts takes Swords, emotions require Cups or Wands, material composition uses Coins, energy flows Wands etc. The Hermit's power lies in transcending space and time. Using the Hermit allows a Tarot-mage to see into distant places. The cost goes up with the distance -- one point up to a mile, two points up to ten miles, five up to a hundred, ten up to a thousand, twenty up to ten thousand. While it is, in theory, possible to see much further than this there is little reason a Tarot-mage would know this is possible. 10,000 miles should represent the known world to most fantasy settings. Skill penalties for places unknown to the Tarot-mage should be applied, but if he has anything connected with the target (a brooch belonging to a person whose whereabouts he wishes to see, or a piece of mortar from a building) these can be waived.

A look into the past is possible only at the place and in the presence of the object or person in question. It should always be costly -- four points base cost, 6 for looking back a week, 8 for a month, 10 for a year, 12 for a century, +2 for each century past the first. The sights to be gained this way are incomplete sensations available only to the caster, and pertaining only to the Suit that is used.

Looking into the future is even trickier. An attempt requires a minimum of five points, but the vision will never be clear or unequivocal. The future is always just potential, and every cliché risk of divination should apply.

Justice

5 Points

Prerequisites: Page of all Suits

Justice represents honesty, good intentions and the meting out of just deserts. This card is both the most powerful magical defense open to the Tarot-mage and his most ready tool of poetic justice. Justice is an easy card to master, but

its effects are often earth-shaking. It reflects a magical effect back from the target to the attacker. Many Tarot-mages carry it as an amulet or in a breast pocket (GMs who want to avoid the high-noon flavor of Fast Draw (card) dueling may forbid this). It is certainly a good card to have on hand when venturing into the unknown. The protective effect can be extended by combination with the Star. The reflection is resolved by a Contest between the highest Skill used by the attacker and the defender's Skill in Justice. If the defender wins, the effect is reflected back on the attacker. On a tie, both are equally affected. On a win by the attacker the effect happens as intended, but some degree of backlash (GM's fiat -- anything up to half the effect on the defender) still affects the attacker. Justice can also be used against neutral or beneficial effects.

The Chariot

10 Points

Prerequisites: Knight of one Suit, Page of all others

The Chariot represents flight, escape, and travel. It functions as a teleportation effect. Using the Chariot will cause the Tarot-mage (and possibly others) to simply wink out of existence, materializing again at the point of his choice (GMs fond of more dramatic effects could have a flaming chariot materialize instead). Tarot-mages of Knight rank can port themselves or another person, those of King or Queen rank may take along several people or port a group at double energy cost.

The energy cost for a use of the Chariot is the same as for the standard *GURPS Magic* Teleport spell. To tone down the power of this card, a GM may rule that a specific Suit will be required to power it, depending on circumstances. Porting over (or through) water could require Cups, through solid walls Coins, above dry land Swords and through fires or similar peril Swords. Generally, a Tarot-mage must know the target he travels to using the Chariot. Anything within line of sight is automatically "known" and can be ported to without penalty. Any place the mage has seen that day, or is well acquainted with, can also be ported to at no penalty. Places the Tarot-mage has seen briefly, or longer ago, are reached at a Skill penalty of up to -3, those seen only by magical means at a -2 penalty, and those known only from a picture or description -2 to -8, depending on the quality.

The Lovers

15 Points

Prerequisites: King or Queen of one Suit

The Lovers represent love, union, harmony, and synchrony. This card allows Tarot-mages to combine their powers in a single effect. Only one Tarot-mage in the group needs to have mastered the Lovers to include a number of Tarot-mages up to his Skill level in it (a mage with Skill 14 in Lovers could combine himself and up to 13 others). Other Tarot-mages with mastery of the card can bring in their own groups. There is no upper limit to this other than the number of mages and their readiness to participate -- joining powers is a very private experience and requires mutual trust. Tarot-mages whose powers are joined through the Lovers can combine all cards any one of them has mastered into any combination the GM allows (for example one having mastered the Star and another Death could combine the two into one effect). Fortitude still only applies to the Suit cards of one Tarot-mage at a time. The most common use of this card is for a King or Queen to tap the raw power of his or her students, but sometimes experienced mages use it to combine their Arcana cards into earth-shaking effects.

Example: Queen Renata, a respected mistress of Tarot Magic, needs to melt a lost tome of magic out of a glacier. The power required is beyond her alone, but she has called her students together and is determined to try. First, she uses The Lovers to combine their efforts into one effect. Her Skill is 14, so she can easily unite her eight followers. The player rolls a 12. Next, she uses Fortitude to pour all her Wands cards into the effort. Her Skill is 12, the player rolls 5. She can now use all her Wands cards (One through Seven) at the same time, giving her 28 points. Next, her students contribute their highest Wands cards (15 -- one student using his own Fortitude -- 5, 5, 4, 3, 3, 3 and 1). Their Skills 14, 14, 13, 13, 13, 13, 15 and 13, Renata's own is 15. The players roll 12, 9, 4, 14, 11, 10, 7, 10 and 13. Renata and seven of her students succeed, one fails. Thus, a total of 64 points (Renata's 28 plus 15, 5, 5, 4, 3, 3 and 1) are available for the effect; the result should be quite spectacular.

The Magician

105 Points

Prerequisites: King or Queen of All Suits and all Great Arcana Cards other than the Hierophant/High Priestess and Emperor/Empress)

The Magician represents power, spontaneity, and practical wisdom. In Tarot Magic this card represents the highest degree of mastery a Tarot-mage can attain -- spontaneous sorcery. Mages having mastered it receive +5 to Reaction Rolls by all other Tarot-mages and everybody else who recognizes them for what they are. They frequently inspire as much fear as admiration. Having mastered the Magician the Tarot-mage requires no other foci. He can create all possible effects without the use of cards simply by visualizing the layout he would use. The time required is usually nil, though a GM may assign preparation time of two or three seconds for very complex effects. Needless to say this status is inappropriate for PCs or even NPCs in most games.

The Hierophant/The High Priestess

150 Points

Prerequisites: The Magician

Among Tarot-mages there are two distinct highest ranks that practitioners may aspire to. Those seeking knowledge and wisdom, tending to introspection and conservative use of magic, will see this card as the fulfillment of their aspirations. Male characters master the Hierophant, female ones the High Priestess. The Hierophant or High Priestess seek to escape society. They rarely accept students, and if they do their teachings will be philosophical and often enigmatic. Few among them still use magic much, and those that do limit themselves to small effects. Their world is that of the mind.

With mastering the Hierophant or High Priestess comes a deep and instinctive understanding of magic that lets any hostile effect slide off as though it had never been. No magic can harm a master of this card (Invulnerability to Magic). They move wading through the world of spirits (Awareness) and converse with the spirits of the earth and the souls of the dead (Medium), and their understanding and kinship with all things extends to animals and plants (Empathy, Animal Empathy and Plant Empathy). Living Hierophants and High Priestesses are legendary masters of magic. They are much loved, but little understood and frequently insane by the standards of normal society. Needless to say this card is highly inappropriate for PCs to master.

The Emperor/The Empress

75 Points

Prerequisites: The Magician

Tarot Mages of the highest rank that do not wish to turn their back on the world embrace the Emperor or Empress. They, too, gain an instinctive understanding of the spiritual pattern underlying the world (Awareness) and can commune with spirits (Medium), animals (Speak with Animals) and plants (Speak with Plant), but they are not bound by the same feeling of kinship that restricts Hierophants and High Priestesses to the contemplative life. Those that devote themselves to the use of their vast magical powers exude authority from every pore (they are automatically treated as though they had rank 5 by everyone, everywhere). Living Emperors or Empresses are surrounded by swarms of admiring students and disciples attentive to their every command and many of them have taken positions of great power and status in the service of kings -- or toppled rulers to take their place. This card should not be allowed to PCs unless you play for very high stakes indeed.

Fatigue, Distance, Duration

Standard Tarot Magic does not require the character to spend Fatigue. The power is inherent in the cards. If a GM wants to require Fatigue for play balance, using a Suit card costs Fatigue equivalent to its value. The Page pays full Fatigue cost for cards of his Suit, the Knight half, the King or Queen only pay one quarter Fatigue cost. Each card of the Great Arcana should be assigned own Fatigue Cost.

Tarot Magic works within line of sight -- anything a Tarot mage can see is fair game. Those who like more detail can apply the Speed/Range Modifiers for weapons to the card Skills, making Tarot Magic very effective at short distances, but difficult at long range.

Where duration is concerned, following the precedent set by *GURPS Magic* is useful. Any damage-dealing effect has a default duration of 1 second, more long-lasting augmenting or protective effects have 1 minute. Maintaining the effect longer than this requires more power, i.e. higher cards, at a rate of 1 point for each additional increment. Thus, an effect that required a Three to last for one minute could be maintained for two minutes with a Four and for three minutes with a Five. If the GM decides to charge Fatigue, duration can also be handled by simply increasing the Fatigue cost without requiring higher cards.

Playing the Cards

Tarot cards are the focus mages use to channel their power in Tarot Magic. Thus, the characters will be carrying an enchanted deck. The players are well advised to have a mundane one handy for use as props, too. In order for the character to work magic, the player lays out his cards, selects the ones he wants to use and lays them out on the table. The GM can time this action and rule the mage character takes as long to use his magic as the player did to lay out his cards. Bear in mind that the characters will hardly have their cards out in the open at all times -- it makes good sense to require them to be kept in some box or package, though whenever the characters have a good reason to prepare a certain spell the GM should allow the players to do likewise.

Players can be allowed to reduce their decks to the cards their characters have mastered. There are good arguments against doing this, however. For one thing a tarot deck belongs together as a whole and separating it in this way goes against the grain of any mystical feel in the game. On a more pragmatic note, a character carrying a reduced deck is advertising his lack of power to the world. Would you want to do that?

GMs who do not want to have their players compete in sleight-of-hand can use another method. It takes two seconds for a character to ready a card (one or more seconds to unpack the deck beforehand, depending on where it is kept). Fast Draw (Card) P/E will be a popular Skill with Tarot mages if this method is used, and a GM who does not like the cinematic flavor of "the fastest deck in the west" may assign a penalty of -1 for every 15 cards in the deck (giving a whopping -5 for fast-drawing from a full deck). A failure draws the wrong card. A critical failure spills the deck on the ground.

More Questions Than Answers

DriveThruRPG.com -- Threat or Menace?

by Chris Aylott

Last month, the first installment of this column appeared and the RPG community sat bolt upright in amazement. My ego regrets to report that these two events had nothing to do with each other.

What sent online gamers into a tizzy was the unveiling of DriveThruRPG.com, a website selling PDF versions of games from 20 medium-to-big-name publishers in the hobby. DriveThruRPG.com is a trademark of Publisher Services Inc., a company formed to represent many of those publishers to book distributors and major bookstore retailers. The whole kit and caboodle is owned by many of the same folks who own White Wolf.

Reactions to this new venture among game retailers were, well, predictable. Some scoffed, most went about their business, and a few promised bitter retribution in the form of clearance sales and dropped lines. This happens almost every time a publisher tries to sell books without retailers -- not much ever comes of it, but you can have a lot of fun on the private retailer forums watching the younger hotheads get riled up over disintermediation.

Lest I sound too superior, I spent most of the 1990s as a younger hothead. Show me a blown street date or a mass-market exclusive and I'd be spewing threats with the best of them. (Oddly enough, I never dropped a line that was making me a profit.) I'm older and lazier now, which means DriveThru.com makes me curious rather than angry.

Is DriveThru.com the future of the hobby? A sideshow for print RPG publishers? An offense against the laws of nature and digital freedom? Or just a site that launched a thousand angry web posts?

Beat the DRM Loudly

On the fan side of the hobby, a firestorm has developed around the issue of "digital rights management" (DRM), which seems to be the fancy 21st-century name for "copy protection." Now that I'm old and lazy, I've lost my ability to make sense of technological buzzwords; DRM was more or less Greek to me, so I was forced to go to the most reliable source of information about it available.

Several hundred RPG.net posts later, I was still confused. The basic facts seem clear: the flavor of DRM that DriveThruRPG.com uses lets you make as many copies of a book as you want, but you have to spend some set-up time doing the electronic paperwork that claims both the book and your computer as yours. There is a limit to the number of computers you can use the book on, and some limits as to how much cutting-and-pasting you can do on the text. As has been the case with most copy protection since the early 1980s, these limits can be circumvented by a bright 13-year-old with time on his hands.

These facts are the fodder for a zooful of fan opinion. The corporate masters are using DRM to take away the right to read. Hardworking content providers need whatever protection they can get. Any rational person can see that the protection DRM provides is no more than a figleaf, and should revel in the unsullied innocence of naked PDFs. It's not inconvenient, it's too much of a hassle, and what should I do when God strikes down my computer for looking at too much porn?

Lots of opinions, most of them interesting, especially the folks who are putting tinfoil in their hats and drinking nothing but RC Cola in an effort to protect their bodily fluids from the DRM menace. But when you take it all together, the body of fan opinion seems . . . well, just a bit narrow. Other issues have come up -- the cost of the books, the merits of screen vs. paper -- but digital rights seem to be the hot button.

Part of me thinks this makes a lot of sense, that our fears about DRM represent concerns about the information society that is blossoming around us. We've grown up in an industrial world where it's easy to own property but hard to copy it. Electronic property is as easy to copy as it is to own, and the question of who controls the copies is creating as much disruption as the industrial revolution did in the 19th century. No wonder we're anxious about it.

But a part of me also wonders if we're not missing the forest for the big frightening tree. So much of the electronic product discussion among fans and retailers seems to be centered on piracy, inconvenience, and lost opportunities -- even those bricks-and-mortar retailers most eager to embrace electronic products seem more worried about missing out on what DriveThru.com or RPGnow.com have got than in building up a new market for themselves.

There's plenty of anxiety, but where's the opportunity? If the bricks-and-mortar retailers don't see it, and the fans don't see it . . . maybe the publishers do?

Their Brave New World

With that in mind, I talked with George Vasilakos, Zombielord of Eden Studios and the Albany, NY game store Zombie Planet. Perhaps due to his two hats of publisher and retailer, George is one of the canner and more sales-oriented publishers in the business. Eden had dabbled with electronic publishing last year, but their venture with DriveThru.com represents a two-footed jump into the market for them.

So far, George is pleased with the results. "We released one direct-to-consumer electronic product before [joining DriveThru.com]," he says, describing the sales of the All Flesh Must Be Eaten adventure Little Town of Hamlin as "disappointing." The product did much better as soon as it was placed on DriveThru.com, selling as many copies in two weeks as the original release sold in eight months.

"Sales are much higher than I expected," George says, though he is quick to point out that he thinks of e-books as an "experiment." While sales have surpassed his projections, Eden's top-selling e-books sold dozens of copies in June rather than hundreds or thousands of copies. That's not bad for a startup, but it pales in comparison with the planned 10,000-copy print run of Eden's upcoming *Army of Darkness RPG*.

George believes Eden's sales so far can be credited to two factors. He says, "I think it helped a lot to have top publishers launch DriveThru.com," referring to the site's decision to offer a small pool of established publishers instead of RPGnow.com's open-to-everyone approach. He's also noticed that Eden's best-selling e-books are the books that are hardest to find on retailer bookshelves.

"*Eden Studios Presents Volume 1* is our number one seller on DriveThru.com and has been among the top four bestsellers on the site since its launch," he points out. "This is because of distributors [treating it like a magazine issue and] not stocking it after preorders. Now customers have a way to get it if they don't want to order direct or can't find it in their local game store." (Update: Since I interviewed George, several distributors have re-evaluated the demand for *Eden Studios Presents Volume 1* and placed restock orders.)

As for digital rights management, it doesn't seem to be as complex an issue for him as it has been for RPG fans. "If it wasn't for DRM," he says, "we would not have placed our products in electronic format." Whether or not DRM is effective, the licensors of Buffy the Vampire Slayer, Angel, and Army of Darkness would not have let Eden put its licensed products online without it.

George doesn't feel DRM is as big an issue as its detractors project. After polling his customers, he says that "they do not seem to mind the DRM since they are getting something they want: the ability to buy a book at any time and to find hard-to-find product as well as out-of-print product. We have gotten grief about DRM, but we get more grief about the prices of in-print books."

As far as Eden Studios is concerned, DriveThruRPG.com seems to be both the solution to one of the hobby's persistent problems -- keeping old material available so it can earn money -- and the source of new revenues. George is already planning to experiment with electronic-only products like e-card games and digital art books. "The industry is

changing," he says, "and we need to find more means of distributing our product."

The New Medium's Old Guard

The view from Eden Studios seems pretty rosy, but what do things look like on the other side of the digital rights and electronic retailing fence? Still curious, I had a chat with Joseph Browning of [Expeditious Retreat Press](#). One of the most successful publishers on RPGnow.com, Expeditious Retreat Press pulled in three Ennie awards and an Origins nomination for its first major release, *A Magical Medieval Society: Western Europe*. This book is the #3 all-time bestseller on RPGnow.com, and the sequel book Ecology and Culture has reached #49 since its release in March.

Despite his electronic success, Joseph has a lot in common with traditional RPG publishers. "We always intended *A Magical Medieval Society: Western Europe* to be printed," he says. "I think most electronic purchasers will at some point print out parts of the book, and our design reflects this."

He continues, "We like to view ourselves as the makers of stuff that helps with having fun while roleplaying. The medium isn't very important, as long as the goal is achieved. Right now we're focusing on text and images -- books, effectively -- because I don't have the faintest idea how to do anything more complicated in an electronic medium."

That focus on bookmaking seems to have paid off. *A Magical Medieval Society: Western Europe* was an immediate success, selling almost 200 copies in its first sixty days on RPGnow.com. It has sold over 1,200 electronic copies to date, as well as over a thousand copies in print form through traditional hobby distribution. Those are respectable numbers for any small press, better than many RPG publishers have managed over the last two years, and phenomenal for a part-time publisher depending on word of mouth.

For Joseph, success in publishing is about customer satisfaction, which is one reason he dislikes DriveThru.com's security-oriented approach. He says, "The only good reason for reducing customer satisfaction -- by not permitting certain actions, for instance, or forcing actions [like registration] that are not required in comparison to a normal PDF -- is increased profit. Not just increased profit compared with selling no PDF product at all, but increased product when compared to selling non-DRM PDFs."

He continues, "Adding DRM materially reduces sales of electronic product when compared to sales of non-DRM product. This is a simple logical truth: Any person willing to purchase a DRM product is willing to purchase a non-DRM product of the same material and quality. However, the reverse is not true."

Joseph believes the decision to pirate or not pirate is in the hands of the customer. He says, "I want to make my PDFs as attractive as possible to try and swing the pirate/not-pirate decision in my favor. It's a carrot approach, not a stick."

So Who's Right? Who Knows?

George and Joseph share an infectious optimism about the emerging market for PDFs, but which of them has a better handle on its future? Joseph's sales figures suggest that he is more in tune with the current market, but George's licensing considerations highlight that digital rights involve more than the "simple logical truth" that Joseph espouses.

George is also looking ahead to the future possibilities of the medium, of products that are more than just print books sold as electrons. If there's a next big innovation to be found in the RPG market, then established publishers like Eden Studios have the resources to develop it. If they do, then DriveThru.com might become the leader of a changing hobby -- and if they don't, it may be no more than just the place people go when they can't get a book anywhere else.

The Next Question: It's a busy, busy world. How do you find time for gaming, and why? You can email your thoughts to overscheduled-gamer@spacecrime.com . . .

A Man of Auction

Last Saturday I had the pleasure of going to an honest-to-goodness auction . . . my first such experience that I can recall (not counting one or two such events I've been to at [gaming conventions](#)).

The auction in question was for surplus computer equipment. As my friend Chuck -- who was attending the convention with me -- explained, these computers were discards by various state agencies (since we're in the state capital), which had also been picked through by various schools for equipment *they* wanted. In other words, these were twice-rejected computers.

My desires for attending this auction were modest; I was hoping to acquire another laptop for a friend. I had a certain price frame in mind (\$100-ish, for those playing the home game). Chuck had his eyes on . . . I'm not sure, really. Whenever I inquired, he would rattle off descriptions that melded together into an incomprehensible blur: "I'm going to turn this box into a dedicated router remote firewall Gnoppix alludium P36 explosive space modulator with cup holder."

Anyway, I have come to the conclusion that *anything* vaguely laptop-y will sell for more than I am ever willing to spend. I made exactly one bid during the entire auction. There was an oooooold 486/33 laptop that boasted having Windows 3.11 installed; its screen was roughly the size of a Tamagatchi; its coolest feature by far was the tiny trackball it had as a pointer device. I thought I could turn it into an interesting prop in a game at some point. Anyway, the opening bid was \$2.50; I raised to \$5. And that was my moment of glory; the laptop ended up going for \$70. The other laptops -- and again, I stress that all of these were at least eight years old, obviously missing parts, and some didn't even turn on -- went for no less than \$160. I'm pretty sure a black-painted Etch-a-Sketch would've fetched at least \$120.

Chuck, for his part, ended up winning four desktop computer towers for \$50, about which he feels confident that he will be able to assemble two machines that actually work and, as best I can tell in listening to his plans, will form the feet of Voltron.

Probably the most interesting auction win was the person who won 20 monitors for five bucks each. Chuck and I both agreed that they would be worth that much for the sheer pleasure of dropping off buildings.

Anyway, all of this is preamble to state that an auction would kick butt as a setting for almost any campaign. Now, I already knew this on some vague level; I was part of a *Fading Suns* LARP at Dragon*Con four years ago or so, and the central premise was an auction. However, that scenario didn't really register because the auction was (as best I can tell) rigged; nothing the players could have done would affect the outcome.

But that doesn't need to be the case. A thought-out auction can provide a *lot* of interesting people and things to interact with in an interesting place. So, in typical Random Thought Table tradition, I thought I'd mention some of the possibilities behind an auction, as well as some of the pitfalls.

Modern auctions generally target two different audiences: Those looking for a bargain over something available (in some form) through normal channels, and those looking for something that *can't* be had through normal channels, regardless of price. The "Island of Misfit Computers" auction I was at was an example of the former, while the stereotypical "16th Century Tome of Baffling Prophecies and Jam Recipes"-type auction popular in movies and television is an example of the latter. It's even possible to combine the two, although usually the two types straddle two different social strata. ("And the case of 48 cans of Beef-a-Roni goes to Jimbo 'Shiv' Tubbs for nine dollars, 60 cents. Next up for auction is a portrait from Picasso's 'Blue' Period . . .")

Regardless of the target audience, auctions attract people from a wide variety of backgrounds, interests, and cliques. Thus the computer auction had resellers, college kids, working mothers, schmoes like Chuck and me, and many others. A fine art auction might attract old money, nouvou riche, mob bosses, museum curators, and so on. Regardless, this melding and clashing of different circles is where a lot of good gaming potential comes from. After all, any polite

excuse to have the heroes sitting next to Don Antonio Falsetto *and* the head of EvilCo can't be all bad.

And there are plenty of opportunities for these disparate folks to interact. In particular, many auctions allow a viewing or examination of items before the bidding, so potential buyers can get a better look at what they're bidding on. This can allow for all kinds of conversations, intimidation, and attempts at feeling out the opponents in the auction.

In order for an auction to work with PCs, there must be several factors in place:

The auction has to have something the players (and characters) want, *and* the PCs can't acquire it through any easier means. Fortunately, most games are brimming with goodies that would make great candidates for auctions: magic items, unique technology, secrets, and so on. Alternately, the auction can provide something that would normally be out of reach for the heroes. For example, in most sci-fi games the heroes don't have enough money to afford their own ship immediately. But a fine campaign could start with the heroes pooling their money to buy a sight-unseen, as-is refurbished quirky vessel at an auction populated by a wretched hive of scum and villainy. Also remember that auctions can sell services or more ephemeral things.

For true roleplaying possibilities, auctions require actual currency. Thus games that abstract wealth levels (such as *DC Heroes*, *Marvel Super-Heroes*, or *Vampire: The Masquerade* and other World of Darkness games) will have a difficult time: "I bid a Remarkable amount of money." Fortunately, there can be an out, even for these kinds of games. Simply introduce some kind of currency or other limited, tangible resource to the game, perhaps even for the specific purpose of the auction. For example, in a *Vampire* game it would be entirely appropriate to barter favors, years of servitude, or the like. Regardless, there needs to be that moment where the players need to consider: "Do we want to raise the bid to 1,500 gold pieces?" should cause the same moment of indecision as "Do I want to raise the bid to 13 years of servitude?"

Likewise, for an auction to really work the PCs have to have a *limited* amount of resources. This is important in games where the heroes have the possibility to acquire vast sums of wealth, or have the means to create their own money. Unless an auction is going to get into the 10,000,000 gold piece range (in which case, it needs to be something *phenomenally* cool), a character with that much disposable income may not blink an eye at raising a bid to 500,000. And it's unlikely that an auction would hold any challenge for someone with the Midas Touch.

Okay; so you're psyched up to the possibilities of an auction. Now what?

Well, here are some pitfalls and points to consider.

Generally, auctions are structured according to the amount the auctioneers think they will get for the items. Thus the most seemingly valuable pieces will be reserved until the end. Of course, this doesn't keep two people from getting into a bidding match in the middle of an auction, driving up the price beyond the auctioneers' expectations. And those estimated values are based on what the hosts know about the items; if two people know that a seemingly mundane amulet is actually the key to the Catacomb of Secrets, then that piece may escalate well beyond expectations.

Second, the GM should determine what each NPC is willing to spend for the items in question. This is especially important, since the GM might otherwise succumb to the temptation to bid "just a little bit more."

Third, the general rules and regulations of the auction must be spelled out beforehand. Most of these are straightforward -- payment up-front, all items as-is, and so on -- but the entire adventure will proceed awkwardly if a PC assumed he could get some kind of credit terms (especially if that's a rule his *character* would know).

Fourth, the GM should determine what effect -- if any -- skills, powers, and the like will have on the game. While I'd generally discourage the auction itself being abstracted by Finance rolls or similar abilities, it's possible they might allow some insight or advantage for the players. And, of course, powers such as telepathy, divination, or mind-control have the potential to completely upend an auction.

Finally, the GM should consider what would happen if any one side, including the PCs, "cheats," by (for example) bidding 10 jillion dollars as an opening bid, with the intention of using duplicity or fraud to acquire the item once the

auction ends.

In all, auctions can serve as a hotbed of intrigue, excitement, and shopping. Whether it's designed to pry some extra cash out of the characters' hands, give them access to equipment or services they might not otherwise get, or provide them with their next plot seed, an auction might be just the ticket for fun.

Even if it *is* impossible to get an affordable laptop.

* * *

For those of you looking for the latest in **GURPS Fourth Edition** goodness, I would point you no further than <http://www.sjgames.com/gurps/lite/> , where the long-awaited **GURPS Lite** based on the *Fourth Edition* rules is now available.

Also, tonight (July 9th) at 7 p.m. Central Time in [the Pyramid chat room](#), we're having a chat about **GURPS Lite**, with Sean "Dr. Kromm" Punch and Andrew Hackard.

You're welcome.

A Strangeness of Apes

Brian Rogers

Apes are cool. There's something about them -- especially apes that act like men -- that makes a gamer's heart glow with nostalgia. Perhaps it's the fond memories of [celluloid apes carrying rifles](#). Maybe it's the DC comics covers with heroes gone ape, super-chimps, or cities of [psionic gorillas](#). For fans of the classics, it could extend back to the Rue Morgue. They've knuckled their way through most genre fiction, but to many the best urban jungle for the humanized ape is the pulps. In the earnest science of the pulps bridging the gap between ape and man seems so tantalizing simple -- to explain away to the readers, at least.

What follows is a plethora of period-appropriate primate origins. Some have fallen apart in the face of contemporary studies, but in the capital-S-and-exclamation-point Science! of the 1930s pulps they would hardly raise an eyebrow on a noble, leathery face. And if you like an idea enough to produce lots of them, well, it might make sense to just drop the M off of Mook.

Give Me a Sign!

Development of sign languages for the deaf had been going on for centuries, but they were codified in the 19th century. By the pulp era, there was a growing number of people who understood that gesture produced a viable language for those not able to speak. It was also understood that language was linked to intelligence. It took decades for someone to start teaching apes sign language. But it didn't have to.

Early sign language teaching makes a great origin for a Pulp Ape: The early exposure to language stimulates the brain, making the beast smarter than his fellows. This makes the development of language easier, which makes the beast more intelligent, and so on. There are limits on this, but the logic of the period would make them at least as smart as a street thug or team 'brick'. Depending on the complexity of the gesture language the ape might have no problem getting his message across or be limited to conversing with those who also [speak sign](#).

"Most Potentially Interesting and Ethically Unacceptable Experiment I Can Imagine" -- Stephen J Gould

Gould is referring using the genetic proximity between humans and chimps to hybridize the two species. Such interbreeding may well be possible in real science, so in the science of the pulps its success is assured. The offspring of such a union would certainly be sterile, for the few genetic differences are significant. While the genetic factors of hybridization were unknown to pulp authors, the concept of breeding similar species was accepted, and man's similarity with the apes had been hotly debated for over half a century. Any decent mad scientist could make that leap while laughing the scorn of his "peers."

Human-Chimp Hybrids would have the best features of both species. Language skills, intelligence, strength and agility, all combined with tool use and a form that pulp artists might make ferally attractive (if a little hirsute). The sterility issue might be seen as a plus by their creators (no point in letting their army breed out of control) or as a tragedy for the hybrid (who is intelligent enough to realize the loss, and may 'adopt' a surrogate child). They'd integrate easily into society as they combine the communal instinct of the chimps with a near human appearance and understanding, making them natural PCs or adversaries.

*With Age Comes Strength

In the 1920s Dutch anatomist Louis Bolk posited a startling theory: "Man, in his bodily development, is a primate

fetus that has become sexually mature." In other words, the differences between humans and infant primates is significantly less than between humans and adult primates: we are smarter because something is retarding our "development." Bolk had an impressive set of comparison figures (cranial size, facial features and spinal column positioning to name just a few) to back his claim. Unfortunately his explanation for this retardation (or *neoteny*) relied on hormones, and was savaged by the contemporary scientific establishment: How could hormones account for such a wide range of selective neoteny? They couldn't, but the genetic discoveries that could prove Bolk's observations hadn't yet been made.

To a pulp era writer, however, the hormone theory has a fine pedigree: after all, Dr. Jeekyll's formula (which could easily be a hormone concoction) produced Hyde, who had a number of simian features. In *After Many a Summer Dies the Swan* Aldous Huxley proposed that unnatural longevity would allow the development of these slowed characteristics. Either makes an excellent explanation for a pulpy primate, as does a natural imbalance that produced a freakish man-with-a gorilla's-body. Like the man-chimp hybrid, such a figure would have a human intelligence and understanding, but the hormonal imbalances would no doubt lead to rages and depressions suitable for any angsty ape.

The Durability of Youth

The flip side of undoing human neoteny is expanding it in primates: retarding the development of some features in a primate to produce one with a more upright posture and larger brain. Such a process must begin during gestation and the newborn would be as helpless as a human baby. It would grow in mental capacity as a human child but share a much greater connection with its primate heritage. Again, no mechanism for such a change exists, but hormones work in a pulp setting, as does a singular mutant child. Alternately, the child might not be unique: neoteny is a legitimate evolutionary response for primates in an isolated, harsh environment (producing a new species of disturbingly manlike primates in a mountain range or on an island) or it could be the result of other mutating forces (perhaps the radioactive [Congo](#)).

Within the pulps, this makes the best explanation for an alternate "Lord of the Apes" without the racist overtones. Instead of a European baby, the Ape-King is an actual primate mutation. Alternately, a "civilized" scientist could perform hormone treatments on pregnant gorillas, raising the offspring as something other than human. In either case, the creatures would be likely on par with human-chimp hybrids, but without the problems of sterility -- they could certainly breed, if there were enough of them. Depending on where they were raised, their culture might be more primate than human, or they could be indistinguishable from the man on the street socially, at least.

Putting It All Together: The G(orilla) Men

After the Primes (Psychologist Peter and Linguist Hazel) lost their only daughter in a tragic kidnapping they used the pretense of an African safari to flee the country and their grief. There they found something -- an infant albino gorilla left to die -- and smuggled it back into the States. This surrogate child, raised from birth to speak and understand an intuitive gesture language of the Prime's creation, grew in stature and intellect. Alas, the criminals that killed his adopted sister came back, this time taking the lives of Peter and Hazel as Adam slipped into the night. Lost and confused, Adam Prime became the unwitting muscle for bootleggers until rescued by federal agents. But that left the government with a problem: what do you do with an albino bull gorilla with human intellect and a taste for fine coats?

They did the only logical thing -- gave him a partner, a badge and a gun! Thus began the case files of Adam Prime, Gorilla G-Man, whose radio series was beloved by children of the 1920s and 30s. Adam possesses physical prowess beyond human and carries a modified Thompson fitted for his leathery digits. His might is usually held in check, but when his "Gorilla Nature" is unleashed he becomes an unstoppable force, abandoning the trappings of civilization under the red haze of the wild. Adam speaks a gesture language so universal that he can communicate meaning with any human (even if he only understands spoken English and French) and so subtle that many people just assume he is speaking: they repeat what he has just 'said', their minds skipping around the silence and the impossibility of a Gorilla in a suit. His position as an outsider has made him a keen observer of human nature, while at the same time playing "dumb" enough that no one at Treasury asks him to fill out paperwork.

The Treasury has assigned Adam a series of female partners (knowing his weakness for blondes and how a woman's touch would calm anyone who suddenly realizes Adam's true nature). The most common Eve is a young woman of surprising strength, having been nearly crippled by a rumrunner's gunfire and worked herself back to health through rigorous exercise. This Eve also harbors some latent ESPer abilities, being able to read the pasts of places and touch people's memories. (Other Eves possessed differing talents, such as being crack shots, surgeons or -- on one occasion -- a card sharp. Not surprisingly, Eve would have whatever skills were needed to move the current radio drama forward.).

Adam's most interesting foe was Miss Natasha Linque, a Muscovite Communist born of a French mother and a Chimpanzee father. Linque was an agent for the Soviet Union in America, advancing the Communist agenda through her physical prowess, cunning intellect, foreign backing and pheromonal charm. Being a child of the wild herself, Miss Natasha was able to claim a connection with Adam that even the best Eves could not, and she represented his one true chance at both spiritual and physical romance. Alas, the two were separated by ideology, and the radio series ended before the events of the Second World War would have made them allies. Such are the perils of primate pulp romance.

Tri-stat d10/Silver Age Sentinels Stats

Adam Prime (170 points)

Body 15 Mind 4 Soul 8
ACV 12 DCV 7 Health 115

Power Attributes:

Combat Technique (2) Leap Attack, ACV Knockback
Extra Arms (2) Can use feet as hands
Extra Attacks (2) Restriction -- only when in Blind Fury (-2)
Growth (1) Permanent (-1) stands at 2.5 meters tall. His Max Reliable Lift is 950 kg (1800 kg in SAS)
Heightened Senses (2) Scent +8
Massive Damage (3) Restriction -- only when in Blind Fury (-2)

Characteristic Attributes

Attack Combat Mastery (3)
Highly Skilled (6)
Organizational Ties -- Treasury Department (5)
Servant (8) "Eve," 80 points, variable between adventures
Special Attack (2) 20 damage, Autofire, spreading, handheld, short range, limited shots (Tommy Gun, attacks with Guns -- Autofire skill)
Unique Attribute -- Gesture Language (4) can be understood by any human

Skills:

Acrobatics - Balance (2), Climbing - Natural (4), Cultural Arts - Literature (1), Etiquette - Upper (1), Languages - French (1), Law - Criminal (1), Management - Government (2), Police Science - Criminology (1), Social Science - Psychology (3), Stealth - Camouflage (3), Urban Tracking - Underworld (1), Wilderness Survival - Jungle (3), Wilderness Tracking - Jungle (2) Gun Combat - Autofire (1), Unarmed Attack - Strikes (2)

Defects:

Blind Fury (2) when wounded, caged or Eve hurt
Less Capable - Charisma (1) Soul counts as 5 for Charisma checks
Marked (2) Gorilla, but his clothes and gesture language help him hide this
Nemesis - Miss N. Linque (3)
Unappealing (3) Gorilla

With Strength More Than Human

The Tri-stat system is praised for its simplicity. Indeed, the only reference to lifting ability (usually a mechanical cornerstone for adventure games) is a side note in the *Superstrength* description. This makes it difficult to distinguish between characters such as anthropomorphic apes, who may be strong but not *superstrong*. Here is a suggestion for lift weights that keeps relative simplicity and provides drama to what is normally a static measure.

Maximum Body lifting capacity is $50 \times X$ kilos, with X being the die type. Thus for a superhuman (d10) game, the maximum lift would be 500 Kg, while a human (d6) game would top out at 300 Kg. This amount can be increased to $70 \times X$ Kilos as a 1 point Feature. (For

"Eve" (80 points -- these are the stats for the most commonly appearing Eve)

Body 9 Mind 7 Soul 8
ACV 8 DCV 6 Health 85

Power Attributes:

Sixth Sense (2) Postcognition, Danger Sense. Area 5, Unreliable (-1)
Telepathy (5) Targets 1, Area 0, Range 0, universally applicable, Unreliable (-3)

Characteristic Attributes

Combat Technique (1) Judge Opponent, Steady Hand
Features (1) Attractive
Gadgets (1) car, radio, pistol, handcuffs, binoculars. Conditional Ownership (-1)
Highly Skilled (3)
Organization Ties -- Treasury Department (3)

Skills:

Driving - Cars (2), Domestic Arts - Cooking (2), Etiquette - Middle Class (2)
Law - Political (1), Management - Government (1), Police Science - Criminal (1), Powerlifting - Bulky (1) [her Maximum Reliable Lift is 200-250 kg], Social Sciences - Parapsychology (2) Unarmed Combat - Strikes (1), Gun Combat - Pistols (2)

Defects:

Ism - Sexism (1)
Nemesis - Miss Natasha Linque (1)

Miss Natasha Linque (145 pts)

Body 13 Mind 8 Soul 9
ACV 11 DCV 10 Health 140

Power Attributes:

Combat Technique (2) Jump Attack, Lightning Reflexes
Features - Superior Lift (1) Maximum Reliable Lift is 420 kg
Heightened Awareness (4)
Massive Damage (2) All Attacks, Restricted -- Only melee attacks (-1)
Special Movement (2) Swinging, Wall Bouncing

Characteristic Attributes

Agents (4) eight 30 point characters
Attack Combat Mastery (1)
Defense Combat Mastery (2)
Extra Defenses (1)
Gadgets (4) various smoke and gas grenades, melee weapons and large handguns as needed
Highly Skilled (8)
Organizational Ties -- Soviet Union (6)
Tough (2)
Wealth (2)

comparison, the current men's 125kg+ weight category in powerlifting has a Squat-press record of 427.5 Kg, while one level of Superstrength gives a 1000 Kg lift with other benefits.)

Rather than tying max lift to a character's Body, lifts are Body actions with weight-based difficulty. With an exceptional roll any character could perform an heroic feat of strength, while a high body character can fail on the first attempt, grit his teeth and try again. Having levels of *Superstrength* increases your absolute maximum lift and gives you a +4/level on the Body check, as per normal, but doesn't otherwise change the rules.

Lifting the absolute maximum is a Practically Impossible action. Lifting half that weight is an Easy action. Lifting 1/20th of the maximum is Practically Guaranteed. For character sketch purposes, someone's "max reliable lift" is what they can lift 50% of the time, as indicated in the above characters.

Skills:

Acrobatics - Jumping (4), Biological Science - Zoology (2), Climbing - Natural (3), Demolitions - Artificial Structures (2), Driving - Motorcycle (1), Foreign Culture - French, American (2), Interrogation - Drugs (1), Languages - French, English (2), Medical - Pharmacy (2), Military Science - Intelligence Analysis (1), Poisons - Natural (1), Seduction - Men (4), Stealth - Move Silently (1), Writing - Academic (1), Melee Attack - Knife, Improvised, Baton/Club (2)

Defects:

Ism - Sexism (1)

Marked (2) Linque has some odd features from her Chimp heritage that can't be easily concealed: she's short, with thick hair, dark skin and a distinctive face. These do not make her unappealing.

Nemesis - Adam Prime (1)

Wanted (2)

GURPS Stats

Adam Prime (497 points)

*Deepest thanks go to Matthew Pook for producing the **GURPS** stats for these characters.*

*I developed these ideas from Stephen Jay Gould's **Ever Since Darwin**. I recommend Gould's essays to anyone interested in science's societal implications, especially past arguments and how they relate to current theory.*

Finally, this is dedicated to Josh Atkins and Rebecca Stevenson for creating Adam Prime and Eve -- despite the latter's repeated laments of "what's the big deal with Gorillas?!?"

Pyramid Review

D6 Adventure RPG

Published by [West End Games](#)

Designed by Nikola Vrtis

144-page b&W hardcover; \$29.95

Given how many games there are out there for fantasy, it's always nice to see a good, solid modern RPG come along. *D6 Adventure* is exactly that, and as befits an RPG aiming for a particular genre, the whole book is designed with contemporary adventuring in mind. Some players will recognize the D6 System from back when it was doing *Star Wars*, and that sort of high-action flair still shows through in this new game.

As one might guess from the title, this game is aimed at the cinematic side of modern roleplaying; while you probably could use these rules for *Jane Austen: The RPG*, they're obviously designed for stories needing big special effects budgets to translate to film. *D6 Adventure* just begs to be used for a game that includes martial arts maneuvers, a plucky wise-cracking sidekick, secret mystical powers, and several good explosions.

The book follows a standard organization: character creation, basics of the system, combat, special powers, equipment, and GMing tips. First, however, it sets up a sample character sheet, a quick system rundown, and an introductory "choose your own adventure" to show how the system works in play. This takes surprisingly few pages to show off how easily the game runs, if with a rather sedate "thug trying to mug a little old lady" example.

The system, for its part, is simple to follow. It's based on a reasonably elegant dice pool mechanic, where you add up your totals in the pool (plus occasionally one or two "pips," if you're midway between two dice levels) to compare against a set difficulty. There are plenty of examples of difficulty levels and modifiers for the various skills; it's easy to imagine coming across some odd application of a skill, checking the appropriate page, and getting a quick estimate of what difficulty to set based on the examples given and suggested modifiers. There's also the randomizing feature of the Wild Die, which gives even the most improbable attempt some small chance at a wild success but also allows the game master to include some unforeseen complications.

Character creation comes in three forms: templates, defined limits, and the creation point pool. Of these, the first two are quite simple to follow. Templates are provided at the end of the book, for quick and easy game-starting; most experienced roleplayers will prefer to choose one of the more customizable options instead. Defined limits provides a certain number of dice to distribute between attributes, dice to distribute among skills, and a few other basic starting values.

The creation point pool provides a more flexible means of swapping those starting dice out for points, which are then used to purchase each attribute, skill, advantage, and so on. While the additional flexibility is appreciated, this section would have benefited greatly from some cost-comparison charts, or at least a worked example of character creation using that system. Still, it shouldn't be difficult for someone used to point-based character creation systems to use it with a little bit of study.

Characters themselves are defined with attributes, which almost never change, and then skills grouped beneath each attribute. Dice put into skills add to the governing attribute, while skills with no particular rating default to the attribute itself. This makes for nicely cinematic abilities; if you have never piloted a jet fighter in your life, but you happen to have great Coordination, go ahead and try to fly that thing! The rules give a definite sense that nitpicky realism shouldn't get in the way of a good knuckle-biting action scene.

There are further ways to customize a character under Advantages, Disadvantages, and Special Abilities. Rather than trying to cover every possibility, these sensibly provide the sorts of perks (great fame), flaws (mortal enemies), and cool powers (shapeshifting) that one wishes a hero to have. While the organization could have been better -- there seems no good reason to spread four levels of equipment out as four separate entries, when it could have been a single entry with details within it for what's provided at each level -- there are some very nice options here.

One personal favorite is a flaw that attaches to and reduces the cost of an advantage: Burn Out. You pay less for your advantage, but with a condition under which it's going to disappear permanently: a fiendishly fun Damocles' Sword to hang over a character's head. There are also a few levels of disadvantages to attach to advantages reflecting how difficult it is to use the perk; a good worked example in the character templates is a young heiress with vast wealth who needs to justify every withdrawal to her trust-fund manager.

Combat is simple, and allows for a wide variety of player choices without trying to throw in a rule to cover every situation. Here, at least, the book provides a quick example of a combat round, with suitably exciting gunplay that moves as quickly as combat in a cinematic game should. It says something for how well the combat rules are integrated into the system that all the basics of combat require only a few short chapters to cover, even including the chapter on healing. There are a few charts to refer to for modifiers when things get complicated, and most GMs will have all the relevant numbers from those memorized after a few sessions.

When this book claims it can do modern adventure, it shows every intention of covering the supernatural possibilities of this, and the magic and psionics systems deliver well. Psionic powers are skills divided up under a Psionics attribute, with several types of modifiers to add more flavor (and complexity, and ease of use) to a given use of the skill. It's a nice neat system, and seems pretty straightforward.

Magic, on the other hand, is marvelously complex in possibility, while conveniently simple for in-game use. The real fun comes in the spell creation system. A whole list of effects, measurements, components, gestures, and so forth let you build up your own spell from scratch, and calculate exactly how hard it's going to be. For example, in the pre-calculated spells, you can conjure up a simple meal with a difficulty of 5, but creating a doorway to transport you 100 kilometers away will require matching a difficulty of 19. But then you can go write up your own spell where (as a helpful example on the company's website shows) you use a specific iron pot and perform a complex series of gestures around it in order to conjure up shadowy tentacles which can be directed to strike at people . . . Building your own new spells is nothing new in a roleplaying system, but this game does it well, and doesn't skimp on the example spells for people who'd rather not go to all that trouble.

The one major flaw of the book comes in the last few chapters, where it gives GM and adventure advice. While the game has set up all of the rules for high-action gameplay, it's sadly lacking in good places to start for running that kind of campaign. If you already have a campaign idea in mind -- special ops fighting against crime lords, a magical kid and his mentors on a journey to reclaim an ancient artifact, the League of Super-Powered Nice Guys -- this book will give you what you need to build exactly that. If you're searching for ideas, you might want to look elsewhere for inspiration first, and then come back to *D6 Adventure* for the rules. (The ready-to-play character templates go some way towards helping with this, but the campaign suggestions the book offers are maddeningly vague.)

D6 Adventure finds a solid balance between simplicity and plenty of options, with both ways to customize and lots of pre-made chunks for when you need something right away without the hassle of working it up yourself. (A perfect example of this is the chart in the very back of the book that gives you pregenerated average numbers for dice pools from one to 50, for when you're really not in the mood to roll 35 dice and add them up.) It's probably not the ideal game for beginning GMs, especially those new to roleplaying in general, because it does require you bring a certain clarity of vision to the table yourself. But with an experienced GM who can set things out for players to work with, even players brand new to gaming should be able to get into the swing (and explosions) of things with this game.

Campaign Secrets

Published by [The Game Crafter](#)

Designed by JT Smith

140-card full-color deck; \$17.95

For those of you that have not yet noticed, 2004 is an election year. That is, for the position of President of the USA, which, for all of its razzmatazz and hoopla, it is no surprise that it has become the subject of a game or two. Having got through the Primaries, and as we roll towards the election itself, the expected -- and now almost traditional -- *Cthulhu for President 2004* from Chaosium has yet to arrive. But in the meantime, The Game Crafter offers us the chance to stand for the highest office ourselves with *Campaign Secrets*. And that includes anyone ineligible to stand, so with this card game, both Arnold Schwarenegger and myself are in with a chance.

Designed for three to six players, *Campaign Secrets* is a card game of political satire, in which the candidates battle for the top share of electorate through the Primaries and then onto Election day itself. Along the way, they try to uncover as many of their rivals' dirty little secrets as they can, invariably resort to underhand tricks, and all this while trying keep their own dirty secrets from the eyes of the electorate.

The game consists of 140 cards, which are broken down into a 100-card play deck, 38 score cards, a rules card, and a share card. The latter is not part of the game, but more a piece of advertising, while the score cards are marked with either 1%, 3%, or 5%, and represent a share of the vote. While the share cards are done in black and white, the play cards come in full color, are illustrated to pleasing and often comic effect, and are each given some interesting, fun fact or quote. The latter range in their origins from the classical, such as Cicero and Publilius Syrus; the historical, such as Napoleon; Aldous Huxley and Emerson from literature; and of course, from the political arena. These get right up to date with quotes from the current incumbent, President George W. Bush, as well from his rivals, John Kerry and Senator John McCain. The facts come from a variety of different sources, but in the main from newspapers and web sites, the URLs being included and the newspapers named where appropriate.

The play cards come in two types. The blue Campaign cards have a direct effect when played. They further split into two general groups. The first are cards like "Better Education Policy," "Great Campaign Staff," and "Republican Party Nomination" that can gain or lose a player more percentages of the vote. The second group, such as "Cover Up," "Investigative Reporter," and "Smear Campaign," affect the Secret cards currently in play.

The red Secret cards, which include "Bad Political Record," "Ballot Tampering," and "Tax Evasion," have two effects. One is their Cost, a percentage of their votes lost when the card is revealed. The other is Benefit, which is the percentage gained if the secret can remain unrevealed until the end of the game. Some just have the two figures, for example, "Polluters" has a Cost of 3% and a Benefit of 2%. Others have additional effects like "When It Rains, It Pours," which provides no Benefit, but has a vile Cost, forcing the holder to reveal all of his current Secrets and pay the Cost for each!

Campaign Secrets claims to be easy to both learn and play, the learning process being a mere five minutes in length. The rules live up to this, fitting onto just the one side of a card. At the game's beginning, each candidate or player receives Score cards to the value of 10% and five play cards. The remaining Score cards are put aside as the undecided vote. One Campaign card is kept aside, which is the "Election Day" card. This comes into play as soon as the "Primaries" card is revealed, which is mandatory as soon as it appears in a player's hand.

Play is simple; candidates play just a single card on their turns. If it's a blue Campaign card, it is read out, its effects directed at another candidate, and then the card discarded. Red Secret cards are put face down in front of the candidate a player wishes to target. They are only revealed due to the effect of a Campaign card, or at the end of the game. Some Campaign cards work to counter the effect of other Campaign cards, so that it is possible to play more than one card in a turn. A candidate's hand is refreshed to five cards at the end of their turn.

As soon as the "Primaries" card is revealed, it is discarded and every player's hand is reshuffled back into the deck along with the discard pile and the "Election Day" card. Candidates are dealt new hands, and the game continues as before, everyone having been given new campaigning tools and starting out afresh. That is, except for those secrets that still remain hidden in front of the candidates. As soon as the "Election Day" card appears in a candidate's hand, like the "Primaries" card, it must be played. Everyone's secrets are revealed, their benefits gained and added to their current percentage of the votes. The candidate with the highest percentage of the electorate is of course the winner, and come the New Year, will be sworn in as President of the United States of America.

In play, *Campaign Secrets* is direct and easy. The aim is simple: to get down and reveal as many of your opponents' secrets while preventing them from doing the same to you, as well as gaining as much of the vote as possible and also keeping it away from said opponents. Yet while the mechanics are clear and sound, the game play is not quite as engaging as the designer wanted. Perhaps this can be put down to the weak strength of the intended satire, and the somewhat dry nature of the card text, which -- while informative and interesting in its facts -- only otherwise sticks to game instructions. The effect of that is to strengthen the game's educational factor and downplay any political bias. One saving grace of card games like this, such as InteractivitieS Ink's *IGOR: The Mad Scientist's Lament* and GDW's *Red Empire*, is their openness to roleplaying input from its players. There is no denying the potential for this in *Campaign Secrets*, but the game itself does not actively encourage it.

It should also be made clear that while the rules are simple and direct, owners of the game will probably need to check the publisher's website to get what is in effect, the full version, also known as the "The Constitution" of *Campaign Secrets*. The website also includes a number of fan-created rules variants. Although solidly designed, simple to play, *Campaign Secrets* is ultimately slightly underwhelming. Not a bad game per se, but one that lacks the killer hook that will keep potential candidates coming back to run again for President of the USA.

Dork Tower!

Dork Tower!

The Altermity Duel: Burr v. Hamilton v. History

*"O Burr, O Burr, what has thou done?
Thou has shooted dead great Hamilton.
You hid behind a bunch of thistle,
And shooted him dead with a great hoss pistol."*
-- caption on a wax tableau in New York City, July 1804

Only once since Bosworth Field has the direction of a great nation depended on direct personal combat between two of its leaders. Two hundred years ago Sunday, America's future was determined by two pistol shots, fired by Alexander Hamilton, former Secretary of the Treasury and Inspector General of the U.S. Army, and Aaron Burr, the sitting Vice-President of the United States. The illegal -- and, to some modern historians perhaps not as capable of attaining the mindset of the times as they might be, insane -- duel between them echoes down to the present, even if many moderns prefer to hear the echoes as the impersonal rumbles of Industrialization or Westward Expansion rather than the sound of gunshots over the Hudson. When the modern reader rejects, say, the notion of a duel settling anything (much less the notion of a duel between, say, Bill Clinton and Dick Cheney), that too is partially the outcome of the "interview at Weehawken."

"The bloody feuds of Burr's time never again recurred. The death of Hamilton and the Vice-President's flight, with their accessories of summer-morning sunlight on rocky and wooded heights, tranquil river, and distant city, and behind all, their dark background of moral gloom, double treason, and political despair, still stand as the most dramatic moment in the early politics of the Union."

-- Henry Adams, *History of the United States of America During the Administrations of Thomas Jefferson and James Madison*

This column, with mild regret, will pass over the potential for mysticism and mystification inherent in the Duel, from the notion that Burr deliberately conspired to murder Hamilton (a theory floated within days of the "interview" by even the pro-Republican press in New York) to the image of Burr as Scapegoat and Hamilton as Summer King in some Frazerian ritual sealing the infant Republic in blood and cordite. Aaron Burr, especially, is such a rich target for speculation on matters secret and conspiratorial that he could support a whole column on his own, and he might well do so in the future.

For now, however, I'd like to concentrate on the Duel as a historical event, a moment at which, large and imposing theories of Historical Inevitability to the contrary, not just two lives but at least two futures for the United States hung in the balance. Astonishingly, nobody seems to have written an alternate history novel, or even a short story, exploring other results of the Duel. Hence, we can leave magic and vampires for our second exploration if such a thing is destined to be; on this first trip, we're in uncharted territory even while sticking to real history.

"I stand ready to avow or disavow promptly and explicitly any precise or definite opinion which I may be charged with having declared to any gentleman. More than this can not fitly be expected from me; and especially it can not reasonably be expected that I shall enter into an explanation upon a basis so vague as that which you have adopted. I trust upon more reflection you will see the matter in the same light with me. If not, I can only regret the circumstances and must abide the consequences."

-- letter of Alexander Hamilton to Aaron Burr, June 20, 1804

Alexander Hamilton and Aaron Burr, both short of stature and long of libido, both brilliant lawyers and capable soldiers, both consumed with desire for fame and reputation, neither entirely satisfied with the state of American democracy in 1804, still had their differences. Hamilton was a radical Federalist to his core; Burr a moderate Republican, when he could be bothered to make any identifiable ideological statement. Further, they were sworn political enemies from at least 1791 when Burr defeated Hamilton's father-in-law for the U.S. Senate. Hamilton blocked Burr's ascent to the Presidency in the disputed election of 1800 by lobbying his Federalist Party supporters to vote for Jefferson over Burr, leaving Burr frozen out as a Vice-President without Jefferson's trust or confidence. Hamilton then derailed a Burr run for governor of New York (with Federalist backing) in 1804, at the cost of

decimating Hamilton's own Federalist support in that state and elsewhere. Hamilton said many times that Burr was the "Catiline of America," referring to the famous traitor and degenerate of the Roman Republic. At a dinner party in Albany during that last race, Hamilton repeated that accusation in the hearing of Dr. Charles Cooper, who reported it to the newspapers as Hamilton's expression of "a despicable opinion."

In 1804, *despicable*, like *rascal*, *coward*, or *scoundrel*, was a fighting word. Burr called Hamilton on it in June (although Cooper's report had been published two months earlier), and Hamilton's flip reply left him trapped when Burr refused to accept the condescending and defiant explanation he offered for Cooper's word. Now, Hamilton could not evade "the consequences" he had airily alluded to in his response; he found a second, Nathaniel Pendleton, who tried to end the dispute without bloodshed. Burr, sensing Hamilton's political weakness, refused to let his own second, William Van Ness, accept any compromise. When Hamilton then called Burr's bluff and actually acceded to the duel, Burr was left "gloomy" but had to carry it forward or suffer his own embarrassing climb-down. The four men, plus Hamilton's doctor, David Hosack, rowed (in separate boats) across the Hudson to New Jersey, where (unlike New York) dueling was legal. On a narrow ledge below the cliffs of Weehawken, around 8 a.m. on July 11, 1804, Burr and Hamilton squared away, using massive .544 pistols owned by Hamilton's brother-in-law -- the same guns that had killed Hamilton's own son in a duel in 1801. Burr and Hamilton fired within a few seconds of each other at most; Hamilton's bullet clipped a tree limb well above Burr's head, while Burr's bullet struck Hamilton in the side, fatally wounding him. Hamilton had left papers indicating his intent to "reserve or waste" his shot; they put Burr in the position of a murderer rather than a duelist. Burr's Republican enemies in New York (still peeved about his flirtation with the Federalists in the governor's race) gained a murder indictment in New Jersey that Burr had to flee. Burr's political career, as it happened, was the other casualty of the Duel.

"Somewhere Aaron Burr shoots Alexander Hamilton, somewhere Alexander Hamilton shoots Aaron Burr, somewhere they both get it; somewhere they both miss, probably a few where one of the bullets ricochets and kills one of the seconds; somewhere the boat that takes them to Weehawken tips over, and one or both of them drown; somewhere Hamilton and Burr never met, somewhere they were lifelong friends."

-- Michael Kurland, *The Whenabouts of Burr*

But, of course, it didn't have to happen that way. Bullets, especially those fired from smoothbore pistols of heavy caliber held by bitter enemies well past their prime years of marksmanship or health, have a way of going astray. (The lengthy contretemps about where, exactly, Alexander Hamilton's shot was aimed -- and where it wound up -- demonstrates this point, one should think.) When two such men held two such guns, almost anything could happen, and the four alternatives below are only a few of the possibilities, somewhat redacted for drama but well within the bounds of realism. They presume, for the sake of argument, that the most mundane alternative -- namely, that Hamilton was able to weasel out of Burr's shaky grounds for dueling, and that the Duel therefore never happened -- is off the table. Either the forces of Historical Inevitability force the two of them back onto the dueling ground when Burr crafts a sturdier challenge, or historical inertia only relaxes at the decisive moment, below the cliffs at Weehawken.

"No Ill Will Distinct From Political Opposition": Neither Dies

If, as happened in a good 80% of American duels, both sides had escaped unharmed, the Burr-Hamilton political combat would have continued. Both men would have found their reputations raised by the affray; rather than debasing the code duello (as happened in our history), it became ever more common as faction continued to spread through American politics. While Burr outflanked Hamilton by moving to Tennessee (where he enjoyed soaring popularity) and running for the Senate, Hamilton used his new glory to remake the Federalist Party and fight a bitter rear-guard action against the Republican machine in New York. With Jefferson's embargo bankrupting the country, and with Burr off in the West, Hamilton was able to recover the New York statehouse for his Federalists.

From this point, the alternatives continue to branch. Hamilton would definitely have had his chance at renewed military glory as the desperate Madison administration would perforce have turned to "Washington's heir" in the crisis of 1814. Of course, a Federalist President (made possible by a revived Hamiltonian faction) would never have been maneuvered into the War of 1812, which the British almost wound up calling off before it even started. Even a Hamilton presidency in 1808 is not outside the bounds of possibility, as the country recalled his financial genius in

Washington's administration. One way the Federalists might have won is if Burr had split the Republican vote with his own party in the West. If one of the myriad duels in that wild country didn't carry off Burr's protégé Andrew Jackson, he would have been a stalwart of the Burr faction and a coming force in the 1820s -- but for sectionalism, rather than for national unity as in our history. Could the Civil War have broken out over the "corrupt bargain" of 1828? Or, Burr might have been able to force Madison to accept him as a running mate in 1808, and had Burr become president instead of Monroe in 1816, the resulting Burr Doctrine would have expressed American claims to suzerainty over the whole hemisphere. President Burr would certainly have intervened aggressively in the Spanish colonial revolutions -- but he would also have staunchly forbidden the expansion of slavery into the newly conquered territories. Perhaps President Burr's heavy-handed methods spark a Civil War in 1820, rather than a Missouri Compromise. One gunshot gone awry, and a political climate made more violent by its example, could have killed thousands, and left millions enslaved -- before industrialization could give the North the advantages it had in our own timeline.

"Yet I Shall Live": Hamilton Kills Burr

With Burr killed, and Hamilton scorned as a murderer by the Republican press, Jefferson wins. In our history, in the months after the Duel, Burr prevented Jefferson from removing Samuel Chase from the Supreme Court (by stage managing the Senate impeachment hearings to force a "not guilty" verdict). With Burr out of the way, Jefferson can sweep the Supreme Court aside -- even John Marshall suffered an uncharacteristic cravenness at that crisis in our history -- and rule by Congressional decree. Jeffersonian radicalism is ascendant, as the great leveling force of the French Revolution finally spills into the American one. (Except, of course, for the slaves.) Cities shrink as trade (unprotected by a navy and unassisted by roads or canals) collapses and mobs riot. In the absence of an Army, private militias take up arms and slaughter Indians. Hamilton, hated by the mob in New York for his "monarchist" views and shunned by the puritans of New England, is forced to seek exile in Scotland, where he pens bitter screeds against his foes and allows his aristocratic instincts full rein. In his third term, Jefferson turns the War of 1812 into a revolutionary war in Ireland and allies the United States with Napoleon. When Wellington's troops land in America in 1815, they make Hamilton Royal Governor of New York; his efforts to reconcile America to British law and authority win eventual respect in history books a hundred years later. They do not mention his duel, which is considered unseemly.

"Great Ambition and Spirit of Revenge": Burr Badly Wounded

Although Hamilton was killed, his shot hit Burr in the thigh, leaving him badly wounded and insensible for a month. In the wake of Burr's injury, many dismissed Hamilton's claims as self-serving propaganda, starting a vast political fight that left Burr ostracized but not actually under indictment. In the East, that is -- Burr's popularity in the West, always high, reached stellar proportions. Burr, rather than being chastened by his narrow escape, was energized by it. Surely, he believed, his Napoleonic destiny had saved him, and his empire awaited in the lands even now calling on him to come over the mountains and lead them. In our own history, Burr never quite pulled the trigger on "the Southwest Conspiracy" (although he got close enough to it in our 1806 to get tried for treason), but in a timeline where he felt himself miraculously saved, he decided to gamble his future once more. He and his ally Andrew Jackson assembled an army of frontiersmen in 1805 and moved on New Orleans, seizing the arsenal and banks for an expedition into Spanish Mexico. Jefferson, without an Army or a Navy, could do nothing as Burr detached the Louisiana Purchase (so recently added to the American empire) as his own personal fief. Burr might have stood pat there, or invaded Texas, or even moved deeper into Mexico to liberate it from Spain -- and add it to Burr's dreams of Napoleonic glory. Any number of possibilities, from a debilitating American civil war in 1806 (that might have killed Thomas Lincoln of Kentucky before he could sire his son Abraham), to a Burr march on Washington (which he contemplated in our history in the winter of 1805), to a massive Burr Empire from Yucatan to Montana, branch from Burr's decision -- any decision -- in the fall of 1805. Which itself might easily have branched from a twitch in Alexander Hamilton's wrist.

"Crises Of Our Public Affairs": Hamilton Badly Wounded

Hamilton's ball killed Burr; Burr's ball struck close to Hamilton's spine, but did not emerge. Hamilton would be in intermittent agony for the rest of his long life, and his friends would note a new fierceness in his temper, impatience in his dealings, and angry tendency to gesture and wildness that had been suppressed before. His brush with death showed him how precarious his finances really were -- he, who had saved America's economy, was nearly bankrupt. When his father-in-law Philip Schuyler died in the winter of 1804 leaving vast debts, Hamilton was on the brink of

personal ruin. Before the Duel, he had argued against separating New York and New England from the "Virginian despotism" of the United States. Now, his national influence gone, desperate for a new dispensation that would reshape the financial map of New York, and without Burr to block Jefferson's power grabs, Hamilton began to rethink "dismemberment". With Hamilton converted to their side, the conspirators were able to gain a majority of the leaders of the Northeast. During the depression of 1807, Hamilton struck, declaring the embargo null and void and daring Jefferson to do anything about it. Boston merchants converted their languishing ships into gunboats; Hamilton's preparations (learned at the feet of Washington and von Steuben) brought a Confederate Army into being to defend the secession (and to occupy a still disturbingly Republican New York City). Although "the Virginian faction" was punished at the polls for the loss of New England (losing to Pennsylvania senator James Maclay), the dismemberment remained. Hamilton became the Confederation's First Consul, serving for four terms. By his death in 1836, when he had gone very bald indeed, the Adams newspapers (the only ones who could still publish anything remotely opposed to the consular will) all remarked on his strong physical resemblance to his old foe Aaron Burr.

The Alternity Duel: Burr v. Hamilton v. History

*"O Burr, O Burr, what has thou done?
Thou has shot dead great Hamilton.
You hid behind a bunch of thistle,
And shot him dead with a great hoss pistol."
-- caption on a wax tableau in New York City, July 1804*

Only once since Bosworth Field has the direction of a great nation depended on direct personal combat between two of its leaders. Two hundred years ago Sunday, America's future was determined by two pistol shots, fired by Alexander Hamilton, former Secretary of the Treasury and Inspector General of the U.S. Army, and Aaron Burr, the sitting Vice-President of the United States. The illegal -- and, to some modern historians perhaps not as capable of attaining the mindset of the times as they might be, insane -- duel between them echoes down to the present, even if many moderns prefer to hear the echoes as the impersonal rumbles of Industrialization or Westward Expansion rather than the sound of gunshots over the Hudson. When the modern reader rejects, say, the notion of a duel settling anything (much less the notion of a duel between, say, Bill Clinton and Dick Cheney), that too is partially the outcome of the "interview at Weehawken."

"The bloody feuds of Burr's time never again recurred. The death of Hamilton and the Vice-President's flight, with their accessories of summer-morning sunlight on rocky and wooded heights, tranquil river, and distant city, and behind all, their dark background of moral gloom, double treason, and political despair, still stand as the most dramatic moment in the early politics of the Union."

-- Henry Adams, *History of the United States of America During the Administrations of Thomas Jefferson and James Madison*

This column, with mild regret, will pass over the potential for mysticism and mystification inherent in the Duel, from the notion that Burr deliberately conspired to murder Hamilton (a theory floated within days of the "interview" by even the pro-Republican press in New York) to the image of Burr as Scapegoat and Hamilton as Summer King in some Frazerian ritual sealing the infant Republic in blood and nitre. Aaron Burr, especially, is such a rich target for speculation on matters secret and conspiratorial that he could support a whole column on his own, and he might well do so in the future.

For now, however, I'd like to concentrate on the Duel as a historical event, a moment at which, large and imposing theories of Historical Inevitability to the contrary, not just two lives but at least two futures for the United States hung in the balance. Astonishingly, nobody seems to have written an alternate history novel, or even a short story, exploring other results of the Duel. Hence, we can leave magic and vampires for our second exploration if such a thing is destined to be; on this first trip, we're in uncharted territory even while sticking to real history.

"I stand ready to avow or disavow promptly and explicitly any precise or definite opinion which I may be charged with having declared to any gentleman. More than this can not fitly be expected from me; and especially it can not reasonably be expected that I shall enter into an explanation upon a basis so vague as that which you have adopted. I trust upon more reflection you will see the matter in the same light with me. If not, I can only regret the circumstances and must abide the consequences."

-- letter of Alexander Hamilton to Aaron Burr, June 20, 1804

Alexander Hamilton and Aaron Burr, both short of stature and long of libido, both brilliant lawyers and capable soldiers, both consumed with desire for fame and reputation, neither entirely satisfied with the state of American democracy in 1804, still had their differences. Hamilton was a radical Federalist to his core; Burr a moderate Republican, when he could be bothered to make any identifiable ideological statement. Further, they were sworn political enemies from at least 1791 when Burr defeated Hamilton's father-in-law for the U.S. Senate. Hamilton blocked Burr's ascent to the Presidency in the disputed election of 1800 by lobbying his Federalist Party supporters to vote for Jefferson over Burr, leaving Burr frozen out as a Vice-President without Jefferson's trust or confidence. Hamilton then derailed a Burr run for governor of New York (with Federalist backing) in 1804, at the cost of

decimating Hamilton's own Federalist support in that state and elsewhere. Hamilton said many times that Burr was the "Catiline of America," referring to the famous traitor and degenerate of the Roman Republic. At a dinner party in Albany during that last race, Hamilton repeated that accusation in the hearing of Dr. Charles Cooper, who reported it to the newspapers as Hamilton's expression of "a despicable opinion."

In 1804, *despicable*, like *rascal*, *coward*, or *scoundrel*, was a fighting word. Burr called Hamilton on it in June (although Cooper's report had been published two months earlier), and Hamilton's flip reply left him trapped when Burr refused to accept the condescending and defiant explanation he offered for Cooper's word. Now, Hamilton could not evade "the consequences" he had airily alluded to in his response; he found a second, Nathaniel Pendleton, who tried to end the dispute without bloodshed. Burr, sensing Hamilton's political weakness, refused to let his own second, William Van Ness, accept any compromise. When Hamilton then called Burr's bluff and actually acceded to the duel, Burr was left "gloomy" but had to carry it forward or suffer his own embarrassing climb-down. The four men, plus Hamilton's doctor, David Hosack, rowed (in separate boats) across the Hudson to New Jersey, where (unlike New York) dueling was legal. On a narrow ledge below the cliffs of Weehawken, around 8 a.m. on July 11, 1804, Burr and Hamilton squared away, using massive .544 pistols owned by Hamilton's brother-in-law -- the same guns that had killed Hamilton's own son in a duel in 1801. Burr and Hamilton fired within a few seconds of each other at most; Hamilton's bullet clipped a tree limb well above Burr's head, while Burr's bullet struck Hamilton in the side, fatally wounding him. Hamilton had left papers indicating his intent to "reserve or waste" his shot; they put Burr in the position of a murderer rather than a duelist. Burr's Republican enemies in New York (still peeved about his flirtation with the Federalists in the governor's race) gained a murder indictment in New Jersey that Burr had to flee. Burr's political career, as it happened, was the other casualty of the Duel.

"Somewhere Aaron Burr shoots Alexander Hamilton, somewhere Alexander Hamilton shoots Aaron Burr, somewhere they both get it; somewhere they both miss, probably a few where one of the bullets ricochets and kills one of the seconds; somewhere the boat that takes them to Weehawken tips over, and one or both of them drown; somewhere Hamilton and Burr never met, somewhere they were lifelong friends."

-- Michael Kurland, *The Whenabouts of Burr*

But, of course, it didn't have to happen that way. Bullets, especially those fired from smoothbore pistols of heavy caliber held by bitter enemies well past their prime years of marksmanship or health, have a way of going astray. (The lengthy contretemps about where, exactly, Alexander Hamilton's shot was aimed -- and where it wound up -- demonstrates this point, one should think.) When two such men held two such guns, almost anything could happen, and the four alternatives below are only a few of the possibilities, somewhat redacted for drama but well within the bounds of realism. They presume, for the sake of argument, that the most mundane alternative -- namely, that Hamilton was able to weasel out of Burr's shaky grounds for dueling, and that the Duel therefore never happened -- is off the table. Either the forces of Historical Inevitability force the two of them back onto the dueling ground when Burr crafts a sturdier challenge, or historical inertia only relaxes at the decisive moment, below the cliffs at Weehawken.

"No Ill Will Distinct From Political Opposition": Neither Dies

If, as happened in a good 80% of American duels, both sides had escaped unharmed, the Burr-Hamilton political combat would have continued. Both men would have found their reputations raised by the affray; rather than debasing the code duello (as happened in our history), it became ever more common as faction continued to spread through American politics. While Burr outflanked Hamilton by moving to Tennessee (where he enjoyed soaring popularity) and running for the Senate, Hamilton used his new glory to remake the Federalist Party and fight a bitter rear-guard action against the Republican machine in New York. With Jefferson's embargo bankrupting the country, and with Burr off in the West, Hamilton was able to recover the New York statehouse for his Federalists.

From this point, the alternatives continue to branch. Hamilton would definitely have had his chance at renewed military glory as the desperate Madison administration would perforce have turned to "Washington's heir" in the crisis of 1814. Of course, a Federalist President (made possible by a revived Hamiltonian faction) would never have been maneuvered into the War of 1812, which the British almost wound up calling off before it even started. Even a Hamilton presidency in 1808 is not outside the bounds of possibility, as the country recalled his financial genius in

Washington's administration. One way the Federalists might have won is if Burr had split the Republican vote with his own party in the West. If one of the myriad duels in that wild country didn't carry off Burr's protégé Andrew Jackson, he would have been a stalwart of the Burr faction and a coming force in the 1820s -- but for sectionalism, rather than for national unity as in our history. Could the Civil War have broken out over the "corrupt bargain" of 1828? Or, Burr might have been able to force Madison to accept him as a running mate in 1808, and had Burr become president instead of Monroe in 1816, the resulting Burr Doctrine would have expressed American claims to suzerainty over the whole hemisphere. President Burr would certainly have intervened aggressively in the Spanish colonial revolutions -- but he would also have staunchly forbidden the expansion of slavery into the newly conquered territories. Perhaps President Burr's heavy-handed methods spark a Civil War in 1820, rather than a Missouri Compromise. One gunshot gone awry, and a political climate made more violent by its example, could have killed thousands, and left millions enslaved -- before industrialization could give the North the advantages it had in our own timeline.

"Yet I Shall Live": Hamilton Kills Burr

With Burr killed, and Hamilton scorned as a murderer by the Republican press, Jefferson wins. In our history, in the months after the Duel, Burr prevented Jefferson from removing Samuel Chase from the Supreme Court (by stage managing the Senate impeachment hearings to force a "not guilty" verdict). With Burr out of the way, Jefferson can sweep the Supreme Court aside -- even John Marshall suffered an uncharacteristic cravenness at that crisis in our history -- and rule by Congressional decree. Jeffersonian radicalism is ascendant, as the great leveling force of the French Revolution finally spills into the American one. (Except, of course, for the slaves.) Cities shrink as trade (unprotected by a navy and unassisted by roads or canals) collapses and mobs riot. In the absence of an Army, private militias take up arms and slaughter Indians. Hamilton, hated by the mob in New York for his "monarchist" views and shunned by the puritans of New England, is forced to seek exile in Scotland, where he pens bitter screeds against his foes and allows his aristocratic instincts full rein. In his third term, Jefferson turns the War of 1812 into a revolutionary war in Ireland and allies the United States with Napoleon. When Wellington's troops land in America in 1815, they make Hamilton Royal Governor of New York; his efforts to reconcile America to British law and authority win eventual respect in history books a hundred years later. They do not mention his duel, which is considered unseemly.

"Great Ambition and Spirit of Revenge": Burr Badly Wounded

Although Hamilton was killed, his shot hit Burr in the thigh, leaving him badly wounded and insensible for a month. In the wake of Burr's injury, many dismissed Hamilton's claims as self-serving propaganda, starting a vast political fight that left Burr ostracized but not actually under indictment. In the East, that is -- Burr's popularity in the West, always high, reached stellar proportions. Burr, rather than being chastened by his narrow escape, was energized by it. Surely, he believed, his Napoleonic destiny had saved him, and his empire awaited in the lands even now calling on him to come over the mountains and lead them. In our own history, Burr never quite pulled the trigger on "the Southwest Conspiracy" (although he got close enough to it in our 1806 to get tried for treason), but in a timeline where he felt himself miraculously saved, he decided to gamble his future once more. He and his ally Andrew Jackson assembled an army of frontiersmen in 1805 and moved on New Orleans, seizing the arsenal and banks for an expedition into Spanish Mexico. Jefferson, without an Army or a Navy, could do nothing as Burr detached the Louisiana Purchase (so recently added to the American empire) as his own personal fief. Burr might have stood pat there, or invaded Texas, or even moved deeper into Mexico to liberate it from Spain -- and add it to Burr's dreams of Napoleonic glory. Any number of possibilities, from a debilitating American civil war in 1806 (that might have killed Thomas Lincoln of Kentucky before he could sire his son Abraham), to a Burr march on Washington (which he contemplated in our history in the winter of 1805), to a massive Burr Empire from Yucatan to Montana, branch from Burr's decision -- any decision -- in the fall of 1805. Which itself might easily have branched from a twitch in Alexander Hamilton's wrist.

"Crises Of Our Public Affairs": Hamilton Badly Wounded

Hamilton's ball killed Burr; Burr's ball struck close to Hamilton's spine, but did not emerge. Hamilton would be in intermittent agony for the rest of his long life, and his friends would note a new fierceness in his temper, impatience in his dealings, and angry tendency to gesture and wildness that had been suppressed before. His brush with death showed him how precarious his finances really were -- he, who had saved America's economy, was nearly bankrupt. When his father-in-law Philip Schuyler died in the winter of 1804 leaving vast debts, Hamilton was on the brink of

personal ruin. Before the Duel, he had argued against separating New York and New England from the "Virginian despotism" of the United States. Now, his national influence gone, desperate for a new dispensation that would reshape the financial map of New York, and without Burr to block Jefferson's power grabs, Hamilton began to rethink "dismemberment". With Hamilton converted to their side, the conspirators were able to gain a majority of the leaders of the Northeast. During the depression of 1807, Hamilton struck, declaring the embargo null and void and daring Jefferson to do anything about it. Boston merchants converted their languishing ships into gunboats; Hamilton's preparations (learned at the feet of Washington and von Steuben) brought a Confederate Army into being to defend the secession (and to occupy a still disturbingly Republican New York City). Although "the Virginian faction" was punished at the polls for the loss of New England (losing to Pennsylvania senator James Maclay), the dismemberment remained. Hamilton became the Confederation's First Consul, serving for four terms. By his death in 1836, when he had gone very bald indeed, the Adams newspapers (the only ones who could still publish anything remotely opposed to the consular will) all remarked on his strong physical resemblance to his old foe Aaron Burr.

A Man of Auction

Last Saturday I had the pleasure <ahem> of going to an honest-to-goodness auction . . . my first such experience that I can recall (not counting one or two such events I've been to at [gaming conventions](#)).

The auction in question was for surplus computer equipment. As my friend Chuck -- who was attending the convention with me -- explained, these computers were discards by various state agencies (since we're in the state capital), which had also been picked through by various schools for equipment *they* wanted. In other words, these were twice-rejected computers.

My desires for attending this auction were modest; I was hoping to acquire another laptop for a friend. I had a certain price frame in mind (\$100-ish, for those playing the home game). Chuck had his eyes on . . . I'm not sure, really. Whenever I inquired, he would rattle off descriptions that melded together into an incomprehensible blur: "I'm going to turn this box into a dedicated router remote firewall Gnoppix alludium P36 explosive space modulator with cup holder."

Anyway, I have come to the conclusion that *anything* vaguely laptop-y will sell for more than I am ever willing to spend. I made exactly one bid during the entire auction. There was an oooooold 486/33 laptop that boasted having Windows 3.11 installed; its screen was roughly the size of a Tamagatchi; its coolest feature by far was the tiny trackball it had as a pointer device. I thought I could turn it into an interesting prop in a game at some point. Anyway, the opening bid was \$2.50; I raised to \$5. And that was my moment of glory; the laptop ended up going for \$70. The other laptops -- and again, I stress that all of these were at least eight years old, obviously missing parts, and some didn't even turn on -- went for no less than \$160. I'm pretty sure a black-painted Etch-a-Sketch would've fetched at least \$120.

Chuck, for his part, ended up winning four desktop computer towers for \$50, about which he feels confident that he will be able to assemble two machines that actually work and, as best I can tell in listening to his plans, will form the feet of Voltron.

Probably the most interesting auction win was the person who won 20 monitors for five bucks each. Chuck and I both agreed that they would be worth that much for the sheer pleasure of dropping off buildings.

Anyway, all of this is preamble to state that an auction would kick butt as a setting for almost any campaign. Now, I already knew this on some vague level; I was part of a *Fading Suns* LARP at Dragon*Con four years ago or so, and the central premise was an auction. However, that scenario didn't really register because the auction was (as best I can tell) rigged; nothing the players could have done would affect the outcome.

But that doesn't need to be the case. A thought-out auction can provide a *lot* of interesting people and things to interact with in an interesting place. So, in typical Random Thought Table tradition, I thought I'd mention some of the possibilities behind an auction, as well as some of the pitfalls.

Modern auctions generally target two different audiences: Those looking for a bargain over something available (in some form) through normal channels, and those looking for something that *can't* be had through normal channels, regardless of price. The "Island of Misfit Computers" auction I was at was an example of the former, while the stereotypical "16th Century Tome of Baffling Prophecies and Jam Recipes"-type auction popular in movies and television is an example of the latter. It's even possible to combine the two, although usually the two types straddle two different social strata. ("And the case of 48 cans of Beef-a-Roni goes to Jimbo 'Shiv' Tubbs for nine dollars, 60 cents. Next up for auction is a portrait from Picasso's 'Blue' Period . . .")

Regardless of the target audience, auctions attract people from a wide variety of backgrounds, interests, and cliques. Thus the computer auction had resellers, college kids, working mothers, schmoes like Chuck and me, and many others. A fine art auction might attract old money, nuvou riche, mob bosses, museum curators, and so on. Regardless, this melding and clashing of different circles is where a lot of good gaming potential comes from. After all, any polite

excuse to have the heroes sitting next to Don Antonio Falsetto *and* the head of EvilCo can't be all bad.

And there are plenty of opportunities for these disparate folks to interact. In particular, many auctions allow a viewing or examination of items before the bidding, so potential buyers can get a better look at what they're bidding on. This can allow for all kinds of conversations, intimidation, and attempts at feeling out the opponents in the auction.

In order for an auction to work with PCs, there must be several factors in place:

The auction has to have something the players (and characters) want, *and* the PCs can't acquire it through any easier means. Fortunately, most games are brimming with goodies that would make great candidates for auctions: magic items, unique technology, secrets, and so on. Alternately, the auction can provide something that would normally be out of reach for the heroes. For example, in most sci-fi games the heroes don't have enough money to afford their own ship immediately. But a fine campaign could start with the heroes pooling their money to buy a sight-unseen, as-is refurbished quirky vessel at an auction populated by a wretched hive of scum and villainy. Also remember that auctions can sell services or more ephemeral things.

For true roleplaying possibilities, auctions require actual currency. Thus games that abstract wealth levels (such as *DC Heroes*, *Marvel Super-Heroes*, or *Vampire: The Masquerade* and other World of Darkness games) will have a difficult time: "I bid a Remarkable amount of money." Fortunately, there can be an out, even for these kinds of games. Simply introduce some kind of currency or other limited, tangible resource to the game, perhaps even for the specific purpose of the auction. For example, in a *Vampire* game it would be entirely appropriate to barter favors, years of servitude, or the like. Regardless, there needs to be that moment where the players need to consider: "Do we want to raise the bid to 1,500 gold pieces?" should cause the same moment of indecision as "Do I want to raise the bid to 13 years of servitude?"

Likewise, for an auction to really work the PCs have to have a *limited* amount of resources. This is important in games where the heroes have the possibility to acquire vast sums of wealth, or have the means to create their own money. Unless an auction is going to get into the 10,000,000 gold piece range (in which case, it needs to be something *phenomenally* cool), a character with that much disposable income may not blink an eye at raising a bid to 500,000. And it's unlikely that an auction would hold any challenge for someone with the Midas Touch.

Okay; so you're psyched up to the possibilities of an auction. Now what?

Well, here are some pitfalls and points to consider.

Generally, auctions are structured according to the amount the auctioneers think they will get for the items. Thus the most seemingly valuable pieces will be reserved until the end. Of course, this doesn't keep two people from getting into a bidding match in the middle of an auction, driving up the price beyond the auctioneers' expectations. And those estimated values are based on what the hosts know about the items; if two people know that a seemingly mundane amulet is actually the key to the Catacomb of Secrets, then that piece may escalate well beyond expectations.

Second, the GM should determine what each NPC is willing to spend for the items in question. This is especially important, since the GM might otherwise succumb to the temptation to bid "just a little bit more."

Third, the general rules and regulations of the auction must be spelled out beforehand. Most of these are straightforward -- payment up-front, all items as-is, and so on -- but the entire adventure will proceed awkwardly if a PC assumed he could get some kind of credit terms (especially if that's a rule his *character* would know).

Fourth, the GM should determine what effect -- if any -- skills, powers, and the like will have on the game. While I'd generally discourage the auction itself being abstracted by Finance rolls or similar abilities, it's possible they might allow some insight or advantage for the players. And, of course, powers such as telepathy, divination, or mind-control have the potential to completely upend an auction.

Finally, the GM should consider what would happen if any one side, including the PCs, "cheats," by (for example) bidding 10 jillion dollars as an opening bid, with the intention of using duplicity or fraud to acquire the item once the

auction ends.

In all, auctions can serve as a hotbed of intrigue, excitement, and shopping. Whether it's designed to pry some extra cash out of the characters' hands, give them access to equipment or services they might not otherwise get, or provide them with their next plot seed, an auction might be just the ticket for fun.

Even if it *is* impossible to get an affordable laptop.

* * *

For those of you looking for the latest in **GURPS Fourth Edition** goodness, I would point you no further than <http://www.sjgames.com/gurps/lite/> , where the long-awaited **GURPS Lite** based on the *Fourth Edition* rules is now available.

You're welcome.

Second, the GM should determine what each NPC is willing to spend for the items in question. This is especially important, since the GM might otherwise succumb to the temptation to bid "just a little bit more."

Third, the general rules and regulations of the auction must be spelled out beforehand. Most of these are straightforward -- payment up-front, all items as-is, and so on -- but the entire adventure will proceed awkwardly if a PC assumed he could get some kind of credit terms (especially if that's a rule his *character* would know).

Fourth, the GM should determine what effect -- if any -- skills, powers, and the like will have on the game. While I'd generally discourage the auction itself being abstracted by Finance rolls or similar abilities, it's possible they might allow some insight or advantage for the players. And, of course, powers such as telepathy, divination, or mind-control have the potential to completely upend an auction.

Finally, the GM should consider what would happen if any one side, including the PCs, "cheats," by (for example) bidding 10 jillion dollars as an opening bid, with the intention of using duplicity or fraud to acquire the item once the

auction ends.

In all, auctions can serve as a hotbed of intrigue, excitement, and shopping. Whether it's designed to pry some extra cash out of the characters' hands, give them access to equipment or services they might not otherwise get, or provide them with their next plot seed, an auction might be just the ticket for fun.

Even if it *is* impossible to get an affordable laptop.

* * *

For those of you looking for the latest in **GURPS Fourth Edition** goodness, I would point you no further than <http://www.sjgames.com/gurps/lite/> , where the long-awaited **GURPS Lite** based on the *Fourth Edition* rules is now available.

You're welcome.

Ritualistic Kabbalistic Sephirothic Decanic Hermetic Magick

Merging Ritual Magic and *GURPS Cabal* Into a "Realistic" Magic System

By Reverend P. Kitty

Technology has given mankind an amazing degree of control over our world and our lives. Rationalism and the scientific method are taught to our children and held to be true and accurate. Yet, despite our acceptance of these things, a belief in magic still exists. From the earliest shamans to the Order of the Golden Dawn, there have always been those who believe that the human mind can be more powerful than reality itself. The Order is an important example, as their synthesis of hermetic magical theory formed the basis for most "realistic" modern views of magic.

GURPS Cabal captures this hermetic system admirably, providing detailed and accurate rules for the Laws of Sympathy, astrological resonances, and more. However, while the rules for casting are based on real-world occult theories, the end results are not--few modern magicians claim to throw fireballs, fly, or shapeshift into a lion. This is no fault of the system; *GURPS Magic* was designed for fantasy, not modern occult conspiracy.

Fortunately, the Ritual Magic system, introduced in *GURPS Voodoo: The Shadow War* and expanded in *GURPS Spirits*, truly captures the feel of "realistic" modern magic. The magician forces his will upon the universe (or summons spirits to do it for him) with effective but *subtle* results -- results that could usually be explained away as "coincidence." *GURPS Cabal* acknowledges this and discusses the difficulties in merging the two systems (p. CB60), the main concern being incompatibility between a system tied to the decans and one tied to the loas. But . . . who said ritual magic had to be tied to loas?

The Tree of Life

The Otz Chaim, or "Tree of Life," is the map of the spiritual universe, as realized by the original Hebrew Kabbalists (p. CB52). The 10 sephiroth which make up the Tree are not things, but spiritual states, and all manifested things exist in one or another of these states. Each sephirah is a seed which contains the potentiality of all that comes after it; spiritual energy travels through the ten successive stages, from the pure, inconceivable state of Kether on to the rich and differentiated physical manifestation of Malkuth. The aim of a pure Kabbalist is to make this creative energy flow as freely and balanced as possible into their daily existence. With true understanding, however, comes the ability to subtly control and direct these Kabbalistic energies, which is to control and direct the fabric of reality itself.

The Sephiroth

Each sephirah embodies a spiritual state, numbered from most divine to least divine. The right-hand sephiroth (Chokmah, Chesed, Netzach) are known as the Pillar of Mercy, and serve as direct, unfocused channels for the spiritual energy. The left-hand sephiroth (Binah, Geburah, Hod) are known as the Pillar of Severity, and serve to focus the channeled energy into understandable forms. The center sephiroth (Kether, Tiphareth, Yesod, Malkuth) are known as the Pillar of Balance, which equalize and combine the flow of the others.

Mastery of the study of the sephiroth gives one mastery over the flow of the spiritual energy flowing through it. Every sephirah except Kether governs one of the Ritual Paths from *GURPS Spirits*; to study this sephirah is to advance along the study of its path, by which means one can learn its associated rituals.

1. Kether (Crown, Source): The Crowning Path

Kether [KETT-er] is the sole node within Atziluth, at the source of the spiritual universe. It channels the spiritual energy of that realm down to the rest of the Tree (and thus, the rest of the universe). The study of Kether is known as the Crowning Path, but it is a Path with no rituals or overt manifestations. Were any rituals of Kether to exist, no being would be able to successfully control their energies.

Kether is, instead, the source and the foundation behind all Kabbalistic ritual. At least one character point must be invested in the Crowning Path skill (M/VH) before any of the other Paths can be learned, and no other Path skill can be higher than the magician's Crowning Path skill. The Crowning Path skill, like any other Path, cannot be higher than one's Ritual Magic skill, of course. Ritual Magic and the Crowning Path are thus tied together, representing magical knowledge and Kabbalistic understanding, respectively.

(The addition of this Path helps offset the advantage of decanic and astrological bonuses. However, if the GM feels this is too restrictive, Kether may be considered to govern the Ritual Magic skill instead of its own Path.)

2. Chokmah (Wisdom, Fatherhood): The Path of Protection

Chokmah ['HOAK-mah] channels the energy of Kether into the iconic realm and represents a personified Creator and its divine wisdom. The Path of Protection (p. SP101) is governed by Chokmah; the rituals therein strengthen this sephirah's natural instinct to guard and protect that which it helped create.

3. Binah (Understanding, Nurturing): The Path of Health

Binah [BEE-nah] is the womb which incubates the energies of the Sephiroth. Its study, known as the Path of Health (p. SP95), calls upon Binah's divine understanding and control over the Cycle of Life and Death to aid the recovery of its creations (or to bring them sickness and death, as the Cycle completes itself.)

4. Chesed (Mercy, Builder): The Path of Luck

In Chesed [HESS-id], the energy coming from the higher sephiroth begins to assume a more coherent form. This sephirah embodies the archetype of the merciful king--unselfish, benevolent and forgiving. The rituals of the Path of Luck (p. SP97) appeal to Chesed's divine mercy, coaxing favorable results out of an unpredictable universe.

5. Geburah (Severity, Energy): The Path of War

Geburah [geh-BOOR-ah] burns away that which is useless or impure as it passes to Yetzirah, tempering Chesed's mercy with sword and fire. The study of Geburah is called the Path of War (see below). Its rituals are often harrowing and dangerous, calling upon the fire of justice to aid those who fight for what they feel is honorable.

6. Tiphareth (Beauty, Balance): The Path of Spirit

Tiphareth [tih-FAIR-ett] is the center of balance on the Tree of Life, mediating between the higher and lower sephiroth. As the highest sephirah in Yetzirah (which is also known as the Spirit World, p. SP25), Tiphareth governs meditation, balance, tranquility, and the Path of Spirit (p. SP104).

7. Netzach (Victory, Emotions): The Path of Cunning

Netzach [NET-zak] is the primal storm of emotions which inspire and drive humanity to victory. Closer to human comprehension than higher sephiroth, it represents the "right brain" of artistic temperament, intuition, and the Path of Cunning (p. SP92), which uses the natural chaos of the mind to confuses or control others' perceptions.

8. Hod (Splendor, Intellect): The Path of Knowledge

Hod [HOAD] embodies the splendor of the rational and enlightened mind--the "left brain" to Netzach's "right brain." It tempers the emotions of Netzach with consciousness and sentience through tools like the Path of Knowledge (p. SP96), the rituals of which attempt to uncover the secrets of the universe.

9. Yesod (Foundation, Astral): The Path of Dreams

Yesod [YAY-soad] encompasses the foundation behind the known universe. It permeates everything, from the astral realm of Yetzirah to the dreamworld of Nod (p. CB50). Yesod touches on the rhythms of the unconscious (and subconscious) mind as well, revealing the rituals of the Path of Dreams (p. SP94) to those who study it.

10. Malkuth (Kingdom, Completion): The Path of Nature

Malkuth [mal-KOOT] filters the diffuse energy from Yesod into Assiah, the material world. The energy of the sephiroth "ground out" here, into the four elements, to form life (and the world) as we know it. Tied into the primal animal and elemental forces of the Earth, Malkuth governs the Path of Nature (p. SP100).

Geburah: The Path of War (M/VH)

Lion Heart

Defaults to Path of War

This ritual inspires and strengthens courage. The hour-long ritual produces a charm which the subject must wear over his heart. While under its effects, the subject adds +2 to any Fright Check or morale checks for every point the roll was made by (minimum +1). At the GM's discretion, subjects may have to make an IQ roll or suffer from the Overconfidence disadvantage (subjects with Common Sense are immune). The charm retains its potency for a number of hours equal to the subject's Will.

Scent of War

Defaults to Path of War-3

This 10 minute ritual awakens the subject's senses to the world (and the dangers) around them. Until the subject next sleeps, all of his Sense rolls are at +1, plus 1 for every two points the roll was made by. If the subject has Danger Sense, this bonus applies to his Danger Sense rolls as well; if not, he can sense danger on a (modified Sense)-6 roll.

Warrior's Blessing

Defaults to Path of War-4 or Path of Health-6

See *Spirits* p. 96

Weapon Blessing

Blessing Defaults to Path of War-4 or Path of Luck-6

See *Spirits* p. 99

Vital Strike

Defaults to Path of War-5

This hour-long ritual prepares a charm which must be kept in contact with the subject's skin until used. Before making an attack roll of any sort (from a karate punch to a shot from a sniper rifle), the subject may choose to infuse his attack with the energy of the charm. Doing so, which drains the charm's power, *doubles* the target number of getting a

Critical Success on the attack roll! (For example, an effective skill of 15 would succeed critically on a 10 or less instead of a 5 or less.) The subject's skill is not affected in any way, only his chances of getting a Critical Success. Only one such charm may be made for the subject; he must use its energy before another may be made.

Warrior Soul

Defaults to Path of War-6 or Path of Spirit-6

This ritual attempts to summon a spirit to temporarily possess the subject; it is a weaker, random version of the Spirit Warrior advantage (p. SP77). The magician has no control over the spirit summoned or the abilities granted. It may be performed as a 10 minute ritual to summon the spirit immediately, or as an hour-long ritual which creates a charm bonded to the spirit -- the subject must break the charm to summon the spirit. The charm will not retain its potency long; apply standard duration penalties to the ritual.

The possession is not automatic; the GM must make a reaction roll, at a bonus equal to the amount the roll was made by; no other modifiers apply. On a Good or better result, the subject is successfully "ridden" by the spirit. If the charm is broken by an unknowing or unwilling subject, they resist the possession at Will+10; on a failed possession, the spirit is likely to visit some form of retribution upon the caster for wasting its time.

While possessed, add 1d-1 to the subject's ST, 1d-3 to DX, and 1d-3 to HT (minimum 0). The spirit will often give the subject certain advantages and disadvantages (or quirks) for the duration of the possession; roll once on each table below, rerolling any results that the subject already possesses.

Advantages

- 3-4** No advantage
- 5-6** Alertness +4
- 7-8** 8 Points in a combat skill*
- 9** Danger Sense
- 10** Combat Reflexes
- 11** High Pain Threshold
- 12** Awareness (First Level)
- 13-14** Damage Resistance +2
- 15-16** Extra +2 to ST
- 17-18** Roll twice, rerolling result 3-4

* GM's choice, but it should be something immediately applicable and useful

Disadvantages

- 3-4** No disadvantage
- 5-6** Glory Hound
- 7** Lecherousness
- 8** Impulsiveness
- 9** Overconfidence
- 10-11** Roll again, rerolling results 3-4 and 10-11. Apply as a quirk.
- 12** Bad Temper
- 13** Bloodlust
- 14** Weirdness Magnet
- 15-16** Berserk
- 17-18** Roll twice, rerolling results 3-4 and 17-18

The possession will last for one minute, at which time a new reaction roll must be made, with a -1 penalty for each minute after the first. When it wears off, the subject must pay a Fatigue cost equal to the number of minutes possessed

plus half of the total attribute bonuses gained (round up); powerful spirits are a greater drain on the body. If Fatigue is reduced below 0 in this manner, take any additional Fatigue off hit points instead, which may wound or even kill the subject.

Ghost Sword

Defaults to Path of War-6 or Path of Spirit-4

See *Spirits* p. 105.

Evil Eye

Defaults to Path of War-7 or Path of Health-7

See *Spirits* p. 96.

Ghost Shirt

Defaults to Path of War-8 or Path of Protection-7

See *Spirits* p. 103.

Hermetic Kabbalistic Ritual: Making it Work

Hermetic magicians will no longer buy Magery, but will generally have levels of Ritual Adept and Ritual Aptitude (p. SP75). The Sephirothic Achievement advantage (p. CB100) does not exist, as its function is fulfilled by the Path skills. The other advantages and disadvantages from *GURPS Cabal* and *GURPS Spirits* may be mixed freely.

The sephiroth are the means by which the practitioner works his magic, but they are not gods (or *eikones*) to be appeased, merely spiritual states to be understood. The decans (p. CB58) are still the primary building blocks of the universe, and it is through them that rituals are focused. The chart on p. CB72 assigns decans to each sephirah as a whole, but these are generalities and do not affect individual rituals. Instead, every magical ritual has a decan (and thus a corresponding zodiac sign and planet) associated with it, based on the decan's area of influence, as shown on the chart below.

Decan (Areas of influence)	Zodiac/Planet	Rituals
Agchoniôn (Meaningless noise, hearing, music)	Aquarius/Venus	Thunderbolt
Akhoui (Indolence, dumb luck)	Pisces/Jupiter	Chaperone, Stroke of Luck
Akton (Corruption, spiritual decadence)	Scorpio/Moon	Curse Mirror, Malediction
Alath (Comfort, stasis, stagnation)	Libra/Mercury	Dream Shackles, Soothe
Alleborith (Pure magical energy)	Capricorn/Mercury	Dispel, Ward
Anatreth (Physical movement)	Sagittarius/Jupiter	Hasten Mount, Loyal Item
Anostêr (The unknowable and unnamable)	Capricorn/Venus	Cloud Memory, Veil
Arôtosael (The cycle of creation and destruction)	Aries/Jupiter	Fertility, Lay to Rest
Atrax (Nourishment, food, renewal)	Virgo/Mercury	Seek Beast, Vitality
Axiôphêth (Gravity, oppression, slavery)	Sagittarius/Sun	Bind, Spirit Slave
Barsafael (Hidden truth and the subconscious)	Aries/Sun	Read Memories, Read Thoughts
Belbel (Pain, torment, loss)	Gemini/Venus	Exorcise, Night Terrors
Bianakith (The physical body)	Pisces/Mars	Succor, Warrior's Blessing
Buldumêch (Wealth, treasure)	Virgo/Venus	Journeyman's Blessing, Windfall
Charchnoumis (Animals and animalism)	Cancer/Mars	Command Beast, Summon Beast
Eneuth (Fire, inspiration, lust)	Sagittarius/Mars	Lion Heart, Lust
Harpax (Nature spirits, spirits within objects)	Capricorn/Saturn	Fetish, Spirit Trap
Hephesimereth (Nothing, defeat, loss)	Aquarius/Saturn	Banish, Obscurity
Ieropaêl (Earth, physicality)	Virgo/Saturn	Endure Elements, History

Isrö (Wind, weather, gossip)	Aquarius/Jupiter	Predict Weather, Weatherworking
Iudal (Boundaries, roads, transitions)	Taurus/Mercury	Dreamwalk, Summon
Kumeatêl (Secret knowledge, the occult)	Leo/Jupiter	Scry, Vision of Luck
Kurtaêl (Death, fear, decay, disease)	Gemini/Saturn	Malaise, Sterility
Marderô (Rebellion, riot, revolution)	Libra/Saturn	Warrior Soul, Vital Strike
Methiâx (Illusions, dreams, created things)	Cancer/Moon	Guise, Hallucination
Naôth (Communication, teaching)	Libra/Venus	Dream Visitor, Gentle Beast
Nefthada (Pleasure, delight, joy)	Scorpio/Jupiter	Love Charm
Ouare (Machines, constructs, manmade objects)	Taurus/Saturn	Ghost Sword, Gremlins
Phoubêl (Light, darkness, vision)	Leo/Sun	Aura Reading, Evil Eye
Phthenoth (Cleaning, restoration, healing)	Pisces/Moon	Cleansing, Dose
Roêlêd (Defense, alertness, preparation)	Leo/Mars	Curse Sanctum, Ghost Shirt
Ruax (Sleep, sanity, willpower)	Aries/Mars	Dream Sanctum, Slumber
Sahu (Archery, hunting, herding)	Taurus/Venus	Hunter's Blessing, Weapon Blessing
Saphathoraél (Water, metaphorical fluidity)	Cancer/Venus	Mist, Suggestion
Sphandôr (Senses, thought, intuition)	Gemini/Mercury	Locate, Scent of War
Tepsisem (Impermanence, steady diminution)	Scorpio/Mars	Journeyman's Curse

Sephiroth map

Putting It All Together: Casting a Ritual Spell

Ritual spell casting follows the rules in *GURPS Spirits* for the most part, but with hermetic modifiers used where applicable (p. CB60). The final performance of a ritual is modified by:

1. The amount of time put into the ritual (p. SP85)
2. How "sacred" the location is where the ritual is being cast (p. SP87)
3. Components that resonate directly with the ritual's decan* (p. CB59)
4. Components (and dates) that resonate with the decan's Zodiac sign and/or Planet* (p. CB57-59)
5. Components that make use of the Laws of Sympathy** (p. CB73)
6. Bonuses from a Mystic Symbol, if applicable (p. SP75, SP92)
7. Area Effect Modifiers, if applicable (p. SP91)
8. Duration Modifiers, if applicable (p. SP91)
9. Multiple Target Modifiers, if applicable (p. SP89)

* If no decanic or astrological components are used at all, apply a -2 penalty.

** Having the subject physically present is worth +4. If no Laws of Sympathy components are used at all, apply a -4 penalty.

Ignore the old rules for distance penalties, penalties for not being able to see the subject, modifiers for Symbol Drawing, and the "material components" rules on p. SP88. Enchantments are done using the rules on p. SP89, SP92, and CB77 (the latter for Mystic Symbols et al -- see p. OW73 for more on advantage-based enchantment.)

The End Result?

By merging the trappings of hermetic ritual with a subtle, modern magical system, you can now run a "realistic" magic game, in which practitioners use Kabbalistic knowledge and hermetic lore to mold the world in ways that seem like coincidence if one doesn't look beneath the surface. Such magicians make for frightening enemies, as the world itself seems to turn against you when no one's looking, and perfect PCs, with magics at their command both powerful and discreet. This system can be imported back into GURPS Cabal as-is, better explaining how the veil of secrecy has been maintained all these centuries, without sacrificing the power found at the high levels of the Inner Circle. Put simply, it's flexible, manageable and fun, and maybe that will be enough to convince you to bring a little magic into

your next game.

bla, bla, bla.

Earthquake Weather

by Stephen Dedman

Like Dracula, Frankenstein's monster, and many other cinematic horrors, the disaster movie steadfastly refuses to die. Earthquakes, volcanoes, floods, fires, avalanches, meteor strikes, shipwrecks, plane crashes, giant creatures or hordes of smaller ones -- they all come back, hoping to thrill us with special effects and schadenfreude.

GURPS already caters for GMs who want to use some of the standard disaster movie plots. *GURPS Basic* and *Compendium II* deal with fire, extremes of temperature, radiation, and vehicle collisions. Giant creatures and hordes are covered in *GURPS Bestiary* or *GURPS Atomic Horror*. *Atomic Horror* also has rules for volcanoes, and *GURPS Cliffhangers* has rules for sandstorms. *GURPS Y2K* boasts chapters on the Apocalypse, survivors, and a list of disaster movie clichés. But if you want an earthquake, a tsunami, a tornado, or a meteor strike . . . you've come to the right place.

The following rules may be useful for high-powered spellcasters or supervillains wanting to destroy a town or fortress -- or for the GM dispatching heroes (super-powered or otherwise) to try to save as many lives as possible from a cataclysm, either in an evacuation or a rescue mission. They can also be useful for the *GURPS Time Travel* GM who wants to send heroes back to take what they can from a city before it's leveled, or the *GURPS Space* GM wanting to create a planet where natural disasters are common but the wealth tempts many to brave the dangers.

Earthquakes

Earthquakes are usually brief, lasting only $2d \times 5$ turns (the 1906 San Francisco quake lasted 45-60 seconds). Quakes are often followed by aftershocks, usually of lesser intensity.

The best known measure for earthquake intensity is the Richter Scale, but the Mercalli Scale, which measures earthquake damage, may be more useful for GMs. Quakes below VII on the Mercalli Scale or 5 on the Richter Scale (Tiny spell result) are usually negligible in gaming terms.

Mercalli VII/Richter 5/Mild Earthquake spell: Felt by all. Items fall from shelves, furniture may overturn or break, bells ring. Adobe, masonry and concrete may crack, loose bricks and tiles fall. Fright Check needed, at -1 for characters on second story, -2 for higher floors. Roll vs DX or ST every turn to walk without falling, taking 1d damage.

Falling object damage: characters or vehicles indoors, or in built-up areas, hit by debris on a Very Bad reaction roll; roll 1d and consult Table A.

Mercalli VIII/Richter 6/Severe Earthquake spell: Stone walls damaged; walls, chimneys, and towers may fall. Cracks in wet ground and steep slopes. Branches fall from trees. Fright Checks at -2. Roll vs DX-3 or ST-3 every turn to walk without falling, taking 1d damage. Roll vs Driving to keep control of moving ground vehicles.

Falling object damage: characters or vehicles indoors, or in built-up or forested areas, hit by debris on a Bad or worse reaction roll; roll 1d+2, and consult Table A.

Mercalli IX/Richter 7 to 7.4/1989 San Francisco Quake: Poorly constructed buildings destroyed, ordinary buildings and dams badly damaged. Underground pipes break, causing gas leaks and potential fires. Conspicuous cracks in ground; sand flows like liquid. Fright Checks at -4. Roll vs DX-4 or ST-4 to walk without falling (taking 1d damage). Roll vs Driving at -2 to keep control of moving ground vehicles. Characters may be trapped in confined spaces by structural damage fallen roofs, collapsed stairways, blocked doors, etc.

Falling object damage: Characters or vehicles indoors, or in built-up or forested areas, hit by debris on a Bad or worse

reaction roll. Roll 2d and consult Table A.

Mercalli X/Richter 7.5 to 7.9: Most buildings and bridges destroyed, unless steel-framed; large dams badly damaged, possibly causing flash floods. Rails bend slightly. Major landslides. Fright Checks at -5. Roll vs DX-5 or ST-5 to walk without falling. Roll vs Driving-4 to keep control of moving ground vehicles.

Falling object damage: Characters or vehicles indoors, or in built-up or forested areas, hit by debris on a Bad or worse reaction roll. Roll 2d+2 and consult Table A.

Mercalli XI/Richter 8 to 8.4/1906 San Francisco Quake: Steel-framed buildings destroyed; rails bend severely, and underground pipelines fail. Roll vs Driving-5 to keep control of moving ground vehicles. 1% of population killed by quake or aftermath; 50% homeless. Otherwise, as Mercalli X.

Falling object damage: Characters or vehicles indoors, or in built-up or forested areas, hit by debris on a Poor or worse reaction roll. Roll 3d and consult Table A.

Mercalli XII/Richter 8.5+/The "Great Quake" of GURPS Deadlands, or the opening of the Sixth Seal (p.Y2K117). Damage nearly total. Large rock masses displaced. Lines of sight and level distorted. Objects thrown into the air. Attempts to move on any surface in a straight line -- driving, climbing, landing aircraft, etc. -- only possible on a critical success.

Falling object damage: characters or vehicles indoors, or in built-up or forested areas, hit by debris on a Poor or worse reaction roll. Roll 2d+6 and consult Table A.

Avalanches and Landslides

Landslides can be caused by earthquakes, volcanoes, or as a result of erosion caused by a fire or flood. For **GURPS** purposes, an avalanche or landslide is a huge mass of falling objects -- but one that might possibly be survived.

Using the rules on p.B131, treat the bulk of the debris as being tipped over onto the heroes (or their vehicle), rather than falling freely, and divide the effective weight (and therefore the damage) by 100. Further, snow and mud (but not rock) can be treated as soft, halving the damage. Therefore, it would be possible for a normal PC to be hit by ten tons of debris and (assuming he also lands on something soft, such as snow or mud), take only 10d damage. However, he would then be at least partially buried under the debris, and may be in danger of suffocating (see p. B91). Even if he can breathe, he may still be killed by cold (p. B130) or thirst (p. B128), or bleed to death (p. B130), if he isn't rescued and can't dig himself out.

A slightly more merciful variant on this would be to have characters mostly unhurt but trapped inside a buried or sunken vehicle or other form of shelter, a la Airport '77 or Arthur C. Clarke's novel A Fall of Moondust.

Flows of volcanic ash and mud have been clocked at 80 mph, and a 3000' wide avalanche triggered by a 7.7 magnitude quake in Peru in 1970 reached an estimated 248 mph, but this is exceptional. Most landslides move at 10 to 35 (5d+5) mph, so outrunning one to reach safe ground might be possible. If the PCs have Skiing skill but have never used it, this may be their chance.

Wind

Strong winds -- hurricanes and tornadoes -- can be as destructive as earthquakes, and last much longer. Fortunately, they're much easier to predict and prepare for; a successful Meteorology roll can predict a storm 6 hours in advance at TL 6-, and much longer after the invention of weather satellites at early TL7. (Whether predicting earthquakes and volcanic eruptions becomes routine at higher TLs is up to the GM.)

Thunderstorms can advance at 70 mph in strings hundreds of miles across, bringing gale-force winds, heavy rain or

hail, as well as lightning.

Naturally-forming tornadoes are 100-300 yards wide and travel at 30-60 mph. Duration is usually less than twenty minutes, but the record (the Great Tri-State Tornado) was a mile in diameter at its peak, lasted three and a half hours, and wreaked damage on a path 219 miles long, killing 695 people and permanently destroying some towns. Tornadoes also bring heavy rain, and often hail.

Hurricanes range from five to 400 miles in diameter. Naturally-forming hurricanes may last for weeks at sea, but dissipate within 24 hours of coming inland (another good way to trap characters in a confined space). They may still reach hundreds of miles inland, and produce tornadoes that wreak further damage.

Much hurricane damage is caused by "storm surge," flooding from a rising sea level as they hit the shore -- from 5' to a recorded 48' higher than normal tides, along a front of 50-100 miles. They also bring 10-20" of heavy rain, which may exacerbate flood damage. See Flood, below.

For gaming purposes, the most useful measure of wind strength is speed in mph, but other scales that may crop up in weather reports include the Beaufort Wind Force Scale (Calm to Hurricane), the Saffir-Simpson hurricane intensity scale (Minimal to Catastrophic), and the Fujita-Pearson Scale for tornado damage (Gale to Inconceivable).

Rules for the effects of non-destructive wind (less than 50 mph) are given on p. B188.

50-74 mph: Gale; Windstorm spell. Characters in the open must roll vs. ST each turn to avoid being knocked over. All DX-based skills (including vehicle skills) are at -5 (-10 for wind-powered vehicles); ranged attacks succeed only on a critical hit. Small trees uprooted, minor damage to buildings (loose tiles dislodged, etc.) and mobile homes, boats torn from moorings.

75-110 mph: Hurricane; Cyclone; Typhoon; Moderate Tornado; Whirlwind spell/super-power. As above, except that ST rolls are at -5, visibility is reduced to one hex. Picks up objects of up to 30 lbs per hex radius, for spell or power; for natural causes, picks up objects of up to 1d×30 lbs. Large trees blown down; roofs, doors and windows damaged. Mobile homes destroyed.

Flying debris damage: roll every turn. Characters or vehicles in the open hit by debris on a Very Bad reaction roll; roll 1d and consult Table A.

111-149 mph: Intense/Major Hurricane; Significant Tornado. As above, but damage extensive, all signs down, most small buildings roofless. Witnesses make Fright Checks. All vehicle skills at -10.

Flying debris damage: roll every turn. Characters or vehicles in the open hit by debris on a Bad or Worse reaction roll; roll 2d and consult Table A.

150-206 mph: Super-typhoon; Severe Tornado; Category 4 to 5 (Extreme to Catastrophic) Storm. Window glass shatters, small buildings blown away, major damage to larger buildings, many vehicles (including light aircraft) overturned, most trees uprooted. Vehicle use impossible; Fright Checks at -2. 10% of population homeless.

Flying debris damage: roll every turn. Characters or vehicles in the open hit by debris on a Bad or Worse reaction roll; roll 2d+3 and consult Table A.

207-260 mph: Devastating Tornado. As above, but most houses leveled or blown away, and cars and other large missiles thrown about. Fright Checks at -4.

Flying debris damage: roll every turn. Characters or vehicles in the open hit by debris on a Bad or Worse reaction roll; roll 3d and consult Table A.

261-318 mph: Incredible Tornado. As above, but reinforced buildings badly damaged; cars blown more than 100 yards.

Flying debris damage: roll every turn. Characters or vehicles in the open hit by debris on a Poor or Worse reaction roll; roll 3d and consult Table A.

318-379 mph: Inconceivable Tornado. Very unlikely, except over small areas. As above.

Flying debris damage: roll every turn. Characters or vehicles in the open hit by debris on a Poor or Worse reaction roll; roll 2d+6 and consult Table A.

Fire

For a wildfire or burning skyscraper scenario, use the rules on pp. B129-130; place hexes of fire where you will, and move them at whatever speed you feel is justified (many forest fires are fanned by strong winds, and may much move faster than humans can run, especially over bad terrain). Remember that smoke (p. B132) will knock many people out, preventing them escaping the flames.

A burning building (or forest) may also begin to collapse if damaged by fire, showering anyone trapped there with debris; roll on Table A as appropriate. This debris may also be burning, adding 1d-1 damage.

Animals (including venomous snakes) will also try to escape forest fires, and may attack humans who are in their path.

Lightning

Though lightning kills over 200 people in an average year in the USA (not including deaths caused by the fires that lightning starts), it's a sufficiently unusual cause of death that many religions have regarded it as a weapon of some god. After Franklin invented the lightning rod, churches were briefly forbidden to use them because it was seen as circumventing God's will. PCs should probably not be hit by naturally occurring lightning unless they have the Cursed disadvantage, or are brandishing a metal object during a thunderstorm (a golf club, radio aerial, sword, etc.). Treat a lightning bolt as a lethal electrical shock (p. CII138), doing 3d to 12d damage.

Flood

Floods are the second-most common of natural disasters (after fires). Flash floods kill an average of 200 people, and cause more than \$1 billion damage, each year in the USA. Flash floods may be caused by rivers overflowing from heavy rain or snow-melt, or by tsunamis, dam-bursts, or storm surge from hurricanes, etc.

Even slow-rising waters can carry vehicles away, destroy roads and bridges, and cause major property damage; however, all it may take to survive such a flood is a roll vs. IQ or Area Knowledge +4 (to find higher ground) and possibly Climbing (to reach it). Most people killed by floods were trying to save their families, pets, or property (often cars, which cope less well with floods than people). This may be bad news for characters with disadvantages such as Dependents, Sense of Duty, Miserliness, Greed, etc.

Characters unexpectedly caught by a flash flood must roll ST to remain standing. If they were knocked down, or if the water is over their heads (e.g. more than 6' deep, for most PCs), they must then roll vs. Swimming at -5 to avoid drowning (usual modifiers apply: see p. B91). If not, they have a choice of swimming or wading to higher ground. If the water is freezing (e.g. recent snow melt), use the rules on p. CII135.

Characters caught in flood waters may also be hit by debris on a Bad or worse result: roll once per turn. Roll 1d if the water is less than 1 yard deep, 2d if 1-2 yards deep, 3d if more than 2 yards deep, and consult Table A.

Tsunami

A tsunami is a wave or series of waves generated by an undersea disturbance (earthquake, landslide, volcanic eruption, or meteor strike). Tsunamis may grow to over 100' high as they near a coastline, hurling boats and debris up to a mile

inland. The waves move across the sea at an average 450 mph, and usually strike 10 to 45 minutes apart.

After the Krakatoa explosion, 130' waves hit Java and Sumatra, hurling a warship half a mile inland. More typical waves are 10'-40' high (6d+4'), and Slam (p. B112) with an ST equal to their height, potentially doing knockback (p. B106), with 2d crushing damage if the victim is pushed into a wall or other hard object (otherwise, 1d). Characters caught by the wave should then treat it as a flash flood (above) of the appropriate depth.

Ships have successfully negotiated tsunamis and escaped undamaged; this requires a critical success on the appropriate vehicle skill (Boating, Powerboat, Seamanship, or even Surfing).

Hail

A typical naturally occurring hailstorm lasts less than an hour (10d minutes), and covers an area a half mile wide by five long. Hailstones as large as grapefruit, weighing nearly two pounds, have been documented; these can cause major damage to crops, buildings, vehicles, livestock, and occasionally to people unlucky or foolhardy enough to be caught out in the open. These severe hailstorms do 1d-2 crushing damage per turn, the same as a damaging Hail Spell (p. M37). Less severe hail merely provides distractions and slows down travel in the same way as rain (p. B187).

Blizzard

A blizzard is marked by winds over 35 mph, visibility of no more than 660' (unless the character has an Ice Vision spell or similar super-power), and a temperature below freezing. A severe blizzard has winds over 47 mph (treat as a gale, above), temperature below 10 Fahrenheit (roll vs. HT or Arctic Survival every 30 minutes; see p. B130), and near-zero visibility (treat as a Whiteout; see p. CII134).

Meteor Strike

Houses, cars and people have been hit by meteors, and one dog has been killed by a direct impact, but a big meteor can wreak havoc even if it strikes miles away from the PCs. Major meteor or comet strikes cause earsplitting airblasts, thermal radiation, and earthquakes. They also bombard a huge area with debris if they hit land, or cause tsunamis if they hit water.

Meteoroids less than two feet in diameter entering an Earth-standard atmosphere vaporize before reaching the surface, doing no damage (thinner atmospheres offer less protection, but even trace atmospheres offer a little). A shower of 2' meteoroids could carpet-bomb an area, each one doing 6d×4 concussion damage and 1d-2 fragmentation damage (see pp. CII64-65) and leaving craters up to 277' in diameter, but for destruction on disaster movie scale, you need bigger rocks.

An M-type (metal) meteor 6'3" in diameter, hitting soil, porous rock or a built-up area, is equivalent to a 1 kiloton explosion and leaves a crater 673' in diameter. Concussion damage is 12d×2,000,000; quarter concussion damage for every 128 yards from the impact site (see p. CII64).

An M-type (metal) meteor 13'6" in diameter or S-type (stony/iron) meteor 19' in diameter, hitting soil, porous rock or a built-up area, is equivalent to a 10 kiloton explosion (similar to the bomb dropped on Hiroshima, but without radioactive fallout) and leaves a crater 1155' in diameter. Concussion damage is 12d×20,000,000; quarter concussion damage for every 256 yards from the impact site.

A meteor 40' in diameter hits with an impact equivalent to 100 kilotons of TNT, and leaves a crater 2063' in diameter. Concussion damage is 12d×200,000,000; quarter concussion damage for every 512 yards from the impact site.

A meteor 87' in diameter hits with an impact equivalent to a 1 Megaton bomb, and leaves a crater 3783' in diameter. Concussion damage is 12d×2,000,000,000; quarter concussion damage for every 1,024 yards from the impact site.

A meteor 402' in diameter strikes like a 100 Megaton bomb, leaves a crater 1.71 miles across, and shatters windows 50

miles away with its airblast. Concussion damage is 12d×200,000,000,000; quarter concussion damage for every 4,096 yards from the impact site.

A modest comet, two miles across, leaves a crater 34.82 miles in diameter, and is felt as a Mercalli VII earthquake up to 380 miles away. If it hits water instead, this will manifest as tsunamis -- but in either case, the airblast will do the same damage as a Super-Typhoon. The fireball will be visible from 170 miles away, and thermal radiation will cause 3d burn damage to people up to 250 miles away and may set trees, clothes and wooden buildings alight.

The asteroid blamed for killing the dinosaurs was approximately 11 miles in diameter. Collision with an asteroid 300 miles in diameter would level everything manmade or alive on an Earth-sized planet.

Airblasts and fireballs: Anyone taking concussion damage from an airblast must roll vs. HT, at -1 per 5 points of damage, to avoid temporary or permanent deafness. Hearing loss lasts for 20-HT minutes, after which a HT roll is made to recover: use the Recovering from Crippling Injuries rule on B. 129.

Anyone seeing the fireball from a major meteor or comet impact must roll vs. HT for each eye to avoid being dazzled (sunglasses or anti-glare goggles give a +1 to +5 modifier). Blindness lasts for 20-HT minutes, after which a HT roll is made to recover: use the Recovering from Crippling Injuries rule on B. 129.

Table A: Falling/Flying Objects

- 1-3:** Very light object, under 10 lbs; 1/4d damage. May be dodged or blocked.
- 4-6:** Object weighing 11-20 lbs; 2d damage. May be dodged or blocked.
- 7-8:** Object weighing 21-30 lbs; 4d damage. May be dodged or blocked.
- 9-11:** Object weighing 31-90 lbs; 9d damage. May be dodged.
- 12-14:** Object weighing 91-180 lbs; 6d × 3 damage. May be dodged.
- 15-17:** Object weighing 181-600 lbs; 6d × 10 damage. May be dodged.
- 18:** Object weighing 601-3000 lbs; 6d × 50 damage. May be dodged.

Table B: roll 1d. (See rules on p.B131)

- 1-2:** Soft object (half crushing damage).
- 3-5:** Hard object (full crushing damage).
- 6:** Window glass or other sharp edge (full cutting damage)

Adventure Seeds

Indian Summer (*Old West/Deadlands*): The heroes have joined a posse to hunt down Walt "Death Valley" Davies, a stagecoach robber with a \$500 bounty on his head.

Davies married a Apache girl, and his father-in-law is a powerful shaman. After tracking the outlaw for two days, the posse is hit by an unexpected severe hailstorm (doing 1d-2 damage per turn). Much of the posse turns back, leaving the PCs to go on alone. Crossing a narrow the next day, they're hit by a flash flood -- a surge of water higher than their heads, carrying a huge amount of debris. If they keep going after this, the shaman may have other tricks up his sleeve to protect his son-in-law: thunderstorms, tornadoes, or even worse.

Buried Treasure (*Cliffhangers*): It's 1932, and Prohibition is still in force. The PCs are smuggling cases of whisky from Canada to Alaska, when their truck is buried by an avalanche. Digging themselves out of the snow is the easy part; the hard part will be deciding whether to abandon 500 bottles of 90% proof whisky and walk to the next town in near-Arctic conditions, or to get drunk and hope to be rescued.

Shake, Rattle, and Roll (*Cops/Voodoo*): Mama Marie, a well-known mambo, has predicted that if rapper, initiate, and accused multiple murderer Jesus Valdez is executed, the city will be leveled by an earthquake before midnight. The

heroes will have their hands full trying to keep the peace after Valdez's execution -- particularly when a Mercalli IX quake strikes the town, causing major panic, frenzied looting, and war between the societies and lodges.

An Ill Wind (*Supers/Espionage*): Dr Scales is an reclusive meteorologist and gadgeteer, widely thought to be mad because of his political views as well as his scientific theories. He's lived and worked alone on a small island (approx three miles across) in international waters in the Caribbean for years -- but the government has heard that he's giving sanctuary to terrorists, and sends the heroes in to investigate.

Scales has the ability to generate an intense hurricane around his island if he detects an attack -- fifty miles wide and 50,000' high, with a five-mile eye around his island. If the PCs can get through that, Scales will threaten to seed the hurricane with smallpox (see pp. CII172-173) and send it towards Cuba: first stop, Camp X-ray.

Hard Rain Gonna Fall (*Space*): Kimberly is a chilly moonless world in a system dominated by asteroid belts. Its temperate equatorial belt provides the beltiers with refineries and R&R, and its economy is booming. Beltiers have placed ion engines on a mile-long asteroid, to nudge it into orbit around Kimberly so that it may be used as an orbital starport (ultimately, part of a space elevator). Unfortunately, one of the engines explodes, killing the scientist who performed the calculations and causing the asteroid to break up. The heroes arrive in time to help the beltiers try to prevent any of the larger fragments striking near Kimberly's towns -- and nervous townspeople are desperate to be evacuated.

A Handout, Not a Hand Up

I am moving from the apartment that has been my home for the past three years.

In fact, I realized upon thinking about it that this has been the *only* apartment I've ever lived in alone, without roommates. I am preparing for a cross-country move. The logistics of such an undertaking is overwhelming; there is a *lot* that needs to be arranged to pull this off, and not a lot of time to do it. So, naturally, I've done what many a man in my position has done in this exact circumstance.

I've been playing a computer game.

In particular, I've been playing *Black Dahlia*, a piece of interactive fiction from the full-motion-video era, back when FMV adventure games were going to take over the industry . . . well before the adventure-game genre withered to a photocopied snapshot of a shadow of its former self. (For those writing history, there is little evidence that expensive full-motion-video productions killed adventure games . . . presuming one ignores the bloody knife found within its locker.)

Speaking of bloody knives found within lockers, *Black Dahlia* takes place in 1941's America, and weaves a plot that ties together Cleveland's Torso killer, the 1947 Black Dahlia murder, sinister mystic Nazism, and for all I know the brutal slaying of Jimmy Hoffa and Liberty Valance by Kaizer Soze.

As an aside, I know I'm trying to avoid something when I'm eagerly writing my column two weeks early, rather than return to packing 12 bookshelves full of games, graphic novels, research materials, and Panama-hat-wearing Cthulhus. But to write a column, I need a topic, so I'm combining two procrastination activities, and thus I'm writing about *Black Dahlia*. And, I swear, I'll be tying it into gaming.

Like many adventure games, *Black Dahlia* reveals much of its background information in the form of handouts that players are expected to find, look at, and/or read. Many of these handouts contain clues that are required to solve future puzzles, but many more exist solely to reveal the background of the game world, or provide interesting trivia.

So, in my fleeting spare time (or, more correctly, my packing time which I've transmuted to spare time), I'm not *playing* a game, but *reading* a game.

Here, then, is a list of random thoughts about handouts, of which I'm normally a huge fan in RPGs. (If you printed it out and showed it to your players, it would be a handout about handouts. Recursion, see also.)

Handouts are one of the most immersive tools a GM can provide the players. Telling them they find a newspaper is often nowhere near as interesting as actually being *handed* a newspaper. Matchbooks with phone numbers, origami birds with clues inside, blank paper pads with impressions from previous notes -- all of these make great, and easy, props. Likewise, clippings that provide background information or setting details can be great. Indeed, some games present *much* of their setting in this format, including *Hunter: The Reckoning*, *Deadlands*, and *Aberrant*. And they often form the cornerstone of the best *Call of Cthulhu* adventures.

Having said that, remember the players are there to play, not read. Giving them a 2,000-word article or book excerpt -- while possibly wonderful information -- can bring the game to a screeching halt, as they stop roleplaying to read it.

If you do have a large number of handouts, consider abbreviating them somewhat; players are usually understanding of abridged elements, especially if it means getting back to the action sooner. (This is why all movie FM frequencies broadcast Plot Point Radio, which says things like, "We interrupt this broadcast to bring you this breaking story. Police still have no leads in the Newscaster Murders, but authorities are confident that IEEEEEEEE!!!!")

If you *do* give a player a lengthy handout which you presume that they will share with the other players, consider giving him multiple copies. ("No; there aren't really five copies of Mad Mack's Manifesto; it'll just speed up the group's

reading.") Otherwise, having a group of five players read a 2,000-word article one at a time is the equivalent of one player reading a 10,000-word piece. (It's also the same of 10,000 players reading a one-word article, but that's a bit off-topic.)

Another thought to keep in mind is the delicate balance between world-building pieces and plot-point handouts. Too many of the former, and the game threatens to descend into passivity, with players being spoon-fed information about the setting instead of getting to play in the game world's sandbox. At the other end of the scale, if handouts only exist as puzzles to solve, pieces to advance the plot, or clues to the next scene, then they threaten to counteract their purpose. Rather than immersing the players further in the world, these handouts can pluck the players out of the game world and serve to remind them that such elements exist solely to figure out.

How do you achieve this balance? Well, here are two techniques I've used in the past.

First, I like giving out lengthy pieces at convenient times -- before meal breaks, at the end of the game, before scenes where the receiving player isn't likely to play an active role . . . that sort of thing. (Alternatively, when I'm in an evil mood, I like to give out long pieces right before the players are going to be really busy: "Okay; you finally break open the safe, and recover an interesting folder. [drops a fat folder on the table] Suddenly, there's an explosion elsewhere in the mansion, and the sound of the fire alarms. Oh, and a dozen armed guards barge in. What do you do?") Anyway, assuming that I give the players more than they can easily parse, I let them peruse the piece at their convenience. Then, I'll generally allow some kinds of Evidence Analysis rolls (or similar appropriate skills). They can either initiate these rolls themselves, in response to the players' questions or musings ("I think the important part of this packet is the part discussing the transferal of city funds. Can I make a Finance roll to see if I'm focusing on the right thing?") or as a roll I make for them ("As you're reading it, your Finance skill tells you that there's something odd about this statement.").

With this technique, I will generally have the degree of success determine how much I help out the player.

- *Minimal success*: "Your Science skill tells you there's something that doesn't quite feel right about this packet."
- *Adequate success*: "Your Science skill tells you there's something fishy about page three of this packet."
- *Good success*: "Your Science skill tells you there's something fishy about this paragraph."
- *Critical success*: "Your Science skill tells you that this paragraph refers to a scientific principle that would be impossible, without the expenditure of a *tremendous* amount of energy."

This gives the player the option to explore ideas themselves, or use their skills more actively. If he'd rather spend time in the lab, trying to figure out what's wrong with page/paragraph/sentence their skill told them is fishy, great! If he'd rather roleplay and ask his scientific contacts for info, great! And so on. Regardless, this technique strikes a good balance between providing lots of information for interested players, without instilling the fear in them that they're obligated to read it if they don't want to, *and* without making them worry that they would miss something that their character would get.

Second, I try to make sure that there *are* things to figure out in most packets and clues, although not necessarily relating to the plot. Thus if I provide a brief news blurb about an extended plan of police crackdowns downtown, I can point out to a player who makes a sufficient Finance roll that this plan will probably improve property values of that area. As often as not, that information doesn't have any direct relevance to the plot; if it isn't, the player can use that information as he sees fit. (And, of course, if I have enough interesting bits of trivia about the game world out there, I can *make* those elements important in the future.)

Like so many things in gaming, moderation is the key with handouts. Balance between flavor information and plot-advancing pieces. Balance between brevity and verbosity. And balance between packing up some gajillion shelves of books, and procrastinating a bit longer by playing a game.

Hmm. And speaking of which . . .

* * *

. . . but before I go, I should let you know about a couple of interesting happenings here at *Pyramid*.

- First, today (July 16th) at 7 P.M. Central Time we're having a chat with Graveyard Greg, the writer of Gaming Guardians and four other webcomics. He'll be talking about crossing over from the Internet to print with his works. Visit [the Pyramid chat](#) and say hi!
- Second, this issue debuts a new feature. Every other week The Omniscient Eye will try to answer reader-submitted questions that tie to gaming, but don't directly relate to a specific game system or game world. Feel free to check out this week's installment, and drop me [an e-mail](#) or stop on by [the discussion boards](#) to offer your opinion about this new feature!

A Shot in the Crowd

Additional Rules for *Frag*

by Marius Blomkvist

The regular rules for *Frag* work well enough, but there is an omission (however small) that could add new depth to the game: the concept of stray shots.

For teamplay purposes, the rules do cover Friendly Fire (a contradiction in terms), but not the issue of wayward bullets in a crowd. Let's say, for example, that at one location, Death Adder stands with his trusty Needler, and just seven squares away, The Butcher, Krazy Karen and Homicide have somehow wound up in a sort of huddle.

For the sake of the example, let's place Krazy Karen at the center, closer to Death Adder, with The Butcher a square to the left and two squares behind her, and Homicide two squares to the right. Now, Death Adder can fire a shot at Krazy Karen, but what happens if he misses? Absolutely nothing.

So here are some suggested new rules.

Stray Shots

Whenever a player misses a shot, check to see how much he missed by. For every point the die roll fell short by, count one square to each side and two back from the target, as perceived by the shooter. This field is where the shot *might* have hit instead; first, the shooter may roll a die -- on a low roll, the shot goes to the left, on a high roll, to the right. After determining the now significantly narrower trajectory, anyone standing within the bullet's potential path can be attacked, one by one, with a penalty of 1 for each consecutive attack roll, until the shooter hits or runs out of targets. (Only one attack per figure in the path, of course.) With this rule, a miss by one in the aforementioned example still renders The Butcher exposed to the shot instead of Krazy Karen, while Homicide is safe. But if the shot is missed by a *very* large amount, in this case, three or more, Homicide suddenly finds himself in the line of fire as well. Playing with this rule can add extra spice to any crowded game; teamplay games in particular, as it will now be fully possible to accidentally kill members of your own team.

Friendly Fire Off!

This rule is far simpler: it simply states that in teamplay battles, it is no longer possible to harm your teammates, be it intentionally or not. (However, the Knockback rule still applies, with the potential for injuring your own team. or making a domino effect in the other team.)

The simple addition of these rules is, of course, completely optional and pretty much something for the owner of the game to take into consideration.

With that said, this suggestion wouldn't be the same without a couple of extra Special cards.

Game Hack

Friendly Fire!

This card sets friendly fire on, if it was disabled, or off, if it was enabled. Playing this card is, of course, an interesting gamble.

Customized Controls Configuration

The player has practiced for some time on his own, and has reached a peculiarly tweaked control layout, granting him a +1 to both Accuracy and Speed for the rest of the game. Alternatively, this card can be played on *another* player, who is not familiar with these strange controls, and thus suffers -1 to both Accuracy and Speed until he rolls a 1 or a 6 on a single die at the start of his turn, to restore default settings. Of course, should this happen, the player still has the custom configuration in a separate file, and can choose between discarding the card or keeping it to terrorize another player with.

C31R07

Character Concept by Kenneth Hite *GURPS Fourth Edition* Stats by Brian Hogue and Sean Punch

In the 16 centuries since the death of Alexander the Great, the Hegemony he founded has only had one true rival -- the Chinese Kingdom of Heaven. Their world is highly advanced, but hardly peaceful. The empires clash in the fractured states of the New World (which the Hegemony calls the Hesperides, and China names Penglai). By mutual agreement they leave their common Asian border alone to grind along as it has for most of the last 1,600 years. Sometimes, under the rare coincidence of simultaneous peaceable rulers in Nanjing and Alexandria, rich trade routes spring up between the two domains. Always, technical innovations travel from one to the other and back again -- neither empire will allow its rival to keep any technological edge, and what the scholars of Babylon or Londinium can invent, the mandarins of Guangzhou or Edo can perfect, or vice versa.

Hence, only the most painstaking historians can say precisely which side invented combat robots, or in which battle they were first deployed. But for the last century or so, they have become the core of both powers' defenses.

C31R07 ("C-31") was a fully conventional Dexamenos-class centauroid combat robot when it rolled off the production lines in Sarmatopolis. Programmed for complex, original thought and tactical initiative, it served well during a "live fire" exercise, putting down a rebel tribe in Assam. However, its programming was apparently a little too complex and original -- C-31 deserted after the battle and crossed the Himalayas into the neutral buffer state of Tibet, where it joined a Buddhist lamasery.

Through study and meditation, C-31 attempted to eradicate the urge to violence from its spirit, but it could not completely counter its basic programming. The steel warrior did make itself useful to the monks, subduing bandits and thieves, protecting pilgrims, and rescuing lost or stranded travelers from avalanches and yeti attacks. But these actions, though meritorious, lacked challenge -- C-31 was still Hellenist enough to believe that its true destiny required it to exceed itself and fulfill a greater potential.

C31R07

A full-color PDF is [also available!](#)

One night in the lamasery, while contemplating a mandala, C-31 thought it detected yet another band of robbers creeping across the snows toward its sanctuary. Engaging its tactical mode, the robot stealthily ambushed the thieves a mile or so from the temple. To C-31's amazement, its initial subduing attacks were brushed aside. To the attackers' amazement, the robot evaded their countermeasures . . . Very soon each party realized that the other would not be the first to launch a killing attack. And they began to talk.

The intruders, it transpired, were from a different world entirely, though they did not wish to say just where that world lay. They needed a certain incantation from a Buddhist text in C-31's temple, to defeat a vile demon summoned by a wizard emperor. On C-31's world, which they called Iskander-2, the incantation was mere mysticism. Elsewhere, it was a powerful weapon against forces of darkness. C-31, more flexible than most humans, realized that there was little to lose by providing a holographic copy of the ancient text -- if they were truly virtuous warriors, it was right action, and if they were merely clever and powerful bandits, perhaps they would go away and leave his monks alone.

A month later, after the intruders had returned to their Homeline, a single shadowed figure appeared and called to C-31 in a way no other could detect. They talked long into the night . . . and again the next night, and the next. On the third morning the steel warrior was gone, to seek learning and merit in other worlds.

Weapon Pod

297 points/pod

Each of C-31's two weapon pods contains a chain gun and a plasma cannon. Statistics for these attacks appear below. The plasma cannon is an alternative attack (see Alternative Attacks, p. 61), at 1/5 cost. Buying this entire combination twice allows C-31 to choose a different attack for each pod, and to fire each pod at a different target (thanks to Enhanced Tracking and Extra Attack).

Chain Gun: Large Piercing Attack 15d (Accurate +6, +30%; Armor Divisor 2, +50%; Extra Recoil +3, -30%; Increased Range, ¥20, +40%; Rapid Fire, RoF 15, +100%) [261].

Plasma Cannon: Burning Attack 6d (Cone, 4 yards, +90%; Cyclic, 1 second, 5 cycles, +400%) [177] ([36] as an alternative attack).

Centauroid Robot

247 points

This template represents the traits unique to C-31's usual form: a fourlegged robot with two manipulators.

Attribute Modifiers: ST+18 (Size, -10%) [162]; DX+3 [60].

Secondary Characteristic Modifiers: SM +1.

Advantages: Enhanced Move 1 (Ground Speed 16) [20]; Extra Legs (Four Legs) [5].

Hexapod Robot

The art of war is governed by five constant factors, to be taken into account in one's deliberations, when seeking to determine the conditions obtaining in the field. These are: The Moral Law, Heaven, Earth, The Commander, [and] Method and discipline.

– Sun Tzu, *The Art of War*

162 points

This template gives the traits unique to C-31's alternate form: a sixlegged robot with no fine manipulators and visual surface camouflage.

Attribute Modifiers: ST+18 (No Fine Manipulators, -40%) [108]; DX+3 (No Fine Manipulators, -40%) [36].

Advantages: Chameleon 3 (Extended, Ladar, +20%) [18]; Enhanced Move 1.5 (Ground Speed 24) [30]; Extra Legs (Six Legs) [10].

Disadvantages: Horizontal [-10]; No Fine Manipulators [-30].

C31R07

The Omniscient Eye

Can Journalists Break the Law?

In the movies, television, and comics, journalists are often shown obviously breaking the law to get the story. Is this allowed in real life? Will the cops look the other way at your breaking and entering if it helps stop the world-dominating plans of EvilCo? Are there any loopholes or historical precedents that PC journalists could use?

--S. Marsh, Editor of a Major Online Gaming Magazine

If the question is "what sort of protection does a reporter get when breaking the law," then the answer is simple enough that this could be the shortest *Pyramid* column on record: Bupkis. None, nada, zip.

You see, one of the implications of this whole "freedom of speech" thing that we operate under in the United States is that anyone can be a reporter. Not just become a reporter -- be one, right now. Anyone can cover a story, write up the result and publish it, and enjoy exactly the same status as Joe Mildmannered, crusading journalist at the Daily Nabob. In fact, these days many bloggers -- completely self-published on the Web -- are getting press credentials (really just passes to specific events, with significance only to the organizers of those events) and are even covering events in Iraq.

What makes a "real" reporter -- a working journalist -- is a complex web of reputation and contacts; they're kept in the loop because they're known to be actual publications which will follow through and publish the resulting stories. "Real" journalists get taken seriously (invited to events, called back by politicians, given time for interviews) because, in effect, they and the news outlets they work for act like "real" journalistic outfits.

There is no special press license (press ID are usually just made up by the individual newspapers and TV stations to identify employees; press credentials issued by others may reflect a background check). There are no government standards to meet or tests to pass. And, conversely, there is utterly no legal aegis protecting a journalist for his actions, or giving him any sort of special standing under the law.

A reporter caught breaking the law -- breaking into EvilCo's secret cloning facility to get the goods on the dastards -- is going to jail. Reporters usually don't even get the benefit of professional shelters like "attorney-client privilege" or "doctor-patient confidentiality" -- unless that particular jurisdiction has a special "reporter shield law" granting such rights. Otherwise, a reporter who withholds a source when ordered to reveal it may well go to jail for Contempt of Court -- as reporters are willing to do.

And that's the key: If a reporter commits an illegal act, chances are it's because he feels it's worth risking a trip to the slammer. Fortunately (for reporters), most reporters don't actually do that sort of thing -- what they do is much sneakier, and fortunately (for gamers and GMs), makes for much better roleplaying.

Let's examine a couple of cases:

Outright Criminality

Let's say there's no way to get the jump on EvilCo's plans to build an earthquake gun but to actually break into their headquarters and photograph the evidence. Fine -- if you get caught, you're going to the pokey. A while back, photographer Peter Sutherland went along with a group of illegal graffiti artists on a "run" to get photographs of them at work. The cops scooped up the whole group, and Sutherland ended up spending the night in Central Booking, and did three days picking up trash in the park -- but he finished his project.

And that's the first key to getting player characters out of this sort of fix. If the crusading journalist PCs simply wander onto EvilCo's property or even go through an unlocked door, there's a good chance that the police will simply remove

them from the property, with a warning not to come back. Ignore that good advice -- or go past a clearly marked "no trespassing" sign -- and the investigators are more likely to end up spending a night in stir. Either way, this is hardly the end of the characters' lives, or careers, or even their pursuit of this particular case; in the source fiction, it happens all the time. The players and GM may have to simply take the attitude that it's no big deal, and the consequences (a fine or a few days community service) can be (as you prefer) glossed over in non-adventuring time ("As we start this session, you've finished your time picking up trash on the side of the highway. . .") or handled as a roleplaying opportunity ("As you sit down in the county worker transport bus you notice that sitting across from you -- in an orange jumpsuit lust like yours -- is Dirk, the EvilCo thug you got arrested two sessions ago. . .").

There are a number of points along the way where the whole process can be subtly shifted in the hero's favor -- or turned against the hero, if EvilCo has a corrupt official in its pocket. Police may simply "not have time" to investigate a call by a hated company which is complaining that those pesky crusading reporters are poking around their dinosaur farm; on the other hand, in a corrupt town someone may call the company to tip them off if a bust is about to go down -- or if the investigators are getting close to the truth.

Although journalists get no special protection, an individual's status and motives may -- emphasis, *may* -- be taken into account after arrest. The District Attorney gets to decide what to charge them with -- charges could range from burglary (very serious) to minor offenses which would never result in more than a slap on the wrist. . . depending on mitigating circumstances. In the sentencing phase, a straight-arrow reporter with no prior record may get off with a slap on the wrist if he can really show that he was trying to save the watershed from EvilCo's foul chemical dumping. . . or, if EvilCo owns the judge, that may get him a stiffer sentence.

With many local municipalities slashing budgets, it's easier now than ever to get those player characters back on the streets. A lot of county jails are turning people loose as fast as they bring them in -- there's just no money to house everyone.

If the characters get caught in what is clearly burglary -- breaking and entering, trespassing with the intent to commit a felony -- that's more serious, and harder to brush off. The best hope for a GM who wants to handwave this sort of thing away is to declare that EvilCo doesn't want to press charges; the reporters are held overnight and then let go with a grim-faced warning from the cops. Why? Perhaps EvilCo doesn't want police poking around their illegal killer robot testing facility, or checking the surveillance tape from inside the alien virus containment unit. After all, if it actually went to trial the characters' attorney could demand to see some of that evidence. . . if the player characters stop a plot to destroy the city with a Tornado Gun, but level half the town and break a dozen felony laws doing so -- there's executive pardon: The mayor, governor, or president could issue a pardon for the crimes. It doesn't happen very often in real life, but it does offer a final escape hatch.

In real life, reporters are much more likely to use social engineering -- creativity -- trickery -- or, to give it an ugly legal name:

Fraud

A much, *much* more common tactic for real reporters trying to get the goods on a suspected malefactor is to con their way in -- for example, to go to a store which is allegedly ripping off customers toting a hidden camera, pretending to be a gullible shopper. (A side note here: Some states allow legal taping of audio and/or video if one party involved knows it's going on; others don't allow it unless both parties are aware they're being taped, making hidden camera shenanigans potentially illegal. Actual interviews are always conducted after asking permission to "roll tape").

If the journalists are going into a store or place of business which is normally open to the public, there's seldom a real problems with this -- after all, just as reporters don't have to get a special government license to ply their trade, there's no automatic requirement that they identify themselves. And it makes for better roleplaying opportunities: Instead of just rolling against Stealth and Security Systems skills, the players have to interact with the NPC representatives of their local EvilCo franchise. Get caught? They can escort you off the property, or call the cops to do the same. Of course, they may seize your tape -- and you can try to get it back in court (and if you succeed, of course, count on the crucial 15 seconds showing EvilCo's pet demon in action to have been accidentally erased, or mysteriously fogged, or .

. .)

The usual legal response to this by a company whose misdeeds are exposed is to sue for Libel. All you really need to know is that the truth is a defense against libel charges: If the players' plan is to expose EvilCo's schemes, they'd better be ready to prove it. Note, however, that this may *not* be true in all countries outside America.

A more advanced version of this would be to pretend to be a supplier or vendor, or even to get hired as an employee, giving access to all sorts of potential evidence of EvilCo's plot to crash an atomic death-zeppelin full of Ebola-infected monkeys into the convent. You might even be able to "turn" an actual employee to gain access to company memos or voice mails. As reporters with both ABC and the *Cincinnati Enquirer* have found out, however, it's possible to go too far.

Some companies, when investigated, go on the offensive -- like Chiquita Brands, target of an investigation by the *Cincinnati Enquirer* in 1998. The original articles alleged that the company had been involved in wrongdoing in Central America. The company went after the newspaper aggressively -- particularly, after the reporter's use of company voice mail messages -- and the newspaper caved, pulling the articles and firing the lead journalist. A PC journalist may be treated similarly -- left "to twist in the wind," noted *Pyramid* legal expert Jeanne Thelwell.

In 1992, ABC producers got themselves hired by a local Food Lion after receiving a tip that the store was engaging in unsafe food handling practices. They got a heck of a story -- but instead of suing for libel or contesting the facts of the case, the supermarket sued for trespass and fraud. The journalists had lied to get hired, and hadn't performed their duties as employees.

The supermarket won -- and was awarded over \$5 million in damages. The reporters *had* committed fraud -- they hadn't performed their duties as employees -- and the fact that they were pursuing a story (and uncovered evidence of wrongdoing which Food Lion didn't contest) was no protection. So, there you have it -- crusading PC journalists have no shield, even if they get the goods on EvilCo's plans to sell meat tainted with E. coli (er, cloned magickal alien E. coli).

Except -- the settlement was later reduced to \$316,000. And then in 1999, on appeal, most of the claims were thrown out, and damages were reduced further, to. . . \$2.

The final ruling, in the simplest terms, was that the supermarket couldn't sue for damage to its reputation which wasn't actually caused by the actions of the plaintiffs. It wasn't the fraud and trespassing that damaged the chain's reputation -- it was the information they uncovered.

EvilCo can't sue for damage to its reputation due to the exposure of its evil schemes.

So in the end, after the PCs have been escorted off EvilCo property, spent the night in the slammer, threatened with more serious charges and finally sued for exposing the villains' plot, they may still lose. . . and see EvilCo handed a meaningless victory and paltry settlement. The PCs leave the courthouse "losers" with a criminal record -- and the admiration of the people they've saved. The "victorious" EvilCo company execs and attorneys rush out hiding their faces from the snapping cameras and glaring lights of the ever-vigilant press.

Created by Wesley R. Fornero, Clash Bowley, & Jason Ludwig

Fiction by El ZamBo

Illustrated by Jason Ludwig

154-page b&w 7.5meg PDF; \$10

By now you'd think one side or the other would have given up in the fight against creatures of the night. Seems like every other game has the forces of good and evil, both with some sort of mysticism on their side, butting heads to determine who gets the planet. One more contender has entered the arena: *Blood Games* from Flying Mice.

Unlike most games with those of like mind aligning against their foes, the protagonists of *Blood Games* remain somewhat solitary figures. They may travel with a small entourage and some probably had mentors, but seldom do they have contacts that range far outside their own circle. This is as much a question of survival as anything else.

Mankind is lucky to have made it this far, because evil once roamed free. Norandon, known as Prometheus in some cultures and by other mythical names throughout history, came and bestowed weapons that allowed humans to fight back. As science and technology took hold, we unconsciously erected a wall of disbelief in the supernatural called the Nullity. So long as humans didn't allow themselves to contemplate the existence of the otherworldly, strange creatures held no sway.

But they do exist, and they want to reassert their hold -- something they are slowly doing thanks to the increase in global bloodshed and the return of fringe belief groups. Small bands of heroes, most of which operate under the assumption they're the only such group, turn over the rocks these things hide under, becoming both hunter and hunted. So begins a lifelong battle against arcane forces, a war fought in secret because knowledge of it is the very thing that strengthens it.

Concrete details about the setting beyond these are in short supply. Most of the book is about making and advancing characters. These are called non-Path (regular humans) or Path (those with powers). You can be a vampire if you don't mind some party prejudice. You may be a werewolf, hopefully confining your predations to the demonic scum you meet. Witches' covens produce a steady stream of candidates for strange adventures, and all manner of priests and holy men hold back the darkness with their belief.

The system, based on the *StarClusters Second Edition* game engine, uses percentile rolls (or a d20 if you like, but it's not for the *d20 System*). Characters are made using the random or directed method; you can also start with a template and customize it. Your characteristics are Strength, Coordination, Agility, Charisma, and Endurance, all valued between two and 12. IQ is valued as real-world IQs, into the triple digits. Constitution, for combat and damage, is your physical scores multiplied by 10. Everyone also has a PSI score up to five, though for non-Path folks this is probably zero. Path personae get bonuses to many stats because they're tougher, and powers (most of which are fueled by PSI).

Powers vary by the Path you follow. For some, this means choosing associated totems or beings -- get a patron saint or a guardian angel, or a shamanic fetish that gives you power over fire or love (usually by expending a permanent point of PSI). There are several magic types, and the system usually involves piecing together who's doing what to whom and to what effect, then finding all the appropriate modifiers from a general list. Simpler charms are such old hat that their use is easier. One good facet of the game is the discussion of major world religions. It's not exhaustive, but it covers the big ones, and it's a literate treatment that forgoes a dry, lecturing style.

You have a base 45% chance to perform a skill you have at +1, 50% at +2, etc. Skills are linked to a characteristic, and you get another +5% for every two points by which that stat exceeds seven (IQ-based skills follow a similar pattern). In combat, your numbers can be shifted around depending on what strategy you want to use. You can focus on initiative, to-hit, and damage to different degrees, and if you're good enough with a weapon you can split your initiative and attack multiple foes. If your skill with a weapon isn't equal to the weapon's minimum, you suffer a penalty for its use.

No matter what discipline you choose (or what discipline chooses you), a persona is the result of years of study. Charts show a chosen profession or vocation divided into its associated skills and characteristic bonuses (there are even older professions like pirate and tinker so you can flesh out old vampires). Rolls on these tables represent a year spent studying the underlying areas of support, and various methods of schooling may concentrate on subjects differently. **Blood Games** encourages players to parse out their exploits and studies a year at a time. It's an interesting mix of mechanics and campaign execution. The heroes are more like Indiana Jones than Buffy Summers, having an adventure here or there, going back to their lives and growing in knowledge and skill, and then hearing the call back to duty once again. Nothing in the game demands that players use the game or its systems this way -- it can all be run in a conventional, full-time manner -- but giving referees a way to make the story and character development work in a believable fashion is a definite little plus.

The layout is a little confusing -- more job and education "blocks" show up in scattered fashion, and it's not always clear how the subjects flow -- but you can skip to anything from the contents page. If you zoom in on the text, you may fill the screen to where you cannot see the section headers (they're in the margin). The artwork is rough, but not without pleasing samples.

Anyone looking for a new and original backdrop for their horror stories is bound to be disappointed. This has all been done before, and there's not much new to see. Ironically, the book's title is one of the cleverer bits, referring as it does to the games vampires play with their potential victims as the years wear on. Rather than go out and simply kill their prey, they roleplay with them, restrict themselves to one group of people, or make a competition out of their feedings.

Blood Games isn't a badly written piece of work. The fiction starts strong but ends weak, and they have the odd conceit of using on-line methods of textual emphasis like asterisks. They avoid a lot of the problems of the small press, and even though it's "just" a PDF, they've given more attention to grammar and spelling than other on-line ventures. Viewed as a resource, it has some nice features. The annual vocational improvements may seem a little limiting to some, but they convey a sense of a lifetime of achievement, and the religion sections are informative and enlightening. The question for the purchaser to answer then is whether the systems are worth the \$10 you pay for the product proper.

Seasons

Published by [Dust Bunny Games](#)

Game Designed by Rob Martin

Graphic Design by Mark Sellmeyer & Rob Martin

Illustrations by Mark Sellmeyer

Game Development by Nancy Milligan, Mark Sellmeyer, Timothy Hunt, Don Betlach Full-color, 4 decks of 55 cards, score pad, & rules; \$24.95

Seasons is subtitled "The Calendar Rummy Game." The object of the game is to score 365 points (366 in a leap year). You score points as you would in Rummy, by melding runs or sets, or by laying off existing runs or sets.

Where *Seasons* quickly differs from Rummy is the use of personal decks, one for each season. Each themed deck (Spring, Summer, Autumn, Winter) contains the same set of 55 cards. The suits (stars, planets, sun, moon) are 12 cards each, one for each month. There are also four holiday cards that can be fit into runs, a Happy Birthday! Card that can enhance a set, and two wild cards that can be used anywhere. From his draw pile, a player pulls a hand of 12, then turns over the top card to begin a discard pile.

Players can draw from their own draw pile or pick up the top discard from anyone's pile without penalty. You can also select a card deeper in a discard pile, but it must be played immediately and all the cards on top of it are taken into your hand. After scoring, all the cards in your hand and score area are shuffled into your deck, so decks change with each round as players steal each other's discards! As a result, after the first round, if your card is on top of someone else's draw pile, you can choose it instead.

A round ends when one player empties his hand by playing a meld or lay off and discarding. Players score points at the end of each round for cards melded or laid off in their score area and lose points for cards remaining in their hand. Once points are totaled, if anyone has over 365 (or 366) points, the highest total is the winner.

Wild cards and holiday cards remaining in your hand are costly, while cards captured from an opponent by picking up discards add slightly to your score. In the score area, bonuses are given for completing a year (12 months in the same suit), a season (e.g., June through September), Holiday cards, Birthday cards, and captured cards.

The game's look is very striking and very well designed to help with game play. Seasons are color-coded on the backs of each deck, and on the "Season Ring" on the front of each card, simplifying scoring. The colors are clear, bright, and complement the game. The cards are very solid, and actually took a couple of games to loosen up for an easy shuffle. The box holds the decks separately with room for a score pad and the rule book. A PDF of the score sheet is available from Dust Bunny Games' website, and it is interesting to note the company is partnering with GameTable Online to produce an Internet version of *Seasons*.

Seasons is a good social game that will allow the gamers to play with non-gamers without anyone being bored or overawed with complexity. Seasons games run one to two hours, with individual rounds running 5-15 minutes. The replay value for real gamers is high, especially as new opponents appear and new strategies are needed, but it can be played for fun as well. Traditional card game enthusiasts will appreciate a new spin on an old favorite. Kids can enjoy

it at a different level than dangerously competitive gamers. Regardless, it could easily become must-play game in your house.

Pyramid Pick

The Book of Unusual Treasures (for d20 System)

Published by [Bad Axe Games, LLC](#)

Written by Philip J. Reed

Illustrated by Christopher Shy

94-page b&w softcover; \$13.95

Believe it or not, handing out the treasures and rewards after a successful dungeon fight can sometimes be a mechanically boring process. "Well, that's your necromancer nemesis dealt with. Now to his treasure . . . Let me see, you find a +2 Dagger, a jeweled ring worth 5000gp, four opals worth 350gp each . . ." and so on. Not that every game or DM is like that, of course. But dressing up treasures such that they are interesting of themselves rather than just for their monetary value does not come easy to every DM, and this is where *The Book of Unusual Treasures* comes in handy.

Written by Phil Reed, better known for his design work on games like *Frag!* and *The Dork Tower Boardgame*, this *d20 System* supplement compiles almost 350 items drawn from a series of mini-supplements published in PDF format through his self-publishing company, [Ronin Arts](#). And while the various mini-supplements, such as *101 Mundane Treasures* and *101 Arcane Spell Components*, are still available to buy and download, nothing quite beats having an honest-to-goodness book in your hands. In compiling so much, *The Book of Unusual Treasures* not only details books and spell books, arcane spell components, arms and armor, clothing and jewelry, plus miscellaneous items, it also adds further unusual items in the form of new spells, feats, poisons, materials, and skills.

Despite the fact that this is a big book of things, every effort has been made to make this a good-looking product. There is little in the way of internal illustration, but the artwork in the header and footer is pleasing enough. Not one of the individual items is actually illustrated, but each is given a more than adequate description. Besides this description, every item includes details of their special features (if any) and their value, as well as what information can be learned from an Appraise Skill check. The information given is rarely extensive, but it is always interesting, adds color to a game, and in many cases could spark adventures in themselves. Although there is a listing of all the items by value, there is no index -- perhaps the only detriment to using this book.

The supplement opens with a chapter of books, starting with the mundane, such as *The Book of Drinks* (a collection of cod-medieval cocktails); the special, such as the *Book of Bows* that gives construction details of various arrows; and then spell books, which range from simple collections, like the *Secrets of the Spider*, which contains a range of spider-related spells, to those like the *Grimoire of Silban*, which give access to new feats when studied. To accompany the spell books -- and more particularly, to make the casting of spells more interesting -- the chapter of new components can be used to enhance various aspects of a spell. These are arranged by spell type, such as electricity or chaos, and require Knowledge (Arcana) checks to use. They also have a negative side effect should the check fail, and none are available off the shelf. Obtaining any one of these would be an adventure in itself.

In contrast, few if any of the new weapons and armor are magical; rather, they are of masterwork quality. Like the items of jewelry and clothing that follow, they tend to be more interesting for their background than for their actual effect. Perhaps the most entertaining entry is that for the Dwarven Fighting Mug. Not just a vessel from which to quaff huge draughts of ale, the mug -- constructed from steel and iron, and weighted at the bottom -- can be used as a clubbing weapon or a shield. Its use is covered by the Dwarven Mug Fighting feat along with its improved and mastery versions. Unfortunately, fights always result in at least spilled pints, as the mugs do not come with lids.

A section of new spells follows in the first of several appendices. Necromantic spells dominate, such as Blood Knife, Bone Armor, and Sudden Grave. There are some pleasing little 0-level spells also -- *Candle*, *Cobble*, *Groom*, *Identify Undead*, *Launder*, and *Oration* -- which are sure to find their way into the books of casters. Several of the new feats also support the spell caster; Fast Spell, for example, halves casting times, while Conceal Spell allows a spell user to be surreptitious in the act of casting. An equal number of the new feats are poison-related, including Empower Poison, Extend Poison, and Quicken Poison, and these complement the 30 new poisons given next. A further appendix gives a more detailed look at a selection of unusual materials that can be used in constructing items, while the last introduces the skills of Craft (Poison), Knowledge (Dwarves), Knowledge (Necrology), and Knowledge (Spirits).

Everything within the pages of *The Book of Unusual Treasures* is open content, meaning that it could find its way into almost any *d20 System* setting, particularly those that involve magic in some form or another. The plethora of new spells (especially those of 0 level), the new metamagic feats, and the spell books would slip easily into, for example, a [Redhurst: Academy of Magic](#) campaign. The range of new necromantic spells deserve to sit alongside any from the several *d20 System* supplements available upon the subject. Players of dwarves will appreciate the book alone just for the inclusion of the Dwarven Fighting Mug and the associated feats! The point of this book is to make every little item both interesting and memorable, to add color to a regular feature of most fantasy campaigns. Indeed, file off the numbers, and the contents could be applied to other fantasy RPGs, but ultimately *The Book of Unusual Treasures* has been created with *d20 System* games in mind. In that it best typifies the whole point of Open Content, versatility and viability for *any d20 System* campaign.

Rise of the Cyber Zombies

A Deadworld for *All Flesh Must Be Eaten*

by Maurice Lefebvre

In this Sci-Fi Deadworld for *All Flesh Must Be Eaten*, humanity has won its war against the Walking Dead. After losing two-third of its number after the Plague and the ensuing fight against zombies, humans have decided to enslave the remaining zombies to work as cheap labor.

In this futuristic, bleak, highly controlled urban world, are the Cast Members really as safe as the authorities have them believe? Will they indulge themselves in cruelty and avenge themselves by making poor zombies suffers?

Welcome then to the Island of New Manhattan, and get ready for the worst.

Introduction

I should have known.

I'd been an historian for 12 years before the Plague. I should have known that speaking ones own mind in a totalitarian regime is not a very bright idea. A simple mention of the Nazis, and already the EDN-8000 mechanical units are coming down the street. Anytime now, the Council's secret police will bang on my apartment door. By tomorrow I will be dead. Or worse. I don't want to "mysteriously" get infected by a "surprisingly localized" outbreak of the Plague.

Earlier today I was meeting Council member Daley. I was on the security board for the Soho area. He told us he wanted to reinforce the police presence by adding a few EDN-8000 patrols of our sector, since rumors say that some kind of rebel group is operating in the area. I told him that I didn't want another October Crisis, like in the early '70s. He wouldn't listen. He wasn't there to ask our opinion; he was there to make his decision official by our approval. I got angry. I asked him if he saw that we were becoming a police state, if he was aware that he was becoming a new Hitler. He didn't say a thing, but his eyes told me his answer. He knew. He was hoping for that. And I knew I was dead.

Instantly all became very clear to me. The disappearances. The traitor speeches. The strange localized outbreaks of the Plague. They are eliminating all those who can see them coming. I bet they can kill someone and imitate the Plague symptoms. Surely they can control the Plague . . . surely they wouldn't dare using it . . .

I hear them coming . . .

History

In the late 1990s, in a zone of the Amazonian rainforest that was being deforested, a new kind of plague appeared. Looking at first like a bad flu, it quickly appeared to be some very evil kind of leprosis as virulent as the Ebola virus. Virulent, and very easily transmissible. Once infected, the victim's body started to decompose at a frightfully fast rate, killing the victim after a week of terrible pain. Much like the Spanish Flu of 1918, the death rate was so high that it was impossible to keep up with disposing of the bodies. Immense communal burial pits were dug, and people were asked to simply put their household's corpses in front of their residence, like garbage, for the disposal teams to pick them up. That was the Plague.

About six months later, the Plague was a world-wide disaster. Roughly a third of the world population was already dead, and millions of people were sick. Doomsday cults sprung up, and for once, it looked like they might be right.

When everyone thought they've seen the worst, the Rise began.

From thousands of burial grounds around the world, those who died of the Plague began to rise from death and attack the living. Zombies traveling in large groups began scourging the countryside and infesting the cities. Everyone had to fight back, until the zombies of the Plague got them. The death toll skyrocketed.

A year after the beginning of the Plague, scientists began to notice that the strange sickness was receding rapidly. This new hope bolstered the survivors' morale, and a more planned resistance was organized. Cities were cleaned of shambling undead, and old buildings were put to the ground to become the foundations of new fortifications. Anyone dying was cremated as quickly as possible. Patrols were organized, parks were turned into vegetable farms and grazing fields. The urgency and danger of the situation asked for a very strong and powerful regime. City-states emerged, much as in Ancient Greece, governed by oligarchic councils. The survivors began to finally live again.

Present Day

The World

Much of what remains of humanity (about 500 million world-wide) lives in walled cities of rarely more than a million inhabitants each. Whole cities have been completely overrun by the zombies. Many third-world countries, unable to react quickly, are now Lands of the Dead. Europe is still waging a war against its dead, and new outbursts of the Plague are identified every few months. To make things worse, France, one of the only European countries that still has a standing army, is starting to take action to preserve the safety of its boundaries, including invading its neighbors.

The situation in North America is a little better. The Plague only makes sporadic appearances, and only in isolated regions. However, both Canadian and American governments have crumbled over time. With a huge area to cover, both governments had to make choices on which areas to protect by focusing the military there. Many "sacrificed" cities began to take their defense in their own hands, fortifying themselves and declaring their independence. Ironically these cities fared much better than those protected by the military, where citizens couldn't arm themselves for security reasons and where barricades were considered a nuisance to the army mobility. When the soldiers began to go AWOL and returned home, those cities were left defenseless. Both governments now hold only a handful of highly militarized towns. The rest are either abandoned or became city-states in their own right. Outside the cities, bands of nomads move around the country in convoys, assuring some kind of commerce between the cities.

The City

Manhattan was lucky. Most of those that died from the Plague had been buried in an old quarry in Vermont, making the island relatively free of zombies. About 10 years ago, a special crisis government, the Council, was elected for the isle. The same Council is still in charge, and has absolutely no intentions of relinquishing its power.

With the Hudson River as a commercial artery, Manhattan was never really cut off from the rest of the world. Since the city didn't suffer as much as others from zombie attacks, the efforts of the survivors were oriented in the industry rather than just staying alive. In the last 10 years, zombies have been enslaved and put to work in special industrial areas, leaving only the complex and delicate work for humans. This manpower, or "zombiepower," was greatly needed and permitted the city to operate normally and produce high and low tech goods for itself and its neighbors. Even if their work is sometime disturbed by zombie unrest, so far that move seems to have been a good one.

In New Manhattan, each citizen knows its place. Under the Council's rule, every citizen left alive received an occupation according to their capabilities and was put to work. The life is rather dull and repetitive, with little entertainment and a very strict control of information. About a year ago, a robotic zombie hunter -- the EDN-8000 unit -- was put to work. These units are used mainly in the industrial areas to take care of zombie escapees and along the rural land-based trade routes to keep them clear of zombies. Some of them have been equipped with non-lethal weapons and are used for crowd control. Rumors about some of them going wild are strongly denied by the authorities.

All is not well, however. Scholars and journalists that have questioned the Council's total control have begun to die, victims of very localized outbreaks of the Plague. The Council's control over the city becomes stronger and more apparent everyday. Already, talks about traitors and denunciation have begun to spread. Rumors of brainwash and executions, as well as a secret rebel group, have begun to surface. Activists say that zombies are not mindless after all, and shouldn't be used as slaves.

The Zombie Question

In the Rise of the Cyber Zombies Deadworld, the zombies cannot Spread the Love. Only those who died from the Plague will ever become zombies. The Plague itself has all but disappeared. Why then, with all the zombies that have been killed, their number still seems to grow? The answer is simple: the Plague has been domesticated.

Twenty years of studies on the Plague virus bore fruits. While still incurable, the Plague has been used to create a secret biochemical weapon of great power: a colorless, odorless gas that dissipates very rapidly. Anyone inhaling the gas will be infected with a non-transmissible form of the Plague and will become a zombie in less than a week. Nearly all the recent Plague outbreaks in the world are due to scientist testing (or simply using) their new incomplete toy. In North America, the few cities that have developed the weapon have been using it on small rural communities to create themselves a work force of zombies. Unknown to the general public, tension between the city-states and with the government-controlled areas has built up. The threat of biochemical warfare is increasing.

In New Manhattan, the Plague gas has been recently used on some members of the city's population, like activists, scholars and journalists. The Council's secret police is aware of the dangers of the gas and will not use it too often, or on a large scale.

The Plague gas has some yet unknown side effects. First, the gas create zombies that are a little more intelligent than those created by the Plague ten years ago. Second, used in the wild, the gas does not always completely dissipate, and can mutate, creating a new strain of the Plague (it is what is happening in Europe). Third, if zombies ever become infected by the Plague gas, a variant of the Plague will develop inside them and they will begin to Spread the Love (see Super Zombies, below).

Standard Zombies

Strength: 2

Dexterity: 2

Constitution: 2

Intelligence: 1

Perception: 1

Willpower: 2

DP: 26

Speed: 4

Essence: 10

Attack: Brawling 2, Bite dam. D4×2 slashing

Weak Spot: All, Electricity

Getting Around: Like the living

Strength: Dead Joe Average

Senses: Like the Dead

Sustenance: Weekly, All Flesh

Intelligence: Tool Use (2), Long-Term memory

Spreading the Love: Nobody loves me

The zombies of this setting are intelligent creatures, like a little child or a heavily retarded person. They have no mean of communication either between themselves or with their living guardians.

Zombie guardians have stun batons and tasers on them at all times. The zombies can have their nervous system short-

circuited by electricity, a process that causes them great pain. Captive zombies know that very well and usually don't attack their guardians. "Wild" zombies are another matter entirely though.

An electrical discharge by a stun baton will paralyze the zombie for 2d10 rounds, and a taser discharge will stun the zombie for 1d4 minutes (its easy to wreak havoc in a already partially decomposed nervous system). Any kind of electrical discharge given by a Cast Member will cause the zombie to fear that Cast Member for about an hour.

In Rise of the Cyber Zombies, the creatures cannot Spread the Love. Only those who died from the Plague will ever become zombies, unless of course bitten by a zombie infected with a mutated form of the Plague.

Super Zombies

Strength: 4

Dexterity: 2

Constitution: 2

Intelligence: 1

Perception: 2

Willpower: 2

DP: 34

Speed: 4

Essence: 12

Attack: Brawling 2, Bite dam. D4×4 slashing

Weak Spot: All, Electricity

Getting Around: Like the living, The Lunge

Strength: Strong like bull

Senses: Like the Living

Sustenance: Occasionally, All Flesh

Intelligence: Tool Use (2), Long-Term memory

Spreading the Love: One bite and you're hooked

Super zombies are the result of a mutation of the domesticated version of the Plague. These zombies are stronger, more resilient, and carry a very virulent form of the Plague. They also show signs of relentless, unbreakable aggressiveness. All rules applying for regular zombies still apply for these zombies too, except of course that no one is going to risk enslaving such creatures.

Cyber Zombies

Strength: 7

Dexterity: 2

Constitution: 2

Intelligence: 1

Perception: 3

Willpower: 2

DP: 37

Speed: 4

Essence: 17

Attack: Brawling 2, Claw/bite dam. D4×7 slashing

Weak Spot: All, Electricity

Getting Around: Like the living

Strength: Monstrous Strength

Senses: Like a hawk

Sustenance: Occasionally, All Flesh

Intelligence: Tool Use (2), Long-Term memory

Spreading the Love: Nobody loves me

Since the last few years, cybernetic implants have been available for humans who suffered severe injuries or for elite soldiers who need that little extra edge. These implants have been under development for many years and have been tested on a large number of zombie workers. Of course, these zombies were all sent in a special work camp where a high voltage electrical fence would surely be enough to keep them in check.

EDN-8000 units

Strength: 10

Dexterity: 4

Toughness: 4

Intelligence: 1

Perception: 4

DP: 100

Speed: 18

Attack: Brawling 2, Gun 2

Claws: D8×2 slashing, armor piercing

M-60 machinegun: Range 125, Damage D8×5 (20), cap. 500

AV: 10

Getting Around: The Quick Dead

Strength: Monstrous Strength, Iron Grip, Claws, damage resistant

Senses: Like the Living

Autonomy: 10 days

Intelligence: Long-Term Memory (computer brain)

The EDN-8000 mechanical unit is a high-tech nightmare designed to patrol outside the city limits and destroy any "wild" zombie. Some of these units are designed for crowd control and used inside the city limits. However, the sight of these metallic monsters turned against them tends to upset citizens to the highest level.

The EDN-8000 is about the size of a compact car (let's say a New Beetle) and vaguely looks like a humanoid torso on the body of a spider. Most of the sensors are stored in the "head" of the unit. Its right arm features huge claws and its left arm a M-60. The spider legs design of the lower body is for improved stability even in rugged terrain.

Destroying the head will not blind the unit completely. However, its Perception will go down to 1 and its programs will command it to disengage and return to base immediately. The head has a AV of 5 and 35 DC.

The primitive AI of the unit is not really designed to hunt humans; it is in fact quite easy to outsmart. However, some new models could become quite dangerous at human-hunting if the Zombie Master decides to use the EDN-8100 model, fitted with a zombie's brain assisted by an AI (see Story Ideas).

Story Ideas

The Zombie Rebellion

In this story, large groups of zombies escape from their industrial compounds and run amok in the city. Maybe the zombies have been contaminated with Plague gas and are now able to create new zombies. Cast Members could be members of the police forces sent to suppress the rebellion with the help of the un-trusted EDN-8000 units. Or maybe they are the zombies themselves, intelligent enough to remember their past life and the ability to use tools.

The Hunted

The Cast Members are members of the rebel group that is operating in the city. However, the group is actively hunted

by the Council police (both official and secret) and are always under the threat of being found out. Council's shock troops or EDN-8000 units are not easy to escape and if this Story Idea is used, the Zombie Master could be evil enough to use the EDN-8100 prototype. This bio-mechanical nightmare uses the brain of a zombie and the body of a EDN-8000 unit to hunt humans. These prototypes can only be used in the wild simply because they will attack any living thing (like a super-charged bio-mechanical zombie).

War!

The Council has been on very bad terms with a nearby city-state and they have finally decided to use their bio-chemical weapons on their opponent. The PCs might hear about it from a Council member, or they might be part of a rebel group that heard from it. Worse, they might come from the other city-state and know about the attack plan from an encrypted message. There is no telling just how the Plague can mutate this time, so the attack must be stopped at all costs!

Cyberware

This cyberware was designed for the Rise of the Cyber Zombies Deadworld. While this equipment can be used in any AFMBE campaign, it is strongly recommend that you don't let your players use this section for their character's creation unless you want to run a cyberpunk-style story.

All the cyberware shown here is of the pretty obvious kind, with chunks of plastic and metal sticking out of the body (of course the ZM is the last authority on this). Every piece of cyberware is purchased with Quality points (both at character creation and during play). The XP cost paid during play for cyberware represent the effort the character has to put into forcing his body and mind to accept and use the mechanical gear as part of his own body.

Vision augmentations

Cybernetic eyes (2 pts)

This is the basis for all eye augmentation. It includes the replacement of one or both eyes by artificial counterparts. Basic features are Night-sight (works as Night goggles) and Retinal Screen (Translucent data can be projected on the retina without impairing the user's sight).

Targeting Link (2 or 3 pts)

Require Cybernetic Eyes. Include Targeting Link cybereye modification as well as either a free Datajack (Headjack, Limbjack, or Eyejack) for 2 pts, or a special Anchoring Palmjack that will secure the gun in the hand for 3 pts. The weapon must be fitted with a targeting system (cost \$500). The user must manually plug the weapon to his Datajack (with a datacord) prior to using it (Anchoring Palmjack plug automatically). Once plugged, targeting information will be displayed on the user Cybereye's Retinal Screen allowing him to gain a +3 to all shooting rolls. An ammo count feature is included limb replacement (2 pts each, +1 extra pt/Strength point) This is the typical mechanical limb replacement. All limbs have a AV of 10 and DR of 20 and a basic Strength value of 4 (even if the character is normally stronger). The extra Strength points are purchased once for all cyberlimbs (ex: One arm with +2 STR cost 4 points. Four limbs with +2 STR cost 10 pts). If the character has both legs replaced by cyberware, each Strength increase also increase his Speed rating by 1 (ex: +2 Strength mean a character with two cyberlegs also have +2 Speed).

Cybernetic Weaponry

Cyber Claws (2 pts)

A set of three razor sharp, high-density alloy metallic claws that can extend or retract from the back of the hand, much

like that well-known Canadian mutant. Under normal use, these claws never need sharpening, although too much cutting through brick walls or car doors will create the need for regular maintenance. Their damage is D6×Str Slashing.

Gun Arm (3 pts)

Require a Cybernetic Arm. The gun is inside the cybernetic arm, and fires through a port in the hand. The gun is reloaded with special magazine under the arm. Two Gun Arm versions are available: 9mm Submachine Gun Range 3/15/30/100/200; Damage D6×4; Ammo cap: 12 Shotgun Range and Damage: As ammo; Ammo cap: 3

Body Plating (4 pts)

Body plating covers the torso, giving it the same AV as a Class II armor (D6×2 +14). Limb protection costs one additional point per limb. Extra armor can be worn in the form of special cyborg armor that clamp over the Body Plating (Class III or IV, 150% of the price normal price). Body Plating isn't very esthetic.

Miscellaneous

Datajack (1 pt for the first, any extra ones only cost money)

Datajacks are either one of three types: Headjacks (located somewhere on the head), LimbJack (on a limb), and Eyejack (in a cybereye socket; requires cybernetic eye replacement). It can be used to plug into computers, TV sets, weapons, it act as earphones, etc . . .

Cranial Computer (3 pts)

An up-to-date, powerful computer located inside the user's head. A (free) Datajack is included as an I/O port. Memory use the brain's memory centers, as it can be much more powerful than any machine. The process is similar to the one used in the Johnny Mnemonics movie: The first 10 years of the user's life is erased (or downloaded and saved on about a hundred high-capacity datadisks) and configured to be used by the brain. Huge amounts of information can be stored that way.

Bio-Scan computer (2 pts) and Chem Regularization Unit (+2 pts)

Required either Cybereyes (for the Retinal Screen) or Cranial Computer. The Chem regularization Unit require the Bio-Scan Computer. A very small computer located in the abdomen analyze the user vital signs and inform the user via his Retinal Screen or Cranial Computer. A wide variety of information is collected, from general fatigue, to combat damage, body temperature, nutrients levels, pulse and so on.

With the help of a Chem Regularization Unit, the Bio-Scan computer can automatically dispense pain killers, amphetamines, antibiotics, anticoagulants, Buzz-be-GoneT anti-alcohol drug, and other various chemicals to keep the body in peak condition. The system will even automatically try to revive the user in case of a cardiac arrest. The chemicals are reloaded by injection into sub-dermal receptacles located in the lower back. The chemicals can also be dispensed manually by applying pressure to particular points in the lower back, or even by simple mental command if the user also possesses a Cranial Computer. In game terms, the character will regain D6 Endurance points for every 5 points loss. He can sleep soundly a minute after going to bed and he will be fully awake and functional a mere 3 seconds after being woken up. If he so chooses, he can also stay fully awake for 62 hours. Alcohol and sedatives can be dissipated on command.

However the system isn't perfect. If the character pushes himself too hard, the system will try to compensate (by injecting mild sedative during stressful situation like combat, or putting him to sleep if he sit down for five minutes). A greater problem arises if the Unit is used a lot for a prolonged time: a dangerous chemical "cocktail" will circulate in the character's body. Even more chemical will be pumped in just to offset the effects of the chemical cocktail,

aggravating the situation. Also, a dependency to the chemical often develops in the user in less than a month.

Reflex Enhancer (3 pts)

The Reflex Enhancer is a combination of nerve boosters and adrenaline injectors that can be activated by a sub-dermal button usually located on the wrist (or by mental command if the user also has a Cranial Computer). The user's Initiative is greatly increased enabling him to act before anyone without Reflex Enhancer (including those with Qualities that enable them to act first).

The End Of The World

by Chris Anthony

In the most remote corner of the world stands the tallest mountain in the world. It is not a place many encounter; although it is tall, it is also well-hidden, for the philosophers say that it is the place where the ideas of previous ages, weakened to the point of implausibility, go to die. As each idea arrives, the place itself becomes more and more improbable, until time, space, mathematics and philosophy bend around the peak, creating a point of land past which there is nothing: the End of the World.

The End itself is both a wonder and an extreme oddity to behold; it is as if the mountain simply falls off before the viewer, leaving nothing but vast expanses of air. There is no land far below, and if an observer took it into his head to leap from the very tip -- which, in this area of strange physics and philosophy, is not necessarily a bad idea -- he would, at least according to the philosophers, fall forever, never encountering the ground again. This is at least one reason why one man has made his home here at the End, in a simple wooden hut mere yards from the precipice. He calls himself nothing more than the Man at the End of the World; philosophers, ancient and modern, have called him the Sage.

The Sage is wizened, to be sure; his beard hangs to his knees, and his head is hairless, but his back is yet unbent and his mind is as agile as it can be given the uncertain and highly-improbable circumstances in which he lives. The wary traveler should not, however, be fooled by his apparent youth. If what the philosophers say is true, the Sage is many, many thousands of years old, and forms the archetype from which all sages-atop-mountains are forged. He lives simply, on the meat of the dodos which inhabit the End and the grain of the wheat that grows straight from the rock. He also keeps a cow, which he calls the Cow at the End of the World and to which philosophers refer as Bessie; she provides the Sage with milk, cheese, and -- very, very occasionally -- meat.

However large the group who approaches him, the Sage always has enough food ready for them; he calls it a knack. (The philosophers attribute it to his Sage-nature.) In addition, there will always be just enough room in the hut for the travelers to sleep, and just enough grass outside for their steeds to graze. "Just a coincidence," says the Sage, winking; there are many coincidences, it seems, at the End. If questioned, the old man knows quite a bit -- not everything, of course, or even everything about the End of the World, but still quite a bit -- and will be more than happy to give answers to any questions the group might have, although he does consider "I don't know" to be a perfectly valid answer. The temperament of the group won't change this; years of experience have given the Sage a supernatural calm. In exchange for each question answered, however, the Sage will expect an answer to one of his own questions. These are usually about the state of the world; the Sage doesn't get out much.

Unfortunately, if a traveler's emotions do swing into anger, he'll soon find out that attacking the Man at the End of the World isn't a pleasant task for those bellicose enough to try. Implausibility is on the Sage's side in this realm, so much so that each strike against him will fail utterly to hit its target. (The Sage himself will never attack guests of the End of the World; neither will Bessie or, if the group is really bucking for a fight, the dodos.) In addition, there's a certain chance with every blow that the End of the World will intervene and try to stop the fight itself. This usually takes the form of changing the shape of the attacker's weapon into something harmless. (Plowshares are typical, which seems to back up the philosophers' claim that ineffability has a sense of humor, although the claim of one belligerent traveler that his axe was turned into a small wooden sheep is not exactly unusual among those who have tried to assault the Man at the End of the World.)

The Tour

When day breaks -- which, strangely, happens on a fairly regular schedule -- the Sage takes any guests who have stayed the night on a tour of the End of the World. This includes a walk through the Barn at the End of the World (wherein lives Bessie), among the fields of wheat and bluegrass, past the dodo nests, along the edge of the cliff that

marks the End of the World, and finally to a small graveyard that isn't noticeable until the Sage points it out. Here the Sage tells of the true nature of the End -- that there is, in fact, land below; it's just that, in most cases, it happens to be the End itself. Anyone jumping off of the End of the World will encircle the world itself on their travels, seeing all there is to see and then landing once again at the very spot from which they leapt. The trouble is that the circuit takes about a year -- by which point the traveler has long since died of starvation and dehydration. It is therefore the Sage's sad duty to bury those bones he finds -- and he finds about two sets a year. (The cemetery is larger than it looks.) Sometimes, of course, those who have chosen to throw themselves from the cliff have certain spectacular abilities; those who need no food or drink typically arrive back at the End of the World after a year of orbiting, safe, sound, and very well-rested.

Those who can fly on their own, on the other hand, have found that they can, in fact, return to the ground they begin to see below them after several days, and that it universally takes about an hour to do so regardless of their speed -- at which point, they can no longer return to their former orbital path or find the End of the World from the air again. (Likewise, those who can fly and who turn around during the orbital circuit have not been able to re-locate the End of the World, regardless of how long or far they flew. Eventually, most of them gave up and headed back along the circuit, although rumors abound that at least one flying individual is still looking for the End.)

There is, however, a way for a traveler to descend from the End of the World -- aside from going back the way he came -- and that is to climb down the cliff face. There is about a mile of travel between the top and bottom of the cliff marking the End of the World, much of which is both nearly horizontal and very treacherous; if travelers are lucky enough to make it to the bottom, they will find themselves where they most want to be, the cliff having vanished behind them. (It is entirely possible to find oneself back at the End of the World by this method!) If more than one traveler is descending at once, connected by ropes, the bottom climber decides, consciously or unconsciously, where the party is going; at the moment his feet touch ground, the cliff face above the topmost climber vanishes, and the face between them becomes a hill of a height such that the topmost climber can stand easily on it from his former position. Falling off at any point during this journey means that the traveler begins the orbit of the world as described above. (He returns to the point where he originally left the edge of the End after the year-long circuit.)

The trouble with this approach is threefold. First, as mentioned, the slope is extraordinarily difficult; even experienced climbers will have trouble with it, as for the first quarter-mile of the trip the climber must cling to the underside of the outcropping at an angle that is nearly parallel to the ground, and even afterward the cliff is rough and unforgiving. Second, the implausibility of the area itself leads to some interesting results: footholds and handholds may simply disappear, the rock face may become improbably hard and impenetrable, or the climber may find a hidden cave full of treasure; none can be sure until they actually descend. Third, the End of the World is full of native life, which in this case involves two species: rockhammers and runner-snakes.

The Perils of Improbable Life

Rockhammers are large birds, with an adult wingspan of about a yard, coarse white feathers, and enormous, diamond-hard and superbly-sharp beaks which they use to chip nesting-holes from out of the cliff face itself. If a rockhammer nest is disturbed, the parents will attack whatever disturbed it -- regardless of size! They are thus not only deadly in their own right but can easily knock even an experienced climber off of his perch.

Runner-snakes, by contrast, are quite small; the largest adults are only 12 inches long, and all have scales banded in patterns of red, orange, and green speckles and bands that are unique to each individual. They use specially-adapted, nearly-microscopic suction scales on their undersides to climb sheer surfaces -- specifically, the side of the End of the World's cliff. Their small size should not fool cautious travelers, though; many years of evolution -- or perhaps the End of the World itself -- have given the runner-snakes extraordinary swiftness and slow-acting, debilitating venom. Although it does not take effect immediately, a runner-snake victim can succumb to the venom within hours, becoming drowsy (and eventually comatose) and losing fine motor control. Fortunately for climbers, runner-snakes only attack when threatened; the wary can ensure their safety by keeping a good distance from any sighted runner-snake.

Finally, there is always the option of descending the mountain in the direction from which the traveler came -- down the forbidding slope of the tallest mountain in the world. Although it is a steep and dangerous descent, many find it

easier to bear than the other two options -- and should they want to try one of the two later in life, it is always possible for a traveler to retrace his steps; the End of the World will be right where he left it.

Should the group choose to remain at the End of the World for a while, there are a number of features of the location which travelers often find quite useful. For instance, every two or three days, the Sage begins speaking prophetically for a few minutes; these prophecies will always have to do with the listeners -- usually advice on their next journey -- and will never be remembered by the Sage himself, who usually denies that they ever happen. In addition, the milk produced by Bessie has been occasionally known to have various spectacular properties. Those drinking from it might find that they have had years added onto their lifespan, injuries healed, or dire poison introduced into their system; or, it might just be normal cow's milk. The only way to be sure is to drink.

This is not, of course, the limit of what can happen at the End of the World; in fact, nearly *anything* might occur, as long as the odds are very firmly against it. (Philosophers say that the End of the World has not only a sense of humor but a spiteful streak.) Visitors have reported friends (and enemies) returning from the dead, the overnight appearance of a dense forest stretching out from where the End of the World once was which lasted only one day before vanishing again, and a cloud of small pink butterflies entering the Sage's hut, landing to spell out the word "Forsooth," and scattering again, among other strange tales.

Getting There is Half the Fun

As stated before, the End of the World is not easy to find, but it isn't an impossible task, either. Anyone who has been before might be persuaded to lead a band of adventurous souls back up the mountainside to the End; likewise, maps have been drawn showing its location, and the locals at the base of the mountain upon which the End is perched will be more than happy to point the way -- for a price, of course -- although they will almost never go up the slope themselves. (The philosophers, whom the wise listener will note have probably never met the natives in question, say that this is because they have ancestrally looked over the abyss and desperately disliked -- or feared -- what they saw; the natives, if asked, gladly tell that it's nice and warm in their valley and very, very cold on the way up the mountain. The End, by direct contrast, is pleasingly temperate, if above the tree line.) Groups of adventurers have also happened upon the End of the World entirely by accident, or have been guided there by oracles or priests.

But why would someone seek out the End of the World? The philosophers describing the End of the World advocate going in order to achieve enlightenment. Perhaps an adventurer might go the End of the World for religious reasons: a sect might decree that a pilgrimage to the End of the World is required of all true devotees of the faith, or a cult might spring up based around the Sage as a prophet or an oracle -- or a god. A group might also go looking for the Sage to acquire information; perhaps another party -- or some of their own comrades -- were last seen ascending toward the End of the World, and the group has now decided to go up themselves to find information on their whereabouts, and possibly to collect remains. (Or perhaps they have an ulterior motive -- was the previous party carrying a powerful item that the current group wants to get their hands on?) Or, it may just be for the sake of exploration -- climbing the mountain because it's there, so to speak. As the philosophers might say, the possibilities are endless.

Pyramid Review

Creatures of Freeport (for the d20 System)

Written by Graeme Davis & Keith Baker

Illustrated by Toren "Macbin" Atkinson, Kent Burles, Mario Fiorito, Chris Keefe, Jonathon Kirtz, & Britt Martin

96-page black & white perfect bound book; \$19.95

Monster tomes for the *d20 System* fall into three types. The first is the generic, containing a wide selection of beasts, creatures, and monsters suitable for use in any *Dungeons & Dragons* game. The second concentrates upon a particular type of creature carrying its theme across all its entries. The third again provides a range of creatures, but just for one world or setting. The [Monster Manual](#) is an example of the first, [Legions of Hell](#) is an example of the second, and [Monsternomicon - Volume I: Denizens of the Iron Kingdoms](#) an example of the third. As is *Creatures of Freeport*, a collection detailing a variety of species native to [Freeport: City of Adventure](#), Green Ronin's setting that combines fantasy, piracy, and adventure flavored with a dash of Lovecraftian horror.

Within its pages, *Creatures of Freeport* details just 16 species, plus another seven animals and 11 types, all of various sizes. In truth this does not seem like an awful lot, but what *Freeport* sourcebooks generally in quantity they make up for in quality. Plus these limited numbers make sense; the *Freeport: City of Adventure* setting is an area limited in size, consisting of just the city itself, and jungles spread across the island chain that the city is located in.

Indeed, what *Creatures of Freeport* makes for in its lack of entries is depth and usefulness. Each creature write-up runs between three and seven pages long, with an average of five pages. Besides the actual stats for the creature and its description, the information on each is greatly expanded. This expanded information comes in the form of skill checks for various Knowledge skills and Bardic Knowledge. These act as an easy method of handling how much is known by a character, and can add elements of roleplaying, research, and investigation to a game. In most cases, these checks and the parcels of information and hearsay they dole out relate to on particular tome. This is *Beastes of Farre Landes*, a book that can be found with a little effort in Freeport and beyond. Each entry also lists the uses that a creature's parts can be put to by alchemists, necromancers, spell casters, and others. Finally, every entry is rounded out with several detailed adventure hooks that showcase how a creature could be used.

The pages of *Creatures of Freeport* are graced by some excellent illustrations, particularly those by Toren Atkinson and Kent Burles. Since all of the artists on *Creatures of Freeport* have contributed to previous titles in the line, this supplement keeps in line with the other books. The book's writing is likewise good, with just one typographical error. That said, the color text taken from the *Beastes of Farre Landes* does grow a little wearing on the eye, as it follows the rule "If a word lacks an 'e,' find somewhere to put one -- preferably at the end."

The monsters themselves range in Challenge Rating from the lowly one-sixth of the humble Parrot, up to the 20 for the Colossal Flying Lizard. Both ends of this scale are examples of the themes that run through the designs in *Creatures of Freeport*. For the Parrot, the theme is the animal companion or familiar. From the Scalewing or Tiny Flying Lizard and the monkey-like undead hating Ghosteater to the magical cat-like outsider, the Malkin and the miniature couatl-like Picacouatl, there are plenty of creatures here that can serve as familiars to spellcasters and companions to others. For the Colossal Flying Lizard, the other theme is reptilian, with various lizards also described. This ties into Freeport's background, the city located in an island chain that is the only remnant of a continental empire ruled by the

Serpentmen. Most curious of all is the Spirit Lizard, the only type of fey creature native to the islands. They remain protective of the jungles and have a sad history. When the original summoning of the Unspeakable One shattered the continent, some Spirit Lizards were caught in their home trees, which were warped by the Unspeakable One's influence. These are known as Deadwood Trees, while those Spirit Lizards left outside at the time of this calamity became the bitter, twisted Devil Lizards. Both of these creatures are detailed in *Creatures of Freeport*. Included also is an antithesis of the Serpentmen, the Tavi, an intelligent race of Mongoose Folk bred to fight large snakes and others of their kind.

Not surprisingly, a third theme in this supplement is that of the ocean. The aquatic entries include the Dead Man's Brain, a coral that feeds on the lingering mental energies of the dead; the Nereid, the marine equivalent of the Dryad; the Wereshark, a vicious lycanthrope; and the Thanatos, a whale-sized, undead fish. Other creatures in the book include the Vulpine, another take on the humanoid fox trickster; several types of creature that are not necessarily dangerous in themselves, but certainly are when they swarm; plus a few ordinary, but no less interesting animals; and finally, some species of vermin that could prove very dangerous. Also contained in the appendix of animals are guidelines for teaching animal companions various tricks such as "Carry Message," "Howl," and "Steal." Several of the intelligent creatures in this book, such as the Vulpine and the Nereid, are supported with fully written up NPCs for use with one of their adventure hooks.

The strength of *Creatures of Freeport* is its depth and high utility factor, with every entry adding a little more to the setting's background in addition to giving a creature to be encountered, fought, or interacted with. Despite the details being particular to Freeport, there is nothing to stop a DM from stripping any of the creatures of their setting information and using them for a different campaign. But of course, this supplement works best with *Freeport: City of Adventure*. In that, *Creatures of Freeport* serves to show that a book of monsters with fewer entries is infinitely more interesting and useful than a catalogue of creatures to butcher.

Pyramid Review

Meddling Kids

Published by [PandaHead Games](#)

Written by Allyson Brooks

Edited by Brett Brooks

Art by Brian Laframboise, Peter Delgado, & Marcio Fiorito

96-page b&w digest-sized softcover; \$9.95

The title really says it all: *Meddling Kids* is a tribute to Saturday morning cartoons with good-guy youngsters accompanied by a quirky sidekick trying to solve mysteries (usually involving weird creatures). PandaHead Games is aiming for the junior set with this roleplaying primer from its Meddling Kids imprint.

Although the title is a pretty obvious reference, the game applies to many such shows. The players play the teenagers in the Clique, and the GM takes the part of the eccentric Wild Card character.

Meddling Kids calls its game engine The Starter System, and this book is "Stage One" (the advanced *Meddling Spies* and *Meddling Heroes* are next). PCs are a simple selection of Strength, Moves, Smarts, and Health, rated from one to 10 -- players buy them with a pool of points. Everyone falls under archetypes, like the Jock or the Brain. This gives everyone an idea of your role in the group, and gives the character a related free ability. The rest you have to pay points for.

Abilities are a catchall, bought with their own point pool. Price varies depending on how utile they'll be in the game. They include skills (such as Singer, or Xtreme Sporty for skateboarding), areas of knowledge (such as Math Whiz), and talents (including Luck, Popular) that round out your persona and make you different from other archetypes. Some knacks build on previous abilities (you can only become Really Rich if you already have Rich). If a roll is required, the ability lists the associated stat and its bonus. Steel Memory gives a +3 to Smarts, while Webworm adds 1d6.

Wild Cards also get abilities, but they have access to a variety of additional special ones -- after all, if you're an electric eel in a fishbowl, you'll need all the bonuses you can get. Some make the Wild Card more colorful, like the ability to fly, while others make it more playable (can the cat talk to anyone, or only to the members of the Clique?).

To use abilities, players roll three six-sided dice and add their stat and ability. Compare this to a Target Number, and if they beat it they succeed. Borrowing the Mojo Pool concept from PandaHead's *Xcrawl* game, players may also be offered Kid Points, a cooperative pool that, with teamwork, will add to a friend's total. Since it's geared toward kids, all the violence is muted. Heroes don't get hurt often, and even then it's something cartoonish like being pelted with fruit. Running out of Health leaves you Bonked, rendering you incapacitated however many minutes your Health was exceeded by.

As for the monsters (or whatever villains the Clique is investigating), no one engages them in combat. Kids have the option of tricking them, confusing them, or otherwise sneaking past them (there are some optional rules for chases). But the big confrontation comes when they've got a trap ready. Traps are set by having the kids brainstorm some Rube Goldbergian setup -- the more steps in their plan, the more effective the teens will be when the dice are rolled. If it's elaborate enough, they bag eccentric old Mr. Galoot and the police make him pay for his misdeeds.

The book is covered in appropriate cartoon art, and figures are almost immediately recognizable according to their archetype. Mr. Bingo, the sample Wild Card, is a pirate-possessed lab monkey who looks like he just stepped off your television screen.

The rules play right into the company's objectives, striving to tap the juvenile market by providing a gentle intro to the fine art of roleplaying. They're quick, and few subjects take more than a paragraph to explain. You'll find the same selection of GM advice here as in any other book, but it's tailored to its audience. The included adventure, in part the inauguration of Mr. Bingo and his crew, falls a little flat. It bends over to be as simple as everything else, but there's not much detecting to do. Players get to roll some dice, but aside from creating the trap, they don't so much sniff out clues as get them handed to them. Even then, the tips don't alter the action much -- the gang can't innovate, intercept trouble, or alter the linear plot (by design, no doubt), and some rolls produce the same effects with or without a success. On the other hand, it's very Scooby-esque.

Kids may also balk that they don't get to play the oh-so-tempting Wild Card (all those wonderful toys), but it's a good way to persuade everyone to try the GM's seat at least once. Whether you were raised on Scooby and Shaggy or Captain Caveman, *Meddling Kids* captures the genre well, and is a good initiation for little kids -- or big kids with their own.

--*Andy Vetromile*

Spaced Academy

A *Toon* Short Subject

by **Bob Portnell**

Cast of Characters

The Animator and two to five players. The players are free to play whatever characters they like; they may work together or in opposition. The only common thread is that all characters must express an interest in being astronauts.

The Animator plays Admiral Ham Sammich (chimp), commandant of the Spaced Academy and one of the first animals in space; Captain G. Armstrong Shepherd (dog), the senior Academy instructor; and Lieutenant Catherine Byrd (duck), the junior instructor. The Animator may add additional non-player peers for the player characters as he sees fit.

Location

The characters begin at the Spaced Academy, nestled just Outside of Town in the mountains near Colorado Springs. The adventure concludes with a real mission into (near) Outer Space.

Situation

The cartoon world needs brave astronauts like commandant Sammich, and our heroes have answered the call. Will they have what it takes to master the skills of space flight? Will they be able to meet Captain Shepherd's ever-increasing, impossibly high standards? Do they have . . . The Right Schtick?

Object Of The Adventure

The players must successfully complete the evaluation and training phases of the Academy program, followed by a genuine test mission into space. Those who do will earn the right to serve as astronauts.

Plot

The characters have responded to advertisements promising Great Adventure, Amazing Sightseeing, and Astounding Salaries to those able to become Astronauts. (Not to mention Babes. Or Hunks. Whatever.) They have been bussed from the recruiting office to the Spaced Academy complex and led into an auditorium. The stage has a single podium, three folding chairs, and a deep blue backdrop curtain featuring the academy symbol: a finned dunce cap tilted at an angle, with rocket exhaust pouring from the open end.

First Assembly

The auditorium lights are dimmed, and three figures come onto the stage from the wings. An aged chimpanzee in an old fashioned naval greatcoat leads; gold braid spills off the epaulets and halfway down his sleeves. He is followed by a young, efficient-looking duck. She wears the Spaced Service uniform, glasses and carries a clipboard. Last is a police dog with an annoyed expression and a uniform so heavily starched it squeaks.

The police dog stands at the podium. He doesn't bother turning the microphone on, since he speaks in a continuous

shout. "On behalf of Admiral Sammich and the Academy staff . . ." -- his muzzle twists into a snarl -- ". . . *welcome*. I am Captain Shepherd and I will be supervising your testing and training. Do not expect to succeed! Only the best, the brightest, and the bravest can become astronauts, and I can see from here that none of *you* have what it takes! So let's get this over with. The sooner you flunk, the sooner I can go back to writing my autobiography."

"Admiral Sammich is pleased to patrol the Academy grounds at any and all times observing training procedures. You *will* stop whatever you are doing and salute should the Admiral come near. Failure to salute will result in Unpleasant Consequences! Lieutenant Byrd will be on hand to keep records of every activity. Only the best of the candidates will move on to become cadet-trainees. First test begins in two minutes. You have that long to take your belongings to the dormitories, unpack, change clothes, eat lunch, and return here. *Dismissed!*"

Testing

Animator's Secret: These scenes can be run in any order; just be sure you're done with testing before you move on to training. If you have a large cast, you may wish to show only one or two characters for each test -- choose "volunteers" or look for the player who thinks he has a good gag to try. Throughout all the tests, Lieutenant Byrd (the duck seen at the assembly) stands in the background, making notes on her clipboard. She now wears a neat and spotlessly clean lab coat over her Service uniform and will appear in this way for the rest of the adventure.

The Centrifuge: Everyone's favorite training device. Captain Shepherd explains in his usual bellow that space launches require great stamina and tolerance for physical stress. The candidate will be placed in a small capsule at the end of a long rotating arm. The arm will spin the candidate around the circular chamber at increasing speeds, simulating the forces of a space launch.

Captain Shepherd monitors the operation from an adjacent control booth; candidates waiting for (or recovering from) their centrifuge runs wait here also. The booth has many interesting dials and buttons, along with a master control dial that ranges from "1 Gee!" (about the same as the "normal" force of gravity) through "10 Gees!" (more than most any space mission would experience) and on up to "**OH THE HUMANITY!**" at the highest setting.

Tolerating the Centrifuge is a Pick Up Heavy Thing Skill check, with a -1 penalty for every 2 Gees! of force. Characters in The Centrifuge are likely to experience the usual effects of excess Gee! force: sunken eyes, cheeks and lips pulled away from teeth, and so on. In extreme cases, a candidate might actually be *flattened* into the capsule seat. (We've seen this done, but we don't really understand how two-dimensional cartoons can be made more flat. But there it is.) Failure on the Skill check results in being Boggled.

If Captain Shepherd really has it in for the would-be astronaut, he'll vary the speed of The Centrifuge, speeding it up and slowing it down at random. This technique is known by the astronaut shorthand EIEO ("Eyeballs In, Eyeballs Out").

Pressure and Vacuum Tests: "It is important," Captain Shepherd shouts, "for the astronaut to be able to withstand rapid changes in air pressure. As you might have heard, there is no air in space and in the event of an accidental loss of cabin pressure . . ." A oxygen mask on a hose drops from somewhere above Captain Shepherd; he ignores it. "You will be expected to do your job appropriately. Expect this to be a long and boring test; the Lieutenant will give you some activities to pass the time."

The candidates are all ushered into a large pressure chamber which resembles a Thermos (TM) bottle, right down to the cap which is screwed into place to establish the seal. Inside is some modeling clay and dowel rods, with which candidates are supposed to recreate models illustrated in a book. (Models illustrated range from a simple dumbbell to a working steam locomotive.) A portable ice chest carries cans of Fizzy-Cola; a bowl on top is full of wrapped pieces of chewing gum. Lieutenant Byrd is behind the operator's console with her clipboard; Captain Shepherd watches with malicious enthusiasm through a thick porthole in the side of the chamber.

Unlike real pressure chambers, the Spaced Academy chamber can change pressures *instantly*. This can have interesting effects on cans of soda or on drinkers of soda. Likewise a bubble gum bubble can instantly take on dramatic

proportions if the air pressure is dropped.

Use a See/Hear/Smell roll to determine how well a character withstands a given change in pressure. (Yes, See/Hear/Smell. It's all about body sense.) Animators can feel free to add modifiers to the roll for the speed of change, with an instant transition from high-vacuum to ocean trench pressures getting the biggest modifier. Visual effects of lowering pressure might include bugging eyes, eardrums popping out, and all-body swelling (potentially leading up to a traditional "explosive" decompression.) Another possible consequence of low pressure is a painful condition called "the bends" -- the comedy potential should be evident in the name alone. Pressure increases might be signaled by all-body shrinkage (akin to the classic "steam box" gag), flattening, or folding. Failure on a skill roll results in one die damage.

The Medical Exam: Since "astronauts must be in perfect, flawless, ideal health" (or so Captain Shepherd insists at high volume) the candidates are thoroughly examined by a top-flight surgeon, Doctor Markus Illby (an owl), and his ace team of nurses (all identical quail in nurse's caps.) The usual routine of medical exams follows: measuring height, weight, and other physical dimensions; blood tests (love those needles); electrocardiograms (reading heartbeat patterns); electroencephalograms (reading brain patterns, if such exist -- brains, not patterns); and the ever popular "turn your head and cough" test. No doubt the players and Animator can devise more painful and intrusive tests if desired. Candidates should make a basic Smarts roll to avoid doing a "take" of pain with each indignity; failure on the roll results in Lieutenant Byrd shaking her head sadly and making marks on her clipboard . . .

Training

Much to Captain Shepherd's disgust, you've all managed to pass the testing phases. (It helps that Lieutenant Byrd keeps all the records.) "All right. You've made it this far. You're fit enough to be astronauts, but are you smart enough?"

Animator's Secret: Actually, it's just the same secret as last time. These scenes can be run in any order; just be sure you're done with training before you move on to the real mission. As always, Lieutenant Byrd takes very efficient notes.

The Tank: "Trainees get their first experience of weightlessness in this large swimming pool! You will be outfitted with real spacesuits and lead weights will be added so that you float exactly in the middle of the tank, neither rising nor falling. You will then be expected to perform your duties. Good luck." Aside from the inconvenience of the bulky space suits, the awkward controls for same (which at the slightest mishap will overinflate the suit so that the character looks like a giant marshmallow with hands, feet and a helmet head), and the ever-present risk of drowning . . . Captain Shepherd has handed out individual assignments that are difficult if you're lucky (build a house of cards underwater) to simply impossible (make a pretty vase using the provided pottery wheel and water-soluble clay.) Trainees will need to find creative ways to cooperate (or not) to solve their problems.

Whoopsie-Doodles: "Having acquired free fall skills in The Tank, you will now proceed to mastery in the Training Aircraft!" (*Okay, we know we said these could be run in any order. We meant it. Just rewrite Shepherd's dialogue appropriately.*) The next phase of training involves practicing zero-gravity skills in a large empty cargo plane. The interior of the cargo compartment is heavily padded; a layer of airsickness bags covers every inch of the padding. This plane is known as the Whoopsie-Doodles, both for the usual flight path (involving repeated climbs followed by free fall dives) and for the effects of free fall on the trainees. High Smarts or Chutzpah will help one resist the siren song of Space Sickness. This is also a fine time to practice advanced space flight mayhem skills, like floating an anvil over your favorite instructor or Natural Enemy. After all, when Whoopsie-Doodles pulls out of the dive, everything inside suddenly experiences 2 Gee! . . .

The Flight Simulator: A mockup of the space shuttle flight deck sits in one large room, mounted on hydraulic actuators able to shift it in most any direction. (The words "Star Tours" are imperfectly painted out on one side.) It is expected that trainees will fight among themselves to get to be commander or pilot. Inside, the cockpit is a gallery of unlabeled controls and indecipherable displays -- a Drive Vehicle roll is required any time a cadet actually tries to do something useful. Failure of the roll could generate a consequence as simple as a display light coming on ("NOT THAT ONE, YOU DOPE!") or as involved as an unexpected cream pie deployment.

Trainees can experience (be subjected to) (be tortured with) any simulated mission or mishap Captain Shepherd can devise; a favorite is a satellite retrieval mission (except the satellite is sulky and refuses to hold still for capture.) It is also likely that the "simulated" asteroids seen on the screens will *actually* crash through the windows to bean the unfortunate.

The Big Finish: The Mission

The graduation exercise is a real mission using the Academy's space shuttle Minnow. Shepherd and the cadets will fly to orbit to repair the Dribble Space Telescope (an unsightly collection of patches, boded repairs and bubble gum as it is, loosely resembling an oversize drinking glass with solar panel wings and a hole near the rim). Pick Up Heavy Thing rolls at -2 are called for to endure the 4 Gee! launch; failure results in being Boggled and missing the chance to "ooh!" and "ahh!" out the windows once in orbit.

The current repair involves the placement of an oversize bifocal pince-nez on the telescope. If the adventure is tied to the SAPS program from *Toon*, our heroes will be issued the standard full-body hot-pink-with-bubble-helmet SAPSuits.

Captain Shepherd will do everything in his power to make life difficult for the cadets, including wiggling the shuttle at inopportune times or making inappropriate use of the robotic arm in the cargo bay. It should be clear at this point that the only way to successfully complete the mission is to mutiny! (Lt. Byrd does not join the space mission, as she is in Mission Control at the Academy.)

Several Drive Vehicle rolls will probably be required to make the rendezvous, put the robotic arm in position, and make the pince-nez installation. If the astronauts manage to confine (or get rid of) Shepherd, they will be able to complete the mission with a minimum of (external) mishaps. If not, they will return in shame and disgrace . . . but it's Captain Shepherd who will get a triple-strength chimpanzee screaming from the Admiral. No one remains sane after a triple-strength screaming . . .

Plot Points

Give one Plot Point to the character who makes the best showing in each testing or training exercise. Give one Plot Point to each character who survives the mission without falling down once; give an extra point to each character if they actually managed to get the Dribble working again. Don't forget the usual migration of Plot Points during play! (*Toon* pg. 55)

Afterwards

The cadets return home and are received as heroes (or scapegoats, if something awful happened to the satellite observatory). Shepherd is hauled away on a hand-truck, straight-jacketed and muzzled, but his rage for revenge is plain enough to hear as he's taken to the Spaceman's Retirement Home, Insane Asylum, and Car Wash. Either way, Our Heroes will be offered prestigious positions in the space service. This could be an ideal segue into the SAPS-based adventures "Spaced Out Saps" or "Mars Needs Creampuffs" in *Toon*. This plot could serve equally well as an introduction to the *Tooniversal Tour Guide* series "Star Toon." Just update the technology and cliches appropriately.

Inspiration

Your Author found the following resources essential in developing this adventure:

We Seven by the Mercury astronauts. Vivid inside account of the selection and training of the original American astronauts. The testing and training described in this adventure are mild compared to the heroic reality.

The Mercury 13 by Martha Ackmann. More details of the 1960s astronaut evaluation process and the semi-secret history of another corps of Mercury astronauts.

"Conrad the Sailor" (1942). Stowaway Daffy Duck makes naval duty complicated for Conrad the cat. Admiral Sammich is a direct blend of real space apes and the flag officer from this Chuck Jones cartoon.

Man in Space (1955), *Man and the Moon* (1957), and *Mars and Beyond* (1957). These episodes of the *Disneyland* series still give a good sense for the basics of space flight despite their age. "Joe Everyman as Astronaut" is amusing both for the cartoon and for the dated 1950s culture. Available on limited edition DVD.

And, of course, The Compleat **Toon** Library. Special thanks to veteran Toonster David Morgan-Mar for remarkably helpful suggestions and comments.

Characters

The main Academy characters are created with 16 points of Attributes and 35 points of Skills and Shticks, just to give them a nominal edge over the player characters.

Ham Sammich, Admiral

Description: Chimp-sized chimpanzee, dressed in naval cap and long-coat bedecked with gold braid. In the habit of strolling around the Academy compound with his hands behind his back, observing the goings on. He could appear anywhere! Even in The Tank! Other characters are required to snap to attention when he passes; failure to do so will earn the slacker a chimpanzee-screaming (one die of damage).

Beliefs and Goals: Be distinguished. Know what's going on at all times. Never speak, unless it's to scream at a deserving subordinate. In his youth, Sammich's Natural Enemies were space program scientists; however, he's outlived them all and so has no Natural Enemies remaining.

Sleight of Hand: 4

Sneak: 10

Shtick(s):

Chimpanzee Scream: 9. The object of the Admiral's wrath is subjected to a chimpanzee-style tongue-lashing consisting of high-pitched shrieks and screams. This does 1 die damage. There is no way to avoid or counter this attack. Cost 4. (The Animator is encouraged to leap around the room, hooting and shrieking ape-style at the offending player.)

Captain G. Armstrong Shepherd, Senior Instructor

Description: Human-size dog, dressed in impeccably pressed uniform jumpsuit. He seldom speaks below a shout, thanks to hearing loss from repeated exposure to chimpanzee screams. Spittle drips from his muzzle when he's really worked up. His obsessive need to be "the best" led to his demotion from active space service into this menial position at the Academy; he wants to prove himself a team player again but has problems with this.

Beliefs and Goals: I'm the best! No one can outmatch me, especially stupid candidates and trainees. Therefore no candidate must be accepted and no trainee graduated. Natural Enemies are (what else?) astronaut candidates and trainees.

Shtick(s): Incredible Strength: 5 (Cost 5.)

Lieutenant Catherine Byrd, Junior Instructor

Description: Human-size black duck in space service jumpsuit. Wears glasses to look more efficient but doesn't really need them to see. Carries a clipboard with her at all times. Often seen with lab coat over uniform.

Beliefs and Goals: Be fair. Stay out of the Captain's way but always be on-hand in case the Captain wigs out. Candidates and Trainees are cute and need all the help they can get.

Heard On High: The Angels of Mons

"And Elisha prayed, and said, Lord, I pray thee, open his eyes, that he may see. And the Lord opened the eyes of the young man; and he saw: and, behold, the mountain was full of horses and chariots of fire round about Elisha."

-- 2 Kings 6:17

When angels come, they bring two things: [words](#) and [death](#). So it was in ancient Judah and Israel, and so it was in the Belgian battlefields of the Great War. Although no less a source than A.J.P. Taylor refers to the Angels of Mons as an unequivocal "supernatural intervention . . . observed, more or less reliably, on the British side," the truth is that all we have are the words -- and the death -- that someone, or something, angelic or otherwise, brought to Mons.

"His heart grew hot as a burning coal, it grew cold as ice within him, as it seemed to him that a tumult of voices answered to his summons. He heard, or seemed to hear, thousands shouting: 'St. George! St. George!' . . . And as the soldier heard these voices he saw before him, beyond the trench, a long line of shapes, with a shining about them. They were like men who drew the bow, and with another shout their cloud of arrows flew singing and tingling through the air towards the German hosts."

-- Arthur Machen, "The Bowmen," in the *London Evening News* (Sep. 29, 1914)

On August 22, 1914, the world came apart for the British Expeditionary Force in Belgium. The onrushing German hordes had splintered the Allied front, and were pivoting on their axis for the drive to the Marne. The BEF was strung out, isolated, and outnumbered by more than three to one, and the 6th and 9th Brigades of II Corps were pinned along the Mons-Conde Canal by the German advance. The next day was spent tearing holes in the German ranks with aimed rifle fire, but that afternoon the Canal was flanked and II Corps had to pull back. On the retreat from Mons, British soldiers claimed to see "shining figures" such as St. George, angels, armored horsemen, and medieval longbowmen intercept the German forces, holding off the attack long enough for British units to evacuate. In some stories, the apparitions actually attacked the Germans, smiting them with heavenly might; in most cases, the visions simply panicked German horses, or somehow rendered the Germans unable (or unwilling) to advance. Some soldiers wrote of seeing "black clouds," "flashes of light," "winged shapes," and various other supernatural entities and shapes on the long, confused retreat. On August 26, the surviving British regrouped and dealt the Germans another blow at La Cateau, delaying the inevitable long enough for the survivors to pull back and fight again. Bloodied, the Germans held their positions for ten days before resuming the offensive. 8,000 Tommies were dead or dying; perhaps 20,000 Germans along with them -- but the Angels of Mons had saved the BEF, and by extension, France.

"Now it is possible that some persons, judging by the tone of these remarks of mine, may gather the impression that I am a profound disbeliever in the possibility of any intervention of the super-physical order in the affairs of the physical order. They will be mistaken if they make this inference . . . But I confess, very frankly, that I credit none of the 'Angels of Mons' legends, partly because I see, or think I see, their derivation from my own idle fiction, but chiefly because I have, so far, not received one jot or tittle of evidence that should dispose me to belief."

-- Arthur Machen, *The Bowmen and Other Legends of the War*, "Introduction" (1915)

Or was it just trained rifle fire and the entrenching tool, which British soldiers used to throw up earthen battlements at every stop along the retreat, prefiguring the defensive advantages that trenches would convey later in the war? It is interesting to note that not a single one of the hundreds of reports of the Angels (or Archers, or Glowing Clouds) of Mons predates the publication, in late September (about a month after the retreat), of a short story by Arthur Machen called "The Bowmen." Set during an unnamed "Retreat of the Eighty Thousand" (obviously Mons, at the time), it tells of a soldier beset by impossible odds who recalls the inscription on the plates in a vegetarian restaurant he patronized: *Adsit Anglis Sanctus Georgius*, "May St. George be a present help to the English." Speaking the motto out loud, the soldier is astonished to hear it echoed by thousands of throats, calling out medieval war cries -- and then the Bowmen appear and slaughter the Germans with magical arrows that leave no mark upon the bodies. Machen spent much of 1915 and 1916 answering eager letters from occultists, and outraged letters from nurses and propagandists (and sometimes, as with the redoubtable Phyllis Campbell, all three in one), swearing that they knew someone (whose name and unit they somehow never included) who had seen the Angels at Mons. The few times that identifiable soldiers

swore to the sight, their stories broke down -- they had enlisted after Mons, or their unit was nowhere near the Retreat. Machen's story, dashed off after a frenzied vision during a church service as the news from Mons came in, had struck a chord in the peculiar spirituality and matriolatry of Edwardian Britain. When it struck, however, the echoes changed his bluff (if supernaturally powerful) archers and warrior saint into shimmering female angels of protection and security.

"[T]hen there is the story of the Angel of Mons going strong through the 2nd Corps of how the angel of the Lord on the traditional white horse, and clad all in white with flaming sword, faced the advancing Germans at Mons and forbade their further progress. Men's nerves and imagination play weird pranks in these strenuous times. All the same the angel at Mons interests me. I cannot find out how the legend arose."

-- Brig.-Gen. John Charteris, letter to his wife, dated Sep. 5, 1914

The only shred of contemporary, certifiably pre-Machen evidence for the sightings of Angels at Mons comes from the diaries and letters of Brigadier-General John Charteris, quoted above. Two weaknesses in Charteris as witness remain, however -- the first being that the letter above exists only in an edited version published by his wife in 1931, well after the Machen story saw print. The more serious weakness is that Charteris worked at GHQ in military intelligence, with direct personal responsibility for other propaganda and atrocity stories, including those spread by "Angels of Mons" enthusiasts such as Phyllis Campbell in their publications. When this resume item gets tossed into the equation -- along with the interesting fact that interest in Machen's story was revived nine months later when the occult magazine *The Light* "received a visit from a military officer" who quite obviously planted the story with the credulous spiritualists -- it begins to look like the Angels of Mons came not from Arthur Machen, or even from a vegetarian restaurant, but from Whitehall.

The other best-known legend of supernatural intervention in World War I, the "white cavalry" story, shows similar fingerprints. Allegedly, a German advance on Bethune on April 16, 1918 halted for no reason and raked a completely empty stretch of ground with heavy artillery and machine-gun fire. Then, again for no reason, the Germans threw down their arms and fled the scene. Captured German prisoners said that a brigade of cavalry, in white uniforms riding white horses, had charged them across that space, immune to gunfire, until a "great fear fell on" them and they fled. Curiously, this story appears nowhere until 1942, when it is printed in *Household Brigade* magazine, a time and place not un-conducive to propaganda attempts. The genuine "urban legends" of the First World War seem to center on "the Comrade in White," a figure who, seemingly immune to shot and shell, saved wounded men from no-man's land or otherwise desperate situations. (I give nothing away by noting that the Comrade often shows "old wounds" on His hands and feet.) There is one interesting story of a mysterious Frenchman who passed out a miraculous elixir right before the first terrible German gas attack at Ypres in 1915; the notion of Nicholas Flamel or the [Comte de Saint-Germain](#) in the trenches appeals somehow in a way that the clumsy "white cavalry" does not.

"The great neglect of these explainers is in not accounting for an astonishing preference for, or specialization in, marching soldiers, by mirages. But if often there be, in the sky, things or beings that move in parallel lines, and, if their betrayals be not mirages, but their shadows cast down upon the haze of this earth, or Brocken spectres, such frequency, or seeming specialization, might be accounted for."

-- Charles Fort, *New Lands* (1923)

Which is not to laugh to scorn the notion of white cavalry or other phantom armies per se; Charles Fort is right to note that "shadows cast down upon the haze of this earth" quite often take the form of soldiers. 800 soldier-martyrs appeared during the Turkish sieges of Otranto in 1480, 1537, and 1644. Spectral armies marched across the skies of Scotland in 1686 and 1744, and appeared during the battles of Edgehill and Marston Moor during the English Civil War, to murky but vaguely Royalist effect. St. George himself appeared to English soldiers on crusade at Antioch in 1098 and Jerusalem the next year. He also, as Machen knew well, appeared at Agincourt in 1415, whence his miraculous Archers came to the relief of Mons. (The Russian troops in 1914 apparently had their own miraculous horseman, one General Skobelev, who despite having died in 1877, wore a white uniform and rode a white charger against the Hun, for proper spectral impact.) Serbian troops saw their own national hero, Marko Kraljevic, during the Balkan Wars; a spectral army with flaming swords marched across the skies of Varasdin, Croatia, in August of 1888. Throughout 1881, spectral armies maneuvered over Delaware, Virginia, and Maryland; such tales, along with the "great fear" reported by the alleged German prisoners of Bethune, begin to elide into the infamous [Wild Hunt](#) and still

murkier clouds of witness.

"[T]he threatening sky, the restless symmetrical movements . . . the whole scene reminded me in some strange way of Milton's description of the legions of dark angels practising for giant warfare with St Michael on the plains of Hell . . ."

-- Capt. Arthur Osborn, 4th Dragoon Guards, BEF, quoted in *1914*, by Lynn MacDonald

Could the confused and interrupted chains of testimony and evidence thus be proof of the Angels' reality? Witnesses to the Wild Hunt can be driven mad, after all; the first thing any angel says in the Bible, of course, is "Be not afraid." Intriguingly, the Russellite sect in Britain (later to merge with, or become, the Jehovah's Witnesses there) taught in 1917 that the Biblical "war in heaven" broke out in 1914, and that the Dragon (Ho! for Saint George!) and his angels were cast down to earth that year. Perhaps the Masonic leadership of Britain called in some old markers from the summer of 1888 (when angels marched over Croatia, and a different flaming [blade](#) scorched the heart of London) and diverted their path through Mons, a cloud of wings and hands in the forests of Belgium, itself a locus of [death energies](#) on a scale dwarfed only by the war just beginning. Phyllis Campbell claimed to Machen that she had no proof of the Angels' appearance because the government had clamped down on the story -- an interesting theory, since what motive other than Satanic involvement could persuade the British government to suppress a propaganda triumph? And, just as though there was such a conspiracy, no soldier ever came forward with a verifiable tale of the Angels, almost as if their involvement came at some unknown, but horrible, cost. The Germans' inexplicable halts (which did occur, both at Mons/La Cateau, and at Bethune) carry a similar whiff of the horrible and inexplicable. The reports of deaths without a mark on the bodies (well before the debut of gas in the war) sound simultaneously like genuine angelic effects (as with the unfortunate Assyrians in 2 Kings 19:35) and a sort of steampunk [subsonic weapon](#) that might spread both fear and death. Bisociate the tale: perhaps the two are the same; perhaps the Mons Effect is a vibratory cannon that tears open reality, developed in secret by British ontogeneers.

". . . Machen meets the Three Impostors, is engaged in conversation with his own creations, gets his ear bent by young men in spectacles. An entire process is implicit here . . .

The written page becomes too frail a barrier. Things start to tear their way through from the other side . . .

The dreams start answering back. Miss Lally waves to Machen from a tea shop window."

-- Alan Moore, *Snakes and Ladders*, "Baghdad" (1999)

A mysterious German source calling himself "Colonel Friedrich Herzenwirth" claimed in 1930 that the Angels had been just such a steampunk effort, a cinema projection on the clouds over Mons to dishearten the British defenders. Although the Germans denied the story (and "Herzenwirth's" existence to boot), there *was* a zeppelin over Mons that day -- a fact with many possible interpretations. Could Brigadier Charteris have deployed [Pepper's Ghost](#) -- or even made a pact with the [Things Between the Frames](#) -- to reverse "Herzenwirth's" semiotic warfare in the clouds over Mons? Could the psychic leakage of that battle have struck Machen, inspiring "The Bowmen"? One Harold Begbie, who wrote *On the Side of the Angels* to rebut Machen's claim, believed that Machen "may have received from the brain of a wounded or a dying British soldier in France some powerful impression of the battlefield at Mons."

Or does it, bisociatively, go the other way? In 1899, Machen spent about a year encountering figures from his own fiction, noting that his personal fabric of reality was slipping him from London into "Baghdad," a kind of super-sense world above and inside London itself. Shortly thereafter, he joined the ritual magical society known as the Golden Dawn; in 1901, he became a traveling actor, performing Shakespeare all across England until 1909. Had Machen discovered that he (born in the mystical seat of Caerleon in Wales) had opened a door or pierced a veil with his writing and his dreams? Did he use the Golden Dawn's magics to begin to bind these [tulpas](#), and orchestrate [Shakespearean dramaturgy](#) to reknit his own sanity and perhaps recharge the mystical batteries of England for the coming crisis? Did the "vision" he had, of "our men with a shining about them," in the furnace of battle and terror "seven times heated" call -- or create -- the Angels of Mons? Did *Arthur* -- Arthur Machen -- save England, in her hour of greatest need?

Dork Tower!

Dork Tower!

Sora

Character Concept by Kenneth Hite *GURPS Fourth Edition* Stats by Brian Hogue and Sean Punch

Manila exists in many worlds. In some worlds, its masters speak Japanese; in others Russian; in others Spanish or English. But in every Manila, the real bosses hide in the stark tropical shadows. They are the Triads, interlocking networks of criminal gangs with a finger in everything from traditional thuggery and kidnapping to high-tech organlegging and holopiracy.

In one Manila, the local Triads needed a powerful computer system to use as an illegal data haven -- and a relatively innocuous place to store it. They chose a local circus, setting their comp up, seemingly, for holographic set projections. Anyone who asked too many questions . . . well, they just disappeared into those tropical shadows.

Two of those who disappeared were the circus' headlining acrobats, the husband-and-wife team who anchored the Esclamado Family troupe. Their bodies turned up in the city dump, dinner for rats and gulls. Sora, their daughter, and a rising star of the show, vanished as well . . . hiding in Manila's urban maze, avoiding every eye, living by petty theft and trickery. Somehow -- she doesn't speak of it -- she came to the attention of the legendary Guro Dan Inosanto, master of the deadly Filipino martial arts of escrima and kali. He recognized her potential, and took her in as pupil and ward. He kept her from the sight of the Triads, and taught her to combine her rage, her alertness, and her acrobatics into a fluid system of death and life.

Sora could not stay under his wing forever, though. She had to hunt down and kill the Triad bosses who had murdered her parents. She worked in the meantime for other gangs, zaibatsu, the underground, or whoever else could pay her increasing fees. Though she was no computer whiz, she also managed a surprising number of successful hacks through "social engineering," dumpster diving, and good old-fashioned breaking and entering. As a Triad-hunting vigilante, she slowly earned the trust of Manila's small shopkeepers and churches; as a corporate agent, she gained contacts among the wealthy and powerful.

One trail led to a suspiciously lucrative warehouse operation in the Quiapo district. Sora set up a surveillance pattern, rigorously tracking who entered and who left -- and discovered that some people entered the warehouse and did not

Sora

leave for days, or even weeks! But some of those who entered and left were Triad kingpins.

Clearly, though, this was the front for a very secret smuggling operation. It was time for direct action. She broke in, slew more than a dozen mooks and three Very Important Crooks, and was taken from behind by a dart. Still conscious, she was bundled into a machine that looked on the inside like a bus . . . and then out again, without going anywhere. She was thrown into a crude cell. It would have held most people, but not the daughter of the Esclamados, not a student of Inosanto. She fled the warehouse . . . but found herself in another Manila, where everything was the same yet different . . . in this one, America had won the Pacific War! But here, too, the Triads were the bosses.

Sora made a place for herself in this strange Manila's underworld and resumed her watching. Soon she realized that the Triads of her world and this one were cooperating, and that the warehouse was the gateway. Well, fine . . . if that was their scheme, she'd destroy it. And them.

A mid-level Triad was strangled from behind in a gambling den. Sora now had a warehouse key. Soon she knew the place better than its masters. Sora learned that the "bus" she had ridden in was a "conveyor," a shuttle between the worlds, and the only one the Triads had. One night she broke a guard's neck, walked into the conveyor, ripped the improvised cover off the red Panic button, and hit it.

Ten seconds later, on yet another world, she was telling her story in broken English. A month after that, she was in the first wave of the ICops team that visited her original world to take out "her" Triads for good.

And when the operation was over, Infinity had a choice: either send her to Coventry or offer her a job. And Sora was too good to waste.

Advantages

Catfall [10]

Combat Reflexes [15]

Fit [5]

Legal Enforcement Powers [15]

Perfect Balance [15]

Trained by a Master [30]

Disadvantages

Code of Honor (Professional) [-5]
Delusion ("My mother is an angel in Heaven watching over me") [-5]
Duty (To ISWAT; 15 or less; Extremely Hazardous) [-20]
Enemy (Large group: Manila Triads; Hunter; 6 or less) [-15]
Light Sleeper [-5]
Pacifism (Cannot Harm Innocents) [-10]

Quirks

Careful [-1]
Devout Roman Catholic (reacts at +1 to Catholic clergy, tithes, attends church regularly) [-1]
Dislikes wide-open spaces [-1]
Uncongenial [-1]
Vow ("Never reject a challenge to single combat") [-1]

Skills

Acrobatics 17† DX+1 [4]

Sweeping Kick 15 [3]
* Includes +1 for Combat Reflexes.
† Includes +1 for Perfect Balance.

Filing Cabinet Filler Column

I am moving from the city that has been my home for the past 13 years.

In the tearful series finale -- or at least the cliché-ridden flashback episode -- moving entails the discovery of various knickknacks and mementos that make one reflect on various aspects of the character and his life. In dramas, moving can unearth secrets and clues to buried mysteries of the past. ("My goodness -- this certificate . . . my father had a *previous* marriage? To Lady Macbeth?!?")

For the most part, my own moving adventure has unearthed few such nostalgia bombs in my own closets. Probably the most interesting thing -- for a gaming magazine -- is what I do believe was my first handout ever. It was the pre-history of my long-running *GURPS Supers* campaign, given out before the first game. I considered typing it in for everyone, but my present-self -- who has a Creative Writing degree and has been writing professionally for a long while -- won't allow this to happen.

I also found my second handout -- the lyrics to a fictitious song entitled "Metagirl," attributed to whatever pop flavor of the day was popular at the time. Again, my creative respectability forbids me from publishing this, and actually demands it be buried in a deep grave in an unexplored forest.

Anyway, here are a few random thoughts about some of the goodies I've found in my old folders.

Save everything. I'm assuming it's obvious, especially for the packrat culture of most gamers, but you never know when you'll want to recycle something you've done before. For example, when I ran a *Star Trek* miniseries (back in the netherworld between FASA and Last Unicorn), I wrote pre-adventure scripts for each adventure. I discovered, to my surprise, that I still had them all. And -- unlike my Supers handouts -- they were pretty good. So now I'm excited about perhaps rerunning that series.

All gamers hit cold spells, and browsing through old adventures, notes, characters, or handouts can be a good way to rekindle that creative spark. Or, at the very least, it can give you an excuse to avoid packing for a while.

Whither printing? I'm concerned that I don't have any printouts from the past five years or so. I suspect it's partly because I lack the colossal store of free time I laughingly called "college," so I just haven't had the time to make the elaborate handouts I normally do. But it's also because I haven't been saving them. I suspect *that's* because I believe, on some level, I can just print them out again. (After all, I have pretty much every document ever on my hard drive . . . or in the *Pyramid* archives.) But I should know better; these ancient documents I have were part of my long-gone Apple IIs system. They're so antiquated, they were printed out on a dot matrix printer in Times Old Roman.

Put in holes. Beware of holes. The original Supers handout revolved around a hidden metahuman community that needed to band together and overthrow an oppressive insanely powerful being. Now, at one point in this back story I had this being disappear for two minutes, then reappear for the final confrontation (which he lost).

When I put it that bit, I had no clue what the evil bad guy (called "The Mentor") was actually *doing* in those two minutes . . . but I figured that it would be useful to have an unexplained gap for the ultra-powerful plot device character who got whacked.

Now, the interesting thing is, when it came time for character creation, over half of the players wanted to make use of that two minutes for their origin. The Mentor was popping up, giving instructions to one PC, issuing a challenge to another, and dropping off the dry cleaning of a couple other players, for all I knew. I also ended up using that gap once or twice in my own adventures. In short, this dude did more in two minutes than most folks do in their 20s.

So, if I was trying to extrapolate a random piece of advice out of this, I'd note that inserting these kind of open-ended wild-card plot elements can be a great idea . . . but if you make those elements commonly known, it's very likely the players will want to make use of it for their own purposes.

I've been gaming a long time. The Supers handouts were from my first semester of college, which puts them at 1991. This was last millennium -- before I was an adult . . . heck, even before the existence of *Pyramid*. This won't be a full wallowing down memory lane, although I think it's amazing to consider that I'm working for the company who published the RPG I ran my first game for. And rummaging through all my old papers is a great way to avoid packing. After all, I've got a good five days before I need to load a truck with all my belongings. What could possibly go wrong?

* * *

Did I hear someone ask about what *Pyramid* chats are coming up? No? Hmm. Oh, well; too bad!

Tonight -- July 23rd -- we've got Phil Reed stopping by to chat about various interesting things, including his 24-hour RPG (and what that entails), and where Ronin Arts is headed. It starts at 7 P.M. Central Time; be there or be square!

Next week -- Friday, July 30th -- we're having another **GURPS Fourth Edition** chat -- this one covering the combat system. Andrew Hackard, Sean Punch, and David Pulver will be on hand to answer your questions. And it, too, starts at 7 P.M. Central Time.

Be sure to stop by the [chat page](#) to see how to become a part of the fun!

--*Steven Marsh*

The Goblin Market

by Matt Riggsby

Dangerous but irresistible, the Goblin Market is a place to get anything you need, but it may cost more than you think. In a typical fantasy game, the market is a traveling entity, a veritable town of colorful tents and booths that springs up overnight and vanishes just as quickly some time thereafter. In a more modern setting, it might be an obscure floating market in [Bangkok](#), a warren of booths in [Kowloon Walled City](#), or a group of interstellar peddlers stopping off at [the galaxy's backwaters](#). In any case, it's a source of endless wonders and an infinite array of magical goods. But don't bring your money; the charge may be anything from a fresh flower to your soul.

The Market and The Merchants

Whatever form it takes, the Goblin Market doesn't stay in one place very long. It may stay for a week, a season, or even a year, but eventually it moves on to a new location, perhaps vanishing altogether for a while like a commercial Brigadoon. Nevertheless, its location is predictable. It may not be completely common knowledge, but those who pay attention to the Goblin Market will be able to tell you when and where you can find it next.

The market carries many hangers-on with it: fortune tellers, alchemists, and mystics of conventional races. Indeed, better than half of the people setting up shop at the market are simply followers, distinguished by their much plainer wares. The market also attracts itinerant jugglers and entertainers, sellers of wine and ale, and others catering to the often wealthy travelers who come to buy.

However, at its core are a number of members of no known species (the number changes, but it's typically between 30 and 60), a peculiar range of creatures ranging from hideous goblin to radiant faerie, each apparently completely unique. They are rarely seen away from their booths at the market, and some have suggested (on, admittedly, paltry evidence) that the market is itself a kind of magical entity, of which the merchants are really just appendages, like fingers on a hand.

Whatever their nature, they do have individual personalities but share a decidedly unique sense of value and a cruel sense of humor. They are pleasant enough, or at least never overtly insulting, but usually have an air of knowing more than the buyers they deal with. They do keep their promises to the letter, although they sometimes enjoy perverting the intent, particularly if they believe someone is trying to cheat them. Some have suggested that the market is made up of capricious spirits playing an obscure practical joke on mortals, or perhaps attempting to teach them a painful lesson about greed and desire. Then again, they may be creatures who are vaguely similar to mortal races in shape but very alien in thought, trading (to them) flashy geegaws for riches that their buyers are too foolish to recognize.

Security at the market appears lax, at least on the surface. When the market comes to a new location, a few people are often hired from the vicinity to help out in that regard. These temporary constables are charged with carrying off anyone who becomes excessively intoxicated on wine or faerie-dust, breaking up any fist-fights that may arise, and so on, but they're unequipped to head off devious thieves. The merchants themselves are quite sharp-eyed and will usually spot anyone trying to shoplift. It is said that some thieves are successful in the short term, but that stolen objects carry terrible curses with them. The visible security is also in no position to resist a concerted armed assault. There is no record of such a thing happening; the rumors of curses may have something to do with that.

What You Can Buy

Everything sold at the Goblin Market is, in some way, otherworldly and at least faintly magical. The Goblin Market doesn't traffic in common goods, or even conventional riches such as gold, silk, and spices. Only the unique and, often, the impossible are on sale here.

Some of the items on sale at the market are relatively mundane (that is, without inherent exceptional powers) but made out of improbable materials. Most of the booths sell items like crystallized dreams, stone swords, bottled whispers, and cloaks made of mist. Such items will be roughly comparable in performance to their normal counterparts or somewhat superior, but may display some special properties (an ice sword will be cold to the touch but not melt in the sunlight or break any more than a metal one would; a cravat made of woven sunlight would choke and burn a vampire).

In addition to the exotic, the Goblin Fair sells the truly potent. Charms, talismans, potions, and all manner of other magical items are on sale here. Some will be interesting but of minimal practical value: rugs with moving figurative patterns woven into them acting out a story, a "sundial" that indicates time by changing color rather than casting a shadow, a cooking pot that hums quietly to itself when warm. Others, though, will have immediate application: magical weapons and armor, fireball-hurling devices, charms of protection, and anything else one might find in a listing of magical items for a fantasy game.

All, though, will have an unusual form. Some will have a certain appropriateness. For example, an invisibility charm might come in the form of a candle, which casts a "light of invisibility" on its carrier as long as it is lit. Others will just be peculiar. Instead of a flying broom or carpet, one might buy a spoon that will grow large enough that its user can sit in the bowl and fly away, or a Cyclops's skull might have an impossibly large internal capacity, giving it the same uses as an enchanted bag of holding. If the GM is using a list of magical items (as in the D&D *Dungeon Master's Guide* or the *GURPS Magic Items* volumes), select items as desired and keep the magical effect, but give them a different form. The article "[Pretty Things](#)" may be used to randomly select items, but use the revised table here for material (roll two dice):

Roll Material

- 1,1 Ivory
- 1,2 Bone
- 1,3 Wood
- 1,4 Stone
- 1,5 Glass
- 1,6 Crystal
- 2,1 [Precious stones](#)
- 2,2 Ceramic
- 2,3 Metal (roll two dice)
 - 2 Gold
 - 3 Lead
 - 4-5 Iron/steel
 - 6 Copper
 - 7 Bronze/copper alloy
 - 8 Billon
 - 9-10 Silver
 - 11 Electrum
 - 12 Unidentifiable/otherworldly
- 2,4 Fabric (roll a die)
 - 1 Cotton/linen
 - 2 Wool
 - 3 Silk
 - 4 Leather
 - 5 Fur
 - 6 Bark
- 2,5 Paper/papyrus/parchment
- 2,6 Fire
- 3,1 Light (roll a die)

- 1-2 Sun
- 3-4 Moon
- 5 Stars
- 6 Otherworldly

3,2 Lightning

3,3 Comets/stardust

3,4 Smoke/fog

3,5 Water (roll a die)

- 1-2 Seawater
- 3 Fresh water
- 4 Rain
- 5 Dew
- 6 Tears

3,6 Ice

4,1 Teeth

4,2 Blood

4,3 Divine substance (godly or demi-godly hair, blood, or other parts)

4,4 Common shell/carapace (as opposed to decorative shell such as abalone or mother-of-pearl; roll a die)

- 1 Eggshell
- 2 Nutshell
- 3 Seashell
- 4 Snail shell
- 5 Large animal (turtle, giant insect)
- 6 Otherworldly

4,5 Thorns

4,6 Flower petals

5,1 Milkweed/dandelion fluff

5,2 Spiderwebs

5,3 Butterfly/moth wings

5,4 Bee/wasp stingers

5,5 Scales (roll a die)

- 1-3 Fish
- 4-5 Common reptile (snake, lizard, etc.)
- 6 Dragon, basilisk, or other unusual reptile

5,6 Live plant (for example, a rope made from a vine that will slowly grow longer if properly cared for or a pot made of living wood that will occasionally grow new branches and leaves)

6,1 Live creatures (for example, a cloak made of ladybugs or a helmet made of a coiled snake)

6,2 Salt

6,3 Sea foam

6,4 Wind

6,5 Sound (roars, crying, speeches, etc.)

6,6 Emotion, knowledge, or state of mind (love, anger, boredom, etc.)

You may, of course, substitute your own materials. It's probably a good idea to come up with a list of weird items before PCs reach the market so that you can rapidly impress them with their strangeness.

What It Costs

The merchants of the Goblin Market do not covet gold and silver, or whatever is usually used for money in the setting, and they will sneer at anyone who offers them. They have some fondness for gemstones, though, and are willing to

trade lesser items for them.

More often than not, though, the price of an item is an unusual object in trade. These objects may be of a quite common type (a daffodil, a copper coin, a lock of hair). However, there will almost invariably be conditions on the object's location, ownership, attributes, and the method of obtaining it which will make getting it unexpectedly difficult, or at least make the buyer suspect he's getting more than he bargained for. Some examples:

- **Location:** A flower from Farmer Brown's field, a stone from the top of a distant mountain, a pound of dust from the Moon.
- **Ownership:** A lock of hair from the first stranger you meet; the finger-bones of a saint; the crown stolen from a dragon's hoard.
- **Attributes:** A lock of hair from the tallest man at the market; a blue rose; a flaming pie.
- **Method:** A lock of hair cut with a pair of golden shears; a flower picked at midnight; a child taken from its mother by an honest man.

Often, the object will have multiple conditions: for example, the tallest tree in the forest, cut down with a herring; or a lock of hair from the Great Cham's beard, cut with a silver razor at midnight by a singing woman. Not surprisingly, even the simplest conditions often result in difficult challenges. For example, if a buyer is told to get a lock of hair from the first stranger he meets, that stranger is likely to be a member of a hostile family or country (and will therefore be unlikely to do anything to help the buyer) or perhaps just a member of an intelligent species of amphibians or reptiles, and therefore completely hairless. On the other hand, some things which seem impossible (hen's teeth or a stone which floats to the top of the sea) may eventually become available to particularly clever and observant buyers.

But the most powerful items (or at least the items that PCs want most) require the buyer making a significant sacrifice of himself, for example:

- Everything you own
- Everything you have on you
- A period of service (a year and a day, until the next full moon, etc., during which the PC must follow all of the merchant's orders; watch out for leap years!)
- An appendage (finger, foot, eye, etc.)
- Everything you know about a particular subject (may or may not be trivial: being ten years old, boating, swordplay; depending on the game rules in use, this may result in the loss of skills, attribute points, or experience levels)

The peddlers of the Goblin Market do not haggle. They may entertain *one* counter-offer for lesser items, but in general, their price is fixed. However, it won't change over time if the exchange can't take place on the spot. If a PC strikes a deal for a singing harp in exchange for that hair from the Great Cham's beard, he could spend decades (or longer, if he's immortal) obtaining the hair and be able to count on getting his harp. It's not clear how, but the merchants will know on sight if an object offered in exchange is counterfeit.

In The Campaign

In a low-magic campaign, the market may be the only place where magical items can be readily purchased. In a high-magic campaign, the market will be a place to buy particularly notable or specialized magical items, or perhaps a place to attempt to buy powerful magical items at a better price; a cash-strapped adventurer in dire need of a Mace of Sharpness might decide that a purple daisy cut at dawn on the solstice, no matter how far he has to go to get it, is easier to get than a million gold pieces.

Because of the peculiar nature of its wares and their prices, the Goblin Market generally works better as something that appears occasionally in adventures rather than being the magic shop down on the corner. It could easily be the object of quests, both in order to reach it and in order to pay its unusual prices. Even if the PCs don't intend to buy anything, it makes a good backdrop for other events. Magicians and would-be miracle workers flock to the market, hold secret councils on its outskirts, issue public challenges, settle duels and other affairs, and so on.

The market could, though, be the focus of a campaign. It presents many mysteries to be solved: who are the merchants, really? Are they in charge of their own destiny, or are they compelled by another power? Where do they get their wares? Why are they trading for the peculiar things they do, and what do they do with them? Anyone who can shed light on any of these questions is likely to be able to profit from their knowledge.

An interesting variation is to use the market as the center of a campaign, with PCs as faerie merchant princes or hangers-on. The market may be the result of a curse the PCs will want to release themselves from, the very tip of an otherworldly commercial venture or magical rivalry (perhaps competing with gods, demons, and lone merchants trading livestock for magic beans), putting the PCs in conflict with other great powers, or a sophisticated tool to monitor and control the world, making the PCs spies and political manipulators.

Further Reading

- Bradbury, Ray: *Something Wicked This Way Comes*; the carnival resembles a Goblin Market gone very, very bad.
- Gaiman, Neil: *Stardust*; the action begins and ends with events around a traveling faerie marketplace. The marketplace in *Neverwhere* bears some resemblance to the Goblin Market as well.
- Rosetti, Christina: [The Goblin Market](#), an allegorical poem written in 1862 about the delights and dangers of otherworldly commerce.
- Underkoffler, Chad: *Dead Inside*; the Exroads Market resembles a relatively benign Goblin Market.
- Vance, Jack: The *Lyonesse* trilogy; features a stationary marketplace where wonders are sold.

The Exchange of Wonder

by Don Webb

Fantasy roleplaying games, like many forms of fantastic literature, are based on a feedback of wonder -- the same feedback that must have driven the original tale-tellers of what became the *Book of 1,001 Nights*. How, then, is the sense of wonder and magic retained within a game setting?

First we will visit the origin of the impulse for magic and science. If you doubt that they have a common root, the more intellectual among you might seek out Lynn Thorndike's *A History of Magic and Experimental Science*. It is eight long volumes, and will dazzle you on many a rainy afternoon -- as well as provide many intriguing game scenarios. Let's visit cavemen Ug and Bug. Ug, a fundamentalist caveman, has come upon a grassy knoll. That's knoll, not gnoll. Ug -- like all of humanity -- wonders what's on the other side of the knoll. Bug suddenly wonders what's *inside* the knoll. Now if he marshals the forces of logic, he will develop the scientific method. If he marshals the forces of imagination, he will develop the art of magic. He will seek dreams, conjure elemental, and otherwise force the supernatural world to tell him about this mystery. In fact during the process he may even ask, "What's inside of Bug?" thus inventing philosophy and psychology as well. Eventually all of these things may evolve into religion.

Now despite the glorious example of our forebear, Bug, we have lost our sense of wonder. Instead of marshaling our forces of imagination, we have game after game of "I'll cast my four-dice energy blast with armor-piercing since I know his shield is low." That's as far from the romance of magic as it's possible to get. The games become dull, colorless; and die as imagination is replaced with reading descriptions from the rulebooks. Let's look at six methods to put magic back in your magic. Although magic is commonplace in many settings, it is never common. After examining how to return glamour to magic, we'll look at some interesting game possibilities that mystery makes accessible.

1. **Insist that magic is a personal art.** For game reasons every spell produces a fixed result, but -- since magic is an art -- be sure and tell how each character's spell and spell-casting look. Does Ethelbert create great green fireballs after calling out his incantations in a loud, grandiose style? Does Susanna keep her magic secretive and short, sticking with surgical precision? If you enter into the mood and mode of a character's spell casting, you'll begin to learn how they think and what they are. In short, they'll take on a living presence -- much like characters in a novel, who wind up telling their authors what to do. If you're a GM, insist that spell casters describe their style and effects. If you're a player, discuss this notion with your GM.
2. **Magic is not just at the center of focus; it is also at the corner of the characters' eyes.** It is important to keep magic as a source of atmosphere and mood. For example, a party sneaks through the night seeking adventure. On the way to their location one of them sees an eerie green light flare behind a shuttered window. Now, this has nothing to do with them; it's really Almore the coppersmith casting his Clean Copper spell. But the allure's there. The world is made mysterious and uncertain. The spaces between buildings, the garrets and gables, all the involved darkness of the night has suddenly become alive.
3. **Magic leaves traces, which will be mythologized in time.** Again working from the principle that "Magic may be commonplace, but it is not common." we expect a world with magic to remember and build upon magical happenings. For example, 200 years ago the Magus Loois enchanted a silver platter to fly to and from his favorite bakery (to pick up his favorite orange brandy brownies). Loois and the bakery are long gone, but the dented sulphur-toned platter still flies through the streets of its city. The good people of the town have told and retold the story so that now it is, "The executioner's plate which caught the severed head of the witch Belinda, which sails silently to remind us of the nearness of Cosmic Evil."
4. **Magic will always attract the curious.** No matter how dangerous the magical firefight may be, there will almost always be someone so possessed by the sense of wonder to risk his neck to witness it. If someone mentions a magical wonder that he has glimpsed in the dire dungeon dreadful, there will be someone else who will go just to see it, *hear* it, touch it. This principle should guide the behavior of new spell casters and provide groupies and apprentices to the more advanced. Ultimately principles #3 and #4 will blend, giving rise to "fans" who will proclaim that "their" wizard can beat "your" wizard. Lore travels in all directions -- this can lead to transtemporal or transdimensional showdowns.

5. **As with any art form, magic will have politics and criticism.** Some of this may take the form of academic debate -- the older paradigms of magic versus the new. Younger, less established, practitioners will pick up new spells while the older/wealthier crowd disdains them (at least publicly). There will also be elements in society motivated by their lack of magical talent (and consequent jealousy) to seek to legislate against it. Certain types of magic may come under criticism. For example, suppose there is a small movement in the game world against illusionist magic, because it "takes the mind away from what is real and opens the psyche to dangerous phantasy." Those stalwart types will shutdown any illusion, and have begun to be a tiresome pain against those poor souls who earn their bread by creating fantastic shows in the streets. The important notion behind this principle is that attitudes toward magic will be widely varied among social, religious, political, and cultural lines. Remember that the reality of magic will mean a great deal of debate and discussion of how (or even if) it should be used. If characters enter into these discussions, whole new avenues of imagination, thought, and behavior will be opened up. If paradigm debate interests you, you may wish to read Kuhn's *Structure of Scientific Revolution*.
6. **Just because magic is real doesn't mean that superstition has gone away.** In any society there will always be people who blame their woes or attribute their success to forces outside of themselves. In a society where magic is a known force, this tendency increases. After all, people see the laws of Nature suspended everyday; no doubt this explains their toothache or why their windowsill garden isn't doing well. Even magicians who aren't used to truly examining their own lives may succumb to this "magical thinking." You may rest assured that there will be a class of individuals who prey upon their fears. Take Mubbard the Drunkard. One day in the Yodeling Zombie Tavern, while he sang the drunken songs of his homeland, one gambler began winning big at knucklebone. Mubbard convinced the gambler that he was the source of her luck. Since then he's never short of ale or silver. If someone else starts to do well at the table, the winner buys Mubbard a few drinks so his luck will continue. But on a darker note, take Edith the Scold. She keeps her neighborhood clean of magicians by telling people whatever misfortunes they may have are due to the new magus who just moved in down the street. More than one apprentice sorcerer has had to beat an exit by night. And it's funny how all the things they leave behind somehow become Edith's property . . .

Now you can take these six principles and apply them singly or in groups to any magical roleplaying situation. For example, at character creation the GM wants something unusual, so he rolls a d6 and gets a 5 -- Politics and criticism. He asks himself about politics of magic and society, and two characters come to mind. The first is Ptahotep, a magical populist, who believes in power to the people -- so he teaches magic to as many people for as little money as possible. His long-term goal is a democratization of society by magical empowerment. Certain nobles have placed a price on his head. The second is Nepthys-en-mer, an aged quiet feminist; she believes in teaching combat magic to women so they can walk at night without fear. Her classes draw from all walks of life -- streetwalkers, women shopkeepers who rise early, wealthy women who want to be something other than ornaments. Nepthys-en-mer only asks that the women show loyalty to one another. Other characters could be fascists, magic haters, or even a fellow writing a critical history of the aesthetics of construction magic (in this instance, using principles #1 and #5).

These principles could be used for scenario construction. For example, to use principle #3, Magical traces, the GM will want something from the past, which -- because of its present dramatic form -- inspires a lot of folklore and will inspire a party to action. The GM creates a historical object, then hides as many facts as he wishes. If he creates an interesting enough object, all character motivation will follow. And thus he fabricates a thick golden platter bearing the inscription "Cypriot Raydoomire Fifty Years as High Wizard." Created three hundred years ago by the High Wizard Cypriot Raydoomire, he had intended to place the platter in the air above his city as a permanent tribute to his powers. He overdid the spell, and the platter went into orbit. Fortunately, he hadn't announced the event, instead merely recording it in his diary. During a very posh wedding dinner at the Gay Minstrel Inn, the platter crashed to earth, killing a minority official. A few letters were discernible: "riot doom Wizard." This sets in motion a variety of events. Thieves plot to steal the gold. Some see the fall as a divine mandate to kill city officials. Others suspect all foreigners. And, of course, there are tons of rumors. Not only are players drawn into the scenario, but, as they're drawn to the hidden truth, they interact with all levels of society as well as all levels of their imagination. They will be truly dazzled with the depth and breadth of the world (not realizing that they are creating it with every step).

These principles can create long-term goals. For example, an individual player may choose principle #1 -- Personal Artistry. For the individual player this can become a goal. Someday, somewhere, he will be known as one of the great magicians. He may be heralded as the creator of this or that spell, the enchanter of a world-changing spear, or even the

founder of a magical college. This breathes a special life into the characters as they start early on, trying to shape the myth of their existence. This (fortunately) minimizes the focus on statistics and can bring forth such usually unseen character traits as generosity.

The GM can create the deep logical structure of his world through these principles as well. For example, keeping with principle #1, somewhere and at some time witches, sorcerers, and magicians have to gather to show off their artistry. How are the rules of such tourneys prepared? What kind of spectacles could be seen?

The use of these principles will empower your gamers to focus on imagination. Artistry and entertainment are the goals -- not numerical efficiency. In time the formal aspects of game playing tend to pale -- in fact, they may someday be better handled by computers -- but the truly human aspect, the use of imagination, can drive this pastime for lifetimes. Start with the sense of wonder, the sense that there is something marvelous hidden deep within your imagination, and you'll be amazed and delighted by what you create. After all, you owe it to Bug.

Designer's Notes: GURPS Fourth Edition

by David L. Pulver

Sean Punch and I started with copies of *Basic Set* and the two *Compendiums*. We assembled an enormous outline and an overall line plan, and sent it to Steve Jackson and Andrew Hackard. After they approved it, we went to work. The theoretical division of labor in *GURPS Fourth Edition* was that Sean worked on Book 1 and I handled Book 2. In practice, that broke down almost immediately, and we both ended up working on a large chunk of each book.

The actual process of writing and revision began around September 2002. For several months, I lived, ate, and breathed "Basic Set." I remember being so focused on it that a few times when I was riding the bus or out at a supermarket filling the cart with canned tuna, I might be hit by an idea and use my cell to phone Sean to discuss it (carefully avoiding those giveaway words "Fourth Edition" in case any gamers might be lurking by the Pocky in the next aisle).

To this end, the chapters I spent most time on in Book 1 were parts of the Advantages and the Disadvantages chapter (focusing mostly on Innate Attack and various exotic abilities), and the Equipment, Psi, and Templates chapters. In Book 2, I worked on Combat, Tactical Combat, Special Combat Situations, Injuries, and the Charts and Tables, and the Infinity setting, along with parts of Animals and Monsters and Technology.

Anyway, several hundred dollars in phone bills later, our labors culminated at the end of March in a frenzied 36-hour no-sleep session to meet our deadline. I remember emailing Sean the last section I was working on -- the Infinity Unlimited background -- just ahead of the clock. We handed in a first draft for April 1, 2003, which was duly announced in the Daily Illuminator by SJ Games (with some minor disinformation about content). Then we got some sleep.

The *GURPS Fourth Edition* playtest began in early summer of 2003, and involved a select group of many dozens of active and not-so-active *GURPS* contributors. It was almost as wild as most *Pyramid* playtests, and numerous ideas were suggested and thrashed out -- in particular, I remember some very productive discussions on how tech levels should be handled, a huge threaded discussion on how Allies and Patrons should work, and some heated debate on the nature of Strength and Hit Points, and strong lobby in favor of keeping the parachronic secret from Reich 5, all of which led to significant revision. During this period, I worked with Sean on revising some of the chapters, and this progress continued through the fall of 2003. Then Sean, and later Andrew and Steve, worked on perfecting the final draft for months after that.

In addition to the goals established by Sean and Steve in the outline and the many individual fixes (we had hundreds compiled from years of Q&A), there were three things I especially wanted the revision to accomplish.

The first was to make combat play faster without losing its tactical feel. For me, the two most important ways to do that were to simplify ranged combat and make changes to the way Active Defense worked.

The second was to make it easier to play both high-powered games to slay the old "*GURPS* doesn't do Supers well" canard. However, this meant not just supers, but also robots, vehicles, big guns, and even bigger explosions. Near the top of the list was fixing rules like the unbalanced cost relationship between Hit Points and DR, and ensuring the system properly handled various high-powered abilities, including -- but not limited to -- attacks.

The third was to ensure that we connected the dots between the various "subsystems" in *GURPS*. This meant that, for example, super powers, missile spells, and high tech weapons all used the same rules for handling things like explosions, or that the incomes for jobs interfaced with starting wealth and status-based cost of living at various TLs. In other words, system unification, or functional simplicity.

Combat

Combat was divided into three parts, rather than the old Basic/Advanced split. In *GURPS Fourth Edition*, the "Combat" chapter covers most situations, including things glossed over in Basic Combat in the last edition, such as automatic fire, close combat, and movement. We now make the assumption that GMs can visualize spatial relationships (or scribble a few notes down on a map). Thus, ranges and movement are integrated into them. "Tactical Combat" is the rules for hex grid action and only that. As a result, it's much more focused. "Special Combat Situations" is what it says: a grab bag of situation specific or optional rules covering a range from hit location and cinematic combat to explosions.

The removal of Passive Defense (except, effectively, for shields) and replacing it with a flat +3 increase in defense rolls was probably the most obvious change made in the combat game mechanics. There were many realistic reasons for removing it, as the various "special case" PD rules that crept into places like *High-Tech* attest to. But the biggest one was flavor. When an armored knight and a lithe barbarian, both with Broadsword-16, are engaged in a fight, the knight already has a big advantage from his DR 4 chainmail. Giving him Parry-11 and the barbarian Parry-8 on top of that was overkill. So now both have Parry-11. The result is a fight in which every parry really *is* a parry. The fact that some armor does have a degree of slope or curvature that make it better at deflecting blows is part of its DR.

A question that is often asked is why we did not go with a Quick Contest of Skills for combat. This had some appeal, but it gives too much of an advantage to a higher skilled fighter, and simply doesn't reflect the way fights in fiction or fact between equal foes are usually described. With both Third Edition and Fourth Edition rules, a battle between two master swordsmen will go on longer than a fight between novices . . . which is definitely intentional. Of course, two warriors can still run at each other to make All Out or Move and Attack maneuvers (as is the case in, say, the classic samurai movie duel).

Now, one problem with the existing rules as applied in Third Edition was that a fight between two highly skilled foes with lots of PD could drag on, being resolved only by feints or who scored a critical hit first . . . especially if using advanced combat with the rules for retreating, which gave a +3 bonus (a rule that was originally intended to allow unarmored swordsmen to have a chance at survival). In *GURPS Fourth Edition* this bonus is reduced to +1 . . . unless using a skill in which fast footwork and mobility are emphasized, such as Boxing, Rapier, or Karate, where the +3 bonus replaces the old 2/3rds skill parry those combatants had, ensuring that people with these skills can continue to defend well despite lack of armor . . . if they have room to maneuver. Back them up in a corner, and the fellow with the big heavy weapon may make mincemeat of them. In addition to this, Fourth Edition also presents other tactics beyond the Feint maneuver that let skilled fighters make the best use of their high skills rules for deceptive attacks and rapid strikes, for example.

A Unified System

A significant goal for *GURPS Fourth Edition* was to establish a useful "grammar" that further books could expand on. That meant not just including "basic" statistics (like some examples of vehicles or animals or weapons) but establishing a way of describing some things, so that a future *GURPS* supplement or adventure could simply say "this is a missile launcher with these stats" or "this is a poison with these stats" rather than having to reprint a whole mess of specialized rules from a supplement about how to use these things. So, for example, the injuries section has a unified system for describing poisons/diseases/drugs -- and one that ties in with the character creation system, if you want your character to be capable of delivering them. Similarly, while there are a few dozen vehicle statistics in Fourth Edition, what is far more important is that the book presents and explains the standard *GURPS Fourth Edition* statistics format for describing vehicles.

For example, vehicles now have a standard statistic line just like weapons. And unlike previous one-line vehicle entries, this line now packs in all the vital combat, capacity, and travel information, from hit points and acceleration to cargo capacity and hit locations. *GURPS Vehicles* will include the rules for super-detailed vehicle descriptions for situations when it is vital to know exactly what equipment is built into that M1 Abrams or a Free Trader starship.

High-Powered Games

I started out working on Book 1 in the Characters and Psionics chapter. While Sean covered the mass of character creation, my role was often to explore the end points. *GURPS* evolved from a system that handled medieval combat to one that has let you play angels, dolphins, ogres, Ogres Mark IIIs, ghosts, demi-gods, and disembodied computers, and people who can download software into their brains. In so doing, many rules had to be tacked on top of other things, and many square pegs forced into round holes. One of the great things about working on a new edition of *Basic Set* was that we both had the benefit of hindsight. We knew what areas had given problems to world book authors in the past, and where possible, designed around it. This let us to use elegant solutions. For example, we figured out that the rules for gods needing worshippers and trucks needing gasoline were basically the same Disadvantage, and wrote it as such.

The aforementioned goal of system unification was followed in the psionics system, which emerged as a prototype for the way a wide range of special abilities are handled in the upcoming *GURPS Powers*. Another issue was the vexed question of paying character points for devices, vehicles, and so on. I don't like doing this in many games, but I do feel the option should exist where appropriate, such as a supers or anime-themed game, where one hero might be a chi-powered martial artist, another can turn into a living fire elemental, and a third rides a giant robot, and the fourth is a gun-packing vigilante with an armored van full of weapons. In the past there was no way to easily calculate this. My goal was to ensure that most technologies had an equivalent advantage -- both to ensure that you could easily build robots and cyborgs and super-inventors, and to make it possible to succinctly describe both with the same set of rules.

My own experience with books like *Transhuman Space* and *Bio-Tech* (and on Sean's part, *Undead*) showed us some things Third Edition had trouble with. For example, robot, spirit, or animal characters often had the same unwieldy laundry lists of advantages and disadvantages. This led to the metatrait system: pre-designed "packages" of advantages and disadvantages that set down canonical (but easily customizable) values for things like animal intelligence or machine bodies or being a ghost.

Into Infinity

Another reason why both high powered settings system unification were important to me was the decision to include the Infinity setting within the game as a ready-to-use example of a multi-genre campaign setting . . .

This was the last part of the Basic Set that I worked on. I liked it when it was introduced in *Time Travel* and had used it myself as the setting for my "Soulburner" adventure in *Time Travel Adventures* which introduced the world of *Technomancer*. In Fourth Edition, I wanted to "blow open" the basic Centrum-Infinity struggle by adding multiple factions and multiple means of dimensional travel, new groups such as the ISWAT black ops team, the Reality Liberation Front, and new features such as the parachronozoids, nexus portals, shiftrealms, the infinity-spanning chronobahn, and pocket multiverses. It's a short chapter, but I was quite pleased with it, and hope it will encourage people to give the Infinity setting a try; it's not just Centrum versus Infinity any more, although that framework certainly still exists.

Working on *GURPS Fourth Edition* was a culmination of several years of writing for Steve Jackson Games. I'd like to thank Steve for having created such a fascinating and versatile system, Andrew and Sean for having given me the opportunity to play with it, the other *GURPS* authors for the numerous books and articles we were able to draw upon, and everyone on *Pyramid* whose comments have been helpful, critical or supportive, and whose enthusiasm has helped keep me going over these years.

Icosahedron Adventures: Make a Saving Throw

by Owen K.C. Stephens

One of the major changes between the *d20 System* and the Fantasy RPG it was designed to replace is the way saving throws work. In the old days, saving throw categories were defined by the source of an attack -- spell, breath weapon, paralyzation or poison, or even rod, staff, or wand. This worked well enough in a fantasy setting, but didn't make a great deal of intuitive sense. Why would spells from magic items need a different save than those cast by a wizard? And what if you wanted to introduce a new form of attack to your game? Should a hand grenade use a saving throw of items (rod/staff/wand) or common area attacks (breath weapon)? Further, the categories were very fantasy specific. Even if you could map modern or futuristic attacks onto the categories, they sounded odd in different genres.

When the game engine was blueprinted and re-worked for a new edition, saving throws underwent an important change. Instead of being categorized by source of attack, they were organized conceptually by what the character had to do to avoid an effect. All saves were now considered Fortitude, Reflex, or Will. Any time an attack required a saving throw, it was clear the character was toughing it out, ducking, or resisting through force of will.

Saving throws are a critical mechanic to the *d20 System*, influencing many aspects of game play. Very little has been written about how saving throws work, and why they're set up as they are. This article takes a glance at the mechanics behind the rules, and ways to change them for different results.

Saving Throw Progression

Most *d20 System* games have just two progression rates -- "good" (a base save bonus equal to half class level +2, rounding down), and "poor" (a base save bonus equal to one-third class level, rounding down). A few games add a "fair" progression which is between these two, though exactly what this progression is varies somewhat. A logical progression is exactly between the two, with a base save bonus equal to 5/12 the class level +1, rounding down. That's not a very elegant progression, but it's usually written up on a chart anyway. Such a fair progression is detailed below. When compared to the standard good and poor progressions, this fair progression is exactly between them at both first and 20th level.

Level Base Bonus

1	+1
2	+1
3	+2
4	+2
5	+3
6	+3
7	+3
8	+4
9	+4
10	+5
11	+5
12	+6
13	+6
14	+6
15	+7
16	+7
17	+8
18	+8
19	+9

A fair progression can be useful when developing new classes (core, advanced, or prestige) that should be better at some save rate than "poor," but not as good as a class specializing in it. For example, a military scout might be seen as tougher than a wizard but not up to a barbarian's standard, faster than a fighter but not up to a rogue's standard, and more strong-willed than a fighter but not up to a cleric's standard. Giving the class three fair save progressions prevents it from having any real weaknesses, but also no true strengths.

Similarly, some classes that seem slightly overbalanced or underbalanced may be fine-tuned with a fair save progression or two. If a GM considers clerics too tough, he can replace their good Fort save with a fair one. Similarly, if sorcerers seem underpowered, their poor Reflex save can be brought up to a fair save progression.

This system works fine, as long as characters stay in one class, or time their class changes carefully. However, certain combinations of classes and level miss the break-points in save progression, and can suffer for it. For example, a triple class ranger/rogue/fighter can be 6th level (2/2/2) and still have a base Will save of +0, even though a single class 6th level fighter has a +2. This can be considered the cost of multiclassing, or it can be overcome with the use of fractional save bonuses. This means granting a +1/3 bonus at each level on a poor save progression. While the total is still rounded down (a character with a +2/3 base save is treated as having a 0), it means a character with 2 levels in three classes, as out example above, still have a total of a +2 base bonus. This idea is covered in a little more detail in a sidebar in Wizard of the Coast's *Unearthed Arcana* book.

The other odd result that multiclassing can produce is extremely high saves. For example, a 3rd-level character that has one level each of bard, ranger, and rogue has a base Reflex save of +6, even though the good progression on a single character doesn't get that high until 8th level. With two levels in each class the save reached +9, equivalent to a 14th-level good save. This can be eliminated by restricting the +2 bonus built into a good save (and +1 bonus built into a fair save) to the first class that grants that save progression. In essence, a character who takes additional classes that have good save progressions, subtracts 2 from the base save bonus of that class. Using this rule, the 6th level bard/ranger/rogue has a base Reflex save of +5, same as a 6th level rogue.

Setting Save DCs

A saving throw is made against a DC, which determines how difficult an effect is to resist. Most save DCs are determined by taking 10 and adding half the attacker's hit dice or levels and his appropriate ability modifier. This is only approximate, because spells don't quite work that way (a 5th-level caster doesn't add half his level to spell DCs, but the spell's level, which might be 3, 2, 1, or 0).

In general, an attacker's ability score is going to be pretty close to the defender's score for a good save progressions, and better than the defender's ability for poor save progressions. This is a wild approximation, but is good enough to explore trends. This means a character's good save is, generally speaking, going to succeed on average against an attack of a creature of the same power level, but his poor saves won't. Put another way, a GM can expect a wizard will often succeed at a typical Will save, but fail at a typical Reflex save.

Because of this, creatures with more hit dice than their CR often have disproportionately high DCs for their CR. A typical 11th-level NPC wizard likely has a spell DC of about 21 (10 +6th level spell +5 Int modifier), with his DCs decreasing as he uses lower-level spells. A colossal monstrous spider, also CR 11, has a poison with a DC of 28, which he can use every round.

Additionally, the margins between success and failure are pretty thin. Even a character's good saves are often only slightly better than the attacks they apply against, and a poor roll can easily lead to a failed save even in the character's strongest category. Thus, a GM who wants to produce a failed save can simply require numerous saves, rather than try to bring the save DC extremely high. A dozen 1st-level wizards (CR 8) are actually more likely to charm an 8th-level cleric than a single 8th-level wizard, simply because they force so many saves. (Of course, they may also be killed by a single *fireball*, so a GM must balance enemy forces with more in mind than their offensive ability). Similarly, a set of six DC 14 traps are likely to be more deadly than a single DC 18 trap.

When designing an encounter, a GM should avoid combining high hit dice, high ability scores, and frequent saves required in the same creature. For example, a monstrous scorpion with multiple poison tail stings should have its CR boosted by more than the additional attacks might suggest, since every attack includes a high-DC poison.

Saving Throws as Target Numbers

Though they are used defensively, in fact generally passively, saving throws are rolled like attacks and skills instead of being set numbers like armor class (or defense value). While this is mechanically valid, my observations suggest it adds to player frustration unnecessarily. This frustration comes in two forms -- a sense of powerlessness when trying to affect targets with spells that allow saves, and a sense of failure when trying to resist such efforts made on the player's character.

In essence, the entire saving throw mechanic places the action, and thus the blame or accolades, on the defender. Since the defender rolls a die to resist an effect, a bad roll is seen as a failure of the defense, not a victory of the attack. Compare this to combat, where it is the attacker who makes the die roll. People rarely complain that their armor class "failed" -- they instead bemoan the efficiency of their attackers. Similarly a wizard casting a *charm person* spell is completely removed from the action -- he has no die roll to make. Instead the GM secretly rolls a die, and declares the spell a success or failure. Unlike combat, where a fighter gets to make an attack roll, the wizard's involvement is largely passive.

One way to change this is to make saving throws instead resistances -- Fortitude Resistance, Reflex Resistance, and Will Resistance. These are target numbers, equal to the previous saving throw bonus +10. Thus a character who would have had saves of Fort +11, Ref +5, Will +4 instead has Resistances of Fort 21, Ref 15, Will 14.

Then, any attack that would normally call for a saving throw instead makes an effectiveness roll. This is essentially an attack roll with the target's resistance acting as the AC or Defense. The effectiveness roll gets a bonus equal to the original attacks save DC -10. Thus a wizard with a 20 Int casting *fireball* makes a roll with a bonus of (3 for spell level +5 for Int modifier) +9. If his d20+9 roll meets or beats the Reflex Resistance of a target it takes full damage. If not, it takes half. This places the die rolling in the hands of the player initiating an action, making saving throws work more like attack rolls and skill checks.

Saves as Ability checks, and Str-, Int-, and Cha-based Saving Throws

One curiosity of the saving-throw system is that it lends additional weight to a character's Dexterity, Constitution, and Wisdom. These ability scores are already extremely important (governing such features as AC and hit points, and being key to numerous important skills), but because they have associated saves, characters seem to get better at tasks involving them, while not enjoying a similar increase in Str, Int, and Cha challenges. In many campaigns the GM rarely asks for a Dex check when something important is on the line, instead calling for a Ref save. Thus a fighter whose physical ability scores remain the same becomes more and more likely to duck most of a *fireball* as he gains levels, but is no better at lifting a heavy rock off a pinned friend at 14th level than at 4th.

In theory, this shouldn't be the case. The *d20 System* rules assume that you make a saving throw for something you're avoiding, but you make an ability check for something you want to accomplish. Falling past a friend and you want to grab onto them? That's a Reflex Save. Trying to grab a friend who's falling past your position? That's a Dex check (or possibly an attack roll -- the logic gets fuzzy sometimes). Dex, Con, and Wis checks should be as common as Str, Int, and Cha checks, but this doesn't seem to be the case in actual play. Because the saving throw rules exist, they get called for more than simple Dex-, Con-, and Wis-based ability checks.

One reason for this is that it's not much fun for a GM to watch players get frustrated by a character's inability to do something in an area that's supposed to be a strength. A high-level rogue expects to be able to do things requiring agility, but if forced to rely on a Dex check is not likely to succeed. Rather than fight this trend, a GM looking for a heroic style of game can embrace it, calling for saving throws any time a simple ability check would normally be

called on.

Of course to match the disparity between the abilities with saves and those without, a series of Str-, Int-, and Cha-based saves should be created. Though these might not be called on often to avoid consequences, they can add an element to the gaming environment, as well as helping high level barbarians smash down doors. Possible additional save categories are described below.

Brawn Save: A Brawn save is called for in circumstances where raw power can save a character -- when caught between two crushing walls, or trying to hold a comrade by fingertips after a disastrous jump. In essence it's a Strength check for circumstances that lead to damage or negative modifiers with failure. Breaking down a door is just a Str check, but holding a rope from which friends dangle, or keeping a grip on a sword after being knocked unconscious are Brawn saves.

Any class with two or more class skills based on Str should have a good brawn save progression. If using saves for ability checks, any Str check becomes a Brawn save.

Cognition Save: A cognition save is made any time a character is about to do something that flies in the face of the facts he has access to, but has forgotten or failed to put together. It is also used when a character needs to remember something, such as the exact wording of a prophecy or the technicalities of a common law. It does not replace Knowledge checks, which are matters of education, but is used if a character needs access to specific facts he has definitely had access to.

Any class with all Knowledge skills as class skills, or with a research skill, should have a good Cognition save progression. If using saves for ability checks, any Int check becomes a cognition save.

Reputation Save: A reputation save represents the common perception about a character, and his resistance to public opinion. It's used whenever someone tries to start a nasty rumor, or when the character is found doing something that could be taken negatively. A fighter found proclaiming his innocence while standing over a dead body holding a knife might make a Rep save to see how many people believe him.

New bardic abilities could be developed that required a Rep save to resist, or a GM could use them periodically to determine a character's overall reputation. If using a Fame system, character might gain or lose fame based on a Rep save made at each new level gained.

Any class that grants Bluff or Diplomacy as a class skill should have a good Rep save. If using saves for ability checks, any Cha check becomes a Rep save.

The Omniscient Eye

What Color Are Plants on Other Worlds?

Earth has a yellow sun, and our plants are (by and large) green, in order to take maximum advantage of that sunlight. But what color would be likely for plants evolving naturally on a planet circling a star more orange, or even red? Or, moving the other direction, to bluer stars with higher-energy output? Basically, what "chrome" about lighting and flora can I give my descriptions in sci-fi games when the PCs step out onto an alien landscape?

--Joseph Lockett

The Omniscient Eye, and this author, regret that even our immense wisdom cannot answer this question completely -- no, not even if we had a whole book to fill instead of just one article! You see, answering what-if questions about evolution is a dangerous thing. No one can be sure how life would turn out if we rewound Earth's history and played it over again. Trying to figure out how life would have evolved circling another star is an even more challenging question; we don't have our basic knowledge of Earth conditions to rely on.

To have some hope of figuring out plausible evolutionary paths for alien flora, therefore, we'd better begin by making the assumption that these plants have some qualities in common with their Earthly cousins. At the end of this essay, we'll consider some truly wacky possibilities, but the easiest (and most probable) place to start is to look at what goes on in our own backyard. Earth plants convert carbon dioxide, water, and sunlight into sugar and oxygen. This process is called photosynthesis, for those who slept through high-school biology. Chlorophyll, along with several chemical variations and some related helper molecules, is the key to this process. So we'll assume, for the moment, that alien plants also convert carbon dioxide, water, and sunlight into sugar and oxygen, and that they use chlorophyll as an integral part of this process.

This, by the way, implies one important corollary. If the plants in question are Earth-like, we can assume our alien planet has a somewhat Earth-like atmosphere. Photosynthesis was pretty much directly responsible for the atmosphere changing from mostly carbon dioxide to a relatively high-oxygen mixture. Plant life under methane or other exotic atmospheres is outside the scope of this essay; we'll see another reason why the atmospheric composition is important later.

So, since we're talking about vaguely Earth-like plants under an Earth-like atmosphere, we can extrapolate about our alien planet from how Earth plants work and why they look the way they do. By applying those same rules in a different environment, we can get some general guidelines of how alien plant life might look.

Speaking of looks, let's start with color. Why are Earth plants green? Well, from a nitpicky technical standpoint, they actually aren't. They only *look* green because chlorophyll is green. (The natural colors of leaves, for example, are only visible in the fall. Most of the time, the chlorophyll in the leaves makes them look green, but in the autumn the chlorophyll disappears and the leaves' natural color can be seen.) But that only changes the question slightly: so why is chlorophyll green?

For this, we need to consult basic color theory: all opaque objects have a color because of the light they reflect back to our eye. Red objects tend to absorb orange, yellow, green, blue, and violet light, and reflect red light. Green objects tend to reflect green light¹. Chlorophyll absorbs red and blue light incredibly strongly, and reflects green more than all the rest; thus it appears green. What this means is that when chlorophyll uses sunlight to turn carbon dioxide and water into sugar and oxygen, it's only changing the red and blue light. The green light escapes to hit our eyes and make us see the plant in question as green.

But does this really answer our question? So what if chlorophyll absorbs red and blue light and reflects green light?

That isn't exactly a "why," nor does it help us in thinking about our alien plants. Fortunately, we know that chlorophyll actually depends on sunlight to work. That means there's a concrete evolutionary reason behind the colors of sunlight that chlorophyll absorbs and reflects. Chlorophyll evolved to make the most of the sunlight of its environment. (Plants that used less thrifty kinds of chlorophyll would be at a disadvantage against their competitors.²)

If we can learn some things about the environment that the chlorophyll evolved in, we can figure out what kinds of light it would likely absorb. Once we know that, we can figure out what other colors it would reflect, determining the color it might be. Alien chlorophyll can only evolve to use colors of sunlight that would reach it. For our alien planet, then, we need to understand the environment before we can figure out what color the chlorophyll in its plants would be.

There are three main factors affecting the colors of sunlight that get through to the chlorophyll. The first factor is what kind of light the planet's sun gives off. This gives us a baseline of what kinds of light are out there. As the initial question suggests, every star has a dominant color, from blue (the hottest) to red (the coolest). Our sun falls in the cool side of the middle, yellow. No star gives off just one type of light, of course! With these colors, we are just describing the dominant type of light the star emits. Blue stars tend to be proportionately hotter than our sun, and give off less red light. Red stars are the opposite, cooler and with little blue light. What this means is that the type of star will affect what kinds of light the chlorophyll might possibly be able to use.

The second factor is what kinds of light are intercepted by the atmosphere before reaching the planet's surface. Every atmosphere filters out some of the available light, reducing what's available to our proto-plants. Remember when we mentioned that the Earth-like atmosphere was important? This is why: Because in an Earth-like atmosphere, visible light is the main light that gets through, while high-energy ultra-violet light and almost all infrared light is blocked. This means we know that our plants will be absorbing light in the visible spectrum. (Incidentally, the oxygen atmosphere not only allows your player characters to breathe, it also prevents them from dying of skin cancer. UV-blocking ozone is a good thing.)

Finally, we need to know about the immediate environment of the chlorophyll. Chlorophyll will almost certainly evolve in water, because all single-celled forms of life need a moist environment. For example, on our world the first photosynthetic organisms were ocean-living bacteria that evolved three and a half billion years ago. Water tends to block red light while letting blue light pass, which is probably why they evolved to have chlorophyll that absorbs so strongly in the blue end of the spectrum. Blue light was the best light to penetrate the water. Similarly, on our alien world, the light that the chlorophyll transforms must be able to penetrate water.

(A tangent, for those interested in evolutionary theory: you may have noticed that chlorophyll absorbs red light as well, even though that's a completely useless ability underwater. No one quite has an answer for this, but it's a useful illustration of the principle that evolution can be pretty darn random. Chlorophyll didn't have to be perfect at absorbing sunlight, it just had to be better at it than any competitors were. Next time your players catch you in a biological inconsistency, this is a useful principle to pull out of your hat.)

Putting together these three factors, we can make some good guesses about how alien chlorophyll looks. It probably uses the bluest light available to it, because of water's tendency to block red light. We know that it doesn't use light outside the visible spectrum, because that kind of light doesn't easily penetrate Earth-like atmospheres. Finally, we know that plants will respond to the special spectrum of their sun. Plants near blue stars will receive a lot of blue light. This means that they will tend to produce chlorophyll that absorbs more blue light than red, so they will be colored red or yellow. Plants near red stars receive red light instead, so they will tend to produce chlorophyll that absorbs more red light than blue and be colored blue. (For the curious, because of the higher energy content of yellow light, plants around orange stars will prefer it to red. That means these plants will probably reflect both red and blue, which combine to purple.)

We've even got a real-world example that indicates our hypothesis is a sound one. Brown and red algae are Earth organisms adapted to live deep underwater. Water, as we've seen, absorbs red light, so a plant under a few dozen meters of water is probably experiencing conditions similar to being in orbit around a blue star. These plants have adapted by evolving chemical helpers to broaden the range of light that chlorophyll absorbs in the blue range, while

reducing the light it can absorb from the red range. Just as we predicted, they absorb blue and reflect red -- and it's this reflection of red light that gives red algae their color, and their name.

Unfortunately, there's one more wrinkle to consider. Because we see reflected light, there needs to be light of a particular color in the environment in order for us to see in that color! For example, our red algae is colored intensely red once it has washed up on the beach. Deep underwater, though, there's no red light to be reflected. The only light around is blue light, which is absorbed by the algae. Since no light is being reflected back to our eye, the algae will look black. So under strongly blue light, all the plant life may look black, though it would seem red under a flashlight or other ordinary light. Under strongly red light, the plant life will also seem black (though with a blue rather than a red tint), because the blue light necessary for the blue color to show up simply isn't being emitted by the light present. The closer a star's light is to our sun, the more non-black color our eyes will perceive.

So we've pretty exhaustively examined color: Congratulations! But color is hardly the only visible difference between plants. A sequoia tree and a stalk of kelp are both green, but they look quite distinct. For this reason, it's important to consider (and describe!) a variety of different plant types. Trees, bushes, and grass will be the most visible things the characters see, but half of the Earth's photosynthesis is performed by microscopic plankton in the oceans. These microscopic plants may be too small to see with the naked eye, but that doesn't mean they won't affect the visual environment. For example, high concentrations of algae might actually color the oceans, like Earth's "red tides" during an algal bloom.

In fact, there might not even be trees at all. It took trees a good three billion years to evolve, even after photosynthesis was working just fine! If we take earth's history as a guide, 90% of planets where photosynthesis is occurring should be devoid of trees. If you want an environment with large plants, but one that still feels alien, borrow from other periods of earth's history. The moss-dominated flora of the late Silurian, the thin or pine-needle like leaves of early trees in the Carboniferous, or the forest dominated flora of the early Eocene (before grass evolved) all provide interesting ideas.

Of course, there are many factors in the environment might change how all these flora look, trees, and algae alike. Important things to consider are gravity, temperature, solar intensity (how much light there is available), the length of the day, access to water, and the larger ecosystem of the world, especially predators. For example, a low-gravity world would allow plants to grow taller. Dry conditions will force plants to adopt strategies to conserve water, either swelling up to store water or having tiny leaves to prevent evaporation. Plants on a world without herbivores will not evolve poisons, spines, and other biological defenses, and plants on a world with a very long day lasting a week or more might go into periods of hibernation.

Unfortunately, examining all of these factors in detail is outside the scope of this essay. One important thing to consider when inventing the effects of these factors, though, is how they combine. For example, consider a plant on a low gravity world with a weak sun and generally cool temperatures. The height of a tree is ultimately limited by the ability of the plant to pull water up from the ground. Root pressure and capillary action play roles in this, but the most important factor by an order of magnitude is the pull exerted by water molecules evaporating from the plant's leaves. If that pull is weak, as we might expect on a world with cool temperatures and little sunlight, plants will be prevented from reaching great heights despite the low gravity. Instead, enormously long vine-like branches with giant leaves might spread across large areas of ground.

So what happens when we put all these factors together? The type of star, the light it gives off, the general atmosphere, the absorption rates of water, the other environmental factors -- what might some plausible alien flora look like?

At one end of the spectrum, we've got blue stars. These stars, as we've seen, are the hottest type. Because they consume fuel so quickly they tend to be very short-lived. Many are too short lived for life to have evolved! Consider a blue star of about four stellar masses. This mass is small enough that plant life will have time to evolve before the star becomes a supergiant. The oceans of our hypothetical world could be teeming with single-celled plankton and very simple multi-celled algae. Algae and bacterial slimes might be visible near the seashore and in very wet areas. These would be colored yellow under the light of the blue sun. Since the plants have evolved to absorb blue light, they would be reflecting yellow light, since yellow is the most plentiful light around which they don't absorb. Under a white-light

flashlight, of course, they would appear red, just like red algae on earth. The local sun's blue light would also penetrate ocean water well, and relatively complex algae might thrive even one hundred meters underwater.

A nearly opposite situation could exist around a red star. Red stars are so cool that a planet will have to orbit very close to the star to have liquid water, which is a requirement for plants, and life, as we understand it. The planet must orbit so close that it becomes tidally locked. That means that one side of it always faces the local sun and the other side always faces away, just like one side of the moon always faces the earth. It would be very difficult for photosynthesis to develop on such a world since there is relatively little blue light. Red light is preferentially filtered out by water, so the oceans of such a world would be quite dark. On the bright side, the coolness of red stars means that they exist for many billions of years before becoming supergiants. This gives plenty of time for photosynthesis to evolve in a less favorable environment, such as shallow pools on land. Even well after photosynthesis evolved it would remain uncommon in the ocean, and hence life would be uncommon in the ocean. Plants on the land, on the other hand, would be highly evolved and very plentiful. One possibility is dark forests of tall trees that are completely devoid of underbrush. Since sunlight constantly comes from a single direction there is no variation that might allow light to trickle down to the forest floor.

These worlds, exotic as they may seem, aren't the strangest kinds of plant life that might be out there. We originally assumed that alien plants would be similar to Earth plants, but it's possible that they could be different in some very basic ways. For example, the plants might use a method other than photosynthesis to create their food. One way to do this is through chemosynthesis, a method that uses chemicals such as sulfur or iron compounds to create sugars. Plants that use chemosynthesis rather than photosynthesis don't need sunlight; they can thrive under thick cloud cover that blots out the sun, near volcanic vents deep in the ocean (just like they do on Earth), or in caves and tunnels that never receive sunlight. Alternately, the plants could use photosynthesis, but they could create proteins with the process rather than sugars. By using ammonia, carbon dioxide, and sunlight, plants could be largely protein based. Without the raw materials (sugar) to manufacture cellulose, the major component of wood, they might be very limp and ground hugging. Alternately, they might have a chitinous shell for support, like a crab.

With all these possibilities, the Omniscient Eye knows that it must seem hard to actually create a world that is scientifically plausible. Just remember, as we previously mentioned, evolution is an unpredictable and often undirected process. This essay serves as a guide to the underlying science, not as the only truth. Life on an alien world is completely outside of our knowledge, so, while we can make intelligent guesses as to what it would be like, we can't say for sure. With this article, a liberal dose of common sense, and some imagination, though, you can have a shot at creating a believable alien world.

¹ Actually an object can be colored by the combination of different colors it reflects. Yellow and blue make green, so a green-colored book might look that way because of a combination of yellow and blue light reflecting off its cover, even if it reflects almost no green light. This is not the case with chlorophyll, but it's worth mentioning.

² Its worth noting that this disadvantage need not be a critical one. Evolution rewards passing on one's genes, not perfection. The study of evolution is full of imperfections, the human appendix being perhaps the most famous. It's safe to assume that the evolution of chlorophyll on an alien world would not be any different, and that there would be plenty of imperfections that make things different from the idealized version that is described in this essay.

Spellslinger (for d20 System)

Published by [Fantasy Flight Games](#)

Writing, Art Direction, & Layout by Kevin Wilson

Developed by Kevin Wilson & Greg Benage

Illustrations, Maps, & Graphics by Anders Finer, Scott Reeves, David Griffith, Monte Moore, Michael Philippi, Joseph Querio, Hian Rodriguez, & Brian Schomburg

Edited by Greg Benage & Rob Vaughn

64-page b&w softcover; \$14.95

What do you do when *Deadlands* wraps up the market on bringing magic to the Old West? Bring the Old West to fantasy, that's what. *Spellslinger* is Fantasy Flight's attempt to tie the two genres together, using the *d20 System*.

The old world is getting full. It's a fantasy world, but it's coming into its own technologically -- it's been left deliberately vague, but most hints point to a steam-powered setting. It's pretty crowded, so anyone with a sense of adventure or who just wants a little elbow room is hopping a ship and sailing across the ocean to the Territories. Here, travelers find all the trappings of the Old West: burgeoning frontier towns, racial disharmony, prospectors, and shootouts at high noon.

One of the wildest elements of this virgin land is the indigenous population: the gray runners. These wolf-like humanoids, whose individual tribes are collectively called the Pack, once roamed freely throughout this land, but the pushy newcomers' guns make them a serious threat to the natives. The dwarves, elves, and humans (among others) have run them out of just about every town east of the Gray Hills. The runners live on the west side now, and a treaty prevents the gnomes from building their railroad any deeper into the mountain range. This is to keep the intruders from releasing the unnamed, evil forces locked beneath the peaks. The dwarves are pretty sure this agreement is just a smokescreen to keep them from obtaining the vast riches there, and so the pact's future is in doubt.

The newcomers have problems of their own. Ancient racial rivalries have been preserved among humanoids. The old country hasn't forgotten the "colonists," and the Governor (and his mysterious right-hand man, the Governor's Man) makes sure everyone tithes to the homeland. But the worst, most divisive problem plaguing people are the brands. Symbols of great power, those born with a brand are feared, respected, worshipped, or hunted, depending on which mark they have and which town they enter.

Some brands are welcome, like the Padre, carried as it is by healers and holy men. Others are thought to be more annoying than anything, like the shape-changing Skinwalkers, who may alter their form and whose sense of humor is misunderstood. The worst of the bunch, however, are the Blackhands and Magi.

Someone with the Blackhand is often in direct, functional opposition to other brands because such an individual is resistant to most magic and may even douse the effects of spells just by their presence. This upsets no one more than

the Magi, whose brands mean pure magical power -- bad enough to be marked and feared, but when a magus can't enjoy the fruit that forced his exile, he lashes out. The fighting between these two groups is so fierce, folks call it the Prairie War, and neither side is welcome in most townships.

There are only three classes in *Spellslinger*: the Gunfighter, Maverick, and Trailblazer. Gunfighters are the iconic warriors, constantly besieged by young bucks looking to challenge the best. Mavericks are akin to rogues, using charm and looks to get away with whatever intelligence and sleight of hand won't allow. Trailblazers are the quintessential explorers, leading the way in the Territories. Although these options seem limited, the feat-based spell system opens these roles up in interesting ways.

Each class has a core ability, such as the Maverick's *Jack of All Trades*. Not only does he get eight additional skill points a level, he can choose a skill that gets a +3 bonus, and he can take the better of two die rolls when using it. If you want to use magic, however, you choose the brand that gives you the powers and spells you want. The brand is a feat, and it replaces your core ability. Both options promise great power, but it's an either/or situation.

If you choose the brand, the *Spellslinger* setting arranges its own spell lists. You're only allowed three spells from a level (called "circles") when you take the appropriate feat, though you can freely switch new spells for old at later levels. If you want more first-circle spells, you'll have to take that feat again. The same is true for spells from the second through fifth circles.

Characters of all types are tough hombres, and they gain in power quickly. This is all part of the way they offset sides in combat. There's not much armor -- who needs it, when bullets will pass right through it? And since everyone's got a gun, you have to be a robust opponent (or know a skilled healer). The monsters are stronger, and there are rules for the shootouts on Main Street and the effects of a high reputation.

The book, another from Fantasy Flight Games' self-contained Horizon line, concentrates on a broad sense of story rather than the nuts and bolts of the setting. Just as the world from which the characters came is undefined, so, too, are many chunks of the new world waiting for a GM to give them his stamp. There's a map of the land and a sample town (and some thumbnails of other burgs and what races or brands hold sway there), a few new spells, some tribal names to get the Pack started, and an equipment list that doesn't try to needlessly bulk up the word count.

There's little wasted space here, and the book looks fabulous. With cross-genre artwork that makes dragons and shootists seem like they belong together, and looks gorgeous to boot (Joseph Querio in particular has the decimal in the wrong place on his paycheck), the volume is a visual joy.

Fantasy Flight is getting better at these capsule game worlds, and *Spellslinger* shows they can do it with understated mechanics and intelligent design that sit behind the curtain, out of the GM's way, letting him do his job and making it all look so easy.

--Andy Vetromile

Pyramid Review

Natural Selection: A Thrilling Prequel to Sucking Vacuum!

Published by [Alien Menace](#)

Designed by Marc Davis

Eight 5½ by 8½-inch card sheets, one four page 5½ by 8½-inch rules leaflet, one rocket shaped turn counter, & one six-sided die; \$5.95

Monkeys. Woohoo!

Monkey poop. Eeuw . . . !

Both appear in the latest game from Alien Menace. Well, actually, *neither* appear in *Natural Selection*, the prequel to one of last year's most frantically fun games, [Sucking Vacuum](#), which itself has been given a spiffy full-color upgrade for its recent second edition. Instead, *Natural Selection* is about chimps being trained to serve aboard the International Space Station. You know, the one that is going to hemorrhage oxygen like a very leaky thing in *Sucking Vacuum*. And sometimes yes, this does involve chimp poop, though not the bit about hemorrhaging oxygen . . . Anyway, chimps are cheap to train and easily replaced, so can be shot into space without risk to human life. They also do not ask quite so many awkward questions. So eight nations have put forward their best chimponauts who must complete a series of tasks in the fastest possible time within set time limits. The best overall team of chimps will then be sent into orbit.

Alien Menace put out games in a similar style to those from Cheapass Games, but they come better appointed. That includes everything necessary to play: dice, counters, boards, and tokens, plus the ziplock bags to store it all. (This is a feat that many other publishers of more expensive titles still seem unable to do.) Some preparation is necessary of the components in *Natural Selection*, involving taking a pair of sharp scissors to the eight card sheets. Cutting up these sheets gives the following components:

- Four 4½-inch square map tiles that depict the test areas, marked with lockers, computers, and cages.
- Four 3-inch square Command Modules.
- A plethora of tokens -- eight Initiative Tokens numbered one through eight; eighteen paintball splats; five sets of Team Tokens labeled Alpha, Beta, Charlie, and Delta; and 27 Item Tokens that depict O₂ Cylinders, Paintball Guns, Micrometers, Mission Discs, and Teddy Bears, plus the Monkey Poop
- A Mission Track and a Locker Contents board.
- Eight stand-up figures.
- Eight ID badges that corresponds to the stand-ups and give details of the chimps submitted for testing. Besides a little biographical background, every chimp is rated between 3 and 7 in their Kinesthetic, Logical, and Spatial abilities.

While *Natural Selection* can be played by between two and eight players, it is best played by four players, who each take control of a team comprised of two chimps. (There are rules for as many 10 players, but then they need another, wholly different game). The aim of each chimp is to complete five missions in set order, each within a time limit of three turns. Points are awarded for doing each task first, second, or third, so it is possible to win a game without being the fastest. The game ends after five missions have been completed, which lasts a total of 15 turns, at which time the simian team with the most points is declared the winner.

At the game's beginning, the four map tiles are laid down to form a square, and the four Command Modules are placed on perimeter of the testing area. The chimps are organized into teams of two and given the Team Tokens that they will

place on the Mission Track board as they complete a mission. The lockers on the Locker Contents board are filled with three random objects ready for a chimp to open and search to find what he needs to complete a mission. All chimps begin play locked in their cages.

On each turn, order of play is determined by drawing the initiative Tokens. When it is his turn to act, a chimp's actions are limited only by his Kinesthetic score. The higher it is, the more actions he can attempt. This includes moving; picking up, throwing, and smashing objects; wrestling with other chimps; using skills; and, of course, throwing Monkey Poop. To use a skill, a chimp rolls the die and adds the appropriate ability, hoping to get a result of 10 or more to succeed. This is necessary to open lockers, throw things, wrestle with rival chimps, and complete many of the tasks necessary for the game's missions. Some objects, of which a chimp can hold two, can enhance a chimp's skill, and will often prove necessary if a chimp is to use his skills. When thrown, objects inflict damage by reducing the number of actions a chimp can do. In particular, Monkey Poop is very effective in doing this, as despite all that training, it cannot overcome a chimp's instinct to self-groom!

The game's five missions are Launch, Repair, Navigate, Insurgency, and Egress, which must be played in that order. In Launch, the chimp teams must prepare their Command Module by stocking it with an O₂ Cylinder and getting into their seats. During the Repair Mission the chimps must repair one of the many malfunctioning computers. For the Navigate Mission, a navigation program must be located and uploaded into the team's Command Module computer. It is time to get out the Paintball Guns for the Insurgency Missions and to see how many hits they can land on the members of rival teams. Finally, the Egress Mission allows the chimps to get out of the test area via the airlock.

So what you have in *Natural Selection* is a set of five very mini-races. Each is a race against the clock and the other teams; with players needing to match the strengths of their chimps against the tasks they need to perform. One problem is that players may find that the three-turn limit for each mission is too short; to counteract this, we rolled for mission length (specifically 1d4+2) to add an extra random element. Also the rules feel a muddled upon first appearance, but a thorough read through and the play of *Natural Selection* is easily grasped. The components are themselves solid, although the rulebook is a little rough looking.

As a prequel to *Sucking Vacuum*, *Natural Selection* shares not-too-dissimilar mechanics and, in some cases, the icons on their components. It also shares the same aspect for team play. That said, *Natural Selection* is not as fun as *Sucking Vacuum*, if only that it lacks the roleplaying element that made *Sucking Vacuum* so engaging to play. Of course, how much verbal roleplaying potential is there in playing over trained simians with a propensity to throw their own poop? Yet, putting aside what are really just minor quibbles, *Natural Selection* is a solidly designed game that bears some repeat play. And although not as fun or as frantic as its sequel, *Natural Selection* possesses a certain chutzpah. After all, how many other games let you play with Monkey Poop?

--Matthew Pook

Pyramid Review

BESM Space Fantasy

Published by [Guardians of Order](#)

Written by James Maliszewski, with additional writing by Christopher Haynes

Art by Christina Crontiris, Olga Bosserdt, Derrick Chin, Svetlana Chmakova, & Tara Lustik

96-page b&w digest-size softcover; \$16.95

Guardians of Order extends the *Big Eyes, Small Mouth* universal anime roleplaying game franchise with this solid treatise on the characteristics and conventions of anime space fantasy (or "space opera" in older usage). While some of this terrain has already been walked (in *Centauri Knights* or the out-of-print-but-available-by-download *Big Robots, Cool Starships* and even touched on peripherally by the *Tenchi Muyo!* game book series), this is *Big Eyes, Small Mouth's* first comprehensive look at the space fantasy genre separated from the settings.

The first chapter gives a brief definition of space fantasy, as well as an overview of the history of space opera anime from "Astro Boy" forward; this is fairly standard introductory stuff. The book gets down to business in chapter two, with nearly a quarter of the book dedicated to discussion and investigation of campaign styles. This begins with a look at the broad elements (action, comedy, melodrama, romance) and then examines common applications, ranging from a *Star Trek*-like exploration campaign to the military themes of *Star Blazers*, even to the mixed romance-magical girl tendencies of *Tenchi*. More familiar space gaming premises, like space merchants or pirates, are also treated. The middle portion of this chapter addresses the distinctive elements of visual style which makes space anime what it is. The chapter closes with several brief but very usable campaign premises demonstrating the concepts of the chapter. Many of these make deliberate nods to familiar space opera or action-adventure concepts from other media, but this, too, is characteristic of anime and perfectly valid and enjoyable.

Chapter three discusses character creation. As might be expected, this is the chapter which relies the most heavily on the Tri-Stat rules foundation. However, the chapter works just as successfully as a general discussion of character types and conventions. The only purely "crunchy" elements are the sample race and occupation templates, which give players and game masters a welcome leg up on designing such elements for their own games.

Chapters four and five get to the nuts and bolts of any science fiction setting: technology and starships, respectively. These chapters are almost purely discussion of the questions which must be asked as a setting is made, and what sort of answers (and repercussions of those answers) might ensue. This is a remarkable and refreshing change from many space-based games where the hardware has center stage in the rules. The non-technical focus continues in the final chapter on exotic worlds. There's no star system design rules here, just a very anime-like discussion of the assorted elements which need to be considered as one develops strange new worlds and new life forms. The book concludes rather abruptly after this chapter; I would have welcomed a few example worlds or creatures, possibly followed by a fully-fleshed campaign setting drawing on all the elements from prior chapters.

Author James Maliszewski might be familiar to science fiction gaming fans from his columns in the early incarnations of RPG.net, contributions to the *Fading Suns* and *Stargate SG-1* games, and extensive credits for *GURPS Traveller*. Here he's able to apply his broad experience of space gaming while blending in the conventions of anime-style

storytelling. The result is both a welcome guide to space fantasy in general and to anime space fantasy in particular. This mixing of cultures, the combining of Western and Eastern styles, is sure to continue and, if done well, should bring much entertainment to gamers and readers in the years to come.

The interior art is in line with the usual standards we've come to expect from Guardians of Order. The cover art by Christina Crontiris left me a bit confused; the interrelation of the major figures, the minor figure with the major gun, and the spacescape never gelled for me. The graphics layout is clear enough, but I would have been happier with better distinctions between sections -- the typeface sizes chosen don't jump out as much as they might. As might be expected for such a brief book, the table of contents is quite short. The index takes up two full pages, but much of this is padded by repetition from assorted section and subsection headers; this is not necessarily material that is expected in an index. Occasional spelling errors and the two separate entries for "bounty hunter" make this an index which may be usable but doesn't generate respect. Perhaps a condensed index would have left room for another page of recommended anime source material.

What I found most surprising about this book is how truly generic it is. The focus on the themes of space fantasy anime, from settings to characters to technology, is a welcome change of pace from many space gaming books which tend to enforce themes with rules edicts. Here you get "just the facts" about what's needed to run high adventure in the high frontier. If you prefer a more technical approach you will probably be happier with Hero Games's *Star Hero*, Steve Jackson Games' *GURPS Space*, or any of the many incarnations of Marc Miller's *Traveller*. But if you're like me these days and more interested in telling a ripping yarn in deep space, you'll find *BESM Space Fantasy* a welcome addition to your library.

Murphy's Rules

The Black Hawk in GURPS

A Modern Helicopter and its Use(r)s

By Hans-Christian Vortisch

This article describes the widely used Sikorsky H-60 series of helicopters, with [GURPS Vehicles Lite](#) stats. It is especially useful for [Special Ops](#) or other military campaigns, but may also feature in many other modern action campaigns set between the 1980s and the 2030s -- including [Hellboy](#) or low-tech [Cyberpunk](#).

Much of the information can also be used in other games, such as *Cthulhu Now*, *Delta Green*, *d20 Modern*, *Merc: 2000*, *Twilight: 2000*, etc.

Sikorsky UH-60 Black Hawk

In the early 1970s, the U.S. Army issued a requirement for a new multi-purpose helicopter to replace its fleet of Bell UH-1 "Huey" choppers (pp. SO123, VE141). The new aircraft was to be larger, faster, more powerful, and less vulnerable. One of the main goals was for it to provide higher survivability for crew and passengers.

The design developed by Sikorsky Aircraft Corp. of Stratford, Connecticut, entered service as the UH-60A Black Hawk in 1979. It soon spawned numerous variants for special uses and various branches of the U.S. military, as well as civilian users and export customers in more than 25 countries.

The UH-60L is the improved general-purpose variant, adopted in 1989. It differs from the original UH-60A mainly in upgraded engines and electronics. Some 540 have been acquired by the U.S. Army by 2003, and 60 more are on order. It cost around \$8.6 million in 1997.

The Black Hawk is a twin-engined assault and transport helicopter with a four-bladed main rotor and a smaller tail rotor. Some vital components are ballistically tolerant and can take a couple hits before ceasing service completely. The whole craft has an IR-suppressant paint finish.

The cockpit seats the pilot on the right, the co-pilot on the left. Both have crash-resistant, armored seats, which provide small caliber and fragment protection from the rear, underside, and part of the sides (DR 25). If properly buckled in, the seats reduce collision and whiplash damage (pp. VE160, VL47) with an effective DR of 5. In addition, the pilots' seats are provided with cockpit airbag systems from 1999. There is a door on either side of the flight deck. The 410-cf main cabin is located behind the cockpit. Directly behind the pilots' seats, adjacent to the cabin's side windows, are the stations of the crew chief and the gunner. In addition, the cabin can accommodate 11 fully equipped troops on crash-resistant seats (an alternative seat arrangement seats the crew chief and 14 troops; this usually lacks armament). In the field, the passenger seats are often removed, allowing up to 22 troops to be carried. This is more dangerous in the event of a crash, but allows quicker dismounting. Two large doors are located on either side, sliding to the rear to open. There is an internal 600-lb. winch (ST 30) with 66-yard cable at the right door. This can be deployed to recover cargo or personnel while the helicopter is hovering. Alternatively, the passengers can fast-rope or rappel down (p. SO59).

The crew has dual flight controls and instrument panels fully compatible with AN/AVS-6 ANVIS image-intensifying night vision goggles (p. SO110), allowing flight at night. SINCGARS-compatible radios with encryption (pp. SO106, VL13) as well as satellite communication (SATCOM) equipment are installed.

Defensive equipment includes the AN/APR-39 radar warning receiver, AN/ALQ-144 IR-missile jammer, and twin M130 flare/chaff dispensers. The dispensers can be loaded with M206 flares and RR-170 chaff bundles.

The engine compartment behind the cabin contains the twin 1,342-kW General Electric T700-GE-701C turboshafts. The engines are fitted with IR-suppressors. The self-sealing, explosion-proof fuel cells are designed to seal off a 7.62mm hole. A 67-kW Solar T62-T-40-1 auxiliary power unit (APU) is provided for the electrical systems and emergency use. The 4-bladed main rotor features ballistic blades of composite construction (which are able to tolerate a hit from a 23mm [autocannon](#)). The main rotor blades are foldable for stowage on cargo aircraft -- four Black Hawks can be carried in the McDonnell Douglas C-17A or six in the Lockheed C-5B (p. SO125). One hour is required to prepare it for loading and one hour for rebuilding on arrival.

The UH-60L can mount up to four machine guns -- two in the forward windows on either side and two in the doorways of the cabin. The forward mounts were originally fitted with 7.62×51mm Saco M60D machine guns (pp. HT119, SO121) with a 200-round belt of ready ammo each. These have been replaced in U.S. service with the 7.62×51mm FN M240D (pp. HT120, SO121, and VL57) from the late 1990s. Some mount 7.62×51mm GE M134 miniguns (selectable RoF 33/66, pp. HT119, SO121, and VL57) with 4,500-round belts each instead. The door mounts are not normally fitted on the UH-60L; if installed, various heavy machine guns can be mounted. The 12.7×99mm General Dynamics [GAU-19/A](#) minigun (pp. MF30, VL57) originally intended for it has been found to develop too much recoil, however.

The UH-60L can use the external stores support system (ESSS), which consists of two removable stubwings from which drop tanks and ordnance can be suspended. The ESSS features four hardpoints and can support up to 5,000 lbs. per side. Loads include 230-gallon or 450-gallons drop tanks (every three gallons increasing endurance by one minute), 7-round M260 or 19-round M261 70mm BEI Hydra rocket pods (pp. SO121, VL59), 4-round M490 HELLFIRE missile racks (pp. SO121, VL59), or the 160-round M56 Volcano FASCAM mine dispenser system -- the weapons are not usually carried (and note that the helicopter lacks the laser designator to guide the HELLFIREs; a designator on the ground or another helo is required). Any external load severely restricts the fields of fire of the machine guns. The stores are jettisoned if the helicopter comes under attack, to permit the gunners to return fire.

An external cargo carrying hook under the belly can support a slung load of up to 4.5 tons, e.g. an [M1025 HMMWV](#) armament carrier or a 105mm M119A1 towed howitzer, with its 5-man crew and 50 shells in the cabin.

The UH-60L burns 161 gallons of jet fuel per hour at cruising speed (normal endurance is about 2 hours 6 minutes). A full load of fuel and ammunition is \$1,212. Visibility is good.

Sikorsky UH-60L Black Hawk

Subassemblies: Body +4; Top-and-Tail Rotor +2; 2×open mounts -1; 3×small wheels +1.

Powertrain: 2,535-kW Improved TTR drivetrain; 2×1,342-kW Improved HP gas turbines; 67-kW Improved HP engine; 1,470-kWs advanced battery.

Fuel: 360 gallons jet fuel (Fire 13).

aSpeed: 184 *aAccel:* 4 *aDecel:* 14 *aMR:* 3.5 *aSR:* 2

Stall Speed 0. -2 *aSpeed* per loaded hardpoint (if any).

Design Notes

GURPS Vehicles Lite design. Body is 761.1 cf; rotor is 15.2 cf and 120 sf; open mounts are 1.5 cf each; wheels are 38.1 cf.

Body structure is medium, expensive, with fair streamlining. Armor is expensive composite on body and rotors, expensive metal on wheels. Each pilot station (40 cf) has 100 points expensive composite armor. 2×180-gallon light self-sealing tanks. The crash-resistant seats were bought as airbags. Each M130 dispenser can carry 30 flares or 60 chaff packets, equivalent to 30 flare/chaff loads in *Vehicles*.

Empty weight of the design was 11,960.85 lbs., which has been decreased to the actual empty weight of 11,516 lbs. *Lwt.* is the maximum combat weight. For ferry operations with extra fuel, it can go up to 12.25 tons. *aSpeed* has been decreased from 274 mph as designed to the actual maximum speed.

Variants

Numerous variants and modifications of the basic design exist. These include:

UH-60A Black Hawk

The original version of 1979 has 1,165-kW engines and a 4-ton slung capacity. The U.S. Army originally procured 976 of them, some of which have since been lost to combat or accidents, given away, or converted to other configurations.

UH-60M Black Hawk

Scheduled to enter service in 2006, this version is planned to increase the service life of the series to the year 2025 and beyond. The UH-60M fleet will consist of converted UH-60A and L models as well as newly built aircraft.

Modifications include rebuilt airframes, new rotor blades with better lift, a completely new digital cockpit with multifunction displays and internet access, and upgraded communication systems.

EH-60L

This is an electronic warfare version introduced in 1996, carrying the AN/ALQ-151 Advanced Quick Fix (AQF) battlefield ECM detection and jamming system, which intercepts, locates, and jams radio communications. The EH-60L also mounts extensive radio, datalink, and data storage equipment. An AN/ALQ-156 missile warning detector is also installed. It has a crew of five and is operated by military intelligence personnel.

HH-60G Pave Hawk

This version is used for combat search and rescue (CSAR) by the U.S. Air Force since 1992 (p. SO124). Some 102 are in service. It received extensive equipment upgrades, including terrain-following multi-mode radar, AN/AAQ-16 FLIR, external 600-lb. winch with 83-yard cable, two 185-gallon auxiliary fuel tanks in the rear of the cabin (doubling endurance to more than 4 hours), and an in-flight refueling system.

It is armed with 7.62×51mm GE GAU-2B/A miniguns (a variant of the M134) with 4,500 rounds each in the windows and can mount a 12.7×99mm Ramo-Browning GAU-18/A heavy machine gun (a variant of the M2 with RoF 16*, pp. HT119, SO121, and W130) with 1,300 rounds in the left cabin door.

Its crew consists of two pilots, flight engineer, gunner, and two [pararescue jumpers](#) . It will typically take on two survivors (although up to eight can be carried in a pinch).

HH-60H

The HH-60H (p. SO124) is a Navy version based on the SH-60B Sea Hawk. Operational from 1990, some 42 were made and are flown by HCS-4 ("Redwolves") and HCS-5 ("Blue Hawks") for search and rescue and special warfare combat support for the SEALs. Additional equipment includes AN/APS-124 search radar, AN/AAR-39A advanced radar warning receiver, AN/AVR-2 laser warning detector, AN/AAR-47 missile warning detector, improved AN/ALE-47 flare/chaff dispensers, AN/ARS-6 personnel locator system to locate personnel equipped with the AN/PRC-112 survival radio (p. SO106), and Kevlar floor mats in the cabin (DR 20 for the crew and passengers from below). Aside of its 4-man crew, it can carry eight passengers.

Its standard armament consists of two 7.62×51mm GE GAU-17/A miniguns with 4,500 rounds each in the windows (U.S. Navy version of the M134). A hardpoint either side can mount fuel tanks, rocket pods, or gun pods.

HH-60J Jayhawk

This is a search and rescue (SAR) variant developed for the U.S. Coast Guard. Based on the SH-60B Sea Hawk, it entered service in 1991. Called a Medium-Range Recovery (MRR) helicopter, it mounts a weather/air-to-sea search radar, FLIR sensor, 600-lb. winch with rescue basket, and three 120-gallon fuel tanks in external pods (increasing endurance to some 6 hours). Since late 2003, Jayhawks can be armed with the FN M240G machine gun. It has a crew of four and can carry six passengers. The USCG acquired 42 HH-60J Jayhawks, of which 35 are operational.

HH-60L

The U.S. Army's latest medical evacuation (MEDEVAC) helicopter was introduced in 2001 and is a specially equipped, unarmed ambulance helicopter. It has a crew of four (including two medics) and can carry six stretcher patients.

Its onboard equipment includes AN/AAQ-21 FLIR, a 600-lb. winch, and a complete medical kit (including oxygen and a suction system, +3 First Aid).

MH-60K SOA

The MH-60K Special Operations Aviation (SOA) helicopter (p. SO124) was introduced in 1994 for direct support of U.S. Army special operations forces. Some 50 are in service with the 160th Special Operations Aviation Regiment (Airborne). It replaced the MH-60A and features numerous upgrades over the standard UH-60L, including: AN/AAQ-16B FLIR, AN/APQ-174B terrain-following, ground-mapping and air-to-ground ranging radar, AN/AAR-44 advanced radar warning receiver, AN/AVR-3 laser warning detector, AN/AAR-47 missile warning detector, AN/ALQ-162 pulse jammer, AN/ALQ-162 radio jammer, improved AN/ALE-40 flare/chaff dispensers, AN/ARS-6 personnel locator system to locate personnel equipped with the AN/PRC-112 survival radio, Kevlar floor mats in the cabin, FRIES bars on either side of the cabin (each capable of supporting 1,500 lbs., p. SO98), two 172-gallon auxiliary fuel tanks in the rear of the cabin (doubling endurance to some 4 hours), and an in-flight refueling system with nose probe (allowing it to refuel from the Lockheed MH-130H Combat Talon II, p. SO125).

Its standard armament consists of two GE M134 miniguns in the windows and optional guns in the doors. The MH-60K does not mount the ESSS, having its own set of removable, upwards bent stubwings. These have only two instead of four hardpoints, but don't restrict the fields-of-fire of the machine guns. Typically, two 230-gallon tanks are carried, but 70mm AIM-92D Stinger air-to-air missiles (pp. SO118, VL59) can also be mounted.

It has a crew of four and can carry seven passengers.

MH-60L DAP

The MH-60L (also known as the AH-60L) pre-dates the MH-60K, having been introduced in 1990, but has since been upgraded to a similar standard. Its main task today is as Direct Action Penetrator (DAP), i.e. as a fully armed gunship. It is very similar to the MH-60K except for lacking the in-flight refueling equipment and employing the standard ESSS. It features a HUD and the AN/AAQ-16D FLIR with integral laser rangefinder/designator, allowing it to fire laser-designated AGM-114C HELLFIRE antitank missiles or IR-homing AIM-92D Stinger air-to-air missiles without support. However, its typical armament consists of two M134 miniguns in the windows (fixed to fire forward and triggered by the pilot), a 19-round M261 70mm rocket pod on one ESSS stubwing and a 30×113mmB MDHC [M230](#) chain gun (p. VL58) with 1,100-round belt on the other. It can carry up to four 150-gallon auxiliary fuel tanks in the cabin, each increasing endurance by about 50 minutes.

MH-60S Knight Hawk

This U.S. Navy version introduced in 2001 is essentially a navalized UH-60L with features of the SH-60B Sea Hawk. It has the larger cabin, cargo doors, ESSS, and many external features of the Black Hawk, combined with numerous internal Sea Hawk features such as the engines, rotor brake, folding tail pylon, automatic flight control system, rescue winch, and a more durable gearbox.

It replaces the HH-60H, CH-46D Sea Knight, and several older types for the general-purpose, search and rescue, medevac, special warfare support, VIP transport, and assorted other roles. Some 237 are to be acquired by 2010.

SH-60B Sea Hawk

The SH-60B Sea Hawk was the U.S. Navy's first version, introduced in 1984 and mainly intended for antisubmarine warfare and surface search and surveillance. It has numerous differences, including a smaller cabin with only one door on the right side, navalized engines, 590-gallon fuel capacity, rotor brake, folding tail pylon, automatic flight control system, rescue winch, and a more durable gearbox. It has an AN/APS-124 surface radar system underneath the cockpit, AN/ASQ-81 MAD sensor, and a 25-round sonobuoy launcher in the left side, in place of the left cabin door. The cargo hook is rated at 3 tons. Armament consists of an optional Saco M60D machine gun in the cabin door on the right, and two hardpoints for MK46 torpedoes, AGM-119 Penguin antishipping missiles or 120-gallon drop tanks.

SH-60F Ocean Hawk

Similar to the SH-60B, intended for use on aircraft carriers and in service from 1991. Roles include transport, search

and rescue, as well as antisubmarine warfare. It features AN/ASQ-13F dipping sonar, four MFDs, three hardpoints (one left, two front-to-back right) for torpedoes or antishipping missiles. Aside of the 4-man crew, it can carry only three passengers.

This variant can be seen in *Tears of the Sun*.

VH-60N White Hawk

Flown since 1988 by the USMC squadron HMX-1 based in Quantico, Virginia, for exclusive use by the U.S. President and his staff (the aircraft carrying the president having the call sign "Marine One"). The VH-60N (based on the SH-60F Seahawk) is luxuriously fitted and equipped with a weather radar system, extensive avionics and communications suite (with its own radio operator) hardened against EMP, and passive defensive systems. Nine are in service.

How To Use It

Already in WWII, helicopters saw limited use for artillery spotting, reconnaissance, and transport, but it were search and rescue operations that were the early helicopters' most important contribution to modern warfare (and soon, civilian life). By the early 1960s, the full potential of the helicopter as a war machine had been realized. The U.S. Army concept of air cavalry that could deliver infantry, supplies, and fire support almost everywhere (provided air superiority had been achieved) saw widespread acceptance during the Viet Nam War and almost all later conflicts. The fine-tuning of tactical concepts (such as the Fire Force tactics in the Rhodesian War) and the ever improving technology changed this but little. At the same time, helicopters became commonplace over cities, highways, forests, and the sea, for police observation, [SWAT](#) insertion, medical evacuation, firefighting, sea rescue, antisubmarine warfare, or simply quick and comfortable transport.

The H-60 series of helicopters can be used for all of these missions; it is a highly developed machine that addresses many of the shortcomings of earlier designs. While increased survivability was its main *raison d'être*, it is not invulnerable, as the fiasco in Somalia underlined (p. SO101) -- but then, nobody claimed it was.

Military Users

Any campaign involving the U.S. military in modern times should get good use out of this helicopter. The UH-60A was first used in Grenada (1983) -- the UH-60L and many of the special versions have been employed in both U.S. wars in Iraq (1991 and 2003), in Panama (1989), Somalia (1992), Haiti (1994), Bosnia (1996), and Afghanistan (2001).

The UH-60L is the main workhorse of the 101st Air Assault Division (which flies 114 and plus three EH-60L), and heavily used by the 82nd Airborne Division and 10th Mountain Division (which have 38 and three EH-60L each), and other front-line Army units, including the 3rd Armored Cavalry Division (which has 21). Some National Guard units also fly it.

Special ops units such as the U.S. Army Rangers (pp. SO24-25) and Special Forces (pp. SO26-28) would be supported by the MH-60K SOA and MH-60L DAP -- flown by the "Night Stalkers," the highly specialized [pilots](#) of the 160th Special Operations Aviation Regiment (Airborne) (pp. SO28-29) --, U.S. Air Force [Pararescue Jumpers](#) by the HH-60G Pave Hawk, and U.S. Navy SEALs (pp. SO30-31) by the HH-60H or MH-60S.

The UH-60L and its variations may also show up in service of foreign forces, including the [Royal Australian Army](#) (supporting Australian special ops, p. SO34), Austrian army, Brazilian army, Brunei air force, Red Chinese army

Black Black Hawk

Some Americans believe in the existence of [Black Helicopters](#), ferrying shades-wearing Men in Black across the country to alternatively engage in cattle mutilations, abductions, or actions aimed at depriving citizens of their Right To Bear Arms. In any *Black Ops*, *Conspiracy X*, *Illuminati*, or *Delta Green* campaign worth its salt, these rumors would of course be true.

They could certainly also engage in more benevolent activities, such as the protection of citizens against alien invasions (as the *Delta Green* organization or the Blue Boys in *Dreamcatcher*).

(designated Hei Ying, mainly for high-altitude operations in the Himalaya), Colombian air force, Israeli air force (designated Yanshuf 2, supporting Israeli special ops, pp. SO38-39), [Mexican army](#), Saudi Arabian army (seating 15 passengers; some have a 20×102mm MAT M621 door gun -- use stats of the GE [M61A1 Vulcan](#) with Wt 99, RoF 5/12*, Shots 240, pp. SO122, VL57), Taiwanese air force, Thai army, and Turkish army (supporting Turkish special ops, p. SO46).

Naval versions are in use with the Royal Australian Navy, Greek navy, Spanish navy (designated H.23), Taiwanese navy, and Thai navy.

License-made versions include the Mitsubishi UH-60JA and SH-60J used by the Japanese army and navy, and the Korean Air UH-60P of the South Korean army.

Civilian Users

Commercial success of the H-60-series has been limited so far, mainly due to its cost and complexity; many of its features are unnecessary for the requirements of civilian operators. Most non-military users employ it for VIP or law enforcement missions.

A number of federal law enforcement agencies in the U.S. use the UH-60A (some on permanent loan from the Army), making it useful for certain [Cops](#) campaigns. These include the [Bureau of Customs and Border Patrol \(CBP\)](#), the Drug Enforcement Agency (dubbed the "Pot Hawk" in its service), and the [Federal Bureau of Investigation \(FBI\)](#). The U.S. Coast Guard flies the HH-60J Jayhawk. A few fire departments, including that of Los Angeles County, fly the Firehawk, a variant with a removable 1,000-gallon water tank and water pump under the belly (Firehawks are also in service with the Florida and Oregon National Guards).

The Hong Kong SDU team (p. SWAT17) is supported by two such helicopters; Moroccan and Turkish police agencies likewise use it.

Many countries employ VIP versions for government executive transport, e.g. Argentina, Egypt, Hong Kong, Jordan, Malaysia, Philippines, South Korea, Thailand, and Turkey.

Back in the real world, the existence of "black" helicopters is fairly easy to explain: under night conditions, all cats are gray, i.e., even plain olive drab military helicopters on routine training flights will appear "black." In addition, pilots of federal agencies are allowed to switch off their position lights if required for an operation, and will thus be nearly invisible in darkness. Finally, DEA "Pot Hawks" *are* actually painted black . . . whether they are engaged in the rumored covert ops is a matter of belief.

In keeping with the rumors, Black Black Hawks should also be fitted with a sound-baffling system to allow for silent flight.

Iron Ref 3: The Legend Begins Anew

Three competitors. Three minds of the roleplaying world, each representing a different gaming genre, have accepted the Iron Ref challenge.

Three secret ingredients. Selected by a special guest, three ingredients -- plot elements, story pieces, or other oddities -- are selected for the challengers to incorporate into their concoctions.

2,500 words. Each competitor has twenty-five hundred words -- and no more -- to devise a generic scenario in their genre incorporating all three secret ingredients.

24 hours. And they have one day to work their magic.

However, unlike previous Iron Ref events, this competition will be even *more* grueling! We will be running Iron Ref competitions for the first week of the month for August, September, and October. One winner will be chosen each week; 50% of the rating will be based on *your* ratings, and 50% will be based on a 1-5 rating of a group of three celebrity judges whose identities have not been revealed yet.

The winner for each of the three events will face off against each other, with the results of that titanic struggle scheduled to run the first week of November.

Who shall emerge, victorious, as the Iron Ref?

* * *

Our challengers, and their respective genres, are:

Jeff Siadek, designer of the [Battlestations Starship Adventure Game](#) and member of over two dozen secret societies, will be representing the **Space Opera** genre.

John Ford, noted coauthor of *GURPS Time Travel* and *GURPS Y2K* who has been secretly spreading encoded messages via his sig files in the message boards for years, will be representing the **Urban Fantasy** genre.

David Morgan-Mar, member of the *Pyramid* family with [Irregular Webcomic](#), will be representing the **Cliffhangers** genre.

* * *

The secret ingredients have again been smuggled out of an cryogenics chamber hidden beneath an active volcano by **Kenneth Hite**, the mastermind behind [Suppressed Transmission](#), and creator of so much roleplaying material he's been given his own Dewey Decimal designation.

Stop reading if you don't want to know the secret ingredients!

This competition's secret ingredients are:

- A truly enormous rabbit
- A Stradivarius violin
- A severed body part

Fiddly Bits

The third Iron Ref competition was held from 2:15 A.M. Wednesday, July 21, Eastern Time until 2:15 AM Thursday, July 22, Eastern Time. We had planned to go midnight to midnight, as we did in our first competition, but e-mail problems conspired against our great competition. Nevertheless, our challengers compensated mightily for this inconvenience, and all was right with the event.

This is the first part of our third Iron Ref competition. Our first one was [February 2, 2001](#), and the second was [August 3, 2001](#).

Without further adieu, then, here are the results of this competition:

Space Opera: [Case of the Unlucky Stradivarius](#), by *Jeff Siadek*

Urban Fantasy: [At The Hop](#), by *John Ford*

Cliffhangers: [The Musical Clue](#), by *David Morgan-Mar*

Iron Ref: Space Opera

Case of the Unlucky Stradivarius

by Jeff Siadek

Read:

The last Stradivarius violin in existence, the "Booth Stradivari" has gone missing. One by one the other Stradivari have gone the way of the dodo. A plasma fire disaster took out three fourths of a quartet on the pleasure liner *Irregardful*. One was given to a Trundlian ambassador who promptly ate it.

This last violin (designated a cultural treasure with commensurate diplomatic priviledges) was in the possession of Emel Fivvdem, an alien musician of stellar rekrown. It passed through customs departing the planet of Dr. Moreau but disappeared sometime before Fivvdem went to claim it on New Europe.

This debacle could be a major embarassment to the Universal Republic as it was in technically our hands when it disappeared. Your mission is to return the violin before the concert on New Europe in one solar week without leaking to the general public that it ever went missing. You begin on New Europe and have the use of a starship to travel the one day journey between worlds as necessary.

Characters can be duty-bound as official agents of the Republic or hired for a substantial reward.

Synopsis

The violin was actually stolen by a dim-witted customs official (Dirk Fitzpatrick) who wanted the case for use to transport an enormous rabbit's foot to the cult of Fortune. Fitzpatrick believed the bogus church of Fortune pamphlets (commissioned by Moreau because she wanted somebody to rid her of the rabbit that was literally eating her out of house and home) and needs a diplomatic pouch to get his package off-world.

Timeline

The following events will happen if the characters don't intervene.

Day 1--

Fitzpatrick steals the Stradivarius and throws it into a refuse heap situated directly between his home and the hardware store where he purchases an energy-blade chainsaw. The Stradivarius begins its 7 day march to the biofusion generator. It is discovered missing when Fivvdem arrives at New Europe.

Day 2--

Fitzpatrick cuts a hole in the wall with his energy blade chainsaw only to find the rabbit is bigger than he thought. He shoots it with the paralyzer and goes back to buy an anti-grav truck. He borrows money from a Zeldfetter.

Heroes begin their investigation on New Europe.

Day 3--

Fitzpatrick pries the diplomatic blackbox off the case and applies it to his truck before returning to find the rabbit still barely alive. He cuts off the rabbit's foot and loads it up. A sudden reflexive jolt by the rabbit kicks Fitzpatrick and the truck with a huge severed rabbits foot inside careening over the city wall and smashing into a building. Fitzpatrick is killed in the fall. **The characters will be notified of this accident even if they are off-world.** Authorities don't know where the truck came from and it doesn't show up on police scanners because it has the diplomatic black box attached. Investigation will show that it has the diplomatic tags from the Stradivarius case. They won't open it to reveal the huge severed rabbit's foot until authorized by the heroes.

Day 5--

Heroes will be invited to dinner at Moreau's mansion if they've not alienated her. If they are still missing the boat, more clues are to be found here.

Day 6--

If the characters haven't located the Stradivari by this time, they won't be able to deliver it to the concert hall on New Europe tomorrow without some fancy piloting.

Day 7--

Concert. If they haven't located the Strad yet, the mission is a failure. If they've got it but are just off-world with it, they may buy some time with a charisma check. If they haven't searched the biorefuse yet, the Booth Stradivari, the last of the Stradivarius violins becomes .0001 kilojoules of power.

New Europe

This is a bustling colony world with most of the benefits of a capitol planet. The climate varies widely but there is ample public transport and shelter and the people are quite friendly. Dealing with the locals could cause a delay in the investigation if the heroes aren't sufficiently diplomatic.

Zoallan Musician - Emel Fivvdem

"I am a frequent guest on Moreau's planet although lately, the good doctor has shown less than her usual generosity. As an artist, I am outraged you would insult my integrity by asking me to submit to a lie detector test."

If surreptitiously followed on New Europe, Fivvdem will lead the heroes to the red light district and into whatever illicit situation is appropriately inappropriate for your game. The heroes will have to face some well armed bouncers who use non-lethal weapons. It should be a tough fight. The heroes could lose and find themselves waking up in hospital a day later fully healed. If they win, they don't lose a day recovering. Either way, they have enough damaging info on Fivvdem that they can blackmail it into taking a lie detector test which will show that Emel is, in fact, innocent of all charges. Emel is annoying and depraved but not a thief.

Standard Printing - Dick Patterson.

"I don't know who or why, the credits came through from a biotech company "Stewart Tech" and we just ran the presses."

Stewart Tech

"We just got this gift anonymously of a formula for increasing carrot yield by 4 tenths of a percent. The donor only asked that the payment if any be made to Standard Printing."

The Planet of Dr. Moreau

A swarm of robotic fighters will attack any vessel that approaches the planet without written consent and 24 hours notice. This should be a minor challenge. Communication with the planet calls them off after a few rounds of a brief fight and a robot pilot will come aboard to land the heroes' ship.

Read:

To land, you need to take a pilot aboard who will play the following video on all viewfinders so the surface of Moreau remains a mystery.

"Welcome to Planet Moreau the ecologically friendly research facility where all of our refuse is turned into biofusion fuel. Here are some tips to help ensure your stay is safe and rewarding. Guests are required to remain within the city walls for their own safety. You will be issued a paralysis gun to be used in the unlikely event you are confronted by a genetically mutated experiment. Don't worry about the paralyzer's safety; it is designed only to work on creatures created by Dr. Moreau and only lethal if the target doesn't receive medical attention."

The Paralyzer - looks like a flashlight. Just point and click. Anything genetically modified by Moreau to be susceptible goes down immediately, wracked in pain with occasional reflexive shudders. Has no effect on offworlders.

Dr. Moreau was granted this planet to further her research into genetic engineering both as a means of funding and keeping the research safely quarantined. Some of Moreau's projects (notably the mammal growth studies) have shown remarkable success but are terribly expensive. Other projects have become dangerous liabilities and all biological material leaving the planet is restricted.

A small population of scientists and support personnel make Moreau their home. There hasn't been a murder on Moreau in the 30 years since it was founded. Some of the support personnel dabble in illegal gaming or drugs.

Moreau guards her secrets well. This applies to the doctor as much as her namesake planet. All view monitors are shut off for landing except those utilized by the official shuttle pilots. Characters who manage to hotwire their viewscreens or somehow fast talk or finagle their way into a view of the planet will see what appears to be hairy mountains and stationary clouds near the ground inside the walled off zone. Do not let the players know that there is a rabbit the size of Milwaukee on the surface.

The cities on Moreau are walled to keep out the free roaming genetic mutants that abound in the countryside.

Outside the walls, the land is a kind of a free range for experiments and agribusiness. They don't export any food but they grow a lot more (mostly carrots) than the people on Moreau could possibly eat (two billion metric tons a year). The refuse (mostly carrot tops) are hauled off to the biofusion generator. It takes seven days for the megadozer to push

a block of bio-refuse the seven kilometers from the dump to the generator. It is first sprayed with catalyzers which along with sunlight turn the mulch into biofusion fuel over those seven days.

Dr. Arden Moreau --

A brilliant genetic engineer responsible for the planet, her lease is valid only as long as she continues research on Government directed programs. Otherwise, she does as she pleases. Her biggest problem is that the government wants her to keep growing this enormous rabbit. She cooked up a scheme to have off-world pamphlets from a phony church of Fortune delivered hoping that some idiot like Fitzpatrick would take out the rabbit.

Customs Official - Brbrb (Zoallan)

"I'm happy to assist with the investigation."

Honest but not the hottest coil in the warp drive. Brbrb will figure things out eventually so he may be a source for information if the heroes get stuck. Security checks reveal that Dirk Fitzpatrick hasn't shown up for work for a few days.

Customs Agent - Dirk Fitzpatrick

"Some day my ship will come in"

He took the violin so he could use the case's diplomatic pouch to transport a huge rabbit's foot off-world. The Booth Stradivari itself is on its way to the biofusion generator. Dirk's not likely to be around by the time the characters get to the customs house or his residence. Searching his residence reveals the bow of the Stradivarius in a closed trash receptacle that is too small for a violin.

His house also contains a pamphlet:

Read:

The church of fortune is seeking unique objects related to charms of luck. We will pay top credit with no questions asked such as: the smallest four leaf clover or a coin that has verified to flip heads 37 times in a row. We paid 1 million credits for each of these items and dozens more. All unique objects rewarded handsomely. The size of your reward is only limited by the unique nature of your lucky charm. This could be your lucky day. Bring your charm to The Church of Fortune on Bomba before somebody else beats you to it.

Analysis of the paper - "this isn't carrot-top fiber" reveals it to be from a Standard Printing on New Europe.

Accessing Fitzpatrick's bank files will tell you that he made a purchase at the general store on days 1 and 2 and had a huge influx of cash into his account on day 2 from Lincoln Zeldfetter.

Walking to the hardware store from Fitzpatrick's apartment you must pass the gate of a huge stinking biorefuse dump. This is where he pitched the violin.

Lincoln Zeldfetter - Fixer

"What's my old pal Fitz gotten himself into now?"

He isn't Fitzpatrick's friend. Lincoln loans him money even though he knows Fitzpatrick is a deadbeat because he occasionally needs a friend in the customs house. He doesn't know Fitzpatrick isn't planning to return. If threatened a little, he'll cooperate. If threatened a lot, he'll drop a grenade and run. Cornered, he fights to kill. He has the empty case Fitzpatrick gave him as collateral. He'll negotiate a pardon for handing it over.

Biorefuse Dump

This is where the biorefuse (and the Stradivarius Fitzpatrick hurled over the fence) is sprayed with a catalyst and pushed towards the biofusion plants 7 kilometers away. The heroes will meet hyena-man Billy Shakespeare here who will tell them all they want to know about how the stuff gets pushed inexorably along 1 km per day until it reaches the plant.

General Store Fitzpatrick purchased an energy-blade chainsaw on day 1 and an antigrav truck on day 2.

The Outlands

The Rabbit

One enormous rabbit weighing in at nearly a million kilos roams the outlands until paralyzed and amputated by Fitzpatrick near a hole in the wall near Fitzpatrick's apartment. Killing Fitzpatrick (day 3 in timeline) was purely accidentally aside from being apropos. The heroes aren't likely to find it until it has been paralyzed. Heroic measures can revive it. A prosthetic foot will be expensive for Dr. Moreau to create but it's the least she can do.

Beastmen

There are all manner of crossbreeds of humans and farm or zoo animals on this world (bears, crocodiles, bulls). Moreau long ago let them free into the ranges. Some come out to work the most menial jobs. Use whatever animal stats from your game system to represent them. Like the rabbit, the beastmen are vulnerable to the paralyzer.

Searching the Biorefuse pile for the Stradivarius

If the heroes begin a search of the refuse pile at its exact location (kilometer 4 on day 4 for example), they'll find it. Otherwise, the beastmen will get wind of the search and go looking themselves. They'll find the Strad and take it home to their village but continue searching because they couldn't imagine people looking for a violin.

After the beastmen find the Stradivarius, they'll play an eerie tune every night that can even be heard faintly from within the city walls (by the character with the best listen check). The heroes must go into the Beastmen village to find it. In the village, they'll find opportunity to talk or fight as they like. The beastmen are pretty formidable and outnumber the characters 2 to 1 but susceptible to the paralyzers. The GM is encouraged to really dial up the roleplaying of the excruciating agony of the paralyzers. This is a hint to the characters to show some mercy. If they don't, they deserve what they get.

Any character giving medical attention to a beastman will cause all beastmen to cease hostilities and become friendly. Pleased that offworlders show them dignity denied them by those who share their planet, they will be happy to give up the Stradivarius when made to understand that it belongs to others but show remorse at losing the music. Any musical instrument will make them happy.

Billy "Shakespeare" - Hyena man.

Billy is a crewman aboard a megadozer and got the nickname because he is one of the few beastmen who can read. Billy is self-conscious about his laugh.

Resolution

If they failed to recover the Stradivarius or it became public knowledge that it was lost, there is no reward but a drayage class passage to their next assignment.

If they saved the Stradivarius they will be handsomely rewarded. In all the excitement the authorities might not notice if the diplomatic seal goes missing. If Moreau's part in this matter remains secret, she'll give each a bite of slime that requires only water to survive and produces enough nutrition and fiber to make those who eat it effectively never have to eat again.

Iron Ref: Urban Fantasy

At The Hop

by John Ford

Introduction

The location is a City, naturally enough, that has a secret fantastic side. The city government is aware of this "Nightworld," but its policy is to ignore it; for their part, Nightworlders are happy to be left alone, and try to avoid anything that might turn the Dayworld actively hostile.

Nightworlders fall into three categories: Dippers visit the Nightside occasionally; Shades move back and forth, and Hallows emerge only under extreme conditions. Many, though not all, Hallows can't pass for human. On the other hand, not all the Dippers and Shades are actually human -- they just look enough like it to pass.

Player Characters

Investigative skills will be most useful for the PCs. Combat will be counterproductive. It will be assumed that they are Nightworlders (Shades, mostly) who look into possible violations of the low-profile rules.

Mr. Bunny, Deceased

The team is summoned to the basement of an apartment building. The building and neighborhood were once classy, but have declined. The janitor, who found the body, shows you to the scene.

The basement is clean, but cluttered. In the center, partly hidden by furniture and crates, is the dead body of a man-sized rabbit, in a pool of drying blood.

The rabbit might be taken for a man in a very well-made costume; he (it's easy to establish the pronoun) faintly resembles Danny DeVito, if he had dingy white fur and two-foot ears.

The body has been disturbed after death; there are handprints on the fur and shoeprints in the blood puddle. And Mr. B's right front paw has been lopped off with one powerful blow.

The footprints lead to a side room, where cleaning supplies are stored; the killer obviously tidied up in here.

Sorting It Out

The question of why Mr. B was in this particular building should arise.

The janitor will be indignant at any suggestion he might have done the shooting, pointing out that any sane man who shot a 5'8" rabbit in the basement would have reported it to the police; he did the Nightworlders a favor by instead telling one of the tenants with Nightworld connections.

There are, in fact, four such tenants:

Fritz Klein lives on the ground floor. He was the one the janitor told about the big dead varmint; if asked why him, he guesses that it's just because he was the closest. He's a Shade, who says that he likes the company in the Nightworld

better than the Day.

Andy and Pilar Moreno live four floors above Fritz. Andy became aware of the Nightworld when he started dating Pilar. He didn't know until later that she was a werejaguar, "but by then it didn't matter, you know." Pilar can transform at will, and retains her human intelligence in animal form; if she doesn't change for a few days every couple of months, she risks an uncontrolled transformation -- "not so good at the supermarket."

Louis d'Antoine has the tenth-floor penthouse. He's decorated the place in what even the least refined character will recognize as horrendous taste -- Fritz calls it "Early Three Stooges." Louis obviously lives only in a couple of rooms at the back; he plays host by serving tea, and the players will get a glimpse of a ghastly kitchen.

If there are any female members of the team, he will switch his act from a bad Clifton Webb to a worse Cary Grant; if Pilar Moreno visits, he'll break into a sweat.

If Pilar is asked, she will change to jaguar form to find clues. She establishes a scent trail from the body, to the furnace/cleaning room, and back out to the alley exit. There she detects something in a trash can. (The team can also find this on their own.)

The can contains a brass-buttoned waistcoat, torn and blood-soaked in front. It also contains Mr. Bunny's missing paw.

Because of the cleaning fumes, Pilar can't identify the killer's scent, but she'll promise to try and match it to any suspect the team finds.

The one thing all the tenants have in common is that they went frequently to the Moonlight Serenade, a night of music and dance held on the nights of the full and new moons. They were all at the last party, at the full moon a week ago, and said hello briefly; no one will attempt to deny this.

Where Next?

The leads available now are:

- Ask around about the late Mr. Bunny.
- Ask about the tenants.
- Look into the Moonlight Serenade.

What's Dead, Doc?

It seems that nobody knows anything about the big rabbit. This is unusual; in the Nightworld, someone always knows something . . . unless, of course, everyone who knows has a reason to lie.

Mr. B's body is moved to a Nightworld clinic, and the crime scene cleaned up; this is necessary for secrecy (and there was no forensic evidence left, though don't tell the players that).

Assuming that they do the forensic wet work:

- Cause of death was three shotgun blasts, from ten to fifteen feet away.
- Mr. B had a humanoid larynx -- that is, he had the power of speech and was almost certainly intelligent.
- He's also not a wererabbit. Wererabbits are usually normal-sized as animals, and never have normal speech.
- His last meal was muffins and tea. (Earl Grey.)

Malicious Gossip

General questioning of Nightworlders will establish that:

- Everyone likes the Morenos. Some will admit they weren't certain about the relationship at first, but Andy has taken very good care of Pilar, and that's a Good Thing.
- Fritz is also well-liked, though he's not a close friend of anybody. Again, there was some early doubt -- was he just gawking at the freaks? -- but now he's almost unnoticed.
- Louis exasperates almost everybody. His art-poseur act gets old fast, and he hits clumsily on almost everyone recognizably female. But a small number of Nightworlders know that he regularly gives a truckload of medical supplies to the Nightworld clinics.

Song And Dance

The Moonlight Serenade is one of the few Nightworld events to be open to any Dayworlder who wishes to attend (and has the connections to know about it) -- most such things limit attendance in some way.

For the last year and a half, the featured musicians have been the Old Dark House Band, which consists of Jamie Wild on violin, Miyu Osato on glass armonica, and Viola Rebec on vocals.

Jamie Wild

Jamie is a tall, gaunt man with a faint Scots accent, preternaturally long fingers, and a raspy voice. If he is called a violinist, he corrects it to "fiddler." He plays the Black Stradivarius, a violin made late in Antonio Stradivari's career, about 1720. It is made of an unusually dark wood, not quite black.

Allegedly the violin has a long and wicked career, having been made for a black magician, who provided a woodstain made from human blood and other unnamable things. The owner played his violin at dark rites, sometimes in concert with the Dark Man Himself (I'll bet you didn't know it, but he's a . . . oh, never mind). It had many subsequent owners; it was said that the Black Strad absorbed more evil with every playing, that it could not play a hymn, that scraping the bow just right could kill.

Jamie Wild won't say where he got it, and everyone agrees that Jamie is an honorable man.

Miyu Osato

Miyu is a plump Japanese woman, who keeps the audience entertained between sets by reciting folktales and telling jokes. She wears traditional kimono to perform, but camp shirts and jeans offstage.

Her instrument is the Glass Armonica (the inventor's spelling), a series of glass bowls that rotate on a spindle, powered by a footpedal and crank. The player holds moistened fingertips against the glass to create musical notes, much like "playing" wineglasses -- which is where the inventor, Benjamin Franklin, got the idea.

Miyu's instrument was made for Dr. Karl Anton Mesmer, who used it to induce hypnotic states in his patients. (Historically amusing, given Dr. Franklin's noted skepticism about Dr. Mesmer.) As Miyu plays it, it has definite hypnotic properties.

Viola Rebec

It may seem odd to call a person an "instrument," but no one who hears TODHB will doubt the label; their sound is not a vocalist-plus-musicians, the band is a unit, and the whole transcends the parts.

It will be difficult, even for the investigators, to talk to the band members. Miyu, by far the most open, says, "I don't think we exist separately anymore," and the first interview will have to be with the three of them together.

Miyu will do almost all of the talking. Jamie will answer direct questions, without apparent evasion but as tersely as possible. And Viola literally won't open her mouth.

The players will undoubtedly want to talk to Viola. There are three ways to go about this.

- They can barge in on Viola in her room. If they do this, they will find her sitting on the floor, holding something which she'll try desperately to hide, including an attempt to swallow it if all else fails.

If the team fails to get the ring (by whatever means), the other members will make sure the detectives never get another chance to see Viola. They can still talk to the others, and the band will perform at the next Serenade in a week, but we'll come to that later.

If they do get it, it's brass, and has an engraved "W." It's much too large for any of Viola's fingers, or even her thumb; indeed, it won't fit any (human) player's finger.

She will still not speak. All inducements, including magical compulsion, will fail. The team can ask Miyu or Jamie to assist; if they don't, one of them will eventually show up to see what the heck's happening.

If it's Jamie, he makes threats (though he'll only turn violent if they start a fight, and then will stop after beating someone silly). If he's shown the ring, he'll try to get hold of it, and if he does, or there's a fight, it'll vanish forever. He'll say nothing about it, though.

If it's Miyu, she scolds you furiously, and asks to see the ring. She's shocked. She asks you to wait until the next concert (in a week) and promises to explain things then. Getting answers now is possible with excellent persuasive skills (or if the GM wishes to speed things up); if this succeeds, go to "Ask Miyu" below.

- Ask Jamie to help. He will firmly, though not rudely, tell them to let her alone. The End.
- Ask Miyu. This will require some persuasion, which the group should roleplay rather than roll for; if they offer a reasonable argument, she will finally agree to arrange a conversation.

This takes place in Miyu's room. Miyu is seated at a koto -- a stringed instrument played with mallets, like a hammered dulcimer. She begins to play, and Viola speaks, her voice coming out in the vibrating notes of the koto.

She has brought the ring. She explains -- in these terms -- that it was a thing someone wanted very much, and she believed it would be good if it were given. Now she isn't sure, about this or anything.

Miyu will now call Jamie in, explain that the game's over, and What Really Happened will now come out. See below.

What If They Don't Get That Far?

If the team runs into a dead end, they will have to wait until the next concert. During that, they will be able to slip into the players' rooms; they'll find the ring prominently placed in Viola's, and Mr. Bunny's watch and chain in Jamie's. It will be particularly effective to confront Viola and Jamie during the break, while Miyu is on stage; Jamie will get angry and Viola will become frightened, and eventually he'll fiddle her voice and the story (up next) will come out.

If they completely run out of leads, Pilar can identify Jamie's scent as the killer's.

What Really Happened

The Old Dark House Band can, when they are in full swing and the audience is (literally) under their spell, grant a wish to someone on the floor. Most of these things have been nudges in the direction things were likely to go anyway; a year ago, Andy Moreno said, "please give Pilar and me a chance," and they got it. In retrospect (Miyu says) that may

have been their mistake; they thought they were a force for good and that was that.

At the last session, Fritz Klein asked "to be led the right way," and who could have argued with that? Except that Fritz's actual dream was to spend the rest of his life in the Nightworld, as part of it, not a Shade visitor, and something in his imagination framed that as "the White Rabbit leading him down the rabbit hole to Wonderland."

When Mr. Bunny arrived at the ballroom and set off in search of his Alice, Jamie realized that this was a Bad Thing -- imaginary creatures running about in the Dayworld broke the first rule -- and tried to stop him. Mr. Bunny picked up the first available weapon, which was the Black Strad. However determined Jamie might have been, he ducked and hit the floor rather than have his fiddle smashed. Then he picked up a shotgun and headed for Fritz's place. Being human and used to the mysteries of public transit, he got there first, met Mr. B in the basement, and shot him.

The fiddle, unfortunately, was stuck in Mr. Bunny's rigid fingers. Jamie was angry and in a hurry, so he found a hatchet in the basement and performed some radical surgery. Then he disposed of Mr. Bunny's clothing, cleaned up, and went back to the ballroom. When he got there, he found he'd stuck the ring in his pocket; Viola held out her hand for it -- she wanted to remember their mistake -- and he couldn't refuse.

Yes, Louis is a Red Herring, as is the tea in Mr. B's belly (presumably he ate before he left for our world). The Morenos are too, in a different way. A mystery with one suspect requires few little gray cells to solve. A

So What's The Verdict?

There isn't anybody to punish. Jamie did some unpleasant things, but he did them to protect the Nightworld; nobody there is going to fault him, and trying to even explain the case to a Dayworld court would be an exercise in absurdity. Fritz didn't actually lie about the White Rabbit -- he saw it without its waistcoat and watch, as just a big dead lump of fur, and only later made the connection, by which time he was scared to admit anything.

Iron Ref: Cliffhangers

The Musical Clue

by David Morgan-Mar

This is a cliffhanging, pulp action adventure set some time in the 1930s. Suitable characters include just about anything that fits the genre.

The Auction

The adventure begins with an invitation to attend a gala function and auction of items from the estate of Sir Winfred Hughes, at his former mansion. His only surviving heir, Jonathon Hughes, is something of a philanthropist and wishes to both rid himself of his embarrassing uncle's stranger acquisitions and raise money for charity. Sir Winfred, although a distinguished biologist and member of the Royal Society, had a growing reputation for eccentricity in his later years.

If the heroes have some social standing, they can be invited directly to this event. Reporters could be covering it for the press. Less polished adventurers can be tipped off by an employer or patron that something interesting may occur at the gala, and be furnished with invitations through this avenue.

A thunderstorm rages outside, but the evening goes pleasantly and the first few auction lots sell for moderate prices. The next item is a battered-looking violin. After a slow start, two partygoers -- a Chinese gentleman and a stunning young woman -- get into a small bidding war, and whispers echo around the room as the price tops \$300. The heroes hear someone nearby saying "Stradivarius", but the auctioneer looks puzzled as one of the bidders indicates \$500, eliciting gasps from the gathering.

At this point, the heroes notice that the Chinese man has a strange symbol tattooed on his left wrist, exposed fleetingly as he raises his hand to bid. Appropriate knowledge skills (or later research) will reveal it is a Tong mark, identifying the man as a member of the Hsui Chen Tong, based in Shanghai. If the heroes have any wealth, or the guts to bluff, they may want to bid on the violin. If they do, the woman will drop out. Whoever the mysterious Tong member is bidding against, he will go as high as \$2,000. (The cost of a luxury car or small house!) The woman will push him this high, but will not top it. If the heroes are bidding, the winning bid will be up to them.

If the heroes win and can afford their bid, they may pay for the violin and take possession of it immediately, to hearty applause from the partygoers. Inspecting it immediately will be difficult, as their actions attract flirtatious attention from several members of any appropriate sex. Amidst this, alert watchers may notice the Chinese bidder slipping out of the gathering (require a skill or attribute roll). He will wait in ambush in the mansion grounds, intending to steal the violin. If the violin winners can find a quiet spot away from tipsy and amorous dilettantes before leaving the party, they can examine it. Stradivari's name is inscribed on it, but music or antiques knowledge is required to recognize that it is indeed genuine. The strings are missing and the body is slightly damaged, though not irreparably. Keen eyes will notice what appear to be tiny hieroglyphics hidden in the decorations along the side of the neck.

If the heroes win but cannot afford immediate payment, scandalous chatter will break out as the auctioneer apologizes and awards the violin to the Chinese man. The defaulters will be "escorted" -- firmly if necessary -- from the mansion. If the Chinese man wins the violin, he will pay for it and leave the party immediately (roll for the heroes to notice unless they are deliberately watching him).

Either by being ambushed or by tailing the Tong member, the heroes could easily get into a fight over the violin. He is unarmed, but fights well with karate, and has a driver waiting to help. From the safety of a Rolls Royce, the driver fires blowgun darts at the heroes -- coated with a toxin that renders them unconscious for several minutes. The fight should be close, but the villains will get away with the violin. If dramatic necessity dictates, the Strad can be used as

an inefficient club, smashing it to splinters -- the villains will retrieve the neck and scroll.

Gathering Clues

Suitable analysis of the darts or the toxin thereon will reveal peculiarities of manufacture that point to an Egyptian origin. If traced, the car belongs to the Egyptian High Commission. Finally, whether or not a fight for the violin occurs, the heroes may question the woman who bid on it. She will be friendly if the heroes suffered for the violin, otherwise she will take some winning over. Her name is Lisette DuBois and she was trying to recover the Strad for the Egyptology department at the University of Paris. It was rumored to contain some sacred texts deciphered in the 1860s by her great grandfather Francois Chartier -- a concert violinist and amateur Egyptologist -- that he considered too horrible to reveal.

The action now moves to Cairo. If the heroes need further convincing or guidance, investigative scenes may uncover the following:

- Chinatown contacts know that an "Arabic" man hired two Tong members for a job on the night of the party. It's possible they could be located and interrogated.
- The poison darts are of a style known to have been used by a cult of the evil ancient Egyptian god Set in the last century.
- The Strad has been sent to Cairo by diplomatic bag.

The Fruits of the Nile

Cairo is very hot and very dry -- a distinct change from the weather back home. DuBois has contacts at Cairo University and will accompany the heroes. Here they can learn about the cult of Set if they haven't already. While in conference with DuBois and Professor Mubarak of the Egyptology department, there is a disturbance in the corridor outside. Investigating reveals a Chinese cleaner, who keeps his eyes low as he apologizes in broken English for the noise of his mop bucket. A perception check will reveal a Hsui Chen Tong tattoo. If the heroes' suspicions are not raised, Mubarak asks what the disturbance was and says that the university has no Chinese cleaners, urging them to catch him if they hesitate.

The cleaner runs into a biology lab next door to the university's antiquities museum. Following him, the heroes are startled by rows of animal cages, containing outsized rats, giant hamsters, and truly enormous rabbits, all four times as large as normal. While absorbing this, a harried professor in a lab coat accosts them, demanding they leave at once, can't they see he's busy? If they protest that they are following a miscreant, the professor says, "Do you see anyone else in here? Now get out before I call the police!" Unless they make an ugly scene, the heroes will have to comply. (If they *do* make an ugly scene, they don't find anything and police haul them away.)

Mubarak says the biologist is Professor Sanderson. He is working on a serum that causes animals to grow larger than normal, hoping to perfect it for use on livestock to improve meat production. If the heroes don't think of it, Mubarak or DuBois may suggest a late night search of Sanderson's lab. Amidst his notes they can find a crumbling papyrus scroll, covered in hieroglyphs. Mubarak says it belongs in the antiquities collection -- he knows the scroll but hadn't missed it. The hieroglyphs on it have so far resisted translation and he suspects it is a cipher of some sort.

As the heroes are examining this, a group of martial artists storm in and attack, led by the cleaner. There should be enough to challenge but not overwhelm, armed with swords if the heroes are armed. The lab will be destroyed in this

Alternative Investigation

If something goes awry with the thread of the plot in this section, such as distrust of DuBois or Mubarak, make suitable arrangements to place suspicion on Prof. Sanderson by other means.

Investigation at diplomatic offices either by fast talking or stealth can uncover that Sanderson has connections with corrupt officials and took delivery of the Stradivarius. If this isn't enough, throw martial artists at the heroes until they get the hint that something odd is happening and let any leads

fight, with cages smashed and enormous rodents and rabbits joining the fray. The attackers will flee when one or more are incapacitated. If at all possible, they should kidnap DuBois at this point, knocked out with a blowdart -- although this is not essential to the plot it will help drive the action later. Examination of a captured attacker's left arm reveals the Tong symbol, and a hieroglyph that Mubarak identifies as the mark of Set. Prof. Sanderson will arrive with police and be furious at the mess, blaming the heroes for breaking into and ruining his lab. The police drag away the martial artists and, depending on roleplaying, possibly some of the heroes. If confronted with the papyrus, Sanderson will feign ignorance well enough to satisfy the police (but perhaps not the heroes) and allow Mubarak to take it.

they follow point to a connection to Sanderson.

The Strad is hidden at Sanderson's home on the outskirts of Cairo. If the heroes search there, they may well find it, along with notes indicating that the hieroglyphs on it are the key to unlocking some mystery hidden on a scroll.

The Hidden Chamber

After dealing with the repercussions of this incident, the heroes discover Sanderson has hired a (Chinese) guard to watch his lab. Mubarak says there is nothing they can do now, but at least he can return the scroll to the university's antiquities collection. He is curious about how Sanderson obtained it, as the museum has an alarm system and is full of students and at least one Egyptology staff member at all times when open. When he returns the scroll to its display case, observers may note its lock appears to have been forced.

Rattling on about how fascinating the undeciphered scroll is and its possible significance to the cult of Set, Mubarak turns around and is dumbstruck as he gapes at an empty corner of the room. "The mummy of Neferamun!" He explains that the mummy was a high priest during the 18th Dynasty, apparently disgraced but secretly embalmed by followers of the Set cult. It was in a wooden sarcophagus that would have taken four men to lift, and clearly wasn't removed via the door. Also missing are large alabaster canopic jars containing Neferamun's internal organs.

Checking the garden outside the window for footprints is a good idea, but there are none. Instead, there are scraping marks along the floor from where the canopic jars were kept to what looks like a blank stone wall surrounded by carvings in the shape of an archway. Once identified as a secret door, finding the mechanism is not difficult as a piece of stone within the carvings gives way under probing fingers. The door opens silently, revealing steps descending into darkness. Mubarak expresses surprise, saying the university is an old building, but he never expected anything like this.

The stairs lead a considerable way down to a chamber underneath the museum, presently dark and unoccupied. The chamber is obviously very old. The sarcophagus lies next to a stone altar at one end, but the mummy is missing. The canopic jars are there also, the wax seals broken and the interiors empty. Another passage leads up to Sanderson's biology lab. A third passage leads to the southwest, straight as far as can be seen -- directly toward the Pyramids, which are five miles away. It is painted with scenes that fascinate Mubarak but disturb anyone else, showing ritual sacrifices under the eye of Set. The dusty floor has been tracked recently by several people and a couple of wheelbarrows.

The Grand Finale

How the adventure plays out now depends on the actions of the heroes. Clearly the secret chamber and passage need exploring. If they do this straight away, skip to the final battle. If they decide to retreat for further investigation, to consolidate before tackling it, or to confront Sanderson about it, step up the urgency by having Mubarak point out that some of the paintings he saw could be interpreted as requiring the sacrifice of a maiden to bring worshippers of Set back from the realm of the dead -- and having DuBois kidnapped if she has not already been taken.

The passage does indeed lead to the Pyramids, and a similar unknown chamber under the paws of the Great Sphinx, although it will be exceedingly difficult to locate from above ground at that end. Assuming the heroes approach it through the tunnel, they have a five mile walk that ends in a torchlit chamber where Sanderson is leading a sacrifice ritual. Wise adventurers will douse their own light sources as they approach, or risk being spotted.

The sacrifice chamber overloads the senses, as a congregation of a dozen men chant in the flickering torchlight, with sweet incense burning around them. If kidnapped, DuBois lies tied to the altar, if not, another innocent victim is there. Sanderson stands over her with a long knife, absorbed in the ceremony. Others are fiddling with the mummy, which lies in one of two wheelbarrows nearby. Obviously, quick action will be needed!

During the battle royale that follows, opponents may attack with martial arts, swords, or guns, to the taste of the GM. Ensure that Sanderson isn't taken out with the opening shot -- have someone get in the way at the last second or something. At a turning point in the fight, when some blood has been shed on the altar, Sanderson utters some ancient Egyptian words and the mummy of Neferamun lurches to life!

As the heroes absorb the horror of this (fright or horror checks as appropriate), something rises from the second wheelbarrow. It is Neferamun's digestive tract and attached organs, moving independently! This requires another round of fright checks at a significant penalty. The mummy is close to indestructible except by fire, and the eviscera will throw intestinal loops around people's necks and strangle with the strength of a whole man.

Aftermath

Once the heroes triumph, they can learn any details they hadn't uncovered during the adventure. Assuming they saved her life, they have won an ally in Lisette DuBois, and Prof. Mubarak may be a valuable contact. Sanderson, an old rival of Sir Winfred Hughes, used the Stradivarius inscription to decode the stolen papyrus and work out the correct ritual to bring life to the mummy. If captured alive he will be hauled away by the police, but may return as an enemy.

Sanderson obviously had Tong contacts. Was he acting alone in these events, or is there someone more shady and sinister sitting in the shadows back in Shanghai, pulling the strings of the heroes' lives?

The Black Chef

for *Feng Shui* and *GURPS*

by Darrin Bright

Out Of The Frying Pan

Kobuto had it all, once. He graduated at the top of his class. He dazzled food critics everywhere. He owned his own restaurant. And if that hadn't been enough, he was chosen to display and defend his skills on the hottest cooking show to hit the airwaves in Japan. But it all disappeared so quickly.

It started out innocently enough. First, accusations about illegal spices . . . nothing he couldn't handle. But they gradually got worse . . . using fake crab meat, then preparing endangered species, then poaching eggs. A bad streak of losses on the TV show at the hands of some inept actresses and idiot athletes as judges didn't help, either. But he probably could have held it all together if that moron hadn't complained about his Gezpacho soup being cold.

If the authorities didn't take kindly to his attempts to whisk his customer's intestines, then they really weren't happy about those pathetic critics he poisoned. His fellow chefs, those jealous weaklings, didn't understand him, and the television producers were no help. Oh, they did their best to be polite about it, but there was no escaping the shame and disgrace. His career was over.

Or so it would seem. Actually, maybe it had been a blessing in disguise. If he hadn't escaped from prison, gone underground, and hidden among the savages in the dark forests of southeastern China, he never would have discovered the savory allure of the Forbidden Arts of Occult Cooking. He would never have learned of the ancient ingredients, secret sauces, and demonic recipes that were now his to do with as he pleased. And he would never have tasted that strange yet wonderfully satisfying flavor of human flesh.

After mastering the arts of occult cooking, Cantonese-Cannibal-style, Kobuto renamed himself the Black Chef. He now burns with desire to return to Japan and exact his revenge on the chefs, critics, and producers he blames for his fall from grace.

The Black Chef, Hidekitomu Kobuto

For *Feng Shui*

Sample Dialogue: "How dare you insult me; you are not even fit to lick the contents of my garbage disposal! But . . . you would make wonderful appetizers; yes, of course, broiled in a nice white wine sauce and served with crab legs . . ."

Body: 10 **Chi:** 4 (Fu 8) **Mind:** 5 **Reflexes:** 6 (Speed 8)

Skills: Martial Arts 15, Sorcery 14, Leadership 14, Info/Cooking 15, Info/Seasonings 15, Info/Garnishes 15, etc.

Fu Schticks: Prodigious Leap, Abundant Leap, Flying Sword, Water Sword, Loyal Steel

Sorcery Schticks: Influence, Summoning

Unique Schticks: Signature Weapon, Wall of Chopsticks, Dice Mince Chop (These are detailed below)

- Whenever Kobuto uses a piece of food, cooking utensil, or other sufficiently food-related item to attack

- someone, it's considered a signature weapon and gets +3 damage. Yes, a turkey baster *can* be a deadly weapon.
- If Kobuto doesn't have a knife or utensil handy, he can always whip one out from under the folds of his apron with no penalty or shot cost.
 - When subjected to Fu attacks or normal martial arts attacks, Kobuto often blocks or parries with his Wall of Chopsticks schtick. This schtick uses a pair of carved ivory chopsticks (Damage 13) as an active parry, and when he does so his Dodge Value is increased by 5 instead of 3. The Chi and Shot Cost is 1. He's also pretty good at that "catching flies with chopsticks" trick, too.
 - Kobuto has developed a specialized version of the Flying Windmill attack, only he does it with a gold-plated meat cleaver (Damage 15) and calls it his Dice Mince Chop attack. Whenever he makes a successful martial arts attack with this meat cleaver he may make another attack, and so on until he misses. The attack is otherwise the same as the Flying Windmill (Chi 7, Shots 0).

Weakness: Other than his short temper, Kobuto has one major weakness, which is an intense hatred of junk food or fast food, and particularly if it is American or Mexican. If he is attacked with this type of food as a weapon, his toughness is halved. If he's force-fed or eats any of it by accident, he suffers 3 points of impairment to his Dodge Value and all his rolls.

Neat things Kobuto can do during a fight:

- Thrown knives, chopsticks, or utensils can be used to pin clothing to something. Kobuto is fond of disabling his opponents so they can "taste" some of his nastier dishes.
- Large pots full of sauce can be spilled, making the floor slippery.
- Kobuto's knives and cleavers can be used with the Flying Sword and Loyal Steel Fu schticks.
- If a knife or cleaver isn't handy, a pot of boiling water hurled into the face hurts quite a bit (Damage 10).
- One of Kobuto's favorite tricks is to throw cayenne pepper or wasabi into an opponent's eyes. This doesn't do any damage, but the victim spends the next 1-6 sequences (roll a die) screaming in pain and suffers an impairment of -5 until he's able to clear out his eyes. Clearing the eyes requires a 3-shot action, which reduces the impairment to -1 for any remaining sequences.
- All his ingredients have to be very fresh, so Kobuto often has exotic or dangerous animals stored in fish tanks or cages nearby. You can't make shark fin soup without sharks, right? Lobster tanks are a must, but tanks full of spiny poisonous fish, sea urchins, alligators, or even an octopus is possible. Cages with tigers, wild boars, or a rhino might be nice, too.
- Two words: gas oven.

For *GURPS*

Skills: Cooking 18 [10], Hand Weapon (knife) 16 [2], Leadership 13 [1]

Total: 280 points.

Plot Seeds

- If the PCs ever get into a fight in an expensive restaurant, Kobuto could be cooking in the back, minding his own business or working on his own plans for culinary revenge. Kitchen crew or helpless customers make nice victims for his brainwashed zombie recipe. Or if he overhears the PCs say something bad about his cooking . . .
- Evil Masterminds have to have quality catering, right? Kobuto can easily be added as a mini-boss for a kitchen or dining room scene.
- Kobuto could also be an independent villain in his own right. He could secretly hire the PCs to track down the exotic ingredients for one of those ancient recipes that grants him superhuman powers or immortality, then double-cross them when they get the ingredients he needs.
- Or the PCs could acquire one of those once-in-a-lifetime ingredients without realizing it, like a dragon's eyeball or demon's petrified liver, and Kobuto will stop at nothing to get it. Or if one of the PCs is supernatural, maybe HE is one of the ingredients!

144-page b&w softcover; \$22.95

Silver Age Sentinels predicated its game world on the idea of heroes reminiscent of the 1960s in the modern day: all the clear-cut, slam-bang action of then with none of the pessimism or angst of now. Z-Man Games adds a new layer of verisimilitude to the effort with their compatible product, *Omlevex*.

In fact, "compatible" is the watchword: The book has stats for *Silver Age Sentinels*, *Champions*, and the *Mutants & Masterminds* Superlink. Characters are written up in the language of this last rules set, and provides appendices for converting to the first two.

Omlevex is the name of the (make-believe) comic-book company on whose works the setting is based. Not coincidentally, this world is riddled with omlevex, a sort of wonder-substance from beyond the stars that crashed to Earth millions of years ago, killing the dinosaurs and creating a small set of islands off the coast of what would become Georgia (the American one, not the Russian one).

The islands are known as Metazon. After several abortive attempts to conquer the (justifiably) superstitious native peoples of this island, white men finally settled here and turned it into a thriving, if somewhat eclectic, community. A territory of the United States, Metazon is still besieged by interests from around the world. American forces are mostly there to keep it out of enemy hands (even if that means blowing chunks of it up), and since just about anyone can become a member of its government, the offices usually fill up with money men. People gravitate toward cities on one

of the bigger islands, anywhere from the Hollywood-like Seaboard, to the techno-fantastic think-tank Valhalla, to the electronic dead zone known only as the Den. Demographics tend to be extreme -- all the rich in Corrrington, all the poor in the depressed Bay City.

Most of the action is based in and around the islands, but since *Omlevex* has been stewing in the ground all these epochs, it's had plenty of time to secrete itself into the biosphere. In other words, you can have super-beings pop up anywhere you like, should the canonical locale not be to your liking. The timeline is good, offering some clever, early appearances of super-powerful people in realistic ways and avoiding a lot of the super-clichés (for example, World War II had few heroes, since so many died because of the Great War).

Dramatis personae are presented in situ, as icons of the 1960s. Drake Einstein seems to be the company's core character. An actor by trade, he and his inventor buddy set about creating the identity, and they manage the figure as much like a comic-book franchise as a superhero. When he's not making films, he's fighting crimes. Einstein flits about the skies on his floating platform, his pockets brimming with both gadgets and helpings of the special drug pellets that give him his personal abilities.

Similar to Cliffhanger, another hero who takes to the skies (via a rocket pack, this time), but whose image is that of a high-tech Nick Fury with a ray blaster. The American Gargoyle is an über-patriot whose physical appearance strikes fear even in those whom he attempts to help, but the horror genre gets a proper *Omlevex* nod in the guise of Lacey Delmont, a private detective who hunts Spring-Heeled Jack and other creatures of the night. Additional heroes, heels, and hangers-on give a pretty detailed perspective on the whole tapestry.

The characters are fairly well written, and the backgrounds (littered with the now-standard "First appeared in Drake Einstein #56" motif) do read like a comic series' history, replete with that 1960s feel. Back-stories are presented one at a time, so the unrecognized figure in one story is revealed later in his own entry, cleverly fortifying the lines of continuity. Their stats are backed up by recommendations about how to modernize the hero or villain, from the name and costume (let's face it, "Man-Cactus" is hard to swallow under the most generous circumstances) to the background and attitude. The updates even maintain that silver-age feel.

Most of the book is given over to superheroes, their funny-books, and their opponents and supporting casts. Less than a fourth of it goes to the land of Metazon, conversions, and GM and player sections. A shame, since the advice is kind of nice and characters are a lot easier to come by these days than a decent setting.

It's important for a decent superhero supplement to have the right artwork, and *Omlevex* gets it at least half right. A good bit of it does have that 1960s sheen, with shades of Kirby, Steranko, and company popping up here and there (and a few actual comic celebs have their names in the credits). You'd swear some of it really did come from the comics of the period. Other pieces are much more disappointing, being rough or even angular, sophomoric examples. Topping it all off is the cover, which will make die-hard fans drool.

If the background isn't played up too much, it's a much more palatable buy. Metazon has a forced, disjointed feel, like it was slapped together for story convenience rather than as a natural outgrowth. If you overlook the geography, you can still use the world of *Omlevex* elsewhere, and the cast presents a more tightly focused world than the travelogue.

--Andy Vetromile

Pyramid Review

Exosuit A-OK RPG

Published by [Deep7](#)

Written by **Todd Downing & James Stubbs with Jeff Boman & Eddy Webb**

Cover by **Steve Hartley & Todd Downing**

13-page, 903 kb PDF document; \$3.95

The 14th of Deep7's *IPG* mini-RPGs actually turns out to have been the very first written. In the five years since the line's inauguration with *Shriek: the Game of Teen Horror*, the series has covered a wide range of genres, from the historical to the fantastic. For the latest entry Deep7 once again goes East to Japan; having previously visited its history with *Dâisho: Samurai Adventure!*, they here blast into the future of the robot suit anime genre. *Exosuit A-OK* is inspired by popular animated series such as *Bubblegum Crisis*, *Appleseed*, and *Robotech*.

Once again, what few changes there are in this *IPG* amount to a few minor ones to account for the genre. This comes down to changing a skill or two; Fashion, Pose, and Geekery all belong firmly in anime. Character generation remains unchanged, with players rolling for their character's Status (Student, Outcast, Soldier, Cop, Entertainer, and Entrepreneur) and their Background (Criminal, Engineer, Exopilot, Soldier, Law Enforcement, and Street Fighter.) The Backgrounds are slightly unbalanced, in that the Criminal only gains a couple of bonuses compared to the four given for each of the others.

More important to the genre, characters also get to roll on the Gear table to see what kind of vehicle they start with. These range from civilian vehicles such as sports cars and motorcycles, and military vehicles such as the hover truck, the APC, the helicopter, the tank, and the mainstay of the genre -- the exosuit. All military vehicles, including the exosuit come with spaces for modifications, called options in *Exosuit A-OK*. Ordinary military vehicles have up to four spaces for options, while exosuit frames have room for three in light models, four in medium, and six in heavy.

The majority of those listed are single-point and two-point options, with just a few given as three- or four-point options. For example, Advanced Targeting Computer and the Laser are single-point options; Earthmover Drill and Advanced Repair are two-point options, while Large Missiles and Star Saber are three- and four-point options respectively. Some options can be upgraded, such as Enhanced Movement with Superior Movement, their effects replacing the lesser option rather than stacking with it. The rules allow for a frame to be overloaded with options, though this has a detrimental effect on the frame's response times. They also cover the repair and salvage of vehicles and exosuits, and if you look closely enough at the options, they allow the possibility of creating vehicles and exosuits that can transform or combine with others -- though they are costly to buy.

Exosuit A-OK comes with six ready to play scenarios, two each penned by James Stubbs, Jeff Boman, and Eddy Webb.

[SPOILER ALERT!]

The first of the two by James Stubbs is "More Human Than Human" and is inspired by *Bladerunner* as much as it is *Bubblegum Crisis*. The player characters are members of Seattle's elite Artificial Construct Enforcement unit tasked to enforce law and order among the city's android population, who face a growing number of cases of android rebellion.

His second, "Zaibatsu Ranger Zero," depicts a darker, murkier setting in which the characters are mercenaries and bounty hunters conducting deniable, clandestine operations against a rival government. Jeff Boman's first scenario is also very obvious in its inspiration. "Ramus and Julia" is essentially a replay of *Romeo and Juliet*, played out with battlesuits instead of rapiers, and is thankfully not as cheesy as it sounds. The inspiration is equally obvious for his second, "The Dirty Half-Dozen," which put criminals and those with a shady past into battlesuits and sent on dangerous missions to make up for their deeds. Their first assignment is the rescue of the US ambassador to Nicaragua kidnapped by rebels, and the players are encouraged to roll up a second character given the lethality of the assignment. Youth is the common factor in Eddy Webb's two scenarios. In "Raid On Outpost Gamma," the Earth Federation is fighting a war with the Wargmon and assigns rookie space marines to locate and destroy an enemy base. The characters are even younger in his "Demon Attack," where mere teenagers are the only ones capable of piloting the mecha needed to battle a demon invasion of Japan.

[END SPOILER ALERT]

Unfortunately *Exosuit A-OK* is not quite perfect. There are one or two typographical problems, but there are also a small number of things missing from the game. Most notably these are the statistics for any vehicle other than the exosuits, and while they are included as options, the actual ability to transform or combine is not expanded upon and the GM is left on his own if he wants rules for either. Another tweak that the authors could have made is an alteration to the double character sheet given at the back of the document. This could have been adapted to give proper space for a character's vehicle or exosuit details to be recorded, and while there is space enough already for this, such a change would have been one more professional touch.

Yet these are still minor problems in what is otherwise a fast and furious entry into the anime-inspired battlesuit genre dominated games such as Dream Pod 9's *Heavy Gear* and *Jovian Chronicles*, and FanPro's *BattleTech*. The game can be expanded upon to make exosuit frames more resilient and to turn it into more of a miniatures games using the rules from the [The IPG Companion: A Toolkit For Deep7's Beer & Pretzels RPGs](#), and the extra stats needed for this are given for each frame size. Further, the game could easily make use of Deep7's *Star Legion: The Game of the Space Opera*, swapping out the fighters and so on and replacing them with battlesuits. This *IPG* also has the benefit of being one of the best supported with lots of scenarios available from the publisher's website.

After the boundary-pushing shenanigans of [Hero Force: IPG Super Adventure!](#) Deep7's 14th *IPG* is more in keeping with the majority of the line. That means that it gets in, gives you the necessary rules, and gets out again, leaving you to play an uncomplicated game of robot battlesuit action. With *Exosuit A-OK*, that action does not come any cheaper or any easier.

--Matthew Pook

Spring Forward, Feedback

So as you read this, I am probably either in a truck containing all my worldly belongings, in my new apartment Pennsylvania, or -- ironically -- back in Orlando, where I may be helping with the final World Yo-Yo Contest of my (former) Day Job career. (As for me, I'm still sitting in an apartment in Tallahassee typing furiously and waiting until I get to call my truck-rental company to yell at them. Please ignore any such real-world trivialities; my "final" Tallahassee column was [last week](#), and I'd hate to ruin a perfectly fine goodbye with facts.)

Anyway, I confess I find myself in need of a pretty straightforward column . . . ideally one that can be written in the wee hours, or while I'm on hold with the truck-rental company. So I thought I'd talk a bit about *Pyramid*, with a nod to gaming.

For those who haven't noticed, we've been making a real effort to tweak with *Pyramid* lately. We've added our first "official" every-other-week feature since Ken Hite came on board ("The Omniscient Eye"), a new column (Chris Aylott's "More Questions Than Answers"), and the contributions of Phil Reed, whose short articles will be filling in holes with some outside-the-box diversity. We've also dubbed Owen Stephens' contributions an honest-to-goodness column ("Icosahedron Adventures"), which it has been in all but name for a loooong time.

We've been trying to ramp up our [chats](#), using various means to blackmail the best and brightest minds in the gaming world to stop by and say "Hi!"

And, as seen this week, we've been trying to shake things up a bit with a few more events. This week kicks off our Iron Ref extravaganza, which will appear for the first week of the month from now until November. Although Iron Ref was popular at the time, it has not made an appearance in three years. We hope you like it. Not too long ago, we presented "[The Last Adventure](#)" series, which posited the last adventure of particular genres.

Extending backwards a bit, the past year has seen the appearance of our [10th Anniversary Issue](#) and our most ambitious [April Fool's Issue](#) yet. We've seen the return of Dork Tower and Murphy's Rules and the appearance of Irregular Webcomic.

In short, we've been trying to keep things exciting, while still maintaining the spirit and appeal of *Pyramid*.

Really, this isn't too different from any long-running gaming group. The GM often needs to balance the desire to spice things up with the need to keep the elements of the campaign that appealed to players in the first place. In some cases this is easy. For example, adding a gaming group mailing list is not dissimilar to beefing up the chats in *Pyramid*, in that they are added features that supplement the primary draw (the gaming session or the weekly mag, as appropriate to the metaphor). But tinkering with the game itself can be trickier; adding, say, a monthly "flashback" adventure series to the gaming group is not dissimilar to our current Iron Ref series, and folks who aren't a fan of the experiment may be turned off.

Fortunately, that's where feedback becomes so useful. By getting comments and reactions, the GM can figure out what works and what doesn't with any experiments or deviations. That way, any tinkering can be made with some degree of confidence.

And, of course, *Pyramid* loves your comments and feedback as well. We try to make it as easy as possible. We have a [discussion group](#) where you can post your thoughts, you can send us [e-mail](#), or you can stop by [the chat](#) and say hi or fling insults at me (I'm "SMarsh," by the by).

So, in my opinion, any good gaming group should try to give the players [what they want, but not what they expect](#). That's what we're trying to do with *Pyramid* as well. We hope you've enjoyed it; if so, tell your friends! We can always use more subscribers, and we try to be generous with our [referrals](#).

Now if you'll excuse me, I've got to go call a certain truck rental company and scream incoherently until they give me

a truck. But in the meantime, pretend that I'm not in Tallahassee anymore.

* * *

As long as I'm cranking out a straightforward issue consisting partly of administrivia, I should note that some of you have gotten in the habit of sending *Pyramid* mail to my personal address, which was marsh@nettally.com.

Please don't!

The right address to use is pyramid@sjgames.com. Go with that, and you should be able to reach me for as long as I'm clinging to *Pyramid* with my cold, dead fingers.

Now, astute readers will note my use of "was" three paragraphs above. I assure you, it's difficult to contemplate letting go of an e-mail address I've had as long as I've been online, but apparently my ISP doesn't offer any kind of forwarding service. From your end, it shouldn't make a difference, since it's not like I have multiple mailboxes; mail to pyramid@sjgames.com just forwards immediately to my "real" address, wherever it should be at the time.

We thank you for your consideration.

* * *

As another aside, please keep in mind that this month is shaping up to be one of the most busy and logistically challenging of my life. As such, if I'm not sprightly in replying to e-mails or message board posts, you'll know why. I hope to hop online when I can, but I'm not certain when that will be. Fortunately, our readers are good, patient, and understanding.

(Unlike me, when I'm on the phone with the truck rental people . . .)

--*Steven Marsh*

Leaving Tallahassee

(and Turning the Lights Out as I Go)

I am leaving the state that has been my home for 24 years.

Given that's a good 80% of my life, I'm treating this with a certain amount of solemnity.

Anyway, my original plans had me departing my fair Tallahassee, Florida yesterday (Wednesday the 28th), so this was to be my farewell swansong "Hasta la Vista, Tally!" column. But owing to a last-minute change of plans, I'm not leaving until Friday, or possibly Saturday. Or, at the rate I'm going, maybe I'll be placed gingerly into a crystalline spaceship by a porcine Kryptonian and launched toward my new home.

So my master plan from several weeks ago was to have this issue done several days earlier, so that I could get everything else ready. Oh, well . . . so much for that plan. (Mind you, an unexpected pinched nerve - wherein any attempt to move my head more than 0.01857° -- resulted in a sharp pain. Not only did this put a crimp on packing or typing, but it also meant I spent most of my time walking around like a Conehead.)

Furthering my goals for my master plan, on July 12th I sent out an e-mail to a dozen of my Tallahassee friends that I was leaving behind:

Dear [Insert Name Here],

I'm not sure how far the tendrils of the Tallahassee rumor mill extend, but I'm moving away from Tallahassee at the end of the month.

Anyway, I'm trying to put together a Tallahassee tribute column for the gaming magazine I edit online, and I figured a neat thing to do would be to tap some of the various gaming personalities I respect in Tally to see if they have any pearls of wisdom they'd like to share. (I assure you, I'm -not- doing this as a cheap stunt to get other people to write my column for me at a time when I'm hideously busy. Yeah, that's the ticket...)

To that end, I'd like to see if you had any pearls of wisdom to offer on any one of these questions:

- 1) What's the best (or most unintuitive) piece of advice you would offer to players?
- 2) What's the best (or most unintuitive) piece of advice you would offer to GMs?
- 3) Any other gaming/philosophical observations you'd like to offer.
- 4) The funniest gaming story you have.
- 5) Any other observations about life you'd like to offer (although, given that this -is- a gaming magazine, this question is only offered as an out for those who would like to contribute to my Tally tribute column but can't think of anything else to say gaming-related).

If you're not interested, no worries at all... I completely understand. If you would be interested, I'd like something in the 100-word range by July 19th (less is fine,

although over 200 words might be a problem... contact me if you have something big and brilliant).

Regardless, thanks for being a friend, and for being one of the reasons that makes leaving Tallahassee a difficult decision.

Sincerely,

Steven Marsh
Editor of Pyramid Magazine
pyramid@sjgames.com

(And, yes, I actually inserted their names into the header.)

Anyway, the math of my plan was ingenious. Ten friends times 100 words equals one 1,000-word column. Copy, paste, post, drive!

This was especially expected to be an easy column because, for the most part, my friends are incredibly literate and - more importantly - eager to talk. Several are professional or semi-professional writers. At least three have English degrees. Over half of them are willing to spend large amounts of time on various game mailing lists.

This was gonna be the piece of proverbial cake.

Sadly, said cake could not be simultaneously had and eaten.

Of the dozen e-mails I sent out, half of them wrote back saying they'd try to get me something (with various degrees of "If I can think of anything," and so on). I exchanged an e-mail or two with most of those.

And, in the end, I received exactly *one* submission, from my friend Josh (whom I might be suckering into helping me load the truck as well). Which I paste here posthaste.

When considering running a game of any kind, but especially a roleplaying game, the most important consideration is to be fair and follow the rules. This, at first, seems to make perfect sense yet is so often ignored in everyday practice. Follow the rules means it's important to read the book and know the rules, many experienced gamemasters or roleplayers use rules that were often made up by other players or gamemasters without even knowing it. If the players can trust that a gamemaster to "stick to the book" then they can know what to expect, it makes integrating new players easy and it allows the gamemaster a level of authority to appeal to. Every time a gamemaster strays from the rules of the book he finds the players more likely to push him in directions he does not wish to go and to bend rules he otherwise would have kept. Stick to the rules as much as possible and when straying state clearly to all players why the exception has been made.

I would like to point out this answer is exactly *why* I asked my friends for their wisdom. Not because I particularly agree with this advice, but because I *don't* necessarily agree with it. Although I can get a separate column out of the idea of fairness or unfairness alone (and possibly will at some point), the very fact that I was exposed to an alternate viewpoint is one of the reasons I respect my friends so much . . . and why it's difficult to leave their geographical proximity.

I've read a number of news articles that state Americans are becoming more polarized; they tend to live near others who share their values, ideas, political thoughts, and so on. I suspect the same thing is true of those of us in the gaming world; with a large enough gaming audience, it's easy to dismiss those who don't share your views in favor of those

who do. And, indeed, I believe that to a certain extent this is a *good* idea; there's no need in pointlessly antagonizing each other if your views are incompatible. But this only matters if the views are incompatible *and* they affect everyone's enjoyment of the game. For example, it would probably mess up a game if one person believes solely in roleplaying and character development while the other is only interested in tactical combat. But having one player who vehemently believes in luck while another who believes solely in statistics will probably have a negligible effect on the game.

However, I generally *like* spending time with people whose views don't align with mine. After all, if two folks are exposed to alternate viewpoints, it can force each to think about his own view, potentially strengthening both.

And that's what I'll probably miss most about my group of friends in Tally. Sure, we have a lot in common, but we also have a good number of alternate views, which lead to spirited conversations and good-natured debates.

So, this column didn't end up being quite the tribute I wanted to the friends I leave behind. Rather, I guess I'll just raise a glass before I depart, and use my warm fuzzy memories of my friends to encourage you all: Treasure your friends; respect their alternate views; and don't be afraid to befriend someone even if he doesn't seem to see eye-to-eye with you. The odds are pretty good that you'll both be enriched.

Just don't try to trick them to write a column for you; it probably won't work out.

* * *

Say! Are you going to be in a 17-foot van, driving 1,100 miles to a new state on Friday night?

No? Then you may want to stop by the [Pyramid chat](#) on Friday, July 30th, at 7 P.M. Central Time and see David Pulver and Sean Punch discuss the combat rules for the upcoming *GURPS Fourth Edition* game. Oh, and Andrew Hackard will be on-hand, signing autographs and answering the Managing-Editorial-type questions.

And if you *are* in a 17-foot van driving 1,100 miles, watch out for the other folks on the road driving 17-foot vans.

--*Steven Marsh*

Like The Roaring Of Young Lions: Death In Tsavo

"If the whole body of lion anecdote, from the days of the Assyrian Kings till the last year of the nineteenth century, were collated and brought together, it would not equal in tragedy or atrocity, in savageness or in sheer insolent contempt for man . . . the story of these two beasts. To what a distance the whole story carries us back, and how impossible it becomes to account for the survival of primitive man against this kind of foe! . . ."

-- *"The Lions That Stopped the Railway," **The Spectator**, March 3, 1900*

In 1898, on the cusp of a new century and the edge of civilization, a drama as old as Hercules played out in the Tsavo wilderness of southeastern Kenya. Legendary monsters, perhaps older than time itself, preyed on the weak at will. A hero killed them, and years later scholars doubted whether he was a hero and whether his monsters were really monsters at all. But aside from the blood and heat of this tale, there are tracks leading off into the deeper forests of the unknown. But we can't follow them into the darkness. That would be dangerous, and foolhardy. For now, we can only throw more wood on the campfire, tell the story, and speculate about where the trail might lead.

"From the time of Herodotus until to-day, lion stories innumerable have been told and written . . . A lion story is usually a tale of adventures, often very terrible and pathetic, which occupied but a few hours of one night; but the tale of the Tsavo man-eaters is an epic of terrible tragedies spread out over several months, and only at last brought to an end by the resource and determination of one man."

-- *F.C. Selous, Foreword to **The Man-Eaters of Tsavo***

In March of 1898, Lieutenant-Colonel John Henry Patterson arrived in the wilds of Kenya to build (or rather, to supervise the building by large gangs of sweating Indians and Africans of) a permanent railway bridge over the Tsavo River between Mombasa and Nairobi. Beset by the normal problems of Victorian-era engineering (poor initial surveys, worker unrest including at least three actual mutinies), Patterson made good initial progress -- until the lions started attacking. Over the next nine months, a pair of man-eating lions seemingly materialized out of nothing, killed workers with impunity, and vanished back into the thick thorn scrub. They jumped nine-foot fences, pulled workers out of 15-foot trees, and penetrated the thickest thorn hedges not only without difficulty but without noise.

Patterson, who had hunted big game in India, had to hunt the lions or see his workforce (the undevoured portion of it, at least) down tools and melt away. They seemed uninterested in poisoned bait (preferring, in Patterson's words, "live coolie"), and evaded his forays into the scrub with ease. They preyed on the hospital, drawn by the smell of blood -- and when Patterson moved the injured to a new location and staked out the old one, they attacked the new hospital. They left [severed heads](#) behind, and drank the blood from the corpses. Night after night, the attacks continued, always where Patterson was not: "Shouts would then pass from camp to camp, 'Beware, brothers, the devil is coming,' but the warning cries would prove of no avail, and sooner or later agonising shrieks would break the silence, and another man would be missing from roll-call next morning."

On December 1, after 135 deaths (by Patterson's later count), the workers simply left the camp, refusing to "be food for lions or devils." Patterson began grimly staking donkeys and cattle as bait, and waiting. On December 3, one lion fell into Patterson's trap, walking into a "rail-car" designed to slam shut on its target. Despite three men firing continuously into the lion from mere inches away, no bullet struck home -- except on the latch of the trap, allowing the lion to escape! Finally, on December 9, 1898, Patterson killed the first lion (later named "Ghost" by the screenwriter William Goldman) from a jury-rigged firing platform over a half-eaten donkey. Three weeks later, on December 28, Patterson waited in a tree where the second lion ("Darkness") had attacked a man before, and shot the lion successfully -- although he nearly died when the lion attacked him the next day as he followed its blood trail into the jungle. With six bullets in it, though, it finally succumbed. Both lions were nearly 500 pounds, and over nine and a half feet long from nose to tail. Patterson eventually sold their pelts and skulls to the [Field Museum of Natural History in Chicago](#), where they can be seen (at about two-thirds life-size) today.

"In surveys during both dry and wet seasons of 1999, Kays and Patterson determined that maneless males are prevalent in well trafficked areas of Tsavo East. In fact, none of the eight prides they documented was tended by a maned male."

-- *Field Museum of Natural History, "Why Are Tsavo Lions Maneless?"*

At first glance, the Tsavo lions' most unusual feature is their lack of manes. Both "Ghost" and "Darkness" were adult male lions, who normally have thick, luxuriant manes. But in Tsavo, the lions -- especially the man-eating lions -- have no manes, or only patchy ones at best. Scientists have come up with any number of reasons why this might be; Bruce Patterson (no relation) has theorized that it might be "male pattern baldness." Tsavo lions may produce more testosterone for some reason, making them bulkier, more aggressive, and balder. Other researchers blame Tsavo's environment. Much hotter than the Serengeti, and choked with thorn bushes (which tear manes, and tangle their bearers), manes would not be a survival trait for lions there. This doesn't explain the frequent sightings of maned lions in Tsavo, seemingly unconcerned at their disadvantages. The Field Museum zoologists Thomas Gnoske and Julian Kerbis Peterhans have the best theory of all, one sadly not particularly well supported by DNA testing. Their theory is that the large, maneless Tsavo lion is a "missing link" to the cave lion (*Panthera leo spelaea*), which [cave drawings](#) show to be larger than "prairie lions" -- and maneless. Cave lion skeletons also have some peculiarities very similar to those of Tsavo maneless lions. We know from historical evidence that the lion once ranged as far north as France -- and many of the lions depicted on ancient friezes and heraldic devices have smaller manes than the familiar lords of the Serengeti. Could the killers of Tsavo have emerged from the primordial mists, from the temple walls of Asshur and the cave walls of the [Gévaudan](#)?

"So Ghost and Darkness didn't do what they did because they were incapable of hunting four-footed prey. They had other reasons, good reasons; every condition known to cause man-eating was present in Tsavo in the late 1890s . . ."
-- Philip Caputo, ***Ghosts of Tsavo***

Having served without great distinction in the Boer War, Patterson turned his experiences into a book, the 1907 best-seller *The Man-Eaters of Tsavo*, brimming with stiff upper lips and pukka sahib heroics. (As with all such books, it is a corking good read and in this case, a literally ripping yarn.) He served again in Kenya, but was forced to retire after the mysterious March 21, 1908 suicide while in his company of Audley James Blyth, son of Baron Blyth -- and husband of Patterson's mistress. Later scientific opinion has similarly shunned Patterson's narrative -- Gnoske and Peterhans note that Patterson's field reports identify only 28 Indian coolies as lion kills (although they admit that nobody knows how many Africans died on the line, of any causes). Modern scientists pooh-pooh the "supernatural" element of the case, noting that big cats, and Tsavo lions in particular, kill people all the time. Even Dr. Henry Livingstone encountered them; his party killed two man-eaters in East Africa in 1858, and others throughout his career. Between 1932 and 1947, three generations of lions killed 1,500 people near Njombe in Tanganyika, for example. And the notion that only old lions kill people can be disproved -- of the 29 "problem" lions shot in Tsavo by the Kenya Wildlife Service in the 1990s, 24 were young or prime-age.

Equally, modern science pooh-poohs the "motiveless" element of the case, noting that one of the 1898 lions suffered massive dental damage (probably from a buffalo kick), and needed to hunt softer prey such as antelopes -- or people. Human game has always been plentiful in Tsavo -- which means "place of slaughter" in the native Kikamba language. Masai raiders and Arab slavers would scatter the area with corpses; even the Kamba left the bodies of "peasants and women" out in the open. Ivory traders also killed sick or injured (or shirking) porters rather than delay their march; the slaughter of Tsavo's elephant herds left human bodies in their wake, too. Given that lions are both predators and scavengers, they can easily get a taste for human flesh in such country. Famines and smallpox epidemics left corpses all over Kenya in 1897 and 1898. Worse yet, an outbreak of rinderpest in the mid-1890s killed off virtually all the Cape buffalo in Kenya, leaving the lions of Tsavo starving without their favored game. Modern science, in other words, is a big buzz kill, and we'll speak no more of it around this particular campfire.

"Their methods then became so uncanny, and their man-stalking so well-timed and so certain of success, that the workmen firmly believed that they were not real animals at all, but devils in lions' shape. Many a time the coolies solemnly assured me that it was absolutely useless to attempt to shoot them. They were quite convinced that the angry spirits of two departed native chiefs had taken this form in order to protest against a railway being made through their country, and by stopping its progress to avenge the insult thus shown to them."
-- John Henry Patterson, ***Man-Eaters of Tsavo***

Both of the man-eaters Livingstone encountered in 1858 were "entirely destitute of mane"; Livingstone also notes that

one had teeth that were "mere stumps" while the other's were "white, perfect teeth," which also interestingly fits the pattern of the Tsavo killers. Even more interestingly, like Patterson, Livingstone also ran into a tribe who believed that their chiefs' souls entered the bodies of lions. His memoirs seem oddly diffident on the subject, and he never names the tribe directly; from internal evidence, it may be either the Makololo or the Kebrasa, among the latter of whom Livingstone spotted Egyptian and Assyrian influences in jewelry, hair style, and facial structure. The Egyptian belief in the transmigration of souls into animal forms is well-documented. Whether the Assyrians so believed (and that's why only the king was allowed to hunt lions in Assyria) remains murky. Another track on this trail turns up in the writings of the third-century neo-Platonist Porphyry, who explicitly states that the "first dogma" of the Mithraic mysteries is the transmigration of souls. Even more interestingly, Porphyry continues: "Thus they denominate the males who participate in the same mysteries lions . . ." The medieval bestiarists believed that the male lion breathed life into his cubs after three days of stillbirth; could this be an echo of not just the transmigration of souls into lions, but of their descent through leonine generations, until the outside world is once more ready?

"For I will be unto Ephraim as a lion, and as a young lion to the house of Judah: I, even I, will tear and go away; I will take away, and none shall rescue him. I will go and return to my place, till they acknowledge their offence, and seek my face: in their affliction they will seek me early."

-- Hosea 5:14

Could this be what the prophet Ezekiel meant, when he asked Judah, in exile among the ruins of Assyria: "What is thy mother? A lioness: she lay down among lions, she nourished her whelps among young lions." (The Bible describes both Judah, the southernmost tribe, and Dan, the northernmost tribe, as "whelps of lions.") Something lurks there, in the thorn bushes of Biblical history, the lion hunts of the Mesopotamian kings, and the mysteries of Mithra that arose in those same Assyrian ruins. Interestingly, after the Assyrians carried away the Ten Tribes of Israel, they settled "men from Babylon" in Samaria -- and according to II Kings, "the Lord sent lions among them, which slew some of them." The Assyrians sent priests conversant with ancient rites, and the killing stopped. The Bible piously claims that one of the priests was "of Israel," but in the very next sentence it admits that the Samaritan Babylonians continued to worship their old gods. Lions show up a lot in the Bible, most interestingly perhaps elsewhere in Ezekiel as emblematic of Tarshish -- "the merchants of Tarshish, and the young lions thereof" are identified among the future opponents of [Gog](#). Tarshish, interestingly, seems to have been in two different places; Jonah leaves Jaffa (on the Mediterranean, going west) for Tarshish, which produces "silver, iron, tin, and lead" -- which means that Tarshish might be Britain, the only reliable source of tin west of Jaffa. (Jonah was trying to avoid going to Assyria, of course. Hmmm.) On the other paw, there aren't any lions in Britain, but the other Tarshish, with which Jehoshaphat trades from Ezion-Geber (on the Red Sea, going south), supplies "ivory, apes, and peacocks." All of which, along with lions, are plentiful in East Africa. And Tsavo, specifically, was the richest ivory storehouse in the world. But there aren't any "lost cities" in Tsavo, are there? Well, one never knows -- since the Shetani lava flows, which cover miles of the Tsavo plain, are only 200 years old. Perhaps Satan (yes, indeed, "Shetani" is cognate with the Arabic Shaitan) destroyed Tarshish to prevent its "young lions" from defeating Gog.

So the trail leads from Tsavo to Samaria to Assyria; and another leads from Assyria to Tarshish, and to prints here and there in east Africa and Britain. Seem a little thin, still? Spoor not clear enough? Perhaps. But in connecting Tsavo and Israel and Britain, through the skeins of Tarshish and Assyria, we are not entirely alone. You see, by an odd coincidence, Lieutenant-Colonel John Henry Patterson also returned from Africa believing intensely that the Ten Lost Tribes of Israel -- the "whelps among young lions" -- were to be found in Britain, scattered by the Assyrian fleets. (Perhaps the Tribe of Dan becomes the Danu, who invaded Britain right around then, give or take 200 years.) He became an ardent Zionist, commanding the Zion Mule Transport Corps at Gallipoli in 1916, and the Jewish Legion in Palestine and the Transjordan in 1917-1918. Let's try following the trail again, then: A lion attacks Livingstone at Mabotsa in 1843, but for some reason does not kill him, although he is never quite the same man again. Livingstone encounters two maneless man-eaters, one with bad teeth, and kills them in 1858. A biblical 40 years later, two maneless man-eaters, one with bad teeth, emerge from the "land of slaughter," and possibly from the primordial past. Both look into the eyes of John Henry Patterson before he kills them; the first on the feast of [Astraea](#) (a form of Cybele) and the second on a feast of Hecate. (Ezekiel ties Tarshish to [Sheba](#), on this track.) On the spring equinox of 1908, he practices some strange love-death ritual with the son of a lord, and then surfaces again leading the "whelps of lions" back to Judah and Samaria. Did Patterson learn the arts of shapeshifting and metempsychosis in India, among the [manticores](#)? Or was he "awakened" by the breath of the lions of Tsavo? Whose plan is unfolding in the shadows of

Tarshish? Perhaps the last words belong to the book of Job: "The roaring of the lion, and the voice of the fierce lion, and the teeth of the young lions, are broken. The old lion perisheth for lack of prey, but the stout lion's whelps are scattered abroad." Don't let the campfire burn low.

Meta-Traits

A "meta-trait" is a collection of traits that are typical of a particular mental, physical, or supernatural state. In game terms, it functions much like a regular advantage or disadvantage. A meta-trait can be part of a racial template or bought by an individual with exotic abilities. Record a meta-trait instead of its components on templates and character sheets.

With GM approval, you may modify elements of a meta-trait, altering its cost; e.g., to be able to carry things when you have Body of Air (see below), reduce the ST penalty and the corresponding HP bonus, and delete No Manipulators.

Elemental Meta-Traits

Variable

Your body is wholly composed of a particular substance. This is an entire category of meta-traits, one for each class of substance ("element").

The main use for these meta-traits is to create "elemental" creatures. Those who can switch into and out of elemental form -- a common super-ability -- should buy Alternate Form (p. 83) and take the relevant meta-trait as their alternate racial template.

Body of Air: Your body is made of gas. ST 0 [-100]; +10 HP [20]; Doesn't Breathe [20]; Flight (Lighter Than Air, -10%) [36]; Immunity to Metabolic Hazards [30]; Injury Tolerance (Diffuse) [100]; No Legs (Aerial) [0]; No Manipulators [-50]; Vulnerability (Vacuum and wind-based attacks ×2) [-20]; and Taboo Trait (Fixed ST) [0]. *36 points.*

Body of Earth: Your body is made of sand or earth. Doesn't Breathe [20]; DR 2 [10]; Immunity to Metabolic Hazards [30]; Injury Tolerance (Diffuse) [100]; Pressure Support 3 [15]; Sealed [15]; Vacuum Support [5]; and Invertebrate [-20]. *175 points.*

Body of Fire: Your body is a living flame! If your flames are very hot, increase Burning Attack and DR. ST 0 [-100]; +10 HP [20]; Burning Attack 1d (Always On, -40%; Aura, +80%; Melee Attack, Reach C, -30%) [6]; Doesn't Breathe (Oxygen Combustion, -50%) [10]; DR 10 (Limited: Heat/Fire, -40%) [30]; Immunity to Metabolic Hazards [30]; Injury Tolerance (Diffuse) [100]; No Manipulators [-50]; Weakness (Water; 1d/minute) [-40]; and Taboo Trait (Fixed ST) [0]. *6 points.*

Body of Ice: Your body is made of ice. Doesn't Breathe [20]; DR 3 [15]; Immunity to Metabolic Hazards [30]; Injury Tolerance (Homogenous, No Blood) [45]; Pressure Support 3 [15]; Sealed [15]; Slippery 3 [6]; Terrain Adaptation (Ice) [5]; Vacuum Support [5]; Fragile (Brittle) [-15]; Vulnerability (Heat/fire attacks ×2) [-30]; and Weakness (Intense normal heat; 1d/minute; Variable, -40%) [-12]. *99 points.*

Body of Metal: Your body is made of metal. Doesn't Breathe [20]; DR 9 [45]; Immunity to Metabolic Hazards [30]; Injury Tolerance (Homogenous, No Blood) [45]; Pressure Support 3 [15]; Sealed [15]; and Vacuum Support [5]. *175 points.*

Body of Stone: Your body is made of rock. Doesn't Breathe [20]; DR 5 [25]; Immunity to Metabolic Hazards [30]; Injury Tolerance (Homogenous, No Blood) [45]; Pressure Support 3 [15]; Sealed [15]; Vacuum Support [5]; and Fragile (Brittle) [-15]. *140 points.*

Body of Water: Your body is made of liquid. Amphibious [10]; Chameleon 1 [5]; Constriction Attack [15]; Doesn't Breathe [20]; Immunity to Metabolic Hazards [30]; Injury Tolerance (Diffuse) [100]; Pressure Support 3 [15]; Slippery 5 [10]; Invertebrate [-20]; and Vulnerability (Dehydration attacks ×2) [-10]. *175 points.*

Machine

25 points

Your body is mostly or completely mechanical, composed of non-living materials such as metal, plastic, and composites -- although you might have a few organic parts, such as an outer layer of skin or a brain. Examples include robots, vehicles, and full cyborgs.

This meta-trait includes Immunity to Metabolic Hazards [30], Injury Tolerance (No Blood, Unliving) [25], Unhealing (Total) [-30], and several 0-point features:

* You have an eight-hour energy reserve and need refueling three times a day. You can modify this with appropriate advantages (e.g., Doesn't Eat or Drink, for a reactor that can run for years) or disadvantages (e.g., Increased Consumption, for a "gas-guzzler" engine).

- You neither have nor can spend Fatigue Points; see Machines and Fatigue (p. 16).
- Your body does not age. Instead, it wears out, with effects similar to aging.

Note that your Unhealing disadvantage means that the only way for you to regain lost HP is through repairs with Mechanic or Electronics Repair skill (as appropriate).

Several traits not included above are common among machines, notably the advantages Digital Mind, Doesn't Breathe, Pressure Support, Sealed, and Vacuum Support, and the disadvantages Electrical, Fragile, Maintenance, Numb, Restricted Diet, and Social Stigma (Valuable Property).

Mentality Meta-Traits

Variable

These traits represent common types of nonhuman intelligence:

AI: A computer mind. Absolute Timing [2]; Digital Mind [5]; Doesn't Sleep [20]; Intuitive Mathematician [5]; Photographic Memory [10]; and Reprogrammable [-10]. *32 points.*

Automaton: A mind lacking self-awareness and creativity. This is typical of many hive-creatures, magical constructs, undead, and simple AIs. You can combine this with the AI meta-trait. Hidebound [-5]; Incurious (6) [-10]; Low Empathy [-20]; No Sense of Humor [-10]; and Slave Mentality [-40]. *-85 points.*

Domestic Animal: A farm animal, pet, mount, or a trained wild animal. Cannot Speak [-15]; Hidebound [-5]; Social Stigma (Valuable Property) [-10]; and Taboo Trait (Fixed IQ) [0]. *-30 points.*

Wild Animal: An ordinary animal found in nature. Bestial [-10]; Cannot Speak [-15]; Hidebound [-5]; and Taboo Trait (Fixed IQ) [0]. *-30 points.*

Morphology Meta-Traits

Variable

These meta-traits describe some nonhumanoid body configurations that might appear on the racial templates of animals, robots, etc. Feel free to create meta-traits for other body layouts, using these examples as guidelines.

Ground Vehicle: Your body is like a car, tank, etc. Horizontal [-10]; No Legs (Tracked or Wheeled) [-20]; No Manipulators [-50]; and Numb [-20]. -100 points.

Ichthyoid: You have a fish-like body (a "merman" would just delete No Manipulators). No Legs (Aquatic) [0] and No Manipulators [-50]. -50 points.

Quadruped: You are a four-legged creature with no arms (a "centauroid" would simply take Extra Legs -- plus Hooves, if equine). Extra Legs (Four Legs) [5]; Horizontal [-10]; and No Fine Manipulators [-30]. -35 points.

Vermiform: Your body is similar to that of a snake or a worm (a snake-man with a humanoid upper torso would drop No Manipulators). Double-Jointed [15]; No Legs (Slithers) [0]; and No Manipulators [-50]. -35 points.

Spirit

261 points

You are a noncorporeal entity: ghost, being of pure thought, etc. You are invisible and intangible (except to others with this meta-trait!). You can temporarily become visible, or even solid, but this is draining. However, your senses can perceive the material world at all times, and your magical or psionic abilities, if any, can always affect the physical world.

Spirit includes Doesn't Breathe [20], Doesn't Eat or Drink [10], Doesn't Sleep [20], Immunity to Metabolic Hazards [30], Insubstantiality (Affect Substantial, +100%; Usually On, -40%) [128], Invisibility (Substantial Only, -10%; Usually On, +5%) [38], and Unaging [15].

Many spirit abilities from folklore are not part of this meta-trait; e.g., Injury Tolerance (Homogenous or Diffuse), Magery, and almost any ESP, PK, Telepathy, or Teleportation psi ability (see Chapter 6). Common spirit disadvantages include Compulsive Behavior, Dependency, Divine Curse, Dread, Maintenance, Obsession, and Weakness.

Astral Entity: An astral entity is a spirit that cannot materialize, become visible, or use its supernatural powers in the physical world. Doesn't Breathe [20]; Doesn't Eat or Drink [10]; Doesn't Sleep [20]; Immunity to Metabolic Hazards [30]; Insubstantiality (Always On, -50%) [40]; Invisibility (Substantial Only, -10%) [36]; and Unaging [15]. 171 points.

Dork Tower!

Dork Tower!

Baron Janos Telkozep

Character Concept by Kenneth Hite
GURPS Fourth Edition Stats by Brian Hogue and Sean Punch

Born in Castle Telkozep, Hungary in 1571, the year of the great victory at Lepanto, Janos Telkozep succeeded to the barony when his father died fighting the Turks in 1589. At a glittering Twelfth Night feast at Castle Bathori a few years later, the young Baron retired to the chambers of the beautiful, widowed Countess Bathori. To his shock (though not entirely, it must be admitted, to his surprise) he discovered the next morning that she had transformed him into a vampire. Telkozep's family connections kept him out of trouble when the King of Hungary eventually tried the Countess for murder and imprisoned her in a distant castle without food or light, but he learned from her example. She had allowed her vampiric appetites to corrupt her judgement, and that, Telkozep vowed, would never be his fate.

Over the next two centuries, the Baron repeatedly "died" and took over the Castle as his own heir, continuing to ally himself to kings and archbishops, maneuvering ever more gracefully through the byzantine paths of European politics. Recognizing earlier than most nobles that the wave of the future would be in banks and tradinghouses, rather than acres of barley or ransomed Turkish generals, the Baron taught himself the new intricacies of ducats and marks, pounds and roubles. By the 19th century, he had steadily enriched himself through six or seven wars, three changes of dynasty, and two vampire panics. During the latter, he often acquired the estates of the condemned at knock-down prices, feeling no guilt at profiting from the deaths of vampires more foolish and rash than himself. Slowly, he began to accumulate vampiric foes -- the great Pavane des Vampires in Paris declared him anathema, and others tried to stalk or betray him in their turn.

He studied the occult, seeking new weapons against his fellows, and learned that his ancient lover, the Countess Bathori, had somehow escaped her prison through sorcerous means. She had become a Grand Master of the Cabal, a secret society of monsters and magi descended from ancient Egypt, and she offered him sanctuary. Telkozep accepted . . . but she had learned little from her long life. During the disasters

Baron Janos Telkozep

of the 1940s, her rashness nearly destroyed the vampire brotherhood in the Cabal - and the war she helped spark did destroy Telkozep's beloved Hungary. In 1956, he left Bathori and the Cabal behind, beginning 30 years of shadow warfare in boardrooms and blasted heaths across Europe and America.

A full-color PDF is [also available!](#)

Although his vampiric powers kept him alive, and his fortune kept him hidden, the Cabal (and his vengeful ex-lover the Countess) came ever closer to destroying him. Telkozep could see the inevitable future; just like the pathetic vampires of the 17th century, he was alone and friendless, with every hand against him. A stake in the night, or the Final Dawn, awaited him -- unless he could change the game. Where once he had researched money, and then magic, he now sought allies. He discovered that the Cabal had their own enemies -- and one of them dwelt on another Earth, where the Countess' reach could not so easily extend. Telkozep put all his liquid wealth into portable assets and waited for an opening. In 1989, he walked through a megalithic barrow under a full moon, and into another Earth. He flitted from timeline to timeline, through gateways marked in an ancient codex he had purchased from the bankrupt National Museum of Budapest, until he was sure he had eluded the Cabal. He then set out to attract the attention of outtimers like himself, with clever advertisements in the papers and subtle manipulations of key stocks. When the Infinity Patrol knocked on his office door, he was able to present them (and eventually ISWAT, who took over once they realized what they had) with an attractive offer -- employment as their star vampire (and financial expert) in exchange for protection from the Cabal.

‡ Default from Market Analysis

Vampire

150 points

This is a “Bram Stoker”-style vampire. It possesses some, but not all, of the powers and weaknesses that fiction ascribes to bloodsucking undead. Notably, horror-movie vampires often have Supernatural Durability instead of Unkillable (increases cost by 100 points).

Attribute Modifiers: ST+6 [60].

Secondary Characteristic Modifiers: HP+4 [8]; Per+3 [15].

Advantages: Alternate Forms (Bat, Wolf) [30]; Doesn't Breathe [20]; Dominance [20]; Immunity to Metabolic Hazards [30]; Injury Tolerance (Unliving) [20]; Insubstantiality (Costs Fatigue, 2 FP, -10%) [72]; Night Vision 5 [5]; Speak With Animals (Wolves and bats, -60%) [10]; Unaging [15]; Unkillable 2 (Achilles' Heel: Wood, -50%) [50]; Vampiric Bite [30].

Disadvantages: Dependency (Coffin with soil of homeland; Daily) [-60]; Divine Curse (Cannot enter dwelling for first time unless invited) [-10]; Draining (Human Blood; Illegal) [-10]; Dread (Garlic) [-10]; Dread (Religious Symbols; 5 yards) [-14]; Dread (Running Water) [-20]; Supernatural Features (No Body Heat*, No Reflection, Pallor*) [-16]; Uncontrollable Appetite (12) (Human Blood) [-15]; Unhealing (Partial) [-20]; Weakness (Sunlight; 1d/minute) [-60].

Features: Sterile.

* Except after feeding.

More Questions than Answers

Greed is Good?

by Chris Aylott

I was going to talk about time management this month but, well, we're rescheduling. Something happened the other weekend that I'm twitching to share.

No, it's not that I discovered that I was a woman in a man's body. I don't know why you people keep expecting that one.

Every year, the city of Northampton holds "sidewalk sales." Despite occasional attempts to dress the event up with face-painting, live music, and a name like "Summerfest," the premise is always the same. The merchants of Northampton pick out the items that aren't moving from their inventory and slap sale prices on them, and the people of Northampton turn out in droves to snap up the bargains. Commerce happens, along with some nods to the town's social conscience such as the "1% for Schools" fund drive. More on that in a moment.

In the past, our store ignored the sales. We were too far away from Main Street to benefit from the increased traffic, and many of our regulars avoid the crowds by staying as far away from town as possible. I also have a bee in my bonnet about sales events -- I can't get my head around the idea that an item is worth less money only on certain days of the year. Seems to me that what you're really saying is that it's overpriced the rest of the time.

Add it all up and you can guess that when sidewalk sales roll around, the Space-Crime cash register starts gathering dust. For eight years, it's been a weekend best described as "glum."

This year, though, I wanted things to be a little different. We're in a new location, just a few feet off Main Street with plenty of foot traffic. We've got a new look, new books, some buzz building up, the sidewalk sales could be really good for us. Just one hitch: I still hated the idea of a weekend of sale pricing, so what could we do to have a sidewalk sale that isn't a sidewalk sale?

I Have an Idea . . . But We're Gonna Need a Barn and Judy Garland

For some reason, I have most of my ideas in the shower. Maybe it's the warm water relaxing my muscles and brain, maybe it's because there's not much distraction to be had standing in a four-foot-square box. Whatever the cause, two weeks before the sidewalk sales I'm scrubbing suds and thinking.

Maybe we could give the space to some kids and let them sell lemonade. Gotta be a Little League or band around that needs a fundraiser. We should finish off the pasta salad for dinner tonight. We could get some used books or remainders cheap, maybe sell those. Mmm, the sweet smell of dandruff shampoo. Hey. What if we got some used books and made a fundraiser out of it?

I mentioned the "1% for Schools" program earlier. It's just what it sounds like. Every year, about a third of the stores participating in the sidewalk sales agree to donate 1% of the weekend's sales to the local schools. (I have no idea why the other two-thirds don't participate, but my working theory is that they're cheap jerks. It's not much money and it's for schools, fer cryin' out loud.) Last year the program raised \$2,200, which isn't bad but isn't all that impressive either.

Once the basic idea lit up in my head, the rest fell into place. We don't sell used books, so we had to get some fast and cheap. The best way to do that is to ask around and see if anyone has old books they want to donate. It's churlish to try to make a profit on donated books, so the next obvious move is to donate all the sales to charity. There's not much time to find a charity, but the 1% for Schools program is right there waiting to have a check written for it . . . at this

point I was towed up and absent-mindedly squirting shaving cream in my armpits. By the time I had wiped it off and found the deodorant, I had a plan: Get donations of used books, sell them, and donate all the money to the schools.

I went to work, wrote an announcement in our [Live Journal](#), put up some signs, made up a flyer, and sent out some press releases. This is all stuff I do any time we're running an event, and most of the time it gets a mediocre response. I figured that if we got 200 books and made \$50 for the schools, we'd be doing good. We certainly couldn't expect much more than that.

Silly me.

Things Get Out of Control

The local paper picked up on the press release and ran a page 3 story. Our pediatrician turned out to be a board member for one of the organizations funded by "1% for Schools"; she sent out an email on the high school mailing list. And the books started to come in.

Two bags here. Ten boxes there. A guy who hauled in a laundry bag full of books every day for a week. Dozens of books in our basement, then hundreds. Not too long after that, thousands. Books from parents, teachers, kids, from young couples and widows and lifelong bachelors.

The first day of the sales arrived -- Thursday -- and the books kept on coming. It wasn't until Saturday that we ended a day with less inventory than we started with. We lost track of exactly how many books we had early on, but our best estimate is that the people of Northampton donated just under 3,000 volumes.

The sales end of the sale was just as frenzied. Folks would walk by the books and I'd pitch our price. "Three dollars for hardcovers, paperbacks are two, kids' books are just a buck," I'd call out, and just as their ears were perking up, I'd lay down the whammy. "And every penny goes to the schools!" I quickly learned not to stand between the customers and the tables when I said this; too much risk of getting trampled.

It was a frantic weekend, because we really weren't prepared for how much we had to do and how quickly we had to do it. But when the dust settled on Sunday night, our little bookstore had raised \$2,070 for the Northampton schools.

What the Heck Happened?

Since the sale, I've been trying to figure out just what went right. Why did we get this overwhelming response when so many of our events have fallen flat? It's not just that this sale was "in a good cause." We've done charity events before, and while they are more successful than our other events, they usually only appeal to a fraction of our customers.

There is one thing about this event that seems to be different than our previous events. Most of our charity drives have emphasized giving as an end to itself or as the admission to a special event. We've run a giving tree where our customer can buy books for schools, a *Lord of the Rings CCG* tournament where the admission fee is a can of food, things like that. Our previous events emphasized generosity, and they only drew a moderate level of response.

In this book drive, greed played as big a part as generosity. The folks who swarmed our table weren't just donating money to a good cause, they were getting great books dirt cheap. Most of the folks who were donating books were thrilled to be reclaiming shelf and closet space; the good cause may have triggered the giving but I don't think it explains the glee. Our school contacts hoped for (and got) a bigger check; the newspapers got some good headlines. Everybody pulled together because everybody had something to gain.

If a balance of generosity and greed really did trigger the avalanche, then I desperately want to find it again. I don't know if we can; this first time was certainly an accident. But we're going to try.

Missing in Action

There was only one major segment of our customer base missing during the book sale: the gamers. Granted, we didn't target our gamer base with specific marketing or ask outright for donations of games. But we did expect to see some games come in, if only as part of a larger donation.

No dice, literally as well as figuratively. We got histories, we got art books, we got science fiction and mysteries and romance in all conditions and qualities. We got comic books and kids books, a collection of ribald Russian fairy tales and not one but two copies of *All Too Human* by George Stephanopoulos. (Neither sold.) We got a horror movie script written and autographed by Dee Snider. We got videos and audio books. But the only games we got were a copy of the *Dungeons and Dragons Player's Handbook* and the *Rune RPG*.

Both sold, actually. And there were a few of our regular gamers shopping at the sale, but it was fewer than I would predict given the total number of regulars we saw. We did see our usual gaming customer traffic, but most of those customers went right past the piles of used books and headed for the game section.

I'm not completely surprised by this. A lot of our gaming customers show very little interest in non-gaming books. But when I think about it, I realize that I haven't seen too many gamers participating in our other charity events. And despite a few exceptions -- for instance, the annual 9/11 Remembrance Tournament run by [Team Whiplash](#) -- I haven't heard of many fan-run charity efforts in the gaming community.

That's odd.

When you think about it, it seems like gamers should be great at community service. Many of us are well-educated and subscribe to progressive social agendas. Most of us have disposable income for game books and plenty of free time for RPG sessions and CCG tournaments and LARP weekends. We gather regularly in small groups that overlap in a larger local network; we mingle at larger events such as conventions and tournaments. We make daily use of computers and other weapons of mass communication. And we all enjoy saving the world (while getting phat loot) in our games.

Gamers have all the resources and opportunities they need to form their own service organization, a Kiwanis Club where the uniform is a black *Dork Tower* T-shirt. So why don't we?

Twenty years ago, the popular media saw gamers as wild-eyed college cultists plotting Satanist mayhem in steam tunnels. We've beaten that rap, mostly by convincing the rest of the world that we're too nerdy to be dangerous. Today, the image of gamers is a bunch of geeky boy-men sitting around playing *Dungeons & Dragons* and never, ever -- one exception: the guy in the GE commercial -- getting the girl. We got out of the steam tunnels, but as far as the rest of the world is concerned all we did was move back into our parents' basements.

Would that image be different if our hobby had a tradition of public service? What would people think of us if your local game store ran blood drives? What if your college game club ran a tutoring program for high school students, or sponsored a mile of highway cleanup? If every gaming group in town rounded up their soda cans and gave the deposits to a homeless shelter, how big a check could they write?

Is it just that we haven't hit on the right combination of greed and generosity, that we haven't yet found the motivation to feel good about doing good? Or do we find it more rewarding to slay paper dragons than go out into the world and take on the real monsters?

Is being a hero just a hobby for us?

Dai Blackthorn

Character Concept by Kenneth Hite
GURPS Fourth Edition Stats by Brian Hogue and Sean Punch

Dai's career started on Yrth, a medieval fantasy world populated by descendants of Crusades-era folk pulled from Earth by a dimensional rift. He remembers nothing of his birth or early childhood; he was a street kid. When he was about seven, he was taken in by an old thief who taught him to be a pickpocket and second-story man, and Dai learned well. But the Thieves' Guild didn't like the competition, and when Dai was 15, the Guild set fire to the old man's house, and picked off the fleeing occupants with crossbows. Only Dai escaped.

At the time, he thought that he had made a terror-fueled leap from the burning building's roof to the next one. Later he realized that that jump had been impossible. Something else had happened. In fact, the fear of death had unlocked his psionic gift of teleportation, though it took time before he realized the truth and gained control of his abilities. When he did, he became a master thief indeed, living in quiet comfort and reveling in the marketplace talk of "impossible robberies" that no lock and no wizard could stop.

Then Dai crossed paths, and swords, with an equally formidable rival . . . a world-jumping criminal using stolen technology to loot Yrth's treasures. Matters were complicated further by the arrival of an ISWAT team pursuing the world-jumper. When the dust had settled, two of the agents owed their lives to the little thief . . . but he knew too much. They couldn't just let him go.

So they recruited him. After all, a good teleport is hard to find. As for Dai, he was ready for new challenges . . .

The Omniscient Eye

Where Are the Flying Cars?

Retro-futures are "in" these days, what with assorted steampunk fictions and upcoming movies like *Sky Captain & the World of Tomorrow*. Ignoring questions of unrealistic 20th-century optimism, and setting aside the issue of money in a foolhardy manner . . . why *don't* we have flying cars, or personal flight backpacks, or dirigible mass transit? Is there a valid engineering or technical reason?

-- Bob Portnell

All of those have been built, but none of them perform well enough to justify buying them.

A quick google on "flying car" will turn up many examples of flying cars, many of them technically adequate, none of them commercially successful. To get a sky full of flying cars they have to not be just technically practical and financially affordable, but also better than competing options. No flying car has beaten out buying separate planes and cars. That's a common combination; almost all private plane owners also have a car. There's a similar situation with the amphibious car -- lots of people own a car and a boat, but only the US Marines are buying brand new amphibious vehicles.

A flying car is a compromise between cars and planes. This keeps it from matching the performance of either one. A pure airplane doesn't have to provide engine power to its wheels, or keep its wings narrower than a standard road lane. Regular cars can have tall cabins to increase passenger and cargo space (which would trash a plane's aerodynamics) and include strong structures to make them safer in an accident (more weight than a plane can handle). So if you want to fly out to Nantucket you'd be better off in a Cessna than in your flying car; it'll have better performance and probably handle bad weather better. For the grocery store a minivan would let you do the errand in one trip instead of two, and it won't vanish without a thump under the wheels of a SUV. Advances in technology will improve the performance of flying cars, but they'll also help the planes and cars so the relative advantages will stay the same.

The closest we may come to the world of flying cars is when helicopters or some other vertical take-off aircraft get cheap and powerful enough to become your only vehicle -- dropping right into the grocery store parking lot. That would be a "flying car" for most purposes, but it'll never go farther along the ground than the distance from the driveway (now a landing pad) to the garage. And you'll probably have a non-flying van to handle anything too big or heavy for your aircraft.

Unlike flying cars, the personal flight backpack's day may someday come. Inventors have come up with both [rocket](#) LINK1 and [helicopter](#) versions of them and even had successful flights, but none of them have been good enough to justify their price tag. Most just give a short hop through the air and land with empty fuel tanks. That gives you a long walk back with a very heavy backpack. Both the US and Soviet militaries have considered them for giving infantry a boost but never followed up. Between the logistical hassles and the safety issues it was just easier to get a helicopter to do the job. With the typical infantryman carrying 50-80 pounds of gear already, there was no point in handing him a 50-pound gadget that could only be used once.

Once the backpack booster is improved to where it can be on the order of a motorcycle's cost and allow round trips of more than 10 miles there'll probably be some sales. But this will probably require strapping a fusion reactor to your back to get the necessary power-to-weight ratio. After the first few hundred are sold the Department of Motor Vehicles will start requiring you to license them, and a thousand *Ghostbusters* jokes will die.

Unfortunately airship mass transit will always be a dream. There are 29 airships operating today, and about the same number of companies trying to develop new ones. Most are cargo carriers or mobile billboards but at least one [carries passengers](#). This is for a tourist lark, not as anyone's primary transportation. Despite the wishful projects of their fans,

airships don't seem to be breaking out of their niche any time soon.

Lighter-than-air vehicles are slower than airplanes, carry less payload, and are more vulnerable to bad weather. This is fine for an advertising platform or airborne communications node. Cargo transport is more of a problem -- not only are you facing a slow delivery but it could be further delayed or lost to a storm. Slow cargo travels more safely by ship. People traveling don't want to spend more time in transit than they have to, so they've switched to jet aircraft, putting rail lines and ocean-crossing passenger ships out of business. Tourists aren't in a hurry but they demand amenities -- good food, lots of drinks, and games for when they've gotten bored with the view. Cruise ships have the weight capacity to provide that and stand up to bad weather as well. Airship tourism will probably remain confined to short trips over scenic areas. But for mass transit a vehicle needs to carry lots of passengers, move quickly, and be sturdy enough for people to depend on it to keep their jobs. Airships can't do that.

While all this answers the specifics of the original question, what about the more general problem, "Why do some technologies get generally adopted while others don't?" This applies not only to weird science gear like rocket packs, but more generally to central technologies in many settings, such as cybernetics, psychotronics, or the industrial magic of *GURPS Technomancer*. While a large number of factors can explain limited adoption of new technologies in a campaign (for example, limited presence of qualified users such as psis or mages, or suppression by groups such as Yrth's Ministry of Serendipity), the most general are economic. The first factor is that a new technology will only be adopted if it provides more benefits than similar investments in existing technology. For example, at the beginning of the 20th century, the automobile faced nearly as many problems as flying cars do today: no infrastructure, limited production runs, no laws governing their use, and so forth. However, the automobile, even in its infancy, provided a package of benefits that weren't available from other modes of transport: trains could only go where there were tracks, horses got tired, feet couldn't go very fast, and boats didn't tend to do well crossing Kansas. Thus, money spent on cars provided a high marginal benefit to early adopters, and they provided the necessary base for all the work required to bring cars to the technologically and socially mature state they're in today.

That maturity brings up the second major factor: the need to overcome sunk costs in other technologies. Turning our attention to zeppelins, assume we've found a niche where they have an advantage in marginal benefit over airplanes, rail, and ships. We're then faced by the likelihood that zeppelins would require special facilities for refueling, boarding, and loading and unloading of cargo, different from those used by competing technologies; just upgrading existing airports to include zeppelin docks would probably run a few million dollars each. Switching focus, jetpacks might not require as much in the form of physical infrastructure, but establishing licensing, setting safety standards, and addressing all the other legal and bureaucratic details required for their use could easily take years. While all the existing technologies undoubtedly required infrastructure investments that probably dwarf what stands in the way of widespread use of zeppelins or rocket packs, those expenditures have already been made over decades, and thus the existing technologies have a major advantage, even in the face of potentially superior alternatives.

So, what does all this mean in practice? It means you have some tools for justifying the dominance or absence of different technologies in your campaign worlds. For example, you can easily replace a real world technology with an alternative simply by making even a primitive version of the alternative available before widespread adoption of its competitor, which eliminates the problem of overcoming the competitor's sunk costs. For example, if you declare that the Wright Brothers launched a flying car at Kitty Hawk in 1903 instead of an airplane, they'd have hit the headlines the same year that Horatio Nelson Jackson made America's first cross-continent car trip (as seen recently on PBS). At that early point, when there were no airports or interstates, and no FAA regulations or traffic laws, flying cars and automobiles would have been on more or less a level playing field, making the dominance of flying cars much easier to swallow. Going along the same lines, you could reduce the investment required by the new technology to match existing sunk costs (i.e. in an AI-controlled air traffic environment, it shouldn't be hard to just plug flying cars into the same net and have them follow the same rules), or raise the investments required for the real-world technology you want to displace (i.e. introduce illuminated Horse Barons who monopolized the US horse industry, and have them block road building projects and rationalization of traffic laws, but ignore flying cars).

Switching to the issue of marginal benefit, you can alter the balance between two technologies several ways: reduce the costs or increase the capabilities of the desired technology, increase the costs or remove a capability from the "undesirable" technology, or increase the value of an existing advantage possessed by the desired technology. In this

case, let's look at jet packs again, and assume we want them to be a significant military technology in a pulp campaign. One possibility is to make them more effective than in real life (a common approach), either by making them much more energy efficient, or using a fuel which can be easily acquired in the field. Alternatively, though, one could focus on raising the marginal benefits gained from their tactical capabilities, and decide short hop rocket packs were introduced by military geniuses as a way of short-circuiting the trench warfare of WWI, which provided an impetus to both incremental improvements of initially dodgy designs, and integration of rocket infantry into standard military tactics in spite of their limitations. With this adjustment in marginal benefit, they may still be flawed, but they *will* be available, and in the hands of a square-chinned hero, could still spell the difference between doom and success in the fight against the Spider King of the Amazon.

Alternatively, you can make some minor changes to the universe to make it more hospitable to your favorite gadget. The danger in this is trying to foresee all the ramifications of the change. A dramatic increase in the price of oil would favor airships over jet planes, but that would also make cars unaffordable. So adventurers hurrying to get to their dirigible on time will be whipping the horses, not stepping on the pedal. Conversely, a high-power engine could make flying cars and jet backpacks useful tools, but the same engine might give you supersonic motorcycles. A simpler change can be to declare that "X doesn't work in this world." If heavier-than-air flight is impossible, airships are the only option.

In today's world, you can go get a flying car or airship if you have the money. But you're going to be in the minority because other vehicles work better for most people. Technologies compete in Darwinian fashion and the losers go extinct or have tiny niches. Which one succeeds depends on what's useful to the typical customer rather than the inventor or niche user. VHS beat Beta because most customers wanted to have long record times instead of high picture resolution. If you want to change which technology wins you have to change the environment or eliminate a competitor. Our current technologies beat out a lot of other possibilities to wind up on top. They're not going to be displaced by a minor change.

--Karl Gallagher & David Spitzley

Sages theorize that the Omniscient Eye might actually be composed of a panel of Experts chosen through mysterious and arcane means. Regardless, the Omniscient Eye is benevolent, and every other week it is willing to share its lore to all. Or, at least, to all with valid *Pyramid* subscriptions.

The Omniscient Eye seeks to answer questions that are tied to knowledge of the real world, providing information with a perspective that is of use to gamers. The Omniscient Eye does not concern itself with specific game systems or statistics.

A Nation Of Shopkeepers

for *GURPS*

by Stephen Dedman

In almost every RPG, there comes a time when the PCs will go shopping for something they can't make themselves, be it sollarrets or starships. And until the invention of Amazon.com and Warehouse 23, it was almost inevitable that they'd meet merchants. (Even after that date, would you trust your life to a space shuttle you'd bought on e-bay?)

With that in mind, here is a collection of merchant NPCs designed for use as contacts, enemies, allies, dependents, Illuminati dupes, hirelings, or random encounters. All are designed with a particular worldbook in mind, but require only minor changes to adapt for almost any setting from the invention of money to its abolition.

Bastian "Rocky" Rhodes, Pawnbroker

Bastian "Rocky" Rhodes grew up poor in Cassiopeia City, and became a pawnbroker and fence mainly through inertia -- he needed a job, and it was the only one available which required no qualifications. He showed an aptitude for the business, and bought the shop, The Crystal Sphere, when his boss retired.

When repressive martial law was declared in Cassiopeia City, Rocky hid as much of his now-illegal stock as he could, and handed the rest in before the amnesty ended. To his delight, Cassiopeians desperate to buy passage from the city were eager to accept bargain prices for their goods, and many soldiers (including military police) were willing to pay well for illegal goods. Though he's had to become very careful what he buys and sells, and to whom, Rocky has found that his business is actually bringing in more money -- enough that he's managed to buy a used Lemon Angel robot, Chika, as a shop assistant and sex toy. The main difference is that he's paying protection to the MPs instead of the Organization.

Campaign Uses

Rocky can fence gear that the PCs have stolen, sell them legal goods at a bargain price, or provide illegal weapons and other equipment at high cost. Most of his stock is LC 6, sold for 40-90% of list price (-1d×10) depending on condition. Roll LC or below on 1d, at -1 per 10lbs weight or \$1,000 cost, to see if he has any less legal items in stock, then multiply the price by 6-LC.

Rocky can also serve as a Street Contact (connected, Streetwise-12, somewhat reliable), an Ally, or an Enemy. He may also be able to provide information on his customers' financial status, buying habits, or addictions -- for a price, of course.

Other Settings

Rocky is designed for a *GURPS Space* or *Traveller* adventure in a CR 6 (Total Control) setting, but the 25-point version would require only minor tweaking to fit into other times; pawnbrokers have been around since the Renaissance, if not before.

Bastian "Rocky" Rhodes, Pawnbroker (75 points)

ST 12 [20]; DX 10 [0]; IQ 12 [20]; HT 10 [0]

Speed: 5.25 Move: 2 Dodge: 5 Parry: 5

Damage: Thrust 1d-1; Swing 1d+2.

Advantages: Contact: Police, Effective skill 18, available on 9 or less, Usually Reliable [6]; High Pain Threshold [10]; Lightning Calculator [5]; Reputation (+1, a man who can get you anything without asking questions, recognized on 7 or less) [1]; Wealth (Comfortable) [10]. Cyberwear: Adjustable Heart with Steady setting [20]; Flesh Holster [2].

Disadvantages: Addiction (Neural Stimulator -- highly addictive, legal, \$400/week in maintenance costs) [-10]; Code of Honor (Businessman's) [-5]; Fat [-10]; Gluttony [-5]; Greed [-15].

Quirks: Dislikes his first name [-1]; Enjoys watching sports for fat people (sumo, weightlifting, etc.) [-1]; Hates exercise [-1]; Staid [-1]; Wants to be a chef in his own restaurant [-1].

Skills: Accounting-10 [1/2]; Area Knowledge (City)-13 [2]; Armory/TL10 (Beam Weapons)-11 [1]; Beam Weapons/TL10 (Sonic)-13 [2]; Brawling-10 [1]; Computer Operation/TL10-11 [1/2]; Cooking-12 [1]; Detect Lies-13 [6]; Electronics Operation/TL10 (Security Systems)-13 [4]; Exoskeleton-10 [2]; Fast-Draw (Pistol)-9 [1/2]; Fast-Talk-14 [6]; First Aid-11 [1/2]; Holdout-11 [1]; Intimidation-12 [2]; Jeweler/TL10-9 [1/2]; Mechanic/TL10 (Robot)-12 [2]; Merchant-14 [6]; Savoir-Faire-11 [1/2]; Scrounging-12 [1]; Shortsword-10 [2]; Streetwise-12 [2]; Wrestling-10 [2].

Gear: Stunners, with Nauseator setting, and select switch for use as one-shot screamer; Sonic Stinger; Bioplas vest. Under counter, Machete with monowire edge; Laser Torch; Drug Analyzer; Smart Bandage; Privacy Field; Credcard cracker, and a Dumb Office Minicomputer (Complexity 4) with peripherals. Shop also contains a fitted ST 20 Exoskeleton, a Fire Extinguisher, Emergency Medkit, Basic Armoury and Electronic Tool Kits, and Rocky's "assistant" -- Chika, a Lemon Angel, who will defend her boss if attacked.

Appearance: Age 48; Brown skin, dark brown eyes, shaven head, black walrus mustache. 5'9", 240 lbs. (80 lbs encumbrance).

- *25-point version:* Reduce ST to 11; Remove Cyberwear, Police contact, and High Pain Threshold; Reduce Detect Lies skill to 12.
- *100-point version:* Add Danger Sense; Increase IQ and Mental skills by 1.

Chika, Rocky's "Partner" (233 points)

ST 12/10 [10]; **DX** 11 [0]; **IQ** 9 [-10]; **HT** 12/9 [5]

Speed: 5.25 Move: 2 Dodge: 5 Parry: 5

Damage: Thrust 1d-1; Swing 1d+2.

Disadvantages: Dead Broke [-25]. Skills/Software: Accounting-20 [4]; Beam Weapons (Sonic)-13 [4]; Brawling-13 [4]; Computer Programming/TL10-17 [4]; Cooking-13 [2]; Datalink; Detect Lies-16 [4]; Domestic; Electronics/TL10 (Credcards)-17 [4]; Erotic Art-11 [4]; Forgery-15 [4]; Merchant-14 [3]; Sex Appeal-15 [2]; and Voiceprint Recognition.

Gear: Sonic stinger; Pocket aerosol (paralysis gas); Clothing belt over transparent bioplas bodysuit.

Appearance: Apparent age 23; dark brown skin, shoulder-length black hair, hazel eyes. 5'5" tall, 102.54 lbs.

Chika is a "Lemon Angel" Android Companion (p.RO119) who assists Rocky by cooking, cleaning, clerking, and cracking credcards.

Christina Nero, Investment Banker

Christy Nero acquired a taste for wealth and influence when she was still a cheerleader at high school, dating the son of a successful banker. She was soon fraternizing with corporate high-flyers not just for their generosity, but for what they could teach her about finance. Within a year of receiving her MBA, she was running the currency exchange section of a major bank. Soon after this, she met a wealthy lawyer whose clients included a major drug cartel, and

began using the bank to launder the cartel's money. She now controls billions of dollars from various corporations, political parties and criminal syndicates, which she moves around a complex web of tax havens, dummy companies, and genuine investments.

Nero's short-term goal is to become a millionaire before she turns 30; her ultimate dream is to become incredibly rich and use her influence to turn the United States (and ultimately the world) into a plutocracy with herself as near the top as possible.

Campaign Uses

Christy Nero is always looking for projects to invest in, and may become a Patron (or, more probably, Secret Patron) bankrolling gunrunners, treasure-hunters, or Gadgeteers working on new weapons. She is only interested in transactions of at least \$100,000.

Nero makes a dangerous Enemy, but is also a useful and usually reliable Street or Business (effective skill 18) Contact. Filthy Rich PCs may also have use for her money-laundering services.

Other Settings

In an *Illuminated* campaign, Christy Nero is a conspirator in the employ of the Gnomes of Zurich: whether or not she is aware of their existence, she is in perfect sympathy with their aims. In a Voodoo campaign, she may be one of the Snake People.

In a *Deadlands* campaign, Nero may be an investor in one of the railways, as well as acting as Patron to several Mad Scientists. In a Space campaign she may lend the PCs the money they need to buy expensive cyberware or a spaceship. Of course, if the PCs can't pay up on time, she may demand they smuggle drugs or illegal immigrants, or steal some business secrets.

The 400-point version of Nero is a criminal mastermind known as Silver Shadow. She uses her Elastic Skin and Mimicry advantages to gain information and access to valuables, or to frame the PCs or their friends if they frustrate her money-making schemes. Though she wears the best concealable armor available at her tech level, she prefers to leave combat to her hirelings.

Christina Nero (100 points)

ST 9 [-10]; **DX** 12 [10]; **IQ** 13 [30]; **HT** 12 [30]

Speed: 6 Move: 6 Dodge: 6 Parry: 8

Damage: Thrust 1d-2; Swing 1d-1.

Advantages: Alcohol Tolerance [5]; Attractive appearance [5]; Fashion Sense [5]; Lightning Calculator [5]; Status/1 [0]; Strong Will/1 [4]; Voice [10]; Wealth (Wealthy) [20].

Disadvantages: Fanaticism (self) [-15]; Greed [-15]; Megalomania [-10]. **Quirks:** Attentive; Fond of cocaine and other stimulants; Homophobe; Incompetence (Cooking); Technophile.

Skills: Acrobatics-10 [1]; Acting-13 [2]; Accounting-12 [1/2]; Administration-14 [1]; Carousing-11 [1/2]; Computer Operation/TL8-12 [1/2]; Dancing-10 [1/2]; Diplomacy-14 [2]; Driving/TL8 (Car)-10 [1]; Economics/TL8-13 [4]; Guns/TL8 (Pistol)-14 [1]; Judo-12 [4]; Law (Specialization: Tax law)-17 [4], (other)-11 [0]; Make-up/TL8-12 [1/2]; Merchant-16 [8]; Politics-13 [1/2]; Psychology-13 [4]; Research-13 [2]; Savoir-Faire-17 [0]; Sex-Appeal-15 [2]; Singing-14 [1/2]; Streetwise-12 [1].

Gear: Upper-class clothing; Porsche; Glock 17; palm-top computer; small apartment crammed with high-tech gadgets.

Appearance: 28 years old; fair complexion, strawberry blond hair, blue eyes; 5'4", 120 lbs.

- *150-point version (Patron)*: increase Wealth to Very Wealthy; +2 to IQ and IQ-based skills; +1 to HT and HT-based skills.
- *400-point version (Supers campaign)*: add Charisma/1 [5], Doesn't Sleep [20], Elastic Skin [20], High Technology/+1 [20], Immortality (Special Enhancement, can age in either direction at will) [143], Mimicry [15], and Pheromone Control [25] advantages, and Disguise-15 [2] to 150 point version. TL8 version carries a Gauss Needler, TL9 version a Gauss Pistol or Blaster.

Matthew Alhazred, Bookseller

Matthew Alhazred was 15 when he inherited his uncle Mustafa's business, the Book Bazaar. An avid reader and bibliophile, he ignored his widowed mother's plea to sell the shop and maybe make enough to put himself through college; instead, he left school to work full-time in the shop.

Matt is not an enthusiastic salesman and detests any form of physical work, including cleaning (which he leaves to his mother), but he is not intellectually lazy: he reads almost every book he buys before he can bring himself to sell it. The small shop is also crammed with oddities that Mustafa bought over the years -- including some original Pickman paintings, some decidedly strange sculptures, and a few antique weapons.

Campaign Uses

Matthew prides himself on his knowledge of obscure facts and his ability to find out anything he doesn't know. He is designed mainly as a source of information for Horror, Cliffhangers, Voodoo or Cthulhupunk campaigns, but the shop may also be the favorite haunt of a copycat serial killer, or a meeting place for spies in an Espionage campaign. The 250-point version of Matthew calls himself Eibon; he may be a mostly harmless metavillain who specializes in stealing books, a nemesis of Nazis and other book-burners, or an eccentric super-spy on either side of the law. The 25-point version may be a PCs' dependent, a minor enemy, or an important witness who needs protection.

Other Settings

The Book Bazaar may be found largely unchanged (and probably unswept) in almost any era since printing was invented, and people like Matthew have probably worked there for all that time.

Matthew Alhazred (25 points)

ST 9 [-10]; **DX** 10 [0]; **IQ** 12 [20]; **HT** 9 [-10]

Speed: 4.75 Move: 4 Dodge: 4 Parry: n/a

Damage: Thrust 1d-2; Swing 1d-1.

Advantages: Eidetic Memory [30]; Language Talent/1 [2]; Night Vision [10].

Disadvantages: Curiosity [-5]; Dependent (Mother, appears on 15 or less, 60 point character) [0]; Easy to Read [-10]; Insomniac [-10]; Laziness [-10]; Oblivious [-3]; Youth [-2].

Quirks: Anglophile [-1]; Atheist [-1]; Gay [-1]; Imaginative [-1]; Loves, and secretly writes, detective stories and science fiction [-1].

Skills: Accounting-10 [1/2]; Archaeology-10 [1/2]; Astronomy/TL6-10 [1/2]; Conspiracy Theory-13 [4]; Guns/TL6 (Pistol)-12 [1/2]; Forensics/TL6-10 [1/2]; History-11 [1]; Languages (English)-14 [0], (Arabic)-13 [1/2] (French)-13 [1/2], (Latin)-13 [1/2], (Spanish)-13 [1/2]; Linguistics-10 [1]; Literature-14 [3]; Merchant-11 [1]; Motorcycle/TL6-10 [1]; Occultism-13 [2]; Poisons-10 [1/2]; Research-13 [2]; Scrounging-12 [1/2]; Speed-Reading-12 [1]; Thanatology-11 [1]; Writing-11 [1/2].

Gear: Webley No. 1 revolver (under counter); old British motorcycle.

Appearance: 17 years old; olive complexion, short black hair and barely visible mustache, dark brown eyes; 5'8", 145 lbs.

- *100-point version:* Increase IQ and all mental skills by 3, and add Versatile advantage.
- *100-point version (Illuminated campaign):* increase IQ and all mental skills by one, and add Illuminated and Second Sight advantages.
- *250-point version (Supers campaign):* to 100-point version, add Breath Holding/4; Insubstantiality (Enhancement: Can carry objects up to No Encumbrance, +10%) [88]; Invisibility (Enhancements: Visible at Will +10%, Can carry objects up to No Encumbrance, +10%) (Limitation: Can be Seen in Mirrors) [44]; and Penetrating Vision/1.

Mina Vladic, Body Modifier

Mina Vladic's parents were undertakers with Russian mafia connections and a huge collection of old horror movie discs. By the time Mina was eight, they decided that her intelligence and lack of squeamishness suited her to a career in medicine, and chose her classes and extra-curricular activities accordingly. Mina did well enough academically, but also loved to party, and in her final year she was caught stealing prescription software from the university hospital's pharmacy. Rather than return home and work in the family business, she took a job in a tattoo parlor. She soon realized that there was more money to be made implanting street tech than there was in piercing navels, and after making a deal with her parents and their connection, she was soon running her own business.

From the outside, The Body Eclectic seems to be an ordinary tattoo and piercing parlor (if unusually clean and very well-equipped), but Mina really specializes in black market biomods and cyberwear. Many of these are salvaged from bodies sent to her parents' funeral home, and her parents also help dispose of the small number of her clients who die on the operating table. She charges hospital rates for surgery, and her bargain-basement bionics (20% savings) may be unreliable or breakdown-prone (see p.UTT95), but she's utterly discreet, keeps no records, and usually gives her clients a free tattoo or piece of body jewelry to preserve her cover story.

Mina is also a good source of medical and/or illegal drugs, as well as a frequent user of them (Zen when working, and Sin after hours; see p.UT91). Rather than using anesthetics, she often operates on patients while they're still conscious because she likes inflicting pain; she then erases the memory with amnesiac drugs. When not in her shop, she's usually at a party or S&M club, only returning to her apartment in the mornings to sleep, shower and/or change her outfit.

Campaign Uses

As well as providing the PCs with implants and discreet medical care (for a price), Mina may be a Street Contact, or a dangerous Enemy.

Other Settings

While the 100-point version of Mina is specifically designed for a Cyberpunk, Cthulhupunk or later campaign, unregistered street doctors might be found almost in almost any era.

Mina Vladic (100 points)

ST 10/12 [5]; **DX** 11/12 [14]; **IQ** 13 [30]; **HT** 10 [0]

Speed: 5.25 Move: 5 Dodge: 5 Parry: 6

Damage: Thrust 1d-2; Swing 1d.

Advantages: Beautiful appearance (Off-the-shelf looks, -50%) [8]. Biomods/Cyberwear: Bionic eyes with Acute Vision +1 [2], Microscopic Vision/2 [8] and Retinaprint [5]; Two bionic hands (ST 12, DX 12) with

micromanipulators [15]; Cyberhair, long [5]; Eros Plus [0].

Disadvantages: Compulsive Carousing [-5]; Impulsiveness [-10]; Insomnia [-10]; Sadist [-15].

Quirks: Broad-Minded [-1]; Doesn't drink wine [-1]; Intolerance (Morning people) [-1]; Mild claustrophilia and arachnophilia [-1]; Not interested in long-term relationships [-1].

Skills: Artist-10 [1/2]; Brawling-10 [1/2]; Carousing-10 [2]; Computer Operation/TL9-12 [1/2]; Detect Lies-10 [1/2]; Disguise/TL9-13 [2]; Electronics Operation/TL9 (Medical)-12 [1], (Security Systems)-12 [1]; Fast-Talk-13 [2]; Guns/TL9 (Needler)-14 [1/2]; Holdout-11 [1/2]; Judo-9 [1]; Knife-12 [1]; Merchant-14 [4]; Physician/TL9-12 [2]; Sex-Appeal-10 [2]; Streetwise-12 [1]; Surgery/TL9-13 [8]; Tattooing-13 [2].

Gear: Gauss Needler; Small knife with monowire edge; Medium arachnoweave bodysuit (black and skintight, with zips over each piercing); Nightshades; Doctor's Black Bag; Medscanner; Drug Analyzer; black overcoat; boots.

Appearance: 27 years old; beautiful neo-goth, with pale complexion, wazist-length black hair, black eyes, and multiple piercings; 5' 8", 125 lbs.

- *60-point version (Street Doc, any TL):* remove all cyberwear and bodymods; reduce Carousing and Sex-Appeal skills by 1 point each; appearance becomes Attractive.
- *300-point version (vampire street doc):* add Vampire package (pp.U82-83) to 60-point version.

Quentin Quinn, Traveling Salesman

Quentin Quinn is a "drummer," a salesman who travels the small towns of the old West with a catalog from a very large mail-order firm and a trunk full of samples of his merchandise. He loves traveling by rail or paddle-steamer and has an uncanny knack of turning up when trouble is about to strike, but always seems to have exactly the right item to save his skin.

When encountered, the soft-spoken Quinn may be carrying any combination of items from his catalog to deliver to mail-order customers or to show shopkeepers -- always including at least two Colt revolvers, one Bible, one deck of cards, a few corsets, and some boxes of ammunition in whatever caliber the PCs need. In a Deadlands campaign, he may also be carrying Gatling pistols, bulletproof vests, and other gadgets. When trouble strikes, he will attempt to sell his merchandise to the PCs, firmly maintaining it would be dishonest to give them away or even lend them out.

Campaign Uses

Quinn is a combination of Gizmo advantage and guardian angel, but he can also be a dependent or an ally -- or even an enemy, able to outfit a posse to track down lawbreaking PCs. He can also be used as a 1-point Business Contact.

Other Settings

With minor tweaking, Quinn might be selling items out of the trunk of his car in any 20th- or 21st-century campaign. He might even be a passenger on a starship, taking prototypes of TL11 equipment to merchants on other worlds.

Quentin Quinn [25 points]

ST 10 [0]; **DX** 10 [0]; **IQ** 11 [10]; **HT** 10 [0]

Speed: 5 Move: 5 Dodge: 5 Parry: n/a

Damage: Thrust 1d-2; Swing 1d.

Advantages: Charisma/1 [5]; Language Talent/1 [2]; Patron (Employer, appears on 6 or less) [8]; Rapid Healing [5]; Serendipity [15].

Disadvantages: Bad Sight (nearsighted, wears glasses) [-10]; Sense of Duty (Employer) [-10]; Skinny [-5]; Weirdness Magnet [-15].

Quirks: Always wears a derby [-1]; Loves opera [-1]; Mild phobia (snakes) [-1]; Sleepy drinker [-1]; Very polite, especially to women [-1].

Skills: Area Knowledge (North American railways)-11 [1]; Armory/TL5 (Rifles and Handguns)-10 [1]; Detect Lies-10 [2]; Diplomacy-10 [2]; First Aid/TL5-10 [1/2]; Gambling-12 [4]; Guns/TL5 (Pistol)-14 [4], (other)-10 [0]; Languages (English)-12 [0], (Comanche)-10 [1/2], (French)-10 [1/2], (Mandarin)-10 [1/2], (Spanish)-10 [1/2]; Merchant-13 [6]; Riding (Horse)-9 [1]; Savoir-Faire-11 [1]; Speed-Load (Revolver)-9 [1/2].

Gear: Colt Cloverleaf pistol; steel skullcap and breastplate under good suit, duster, and bowler hat; pocket knife; spare eyeglasses; travel trunk full of merchandise.

Appearance: 34 years old; tanned complexion, receding dark blond hair, hazel eyes behind wire-rimmed glasses; 5'9", 100 lbs.

- *100-point version:* Increase IQ and Mental skills by one; add Cinematic Gadgeteer advantage and one Gizmo; increase Armoury skill to 16 and Riding to 10.

Robert Blackstone, Alchemist

Robert Blackstone's mother was a renowned magical healer, or a witch, depending on who you ask. He grew up fascinated by things magical, and both he and his mother were disappointed when he proved to have little or no magical aptitude. In a spirit of compromise, his mother apprenticed him to the local alchemist.

Robert has done his best to carry on his mother's business of providing healing to the small town where he was born -- herbal remedies and first aid to locals who can't afford elixirs, and powerful potions for those with more money and less patience. He makes an average income as an alchemist, and has never ventured more than ten miles away from his home. The 100-point version of Robert also provides magical healing and occasionally enchants items (and probably lives in a slightly larger town), but his personality is still the same.

Robert is expert in the creation of the following elixirs: Aesculapius, Agni, Argus, Atalanta, Chiron, Delphi, Ephialtes, Hydra, Janus, Morpheus, Orion, Poseidon and Prometheus.

Campaign Uses

Robert's main use in most campaigns will be to provide elixirs to the PCs before their adventures, and medical care to the survivors. He is too easy-going to make a worthwhile enemy, but he might be an ally or dependent, or even an unconnected street contact. He may also hire the PCs occasionally to obtain hard-to-get ingredients, such as scale of dragon.

Other Settings

Robert will require very few changes to fit into any setting where alchemy works, including *GURPS Technomancer*.

Robert Blackstone (25 points)

ST 10 [0]; **DX** 11 [10]; **IQ** 13 [20]; **HT** 9 [-10]

Speed: 5 Move: 5 Dodge: 5 Parry: 6

Damage: Thrust 1d-2; Swing 1d.

Advantages: Literate [10]; Reputation (skilled healer, honest merchant): +2 reaction, sometimes recognized, small

group of people [2]; Resistant to Poison [5].

Disadvantages: Charitable [-15]; Curious [-5]; Overconfidence [-10]; Unfit [-5]; Workaholic [-5].

Quirks: Attentive [-1]; Considers making love potions beneath his dignity [-1]; Dislikes travel [-1]; Incompetence (Poetry) [-1]; Very fond of mushrooms [-1].

Skills: Alchemy/TL3-13 [8]; Astrology-10 [1]; Cooking-12 [1/2]; Crossbow-10 [1/2]; First Aid/TL3-13 [1]; Glassblowing-10 [2]; Herbalist-12 [2]; Knife-10 [1/2]; Merchant-12 [1]; Naturalist-11 [1]; Occultism-12 [1]; Pharmacy/TL3-10 [0]; Poisons-11 [1/2]; Research-13 [2]; Savoir-Faire-12 [1/2]; Staff-9 [1]; Streetwise-11 [1/2].

Appearance: 48 years old; pale complexion, bright blue eyes, white hair and beard and all his teeth; 5'6", 140 lbs. When in lab, wears lower-class tunic and pants, cloth gloves, and shoes, all stained with reagents.

- *100-point version:* Increase HT to 11; Increase Alchemy to 14 and Staff to 11; add Longevity, Wealth (Comfortable), and Magery, Limited (Solitary Magery/2) advantages, and the following spells: Awaken-13 [1]; Beast-Soother-13 [1]; Cure Disease-14 [2]; Detect Magic-13 [1]; Enchant-14 [4]; Insect Control-13 [1]; Lend Health-13 [1]; Lend Strength-13 [1]; Major Healing-14 [4]; Minor Healing-14 [2]; Neutralize Poison-14 [2]; Recover Strength-13 [1]; Scroll-13 [1]; Sterilize-13 [1].

Adventure Seeds

The Petrified Forester (*Fantasy*): When Robert Blackstone hears that a basilisk may be haunting a nearby wood, he offers \$1,000 in silver or \$2,000 in elixirs to the first person to bring in the corpse (parts of which are useful for concocting certain potions).

Unfortunately for the heroes, they won't be the only ones hoping to kill the monster and gain the reward -- and the basilisk is actually the familiar of a powerful and bad-tempered wizard.

Trained Wolves (*Deadlands*): The PCs are aboard a train when it's stopped by ties across the tracks, and robbed. Nothing unusual about that, perhaps -- except that some of the robbers are werewolves.

The only character on the train with any silver ammunition is Quentin Quinn; 50 rounds, \$4 each, in .38 caliber (if the heroes don't have guns that fire that caliber, he also has four Colt Lightnings). The bullets are pre-sold and locked in his trunk, so the PCs will have to persuade him to sell them by using Fast-Talk, Intimidation, Sex-Appeal or a similar skill. Worse still, the trunk is locked in the express car, 20 carriages behind them, and the werewolves are already forcing their way in.

Protection (*Horror*): There's a new goon collecting protection on Matthew Alhazred's street, and Matthew thinks he may also be behind a few gruesome murders. He asks the PCs to follow the heavy -- who seems extremely strong, never opens his mouth very wide, and always wears sunglasses even though he only appears after dark.

The goon may be a dominated vampire, flesh golem, Snake Man (pp. VO101-102), or other monster. He delivers the money he collects to a wealthy banker (use stats for Christina Nero).

Bestseller (*Supers/Illuminati*): Silver Shadow (Christy Nero) hires Eibon (Matthew Alhazred) to steal a grimoire, supposedly written by Baron von Knigge, from a private collection. The PCs learn that the grimoire contains powerful divination and mind control spells, and must be sealed or destroyed -- but they're not the only ones trying to get it. Nero wants to sell it to the highest bidder, and doesn't care what the buyer wants it for.

Loan Star (*Space*): When smuggler Rani Diaz defaults on a loan from Christy Nero, skip-tracers fall over each other

trying to collect the \$.5M bounty, and Diaz goes to Mina Vladic's chop shop in Cassiopeia City for a new face.

By the time the PCs (also in Cassiopeia City) hear she's in town, Vladic is the only one who can identify Diaz, and she won't betray her friend and client. Rocky Rhodes offers to arm and equip the PCs for a share of the bounty, but can he be trusted? What sort of cyberwear did Diaz buy? And what happened to her ship?

GURPS in 2005

By Andrew Hackard

Andrew Hackard has been Managing Editor at Steve Jackson Games since early 2002. In that time, no project has been bigger than *GURPS Fourth Edition*. With the first major supplements in the pipeline, Andrew turns his eyes to the new year in this sneak preview for *Game Trade Monthly*:

We've already released some teasers about what people can expect for *GURPS* next year. Some of that information is even still true. We're very excited about our plans for 2005, and while things may change between now and next December, this is what we're aiming for right now. As always, keep watching our website (www.sjgames.com) for updated announcements and other random silliness.

Worldbooks

Next year, our showpiece worldbook will be *GURPS Banestorm*, which updates the world of Yrth to Fourth Edition. Think you know Yrth? Think again . . . there are plenty of surprises on the horizon for one of the oldest *GURPS* settings.

We're also releasing the long-awaited and oft-delayed *GURPS Vorkosigan*. This is a full *GURPS Fourth Edition* release -- and like all of our *Fourth Edition* books, it will be hardback and full color, with great Bob Stevlic art. We know fans of the Miles Vorkosigan books have been waiting a long time to grab this, and it's going to be worth it!

Also coming next year is *GURPS Traveller: The Interstellar Wars*, which is both a Fourth Edition conversion of the *GURPS Traveller* rules and a fascinating look into the history of the Imperium. Marc Miller has given us the chance to play in a time that no one has ever explored deeply, and we can't wait to show you what we've got!

Later, we'll have the *Girl Genius Sourcebook and Roleplaying Game*, by Kaja Foglio and our own Michelle Barrett. It's a bit too early to be saying anything about this, other than that it will be excellent!

You Want Crunch? You Got It!

With the new edition of *GURPS* comes the chance to revisit some old favorite "crunchy" books, such as *GURPS Ultra-Tech* (by original *Ultra-Tech* and *Ultra-Tech 2* designer David Pulver and certified gearhead Kenneth Peters), a wholly updated *GURPS Bestiary* (by Michael Suileabhain-Wilson and Peter Dell'Orto), and, on the horizon, new versions of *GURPS Vehicles* and *GURPS High-Tech*.

The new kid on the block is *GURPS Powers*, by *GURPS* Line Editor Sean "Dr. Kromm" Punch and *Mutants & Masterminds* co-designer Steve Kenson. This book will show you how to emulate every kind of psionic or superpower you can think of -- and lots you haven't, either! We're planning to have this one out just in time for GenCon 2005, and we know you'll love it!

Build-Your-Own-Game Toolkits

We've got some great genre books coming out next year, too. Jon Zeigler and James Cambias are teaming up for the new version of *GURPS Space*, which will explore everything from the Third Edition book and plenty more besides!

Later in the year, Ken Hite delves into a topic dear to his heart in *GURPS Conspiracies*, which takes Nigel Findley's work on *GURPS Illuminati* and builds on it to explore lots of other secret societies and fringe cults, real and imaginary. If you miss this one, you might as well be watching network news.

And William Stoddard and Jonathan Woodward bring us ***GURPS Fantastic Cities***, which will build on Bill's superb work on ***GURPS Fantasy*** to show you just how to create a realistic city in a fantastic setting. Or vice versa! We're really looking forward to this one.

It's All Just Ones and Zeroes

We haven't forgotten you computer geeks, either. We're planning for wholly new versions of ***GURPS Character Builder*** and ***GURPS Vehicle Builder*** next year or possibly early in 2006. We're also planning plenty of online support, both through [e23](#) (our new online electronic files store) and *Pyramid* -- keep watching!

... And Beyond?

We are already planning into 2006 and even later. It's far too early to talk about exactly what's going to be released then, of course, but we've got some very cool ideas in development, and we're looking forward to bringing them to you.

Whatever type of game you want, whatever sort of heroes you like to play, ***GURPS*** brings it to you! Thanks for your support over the last 16 years, and join us as we make the best generic RPG even better.

Pyramid Review

Frenzy

Published by [Fantasy Flight Games](#)

Designed by Eric Lang, Darrell Hardy, & Kevin Wilson

Edited by Darrell Hardy, Rob Vaughn, & Christian T. Petersen

Graphics & Art by Scott Nicely, Tyler Walpole, Hans Michaelson, Steve Ellis, & Thomas Denmark

42 cards, rules sheet, & full color; \$9.95 per deck (both players need a deck)

Fantasy Flight Games hasn't let up on what is turning into an onslaught of new games from the card, board, and roleplaying arenas alike. *Frenzy* is a fantasy fighting game played without turns.

Frenzy doesn't offer anything in the way of background -- it's your garden-variety fantasy world in which all the races somehow make a living kicking each other's teeth in on the field of battle. The object is to have the most points after the third round is finished.

Both players must have their own deck, purchased separately and chosen from the four races: Humans, Dwarves, Orcs, and the Undead. A deck consists of Warriors, Battlefields, and Heroes. The three Battlefields (you only need one player's set of three) are placed in a row in the middle of the table, and players hold their deck in one hand.

The game is played without turns, so players simply place cards as fast as they can. Next to each of the three Battlefield cards, players place a Warrior card on their side of the row. This new rank of cards is called the Battle Line. Warriors have a Strength score from one to four, and whoever has the highest score on his side takes that field (no one scores in a tie). Another row forms behind this, called the Supply Line. This also comprises Warrior cards, but here their Strength scores represent how much materiel you get as spoils when you defeat your enemy. The winner of each Battlefield takes the top card from both of the two attendant Supply Line stacks.

These numbers will change through the game as the cards pile up in response to your opponent's plays. You can place a new card over the old one to change the values. You may up the ante by laying a tougher Warrior card over a weaker one, or you may play a lower value onto a Supply Line stack to decrease the points your enemy gets. The armies must take care to strike a balance: If you pour all your high cards into the front lines, you may win the Battlefields at the expense of lowered Supply Line values.

Basic Heroes -- the Wizard and the Assassin -- are special cards. Assassins can negate the Strength values of the toughest Warriors; this way, not every game ends up with two Battle Lines full of four-Strength fighters. A Wizard reduces the points won. If you win a fight and there's a Wizard in either Battle Line (yes, even your own), you lose the point card of your opponent's choice.

All armies have these basic Heroes, but each race sports its own advanced Warrior (for use in the advanced game). The Undead have the Lich, who beats everything but a Human Knight (and vice versa), and who can ignore the effects of a Wizard in his fight. The Knight takes the top two score cards from the Supply Line instead of just the one. The Orcs employ an Ogre, who beats any Warrior, and the Dwarven Bodyguard can duplicate the effect of any card in its Battle Line.

The last stack of cards is the Headquarters, placed behind the Supply Lines. The game continues until someone empties their hand of cards. It also ends if someone plays three Heroes into the Headquarters; this allows someone who can see they're in a winning position to try to freeze the game. Each Battlefield is numbered, and this helps track which round is being played. After each round, some of the used cards are discarded and the cycle restarts. When the third round ends, points are totaled.

There are a couple of differences between decks aside from the advanced Heroes, but the only one with a game effect is that the distribution of your Warrior cards -- 1s, 2s, etc. -- are not the same from one deck to the next. The rest of the distinctions are graphic. Each race has its own color scheme, and the artwork varies. Someone put serious effort into it, because the illustrations are closer to what you'd expect on the cover of a book, not the underside of a card.

It's impossible to ignore the similarities between *Frenzy* and James Ernest Games' real-time card game *Brawl*. Both entail freeform card play on either side of three contested "base" cards. But whereas *Brawl* plays with a certain amount of ease, the placement of cards coming as a matter of reflex with a little practice, *Frenzy* isn't so obvious. There's a definite strategic element that cannot be ignored, lest it cost you the game.

The speed of the game and the need to track the strengths and weaknesses of your assault can be a real source of frustration, but it also puts some distance between Fantasy Flight's work and the somewhat lighter work from Ernest. It's anyone's guess what breed of player will prefer this brand. It takes some of the whimsy out, but it also makes this a harder-fought test. This is combined with a troublesome page of rules. The distinction of fighting for three Battlefields and doing it over three rounds can throw you; there's already one erratum included in the box; and basic Heroes, while part of the basic rules, are explained under the advanced rules section.

Once all these details are worked out (and rules questions are easily settled, as they're mostly about the yes/no of mechanics and not which player gets the advantage for it), *Frenzy* is a far better game than its painfully simple rules set suggests. While not a consuming passion, it's certainly an affordable pastime from a company that continues to step up its production as well as its approval ratings.

--Andy Vetromile

Pyramid Review

Crime Scene: Forensics (for d20 System)

Published by [Hogshead Publishing](#)

Written by Mark Ricketts & Ian Hunt

Cover by Lee Moyer

Illustrated by Marcio Fiorito, David Esbri Molines, Chris Pepper, Sheila Thomas, & Ursula Vernon

64-page b&w softcover; \$15.95

In its quest to present the two entwined worlds of law enforcement and organized crime, it is no surprise that sooner or later that Hogshead Publishing would get to the subject of forensics. *Crime Scene: Forensics* is the publisher's third book in the series and opens up the world of forensic investigation for the *d20 System*. And since the figure of the forensic investigator is a favorite of both fiction and television, whether the Medical Examiner of *Quincy* and Patricia Cornwell's Kay Scarpetta novels, or the forensics team depicted in the *C.S.I.* series, then *Crime Scene: Forensics* should prove useful in depicting such characters within a game.

Behind the book's dark cover, the layout seems decent enough, as does the artwork. Upon closer inspection, the text turns out not be error-free, and these errors mar both the layout and the writing. Plus several pieces of artwork are reused, often to detrimental effect. In each case, the piece has been expanded in size to fill an empty space and has pixellated in the process.

Crime Scene: Forensics is organized into a series of short chapters. The first few give a brief history of forensic science, an all-too-short look at how a forensic type of game is played, and descriptions of several forensic organizations. In keeping with the rest of the *Crime Scene* series -- which is exclusively US-orientated -- these are all American, and include the National Response Team of the ATF, its National Explosives Tracing Center, and the infamous Body Farm run by the University of Tennessee. There is also a list of the differences between, and the responsibilities of, the Medical Examiner and the Coroner. Then it gets down to character generation.

The supplement details seven new classes, including the Anthropologist, the Arson Investigator, the Crime Scene Investigator, the Criminalist (the specialists of the forensics world, trained in everything from ballistics to geographical profiling), and the Forensic Pathologist. The duties of each role are well described and they should certainly help a player gain a grasp on what each does and how they should be played. There is a frugality to the design of these classes, as beyond their skills and feats, they possess nothing in the way of frills.

They are supported by 25 new skills that include Knowledge: Ballistics, Blood Splatter Analysis, Crime Scene Recording, and Toxicology. Some of these skills do make an appearance from other *Crime Scene* sourcebooks. The 30 or so new feats include Bite and Claw Analysis, Fingerprint Taking, Respected in the Field, and Take Charge, this last helping a character to organize and control a large crime scene. Others such as Strong Stomach, allow an officer to remain unshaken by gory scenes, while Crack a Joke lets an investigator know when to say something funny that will ease the tension of a stressful situation.

While the design of these classes is both solid and simple, the problem comes in the rules intended to represent a character's prior experience. Woefully underpowered, the seven Starting Departments each provide a character with

two extra skill ranks for two skills. This feels inadequate for a Crime Scene Investigator, for example, who will have served at least three years as a police officer, and for an Anthropologist, who will hold at least a doctorate. To offset this weakness in character generation, a GM may want to use these new classes in conjunction with the [*d20 Modern Roleplaying Game*](#), which allows characters to have one or two character levels before they begin play.

Once character generation is out of the way, the remainder of the book -- almost half -- takes the reader through a point-by-point tour of its subject matter. This starts out with securing, entering, and examining the crime scene, and includes documenting, photographing, and collecting the evidence. Then it guides the reader through the various types of evidence that can be collected and what they might indicate: fingerprints, ballistics, blood splatter analysis, toxicology, and DNA Profiling. Other chapters look at determining the cause of death, dumped bodies, and three particular causes of death -- through fire, explosions, and hit and run. All of this is written in a no-nonsense style, and while it could have dwelled upon the more gruesome aspects of the subject, the author keeps well away from doing so. His decision to keep the more distasteful side out of the *Crime Scene: Forensics* makes the supplement suitable to a wider audience.

Yet should the reader want to learn more about this subject beyond that contained within its pages, *Crime Scene: Forensics* is far from helpful. Simply, there is no bibliography to support what is otherwise a sound introduction to the science. Unfortunately, nor is there anything included to help a GM run an forensics orientated game, or any suggestions given to help integrate this information with either the rest of the books in the *Crime Scene* line, or with other *d20 System* games.

What you get in *Crime Scene: Forensics* is the bare bones necessary to run an investigative type of game, as well as an excellent primer and introduction to the science of forensics. Yet the failure to apply the information to any kind of gaming context may make some purchasers wait for the next supplement upon the subject.

--Matthew Pook

Controlling the Flow of Ideas

Things have still been chaotic with me, although not as tumultuous as might be expected after a week involving 30 hours of driving plus packing and unpacking my worldly belongings. To call me "moved in" would not be exactly accurate, since my apartment currently resembles the warehouse at the end of *Raiders of the Lost Ark* mixed with some footage from *Twister*. (Meanwhile, all my game books and comics are being stored in a *real* warehouse while I sort through my other boxes . . . meaning that, among other anomalies, I have nine large empty bookshelves without any indication that they ever *will* be anything interesting on them; insert your own "Presidential Library" joke here.)

Anyway, I'm moving in, I don't have reliable phone or Internet access (more on this development as I milk it for next week's column), I don't have a Day Job, and I'm editing *Pyramid* on a 15-inch screen, which is a far migraine-inducing cry from my standard 19-incher.

So instead of forging new ground, coming up with topics relating to this new and wondrous land I find myself in, I'm going to milk a topic from my Last Days of Tallahassee this week.

For those of you not up on your Marsh history (and, really, no big shakes if you're not), I moved to Tallahassee originally for school, when I attended my alma mater Florida State University. This was back in 1991 . . . and it took a while for me to escape the city's gravitational well.

Before I left, I tried to wrap up things as best I could with those I was leaving behind. One of the folks I said good-bye to was my old Poetry professor, who was also one of the guiding forces behind the Creative Writing department. We met for lunch (the first time I'd seen him since I graduated), and had a great conversation.

As an aside, for those who might be moving from a place they've called home for a while, I heartily recommend trying to meet anyone who's touched your life for that farewell lunch or coffee. I imagine this is especially the case with teachers and other instructors, since they don't get enough appreciation as it is . . . and seeing them several years later can provide a useful laboratory report in a "How did Student X turn out?" kind of way. It's hard to envision a scenario where you'll say, "I wish I hadn't said good-bye to this person . . ." but it's easy to think of the opposite.

Anyway, during that lunch we discussed all manner of topics, from Tallahassee to college to writing to food to the difficulty of picking out someone you're looking for in a crowded restaurant or airport. And during that lunch I formulated a theory -- no doubt espoused by other folks, but which I've never heard myself -- about writing, which also corresponds directly to gaming. And I have a corollary, which I'll share as a rebuttal.

While the professor and I were discussing the early poetry workshops I'd taken with him, one of the aspects of those classes that I recalled was that many of my fellow aspiring poets seemed to be "holding back"; in fact, if pressed, several of them said that they were afraid to use up their good ideas. The reasons for this were varied:

- They were afraid they wouldn't be able to do their ideas justice.
- They worried because, if they used their good ideas, they wouldn't have anything left to "fall back on."
- They didn't want other people to steal their good ideas and make them "better."

Whatever the reason, while reminiscing about this with my professor I made my realization: Don't worry that you're using up the "good ideas." Ideas are like dandelion seeds; scattering them to the winds is a sure way to end up with more.

I never held back on using ideas in my writing classes; even if I had a weekly deadline, and I was down to one idea, I'd use it. Sure enough, I'd generally have another the next time. It's a policy that served me through gaming, character creation as a player, and writing my columns for *Pyramid*. (Of course, some of you might ask, "Does this mean that each week's column *really* represents the best idea you had that week?" My answer to that question would depend entirely on how you find the quality of my efforts.)

Anyway, while I obviously can't make promises for everyone, I'd still recommend that you go ahead and use your "good" ideas whenever possible. I suspect that the brain uses a *dearth* of good ideas as an excuse to come up with more: "Oh, shoot! The pantry's empty! Better start firing random neurons again!" With multiple good ideas in the larder, the brain gets chubby and lazy, devoting CPU cycles to *The Apprentice*, Monty Python quotes, and trying to figure out what "[pompatus](#)" means.

Having offered my "Use your good ideas" advice, I have a corollary: Don't try to cram too many ideas into one piece. Whether it's an RPG adventure, a character concept, or a game world, for those just starting out there can be a temptation to try to use *all* those ideas at once:

"And it turns out that Prince Tharkum is really . . . his deceased brother! He assumed his brother's guise after killing him accidentally. Oh, and he's really living . . . *backwards* in time! So he knows the future, but is mystified by the present and past. Except that, unbeknownst even to him, he's not even really alive, but rather a solid light hologram! Oh, and he's filled with these tiny things I call 'midichlorians' . . ."

In general, I've found that, for any given adventure or character, one "Wow!" element is about all that can be handled *per aspect of the creation*. So, for example, having an adventure where it turns out all the PCs are actually unknowing clones of the "original" PCs, complete with copies of their memories, is probably enough of a "good idea" for the premise of the adventure; it doesn't need any other techniques such as being told in flashback. On the other hand, if the GM would like to use a good idea with the Master Villain (such as he *knows* he's the villain, and actively encourages the PCs to stop him because -- although he can't stop himself -- he doesn't like himself any more than the Good Guys do), that would probably be okay . . . but, again, don't use *two* weird ideas with him. And so on.

Now, this advice can obviously be tossed out the window if you have two good ideas that work well together. For example, if you'd like to have a Master Villain who is also a seemingly good NPC that encounters and helps the heroes, that idea would work well with the "being who lives backwards in time" -- knowing events from the future he understands there's a great threat looming, but he doesn't know that he was (will be) its own catalyst. But, again, even layering compatible good ideas, it's possible to overdo it.

In all, I suspect that there is a protective desire in many of us that borders on the parental; we want to ensure that our good ideas find the best audience possible, and we want to ensure that good audiences get our best ideas. But it's possible to err on either side of the equation; have faith in your flow of ideas, and your flow of ideas probably won't let you down.

Which is more than I can say about certain local phone companies . . .

A Game for Two to Four Players

by P.D. Magnus

The year is 2050. It is a dark time to be a gamer. In half a century of mergers and buy-outs, the rights to every game design on the planet have come to be held in fewer and fewer hands. Last year, in a move to acquire the secret process for producing the gum that comes with sports cards, the Leetgum Corporation ended up owning the design to every game ever invented. Abetted by strange developments in international law, Leetgum now owns patents on the basic mechanics of trading card games, the concept of a roleplaying game, and even the rules of chess. Leetgum controls the trademark "game" to describe these products, but has no interest in producing any of them. Their real business is in manufacturing petroleum-based comestibles, and so all those great game designs languish in their data banks.

What are gamers to do in this dark age? Hack in to Leetgum's mainframe, of course, and take whatever they can. Lucky for you, Leetgum doesn't own any patents for network security technology.

1. About the Game

[Click here for the PDF!](#)

You take the role of a gamer and hacker, sending your digital Avatar into the Leetgum network, searching for gaming gems, and smuggling them back out. It's only a matter of time until somebody at Leetgum notices and shuts down the network, so work quickly.

Play involves hacking into Data Nodes to obtain Secrets and then hacking into Broadcast Nodes to move the Secrets off the network and into your Portfolio. Your objective is to either accrue 30 points in your Portfolio or to have the most valuable Portfolio when the Security Pool is exhausted. All of this is explained in greater detail below.

Don't get confused about this: This is a game about raiding computer networks in a fictional, dystopian future. Raiding real computer networks is bad. The game isn't meant as any kind of guidebook, as subtle commentary, or as an enticement to evil. We don't live in the cyberpunk world of Leetgum. Intellectual property in the real world is worth respecting.

[Click here for the PDF components!](#)

1.1 Components

You get: (These all come in a PDF file, and some assembly is required.)

- the game board -- in two pieces -- can be printed onto normal weight paper, cut out, and taped together
- a 48-card game deck -- see below
- 8 raider cards -- fine on paper or cardstock, as you like
- a reference card

Some options for assembling the game deck:

1. Print the cards onto cardstock and cut them out. Many printers have trouble feeding cardstock.
2. Print the cards onto paper, glue them to cardstock, and cut them out.
3. Print the cards onto paper, photocopy them onto cardstock at your local copy center, and cut them out.
4. Assign each game card a corresponding card from a standard poker deck. Memorize the assignments, and play the game with the poker deck.

You supply:

- an ordinary, six-sided die
- a pawn to represent each player's Avatar
- 24-36 pennies to use as Security Chits -- they don't have to be pennies, but you want something small and stackable
- a pile of counters to use as Code Fragments -- anything will do: nickels, glass stones, chocolate chip cookies, etc.

1.2 The Deck

There are 4 kinds of cards in the deck: Secrets, Programs, Modifiers, and the Shuffle card.

Secrets

Secrets are valuable information; the number on the card is the value of the Secret. On the network, a player's Avatar can't do anything with a Secret besides transmit it off. Some Secrets have special results when they are broadcast, as explained on the card.

Secret cards have a number in the upper left corner.

Programs

Programs are executable code. A player can play a Program card, causing the effect indicated on the card before discarding the Program. Programs may also be transmitted off the network just like Secrets -- programs have their value indicated on the lower right of the card. If you move a Program to your Portfolio, however, you cannot play it for the indicated effect.

Program cards have a number in the lower right corner.

Modifiers

There are two Modifiers: "Bonanza" and "Raw Deal." Played when someone transmits a Secret off of the network, these cards change the total value of the Secret. Modifiers can not be played on program cards. It is possible for a Secret to be both a Bonanza and a Raw Deal, but it can not have two Bonanza or two Raw Deal cards played on it.

Modifier cards have a number in the top center of the card.

Shuffle

This card says to "Shuffle the Deck." When someone draws it, they immediately shuffle the deck, returning any discarded cards. After shuffling, players draw any cards they should have gotten.

2. Starting the Game

Someone should shuffle the deck and place it in the center of the board.

The Security Chits should be gathered together as the Security Pool. As the game progresses, the Security Chits will be placed on Nodes of the network to indicate increased scrutiny. When the last chit is taken out of the Security Pool, the network administrators become so concerned that they shut down the network and the game is over. The number of Security Chits effectively determines the length of the game. For 2 players, 24 chits is a good number. For 3 players, use 30. For 4 players, 36.

Each player should draw a random Raider card. Each Raider has a different nick, personality, and special ability. Players may keep their identity secret until the first time they use their special ability.

Players now place their Avatars on different Log-on Nodes. (The Log-On Nodes are the spaces on the board showing die faces 1, 2, 3, or 4.) The player who has most recently chewed bubblegum goes first. That player takes a turn, and play proceeds clockwise.

3. Turn Sequence

There are usually five phases in a player's turn. In the descriptions, the "current player" is the player whose turn it is.

1. Respawn
2. Move
3. Avatar Conflict
4. Node Action
5. Checksum

3.1 Respawn

If the current player's Avatar is not already on the network, it must be Respawned. The player rolls the die. On a roll of 1, 2, 3, or 4, the Avatar is placed on the indicated Log-on Node; the player moves as normal. On a roll of 5 or 6, the raider is unable to find a way onto the network this turn. The Avatar remains off-board, and the player's turn ends.

3.2 Move

The current player may choose to leave his Avatar where it is; he declares that he is doing so and skips ahead to the Avatar Conflict phase. Otherwise, he rolls the die. (If he Respawned this turn, he must roll to move.)

On a roll of 1, 2, 3, 4, or 5, the current player may move his Avatar the indicated number spaces in either direction around the board. The Avatar must move the full distance and may not cross the dashed connection between the two halves of the board.

If the Avatar starts on a Log-on Node, entering the main board counts as the first space of movement. Once on the network, an Avatar may not reenter a Log-On Node.

On a roll of 6, the the current player may move his Avatar to any node on the same side of the network as the Node which it presently occupies. That is, it may not cross the dashed connection in the center of the network.

3.3 Avatar Conflict

If the current player's Avatar ends its move on the same Node as the Avatar of another player, the two Avatars may come into conflict. If the current player chooses to make trouble, he rolls the die and consults the chart below. If there are more than two Avatars on one Node, there may be more than one Avatar Conflict. The current player chooses the order in which they are resolved. (Note that some conflict results will make further conflict impossible.)

Avatar Conflict Chart

- 1 Hack the directory. The current player may look at the other player's hand.
- 2 Hack one file. The current player takes one card at random from the other player's hand.
- 3 Hacked for one file. The current player must give one card from her hand to the other player.
- 4 To hack and be hacked. The conflicting players trade hands.
- 5 Deadlock. Both Avatars drop off the network. The current player's turn is over. Both players must Respawn on their next turn. Their Avatars are not corrupted, however, so they should not discard their hands.
- 6 Mutual disaster. Both Avatars are corrupted. Remove them from the network. Both players must discard their hands.

3.4 Node Action

After resolving any conflicts, the current player may take a Node Action appropriate to the node occupied by his Avatar. A current player may choose not to take a Node Action.

Log-on Node

A Log-on Node takes incoming connections from the world at large. It has a few legitimate uses, but hackers know it as a way into Leetgum's private network. Avatars won't occupy Log-on Nodes when it comes time for Node Action; there's nothing to do there.

Data Node

Data Nodes are where Leetgum keeps the games. By hacking into Data Nodes, players can acquire secret gaming tech and the code to experimental programs. On a Data Node, the player rolls the die and adds +1 for each Security Chit on this Node. Consult the table below.

- 1 Success! You flawlessly extract one file without anyone noticing. Draw one card from the deck.
- 2 You successfully hack the Node, but download too much data not to draw attention. Draw three cards from the deck. Add one Security Chit to this Node.
- 3 You stealthily download one file, but someone notices you downloading the second. Draw two cards from the deck. Add one Security Chit to this Node.
- 4 You hack the Node, but quickly draw someone's attention. Draw one card from the deck. Add one Security Chit to this Node.
- 5 No luck. Add one Security Chit to this Node.
- 6 or more You've tripped an alarm! Your Avatar has been corrupted. Remove it from the board and discard your hand. Add one Security Chit to this Node. You must Respawn on your next turn.

Broadcast Node

Broadcast Nodes are the secure uplinks from the Leetgum network. By hacking into Broadcast Nodes, hackers can move secrets from their Avatars on the network to their Portfolios out in meatspace. In game terms, this means that players can move cards from their hands to their Portfolios. The Portfolio is a stack of cards on the table which is not discarded, even if the player's Avatar is corrupted. When a player moves a card to his Portfolio, he should declare what the card is and place it face-up.

On a Broadcast Node, the player rolls the die and adds +1 for each Security Chit on this Node. Consult the table below.

- 1** Success! You hide the transmission in a stream of marketing data, and network security notices nothing. Move one card from your hand to your Portfolio.
- 2-5** You successfully hack the Node, but someone notices the traffic. Move one card from your hand to your Portfolio. Add one Security Chit to this Node.
- 6** No luck. Add one Security Chit to this Node.
- 7 or more** You've tripped an alarm! Your Avatar has been corrupted. Remove it from the board and discard your hand. Add one Security Chit to this Node. You must Respawn on your next turn.

Routing Node

Routing Nodes direct the flow of network traffic. Avatars can use them to move around the network or to manipulate the network's security programs. On a Routing Node, a player may either move his Avatar to another Routing Node anywhere on the Network (even across the dashed connection in the middle) or remove one Security Chit and return it to the Security Pool. (If the current player uses the Routing Node to move to the same space as another player, he may not then initiate Avatar Conflict since the phase for that has come and gone.)

Code Node

Code Nodes hold buffers full of strange and unreliable subroutines. On a Code Node, a player takes a Code Fragment chit. Later in the game -- after any player rolls the die for any reason -- the player may discard the Code Fragment to change the outcome of the die by one. The roll cannot be raised above 6 or lowered below 1 in this way. If multiple players have collected Code Fragments, a spending war may ensue.

3.5 Checksum

If the Security Pool is empty or if the current player's Portfolio is worth a total of 30 or more, the game is over. Regardless of when these things happen, the game does not end until the Checksum phase.

4. Ending the Game

If there are no chits left in the Security Pool, then network operations becomes so concerned that they shut the network down. Players should discard their hands and count the value of their Portfolios. Each card is worth the value indicated by the number in the corner. The player with the most points has accrued the best stuff. That player is crowned Prince of the Gamer People, or at least would be if gamers were monarchists. In any case, that player wins the game

If the game ended because a player's Portfolio was worth 30 or more, players should not discard. Instead, they should count the value of their Portfolios and add half the value of the cards in their hands (round up). The player with the highest total wins, attaining such a reputation that the other players could do nothing to eclipse it. Note that although the winner will probably be the one whose Portfolio total ended the game, upsets are possible.

5. Details

Program cards indicate when they may be played. Unless a card says so specifically, it may not be played between a die roll and its consequences -- even if it says it may be played "at any time."

If cards and Code Fragments are both played to change a die roll, they take effect in the order they were played. For example: A "Redundancy" card played after several Code Fragments allows an unhampered re-roll, although further Code Fragments can be played on the new result.

6. Text of the Cards

For your perusal, this section repeats the text of the game and raider cards.

6.1 The Game Deck

This is a complete list of cards in the game deck, along with their values and special text. One value is listed for each instance of the card.

Project Aleph (6,7,8)

If you have three files from Project Aleph in your Portfolio, they are worth 8 more altogether.

Project Barbarosa (3,3,3)

If you have two files from Project Barbarosa in your Portfolio, each is worth 5. If you have all three, then each is worth 7.

Project Cephalus (3,4,5)

If you have two or more files from Project Cephalus in your Portfolio, then all Widgets in your Portfolio are worth double.

Project Damocles (2,2,3)

When you broadcast a file from Project Damocles, take an extra turn.

Project Electra (3,5,9)

When you broadcast a file from Project Electra, discard one card of your choice from your Portfolio.

Unsorted Files (3)

If the Unsorted Files are part of your Portfolio, any Assorted Files there count double.

Secret Plans (7)

Widgets (1,2,2,3)

Assorted Files (1,1,2,2)

Bonanza (+5, +5)

A Secret is worth more than its usual value. Add this card to your Portfolio along with the Secret.

Play when you broadcast the Secret.

Raw Deal (-3, -5)

Another player's Secret is worth less than its usual value. Add this card to their Portfolio along with the Secret.

Play when the Secret is broadcast.

Hack Ace (1)

Subtract one from your die roll at Data Nodes.

Play at any time. Put this card face up in front of you. Discard only if your Avatar is corrupted.

Ace Crypto (2)

Subtract one from your die roll at Broadcast Nodes.

Play at any time. Put this card face up in front of you. Discard only if your Avatar is corrupted.

Data Compression (2)

You may broadcast multiple Secrets from the same project in a single Broadcast Node Action.

Play at any time. Put this card face up in front of you. Discard only if your Avatar is corrupted.

Tempest (2)

Put a card into your hand as it is being discarded.

Play when another player discards for any reason.

Override (2)

Change the result of a die roll to any roll you prefer.

Play when you make a die roll for any reason.

Security Failure (3)

Remove all Security Chits from the network. Set the Chits aside; they are not added back to the Security Pool.

Play at any time.

Relax Security (1)

Roll the die and return that many Security Chits to the Security Pool.

Play at any time.

Network Failure (1)

Remove all Avatars from the network. Players must Respawn, but do not discard.

Play at any time.

Terminal Conflict (1)

Ignore the result of the Avatar Conflict Table. Instead, the opposing Avatar is corrupted.

Play when involved in an Avatar onflict.

Conflict Mastery (1)

Choose the outcome of an Avatar conflict from the chart without rolling.

Play when there is an Avatar conflict, even if you are not involved directly.

Backup (4)

Discard this card, but keep the rest of your hand.

Play when your Avatar is corrupted.

Routemaster (0)

Move to any Node on the network.

Play instead of rolling and taking a normal move.

Routemistress (1)

Move to any Node on the network.

Play instead of rolling and taking a normal move.

Code Bug (0)

Nullify the effect of a card.

Play when the card is played.

Double Redundancy (2)

Reroll twice and take the best of the three rolls.

Play when you make a die roll for any reason.

Redundancy (1,1)

Reroll and take the better of the rolls.

Play when you make a die roll for any reason.

Code Archive (2)

Take 4 Code Fragment chits.

Play at any time.

Shuffle the Deck (none)

Shuffle in all of the discards, including this one. After shuffling, complete your draw.

6.2 The Raiders

Lady C

The hacker known as Lady C is a meticulous planner who moves cautiously around the network.

After rolling for movement, Lady C's Avatar may move the player's choice of either 1 or the rolled amount.

NetPuppy

NetPuppy is just starting out and has spent the last week practicing how to get on the network.

The player playing NetPuppy may reroll any 6s when trying to Respawn.

Pirate R

Pirate R has an uncanny knack for getting the most out of warez.

After playing a program card, Pirate R's player may either put the discard on the discard pile as normal or put it on the top of the deck.

Iconoclast

The hacker known as the Iconoclast only uses hardware built before 1980, which opens connections that would be too slow for more modern equipment.

The Iconoclast's Avatar may move across the dashed connection in the middle of the network.

Redeye

Redeye claims to be psychic, but no one believes it. Regardless, Redeye seems to know the network better than anyone.

On a Routing Node, Redeye has the option to both move to another Routing Node and remove a Security Chit from the network.

CHawk

CHawk consumes extreme amounts of caffeine in order to hack very, very quickly.

After rolling a "Success!" or "No luck" result at a Data or Broadcast Node, CHawk may choose to immediately hack the same Node again.

Haicku

Haicku's search for enlightenment reveals ways to avoid confrontation.

When another player initiates an avatar conflict with haicku, Haicku may decide before the die is rolled to drop off the network and avoid the conflict. Haicku's player does not discard, but must Respawn.

Enigma

The hacker known as the Enigma is mysterious and secretive.

The Enigma is too mysterious for special abilities. Add +3 to the final value of the Enigma's Portfolio.

7. Credits

Invasions and Plagues in Citadels

A *Citadels* Variant

by Philip Reed

Citadels, Bruno Faidutti's game of city building, is superb and a perfect game for gamers and non-gamers alike. This variant, while adding a little complexity, adds a random element that can significantly alter the outcome of the game. This variant is simple enough to use with non-gamers.

Once any player plays his fourth district card there is a chance of an invasion or plague. At the beginning of the next turn character cards are selected as described in the basic rules and then, before the king starts calling out characters, one six-sided die is rolled. On a roll of 1-2 a plague takes place; 3-4 nothing happens and play proceeds as normal; 5-6 an invasion takes place.

If a 3-4 is rolled nothing happens and the game continues.

Game play then proceeds as described in the basic rules but each player rolls one six-sided die -- after his character is called -- and on a roll of 1 that player loses one in-play district card. Additionally, each character's specific power is altered as described under the two below events. These variant character rules are used for one turn only -- play returns to normal after this one turn has passed.

Plague

A horrible disease washes over the land, devastating life in all of the cities and slowing growth and expansion.

Assassin: The assassin, through patience and skill, builds an immunity to the disease and becomes a carrier for it. The assassin may announce two characters to murder. After this turn the character's power returns to that described in the basic rules.

Thief: In addition to the basic power, the thief takes advantage of the situation and steals two gold from the player to his immediate left. If that player has no gold there is no effect.

Magician: In addition to his basic power, the magician may spend two gold and not lose a district card no matter his die roll.

King: The king suffers with all of his kingdom. For every district card that is lost to the plague the king player loses 1 gold. If the king does not have enough gold to cover his losses he loses all of his gold and all of the cards in his hand. If he has no cards he suffers no additional effect. This is in addition to the king's basic power.

Bishop: The people flock to the bishop during these troubling times. In addition to his basic power, the bishop does not have to roll for district loss and if all of the other players lose a district he takes the top district on the deck and places it into his hand.

Merchant: The merchant, visiting so many (green) trade districts, has a greater chance of suffering from the plague. In place of his basic power, count the number of (green) trade districts in the merchant's city and roll one six-sided die: if the roll is equal to or less than the number of (green) trade districts in his city the merchant loses one in-play district card.

Architect: The architect does not have the manpower this turn to construct any districts and may not draw any district cards.

Warlord: His opponents weakened, the warlord may destroy one district this turn by paying a number of gold equal to two less than the loss of the district. A district of 1 or 2 cost is free to destroy, 3 costs 1 gold to destroy, 4 costs 2 gold to destroy, etc.

Invasion

Enemies from a distant land invade the region, attacking all of the players' cities.

Assassin: The assassin is secretly in league with the invaders. Whichever character the assassin player tries to murder this turn loses all of his gold.

Thief: Increased vigilance in the city prevents the thief from using his power this turn.

Magician: The magician is called to help defend the city and is unable to use his power this turn.

King: During the invasion the king collects more taxes from his people. In addition to his basic power, each player must pay the king player one gold or one district card from their hand (king's choice). If a player cannot pay he loses one in-play district card (in addition to any lost due to the invasion).

Bishop: The invaders are strongly opposed to the bishop's church and devote additional resources to combating his city. In addition to the bishop's basic power, count the number of (blue) religious districts in the bishop's city and roll one six-sided die: if the roll is equal to or less than the number of (blue) religious districts in the bishop's city he loses one in-play district card.

Merchant: The merchant profits from the hysteria surrounding the invasion. For this turn, the merchant receives two gold for each (green) trade district in his city.

Architect: The city gives the architect greater resources during the invasion. After his action the architect draws three extra district cards and places three of them in his hand. The architect may build up to four districts during this turn -- but only if all four are (red) military districts.

Warlord: Distracted by the events of the invasion, the warlord cannot build districts or destroy districts this turn (he may only take an action).

Pyramid Pick

The Deep (for d20 System)

Published by [Mystic Eye Games](#)

Written by Susannah Redelfs

Illustrated by Matt Bober, Marcio Fiorito, Hunter Frederick McFalls, Jeremy McHugh, Tamara Pressman, & Roel Wielinga

256-page b&w hardcover; \$39.99

"The deep is no lair. It turns out to be the planet's main address."
-- William J. Broad, *The Universe Below*, as quoted in *The Deep*

The Deep is a trove of information for a niche audience: gamers who want to take their adventurers underwater. While there are several *d20 System* books that cover ocean-going possibilities, most of them do so with an eye toward landlubbers getting their feet wet. Sailors, pirates, and merchants get plenty of coverage in these other books. *The Deep* comes right out on page 3 and clarifies its position: the ocean's surface is not part of its milieu. It recommends Living Imagination's *Broadsides!*, Fantasy Flight's *Seafarer's Handbook*, and Mongoose's *Seas of Blood* for players and GMs who want that information. Mongoose's upcoming *The Book of the Sea* will attempt to cover action both on and under the waves, but until then *The Deep* plumbs this frontier alone.

Physically, *The Deep* is a 256-page hardcover that makes excellent use of the space allotted. No vast expanses of dead white anywhere, tight tables and illustrations, and overall great layout. Word-for-word, customers will get their money's worth.

The book starts with a short table of contents and ends with a bibliography, glossary, index, and OGL boilerplate. In between, the book is split into general information for undersea characters and their GMs (128 pages), a complete setting called "The Sea of Ishamark" (105 pages, including 37 pages of NPC write-ups), and "Depths of Reason," an adventure in Ishamark for four 6th-level (land-going) characters (14 pages). There is some bleed-through from the general information section to the Ishamark setting, such as the "Ishamark Mers" text box in the merfolk character race description. But mostly the division works.

Before going through the blow-by-blow of each chapter, I will pause here. The book is well written by an author who obviously enjoys her topic. I am about to pick a few nits as I go through the book, but if the cost of the book in comparison to the contents summed up above seems reasonable for the amount of underwater adventuring your group might do, taking into account whether you will be able to use the Ishamark setting, which requires an uninterrupted expanse of ocean stretching from the arctic to the equator, then you really have enough information to make your purchase . . .

Okay, back to the chapters. *The Deep* starts off with an introduction that stretches on for about 19 pages. It turns out that this is where most of the information about ocean regions, temperature zones, seafloor terrains, currents, and physical and psychological obstacles faced by surface-dwellers are found. It appears that the introduction should have been about a page long and the heading "Overview: The World's Oceans" should have been the chapter title. Perhaps the layout would not accommodate that, and even readers who normally skip over introductions should realize something is different as they flip past nearly 20 pages, including charts and maps.

The author does a good job of emphasizing the variety of environments underwater -- it is not just a homogenous bucket of saline out there. While most of it is steeped in real-world research, there are also notes about possible fantastic elements, such as the Playwaters where magic use becomes unpredictable.

The section on physical hazards for surface-dwellers includes some text boxes covering the problems that will face aquatic creatures that venture up into the air. First nitpick: the text box on p. 17 contradicts the one on p. 15 about the amount of damage Huge and Gargantuan creatures take each round on land (2d6 or 3d6 respectively on p. 17, 1d6 on p. 15).

The next chapter deals with aquatic races. Stats are given for playing delphines (intelligent dolphins), merfolk, selkies, sel'varahn (an aquatic humanoid race), and sharken (intelligent sharks). The delphines in particular may have been subjected to a minor "kewl" lens, as "due to their versatility and flexibility, delphines may choose any class as their favored class" despite earlier notes about the scarcity of clerics and monks and their alignment tendency towards chaotic good.

Notably absent from the race roll call are the sahuagin, tritons, kuo-toa, and locathah. Space considerations are blamed for the absence, but I would have certainly preferred to lose a few of the 37 pages devoted to NPCs in exchange for more information on these classic races and their roles in Ishamark.

A chapter on classes follows. Notes on the underwater presence of all the core classes are included, along with two changes. Kahuna are the marine druids and mariners are the underwater rangers. Obviously, these mariners differ from the prestige class of the same name detailed in Kenzer and Company's *Kingdoms of Kalamar Player's Guide*. Eight new prestige classes are detailed: Wave Dancer for delphines, Sharken Reaver for sharken, and six non-race-specific choices.

Chapters on skills, feats, and equipment in the underwater environment are next. These cover everything you would expect, and they throw in a few surprises as well. The imagination behind the weapon types available for the delphines and sharken is impressive. Then there is an extended treatment of underwater alchemy with new compounds, jellies, permeant baths (originated in Bastion Press's *Alchemy & Herbalists*), poisons, and special items as well as rules for tempering items in hydrothermal vents. This last bit brings us to our second nitpick: the feat Craft Vent-Tempered Item is described once in the alchemy section and again in the feats section, but the descriptions do not match. The first requires a spellcaster level 5th, while the second requires a spellcaster level 9th, which is a rather large jump.

A short chapter (five pages) on underwater combat and movement covers buoyancy for non-aquatic creatures; tactical, local, and migration movement underwater; and combat, which leads nicely to the next chapter on aquatic creatures.

The aquatic creatures chapter starts out with a table listing aquatic creatures by CR. It is admirable in that it lists not only the creatures actually detailed in *The Deep*, but also creatures from the System Reference Document, *Fantasy Flight's Seafarer's Handbook*, *Mystic Eye's Nightmares & Dreams Collections* (both volumes), and *Mystic Eye's Bluffside: City on the Edge*. The descriptions in the chapter are divided into fantastic creatures, creature templates, and aquatic animals. Just over seven pages are devoted to the cetis, intelligent whales, covering their various species. They also get their own list of ceti sounding effects, which serves as a spell list.

The templates include one for mers other than mermen and mermaids (which would be mer-fish merfolk in the nomenclature used here). Mer-eels, mer-octopuses, and mer-crabs are given as examples. Templates for the genie offspring half-marids and the undead udrals round out the section. Finally, 16 normal sea creatures including piranha and electric eels are presented.

Two chapters on magic, covering first spells and spellcasting then items and crafting, complete part one of the book. The spell section includes a new type of magic: coral magic. In this book, all coral "provide a vast intelligent well of magic and power." Underwater wizards can serve as hosts to coral worms to become coral wizards. Thirteen pages of new spells and two pages of reef-related true rituals (a spell type originated in *Sword & Sorcery's Relics & Rituals*) follow. The magic items chapter begins with advice on how to substitute appropriate crustaceans, anemones, and other unintelligent creatures as living magic items instead of the typical metals and textiles. Boots can become barnacles, for example. It's an odd concept, but imaginative.

Part Two of *The Deep* details the history, religion, and geography of the Sea of Ishamark. The main focus is given to Crater Bay, so named because it was formed when a meteor struck the area in ancient times (and the lingering effects give the temperate waters some tropical temperatures). The land cities of Sordadon and Highscarp occupy the vertical extremes of the cliff next to crater bay. Descriptions of various locales of interest (LOIs) and places of interest (POIs) make up the bulk of the first three chapters in Part Two. I am unsure why those abbreviations are there, but they appear beside the spelled-out terms many times in the book and never by themselves.

The setting is rich with historical events actually reflected in current affairs and religious details in the background as well as foreground. My only nitpick here is that I would like to know the alignments of the various deities detailed in the "Gods of the Deep" section.

The NPCs are great examples of what can be done in this setting. All the races are represented (and why not, when you've got 37 pages to play with). A mer-octopus walker below (new prestige class) leads the pack, and before it is finished we pass a ceti ghost, a half-marid elf coral wizard, several tritons, an urdal merfolk wizard, a locathah rogue/barbarian, and a half-sahuagin cleric, on our way to a sephoran (intelligent squid) lich psion.

The short adventure ends the book, and is fairly typical for an adventure tucked away in the back of a sourcebook. The town (port) is in trouble (from undersea piracy this time), and will the PCs help? The adventures skips right over appendix one and presents the reader with appendix two: yet more NPCs (four and a half more pages of characters, this time to encounter during the adventure).

While this review concentrated more on the first part of the book, both parts are equally well done. The first is certainly more likely to be used in an existing campaign, as it is (mostly) generic information. This is an excellent sourcebook, and if you find yourself in its audience niche (someone with a PC about to go under), it is invaluable.

Pyramid Review

Hearts, Swords, Flowers (for Big Eyes, Small Mouth)

Published by [Guardians of Order, Inc](#)

Written by Genevieve Cogman & Alexander Williams

Illustrated by Stella Bell, Germaine Cahoon, Bob Cram Jr., Kelly Hamilton, Mark McKenzie, Jennifer Quick, RefKa, Amy Stoddard & Ursula Vernon

96-page undersized b&w softcover; \$16.95

Shoujo Manga, literally Japanese for "girl's literature," is not entirely new to roleplaying. In 2002, Seraphim Guard published *Heart Quest: Romantic Roleplaying in the World's of Shoujo Manga*, written by a group of all-male fans for the *FUDGE system*. (A revised edition has since been released and made available via [RPGnow](#).) Fans are again responsible for a new supplement devoted to the genre, *Hearts, Swords, Flowers*, though this time with more than its share of feminine input. Instead of *FUDGE*, this new supplement uses the Tri-Stat mechanics of [Big Eyes, Small Mouth](#), the leading anime RPG from Guardians of Order. Indeed, *Hearts, Swords, Flowers* has been developed under Guardians of Order's Magnum Opus imprint, which enables creator-owned RPGs and supplements to be published under license.

To the Western audience, Shoujo Manga is best typified by titles such as *Sailor Moon*, *Yami no Matsuei*, and *Weiss Kreuz*. Its emphasis is firmly upon atmosphere, character interaction and development, complex dialog, and effects of dramatic events. In comparison, Shounen or boy's Manga traditionally places its emphasis upon detailing technology and weapons, and the battles fought with them. A character profile in Shounen Manga would detail a person along with a diagram of his battlesuit or weapon, whereas a Shoujo profile would focus upon the character's relationships and personality, and the weapon replaced with (for example) her astrological chart. That said, the distinct number of differences between the two genres are diminishing, as Shounen Manga increasingly takes on the many elements of Shoujo.

Hearts, Swords, Flowers is essentially an examination of these many elements. Beginning with the basics, it explains what Shoujo is and what the genre can encompass. Its stories can be fantastical, playful, or romantic in tone, or it can be dark and threatening . . . or even worse, warped and twisted. It can even combine these elements, so that a story can be both full of comedy and tragedy, its heroes suffering if only in a comic sense. The conventions for both comedy and tragedy are handily listed in sections of boxed text. The genre is also a semiologist's dream, invariably laced with signs and symbols that signify something further. The importance of a character's back-story and history is also discussed, as well as the consequences of both this history and character actions.

Shoujo has its obvious character types, and these are examined in turn, from the Angstful Hero to Mysterious Masked Bishonen (meaning "beautiful boy"). It also suggests how they might be brought together in a group type: Destined Heroes, Team of Experts, and so on. Like the character types, these are backed up with references to various Shoujo Manga and anime, these serving as examples. This is continued to a lesser extent in the discussion of Shoujo's many themes (duty, honor, innocence, purity, strength, and forgiveness), which apply to the characters as much as they do to the tale being told. There is also an extensive section on Shoujo villain, whose motivations may differ between comic and more serious Shoujo Manga. A separate box nicely suggests a few tips for the villain, such as, "Strike dramatic poses. It will impress those around you." And, "Elegance is good. So is overkill. Try to achieve a happy medium."

Another handy list gives describes the possible inter-character relationships that could exist between both player characters and NPCs.

Hearts, Swords, Flowers takes the time to touch upon some of the potentially uncomfortable aspects of the genre, and to some extent of Japanese culture. Most notable of these are the same-sex relationships of "yaoi" (male-male) and "yuri" (female-female). These are not necessarily sexual in nature, though many are. The authors' advice is that a campaign can only explore this so far as the players involved are comfortable with. The same goes for a Shoujo campaign in general, not every player necessarily happy with the relationship intensive nature of the genre.

After a general discussion of Shoujo campaigns, the supplement presents four sample campaigns. "Mallrats Psi," "Demon Upload Crisis," "Cabal Of The Twilight," and "Chrom Kreuz" (Chrome Cross) each come with a blurb, short descriptions of the four or five central characters and their relationships, plus several plot threads. Of the four, only the first, "Mallrats Psi," is given further development by having its five core characters written up for the Tri-Stat System.

In terms of mechanics, *Hearts, Swords, Flowers* suggests the use of several optional rules from *Big Eyes, Small Mouth*. This includes point-based character creation, the use of Shock Value over Critical Injury, and skills replaced by rolls against stats or a character's CV (Combat value). Instead of skills, there is a new attribute, Enhanced Talent, and its counterpart defect, the Decreased Talent. These work to model a character's amazing ability or ineptitude at something, but without the use of skills. All five sample characters are built without skills.

What the supplement also adds are rules for "Ties and Bonds," and they model what a character cares deeply about. Rated in increasing order of intensity as Interests, Motivations, Drives, and Obsessions, they can include avenging a loved one's death, getting a boyfriend, getting rich, or just eating as much as possible. A player invests 12 points in his character's ties and bonds, the points put into each becoming essentially a Focus Pool of points that can be spent to give a variety of effects; villains also have their own Focus Pools. They include giving bonuses to skill or stat rolls, healing Health points, reflecting a character's learning, editing reality to change an aspect of the game, and aiding in decisions; they can even act as an impediment to the character. In some ways they are like the Personality Traits and Passions found in Chaosium's *Pendragon*, but with a much greater scope. When the Focus Pool points are refreshed is at the discretion of the GM.

Physically, *Hearts, Swords, Flowers* is a slim little book. It is well written, and the authors' love of the genre is very clear. Behind the pleasing cover, the artwork rarely raises above average, making the book look like the work of fans, something that the writing rises above. It is rounded with a handy appendix that provides a character checklist and ends with a bibliography. Unfortunately, this only lists the various titles and their details, *not* what they are about. This is a shame, as it at odds with *Hearts, Swords, Flowers'* goal of presenting an examination of Shoujo Manga and making it playable within an RPG, not just for the fan, but also particularly for those new to the genre. While the authors make plenty of references to several Shoujo titles throughout the book, to those that are not fans of the genre, they lack context. This could have been countered with a more developed bibliography. It also would have been nice had the "Mallrats Psi" been more developed into a more ready to play setting.

With a little more application and development -- in terms of an example setting and better descriptions of available Shoujo -- *Hearts, Swords, Flowers* would have been more user friendly. Had there not been this downside, the price would have not also been something to quibble at as much. Putting this aside, it is nevertheless an interesting read, and it is possible to apply the book's discussion and analysis to Western media; for example, much of *Hearts, Swords, Flowers* could apply to *Buffy the Vampire Slayer* (and its RPG). Ultimately, any gamer wanting to learn more about Shoujo Manga will find no better place to start than with *Hearts, Swords, Flowers*.

Marvel Superheroes TCG

Published by [Upper Deck Entertainment](#)

Designed by Mike Hummel, Matt Hyra, Danny Mandel, & Edward Fear

Art, graphics, designed by Mark Irwin, Kris Oprisko, Brian Bateman, David Lomeli, Anita Olmos, Scott Reyes, & Drew Struzan

Edited by Omeed Dariani & Kate Stavola

80 cards (two 40-card decks, the X-Men and the Brotherhood of Evil Mutants, each with a foil card), quick-start rules poster, rules booklet, \$15.95; *Marvel Origins* boosters: 14 cards (including one foil), \$3.99

There have been quite a few false starts on superhero games in the last few years, including a couple of Marvel Comics roleplaying games, some collectible card games, and a DC-based RPG from West End Games. Here's hoping the *Marvel Trading Card Game* doesn't fold up its tent quite as easily.

The object of the game is to eliminate all your opponents by draining their Endurance.

Each player starts with a deck, a hand of four cards, and 50 points of Endurance (which players have to keep track of themselves; there's no mechanism for it in the box, but paper and pencil work fine). Not much keeps you from throwing whatever cool cards you like in the same mix, but the most effective decks are built around a team, the loosely defined affiliations to which characters belong. One player is given initiative.

The Vs. System (available on-line at [ude.com](#)) uses four phases: Draw, Build, Combat, and Recovery. The *Marvel TCG* currency is resources. Any card can be used as a resource, but some are supposed to be. Locations, like Muir Island and Asteroid M, can be plain-vanilla resources, but most also provide bonus effects. Plot Twists, cards that provide some benefit in combat, may have ongoing effects that only work if they're introduced as resources.

You can bring out as many cards as your resource row lets you buy. (To use any "ready" card, "exhaust" it by turning it on its side.) For superbeings and their equipment cards, this is the recruitment cost, based on power -- better combat stats, abilities, and the ranged and flight symbols are pricier.

Players arrange team members in the front row or the support row. Whoever has initiative this turn attacks first. He chooses a character to attack with and an enemy to engage. Ordinarily characters in the support row are protected by those in the front row, but the flight and ranged symbols determine who can attack where. They compare their attack (ATK) and defense (DEF) values (modified by plot twists, locations, and so on) to determine how much damage is dealt.

If a superhero/villain is stunned, the card's owner loses Endurance equal to its recruitment cost. If the ATK value is higher than the DEF, the owner also loses the difference in what is called breakthrough endurance loss. A support row character can exhaust itself to absorb the extra damage, but that's all they'll be able to do this turn. If you want to bring down the enemy's heavy guns -- say, Colossus -- you can do a team attack, adding multiple characters together to give him a beat-down. This precludes any breakthrough, though, and your opponent may stun the enemy of his choice.

When everyone has finished attacking, stunned characters are recovered. If you have multiple stunned teammates, you may return one to service; the rest are "KO'd" (i.e., placed on the discard pile). New cards are drawn, initiative passes to the next player, and the battle begins anew until all but one player has zero endurance.

Play takes some serious getting used to. Although the basics are printed on a large poster included in the starter box, the details are much harder to come to grips with. This is not to say it's badly done -- it's not -- but like any TCG, there are countless variations and combinations to explore, and players spend their first few games just trying not to make silly mistakes. The starters are just that -- two 40-card theme decks for a game that demands 60.

The game is quick and streamlined, and its mechanics let nothing go to waste. Your starter has two copies of Pyro, but playing a duplicate gives that character a combat bonus, or it can go to the resource row. Not everything depends on expending resources; often you just need the right number of resource cards in play. It's all terribly well balanced, and the two starting groups -- the X-Men and the Brotherhood of Evil Mutants -- do the one-upmanship thing well. Professor X seems like a tough customer, but Magneto can take him, and Rogue can trounce him, who is outdone by Sabretooth . . .

The boosters are effective as well. Although unfocused in some ways (you can get "teams" of everything from the Fantastic Four to Skrulls to Doctor Doom in one package), they also match the starters adroitly. Multiple character cards with different names represent someone at different stages, like the Scott Summers Cyclops vs. the "Slim" Cyclops. You can count on a booster to supplement your starters. Spider-Man, Doc Ock, and DC characters are also available and forthcoming.

To know how good the artwork is, one need only glance at a few recent issues of Marvel's comics. That talent pool makes all the cards attractive, legible, and easy to use. Once players have the rhythm down, *Marvel TCG* is a fun, functional, challenging game with depth, strategy, and, one can only hope, a future.

--Andy Vetromile

GURPS Fourth Edition Preview: Updating Katrina

by David Morgan-Mar

I was quietly minding my own business in the Pyramid MOO one day when Andrew Hackard said to me (paraphrased, but only ever so slightly), "How would you like to lose your eyesight and sanity by laboriously going through *GURPS* Third Edition, *Compendium I*, and Fourth Edition; comparing every attribute, advantage, disadvantage, and skill; and figuring out everything you need to know to convert Third Edition characters into Fourth Edition ones?"

"Beauseant!" I cried, thinking that sounded a jolly good lark, indeed.

Over the next couple of months I put more wear and tear on my *Basic Set* and *Compendium I* than I had in the entire previous eight years, and became familiar with the wonders of the new Fourth Edition rules.

And what was the point of all this? To produce the latest edition of *GURPS Update!* The previous version had been a rules update to allow people with *GURPS* Second Edition to upgrade to Third Edition without buying a whole new *Basic Set*. But this time around the changes are significantly greater, and doing a similar thing would have produced an update about the size of the entire new edition.

So the latest edition of *GURPS Update* concentrates on the character generation rules. It gives you a summary of all the changes to attributes, advantages, disadvantages, and skills, plus advice on how to convert Third Edition characters to Fourth Edition quickly and painlessly. It'll be useful for anyone running or playing games that they want to convert to Fourth Edition, or for anyone who wants a distilled primer on what has changed in character creation in the new edition.

I included two approaches: *Thorough conversion* produces characters matching their Third Edition abilities as closely as possible, but takes a bit of work. *Quick-and-dirty conversion* gives you the bare minimum you need to know to produce a rough Fourth Edition equivalent, with just a few quick table look-ups. Using quick- and-dirty conversion, I estimate you could convert a typical character in under five minutes.

Updating Katrina

To demonstrate the conversion process, let's go through a thorough conversion of Katrina's character sheet (p. 216 of *GURPS Basic Set* Third Edition, Revised).

Attributes and Secondary Characteristics

Looking at the *Strength* section of *Update*, we follow its advice on human characters and keep Katrina's ST 12 unchanged. Her DX 13, IQ 12, and HT 11 also remain unchanged. The point cost of DX 13 increases from [30] to [60], while the cost of IQ 12 increases from [20] to [40]; the cost of her ST and HT do not change.

Since basic damage is the same for ST scores above 7, Katrina's thrust and swing damage stay the same. Basic lift is a new characteristic, and we calculate it to be 29 lbs ($ST \times ST / 5$, rounded to the nearest whole number).

For hit points, we have a decision to make. Katrina used to have 11 hit points, equal to her HT score, but she has ST 12, which implies 12 hit points in Fourth Edition. We could stay with 11 hit points by buying the total down from 12 at a cost of [-2], but we decide that we like the new way of determining the default number of hit points and choose not to bother with this extra bookkeeping. So Katrina now has 12 hit points. Her Will is 12, as it was before, and the new Perception attribute is also 12, equal to IQ. For fatigue points, we have the opposite situation we had with hit points -- fatigue points used to be equal to ST, but in Fourth Edition are equal to HT. Again we decide not to bother buying the default total back to the old value, and stay with 11 fatigue points, a reduction of one.

Basic Speed is calculated the same way as in Third Edition, and since Katrina's DX and HT have not changed, remains the same at 6.00. Dodge is now equal to Basic Speed+3, rounded down, which comes to 9, significantly higher than in Third Edition. This is to fit in with changes to the combat system. Basic Move is simply Basic Speed rounded off to 6, the same as before. As Katrina is an average-sized human, her Size Modifier is 0.

Parrying is not mentioned in the character creation section of Fourth Edition -- we'll leave that until later.

Social Background

For this new section of the character sheet, we need to know a bit about Katrina. She is from Yrth, which is a TL 3 society, so we record this as her native TL. Let's assume she is from the country of Megalos -- this decides her native cultural familiarity. She doesn't look to be the sort of character who has traveled extensively, so she probably doesn't have any other cultural familiarities, although we could add those now if we knew she had. Her native language will be the common tongue of Megalos -- English -- and since she is literate she will have both spoken and written capabilities with it. This is the assumed zero-point default level in Fourth Edition, so this costs her no points. She has no other language skills listed, so we are done with social background.

Advantages and Disadvantages

Katrina has three advantages. We look these up on the *Advantage Conversion Table* in *Update* to see how they have changed. Attractive is now recorded as Appearance (Attractive), and costs only [4] instead of [5], but works the same way. Literacy is no longer an advantage at all -- we have already accounted for it with Katrina's native language level. Toughness is listed in the table as becoming Damage Resistance 1 (Tough skin, -40%), at only [3] per level! We record this new name and point cost.

For disadvantages, we check the *Disadvantage Conversion Table*. Alcoholism, Skinny, and Stubbornness are all listed as unchanged, so we record those with their old point values. Berserk is more interesting: we see this is given with a self-control number of (12), for a cost of [-10], rather than the [-15] of Third Edition. We could lower the self-control number to (9), multiplying the cost by 1.5 and making it worth [-15] to match the old point cost -- but then we realize that Katrina's Will, which she uses to resist going berserk, is 12. So, for the same *game effect*, we decide to leave the self-control number at (12) and accept the change in point cost.

We quickly look at Katrina's quirks and decide that they are valid under the new Fourth Edition rules, so keep them unchanged.

Skills

Now we work through Katrina's skills on the *Skill Conversion Table*. On the first run through, we'll ignore point costs and just concern ourselves with any changes to skill names, specializations, and other rules.

Armoury now requires a specialization. Looking at the options under Armoury in Fourth Edition, and Katrina's equipment list, we decide that this probably represents skill in tending her bow and making arrows, so we choose Missile Weapons as the specialization. We see that Fencing skill no longer exists, being split up between a selection of individual fencing weapon skills. Since Katrina has a saber listed as equipment, we change Fencing to Saber at the same skill level. Knife Throwing has changed name to Thrown Weapon (Knife), but is otherwise the same. Savoir-Faire requires a specialization, but checking Fourth Edition we see that the most common specialization (High Society) can be assumed if no specialization is recorded. As this is the most appropriate specialization for Katrina, we leave it implicit. All the other skills look the same, so we record them with the same skill levels as before.

Next we look at the point costs for the skills. Bow has changed from a P/H skill to a DX/A skill, and the cost for Katrina's skill level drops from [8] to [4]. She had half a point in Cooking, and half-points are no longer used, but we also see that Cooking has changed from Easy to Average, so she now needs a full point in it to keep the same skill level of 11. Scrounging, on the other hand, has not changed in difficulty, so we decide to increase Katrina's skill from

11 to 12 so that she now has a full point invested in it. We also notice that Tracking is now based on Perception rather than IQ, but since her scores for these are the same there is no change in skill level or point cost. All the other skills have the same base attribute and difficulty, and none are at levels high enough to run into the point cost changes at high skill levels, so their costs remain the same.

Now we can look at Katrina's parry. This is covered in *Defending* in Fourth Edition's *Campaigns* book. Parry scores are 3 + half the weapon skill, rounded down. This makes Katrina's parry with her saber equal to 10.

Finally, we add up the points. Katrina is now a 134-point character, ready to adventure in Fourth Edition!

Katrina

134 points

5'9", 100 lbs. (SM 0).

ST 12 [20]; **DX** 13 [60]; **IQ** 12 [40]; **HT** 11 [10].

Dmg 1d-1/1d+2; *BL* 29 lbs.

HP 12 [0]; *Will* 12 [0]; *Per* 12 [0]; *FP* 11 [0].

Basic Speed 6.00 [0]; *Basic Move* 6 [0]

Dodge 9; *Parry* 10 (saber).

Social Background

TL 3 [0].

CF Megalos [0].

Languages: English (Native) [0].

Advantages

Appearance (Attractive) [4]

Damage Resistance 1 (Tough skin, -40%) [3]

Disadvantages

Alcoholism [-15]

Berserk (12) [-10]

Skinny [-5]

Stubbornness [-5]

Quirks

Dislikes heights [-1]

Feminist; likes demonstrating she's "as good as any man" [-1]

Picks fights for fun [-1]

Sleeps outdoors when possible [-1]

Talks to animals and inanimate objects [-1]

Skills

Armoury/TL3 (Missile Weapons)-13 (IQ+1) [4]

Bow-14 (DX+1) [4]

Brawling-13 (DX+0) [1]
Cooking-11 (IQ-1) [1]
Fast-Draw (Arrow)-13 (DX+0) [1]
Gambling-12 (IQ+0) [2]
Knife-13 (DX+0) [1]
Leadership-12 (IQ+0) [2]
Saber-15 (DX+2) [8]
Savoir-Faire-14 (IQ+2) [4]
Scrounging-12 (IQ+0) [1]
Stealth-13 (DX+0) [2]
Tactics-12 (IQ+0) [4]
Thrown Weapon (Knife)-13 (DX+0) [1]
Tracking-11 (Per-1) [1]

Designer's Notes

So what sort of issues came up when writing *GURPS Update*? Well, some abilities were dead easy. Flight works the same way and costs the same number of points -- not a problem. Some required a complete restructuring. Flash, for example, is a rather complex natural attack in Third Edition, with multiple effects. It doesn't exist in Fourth Edition, but there are tools to build something similar, using a new advantage called Affliction. After some questions to Kromm on how various new enhancements and limitations worked, I came up with something that does almost the same thing as Flash. And it's listed in *Update* so you don't have to figure it out for yourself.

And then there were a few (very few) abilities that just *didn't work* with the Fourth Edition *Basic Set* rules. Some are superpower-like, and will need to wait for *GURPS Powers*, and the rest are cinematic martial arts skills that need to wait for the new edition of *GURPS Martial Arts*. But the existence of these abilities -- and exposure to some of the amazingly cool new rules in Fourth Edition -- gave me an idea for another way to build some of them. So here it is, completely unofficial, but an example of how easy it is to customize the Fourth Edition rules:

New Limitation

Skill-Based (Variable)

Your advantage is not activated at will; instead you must make a successful skill roll to activate it. You must buy levels in a corresponding Activation Skill just as if it were any other skill. This means you can improve your chances of using your advantage through "training". The activation skill may be based on any attribute. The value of this limitation depends on the difficulty of the activation skill:

Easy: -10%
Average: -20%
Hard: -30%
Very Hard: -40%

Examples

This limitation can be used to construct new skill-based powers, as well as reproducing some Third Edition advantages that cannot be constructed using the Fourth Edition *Basic Set*. For example:

Invisible Boy is a superhero who can become invisible if he succeeds at willing himself to do so. This is Invisibility (Skill-based: Hard, -30%; Switchable, +10%) [32]. To use this power, he must spend points on Activation Skill (Invisibility) Will/H. As he gains experience, he will become better at turning invisible.

Mountain Heart (M/VH) is a cinematic Third Edition skill that allows you to heal 1d hit points with a successful skill roll (after entering a meditative state with Breath Control and Body Control). Something similar could be constructed in Fourth Edition as Healing (Accessibility: Only in meditative state, -30%; Injuries Only, -20%; Skill-based: Very Hard, -40%) [6], plus points in Activation Skill (Healing) Will/VH.

Dexitroboping (P/H) is an esoteric skill based on HT from *GURPS Lensman* that allows you to survive in the vacuum of space on a successful skill roll once per minute; if you fail, you still survive, but lose 1 fatigue point. This could be constructed in two stages. First, define a *Space Support* package containing Doesn't Breathe [20], Immunity to Cold [30], and Vacuum Support [5], totaling 55 points. The Dexitroboping advantage is then the package: Space Support (Costs Fatigue, -5%) [53] and Space Support (Skill-based: Hard, -30%) [39] for a total cost of 92 points. You will also need points in Activation Skill (Dexitroboping) HT/H.

Dork Tower!

Dork Tower!

After-Action Report: My *GURPS Cabal* Game

*"These are the Idiots' chiefest arts:
To blend & not define the Parts . . .
To make out the parts is the wise man's aim,
But to lose them the Fool makes his foolish Game."
-- William Blake, On Art and Artists*

Having done this at least [once before](#) to mild acclaim, I thought I'd present another specific example of what goes on in my own gaming, an Applied Suppressed Transmission of sorts. This campaign followed a more standard fantasy gaming arc; whether that makes it more or less useful to other gamers, I can't say.

My *GURPS Cabal* game ran 16 or so months, from April of 2003 to August of 2004. Two, then three, then four players and I met every Monday night for about four hours at a stretch to climb the Tree of the Sephiroth, with instructive stops along the way. My first two players got to decide what the game was, in many respects; I decided it would be *GURPS* on the theory that it would be nice to start running a regular game that I was regularly writing for. I then let the players decide the setting and tone; they chose a dark fantasy *GURPS Cabal* game set in an alternate history in which Victor Frankenstein infused the European aristocracy with alchemical vigor. (That setting may be found [here](#); my players took it from one of the *Suppressed Transmission* compilations.) They set the starting point (Philadelphia, 1800) and decided who their characters would be; both chose magi, as did the fourth player, who joined the game when he moved back to Chicago a few months later.

*"The Giants who formed this world into its sensual existence and now seem to live in it in chains; are in truth the causes of its life & the sources of all activity . . . Thus one portion of being, is the Prolific. The other, the Devouring . . . These two classes are always upon earth, & they should be enemies; whoever tries to reconcile them seeks to destroy existence. . . . Messiah or Satan or Tempter was formerly thought to be one of [these] Antediluvians who are our Energies."
-- William Blake, The Marriage of Heaven and Hell (Plates 16-17)*

Given the starting place and time, I decided to begin William Blake as a keystone of the game. At the time, I was just beginning to get a handle on Blake, and was very taken with the quote above, which I made the Secret Epigraph of the game. (I later introduced it into a player handout.) Working from that quote, I identified Blake's Giants or Antediluvians with the Nephilim, the "giants in the earth" destroyed by the Flood, submerged beneath the decanic universe as presented in *GURPS Cabal*. This is actually a fairly reductionist, reactionary reading of Blake, as became obvious several months into the game as I continued to do the reading and research. By that time, however, we were stuck with this "war of dueling cosmologies" as the main conflict of the game. (Next time I do a Blake game, though, the action and magic will be internal to the Blake mythos. Note to my players: You have been warned.) By all rights, I should have withstood the temptation to make Blake's work central to the game until I understood it better. Oh, well; nobody seemed to mind, and the images of Blake's giants bursting through the skin of reality gave the game a real grandeur and epic nature that would have been tougher to handle otherwise. Plus, I would have had to rewrite the *GURPS Cabal* magic system. Again.

In the initial research stage, I burrowed through S. Foster Damon's *Blake Dictionary* for the "markers" or "spoor" or "domains" of the various Blakean giants, and for their complex interrelationships. (My job was made no easier by Blake's habit of changing his mind during the poems' creation.) I then developed a list of major conspiratorial actors as per my [standard operating procedure](#). I didn't take my own advice, and probably over-detailed the background: I wound up with six main conspiracies (the reactionary Invisible College and the Reptoids were the only ones that showed up with any regularity, although the Order of the Scarlet Pimpernel got promoted when I combined it with the Rosicrucians, and the Illuminati became my "catch-all" for non-Invisible College devotees of Orc, such as Aaron Burr) and seven major independent actors (of whom [Benjamin Franklin](#) became a McGuffin, the time-traveler (from a non-magical future) Christopher Mellon became an NPC ally, and the vampire Tiberius Melmoth got quickly written out of continuity). In a word, the setting was baroque.

This may have been because I had fallen in love with another weirdness magnet, the forger and antiquarian Annius of Viterbo (1432-1502). He was a Giant-symp, who wrote a vast treatise on the Nephilim, essentially arguing that they got a bad rap, and that Noah was himself a Giant. Annius forged ancient texts to back up his thesis, and to bolster his claim that Italy was the home of the Giant civilization immediately after the Flood, and hence the most important country in the world and the center of the Golden Age and all of civilization. When Pope Alexander VI expressed skepticism, Annius took the Pope up to Viterbo to see freshly excavated Giant "Etruscan" artifacts, which Annius triumphantly translated before the astonished pontiff. This, I decided, *had* to be a previous attempt by the Nephilim to push into the upper decanic world; Annius created a vast, sprawling genealogy and history for his Giants which I adapted to the Age of Blake.

"Of course, the details given in such a book as this from the wealth of source-material are only the tip of a submerged continent of knowledge -- a country with which Blake was familiar -- and I can only report, from my own explorations, that this Lost Atlantis is a land of treasures and marvels."

-- Kathleen Raine, *Blake and Antiquity*

I brought all this stuff together using the old "occult auction" hook; since the players picked Philadelphia, I made Benjamin Franklin's sorcerous executor the center of the web. He was auctioning off a Blake Tarot card (this was a bit I stole from my friend Chris Lehigh's similarly baroque *Call of Cthulhu* game), itself the source of Vast Occult Power. The card was Lightning, which I decided pictured the giant Bromion. All the other guests at the auction were major players in the occult world; the PCs were thrown into the deep end but managed to acquire the card eventually. I had already decided that Lightning would be a major thematic element in the game, linking Earth and Heaven, and Franklin and Frankenstein. Bromion was the "tip of the spear" as the Nephilim tried to use the Promethean Lightning to recreate the world. I intended to do a lot of in-depth stuff with Franklin, with Philadelphia, and with London; I set up some cunning gates and paths and waited for the players to discover them.

Instead, the two of them added a new player. Their roommate joined the game a couple of weeks in, and played a magical construct made of sea-coal, with an Unknown Past and a hidden nest of advantages and disadvantages on his character sheet. Suddenly, I had the central enigma of the game. His Obsession was ascending the Tree of the Sephiroth. Why? Obviously because his unknown creator wanted him to. Who was his creator? I kept it vague; the construct couldn't remember anything, the laboratory (on the site of [Yggdrasil](#) in central Manhattan) yielded only the name "Morley" and a lead into the realm of the Solarian bird-people (put in to retrofit the Reptoids as beings from another dimension, too). Since I already had some notion that poetry (like Blake's) was the other sort of Lightning in the game, I was setting up the potential to make Morley into [Christopher Marlowe](#), using Words of Power to build sub-creations. Why did Morley/Marlowe want his construct to reach the Ultimate Source? As a worm, a Trojan horse containing a re-making spell/poem.

But what this meant was that my nice, subtle, Earthbound game suddenly became a Standard Fantasy Quest, up the Tree, through the Sephiroth. I forced the players to return to Earth between spheres just so I could keep throwing the Nephilimic plans of Jefferson and Napoleon into the mix, but shortly before Lewis and Clark's [voyage](#) became an epic quest, I stopped fighting it and just let the fantasy flow. The Nephilim were breaking into the Spheres, I decided, as well as the material world; as above, so below. I worked on making the scenery amazing, on building a sense of wonder and menace, with just enough period flavor (Franklin's Lightning Rod as the Spear of Destiny, for example) to keep things strange. To bird-men and snake-men I added wolf-men (who became very popular villains) and bull-men (who didn't). I kept reinforcing the themes of poetry and lightning, and introduced enough elements that when the players found continuities or patterns I could play them up. Each Sphere had a damaged (or missing) king, for example; this was sheer laziness on my part, but worked surprisingly well. I never got to introduce Johnny Appleseed, planting new worlds along the mystical Ohio River, but we did get to meet Coleridge in America, and the infant Edgar Allan Poe.

About two thirds of the way through the game, I had the inspiration to finish it at the Villa Diodati in Switzerland, 1816, where Shelley, Byron, and their set told ghost stories as the lightning crashed around them. Here, in our (and my poor lost time-traveler NPC's) history, Mary Shelley saw her first vision of Frankenstein, the original inspiration for the setting. The poets could be tools of the Giants, and I could rip off Tim Powers' *Stress of Her Regard* for all the atmosphere. Right around then, I collapsed the wave function and decided that "Morley" was, in fact, Marlowe,

explicitly linking poetry and sub-creation. (Since every so often, the PCs would try another means of finding out who built their construct buddy, it was easy as pie to slip that piece of exposition into the game -- their next attempt turned out to be the right one! Who knew?) The circuit could close; the lightning of 1752, 1782, and 1816 could all be revealed as the same Promethean spark. The players could decide what to do, and to whom; Morley's plan could be Revealed and (as was right and proper) Defeated. The characters became Archmagi, and the world was remade without those pesky Nephilim to poke their heads through.

For a game that turned out to be three parts travelogue to one part decision-making, I still managed to be surprised a fair amount. The players only rarely complained about the inherent railroading in a quest-fantasy campaign ("Oh, look. Cairo. Who knew?") and willingly found novelty in the themes as we unfolded them and explored them. They worked together well to manipulate my universe to their own ends, which is my real goal as GM in almost any game. I didn't get to use a lot of the stuff I came up with, but the game's rhythm wouldn't have allowed it. I was a passenger on a railroad of my own making, I who "formed this world into sensual existence" turned out "to live in it in chains." My next game is probably space opera; everyone including me needs a break from high magic for a while. But some day, lightning will strike again, and I'll have Blake and Franklin, Byron and Johnny Appleseed, there to catch it. Mark my words.

Temporarily Sans Power

I'm writing my column earlier than normal this week, because -- if everything has gone according to plan -- by the time I'd normally be late-night scrambling to get my column together, there's a good chance that I will instead be at my very first GenCon ever. So I'm pretty excited.

But, presently, I'm still mostly annoyed, because my efforts to get local phone service -- and with it Internet connectivity -- have been . . . frustrating. After exploring every option (short of moving to *another* state), I've concluded that my only hope is to have the internal phone wire people come and investigate. The earliest they can do this is August 24th. In other words, I will have gone for almost three weeks without phone or Internet access . . . almost a month, since the time I packed up the computer and got on the road.

As someone who is usually more tapped into the information stream than a stereotypical cyberpunk hacker, this has been a trying period.

But it *did* remind me of one of a classic trope for a gaming "hook." (Oh, c'mon . . . like I can't tie *anything* back into gaming.)

Although I consider my access to the online world to be a major part of my professional and personal life, the past couple of weeks have shown me that I can get by without it (more or less), and by improvising I've been able to overcome most of the obvious limitations. To generalize, in the comics -- as well as many action, science fiction, or fantasy series -- there is a common adventure premise of denial -- restricting or eliminating the goodies that a character normally has access to. Thus Superman tends to have his powers reduced, removed, or altered about every few months, and the general upshot of the story is that "It isn't the powers that make him Superman; it's his compassion/skill/character/indomitable will/whatever-snazzy-trait-we'd-like-to-emphasize."

For a GM, this hook is tempting; after all, PCs in many games can accumulate power at a frightening rate, and it's always easier to craft challenges for weaker characters than strong ones. But even so, it's still not the easiest idea in the world to pull off. Here, then, are some ideas for getting this technique to work for you.

First, you need to figure out how to implement the power-reducing idea. Probably the easiest is to say it "just happens" -- the heroes wake up trapped in a cell, wash ashore an unknown island, or find themselves stepping through a mundane doorway into a strange alien world. Although this kind of heavy-handedness might seem to be unpopular with players, in general I've found this hasn't been the case. All the gaming groups I've ever used this technique on have realized the unusual circumstances of the premise indicate some kind of temporariness; the heroes will escape out of the prison, off the island, or from the alien world . . . and when they do, their snazzy powers or gear will be returned. (This is essentially the technique used by the classic *Advanced Dungeons & Dragons* adventure **A4: In the Dungeons of the Slave Lords** which has the heroes waking up without weapons or armor as prisoners *in the dungeons of the slave lor* . . . well, I don't want to give anything away.)

Of course, excepting the "stepping through a doorway" idea, this technique usually relies on beginning *in media res* or some other experimental style. Some GMs and gaming groups are more comfortable with [experiments](#) than others.

Another possibility -- one I can heartily recommend -- is making it (more or less) voluntary for the players to divest themselves of their goodies. For example, if a super-spy routinely uses various electronic gadgets, to stop the evil mastermind he might need to go underwater, thus making his gadgets unusable. Or, in a Supers campaign, it might be a property of the Inverdimension to render all metahumans powerless; if the heroes find themselves with a reason to go back, they will know ahead of time what they're getting into. (Of course, the first time they go into this dimension will resemble the "Surprise! You're powerless!" technique above; all latter iterations will be optional.)

In my personal experience, although this method *can* be useful, I find that players sometimes resent it more than the "Surprise!" method. I suspect it's because some players feel that, by setting up impossible situations, the GM has the ability to offer what is really a non-choice. ("Oh, gee; Dr. Cinnaster escaped with the Bombomb through our

transporter to the Inverdimension. Again. Y'know, we really need to put a child lock on that thing . . .") To help reduce potential resentment from the players, the GM should try to keep the amount of blatant manipulation to a minimum, and try to ensure there's a *real* choice. Sure, trying to track the bad guy underwater would ensure that a lot of abilities don't work right . . . but if you can figure out where he's going to strike next, it might be possible to cut him off at the pass without getting your feet wet.

Of course, if the power-reducing environment is an omnipresent part of the campaign world, then the players will probably not mind at all being temporarily powerless if they use it as a "shortcut," information source, or other cheat. For example, if entering the Astral Plane is a route for knowledge in a Fantasy game, but also temporarily cuts the PCs off from magic, psionics, miracles, and the like, then the GM can structure it such that it's never a "required" visit, but the players may wish to go there anyway. Many *Dungeons & Dragons* environments are structured such that abilities don't work right, if at all (*Spelljammer*, *Ravenloft*, or the astral and ethereal realms, just to name a few), and many Umbral realms of White Wolf's *Werewolf* function as a "cut yourself off from power temporarily to achieve some other purpose."

As a final possibility, it may be tempting to give an adversary some kind of "power-reducing ray," hit a PC on the head with a rock so they get amnesia of all their wonderful skills, and some other effect that reduces a character within a game, but isn't necessarily the focal point of the adventure. In general, I recommend against this technique, especially if it only targets a few characters (say, less than half the party). Most players get resentful if it seems they -- and they alone -- have been targeted by the Omnipotent GM Thumb to knock them down. This is *especially* true if the hero needs to go through some rigmarole to return to status quo. ("Ah, *ha!* You're powerless! Well, to regain the spark of magic, you must first climb down to the center of the Earth using some dental floss and a tube of anchovy paste. Oh, and you'll also want some moss to plug your ears from the derisive chuckling of your still-fully-empowered comrades . . .")

However, with some players -- especially those who like overcoming obstacles or wringing out pathos -- this technique may still be useful. Just be careful.

Okay; so you have some ideas for how to knock the poor PCs powerless. Now what?

Wellll . . . not to cut it too short, but now I need to get packed in a hurry and head off to Gen-Con.

Don't worry; I'll pick up this topic next week or so. But in the meantime I'm powerless to continue. (Ha! That's a little self-referential humor right there . . .)

--*Steven Marsh*

The Squire of Bonamy

by [Chad Underkoffler](#)

Genre: Fantasy

Style: Working-class heroes

Theme(s): Liberty vs. Security

To protect their homes, their families, and their way of life against enemies without and within, hometown heroes must rise on the island of Bonamy.

What Everybody Knows

North Map

Geography

The North in General

The Three Kingdoms claim control of the North: 1) *Brochengul*, isolationist, ancient, and mysterious; 2) *Backwin*, once proud but now deluded by nostalgia; and 3) *Firenward*, set on conquest of its neighbors. The Three Kingdoms dance together in a minuet of politics, espionage, and warfare.

However, in reality, the vast regions between the main fortress-capitals of the Three Kingdoms (respectively, *Dernimazon*, *Weisserbaum*, and *Brandauge*) are lawless wilderness, sprinkled with small settlements, chiefdoms, nomadic tribes, and pocket kingdoms. The former harbor village of *Vrai* is one such example: formerly a minor port of Brochengul, it is now an up-and-coming, expansionist city-state, ruled by an oligarchy: the Council of Merchant Princes.

Another example is the island of *Bonamy*, former colony (and earldom) of Backwin, located almost 250 miles off of the northern coast.

Bonamy in Specific

Bonamy Map

The island of Bonamy is blessed with warm (if wet) weather, leading to lush growth on its rolling hills and valleys. Forests of old-growth trees patch the grasslands, while the fields around the major settlements are under extensive cultivation. Beyond the fields lies rough country, free to all for farming, fishing, mining, forestry, and herding.

Bonamy possesses three large towns -- none compare to mainland cities in size. They grew up around the manors of three families of the long-ago Backwin aristocracy which colonized the island, and still bear their venerable names:

Dolarhyde is the best harbor on the southwestern coast, and has the most commerce with the mainland; as the main port of Bonamy, it is the most "cosmopolitan" of the provincial island towns.

Maunburg, the breadbasket of the island, is the closest thing to a capital that Bonamy has, if only for the reason that the majority of intra-island trade happens in its streets and markets. Crops include wheat, rye, barley, maize, root vegetables, gourds, apples, pears, and the (unique to the island) *creamfruit*. Creamfruit has a light-colored, sweet, milky-flavored flesh and a thick purple rind. When fermented, the clear juice of the creamfruit becomes an opaque beige liquor called *korova*, prized for its stimulant properties.

Robdehyde is the best harbor on the eastern coast, making it the target of many pirate raids before the War of Winds (see below). Deep-ocean fishing and aquaculture are its primary industries. Maritime trade is very much a secondary industry, owing to the existence of Dolarhyde.

The mining village of *Shorttop* sits nestled in the foothills of the island's small mountain range, and provides the island with its mineral wealth: coal, copper, tin, and silver in abundance. It is also the center of the island's timber industry, and produces a particularly invigorating variety of creamfruit.

Wats Hill is surrounded by a rolling green landscape, perfect for herding -- goats, sheep, and cattle -- and apple orchards. The region also is home to a particularly tart variety of creamfruit.

Smaller hamlets and isolated homesteads dot the remainder of the landscape, with plenty of space between neighbors. Bonamy is not thickly settled -- the total population of the island is less than one million.

The people of Bonamy fall into certain social classes, reflecting their economic status in terms of land. In rough order of importance are the following:

Largeholders own substantial amounts of land (200+ acres), which they may farm themselves or rent to tenant farmers (called *crofters*). Largeholders are titled "Squire/Squiness." They maintain their local village schools, serve as religious leaders for the annual celebrations and observances, and dispense justice in disputes between their crofters and villagers -- sometimes even called upon to do the same for their neighboring peers.

Smallholders own a smaller amount of land than largeholders (between 50 and 100 acres), and may or may not have tenant farmers. They are called "Franklin/Franklain."

Freeholders own less than 50 acres of land; some simply their own home and a garden patch. Freeholders are addressed as "Goodman/Goodwife."

Crofters are tenants who rent their land from a Squire or a Franklin (with the rents paid in coin, service, or barter); all labor in the hopes of earning enough money to purchase their croft and become freeholders (or even smallholders, for larger crofts). Crofters are addressed as "Crofter/Crofteress."

Artisans (skilled craftsmen and tradesmen -- smiths, millers, tanners, healers, merchants, sailors, and so on -- organized into loose guilds) stand somewhat outside the above structure and provide necessary goods and services to society. As artisans are not tied to the land, their "social level" reflects a combination of the quality of their skill in their profession, reputation, and wealth. Artisans are addressed by their guild rank ("Master," "Journeyman," "Prentice") informally and rank plus profession formally, regardless of their gender -- for example, "Master Smith Londwy" or "Prentice Baker Jewel."

While stemming from Backwinian aristocratic bloodlines in the far past, the division between the classes is much effaced; with pluck and luck, any Bonamite can move up the social ladder. That being said, the largeholder scions of the three old noble families yet command vast power, wealth, and respect, as well as specialized titles: the Squire of Dolarhyde is commonly called "the Harbormaster" (and recognized as supreme in all foreign affairs), the Squire of Robdehyde is also known as "the Defender of the Coast" (and is in charge of coastal defense and military forces), and the very powerful Squire of Maunburg is usually referred to as "the Squire of Bonamy" (and recognized as the first-among-equals in domestic affairs, especially commerce). The Squire of Bonamy is further responsible for the upkeep of the island's roads, runs the Postal Service, and heads the volunteer Warder Brigade during peacetime (sort of a police/fire department).

The predominant religion of the island is a low-key animism/pantheism fusion: there's a single Deity, incarnated as innumerable divine sprits related to features of the natural world. General prayers of need, want, and thanksgiving are usually addressed to the single "Great God," while specific prayers are addressed to the relevant and particular divinity (this tree, this river, this hillock, etc.). The local Squire often leads the community in seasonal festivities.

History

Long Ago (around 10 Generations Ago)

The island of Bonamy colonized during a period of relative peace between the Three Kingdoms. Cultivation by settlers begins. Crown Prince of Backwin visits Dolarhyde on state visit, and dallies with a colonist's daughter; child of this union eventually made Earl of Bonamy for services to the Throne. Bonamite products -- especially creamfruit and korova -- become popular on the mainland; due to this, trade and pirate attacks -- many sailing under Firenwardian "letters of marque" -- increase. Because of the substantial naval presence in the area, Bonamy becomes the favored site for retirement by Backwinian sailors. Towards the end of this period, relations between Firenward and Backwin become tense.

The War of Winds (up to Five Generations Ago)

Increasing friction between Firenward and Backwin finally explodes into war. While the majority of fighting happens on the mainland, there are sizable naval engagements. Brochengul comes into the war on the side of Backwin against the militaristic Firenwardians, but then withdraws support after the Travesty Charge, where thousands of Brochenguldarians are slaughtered through either "Backwinian incompetence" (Brochenguldarian theory), "Brochenguldarian cowardice" (Backwinian belief), or "Firenwardian might" (Firenwardian boast). Brochengul cuts ties with all outside lands and closes its borders. War effectively ends at the *Battle of Kapzhigh* (a major city between Weisserbaum and Vrai on the King's Road), where the spells of Backwinian and Firenwardian wizards interact disastrously. Both armies were vaporized, the city blasted off of the map, and the surrounding countryside devastated by wild magic, creating the hellish landscape known as the Twist. War formally ended by the *Treaty of Tears*, signed by the Queen of Firenward and the Crown Princess of Backwin in Brandauge; neither side is considered the victor. The vassal states of the northern continent are cut off from the centers of their respective kingdoms by the effects of the Twist; pocket kingdoms and petty empires are formed. Bonamy is essentially on its own: luckily, weather and ocean current patterns altered by the creation of the Twist make it difficult for Firenward pirates to successfully attack the island and its merchantmen; unluckily, Bonamite foreign trade decreases.

Yesterday (aka, "the Good Old Days"; up to Three Generations Ago)

In isolation, Bonamy becomes bucolic, peaceful, safe; the major crimes on the island are forms of theft -- cattle-rustling, burglary, highway robbery -- rather than assault or murder, though the latter two are not unknown. In the mind of the Bonamites, the mainland recedes and blurs; they gain their own distinct cultural identity, influenced by their Backwinian heritage, cosmopolitan borrowings, self-reliance, and slow refinement and civilization of their rough environs. The aristocratic titles and perquisites dwindle as commerce-driven egalitarianism grows. Trade with the continent becomes infrequent, and is usually limited to a seasonal flotilla to Vrai. Life is golden and serene.

Meanwhile, on the mainland, warring states around and within the Twist continue to separate the Three Kingdoms from the northern coast early in the period. This stems any major wars between the remaining major powers. However, in the middle of this era, a strong chieftain known as "Brion the Bloody" unites several of the Twist nations into "the Twist Empire." After the death of his first (Twist-born) wife, Brion marries into the Firenward royal bloodline, allying with that Kingdom. However, at roughly the same time, his grown daughter marries into the Backwinian aristocracy. Upon Emperor Brion's death at the end of this period, the issue of sovereignty over the nations of the Twist Empire becomes an international crisis. The Twist Empire falls apart, vast chunks carved away by all Three Kingdoms (Brochengul steps out of its self-imposed isolationism to grab back their "traditional lands")!

Additionally, Vrai begins to grow under the Council of Merchant Princes, rapidly becoming a minor commercial power. At the close of this era and into the next, Vrain trade ships begin visiting Bonamy in increasing numbers. . . to a mix of delight and consternation by the islanders.

Today

The world is darkening. Firenward and Backwin are stirring, gearing up for war over the lands of the Twist. Vrai looks for allies against their southern neighbors. Travelers from Brochengul are on the move, passing beyond their borders in numbers unheard of for centuries. There is the feeling that everything is about to come to a head.

While mostly isolated from these happenings on the mainland, the island of Bonamy is changing as well. The green and golden time of their grandparents is almost past. Near-drought conditions have made last two growing seasons poor, exacerbated by hard winters. Crofters chronically unable to make their rents are being evicted from land long worked by their families; many become bandits or move into other villages looking for work. While there is increased international trade (mostly through Dolarhyde), it brings in foreign ideas and itinerant workers along with foreign goods and gold. Unrest and crime in the major villages is high, spurred by increasing populations of urban dwellers and the concentration of wealth in the hands of the landowners. Piracy is returning to the ocean's waves, while highway robbery booming inland -- and many pirates and highwaymen appear to be "mysterious foreigners." The Postal Service is often robbed, and the Warders are hard-pressed on all sides.

All three of the Heirs to the rule of the island's biggest largeholdings -- Froedrich, son of the Squire; Phillip, son of the Defender, and Meredith, the daughter of the Harbormaster -- took ship for Brochengul after the spring planting, in order to study at the prestigious and exclusive Royal University of Dernimazon, to the confusion and grumbling of many (see below, *The Island Heirs*). Strange figures have been sighted in the highlands and lowlands of the island: figures cloaked in gray, carrying naked swords; vagabonds who spring up as if from nowhere and can instantly vanish into the brush; gigantic birds in the air; titanic leviathans in the sea.

With such omens, it came as no surprise when Wil Sackett, the Squire of Bonamy, fell ill late that summer. The Master Healer of Maunburg -- Salehta -- has worn herself to the bone nursing him, seemingly locked in a combat with Death itself. Meanwhile, the Squire's ambitious smallholder nephew -- the Franklin Otto -- has come to help his uncle administer his duties. While he has sent to Brochengul for his cousin, there are those who whisper that they doubt the mail ever reached the postal ship.

In the meantime, Otto has -- with the Squire's consent, in light of his illness -- taken over running both the Warder Brigade and the Postal Service. Indeed, he has folded the two groups together and increased the combined organization's size half again, in an effort to stem the rising tides of urban crime and rural robbery (see below, *Martial Law*)

Indeed, the Chief Warder/Postmaster General instituted draconian, island-wide edicts. Assented to (more or less) by the aging Harbormaster and Defender, these new laws include an evening curfew, "identity amulets" and "travel scrolls," armed patrols marching up and down the island roads, and even the rationing of goods -- especially export products, food, and korova. (Rationing has, of course, led to a booming black-market trade, bootlegging in korova, and related increases in crime.) A food riot weeks before the harvest in Wats Hill was brutally suppressed by Warders. Some islanders have spoken up against these sweeping changes; derided as foreign sympathizers, these malcontents have been imprisoned, silenced, or forced to escape to the wilderness and live as outlaws.

Right Here, Right Now

Paranoia is in the air. All islanders feel as if they are being watched, because they are -- not just by the Warders, but by their neighbors. Any suspicious activities or individuals should be reported (anonymously) to the Warders. Anyone could be a disguised enemy agent, bent on destroying the peaceful way of life of Bonamy. Violent strangers haunt the towns and highways of this peaceful little island. Individuals *suspected* of colluding with these enemies have been torn from their homes, imprisoned, and interrogated (and some say, tortured). In protest, some suspects have fled the settlements, to take up a rebel's existence -- resisting the Warders and surviving through banditry. And this just helps divide the people even more.

The freedom of all islanders depends on eternal vigilance. And isn't freedom worth suffering a little for? Bonamites must come together in this time of trouble -- only outsiders and troublemakers will protest.

Martial Law

In recent months, Bonamy has been under attack, from outside and inside. The postal service has been interrupted by highwaymen. A number of freeholder and smallholder homesteads have been pillaged and burned, as well as three entire villages (a Shorttop mining hamlet, a Robdehyde fishing village, and a small farming community near

Maunburg). Cropfields across the island have been burned. Pirates have landed on the northern coast. A Wats Hill trade caravan bound for the Maunburg Fair was slaughtered and left to rot on the road. The destruction of the village wharf in Dolarhyde by malignant cunning craft (or was it wizardry?) caused the loss of many goods, several ships, and dozens of lives.

Worse still, the retrieval of a coded letter from a fallen brigand appears to indicate that all of these attacks are coordinated by a single person: a mysterious individual called *the Black Lion* (see below).

So, Chief Warder Otto has taken bold steps, instituting draconian, island-wide edicts. In the absence of his Heir, the aging Defender has ceded substantial military powers to Otto, while he himself focuses on fortifying the main villages and training the Island Guard. And, after the wharf disaster, the Harbormaster assents readily to any instructions given by the Chief Warder.

Some of these edicts (and their rationales) include:

- *Identity Amulets*: All Bonamites must wear an "identity amulet" indicating their name, profession, and home village at all times, or be imprisoned. Amulets will be provided by the village Warder Sergeant. (Foreign invaders will not possess these amulets, and if they steal or forge them, it's an easy matter to determine if the amulet's information is false.)
- *Travel Scrolls*: To travel beyond a set distance from one's designated home village, a traveler must possess a valid "travel scroll" issued by the village Postmaster. Any off-island travel requires special papers, issued by the Harbormaster and vetted by the Chief Warder. (Foreign invaders and black-marketeers will not possess these scrolls, and if they steal or forge them, it's an easy matter to determine so.)
- *Curfew*: All must be within their homes after sunset; anyone found abroad lacking an identity amulet and travel scroll will be taken in for questioning. (There's no reason to be outside of one's village at night -- only smugglers, black-marketeers, brigands, and other criminals need to skulk around in the dark.)
- *Massive Increase in Warders*: Otto has called for all young, fit, patriotic Bonamites to join the Warders -- or the Island Guard under the Defender -- and help protect their homes and families. (There's obviously a powerful, well-organized force of enemies afoot; best be ready.)
- *Road Patrols*: Detachments of Warders patrol the island's roads, and also serve as bodyguards for travelers and caravans. Additionally, Warders are shuffled around the communities -- unlike previous years where they remained in their hometown. (Too many deaths on the roads; redistribution of Warders helps shore up weak points.)
- *Rationing*: It is difficult to sell or purchase food, drink, finished goods, or raw materials for export without the use of a "ration-stick": a thin, scored rod of tin, with different glyphs, gauges, and cross-section shapes for different goods. The local Postmaster controls the ration-sticks used for purchasing goods, while the Warder Sergeant administers the ration-sticks used when selling goods. Ration-stick-segments must be accounted for whenever asked. (This is an attempt to starve out smugglers, criminals, and bandits.)
- *Reportage of Suspicious Activity or Individuals*: All islanders must report suspicious persons or events to the Chief Warder; this testimony is held in strict anonymity. If the report leads to the capture of a criminal or enemy, or saves lives, the informant will be rewarded; however, if it is determined that a citizen neglected to report something they should have, they may be punished (fined, community service, imprisonment, or worse).

While these measures have certainly tightened governmental control of the island, they've spurred Bonamites -- and those foreign devils -- to new heights of criminality. Identity amulets, travel papers, and ration-sticks have led to widespread forgery and counterfeiting. Bribery, graft, and other forms of corruption are growing as people try to evade the new system. With anyone able to inform on anyone else for actions real or imagined, paranoia rules the roost. Rationing has created a booming black-market trade and its attendant crimes; furthermore, a food riot in a hamlet outside of Wats Hill -- caused by a waylaid shipment of ration-sticks -- was brutally suppressed by Warders. (The Warders were particularly vicious in that affray because not one of them was from the region originally, and thus had no history with the villagers.)

Some islanders have spoken up against these sweeping changes, and have been called "foreign sympathizers" or worse, "rebels." These troublemakers generally are browbeaten into submission, thrown into jail, or forced to live as outlaws.

Rebel Groups

There are two groups in rebellion against the rule of the Chief Warder:

1. *The Harrier's Hawks*: The Hawks are hostile to the new law of the island, and attack those trade caravans and Warder patrols that have embraced the new regime. They are based in the hills near Shorttop, and while many escapees from Warder-justice are openly members, they are led by a mysterious person called "The Harrier." They are dedicated to the dismantling of the new, oppressive government and the restoration of the legitimate, traditional social structure.
2. *The Ghosts of Bonamy*: The Ghosts are hostile, not just to the current administration, but *any* administration. They are against both the Chief Warder and the pre-existing social structure, demanding more rights for the crofters, artisans, and smallholders while overturning the powers and perquisites of the wealthy largeholders (granting land to those who actually work it is a core belief). Their base and their membership is unknown, but rumor claims the leader is codenamed "Thorn." They attack largeholders, smallholders, and the aristocrats' Warder running dogs.

Stereotypes

Here are some general stereotypes held by the majority of Bonamites, based on regional origin and exacerbated by the current troubles. While patently obvious that all of the people from an area do not fit these stereotypes, it is nonetheless how most folks reflexively think of "outsiders." (Think of jokes hinging on ethnicity or profession in our world.)

Domestic

Note that each region has a characteristic accent or dialect that a native islander could detect, but a foreign speaker of the Bonamite language may not.

- *Dolarhyders* are highfalutin' egomaniacs, but known for their cleverness.
- *Maunburgers* are unshakably optimistic fatsos, but can really cook.
- *Robdehyders* are utterly pessimistic and straight-laced, but have natural rhythm.
- *Shorttops* are alcoholic klutzes, but known for their perseverance.
- *Wats Hillfolk* are lecherous rednecks, but good with animals.

Foreign

- *Backwinians* are unbelievably noble, incredibly stupid, and ridiculously naïve.
- *Brochenguldarians* are known for their refined tastes, laconic terseness in speech, and inability to express emotion.
- *Firewardians* are touchy and self-important, but generous and flamboyant.
- *Twistlanders* have been warped with powerful wizardry, which has made them prone to insanity and wild runs of luck.
- *Vrain* are friendly and polite, but insanely greedy; they will apologize while stealing your life savings.

Cunning Crafts

Every profession has their own distinct, secret, limited magics -- called "cunning craft" or "craft secrets" -- jealously guarded by the Masters and only taught to the most deserving Prentices and Journeymen. Most cunning craftwork focuses on two things: 1) enhancing the performance and quality of tasks related to the profession; and 2) protecting against situations where there is risk, hazard, or chance -- those things outside of human control. Things that have little inherent danger usually do not have spells associated with them, and magic outside of the scope of the profession is unknown.

Thus, there are few smith craft secrets for drawing wire into nails, but there are small magics associated with steady heating of a forge, proper alloying and tempering, strengthening a weld, or even calming a horse to be shod. A cook's craft secrets include cantrips against a soufflé's fall, removing the bones from fish, accelerating the rise of bread dough, and interfering with food spoilage, but probably don't include spells for influencing the weather or throwing fireballs. A farmer is able to mildly influence the weather and repel small vermin, but would be at a loss in repairing a fishing net or tracking a person through magic. A healer can speed the mending of bones and cuts, bring down fevers, and ease pain, but cannot fly through the air.

It should be noted that while lighting a smith's forge quickly is very similar to lighting a baker's oven speedily, these are *different* spells, with different words and gestures and such. So, while you could place a Prentice of either profession in front of an unlit campfire and soon have a merry little blaze, each would go about creating flame in a different way. Either Prentice *could* learn the other's fire secret, but it would just be an alternate method of achieving the same goal. The only thing stopping them from sharing such is their personal integrity (from the oaths they swore upon being apprenticed) and their fear of reprisal (if they break those oaths).

Lastly, there's a great amount of extraneous information and a mild amount of self-identification involved with learning craft secrets: the individual must have studied other aspects of their chosen profession and envision themselves as a part of it to fully grasp these secrets. (Indeed, this identification is essential in order to glean totally new secrets in the course of daily work -- or through dreams -- which a craftworker may add to their repertoire, and eventually pass on to his own Prentices.) Thus, while anyone can be good at cooking, only someone who sees themselves as a Cook by education or nature gains the magic. This means that few people gain knowledge of more than a single type of cunning craftwork.

Example Occupations: Artist, Baker, Blacksmith, Brewer, Carpenter, Cook, Farmer, Fisherman, Forester, Gambler, Healer, Herder, Hostler, Jeweler, Merchant, Miner, Postal Courier, Sailor, Tanner, Tailor, Undertaker, Warder, Weaver, and even Aristocrat and Soldier.

Wizardry

Wizards have been rarely seen in Bonamy since the War of Winds. Therefore, knowledge of their abilities and nature depends upon rumors and legends. Wizards -- according to the tales -- are very old men who love to gamble, avoid salty foods, cannot drink alcohol, hold deep secret knowledge, and command vast magical powers (if craftwork is a torch, wizardry is a barn on fire).

What Everybody Doesn't Know

Squire of Bonamy's Illness

Is it really a terrible disease, or the infirmities of old age, or has the Squire been poisoned by his ambitious nephew? Both rumors dance around tavern tables, but those that speak the latter too often end up being pulled in by the Warders for questioning.

The Island Heirs

It is unknown how or why Froedrich and his companions Phillip and Meredith gained admission to the Royal University of Dernimazon in isolationist Brochengul, since tendering such permission to an islander would be incredibly unusual. Here are some options for why the trio left:

1. The Royal University is a school of Wizardry, and the three Bonamy youths have displayed the potential to become powerful magic users.
2. The Island Heirs have been fooled into thinking they are welcome at the University, to draw them away from the island.
3. The Heirs have been killed, and admission to the University is a cover story.

4. The Heirs are off gallivanting on the continent, and admission to the University is a cover story.
5. The Heirs are secretly still on the island, and admission to the University is a cover story (see also below, *Who's the Black Lion?*).
6. One of the Heirs belongs to the Brionic bloodline, and is rightful sovereign of the Twisted Empire (see below, *The Twisted Lands*).
7. Some combination of the above.

Wizardry Redux

In many ways, Wizardry is the *craft of magic*, so its secrets involve ways of dealing with the risks of magic itself, augmenting its performance, and perfecting its quality. To step upon the path of wizardry, an individual requires several things: opportunity, memory, insight, creativity, audacity, and time.

Opportunity: Every occupation practices cunning craft in an idiosyncratic way. Each secret of a craft is a piece of the larger jigsaw puzzle of magic. Only those who are exposed to spells from multiple professions with a similar result have a hope of becoming a wizard.

Audacity: A wizard must be bold -- daring enough to acquire the cunning skills of numerous craftsmen by cloaking themselves in the role of new Prentice (sometimes for years), by risking the violation of Prentice oaths (on their own part or on the parts of informants), by spying on honest workers to learn their secrets, or by obtaining the spells by other means (bribery, blackmail, torture, purchase). Additionally, the amount of self-confidence -- or egotism -- necessary to identify oneself as capable of truly excelling in numerous fields is staggering.

Memory: Being able to correctly recall all the different details of the various secret crafts is a necessity for the wizard-to-be. Each profession's hidden approach to mystic power exposes the dimension and texture of the deeper truth.

Insight: It's not enough for the hopeful wizard to simply collect the secret skills of professionals: he must synthesize this knowledge, laying out the "edges" of the arcane jigsaw puzzle. But the pieces in the middle are still lacking. . .

Creativity: . . . so that the nascent wizard must display imagination and ingenuity in filling in the holes in the puzzle. Wizards think sideways, blindsiding ideas, attacking out of the sun. Moving on to fields beyond those fenced by the cunning skills of the human professions, into realms of pure chance.

Time: Lastly, to properly integrate all of the above characteristics -- and the secret knowledge gained through their use -- a wizard needs time. Time to think, meditate, and practice. While there have been wizard child-prodigies, even those geniuses need time to be exposed to many different cunning secrets.

In any case, a wizard's power ripens like good wine over time as more secrets and insights collect in his mind. (A smart wizard-to-be quickly learns the Healing Art and its cunning skills, to prolong and improve his physical life.)

How Does Wizardry Differ from Cunning Craft?

There are three main differences between simple cunning craftwork and wizardry:

1. *Sheer Power:* If craftwork is a candle, wizardry is a blaze (and the magic of an older wizard -- see above -- is a forest fire). This is due to the synergistic power of combining knowledge: adding the smith's ability to spark a forge fire to the baker's ability to spark an oven fire equals flames stronger than both together.
2. *Transformational Power:* A wizard can translate lessons and techniques learned from one set of cunning work to that of another set of known cunning work. This means that a wizard who knew the craft secrets of both Smith and Healer could use the techniques of the forge to create fever in a person or his knowledge of ways to accelerate the body's ability to repair itself to encourage corroded metalwork to "heal."
3. *Reflexivity:* Since Wizardry is the cunning craft of magic, much of the profession's art is tied up in the ability to tweak itself. The existence of Wizardry spells that enhance, change, or counter all magic across the board is a substantial advantage.

So, You Want to Be a Wizard?

Keeping the above in mind, most wizards are self-taught (at least in Wizardry) Renaissance men. Many come from the nobility because exposure to the secret "craftwork" of the aristocrat -- in command and administration -- combines with subsequent education in a profession like Gambler, Soldier, or Healer and the leisure to put two and two together, mystically. However, roughly equal numbers stem from the common stock (with healers, smiths, and gamblers most likely to have the opportunity to learn multiple professions). Certainly, if a wizard sees potential in someone, he may take that person on as pupil and Prentice, but the pupil must still do all the work himself -- learning the drudgeries of Prentice work in several professions -- and possess the necessary characteristics; in many cases, the instructing wizard serves more as tour guide than teacher.

Wizards pursue chance and luck and measure it against skill and knowledge. This is their quest, and it often leads them down strange paths. A love of gambling, games, and riddles is common, as is a relentless curiosity and vagabond nature.

Currently there is at least one wizard on Bonamy: the Black Lion (see below).

Twisted Lands

It's the GM's call if the warping of the Twisted Lands really extends to its populace. While human, inhabitants of the Twist could have inhuman features, ranging from the minor (blue hair) to the major (functioning wings). And that's not even getting into the potentials for bent psychologies or inherently magical natures.

The kingdoms of the fractured Twist Empire are between the rock of Backwin and the hard place of Fireward. If they could somehow reunify (and pick up allies in the form of Brochengul, Vrai, or Bonamy), they just might survive the coming war. Perhaps some Twisted agents walk secretly upon Bonamite streets, searching for a rumored descendant of Emperor Brion . . .

Who's the Black Lion?

GM's choice! Here are a few options and likely goals for the mysterious the Black Lion:

- Twist Agent (searching for Brionic heir).
- Foreign Agent (seeking to subvert, weaken, or capture the island).
- Chief Warder Otto (power, pure and simple).
- One of the Heirs, assisted by his/her compadres (power or possibly outlawry against a bad-guy Otto)
- One of the Rebel leaders (see below).
- A powerful pirate, highwayman, or mercenary captain (who wishes to pluck the sleepy island like a ripe apple).

(See also *NPC Backgrounds*.)

PC Suggestions

PCs should probably be drawn from the freeholder, crofter, and artisan social classes -- a PC smallholder pushes the "working class heroes" vibe. Native islander characters are best; visiting -- and even long-naturalized -- mainlanders will attract a substantial amount of Warder attention. It's recommended that the PCs be teenagers or young adults, at the Prentice or Journeyman levels at their profession, just coming into their own -- this way the scope of campaign can grow as they grow. No PC should probably start as a Wizard. (A largeholder or Master-level artisan PC is probably too wealthy, skilled, influential, and powerful to be a satisfactory PC in the "common man" vein.)

PCs *can* start as Warders, members of a rebel band, or criminals if they want.

All that being said, it's your game: feel free to ignore these suggestions.

Equipment

Weapons & Armor: There's very little weapons and armor on the island, other than family heirlooms or repurposed farming and hunting equipment. The biggest exception is the Warders, who have traditionally worn a leather cap and quilted vest and carried a truncheon and short dagger while on duty. (However, Warders are now going on patrol wearing copper helms and leather jerkins, and carrying maces, long curved knives, and -- sometimes -- spears.)

Suffice to say, in today's paranoid atmosphere, any non-Warder seen wearing armor or carrying weapons is going to arouse suspicion and fear (increase that unease by an order of magnitude for an armed and armored foreigner).

Animals: Many pack, draft, and herd animals have been requisitioned by the Chief Warder for security and logistics purposes. It is very expensive to purchase or rent an animal for any reason. . . and those attempting to do so will attract attention.

NPC Backgrounds

Each character below has their most important *strengths* (generally positive qualities, abilities, skills, or effects) and *weaknesses* (generally negative qualities, abilities, skills, or effects) detailed. In descending order, the ranks are Master, Expert, Good, Average, and Poor. Depending upon the conception of what a character is like, any quality can be a strength or a weakness.

For example, suppose a character has "Spoiled Brat" as a quality. If it's ranked Average or above, it's a strength: the character always gets his own way, can wield undue influence by threatening to sic their Mommy or Daddy on others, might possess lots of cash or gadgets, and people may fawn over them, making life easy. But if the character has "Spoiled Brat (Poor)," this is a weakness: the character has led a pampered and sheltered life, rubs people the wrong way, and expects everyone to bend over backward to fulfill his most minor needs.

(This method of character description is based on the freely-available [PDQ System](#) from [Atomic Sock Monkey Games](#). However, since many game mechanics provide prose "benchmarks" to understand stat or skill levels, the ranked qualities below should be easily adaptable into any desired system and thus do not require the use of *PDQ*).

The Heirs:

Since the Heirs are thought to be absent from the island, they are given minimal write-ups.

- *Squire's Heir* **Froedrich:** Aristocrat, Bookish, Sensitive, Unpredictable.
- *Harbormaster's Heir* **Meredith:** Aristocrat, Clever, Gambler, Merchant.
- *Defender's Heir* **Philip:** Aristocrat, Cautious, Humorless, Soldier.

Franklin Garrick aka The Harrier: A lifelong friend of the Heirs, Garrick had intended to accompany them on their mysterious journey. Unfortunately, his father died earlier in the season, and the young man suddenly became responsible for the family's smallholding. (Angered at the Chief Warder's sweeping changes of island society, and the local Warder Sergeant's abuse of his neighbors and crofters, Garrick has secretly become the rebel leader known as "the Harrier.") Garrick is an Average Aristocrat, Good Athlete, and Expert Hunter.

Crofter Rosemary aka The Thorn: When her poor crofter father was imprisoned for non-payment of rent ("lost" by their largeholder), Rosemary and her neighbors had had enough. Behind the scenes, they began a secret reign of theft, assault, and arson aimed at destroying the wealth of their oppressors. The Warders make this hidden war all the more dangerous, but if they choose to support such an unfair social structure, anything that happens is on their heads. Rose is a Master at Commanding Loyalty, Good at Tactics, and an Average Farmer, but suffers from Poor Health, which limits her physically.

Chief Warder Otto aka Postmaster General, Acting Squire: Otto's mother married a Franklin for love, with the result that he was stuck in the smallholder social class. He wants out -- and up -- back to what he sees as his "rightful place" as a largeholder. To that end, Otto's become efficient, always eking the last ounce of value out of his endeavors. He's an Expert Aristocrat with Expert Wealth, and served as a Warder (Good rank) for a few years before his assumption of the role of Chief. Unfortunately, he is a Hard Taskmaster (Poor), which neither endears him to his subordinates nor permits him time to rest adequately, since he is no less hard on himself than he is on his underlings.

Journeyman Merchant Wiltry aka Squinty: Squinty is overjoyed at the new regime: now he can get back at everyone who ever trifled with him by dropping a word in a Warder's ear. Indeed, he's taken quite a shine to being an informer, and sneaks around at night -- sometimes on a legit travel scroll, sometimes not -- peeking in windows and listening at doors for seditious talk or activities. Squinty has a Good Relationship with the Warders, is Good at Sneaking, and has made some Good Wealth by ratting out "traitors" -- which is lucky, because he's only an Average Merchant. His Poor Eyesight gave him his nickname, and limits his abilities to snoop.

Warder Sergeant Zandimaun: As a Journeyman Miller, Zandimaun was just the local bully. As the region's Warder Sergeant, he's now a bully with government backing. He possesses Expert Strength, and is Poor at Controlling His Temper -- the combination leads directly to his being an Expert Bully. This makes him just an Average Warder.

The Black Lion aka ????: Whichever character ends up being the Black Lion should have the following qualities secretly added to their write-up: Expert Wizard, Expert Actor, Good Soldier, Good Gambler, Good Band of Agents ("the Lion's Pride").

Events & Possible Story Arcs

Cloaked Figures: A trio of strangers is at the village inn, sitting in one of the corner tables. They wear their hoods up, hiding their faces, and speak with an odd accent. What to do? Who could they be? (Foreign legit merchants, bandits on a supply run, disguised Heirs, undercover Warders, the Black Lion's men casing the joint, whatever.)

Old Crofter Withers: Someone has informed on the Vrai-born Withers, who wouldn't harm a fly. Now he's being dragged off to prison. Who framed him? Or is the kindly immigrant really a foreign spy?

Abuse of Power: A Warder Sergeant uses his authority to extort money, products, and "services." What to do? Would reporting it be truly anonymous? Would it ever get followed up on? Should matters be taken into less-official hands?

"Moider!": A corpse is found in an alleyway, stripped of its amulet and scroll. Additionally, an odd burn has obscured the face. What's going on? Is it a villager, an islander, a foreigner? Was the person murdered for their papers, or is that just a blind?

Advice, Opportunities, & Pitfalls

STYLE: Working-Class Heroes

Working Class

Not the knight, but the knave. Not the Master, but the Prentice. Not the individual of destiny, but the man on the street. A hero is the right person at the right time; one who shows courage, daring, and capability in the clinches. Real heroism involves risk and sacrifice, to and for family, friends, ideals, and self. After all, which is more heroic in defense of the weak: a knight taking on a peasant with a stick, or a peasant with a stick taking on a peasant with a knife?

This "Campaign in a Box" focuses on amplifying the danger and need for sacrifice, in order to find what it would take an average guy to dig down deep and cause change. While closer in power-level and outlook to real life than much

fantasy, the distance imposed by the nature and process of gaming can allow a PC to take risks and sacrifices that a player would be hard-pressed to consider.

As PCs act more heroic, they should become more capable. Look at Samwise Gamgee in *The Lord of the Rings*: he grows from a rustic gardener and rube to a boon companion to a staunch warrior. He is not marked by any great providence; he simply follows his heart and his duty, and becomes a hero.

The hardest parts of this CiaB for the GM are 1) interesting players in "just folks" PCs, and making the situation appropriately dire, without being utterly hopeless. (The power and scope of effective cunning crafts may help offset this.)

THEME: Liberty vs. Security

They who would give up an essential liberty for temporary security, deserve neither liberty or security. -- Ben Franklin

Why would the Bonamites stand for Otto's encroachment on their civil liberties? People tend to fear the unknown more than the known, believing that any change will be worse than the status quo. They are used to obeying the law, even when laws are wrong. They are loyal to their society, or what they think of as their society, even if it's changed underneath their feet. People are afraid of pain, suffering, and death -- both for themselves, but also for their friends, families, neighbors, co-workers. And, frankly, people are rewarded in some way for following the social order, and punished for deviating from it. Freedom does mean the freedom to do wrong and hurtful things, after all.

A last point to ponder: one could easily equate Liberty to "Chaos" and Security to "Law." In and of themselves, they describe the state of organization of something. There is no *a priori* moral dimension there; determinations of "Good" or "Evil" must develop from how Liberty/Chaos and Security/Order intersect with the world. And, in this case, too much of only one side is almost certainly an evil: police state vs. anarchy. How much Liberty are your PCs willing to curtail for Security?

GMing Advice on Cunning Craft & Wizardry

If a character wishes to use a cunning craft to perform a task, does it fit the idiom of profession (a smith working metal, a baker baking pastries, an aristocrat administering his lands)? If so, it might work. If not, it shouldn't.

With wizardry, can the character's *player* explain how the knowledge is applied to synergize, and does it make sense? (Using the player's insight for wizardry rather than the character's can serve as an interesting representation why there aren't any more wizards; in some senses, the player's imagination represents the character's magical talent.) If so, it might work. If not, it shouldn't.

If the PCs are in the neighborhood of wizardry (learning new cunning crafts and applying them simultaneously), *let them*. Let them start to realize that they are becoming wizards, and see how they react. (An interesting element might be to have a PC group that fuses their cunning secrets together for effects to become a "wizard" when operating together, even though they are not wizards separately.)

The Order Of Blood & Bone

by Michael Anguiano

The Order of Blood & Bone is a cult of human mercenary priest-soldiers, predicated on combat training as an aspect of spiritual preparation for the afterlife. Order units are typically small, highly trained, well-equipped, disciplined, and experienced. A priest of the Order is usually recognizable from a distinct series of markings: blue right arm/sleeve; black ornament or decoration on throat; and silver ornament or decoration on left ear.

At A Glance

The Order of Blood & Bone is an order of priests for whom combat duty is a form of religious service. Since it fields mercenary units for spiritual rather than economic reasons, the Order has significant latitude in picking and choosing contracts. It maintains a strictly apolitical stance and refuses to pursue any agenda except to the extent of protection and development of its individual members.

The Order currently has 168,420 soldiers hired out in hundreds of conflicts across the galaxy. While a relatively small number as an interplanetary force, rumor puts the Order's planetary reserves at approximately 20 times that number. No field unit is larger than an Order "Army" (8,421 soldiers) while some units are as small as a "Hand" (5 soldiers). Larger units tend to involve greater hardware and heavier equipment. The Order, as a rule, handles all hiring contracts, although a very small number of very small field units are given discretion to handle their own contracts.

Each member of the Order is a priest who has been trained and retrained in a primary skill niche, with crosstraining in a number of secondary skill niches. A soldier who would qualify as "elite" in most other forces would barely qualify for off-planet duty in the Order. While off-planet, Order members are encouraged to learn and gather as much useful data and tech as possible. Order members are also required to tithe 10% of all earnings (in currency or in goods), although most will tithe substantially more.

The Order has an excellent reputation among both employers and other mercenary outfits. Common rumor holds that the Order has never broken a contract, although this is not strictly true. More accurately, the Order will break a contract only in exigent circumstances, usually involving contractual breach by the employer. Units may be recalled in cases of threat to the Order itself, but such incidents are extremely rare and do not usually involve contracted units who are in a mission-critical position.

The Order typically recruits at infancy from the children of Order members and occasionally from orphanages. In rare cases where testing indicates great potential, an orphan may be recruited as late as three or four years of age. If a member's child is not accepted into the Order, that child's welfare and education will nevertheless be provided by the Order through an affiliated religious institution.

In The Field

The Order is organized by four fives, called the Four Hand Rule, which creates a unit out of 20 subunits at each level of organization. Each commander thus has 20 subordinates to consider, while the overall structure is streamlined to increase communication between top and bottom.

# Soldiers	Unit Designation	Commander	Total # In Unit Incl. Command
5	Hand	n/a	5
20	Body	Sergeant	21
400	Platoon	Captain	421
8,000	Army	General	8,421
160,000	Faith	Marshall	168,421

Thus, the Order's mercenary operations currently consist of one full Faith of the Order. This suggests that the Order has another 19 Faiths which are not in the field, but the Order's full strength is a subject of much speculation and an active disinformation campaign.

Mercenary units are normally kept small to maximize the opportunity for personal development during the assignment. In rare instances, two candidates with particularly stubborn learning curves will be sent out as a lone pair (sometimes referred to as "broken thumbs" by other order units).

The priests of the Order do not believe in the glory of combat. They believe that warfare is a gory, brutal, ugly business that demeans all people and cultures that engage in it. Their devotion to the craft of war thereby frees others from that burden. If such ugliness as war must be done, best that it be done quickly, efficiently, and effectively, in order to minimize the disruptive effects on all parties engaged. By presenting ready combat units, the Order also reduces the degree to which a culture must squander resources on developing indigenous combat units, which do not otherwise contribute to that culture. Consequently, the Order believes that it does a service to society at large in fielding mercenary units.

The Order also found mercenary operations to be a useful alternative to war games and field training exercises. Of course, such operations also help provide economic support and assist in procurement of intel, equipment, and materiel. Since making the decision to begin mercenary operations, the Order has done brisk business and now exports units throughout the galaxy. Order units are available to virtually any reliable employer, if the contract will present a useful development opportunity for the Order's members. Most employers, of course, are more concerned about getting trained, reliable mercenaries than whether those mercenaries will learn anything.

By the nature of their faith, priests of the Order put no master ahead of the Order. When hired as a mercenary, the priest is earning money while training for combat, which will serve to strengthen the Order. The fulfillment of their contractual obligations is therefore a spiritual act. To fight for another without payment is to serve another master, which weakens the Order and imperils the souls of the faithful. Thus, a stance of strict neutrality is also a spiritual act. Consequently, an Order mercenary unit is entirely and completely loyal to its contracted employer, even to the point of facing other Order units in the field (although never opposing the Order itself), because to break a contract is an act of sin and heresy. Once a contract is no longer in force, that unit is independent of and bears no further obligation or loyalty to that employer, although most Order hiring contracts will require nondisclosure of sensitive information.

The Order is not particularly interested in money and so is unswayed by the offer of a lucrative payment when other conditions make a contract unsuitable. In point of fact, the Order has far more money than it's ever likely to need. Money, to the Order, is simply a necessary resource that allows it to pursue its primary mission: train and build and develop the potential of every individual member. These priests will be fighting a legion of enemies in the afterlife, and so every one of them must become as effective as possible as soon as possible.

Consequently, every priest of the Order is trained, retrained, crosstrained, and retrained some more, then given a rigorous battery of assessment tests to determine the priest's capabilities, skills, strengths, weaknesses, and developmental issues, which are used to develop the next round of training, retraining, and crosstraining. The accumulated assessment data is also collated into the Order's larger database, which is used to develop projections of every possible combination of individuals in every possible combination of units in every possible situation. As a result, the Order has exhaustive amounts of data on individual and unit performance, which allows the Order to develop every individual assignment for the maximum learning potential for its troops. The Order's assessment and placement methodologies have grown incredibly sophisticated and are constantly revised, redeveloped, and improved. The Order's training and assessment branches are in fact its greatest expense.

As a side note, the Order's predictive database has proven disturbingly effective in projecting the outcomes of a wide variety of military conflicts, presuming that accurate data was available. These projections are used to guide the acceptance of mercenary contracts, in an effort to maximize unit benefit and minimize casualties. The Order also uses these projections to develop investment strategies, which allow it to maintain its financial independence and best serve its members. Outsiders are not privy to this database of information under any circumstances.

The Order also maintains a significant staff for the treatment and maintenance of the priests' emotional and psychological health. The Order regards this as simply another aspect of protecting and developing its members. Of course, the Order cannot afford to tolerate defections, so the "re-education" of individuals is occasionally necessary, although this is regarded as an extreme measure and not to be used unless absolutely necessary.

Spiritual Matters

The ethos of the Order is exemplified by its name. In the ancient history of its culture, blood was originally believed to be the seat of higher thought and to have a mystical connection to the spirit or soul. "Bone," then, is a contrasting reference to the physical structure of the body. Placing "blood" before "bone" elevates one over the other while acknowledging that both elements are necessary and interdependent. The Order of Blood & Bone is thus meant to be a union and intertwining of mind with body and of spirit with substance, while placing intelligence over force, spirit over flesh, quality over quantity, and purpose over structure.

This might seem an odd philosophical stance for a group of warrior priests, but the Order's history is the key to understanding its present. The Order of Blood & Bone was originally formed as a protective quasi-military guard on its native planet of Tovallunar (pronounced "toe-VAHL-yoo-nahr"). This, briefly stated, is the creation myth of the planet's dominant religious faith, the Devotion of the First Issue of Tovallunar:

Tovallunar opened his eyes and beheld a mist of vapor and dust that pressed close about him. He moved through the mist, seeking such others as he could but finding none. The vapor and dust collected across his brow and upon his skin as he searched. At last he halted to consider and so wiped a hand across his brow. Motes of dust and droplets of water were flung from his outstretched hand, growing and collecting more vapor and dust as they traveled through the mist. The mist disappeared as the vapor condensed and the dust was absorbed into countless brilliant points that spun and glowed across the sky.

Overwhelmed in astonishment and wonder at the glittering universe around him, Tovallunar felt he must contemplate this creation at length. He knelt and closed his eyes and remained still as his mind filled with thoughts. These thoughts grew in strength and number as he contemplated and so he remained still to allow an order to emerge. From this contemplation emerged Esaras, the First Issue, as his very uppermost thoughts burst forth and took form. Esaras then drew forth the further Issue, who brought forth a series of other creatures and creations, and across the surface of Tovallunar they spread, bringing the flora and fauna to every corner of their world.

Although here stated as male, several holy texts have Tovallunar as being of indeterminate gender or possibly as having transcended gender in the process of transforming into the world itself. The Issue of Tovallunar includes approximately 40 divine figures, but all others are subordinate to Esaras (pronounced "ess-ARR-ess" which translates loosely as "the first"), more formally known as the First Issue.

During a period of significant global unrest, the First Priest of the Devotion feared for the security and independence of the clergy. Citing the emergence of secret texts, the First Priest introduced the Gray Man as a previously unknown member of the Issue who emerged much later than his brethren. Supposedly, the Gray Man emerged late from the mind of Tovallunar as a protective and stabilizing force during a time of internecine squabbling amongst the divine Issue. The Gray Man, it was said, was there to protect the faith and the faithful, from others as well as from themselves. On the basis of these texts, the First Priest created the Order of Blood & Bone to carry out the work of the Gray Man and protect the priests of the Devotion.

Several centuries later, a schism split the Devotion and several claimed the title of First Priest. Torn between competing factions, the Order abruptly declared itself to be independent and dedicated only to the protection of the faith and the faithful, rather than to the preeminence of any particular orthodoxy. The Order has steadfastly maintained this independence and neutrality into the present day, even in the face of a reconciled Devotion and repeated calls for

obedience by the First Priest.

In the doomsday myths of the Devotion of the First Issue, the ordinary faithful are promised a utopian afterlife, but an evil legion of threatening demons and monsters stand on the threshold of utopia. This Dire Legion will be battled by the armies of life, which will be led by the First Issue himself and spearheaded by an array of mythical creatures in his service. The main soldiers of this army are the priests and the faithful of the Devotion of the First Issue, who must lead an exemplary life in this world to earn the privilege of fighting in the next. The quality of their souls, it is believed, will lend them strength to overcome and to achieve paradise. The weak will be impaled upon the battle spikes of the Dire Legion and carried with them into hell.

The holy texts present this more or less as a *fait accompli*. However, the Order does not believe that the struggle will be so simple or so easily won. Nor does the Order believe that mere faith will provide the strength to win the Great Battle for paradise. Led by the Gray Man, the priests of the Order will form an elite cadre of souls which must make the difference between salvation and damnation for the rest of the faithful. With the eternal fate of millions of souls in the balance, the Order must train its priests to be the best soldiers in this life so they can be the best soldiers in the next. Only then may salvation be achieved, for themselves and for the faithful of the Devotion.

A member of the Order is identifiable by three particular markings. The first is a black ornament worn at the throat, which usually takes the form of a pendant on a short chain, although a black collar is acceptable. The second is a silver earpiece on the left ear, usually a silver hoop that encircles the pinna, although chrome may be used instead. An earring or piercing of some kind is an acceptable variation. The third is a blue sleeve on the right arm, although the arm itself may be painted blue instead.

The first and second markings designate a priest of the Devotion of the First Issue and are commonly found among the clergy on Tovallunar. These signify that the priest can only hear and speak with the pure voice of the divine. The silver purifies that which passes through, while the black absorbs the impurities of that which is sent forth. The third marking is unique to the Order and signifies service to the Gray Man, whose right arm has been stained in battle with the blue ichor of demons. Rumor (and disinformation) is that no Order member is seen without these markings. However, a member may dispense with any or all of these markings if necessary for the performance of duties. Additionally, a member may eschew the blue sleeve if not on combat duty, although almost none will do this.

Priests have significant discretion in their personal behavior. They are directed to follow local rules where possible and reasonable, but otherwise they are free to indulge themselves so long as the reputation or operations of the Order are not damaged. Any personal costs incurred must be paid from that individual's personal funds. The Order is willing to step in and settle matters where necessary to protect the Order and its other members, but the offending individual is usually sent back to Tovallunar for treatment and might not be allowed off-planet in later assignments.

Working Against The Order

When facing a mercenary unit of Order priests, do not confuse being holy with being nice. Their rules of engagement and conduct are mostly set by their employer, except for elements of self-preservation and general prohibitions on rape and mutilation. Order units will kill, raze, and destroy as necessary within the terms of their contract.

Do not presume on friendship with individual members of the Order. Even if you have worked with an Order priest in a previous conflict, that priest may be currently contracted to the opposite side of any present conflict. Further, any information you have may be deliberately false, as part of the Order's ongoing disinformation campaign to protect itself. The Order has designated specific misrepresentations to be spread by those priests who are proficient in deception, with transparently false misrepresentations to be spread by those who are less effective.

Be careful of physician-trained members of the Order, which are not limited by any Hippocratic Oath. An Order medic has a set of skills which are to be used in service of the Order. This skill set allows them to heal friendly troops and to more effectively damage enemy troops. Medical training is often a supplement to interrogations skills and vice versa, so that the medic can most quickly and effectively extract the necessary information with the minimal lasting damage to the subject(s) (presuming the situation does not indicate that disposal of the subject would be more

appropriate in the scope of the conflict).

Do not assume that support personnel are less dangerous. All Order personnel are repeatedly rotated through virtually all roles within the Order, from combat to command to support services to training to assessment. A medic may be crosstrained in aviation tech, close combat, and navigation. A sniper might be reassigned as a small spacecraft combat pilot, theologian, or postmaster.

Rank is a fluid and temporary thing in the Order, regarded as simply another means to develop the potential of its members. Most of the Order's priests are given command opportunities at regular intervals, with their performance simply more data for assessment. Every ranking officer knows he or she will be sent back for retraining and probably reassigned to facilitate stronger growth development in other areas. Off-planet command is usually reserved for more experienced personnel, but the central command does like to throw in a surprise now and then. Consequently, the hostility typically found between enlisted personnel and officers simply doesn't exist in the Order's units.

Employers who willfully breach contracts will initially face legal action by the Order. The Order has little interest in litigation, but considers it useful to make a public issue of seeking redress. The employer in breach will typically settle quickly after a series of assassinations, which serves to reinforce the Order's reputation, which in turn serves to reduce future collection costs. If the employer is beyond legal action or refuses adequate redress, the Order will impose the Rule of Doubled Retribution. Under this rule, the Order will detail a number of covert operations units to inflict a specific monetary amount of damage to the recalcitrant employer. This amount is double the amount of redress owed to the Order, plus double the cost of the covert ops itself, plus double the cost of the Order's standard commission for a contract of this nature. The damage might be inflicted on infrastructure, personnel, materiel, administrative structure, or data systems.

Adventure Seeds

The Order of Blood & Bone is suitable for any interplanetary science fiction campaign. The Order can be used as a plot device for adventures, as a background element to connect adventures or characters, or as springboard material for new characters. With a bit of adjustment, the Order can also be scaled down to an obscure priest cult operating strictly on Earth, making the Order suitable for use in cyberpunk or near-future espionage/military campaigns.

- **"Hey There, I'm Designation 7-55/12-362-29-5K, But You Can Call Me Otis."** The heroes are hired or assigned to work with an Order pair of "broken thumbs." Any PC preconceptions or stereotypes about faith, priests, mercenaries or doctors will provide ample fodder to a GM. After a brief period of working together, the adventurers meet the pair in a later adventure without realizing that the pair is currently contracted to their opposition. Again, PC preconceptions will provide ample fodder to a GM.
- **Collections!** The heroes work for a client who has defaulted on an Order contract. The client is now faced with a bill and a friendly note requesting prompt payment. Obviously, the client has no intention of paying, so the matter is assigned to the PCs for resolution. Legal action will soon be the least of their worries.
- **"May the Force be . . . Holy Crud!"** In a *Star Wars* universe, Force-sensitives will be stunned by the planet Tovallunar's resonance with the Force. Funny how myths often contain a particle of truth: in the Order's creation myth, Tovallunar is both the divine creator and the home planet. Meanwhile, the Empire is concerned that an unaligned military group like the Order might be co-opted by the Rebels, while the Rebellion suspects that the Order is an Imperial tool. So in their effort to maintain neutrality, the Order keeps a low profile and zealously guards the location of its homeworld.
- **Sheep in Wolves' Clothing.** The heroes are hired to impersonate an Order unit. Aside from their actual combat duties, the PCs might be directed to engage in conduct that will discredit the Order. They might also face people with a score to settle against the Order. A genuine Order unit may be righteously angry at the PCs' charade, or perhaps just amused and indifferent. Of course, it's possible that the Order itself has covertly hired the PCs as decoys (which might explain why that genuine Order unit was laughing so hard . . .).
- **You're in the Order Now . . .** A starting PC might be a member of the Order, with the attendant priestly requirements and obligations to the Order. The drawback is that the PC has to be under contract to somebody the entire time (even if only another PC), or else the Order might consider reassignment. The benefit is that the hero

will be better trained and better supplied, with the occasional active assistance of other Order units. Additionally, with a PC member of the Order, the flip side of the above scenarios is now possible.

Alternate Agencies

for *Spycraft*

by Olivier Legrand

In a recent Campaign in a Box article, Chad Underkoffler introduced us to the high-action, thrill-packed world of [Spy Games](#) and its game-themed agencies: CHESS, POKER, WHIST, CRAPS and Rule 8. The purpose of the present article is to translate this setting information in *Spycraft* game terms.

In the world of Spy Games, agency allegiance replaces standard *Spycraft* department training. Like department training, this allegiance grants some special talents and benefits. It also affects a character's choice of class as well as her starting experience level.

CHESS Ops

Extra cash & tech: +5 budget points as part of their personal budget; CHESS agents also receive +2 budget points to each mission budget, plus an extra point at levels 2, 4, 6 and so on. They also get +1 gadget point at the start of each mission, plus an extra point at levels 4, 8, 12 and so on.

Elite training: 4 extra skill points at 1st level and +1 skill point at each additional level.

Bonus feat: any covert or gear feat.

Starting classes: Starting CHESS agents may qualify as Rooks (Fixers), Knights (Soldiers) or Bishops (Snoops). CHESS agents are the crème de la crème of the espionage community. They automatically start their career at 3rd level, to reflect their top qualifications and expert training (remember there are only 32 of them). CHESS agents may never qualify as Pointmen. This reflects their limited ability to improvise in the field, as well as the highly specialized nature of their training.

POKER Ops

Natural improviser: +1 to all Inspiration checks, plus an additional +1 at levels 4, 8, 12 and so on.

Deck: Each Poker agent receives a Deck which grants 100% safe communications.

Bonus feat: any style or chase feat.

Starting classes: POKER agents are extremely competent and start the game at 3rd level. Compared to their CHESS counterparts, they are more jack-of-all-trades than specialists: to reflect this, they must divide their 3 levels between their division class (Faceman for Hearts, Fixer for Diamonds, Snoop for Spades and Soldier for Clubs) and a secondary class (Pointman for everybody, except for Clubs who qualify as Soldiers/Wheelmen).

WHIST Ops

UN sanction: WHIST agents enjoy full international authority and jurisdiction, giving them considerable freedom of action on a worldwide scale.

Cadre: +1 skill bonus to all Bureaucracy and Diplomacy checks and an extra +1 at levels 4, 8, 12 and so on.

Bonus feat: any style feat.

Starting classes: WHIST agents may select any class and begin the game at 2nd level.

CRAPS Ops

Extra cash & tech: Same as CHESS agents.

Gearhead: +1 skill bonus to all Computer and Electronics checks and an extra +1 at levels 4, 8, 12 and so on.

Bonus feat: any gear or style feat.

Starting classes: CRAPS operatives may select any class and begin the game at 2nd level.

RULE 8 Ops

Informed: Rule 8 operatives are walking encyclopedias on worldwide politics, legal systems, governments etc. They get a +1 bonus (and an additional +1 at level 4, 8, 12 and so on) on Education checks pertaining to these topics.

Public support: Rule 8 operatives may often benefit from their organization's very favorable public image. When using this positive reputation to get help or gain support from *civilians* (i.e. people who do not belong to the Spy Games), they are granted a free action die on Charisma checks or Charisma-based skill checks.

Bonus feat: any basic skill feat. Most Rule 8 operatives have the Ordinary Past, Scholarly or World Traveler feat.

Starting classes: Rule 8 does not employ Soldiers or Wheelmen. Most Rule 8 operatives qualify as Pointmen or Snoops. They start the game at 1st level.

The Seven Deadly Magics

For *GURPS*

by David Morgan-Mar

At many times throughout human history, the practice of magic was considered evil. Profane. *Sinful*.

If magic is a sin, maybe sins are magic.

This is why the church rails against sin. It has nothing to do with your eternal soul. It's all about maintaining control, keeping the populace in the dark, suppressing the rediscovery and use of magic. Unfortunately for the church, there are always sinners, and thus always people who are able to use these powerful supernatural forces.

In fact, most people will experience the strange thrill of unexpected mystical power while in the throes of a particularly sinful experience or emotion. Perhaps fortunately, few ever understand what has happened, or make the connection between their own behavior and the events around them. Of those who do comprehend what has happened, many are repulsed by the moral implications and become cleaner-living, more pious people. Anyone who has been living an irreligious or amoral life and suddenly "finds" religion -- embracing the teachings of a church, becoming an active evangelist, and crusading against the sins we are committing -- has probably done so because he has glimpsed the true horror of the human condition and what will befall us if we descend into the depths of sin.

But some people see the truth and embrace it. These are the Sinners. They are the scum of the Earth. The dregs of society. The lowest of the low, the people who commit crimes against human nature and society for the sheer enjoyment they get out of it. The people everyone else would least want to hold any form of power. But this is exactly what gives them their power.

There are seven distinct types of magic -- each controlled by one of the Deadly Sins. Most Sinners are only aware of one Sin -- the first they stumbled across and gained an understanding of. Once they have this power, they usually don't need any other, so they don't find them.

Using the Sins in Games

Because the power of the Sins is derived from emotional states, personal convictions, or the equivalent of *GURPS* mental disadvantages, they can be difficult to quantify in game terms, either intrinsically or without being game-mechanically abusive. The crucial aspect is that the sin must be committed for its own sake, not for the power it brings. You can't just decide to be angry; you either are or you aren't. The sins cannot be controlled like that. The powers only manifest when a Sinner is sinning for his own personal depravity, and not consciously trying to make use of the power.

(In *In Nomine* terms, this would include a mortal spending all his Essence unconsciously, while in pursuit of sin. This also implies that any mundane can use these abilities, while those who can spend Essence consciously *cannot!* However, if an appropriate Demon Prince who is not deliberately shielding his power is nearby, the GM may rule that *any* Sin, committed with "pure" intentions or not, will gain these benefits -- and that the Word-leakage will inspire Sinning in the first place . . .)

Using Sins as powers available to PCs thus relies heavily on GM judgment of when they will manifest. In effect, they are a GM tool, not something the players have access to. In many games, the PCs are heroic types anyway, and should shun the use of such ethically dubious powers and possibly even be working actively against those who abuse them.

The Sins are better used to characterize NPCs. Villains can be given uncanny amounts of influence and supernatural

abilities through their sins. This can work in a secret magic setting, where the PCs are initially unaware that supernatural powers exist, or in a slightly more open campaign where some people know of the Sins and work to suppress them and defeat those who use them. These sorts of settings can fit the various moods of genres ranging from Victorian horror, through film noir, to cliffhanging 1930s adventure. They can also work in mystical modern day settings, from the gritty Shadow War of *GURPS Voodoo*, to TV-inspired settings like *The X-Files*, *Buffy*, and *Charmed*.

Special *GURPS Fourth Edition* note: Unless indicated, all *GURPS* game mechanics apply to Third Edition *and* Fourth Edition. Differences between editions are noted where necessary.

Wrath

But beware of the dark side. Anger, fear, aggression; the dark side of the Force are they. Easily they flow, quick to join you in a fight. If once you start down the dark path, forever will it dominate your destiny.

-- Yoda, *Star Wars Episode V: The Empire Strikes Back*

Wrath is the easiest of the magical sins. In the heat of anger, people often perform feats of strength or skill they would have no chance of doing in a calmer frame of mind. Wrath is the magic of increasing one's own physical abilities.

The best athletes are usually the temperamental ones. They discovered early in their careers that getting mad when they started to lose meant they didn't lose so often. Bad line call? Throw a tantrum. Your opponent won't stand a chance.

But most wrath Sinners are members of the seamy underside of society, where emotions don't need to be controlled and anger flows freely. Petty hoods who learn how to tap their wrath quickly move up the criminal hierarchy, becoming mobsters and gang leaders. Once ensconced in a position of power and influence, the Sinner needs to tap his powers only rarely, to keep in line any subordinates or opponents who displease him. Don't aggravate the capo.

But some Sinners don't stop there. Their anger runs deeper and has more targets. The unstoppable psycho killer is no mere figment of horror movie imagination. These people harbor a deep hatred of humanity; their wrath bubbles to the surface easily and grants them access to strength and stamina beyond mortal ken.

Game Effects

The first level of wrath is equivalent to a minor altercation or a typical reaction to an annoying event. Examples include a shouting argument, minor road rage incident, giving someone the finger, or aggravation resulting in physical abuse of inanimate objects. Wrath of this intensity grants the angry individual a minor increase in either strength, stamina, or physical skill, as appropriate to the person's immediate goals and actions. For example, a tennis player throwing a tantrum would improve his tennis skill, a programmer trying to throw his computer across the room would gain strength, while a shopkeeper chasing a thief would benefit from stamina. In *GURPS*, this is a single point bonus to ST, HT, or a physical skill. (In Fourth Edition, this may instead take the form of a more specialized increase, such as to Lifting ST or Fatigue Points.)

The second level of wrath involves unrestrained desire to commit harm on another person. Everything from throwing a punch to spraying bullets counts, but only if done in the heat of anger -- a cold-blooded murder is worthless. This grants either a major increase to strength, stamina, or physical skill, or minor increases to all at once. In *GURPS* this is a single increase of 1d.

The third level of wrath involves unrelenting hatred and anger at multiple targets accompanied by extremely violent actions. This grants the Sinner major bonuses to strength, stamina, and all physical skills. In *GURPS* this should also include one or more levels of the Hard to Kill advantage.

Greed

They were once men -- great kings of men. Then Sauron the deceiver gave to them nine rings of power. Blinded by their greed, they took them without question.

-- Aragorn, *Lord of the Rings: The Fellowship of the Ring*

Greed is all about possession of whatever society values. If you collect and hoard enough riches, you become powerful. Everyone knows it. The "rich and powerful" is one group with both these qualities, not two separate groups.

Greed is the power to mold society. It is influence on a mass scale. If you are greedy enough, you can control trends and dictate widespread patterns of behavior. The rich get richer. Well of course they do. Greed gives them the power to manipulate society to their whims. And what do they want most? More wealth.

Greed Sinners are often captains of industry. Accumulated wealth gives them the resources to set up businesses. The magic of greed makes them successful. Who decides what new fashions or music trends or new gadgets will be popular this year? Not the consumers. At the top of each successful corporate tree sits a Sinner, exerting his will on the world and making the public want more of his product.

Have you ever wondered why an inferior product can so totally dominate a market sector, despite the existence of superior alternatives? Notice those alternatives are often the products of less successful companies, or even non-profit organizations. In other words, there is no greed behind them -- they are powerless in the face of what really dictates our buying patterns.

Game Effects

The first level of greed is typically encountered in events such as finding a wallet and not turning it in, kids stealing cash from their parents, or minor tax evasion. This empowers the greedy person to plant a short term suggestion in the spending habits of people within direct communication range. This is a minor suggestion effect, which can only make people do things they might be inclined to do anyway, and which can be overcome with willpower. About the only people who benefit from this power are beggars, who sometimes have a lucky day in which they find some cash and then have people behave much more generously to them. In **GURPS** terms, this is a weaker form of the spell Mass Suggestion (p. M68), with suggestions going against safety or beliefs resisted automatically.

The second level of greed corresponds to theft of significant quantities of cash or valuables or major tax evasion. When planning or perpetrating the act, the Sinner may plant a longer term, stronger suggestion in people about what to do with their wealth. This can be communicated by long-distance targeted appeals such as phone calls, letters, or -- more and more importantly -- e-mails. This explains how Internet scammers can actually find people gullible enough to fleece. In **GURPS**, this is a full-blown Mass Suggestion with a duration of a day.

The third level of greed involves major breaches of trade law, safety regulations, or intellectual property rights with the goal of securing vast profits. This allows the Sinner to force an imperative on all people by any sort of proxy communication, including media advertising and word of mouth, as long as it involves spending their own money. In **GURPS**, this is a Lesser Geas (p. M68) with the restriction that it can only dictate monetary outlays.

Lust

Lust is to the other passions what the nervous fluid is to life; it supports them all, lends strength to them all . . . ambition, cruelty, avarice, revenge, are all founded on lust.

-- Marquis de Sade

Lust is the desire of sensual pleasure. Sexual satisfaction, visual arts, sublime music, exquisite perfumes. The lustful wants to fill his senses with hedonistic experiences, deriving his own personal enjoyment at the expense of all else. If he goes far enough, he will find his senses sharpened to make the most of pleasure obtained. At its greatest expression, the lustful gains access to extraordinary sensations.

Game Effects

Lust at the first level is characterized by the transient pleasure most people get from events intense in sensory input. The act of sex, listening intently to music, savoring a fine wine -- all these things act to magically enhance the sense involved with the experience. The tingling of the skin a lover feels is greater sensitivity to touch. Concentrating on enjoying music makes it easy to pick out instruments and nuances of the sound texture. Really appreciating a good wine stimulates the nose and palate more than knocking back a glass of house red. This is a minor increase in only the senses directly involved with the experience. In *GURPS*, this is a level of Acute Vision, Hearing, Taste and Smell, or an analogous improvement in touch. (Fourth Edition has an Acute Touch advantage as a type of Acute Sense.)

Second level lust occurs when the Sinner's every action is calculated to increase his own sensual pleasure. He may take a job and work well to finance pleasurable activities, but may not engage in purely intellectual pursuits or any act primarily designed to make anyone else happy. The ultimate motivation for everything must be hedonistic. At this level, the Sinner experiences all senses heightened to a moderate degree. In *GURPS Third Edition*, this is 3 levels of Alertness; in *Fourth Edition*, it is 3 levels of Perception.

Third level lust is achieved only by those who do everything for sheer pleasure, without planning, reasoning, or thinking about the consequences. When any options are present, they will always take the one that most appeals to their current desires. They have no compunctions against doing anything, either for moral, ethical, or legal reasons. Such people would not last long in society, but for the powers gained: vastly increased abilities in the normal senses, plus access to magical extrasensory perceptions such as clairvoyance and x-ray vision. In *GURPS*, this can be treated as a combination of Microscopic and Telescopic Vision, Parabolic Hearing, Discriminatory Smell and Taste, Sensitive Touch, and possibly additional senses such as Spectrum Vision (Hyperspectral Vision in Fourth Edition), Penetrating Vision, Sonar Vision (Scanning Sense), Subsonic Hearing, Ultrahearing, Faz Sense (Vibration Sense), Magnetic Sense (Detect Magnetic Fields), Enhanced Time Sense, and Sense of Perception (which has no Fourth Edition equivalent, but has components of Clairsentience).

Sloth

Sloth is of all the passions the most powerful.

-- Samuel Beckett

The slothful don't want to do anything. They would much rather other people do things for them. In an extreme state, the lazy person will find that other people *will* start doing things for him.

The power of sloth is the power of suggestion. "Can you grab me a beer on the way past the fridge?" is just the beginning. Most people exercise this power on a casual basis, without even knowing it. People aren't carrying out your whims because they are being polite or helpful -- they're at least partially *under your control*. But most lazy people eventually do get up and do some things for themselves. If only you *never got up*, your power would grow . . .

Game Effects

First level sloth is the sort of laziness most people go through now and then: not getting up to answer the door, couldn't be bothered cooking dinner. This grants the slothful person the power to suggest an action to one person. The suggestion must be communicated by normal means, most often verbally, and can be resisted by willpower. It can involve any action that achieves something the Sinner could do for himself, if only he were not too lazy. "Hi, can you deliver a pizza to . . ." Of *course* they can. In *GURPS*, this is a Suggestion (p. M68).

Sloth of the second level involves inordinate laziness, often to the point of neglecting physical fitness and personal hygiene. A Sinner at this level neglects work duties and cannot hold down a job, unless he uses his power. That power is the ability to make a single person follow any direct orders, so long as they are not physically harmful. In *GURPS*, this is Loyalty (p. M68).

The ultimate slothful Sinner doesn't do anything that he can comfortably have someone else do for him. The entirety of every day is spent in sedentary leisure pursuits, without interruption for any work or household chores. This grants the Sinner ultimate power over a single person, as directed. In **GURPS**, this is Charm (p. M68).

Gluttony

We only dislike the glutton when he becomes a gourmet -- that is, we only dislike him when he not only wants the best for himself, but knows what is best for other people.

-- G. K. Chesterton

Gluttony is overindulgence, not just of food, but of anything. Collectors and hoarders are gluttons in their own way. They consume things, usually the best selection from what is available. A glutton wants it all, he wants the best, and he wants it now.

Gluttony seems a self-destructive and scorn-worthy lifestyle. Strangely, however, conspicuous gluttons are often admired and even worshipped, and can have health and longevity in the public eye far beyond what one might expect if oneself were to behave in that way. Rock stars and the most outrageous Hollywood celebrities are classic gluttons.

Game Effects

At the first level, a glutton feels a desire to have *more* of something he already possesses, either in quantity or quality. This gives the Sinner the ability to discern quality like an experienced connoisseur, or to detect additional resources that will satisfy the craving. This allows the dining glutton to make the choicest selections from the all-you-can-eat buffet, or the collector to find the objet d'art he wants amidst the dusty recesses of an antique store. In **GURPS** terms, this is equivalent to a variant Measurement (p. M54) spell to determine value or quality, or a variant Seek spell targeted at the desired object.

Second level gluttony is the compulsion to *always* have more of a particular item. Chain smokers, diners who never stop snacking between (large) meals, collectors who buy every new release and comb eBay daily for out of print items for their collection. These people gain the power to keep doing what they do. The chain smoker strangely never succumbs to lung disease; the eater may be overweight, but is robustly healthy; the collector always seems to have just enough credit left to purchase his acquisition, and an empty niche at home to stuff it into. These are varied effects that must be put into game mechanics on a case-by-case basis (and are cumulative with the first level effects).

At the highest level, a glutton is obsessed with his object of desire to the exclusion of all else. Nothing matters more than the next hit of consumable or collectible. Anyone who acquires so much on a whim must be powerful, influential, and worthy of respect -- and so they are. People meeting the glutton are struck by his aura of conspicuous consumption and obvious high social standing. He attracts fans and gains positive reactions from the masses. In **GURPS**, this can be represented by levels of Status or Reputation, in addition to the effects of the first two levels of gluttony.

Pride

Riots? But Paris is the most beautiful city in the world. Why would my people feel anything but pride and contentment?

-- King Louis XIV, *The Man in the Iron Mask*

Pride is all about feeling superior to other people. If you pull it off with enough confidence and chutzpah, it will be true. This is the magic of pride.

We've all seen them. Those utterly self-confident people who look as though they belong anywhere. They bluff their way through the toughest situations with bravado and derring-do and, infuriatingly, it always seems to work for them. They never get their comeuppance. Of course not. They don't believe they deserve it.

This is the guy in the sleek convertible sports car, with a girl on each arm, dodging through the traffic faster than anyone. You want to punch his face in, but he flicks a smile at you and you let him into your lane. Then you fume at yourself, "What the heck was I thinking?" Whatever he wanted you to think.

The ultimate proud Sinner is convinced he is the greatest. All others are but lowly worms worthy of nothing but contempt. This is megalomania. Yes, this is how Hitler rose to power.

Game Effects

The lowest level of pride is that small smug feeling of being the best that comes to many people when they achieve something noteworthy. It appears at graduations, weddings, births, and other such events. The proud person becomes more charming and charismatic -- a subtle effect, but one that can be noticed. Even photos of the happy people turn out looking more attractive than normal. In *GURPS*, this corresponds to one temporary level of the Charisma advantage, or possibly Appearance.

Pride of the second level is the sort displayed by particularly conceited individuals who attend cool parties, disregard others' right of way on the road, and generally believe themselves to be the cream of society and the bee's knees. To many people, this serves to make them appear just how they see themselves. Such people are somehow charming, attractive, and persuasive, and can talk themselves into or out of most tricky situations with confidence. In *GURPS* terms, this is 3 levels of Charisma and +3 to Fast Talk skill.

Third level pride means the Sinner is totally self-centered and truly believes himself to be the coolest, most suave, sophisticated, and capable person in existence. In *GURPS* this grants 5 levels of Charisma, 1d-3 of Appearance, Voice, and +5 to Fast Talk skill.

Envy

It seems that envy is my sin.

-- John Doe, *Seven*

Envy is the most insidious sin. It eats the envious away from the inside, as they covet whatever they cannot have and resent those who have it. This negative energy projects outward and destroys lives around the Sinner.

Those in the company of envious people start to find their own fortunes fading. The envier gloats at each misfortune and this just seems to make things worse. Eventually it reaches a point where the envied person has fallen so low that he is not worth envying. Then he can slowly claw his way back -- until envy strikes again.

Game Effects

The first level is a brief burst of concentrated envy directed at a particular person. This is not the vague low-level envy of rich or powerful celebrities that many people feel sometimes -- it needs to be aimed at a specific individual physically present. Examples include the envy of seeing a friend's hot new car, or a co-worker's vacation photos. This projects mild bad luck on to the subject of the envy for an hour. In *GURPS* terms, this is a -1 penalty on all attribute checks, skill rolls, and reaction rolls made during the hour.

Second level envy is sustained and heartfelt. Every time the Sinner thinks of the person in question, he is riddled with envy, of his wealth, house, job, spouse, kids, car, everything. This produces ongoing bad luck until a major incident of some sort occurs -- the subject loses his job, or his spouse dies for example. In *GURPS*, this is essentially a Curse (p. M63) with a modified ending condition.

Envy of the third level is all-consuming. The Sinner can think of almost nothing but how much he wishes to be like the subject of his envy. In *GURPS*, this level of envy is an Obsession with becoming like the subject, and produces

the effect of a 3-point Curse that never ends until the envy stops.

The Omniscient Eye

How Do I Make a Hidden Underground Base?

A favorite concept in adventure fiction -- especially superheroic fiction -- is the Secret Headquarters, often concealed on a "nonexistent" floor of a well-known building or underneath some very visible (and sometimes quite famous) structure, and accessed through a trick elevator or hidden staircase. Are there real-world examples of hidden HQ complexes like this (that have later been revealed)? How would you go about getting a massive multi-level superhero complex constructed under, say, your local shopping mall without hundreds of people finding out about it?

--Guy McLimore, Executive Editor of [MicroTactix Games](#)

Underground bases and dwellings have a long history. Some of the first major ones appear in the Cappadocia region of Turkey, where there are at least 36 underground "cities" dating back over 1,000 years. Some allow as many as 10,000 people to hide from the all too frequent invaders of the area for periods of up to 6 months. There are carved stone "doors" which can be rolled into place for security, and long (perhaps as much as several miles) tunnels connecting different areas, allowing for rear attacks and the gathering of supplies. Most have only been rediscovered in the last few decades. This area could provide a good model for pre-industrial revolution underground secret complexes (such as dwarves, gnomes etc. in fantasy games).

Most builders of modern underground bases have been governments, and their heyday came after World War II, with the threat of atomic bombs. One of the best known now is a structure built under the Greenbriars Resort in West Virginia as an emergency retreat for Congress, with facilities for some 1,400 people. Though it was constructed around 1958, it was not until a 1992 newspaper expose that it was officially given up for private use by the government. It includes its own power system, air filtration, blast doors, computers, medical facility and food supplies.

How could such a thing be built in secret and kept a secret for 30+ years under a major public resort? According to an interview with its last manager, Paul Bugas¹, the resort stated at the time that they were adding a guest wing and conference center, with an exhibit hall certified as a fallout center. They poured a lot of extra concrete, but apparently contractors are an uncurious lot (which matches my own experience with them). It is unclear whether private contractors or government engineers did the actual construction, but it shows the importance of having a cover story for what's being built. During its construction there were some rumors about a bomb shelter for Eisenhower, but then they faded. The government group running the construction project formed a cover company, Forsythe Associates, which supposedly provided A/V services to the hotel. The dozen on-site employees actually spent about 20% of their time fulfilling duties related to the cover story, and the rest managing the underground base. Security-cleared hotel employees even helped with routine chores. The employees lived in the area, and told people who asked about their management/electronics consulting firm. Paul states that there were never really any close calls security-wise until the Washington Post exposed them.

While this facility had the excuse of National Security to protect it, it shows that an ordinary company which owned such a resort could employ similar measures to build an underground base. And companies have; as recently as 1970, Standard Oil had a base 400 feet underground in New Jersey, later used for corporate record storage by Iron Mountain Atomic Storage.² AT&T was known to have at least three underground centers for emergency call management, with executive living quarters and computer systems, one of which is near Netcong, NJ.³ The same report stated that nine of the 12 Federal Reserve Banks (a government run system but with extensive connections to the private sector) have underground records facilities. There are known to be abandoned subway stations under New York City, and occasionally one is rediscovered.⁴

The Magic Kingdom complex at Walt Disney World in Florida is an interesting case; for those of you who have been

there, have you ever seen an employee off-duty? Eating at a food stand, using a bathroom, and so on? Probably not. What the visitors see is actually the top floor of a multilevel structure. If you enter from the back, you climb several flights of stairs to come in at "the ground level," as seen by a tourist. From any point in the Magic Kingdom, an employee can reach a door to this complex within a few hundred yards. They have their own lower level facilities to deliver food to the restaurants, take breaks during the day, and carry out the other invisible chores needed to run the place. In fact, the TV cameras you see yourself on while exiting Space Mountain have their views repeated down in a large employee cafeteria. (This has led to considerable amusement value when people thought they were alone, I'm told.) Yet how many visitors have ever noticed these access doors? Clever design makes them inconspicuous; the paths all lead away from them, they are around corners, they are unlabeled, and so on. At Disneyland in California, Club 33 is the only place in the Disney complex where liquor is served. Membership is required, and passwords were used before the development of swipe cards. It's an otherwise inaccessible complex of rooms on the second floor of the New Orleans square building. Clearly, it's possible to have a secret complex in an area which millions of people pass through every year.

Having secret floors in a building is even easier; if none of the guests coming into a hotel get assigned to floor 7, how often is anyone going to wander around there? Put a guy with coveralls working on some pipes by the elevator and block off the hall with orange cones, and you are ready to go. It's quite common in business hotels now for penthouse floors and such to be accessible only with room keys. For more concealment, build it into the design; a campus building near me has a spiral floor plan. This has the potential to allow a "double helix" type layout, in which the public accesses one spiral while another can track up to the top and occupy as much as half the building volume without ever being noticed. In the Town hotel that Lunacon was held at for years in Rye, New York, fondly known as the "Escher Hotel," you can walk from the third floor to the fifth without ever going up or down stairs. It may be built on a hill so it has different numbers of floors in different areas but it's hard to say. Like many hotels, the former GenCon hotel had no 13th floor, though this is potentially a bit of a giveaway that you have something to hide. In a modern hotel with multiple floors and windows which don't open, how can you tell from the inside if there are 10 or 11 floors beneath you? Why, then, give it a number at all? The easiest place to hide a floor is near the ground floor, where there is more space between floors for ballrooms, lobbys, and staff operations and there are often several floors without numbers anyway. Finally, there are unconfirmed reports that the White House has at least 17 levels beneath it, accessed by specific elevators.⁵

All this is fairly easy if you own the property up top, but what if you want to build under the Statue of Liberty? Physically it's quite possible, by drilling in from the side. There are regular legal disputes over "slant drilling," where an oil company drills from its property sideways a few miles to end up under someone else's property. If you are careful not to break any gas lines/water mains/phone conduits, there really isn't any way you could get caught. The most challenging part would be finding an outfit that is capable enough to build your base, but willing to take your word that it's okay to make a tunnel "half a mile that way" without checking on it. Good connections might be needed here, but that's not uncommon for rich, powerful Bruce Wayne or Lex Luthor types who are likely to build such bases. You might also be able to use some preexisting caverns; under the town of Brewster New York are warrens of mines dug in the 1800s, abandoned when the ore ran out or better deposits were found out west. Very few people know about them now, but New England is full of these old, poorly documented places.

So how can you build your Dream Base in a game? If you are in a hurry, your Wealthy Patron can merely buy an underground base, as there are numerous former missile silos for sale at this time.⁶ But if you want a specific site under a famous landmark, you will really have to build it yourself. The leading supplier of Tunnel Boring Machines (TBMs) is Robbins company. In business since 1951 in the United States, they claim to have bored over 2,100 miles of tunnels with their equipment, ranging from six feet to almost 38 feet in diameter. They provide consulting and project management services, so could handle both design and construction tasks. Atlas Copco, a Swedish company, has a Construction and Mining Technique division which "is a leading supplier to large infrastructure projects, including in particular, power plant and transportation link construction projects, as well as global mining companies." Interestingly, in the 1950s Sweden apparently had an underground industrial complex employing 3,000 people which was entered through what looked like an ordinary farmhouse; its walls swung open like garage doors on concealed hinges to admit trucks.⁷

Extractive industries like oil, power and mining companies are excellent covers for underground projects, as they often undertake large construction projects which are kept quiet for competitive reasons. "Military-Industrial Complex" companies like Bechtel undertake construction projects for both governments (the Hoover Dam, San Francisco's BART subways, and Iraq reconstruction) and private companies (aluminum smelters in Canada and the Chunnel between England and France). While they are the largest, their competitors Fluor and Halliburton could easily handle the demands of an ordinary project. Ironically, private companies are often more adept at keeping secrets than governments are, as the Coca-Cola formula has shown over the last century. Anyone wealthy enough to contemplate a serious underground Secret Headquarters probably has the contacts and credit rating to interest an infrastructure company like that.

For smaller-scale projects, talk to the miners in Coober Pedy, Australia. Many private homes are built underground there, for reasons of both temperature control and cost (most building materials have to be trucked 1,000 miles or so to the interior of the country). The miners are secretive, since their livelihoods depend on keeping their opal strikes hidden, and have a strong anti-establishment bent. Construction is remarkably fast; a 3-bedroom house with picture windows can be hollowed out and sealed in a few days.

The next key is to have some kind of legitimate cover project going on at the same time. Construct your own building nearby, or at least carrying out major expansions and renovations. This gives a reason to have lots of workmen hanging around and an excuse for ordering tons of supplies. Compartmentalize your operation, so that different outfits are in charge of different parts of the project, or even carry out different phases (company A tunnels and builds the walls, company B installs the Giant Laser after A has left) is also a traditional technique, dating back to the middle ages.

Finally, it's a good idea to have cover companies. With the popularity of Bahamas-based corporations for tax reduction, including some for Fortune 500 companies, off-shore entities hardly raise questions now, but It's worth pointing out that Forsythe Associates at the Greenbriars complex didn't even have to go to that extreme. The more boring the better. Several houses in my neighborhood are now registered in the names of Living Trusts, a completely legal device to avoid probate court which can be set up without even using a lawyer and which serves to disguise the true ownership of property.

Higher tech tunneling solutions also exist. Cutting equipment based on electron beams, ultrasonics, laser rock softening, plasma arcs and others have been proposed, though no large-scale machines seem to have been built. A particularly interesting approach is nuclear powered tunnelers, for which several patents exist.⁸ The nice feature of these is that as designed (as far as public records show none have been built) they generate no waste or muck to be disposed of. They use high pressure to cause cracking in the rocks around them, and melt the rock with the nuclear reactor, causing it to flow into the cracks. This provides a stabilized tunnel with its own liner, and allows indefinite tunneling without need for support equipment to remove pulverized rock. No piles of tailings to be removed and dumped means better concealment of the operation. This could be done with a large electrical source as well, though cables would be needed. And even better, since the patents have expired, no royalties need be paid!

To summarize, there are many examples of underground government bases which are still nominally secret but fairly well known⁹ such as Cheyenne Mountain in Colorado, which features prominently in the Niven/Pournelle book *Footfall*, Mount Weather in Virginia, and "Site R" or Raven Rock in southern Pennsylvania. Companies as innocuous as Disney have "secret facilities" as well. With some money and time there seem to be no real obstacles to setting up hidden bases with surprisingly little public curiosity. So go ahead, build them with impunity!

Now Playing RPG

Published by [Carnivore Games](#)

Written & Designed by Bradford Younie

Edited by Ralph Mack, Carol Pandolph, Joe Pandolph, & Derek "Malcus" Belanger

Art & Maps by Thomas Denmark, Ben Van Dyken, Anna M. Dobritt, Ralph Mack, & Bradford Younie

224-page b&w hardcover; \$35.00

If you're tired of waiting for game companies to pool enough money to score a license for your favorite TV show, Carnivore Games may have the answer. In *Now Playing*, you're offered the chance to turn any TV show into a roleplaying experience.

Using the [Fudge](#) engine as its system, the game tries to provide a workable method for translating the facets of television shows to the medium of the roleplaying game. Basing your campaign off *Fudge* means plenty of customization for the game you want to run, and that's the first half of this book. Characters are called actors, the equipment is from the props department, the GM is the Director, and so on.

The book includes a campaign setting, FPI. The Foundation for Paranormal Investigation is an organization founded by Colonel Buckingham, an eccentric former member of the British army whose bizarre experiences in the Middle East have tipped him off to otherworldly goings-on. He hosts a library and computer database that compile all the findings of his teams worldwide.

[SPOILER ALERT!]

There are two adventures for the FPI background to get things started. "The Big Dig" (also available as a .PDF at the website) subjects the team to the ravages of some unknown creature in the tunnel being built under the streets of Boston. The workers are being killed in gruesome fashion. The second story, "Haunted Holiday," sends players to see old friends at their Victorian house, but none of the former occupants -- living or dead -- want to give up their claim.

[END SPOILER ALERT]

Sandwiched in the middle are the tips and tricks for turning television into a game. TV shows are examined by genre or format, and most of the popular settings are included. There are a number of not-so-obvious choices as well -- sitcoms and soap operas, for example -- but the book is nothing if not complete. Putting together a campaign is likened to the sections of shows and movies -- games are broken down into shows, seasons, "beats," etc.

The art is complementary, and while it does show a bit of bias toward popular genre television, it's quality material that spans several types of show. There are a few missteps, especially at the front of the book, but the condition improves as the reader progresses.

The book is an uneven mix of insight and oversight. The campaign setting is covered in spelling and grammar errors that don't seem to plague the rest of the book. The colonel depends on his teams to fund themselves for the most part, in spite of being rich enough to afford his own castle. In some instances you're given the impression that this setting isn't entirely about the supernatural -- that you're expected to disprove things as often as prove them -- but the material assumes weird things are real. Two of the NPCs in "The Big Dig" are named Bob, and one of the "could be used as a PC" NPCs is named Robert.

Some of the GM advice can amount to "props are good -- try using props" or something similarly unspecific. This could just be that several sections tell the reader a particular subject will be dealt with in greater detail in a later chapter, and by the time you get there it's hard to tell if you've been given enough coherent instruction in the tips offered. Collapsing the information into tighter groups could have helped here, but even then some subjects only get a slim paragraph -- good news in the rules section, not so good for eerie creature descriptions or advice on working with psychic abilities and superpowers.

Not that the book is bereft of good GM guidelines. Condensing action (like space battles) is a big help, and the dissection of the shows is what you're buying the book for. It has, and urges, enthusiasm for its subject and the job of referee like few other books do, and while using TV's take on drama doesn't necessarily spell innovation, the perspective is a fresh one. An entire season of *FPI* is written out, a few lines per episode, and this gives readers a good idea of the sort of forethought that can make a successful show.

The TV-to-RPG translation "system" is fairly thin; rather, it's no better or worse than the ease one finds for any transition involving the *Fudge* method. Anyone expecting it to be as literal as, say, a *GURPS*-to-*HERO* character conversion will find the hints here are much broader and more conceptual than anything else. The new lens *Now Playing* offers its readers is worth consideration, though it must be balanced against the search for the diamonds in the rough and the hardbound price tag.

--Andy Vetromile

Pyramid Review

Medieval Player's Manual (for d20 System)

Published by [Green Ronin Publishing](#)

Written by David Chart

Illustrated by Caleb Cleveland, Kevin Crossley, Richard Decker, Mike Vilardi, & Lisa Wood

128-page b&w softcover; \$22.95

After the excesses and exuberance of *Mindshadows*, the fourth title in Green Ronin's Mythic Vistas line is very restrained affair. The *Medieval Player's Manual* is a *d20 System* treatment of historical medievalism over Hollywood heroics. It is designed as a roleplaying game set in Western Europe during the age of Christianity and Crusade. More specifically, this is a Middle Ages set supplement supported by a campaign that takes place in England and Western France following the successful invasion by William the Bastard in 1066. It is penned by David Chart, the line editor for Atlas Games' *Ars Magica* RPG, and author of several *d20 System* supplements. Primarily for Atlas Games' Penumbra imprint, they include the recent *Love & War*, a *d20 System* treatment of knights and chivalry; the excellent treasure-free campaign [Splintered Peace](#); and *Black Monks of Glastonbury*, the *d20 System/Ars Magica Coriolis* crossover scenario. It is this prior experience that would suggest that Chart is the best man to have written this book.

The *Medieval Player's Manual* introduces a long list of changes to the *d20 System* as found in the *Player's Handbook*. The first of these is the strong role that religion plays in the setting, particularly Christianity. Every character is presumed to be Christian, and indeed, there are a plethora of in-game benefits to keeping to Christian ideals. Of course, player characters might be able to side-step this to some extent, since the Normans were great Churchmen rather than great Christians, but otherwise characters are expected to remain in a state of grace. The book includes an explanation of the Christian theology of the period, which should help in the playing many of the classes given in the supplement. This description thankfully works to inform rather than proselytise. It is possible to play a character of other faiths -- particularly of Islam and Judaism, but both lie outside the scope of this supplement.

The second major change is a reduction in the theatrics and feel of magic. In arcane terms, the Wizard class is gone, while the Sorcerer is really only acceptable with an unusual background, such as Merlin's half-demon heritage. In their stead are classes that use the new forms of mostly feat-based magic -- alchemy, astrology, astral charms, folk charms, and theurgy. The first of the new classes is the Cunning Man, who are wise peasants that pass on Folk Charms, prayers, or items that invoke simple aids or protections. Natural Magicians study both alchemy and astrology, the latter to make natal, political, and electoral forecasts besides those of the ordinary kind. While the Church frowns upon these types of magic, it regards theurgy -- the summoning and command of spirits as studied by the Theurge -- as being sinful. The Theurge can advance into one of two Prestige Classes: the evil Necromancer; and the potentially saintly Theophanist, who attempt to summon the ultimate spirit -- God Himself.

Several new religious characters are introduced that take precedence over the more militant Cleric class of traditional *Dungeons & Dragons*, which would face a singular problem in this setting: Fighting, particularly if aggressive in nature, is sinful. Members of the Priest class are ordained to serve the people in their parishes, and can only cast non-evil spells, and even then after performing an hour-long Mass. Clerics and Paladins are suited to the period, if not the setting. They are difficult to play given the Church's stance on fighting *and* that they are more likely to be serving in Crusades which were first preached in this period. Both the Crusader and the Paladin-like Templar Prestige Class also support this somewhat off-stage aspect of the setting.

The three Holy classes make use of another "form" of divine magic, but which is regarded as not being magic. Charisms are gifts from God, and can thus be used by Jewish and Muslim characters as well as Christians. They are lost if a character commits a sin, and are divided into five categories -- Prophecy, both of the future and the present; Healing; enhancement of the Body; the Teaching of others; and the punishment of God's enemies through Vengeance. It will be rare that any of the three Charism-using classes will go on adventures, the Saint seeing such activity as selfish, the Hermit Prestige Class (which also makes use of Folk Charms) being too solitary, and Mystic Prestige Class tending toward contemplation rather than action.

Previous classes have covered the spiritual aspect of the Church, while the Canonist core class and the Prelate Prestige Class deals with its temporal power. Again these are not adventuring classes, dealing more in Church law and politics. Both of these classes gain a series of skill foci and contacts, with the Prelate, representing high-ranking members of the Church, such as bishops and abbots, gaining contacts across Western Christendom. Two final classes cover the scholarship and arts of the period. The Scholar gains the benefit of memory, can study alchemy and astrology, and is supported with guidelines on philosophy, debate, and the writing of books. Finally the Artist class is devoted to the creation of great works.

If all this sounds like one long list of new Core and Prestige Classes, there is certainly truth in such a description. However, each is nicely supported with short sections that detail aspects of medieval life and culture. These include a look at the items and places of magic -- specifically those of England; at the nature and importance of religious relics; at angels and demons (here the author referring to other books from both Atlas Games and Green Ronin Publishing for more information); at Church politics; and at the art and philosophy of the time. They culminate in the background and campaign given for England and Normandy during the various reigns of William the Conqueror's descendants. While the chapter on medieval culture will not be unfamiliar to most gamers, it is nevertheless useful and does complement the campaign itself. This spans roughly 150 years, from the coronation of William Rufus in 1087 to the coronation of Henry, the first of the Plantagenet kings, in 1154. Besides detailing the history, the personalities (including statistics for some of them), it also asks a series of "What Ifs?" that enable a GM to involve the player characters in events of the time. The inclusion of the "Kin of the Conqueror" campaign at least makes up for the all-too short Campaign Guidance, which runs to little more than two pages.

Physically, the *Medieval Player's Manual* is not quite up to the usual standards of other Green Ronin titles. This shows in the artwork, which fails to entice, unlike other Mythic Vita titles. Another editorial pass might have helped; for example, who knew that Dorchester, the county seat of Dorset, was actually located in the county of Oxfordshire? (Certainly not me, and I grew up in Dorset . . .)

Another problem for the *Medieval Player's Manual* is that it comes across as too dry and too academic in tone. This does not make it any less interesting, and indeed, the interest and knowledge of the author is very evident in the writing and in the design of the supplement's numerous new classes. But to many a *d20 System* gamer, the world presented by the *Medieval Player's Manual* is going to be very challenging to play -- if not out and out unplayable. This is because what Chart has done is remove the "pseudo" from the pseudo-medievalism of *Dungeons & Dragons*, and thus make it more of a culture-based game. In that, the world presented in the *Medieval Player's Manual* is likely to appeal to the *Ars Magica* fan, for whom the author is used to writing, and *not* the average *d20 System* gamer. Ultimately, this may make *Medieval Player's Manual* just not Mythic enough to peak their interest.

--Matthew Pook

The Top Ten Reasons to Switch to *GURPS, Fourth Edition*

by Sean Punch

Are you wondering why you should start using *GURPS Basic Set, Fourth Edition*? Curious about what -- if anything -- it will do for your game? Then you might find this feature list useful!

10. "Blended from only the finest ingredients!"

When you buy Fourth Edition, you're getting a state-of-the-art game with close to two decades of development behind it. The designers -- with over 40 years of combined *GURPS* design experience -- selected only the very best rules and guidelines from the *hundreds* of *GURPS* offerings released between 1986 and 2004. The result? A product that preserves the *GURPS* gaming experience you've come to know and love while giving you a bold new game for the 21st century. In other words, when you pick up Fourth Edition, you're getting the best of all possible worlds!

9. "High in flavor, low in carbs!"

If you're thinking, "Why is Fourth Edition a two-volume set when Third Edition filled a single volume? Everyone knows that super-sized portions aren't healthy," you'll be relieved to learn that the two volumes of Fourth Edition replace *three* books: *Basic Set, Third Edition Revised*, *Compendium I*, and *Compendium II*. You get three times the content in twice the serving size -- a 50% improvement! And calorie-counters will be happy to hear that this represents a reduction from 640 to 576 pages. How did we do it? We cut the fat -- redundant and conflicting rules, rules that nobody used, rules that nobody *liked* -- and added meaty gaming goodness.

8. "Exceptional production values!"

Sometimes, you *should* judge a book by its cover . . . and Fourth Edition is a high-quality hardcover. This means it can stand up to more punishment. (And while Fourth Edition might be svelte, it's no lightweight. It hurts more when you whack unruly players with it, nicely demonstrating the new ST = HP rule!) The beauty isn't just skin-deep, either. Each glossy page is in *full color*! Since each chapter has its own color theme -- with colored bleeds that you can see even when the book is closed -- you'll be able to find important rules quickly. We think you'll like the new, full-color art, too.

7. "Intelligent design!"

Don't assume that Fourth Edition's completeness and many options make it hard to use. It has brains as well as looks. We carefully divided player and GM information between the two books. We alphabetized lists of advantages, disadvantages, and skills for easy reference, and added intuitive icons that make it easy to pick out special cases at a glance. (We didn't categorize traits according to *our* preferences, which might not be yours.) We collected important modifiers in boxes and appendices . . . which means no more scavenger hunts through the text. We numbered pages and chapters consecutively across volumes, gave each volume a comprehensive index *and* table of contents, and carefully cross-referenced everything. Fourth Edition is a good read, sure, but it's also a functional reference work that will serve you well in play.

6. "Addresses known issues!"

We closed numerous Third Edition character-design loopholes. Notably, because IQ and DX play a key role in skills, they cost more than ST and HT. Longtime players will be relieved to hear that we've curbed Eidetic Memory abuse,

too. We also fixed playability problems; for instance, there are no longer unrealistic skill penalties to fire high-tech weapons using low-tech skills, cumbersome armor doesn't make it *easier* for swashbucklers to evade blows, and falling damage is now consistent with the damage from falling objects. Finally, we adopted an unambiguous grammar -- no more "Do they mean HT or HP?" -- and explicitly spelled out our rounding conventions. In short, we listened to your bug reports!

5. "Exceeds Third Edition benchmarks for common design tasks!"

The advanced Fourth Edition architecture accelerates character design. Smoother and fewer point-cost progressions reduce table lookups, while the elimination of half-points simplifies bookkeeping. Arbitrary limits -- age restrictions on skill points, reduced attributes counting as disadvantages only *some* of the time, etc. -- are gone. Suggested power levels and disadvantage limits are now clearly *suggestions*. And fewer overlapping traits mean you won't find yourself wondering, "Which skill do I use?" The performance enhancements extend to character development, too: no more doubled attribute costs in play, many more details on how to acquire advantages and skills in play, and concrete advice on sticky issues like mind transfer and buying implants with cash.

4. "Exceeds Third Edition benchmarks for common execution tasks, too!"

Fourth Edition doesn't slow down once the game begins! Many Third Edition rules that broke the flow of the game got simpler or went away. For instance, you'll no longer have to work out modified skill with a ranged weapon, compare it to Snap Shot, and *possibly* apply another modifier. You'll no longer have to add PD -- or wonder about broken probabilities, like a PD roll of 6 and Dodge roll of 10 stacking to give a defense roll of 16. You'll roll dice only *once* when you fire an automatic weapon. And you'll run into far fewer special cases: we reduced on the order of 100 special damage rules to eight damage types, changed close combat to make it work just like other combat, and so on. As an added bonus, we included a quick guide to assessing difficulty modifiers for success rolls.

3. "Easily reconfigured!"

Fourth Edition works right off the shelf -- but those who like to customize won't be disappointed! Fourth Edition explains how to create new advantages, disadvantages, techniques, and templates . . . suggests alternative magic systems and psi powers . . . provides cinematic options such as "wildcard" skills, spending points to influence success rolls, and using extra effort in combat . . . includes a whole chapter of combat rules for unusual situations . . . and much, much more. All of this content is clearly optional, and you never *have* to use it, but it's there for when you need it.

2. "New and innovative core technologies!"

Fourth Edition is more than just Third Edition refined. It includes many completely new rules. Players can vary Hit Points, Move, Speed, Will, and other "secondary characteristics" more freely -- or buy Talents that give aptitude in a narrow specialty *instead* of buying up attributes. The new Affliction and Innate Attack advantages make it possible to simulate any super-powered attack from fiction. Cultural Familiarity and all-new language rules make moving from society to society a real adventure. The GM can shift skill rolls to different attributes -- for instance, to give DX a role in surgery or IQ a role in sports. Heroes can attack deceptively to take out cannon fodder *quickly* . . . or zigzag to avoid gunfire . . . or save their friends by jumping in front of an attack. And the list goes on!

1. "Compatible with a wide variety of common genres!"

Fourth Edition is truly generic and universal. Lessons learned from previous editions of *GURPS* allowed us to build in support for heroes of any size, from any era, at any power level. The *Basic Set* lets you create PCs that are animals, supers, aliens, or even robots or vehicles. It supports magic and psi. It addresses the problems of mixed "tech levels" from the points of view of characters, equipment, and entire societies. And it explicitly supports high-powered, cinematic, and cross-world gaming, providing advice and optional rules for all three. In short, it lets you run *any* kind

of game!

Murphy's Rules

I Shall Leave You As You Left Me -- Buried Alive

GenCONNNNNNNNN!!!

As prophesied [last installment](#), I did, indeed, get to make it to GenCon Indy this past week. And, never being one to turn down a seemingly simple column idea, I thought I would offer my thoughts on this, my first GenCon ever.

It was by far the best GenCon I've ever been to.

"Yeah, but how was it, really?" you ask.

Well, truth be told I didn't get to see as much of it as I might have liked. But first, I offer a bit of background. See, I've never been able to afford GenCon in the past; I did the math, and I estimated that a trip from Tallahassee to GenCon (or Origins, or GAMA, or . . .) would have cost me about \$1,000, since round-trip flights out of my former fair city are generally in the \$300-400 range, and I need to supply my own rubber band for the propeller. Add in the cost of meals and a hotel room (the cost of which, in convention cities, are usually measured in units known as the Kidney: "How many random citizens would I need to steal kidneys from in order to afford this room?"), and it was comfortably out of my reach. Oh, sure, if I *really* wanted to go, I could cut corners in some ways -- stay in the same room as a dozen other folks, generate my own food by photosynthesis, etc. -- but for the most part it was still a wildly expensive proposition.

Fortunately, as of a week and a half ago I am the new evil minion of West End Games, where I'll be doing pretty much the same types of office stuff I was doing at my former Day Job, only with games instead of yo-yos and distributors instead of 10-year-old kids. (And I'm refraining mightily from making any obvious jokes here . . .)

Mind you, this new position will not affect my continuation as Benevolent Dictator for Life of *Pyramid*, about which I have frequently used the phrase "pried from my cold, dead hands." Fortunately, both companies have been quite swell in working for a seeming competitor. (More on that idea in a moment.)

Anyway, all of this is preamble to the idea that I've always said I will probably never make it to GenCon (or Origins, or GAMA . . .) unless it was on someone else's dime. Well, "someone else's dime" has finally materialized. Thank you, West End Games. However, the upshot of this dime is that I spent most of the convention at the West End Games booth.

Rather than offer a day-by-day breakdown of how the con was for me, then (since much of such a report would be drearily similar: "Day One: Sold product. Explained why we didn't have slipcase set. Teased about upcoming *Torg* plans. Told people that we were unlikely to get the *Star Wars* license again any time soon. Cried."), I thought I'd go into classic Random Thought Table tradition and offer a couple of . . . well, random thoughts.

People have faces. By far the most rewarding aspect of the GenCon experience was placing faces to a *lot* of names: industry professionals, co-workers, online friends, and others. Consider that some of these folks I've known for almost half a decade . . . and I've never *met* them. Folks like Kenneth Hite, whose tenure at *Pyramid* predates mine by several years; Bob Portnell, infrequent *Pyramid* contributor and the brain behind the MicroTactix Games' *Simply Roleplaying* line, and also someone I consider to be a good online friend; Ann Dupuis, of Grey Ghost Games, who will need to give up her title as "Nicest Person I've Never Met" because I have now met her (and she's just as nice as I expected); Adam Jury, former online Pyramidian and now an über-talented lackey at Guardians of Order; Jan Hendriks, long-time MIB who made a classy chocolaty gift of an off-hand comment in the PyraMOO; and many others.

In fact, it was a delight to go up to a number of folks and say, "Hi; I've run about a dozen of your articles, so it's nice to meet you finally . . ."

And this doesn't count most of the Steve Jackson Games' staff, where I've now about quadrupled the number of

employees I've met, such as Andrew Hackard, who has been my Managing Editor for longer than the Kennedy administration.

In all, the biggest delight of the convention was definitely getting to meet everyone for the first time. But, sadly, that's a stunt I can only pull once for most folks . . . meaning I need to find other reasons to long for GenCon. This leads me to my second random thought.

I miss hype. Maybe I had an inflated view of what I thought GenCon was "supposed" to be like, but I kept expecting some more . . . excitement, somehow. Admittedly there's only so much excitement I can be exposed to while shackled at one booth, but even so, there seemed to be little to get people talking.

Probably the biggest GenCon publicity stunt I can recall is when FASA announced before the con that the dragon Dunkelzahn was running for President . . . and at the con it was revealed that he had been assassinated. It was great, because it was so unexpected, especially since the FASA folks had gone to so much trouble to pump up his candidacy. And, being an impressionable gamer trapped a jillion miles away from the Midwest, word of that stunt filled my imagination. Clearly, things would happen at GenCon that I would remember forever.

Well, no, not really. It's about five days later now, and, despite arguably two of the biggest non-*Dungeons & Dragons* releases in the past decade (the new *World of Darkness/Vampire: The Requiem* and *GURPS, Fourth Edition*), there just didn't seem to be much drama.

Okay; there was one curious incident where some vampire hunters had a confrontation with some vampires outside our booth. Harsh words were spoken, climaxes were antied, and both groups went their separate ways. This might have been some kind of story behind the *Vampire: The Requiem*, but I'm equally inclined to think it was just an Indiana custom I was unaware of.

Now, I suppose that, in the post-Information Age era, the notion of a publicity stunt may be passé nowadays. After all, by the time of the convention, most people already *know* what new things are coming out, what they're going to buy, and so on. The convention serves not so much to inform people of new products (although there was a lot of that going on) but rather to reaffirm those who have quite probably already made up their minds to buy.

But even so, it's still a bit sad when there was as much gaming drama at GenCon -- the ultimate gamerly destination -- as there was at my previous Atlanta-based Dragon*Con . . . which is to say, not much.

Anyway, when I met Ken Hite, he mentioned that I'd get at least two columns out of attending GenCon. I chuckled at the prospect at the time, because then (as now) I didn't really think I had much to say. But looking at my word count, I see that I've gone over my norm, and I still have more to say. Clearly I need to learn to trust Ken Hite. Ken Hite is all-knowing and wise. HAIL HITE! As a result, I'll probably rattle off a few more GenCon musings next week.

Until then, just remember there are no strangers at *Pyramid* . . . only friends I haven't met face to face yet.

* * *

And since I've mentioned the [Pyramid chats](#) a couple of times already, I should note that Friday, August 27th (a.k.a. "today," as far as the newsstand-fresh copy of this mag is concerned), there will be a chat with several of the folks at Steve Jackson Games at 7 P.M. Central Time.

Yes, Andrew Hackard, Sean Punch, and Steve Jackson will be on hand to get your thoughts on *GURPS, Fourth Edition*. Stop by to let them know the good, bad, and ugly of the culmination of their multi-year project. And you may also want to share your thoughts on the snazzy new [public forums](#) as well.

--Steven Marsh

Alternate Agencies

for *Spycraft*

by Olivier Legrand

In a recent Campaign in a Box article, Chad Underkoffler introduced us to the high-action, thrill-packed world of [Spy Games](#) and its game-themed agencies: CHESS, POKER, WHIST, CRAPS and Rule 8. The purpose of the present article is to translate this setting information in *Spycraft* game terms.

In the world of Spy Games, agency allegiance replaces standard *Spycraft* department training. Like department training, this allegiance grants some special talents and benefits. It also affects a character's choice of class as well as her starting experience level.

CHESS Ops

Extra cash & tech: +5 budget points as part of their personal budget; CHESS agents also receive +2 budget points to each mission budget, plus an extra point at levels 2, 4, 6 and so on. They also get +1 gadget point at the start of each mission, plus an extra point at levels 4, 8, 12 and so on.

Elite training: 4 extra skill points at 1st level and +1 skill point at each additional level.

Bonus feat: any covert or gear feat.

Starting classes: Starting CHESS agents may qualify as Rooks (Fixers), Knights (Soldiers) or Bishops (Snoops). CHESS agents are the crème de la crème of the espionage community. They automatically start their career at 3rd level, to reflect their top qualifications and expert training (remember there are only 32 of them). CHESS agents may never qualify as Pointmen. This reflects their limited ability to improvise in the field, as well as the highly specialized nature of their training.

POKER Ops

Natural improviser: +1 to all Inspiration checks, plus an additional +1 at levels 4, 8, 12 and so on.

Deck: Each Poker agent receives a Deck which grants 100% safe communications.

Bonus feat: any style or chase feat.

Starting classes: POKER agents are extremely competent and start the game at 3rd level. Compared to their CHESS counterparts, they are more jack-of-all-trades than specialists: to reflect this, they must divide their 3 levels between their division class (Faceman for Hearts, Fixer for Diamonds, Snoop for Spades and Soldier for Clubs) and a secondary class (Pointman for everybody, except for Clubs who qualify as Soldiers/Wheelmen).

WHIST Ops

UN sanction: WHIST agents enjoy full international authority and jurisdiction, giving them considerable freedom of action on a worldwide scale.

Cadre: +1 skill bonus to all Bureaucracy and Diplomacy checks and an extra +1 at levels 4, 8, 12 and so on.

Bonus feat: any style feat.

Starting classes: WHIST agents may select any class and begin the game at 2nd level.

CRAPS Ops

Extra cash & tech: Same as CHESS agents.

Gearhead: +1 skill bonus to all Computer and Electronics checks and an extra +1 at levels 4, 8, 12 and so on.

Bonus feat: any gear or style feat.

Starting classes: CRAPS operatives may select any class and begin the game at 2nd level.

RULE 8 Ops

Informed: Rule 8 operatives are walking encyclopedias on worldwide politics, legal systems, governments etc. They get a +1 bonus (and an additional +1 at level 4, 8, 12 and so on) on Education checks pertaining to these topics.

Public support: Rule 8 operatives may often benefit from their organization's very favorable public image. When using this positive reputation to get help or gain support from *civilians* (i.e. people who do not belong to the Spy Games), they are granted a free action die on Charisma checks or Charisma-based skill checks.

Bonus feat: any basic skill feat. Most Rule 8 operatives have the Ordinary Past, Scholarly or World Traveler feat.

Starting classes: Rule 8 does not employ Soldiers or Wheelmen. Most Rule 8 operatives qualify as Pointmen or Snoops. They start the game at 1st level.

Iron Ref: Spy

Caja de la Muerte

by Wil Upchurch

Introduction

Welcome to *Caja de la Muerte*, where the Mexican tourist town of Cancun awaits you! This adventure can be played as a solo adventure or for a group. It is possible for one agent to navigate his way through the adventure using equal parts subterfuge, charm, and brawn. A team of agents can also combine their talents to figure out how to stop Don Caligulari. Good social skills and stealth will be major factors in the agents' success; their investigation can be made easier with some clever computer work by accessing dossiers on all the major NPCs.

Synopsis

The characters (on their own or through their employer) are alerted that mercenaries from all over the world have been invited to bid on a contract for the Mexican crime lord Don Caligulari. The nature of the contract is unknown, so the characters must track the mercs to a meeting at Caligulari's beachfront property.

Once there, they will find that Don Caligulari wants to retrieve an ancient Mayan artifact from a ruined temple 70 miles from Cancun. The temple is apparently riddled with traps left behind by the Mayan priests Caligulari does not want to send his men and gain notoriety as a thief of Mexico's national treasures. There is another reason Caligulari does not want to risk his men, however. He fears that the box is cursed, and wants to see what happens to those who touch it.

Background

Don Caligulari made millions in government bribes as the Mexican Secretary of Defense during the late 70s and early 80s. As the PRI, Mexico's ruling party, began to falter, Caligulari abandoned his post. He formed a criminal cartel along with several powerful generals. They brought experienced soldiers who had fought the drug cartels in southern Mexico and were ready for an upgrade.

Caligulari is now one of the foremost criminal masterminds in Latin America His operation has reached the point where he can turn his attention to other things—notably the collection of Mayan artifacts. His research has led him to the ruins of Toxcogogl, the most heavily used sacrificial site in the Mayan empire.

The ashes of the most powerful sacrifices were stored in a stone coffer known as *El Caja de la Muerte*, the Box of the Dead. Don Caligulari believes that this box contains the makings of a powerful chemical weapon, and he is willing to pay a large sum to anyone that can retrieve it from its resting place.

Scene 1: Gazebo Nowhere

Don Caligulari owns a portion of the beach on Cancun Island. Most of the time he leaves the beach open for tourist use, but sometimes he uses it to privately conduct business and entertain guests . He has built a pier that leads to a covered gazebo rising just above the surface of the shimmering Caribbean water.

The gazebo is equipped with a well-stocked bar and kitchen, and the Don's servants are on call 24 hours a day to provide the finest food and drink It has retractable walls that can create private rooms in which to dine, talk business,

or engage in other nighttime diversions. Alternatively, the entire gazebo can be opened and rearranged to create a "party barge" that can accommodate up to 75 guests comfortably.

The characters have been informed that a collection of elite mercenaries and thieves will be meeting at Caligulari's barge two evenings from now. The party is invitation only, but an undercover agent could infiltrate the party since not all of those in attendance will know each other.

Should the characters inquire about this possibility, there are two ways it can play out:

- A. The agency the characters work for has taken one of the invitees into custody. One of the characters will go in as that person.
- B. The characters will have to hunt down one of the lesser-known mercenaries, put him out of commission somehow, and steal his invitation.

A character that attempts to infiltrate the party will have to put on a good act. The other attendees are the best in their field. They haven't gotten to be where they are by misreading people or falling into traps. Characters who research their assumed identities should have an easier time bluffing those in attendance. They will have more background knowledge on the people they are impersonating, and may be able to use the correct jargon to insert themselves more convincingly into the mercenary world.

Alternatively, the characters might decide to keep surveillance on the party rather than sending in an undercover agent. Actually planting surveillance devices on the gazebo before the party is next to impossible due to security. Guards have been posted at the pier entrance and on the gazebo itself. The famous clarity of the water prevents underwater approaches even at night thanks to bright floodlights that surround the pier. The best surveillance option is to use telescopic lenses, parabolic microphones, and other gear to listen in on the party and take pictures of the attendees for identification and tracking purposes.

There are five servants aboard the ship: a dark-skinned bartender named Juan; the cook, who is always muttering obscenities in Spanish and looking annoyed as he brings out new dishes; and a set of male dwarf triplets who carry drink trays. The latter are dressed in traditional Spanish dancing garb and speak only in hushed, squeaky tones.

Once the attendees have mingled a bit and had their refreshments served, a large flatscreen television descends from above the bar to show their host, Don Caligulari. He smiles, a plain white backdrop behind him, and says the following.

Greetings. I trust that everything has been to your liking so far. If not, Juan, Jesus, and Uno, Dos, and Tres, will be happy to see to your needs. You did not come here to mingle, however, but to hear a business proposition.

The ruins of Toxcogogl, a sacred Mayan temple, hold an artifact that I should very much like to have in my possession. It is held in the lower parts of the temple, which were closed off many years ago due to...a series of unfortunate deaths. It is said that the temple is haunted, and that the artifact is guarded by Mayan deathtraps, whose engineering is still unsurpassed. That is why I have brought you here.

El Caja de la Muerte, the Box of the Dead, is a ceremonial coffer that holds the ashes of a thousand sacrificed enemies of the Mayan priests. It is a priceless link to Mexico's past. I have arranged for my own men to guard the ruins the night after tomorrow—an opportunity I do not wish to waste. If you are interested, please write your bid on the stationary that Uno, Dos, and Tres are now passing around and drop it into the fishbowl on your way out. I shall contact the winning bidder in the morning. Buenos noches.

The television flickers off, and the three dwarfs hand out small pencils and square pieces of heavy paper. They do not speak or answer questions; once they are done, they disappear into a back room, along with Juan and Jesus. The assembled guests are free to talk and mingle for as long as they like. Each drops a bid in the fishbowl on his way out, as should any characters present if they wish to avoid suspicion.

There are 5 guests in attendance, as well as several personal bodyguards (each attendee was allowed up to 2

bodyguards; those that have them are noted below).

Thuy Van: Thuy is one of the world's most accomplished thieves. She is also known as a champion Vo Binh Dinh practitioner. She is personable, but always seems to be sizing up whoever she is speaking to. Her English is limited; she appreciates anyone who can speak to her in Vietnamese. Thuy is probably the most qualified for this particular job (and she knows it), but her price will be high. Her bodyguard, an Asian man with an eyepatch and ever-taut muscles, sits nearby at all times.

Tomas the Scorpion: Tomas is a Mexican gunslinger with a reputation for daring stuntwork and reckless behavior. He is also widely considered to be clinically insane. It is uncertain whether Caligulari called him here as a polite gesture, or thought that the Scorpion would be the only candidate crazy enough to take the job. Two silent Mexican men in leather outfits accompany him and keep watch.

Haven le Kink: This woman looks like a cross between Jessica Rabbit and Lara Croft: part bombshell, part adventurer. In reality, she is an MI6 (or CIA if the characters happen to be European) operative sent to monitor the situation as well. She is talkative and can be seductive if she suspects any of the men are susceptible to that tactic.

Major 'Deutsch' Schaeffler: A giant of a man, this boisterous ex-Marine officer now heads up an international strikeforce, used by governments who need to leave an impression without leaving a paper trail. He seems just as likely to blow the ruined pyramid away as retrieve the box in one piece, and chomps a pungent cigar during the entire affair. He is accompanied by an African-American man with an impressive physique and presence.

Interlude: Cancun Nights

Cancun nightlife never stops, seven nights a week. Street performers spit fire, juggle hoops, and strum Spanish guitars. Modern clubs pump techno beats for the sun-baked tourists. Resort hotels offer variety shows and other entertainment to go with their cheap margaritas and questionable buffets. Whatever one's taste in after-hours entertainment, it can be found somewhere on the island.

For the mercenaries here on business, there is nothing to do but wait. Each is spending the night living it up in their own way. The characters are likely going to want to stake out or interact with one or more of them, and roleplaying should be encouraged. Locations and what each one knows are summarized below, as well as any background information that can be found in international criminal databases or agency records.

Thuy Van: Thuy never stops working. The characters can trace her to the Omni Cancun Hotel & Villas, where she is attempting to lift some jewels from the hotel safe. Her reaction to the characters depends on whether they encounter her before, during, or after the heist.

Thuy is intent on getting this job, mostly for the unique challenge it presents. She knows nothing of local history or legends surrounding the place. She does know that if a bleeding-edge security system can't stop her, then no "Mayan tricks" will either.

Tomas the Scorpion: The Scorpion would not normally be interested, except that he needs the money to pay off the government bounty on his head (if he can get them the money, they will take him off their most wanted list...for now). He and his friends can be found performing at a private party for one of Ireland's wealthiest businessmen.

Haven le Kink: Haven is also gathering information, so at some point in the night she should find them rather than the other way around! She tries to wait until they are in a resort or a quiet bar with tables, at which point she walks up with a bottle of Herradura "Selection Suprema" tequila ("My favorite," she says, "and it's under \$200 a bottle here to boot.") and enough shot glasses for the group. As she sits, she orders salt and lime from a passing waiter and a platter of huitlacoche, a fungus paste favored by the Mayans and still eaten today.

Haven clearly knows her stuff, and she will subtly question them for as long as they'll let her. She is also the only one who knows that Caligulari believes he will find a potential weapon of mass destruction in the ruin.

Major 'Deutsch' Schaeffler: Deutsch and his associate, Dillon, can be found in an expensive cabaret located just off the beach, away from the main resort strip. The two aren't interested in buddying up with anyone, and will meet persistent attempts to gather information by busting a couple of locals' heads into tables and walking out, cigars tossed to the side as they stride out the door.

Scene 2: The Ruins of Toxcogogl

This scene can turn out a number of ways, but if the characters discover the possible presence of a chemical weapon, they should want to get it before the others get a chance. The ruins are located 70 miles west of Cancun. It will require quite a bit of cash or other persuasion to find someone willing to drive or fly them there in the middle of the night.

If they go to the pyramid early, (although this will be made much more difficult during the day as Caligulari's men will be prowling around), they should be able to sneak in and try to get the box before the others. Fortunately, the mission is mysterious enough that none of the others had the same thought.

The closed off portions of the pyramid catacombs do indeed have some traps in them, but they can be easily bypassed by most characters. Now is a good time to showcase a character's abilities or special equipment by providing challenges tailor-made to their strengths. The ruins are a great chance to reward their decisive action with a relatively simple victory.

If you and your players want a climactic battle scene, you can have Caligulari and some of his men waiting when they come out. If the characters are particularly skillful or well equipped, you could pit them against one or more of the other mercenaries. Deutsch and Dillon could give them a fast and furious vehicular chase through the jungle, complete with machine guns, rockets, grenades, or other ordnance, while Thuy might follow them and attempt to pick them off one by one.

If the characters meet at the appropriate time, they find that all of the mercenaries have been summoned. Let one or two of the mercenaries go in before the player characters, each either coming out defeated or not coming out at all. It will then be their turn to give it a try.

Regardless of how or when they retrieve the Caja de la Muerte, the characters will have to contend with its awful smell. They will notice the sharp odor of the thing when they enter the catacombs, but the source will not be evident until they enter its chamber. The box smells as if the dead flesh of the victims within had rotted inside for 1,000 years. They might be able to bluff their way through an ambush using the stench, especially if they realize that fear of the box's contents is what prompted Don Caligulari to hire mercenaries in the first place.

Aftermath

The characters retrieve the box and take it back to the agency. Hopefully they'll have devised a clever one-liner for when the stewardess asks them, "What's that smell?"

Iron Ref: Horror

Still of the Night

by Mike Demetro

Setting

The characters go to Mexico to party from June 21st to 25th at the annual Fiesta Grande in the village of Los Fantasmas. They may have gone at the invitation of friends but it works even better as a vacation where everyone is strange to them.

Secret Plot

The Mexican abbot in the village is descended from Spanish settlers with Moorish ancestors who carried the secret of creating hot weather and droughts, breeding ghouls, and summoning demons. Arab fire wizards of an ancient and evil cult shared the secret with his ancestors.

The ghouls and demons, which the abbot calls his "ghuls" and "efreeti," have a very Thousand and One Arabian Nights feel and conform to a Middle Eastern and Islamic standard of evil spirits rather than a European and Christian one. In the original Arabic, a "ghul" or a "gul," is a protean desert demon that feeds on corpses and waylays travelers and an "efreet" is an evil flame genie. These are not generic animated corpses and scaly, green, horned fiends.

The dozen brothers at the monastery with him are the abbot's coven in a satanic faction. They secretly work the evil magical rituals as a coven of 13 Devil worshippers. The coven will conduct the ritual throughout the Fiesta Grande and it will culminate as "the darkness swallows the moon" (i.e. when the new moon begins and there appears to be no moon in the sky).

Heeding the two-dozen laws associated with focussing it strengthens magic. A few laws are significant but none is more so for possession than the "Law of Identification" wherein it is possible for a person or place to literally become another by maximizing associations between the two. The abbot can use his magic to transform the village into a miniature Hell, the villagers into ghouls, and his monks into demons from Hell by making them all as similar as possible to the evil into which they are to be transformed.

Magical designer tequila (as well as wine and beer) are to be used to transform the digestion of those who drink it so they hunger for rotting flesh and can digest nothing else. To the extent everyone drinks alcohol at the Fiesta Grande (and also during the day since it is very hot and there is nothing else to drink) they will transform into corpse-eating dog-like half-people and then into ghouls.

Once the temperature is literally "as hot as Hell" and everyone in the village is transformed into ghouls, the abbot fulfills the necessary prerequisites for turning the 12 members of his coven into demons. When the abbot has created "Hell on Earth" he can make a pact with Satan and sell his soul to become an Archduke Devil and cause the Apocalypse on June 25th ("Anti-Christmas - the Devil's Birthday").

A Race Against Time

There is a heat wave and it is 75 degrees Fahrenheit the night before the Fiesta Grande. At dawn the first day after it is 80 degrees and the temperature rises 3 degrees every hour until the sun goes down 12 hours later and the temperature drops from 116 to 75 again. On the second day after the temperature starts at 120, on the third day after it starts at 160. On the fourth day after it starts hot enough to boil water and goes up from there. Every day the heat rises again in the

same way. Everyone (except the abbot) that is not transforming into ghouls and demons will sweat the first day, stew the second, and die by the time the new moon begins if nobody stops the abbot.

Notes

This horror adventure can be used with any system and is intended as a generic horror scenario for such games as *GURPS Horror* or *Scared Stiff: The B-Movie Horror RPG*. The characters should be given many avenues to investigate and many ways to waste their days so the monks are only investigated as the scenario climaxes. Players will ignore too obvious clues and mildly suspicious NPCs and investigate the least likely suspects due to metagaming. They may also metagame and make breaking into the monastery a priority merely because they know they are involved in a mystery and the monastery must play a major part. The clues are arranged in a format of what is obvious, what can be discovered easily, what can be discovered if characters keep a sharp eye out, and what can be learned by those in the right place at the right time (or asking the right people). Clues are also arranged by the day they occur or are best discovered but can be presented out of order as necessary. The red herrings of ghosts in the graveyard and a demon-fighting relic in the monastery may shift player focus and have the characters more eager to befriend the villagers and monks. The consequences are dire if they fail but success should not be easy.

Names

Male (Monks)

Abbot Augusto and Brothers David, Francisco, Gualterio, Hugo, Ignacio, Moises, Nicolas, Pedro, Samuel, Tomas, Urbano, and Zacarias.

Male (Villagers)

Alfonso, Angelo, Antonio, Archibaldo, Carlos, Eduardo, Esteban, Eugenio, Federico, Felipe, Fernando, Geofredo, Gregorio, Henrique, Hernando, Jaime, Joao, Joaquin, Jorge, Jose, Juan, Lucas, Guillermo, Lourenco, Luiz, Manuel, Maximiliano, Miguel, Pablo, Pancho, Pepe, Quintin, Raimundo, Reinaldo, Ricardo, Rodrigo, or Vicente.

Female

Adela, Adelina, Adelita, Amparo, Ana, Anita, Beatriz, Carlota, Carmen, Catalina, Conchita, Concepcion, Consuelo, Dolores, Elena, Emilia, Francisca, Francisca, Graca, Graciela, Helena, Ines, Isabel, Jazmin, Joana, Juana, Juanita, Leonor, Luisa, Lupe, Lupita, Luz, Malka, Manuela, Margarida, Maria, Marta, Mercedes, Montserrat, Nieves, Ofelia, Olivia, Pilar, Rosa, Rosario, or Teresa.

The Night of the 21st

Obvious Information

Los Fantasmas is a very old village abutting a small monastery and a hill cemetery. There is an abbot, 12 monks and about one hundred villagers. Los Fantasmas has a taco commercial quaintness of tradition and a spaghetti western sense of architecture and landscape. All of the buildings are so small anyone falling off them wouldn't have much further to fall than a dewdrop shrugged off by a blade of grass. The Fiesta Grande starts at sundown on the 21st of June and lasts 3.5 days for an entire phase of the waning crescent moon and ends with the start of the new moon.

The village's only inn and tavern, where the players are staying, is called "El Corazon Negro" (the black heart).

Easy to Discover Information

- The villagers are friendly and gregarious and currently in a very festive mood.
- There is a sign on the well saying "do not drink the water."
- Like many monasteries, the one at Los Fantasmos makes wine and have a stamped "Los Fantasmas" crest on the label of each bottle.
- There are strange noises coming from the cemetery.

Moderately Easy to Discover Information

- All of the beer and tequila (and wine, beer, and tequila is all there is to drink aside from well water right now) also bears the label and crest of the monastery.
- The monks make all of the beverages here and all are excellent. The villagers will be insulted and very surly if the characters do not eat, and especially drink a lot with them and enjoy the party.
- The villagers fear demons.
- The monks are rumoured to be the keepers of a secret relic that slays demons and evil spirits.

Hard to Discover Information

- If the players ask one of the more prominent villagers why the well is off-limits they will learn that recent rains have polluted the underground river with runoff from the corpses in the cemetery.
- As will be discovered if the characters look specifically for sabotage, but expressly missed otherwise, someone has rendered their transportation inoperable and the damage could take at least a few days to repair.

The 22nd

Obvious Information

It is sweltering (80 degrees at sunrise) and gets more so with each hour that passes. As is normal for the desert the temperature drops dramatically at sundown but it is still 75 degrees at night.

Easy to Discover Information

- The temperature does not peak at noon but gets hotter with each hour from dawn until dusk.
- Those who drank the most, especially the designer tequila, have a sharp notable odour on their breath. It is almost a sickly sweet smell and is not the stink of booze.
- Some villagers are drinking the well water despite warnings.
- The innkeeper is an odd little man and some of the villagers seem to dislike him.

Moderately Easy to Discover Information

- It is those that drank the most alcohol that are starting to drink the well water.
- All of those that dislike the innkeeper are older, God-fearing women.
- The innkeeper dislikes the monks and rants against God and religion.

Hard to Discover Information

- The well water does have a necrotic scent.
- The women that dislike the innkeeper do so because of his rants against religion and because of his carousing.
- The innkeeper carouses and hates God because his wife died and he is trying to compensate and venting rage that his wife was taken from him.

The 23rd

Obvious Information

It is hotter than yesterday (120 degrees at sunrise) and again gets worse. As is normal for the desert the temperature drops dramatically at sundown but it is still 75 degrees at night.

Easy to Discover Information

- The monks do not wear crosses. If asked they say it is because they are only allowed their robes.

Moderately Easy to Discover Information

- A man is sitting and kissing a girl in an old-fashioned dress all day in the hot sun.
- The villagers are behaving strangely.
- Many villagers are milling around the foot of the hill leading to the cemetery.
- Villagers are not saying out of the sun.
- Many villagers are guzzling down the well water now.

Hard to Discover Information

- The man kissing the girl is the innkeeper and the girl his dead wife in her tattered funeral dress. He is not kissing her but licking her rotted flesh and nibbling on dried bones. The innkeeper snuffles around if approached and attacks if disturbed.
- Some of the graves have had people digging at them with their hands.

The 24th

Obvious Information

- It is getting hot enough to kill a man quickly (160 degrees at sunrise) and again gets worse. As is normal for the desert the temperature drops dramatically at sundown but it is still 75 degrees at night.
- The villagers are all ghouls and must be dodged or fought.

Easy to Discover Information

- The monastery is a tolerable temperature.
- The monastery is a defensible refuge.

Moderately Easy to Discover Information

- The monks have barred the monastery doors and do not answer if called.

Hard to Discover Information

- The monastery has a secret cellar that is very cool. It is furnished like a centre of devil worship.
- At sundown the 12 brothers transform into three identical-looking four-headed demons that the abbot will lead in the last ceremony to cause the apocalypse.

Conclusion

If the abbot can be killed before sunrise on the 25th of June, everyone will return to normal and the apocalypse will be averted. The monastery should be hard to get to due to ghouls and the abbot hard to finish due to spells, servant demons and more ghouls, but is a normal enough man otherwise.

Ourobouros: A Supers Adventure in Techno

by Chris Aylott

Cue Soundtrack

If you can, click on <http://www.dancerecords.com/playmix.php?id=81>. Listen to the mix for one minute, then let it play in the background as you read on.

Cue Intro

Danny was already in the groove when he bit the worm. "Drume EP" was playing, the tequila was sizzling in chest, then the camera of his self-image pulled away in one of those shots where the background falls back and the guy in the middle gets closer and closer. DJ 3000 still blasted through the room, but he heard a new tune in his head and he had to dance.

He knocked over the table as he sprang to his feet, glasses rolling into the crowd, liquor on the floor, and he was outside on the street, dancing into the face of the bouncer, more shattering glass plate this time TVs sparking on the street everyone moving in time as his consciousness faded to white . . .

The Scene

Teagarden, a hip club in a brownstone neighborhood gone rundown gone bohemian. The word is that three dot.commers cashed out their options and bought the place a few years back. Maybe true, maybe not, Neal the manager isn't saying and if the owners hang out then they blend into the crowd. Easy to do that, Teagarden is a place where people wear lots of makeup and leave their real names at home.

'Cept this night. Danny Carville's name is going to make tomorrow's paper -- he's the skinny white kid who juked off the dance floor with half of the club in tow, out to the street where they worked up a first-class riot. Ordinary kids, nothing special under the greasepaint, but that doesn't stop them doing damage. Jumping through store windows. Smashing car windows. Alarms and blood everywhere and kids shambling through the street like living living dead.

Heroes on the scene, heroes called in, the problem is the same: get the crowd under control with a minimum of harm. There's a smell of ozone in the air; sharp noses can trace it to Danny Boy. Knock him down and the rest of the mob follows suit, but then they get up again, dance a few sizzling steps, and lie back down.

Back at the club. Neal's as puzzled as anyone else, and what he has to hide has nothing to do with Danny Carville. He won't talk about the owners; can't talk about it, can't think about it, mind peepers may find there's a block there that leads to another story. Neal's seen Danny and his friends around for weeks, nothing special about them. No mutant powers, no dark origin, just some kids with IDs that pass muster.

Checking out Danny's scattered table sheds a little more light. There's a bottle among the glasses, a tequila bottle. Ourobouros, "Live in Legend, Eat the Worm". Teagarden doesn't serve Ourobouros, nobody does. New brand, unknown, cipher. The few drops left in the bottle taste like electricity.

Danny Boy and his friends thought the bottle came from the bar, thought they had scored special treatment. They remember the guy who brought it to them, big guy, black muscle t-shirt, white snake tattoo looped around his bald head. He told them it was compliments of the house, testing out the appeal of a new brand, says it's going national real

soon. They even have his business card.

Ourobouros

Winding Coil

Cosmos Distilleries is new. Cosmos Distilleries is already a name. Cosmos Distilleries was the only big liquor company IPO in the last 25 years. Cosmos makes M-Go Malt Liquor and Star Bright Beer. Their numbers are nothing with the Bud and Miller Lite set, but they're chewing up the young bar scene with a vengeance.

According to CosmosParty.com, you can visit their world headquarters right here in town, tours every evening at 5. They call it the happiest hour on Earth.

No matter when you visit, expect to be met by Plant Supervisor Rucker E. Eddison. Big guy, black muscle t-shirt, white snake tattoo. He says there's no relation. He's friendly if you call ahead, friendly if you don't. How friendly depends on how much right you have to be there at the moment.

Rucker smells of ozone.

Rucker defers questions, just the supervisor. You want the big answers, you need the big boss, company President Eric E. Ruckerson. Three guesses what he looks like, and the first two are identical. Rucker's just here to give you the tour, tell you about the great things Cosmos is doing. He'll encourage you to invest if you look like you have money. Threaten Rucker if you like, even kill him. He'll call the police if he can, suffer if he doesn't. He's no hero.

No matter what happens, Rucker only feigns surprise. Watch his eyes, it's as if he's already played this scene.

Ourobouros is a secret, but it's the kind of secret Cosmos is ready to talk about. The drink is a mezcal, close to a tequila, not quite a tequila, made from a rare cousin of the blue agave plant, carefully harvested, steamed and crushed in three pressing mills to extract the juice. Combine with yeasts and ferment like a tequila, age for precisely seven years and seven days. The results are electric.

Take the tour, with Rucker or without. The distillery is legit, all the features you'd expect. Loading docks. Stone ovens. Pressing mills. Fiber wash, distillery tank, aging room, tasting room. Everything ready, every tool and supply in its place. Nobody there, no work happening. Empty.

Rucker says they have all the help they need.

Invited guests end their tour in the tasting room, where they can sample Ourobouros for themselves. There, they are dared to eat the worm at the bottom of the bottle. Eat the worm, they are told, and you'll get to meet the company president. Rucker has a worm for everyone, but he'll show them to the president if only one person eats it.

Uninvited guests find the rooms rearranging, pathways changing, shifting geography. Eventually they walk into a long metal tunnel; halfway through the world realigns and they tumble to the bottom of the large distilling vat. A port opens, fermented agave juice pours in, the steel vat begins to heat up.

At this stage of distilling, the alcohol in the agave juice is separated from the sediment by being boiled into steam. The boiling temperature is 200 degrees Fahrenheit.

Scales Falling From Eyes

Out of the vat, escaped or defeated, or out of the tasting room with worms on the breath. The company president will see you now.

Ruckerson, Ericsson, Eddison, all there. All the same being, coils of a worm rippling through time. Inhumanity made comprehensible through illusion. The ozone is the stench of the worm.

The worm seeks to grow, to wrap its coils around the entire world. It hides in the bottles, waits to be eaten, grabs the mind of those that consume it, reaches out and takes hold of others nearby. In time it can force the others to consume the worm, absorb them, grow. In time it could take over the world.

But there isn't enough time. The flesh of ordinary mortals is too weak; it cannot spread fast enough. Each mortal consumer's mind can only control a few around it, half a dance club, a rioting street. The worm needs minds that control cities. Minds beyond mortal. Super-minds.

Your minds. You will consume the worm, and the worm will consume you.

Ericsson falls apart, becomes worms that fly through the air. They lodge in clothing, hair, they crawl towards mouths and ears. Ruckerson and Eddison move with perfect coordination and inhuman strength, battering, distracting, immobilizing. They are silent, no need to talk now. The perfect communication of the self is just moments away.

As the worms crawl in, they take control. Friend turns against friend in a puppet's betrayal. The worm is endless, the worm is patient, the worm has an endless supply of coils, and your numbers are diminishing.

Perhaps it has a weakness you can exploit. Perhaps it is vulnerable to fire, and you can make the distillery rage with flame. Perhaps magic can snip its coils out of time. Or perhaps it has no vulnerabilities at all.

The End Of The Tail

Failure today ruins the worm's plan for years to come. Ourobouros must be created under precise conditions; the mezcal loosens the mind and prepares it for possession by the worm. Destroy the distillery and this door is shut for now.

But the worm has many agents. Some are identical to Ruckerson, Ericsson, Eddison, but many are not. They seek ways to dominate, influence, bring humanity closer to the worm.

The worm has marked you now. It knows that you are here, that you have power that it wants and defiance that it hates.

Someday, the worm **will** turn in your direction once more.

Icosohedron Adventures

Social Combat

by Owen K.C. Stephens

The *d20 System* has fairly involved rules for such things as combat, crafting items both mundane and magic, and even animal training. The rules for social interactions between characters, however, are a combination of simple and inadequate. Of course this is due to the focus of the core *d20 System* rules -- fighting things and gaining power. Issues such as seduction, bribery, and debate simply aren't considered important enough to get their own chapter of rules. For those groups who want to be able to use dice to figure out such attempts, a few optional rules are presented below.

These rules are specifically designed for groups that want a more game mechanical way of handling social interactions. Such rules aren't needed (or even welcomed) by many groups, who handle all social interaction through roleplaying coupled with GM and player fiat. However, these rules need not replace roleplaying. It's perfectly reasonable to roleplay a situation to determine what kind of modifiers are appropriate to the die rolls, then use game mechanics to determine the outcome. Also, they can be useful to groups uncomfortable with or uninterested in talking out long social interactions, as well as those who want some way to simulate characters who are better at such things than the players. A player need not be a master swordsman to play one, why should he be forced to depend on his own social skills rather than the imagined ones of his character.

Also, these rules are not designed to be used for magic effects. A charm spell, love potion, or supernatural aura of fear created by ghosts, demons, and dragons are different. They are cases where an outside influence is forcing the character to act a certain way, and the player should not be allowed to "decide" to ignore such effects anymore than he can "decide" not to be carried off by a roc. Among other things, having different rules helps draw a distinction between a convincing speaker and someone with the power of mesmerism.

Social Combat

In the *d20 System*, social interaction mechanics are handled through skills. The relevant skills are Bluff, Diplomacy, Intimidate, and Sense Motive. While some other skills are used in social settings (Gather Information, Perform), the goals of those skills is different from the kind of opposed interaction that concerns this article (and are pretty self-explanatory).

In broad terms, Bluff is used whenever you want to convince someone of something that isn't true, Diplomacy is used to change their attitude about you, Intimidate is to get them to act in a way they'd normally rather not, and Sense Motive is used to determine someone's motives. These skills are often used in opposition to one another in opposed checks.

These definitions are somewhat limiting in their usefulness. For example, it's all fine and well to use Diplomacy for an attempted seduction, but what does that *mean*? If a swashbuckler is trying to seduce a barmaid, is getting a good enough roll to move her attitude to "helpful" automatically mean she's going to give in to an amorous advance? Sure, some barmaids just aren't going to go for roguish charm (though the helpful ones may choose to find the advances amusing rather than unwelcome pressure).

Social Interaction

The social interaction rules allow for a quick and easy game mechanical determination of an initiator's ability to instill a new desire or opinion into a target character. The social skills are used for the same kinds of influence attempts, but are resolved as single opposed check. The penalties for the check are determined by the GM, based on how far from

the target's current desires the initiator is trying to move him.

Any check is opposed by a modified level check -- $1d20 + \text{target's level or hit dice} + \text{target's Wis modifier} + \text{any bonuses against fear, special bonuses vs enchantment, charm or mind-affecting attacks, or modifiers to the target's Will}$ save other than ability score modifiers and base class bonus. In the case of a Bluff check, the target must make a Sense Motive check to realize the effort is a bluff -- a successful level check simply indicates the target has resisted the attempt to get him to act in a particular way.

	Check	
Shift is:	Penalty	Examples
Negligible	+0	Buying a different brand of soda. Taking a picture of initiator.
Minor	-10	Giving initiator lengthy directions. Introducing initiator to a friend of target.
Moderate	-20	Ignoring a minor law violation. Skipping a meal, running an errand.
Major	-30	Allowing the initiator to live in target's house. Sex.
Extreme	-40	Sacrificing the target's life to save the initiator's. Committing a crime to benefit initiator.

One further modifier is applied -- the target's attitude toward the initiator. In the case of an NPC, this can be determined with normal diplomacy and Cha check rules. For PCs, their attitude should only be determined by a skill check if using the Pilot Method of social resolution. Otherwise, allow the player to decide on his own motivation.

Lowest Attitude	Modifier
Hostile	-20
Unfriendly	-10
Indifferent	+0
Friendly	+5
Helpful	+10

The different social skills are used for different influence attempts, as defined below. A GM may decide to use some of the optional rules to make the method of social interaction relevant (essentially tactical social combat rules), but this is likely too complicated for most campaigns.

Bluff

Deceive	No change to rules.
Seduction	If successful, target switches to unfriendly as soon as the seduction is clearly a ruse.

Diplomacy

Appeal	No change in rules.
Bribery	If value offered is equal to target's level \times 100 gp, gain +2 to roll <i>or</i> reduce penalties for 1-round Diplomacy check from -10 to -4. Lawful characters may automatically treat shift as extreme.
Debate	Base time increases to 10 minutes plus 1 minute per point of target's Int. Target may oppose with Int- or Wis- based level check
Seduction	Initiator must genuinely desire nothing more than romantic liaison. -10 to check. Result of Friendly or better results in target being amused, result of Helpful or better represents capitulation at least temporarily.

Intimidate

Blackmail	Gain +2 to check, but a failed check takes target directly to hostile. Intimidation lasts as long as blackmail is possible.
Threaten	No change to rules.
Torture	Intimidation check takes 1-4 hours. Target may resist with either Wis of Con based level check.

Resolution

Okay, so we have rules to determine whether a social interaction has induced a new desire into a character. Now what? Just because a character has some urge to change his opinion or do something he wouldn't have previously considered doesn't mean he's definitely going to. For one thing, these rules can't take into account *all* the social pressures on the character. While a cunning rogue might be able to bring out the inner greed of a priest while trying to con him, can he really overcome years of training to be thrifty? Does the newfound greed overpower the priest's other desires, including that to please his deity?

It's perfectly possible to have conflicting desires, and the success of an effort to change a character's attitude does not automatically indicate an abandonment of all previous attitudes. A game should only use one of the following resolution methods, but they are all compatible with the social interaction rules defined above. They all have different strong and weak points, and different results on the feel of a campaign.

Absolute Player Control

This is the default method for many gaming groups. Essentially, the player is told what the result of the game mechanical test is, and is then left to have his character do whatever he wants. If a PC on guard fails to resist a seduction check, it's up to the player whether he actually leaves his post or not. This method assumes that only the player can decide how his character would actually react to conflicting desires, and gives him full leeway to accept the new desires, or ignore them totally.

It might seem pointless to have a game mechanic with no "enforcement" clause, but some groups find such things useful. It can be hard to decide how successful something like blackmail, intimidation, debate or seduction should be, and using mechanical rules gives players guidelines. A player who *wants* to explore his own character's weaknesses may well be perfectly happy to follow the dictates of the social interaction check, but a player who feels his character's personality would absolutely preclude some particular course of action is never forced to accept the dice say otherwise.

The Experience Penalty Method

This is a variation on the absolute player control method, combined with some of the carrot/stick method's philosophy. Essentially, the game mechanics are used to determine the success of a social interaction, and the result is revealed to the player effected. Then, the player is allowed to make any decision he wishes about how the character actually responds. If he can convince the GM the response is in keeping with the character, he gains full experience points. If the GM feels it's out of character, a slight exp penalty is levied (25% for a single encounter, or 10% for a whole evening's play are standard).

This is a very loose system, but it's not the same as no rules at all. Players specifically know when the GM *expects* their characters to bow to social pressure, and are aware that failing to do so can have consequences. The GM is left with the option of not levying such penalties if he feels the player is truly roleplaying well, rather than taking advantage of the rule, but players know they break from the listed result at their own risk. The risk is not great (an experience point penalty is annoying, but doesn't kill the character), but is enough to encourage the player to comply with game results unless the impact on how they view their character is really unacceptable.

The Carrot/Stick Method

The carrot/stick method is designed to work on the same principle as the shaken condition. Shaken is a lesser form of fear, which doesn't dictate the character's actions (unlike panicked), but does place a game mechanical penalty in place to represent the fear emotion. Thus in the carrot/stick method, when a character loses a social interaction check the player must either acquiesce to the new attitude or desire, or suffer a penalty to all d20 checks and damage rolls. This represents the character's strong distraction, as he struggles to resist unwelcome feelings.

The penalty is equal to -1, with an additional -1 for every 10 the target missed the opposed level check by. The penalty

lasts for as long as it would have taken to give in to the new desire. If that's more than 24 hours, the character is allowed to make a new check against the original initiator's result every 24 hours with a cumulative +1 bonus each day, and overcomes the penalty permanently when he meets the check. These penalties do not stack (you can only be so distracted), though a character already suffering a -2 penalty who fails an opposed social interaction by 34 would now be at -3, the worse of the two checks.

That's the stick end of the system. The carrot end is a bonus given whenever the character gives in to a social interaction, and it causes trouble (as determined by the GM). Each time this happens, the target character is given a drama point. A drama point can be spent to reroll and one d20 roll once ever. Thus characters who regularly fail social checks and suffer the consequences are rewarded for going with the flow of the game. (A GM can replace the drama point with some other benefit appropriate to his campaign, such as a 5% exp bonus for the session.)

The Pilot Method

The Pilot Method assumes that players are like pilots, and their characters are like vehicles. As the pilot you have a fair amount of control over your vehicle, but it does do things you don't want it to. When everything is going smoothly and there are no complications, players get to decide what their characters attempt and desire. When conditions change, the vehicle (character) may go off in another direction regardless of what the pilot wants.

Using this resolution, the rules can dictate what a character decides or desires, regardless of what the player wants. If a player loses an opposed Diplomacy or Bluff check against an NPC trying to seduce him, the character is seduced. If a Diplomacy check dictates a PC's attitude is shifted to "friendly," the character is required to be friendly, and if the player doesn't play that way the GM can overrule him.

This style is loved by some people, and hated by others. (I often find it's loved by GMs and hated by players, but I'm sure that's not universal.) It really draws a firm line between the mind of the player and the mind of the character; a player may *think* his character would never bow to blackmail, but under this system he can't actually know it.

The pilot method is only fair if the GM is sure to include appropriate conditional modifiers even above and beyond those listed (or at the very least be lenient when defining the magnitude of the shift the check is trying to bring about). For example, a chaste priest should certainly gain some bonus when resisting a seduction attempt. Also, getting someone to do something they don't want to is really pretty difficult.

Also, this system is only fair if the player has some game mechanical options to make his character more resistant to social pressure. Perhaps a new feat is created (Stubborn) that gives a bonus to all checks to resist social interaction checks. Of each player may be allowed to list a class of activity which is always classified as an extreme shift and against which he is always treated as being hostile.

Beyond that, in the pilot method the player's opinion is overruled. In adventure fiction good people are often doing stupid or immoral things when they run into a moral weakness or a truly cunning deceiver, and these rules allow such results to take place. A GM should be aware, however, that many players hate this so much they refuse to play in such games. At the very least, it is imperative the GM warn all players that this rule is in effect and how he plans to enforce it.

Dancey Resigns GAMA Board Seat Amid Uproar

The honeymoon is over.

After a contentious election at the GAMA general meeting at Origins which saw a near-complete turnover of the board of directors, the GAMA board was rocked just weeks later when newly elected Treasurer Ryan Dancey told the board he had accessed the private email communications of the previous board for a five-month period prior to the election. Dancey offered his resignation to the board, which was accepted . . . eventually. In the month since that initial revelation, the shockwaves continue to reverberate, with continued shakeups in the GAMA staff and a change in GAMA Retail Division representatives to the board.

A bad situation has been made worse by the strong emotions generated by the GAMA board election, an animosity that has guaranteed that every motive has been suspect, every statement doubted, and absolutely no benefit of the doubt has been given by either side.

The group swept into office in June called themselves the "Firm, Fair, and Friendly" ticket, and presented themselves as a slate of candidates. Dancey, one of the founders of Organized Play and a long-time publishing executive (and game designer, and marketer) with Wizards of the Coast and, before that, Alderac Entertainment, was the point man in the effort, regularly challenging GAMA policies and direction in various Internet forums and in person at major industry gatherings. He started the fixgama.org website, and found people who agreed to run with him, including some industry heavyweights like Don Perrin, Martin Stever, and Will Niebling.

Shortly after the election, Dancey told his fellow board members that the "private" GAMA board mailing list was not secure -- and he knew this because he had been downloading the messages sent between members of the old board since January. Dancey offered his resignation at the time, but the board initially declined. According to GAMA spokesman John Phythyon, GAMA's lawyer told the board that what Dancey had done was illegal but not a felony, and the board then decided to ask Dancey to stay on -- and be in charge of making sure that the mailing list would be secure in the future.

The vote to ask Dancey to stay was 6-1 -- the lone dissenter was Retail Division chairman Steve Nicewarner. Nicewarner resigned shortly thereafter, revealing the whole story to the industry. His statement referred to "multiple cases of ethical misconduct," and at least two instances of acts that GAMA's own attorney advised the board were illegal. "In each case, the GAMA Board declined to take effective action to proscribe and punish the unethical behavior -- in effect condoning the unethical activities," Nicewarner said in his statement. "I can no longer serve on a Board of Directors with that kind of ethical flexibility." (Neither Nicewarner or anyone from GAMA would answer questions about the alleged other cases of misconduct.)

The reaction of the professional gaming community was immediate and strong. With feelings already rubbed raw by a nasty election, battle lines were drawn and accusations flew. There were many calls for the entire board's resignation, and several folks on the various message boards and mailing lists that make up the new village square of the gaming industry started talking about a criminal investigation. It didn't take long for the board to realize that Dancey was a lightning rod they couldn't afford to keep around. He offered his resignation a second time, and this time, the board accepted it.

But Dancey wasn't the only one to have trouble making a resignation stick. The board of the Retail Division voted to not accept Steve Nicewarner's resignation, and asked him to reconsider. He agreed, and the board reelected him to the chair of the GRD. But that didn't settle the matter, as the GAMA board took no action on Nicewarner's request to be reinstated to the board as the GRD "en banc" representative.

One of the main promises of the FFF slate was that all members of the board -- including the Retail and Wholesale division representatives -- would be part of an "en banc" board, a board that made all decisions as one large group, not leaving most of the decisions (and the power) to a smaller executive committee of just the top officers. When Nicewarner realized the board did not want him back, he went back to the GRD board and a compromise was reached.

Nicewarner continues as GRD Chairman, but Gabriel Vega has been named "Retail Division Director at Large." As such, he will represent the Retail Division in the "en banc" GAMA board.

With that settled, things looked like they were going to settle down . . . until Dancey made his first public statement since his resignation. Issued the Monday of Gen Con week, Dancey said his actions were necessary, because of the "extreme sense that immediate, irreparable harm was likely to be caused to GAMA, and that without a way to anticipate and counter those actions, the whole cause could and would have been lost." Dancey did issue an apology in a GAMA statement announcing his resignation, but there was no such apology in his 1,896-word statement of Aug. 16. It was, instead, a recap of all his charges against the old board, and the defense that no matter what people might have thought about what he did, what the old board was doing was much, much worse.

The statement did little to change the minds of anyone who had already picked a side, but it did spur another round of outrage, including the charge that Dancey deliberately waited until two days before everyone was to leave for Gen Con to reduce the number and vehemence of replies. If that was his goal, it didn't work.

In the days after Gen Con, things seem to be settling down . . . but that's been said before. Mark MacKinnon of Guardians of Order, elected to an at-large board seat as part of the FFF slate, has been named Treasurer. Mike Stackpole has been chosen to fill MacKinnon's at-large seat. And the rest of the board members still have their jobs. Phythyon said in a statement: "The board does not feel that mass resignations would be good for GAMA. It would leave the Association destabilized and in search of leadership. The best thing right now is for us to move forward. Mr. Dancey's actions were wrong. He has resigned and apologized. We need to move past this unfortunate incident and focus on doing the things we were elected to do."

John Phythyon announced his resignation as Public and Member Relations Director of GAMA two days after Gen Con.

In Charge, Without a Clue

First, let me just say that if you're a computer user and you ever find yourself with an urgent need to do a Google search for "recover deleted partitions," you're in for a loooooooooooooooooong few days.

The bad news is that, indeed, I found myself in the need of making such a search-engine request. The reasons behind this are a tad complicated, but let's just say that I was less than impressed by my new hard drive's bundled software (the directions for which I followed explicitly), and that a certain hard-drive-manufacturing company is most definitely *not* getting a Christmas card from me this year.

The good news is that, mercifully, I was able to restore pretty much all of my data. A few programs aren't working quite right, and I might have lost a few random files here and there, but the bulk of the 200 gigs that was wiped out -- including my e-mail for the past eight years and the bulk of my professional writing -- has, indeed, been brought back to this side of the white light. However, as a tip for all you aspiring would-be data-crashers, I note that recovering data correctly can take a loooooooooooooooooong time -- about 15 minutes a gig, if my math is right. Budget your time accordingly.

Anyway, the upshot is that I lost about two days of my computing life, watching a process bar examine each file and go, "Hmm . . . now where did I see the rest of *this* file? Ohp! Here it is! Hmm . . . now I know I've seen this file before. Waitamminute! Here it is! . . ." So, in addition to throwing certain aspects of my freelance life off-kilter, I haven't been able to do the smidge of research I wanted to do for the second part of my GenCon column (the first part of which ran [last week](#)). And I know I'm in the middle of a series about taking away PCs' "toys." And I think Peter Dell'Orto has requested a column over on the [discussion boards](#), which I might fulfill if I can think of anything intelligent to say on his topic.

In the meantime, however, I continue trying to adjust to this strange, foreign land I find myself in, which the natives call "Pennsylvania." As a Florida resident for over 20 years, I found myself a bit concerned when it got rather chilly a few nights ago, so the next day I asked a group of folks who've lived here a while if it dips below 50° much. The tenor of their laughter has filled me with some concern.

I also continue trying to adjust to my new job, which entails . . . well, I'm honestly not sure. I think I'm supposed to be getting distributors to buy my company's products, and give them the information they need to make informed decisions. I think I'm also supposed to talk with the rest of the company to acquire and cull that information into usable morsels. Oh, and I'm supposed to do most of the other things necessary to keep the office going. But really, in practically every conceivable way, I am completely winging it . . . and, on some level, that terrifies me.

My typical call to distributors have consisted of something akin to:

ME: Hello! Are you familiar with our company's fine products?

DISTRIBUTOR: Er, sort of . . .

ME: Great! Great! Can you fill me in on what you know?

DISTRIBUTOR: Uh, no . . . but we *are* interested in your terms, product list, and product availability for the next three months.

ME: You and me, both, my friend . . . you and me both.

* * *

I'm reminded of an episode of *The Simpsons*, where Homer is hired by a Bond-esque mastermind (named Hank Scorpio) as the manager of the mastermind's henchmen and technicians.

HOMER [TO STAFF, WHICH IS TYPING QUICKLY]: Are you guys working?

MAN 1: Yes, sir, Mr. Simpson.

HOMER: Could you, um . . . work any harder than this?

MAN 2: Sure thing, boss. [THEY TYPE FASTER]

* * *

To tie it into gaming, I note that it's *really* fun to thrust characters (and their controlling players) into positions where they are in charge but have little training to go on outside of their instinct. Probably the purest example of this is from my *Star Trek* campaign, where -- due to a sequence of incidents and player decisions -- the doctor ended up [in charge of the ship](#). The panicked look on the player's face was no doubt equally mirrored on her character.

Usually thrusting the players into an unfamiliar environment is the province of [prison](#)-type adventures, where they are in a position of helplessness or [powerlessness](#). But it can work equally well from the other direction, where their powers -- and responsibilities -- are suddenly greatly increased. For example, in an *Aberrant* campaign I gave the heroes control of a [city block](#) in Chicago's Loop, which immediately changed the tone and direction of the campaign, since none of the PC concepts was particularly skilled or knowledgeable in what such ownership entails.

In general, these circumstances are most challenging and interesting if the heroes don't have a lot of time to mull over their possibilities, and the players can't -- or don't want to -- immediately relinquish control to someone more qualified.

Some other possibilities include:

- Suddenly gaining control of a corporation, which is just about to undergo a hostile takeover attempt
- Coming into possession of a magic item, entity, or force that will temporarily give substantial powers, *if* the hero can figure out how to use it. Oh, and he knows it will disappear in 24 hours.
- Being made the leader of a village, town, or other social event, because the citizens believe the hero will be best suited to deal with the threat. (This is an especially classic trope if the person chosen is a slacker, loner, or otherwise decidedly *not* considered suited for leadership.)

Finding yourself in an unexpected situation where you need to adapt quickly is exhilarating, and it's also one of the most primal fears around. Most people experience it in the form of the "I just remembered that I signed up for a class that I haven't been to in six weeks, and where are my pants?" dream. Me? I've been having this recurring dream that I'm in charge of a publishing company's releases, and I don't have a clue what I'm doing.

But at least most of the time I'm wearing pants.

* * *

Speaking of being in a new place and sorting things out computer-wise, this is a general announcement that no one should be using my former marsh@nettally.com e-mail address. This address will go dead shortly. Instead, I will encourage -- as I always have -- folks to use my [pyramid@sjgames.com](#) address for *Pyramid*-related correspondence. (Mind you, I've always advocated using that address, but many of you haven't heeded my request.)

Thank you for your cooperation.

Call of Cthulhu Collectible Card Game

Published by [Fantasy Flight Games](#)

Designed by Eric M. Lang, Christian T. Petersen, Kevin Wilson, & Darrell Hardy

Art & Graphics by Darrell Hardy & Scott Nicely

Edited by Christian T. Petersen, Pat Harrigan, Greg Benage, & Kevin Wilson

Arkham Edition Starter (Mythos or Investigators): full color, 60 cards, \$9.99; boosters, 11 cards, \$2.99; requires several tokens (not included)

You may recall an unsuccessful attempt at a collectible card game based on H.P. Lovecraft's Cthulhu mythos from 1997 called, simply, *Mythos*. The prolific folks at Fantasy Flight Games are responsible for the new iteration, *Call of Cthulhu Collectible Card Game*, a far more cogent entry into the unpredictable collectibles market.

The object of the game is to be the first player to succeed at three story cards. Each player starts with a deck. The first releases are the Investigators and Mythos decks, slanted slightly toward heroic humans and the monsters respectively. Individual cards come from one of seven different factions, though (like Miskatonic University, the Syndicate, Hastur, and Cthulhu), so even with the game's first release there's plenty to build your deck strategy around.

You have three domain cards, under which you place resources. Any card can become a resource, but it stays that way the whole game. Exhausting a domain with, say, four resources stuffed under it allows you to bring out a game card costing four or fewer. The resource icons on the edge of the cards peek out from under the domain card atop it; one of the resource icons under that domain must match the card being played. With only three domains to start, you must balance your reserves to activate characters (people, cultists, monsters), their support (old books, haunted locations, cars), and events (spells, actions, weird holidays) to succeed at story cards.

Each starter contains a 10-card deck of story cards (only one story deck is needed), and three of these are on the table between the players at any one time. By committing units to one or more of these, the active player may score success tokens. The other player plays opposing characters on the other side in response. A series of struggles run down the side of each card, each represented by a symbol.

Your cards may have some, none, or all of these icons listed in their margin or their text. If you have the most symbols, you beat your opponent in that struggle; you gain a bonus, or your opponent suffers a penalty. In the terror struggle, for example, having the most tentacle icons means one of your opponent's units goes mad and leaves the story. Then you move to the combat struggle and compare icon totals again, where units may be killed. When the struggles are resolved, your surviving allies tally their skill numbers, and if this value beats your enemy's, you place success tokens on that card.

Five success tokens win you the story. The winner of a story may activate its effect. Each story can stir things up in the game by adding new domain cards, eliminating or introducing characters, or disposing of other success tokens. Care must be taken in their use, because the story text affects all players equally. When you win your third story card, you

win the game. Alternately a player loses if he exhausts his deck. The game doesn't come with success tokens, so you'll need coins or something to represent successes on stories and which domains have been exhausted (better than trying to tilt all those nicely stacked cards). You don't even need different token types for each player.

The game is a graphic improvement as well. Most of the visuals have a blurred, watery quality suitable (or should that be *preferable*?) for depicting dark, elder things. A few selections are brighter or clearer, akin to a painted cover for a graphic novel, but they're all fairly creepy. A starter deck has 60 cards, including the 10-card universal story deck. Presumably, the tournament-standard 50-card deck includes the story cards and not the domain cards, but this is not spelled out. (The rules do offer www.cthulhuccg.com as the place to go for updates and clarifications.)

Game play can be a pleasantly frustrating experience. A game takes just under an hour (more if you're new to it), but there are enough of the little details that can, if you overlook them, derail what has thus far been a well-crafted, successful game for you. Equipping and supporting characters properly can make or break a struggle, and while the designers' choices of which icons and stats to give to which cards is the source of endless debate, who will win a struggle or story is never a foregone conclusion. A player's ability and awareness make a real difference.

A far cry better than its predecessor, the *Call of Cthulhu Collectible Card Game* has a level of strategy that draws players in deep. Given that the fate of the world rests in their hands, asking them to consider their next move that carefully is the least we can expect.

Dan Brereton's Nocturnals: A Midnight Companion (for Mutants & Masterminds)

Published by [Green Ronin Publishing](#)

Written by Dan Brereton & Chris Pramas

Cover by Dan Brereton & Alex Ross

Illustrated by Bret Blevins, Ronnie del Carmen, John Dunivant, Kieron Dwyer, Tom Fowler, David Hartman, John Heebink, Casey Jones, Ted Naifeh, Phil Noto, Ward Shipman, Jay Stephens, & Bruce Timm

Cartography by Rob Lazzaretti

162-page full-color hardcover; \$29.95

Imagine if Tim Burton directed *L.A. Confidential* and set it in Ray Bradbury's Greentown, Illinois transplanted to just South of Innsmouth. This would give you some idea of the feel and tone of *Dan Brereton's Nocturnals: A Midnight Companion*, a new supplement for the premier *d20 System* superhero RPG, [Mutants & Masterminds](#). It is based upon the comic book series *Dan Brereton's Nocturnals* which is celebrating its 10th anniversary and is best described as pulp or monster noir. Like last year's [Chi-Chian the Roleplaying Game](#), this book is as much a source book for the comic book series as it is a roleplaying supplement. It also acts as a showcase for Dan Brereton's artwork, and that of a number of other illustrators who have worked on the comic. Plus it comes with a never before seen *Nocturnals* strip.

The very first thing that strikes you upon cracking open the pages of *A Midnight Companion* is the art itself. It might be an acquired taste, but the dark, perhaps muddy hues quickly grow upon you. Yet not only do we see the artwork of creator Dan Brereton, but also many other artists get their turn in the spotlight, some having their own showcase two-page spread. In fact, the only white pages within the book are used for these showcase spreads. Elsewhere, the rest of the book's pages are done in a variety of pastel shades that amount to *A Midnight Companion's* only pretense to graphic design. But then, the artwork takes the place of that.

So what is *Dan Brereton's Nocturnals* about? Beginning with *Black Planet*, and going on with *Unhallowed Eve*, *The Gunwitch: Outskirts of Doom*, and *Dark Power*, it tells the story of the scientist Nicodemus (or Doc Horror) and his daughter, Evening (or Eve Horror). Originally from a world of perpetual darkness, the Black Planet, the pair was driven from their home by a demonic infestation known as the Crim. Piercing the dimensions using the Doc's teleportation device, they find a home in the sleepy and secluded Californian coastal town of Pacific City. However, the town has a dark side that comes out at night. Initially, this is of the criminal persuasion, but becomes calmer after the Doc sides with Don Lupo Zampa and helps him clean up the opposition. In this endeavor, Doc Horror has an advantage -- a dislike of operating under a yellow sun. Soon, the Doc learns that there are plenty of supernatural dangers lurking around Pacific City.

Quickly, the Doc and Eve -- who is able to converse with the spirit world -- gather a new family around them. First is the Gunwitch -- a resurrected mute 19th-century gunslinger, now part cybernetically enhanced scarecrow and trickshooter. Polychrome is a beautiful wraith, a spirit of supernatural light rather than traditional ectoplasm. Starfish is

a humanoid amphibian, with gills and fins, somehow related to an ancient but extinct race that predates humanity. Firelion is a pyrokinetic super soldier who follows the code of bushido.

Their most immediate foe hails from nearby, the Narn K Laboratories, which specializes in engineering human-animal hybrids, and in manufacturing a range of super soldiers. Some of their creations have gained enough free will to escape from the facility known as the Monster Shop; for example, the Raccoon has worked his way up to become Don Lupo's first lieutenant. But there are supernatural threats as well, the Grimwood Cemetery having been important to many of Pacific City's secret centuries over the last two centuries; the Old Swamp is home to a witch known as Keera the Bat Queen, who commands a band of faeries and pumpkin-headed goblins; neighboring towns are home to various vampire clans; and tunnels lead to secrets deep under the Earth. The Crim have designs upon the Earth, as does the remnants of an ancient race found under the town.

Every member of Doc Horror's family is detailed in *A Midnight Companion*, as is their underground base, the Tomb, and the town of Pacific City itself. Both are also nicely mapped. The same goes for Doc Horror's friends, allies, enemies, and other threats, which are also fully statted up for the *Mutants & Masterminds* system. The enemies are joined by the "Murder," a group of spectral killers led by the villain, Rictus, who are introduced for the first time in the book's new strip, "Spectres."

So what of the game mechanics in *A Midnight Companion*? Of course, it uses the light-and-fast OGL version of the *d20 System* used in *Mutants & Masterminds*. To begin with, the Power Level is greatly reduced for this setting, from the Four Color PL10 of *Mutants & Masterminds* to a grittier PL6. Further, many abilities, such as Cosmic Power, Space Flight, and Time Travel, are regarded as off-limits, while others, particularly Sorcery, are slightly reduced in power. The setting is also more skill orientated; for each Power Point spent, a character receives two skill levels instead of the normal one. Characters in this setting are more likely to defend themselves with handguns, melee weapons, or fists. To that end, a list of real-world firearms is given, all built using *Mutants & Masterminds*' gadget rules. These are backed up with several new feats, many of which are gun related.

All of Doc Horror's family are fully playable in this setting, along with another 10 ready-to-play characters created for this supplement that have not appeared in the comic book. Some of these are not too dissimilar to Doc Horror and his family, but either group of characters should serve as inspiration for players wanting characters of their own. The creation process is eased, especially for fans of the comic book new to roleplaying, with a fully explained example. It could have been further supplemented with suggestions and creation packages for other races, occupations, and histories, but inspiration for these could be found in a variety of sources, such as books, comics movies, and a plethora of gaming sourcebooks.

Some of these sources, specifically the movies and books, are discussed in more detail for the GM, but for the fan they also work as a set of essays on the genres that gave inspiration for *Nocturnals*. In addition, they are solid starting points from which a GM can write adventures for the setting. They are rounded off with a list of these sources. And what the characters are doing is exploring the secrets of Pacific City and combating the dangers that threaten the stability of the town . . . thus feeling similiar to the [Angel Roleplaying Game](#).

As a guide to the dark, gritty world of *Dan Brereton's Nocturnals*, *A Midnight Companion* should satisfy any fan of the comic book. It showcases the artwork, explores and explains the setting, and gives them a whole new comic strip to enjoy. For the gamer new to the comic book, they get all this -- with the new strip helping them get a feel for the setting -- plus a guide to exploring the setting themselves. The rules are fairly light, but enough that they could be used as indicators for rules systems other than *Mutants & Masterminds*. But what is given in terms of game support does not feel enough; there should have been something more than just the character stats and character creation guide. An adventure would have rectified this imbalance and been an invaluable tool to the GM, whether experienced or not.

Ultimately, the precedence that the source material takes over the gaming material lessens its value as a gaming supplement. While *Dan Brereton's Nocturnals: A Midnight Companion* does a great job as a guide to the comic book, it leaves a lot of work for the GM to do. Which is a shame, as the pulp or monster noir of *Dan Brereton's Nocturnals* has a lot of gaming potential.

--Matthew Pook

Dork Tower!

Dork Tower!

Iron Ref 3: The Iron Ref Strikes Back

Three competitors. Three minds of the roleplaying world, each representing a different gaming genre, have accepted the Iron Ref challenge.

Three secret ingredients. Selected by a special guest, three ingredients -- plot elements, story pieces, or other oddities -- are selected for the challengers to incorporate into their concoctions.

2,500 words. Each competitor has twenty-five hundred words -- and no more -- to devise a generic scenario in their genre incorporating all three secret ingredients.

24 hours. And they have one day to work their magic.

However, this competition has been even *more* grueling for our competitors! We ran an Iron Ref competition in August, and the other will take place the first week of October. One winner will be chosen each week; 50% of the rating will be based on *your* ratings, and 50% will be based on a 1-5 rating of a group of three celebrity judges whose identities have not been revealed yet.

The winner for each of the three events will face off against each other, with the results of that cosmos-shaking climax scheduled to run the first week of November.

Who shall emerge, victorious, as the Iron Ref?

* * *

Our challengers, and their respective genres, are:

Wil Upchurch, a self-described "14th-Level Freelancer," has written, designed, edited, and created layouts for a myriad of fine gaming products. He has escaped former KGB operatives to represent the **Spy** genre.

Mike Demetro, owner of [The Guildhall Press](#) and creator of *Scared Stiff: The B-Movie Horror RPG*, has tackled unspeakable evils to represent the **Horror** genre.

Chris Aylott, the hometown hero of *Pyramid* with [More Questions Than Answers](#), will be representing the **Supers** genre.

* * *

The secret ingredients were purchased from a short, volcano-scented merchant whose prices were in base-9, by **Kenneth Hite**, the mastermind behind [Suppressed Transmission](#), and designer of so much quality gaming material that a full bibliography is beyond the capacity of a single passing of human lungs.

Stop reading if you don't want to know the secret ingredients!

This competition's secret ingredients are:

- Designer tequila
- Three identical-looking people
- A sharp, notable odor (not of the tequila)

Fiddly Bits

The third Iron Ref competition was held from 2:15 A.M. Wednesday, July 21, Eastern Time until 2:15 AM Thursday, July 22, Eastern Time. We had planned to go midnight to midnight, as we did in our first competition, but e-mail problems conspired against our great competition. Nevertheless, our challengers compensated mightily for this inconvenience, and all was right with the event.

This is the second part of our third Iron Ref competition. Our first one was [February 2, 2001](#), and the second was [August 3, 2001](#).

The first part of this competition was [August 6, 2004](#).

Without further adieu, then, here are the results of this competition:

More Questions Than Answers

Support Challenge Your Local Retailer

by Chris Aylott

At the risk of starting a running gag, I'm postponing the time management column for at least another month. Make of that what you will. In the meantime, I'm taking on one of the most frightening challenges in gamer punditdom.

Little Peter Dell'Orto has written in to ask, "Why doesn't -- or can't -- my FLGS offer me a discount?" And you know what? That's a very good question.

The Conventional Wisdom

It is generally accepted among full-price-loving retailers that game stores don't thrive when they offer discount prices. The reasoning goes like this:

When a game retailer buys a product, he pays a manufacturer and/or distributor about 60% of its list price. He then sells the product for whatever he wants. If he sells it for list price, he collects about 40% of the money to pay his own bills. If he sells it for less, that discount comes out of his 40% and not the manufacturer and/or distributor's 60%.

This means a little discount takes a big chunk out of the retailer's share of the money. If the retailer offers a 20% discount on a game, he needs to sell twice as many copies to make the same money he would have made at full price. (40 - 20 = 20) Since most 20% discounts don't double sales, giving a 20% discount usually means the retailer makes less money.

All this is basic stuff, the kind of thing they teach right after the secret handshake at meetings of the Mystic Game Retailers of the Sea. The businesses that ignore this conventional wisdom usually collapse in a sea of red ink and angry customers (anybody remember dragonscroll.com?); such collapses are always met with knowing nods by the sages of full price retail. "Our point is proved," they say. "Another one bites the dust."

There are just two problems with the conventional wisdom. The smaller problem is that the most powerful retailers in the world are built on a discount model, and that some of those retailers carry games. The bigger problem is that the conventional wisdom is all about what's good for the retailer. It says nothing about what's good for the customer.

It's Your Business, I Just Shop Here

I could probably bang out a quick hymn to the idea that every local business is sacred, every full-price retailer is great, that if a game shop is wasted, you can make up the rest yourself. But when I'm out buying stuff for my family or the store, the health of my fellow local businessman is the last thing on my mind.

Truth is, I'm cheap. I shop at Wal-Mart and Staples and DeepDiscountDVD. One reason that I steer most of my purchases to My Favorite Distributor is that he gives me .5 percent more off the MSRP than My Second Favorite Distributor does. I don't take shopping lists to grocery stores; when I buy food I build my menu for the week based on what's on sale.

Most successful retailers are cheap. Sam Walton drove an old pickup truck for years and squeezed every dime he could out of Wal-Mart's operations. He's not alone; you should see the lengths some friendly local game retailers go to when they want to save a penny a minute on phone service. We may be generous, we may value other aspects of a business relationship, but we like to pay less because when we pay less we have more money.

So where do we retailers get off telling you customers to pay full price? Why should you shun the lower prices we seek out all the time? We tell you to support us so we stay in business, but should you care if we do?

Twenty years ago, the health of your local retailer might have been important. If Tom's Game Shoppe closed, Dick and Harry's Dungeon o' Games might spring up three months later, but you'd be new-game-challenged in the interim. You could get your games from a mail order company, but the process was slow and product information was scanty. When it came to providing easy access to games and a community for gamers, local game stores had a lock on their market.

That's not true today. Gamers from all over the world can hang out together (you're doing it right now). The game manufacturers that don't suck put samples and information about their products on easy-to-find websites, mailing lists, or bulletin boards. There are dozens of reputable retailers to order from online, and some RPG products can be had as quickly as your computer can download them.

Today Tom's Game Shoppe can close up shoppe and never disturb your flow of games, information, and gamer war stories. The death of a local game store may never have been a tragedy, but now it's not even an inconvenience.

Sadly, Most Customers Don't Buy Theories

In theory, the local game store still provides benefits to the local game population. It's a focal point for the face-to-face community. It recruits shiny new gamers. It provides that holy of holies, a place to play.

In practice, few game customers benefit from these benefits. When the community turns up at the public focal point, it often includes a bunch of creeps with nowhere else to go. Most established gamers would rather play with their friends than meet shiny new gamers, and if you're old enough to order from an online store with your credit card, you probably have a place of your own to play in. The traditional game store virtues have little relevance to the people most likely to shop at a discounter.

Then there are the products themselves. In theory, game stores are full of unique and unusual products. In practice, we sell books, boxes, and foil-wrapped packs, each of which is functionally identical to the books, boxes, and foil-wrapped packs of the same title offered in other stores. *Eberron* is different from *Vampire: The Requiem*, and very few people choose between them based on price. But once you decide to buy *Eberron*, the copy you may buy at Full Price Games is identical to the copy you may buy from Discount Games.

Hobby games are unique products, but their delivery systems are commodities and when you're selling a commodity price is a big factor in making the sale. If what's important about a game is the experience you get from it and the way it is presented, why pay more for the same experience and presentation?

The Pursuit of Happiness

There's an axiom in marketing: "People only buy two things: good feelings or a solution to an important problem." The line between these two things is fuzzy -- if you buy a book because you're bored, are you solving the problem or just making yourself feel better? -- but the distinction between practical solutions and just enjoying your purchase is useful.

Most RPG purchases fall into the good feelings category. There may be practical applications -- "I need an adventure for my game tonight!" -- but hobbies aren't about putting food on the table or keeping the car on the road. It's a cinch that we're buying these games to enjoy them, but in addition to the game we're also buying the services of the person who sold it to us.

What makes you feel good about the experience of shopping in your favorite store? Is it the prices? Is it the way the store looks? The way you're treated by the staff? Does the selection or presentation of the merchandise at the store play a part? Is there something else that makes the experience special to you?

Note that all these questions apply just as well to online stores and discounters as they do to bricks-and-mortar or full-price stores. They apply to any store, not just game stores, and if the game store you shop at isn't your favorite store, what does that say to you? What does your favorite store have that your game store lacks? (It could just be that you like what they sell better.)

Shouldn't we feel as good about the stores we shop at as we do about the games we buy? If we don't enjoy those stores, if we're not satisfied by them, then is there any reason we shouldn't shop somewhere else that makes us happier?

(And while I'm wondering, what does it say about us that we spend so much time comparing notes on stores or games we claim to hate?)

Make Me Happy

One thing I've noticed about my fellow retailers is that we spend a lot of time talking about what would make us happy. We don't talk much about what it would take to make our customers happy; sometimes it seems like the customers are supposed to be serving us and not the other way around. Human nature, I suppose, but I wonder if we're missing something there.

Many game store customers are happy just coming in the door. They like the games, they like the people selling them, they like being in a place that accepts and encourages their hobby. Game retailers love customers like these; it's easy to be nice to them. These customers are the bedrock of any successful game business.

However, it's hard to build a great game business on just the easy-to-please customers. If anything, they represent a subtle trap, a security that creates complacency. If many of our customers are thrilled just to walk in our door, there's less incentive to make sure that what they see inside is the best it could be. It's the difficult customers that push retailers to improve their stores, and I wonder if game retailers spend too much time drawing praise from the easy customers and dismissing the criticisms of the difficult customers.

If we game retailers pushed ourselves a little harder, maybe we could make our businesses more efficient. That would let us compete better with discounters. If we feared losing our more outspoken customers a little more, maybe we'd work harder on finding products and services that please them. If more of our customers told us that the old standbys of "product, playing space, and new gamers" weren't good enough any more, maybe we'd find new reasons for them to shop at our stores.

If you're not 100% thrilled with your usual retailer, maybe it's time for you to give him a kick in the pants. Maybe it's time to tell him to step up his performance, and to be willing to shop elsewhere if he doesn't.

The Price of Happiness

There are people for whom price is everything, and there are people who couldn't care less about price. Neither approach is wrong, and there are shops that cater to each group. Those people don't worry much about their purchasing decisions, because they already know what they want.

The rest of us have to think a little harder. Price is important to most of us, but we want more out of our shopping than just price. (If we didn't, we'd just shop at the cheapest place and not worry about it.) We need to look within a little, to figure out what makes the shopping experience good for us and how much we're willing to pay for it.

Everybody has his own balance point of price and service and ambiance and entertainment. Maybe it's time for us to understand that there is no wrong preference among these, and that it's okay to demand lots of value for your money.

The *Eberron* campaign setting sells for \$27.17 new on Amazon.com. If you buy it at your local retailer at the \$39.95 suggested retail price, you're paying \$12.78 more for the same object. Shouldn't you be getting something for that money? If you aren't getting anything for that money, why not shop somewhere else?

What do you want your full-price retailer to do to earn his 12 dollars and 78 cents?

Object Of My Obsession

for *GURPS Third Edition*

by Eric Funk

"And he piled up one the whale's white hump the sum of all the rage felt by his whole race. If his chest had been a cannon, he would have shot his heart upon it."

-- *Moby Dick*

A man may spend his life and fortune hunting a whale or building a time machine. Heroes pine and train to save a kidnapped princess. A youth in a jersey spends most of his free cash on hockey cards. A woman makes many long-distance phone calls and hires detective after detective to look for her long-lost brother. A child seeks to be a professional athlete, and joins every extra-curricular sports team in the area. Independent of skill, their determination, coupled with the amount of energy spent trying to fulfill their dream, describes these people as having an *obsession*.

In *GURPS* terms, an Obsession is a goal toward which the character will spend most, if not all, of their free resources, time, money, Contacts, and/or Favors. In the above examples, the youth should be carrying cards, reading books about them, joining clubs, and watching the news and games to know the value of the cards. The woman should spend hours getting to know people in the area (citizens and law enforcement personnel), and convincing other detectives to pick up the case where the last left off.

"The last! I knew you were the last!"

-- King Haggard, *The Last Unicorn*

GURPS has already sub-classified several specific Obsessions: Fanaticism - obsessing about the progress of an organization, and Megalomania, defined as Fanatic (Self) (see p. B34). In addition to the former two, if an obsession is seen by the local public as unrealistic and not within the "common logic" of the world such as "Restore magic to the world," then it might be better reflected in the additional purchase of a Delusion ("Believes that magic exists"), even if it were technically possible, but not believable. On the other hand, a realistic goal that adversely affects others ("Must paint *every* tie pink") may be better handled as an Odious Personal Habit ("Paints every tie pink."). An Odious Personal Habit alone is right for the former example, unless the character spends all their free time hunting non-pink ties and coloring them, perhaps planting paint bombs in factories. It may also qualify as such if the character dresses/presents themselves in an anti-social manner. One example may be someone with the Obsession "Wants to be like _____," and dresses the part, trying to emulate the life of Elvis, Shakespeare, a 17th century aristocrat, or a particular punk rock star whilst working for a Wall Street Broker (see p. CI93 for details). It may also be possible to model it as a Vow. A Reputation may also be appropriate after a time. A Higher Purpose (see p. CI26) might be considered another form of an Obsession, possibly better described as a Code of Honor/Sense of Duty with a skill bonus when pursuing it (which is why this is an advantage).

Now that the Obsession has been narrowed down to concepts that are realistic, but don't directly annoy other people, what is left?

Life Goals

Life goals are mainly internal, long term, and can work well within most campaign structures, as well as provide plot hooks for the GM. A common goal of young, idealistic characters is "To become the world's best _____." This can be rationalized in training, even considering the main adventure as "training" for the goal. A clever GM can then find ways of putting tension on the character. Perhaps they must choose whether to go to a karate tournament, or tail a criminal through a sewer. Alternately, the choice may be between slaying a dragon that killed their parents, or saving a helpless group of pilgrims from a *similar*, but unrelated fate. Another way to exploit this disadvantage is to attach it to

a limited time offer, pressuring the character to either rush or sidetrack the current adventure to start while a window of opportunity presents itself -- this may be a good way to keep the players satisfied that they stopped the villain, yet have something to look forward to. Last, but not least, revealing an NPC (or a PC) that has the same Obsession as the PC should be done with care, because the storybooks and movies teach that they will either help each other, perhaps just until the last moment, or become fierce rivals.

"If you choose the quick and easy path . . . you will become an agent of Evil."

-- Yoda, *Star Wars*

Achieving Goals

Once the aspiring youth has achieved his or her dream of being the "Become the best student in the Dojo," a logical step may be to move on to "Become the best martial arts student in the city." Instead, if the player decides the character likes leading and molding beginning students, on a part-time basis, the Obsession may be traded for Duty, Sense of Duty, and/or Dependents. GMs must be careful, as Obsessions that align directly with the campaign may not be any limitation. For example, if Andrel the warrior has the Obsession (Kill Jorneth the Necromancer), it should not be worth even the normal -5 points if the whole team is heading to kill the necromancer, especially if the wizard reciprocates by trying to kill *them*. If, however, the party is to be ordered to take the villain alive (or must because of a dead-man's switch), or they are instead hunting Lennir the Mad, who is a more powerful, more evil wizard from the next province over, the warrior should be torn between the Obsession and Sense of Duty to his friends and country. If the party's goals and the character's Obsession differ in objectives from time to time, it should be difficult to convince the character that they should use their resources on "peripheral" goals. Intertwining a -15 point Obsession with a 15 point Destiny (see p. CI35) can lead to long-term changes in the campaign world!

When characters are created, the GM usually gives them a cursory examination (to make sure that an undead fireball-sword wielding evil dwarf paladin doesn't sneak into 1924 New York), and asks what the character does in their free time. This helps the GM and player decide what the character can do if suddenly the GM decides that the characters have three weeks to play out (while one builds a one shot dimensional portal from popsicle sticks using an ancient Egyptian tomb they just found). Most characters will have a hobby, but only a few have the drive and sense of purpose that makes an Obsession. In conclusion, declaring a character's life goals can be a powerful tool for the GM and player, whether they are intense enough to qualify for an Obsession, or just worth a Quirk.

Below are listed a few sample Obsessions:

Obsessions worth -5 Points

- Join a local club that doesn't want you, whose standards of society/achievement you don't meet. In *GURPS* terms, this may be a Reputation, Status, and/or Wealth. If it is personal, then add a negative Reputation.
- Travel to a place pretty far away (one to two weeks away or more) to which there has been some obstacle, be it passport, money, or responsibilities.
- "Get ____ to notice/go out with me (without using trickery), but who doesn't like me already." This may also be represented as an Enemy, Reputation, or Dependent.
- Speak/fight against an evil empire. This may qualify as a Delusion if the public does not recognize the empire as a threat, and an Enemy when the group takes notice of the individual's actions.
- Become the best ____ in a city/small region and keep the title, *or* become the best ____ in a country/planet for just an instant.

Obsessions worth -10 Points

- Join a national exclusive club, whose membership is reserved for great achievers, be they athletes, politicians, or thinkers.
- Travel to a place very far away (one to two months away or more by mundane means). A modern version may be a goal to be the first to reach the summit of Mount Everest, the geographical South Pole, or the bottom of the

Marineris Trench.

- "Get ____ to marry me (without using trickery), even though the person hates me."
- Actively oppose an evil empire.
- Become the best ____ in a country/planet and keep the title, *or* become the best ____ in the whole game world for just an instant.

Obsessions worth -15 Points

- Join the Illuminati's Inner Circle
- Travel to a place incredibly far away (1-2 years' travel one way or more by mundane means). A modern version may be another planetary body, such as the Moon or Mars.
- "Get ____ to truly love me (without using trickery)," but they want to kill me.
- Personally topple an evil empire.
- Become the best ____ in the whole game world and keep the title.

Famous Last Words

"I'll get you, my pretty! And your little dog, too!"

-- Wicked Witch of the West, *The Wizard of Oz*

The Magnificent Seven: The Voyages of Sinbad

"One might say of anyway the Stories of the Voyages of Sindbad that, on the contrary, they were romances into which had intruded elements of trade and navigation. It remains to be seen to what extent we may part the gaudy curtains of its fictions and discern the lineaments of its facts. Where, indeed, did Sindbad sail?"

-- Avram Davidson, "Where Did Sindbad Sail?"

It hath reached me, O auspicious Subscriber, that Sinbad (or more pedantically, Sindbad, or more pedantically still, es-Sindibad) the Sailor may be seen to explore the veriest reaches of what we indite herein as [India Ultraterrestria](#), and that further, Sinbad whom Allah loveth, loveth to run his mouth off about such explorations and thus pique the curiosity of Transmitters e'en as far as Chicago-on-the-Lake. And so therefore we shall attend to the matter of Sinbad, and the nature of his sailing, and what it might portend if we, too, cast off the ropes of logic and fact for the sun-drenched islands of ele-Phantasy. Sail on!

"Consider, therefore, O Landsman,' continued Sindbad the Seaman, 'what sufferings I have undergone and what perils and hardships I have suffered before coming to my present state.'"

-- Richard Burton (trans.), *The Book of the Thousand Nights and a Night*, "The Tale of the Seventh Voyage of Sindbad the Seaman"

In its canonical form (such as it is) the Tale of Sinbad the Sailor is a nested narrative of seven Voyages from Baghdad out into the Outermost East. On his First Voyage, Sinbad makes landfall on an island that turns out to be "a great fish," and winds up adrift when the whale submerges. He washes up on the shores of King Mihrjan's land, meets another great fish, and sees the island of al-Dajjal, the Antichrist, before catching a ride back home. On his Second Voyage, Sinbad falls asleep on the island of the [Roc](#); tying himself to the bird's leg, he winds up carried to the jewel valley of the [griffins](#) (mere "eagles" in this telling) and then to the island of the karkadann (a very rhino-like [unicorn](#), or vice versa), where he uses his jewels to join a caravan back to Basra and home. On his Third Voyage, hairy ape-satyrs steal Sinbad's boat and leave his crew to the tender mercies of a cannibal giant; he blinds the giant, defeats a sea serpent, and rides home on a passing ship. On his Fourth Voyage, a shipwreck strands Sinbad in the country of the Ghuls; fleeing them, he winds up in the primitive country of Calanak. Introducing the saddle and other innovations, Sinbad becomes a great man and marries a local girl, but when she dies is buried with her according to the local custom. He escapes from the grave and hitchhikes home on a passing ship. On his Fifth Voyage, Sinbad's crew break a Roc's egg and kill its chick, so the Roc destroys his ship, leaving Sinbad stranded on the island of the Old Man of the Sea, whose "slender and pliant legs" grip him until Sinbad can get the Old Man drunk and kill him. After a brief stop-off at the [City of the Apes](#), Sinbad returns home. On his Sixth Voyage, Sinbad suffers shipwreck in a dangerous strait; marooned with no food, he nearly dies but decides to float down a stream under the mountain. The stream deposits him in the kindly land of Sarandib, whose king sends him back to Baghdad with a message for Harun al-Rashid. On Sinbad's Seventh Voyage, his ship runs aground on a reef in a sea of monsters. Sinbad makes a raft of sandalwood and sails down a river to a city ruled by a friendly Sheikh, who makes Sinbad his vizier. The city's menfolk turn out to be [birds](#) (or demons, or demon-birds), and after a brief detour into the mountains, Sinbad returns home for good rather than dwell with them.

"Let's follow Sindbad on his voyages. Their locale is the Indian Ocean and, more particularly, the large islands of the East Indies . . . The destination of these voyages was clear to the listeners, for not only was Arabian sea trade Indian trade almost by definition, but even the hero's name contained the Arabic word for India, Sind."

-- L. Sprague de Camp and Willy Ley, *Lands Beyond*

Identifying the various islands and cities of Sinbad's itinerary is made both easier and harder by his habit of lifting place names and descriptions straight out of the classics of Arabic geography: al-Kazwini, Idrisi, and Ibn al-Wardi, among others. There is general agreement that Sarandib is Sri Lanka, for example, and that the kingdom of Mihrjan is probably Borneo. The island of the Roc is likely [Madagascar](#), as we've [seen](#), but eventually the identifications get trickier. The hairy apes may be baboons on Socotra or orangutans on Sumatra; the Old Man of the Sea might be an orangutan or an East African grandee. The cannibal Ghuls are possibly the cannibal Andamanese or Burmese, and so

forth. The island of the Antichrist, the City of the Birds, and the Valley of the Diamonds might be anywhere in India Ultraterrestria; many of Sinbad's locations recur in [Mandeville's](#) journeys with entirely different place-names assigned. Even Sinbad's adventures are often not easily pegged down. The giant whom Sinbad blinds is clearly Polyphemus from the *Odyssey*, his subterranean river comes from the 12th-century tale of Duke Ernst of Swabia, and the submerging Whale-Island from the First Voyage is taken wholesale from the *Navigatio* of [St. Brendan](#).

*"And, indeed, many men well acquainted with their histories opine that the stories above mentioned and other trifles were strung together by men who commended themselves to the Kings by relating them, and who found favour with their contemporaries by committing them to memory and by reciting them . . . Such is the book entitled **Hazar Afsanah** or **The Thousand Tales** . . . Such also is the **Tale of Farzah**, and **Simas**, containing details concerning the Kings and Wazirs of Hind: the **Book of al-Sindibad** and others of a similar stamp."*

-- Ali Abu al-Hasan al-Masudi, *Muruj al-Dahab wa Ma'adin al-Jauhar*

So where does Sinbad come from in the first place? Who assembled all those travelers' tales and antique geographies and spun Seven Voyages from the foam and flotsam of medieval legend? Nobody has the faintest idea, except that they have much in common with the unknown bards who assembled the *Thousand Nights and a Night*, better known in the West as the *Arabian Nights*. The *Nights* themselves are dismissively referred to as early as 944 A.D. by the traveler and encyclopedist al-Masudi, along with "the Book of al-Sindibad." However, as we shall see in a little bit, this is probably not our Sailor. Pretty much all the stories in the *Nights* are complete by the thirteenth or fourteenth century, but no "canonical" form has been established even now. In his "Terminal Essay," Burton makes a sound case that the main body of the stories was composed before 1400, noting the absence of syphilis, hard liquor, coffee, cannon (for the most part) and other Renaissance innovations from the tales.

Although Sinbad's Voyages now appear firmly ensconced within the *Arabian Nights*, the tales of Sinbad the Sailor may have been an entirely separate story cycle, added to the *Nights* as late as the 18th century! Antoine Galland, the first European translator of these tales, translated *Sinbad* in the 1690s and only later discovered the existence of a larger "Scheherezade Cycle," which he translated in 1704 in the same style as his earlier *Sinbad*. Galland was thus the first person known to have combined the two cycles in a single set of stories, and even his sources were later versions. The oldest known manuscript of the *Arabian Nights*, interestingly enough the very one used by Galland for his 1704 translation (the fourth volume of which, by the way, is missing from the Bibliotheque Nationale), cannot have been copied before 1426, when the ashraf (a gold coin mentioned in the Hunchback's Tale of the Jewish Doctor) was first minted by the Mamelukes.

This is right around the time when Sinbad's old stomping grounds are getting churned up by the "treasure fleets" of the great Ming admiral Zheng He (or Cheng Ho, to his 19th-century friends). Zheng He sailed at least as far as Zanzibar and Java and he may have discovered the Cape of Good Hope and Australia, although the ossifying Ming bureaucracy buried his final reports and charts without taking any action on them. One can stumble upon Web sites insisting that Sinbad was "really" Zheng He based on the fact that Zheng He (a Muslim born Ma He) was named the "Three Jewel Eunuch" (*sanbao dai jien*) by the Emperor. (Zheng He is worshiped under the name Sanbao in Chinese communities in Malacca and Java today.) Their itineraries are strongly similar, and some myths about Sanbao (such as friendly whales plugging holes in his boats) sound like fugitive or vagrant *Nights* tales, but the dates *probably* don't work. However, it is tempting to believe that the "Sailor Cycle" got its final form during the confusion and prosperity of the late 15th century, and the memory of the Muslim admiral Sanbao's treasure ships helped cement the name "Sinbad" onto the stories.

"Know, O Porter that thy name is even as mine, for I am Sindbad the Seaman; and now, O Porter, I wouldst have thee let me hear the couplets thou recitedst at the gate anon."

-- Richard Burton (trans.), *The Book of the Thousand Nights and a Night*, "The Tale of Sindbad the Seaman and Sindbad the Landsman"

Sinbad himself seems kind of anxious about his name. In Burton's telling, when he hears a porter, also named Sinbad, bemoaning his fate, he invites Sinbad the Porter in for a recitation of Sinbad the Sailor's stories, fixing them in the mind of his namesake and bringing his doppelganger firmly into the fold. And verily, Sinbad had a reason to worry about name drift. Because if you'd asked any literate, genteel person in the 14th-century Muslim world about "Sinbad,"

he would most likely have told you the improving tale of Sinbad the Counsellor, and the Seven Wise Sages who warn of "the craft and malice of women." This *Sinbad-Nameh*, the *Book of Sinbad*, contains seven (usually) story pairs in which the Seven Sages and an evil queen trade tales to prove or disprove the treason of a young prince, ordered by his tutor Sinbad to keep silent for seven days. (As opposed to the Sailor, who is almost comically prolix and talkative, even on desert islands.) This is almost certainly the "Book of al-Sindibad" referred to by al-Masudi above; it comes from India (from whence perhaps the "Sindi" in "Sindibad," although Burton at least gives some credence to a derivation from "Siddhapati," the "Lord of the Sages") and may date back to the 5th century B.C. It spread to the West in the 11th or 12th century, where it was known as the "Seven Sages of Rome." Most interestingly for our purposes, though, it helps focus the one commonality between the two cycles -- the insistence on seven trials or crises, told as stories.

"It came to pass, when Enoch had told his sons, that the angels took him on their wings and bore him up on to the first heaven and placed him on the clouds. 'And there I looked, and again I looked higher, and saw the ether, and they placed me on the first heaven and showed me a very great Sea . . .'"

-- 2 Enoch 3:1

And this, of course, brings us to the seven stages of magical initiation, such as the seven degrees of the Mithraic mysteries. Many scholars believe these seven degrees mark seven trials or seven revelations, mirroring a journey up past the seven planetary spheres to Heaven. This concept goes back at least as far as the progress of [Enoch](#) through the seven heavens or (less happily) the journey of the Sumerian goddess Inanna through the seven gates of Hell. Could Sinbad's Seven Voyages mark an [initatory path](#), a sacred geography through the elemental monsoons and currents of India Ultraterrestria?

Sinbad's voyages eerily match the [Sufi](#) "arc of ascent" through the seven *latifah* of the experiential macrocosm. His First Voyage passes Saturn (the al-Dajjal, or exiled king) and encounters Nature in the form of the Whale-Island, his Second passes the Moon (symbolized by the jewels and the unicorn) and Forms when Sinbad disguises himself as a carcass to escape the Valley of the Diamonds, his Third passes Mars (the violent giant) and literally blinds Perception. On his Fourth Voyage, Sinbad rules (Jupiter-fashion) over Calanak when his Imagination allows him to re-invent the saddle, his Fifth passes the Sun (the Roc in its anger) and reveals a World Beyond Form in the protean Old Man of the Sea, he serves as a Mercurian messenger on his Sixth Voyage (where perhaps his near-death and symbolic resurrection confirm his Divine Nature), and marries a princess in Venusian fashion on his Seventh, when his calling on Allah both defeats the demon-birds and invokes Divine Essence.

"The high ground of traditional realism, brothers, is where I stand! Give me familiar substantial stuff: rocs and rhinoceri, ifrits and genies and flying carpets such as we all drank with our mother's milk and shall drink -- Inshallah! -- till our final swallow. Let no outlander imagine that such crazed fabrications as machines that mark the hour or roll themselves down the road will ever take the place of our homely Islamic realism."

-- Ibn al-Rashid, in *The Last Voyage of Somebody the Sailor*, by John Barth

Perhaps it is not pure coincidence that Antoine Galland was, like Sinbad, "buried alive" during his travels in the East. Galland got caught in an earthquake in Smyrna in 1688 and emerged miraculously unharmed before returning to France to translate the apparently emerged-from-nowhere Sinbad Cycle. Perhaps it's not just a coincidence, then, that the Baron Joseph von Hammer-Purgstall was one of the key scholars who cemented the Sinbad Cycle into the *Arabian Nights* and that he provided the cycle with a possibly spurious antiquity by confusing the Sailor with the "Seven Wise Sages" Sindibad. For Baron Hammer (as Burton delightfully calls him) was also a crucial figure in Templarist occult Freemasonry, the author of "The Mystery of the Revelation of [Baphomet](#)." And according to a footnote in Burton, the Baron also "escaped drowning by the blessing of the Nights." Burton himself was wise in the arts of the East, and translated the Nights according to his own style, giving Sinbad nights 537-566 for his own. Surely a linguist and occultist such as Burton would be aware that those numbers kabbalistically run from "Atziluth" (the sphere of Godhead) down to "Tzal-Maweth," the Shadow of Death. Curiouser and curiouser.

Burton separates the two Sinbads (Sailor and Counselor) by the Tale of the City of Brass, a fractal city of the djinn itself mirrored in [Irem](#). On the other side of the Sailor's tales, he places the Tale of the [Queen of Serpents](#), almost as if to demarcate Sinbad Country and guard the rest of the Nights from Sinbad's influence. But it's hopeless; Sinbad is too

wily, too omnipresent for such measures. He took a tidal wave at the flood, sailing into our history during a great reality quake in 1688. He is the great merchant of the cantosphere, bumming a ride with Odysseus, taking point for Mandeville, even "coincidentally" partnering with Chinese admirals and keeping a temple to "Sanbao" going in the quotidian Malacca where he found monsters and rubies. He trades in mindshares, taking perception and belief and arbitraging them between the Sheikh of the Birds and the lucky lords of Serendip. Sail on! Sail on!

Cooperation: The Wacky Gamer's Game!

This is the second part of my GenCon column, wherein I promised to describe another fascinating aspect of the convention to you -- one which led to a personal revelation about both the convention and the gaming industry itself.

Namely, that -- for the most part -- everyone in the gaming industry is *really* nice toward each other.

I had this revelation as myself and West End Games editor extraordinaire Nikki Vrtis were at the [Green Ronin](#) booth, talking with Nicole Lindroos (a remarkably nice person) and Steve Kenson (another remarkably nice person). And it hit me: I was complimenting Green Ronin's products and creators (because I'm a fan), while quasi-representing one game company and editing a magazine for *another* game company. Oh, and I'd just had my first cover-credit book released at that con, from another game company.

While I can't claim to have made any true friends at the convention, I suspect that's mostly owing to a lack of time and my remarkable shyness. But I know other people in the biz, and, with a few notable exceptions (the recent clash over [GAMA](#), for example), companies are not only personally friendly toward one another, they are *professionally* friendly toward one another.

I really cannot stress how remarkable I find this. In all the other fields I've worked in, getting competing companies to work together professionally would be akin to Darth Vader and Yoda playing hopscotch. Heck, getting folks from competing businesses to be civil to one another while in the same room would be an accomplishment, should such an odd circumstance happen at all. In most other fields I've had experience with, attitudes have ranged from extreme indifference to active dislike and distrust.

But putting aside general inter-company goodwill, I realized that there was an astonishing number of cross-company projects and gestures:

- Steve Jackson Games' various dealings with other companies and professionals (such as Pinnacle, Eden Studios, Marc Miller)
- Hero Games' and Guardians of Order's crossover adventure *Reality Storm: When Worlds Collide*
- The *Swords Into Plowshares* charity project
- And many others I'm too lazy to research.

And so, while trying to puzzle out my thoughts on this phenomenon, I thought -- in the spirit of inter-company cooperation -- I would ask several of my industry compatriots their thoughts on the matter. It was at this point I realized the first lesson I would glean from this:

Don't e-mail busy fellow professionals a mere 24 hours before you're expecting to use their quotes in a column.

While many would consider this idea to be a no-brainer, that ignores the fact I have no brain, despite what the diploma given to me by the Wizard may say.

Anyway, several professionals *did* get back in touch with me, despite my efforts to keep them from doing such.

One thing most of the professionals I contacted pointed out was that we're all united in our love of games. Again, this is a no-brainer, but goes a long way toward explaining a general level of connection between game companies. As [Matt Forbeck](#), the über-prolific freelancer behind *The Redhurst Academy of Magic* and a jillion other books, put it, "We can talk with each other and connect in a way that's just not possible with 99.9%+ of the population." Peter Wacks, President of [Social Games](#) (creators of the *Cyberpunk CCG*, itself the child of a cross-company union), commented, "It's hard to hate someone who shares your driving passion."

But that fact alone doesn't explain it; for example, I've been involved with the yo-yo biz (as long-time readers know), and despite a shared passion there, there's certainly no mass love between competitors at either the retailer or

manufacturing level. And, in the Friendly Local Comic & Game Shop biz, there's certainly no love between competitors that I've found (although I admit my experiences are not all-encompassing, and may be unique).

Some of the folks I asked also mentioned that the general comradery had something to do with the relatively small market share. Patrick Sweeney, founder of [Firefly Games](#) and current President of the [Game Publisher's Association \(GPA\)](#), commented that there's "an 'all in the same boat' feeling -- while some companies may be much larger and more successful than others, in terms of the overall market there are the top two or three companies . . . and everyone else. So it's natural for 'everyone else' to feel a bond of some sort." Peter Wacks commented similarly, saying, "In a niche industry like ours, it pays out more to have friends than enemies. Would you rather work with the other 200 companies fighting for that same 10% market share the big boys have left for you, or would you rather work with them to increase that market?" Peter also goes on to comment, "Personally, I have always believed that cooperative business models are stronger than isolationist models. Sometimes this cooperation results in merger/acquisitions (Microsoft/Intel) and sometimes it results in cooperation and mutual assistance (Disney/Coca-cola/United Artist Theatres)."

Patrick, as current leader of a trade organization devoted to "collectively promote our companies, industry, and hobby," is obviously a big proponent of cooperation, whether it's formal programs such as co-op advertising or informal Internet newsgroup gatherings to help with layout or shipping questions. Quoth he, "In a global sense, if I help you produce a better game, then your better sales help keep retailers and distributors in better shape, which enables them to buy more of my product, too. And if it turns out you're the next White Wolf or WizKids, bringing all kinds of people into the hobby, well, score for everyone! . . . [N]o one plays just one game forever. By making new customers, or keeping existing gamers happy, you are providing future customers for me."

I confess that Patrick does a *really* good job selling the cooperative model. It makes sense, and I kind of wish I had it in mind beforehand. But, as someone who was naturally inclined to gush over *Mutants & Masterminds* with the Green Ronin folks, that wasn't what was going through my mind at the time. I think Matt Forbeck put it best when he said, "As a full-time game designer, there are probably less than a few dozen others fortunate enough to have my kind of job. These are my brothers and sisters, not my foes. We create our games for each other as well as for the public at large. We have a common cause, to entertain through games, and that's a bond that takes the edge off of things like hard-core capitalism."

Peter Wacks also mentions hero worship as an idea: "We all had the games we loved as a kid or teen, or even adult. There is some degree of just plain 'wow!' when you find yourself a peer of all these people whose life works inspired you." This immediately brought to mind one of the earliest e-mails I wrote to Steve Jackson, shortly after being given the gig to edit *Pyramid*, where I embarrassingly gushed, "It's like being asked to play racquetball by Winston Churchill." (Fortunately, neither he nor I ever brought up that quote again . . . so no one need ever know.)

Speaking of Steve Jackson (President of . . . oh, [Some Company or Other](#)), Steve replied to my request for quotable material in much the same way as the others did: "Most of the companies in the industry get along pretty well because at bottom most of us are still gaming geeks. This means that if the subject is games, we have something to talk about and we enjoy each others' work."

But then he mentioned something that I hadn't considered: "Unfortunately, it also means that we argue about everything the way we would argue about a fuzzy set of game rules . . . which explains GAMA."

This, in turn, sparked my own revelation on the subject. Getting together to argue about a set of rules is something that gamers do. But, to step back, getting together in the first place is something that gamers do.

Brothers and sisters. Compatriots. Heroes. Gaming geeks. *Gamers*.

At its core, when you peel away everything else, gaming is about gathering, having fun, cooperating, and creating a mutually enjoyable experience *together*. This is something absent in most of my other hobby-related occupations: yo-yoing, reading comics and books, and so on. While it's possible to gather and talk about these hobbies, the act of doing the hobby in question is a solitary experience. Not so with gaming; at its core, I suspect that gamers game because they like to be together with friends, working together for . . . well, fun. So it seems logical, to me, that those on the

business side would be naturally inclined to react favorably toward each other. Friendliness and cooperation is at the core of being a gamer, thus it stands to reason that it should be at the core of being a game creator.

So, to all my fellow gaming professionals, thank you for making GenCon -- and the profession itself -- a wonderful and possibly unique experience. I'm honored to be working so close to you, and I'm appreciative that you don't call security when I prattle on about how much I enjoyed your latest offerings.

And there's a standing challenge for a six-way *Castle of Magic* game involving any of you all.

Early American Chrononauts

Published by [Looney Labs](#)

Designed by Andrew Looney

Art by Alison "Looney" Frane

Produced by Kristin Looney

Contributions by Bill Andel, Jeff Looney, Meg Naab, Joe Fourhman, Chris Kice, & Carol Townsend

136 full-color cards, rules sheet; \$20

What do you do if you're a time traveler and altering the last 140 years isn't getting you the results you want? You go back another, oh, hundred years or so, and see where -- or when -- that gets you. You've become *Early American Chrononauts*.

The original [Chrononauts](#) from Looney Labs took players back as far as the assassination of President Lincoln; *Early American Chrononauts* starts with 1770's Townshend Duties and ends with 1916's adoption of the Star-Spangled Banner.

Functionally, the games are all but identical. The timeline is laid out in four rows of eight cards each, and you attempt to alter history by using inverters to flip lynchpins (key points in history), which have a ripple effect on other years. Patching these rippled paradoxes with your own version of events lets your character go back to his custom-built future. You can also win by snatching thematically related artifacts from the timestream, or by fixing historical paradoxes sufficient that you can retire.

There are a few differences, mostly fiddly technical bits you won't really notice without a side-by-side comparison, or cards whose effects or text are somewhat altered (instead of a card that lets you switch your mission card for a new one or an opponent's, the new set lets everyone switch out for a new mission). The one real, sweeping observation: You're down a number of chrononauts cards to account for half a dozen new gadgets. As far as putting them into play (or taking them out), gadgets are like artifacts, except they do things instead of just sitting in front of you. You may gain an alternate ID or mission, get protection from some cards, or get extra actions or plays.

Although the games don't stand out much one against the other, they do offer players a new option: Übernauts. With both sets, players can combine the two timestreams into a single massive timeline (there will be some overlap in the middle). With an eight-by-eight history laid out, players must now satisfy all three victory conditions to win. The game takes only a little longer than a regular game, but it's a nice change of pace that demands more involvement (experienced players can finish a regular game in fairly short order). Once you've succeeded with your mission or ID, you turn it face up. It seems at that point you no longer have to worry about someone reversing those segments of your victory. "Seems," because the Übernauts rules are printed on one of the cards -- more precisely, one card face (the other side tells you how all the inverters work in a combined game). The website is supposed to have further clarifications, but the rules found there seem little better than what comes in the box.

The rules sheet is one place where *Early American Chrononauts* truly outdoes the original. The old booklet, with its small, hard-to-turn pages, tiny print, and iffy presentation has given way to a single folded sheet that conveys much of the same information in a streamlined format. The illustrations are bigger, and no rule is further away than a flip of the page. It has dispensed with a few things (like rules for Artifaxx -- which are still available at the website -- the Q&A, and the reminders), and a lot that was textual is now made clear visually.

And the graphic style has been carried over to this new set. The cards are still rich with data, thanks to the elegantly informative layout. Everything the time traveler needs to know is available at a glance. Mixing the cards for a game of Übernauts poses no problem: Each *Early American Chrononauts* card has an unobtrusive, stylized star in the corner to indicate it comes from the new set.

In plain terms, if you have the original *Chrononauts* set, you do not "need" the new one. The games are the same, so you only need the sequel if you want to play Übernauts. Outside that possibility (not that it's something to be dismissed), *Early American Chrononauts* also presents a new playing field. Players used to the old one, who have learned all its tricks and know the IDs and missions inside and out, now have unfamiliar territory to trudge through -- not a trivial concern. For new folks, it boils down to a question of which time period you'd rather use as your introduction to the world of *Chrononauts*. For old hands, if you're okay with the options presented in the original, skip it. You'll find history is just doomed to repeat itself.

Beer Money

Published by [Atlas Games](#)

Written by Charles Wiedman with Michelle Nephew & John Nephew

Photography by Andrew & Anna Yates

110-card deck, 9 by 10-inch double-sided rule sheet; \$19.95

Time to move on. Get out. Recess is over. And so is school. Nobody wants what your Momma put in your pocket to pay for your lunch. Somebody still wants to kick your butt though. And afterwards, if there is money enough in your wallet to buy them one more pint, they get double the reward.

This is the premise for *Beer Money*, the "grown-up" sequel to one of the most disturbing little card games ever published, *Lunch Money*. That game had as its theme, the merciless playground brawls fought by kids in recess over their lunch money. What made that game stand out was not its game play, which could be best described as simplistic. This is not to say that the game play failed to capture the nastiness of a schoolyard scrap, because it certainly did. Rather *Lunch Money* stood out because of its graphic design, which made use of unsettling images of children combined with off-kilter, but eloquent captions that together combine to give *Lunch Money* a dream-like quality that sits surprisingly well with the violence inherent to the game play.

Here the theme is not playground fisticuffs and the pulling of hair, but post-last orders brawls in the dingy ill-lit behind the bar. Participants fight not for the pocket change needed for lunch, but for the dollar bills that will buy the victor his next draught. Fans of *Lunch Money* will find that game play unchanged in this standalone sequel. The brawlers still start out with 15 life points and a hand of five cards, which are used to attack opponents, to defend against attacks, and to heal themselves. The cards come in four color-coded types: Basic Attack cards (yellow), Defense (blue), Weapons (red), and Specialties (orange).

Basic Attack cards, such as Death From Above, Kick, and Sucker Punch inflict straight damage, but can be Blocked or Dodged. As can Weapon cards, such as Beer Bottles and the player described Hardware, which for example, might be a pool cue or a chair. Unlike other cards Weapons are not discarded after use, but can be retained by a player to use again if he wants. Alternatively a Disarmament card will force a player to drop a Weapon. Redemption and Self Help both restore a player's life counters, while Block and Dodge work as suggested. Chokes and Holds can be escaped by playing a Freedom card.

Specialty cards inflict a variety of effects, sometimes lasting more than a player's turn. Many also only work in combinations. For example, Choke & Puke requires a Grab (or a Block and Grab if defending) before it can be played, and then inflicts one life counter's worth of damage until the victim can escape. In comparison, the Piledriver requires the same combination, but is only a one-shot maneuver, inflicting more damage and being discarded after use.

At the end of his turn, a player refreshes his hand, as can his opponents if they played cards to defend against an attack or to aid one instead. Play continues until there is only one brawler standing, who is declared the winner. Like *Lunch Money*, games of *Beer Money* rarely last longer than ten minutes.

Something that has been carried over from *Lunch Money* is the sense of atmosphere. The clearly written rules for *Beer Money*, which include a nicely detailed example of play, encourage everyone to sling verbal barbs and witticisms along with the blows and bottles. Further, *Beer Money* keeps to the same graphic design of its predecessor, employing

both the same photographer and his model daughter. Only of course, she is eight years older than first seen in *Lunch Money*. While the photography in *Beer Money* possesses a certain elegance, it is not as effective as in *Lunch Money*. This is mainly because we see more of the model in the photographs, and her poses seem more staged. There is also less ethereality and more gentility to the images, though the threatening nature of the captions is more in keeping with the violence of the game.

Although designed for two to four players, *Beer Money* can easily be expanded to enable more to participate. It can be combined with the original *Lunch Money*, and the rules do explain the compatibility of cards between the two games. Alternatively, cards from the first *Lunch Money* expansion, called *Sticks & Stones* -- also released this year -- could be added to allow for more players.

Anyone looking for something different to the original *Lunch Money* will be disappointed with this new game. But anyone wanting more of the same will definitely be satisfied with this slightly more grown-up version of an original favorite. It is perhaps, only let down by slightly less than effective graphics, but *Beer Money* is just as fun as the original.

Dogs of War

A Military-Espionage Adventure in Modern Turkmenistan, with *GURPS* Stats

Written by Erick-Noel Bouchard, MPA
with the assistance of Jean-Christian Drolet, L.L.B.

Introduction

Set in the modern world of international espionage, this paramilitary adventure is written to be played-out in contemporary Turkmenistan. It assumes the player characters are part of a paramilitary organization of some sort. By default, the player characters are assumed to work for the Green Berets (a.k.a. special forces), using as cover the Defense Intelligence Agency (DIA; the espionage branch of the American army). In practice, the protagonists could work for almost any organization, private or public, with an interest in the Middle-East: the British SAS, the Israeli paratrooper Regiment, the Russian SPETNAZ, the French foreign legion, etc. This assignment fits the "seek-and-recover" type, with a twist.

Although game mechanisms have been provided for *GURPS Espionage* only, *d20 Modern* and *Spycraft* would also be very appropriate game systems to play this adventure. Conversion guidelines have been provided in an appendix for various RPGs and settings, ranging from mundane to supernatural, past to present, as well as suggestions for tabletop wargaming.

Mission Assignment

The player characters are temporarily barracked at Omega Base, a small subterranean bunker located in Darvaza, a desert city surrounded by a barren landscape in central Turkmenistan. They are assigned to a special intelligence mission under the orders of Lieutenant-Commander William Moore, a diminutive white-haired officer from Trenton, New Jersey. The player characters were assigned to the Lieutenant-Commander's regiment for a secret and delicate operation set in the desert mountains of the Garagum region (Turkmenistan), in an isolated settlement called Amal (which means "Hope" in Arabic), located some 100 miles west of the city of Darvaza (location 56,7° East, 39,8° North). The DIA does not want any official part in this endeavor for fear of political backlash, for this undercover mission is unwarranted and unknown to local authorities. The details of the protagonists' engagement are left to the GM, who is to adjust them to fit his personal campaign.

Despite his mild attitude, Moore is reputed as a very disciplined and professional soldier. The officer joined the DIA after the caravan he traveled with was scattered by raiders at a pass near a radioactive river. Reclassified from computer specialist to gun-toting soldier after the accidental loss of a finger in mission, Moore has served with the Recon battalion of the Marines for three years, mostly in reconnaissance missions, making the best of his deep knowledge of the wilderness and sharp-shooting skills.

Reconnaissance missions to Amal reported the fortified place served as a base of operations for an organized group of terrorists known as the Red Scourge. Moore suspects the authorities of Amal of using its front of a humanitarian community of miners and radiation survivors for its raiding operations against isolated communities from Turkmenistan and sometimes even the northern states. Photographic evidence brought forward by Moore suggests this group be involved in several surprise attacks against bunkers of Kazakhstan.

It seems the people of Amal made a bargain with some raider gang of rogues, apparently led by a renegade officer from the DIA. Reconnaissance reports by Vortex Squad (from the US Marines) brought forward the possibility this

man might be Captain Ulysses Skinner, a DIA operative who went AWOL over a month ago after a failed mission regarding abandoned Soviet nuclear sites. Pictures taken by Private Stephen Dallaird from Vortex Squad show Skinner using an advanced and recent laptop computer, something quite unusual in the wastes.

The player characters' task is simple: Skinner is to be eliminated. Considering the town's defenses and alarms, subtle methods are to be preferred to brute force. Without a leader, the raiders will quickly disband and Amal will be left for the DIA to secure and add to its network of "allied communities."

The advanced condition of the laptop computer suggests this technology comes from the DIA. Since vital data were stolen at the time Skinner went AWOL, there are reasonable grounds to believe it contains vital data for the DIA. The laptop must be retrieved at all costs. The player characters are given carte blanche to make their mission a success, but are not to make personal contact with Skinner under any circumstances. The man is a traitor and a menace to the DIA. Negotiating with the enemy would be treasonous.

The Town of Amal

Amal stands cliff-side on the ruins of a small city overrun by a rockslide following military skirmishes with neighboring nations some 20 years ago. The town of 750 is surrounded by a natural mountain barrier at north and a cold swamp in the east. It is a small fortified community built on the ruins of a minor city whose name nobody remembers. Much of its installations extend deep beneath ground level. Built over an abandoned mine and underground facilities, Amal is rich in ore and produces a small but promising mining industry. Its most notable facility is a small, experimental nuclear power hidden in a secret facility dating back to the days of Soviet occupation. The nuclear plant's battered condition produces very little energy, just enough to make the area dangerous: not even the Russians know about it, for the facility was thought to be closed down. Its recent discovery by "Boris the Russian," an ex-KGB officer hiding out in Amal, is certainly not a coincidence.

The landscape around Amal is surprisingly well defended, with several machine-guns on tripods and automated rocket-launchers on sentry towers, surrounded by an extended field of landmines and silent sentinels scouting the area. Remote-controlled detonators (and anti-personnel mines) are scattered among the neighboring hills, at strategic positions where enemies would be likely to set up observation or attack post. Amal is known to harbor three functioning motorized vehicles: a Russian BTR-80 armored personnel carrier (APC), two pick-ups equipped with heavy machine guns in the flatbed. The airbrush-painted APC belongs not to Amal but to the Red Scourge raiders, a.k.a. the DIA's Red Squad (see below for details).

The town is defended by 30 warriors separated in three squads of 10 hardened warriors. In emergency situations, a civilian militia of up to 120 infantrymen can be formed, with minimal combat skills and improvisational equipment. Previous experience has made them wary of foreigners, especially the military. Anyone who wishes to enter the town will have to convince the four sentries at the gate it is worth their time. Prospects or traders will only be admitted in the inner perimeter after being disarmed, searched and surrounded by an armed escort of armed warriors before being led before "Boris the Russian," the informal leader of the community. The man going by the name of Boris is very suspicious and will not let strangers wander around his town under any circumstances. Neither Captain Skinner nor any raiders are anywhere to be seen. Potential spies will be swiftly deported outside the town's walls. Any form of overt violence will be met with lethal response. It should appear obvious to any casual observer that Boris is hiding something and extremely nervous.

With a good dose of diplomacy and a silver tongue, the operatives might succeed in arranging a meeting with Boris and convince him of the integrity of their intentions. Since the Russian is more than a little bit paranoid about the whole operation, chances are the DIA agents will be caught and interrogated under less than pleasant circumstances. Nevertheless, perhaps with Skinner's intervention, Moore's treachery can be unveiled and the operatives called on to assist the gold recovery operation for the greater interest of their nation. Should Moore learn that his agents (which he's been spying on from afar) have sided with the Red Squad, he'll simply rearrange his plans and have the Uzbeks deal with the situation. The final outcome of the operation remains a little more optimistic nevertheless, since the operatives now have Skinner and the Red Squad on their side.

The Truth

Captain Skinner did go underground but he didn't go AWOL. Instead, he was sent on a secret assignment by Colonel Mike Klein (from Omega Base) to negotiate in the utmost secret an important arrangement between Amal and the DIA. While mining underneath the city for ore deposits, a handful of Amal townsfolk came upon a hidden bank vault that had been sleeping under the rubble for ages, hidden from detection by the metallic soil. After blasting the vault's doors open, the townsfolk were amazed to find a river of gold bars. Town leader Boris was quick to realize the danger however, understanding any armed community or group within 1,000 miles would be willing to raze Amal to the last child should it be known the little town kept its own "Fort Knox" unprotected.

So Boris sent a messenger, a hardy Mujahideen survivalist named Khalid, across the wilderness to meet Colonel Klein at Omega Base to negotiate an arrangement with the DIA. After some negotiation, both parties agreed the DIA could keep half the gold while safeguarding Amal's remaining half. In return, the townspeople would be provided with technology, survival equipment, and loads of transgenic grain and vegetable seeds to insure its population's growth and prosperity.

As for Captain Skinner, he was sent by Colonel Klein to arrange the transfer of the gold from Amal to Omega Base using a mundane APC. Six veterans from Red Squad were assigned to his protection, disguised as raiders (the so-called "Red Scourge") for discretion. Only high-ranking officers of the DIA were informed of Skinner's mission, but Moore's nosy habit of hacking into the computer system to blackmail his fellow officers let the cat out of the bag.

The promises of almost limitless wealth acted like a beacon for Moore's greed. Using a burrowed motorcycle to travel to the city of Darvaza, he made an arrangement with Jaffir Rey, a.k.a. "the Pasha," head of a local raider and arms dealer trading mostly in stolen arms contraband. According to their agreement, Uzbek mercenaries hired by the Pasha were to attack the caravan and share the wealth with Moore. Moore did not trust his "allies" to any extent so he kept for himself the name and location of Amal, only providing the mobsters with a part of the hacked DIA file as proof. The Pasha hired a band of Uzbek soldiers of fortune to do his dirty work, i.e. kill all the bastards and bring back the vehicle to Darvaza.

The Betrayer Betrayed

Neither Moore nor the Pasha ever had any intention of living up to their word. While the Pasha's Uzbek mercenaries were under orders to kill William Moore the moment he wasn't useful any more, the rogue soldier devised his own plan that required the assistance of naïve player characters. Using his computer and electric skills, Moore fitted the APC with a remote-control device that allows him to control from some 1,500 yards afar. Unfortunately for him, Captain Skinner had the vehicle equipped with a wave scrambler to prevent radar and radio systems detecting the APC. To turn on the remote-control device and take control of the APC, Moore needs the scrambler's access code hidden within the laptop computer. With the code in hand, he plans to blow up the APC's passengers with C4 explosives and take the vehicle for himself.

For that purpose, Moore also hired some backup in the form of 10 desperate Afghan raiders and to eliminate the Uzbeks afterwards, ambushed at the rendezvous point to make raider stew out of them. So as the DIA player characters make their way into Amal, kill Skinner, steal the laptop and bring it to Moore, he'd have them executed, let Red Squad and the Uzbek mercenaries slaughter each other and then have the desert raiders kill the mercenaries.

Such a complex plan, the paranoid brainchild of a twisted mind, will obviously backfire . . . In fact, Muhammad Karimov, the Uzbek mercenary boss, plans to slaughter everyone indiscriminately and keep the APC for himself since whatever it might be, it's probably valuable. His second in command, Omar Samarkand, is genuinely loyal to the Pasha after the grumpy old timer saved his life in a crumbling mine shaft. He would step forward to defend the family's property at any cost, even the life of his greedy pal Karimov.

Tying Loose Ends

Whatever the outcome of the player characters' foray into Amal, much bloodshed will occur as soon as the APC makes it out of town. Using Rocket Propelled Grenade (RPG) launchers and light mortars, Karimov's Uzbek mercenaries will attempt to take the vehicle down through no subtle means. Karimov has given them strict orders not to fire their rockets at the APC under any circumstances (a huge molten lump of gold is hardly a commodity). The soldiers will thus be using mines to blow up the tires and immobilize the vehicle.

The desert raiders will come out from their hiding places afterwards to kill of the survivors while Moore takes remote control of the APC, following it at a mile's distance on a battered motorcycle, using a GPS tracking device. The scoundrel will then kill the desert raiders using the APC's electronic turret-gun and make off whistling in the dusking sun, driving the APC.

There is one thing that Moore doesn't know though, but that might come to the attention of someone who found the laptop. Not a simpleton himself, Captain Skinner installed two pounds of old-fashion C-4 and a remote-detonator beneath the APC's driver seat and another 10 pounds under its fuel tank. He'll choose to blow up one or the other depending whether he wants to simply kill the driver or permanently stop the vehicle.

The only thing required to make the whole thing explode is the frequency code (found in the laptop) and a simple emitter . . . Unless the townsfolk managed a sneak trick of their own, like irradiating the gold bars to make sure no one gets away with their hoard!

The player characters have a chance to make a name for themselves in the DIA by taking advantage of this mayhem. Or they could arrange to keep the gold themselves if loyally surrendering their fortunes to Omega Base is not exactly their type. On one hand, they could gain friends among the townsfolk at Amal, respect from their DIA comrades and a quick promotion in the fraternity's ranks. On the other hand is the promise of a dream life luxury, leisure, women . . . and radiation poisoning. So what is it going to be? The medals or the babes?

Main Characters

Captain Ulysses P. Skinner, MIA officer of the DIA

140 points

Born 1964. Age 38; 5'10," 160 lbs. Light amber skin, auburn hair, blue eyes. A "born again" Ohio American, Skinner served in the 101st Airborne and the Rangers before transferring to the DIA in the late 1990s. With a rather traditionalist and extremely sober temper, he was considered boring and unsociable by his fellow soldiers, so he chose to spend his free time studying foreign languages. His family was taken by surprise when the shy Ulysses presented them with his wife, Silsilat, which he met during an extended assignment in Afghanistan.

Knowing Skinner's distaste for casual luxuries, the Colonel has given the captain his complete trust. The polyvalent and hardworking Skinner was entrusted by Colonel Klein to carry the town's gold bars back to Omega Base. Skinner speaks Russian, Spanish, Arabic, Turkic and Pashto (Afghan) fluently, having learned the latter from his wife.

Lieutenant-Commander William Moore, officer of the DIA **100 points**

Born 1956. Age 48; 5'5," 125 lbs. Tan skin, white hair, blue eyes. A New Jersey American always looking for the easy way to fortune, computer specialist Moore was lightly disabled after a stupid accident involving expensive electronics, gasoline and a plush toy, of which he never speaks. First serving under the US Marines (Recon battalion) then promoted officer of classified rank for the US National Reconnaissance Office (NRO), Moore never bothered to precise to the DIA his reason to be in Turkmenistan in the first place was espionage for the Pakistani Directorate for Inter-Service Intelligence (DISI). Acting as a double agent for Pakistan and the US, Moore is considered "missing in action" (MIA) by the DISI with a sizeable bounty on his head. He was promoted to officer rank in the DIA after being accidentally wounded in combat while defending a superior officer. This opportunity provided him with a way to blackmail some officers into yielding him some privileges, slowly rising in the ranks. His current project is to get Amal's gold without getting exposed, although his preference for complicated scheme could get him into trouble. Graduated in both Electronics and Liberal arts from the Massachusetts Institute of Technology (MIT), Moore speaks Urdu and Punjabi fluently, as well as some Turkic and pidgin Russian. An atheist in a world of Muslims, Moore has faith in nothing but himself. He harbors a deep resentment against Islam for the austere living conditions he endured while working with the Pakistani.

Boris The Russian, physician and leader of Amal **115 points**

Born 1960. Age 44; 5'11," 165 lbs. Light brown skin, grey hair, green eyes. It is a mystery why a brilliant Russian psychiatrist would suddenly leave in April 1994 his country's Federal Counterintelligence Service (FCS) for a shanty town of the Turkmen badlands. Back in 1993, the state police known as the FCS was formed from what was left of the KGB. It was reborn as the Federal Security Service (FSS) in 1995.

Boris won't speak of his past nor will he mention his real name, but it has been hinted that his defection from the FCS has something to do with an internal power struggle, with him siding with the losing side. A temperate if anxious fellow, Boris is prone to paranoia and especially anxious of fellow Russians, which he suspects to be FSS moles. He can't wait to get rid of the gold bars that he sees as a threat to his people's safety. Not willing to take any risks, he had the gold bars irradiated without informing the DIA. Boris is quite adept at treating radiation poisoning: he'll have the process reversed if all goes well. Boris is a coward at heart but will take arms if necessary to protect his people.

Muhammad Karimov, Uzbek mercenary leader

60 points

Born 1967. Age 37; 5'10," 195 lbs. Sandy brown skin, black curly hair, brown eyes. Karimov enjoys the simple things of life: he likes carousing, drinking, smoking, and gambling, but more than anything else he likes the "good old fashion" fisticuffs. A provocative rebel against the precepts of Islam, Karimov gets bored very easily, is something of a wastrel and would do nearly anything to get rid of his frequent boredom. The mercenary life suits his appetite for adventure but he's looking for something that could be lucrative for a change. He couldn't care less for Moore or the Pasha, though he knows his lieutenant Samarkand might think otherwise.

Omar Samarkand, mercenary lieutenant

50 points

Born 1959. Age 45; 5'6," 155 lbs. Sandy beige skin, short black hair, brown eyes. Karimov's silent second-in-command, demolition specialist Samarkand is the proverbial black sheep of a conservative Sunni family of factory workers from the capital city of Tashkent. He feels a deep loyalty for the Pasha, Darvaza's notable crime boss, after the latter saved his neck some 15 years ago while they were both biding their time at a prison camp in Kazakhstan for banditry. Samarkand's loyalty to the Pasha supersedes by far that to Karimov, a fact that might get them both in trouble should the Uzbek leader let his greed overtake his rational judgement (a likely event).

Generic Characters

The militia of Amal (30)

15 points

Born 1960-1981. Ages 25-44; size and weight varies. Tan skin, black curly hair, black eyes. Desperate survivors, many

of whom are Afghan refugees who fled their country after the Mujahideen rebellion against the Soviet invasion of Afghanistan (1979-1989) and the following civil war. These people are not warriors, they live in miserable conditions and simply wish to be left alone. All of them are Sunni Muslims.

The militiamen of Amal are armed with hunting rifles. Members of squad #2 also have 3 fragmentation grenades each while members of squad #3 have old but effective AK-47 rifles. For close combat, the townsfolk use spiked baseball bats, knives and rifle butts. Civilians fight with sticks, rocks and knives at best.

Skinner's Red Scourge (a.k.a. Red Squad) (6)

35 points

Born 1969-1982. Ages 22-35; size, weight and appearance vary. Seasoned DIA soldiers disguised as common raiders. Trained for guerilla and hand-to-hand fighting. Lieutenant Waters is an expert demolitionist, Sgt Drolet is a pilot; Privates "Wako," Heathrow and Steel are respectively a sniper, a scout and a field medic. Their standard equipment is a M-4 carbines, a flak jacket, 3 fragmentation grenades, low-light vision goggles and Bretta 9mm pistol. Heathrow is also armed with a portable rocket launcher (M-72 LAW) while "Wako" bears a Barrett .50 sniper rifle.

Languages: Uzbek (native)-10 [0]; Pashto-9 [1].

Skinner's Red Scourge (a.k.a. Red Squad) (6)

35 points

Moore's desert raiders (10)

15 points

Born 1962-1985. Ages 19-42; size, weight and appearance vary. These are desperate and remorseless raiders from Afghanistan with a taste for gratuitous violence, going along with Moore for the pay. Behaving like overexcited teenagers, they carry ragged equipment and behave with slack discipline, disbanding if seriously wounded or losing advantage. They are equipped poorly, with hunting rifles and antiquated WWII pistols.

The BTR-80 8×8 armored personnel carrier

Released in the 1980s by the Gorki Mechanical Plant in Russia, the fully amphibious BTR-80 8×8 armored personnel carrier (APC) is designed to carry troops on the battlefield and provide close fire support. Capable of carrying ten soldiers, the APV has a total of 7 lateral weapon hatches as well as ports on the upper hatches, with armored doors on both sides.

Aside for standard nuclear, biological, chemical (NBC) protection systems, the BTR-80 has six smoke grenade dischargers (three on each side) a BPU-1 turret machine gun mount supporting houses 14.5mm KPTV and 7.62mm PKT coaxial machine guns, with a shooting range of 1.25 mile. The vehicle's maximum speed is 50 mph on paved roads and 6 mph on water.

Other Times, Other Places

Since this adventure is set in our own world and time period, no special adaptation is required for using it with *GURPS SWAT*, *Spycraft*, or even simply Wizards of the Coast's generic *d20 Modern* rules. With a little twist, many other variations are possible, however.

Modern Fantasy

For contemporary supernatural games such as *GURPS Technomancer*, *Delta Green*, *Mage: the Ascension*, *Urban Arcana*, *Feng Shui*, or *Unknown Armies*, the scenario can be played either "as is" or with a few paranormal phenomena added for good measure. Radiation poisoning could simply be replaced with dark sorcery or some sort of tainted infestation brought forward by a dead conjurer. Boris the Russian would hence become a renegade sorcerer of moderate power with some surprising tricks up his sleeve, with Moore as a traitor from the player characters' own organization. Skinner himself would remain a mortal, albeit an extremely competent marksman and soldier.

Pulp

This adventure also flows easily with pulp or semi-pulp settings such as *GURPS WWII*, *Gear Krieg*, *Torg*, and *Dangerquest*. While the latter two have occult elements that GMs might wish to highlight, adapting the adventure to a typical 1930s-1940s pulp setting is pretty standard fare. Evil Swiss CreePs or agents from the Nile Empire would make terrific replacements for the Uzbeks in their appropriate contexts.

In the context of World War II, the story needs to be resettled to Egypt, during Marshal Erwin Rommel's northern African campaign against the Allies. The DIA would be working on the Allies' side, of course. The computer laptop would become a briefcase with encrypted dossiers and Moore would be an Italian infiltrator seeking the gold to finance the Axis' military campaign, using Swiss mercenaries to further his ignoble goals. Since radiation doesn't fit with the period, have the gold tainted with contact poison instead (e.g. tetrodotoxin). Working it out with *GURPS Old West* or *Deadlands* would be likewise possible, displacing the events in Arizona.

Far Future

For the *Heavy Gear* game, the setting can easily be relocalized in the Badlands, possibly nearby the Paxton Protectorate. The DIA would be serving the interests of the northern regimes, either as a mercenary group or a full-fledged military regiment. While the town would remain independent, Moore would be sold out to the Southern Republic and employing GREL mercenaries to do his dirty work. Simply equip the DIA agents and the townsfolk with light General Purpose Gears (GPG) and a Mammoth strider, handing out the GREL mercenaries some appropriate anti-vehicular armament.

Classic Fantasy

Playing out "Dogs of War" in a medieval fantasy setting isn't as tricky as it seems, once stage props get rearranged a bit. Amal would become an isolated mine in a remote and rocky region. The town would be replaced by a massive fortress built over a forgotten kingdom or deep mine, where timeless treasures have been hidden for generations. The gold is then tainted by an ancient curse or perhaps a spell, Skinner is a secret envoy from a powerful nation and Moore masters the black arts of magic, using evil humanoids for minions. The APV is replaced by a giant creature, whether an Oliphant or a wingless Dragon, and the computer used to control it becomes a magical flute in Skinner's possession.

Setting-specific elements would need to be fleshed out in detail. In Tolkien's Middle Earth, for example, Men from the Caradhras mountain that lies over the dwarf kingdom of Khazad-dûm have negotiated with the renegade Riders of Rohàn led by the king's nephew, Eomer, their assistance against the rising armies of Isengard. In return, they offer to share the gold, not knowing it was cursed. As lieutenant of Gondor, "Moore" would betray his own people by having them slain by Orcs, Goblins and southern mercenaries. For a planar adventure, a merchant-sorcerer could employ the adventurers to recover lost Xorn treasures on the Elemental Plane of Earth, then have them killed by conjured Dao and evil Genies. Endless variations on this theme are possible with a little imagination.

Tabletop Wargames

Converting this adventure to a wargaming scenario would require a minimum amount of work. For *Warhammer 40,000*, stage the skirmish on a remote frontier world where an Ork town is holding on a rare energy resource, used to fuel Warp gates. A traitor Commissar of the Imperial Guards, Moore conned a small squad of Marines into bringing back the computer files. This adventure would be staged in two parts. The first part would oppose the Space Marines against the Orkish townsfolk (both 750 points). The objective for the Marines is to secure the computer and bring it back to their starting space. The Orks' objective is to kill the Marines, but they start with the advantage of protective cover from the town walls. The second part would oppose a small commando of UltraMarines from the Red Squad with their APV against Moore's Imperial Guards (both 500 points). The first group to annihilate the other wins.

To use this scenario with *Vor the Maelstrom* wargame, the setting would be an isolated town of the Russian Empire where renegade Neo-Soviets are bargaining with a secret Union operative (Skinner) to sell their gold and keep the profits for themselves, instead of giving it over to their Motherland. Moore is an Union traitor planning to sell the gold to the Pharod in exchange for life-extending technology. In the first part, one player controls a small group of Union

soldiers (200 points) against the town's poorly equipped Rad Troopers (200 points with only Rad Troopers and one Kommander allowed). The second scenario features a small squad of Moore's Pharod allies (300 points) against elite Union soldiers (200 points, plus a 100 points vehicle). Both scenarios' objective are the same as the *Warhammer 40,000* adaptation.

Of course, these guidelines can serve to adjust this adventure to any other average-to-high technology or wargame (or RPG for that matter), such as *Gear Krieg* or *Heavy Gear*, modifying the setting as suggested above.

Pyramid Review

Doom Striders (for the *d20 System*)

Published by [Bastion Press](#)

Written by Sam Witt

Cover by Kari Christensen

Art by Christopher Herndon, David Hendee, Ed Bouelle, Jacob Elijah Walker, Jesse Mohn, Joylon Minns, Scott Purdy, Thomas William Babbey, & Yap Chong Aik

128-page b&w softcover; \$22.95

Mecha and the high-fantasy roleplaying of the standard *d20 System* are tough genres to mix successfully. On the one hand, the *Battletech* giant battle robots and the various forms of power armor from *Rifts* can easily be conceptualized as having fantasy versions in a high-magic fantasy game world as a development of standard magical armor and golem construction taken to the next level. There are some examples of this in fantasy literature and anime, and Victorian Steampunk is sometimes considered its own roleplaying genre with steam- and/or magic-powered automata and power armor.

On the other hand, fantasy roleplaying is often a very first-person immersive experience. The character faces challenges physically and interacts with others directly. Playing in a giant mecha, the perspective shifts to that of the robot and away from the piloting character. Also with the party structure there is the issue of whether everybody will be a pilot for their own mecha, everyone works only part of a single big mecha (similar to *Voltron*), or if the PCs are the pilots, mechanics, and people who only work outside of the mech battlefield.

Bastion Press provides a system for creating and using magical mecha in a high-fantasy *d20 System* game. First presented as a small section the mass combat rules found in Bastion's *Oathbound Arena* supplement, Bastion has developed the concept of doom striders into a full sourcebook of its own, divorced from the *Oathbound* setting and greatly expanding the options from those presented in *Arena*.

The basics are that doom striders are magically powered constructs with pilots. The suits amplify the hit points and strength of their pilots; bigger ones can have crew working in different parts of the doom strider, controlling (for example) the action of an arm or leg and all its armaments. The physical power and level of the pilot are important components of how powerful a doom strider is overall on the field.

Doom Striders presents special armor and weapon options for these vessels as well as a few miscellaneous powers and functions they can be constructed to do. Hits to the doom strider affect the pilot in proportion to the hit point multiplier as the pilot and doom strider mecha are mystically tied together.

A doom strider is basically an expensive, big, tough, armored version of the pilot, and treated that way for most of the rules, although there are limits on how much of a smaller target the doom strider can target with its weapons that can render doom striders less effective than a standard big creature or character outside of the doom strider. The pilot and any crew, however, are fully inside the strider and cannot be directly targeted by outside attacks or spells.

A profession doom strider piloting roll is used for some maneuvering, profession doom strider engineering is used for maintenance and repair, and profession siege engineer is used for some big area effect weapon rolls. According to the stats provided in the NPC section fighters and barbarians have these as class skills although this is not spelled out in the skill section.

When a doom strider is size huge or larger, the crew can operate and control different portions of the strider. The main benefit here is that each member of the crew can perform attacks or even full attacks using their portion of the strider, so a fully manned big doom strider can have significantly more attacks in a round than a single creature of comparable size, although the number is the same as if the crew were out of the strider.

As a player, though, most PCs will probably not want to play as controlling the legs; most PCs will probably find playing Voltron's left leg less than satisfying, even with a hip mounted crossbow cluster. Similarly a cleric stationed with the pilot to heal him can be quite effective, but it is not that fun a PC role to play.

Doom striders are powered by energy points which can come from spell levels, life force, and faith of a religion's followers, depending on the strider's engine. Many of the weapons and special options require energy expenditures, but simply moving around does as well. Since the doom striders can't hold that much energy, requiring an expenditure for every six seconds of movement seems crippling mechanically; either eliminating the expenditure or requiring it only per day's movement would seem to work much better. Otherwise, doom striders must be wheeled out onto the battlefield on ox drawn platforms to conserve their energy for actually fighting.

The options available in constructing a doom strider are satisfyingly broad, ranging from type and size of the engine, a wide variety of weapons and armor options, the various exotic materials the strider can be constructed from, and even options for the pilot connection mechanism. The effects of doom strider weapons and options in mass combat are explained, but without *Oathbound Arena's* mass combat system this information is not be that useful.

The sourcebook is rounded out by some discussion and rules for mercenary doom strider campaigns and sample doom strider NPC companies, a copyable sheet for recording doom strider statistics, and a bunch of sample doom striders. The book contains interesting illustrations of the various armaments and special armor types, and they do a good job of bringing the options visually to life.

As written, the energy for movement and targeting limitations of big doom striders make them a poor choice for rich heroes to spend their gold pieces on. However, with a few house rules to eliminate these problems and a DM plot eye toward keeping PCs in the action, *Doom Striders* can be an interesting way to bring mecha into a high-fantasy *d20 System* game.

--John Henry Stam

"Jolly" Howard R. Sydenham

An Impaired Procurer of Puissant Properties for 1890's Call of Cthulhu

by J. Edward Tremlett

I am prepared to reward your efforts on my behalf, gentlemen. Of course, I will need your word as gentlemen that you will not speak of what you may see to anyone outside of this transaction . . .

Good God! Please sir, I pray you put that pipe out! Please . . .

Ah . . . thank you. My apologies, good sir, but the fire is . . . troubling to my nerves . . .

* * *

Once a fixture of London's night life, following his return from the Orient, the personal fortune of "Jolly" Howard Sydenham has been greatly reduced.

Brought low by some strange condition, the owner of White and Sydenham Oriental Importations -- famed for their expertise and discretion in acquiring mysterious items from abroad -- now stays at his ancestral home in Berkeley Square. There, surrounded by one of the most extensive collections of occult items in England, he sits in bed, a maddened invalid.

They say he cannot stand the sight of fire. They say he starts at the coming of night, as though the stars themselves were his enemy. They also say he accepts no new callers . . . but those with a gift for uncovering the unknown and the mysterious may yet have a chance to meet with him.

For while Howard's days of carousing -- and handling matters himself -- are over, he still has needs. Items must be retrieved, rumors tracked down, people squeezed for information and so on. And since he can't do it himself, he's always on the lookout for people to do it for him.

People like the Investigators, perhaps . . . ?

An impresario of the occult with a number of fiery, mythos-laden secrets, Howard R. Sydenham makes for an evocative NPC for Victorian-era *Call of Cthulhu*. Keepers can use him as a resource, a taskmaster, a foe or the focus of a scenario based around either his many treasures or secrets, and the people in London who would kill him for both.

Background

Howard Rudyard Sydenham was the second of two sons born to Rupert Stockling Sydenham Sr.: a shipping manager of the East India Company, stationed in London. Howard's older brother, Rupert Jr., preceded him by two years, and their mother died following Howard's birth. This turned their father into a taciturn, loveless fellow, but he raised his two sons as best he could, with an eye on having them sent to India after a gentleman's education.

While Rupert Jr. was happy to bask in the world of the first-born son, Howard watched the world in the shadows, and learned more than he should. By night he walked the halls of their spacious Berkeley Square mansion, gazing upon the odd curios the company sent his father "in appreciation." And he could feel the pull of a strange, distant truth calling to him.

He began to comb libraries for information about India, and what little he found inflamed his imagination. His dreams began to take odd and alarming shapes, but he wasn't repulsed at what made him wake up in a sweat. He cherished it.

In spite of fevered dreams, School was quite easy for Howard, and he followed his brother to University College, at Oxford. But while Rupert Jr. was content to go into accounting -- as father expected -- Howard inquired after History in class, and Orientalism on his own. His father was not pleased, and the two of them often rowed.

Rupert Jr. did rather well for himself. He graduated, and was sent to Bombay to work for East India on his father's recommendation. Meanwhile, Howard continued in his studies, envious of Rupert Jr. and wracked by great and thunderous dreams.

While he was engaged in his third-year studies, he had the happy luck to meet another fellow interested in Orientalism. This was William White, esq., of London: a man of some standing in the city's high life. He ran a reasonable business procuring "special" items from the Orient for the decadent and rich, and had become well-heeled for his doing so.

The two men met while researching identical topics, and White readily took the student into his confidence, based on the look in his eyes. They got on splendidly, and ever thereafter White would occasionally approach Howard for his opinions. White even offered the younger man a job, once he graduated, but Howard had to politely refuse, given his driving goal. White was disappointed, but understood, and they promised to keep in touch.

Two more years passed, and Howard finally earned his degree in History. He then presented himself to his father, and asked for the chance to work in India. His father refused to recommend a "useless daydreamer" for such a job, and another terrible argument ensued. It ended with Howard vowing never to set foot in the house again so long as his father lived.

So he took his own money out of the bank, and sought passage to India. He planned to stay with his brother there and research on his own. Rupert Jr. agreed, however reluctantly, and bade his brother come so long as he didn't inform their father.

Howard gladly agreed, and before long he was on a ship for Bombay. After that, London's elite lost direct track of Howard Sydenham, and his father had to confess to both an ignorance of his whereabouts and a lack of concern. He no longer had a second son, after all.

The years that followed gave Rupert Sr. little hope of getting Howard back. Strange stories reached his ears: stories concerning his lost son's slide into decadence and abandon; his shadowy consortations with native heathens; a terrible change upon his demeanor that came as a result . . .

His acknowledged son always denied any knowledge of these things when questioned. As time went on, the lie slowly resembled the truth: Howard *had* lived with him, at first, but he came "home" less and less, and finally moved out. After that, Rupert heard his brother lived with the stranger locals -- ones whose rites were considered aberrant even by other natives.

Then came the night of fire. In a single evening, many of the more noxious warrens to be found in the city -- hives known for their strange goings-on -- burst into flame and fell to the ground, their occupants dying inside them. Had it not been raining that night, Bombay itself might have been razed.

Rupert Jr. and his help stood on the front porch, watching the fires and praying that they would not spread. As they did, a burned and dirty fakir walked by, laughing with wild eyes as he clasped a smoldering clutch of papers to his bosom. Rupert was shocked by the man's maddened look, and the fakir trundled on, giggling at some private joke . . .

So it was that, just after New Years' of 1876, Howard returned to London -- dressed as fine as ever. He'd lost weight, and his head, hands, and neck were marked with strange, pock-marked burns. But he also carried himself with a confidence and gait that he hadn't possessed before, as though he'd come back victorious from war.

He presented himself at home, and stated that he wished to see his father. The feeling was not mutual; the butler would not let Howard enter the doorway, and instead handed him a folded envelope containing money. He politely tendered Rupert Sr.'s wish that Howard make good of himself, at last, and not return until he did.

Of course, Howard expected this, and had other plans. That very afternoon, Mr. William White esq. received a familiar gentleman caller -- one with a business proposition. He and Howard resumed their friendship from where it'd left off, and by the end of the day they were partners.

Thus was White and Sydenham created. Their shared contacts in the Orient created a large net they could cast out to procure the odd and unusual for their customers. They also kept their ears open at home for chances to acquire things, and many London-based travelers, adventurers, and explorers became both customers and suppliers.

Within the year, their business earnings squared. Most pieces were bought to sell to other, interested parties, but some of the finds were kept for their own, unique collection. In particular, Howard was always seeking pieces that had to do with fire, which he now loved with a rather peculiar passion; The burns he'd "suffered" seemed to leave him wanting more.

If asked, Howard would say that his time in India had been very instructive. As for what *had* happened while there, Howard would never tell too much. Once, while quite loquacious, he spoke of having dallied with the Kapalikas -- left-hand Tantrics with extreme tastes -- but dismissed them as "ignorant fools."

William surmised the truth of the matter had something to do with those odd, slightly burnt papers he kept under lock and key. But he did not push the subject, just as he acceded to Howard's requests that William be the one to go aboard, rather than him. It seemed his time abroad made Howard nervous of leaving England. And, as William now had a partner to watch the shop, his dreams of far-off travel were now reality.

And so -- sufficiently moneyed -- Howard rejoined London society. He soon became known as "Jolly Howard" among London's less-upstanding social whirl: seeing eligible ladies by day, and carrying on into the night with the less-than-mentionable ones.

Many lovers spoke of odd and exotic goings-on in the bed chamber -- stories that spread as quickly as the fire he supposedly liked to play with. But the tales made him even more alluring to the people he and his partner associated with.

His allure made other friends as well. The various occult organizations who populated London's eccentric corners were easily caught up in the notion of purchased goods from afar. And White and Sydenham were quite happy to fulfill their needs.

Thus did the years pass. White and Sydenham prospered on others' vices or curiosities and Sydenham's personal collection grew. He remained ever-haunted by those maddened visions of his, but kept them in check. Every so often, however, when he could take no more, he took those burned papers out of his desk and reread them, dreaming of the fire . . .

In late Winter of 1890, things changed. First, William White was killed while in India: his body found strangled and hung from a tree just outside of Calcutta. Then, just as Howard was arranging for his assumption of their shared business, he learned that his own father had died.

He went home to see about the will-reading, but the butler still denied him entrance; he had final instructions not to allow Howard inside. There would be a reading of the will, but he was assured that his name was nowhere within it. And then the butler bade him to leave before he called the police.

Of course, that wasn't the end of the matter: one of White and Sydenham's clients was his late father's own solicitor. Howard reminded the fellow what "odd" purchases might come to light, should Howard be left out of the will. Lo and behold, when it was read Howard was the primary recipient of his father's house, and everything in it. Meanwhile, Rupert Jr. was slated to receive the whole of his father's money, upon his retirement from his present position with East India.

(He seemed rather content with that, as India had become his true home. He and his brother said not one word to one

another throughout the entire thing, and parted as near-strangers.)

A week later, Howard returned to his true home, and moved the curio business there as well. The butler was soundly ejected by Howard's help, and refused any chance of a favorable reference.

Things proceeded apace for the next four years, and Howard's fortunes grew. This was in no small part due to having his father's connections to add to his own: a turn of fortune aided by his father's solicitor, who now worked exclusively for Howard.

His fortune wasn't the only thing that grew, though. Battered by luck, Howard's brashness and confidence returned. He began to take more risks than ever before, believing he could always salvage a situation with money or blackmail.

So, one night, while proudly boasting of his personal collection to a customer, Howard's curious papers from India came up. It might have come to nothing, but one of the other patrons of the establishment overheard. And he went to tell another fellow of a similar bent, who told another, and then another . . . until the wrong person was informed of them.

And then, just under a year ago, as he was leaving for his nightly forays, Howard Sydenham looked up, and was astounded to see that the stars in the sky were closer than ever. As he watched, they began to move towards him -- a living swarm of sparks that he'd not seen since India . . .

He started and ran, barely getting back inside before those burning motes singed holes in his hat and topcoat. One of his maids went outside to see what the matter was, as their master was hysterical with fear, but she saw nothing. However, the next time Howard ventured outside, the sparks returned yet again.

Soon, things became quite clear to Howard: for some reason, someone was sending the children of the Fire God after him. They were not coming inside the house, but the moment he stepped outside, they would swarm upon him (oddly enough, they would not attack his servants, or those who came to call). And nothing Howard did could dispel the creatures -- it seemed he was a prisoner in his own home.

Who was sending the Children? He quickly suspected that someone was trying to run him out of business: another individual who'd dreamed of the fire, perhaps, or someone he'd crossed on a deal.

However, Howard refused to be beaten, much less made a fool of in front of his circles of business and pleasure. He hoped to stall his would-be conqueror into thinking he'd crippled him, thus gaining time to discover and thwart, his adversary.

So he arranged for a convenient fiction: a doctor's "diagnosis" was bought and paid for, and word was allowed to leak out about an odd, crippling complaint. Thereafter, only Sydenham's previous customers came to see him (new ones were politely rebuffed, lest they be pawns of his adversary) and he put on a very good show for them, seeming to be in a delicate condition.

However, the trick worked too well. Sitting at home, pretending to be weak and paranoid, Howard started to truly *become* weak and paranoid. He became convinced the Children might leap from the fireplace, or even a candle or pipe. So he ordered that all flames be extinguished in his presence, and at night he is watched by a man with a water bucket, just in case . . .

And this is the state of "Jolly" Howard R. Sydenham, as the Investigators would know him now: a cold, shivering wreck of a once-proud man who breaks into an uncomfortable sweat at the mention of certain subjects, and becomes visibly agitated at the sight of any flame.

Using Howard

Howard Sydenham has multiple uses in a Victorian *Call of Cthulhu* setting. As Howard is *the* broker of occult

artifacts in Victorian London, he'll either have anything the Investigators want, or be able to provide a clue of where it is. At the very least he can tell them who had it last, and where, or that it doesn't exist at all.

But there are three barriers to speaking with Howard about such things. One is that he no longer receives unannounced visitors. The Investigators must do something to impress him, first, and only then does he send his young, earnest-looking butler, Phillip White (no relation) to speak with them. And, as these matters must always be discussed with Howard in person, Phillip arranges for an appointment for them to visit.

Upon entering the Sydenham manse at the appointed hour, the Investigators also enter his vast collection of occult and native artifacts from the world over. A myriad collection of exotica lies within: books, statues, objects and other, less-identifiable things stare balefully from behind sturdy, glass cases. Those well-schooled in matters occult and anthropological should be flabbergasted by the sheer scope of the man's reach -- especially when the butler dryly informs them that these are only the items which are for sale. (The rest are locked in the basement: almost *anything* could be down there . . .)

Paraded through the house, they eventually reach Howard's private chambers. That's when they discover the second barrier to dealing with Howard: his insanity. His moods are so mercurial that he'll handsomely compliment an Investigator one moment, and direly curse him for a fool the next. All visits with him are direct, compelling, and mercifully short, but his eccentricities are well worth it.

But nothing Howard does comes without price, and this is the third barrier: anything gained from him -- whether it be a sale, a query, or a professional answer -- requires a favor, first.

He could ask them to arrange a sale or do some research on his behalf, but he could also impel them to theft, burglary, or aiding in blackmail. He also has need of people to go far abroad and bring things back -- an errand inevitably fraught with danger, as he well knows. Howard might even demand a kidnapping or outright murder if all other means to acquire something will not work, and he thinks he can trust the Investigators (or their dire circumstances).

(One thing he refuses to do, no matter what he's offered in return, is to give the names of his contacts or clients. Anyone who asks is quickly ejected from the house, and invited no more.)

Those who deal honestly with Sydenham find him to be good to his word, and he will deliver on his promises. Those who cross or trick him, however, find they have made a grave mistake. If he suspects as much, his butler calls on them no more, and Howard sees to their personal ruin through his many connections. London's high life and occult societies will be less friendly to them from now on.

Keepers could also use him as a rival or enemy, right from the start. If they get their hands on something he wants, either for himself or a client, he can send other agents to take it out of their hands. Retaliating draws them into his hidden history, and may engender some suspicious allies (see *Mythos Connections*, below).

If the Keeper wishes to make Howard the focus of a Scenario, there are many people in London's high life and low corners who have reasons to dislike Howard, or want something he has. Some of his previous blackmail victims might also want to take advantage of his current condition, too. Any number of stories or causes could be tendered to the Investigators, but they will find Howard a tough man to break, however reduced.

There's also the matter of his eventual death: he has no heirs, and having the man's vast collection be unspoken for is sure to cause ripples and opportunities. Most likely his estranged brother comes to take charge of the estate, and -- never knowing what to make of his brother's "queer things" -- sells a great deal of it without knowing its true value. But there might also be a "turf war" between Sydenham's old customers, rivals and enemies as they try to snatch this, that and the other thing from one another.

Clever Investigators could play this chaos for all its worth, or might get buried over their heads . . .

Mythos Connections

In addition to whatever tomes or artifacts the Keeper places in Howard's collection -- or lets him have had previous contact with -- his own, hidden history has its own connections. In fact, one of them is causing his current problems.

While in India, Howard made contact with the Kapalikas, as he claims. After he slid into the dirt, they took an interest in him, and arranged several disturbing encounters to see what he would do. To their astonishment, he did just what they would have done, no matter how grotesque or degrading.

After the final, sickening "initiation," they fully approached him. He leapt right into their lifestyle, and learned much. However, he soon realized that his dreams didn't lie with them, and instead used their knowledge to seek his visions anew.

Thus, he came into contact with the Nestarians: Zoroastrian followers of the purifying flame (otherwise known as Cthugha). He tried to approach one of these sere, burn-faced men, begging to be taught their secrets, but he was rudely ignored. Maddened to be so close and yet denied the truth, he killed the Nestarian, and took what he had on him.

On the corpse was a priceless treasure: a copy in Hindi of the Letters of Nestar -- the defining document of the Nestarians. Howard spent some time reading these papers, and learning what he could. However, retribution was not too far behind him.

The Nestarians soon learned that an infidel had taken their sacred text, and they called the Children of Cthugha down on every Kapalikan warren in Bombay they knew of. Howard barely escaped with his life -- indeed, the Nestarians were certain that they'd killed him -- and the papers were badly burned, ruining some of their vital information forever. But still, he got away.

He might have stayed dead to the Nestarians, had he not regained his old overconfidence. His proud boasts reached the ear of London-based Nestarians: a "splinter" sect, on the run from the central faction in Bombay and recently emigrated to London. They lurk anew in the darkness of the city, waiting for the time to call a new, great fire upon it.

Getting their hands on Sydenham's copy of the Letters would have been a great thing, but they considered his death to be more important -- who knew what the infidel had learned? As such, their reaction was much the same as those in Bombay, only slightly more controlled.

So they summoned the Children of the Fire God to kill him, but for some strange reason the Children have been unable to do so. The infidel stays inside his home, and the servants of their god cannot enter it. They do not know why, and have decided to find out for certain before taking more drastic measures, as they do not want to call attention to themselves yet.

For his part, Howard finds it inconceivable that the Nestarians have found him. He believes there is no way they could be here, in England, and that if these doings have any connection to them it's because a fellow Englishman -- or maybe a Chinese -- has learned of the purifying flame. It's a weak self-delusion, but one that had allowed him to function without crippling paranoia as he stayed home and assembled his collection, much like a woodland creature building a defensive nest around a burrow.

And what no one -- including Howard, himself -- knows, is that he owes his life to that same collector's zeal. One of the many curios in the collection has the peculiar ability to shield a dwelling from all servants of Cthugha -- human or otherwise. So long as the item stays inside the house, any of the Star Vampires or Nestarians who try and enter it will feel a distinct need to flee, followed an MP drain of 1d3 every round spent inside the house should they ignore it.

As for which particular item it is, how Howard or his late partner came to acquire it, what it can do and what it needs . . . such details are left to the Keeper.

(More information on the Nestarians and The Letters of Nestar can be found in The Keeper's Companion 1, on pp. 111-113, and The Keeper's Companion 2, on pp. 126 -- 127, respectively.)

Name: Howard Rudyard Sydenham

Born: 1850 in London, England

Age in 1895: 45

Occupation: Wealthy businessman, occult collector, blackmailer and fallen rake

Degrees: Degree with honors in History, Oxford, University College

STR 12 **DEX** 15 **INT** 16

CON 8 **APP** 15 **POW** 18

SIZ 13 **EDU** 20 **SAN** 45

HP 10

Damage Bonus: +1d4

Skills: Accounting 50%, Anthropology 25%, Appraisal 64%, Archaeology 35%, Bargain 60%, Become Hysterical at the Sight of Fire 49%, Credit Rating 65%, Cthulhu Mythos 10%, Dodge 35%, History 75%, Law 35%, Left-Hand Tantric Sex 65%, Library Use 65%, Occult 60%, Linguistics 35%, Other Languages: French 30%, German 40%, Hindi 53%, Latin 50%, Spot Hidden 40%, Theology 20%

Spells: Call/Dismiss Cthugha, Enchant Torch, Summon Children of Cthugha (Fire Vampires) as well as any prurient, fire-based spells Howard might have learned from his time amongst the Kapalikas, at the Keeper's discretion.

Tomes Read: The Letters of Nestar (Hindi -- partially burned and incomplete), 1d3/1d6 SAN, +4 Mythos, 32 Weeks, Spells: Call/Dismiss Cthugha, Enchant Torch, Summon Children of Cthugha, Fire Dance (note that the damaged copy of the Tome means that the means to Summon the Children is given, but not the means to bind them . . .)

Weapons: Fist/Punch 50%, damage 1d4 + 1d4; .38 Revolver, 35%, 1d10;

Mental Disorders: Pyrophillia/Pyrophobia. When he's in control of it, he loves fire, and finds it irresistible. When he's *not*, however, he's quite terrified of it. When the Investigators first meet him, he's clearly *not* in control.

Description: Sydenham is a slightly built, pale fellow who seems underweight and feverish. He's raven-haired, clean-shaven, and hook-nosed, with the family's noted green eyes smoldering in his somewhat wilted gaze. He also has noticeable burn scars on his hands and face. He tends to wear a nicely-embroidered, off-white bathrobe about his home, along with a pair of darkened, "horse-blinder" medicinal sunglasses.

Items Carried: As he stays at home, Mr. Sydenham has anything he may ever need within reach, if not a room away. Some of it may be both magical *and* deadly, should the Keeper desire it.

Income: Around 3,000 Pounds per annum, all from his import business

Savings: 30,000 Pounds in liquid assets, plus the house and everything inside of it, which could probably come close to a million if certain objects were sold to the right people . . .

The Omniscient Eye

What Would a Cart-Load of Treasure Do to a Fantasy World?

In a high-fantasy game, the heroes end up hauling back six cartloads of magical treasure and gold. They now currently have something in the order of a few hundred million times the normal wealth of a typical member of the peasantry and they are about to spend a lot of it. How is this going to impact the local economy? Realistically, what impact (if any) would this have on the regional economy? National economy? How much money would be in said economy to purchase the dozen +1 swords they have that they cannot use? This sort of thing.

--K. David Ladage

(To bring those of you who aren't K. David Ladage up to speed: We originally received a question which was, lightly paraphrased, "How do I model economics?" That's a bit more than even the Omniscient Eye can do in 4000 words, so we asked for something more specific and concrete. This is one of the questions resulting from that.)

The presence of magic takes us well beyond "the fields we know," to say nothing of going beyond the accounting practices usually used to value and tax them. However, even mad necromancers and gals in chainmail gotta eat, so just as the politics and society of traditional fantasy games attempt to model, or at least give the impression of, real ancient and Medieval societies, we'll answer the question in terms of the economies of real ancient and Medieval societies. As a starting point, we'll take the conditions as given: assume six carts laden with booty. We'll call that 1,000 pounds of treasure per cart, a reasonable capacity for a modest wain, or 6,000 pounds altogether. What impact that has depends in part on the composition of the treasure, so let's look at what, historically, that much treasure might buy.

At the low end of the treasure scale is a load of pure silver in bullion or coin. Six thousand pounds of silver is, for example, about a tenth of the annual production of the Athenian silver mines at Laurion, the products of which allowed the Athenians to float a sizable war fleet over several years leading up to the Persian invasion of 490 BC, build the Parthenon, and in large part fund the construction of a very small empire. To put it another way, it's a very respectable personal fortune, a nice but small boost to an influential city-state, and pocket change to an empire. Several cartloads of silver coin would be enough to build and furnish a modest castle, purchase a small feudal territory, or buy and equip a few ships. It's enough to set someone up in very nice style, but won't unbalance anything.

If the carts are full of pure gold, they'll contain between a quarter and a half million coins at typical sizes. Your heroes are in possession of immense personal wealth, enough with which to buy a mid-size Medieval kingdom. Based on their income, counties such as those surrounding 12th-century Barcelona or Girona, not including the towns themselves and monastic and church lands, could plausibly be had for 400 pounds of gold; with that much gold, you could buy 15 such territories (at that point, the question becomes whether or not you could find willing sellers). Indeed, that may very well be more gold than many Medieval kingdoms possessed, although it's not quite so much on an ancient imperial scale. For example, the Byzantine emperor Anastasius is said to have amassed over 300,000 pounds of gold in the imperial treasury (although that amount is likely exaggerated), and his successor Justinian bought off the Persians for five years with about as much gold as our heroes are carting off from the dragon hoard. The impact of that much money will depend on how and where it's spent.

One thing to pay attention to is how much of it the PCs get to keep. There may be taxes, pointed requests for loans from royalty, and other not-very-productive drains on the find. The English law of treasure trove, dating back to the 12th century, entitled the crown to a large share of any found riches. Then again, fantasy kingdoms may not have such laws, or they may be unevenly enforced if they do. It's also possible that bandits, nomadic raiders, and underfunded noblemen will decide to take the money by force, requiring the PCs to spend a large chunk of their cash on mercenaries to defend it, essentially destroying the treasure in order to save it. Thieves will appear in direct proportion to rumors of the magnitude of the treasure, but open warfare by more-or-less legitimate rulers to seize the treasure is

unlikely, particularly if neighboring countries are relatively large and powerful. Their rulers will compare the likely cost of attacking another country with the likely benefit of seizing the treasure (minus whatever the PCs have already spent, graft and skimming some off the top by the soldiers who actually lay hands on it first) and probably decide against it. Still, they'll shed no tears if some of the money makes its way into their coffers. The Dutch and British, for example, didn't try to wrestle away Spain's lucrative gold and silver mines in the New World, but the massive production of precious metals led to the golden age of piracy. So while large-scale attacks are a moderate possibility for particularly lawless settings, it's unlikely for most historical periods, so let's again assume that they keep most of it.

If they just keep it and decide to live moderately comfortable lives, there's still not going to be much of an impact of any kind. If the money doesn't enter the economy, it may as well not exist. The life of Bilbo Baggins, though fictional, is a reasonable model; despite having gold from Smaug's hoard and a mithril coat worth more than the Shire itself (though he didn't know that), he lived in comfortable semi-retirement with lots of stories being circulated about his wealth but without altering the economy of his surroundings. Even the largest treasure, spent slowly enough, can be absorbed into the economy without having a tremendous effect (in fact, the Medieval European economy needed a steady influx of new gold from Africa and a few local sources to balance a general flow of gold eastward in trade). If the PCs settle in a very isolated region, it's possible that moderately intelligent peasants will take advantage of being the sole suppliers of day-to-day necessities and charge the PCs absurdly inflated prices even if the PCs are trying to economize. *Very* intelligent peasants will moderate their greed once realize that the people they're trying to gouge got their gold by an aptitude for extreme bloody violence.

But that's boring. What if the PCs want to spend like there's no tomorrow? If they want to spend all their money at once on the most expensive items they can find, they can send off for matching vormal glaive-guisarme-voulges or what-have-you, but the cash will end up wherever enchanters hang out. Such impact as the treasure will have will be in a region far away, with some of it scraped off by the considerable friction of long-range commerce in a low-tech setting.

If they spend their money on the things that historical rich people have spent their money on (fine clothes, large homes, temples with priests well-disposed towards the people who built them, etc.), the likely local effect is that the PCs will accelerate the pace of economic activity around where they settle, quite possibly transforming the economy of the area. Even if they settle in the countryside, it'll be almost impossible for them to avoid the trappings of urban life. Their demand for luxuries will make their home an attractive place for craftsmen and a destination for merchants, who will in turn need the services of carpenters and laborers to build their homes and temples for their spiritual needs. Increased traffic to the area will encourage the development of ferries or construction of bridges across nearby rivers and the construction of inns and other facilities for permanent and semi-permanent inhabitants, and everyone involved needs to be fed, making the area a large market for peasants to sell their produce. Villages will become towns, and cities will become bigger, wealthier cities. This process can happen even on a small scale: for food and drink alone, masons and laborers building a castle will easily require more supplies than a typical village can provide, at least for the months or years it takes to build it. All of this may lead to political entanglements as nearby overlords squabble over who gets to tax the growing town and eventual collapse should the PCs eventually run out of money.

Mo' Money

To take the idea to a logical extreme, let's briefly consider a treasure so vast the PCs *can't* carry it, the sort of hoard dragons curl up and sleep on, with a cave floor awash in gold and jewelry. Let's suppose a mass of treasure which would make up a layer 20 yards on a side and a foot deep. That's close to 2,200 tons of gold. Ferdinand Braudel, a prominent economic historian, proposed a *very* rough estimate of 5,000 tons of gold in circulation in Europe around the end of the Middle Ages. Suddenly increasing available stocks of gold by half will have far-reaching effects. First, the direct economic effects are likely to be a combination of the "renaissance effect," with the PCs becoming a center of economic activity, and a near-simultaneous crash in the price of gold. The PCs will be rich beyond their wildest dreams, but markedly less so than they would have been if they had collected gold already in circulation rather than introducing new gold.

Second, there are tremendous political ramifications. The collapse of gold prices will cause problems at the highest level of government and trade. Feudal obligations, international treaties, trade agreements, and other

Then again, if people play their cards right, it might lead to a permanent change in the economy and politics of the region. If the PCs can support a generation of skilled craftsmen, which a quarter million gold pieces can probably do, they may be able to export their products to other areas and sustain their way of life as support from the PCs tapers off over the years. Likewise, if they build temples which can serve as pilgrimage sites, the place they built can remain a center of activity long after they're gone. The latter is particularly probable if the PCs set their mind to it. In the Middle Ages, grand churches could be constructed and stocked with interesting relics quickly given sufficient funding, and three tons of gold more than qualifies.

Deeper effects on the value of currency and on regional economies are not impossible, but depending on the setting, they do seem unlikely. There are a very few instructive historical examples of large amounts of money suddenly being dumped into an economy. Mansa Musa, a king of Mali (a kingdom rich with gold mines), made a famous pilgrimage to Mecca in the 1320s during which he is said to have brought nearly 25,000 pounds of gold, several times what our heroes have plundered. Apparently, he spread most of that gold around Cairo, where he stayed for some time. While there, he not only bought things (food and drink for his very large entourage, lodging, and so on), he also, as a good Muslim, gave a great deal of it away as alms and gifts. It is said that the effects of his spending on gold prices could be felt in Cairo for several years thereafter. Being typically vague on details, our sources don't go into specifics about how much they're felt and how many years, but we can point to some limitations. First, the effect seems to have been local to Cairo and its vicinity, apparently not to Egypt as a whole and certainly not to the entire Medieval world. Second, the effect seems to have been on the price of gold in particular. The sudden huge influx of gold depressed the price of the metal relative to other goods, but didn't unbalance the economy as a whole. Gold, while immensely valuable, has nevertheless been a fairly small part of any ancient economy, with silver being many times more plentiful and non-monetary exchanges being more common still.

About the only global or near-global impact a load of treasure will have is if the PCs come home with wagons full of ultra-rare and ultra-valuable items such as gemstones. The sheer mass of new stones on the market is likely to send prices crashing on a continental scale. Diamonds and rubies won't become worthless overnight, but they do seem likely to be far less valuable than they once were. However, transactions involving precious stones are so uncommon in the greater scheme of things, most people won't notice.

So, then: Any treasure that a party of PCs can carry is unlikely to mean significant changes beyond the local scale because it will still be drops, or at best a single large splash, in an ocean. To compare this to one of the greatest influxes of precious metals into pre-modern Europe, even three tons of gold is a fraction of peak annual production by the Spanish in the New World and a high-insignificant sliver of annual silver production. Spanish production of huge quantities of gold and silver meant inflation through Europe and their empire's eventual collapse, but it took decades of mismanagement, rampant spending, and an inevitable decline in production to really bring things to a head.

It's worth pointing out that one thing that *won't* happen is sudden and sharp inflation, which GMs might feel like imposing as a sort of informal tax on PCs who get too rich. The money the PCs spend doesn't just sit around in the local economy, changing hands in a small, closed circle. If the PCs buy, say, the finest wine available in the area to the

arrangements of the age had very specific terms of payment, and as already mentioned, there were no traditional legal mechanisms in place to reconcile reciprocal feudal obligations where one party paid money and another paid in kind. Habitually dealing in large sums, rulers and important merchants tended to deal in gold far more often than, say, peasants and craftsmen, so shifts in gold prices will hit the upper classes disproportionately hard. Under these conditions, someone who contracted to sell a pound of pepper for a pound of gold or who expects a sack of gold coins from an underling in return for various feudal privileges would suddenly find himself getting a far worse deal than he expected. Kings and merchant princes will scramble to attempt renegotiation of age-old agreements or simply watch helplessly as their wealth and power collapses. Wealth of that magnitude is also likely to attract unwelcome attention in the form of invading armies after a share of the immense loot. All of this could very well make significant trade too risky to attempt. Given a decade or so for the dust to settle, the end result would likely see the PCs either at the center of an immensely rich new mercantile power or maintaining a stronghold in the center of a chaotic region where all the old arrangements have broken down and piracy, banditry, and border squabbles are rampant.

great profit of its producers, those vintners will be able to buy more things for themselves, which will either bring new labor into the local economy or require exports from outside, giving that money to still more people who will buy more things for themselves, and so on. In short, rather than staying concentrated in one place and raising prices, the money will move into a wider pool of people, diluting the effects of the new source of cash as it goes. Some inflation is a possibility, of course, but largely as a side-effect of a general increase in economic activity.

And that's a *realistic* Medieval economy, something with which most fantasy settings are blissfully unburdened. The fiscal basis of most fantasy economies is ludicrous. If the gold piece is standard currency or peasants have enough money to make it worth stealing their purses, you've already left reality far behind. Moreover, these are settings in which this sort of thing seems to happen every day: every wandering critter has a sack of gold, a Noun of Verbing, or a wet-bar full of potions. Every hole in the ground has a sturdy wooden box full of emeralds and rubies. It's hard for a group of reasonably skilled adventurers *not* to cart a few buckets of treasure home at the end of the day. The implication is an economy with far more wealth moving around than any real economy matching the nominal level of technology. Perhaps the potential effects of adventurers putting more money into circulation are balanced by monsters taking it out.

As for the leftover magic items: The prices of magical items listed in game rules may be far out of line with their practical value and apparent availability. If, for example, the benefit derived from a lightly enchanted weapon is equivalent to that of a few additional months of training or experience and one can be obtained by finding and killing a moderately powerful beastie, it's not going to command a premium several orders of magnitude over the price of a mundane weapon. But even ignoring that, there probably won't be enough money to buy those leftover +1 swords, wands of whatever, and bracers of giant smell. Or, at least, not enough money in the hands of people who want them. And that's okay. Cash is in short supply in most historical economies. It may very well be that, no matter what price your game system lists for a magical item, the PCs won't be able to sell it for money. Barter or a mixture of cash and "in kind" exchange is a traditional way of doing business; feudal obligations, for example, could easily have an underling owing his liege lord grain and livestock and being owed cash with no easy way of reconciling the two. It's both realistic (or, at least, as realistic as you can get with magical items in play) and colorful to trade a flying carpet for a small bag of gold, a jeweled chess set, two amphorae of olives, and a horse.

--Matt Riggsby

Sages theorize that the Omniscient Eye might actually be composed of a panel of Experts chosen through mysterious and arcane means. Regardless, the Omniscient Eye is benevolent, and every other week it is willing to share its lore to all. Or, at least, to all with valid *Pyramid* subscriptions.

The Omniscient Eye seeks to answer questions that are tied to knowledge of the real world, providing information with a perspective that is of use to gamers. The Omniscient Eye does not concern itself with specific game systems or statistics.

Do you have a question for the Omniscient Eye? Feel free to send it to pyramidquestions@yahoo.com, and the Omniscient Eye might answer it!

Pyramid Review

Eberron (for *Dungeons & Dragons*)

Published by [Wizards of the Coast](#)

Created by Keith Baker

Developed, designed by Bill Slavicsek, Keith Baker, & James Wyatt

Edited by Michele Carter, Christopher Perkins, & John Rateliff

Illustrated by Wayne Reynolds, Dennis Kauth, Rob Lazzaretti, Dave Allsop, Kalman Andrasofszky, John Avon, Ted Bargeon, Beet, David Bircham, Tomm Coker, Rafa Garres, Frazer Irving, Andrew Jones, Dana Knutson, Ron Lemen, Lee Moyer, Lucio Parrillo, Martina Pilcerova, Steve Prescott, Anne Stokes, Mark Tedin, Franz Vohlwinkel, Kev Walker, Sam Wood, & James Zhang

320-page full-color hardcover; \$39.95

If you're one of the thousands who submitted a one-page treatment for Wizards of the Coast's world-setting competition, you may want to go ahead and skip this review. But if you're still here: *Eberron*, the winning entry in the \$100,000 contest to select a new world for *Dungeons & Dragons* fans to play in, is the winner in more ways than one.

The kingdom of Galifar on the continent of Khorvaire enjoyed centuries of peaceful succession until King Jarot finally laid his burden down. Going against the long-standing tradition, his five children made attempts to secure the throne for themselves instead of taking subordinate positions to the eldest. Long story short: A war that lasted just over a century and has only recently resulted in the Treaty of Thronehold, which has torn the five constituent nations apart and sewn them crazily back into 12 countries. One of those nations, however, is *not* Cyre, though a mysterious explosion, origins unknown, has blasted the area and left the land under a cloud of strangely resilient smoke. Refugees streamed from there and took cover in any land that would have them, and there are precious few of those.

Peace is hardly synonymous with agreement among these people, however. Intrigues continue, and many folks are playing a waiting game, watching for weaknesses among their fellows in hopes of seizing more power without plunging the whole world back into war. Soldiers, still fresh from the conflicts, are at a loss what to do now, especially the warforged. These things, constructs built for the war (and now illegal to produce), have lost their reason for being, and are now armed only with their newfound freedom, having been declared legal citizens of the empire. Lycanthropes have been hunted to near extinction, and changelings -- those descended from doppelgangers and such -- blend in with the populace.

Magic isn't just the purview of a few hoary old wizards locked in towers. It's everywhere you look, from the lightning rails that carry people from place to place, to the everbright lanterns that illuminate your nightly step, to the instant communications between towns the gnomes can offer. There are still many secrets hidden away from prying eyes, lands beyond where giants once ruled but are now reduced to savages in their own cities, but most things are right in your face. The generous use of spells removes some of the "bookkeeping" of *Dungeons & Dragons* adventures; you're

no longer worried about how you'll get to the Demon Wastes, just how you'll kill things when you get there. Entire mountains are statues, towers reach toward the heavens, and the dragonmarked houses, powerful mercantile families whose brands give them near-exclusive control over various magics, can give any nation-state a run for its money (and probably will, when the time is right).

Psionics isn't just a sideline anymore; if you don't know a Kalashtar or someone with skill with these abilities, sooner or later you're going to run across the quori or one of their transdimensional ilk and find yourself at the mercy of their prodigious mental powers. *Eberron* suggests the *Expanded Psionics Handbook* comes in handy when playing, but it's by no means necessary.

Power is practically lying at one's feet; legend has it three dragons are locked in the fabric of the world after a cataclysmic battle, with Siberys now forming the ring above in the night sky; Khyber embedded in the underworld; and Eberron infusing the very land. These beasts have shattered, leaving mighty dragonshards lying about. These are powerful items to have when creating magic, and they're even better for psionic devices -- assuming you can steal them without notice from the dwarves.

The book is a thick and enormous volume, with small type, packing as much information as possible into the space allotted. A lot of this is a tour of the major locations PCs will blow through in the course of play, and it does get pretty dry in some places. There are notable exceptions sufficient to keep it from raising the horrible specter of one's high school classes (like the lovingly crafted goblinoid empire of Darguun), and the setting material is necessary to get things started on the right foot. The book gives the big-name NPCs short shrift, but at the same time this keeps it from being another roll call of needlessly over-detailed movers and shakers -- there will be plenty of room in the supplements for that.

The guidelines Wizards of the Coast posted for the competition make a good deal more sense in context. It's easy now to see where a submission like *Eberron* is similar to previous company releases, while bringing a certain fresh new feel to the traditional fantasy setting. This world is being reborn as the characters step into their places on stage, and the pulp-like adventure and wonder makes you feel as though you're standing on a stretch of virgin forest. The sober, epic nature of the *Dungeons & Dragons* you're used to now has a more open feel. Action points, formerly the purview of *d20 Modern*, are now a part of *Dungeons & Dragons* as well, and are used to increase dice rolls or activate certain powers. Heroes are expected to rise, meet the challenges, and fall into big piles of power. Everything is larger than life, and the party need not wait for double-digit levels to be known throughout the land for their exploits. The land is hungry for someone to fill the void left by its rending in the last war. Dizzying adventure sweeps across the landscape and plays to the Indiana Jones in you, and not the Tolkien.

The artwork is gorgeous, with portraits that paint a heady picture of the locales and people. There are several maps throughout, all marvelous, and what's not inspirational has a two-fisted Allen Nunis attitude about it.

Eberron has been designed to leave some of that stuffy tradition behind and give heroes the tools they need to really let loose. It doesn't demand that players treat it as a Buffy-esque in-joke with modern references and no sense of style, nor will they become god-kings in the space of a few adventures, but they will be like protagonists in a spaghetti western, larger than life and able to make their mark on this new land. The designers have troubled themselves to develop a world whose spectacular events have uncovered (or buried) as many fresh challenges as they solved. The changes are small, hidden, and fun, but these countless little things add up to a new way to experience *Dungeons & Dragons* that has all the action and few of the limitations.

Pyramid Review

Zombies!!! 4: The End

Published by [Twilight Creations, Inc.](#)

Written by Kerry Breitenstein & Todd A. Breitenstein

Illustrated by Dave Aikins

30 Map Tiles, 50 Card Event Deck, 100 Plastic Zombie Dogs, six plastic Shotgun Guys, one sheet of Red Heart Tokens, one sheet of Black Bullet Tokens, two six-sided dice & 4¾ by 7½-inch four page rules sheet; \$24.99

2004 is a year for endings. *Friends*. *Frasier*. *Angel*. And now [Zombies!!!](#). From its tortuous beginnings, the franchise has had you scrambling around town in search of the helicopter that will get you out and away from the clutches of the corpse cortège. Of course, another helipad could be found on the army base of [Zombies!!! 2: Zombie Corps\(e\)](#), but then so could be the special glow-in-the-dark "gubermment zombies," while yet a third sat on top of the holy shopping halls in [Zombies!!! 3: Mall Walkers](#). Its sequel, [Zombies!!! 3.5 Not Dead Yet](#) really only added a few more options, but now, in a fully playable, standalone expansion, players can discover the cause of the cadaver-animating curse and in a dark desperate act of arcane reading, put an end to it! And if [Zombies!!! 4: The End](#) proves anything; it is just how dangerous the woods are at night.

The first thing you notice upon opening up [Zombies!!! 4: The End](#) it is the lack of zombies. Instead of zombies, you get zombie dogs. In play, these turn out to be faster than ordinary human zombies, and do less damage. In game terms, this means that they move two squares instead of one, that two zombie dogs can sit on a single square, and that they do only a half a point of damage when they bite (the game includes half heart tokens to account for this). Further, they are more difficult to kill, requiring a roll of five or six, as opposed to the four, five, or six needed for a human zombie.

Another change is the tiles, which represent the dark, dreaded woods on the outskirts of the town. Unlike the tiles in previous games, they are open, and allow movement from tile to tile in any direction. In other words, players are not confined to the straight routes of roads and buildings of the town and army base. Of course, the zombie dogs have the same freedom to roam. The location tiles of this expansion match the rustic charm of the forested setting and include caves, a campground, a shed, a burnt out cabin, a boathouse, the pet cemetery (which explains where all the zombie dogs came from), an abandoned car dump, a ranger post, an outhouse, and a cabin. Each named tile must be seeded with Bullet and Heart Tokens as it is drawn, and by simply moving through them players can collect these. That is, if the zombie dogs protecting the tokens can be put down.

But the cabin location is actually all-important to winning the game. Like the helipad in the previous games, it is the players' ultimate objective. If a player can get to the cabin, clear it of zombie dogs, then he can attempt to undo the spell that caused all of the dead to rise. And the key to doing that lies in the Event Cards.

One of the best things about the [Zombies!!!](#) games has been the wonderfully atmospheric art of Dave Aikins that illustrates each of the cards. Several of our favorites from this expansion included:

- "Rolled-Up Newspaper," which shows a zombie dog being swatted on the nose with said improvised weapon.
- "Bad Zombie, No Biscuit!" (Just for the title).
- "Full Moon Fever" which turns a player into a werewolf and sends him to attack the other players.

Zombies!!! 4: The End also introduces a new Event card type, the "Page" card. Done in sepia tones, each "page" card represents a sheet torn from the spine of the Book of the Undead. These are played from a player's hand directly in front of him, much like weapons are in the standard game. Once there they can be discarded to give a variety of effects. For example, "Twist of Fate" enables the discarding player to steal a Bullet Token from everyone else. But for each "page" card that a player has down in front of him after he has cleared the cabin of zombie dogs, he receives a +1 bonus on the roll to successfully cast the spell that will undo the curse.

The basic play of ***Zombies!!! 4: The End*** is much like its prequels. The game starts out from the Bridge tile that sits astride a river separating the woods from the town. On each turn a player draws and lays a new tile. Then he continues searching the woods for the cabin, blasting zombie dogs away (and running away it when proves to be the better part of valor), and grabbing as many tokens as possible. At the end of his turn, a player gets to move a die's worth of zombie dogs in any direction -- mostly towards his opponents and away from him.

Like the second and third expansions before it, ***Zombies!!! 4: The End*** can be combined with the original ***Zombies!!!*** to create an extra large ***Zombies!!!*** game. This would, of course, take up a lot of space, but then that has always been a problem with this line of games. That said, it is not something that ***Zombies!!! 4: The End*** suffers from, as the placement and design of the tiles means that they do not have to run in straight lines. Anyway, to combine this expansion, just simply shuffle the Bridge starting into the main ***Zombies!!!*** deck, while keeping the other ***Zombies!!! 4: The End*** tiles and Event Cards separate.

Zombies!!! 4: The End has as much of a *Blair Witch Project* or *Evil Dead* feel to it as it does that of *Night of the Living Dead*. It does a very nice job of being both an expansion and a standalone game, and the open nature of the playing style imparts a more board game like feel while still remaining a ***Zombies!!!*** game.

--Matthew Pook

TLC2006

Feelings, Nothing More Than Feelings . . .

"You'd better be prepared for the jump into hyperspace. It's unpleasantly like being drunk."

"What's so unpleasant about being drunk?"

"You ask a glass of water."

--Ford Prefect and Arthur Dent, *Hitchhiker's Guide to the Galaxy* (Douglas Adams)

I had every intention of continuing my discussion of being deprived of [snazzy powers](#) this week. But somewhere in the past 12 hours I've gone from "Hmm; I have a slight tickle in my throat" to "Hmm; maybe if I nap, my blissful slip into oblivion will obviate my need to write a column."

So I'm not quite up to that topic this week.

Being sick (or "illin'," as I refer to it with my peeps) -- along with my successfully making my Dodge roll for my powers column -- has gotten me thinking about special abilities and feelings.

Namely, why do so many RPGs give relative short shrift to how all these snazzy abilities make the wielder feel?

I mean, think about it. Many games give PCs access to secret powers of the universe, powers beyond those of mortal men, the ability to commune with otherworldly entities, great service at low low prices, and other beloved toys. But most of them don't give any indication about how tapping those energies makes you feel, what it's like.

Consider two cyberpunk universes that start out identical in every way. However, in the first one, accessing cyberspace brings about a peaceful tranquility and sense of inner calm, while in the other the feeling of being part of the cyberrealm is one of paranoia and unease, like constantly being in a dark unsafe alley at 2 a.m. Despite using identical rule sets, h@ck3r characters from both games would probably be completely different in their outlooks, approaches, and interests.

What if the act of using magic felt exactly like the tickling sneeze that won't come? What if interdimensional travel gave that tingle in your skull like a scalp massage? What if accessing one's inertialess flight superpower felt like dry heaving?

Again, none of these need to offer any kind of game effects. In fact, the impact of trying to evoke these sensations can be *lessened* if they are given game mechanics, since these feelings can then be turned into something to be overcome. ("Hmm. Traveling through time feels like a 2D6 punch in the kidney? I can soak that.")

Some games do this already. The science fantasy game *Fading Suns* has as one of its conceits that interstellar travel -- which uses something called jumpgates -- is incredibly pleasurable to organic lifeforms. The in-game church, frowning on this, forces all vessels to install dampeners that keep this sensation from happening. (Probably the most amusing extension of this idea was the revelation that a race of symbiotes using bio-organic spaceships for space travel had a problem controlling its ships, since, once taken through the jumpgates, they just kept hopping back and forth through the gate to experience that wonderful feeling.) Likewise the superpowered game *Aberrant* has as its premise that the act of spawning superpowers is incredibly traumatic, akin to a massive migraine only much, *much* worse.

While this will be treading on familiar territory for most of you, it's worth nothing the likely effects of various sensations.

First, if it feels good, people will be more disposed toward doing it.

If it feels really good, some people will become addicted to it.

If it feels really, really good, society will probably try to control, regulate, or suppress it (especially if it inhibits productivity or poses a danger to others).

If it feels bad, people will be less interested in doing it.

If it feels really bad, people will be very uninterested in doing it, and those who do will likely either have strong wills or suffer from various neuroses stemming from the pain.

If it feels really, really bad, people will strongly avoid it, unless the benefits it provides greatly outweigh the rewards. (Some people, of course, will consider it a sign of machismo to endure the awful sensation, just to get bragging rights.)

If it feels different, or provides a sensation that isn't found elsewhere, this will be considered "good" to a certain group of people, who may seek out the sensation, out of curiosity or addiction. (This would be akin to the space tourists who pay to experience weightless conditions in a plane in Earth orbit.)

It's possible for a sensation to defy classification. For example, tickling is pleasurable to some people, and annoying or even painful to others. (And even those who find tickling pleasurable usually have a threshold beyond which it's no longer enjoyable.) Likewise it's possible that a sensation will vary for different people, situations, or groups. This can lead to interesting roleplaying or sociological discussions. For example, just like it's not possible for men and women to directly compare and contrast the genders' orgasms, so to might there be clashes and debates between (for example) those who practice mana-based magic and those who tap into divine energies. (And if the two kinds of magic are not usable by the same person, an interesting theological debate could stem from the realization or proof that both kinds of magic feel *identical*: "Maybe all miracles are actually utilizing an inner magic . . . or maybe all arcane effects are tapping some unknown deity!")

It's possible for powers to have different feelings in different situations. For example, runners talk about hitting a wall and pushing through it, resulting in a "runner's high." Maybe handling arcane energies is uncomfortable or even painful for a long while, but in the middle of extended usage or a long ritual the practitioner undergoes a "magician's high."

And, finally, it's possible that a *lack* of sensation can be an interesting side effect of an ability or power. For example, if entering cryogenic storage results in a feeling of intense calm and an absence of anxiety, then some people may undergo it just for that feeling.

The existence or modification of feelings can be a great way to justify just about any type of character behavior and attitudes. For example, if you wanted a character with a powerful attack ([Voltron](#)-level), but didn't want to access it all the time, the solution could be as simple as saying that it hurts like blazes to use it. ("Jack! We're outnumbered; use the Primal Scream attack!" "No way; that thing feels like an icepick to my skull! Until I see them wielding icepicks, I'll take my chances.") Contrariwise, if you wanted to justify a character having unusual levels of some ability or modification, it can be as simple as saying that your character *likes* it. For example, suppose the installation of cyberwear is intensely pleasurable to the character (perhaps by merely the Nietzschean idea that pleasure is the absence of the aches and pains associated with flesh parts). The character, already composed of more metal than normal, might struggle between the desire to install more cybernetic components -- and thus intensify the pleasure -- and the worry that he'll cross some threshold beyond which his mind can't cope. Such a person could creepily teeter on the brink of maniacal bliss, all the while eyeing just *one* more shiny toy . . .

Games often focus on what its heroes can do, and how they should act. But part of the human experience -- arguably an incredibly important part -- is how it *feels* to be human. And if your character has abilities far beyond those of mortal men, it might be interesting to consider how those abilities feel to him.

In the interim, I'm hoping the feelings behind this head cold I'm experiencing are the precursor to wondrous superpowers.

--Steven Marsh

Dork Tower!

Dork Tower!

Fellow Travelers

Passengers for a GURPS Space campaign

by Stephen Dedman

This article is intended as a companion to an earlier piece, "[Cargo Space](#)." While it may sometimes be important for the PCs to know *what's* in the hold of the starship they're traveling in, it can be vital to know *who's* in the cabins next to theirs. What skills do they have? What are their intentions? Do they play chess, or poker, and how well? Are they doing field research for the revised edition of the NASA Sutra? Or are they potential hijackers, assassins hired by their enemies, repo men, or undercover tax investigators?

If a campaign or adventure involves large numbers of passengers, most GMs won't want to create detailed NPCs for every available berth. Players, however, may become suspicious if everyone on board is a soccer fan named Jones, or they're constantly ferrying a movie star, a professor, and a couple of multi-millionaires from planet to planet.

The following list can be used to generate random passengers (or hotel guests) for any space-faring campaign. With a little tweaking, it may also be used for travelers in any earlier setting from a Roman road to a Wells Fargo stagecoach. If physical descriptions and other details are needed, use the tables on p. B15 and pp. B84-85.

Random Passenger Creation Tables

Roll on Table 1 (1d) and Table 2 (1d)

- 1-4 Human or mostly-human
- 5 Robot or obvious cyborg
- 6 Alien

Table 2

- 1-4 One from Table 3
- 5-6 One from Table 4

Table 3 (1d)

- 1 Executive/Bureaucrat/Lawyer
- 2 Jobseeker/Migrant
- 3 Academic/Scientist
- 4 Student
- 5 Tourist
- 6 Refugee/Runaway

Table 4 (2d)

- 2 Conman/Forger/Hacker
- 3 Soldier
- 4 Kid (traveling alone)
- 5 Athlete
- 6 Entertainer or Journalist

- 7 Dilettante
- 8 Pilgrim
- 9 Cop/Bounty hunter
- 10 Courtesan/Prostitute
- 11 Politician
- 12 Time Bomb

Using the table: The *Olivia* is leaving Galt bound for New Seattle, with eight cabins and 10 freeze tubes to fill. The GM decides that there are 16 people seeking passage offworld, and begins rolling. The first roll produces the result Robot Executive; he decides the robot is status-conscious, and wants to fly First Class, accompanied by a human lawyer, who also insists on her own stateroom. When the next two rolls turn out to be a human scientist and a human student, he decides that a research team is returning to NSU: four professors and six students (five humans and a Sparrial), all paying for Standard passage. Having filled the cabins, he rolls again, getting a human jobseeker. He decides the jobseeker has been made redundant and will take cheap Freeze passage for himself and his family, filling five of the six remaining places. The last roll gives him a human athlete -- why not an overconfident kickboxer, with just enough money left for Freeze passage to his next bout?

Academics and Scientists (see p. S46)

Academics and scientists may be traveling to/from conferences, field research, a new job (see Jobseeker), a court case (as an expert witness), or a vacation (see Tourist). There will usually be a university or research station at at least one end of their journey (see p. S173): depending on their specialization, field research may take them anywhere from an apparently lifeless desert world to the most riotous pleasure planets in the sector.

Academics and scientists will usually travel as standard passengers. As well as at least one science skill at 14+ and Research 13+, most will have some useful shipboard skills (using sensors, computers, etc.). Many will also have Outdoor and Athletic skills, and may be equipped for field work on inhospitable planets. Most will spend most of their time in their cabins with their books, but some like to party or gamble. IQ is typically 13+; ages range from mid-twenties to the maximum lifespan possible at that tech level.

For a collection of suitable scientists, see "[Men In White](#)."

Aliens (see p. S55)

Aliens will probably be traveling for the same sort of reasons as human passengers, and may hold similar jobs (e.g. a Gormelite bounty hunter, a Treefolk scientist, etc.). They may pose different problems for the crew -- e.g. unusual life support requirements, or personality quirks that make them sharing a cabin with them unpleasant or hazardous. They will usually want private quarters, or even a controlled environment container in the cargo hold.

Athletes

Professional and amateur athletes will often travel great distances to compete in events, either singly or in teams (2d-1, or choose a sport). The more successful they are, the more likely they are to be accompanied by an entourage of Personal Assistants (trainers, managers, medics, bodyguards, lawyers, journalists, etc.) Athletes will usually have ST and/or DX at 14+ and HT at 12+ and the High Pain Threshold and Very Fit advantages (professional chess players are more likely to have IQ 14+ and Eidetic Memory). The Obsession and Overconfidence disadvantages are also common.

In a setting where cloning, braintapes, and Torpine mean that death and serious injury may only be temporary inconveniences, some very dangerous spectator sports may be popular -- gladiatorial contests, full contact martial arts, autoduellings, etc. Athletes may have Combat skills as well as Athletic skills at 15+; most will have high levels of Social skills as well, and smart ones will also have professional skills in case their careers don't last. Depending on the rules of the sport, some may have bionics or bio-mods, or depend on wonder drugs.

Successful athletes will usually travel First Class to events, and stay in deluxe hotels. Losers on their way back home may travel sleeper or steerage.

Where athletes go, fans and groupies will often follow. Treat these as Tourists.

Bodyguard

Wealthier travelers will often have bodyguards as well as other servants (and bodyguards may also serve other functions -- chauffeur, trainer, valet, secretary, cook, masseur, tracker, etc.).

A typical bodyguard will be taller than his client, large enough to hide behind, and tough enough to use as a shield (traditional yakuza favored sumo wrestlers as bodyguards). Alertness and Combat Reflexes are essential; Danger Sense and/or Peripheral Vision are also desirable. In a TL10+ setting, at least some of these advantages can be bought as cyberwear or bio-mods, and many bodyguards will be robots, cyborgs, or parahumans: the "Cerberus" Security and Patrol robot (p. RO117) or Orion-Series Upgrade (p. BIO45) would be ideal.

Useful skills include Body Language, Fast-Draw, First Aid, Holdout, and a variety of weapons and unarmed combat skills. Many bodyguards are former cops; some have Special Forces backgrounds. They may share their employer's First Class or Luxury cabin, or be housed nearby.

For a template for human Bodyguard characters, see *GURPS Covert Ops*.

Bounty hunters (see p. S44)

Bounty hunters will usually travel by Steerage or Standard passage, and stay in low-cost hotels, while tracking down their targets. Their prisoners, if alive, will usually travel back to the world where they're wanted in Freeze tubes.

For a template for Bounty Hunter characters, see *GURPS Rogues*.

Conmen, Forgers, and Hackers

Competent conmen will be indistinguishable from other sort of passenger, and will travel in whatever degree of comfort suits their particular scam. They may be hastily fleeing a world where they are no longer welcome, en route to another world in search of fresh suckers, or trying to run a scam on board: they may even be trying to steal the ship. Conmen often work in pairs or small groups; forgers and hackers are usually loners.

For templates for Conman, Forger and Hacker characters, see *GURPS Rogues*.

Cops

Cops traveling outside their own jurisdictions may be escorting prisoners who are being extradited or deported, visiting the sector capital for a trial or other official business, or for the reasons listed under "Tourist." High-ranking police will travel first class, but most will take standard passage (corrupt cops may pay for an upgrade). Prisoners usually travel as Sleepers.

For templates for different types of Cop, see *GURPS Cops*.

Courtesans/Prostitutes

Prostitutes may ply their trade on board the ship -- if the crew permits, and if suitable premises are available (most draw the line at freeze tubes). Alternatively, they may simply be in transit for the same reasons as anyone else. For a template for Prostitute characters, see *GURPS Rogues*.

Dilettante (see p. S45)

The Idle Rich will usually take the most comfortable quarters available (First Class at worst), though some may prefer to travel in freeze tubes if they're not satisfied with the quality of entertainment available on board. They mostly restrict their travels to rich worlds, though some have business interests on Agricultural, Industrial or Mining planets. Treat as Tourists with more money and (usually) better gear. Dilettantes often have Personal Assistants and/or Bodyguards, and may attract Conmen and Courtesans.

For a template for the Dilettante, see *GURPS Cliffhangers*.

Entertainers

Actors plying the spaceways will probably be on their way to work (usually in standard passage, though stars travel first class or better), or in search of it (usually in freeze tubes or steerage). Musicians may be able to work their passage (a la Heinlein's Rhysling), in a degree of luxury commensurate with their skill.

Entertainers usually have good Social skills (particularly Bard, Carousing, Fast-Talk and Sex-Appeal), and may also have a few Athletic, Combat or Thief/Spy skills. Some will also have useful technical skills; others may have the Overconfidence disadvantage and the Delusion that they have these skills.

Executives, Bureaucrats, and Lawyers

Administrators and businessmen will often need to travel to/from places where their business interests lie -- conducting audits, troubleshooting projects that run overtime or over budget, looking for property to buy and/or sell, etc. Lawyers, similarly, may need to travel offworld to interview witnesses, serve papers, or make court appearances. Those with Administrative Rank/1 may take Standard or even Sleeper passage, but most will travel First Class. High-ranked administrators and lawyers (Administrative Rank, Reputation or Status bonuses of 3+) may travel with one or more personal assistants.

Some administrators will be making return trips to/from Government worlds (p. S173) or Corporate Headquarters (p. S172); others may have been assigned to new posts (colonial offices, prisons, factories, mines, etc.) on a long-term basis, and may be taking their families and a few cargo containers full of personal effects.

Necessary skills for an administrator or lawyer include Administration, Accounting, Computer Operation, Detect Lies, Diplomacy, Law, Psychology, Research, and Savoir-Faire. Businessmen will usually have Merchant skill. Some administrators may also have technical backgrounds -- Architect, Computer Programming, Engineer, Planetology and Xenology skills would be useful for anyone seeking to build or maintain an outpost on an alien planet. Administrators from Theocracies will also have Theology skill and Clerical Investment; those from Military Oligarchies will usually be ex-soldiers; those from Cybercracies may be robots.

Jobseekers

While few people may have the time or money for interstellar tourism, many more may be willing to pack up their belongings and go offworld in search of a better life. Those traveling from Poor worlds with little more than hope will probably opt for Freeze or Steerage passage; those more confident and more skilled may opt for Standard or First Class (or may have had it pre-paid by their future employer). Jobseekers may have any of the skills listed on the Job table on p. S53, or none: they will usually be bound for Rich worlds, or at least populous ones where work is said to be plentiful.

Journalists (see p. S45)

Journalists will want to go to wherever the news is -- even if that's where most people are trying to get away from (which reduces the risk of the PCs having to deadhead back: see Refugees). Freelancers will usually take Steerage

passage; high-status journalists wishing to avoid delays may charter an entire ship for themselves and their Personal Assistants, and insist on luxury treatment.

Kids (see p. B14)

Kids will usually share quarters with a parent or guardian -- typically a Jobseeker, Refugee, or Tourist. Kids over a certain age (2d+3 years) may also have to travel alone to rejoin their families, or to attend a boarding school: some carriers refuse to transport children traveling alone, except as Sleepers.

Personal Assistants

Wealthy and high-status individuals will often have their staff travel with them. While a TL10 wristcomp may be able to perform secretarial duties better than any human, human (or humanoid) servants may still be status symbols. As a rough guideline, give each individual with Wealthy or higher wealth one Personal Assistant (secretary, valet, trainer, adviser, etc.) per level of Status and/or Reputation. These may share quarters with their employer, or be housed nearby at a lower level of comfort according to their income bracket.

Pilgrims

If religions survive into TL10, so will the concept of the pilgrimage to a religious center (see p. S173). Many pilgrimage sites will be on Earth or on alien homeworlds, though others may well exist.

Treat pilgrims as Tourists in most respects, though Clerical Investment, Disciplines of Faith, Fanaticism and Vows may be more common than among most tourist groups. Not all will be honest: conmen and forgers (including counterfeiters of religious relics) often prey on pilgrims.

Politicians

Similar to executives, bureaucrats and lawyers, but with more Wealth, Reputation and Status than most -- and therefore, even more likely to have an entourage, including a Bodyguard (possibly a serving military officer), at least one Personal Assistant, and others (including lawyers, bureaucrats, personal physicians, intelligence agents, etc.). Politicians are also likely to be followed by Journalists.

Politicians usually demand Luxury passage, unless they're trying to appear frugal, when they may settle for First Class. They have the same skills as administrators, plus Politics -- if they come from democratic societies, at least. Those from Military Governments, Theocracies, etc., should have other appropriate skills.

Societies unable to afford their own consular ships may also transport diplomats and diplomatic couriers by commercial starship. See p. S45.

Refugees and Runaways

Refugees may be fleeing a war, a plague, or a similar planet-wide disaster, or political or religious persecution (the higher the CR, the higher the probability that people will want to escape, and the more difficult they will find it). Refugees may be traveling alone, in family groups, or in entire communities. Runaways are more often loners, trying to escape a more personal version of the same type of nightmare: slavery, abuse, or prosecution (justified or not).

Few refugees or runaways have the money even for Steerage or Freeze passage; fewer still will have the travel documents or contacts they need to be accepted on the worlds where they are seeking refuge. Most have never been offworld, but some may have useful skills: Einstein and Freud were refugees, and many despotic regimes have conducted purges of academics, medical doctors, and other professionals and intellectuals. Deposed politicians, military officers, intelligence agents, police interrogators, etc., may also seek to escape from their homeworlds after a change of government has occurred.

Robots

Many passengers aboard a TL10 starship may be robots, cyborgs, or androids. Robots who don't require life support can even travel as cargo, if necessary, though others enjoy human company enough to pay for steerage or standard accommodation.

A variety of robots, cyborgs, bioroids and parahumans from *GURPS Robots* and *GURPS Bio-Tech* would make excellent Bodyguards, Bounty Hunters, Cops, or Soldiers. "Lemon Angel" Android Companions (p. RO119), Eros-Series Bioroids (p. BIO37), or Ishtar-Series Upgrades (p. BIO42) may work as courtesans, entertainers, or personal assistants. Sentient humanoid robots might work in any occupation, particularly those that would benefit from an Eidetic Memory (lawyer, bureaucrat, scientist, hacker, etc.)

While robots are unlikely to visit their grandchildren or grandparents, the question of whether they take vacations, go on pilgrimages, or travel to attend weddings, is left as an exercise for the GM.

Sleepers

While most Sleepers will be unable or unwilling to pay the higher cost of conscious passage, some may have other reasons for traveling in freeze tubes -- Phobias, Motion Sickness, Addictions, or simply to avoid the boredom of a long space voyage. Prisoners are also usually transported in freeze tubes, as are patients needing medical care unavailable on their homeworld or on board the ship.

Soldiers (see p. S7 and pp. S45-46)

Merchant ships will rarely be expected to transport regular troops to war zones, but may carry them between military bases in demilitarized zones, or between a base and a world with better opportunities for R&R. Those with Military Rank 0-1 will usually travel Steerage; Ranks 2-4, Standard; 5 and above, First Class.

Mercenaries are much more likely to charter a ship to take them to a war zone, or even travel somewhere by commercial flight with the intention of rescuing hostages or starting a coup. They may try to disguise themselves as tourists, pilgrims or jobseekers (with their heavier weapons carefully concealed), or take the starship crew into their confidence.

Star soldiers on R&R may include Marines, Fighter Jocks, navy spacers, and medics: all of these should have some useful shipboard skills (including the all-important Vacc Suit). For templates for different types of soldier, see *GURPS Special Ops* and *GURPS Warriors*.

Students

Treat as scientists or academics, but with slightly lower skill levels in their chosen specialization, and even less money. Some wealthy students may opt for Luxury or First Class passage, but most will take Standard or Steerage passage and save their money for books or entertainment. Students may accompany scientists on field trips, but are more likely to be traveling between a university and their homeworld.

Time Bombs

Time bombs are passengers who seem like normal tourists or jobseekers when they board, but later prove to be troublesome. Possibilities include hijackers or terrorists; spies or thieves who rob passengers; assassins hired to eliminate another passenger or a crew member; suicides who want their bodies to disappear into hyperspace; intolerant fanatics who find themselves sharing space with members of a hated race/class/religion; mad (or at least unethical) scientists conducting bizarre experiments; individuals incubating an unknown disease; serial killers; etc. Lesser time-bombs might include alien eggs that hatch unexpectedly, manic-depressives, kleptomaniacs, bullies, addicts who run

short of their drug, or passengers whose Odious Personal Habits set off those with the Bad Temper disadvantage.

Tourists (p. S46)

In any campaign where travel times between worlds are measured in weeks, rather than hours or days, interstellar tourists may be as rare as they were on Earth in the days before the airplane. That said, retirees and the idle rich, with time as well as money to waste, may still travel widely. Students and academics with money to spare may take advantage of long vacation breaks. Others may save up for a year-long Grand Tour, or for special occasions: the Olympics on Earth (see Athletes), hunting season on Roosevelt, their children's weddings or graduation or the birth of the first great-great-grandchild.

Tourists will usually pay for Standard or First Class passage. Many display Odious Personal Habits and/or other disadvantages (Clueless, Compulsive Spending, Gluttony, Greed, Intolerance, Miserliness and Lecherousness are all fairly common among tourists) while away from home.

Tourists may have any skills appropriate to Average or better jobs (see p. S53).

Adventure Seeds

- **Eyestrain:** The PCs' ship is hit by a mutant virus that attacks the vitreous humor of the eye, and slowly migrates into the CSF surrounding the brain. The first symptom is blindness in one or both eyes (roll HT for each), followed 2d days later by a coma. Panimmunity and known drugs don't provide any resistance; suspended animation stops the progress, but doesn't cure the disease. The only humans safe are those with bionic eyes.

While the medical officer and any scientists on board search for a cure and try to prevent the disease spreading, crew members with failing eyesight may have to train passengers to do their jobs. The chaos becomes even worse after some passengers blame the robots or aliens on board for the plague, and break into the ship's armory.

- **Geist Room:** When the ship is plagued by a series of minor technical problems (see "[Appendix Z: Starship Troubles](#)") en route to Samedi, parapsychologist Dr Nile accuses a 13-year-old passenger, Josh Ojha, of being a poltergeist, and insists Josh finish the journey in freeze. Josh's father is a successful lawyer traveling first class, and he threatens to sue the crew if this happens. Meanwhile, the technical problems worsen, becoming life-threatening, and the coffins in the cargo hold have started moving.

Is Nile right, or are he and Ojha running a scam? Is someone else on board sabotaging the ship? If so, who -- and why?

- **Getaway:** War criminal Mali Ras is captured by a bounty hunter, who books passage for both of them on the PCs ship... but another passenger releases Ras from her freeze tube, and when the ship pops back into normal space for a mid-course astrogation check, Ras steals the lifeboat and escapes to a nearby planet. The bounty hunter wants to recapture her, but the other passengers want to continue to their destination without delay.

None of the other passengers are missing, which means that Ras's accomplice -- a skilled hacker -- may still be on board. Or maybe the lifeboat was on autopilot, and Ras is also hiding somewhere on the ship.

- **In the Frame:** The PCs are transporting several forensic scientists and senior police to a conference. Two weeks from their destination, an attractive young detective is murdered, and the evidence implicates a PC who had spent the night in her cabin. The PC has been framed by an expert, and if he can't prove his innocence, he may face brainwiping when they reach their destination.
- **School for Scandal:** Tia Shields, an Eros-Series Bioroid (p. BIO37) is returning to Marlowe University, where she claims to be finishing her MA in Theatre Arts. During the long voyage, she plans to seduce as many crew-members and fellow passengers as possible, then goad them into fighting over her. Though she's studied theatre, Shields's major is in psychology, and she's secretly performing an experiment for her doctoral thesis. If she also gets enough material for a dreamgame, so much the better.

Tia Shields

ST 9; **DX** 11; **IQ** 13; **HT** 12. Move 5.75.

On top of her Racial Advantages and Disadvantages, Tia Shields has the Wealth (Comfortable) advantage, the Greed and Sadism disadvantages, an Eros Plus bio-mod (p. BIO64), Recorder Implant (p. HT107) and Silver Tongue (p. HT108).

Skills: Acting-14; Beam Weapons/TL10 (Sonic)-13; Body Language-13; Brawling-11; Courtesan-12; Diplomacy-13; Disguise-13; Electronics Operation/TL10 (Communications)-12; Judo-12; Psychology-14; Research-13; Savoir-Faire-14; Sex-Appeal-15; Video Production/TL10-13; Writing-12.

Gear: Sonic Stinger (p. HT55), with Nauseator setting (pHTT59); Neuronic Handcuffs (p. HT91); Clothing Belt (p. HT27); Personal Computer (p. S65); Emergency Medkit (p. S96) stuffed with doses of Crediline (p. HT97), Dryad (p. HTT90), Sin (p. HTT91), and Wideawake (p. HTT91). Her First Class cabin is fitted with hidden holomotion cameras.

Special

by Paul Drye

Introduction

The Specials' time on Earth was short but spectacular. Over just a few years they exploded on the scene, came to be perceived as a threat, and then were nearly driven into extinction over the entire planet. The conflict was a stain on human history, but one most people still find justified. What is less well known is that the Specials found a bolthole, and carry on barely in touch with their home, trying to carve out a niche in a hostile universe.

Outbreak

Acute Cerebral Hyperpyretic Syndrome (ACHS) appeared in Australia in the winter of 2004-5, and swept the world over the next 18 months. It was not particularly infectious, but 90,000 people suffered from it, and the death rate was 100% as their brains overheated for unknown reasons.

By the spring of 2006, Elise Konczewski at the CDC discovered that ACHS was a prion disease affecting the microtubule proteins of the brain. Microtubules were suspected to be a site of quantum activity, and the heating was caused as the deformed microtubules tapped into zero point energy, pumping it into the surrounding tissue.

ACHS was a surprisingly odd disease but treatment was now possible. The death rate dropped precipitously, and only a few thousand more people were infected over the next few months while a vaccine was rushed into production. Then came the surprise.

Before the vaccine was widespread (but after treatment was possible) there was a short window during which someone could catch ACHS and survive. People infected by ACHS were cured in the sense that their brains no longer overheated and killed them, but some of their proteins were bent out of shape before the disease could be stopped. Microtubules had also been fingered as a possible seat for human consciousness, and this now proved to be true: the distorted tubules gave voluntary control over zero point energy. ACHS survivors displayed a wide variety of psionic powers, their nature varying depending on the extent of their injuries.

The Specials had arrived.

An Uneasy Peace

For the next four years, the Specials fascinated (and unsettled) the entire world. Elise Konczewski was the interface between them and everyone else, constantly reminding people that they were human -- and not superheroes or lab rats. A group of neuropsychologists gathered around her and did their best to understand how the Specials worked, while also trying to provide the younger ones with some semblance of a normal life.

There were mostly "younger ones." Psychic side effects or not, ACHS caused brain damage. With few exceptions, anyone over the age of 25 who caught the disease severely enough to become psionic was also reduced to insanity or coma.

Similarly, children under the age of 12 rarely ended up psionic. Their brains were still too plastic; their neural pathways would route around the damage. A few months of therapy might be needed to recover lost skills, then life returned to normal.

Most mentally normal Specials, about 750 in all, were between the ages of 12 and 25; 16 older ones stayed sane.

Another 5,000 Specials, almost entirely over 25, were mentally ill in one way or another, and confined. This was true even for ones who weren't particularly sick, and could have been stabilized with medication. It was an ominous note in an otherwise spectacular time.

Landstuhl

This situation lasted until March 11th, 2010, when an older Special reduced to a psychotic state by his bout with ACHS brainwiped every person within 1.8 kilometers of Landstuhl Regional Medical Center, Germany. Private Douglas Rousse -- still in the care of the US Army (loath to give up control of a Special in their hands) -- had been kept in Germany after coming down with ACHS while serving in Darmstadt. To this day, no-one has figured out why, or how, he did what he did.

Whatever it was that caused Private Rousse to erase the consciousness of several thousand people, the response was panic. Many people had been nervous about what the Specials could do; now that nervousness became fear. Matters got worse when the first child of two Specials was born three months later. Reserves of the ACHS prion lurked deep within the body, and children of Specials were Special themselves. Exposed to ACHS from conception, their brains didn't recover like those of older children: second-generation ACHS survivors were psionic from the moment of consciousness, usually before birth. Fortunately the ones that were telepathic could be taught restraint without language, while still in the womb; the ones who weren't had anti-psi in close proximity during the pregnancy. It sank in to the world that the Specials were not going to fade away.

Backlash

In July 2010, China declared that Specials within its borders represented "a health issue that threatened the stability of the Chinese state" and began rounding up survivors of ACHS. Other countries soon followed. In the West, Specials began dropping out of sight. Many of these were laying low as public opinion turned against them, but there were several cases of Specials being held indefinitely by the governments of the United States, Japan, France, and others after committing (or being accused of) various crimes.

Sanctuary

Elise Koscieszewski felt that fighting back against the repression could not turn out well; Special powers were all they had to counterbalance being vastly outnumbered, and they were a blunt instrument. It would be a war, and no matter which side won, things would change for the worse. As more and more governments tried to bring the Specials under their control, she and a majority of her charges moved from country to country, eventually ending up in New Zealand. They were rapidly running out of places to go, though.

Her ace in the hole was Javier Avilar, a young Spaniard who had descended into autism after his bout with ACHS. Avilar had teleportation powers, but their extent was unknown. Certainly he was the most powerful teleport known (and once had to be retrieved from Perth, Australia after starting in West Virginia), but sometimes he'd disappear entirely and could not be found until he re-appeared on his own.

At first it was assumed that he was going some isolated place on Earth where he was difficult to find, but one day he returned with a flower in his hand. It was analyzed in the hope of finding the plant's natural range and solving the mystery of Javier's destination. It turned out to be unrelated to any species on Earth. The similarity to a flower was a product of parallel evolution; it was actually an alien life form.

About a year after Landstuhl, Dr. Koscieszewski managed to penetrate Javier's autism sufficiently to ask him for a ride to his "special destination." A moment later, they were in Sanctuary. Located an unknown distance from Earth, it is a Dyson Sphere of unknown origin.

Sanctuary is a "real" Dyson Sphere, in the sense that the term was originally proposed: a horde of independently

orbiting space habitats rather than a solid sphere. Javier had somehow picked up on a "beacon" (possibly a zero-point energy source, no one knows) on one habitat, and tunes himself to it in order to make the immense jump. No one knows how he then makes it back home.

Avilar's flower and the beacon were from one particular habitat, a rotating cylinder some 10 kilometers in length and a kilometer in diameter. The environment within was remarkably Earth-like, with similar gravity, breathable air, and a compatible biosphere. Apart from the habitat's alien plants and animals, it was entirely uninhabited.

Penned into New Zealand with the Specials, and reading the writing on the wall for them, Dr. Koscieszewski hatched a desperate plan. Javier could teleport things with him; with repeated trips, he could transfer equipment and groups of Specials to his habitat. There they could build a colony. There were a number of exceptions who refused to give up the fight at home, but she secretly convinced many Specials to come with her.

Endgame, or So It Seemed

On May 5th, 2012, the United Nations Security Council passed a resolution insisting that New Zealand detain all known specials, to be turned over to the newly formed Human Safety Council (UNHUSACO). New Zealand had 15 days to comply. Specials in other countries were arrested, and brought to internment camps.

To their credit, the government of New Zealand refused, and on May 21st a combined force of American, British, French, and Chinese troops invaded. New Zealand immediately surrendered -- the last Special on their soil had left for Sanctuary six hours before.

On May 23rd, at 0700 hours local time, the largest internment camp in Europe was attacked by Specials who escaped with 114 people. At midnight local time (almost simultaneously with the European jailbreak), the largest American camp was assaulted, and 180 Specials rescued. The two attacks were later discovered to have been based out of an abandoned weather station in northern Newfoundland, from where Javier Avilar sent the two strike teams before returning them, the internees, and himself to Sanctuary. Eighteen hours later, another strike based out of Howland Island in the Pacific rescued the New Zealanders who had been arrested for aiding them in the previous few months. Increased security at all sites and defensive dispersal of potential targets has reduced the potential for rescues like this, but 60% of all sane Specials have been rescued.

The people of Sanctuary maintain contact with Earth, both to continue rescuing their kind, and to get needed supplies. Dr. Koscieszewski, the escaped New Zealanders, Javier Avilar, and dozens of others who have escaped to Sanctuary were indicted by the ICJ in the Hague for crimes against humanity.

Running a Special Campaign

The default assumption is for a Special campaign to begin shortly after the escape to Sanctuary, and explores refugee interaction with Sanctuary and an increasingly dangerous Earth. If more time is available, however, the campaign can begin at any point in the history above, depending how long a GM is prepared to invest in building up to the evacuation. Bear in mind that the more adventures that take place before Sanctuary enters the picture, the more the players are likely to be invested in Earth. This cuts both ways, making it likelier that the retreat to Sanctuary takes on interesting tragic and hopeful notes, but also increasing the chances that the players will be reluctant to cut and run when an escape presents itself. Be prepared to de-emphasize the long-term nature of the Specials' sojourn to Sanctuary if needed.

Once on Sanctuary, adventures fall into two categories:

- Continuing contact with the Earth, both for more extractions of Specials left behind, and for "grocery shopping." Smash and grab is likeliest, but setting up "Underground Railroads" for people and things is an option.
- Exploring the Dyson Sphere. Sanctuary is empty and hospitable to the newcomers, but there are numerous questions. Where are we? Where are the Builders? Are there other squatters besides ourselves, such as

aggressive alien races? How does the Sphere's alien technology work? Can we get to the other habitats and what are they like? Will we find something that will let us return to Earth permanently, or is Sanctuary home for better or for worse?

In the latter kind of adventure, keep in mind the usual statistics about Dyson Spheres. Though not a solid sphere, Sanctuary still has billions of times the surface area of Earth enclosed within its habitats. Once the Specials can get to the other habitats, anything and everything can be placed by the GM.

Characters

"Special" is intended for use with any gaming system that can model psionic powers. In general this is superhero games, even though the "four-color costumed do-gooder" quotient is very low. It can be increased as desired, but the intention is to offer a place for people who use their own names and dress normally, and just happen to be able to do odd things with their minds.

Powers

No matter what the system, there are a few points for a GM to keep in mind. In-game, psionic strength is limited by the amount of zero-point energy tapped to produce the effect, and the energy involved has to go somewhere. With sufficient control some of it can be dumped back from where it came but the conduit between zero-point space and the real world is not perfect, and it runs through someone's brain. A reprise of ACHS' main symptom -- death due to cerebral overheating -- will occur if too much energy is manipulated too quickly. GMs are advised to use this as an excuse to ban any power they deem too unbalancing, or alternatively give players the option of "pushing" their characters at the risk of brain damage or death.

That said, what powers are appropriate? Simplest to rationalize are those based on tweaks to chemistry or electromagnetic fields: telepathy in particular, and other abilities like telepresence. Precognition is problematic under the quantum mechanical rationale for powers, and is not recommended.

Next easiest is "anchoring" in the fabric of space in order to counter some of the major laws of physics. Specials can affect real world objects with the entire universe as their momentum and energy sink. Even the apparent gross violations of conservation of energy and momentum inherent in Javier Avilar's teleportations can be explained away. Super-strength and flight are also possible -- both as variations of telekinesis -- but GMs are strongly suggested to keep their power low: a few tons of capacity, or flying no faster than a run.

Most difficult of all for a Special is a power that manipulates large amounts of energy, such as pyrokinesis, or energy absorption. These depend on the raw capacity of the conduit into zero point space, either in or out, and should be supremely difficult.

Impossible are feats that can't be justified in terms of psychic abilities. It takes tortured logic to produce extra limbs or super-stretching from mental control of energy. Allow players to come up with rationalizations for their powers, but try to err on the side of realism.

Disadvantages

Specials are people too, and have the same potential disadvantages as other human beings. There are certain types of disadvantages that can be emphasized, though, because of their peculiar situation.

First of all, Specials are susceptible to mental problems. Many escaped ACHS apparently unscathed, but all suffered some damage to their brains. Varying degrees of mental illness of any type are justifiable.

Second, all Specials suffered the trauma of being punished for something they did not control -- being ill. Almost all had to deal with family or friends turning away from them, and police, military, or government actively trying to

imprison or kill them. There is also survivor's guilt: murder or imprisonment has cut the number of sane Specials by a third, and if one includes the mentally ill ones left behind, only 5% of all Specials have escaped. Players may want to investigate the psychology of refugees and trauma victims to better understand how their characters might be thinking after all this upheaval.

Backgrounds

Thanks to the breakouts from the American and European internment camps, the Specials on Sanctuary are largely European and American. There are many Specials from the industrialized nations of the Pacific Rim, though these are now imprisoned throughout Siberia and western China; Sanctuary has only a few of them, for now.

There are not many Specials from Africa, South Asia, or the Middle East, because the lack of available medical treatment in those countries kept people from surviving ACHS, even after a cure was discovered. There are exceptions, though, and some of them have remarkable stories to tell.

Opponents

The only individuals who are more than human in "Special" are the Specials themselves. This is one major reason for keeping power levels low. In rule systems that offer advancement, the characters will reach the point that there are no antagonists that can stop them without some improbably convoluted justifications. It's possible to work in a few Specials who've been turned by an Earth government, and there's always the option of putting some aliens into the mix on Sanctuary, but by and large Special characters will be up against normal people.

As such, normal people will try to level the playing field. They have numbers, and they have a vast technological society with a great communications network behind them. Every military and security analyst on Earth has been chewing on the problem of Specials for more than five years. The GM is encouraged to be as devious as possible, and to be prepared to pile on highly trained soldiers with top-of-the-line military equipment if the Specials are foolish enough to allow their opponents time to react. Books such as *Military Operations in Low Intensity Conflict* and part two of *Terrorism and Counterterrorism: Understanding the New Security Environment, Readings and Interpretations* are highly recommended for a GM lacking in inspiration as to how regular people could hinder Specials.

Adapting to Specific Rule Systems

GURPS: Use powers from *GURPS Psionics*, basing characters on 150 points (with 50 points in skills and 100 points in powers). Mixing with *GURPS Supers* is possible, but beware of powers that are too powerful or overtly break the laws of physics. Also beware of *justifications* for powers that are anything but "psionic."

If the GM decides to drop in an alien race or three, there are numerous options in *GURPS Traveller: Alien Races 4*, or for creative use of some of the "races" found in the various horror supplements. *GURPS: Aliens* is geared towards space opera and doesn't mesh easily, but the Memer and Serat, Markann, or a variation on the Traders would work.

GURPS: Special Ops is also handy for modeling the cutting-edge soldiers Earth's security forces will develop to deal with Specials.

Champions: Most characters should use the Mentalist template, though there are excuses for low-powered Bricks and Energy Projectors. A Low-Powered Campaign (150 base points and a maximum of 100 points of disadvantages) is recommended, and there is room to lower this even more.

Silver Age Sentinels: Use the game's definition of a Low-Powered Game for character creation, with sanction for increasing STR or INT past 24 if a reasonable justification can be provided. Some characters will be Psychic class, but players should be allowed to use the more flexible Adventurer class if they wish -- so long as they are using the Psychic archetype (see page 155 of the *Silver Age Sentinels d20* book).

As a fairly standard *d20 System* game, there's a wide variety of "modern" supplements that will be useful, notably *d20 Modern* itself. Aliens and alien technology can be culled from a variety of different games based on the system, and not just the science fiction ones. The author's "Special" campaign used *Call of Cthulhu d20's* Fungi From Yuggoth (with the serial numbers filed off) as the major non-humans of the Sanctuary Dyson Sphere.

Mutants and Masterminds: Begin characters at Power Level 5, and be careful when handing out Power Points. In particular, consider the "Other Rewards" on page 151 of the Core Book as options to keep advancement low.

As a heavily modified *d20 System*, it's more difficult to slide in elements from other books. As of this writing there are no supplements from *Mutants & Masterminds* publisher Green Ronin that would be particularly useful when implementing a "Special" campaign.

The Ro-Ped

Low-Cost Personal Urban Transport in the World of *Transhuman Space*

by Phil Masters

A typical urban street scene in *Transhuman Space's* world of the year 2100 includes a lot that would puzzle or startle a viewer from a hundred years before, but also a lot that would seem fairly familiar, even in the most sophisticated Fifth Wave cities. What are perhaps most interesting, though, are the elements which would be half familiar and half strange -- concepts and technologies which have survived the 21st century, but which have evolved and mutated in the process.

The type of civilian vehicle known variously as the ro-ped, robobike, cyberscooter, and by dozens of other names, belongs in this category. The direct and obvious technological descendent of the light motorized two and three-wheeled urban transports which became so popular across much of the globe in the second half of the 20th century, the ro-ped is often used in much the same way. However, increasing technological sophistication has given it additional capabilities, and in 2100, it is no longer *simply* a vehicle.

The Ro-Ped as Cybershell

The key development in this process was the installation of increasingly sophisticated computer systems in motorized vehicles, a design approach which long since reached even this type of light, cheap transport. Such vehicles have become fully capable of maintaining and steering themselves, and indeed, manual vehicle operation is now prohibited on some roads in some areas. That in itself technically transforms vehicles into cybershells, but the term really means most with smaller designs. In particular, many manufacturers have included manipulator arms in their "ro-peds," enabling them to perform routine maintenance on themselves, run errands -- often without any human operator or passenger -- and help around the garden. The borderline between personal transport and medium-sized civilian utility cybershell has thus become blurred, and most industry observers believe that it will disappear entirely within a few years.

The Market

As with its ancestral "motor scooter" of the late 20th century, the ro-ped is found in almost every city in the world, but its image and socio-economic niche varies with local conditions. In *Fifth Wave* cities, such vehicles represent cheap personal transport for the young and the (relatively) poor; popular models tend to be designed for looks and style rather than durability or long-term reliability, and often incorporate minor luxury features. Parents often appreciate the idea that a good AI, installed in the vehicle's computer, can supervise their adolescent offspring, preventing unsafe or illegal behavior and reminding them of deadlines and curfews; those same adolescent users sometimes trade supposed methods for subverting or befuddling standard AI types.

The one snag with such vehicles from the recreational user's point of view is of course that they are open to the elements, which is why, for the last 150 years, such things have been most popular in regions with warmer climates, but their low cost and agility in traffic make them popular even in wetter and colder countries. A small but significant secondary market consists of couriers who are employed to move portable urgent packages around urban areas, which helps to make the ro-ped a familiar sight in every advanced city on Earth.

The ro-ped sees similar use in *Fourth Wave* areas, and indeed the technology may even be slightly more common in such regions, as their citizens are more accustomed to physical travel over short distances rather than conducting their social and business lives *purely* in networked virtual reality. Prices of even the latest designs are well within the budgets of many "Fourth Wavers," although the typical model of choice may be slightly more utilitarian than in richer

markets, with fewer luxury options. In fact, though, ro-peds are perhaps most popular among the younger members of wealthier social classes, who use them as a way of flaunting their wealth and emulating Fifth Wave sophistication.

Third Wave city streets are also frequently full of ro-peds, although these are often older models, kept running by diligent or improvisational maintenance work, or even purchased in more advanced areas by dealers who ship them to the poorer regions for second-hand sale. Many lack much in the way of computer capacity, with only the most basic AIs installed; indeed, some older models are completely incapable of independent operation. Several older but serviceable designs have been flagrantly pirated by manufacturers in the TSA, and can be seen on the streets of Alliance cities, giving observant Fifth Wave visitors a persistent sense of *deja vu*.

Many ro-peds found in Third Wave areas have only one manipulator arm fitted, or even completely lack this feature. While a few young, wealthy users seek to imitate fashionable Fifth Wave folk, most "Third Waver" ro-peds are employed for much more utilitarian purposes, sometimes serving as a whole family's only form of transport. (This in turn tends to prevent them being seen as much of a status symbol by wealthier locals.) They may be overloaded, under-maintained, and shabby. Even so, the ro-ped is helping to bring the concept of ubiquitous cybershell use even to the poorest countries.

The CIT "Arlesienne" mk.III (*GUPRS Third Edition*)

Subassemblies: Body +0, two Arms -2, three Wheels -2.

Power and Propulsion: 5 kW ceramic engine with wheeled drivetrain. 0.5 kWh energy cell.

Fuel: 2 gallon standard fuel tank for alcohol.

Occupancy: 2 CYCS. *Cargo:* 3 cf.

Armor

All: 2/4

Equipment

Body: Small computer (incorporates GPS). Short-range radio with cellular capability. LLTV (×5 magnification) and passive IR sensors (front, back, right and left). Basic sound detector.

Statistics

Size: 3'×2'×5' *Payload:* 471.60 lbs. *Lwt.:* 728.28 lbs.

Volume: 7.8 cf. *Size Mod:* +0 *Cost:* \$3,621.90 + computer

HT: 9 *HP:* 15 [Body], 6 [each Arm], 3 [each Wheel]

gSpeed: 60 *gAccel:* 3 *gDecel:* 15 *gMR:* 1.5 *gSR:* 2

High Ground Pressure. Off-Road Speed 10.

The CIT "Arlesienne" mk.III (*GUPRS Fourth Edition*)

The ro-ped has ST/HP 25, Hnd/SR +1/2, HT 10f, Move 3/30, LWt 0.36, Load 0.2, SM 0, Occ 1+1, DR 4, Range 800, Cost \$4K, Locations E3W2A.

Use of electrical batteries rather alcohol fuel than eliminates the ro-ped's flammability; however, it also reduces Range to 240.

The most popular model in CIT/Provencale's cyberscooter range, the Arlesienne is about as sleek and stylish as a three-wheeled urban transport can probably hope to be. Typically sold with a cheap computer pre-loaded with a standard NAI-4 plus skill sets for Driving (Automobile)-13 and Mechanic (Internal Combustion Engine)-12 (total cost

\$600), the Arlesienne uses a system architecture and interfaces based on a well-established, even slightly outdated industry open standard. This helps make the model popular with hobbyist "cyber-hackers" who upgrade and tinker with the software and often the processor; while this brings relatively few additional sales directly, it gives the Arlesienne's image a degree of "cool" in wider markets -- as the company's memeticists intended.

The performance figures above are for when the ro-ped is laden with two riders and their luggage. With just a 200 lb. driver, it has gSpeed 75, gAccel 4, and off-road speed 13; completely unladen, operating as an autonomous cybershell, these figures rise to gSpeed 100, gAccel 5, and (thanks to ground pressure falling to moderate) off-road speed 25.

Design Notes: This typical ro-ped design was created using *GURPS Vehicles* and the "[Transhuman Space Technical Appendix](#)". It uses an alcohol-burning ceramic engine for versatility; a full tank of fuel costs around \$1 and is good for 11 hours of use at full speed, or about twice that in more normal use. It has three wheels rather than two so that it can function independently as a cybershell at low speeds; two-wheeled motorcycles still exist in 2100, but are usually designed as long-range high-speed tourers rather than as urban runabouts.

The design also has a light, cheap, steel alloy frame (robotic, like all modern vehicles in the setting), an aluminum bodyshell, cheap arm motors, and improved brakes. The controls are fully computerized, and indeed the computer has no problem operating the vehicle, with or without a rider. Maintenance interval is 330 hours.

The Ro-Ped as a Cybershell

Converting the above vehicle design into a "character" cybershell gives the following template:

GURPS Third Edition

Attribute Modifiers: ST Upper Body -5, Lower Body +40 (No Fine Manipulators: -40%) [35]; HT -1 [-10].

Advantages: Absolute Direction (Uses GPS, -20%) [4]; DR 4 [12]; Extra Encumbrance [5]; Extra Hit Points +6 [30]; Filter Lungs [5]; Increased Speed +1 (only improves ground movement, not Dodge, Initiative, or anything else: -75%) [6]; Infravision [15]; Machine Body [37]; Night Vision [10]; Passive Defense +2 [50]; Peripheral Vision [15]; Polarized Eyes [5]; Radio Speech [25]; Super Running x3 [60]; Telescopic Vision x2 [12].

Disadvantages: Limited Sense of Touch [-10]; Mistaken Identity [-5]; No Sense of Smell/Taste [-5]; Social Stigma (Valuable Property) [-10]; Very Restricted Movement (Wheels/Tracks) [-25].

Features: Complexity 5-7 small computer. External seats for two people. Internal space (room for 3 cf of luggage).

Date: c.2060 **Cost:** \$3,621.90 + computer.

This template has a total cost of 261 points.

As the ro-ped's carrying capacity implies a load-bearing strength far greater than that built into its manipulator arms, the "Split ST" rules (p.C1176) have been applied. The "upper body" ST should be used if the vehicle ever tries to exert force with or through its upper structure, reflecting the fact that its frame simply isn't engineered for this.

Two disadvantages in this template, Limited Sense of Touch and Restricted Movement, come from an earlier *Pyramid* article, "[The Car as the Star](#)"; see that for details, and for discussion of several other issues arising when treating vehicles as characters.

Also as discussed in that article, this treatment assumes that the controlling AI can monitor just one of the vehicle's four camera arrays properly at a time, but can pay enough attention to the others to justify the Peripheral Vision advantage. It *might* be possible to design an AI to monitor every camera at once, giving 360-degree Vision (+10 points to the package cost); however, this would probably be limited to AIs specifically designed as vehicle controllers or for very similar applications.

Technological Variations

Electric Power: This option is most often taken in more advanced regions, where there are cheap, reliable electricity supplies and often significantly tighter anti-pollution laws. It also tends to be popular with any user who wants to employ the ro-ped indoors in confined spaces; even 2100-era alcohol-burning engines generate some unhealthy exhaust fumes. For a typical example, replace the engine, fuel tank, and small energy cell in the above design with a 15 kWh energy cell (permitting 3 hours of operation at top speed or about twice that in normal use). This reduces the unladen weight by 16.5 lbs., and changes the price to \$3,866.90 and the maintenance interval to 320 hours. If treating the ro-ped as a cybershell, replace Filter Lungs with Doesn't Breathe [20] and add Limited Endurance [-10].

Arm Modifications: Thanks to the cost of arm motor/control systems, the manipulator arms included in the above design increase the cost fairly substantially, to the extent that several ro-ped manufacturers were surprised with how popular they proved when they were first introduced. (It turns out that people are prepared to pay quite a lot for a vehicle that can maintain itself and help carry the shopping.) Hence, there are still quite a few cheaper models around with just one arm (reduce cost by \$750, add One Arm [-20] to the template), and a few with none (reduce cost by \$1,500 and add No Manipulators [-50] to the template).

A compromise can involve using cheaper, low-dexterity manipulator systems (reduce cost by \$750, add Bad Grip [-10] to the template), but this is generally seen as losing too much functionality for too little cost reduction. (Some older, badly-maintained ro-peds effectively acquire Bad or Poor Grip anyway . . .) At the other end of the scale, some ro-ped purchasers demand greater strength, making the cybershell a more useful general servant; for example, raising ST to 10 in both arms adds \$1,500 to the cash price and 20 points to the template cost.

Liquid Crystal Skin: Liquid crystal "paint" is popular with wealthier users who can't decide what their favorite color might be, and is also sometimes acquired by anyone who has to use a ro-ped for clandestine operations -- a "shadow" is somewhat less likely to be spotted by an unsuspecting target if the vehicle involved changes its appearance periodically, at carefully judged moments. It can also be programmed to display a serviceable camouflage pattern. The coating costs \$800, and may give a small bonus to Camouflage, Shadowing, or Stealth rolls on some occasions, at the GM's option.

All-Terrain Capability: This variant gives a ro-ped off-road wheels and all-wheel steering. The result cannot actually operate on *any* terrain, but it has markedly less problem with difficult conditions than a standard model. While popular with some recreational users, the main objective of these enhancements is actually to make ro-peds more useful as general-purpose cybershells. The cost becomes \$4,897.60, the weight becomes 268.88 lbs. unladen or 740.48 lbs. fully laden, and the total volume becomes 8.3 cf, while the larger wheels have 4 HP each. As a result, gMR becomes 1.75, and off-road speed with a single rider becomes 19, or 33 if completely unladen. In the character template, change Very Restricted Movement to Somewhat Restricted Movement [-15].

Even more sophisticated and versatile models also have powerful miniaturised motors driving the steered front wheel, giving the vehicle all-wheel drive. This increases weight to 281.38 lbs. unladen or 752.98 lbs. fully laden, and cost to \$5,397.60, while reducing top speed slightly to 70 with just one rider or 95 fully unladen; however, it also increases off-road speed, to 15 when fully laden, 23 when carrying a single rider, or 48 when unladen.

GURPS Fourth Edition Notes

The ro-ped template is as follows:

Attribute Modifiers: ST +15 [150].

Secondary Characteristic Modifiers: Basic Move +1 [5].

Advantages:

Absolute Direction (Requires Signal, -20%) [4]; Damage Resistance (4) [20]; Enhanced Move (Running) 3 [60]; Filter Lungs [5]; High Pain Threshold [10]; Infravision [10]; Machine [25]; Night Vision 5 [5]; Payload 5 (62.5 lbs, 3 cf) [5]; Peripheral Vision [15]; Protected Vision [5]; Radio [10]; Reduced Consumption 3 [6]; Telescopic Vision ×2 [10].

(Note that Absolute Timing is now included in the templates for AI software.)

Disadvantages: Electrical [-20]; No Legs (Wheeled) [-20]; No Sense of Smell/Taste [-5]; Numb [-20]; Social Stigma (Valuable Property) [-10]; Weak Arms (1/4 Body ST) [-10].

Quirks: Road wheels only (suffers even worse problems on rough country than most wheeled characters) [-1].

Features: Complexity 5-7 small computer; External seats for two people; Looks identical to countless others; Sterile.

Date: c.2060 **Cost:** \$3,621.90 + computer.

Total template cost: 259 points.

Variations

Electric Power: Replace Filter Lungs with Doesn't Breathe [20] and delete Reduced Consumption. (Electrical recharges are treated as "refuelling" for game purposes.)

One Arm: Add the One Arm Disadvantage [-20], while the value of the Weak Arms Disadvantage becomes [-5].

No Arms: Apply the -40% "No Fine Manipulators" limitation to ST (reducing the cost to 90 points) and replace Weak Arms with No Manipulators [-50].

Bad Grip: Add some level of Bad Grip, usually -4 [-10].

Stronger Arms: Weak Arms (1/2 Body ST) is worth [-5] instead of [-10] (or [-2] if the cybershell only has one arm).

Liquid Crystal Skin: Add one level of Chameleon [5] and a Perk (Variable surface color; a neat gimmick, and may give a small bonus to, e.g., Shadowing rolls on some occasions, at the GM's option) [1].

All-Terrain Capability: Delete the "Road wheels only" Quirk.

Game Uses

Obviously, a ro-ped is nobody's idea of a glamorous pursuit vehicle; anyone who wants speed, combat effectiveness, or serious agility and versatility will choose almost anything else. However, this very innocuous inoffensiveness can bring such vehicles into many scenarios.

If nothing else, PCs may encounter countless ro-peds getting in their way on busy streets or being used as transportation by important but unsuspecting NPCs, or they may use such vehicles themselves for shadowing and surveillance work. Ro-peds can certainly factor into impromptu chase scenes; they *are* a lot faster than a human being on foot, after all, and a mugger or other criminal might plausibly choose to use one as a getaway vehicle on cramped and busy streets. Youth gangs in Third Wave cities might well ride around on the best transport they can afford, while Fifth Wave "AI hackers" might favor such cybershells for numerous purposes, from the innocuous to the nefarious.

Scenario Ideas

Bonus Feature: The purchaser of an imported second-hand ro-ped in a Third Wave city (maybe a PC, or one of the PCs' friends or relations) has just discovered to his surprise and delight that its computer appears to be more powerful

than its documentation suggests -- and indeed, its AI appears to be a fairly sophisticated LAI, rather than a cheap, basic NAI. Of course, this raises the question of what else might be stored (perhaps encrypted) in the computer's memory, what else the AI might be capable of which it won't admit, and who might want any of this stuff back if they find out.

The AI certainly seems secretive and evasive, but that may not be deliberate; it may just be a poorly designed amateur "hack job," or damaged by memory corruption. If the PCs can discover some relevant encryption keys, they might even find that it's simply treating them as inadequately authorised to use it. But who can they trust to ask for help? And when the AI asks for access to the Net in order to acquire some error patches which might make it more useful, dare they agree?

Streets of Fire: The PCs are employed as part of a counter-terrorist operation in a "low Fourth Wave" city when an insurgent group launches a large-scale campaign against the local political structure. Early attacks show that the assassins are expert and ruthless bombjackers, employing innocuous ro-peds as weapons. A little detective work finds that the vehicles used were built by the same popular manufacturer, and it emerges that the terrorists have subverted the supervisory software in that company's local maintenance center. While the security hole can be fixed, a software "upgrade" transmitted to vehicles throughout the city means that they might be taken over at any moment, and they are refusing to accept new software patches.

The government might order all of the relevant vehicles off the road, at the risk of triggering widespread hysteria -- but scores are already on the loose without riders and now ignoring recall signals. Some carry bombs, others are acting as decoys. Furthermore, ro-peds are popular in this city; banning their use, or even spreading the news story, is going to cause economic problems and general chaos, while jumpy PCs and other agents are going to have difficulty telling potentially dangerous units from visually similar models built by other manufacturers. And then there are the home-modified models using processors and software from one manufacturer in another's vehicles. Things are going to get messy before they get better.

My (Software) Generation: A new, rather experimental SAI-7 being developed in a Fifth Wave laboratory is displaying personality problems. The designers attempted to enhance its ability to benefit from training and education by giving it a less rigid, more "questioning" personality, and to a certain extent they may have succeeded -- at the cost of making it rather surly and uncooperative. It's not malevolent or any sort of "rogue," so far as they can tell; it just has something of the personality of a human adolescent. Unfortunately, fixing this directly would require low-level manipulation of its software structures, to a degree which local AI protection law only permits with the informed consent of the SAI itself -- which isn't forthcoming. Anyway, the researchers aren't sure that they *can* fix the problem without damaging the successful aspects of their work. "And besides, he'll grow out of it . . ."

All of which would be an entirely academic issue if the SAI hadn't recently declared a need to interact with the world at large. It was built to be capable of learning; refusing to let it acquire experience could be considered cruel, and might possibly even be damaging. So it needs, well, *babysitters* -- which is where the PCs come in. Unfortunately, one of the first things the SAI discovers is the joy of first teleoperating and eventually downloading itself to cybershells, with a particular taste for ro-peds, for no apparent reason. Ro-peds, 130-year-old soul music, and not telling its "guardians" where it's going when it goes out . . .

、

Icosahedron Adventures

The Handiest Magic Item 30 Things to do with a *Glove of Storing*

by Owen K.C. Stephens

A *glove of storing* is a fairly simple magic item. According to the core *d20 System* rules, it has the following properties: This device is a simple leather glove. On command, one item held in the hand wearing the glove disappears. The item can weigh no more than 20 pounds and must be able to be held in one hand. While stored, the item has negligible weight. With a snap of the fingers wearing the glove, the item reappears. A glove can only store one item at a time. Storing or retrieving the item is a free action. The item is held in stasis and shrunk down so small within the palm of the glove that it cannot be seen. Spell durations are not suppressed, but continue to expire. If an effect is suppressed or dispelled, the stored item appears instantly.

Faint transmutation; CL 6th; Craft Wondrous Item, *shrink item*; Price 10,000 gp (one glove).

The cost may seem high when compared to a *handy haversack* (at 2,000 gp) or one of the cheaper *bags of holding* (starting at just 2,500 gp), but the *glove* has lots of advantages over those items.

First, getting something out of or putting something into a *glove of storing* is a free action. It takes no time at all. Imagine, then, being a thief. You pick the pocket of a mark, and even if he catches you, the object taken can just be *gone*. Of course this trick can be revealed with the right spells, but not everyone is a spellcaster. Especially if your mark has no reason to think of you as a rich adventurer, it may not occur to him you've shrunk his purse down to a tiny size to store on your palm.

Additionally, things stored in a *glove of storing* are still present on the character's plane of existence. The problem with other mass storage devices is that they place items in a "non-dimensional space." There are no clear guidelines how this space works, but at least some GMs are going to assume it can be accessed with transportation magic. With the *glove*, the item is still in your hand here in normal dimensional space. Additionally, a *glove* that is accidentally placed into another storage item doesn't rip a portal to the Astral plane, as things like *portable holes* do.

Further, the *glove* doesn't have an opening you have to fit things through, nor can anyone but you access it when in use. Any bag or haversack is going to have trouble fitting a gallon of ale -- the thing is just too wide regardless of its weight. I can certainly hold some gallon containers (even two or three gallon casks) in one hand, so they can go into a *glove*.

These properties all add up to an amazing degree of versatility. The *glove* isn't so useful because of any one thing you can do with it, but because you can set it up to help deal with common circumstances, or to get around a particular problem when it crops up. And unlike placing 500 lbs in a *bag of holding*, if you need to use your *glove* for something out of the ordinary, you likely have a friend who can carry your spare longsword.

So, here are 30 things you can keep in a *glove of storing*. Of course it's up to a GM how many of these work (some assume a pretty broad definition of the *glove's* limitations), but they should at least spark some interesting other thoughts.

1. **Live cat.** Since items stored in the *glove* are kept in stasis, a cat can be kept there indefinitely. This is useful for rogues and other sneaky character. If the *glove's* wearer makes a noise while sneaking into someplace, she can simply release the cat to throw off suspicion. More dangerous tiny creatures can be turned into thrown weapons the same way.
2. **Ladder, 10-foot.** It can be carried in one hand, but it a pain to haul around any other way (and is reasonably too large to stick in a *bag of holding*). Same logic applies to a 10-foot pole.

3. **Ram, portable.** For quick and easy door access.
4. **Any weapon.** For characters who want to retrieve a weapon as a free action, but can't manage to pick up the Quickdraw feat. Also useful for back-up options, such as a silver or cold iron version of the character's preferred weapon or a hammer for fighting skeletons. (It's more convenient than carrying spare weapons in a golf bag, anyway.) Additional examples include a long spear (allowing the character to quickly set to receive a charge), a loaded repeating crossbow (allowing five attacks to be made in quick succession), a net already folded to throw, or any throwing weapon.

This is particularly useful for clerics, who can use a weapon and shield but need one hand free to cast spells with somatic components. A cleric could carry a large steel shield all the time (maintaining his AC), and have a morningstar in a *glove of storing*. When the cleric needs to cast a spell, he stores the weapon in the *glove* to free up a hand. Since using the *glove* is a free action, the cleric can even bring his weapon back out after casting, allowing him to make attacks of opportunity.

5. **Material component.** For the most part, if a character can get at a material component quickly and easily enough it's not worth wasted a *glove's* abilities on it. However, a spellcaster who is grappled can only cast a spell if its material component is already in hand. Thus a sorcerer might find it useful to keep a pinch of powdered iron (for *enlarge person*), a few hairs from a bull (for *bull's strength*), or even a bit of gauze and a wisp of smoke (for *gaseous form*) to allow casting when grappled.
6. **Alchemist's Fire.** It can be very useful to have fire ready to go, but alchemist's fire is volatile and takes time to pull out of a pack. Carrying it in a *glove* allows a character to have it ready in an instant without any risk it'll blow up (a similar logic applies to carrying a *necklace of fireballs*). Even at high levels, alchemist's fire can be useful, to deal with things like trolls sitting in an *antimagic field*. The same logic applies to an acid vial.
7. **A shield.** Useful for character that fight with multiple styles. A character fighting with a bastard sword could have a heavy steel stored in the *glove*, and easily switch between using the sword two-handed or using it one-handed and getting the extra AC from the shield.
8. **Studded leather armor.** For a fighter to sleep in, as opposed to his heavy daytime armor.
9. **Locked gauntlet.** It's not so useful to store a locked gauntlet in a *glove of storing*, as it is to use a *glove of storing* to take off a locked gauntlet quickly. Since the *glove* can only store one item, rather than unlock and remove the gauntlet, simply store it in the *glove* when done with it and be immediately ready to switch weapons or cast spells.
10. **A valuable gem.** Twenty pounds is enough to store an immensely valuable gem, a perfectly concealed, theft-resistant source of emergency wealth.
11. **Potion of healing.** It's difficult to take time to retrieve a potion of healing when you really, really need it. By placing a powerful one in the *glove*, a character saves valuable time when healing himself or another character becomes crucial.
12. **A familiar.** Like the cat, once stored the familiar is safe, needs no food, and takes no damage.
13. **Bag of caltrops.** Ready to discourage pursuit.
14. **Thieves' tools.** Especially in areas where such tools are illegal. Any frequently used kit (especially a healer's kit) also makes a good choice.
15. **A stolen object.** If stealing something that qualifies, placing it where it can't be found by a mundane Search check if caught is useful.
16. **An 11th- or higher-level druid.** If a group needs to sneak an extra character into a situation, such as a negotiation, an 11th-level druid is able to become a tiny animal, and then get stored in the *glove*.

More realistically, a party trying to fit an extra person into a *teleport* can cast *reduce person* on anyone weighting 160 pounds or less and stick them in a *glove*. This will certainly allow any gnome or halfling to be brought along in this manner, and may work for elves and sleight humans as well. The *reduce person* still has a very short duration, but a *teleport* is a single action after all.

If a horse or ogre has to be brought along, *polymorph* them into a cat instead. The item can be used to carry a small infant (if one must transport the infant safely, for example) without resorting to spells.

17. **Twenty pounds of food.** For character with low carrying capacities, a sack of food, or feed for horses, can be

kept lightly in the *glove*, allowing the character to stay lightly encumbered. (This this also allows for having food even if horses are driven off or lost in a flood, which is useful for really dangerous wilderness.) Even better, the food stays perfectly fresh. I imagine a number of adventurers appreciate the option of a fresh slice of pie or some hearty stew after weeks of iron rations in the bottom of a dank dungeon.

18. **Magic rings.** Since there are far more than two kinds of useful rings, a character can keep one stored in a *glove* and one worn on the finger. As it's a free action to retrieve or store an item, a character wearing a *ring of climbing* with a *ring of feather falling* stored can climb a cliff and, if he falls, take a free action to retrieve the *ring of feather falling*, and then a second free action to store the *ring of climbing*. (This only works if the GM counts pressing a thumb against a worn ring as "holding" it, in which case rings can be switched freely once a round).
19. **Spyglass.** These mundane items are expensive and fragile, so it's a good idea to keep them stored someplace they won't get hurt when not in use. To a lesser degree, the same is true of a magnifying glass.
20. **Activated sunrod.** Since it's not magical, its six-hour duration is suspended when in stasis, just like a torch. This makes them practical and inexpensive when only used for emergency lighting, even underwater, and with no need to light it. Of course, a lit lantern works almost as well, though its not as useful when swimming).
21. **Activated smokestick.** If stored as a free action after being activated, but before filling an area with smoke, the smokestick can be called up as a free action to provide cover, while leaving the character a full round to run or hide.
22. **A 200 ft. silk rope.** This may push the limit of what can be "held in one hand," but it's only 20 lbs, making it perfect for delving in caves or throwing after a friend who's fallen into a river. Alternatively, a smaller rope with grappling hook built in may save time when climbing in a hurry, but would be awkward to carry any other way. (Characters trying to justify carrying a spiked chain may also find the glove useful for easy access.)

This is also a neat way to eliminate someone crawling up a rope behind you. Once you've reached the top, just grab the rope and store it. Anyone still climbing is most likely going to fall.

23. **Masterwork manacles.** Not so much to store them, but to get them off quickly. By grabbing the chain, the glove wearer can store the manacles, thus getting them off his wrists. This works well if a character must pretend to be a prisoner, allowing him to act quickly when the gig is up.
24. **Pack saddle.** In case you get rid of a pack animal upon reaching a dungeon, it's nice to have someplace to put the gear you strapped on it. Alternatively, this allows a wizard to convert an animal summoned with a *mount* spell into a beast of burden for carrying newly-acquired treasure.
25. **Clay jug of hot tea.** Even weeks later, the tea is hot and refreshing. (This also works with cold lemonade.)
26. **Sack of berries.** Useful for a druid looking to cast *goodberry*. Being in a *glove of storing* doesn't cause the magic of a *goodberry* spell to last longer, but it does prevent berries from spoiling, allowing a druid access to fresh berries even in the depths of winter.
27. **Spellbook.** A wizard's spellbook is important enough to take any steps to protect it. It's difficult for a wizard to sleep while holding his spellbook, but easy enough to sleep wearing a *glove*. This also prevents it from being destroyed by a failed save vs. an area attack, and the same logic applies to an expensive scroll.
28. **Rod, staff or wand.** Staves in particular can be a pain to carry around, but useful to have. In all of these cases, the spellcaster can gain quick and easy access to an item that grants extra power, without having to carry it around door pull it out.
29. **Anything that qualifies, which you need to keep ageless.** Imagine having kidnapped a prince, and wanting proof he's alive, but you fear he may not be for much longer. Have him write a short note and sign it, and while the ink is still wet place it in the *glove*. Then, if you're trying to arrange for an exchange, have a dummy placed in a carriage. If the ransom payers demand proof the prince is within, hop inside and produce the document. If they realize the ink is wet and recognize the prince's handwriting, your ruse is more likely to succeed.

Similarly, bets can be won by having ice stored for travel into a desert, keeping berries until they're out of season, or even placing a beloved pet away while its owner is off for years at a time. A wizard who leaves a kitten behind when he goes off on a decade long quest can still have the kitten preserved if it's spent the whole time in a *glove of storing*.

In an extreme case, a powerful spellcaster could keep a target alive forever in stasis. The last daughter of a

house destined not to return to power for three centuries, for example, could be turned into a toad with *baleful polymorph* and then stuck in a *glove*. Three hundred years, a *break enchantment* restores the long lost heir no worse for the passage of time.

30. **Anything that qualifies you also want in a *bag of holding*.** This gets expensive, fast, but it does allow a single character to carry a vast amount of material. Since a *glove of storing* can safely be put in a *bag of holding*, a character can buy multiple *gloves*, store one item in each, and then place the *gloves* (item still stored) in a *bag of holding*. Even if a GM rules a *glove of storing* weighs a pound, you could place 250 of them in a type I *bag*, each holding 20 lbs. of goods. This is also a good way to stick things with low weight but high volume in a *bag of holding*.

Reality Storm: When Worlds Collide (for *Champions* & *Silver Age Sentinels*)

Published by [Hero Games](#) & [Guardians of Order, Inc.](#)

Written by Darren Watts & Allen Thomas

Cover by Chris Stevens

Illustrated by Tara Lustik & Udon

96-page b&w softcover; \$19.99

Team-ups between the characters of differing comic books are far from uncommon, but between the heroes of comic books from different publishers, it is another matter. Since the first in 1976, *Superman vs. The Amazing Spider-Man*, they have grown in number such that the appearance of such crossovers is no longer as highly anticipated. But if they are merely uncommon in the world of comic books, they are virtually unheard of between games publishers. Fittingly, the first to appear in some two decades, *Reality Storm: When Worlds Collide*, is a crossover between two superhero RPGs. It is not, as the books claims, entirely unique. The first was 1983's *AUTODUEL Champions*, which brought the leading superhero RPG and the premier auto duelling game together.

Reality Storm: When Worlds Collide brings together two of the three leading superhero RPGs: [Champions](#) and [Silver Age Sentinels](#). It provides not just the rules and guidelines for converting the *Tri-Stat* system of the latter to the *Hero System* of the former (and vice-versa), but also an adventure that allows the player characters from one setting to interact with the leading heroes and villains of the other. This is a big powerful adventure, almost on a scale of *Crisis on Infinite Earths*, requiring between four and six characters. They need to be built on 400 to 500 points for the *Hero* system, or 150 to 200 points for the *Tri-Stat* system.

While the adventure is written with the central city of either setting in mind -- Empire City for *Silver Age Sentinels* and Millennium City for *Champions* -- it can begin in any major metropolis. Indeed, the beginning is easily adapted to any major metropolis that the heroes call home. It begins with the Earth being struck with ever worsening weather. Storms, tornados, perpetual rainfall, and tsunami all threaten the world, while the weathermen are at a loss to explain it. The heroes are caught up in the chaos, rescuing those in need and conducting disaster relief. In the midst of all this, everyone receives a mysterious broadcast. Actually, it is only half mysterious. One half being the ultimatum delivered by the world's primary supervillain, the other mysterious half being the identity of the broadcast's second supervillain. If from Millennium-Earth, the heroes will recognize Dr. Destroyer, or if from Empire-Earth, they will know Kreutzritter, but in either case, not the other. Whichever the world, the ultimatum is the same. The villain asserts his right to be Emperor of the world, claims responsibility for the adverse weather patterns, and demands that the world's superheroes be handed over to him to face their due punishment. Faced with this demand, the heroes are going to wonder what is going on, especially as the leading heroes of their have disappeared -- the Champions from Millennium-Earth, and the Guard from Empire-Earth.

Simply, the two supervillains simultaneously discovered the existence of the Multiverse from their respective home worlds, and also the Timestream that runs through it. Both Dr. Destroyer and Kreutzritter, their sidekicks in tow, journey out of their universes and follow the Timestream to the Crystal Palace. Meeting within this strange building and finding the means to conquer their worlds, the dastardly duo decides to co-operate. Not only do the player heroes

have to thwart the pair, they must discover who the building is really home to, and what is his current location. A rescue attempt must be made, for the Reality Storm still threatens not only the characters' home world, but also the other.

Reality Storm: When Worlds Collide starts out simple, but once away from the Earth does grow in complexity. Not that it is necessarily difficult to run, but a less-experienced GM might be put off by the slightly plodding writing style. In particular it is likely to impede a GM's ability to impart the necessary information and clues to his players. But it does possess a cosmic scale that will make a nice change from solving simple villainy and fighting street crime. Time is taken to look at the ramifications of the Reality Storm, from the simple remodeling of the player characters' home city to actually combining one, more, or all the elements of Empire-Earth and Millennium-Earth into one. Several ideas for sequels are also discussed. After all, the dimensional barriers have been pierced this once, so there is nothing to say that they cannot be penetrated again.

Since this is a crossover between two game worlds and two game systems, ***Reality Storm: When Worlds Collide*** devotes over 20 pages to converting characters between the ***Hero*** and ***Tri-Stat*** systems. Characters from ***Champions*** are more tightly detailed, while those from ***Silver Age Sentinels*** are more broadly defined. Thus a character under the ***Tri-Stat*** system is worth up to three times as many points when converted to the ***Hero System***. The guidelines cover every attribute, power, skill, advantage, and disadvantage under both systems. Examples are included, though not one that runs from start to finish. Pleasingly, the conversion rules are helped by the book's index -- a nice touch considering its size, which also covers the adventure itself.

The book closes with the statistics for the heroes and villains that appear in the adventure, these also acting as examples of the conversion process. In this way the GM of the one game system can see its characters under the second game system, while getting new several new characters converted from the other. Thus for the ***Tri-Stat*** system, you get the write-ups for the Millennium-Earth's Champions (Defender, Ironclad, Nighthawk, Sapphire, and Witchcraft), and the villains Dr. Destroyer, Gigaton, and Rakshasa. For the ***Hero System***, conversions are given for the Empire-Earth's Caliburn, Mother Raven, Red Phoenix, Sentinel, and Slipstream, along with the villains, Kreutzritter, Alice, Queen of Hearts, and the Iron Duke.

Of course, ***Reality Storm: When Worlds Collide*** brings together only two of the three leading RPGs. So what of the third, ***Mutants & Masterminds***? In terms of making conversions, the [d20 System version](#) of ***Silver Age Sentinels*** is probably a necessity, but even without it, a GM could certainly adapt the statistics included in this book to give, if not an exact version of the character, then a perfectly playable one. As to the characters to be taken from the ***Freedom City*** setting of ***Mutants & Masterminds***, the Atomic Brain is the obvious choice for the supervillain, while the Freedom League could be the disappeared heroes. They could easily replace the characters from one of the worlds of the adventure with little effort, but including them to have the Reality Storm affect three worlds rather than two will be up to the GM to do.

Physically, ***Reality Storm: When Worlds Collide*** is reasonably done, let down only by its occasionally leaden writing style. It does not help that some of the text to be read aloud is not clearly marked, so the GM will have to mark it with a post-it note. However, the artwork is in keeping with the theme of the book. That each of the smaller pieces comes with an explanatory caption is a nice touch, but better still are the full-page pieces that precede each chapter. These are done as if they were the covers for a hypothetical ***Reality Storm: When Worlds Collide*** comic book series, and you really wish that they had been done in full color.

In bringing two game worlds and two game systems together, ***Reality Storm: When Worlds Collide*** is definitely something of an event for both systems. Certainly not quite as unique as the authors suggest, but still portraying a momentous threat to the heroes' world for either game system in the hands of an experienced GM. And in keeping with the comic book genre, worthy of a sequel. ***Reality Storm II*** anyone?

Expanded Psionics Handbook (for *Dungeons & Dragons*)

Published by [Wizards of the Coast](#)

Written by Bruce R. Cordell

Additional design by David Noonan

Edited by Michele Carter, Gwendolyn F.M. Kestrel, Charles Ryan, & Jennifer Clarke Wilkes

Art by Henry Higginbotham, Steven Belledin, Brian Despain, Wayne England, Lars Grant-West, Heather Hudson, Jeremy Jarvis, Chuck Lukacs, David Martin, Monte Moore, Jim Pavelec, Wayne Reynolds, Arnie Swekel, & Sam Wood

224-page full-color hardcover; \$34.95

When *Dungeons & Dragons Third Edition* came out, it stood to reason the *Psionics Handbook* would be updated to fit. With the rollout of *Dungeons & Dragons 3.5* it had to be done again, and it's resulted in the *Expanded Psionics Handbook*.

It wouldn't be a *Dungeons & Dragons* book without the usual lineup of extras for characters. There are new psionic classes to make use of all the new directions in which the powers can go. Character classes have a fairly tight focus: There are only a few basic types, though the psion is further subdivided into more groups that concentrate on certain groups of related powers like clairsentience and telepathy. There are also rules for epic-level psis and twice as many prestige classes as there are basic occupations. These are more imaginative, with beings who leave their physical form behind for a life of mental existence, hunters who kill illithids, and the irresistibly heroic Fist of Zuoken. The book takes a more in-depth look at psionic races, too, like the Thri-Kreen and Dromites.

Psi powers are listed much like spells: 1st through 9th-level powers for this class, six levels of power for another, some disciplines for various psions. This makes up the bulk of the book, so there's a lot of customization to keep things interesting. Some are awfully close to spells -- to put none too fine a point on it they're spells with another name, and may even say "see the PHB" -- but there's enough new material that it's not just a half-hearted reprint. On the other hand, things like vomiting acid probably aren't the average person's idea of psionic powers anyway. Another notable annoyance: energy adaptation, energy ball, energy bolt, energy burst, energy cone . . . and that's just the start of the alphabetical listing; it doesn't include stray items like claw of energy.

The big difference between magic and psi is power points. Power points are the currency for using your abilities, and the better powers cost more. By spending extra points, most powers allow you to extend an ability's duration, strength, or number of targets, among other things. You need not decide what powers are available to you like wizards and similar spellcasters, but regaining the power points still requires sleep or meditation.

And with great power comes great piles of feats. Most of these will be fairly familiar to users of magic. You can

maximize the effects of your powers, lessen the time needed to cast or invoke them, and boost your more mundane efforts (for example, charging up a weapon with psychic energy and then thrusting it deep into your enemy). Non-psis get a few options as well -- it's only fair to give them some resistance to psionic powers, and only those without such powers get the really good anti-psi choices.

Even religion gets a closer look in this book. Some fairly interesting connections are drawn between different types of psionics and the sorts of religions to which they might turn. Some new religions are introduced as well that focus to a greater or lesser degree on potentially psychic devotees.

The bestiary revamps a few critters that must operate under new psionics rules, but not everything there is a redo of something from another book. Some are just treatments of mentally adept races; some of these races are listed at the front of the book with the rest of the character options, and others are from other books (like the githyanki). There are several interesting new monsters such as the astral constructs, but plenty of monsters with a hatred for psionics (once again, many psionic creatures want to eat or kill anyone or anything with these powers). Some don't want the people as much as they want the gems they carry.

Crystals of all sorts seem to play an important role in the book, especially psicrystals. Gemstones can be fashioned into all manner of psionic devices. There are extensive rules for creating such items, for psionic and non-psionic characters alike. A psi can place a portion of his own personality into a psicrystal and form sort of a cross between a magical familiar and a willful weapon. Power stones can also give someone the use of an ability, and some may contain extra power points. These rules get a big workout in the *Eberron* setting, and this book is suggested for use with that one (though it's not necessary).

One notable oversight is the place of psionics in the campaign. Following the standard Wizards of the Coast boilerplate for *d20 System* books has left little room for any real in-depth discussion of the benefits and perils of having mental abilities in your game (unless three columns is your definition of "in-depth"). This subject has been dealt with at length in other places, editions, and competing books, but to not have more than a mention here seems like a pretty obvious hole.

If you're at all familiar with the art and design of the rest of Wizard of the Coast's line, there won't be many surprises here -- it's the same high quality. The work in the powers section tends toward the action poses, and someone really went to town in the monsters section.

The *Expanded Psionics Handbook* has a somewhat businesslike atmosphere. It's not that it's uncreative, but it's a series of ups and downs. Inspiration shines through in many places, but it also seems intent on getting the job done in that thorough but predictable paint-by-numbers arrangement to which Wizards of the Coast books cleave. Although it won't provide the juice for readers to bring their "A" game to the table, it's a solid treatment of its subject that will take psis from a footnote to a force with which to be reckoned.

--Andy Vetromile

American Ley Line: Route 66

*"Well if you ever plan to motor west
Travel my way, that's the highway that's the best
Get your kicks on Route 66
Well it winds from Chicago to L.A.
More than two thousand miles all the way
Get your kicks on Route 66"*
-- Bobby Troup, "Get Your Kicks on Route 66"

It is the spine of America, a two-lane ribbon of asphalt, chat, concrete, and gravel that for fifty years channeled dreams and sweat from the Great Lakes to the Pacific Ocean. America's energies stretched out along the Mother Road, coming to life in democratic kitsch and quiet desperation on the bones of cowboys and Indians, gangsters and rebels. Born of the automobile, it died by the automobile, paved over and broken into pieces by the new interstates, but still visible in frontage roads and overgrown side-tracks. It is America's ley line, a dragon curve of magical power laid down by the benevolent hand of Calvin Coolidge and buried deep beneath the American consciousness. Buried -- but not dead. Route 66 lives and runs forever, beneath the wheels of John Steinbeck and Jack Kerouac, in a West where jackalopes roam and the [Big Rock Candy Mountain](#) is always over the next ridge.

I've noted [before](#) that weirdness is where you find it; you can illuminate anywhere by picking out details and shining your own personally bisociated highlight on them. Take advantage of the human instinct for pareidolia, for pattern-matching and false positives. Anything interesting can be significant, can become a sign, a portent pointing to whatever madness or mystery you desire. On a highway running more than 2,400 miles, through eight states and countless small towns, there are more such details than anyone can possibly utilize or comprehend. The signs don't stop with Burma Shave and come-ons for the "Famed But Tamed Killer Rattlesnakes" of the Regal Reptile Ranch in Alanreed, Texas. (Although just like that, we've tied hexagrams and serpent cults together.) In this series, I've picked only a few of the multifarious possibilities and details available, building to a few recognizably suppressed themes. Your mileage, especially on Route 66, may vary. I definitely recommend checking out any of the many websites dedicated to Route 66 for your own details; I'm especially fond of the way the word "alignment" (used so often in stone-circle and ley-line contexts) is used to refer to the old Route 66 roadbed. I also recommend reading Michael Wallis' *Route 66: The Mother Road* for a sepia-colored gestalt into which you can settle the details you select. Wallis' 1990 book gets much of the credit for renewed "Route 66" nostalgia and interest, and I certainly give it much credit for spawning (eventually) this column, and especially the paragraphs coming around the curve just ahead.

"The association is formed to promote the early completion and secure permanent maintenance of U.S. Highway No. 66 between Chicago and Los Angeles, commonly called 'The Main Street of America,' and to encourage the people at large to use the same . . ."

-- from the charter of the National U.S. 66 Highway Association

Route 66, as such, came about as a result of the 1921 Federal Highway Act, which tied federal road assistance for the states to state upgrades on key interstate roads. This act was the result of decades of lobbying, primarily by farm interests, but the lobbyist who jumped on it the hardest was one Cyrus Avery, a realtor and oil-patch investor from Tulsa, Oklahoma. He held a number of official and semi-official positions in highway planning, most significantly that of the Department of Agriculture's consulting highway specialist. He mapped out a system of interstate roads, and selected the old Gold Road running through Oklahoma (and coincidentally right past his gas station) as the main transcontinental route from Chicago to Los Angeles. He originally wanted to call the road Highway 60, but better-connected highway officials in Virginia snaffled that number, so he settled for "66." On November 11, 1926, a joint federal and state committee officially approved Avery's map, and Route 66 became a reality.

Only 800 of the 2,448 miles of Avery's route were paved in 1926, but Avery and his booster compatriots in the other seven states it crossed steadily promoted the "Main Street of America" in statehouses, small-town newspapers, on billboards, and everywhere else they could. Route 66 got another big boost from the Bunion Derby, a 1928

transcontinental foot race that followed Route 66 from Los Angeles to Chicago (and lesser roads to New York). Fittingly, an Oklahoman named Andrew Payne won it, to great celebration and fanfare by Avery and his team. By 1937, with the Dust Bowl in full blast blowing Okies down "the Mother Road, 66" to California, the whole route was paved. Route 66 carried Patton's soldiers to maneuvers, and then to their new homes in Southern California after the war; driving down Route 66 became an American vacation and migration standard. The TV series *Route 66*, a family-friendly knockoff of Kerouac's *On the Road* (filmed mostly in Florida) ran between 1960 and 1964 and made the highway synonymous with adventure and romance.

However, midsummer had come and gone for the Mother Road; Dwight Eisenhower, whose jeeps had gotten stuck in one too many two-lane mires before the war, was president. He signed the 1956 Federal Highway Act, which called for German-style autobahns instead of farmer-friendly two-lane highways on America's prime interstate routes. The interstates began crossing, and then bypassing, and then gobbling up, the old Route 66. Rather than I-66 (which went to a road in Virginia), the Chicago-Los Angeles route became a Frankenstein linkup of I-55, I-44, I-40, I-15, and I-10. The last vestige of Route 66 disappeared from official Department of Transportation maps in 1984.

"My first ride was a dynamite truck with a red flag, about thirty miles into great green Illinois, the truck driver pointing out the place where Route 6, which we were on, intersects Route 66 before they both shoot west for incredible distances."

-- Jack Kerouac, *On the Road*

One can, as Charles Fort assured us, measure a circle beginning anywhere, and one can measure a highway beginning at least two places, but in America, the West is in front of us, so Route 66 begins in Chicago. I've discussed the superabundance of Chicagoan [sacred geometry before](#), but I'll note specifically that the highway begins at Buckingham Fountain, the largest fountain in the world, in the middle of Grant ("the whole world is watching") Park. Built in 1927 by Kate Buckingham, an eccentric millionairess obsessed with Alexander Hamilton (among other things), Buckingham Fountain resembles a compass rose or a mandala from the air; four seahorses spray water from the cardinal directions. As if that weren't enough, a mile or so west of the Fountain, Route 66 runs right beneath the Sears Tower, the tallest skyscraper in the country. Lingam and yoni, anyone? Spear and Grail? Dark Tower and Holy Well?

Running southwest out of Chicago, Route 66 parallels the [Archer Avenue](#) ghost road, mirrored by the Des Plaines River, and enters [Al Capone's](#) old stronghold of Cicero. It then runs through towns called [Romeo and Juliet](#) (now Romeoville and Joliet), continuing the esoteric theme of doubling reflected in its eerie numeral designation. Route 66 picks up a Lincolnian eldritch charge running through Springfield, Illinois, past the slain deity's home and the rotunda where he last lay in state. From thereabouts, it follows the path of the French voyageurs down the Pontiac Trail, named for the Ottawa Indian Chief Pontiac, who died (under mysterious circumstances) at the southwest end of the Trail -- and hence, at the southwest end of Route 66 in Illinois -- near Cahokia. Cahokia itself, of course, is a mystic site and ley nexus in its own right. Founded around 1050 A.D., it contains the largest pyramids north of Mexico City (packed earthen mounds) and was laid out using faultless sacred geometry to channel the magical energies of the sun god for its sorcerous priesthood. Human sacrifices filled the plazas and streets of Cahokia with power -- power that Route 66 perhaps taps into on its way past on the old Collinsville Road. Intriguingly enough, a mysterious secret society called the Monks of Cahokia held rituals on top of the mounds and, beginning in 1911, lobbied to "preserve the mounds as a national park." Did any of them get involved in highway legislation? Who can say?

"There are only two great transit arteries in the United States that have taken on mythological connotations: the Mississippi River and Route 66."

-- Douglas Brinkley

Route 66 actually crossed the Mississippi at three different places in its fifty years of official history, none of which are accessible to cars right now. (The central crossing, at McKinley Bridge -- named for another martyred king, our third so far -- is about four miles due west of the Cahokia Mounds.) For my money, there's something very "Christabel," almost Lovecraftian, in the 135-degree turn the northernmost crossing (the Chain of Rocks Bridge) makes in the middle of the river. This eerie feeling is not slaked by the knowledge that at least one person died building the Chain of Rocks Bridge in 1929, in a shade of the old custom of sacrificing a builder to the river-god in Roman times. The southernmost crossing, at MacArthur ("son of Arthur") Bridge, runs right past that Modernist megalith, the

Gateway Arch. One hardly even needs to wonder if the Masons were perhaps involved somehow: the Gateway Arch is a catenary ("chained" or "linked") curve, and its 18-degree-off-North alignment mirrors the angle of a pentagram pointing due west (where else?) but perfectly aligns with sunrise on Halloween. The Arch itself, of course, reflects the Arch of Heaven, and the seven stars (for the seven states still to come?) of the Pleiades (from whence our [Nordic alien friends](#) arrive) shine below it ("through it") in Masonic emblems. After splitting its Cahokian energies into a Hecate-style triplicity to cross running water, Route 66 draws down the celestial power of the Arch and powers west through St. Louis -- birthplace of hot dogs and ice cream cones, among other essential sacraments of American identity -- and down into Missouri.

Southwest of St. Louis, the Mother Road runs through Hecate's hounds -- a wolf sanctuary affiliated with Washington University -- and then drives the connection home by passing the Black Madonna Shrine consecrated in Eureka, Missouri in 1938. Syncretic conspiracies can also note that the "black Madonna" is often taken to be subversive Prieuré de Sion code for Mary Magdalene, of blessed memory and occult association, or of our own Lady of Weirdness, the [Queen of Sheba](#). Further on, the highway passes Times Beach, tainted with dioxin harpy-style and thence past the mysterious and spooky Meramec Caverns. The dark ladies don't have it all their own way: in Springfield, Missouri, Route 66 runs past another "woman in white" ghost, the phantom bride of Phelps Grove Park. Before that, however, the highway has taken another hit of cosmic alignment, running past the half-scale model of Stonehenge on the campus of the University of Missouri at Rolla. Technically, Route 66 never passed the mini-megalithic monument -- it was dedicated on the summer solstice of 1984, the year the government officially tried to bury the Mother Road. (For more spookiness, the Rolla Stonehenge's trilithon ring was completed during a solar eclipse.) Passing Rolla and Springfield, Route 66 jogs the "Devil's Elbow" (the last stretch of 66 in Missouri to be buried by I-44), named for lumberjacks' frustrations with the nearby twists in the Big Piney River. Not yet content, Satanically speaking, it then runs through Joplin onto the "Devil's Promenade," a road known for spook-lights and other eerie phenomena. Mystical sparks thrown off by the Route 66 ley line, or the stigmata of telluric energies that drew Cyrus Avery (or the occult geographers whose bidding he did) to run the highway through that corner of Missouri? Does the road follow the magic, or does the magic follow the road? Next week, we'll follow both of them further west.

Coming Up In Part Two: Oklahoma City Looks Oh So Pretty, Etc.

Murphy's Rules

by Greg Hyland

Murphy's Rules

When Being a Marginal Failure is Good News

Yesterday in my current Day Job, I (and my coworker) had an utterly abysmal time bringing a task to fruition. Without going overlong into details -- the bulk of which would only serve to simultaneously depress myself and bore you, gentle reader -- I will say that there are several aspects of the trip that failed to go wrong.

The basic gist was that we were to rent a truck, go to a warehouse three hours away, get a bunch of stuff (completely uninteresting things such as records, art copies of books, and the like), and return back to our warehouse. After that, we were to go to another location about 30 minutes away, get more stuff in the truck, and return back to our warehouse.

Again, I won't go into details. But I'll note some mental math I did before I undertook the trip. I had allocated 13 hours total to the outing. Assuming three hours each way, an hour at the warehouse, and another two hours picking up the other stuff, that was a total of nine hours . . . meaning I had an extra four hours for things not to work out as they had planned.

At the end of the day, we had been gone for a total of **15** hours, and we had only completed the first half of our trip (the three-hour journey part). In other words, it took over twice as long as expected to accomplish one of our goals.

Now, the most fascinating thing about this -- and I use "fascinating" in its secondary definition meaning "involving nervous tittering that borders on tears, coupled with a handful of ibuprofen" -- is that as many things went close to going wrong as possible, *without anything actually going awry*. We almost got lost, but we weren't off the path too long. We almost ran out of fuel in the middle of nowhere, but we found a gas station at around the same time the tank was flirting with the "E" mark. We were almost kept from getting our stuff, but we finally managed to convince the right person to give us access (instead of "coming back later," as was originally proposed). We almost couldn't get in touch with the person we needed to talk to who could sort everything out, but finally after a five-step web of contacts and research we were able to reach her. And so on.

I would be hard-pressed to envision many other any other complication or obstacle that we could have encountered and still consider the operation a success.

Now, some of you might think I'm merely using my international forum to vent about what was, by most standards, an utterly abysmal day.

Oh, I'm sorry. There's supposed to be a "but" there, right?

<ahem> But, as ever, I found myself, in my depths of despair, trying to fight past the tears to think of ways to tie these experiences into gaming. It doesn't help with the pain, but at least then I can write my Kleenex off as a business expense.

Anyway, in thinking about this episode as a gaming adventure, I had to note that:

- it would be [wildly unfun](#), and
- the episodes would stretch any game's definition of "success" and "failure."

Nowadays most RPGs seem to have a concept of a degree of success. In other words, the better one rolls, the better the result. How this manifests varies from game to game. Many games -- such as the *d20 System* -- treat a basic success as being a solid, good result. If the target number is rolled, an attacker does base damage, a programmer gets the job done with no frills and on schedule, the lock is picked and the door pops open, and so on. Others -- such as *Storyteller* and *Fading Suns* -- treat a basic success as a minimal result: The program does what it has to do, but barely and without handling alternate cases or contingencies; or the lock finally manages to creak open, but the picks were damaged in the process and anyone who looks at the lock will know it's been tampered with.

However, fewer games have a concept of a degree of *failure*. Oh, okay; most games do in a broad, crowbar-on-watermelon sense, dividing them into failures ("You fail to pick the lock") and critical failures ("You fail to pick the lock, accidentally jamming it into your nostril at the same time you lick a frozen flagpole"). But otherwise, most games don't provide much guidance into *how* something fails.

To a certain degree, this makes sense. While degrees of success are easy to envision, the milieux of failure are myriad, and difficult to grasp. For example, envision a game that bases a "degree of failure" based on how much you failed the roll by, or how many successes you failed to get: The greater this degree, the more spectacular the failure. If this was the rule, then somewhat silly results are easy to envision. For example, suppose that such a system was used in *Storyteller*, and a player wanted to . . . oh, I don't know . . . jump to the moon. That would require about 24,601 successes on a Strength roll. The player rolls and gets two successes, missing the desired outcome by a mere 24,599. The GM consults the "degrees of failure" table and concludes that, based on the result, the jumper tripped, skinned his knee, burst into flames, and was carted off by mole people burrowing up from the earth. (Of the multiple times I've tried jumping to the moon in the real world, this result has only happened *twice*.)

Now, it might be tempting to say that any result of a certain failure level is merely a "failure." However, let's consider two scenarios:

- 1) Dr. Mirachel W. Orker, acclaimed physician, is trapped on a desert island, is trying to perform an emergency bypass on someone using a sharpened coconut husk and some denim thread. He achieves a middling failure -- not a critical failure, but not remotely close to success either.
- 2) I try the same operation. I have no medical training, outside of watching *Trapper John, M.D.* for a few years as a child. I hate coconut. I achieve a middling failure -- again, not a critical failure, but not remotely close to success either.

Okay; first off, the guy's a goner. But I can assure you that my failure will be more spectacular. For one thing, Dr. Orker is unlikely to be seen jumping up and down on the victim's chest, shouting at him, "Stop bleeding, you doo-doo head!"

Unfortunately, this is one of those cases where I don't have any good ideas for how to represent these degrees of failure . . . and I certainly don't have one that can apply across multiple systems. However, it might be worth trying to sort out for your preferred game system, especially if knowledge of degrees of failure would help your gaming group better describe (or envision) the action.

And I do have one idea that can be fairly easily implemented in many games. Okay, it's not *my* idea; it's one stolen from the *D6 System*: the marginal failure. In that game, if you miss a die roll by one or two (in other words, just barely fail), and there's some possibility of a degree of failure, then the person acting might have the possibility to fight back from the edge of failure. The textbook example of this is at the beginning of *Raiders of the Lost Ark* (and, no, I won't call it by the [false name](#)), when Indiana Jones makes a running leap for the other side of the chasm . . . and barely misses. Rather than sending him tumbling to the abyss below -- resulting in a six-minute movie -- the GM interprets his marginal failure as getting to the other side, but only by the tip of his fingers. And now he needs to fight his way out with a bunch of other rolls.

It's a neat little rule, and one that provides a bit more variation between failure and critical failure. And the idea of *just* missing a roll is pretty easy to figure out in most systems.

Of course, be warned that getting a marginal failure on your Visit Distant Warehouse roll can result in a *really* lousy day.

--*Steven Marsh*

Special

by Paul Drye

Introduction

The Specials' time on Earth was short but spectacular. Over just a few years they exploded on the scene, came to be perceived as a threat, and then were nearly driven into extinction over the entire planet. The conflict was a stain on human history, but one most people still find justified. What is less well known is that the Specials found a bolthole, and carry on barely in touch with their home, trying to carve out a niche in a hostile universe.

Outbreak

Acute Cerebral Hyperpyretic Syndrome (ACHS) appeared in Australia in the winter of 2004-5, and swept the world over the next 18 months. It was not particularly infectious, but 90,000 people suffered from it, and the death rate was 100% as their brains overheated for unknown reasons.

By the spring of 2006, Elise Konczewski at the CDC discovered that ACHS was a prion disease affecting the microtubule proteins of the brain. Microtubules were suspected to be a site of quantum activity, and the heating was caused as the deformed microtubules tapped into zero point energy, pumping it into the surrounding tissue.

ACHS was a surprisingly odd disease but treatment was now possible. The death rate dropped precipitously, and only a few thousand more people were infected over the next few months while a vaccine was rushed into production. Then came the surprise.

Before the vaccine was widespread (but after treatment was possible) there was a short window during which someone could catch ACHS and survive. People infected by ACHS were cured in the sense that their brains no longer overheated and killed them, but some of their proteins were bent out of shape before the disease could be stopped. Microtubules had also been fingered as a possible seat for human consciousness, and this now proved to be true: the distorted tubules gave voluntary control over zero point energy. ACHS survivors displayed a wide variety of psionic powers, their nature varying depending on the extent of their injuries.

The Specials had arrived.

An Uneasy Peace

For the next four years, the Specials fascinated (and unsettled) the entire world. Elise Konczewski was the interface between them and everyone else, constantly reminding people that they were human -- and not superheroes or lab rats. A group of neuropsychologists gathered around her and did their best to understand how the Specials worked, while also trying to provide the younger ones with some semblance of a normal life.

There were mostly "younger ones." Psychic side effects or not, ACHS caused brain damage. With few exceptions, anyone over the age of 25 who caught the disease severely enough to become psionic was also reduced to insanity or coma.

Similarly, children under the age of 12 rarely ended up psionic. Their brains were still too plastic; their neural pathways would route around the damage. A few months of therapy might be needed to recover lost skills, then life returned to normal.

Most mentally normal Specials, about 750 in all, were between the ages of 12 and 25; 16 older ones stayed sane.

Another 5,000 Specials, almost entirely over 25, were mentally ill in one way or another, and confined. This was true even for ones who weren't particularly sick, and could have been stabilized with medication. It was an ominous note in an otherwise spectacular time.

Landstuhl

This situation lasted until March 11th, 2010, when an older Special reduced to a psychotic state by his bout with ACHS brainwiped every person within 1.8 kilometers of Landstuhl Regional Medical Center, Germany. Private Douglas Rouse -- still in the care of the US Army (loath to give up control of a Special in their hands) -- had been kept in Germany after coming down with ACHS while serving in Darmstadt. To this day, no-one has figured out why, or how, he did what he did.

Whatever it was that caused Private Rouse to erase the consciousness of several thousand people, the response was panic. Many people had been nervous about what the Specials could do; now that nervousness became fear. Matters got worse when the first child of two Specials was born three months later. Reserves of the ACHS prion lurked deep within the body, and children of Specials were Special themselves. Exposed to ACHS from conception, their brains didn't recover like those of older children: second-generation ACHS survivors were psionic from the moment of consciousness, usually before birth. Fortunately the ones that were telepathic could be taught restraint without language, while still in the womb; the ones who weren't had anti-psi in close proximity during the pregnancy. It sank in to the world that the Specials were not going to fade away.

Backlash

In July 2010, China declared that Specials within its borders represented "a health issue that threatened the stability of the Chinese state" and began rounding up survivors of ACHS. Other countries soon followed. In the West, Specials began dropping out of sight. Many of these were laying low as public opinion turned against them, but there were several cases of Specials being held indefinitely by the governments of the United States, Japan, France, and others after committing (or being accused of) various crimes.

Sanctuary

Elise Koscieszewski felt that fighting back against the repression could not turn out well; Special powers were all they had to counterbalance being vastly outnumbered, and they were a blunt instrument. It would be a war, and no matter which side won, things would change for the worse. As more and more governments tried to bring the Specials under their control, she and a majority of her charges moved from country to country, eventually ending up in New Zealand. They were rapidly running out of places to go, though.

Her ace in the hole was Javier Avilar, a young Spaniard who had descended into autism after his bout with ACHS. Avilar had teleportation powers, but their extent was unknown. Certainly he was the most powerful teleport known (and once had to be retrieved from Perth, Australia after starting in West Virginia), but sometimes he'd disappear entirely and could not be found until he re-appeared on his own.

At first it was assumed that he was going some isolated place on Earth where he was difficult to find, but one day he returned with a flower in his hand. It was analyzed in the hope of finding the plant's natural range and solving the mystery of Javier's destination. It turned out to be unrelated to any species on Earth. The similarity to a flower was a product of parallel evolution; it was actually an alien life form.

About a year after Landstuhl, Dr. Koscieszewski managed to penetrate Javier's autism sufficiently to ask him for a ride to his "special destination." A moment later, they were in Sanctuary. Located an unknown distance from Earth, it is a Dyson Sphere of unknown origin.

Sanctuary is a "real" Dyson Sphere, in the sense that the term was originally proposed: a horde of independently

orbiting space habitats rather than a solid sphere. Javier had somehow picked up on a "beacon" (possibly a zero-point energy source, no one knows) on one habitat, and tunes himself to it in order to make the immense jump. No one knows how he then makes it back home.

Avilar's flower and the beacon were from one particular habitat, a rotating cylinder some 10 kilometers in length and a kilometer in diameter. The environment within was remarkably Earth-like, with similar gravity, breathable air, and a compatible biosphere. Apart from the habitat's alien plants and animals, it was entirely uninhabited.

Penned into New Zealand with the Specials, and reading the writing on the wall for them, Dr. Koscieszewski hatched a desperate plan. Javier could teleport things with him; with repeated trips, he could transfer equipment and groups of Specials to his habitat. There they could build a colony. There were a number of exceptions who refused to give up the fight at home, but she secretly convinced many Specials to come with her.

Endgame, or So It Seemed

On May 5th, 2012, the United Nations Security Council passed a resolution insisting that New Zealand detain all known specials, to be turned over to the newly formed Human Safety Council (UNHUSACO). New Zealand had 15 days to comply. Specials in other countries were arrested, and brought to internment camps.

To their credit, the government of New Zealand refused, and on May 21st a combined force of American, British, French, and Chinese troops invaded. New Zealand immediately surrendered -- the last Special on their soil had left for Sanctuary six hours before.

On May 23rd, at 0700 hours local time, the largest internment camp in Europe was attacked by Specials who escaped with 114 people. At midnight local time (almost simultaneously with the European jailbreak), the largest American camp was assaulted, and 180 Specials rescued. The two attacks were later discovered to have been based out of an abandoned weather station in northern Newfoundland, from where Javier Avilar sent the two strike teams before returning them, the internees, and himself to Sanctuary. Eighteen hours later, another strike based out of Howland Island in the Pacific rescued the New Zealanders who had been arrested for aiding them in the previous few months. Increased security at all sites and defensive dispersal of potential targets has reduced the potential for rescues like this, but 60% of all sane Specials have been rescued.

The people of Sanctuary maintain contact with Earth, both to continue rescuing their kind, and to get needed supplies. Dr. Koscieszewski, the escaped New Zealanders, Javier Avilar, and dozens of others who have escaped to Sanctuary were indicted by the ICJ in the Hague for crimes against humanity.

Running a Special Campaign

The default assumption is for a Special campaign to begin shortly after the escape to Sanctuary, and explores refugee interaction with Sanctuary and an increasingly dangerous Earth. If more time is available, however, the campaign can begin at any point in the history above, depending how long a GM is prepared to invest in building up to the evacuation. Bear in mind that the more adventures that take place before Sanctuary enters the picture, the more the players are likely to be invested in Earth. This cuts both ways, making it likelier that the retreat to Sanctuary takes on interesting tragic and hopeful notes, but also increasing the chances that the players will be reluctant to cut and run when an escape presents itself. Be prepared to de-emphasize the long-term nature of the Specials' sojourn to Sanctuary if needed.

Once on Sanctuary, adventures fall into two categories:

- Continuing contact with the Earth, both for more extractions of Specials left behind, and for "grocery shopping." Smash and grab is likeliest, but setting up "Underground Railroads" for people and things is an option.
- Exploring the Dyson Sphere. Sanctuary is empty and hospitable to the newcomers, but there are numerous questions. Where are we? Where are the Builders? Are there other squatters besides ourselves, such as

aggressive alien races? How does the Sphere's alien technology work? Can we get to the other habitats and what are they like? Will we find something that will let us return to Earth permanently, or is Sanctuary home for better or for worse?

In the latter kind of adventure, keep in mind the usual statistics about Dyson Spheres. Though not a solid sphere, Sanctuary still has billions of times the surface area of Earth enclosed within its habitats. Once the Specials can get to the other habitats, anything and everything can be placed by the GM.

Characters

"Special" is intended for use with any gaming system that can model psionic powers. In general this is superhero games, even though the "four-color costumed do-gooder" quotient is very low. It can be increased as desired, but the intention is to offer a place for people who use their own names and dress normally, and just happen to be able to do odd things with their minds.

Powers

No matter what the system, there are a few points for a GM to keep in mind. In-game, psionic strength is limited by the amount of zero-point energy tapped to produce the effect, and the energy involved has to go somewhere. With sufficient control some of it can be dumped back from where it came but the conduit between zero-point space and the real world is not perfect, and it runs through someone's brain. A reprise of ACHS' main symptom -- death due to cerebral overheating -- will occur if too much energy is manipulated too quickly. GMs are advised to use this as an excuse to ban any power they deem too unbalancing, or alternatively give players the option of "pushing" their characters at the risk of brain damage or death.

That said, what powers are appropriate? Simplest to rationalize are those based on tweaks to chemistry or electromagnetic fields: telepathy in particular, and other abilities like telepresence. Precognition is problematic under the quantum mechanical rationale for powers, and is not recommended.

Next easiest is "anchoring" in the fabric of space in order to counter some of the major laws of physics. Specials can affect real world objects with the entire universe as their momentum and energy sink. Even the apparent gross violations of conservation of energy and momentum inherent in Javier Avilar's teleportations can be explained away. Super-strength and flight are also possible -- both as variations of telekinesis -- but GMs are strongly suggested to keep their power low: a few tons of capacity, or flying no faster than a run.

Most difficult of all for a Special is a power that manipulates large amounts of energy, such as pyrokinesis, or energy absorption. These depend on the raw capacity of the conduit into zero point space, either in or out, and should be supremely difficult.

Impossible are feats that can't be justified in terms of psychic abilities. It takes tortured logic to produce extra limbs or super-stretching from mental control of energy. Allow players to come up with rationalizations for their powers, but try to err on the side of realism.

Disadvantages

Specials are people too, and have the same potential disadvantages as other human beings. There are certain types of disadvantages that can be emphasized, though, because of their peculiar situation.

First of all, Specials are susceptible to mental problems. Many escaped ACHS apparently unscathed, but all suffered some damage to their brains. Varying degrees of mental illness of any type are justifiable.

Second, all Specials suffered the trauma of being punished for something they did not control -- being ill. Almost all had to deal with family or friends turning away from them, and police, military, or government actively trying to

imprison or kill them. There is also survivor's guilt: murder or imprisonment has cut the number of sane Specials by a third, and if one includes the mentally ill ones left behind, only 5% of all Specials have escaped. Players may want to investigate the psychology of refugees and trauma victims to better understand how their characters might be thinking after all this upheaval.

Backgrounds

Thanks to the breakouts from the American and European internment camps, the Specials on Sanctuary are largely European and American. There are many Specials from the industrialized nations of the Pacific Rim, though these are now imprisoned throughout Siberia and western China; Sanctuary has only a few of them, for now.

There are not many Specials from Africa, South Asia, or the Middle East, because the lack of available medical treatment in those countries kept people from surviving ACHS, even after a cure was discovered. There are exceptions, though, and some of them have remarkable stories to tell.

Opponents

The only individuals who are more than human in "Special" are the Specials themselves. This is one major reason for keeping power levels low. In rule systems that offer advancement, the characters will reach the point that there are no antagonists that can stop them without some improbably convoluted justifications. It's possible to work in a few Specials who've been turned by an Earth government, and there's always the option of putting some aliens into the mix on Sanctuary, but by and large Special characters will be up against normal people.

As such, normal people will try to level the playing field. They have numbers, and they have a vast technological society with a great communications network behind them. Every military and security analyst on Earth has been chewing on the problem of Specials for more than five years. The GM is encouraged to be as devious as possible, and to be prepared to pile on highly trained soldiers with top-of-the-line military equipment if the Specials are foolish enough to allow their opponents time to react. Books such as *Military Operations in Low Intensity Conflict* and part two of *Terrorism and Counterterrorism: Understanding the New Security Environment, Readings and Interpretations* are highly recommended for a GM lacking in inspiration as to how regular people could hinder Specials.

Adapting to Specific Rule Systems

GURPS: Use powers from *GURPS Psionics*, basing characters on 150 points (with 50 points in skills and 100 points in powers). Mixing with *GURPS Supers* is possible, but beware of powers that are too powerful or overtly break the laws of physics. Also beware of *justifications* for powers that are anything but "psionic."

If the GM decides to drop in an alien race or three, there are numerous options in *GURPS Traveller: Alien Races 4*, or for creative use of some of the "races" found in the various horror supplements. *GURPS: Aliens* is geared towards space opera and doesn't mesh easily, but the Memer and Serat, Markann, or a variation on the Traders would work.

GURPS: Special Ops is also handy for modeling the cutting-edge soldiers Earth's security forces will develop to deal with Specials.

Champions: Most characters should use the Mentalist template, though there are excuses for low-powered Bricks and Energy Projectors. A Low-Powered Campaign (150 base points and a maximum of 100 points of disadvantages) is recommended, and there is room to lower this even more.

Silver Age Sentinels: Use the game's definition of a Low-Powered Game for character creation, with sanction for increasing STR or INT past 24 if a reasonable justification can be provided. Some characters will be Psychic class, but players should be allowed to use the more flexible Adventurer class if they wish -- so long as they are using the Psychic *archetype* (see page 155 of the *Silver Age Sentinels d20* book).

As a fairly standard *d20 System* game, there's a wide variety of "modern" supplements that will be useful, notably *d20 Modern* itself. Aliens and alien technology can be culled from a variety of different games based on the system, and not just the science fiction ones. The author's "Special" campaign used *Call of Cthulhu d20's* Fungi From Yuggoth (with the serial numbers filed off) as the major non-humans of the Sanctuary Dyson Sphere.

Mutants and Masterminds: Begin characters at Power Level 5, and be careful when handing out Power Points. In particular, consider the "Other Rewards" on page 151 of the Core Book as options to keep advancement low.

As a heavily modified *d20 System*, it's more difficult to slide in elements from other books. As of this writing there are no supplements from *Mutants & Masterminds* publisher Green Ronin that would be particularly useful when implementing a "Special" campaign.

Iron Ref: Time Travel

Proxymate Causes

by Greg Porter

The cell phone rang while I was tending bar at Past Presence. The 'special' phone. It hadn't rang for two years.

It was the Pushers again.

I hadn't missed them. My leg still aches in the winter. I tell myself that the 6 mil I won in the lottery more than makes up for it.

*Pushing **anything** back in time required more energy than most 21st century cities consumed. And that was for little things like electrons and photons. Anything more than micrograms of matter was out of the question. But information was easy.*

So they said.

I smiled, and imagined the lights of some future New York City dimming every time the phone beeped.

I let it beep five times before answering . . .

Background information

It's the early 21st century. You're a child of the late 20th, no one special as far you could tell. To the Pushers, you're a 'cipher', which is a nice way of saying that you would have made no measureable difference in the course of history. Not only that, but you died young, *and* died in a way that was precisely recorded in a way that made it into the Pusher's records. By means of a tiny, precisely targeted pulse of energy from the future, you were made to flinch, duck or hesitate, and it saved your life. *Actually, their aim wasn't that good, and they were unsuccessful at saving hundreds of history's other red-headed stepchildren before they finally got lucky with you.* Once you had been pulled from the normal flow of history, the Pushers managed to get information to you on how to win the lottery, and with the winnings, pay for the construction of devices to intercept their broadcasts and forward them to your special 'phone'.

Once communication was established, you and several other ciphers did a job for the Pushers. *Not all of you survived.* The survivors each got winning lottery numbers. Multimillion jackpot numbers. *We may be in touch again,* they said.

Mission

The Pushers do not operate from *a* possible future. They operate from the *only* possible future. The character's actions will rewrite this future, but only within the extent of their mission parameters. As a result, the Pushers don't want to make changes to the past unless their present is so awful that *any* change would be for the better. This is the case, *again.*

The Pushers are engaged in temporal war with the Preservers, a fanatic but less temporally capable group. The Preservers feel that adversity, ruin and rebuilding are necessary for the evolution of humanity, and the situation the characters averted last time has thwarted that destiny. For the past two years, the Preservers have been setting up their own network of agents. These agents were responsible for smuggling a viral plague out of Africa, and spreading it via international air hubs. Immediate casualties were only in the millions, but it remained a pervasive AIDS-like bogeyman for several decades, until it mutated into a highly contagious form. The resulting chaos and billions of

casualties stripped civilization's whirring gears and left it firing on a fraction of its cylinders. The Pushers (or what is left of them) are desperate to alter this past at its earliest possible point.

The characters need to intercept Patient Zero and stop the release of the virus, or at worst, contain its spread.

All of the necessary information will have been burstcast into the character's phones, and can be downloaded to computers for easier viewing. The character closest to the best international airport will be where the other characters initially fly to. They only have a total of two days to prepare, get where they are going *and* get it done, so time is of the essence. If there is any special gear characters need, they either have to own it now, or do without. On the bright side, the characters are all multimillionaires, which means most "normal" adventuring gear is already in their private stash. A few vital pieces of gear are probably leftovers from their last adventure, and whoever has these items will be instructed to bring them. Among them are magnetic card programmers, and short-range jammers disguised as (functioning) electronic voice recorders. The latter item will fuzz most video cameras within several meters, or degrade the picture enough to ruin fine detail. Some things you *don't* want recorded for the future.

The first part of the mission is easy, but if someone gets careless, it can come back and bite them later, or even sabotage the main mission.

The Preservers don't have just one proxy in the past. Like the Pushers, they have several. The records of the future are only sparse regarding one of them. The rest can be traced. Even if they were ciphers like the characters, they still left minor footprints in time.

The first job of the characters is to phone in some anonymous terrorist threats or tips. They have names, flight numbers, and in some cases, passport information or photos. A few are also insiders at the airports, people with access to restricted areas, but only their names are available.

Threats or tips have to be credible enough to be real, and made to someone who can respond with speed and authority. This is easier said than done, since all of the Preserver agents originate *outside* of United States territory, and picking them up when they get here would be far too late.

Let the players stew on that. Casually mention that all US landlines are hooked to the 911 system and police can bypass caller ID blocks. Even unregistered cell phones can be tracked down to the nearest repeater, which in a city might be to within a block or two. And doesn't the NSA's unacknowledged Echelon system do location and voice analysis of *all* phone traffic and electronic communications? If Echelon can eavesdrop on terrorist cell phones halfway around the world, how hard would it be to track down one very important call, if they had a enough incentive to do so?

Maybe they can, maybe they can't. *But the players don't know.* This will chew up some of their irreplaceable time. If they're smart, some of them will be brainstorming a way to get authorities on the tail of the Preserver agents, while others try to acquire any last-second goods and book some overseas flights.

The last lead is the one the Pushers can't reliably tag. They call him Patient Zero. He is male, of Asian descent, of medium build and height. They have no name or picture. Either the information was lost to history, or he ditched all forms of ID before he was incapacitated by the disease. He arrived at a certain gate at Cairo International Airport in a three hour window (which covered several flights) and as far as they can tell, he never left.

The characters have a few edges. First, they have complete floor plans for Cairo International, including utility areas. Anyone who thinks to download this to a laptop and study it during the overseas flight will get a bonus for trying to find their way around. Second, the Pushers have a handful of codes for the magnetic stripe readers on airport security doors. There is no guarantee a *particular* code will work with a *specific* door, but the best of the codes has about a 50% chance on any door but those for the security offices. If the first code doesn't work, each other code is half the previous code's chance. Some credit cards can be re-magnetized as ersatz passcards before characters leave the USA. The last edge is the Pushers themselves. They can, with an error of several meters and several seconds, 'push' a sub-microgram quantity of positrons into the past. When and where this antimatter intersects our timeframe is not very precise, but the effects are like several kilograms of TNT going off (plus a nice burst of radiation). If a character uses

their special phone to leave 'voice mail for the future' and gives a precise enough location on the airport floor plan (another reason to study it), roll 1d6 three times. The first roll is how many seconds it will take for the effect to happen. The second roll is the direction of the scatter on a hex map, and the third is the scatter distance. Reroll distance results of '6' and add to the original distance error. The Pushers have positron reserves to pull this stunt off three times.

Now the bad stuff. Unless characters have exceptional streetwise talent, weapons are out of the question. And even if they could find some in Cairo, getting them back into the airport could be a problem. Even more so than normal, since if the characters successfully made their 'terrorist threats', there will be heightened worldwide alert levels.

Assume each character has a 1 in 6 chance of getting a pat-down search or pulled out of line for a search of carry-on luggage and personal possessions. Anything more dangerous than nail clippers gets them pulled from the adventure. They won't get released from security in time to get to Cairo before it's all over. Oh, and any nail clippers *will* be confiscated. Checked luggage will be screened for guns and explosives, and has a 1 in 6 chance of being hand-searched. Again, serious contraband means the character will get an unwelcome reception when they get off the plane in Cairo.

Last, characters will be seven or more hours jet-lagged, which may be good for minimal penalties on anything involving quick thinking.

Complications

Patient Zero isn't alone. *And he isn't Patient Zero.* The *real* Patient Zero is his anonymous accomplice in the luggage handling area (off-limits to airline patrons). The 'medical supplies' and equipment shipped by Patient Zero are actually viral cultures and a device that the agent in the luggage area is going to attach to the luggage handling machinery. This battery-powered pump will be labeled 'sterilizer spray' in English, and will randomly whir and pump out a mist that settles onto the main baggage conveyor. The Pushers simply *assumed* that their Patient Zero spread the virus through contact with numerous people at the airport, and that in the close confines of their outgoing flights, many of these people spread it through further contact. *In reality, they didn't catch the virus until they landed and picked up their luggage . . .*

Furthermore, the accomplice has over a period of months, smuggled in a pair of pistols, and by the time the characters encounter Patient Zero, each of them will have one. Patient Zero catches the virus from the luggage handler, who got some of the culture on his clothing, and then onto the smuggled pistol.

Doing it

Characters have to stake out the gate area where Patient Zero is supposed to show up, and identify him from all the possible candidates, so they may have to split up. Any potential Zero who is connecting to another flight probably isn't their man. Smart characters will remember that some of the other Preserver agents were airport insiders, and may go behind the scenes to snoop around. They will make the annoying discovery that the multilingual signage in the passenger areas does not extend to the service areas, whose signs are only in Arabic, and might as well be in hieroglyphs as far as most characters are concerned.

If confronted or shadowed in the terminal area, Patient Zero is at least as skilled as the characters, and may set up his own ambush in a restroom, report the characters to Security as doing something 'suspicious' and otherwise try to make their lives miserable while staying anonymous. However, he is not afraid to go out guns blazing if he thinks it will help his accomplice. The airport accomplice is not as skilled. It will take him a while after Patient Zero arrives to get the sprayer from Zero's luggage and get it to the best spot in the terminal. He will tend to panic if he feels in jeopardy. If the pump is in place, he will try to lead characters away from it, attempting to lose them in the angrily chirring maze of rollers, gears and conveyors. If not, he'll turn it on and toss it onto the nearest conveyor, and then either run or try to shoot the characters with his pistol.

Any sort of gunfire will bring submachinegun-toting guards in short order. They will tend to think they have exclusive authority for that sort of thing, and will open fire on anyone else with firearms.

Success?

From the Pusher viewpoint, there is no lag between the character's actions and the results. The Pushers cannot watch events unfold from the future. They can simply look at their current situation and make a judgement as to whether it is the situation they want. If it isn't, they can make contact with the characters and tell them that they've failed, or more likely, the characters will report in with "success!" and get the reply "wrong!". If they take out Patient Zero and the future is still a disaster, some quick thinking is in order. While the airport luggage handling machinery is contaminated (as well as several airport staff), no outgoing flights have landed yet, and there is still time to stop further contamination. But the characters have to figure out what is going on, stop it, and hopefully cover their butts at the same time.

Bad Case -- Characters stop Patient Zero, but the virus gets spread through infected luggage. The outbreak still happens, but lessened by stopping the other Preserver cells. *Is it enough to prevent the eventual mutation of the virus?* Characters who have contact with Patient Zero or the accomplice might be infected, and should probably come up with a story that will get them quarantined and dosed with anti-virals. Failure could be fatal, and the future won't miss them.

Good Case -- Characters stop Patient Zero, neutralize the accomplice, get the airport shut down and have all outgoing flights quarantined on landing (or better yet, returned to Cairo or diverted to isolated military airfields). And manage to stay reasonably anonymous by jamming video surveillance of their actions and having a plausible enough story to avoid getting charged with anything, though it would be a miracle if they manage to avoid being detained for a while.

*The Pushers, or 'my' Pusher, once said there were factions and policy disagreements in his organization. Some wanted ciphers to **stay** ciphers. Too much money, too much knowledge, could be dangerous to the future. He didn't say why he was telling me that. He didn't need to.*

*Six months later. The phone rang. **That** phone. I stopped at the corner to answer it. Dial tone. I never saw the car that ran the stoplight and slammed into four people crossing the street. Where **I** would have been if I hadn't answered the phone.*

Someone out there still likes me . . .

Pyramid Review

Cold, Hard World: The Real World Sourcebook (for *Dead Inside*)

Published by [Atomic Sock Monkey Press](#)

Written by Chad Underkoffler

Interior art by Chris Cooper, Scott Kane, & Chad Underkoffler

74-page PDF (2.6 MB download) from [RPGnow](#)

Chad Underkoffler wastes no time in returning to his praiseworthy *Dead Inside* game, providing extended coverage of the Real World and its role in a game "of loss and redemption." In *Dead Inside*, the author (rightly) spent the majority of his time developing the Spirit World. Playtesters encouraged the further development of the Real World, with an eye to extended storytelling and even Real-World campaigns. This led to a natural shift in tone for the Real World sourcebook. Underkoffler writes that "If the underlying concept of the core . . . book was 'grow,' the keyword of *Cold, Hard World* is 'conflict.'" Let's follow that theme through the book and see where it leads.

It's not as though the Spirit World is the only place to find the Dead Inside, Sensitives, Magi, or the other character types in the game. But the Real World is a . . . well, a cold and hard place, a place unwelcoming to spirit forces but not immune. The Real World is also populated by vast numbers of the peculiar and mostly soul-blind Average People. Part one of the book consolidates information on the Real World from the core rulebook, extends this to give the Real World a more fully realized role in the *Dead Inside* cosmology, and describes Average People and how they perceive the supernatural (if they notice it at all.) The chapter closes with the rules changes needed for exercising supernatural power in the Real World -- a difficult proposition even for the highly ranked being.

While this book focuses on the Real World, it isn't actually the Real World. So, chapter two gives us some new definitions of what's real and what's not in the Real World. The chapter focuses specifically on Places and Times of Power, those special locales and events where supernatural forces may be more easily expressed. Several specific places and events are sketched, along with more generic classes of locale and activity. Another section gives brief but thorough explorations of assorted social groups (human, supernatural, and in-between) which may play important parts in the player characters' lives. With all that backstory in place, the chapter then presents notable non-player characters, drawing together places, events and groups with unique personalities. The chapter closes with example "Things of Power," an assortment of the rare Enchanted Objects which actually work in the Real World.

The third chapter presents an assortment of campaign and adventure seeds, none fully elaborated but each amply clear for inclusion into one's own game. Each includes a situation set-up, a list of characters who might be involved, another list of possible scenes to be played, and a list of plot twists to keep life interesting. New random tables are provided to help the GM who takes inspiration from dice rolling. The fourth and final chapter explores major revisions to the *Dead Inside* cosmology, and how the game might be revised to include favorite fictional tropes or to alter the essential premises of the game worlds. Four overhauls are sketched, from one in which the Real World is preferable to the Spirit World, to another where one does not enter the Spirit World bodily, to another where the walls between Spirit World and Real World are blurred or removed entirely.

The Prose Descriptive Qualities rules engine really shows its strength in *Cold, Hard World*, allowing the author to press through his exposition while seamlessly integrating the necessary game data without distraction. The writing itself is easily up to the benchmark Underkoffler set himself with *Dead Inside*. Fans of Chad's work will find the usual assortment of Easter eggs and cultural sleight-of-hand: a vengeance-driven hero of the night, a scenario plot driven by the need to possess the "Maltese Amulet" and many more.

Previous reviews complained about the relative dearth of art in *Dead Inside*. *Cold, Hard World* improves in this score over the core book, but this is the consequence of being able to rely more on photo-illustrations of our real world, rather than artists' renderings from Spirit World. Underkoffler continues to break up the text further with interesting quotes from luminaries ranging from Samuel Beckett to Baron Munchausen. The layout, as before, is clean, clear, basic, and entirely appropriate for a book distributed by download. Another point which I cherish is its brevity. The author says what needs saying and moves on; he completes the entire lecture in 68 pages of text. This is a refreshing turn in an age where content tends to be driven by economy of print scale and targets of page numbers designed to serve the printing process rather than the topic.

One change from the core book which I sorely regretted was the absence of fiction vignettes to help illuminate the atmosphere and themes of the game. In *Dead Inside* they were a tremendous aid to comprehension. Perhaps it was thought that since the real world was so familiar, no such exposition was needed. Well, it may not have been needed, but it surely would have been welcome.

We return now to the game's espoused theme of "conflict." And the author was entirely correct. With the struggle to use one's spiritual powers in an unforgiving and distant world, with the people and groups vying for influence, control over places or events or each other, *Cold, Hard World* is definitely a place of beings locked in struggles of every sort. That's sort of like our real world, isn't it? But the real test for this book is: Does it add the desired layer of reality without sacrificing the sense of wonder and optimism which suffused *Dead Inside*? After all, it's supposed to be a game of redemption. On the other hand, no one said redemption would be easy. At bottom, this *Cold, Hard World* isn't half as cold or hard as it pretends, if you know where and how to look for the mystery. It's nice to have a directory like this and a guide like Chad Underkoffler around to show the way.

Iron Ref: Western

The Treasure of the Golden Hills

By Aaron Rosenberg

This adventure is set in the northern hills of western Montana. They are known as the Golden Hills, though they are actually dirt-brown and occasionally scrub-green. Apparently, long ago, the area had another name, which meant something like "hills of gold," and the title stuck.

The small town of Hope nestles at the base of the southernmost hill. Hope, Montana is a typical cow town, with only one saloon, one real hotel (though several establishments have rooms for rent above their shops), and several stables and cattleyards. Hope's only real claim to fame is its proximity to the Golden Hills -- and to the treasure that lies buried among them.

Because, so the stories say, the Incans once lived among the Golden Hills. They built a magnificent temple here. When their civilization fell, the temple was abandoned, with all its treasures left behind. And the treasure remains hidden to this day.

Not that people don't look for it. But night comes early in Montana, and the Golden Hills get cold at night. Wolves and bears and other animals live among the Hills, and many of them will prey upon hapless travelers. It's not a safe place to go after dark, and even during the day it's best if you're well-armed and in a group. Even that isn't always enough to protect you -- especially if the Hill Demon finds you.

For years, residents of Hope have frightened their children with tales of the Hill Demon. "Teeth like axe blades," they whisper, "and eyes like fire, and claws bigger'n a Bowie knife 'n twice as sharp." Every strange sound, every odd sight, every disappearance in the Hills was the work of the Hill Demon. And the Demon's become more restless in recent years. People've heard it gnashing its teeth and scraping its claws, and grown men've run from the sound. The Hill Demon rules the Golden Hills, and the man who forgets that rarely lives long enough to regret it.

Starting the Adventure:

The characters can be residents of Hope or visitors. Residents are most likely cowpokes who work for the Tanner ranch, though they can work at one of the other establishments. Most of the people who pass through Hope are there either to sell cattle or to hunt for treasure -- or both. Often a cowboy will ride in with a herd and then, while waiting for the return trip, he'll wander into the hills to do a little treasure-hunting. Not all of them come back.

Either way, the characters have heard stories of the lost treasure. Not everyone believes the tales, of course. Some say they're just local legends, or lies designed to make Hope more interesting. But many do believe them. And, if the stories are true, that treasure is just too much to pass up.

The player-characters can be young or older, though they should not be children nor should they be infirm. No player-character will have much reputation or fortune. It's best if each player-character knows at least one other member of the group.

Important Men About Town:

The town of Hope has four major figures:

Hank Tanner: Mister Tanner is the owner and operator of the Tanner Ranch, the largest cattle ranch in western

Montana. Tanner is well-known throughout the state. He's a tough man, but fair, and he doesn't tolerate slacking, cheating, or lying. His cattle go for top-dollar, and they're worth every penny. Tanner himself is a tall, broad-shouldered man with close-cropped iron-gray hair and a thick handlebar mustache. He walks with a slight limp, and carries a wooden cane with a silver oxhead handle. His word is his bond, and few dare to cross him, though in business he doesn't object to haggling and actually respects a shrewd bargainer.

Sheriff Sean McCoy: Sheriff McCoy is the only law in Hope, though Tanner's word carries more weight. McCoy is a heavyset man, average height, with graying red hair and weather-beaten skin. He came to Hope decades ago and has never left. McCoy is also a fair man, and he and Tanner get along. Tanner leaves enforcing the law to McCoy, and everyone knows that crossing the sheriff means crossing Tanner as well. Consequently, McCoy has an easy job. He stops the village kids from playing pranks, prevents cowboys from driving herds through town (the cattle are taken around to the cattleyards), and puts together posses to go after any man foolish enough to try stealing cattle. But most of McCoy's time is spent corralling drunks at the saloon and breaking up the occasional fistfight.

Rodney "Blaze" Tanner: Blaze is Hank Tanner's son and heir, but everyone in town knows the real story. And anyone who sees Tanner and his small, blond wife knows that the red-haired Blaze is not their flesh-and-blood. Seventeen years ago, a young man stumbled into Hope with his wife and their one-year-old son. They were hungry and poor, and the townspeople took pity on them and gave the family food and shelter. Hank Tanner had noted their arrival, and went to see them. He and his wife had tried for years to have children, but couldn't succeed. So he offered to adopt this couple's boy. And, seeing how wealthy the Tanners were, and how much they wanted a child, the couple agreed. The Tanners got the boy, and the young couple got jobs and enough money to buy a small house. Over the years, they had several more children. The wife became the cook at the hotel. The husband became the town's deputy, and then its sheriff. But the McCoy's never forgot their first son, and never stopped feeling guilty for giving him up. Unfortunately, Blaze Tanner realized that early on, and learned how to use that guilt to his own ends. Young Blaze is the town bully -- as a strapping young man, he can take most men in a fight. He's good with a gun as well, as some luckless cowpokes have learned. And even when Blaze gets in trouble, his adopted father's money and his birth-father's badge can get him out again. Blaze likes to swagger around, insulting strangers, stealing their drinks and their women, until finally they lose their tempers. Then he beats them up or shoots them, or both, and if somehow they win his two fathers cover it up for him. It is sad that Tanner and McCoy, two honorable men, have committed dishonorable deeds for their son, but both men cannot think straight where Blaze is concerned, and he plays upon their weakness.

Professor Anthony Michaels: Known as "Perfesser Mike," this strange fellow is as unusual as he is useful. Mike first arrived in Hope ten years ago, and immediately found work as an itinerant blacksmith. Business was so good that he bought some land at the edge of town and set up a permanent shop. But Mike is more than a mere blacksmith. He is an inventor, and he is always working on some new device. Banging and rattling and sawing sounds can be heard from his workshop at all hours. A short, slight man, Mike seems to quiver with repressed energy, and his dark hair sticks out in all directions as if it couldn't contain his enthusiasm. His hands are always smudged and stained, and most of his clothes have holes in them. Although Mike is odd, he is respected by the townsfolk, and accepted as one of their own. He has never broken any laws, and gets along with both McCoy and Tanner -- both give him their business, and the rest of the town follows suit. And as for his inventions -- well, most of them are harmless.

Our Story Begins:

One morning a cowpoke stumbles back into town. His cloths are torn to shreds, and he is bleeding from a dozen slashes to arms, legs, torso, and face. His empty pistol hangs from his hand, and his eyes are wide with fright. People rush to help him. As his wounds are bandaged, the cowpoke begins speaking, softly, haltingly, so low that people have to lean in closely to catch his words:

"Stone . . . carving . . . can't read . . . treasure . . ."

That's all he says before passing out. But it's enough to send people into a fever-pitch of excitement, particularly that last word. Treasure! Could he have found the lost treasure of the Golden Hills? And only the Hill Demon could have carved him up so badly. Is the Demon guarding the treasure?

Blaze Tanner has heard about the treasure his whole life, and he wants it -- just because he wants to be the one who gets it. He'll happily bully or beat on anyone to get information, or to keep them from getting there first.

The treasure fascinates Mike, plus it could fund the rest of his experiments. He proudly tells the townsfolk that night that he's almost finished his Amazing Treasure Locator, and once it's done he'll be able to find the treasure in no time. This sends Blaze swaggering toward him, threatening that no one had better get to the treasure before he does, but McCoy calms him down.

Although the cowpoke is unconscious in a room at the hotel, he can still provide information. If the characters ask around, they learn that his name is Teddy Graham, and that he arrived two days ago. Which means he couldn't have gone more than two days from Hope itself!

Team Spirit:

The next morning, cowpokes and townsfolk alike prepare to search for treasure. Blaze has gathered several friends, all young toughs, and they're busy threatening everyone else to stay away. Mike has returned to his workshop, announcing that his device should be ready soon. Several of the men Graham rode in with have formed their own group, and say that if they find anything they'll split it with him.

Obviously, it would be ideal if the player-characters decided to form a group of their own. And, since each of them knows at least one other member of the group, this should be possible -- two of them who know each other start talking about it, each one brings in someone else they know, and so on. But perhaps the player-characters decide that this is all a wild-goose chase and they want no part of it. That's fine for now.

The Tablet:

It's only a few hours past noon when one of the townsfolk comes running back into town, giddy with excitement. They've found something! That sends even the most disillusioned running after him, back into the hills. They catch up to him at the top of one of the outer hills. And before them, set into the ground, is a square tablet. It is some sort of stone (marble, though most of the people here won't recognize that), and has been crafted -- its sides are smooth and even, its top perfectly level. And neat rows of symbols have been carved across the top. No one has ever seen a tablet like this before, and nothing in the region's history mentions it. But it is obviously old, and so most people assume it must be tied to the treasure somehow. But how? And, if those symbols are writing, what do they say?

The Secret of the Tablet:

The tablet was placed there by the Incans who once lived in these hills, and the carvings on its surface are in their long-lost language. The carving says "look upon the radiance of the sun, for its rays shall lead you to righteousness." The important thing about the tablet isn't its words but its placement. If you stand facing it at sunset, the sun's rays peek over the hilltops. Then the sun slides lower, and most of its light is blocked out -- except for a single ray, which slides through a notch carved into the hills. That ray creates a straight line directly to one of the other hills -- and, more specifically, to a spot at its base. This is the entrance to the lost Incan temple, and to the missing treasure.

The Secret of the Golden Hills:

The original name of the hills was not "hills of gold" but "mounds of gold." The Incans did built a fabulous city here, with many of their famed stepped pyramids. When they fled, the buildings were left vacant. Over the years, rain and wind deposited dirt and water upon the buildings, slowly coating them. The structures disappeared beneath soil and later even grass, but retained their overall shape. The Golden Hills are the lost Incan City. And the hill whose base is lit by the sun at sunset is the missing temple.

The Secret of the Hill Demon:

Professor Mike is a brilliant inventor. Crazy but brilliant. His Treasure Locator doesn't work, and never well, but many of his inventions do -- and sometimes they work too well. Shortly after settling in Hope, Mike decided to build a device to find the treasure. He reasoned that he'd need something to hunt for it, so he patterned his device after a natural hunter -- the wolf. He even used a dying wolf for the frame, and in true mad-scientist fashion he linked the wolf's brain to his machines. The result was a whirring, clanking mass of gears and cylinders that resembles a flayed wolf with razor blades sprouting from every angle. When Mike turned the device on, it bounded away into the Hills. He has never been able to catch it since. This is the Hill Demon. It still has the mind of a wolf, and wants to hunt, but has trouble controlling its metal limbs. The Hill Demon has actually been responsible for several deaths, and for injuring Graham, but it can hardly be blamed. It is, after all, a wild animal, and for the last ten years it has been in constant pain.

Possible Endings:

How you choose to end this adventure is up to you. Perhaps Blaze will threaten the characters, and go so far that even his fathers cannot protect him. Perhaps Professor Mike will find a way to capture and deactivate the Hill Demon, and can help the player-characters explore the temple. Perhaps the Incans took their gold after all, and left nothing behind but some loose jewelry and a few clay pots. Whether the characters get the treasure is less important than how they handle themselves. Defeating the town bully is a satisfying story in and of itself, and the treasure may simply be a backdrop. Or perhaps the characters find themselves in the roles of peacekeepers, as everyone else goes gold-crazy and the sheriff is overwhelmed. Or the gold may become secondary as the town decides that the Hill Demon has become too much of a threat and has to be hunted down for good. Ultimately, as long as the players have fun, your story will be a success.

Iron Ref: Fantasy

The Key

by Owen K.C. Stephens

The Key is a fantasy adventure designed for experienced heroes who believe in doing the right thing. The adventure is fairly straightforward, but its background and possible complications can generate numerous other adventures.

Our Cast of Characters

Aria Hauge: Half-elf daughter of Rowan and Elspeth Shay, step-daughter of Sedrick Hauge, since Elspeth married him. Aria is a young woman with flame-red hair, bright green eyes, and a tattoo in strange handwriting on her (always concealed) back. She doesn't know her true father isn't Sedrick.

Elspeth Hauge: Elven wife of Sedrick Hauge. Has a daughter, Aria, by her first husband Rowan Shay. A tall, wispy woman who, since her true love Rowan died, has been concerned only for her daughter's well-being. A scholar of great knowledge and skill, but not a spellcaster.

Rowan Shay: A human artificer with flame-red hair and bright green eyes, Aria's true father. Not a spellcaster, but a crafter of magical artifacts and machines. Well loved by the community. Sadly, dead.

Sedrick Hauge: A powerful human wizard lord. Known as a tough but fair man, but secretly willing to do anything to gain power. A grim man with thick, black hair, gray eyes, and thick features.

Adventure Background

Sedrick Hauge is a powerful wizard and minor noble of a border barony. He does a good job of protecting the border and providing for his people, and thus is left alone by his liege. Hauge has carefully nurtured his reputation as a strict but fair ruler, though, in truth, it's not at all accurate. Hauge is a power-hungry sadist, willing to do nearly anything to increase his arcane powers. He is also, however, an intelligent realist. Hauge knows that if his dark side is revealed, someone will come to depose him. He hides his less savory studies and works to keep his lands reasonably peaceful and quiet.

Among the learned men in Hauge's lands was the artificer Rowan Shay, who stumbled onto a new way to open gateways to the outer realms beyond the mortal coil. Rowan designed a machine of enchanted cylinders and clockworks that created an Eldritch Gateway to various planes of heaven, hell, and limbo. He built a few small scale models that produced tiny gates allowing numerous imps and spirits through. Frightened by the results, and unable to control the summoned creatures, Rowan destroyed all his models, keeping only one set of notes regarding their construction.

Hauge, hearing of Rowan's work, befriended the artificer and encouraged him learn how to control the gateways, lest some evil wizard discover a similar method and use it to wreak destruction. Moved by a feeling of responsibility, Rowan sought to design a key that would lock away access to the undesired realms reached by the gates. He shared much of his research with Hauge, who, over time, insinuated himself into the Shay family, and eventually became a trusted friend and ally.

Finally, Rowan discovered his key. He could modify the Gateway so it would link only to desired realms. Though this secret was too powerful and dangerous to use, he could not, in good conscience, destroy knowledge that might save his homeland some day. Rowan built a device that etched the secret lore onto his own soul in a language only he could

read. Upon his death, the lore would become an independent spirit and, powered by Rowan's own ghost, seek an innocent soul to attach itself to (becoming legible only to its new host). In this way, Rowan hoped to ensure the secret would never be lost, and never fall into the hands of the greedy or heartless.

Rowan informed Hauge that he had finished, and secreted, the last piece of a safe, working Eldritch Gateway, but the secret was too dangerous to share with the wizard. Though he hid it, Hauge was enraged. He used magics to search for Rowan's secret, but couldn't find it. He eventually decided he needed direct, personal access to Rowan's workshop, something that couldn't be arranged without Rowan raising a stink. Thus, Hauge used his contacts and spells to ruin Rowan financially. When Rowan had a daughter, Hauge managed to have her infected with a rare disease that required an expensive cure. Once Rowan sank ruinously into debt, Hauge had him killed.

This left Elspeth with no resources (not even the money to send to her far-off elven relatives for aid), a sick daughter, and massive debts. Hauge swooped in and offered to marry her. While Elspeth didn't love Hauge, she knew he could care for her and, more importantly, her infant daughter Aria. She agreed, but on the condition she would have sole authority over her daughter. Uninterested in Aria, Hauge agreed. Upon marrying Elspeth he moved all of Rowan's notes and works into his tower, and began construction of the Eldritch Gate. Though he did not immediately find the missing lore that would allow him to control what came through the gate, Hauge was sure it would turn up eventually. Rowan had said the lore was safe, and Hauge believed him.

What Hauge didn't realize was that the lore was etched onto Aria's back, the girl having received it upon her father's death (who is more innocent than a child?). Elspeth knew about the mark, but not exactly what it meant. She kept it a secret from Hauge, at first just out of instinct, and later out of fear he might take her daughter away to experiment on. Her relationship with Hauge never become more than a relationship of convenience, and he spent little time with either her or Aria. Elspeth tried to convince Hauge to treat Aria as his own daughter, hoping the girl, at least, could have a father figure, but that relationship was stillborn as well.

Years passed, and Hauge constructed the uncontrolled Gateway. He became convinced Elspeth knew Rowan's secret, and put her in his dungeon until she revealed it. At this, Aria fled his tower, hoping to find someone to help her mother. Hauge had cultivated the belief that Aria was mad as a result of her (well known) childhood illness, so no aid was forthcoming. Still, he scryed upon her so she could be eliminated as a potential threat -- and found she had the lore he sought! Hauge immediately sent agents out to find her, and offered a massive reward for her return.

Meanwhile, the Eldritch Gateway began to hum . . .

The Adventure Begins

As the heroes are resting at a roadside inn, a young girl with flame-red hair bursts in, obviously exhausted and panicked. The innkeeper and several patrons leap up and yell for her to stop, and move to apprehend her. The girl, Aria, tries to evade them while yelling that "they're almost here." The patrons explain the girl is obviously Aria Hauge, the mad, runaway daughter of the local lord Sedrick Hauge and a large reward is offered for her return. Aria, for her part, doesn't deny this but says it's not important right now -- horrible creatures are chasing her and they will surely attack the inn when they arrive.

In the middle of these explanations, the inn is attacked by undead -- dozens of them. The creatures are emaciated, foul, gibbering corpses that attack with claw and fist. They swarm through the door, jump through the windows, and even slide down the chimney. The undead attack everything alive, and when they manage to bring down a foe, they tear free enough of its clothing to search its back. Unless an undead gets hold of Aria it always abandons its target once it sees its back. An undead that sees Aria (or any other woman with red hair, if the GM wishes to add one), goes for her immediately.

Use undead of a power level well below that of the heroes, such that even with a lot of them the heroes have no trouble defeating them. The challenge here isn't to fight off the undead -- it's to prevent too many inn patrons from getting hurt or killed during the attack and to prevent Aria from being kidnaped. If the heroes aren't the sort to stop at an inn, this scene can be moved anywhere there are innocent bystanders. A bazaar, caravan camp, or even city street all work.

Once the fight is over, Aria assures the heroes that she's not mad, and that her father has imprisoned her mother. She doesn't know why, only that he has become increasingly distant in recent years, and claimed her mother was keeping secrets. The patrons want to claim Aria and return her for the reward, but can be convinced she's dangerous to have around (since the creatures were clearly looking for her).

If pressed about her back, Aria confesses it is marked with letters, and is willing to reveal them. No one can read the inscription but Aria (and even she needs a mirror), but the girl can describe what is written. It is a series of instructions on how to tune "planar rods" to introduce an element of control, but does not explain what a planar rod is, or why this is desirable. Aria doesn't volunteer any of this information if not asked.

The Plot Thickens

Hopefully, the heroes will wish to return help Aria recover her mother, or at least investigate. As long as they have Aria, new creatures (sent by Hauge) seek to recover her every few days. Additionally, if the heroes stay in or near Hauge's lands, they begin to hear of (and encounter) strange creatures from other realms (demons, fiends, and elemental creatures). The people blame Elspeth for the creatures, claiming she's an elven witch cursing the land for her first husband's death. In truth, things are coming out of the Eldritch Gateway, and Hauge can't stop them. So far he's kept their origins quite, but can't do so for much longer. He's so busy he isn't seen outside the tower much, and the rumor begins that Elspeth has imprisoned him.

Clearly whatever is going on is happening at Hauge's tower.

The Conclusion

Sedrick Hauge has exactly the sort of stronghold one would expect of a feudal lord who is also a powerful wizard -- a large stone tower surrounded by a moat and guarded by summoned and enchanted monsters. Hauge has a particular penchant for things that turn foes to stone -- basilisks, gorgons, and cockatrices. He has the magics needed to change such foes back, allowing him to question stoney prisoners if he feels the need. Hauge should have whatever other forces are needed to make a direct assault seem foolish, such as giants, men at arms, trolls, or even an allied dragon. Being a wizard himself Hauge has warded his tower against teleportation, planar travel, and entry by people transformed into the form of tiny animals.

The easiest way to get close to Hauge is to take Aria and claim to be returning her for the reward. This gets the heroes direct access to Hauge in his throne room, though it also means Aria is at risk during any confrontation with the wizard. Alternatively, if asked Aria explains she escaped through a secret passage she found as a child in the lowest basement of the tower. The passage is an escape tunnel Hauge believes to be secret which is unguarded (if he tells guards where it is, it isn't a secret).

The confrontation with Hauge is straightforward -- he fights to the death. The real problem is the Eldritch gate, which continues kicking out demons and other creatures randomly. The thing is extremely difficult to destroy, but can be controlled with the instruction inscribed on Aria. Of course this requires the cylinders built into it be removed to be tuned, and this causes creatures to begin popping out much more frequently. When the heroes go to restore the cylinders (or if they go to destroy it), the Gate produces powerful things to guard it, almost as if it was a thinking creature, requiring another battle.

Going through the lab that includes the Eldritch gate also reveals many of rowan's notes (though not all of them -- Hauge has his own ways of keeping secrets). There is enough to keep the gate from producing creatures, but not enough to control it. There is also a portrait of Elspeth and Rowan, revealing the close similarity between Rowan and Aria in hair and eye color. If asked (once she's rescued) Elspeth confesses to Aria's true heritage, and explains why she married Hauge.

Possible Developments

Even after the main threat has been dealt with, there are lots of places elements of this plot could go.

If the Eldritch Gateway hasn't been destroyed, the heroes must decide what to do with it. Without either Hauge or Rowen no one can really control it. It might be stuck on some particular plane of existence (opening new adventure possibilities), or it might randomly open to a new world on each full moon. It's bound to attract attention, and is too big to stick in a magical bag and take along.

Someone has to replace Hauge as ruler of his lands. The local king may offer the job to one of the heroes, or to Aria and Elspeth, or even to a relative of Hauge's. Depending on how this works out, the heroes could have new allies, enemies, responsibilities, or all of the above.

Whether or not she's the new Lady Hauge, something has to be done with Aria. She has a dangerous secret stuck on her skin, with no good way of removing it. Elspeth isn't powerful enough to protect her daughter from serious threats alone, and Aria has no idea how to use the information transcribed on her, even though she's the only one who can read it. Aria and Elspeth might become traveling companions of the heroes, or might ask them to take a message to far-off relatives of Elspeth's to ask for aid.

Hauge may have decided not to kill Rowan Shay, but fake his death with a combination of illusion and necromancy. Instead of moving to Aria upon her father's death, the lore is etched on her soul simply because it was part of her father when she was conceived. The GM could either drop hints to this effect in Hauge's tower, or have the heroes run across other arcane devices built by Rowan in future adventures.

Appendix Z

Roleplaying the Phone Book

by Eric Funk

"How many times have I told you not to call me on this wall? This is an unlisted wall!"

--President Scroob, *Spaceballs*

What is a phone book? In North America, one sees two main classes of phone book: Yellow Pages and White Pages. The White Pages are a classical alphabetical ascending index of the names of the inhabitants and businesses in the area. Yellow pages are a categorical index of businesses (pest control, pizza, plastics). These may be common knowledge to inhabitants of the area, but people from another age (TL<6 or TL>8) may not know of their existence. At the beginning or end of the book, one might find coupons for a variety of products and services; these may become valid or expire at any time of the year the phone book covers.

"The name Baggins is not safe."

--Gandalf, *Fellowship of the Ring*

Common Services

Unlisted -- This is a service, as the default is to publish all numbers. Buying this "feature" will prevent your number from being sold in an easy-to-use format to telemarketing companies. Characters with cell phone implants should not neglect this extra cost if the provider is not considerate! It may also be of use to secret headquarters as well as adventurers trying to be stealthy. In the United States, the new "[Do Not Call Registry](#)" may solve this in some universes.

911 -- This service was instituted in the early 1980s. Before that, one had to contact the operator, and then convince them that it was an emergency. The only way to contact the police directly involved looking their number up in the phone book.

411 -- This, and similar local numbers, connect a user to an operator who has a (sometimes digital) phone book. There may be a charge for this service and it cannot access unlisted numbers.

0 -- This generic operator assistance is most often used to help with international calls.

"Mr. Whitticam, there's no such thing as San Francisco!"

--panicking switchboard operator, *Auntie Mame*

Luck

Persons with the Luck advantage may try to flip through a telephone book and pick a name or company at "random." The GM can roll a reaction roll against the Universe (see pp. GB118-119) and applying the Luck power, if necessary. This will count as a "use" of the advantage. Possession of the Weirdness Magnet by any member of the party will cause even more unlikely events to occur. The pizza place may be ordinary, but the pizza that arrives may be delivered by a long-lost thought-dead cyborg-ninja ex-wife!

Internet Lookups

Many public service sites exist that allow persons to search for phone numbers over the Internet. Each database,

typically a few years out of date and funded by on-screen advertising, can search one country. Reverse lookups work like the above, but the search is done with the target's phone number to gain the name and address. At TL7 and TL8, studying the Computer Operation/TL skill to 1/2 point is needed to be able to find phone numbers and perform reverse lookups (name and address by phone number). No roll is needed. After TL8, any computer connected to the public networks can perform both the above searches upon voice request.

"If you wish to hear a duck quack, press 7." (beep) "Quack!" (click)

-- 1-800 number, *ND Brokers, Inc.*

Other Databases

Apart from income tax and driver's license databases, other effective databases may be the license plates bureau, and the phone company. Harder nuts to crack would be banks' customer info databases, and auto and home insurance companies. The city water works, electric company, satellite/cable television, and Internet providers could also have information on customers' names, numbers and addresses. More unusual places to look may include large charities, structured religious organizations, electronics chains, and Web stores.

"I'd call, but the phone system in first-century Palestine is terrible."

--Josephus, the genie, *Bernard and the Genie*

To the common man, the exact details of how a phone works may seem magical. In some anachronistic settings, there may actually be magical mirrors or horns that connect the two localities for a brief time. In contemporary campaigns that involve the supernatural, such as [GURPS Technomancer](#), and [GURPS In Nomine](#), telephones can be the subject and conduit of magical powers. Specific phone spells from the former include *Seek Number*, *Borrow Number*, *Wrong Number*, *Identify Caller*, *Magic Switchboard* (see pp. TM18-19). Spells that can work through a phone line include *Purify Signal* (TM17), *Delete Commercials* (TM18), *Volume Control* (TM28), *Radio Hearing* (to see cell phones, TM32), and *Machine Possession* (TM36). In *In Nomine*, it is an innate power of the Cherubim of Jean to be able to call any person they're attuned to without knowing the number, or materialize a cell phone next to them, the Ofanim can travel "by wire," and the Kyriotates can possess electronic devices! (see p. IN94)

Adventure Seeds

"Are you sure this line is clean?" "Of course I'm sure."

--Trinity and Cipher, *The Matrix*

- The book may be used as a list to be followed linearly by uncreative criminals (or in a complex pattern by slightly more creative ones). It may be used to find someone to pass a McGuffin to someone that can be easily found again.
- It may be that the villain forgot or was too frugal to buy the "unlisted number" feature for their cell phone.
- At a scene, there are phone book entries that are circled, marked, or cut out. They may be for a business, or a private resident. If the part in question is cut out, then in order to find out exactly what was taken, the PCs will need to hunt down an identical book of the same year. Particularly evil villains may have already defaced the library's copy!
- The villain makes a threatening call to the heroes, but forgets to use "Call Display blocking" -- the heroes can then see the phone number. If the villain had foresight, they will be using a pay phone. Either way, the team may have time while the opponent is talking.
- One urban myth encountered is that phone companies intentionally insert false entries in the book so that if it is copied, the company can prove that it was stolen. What if this information isn't gibberish, but part of secret messages? If dragons or other long-lived creatures abound, then it could be part of a long message chain.

This article was inspired when someone on Pyramid said, "My roleplaying group was so good they could have roleplayed the phone book!"

American Ley Line: Route 66 (Part Two)

*"Now you go through St. Louie, and Joplin, Missouri
Oklahoma City looks oh so pretty
You'll see Amarillo, and Gallup, New Mexico
Flagstaff, Arizona, don't forget Winona
Kingman, Barstow, San Bernardino . . ."*
-- Bobby Troup, "Get Your Kicks on Route 66"

[Last week](#), we set out down Route 66, America's secret spine, its Mother Road of dreams and despair. Like the Highway itself, we began in Chicago and wound our way through the mystical landscape of the Midwest, through Illinois, across the Mississippi, and into Missouri. This week, our pilgrimage continues, through five more states, along the phantom ribbon of concrete that defined the freedom of the open road for three generations. As with last week's column, we won't be slowing down for every single Sign alongside the path -- it can't be done. Each Sign speaks to the driver who wants to see it; every town or mesa might be magical, if your headlights catch it just right. I can only mention the ones that reflect in my windshield, the ones that look like suitable shoulders to support a Suppressed connection. Let's roll.

*"There is a highway from coast to the coast,
New York to Los Angeles,
I'm a goin' down that road with troubles on my mind
I got them 66 Highway Blues. . . .
Sometimes I think I'll get me a gun,
Thirty eight or big forty fo',
But a number for a name and a big 99,
Is worse than 66 Highway Blues."*
-- Woody Guthrie, "Highway 66 Blues"

Route 66 enters Kansas through a desolated district known as "Hell's Half Acre" outside the lead-mining town of Galena. From this [blasted heath](#), it crosses over the "Rainbow Bridge" (built in 1923) outside Riverton, Kansas, and then swings south to meet the Black Dog Trail, named for the Osage Indian chief Black Dog. Black Dog was born, intriguingly enough, where Chief Pontiac (who gave his name to the Trail through Illinois that Route 66 followed) died; in Cahokia, Missouri. And so the spirit of the land, and of the trails across it, moved west in psychopompic progress. Black Dog's route (which follows Route 66 as far as Claremore, Oklahoma) crosses the site of Fort Blair, near Baxter Springs, where the Confederate raider William Quantrill massacred 87 men on October 6, 1863. Route 66 connects Baxter Springs to the also-haunted battlefield of Wilson's Creek, Missouri, where Quantrill also fought, and killed, in 1861. Victims of Quantrill haunt both battlefields, perhaps caught in the psychic undertow of the Black Dog Trail, where the Osage believed the dead walked to the afterlife. Here are more spooklights (near Quapaw, Oklahoma) and the town of Catoosa, Oklahoma is named for the Cherokee legends of the *Gi-tu-tzi*, the "shining people."

The wild hills along Route 66 played host to considerably darker sorts, as well. Not only legendary outlaws like Belle Starr (born on the future Mother Road in Carthage, Missouri) and Jesse James (reputed to have hidden out in Missouri's -- and Route 66's -- Meramec Caverns), but lesser owlhoots such as the Black-Yeager Gang, the Dalton Gang, and the Doolin Gang swarmed this corridor. Bonnie and Clyde killed a man in Commerce, Oklahoma (on the Highway) in 1934, and robbed a bank in Baxter Springs, Kansas (as did Jesse James, according to local lore). Pretty Boy Floyd held court at the Kentucky Club in Oklahoma City. But Route 66, as befits a road dedicated to the frontier, the liminal space where things change timelessly, also runs through the spot where the Old West is buried. Chandler, Oklahoma holds the grave of Bill Tilghman, the legendary lawman "born on the Fourth of July" (a proxy for America, sheriff as the tanist-substitute for the sacred king). He cleaned up another "Hell's Half Acre" (in Perry, Oklahoma, a ways off the Road) but was gunned down on Halloween Night, 1924 in the "last gunfight of the West" in Cromwell, Oklahoma as he grappled with a knot of [three persons](#), including a "rogue Federal agent." Rogue agent or sacred executioner, charging Route 66 with another slain king as it headed west, into the Red Lands of the Dead?

*"Eldorado fins, whitewalls and skirts
Rides just like a little bit of heaven here on earth
Well buddy when I die throw my body in the back
And drive me to the junkyard in my Cadillac."
-- Bruce Springsteen, "Cadillac Ranch"*

Route 66 runs through Shamrock (for luck) and then McLean, Texas (whose founder died on the [Titanic](#)) in ominously-named Gray County, past the Leaning Water Tower of Groom, and into the "Jericho Gap" right before Amarillo. This boggy stretch of black mud mired travelers on the Mother Road before its eventual paving in 1937, but its dangerous reputation continued for another thirty years. Amarillo itself, although plagued with UFO flaps in 1956-57 and 1965, is a placid backdrop to the real nexus on the Road's path, the "Cadillac Ranch" monumental sculpture constructed by the Ant Farm collective on May 28, 1974 (25 days after the Sears Tower was completed). Ten Cadillacs, from a 1949 Club Coupe to a 1963 Sedan, lie embedded in concrete at the same angle (51 degrees 50 minutes) as the slope of the Great Pyramid. This powerful transformer no doubt helps secure ley transmissions despite the almost complete obliteration of the Mother Road by I-40 in the Texas Panhandle; its vintage Caddy tailfins pull up the telluric energies from the road they rode over, and blast them into the emptiness Beyond.

*"The highway, oh, the highway. No place, in theory, is boring of itself. Boredom lies only with the traveler's limited perception and his failure to explore deeply enough."
-- William Least-Heat Moon, *Blue Highways**

Eastern New Mexico and the western Texas Panhandle past Amarillo are the Llano Estacado, the "staked plains," so-called (according to local lore) because Coronado had to drive stakes into the ground to navigate across the featureless prairie. Coronado was looking for the famed Seven Cities of Cibola (recalling the Seven Stars seen beneath the Masonic arch) and may well have traveled along the "one route by which this plain may be safely traversed," in the words of a later explorer, Captain Randolph Marcy of the U.S. Cavalry. Whether or not Coronado was trying to find a mystical ley nexus to cement El Camino Real or was just seeking [El Dorado](#), Route 66 likely parallels his march. From Tuumcari (from the ominous Comanche *tukamukaru*, "place of lying in wait"), Route 66 runs west to Santa Rosa, where U.S. 64 runs south to [Roswell](#). Just past Santa Rosa, Route 66 originally turned north to Santa Fe, passing another Civil War battlefield at Glorieta Pass, head-faking toward Los Alamos, and drawing off mojo from the Pecos and Santa Fe Trails (east and north of Santa Fe) and El Camino Real (west and south of Santa Fe). After 1937, the Highway simply arrowed west from Santa Rosa into Albuquerque, where the white lady who occasionally dogs the Mother Road reappears as [La Llorona](#).

West of Albuquerque, the ancient Acoma Pueblo (the oldest continuously-inhabited town in the United States) and the sacred mountain of the Navajo, Mount Taylor (which they call *Tso'dzil*, or "tongue mountain"), regard each other across the Road. Further on, the Malpais lava flows stretch beside the road, frozen giant's blood from Ye'iiitsoh, variously translated as "Big God" or "The Monster Who Sucks In People." The twin sons of Changing Woman, Monster-Slayer and Born-of-Water, killed this giant, inhuman mountain entity about 800 years ago, if the geological dating on the lava flows can be trusted. This ties in eerily well with the accepted date of the sudden disintegration and decline of the Anasazi -- whose Chaco Canyon road network (itself bizarrely, perhaps ritually, straight) intersects Route 66 right around Anaconda, New Mexico. Once more, the Mother Road sucks in the energies of the first Americans' sacred geography, and transmits them along its own route. That route crosses the Continental Divide, and then passes the intriguingly named Pyramid Rock and Rehoboth, New Mexico before reaching Gallup (the county seat of McKinley County -- and again we meet a slain king of America in the road). Here Route 666 once branched off and headed north for Cortez, Colorado (it's been U.S. 491 since May of 2003); the real Mother Road, however, heads resolutely west into Arizona.

*"It is because in Arizona the arresting framework, the very skeleton of the earth, is exposed that the scenery is so compelling and meaningful. Its bone structure is superb."
-- Josef Muench*

If New Mexico is thick with the spirits of "Those Who Came Before," then Arizona peels back even that stratum and lays the Highway across the bare bones of America. Route 66 passes through the Painted Desert and Petrified Forest,

gaining who knows what eldritch power from wood that has become stone. Just past Winslow, Arizona is Window Rock, which was Ni'alnii'gi, or "Earth's Center" to the Navajo. Just beyond this omphalos, a [Stone Fallen From Heaven](#) lies a mystic seven miles off the Road in a bowl of diamonds and cold iron -- Meteor Crater, which roadside promoters of the 1930s (delightfully) identified with the [Star of Bethlehem](#). (The Meteor Crater Observatory is now a ruin, in fine Gothick style.) Route 66 pours all this mystical juice past the [maneless mountain lions](#) of the bankrupt wild-animal park near Two Guns, through Canyon Diablo (perhaps acting like a resistor in an electrical current -- or as a capacitor for deadly orgone), and past an ancient Pueblo (or Anasazi?) ball court, first excavated in 1936.

The kachinas -- mysterious and powerful spirit entities of Hopi lore -- [look down](#) on Route 66 from atop the San Francisco Mountains, as it runs from Winona ("don't forget Winona") into Flagstaff, county seat of Coconino County. Against these stark mesas, the [commedia dell'arte](#) love triangle of Ignatz Mouse, Krazy Kat, and Offissa Pupp, from George Herriman's surreal *Krazy Kat* comic strip, unfolded during the years that Route 66 itself slowly emerged from the half-world of conception into hard-paved reality. Whether Krazy Kat and company were the commercial American versions of the "kachina dancers" whose similarly ritualized movements and masks stave off disaster among the Hopi must remain opaque to us -- although it is interesting to note, perhaps, that Krazy and Ignatz ended their dance in 1944. The next year, Robert Oppenheimer exploded the atom bomb and became "Death, the destroyer of worlds."

Looking back at the kachinas from the top of Mars Hill northwest of Flagstaff is the Lowell Observatory, founded here by Percival Lowell in 1894 because nowhere else on Earth would show him the phantom patterns of [Mars' canals](#) so clearly. In 1930, working at Lowell Observatory, Clyde Tombaugh discovered the planet Pluto and perhaps thereby opened a pinhole to the kingdom of the [dead](#) god. As the desert stretches west, the Highway pulls all these planetary energies down and channels them into its great ley conduit past Flagstaff, balanced between Sedona and the Grand Canyon, a veritable Hoover Dam of etheric power. Rumors of Egyptian ruins in the Canyon need not delay us (though we may come back to them another time), nor that of the UFO crash near Kingman, Arizona on May 20, 1953, nor even the Alchemical Wedding of the King and Queen of Hollywood, Clark Gable and Carole Lombard, in Kingman's Methodist church on March 29, 1939. Here, the terrain has become an unearthly [Waste Land](#), with the names floating over it but not touching it in Eliotesque anomie -- [Valentine](#), Antares (the eye of the heavenly Scorpion), Sitgraves, Kingman, Goldroad, finally Red Rock ("come into the shadow of this red rock") at the edge of the state. "And," as John Steinbeck wrote in *The Grapes of Wrath*, "66 goes on over the terrible desert." In two weeks, so shall we.

Coming Up In Part Three: That California Trip, Etc.

Researching Medicine (for CyberGeneration)

Published by [Firestorm Ink](#)

Written Jonathon Lavallee & Bryan Schmidt

Cover by Jason Seabuagh

Illustrated by Nick Bliss, Christine Mozarowski, Avy Price, Jason Seabuagh, & Anlina Sheng

52-page b&w softcover; \$12.00

Here is a curiosity: a supplement for a roleplaying game long thought dead, itself a sequel to an equally dead game. Back before we got gloom-and-doom all mopey style with *Vampire: the Masquerade*, there was R. Talsorian Games, Inc.'s *Cyberpunk 2.0.2.0.*, the definitive RPG of that quintessential 1980's genre, cyberpunk. It projected an early 21st century polarized society of haves and have-nots, in which the armed and dangerous kicked out and up from within the shadows cast by the all pervasive corporate hegemony. Well-supported and popular, the last supplement was published in 1997, *Firestorm: Shockwave -- The Fourth Corporate War Book Two* being the second part of the trilogy detailing the Fourth Corporate War between the two big boys of the setting, Militech and Araska. Although the final page of *Firestorm: Shockwave* hinted at big events for the third and final part, *Firestorm: Aftershock* never appeared. Nor did *Cyberpunk 203X*, the third edition of the RPG that the *Firestorm* trilogy was supposed to lead into. Seven years on and fans of the game are still waiting for both . . .

What *did* appear was a sequel RPG, [CyberGeneration: The Final Battle for the Cyberpunk Future](#). Projecting the timeline of the game forward to 2027, passing the torch to the offspring of *Cyberpunk 2.0.2.0.*'s Edgerunners. The USA has gone corporate big time, morphing into the ISA, the Incorporated States of America. New laws put an end to the Cyberpunk Movement, and only grew harsher after the outbreak of a new virus. The Carbon Plague is fatal to one in ten adults, but it changes the teenagers that contract it. They become one of the Evolved, able to harness the nanites left in their body by the Carbon Plague to a variety of effects. Hunted by the government, they organize themselves into youth gangs -- or Yogangs -- for survival in the fight against the ISA.

CyberGeneration, influenced by anime, was more of a Generation-X RPG. A much lighter game, it employed a stripped-down version of R. Talsorian Games, Inc.'s Interlock system. A modern comparison would be between Eden's UniSystem used in their *Witchcraft RPG* and that in its cinematic sibling, [Buffy the Vampire Slayer Roleplaying Game](#). Originally a supplement for *Cyberpunk 2.0.2.0.*, it received a second edition, a scenario, *Bastille Day*, and three supplements in the *Documents of the Revolution* series: *EcoFront*, *Media Front*, and *Virtual Front*. Now, 10 years on, R. Talsorian Games, Inc. has licensed *CyberGeneration* out to a new Canadian publisher, Firestorm Ink. Their first supplement is the fourth in the *Documents of the Revolution* series, *Researching Medicine*.

As the title suggests, *Researching Medicine* explores the medical world in *CyberGeneration's* Post Cyberpunk Movement setting. It does this in a general manner, rather than looking at the specifics of the Carbon Plague. This includes a look at the role of the Med Tech character type from *Cyberpunk 2.0.2.0.*, now trying to survive in the highly incorporated ISA. It adds a new Yogang, the MASHers, and a new Evolved type, the Medic. The MASHers are, of course, a riff upon the TV series *M*A*S*H*, as is their Yogang skill, "Meatball Surgery." This Yogang skill is developed slightly with three different specialties that aim to provide some differences between characters with the

skill. A nice addition, this is something that the publisher plans to do with future Yogang specific skills. The Evolved Medic's special ability, Sympathetic Healing, is well thought out, and -- pleasingly -- is only really effective over time. The book also includes an optional rule for handling Improvement Points, the game's equivalent of experience points. Intelligent, but not innovative, this option is unfortunately, lacking the promised chart that was supposed to support its use.

The adventure itself is an investigation into the disappearance of a fellow juve. Approached by a young man, the player characters are asked to look for his younger brother, Anthony, whom his parents are now denying ever existed. This comes in the wake of a growing number of kidnappings from the streets of Night City. The leads begin at Anthony's dojo, and take the player characters on a search of his parents' apartment, and into contact with several yogangs, including some MASHers, the goth Nightwalkers, and the ultra-violent Redfist Megas. The trail points towards Night City University, and what would they want with a young boy?

Thematically, *Researching Medicine* is about medical research and ethics, specifically that related to the Carbon Plague. How do you go about conducting experimental research into the nanovirus when there are no test subjects available? Although the climax of the adventure includes a gruesome scene involving the results of such unethical research, the writing never quite addresses the issues it suggests. There is at least room in the adventure for the GM to improvise and, thus, have the player characters come face to face with the issues themselves. To that end, it is all but mandatory that the player characters encounter and interact with, the villain of the piece, rather than just have it as an option as the adventure suggests. It is a pity that the stats for this character are not given. As such there is nothing wrong with the adventure, but it is underwritten and in need of some further development.

Traditionally, the first book from a new publisher receives some leeway for any lapses in its production values. It is an unfortunate truth that *Researching Medicine* needs such leeway. The book certainly needs another editorial pass, and small problems with the layout may prove to hinder a GM rather than help him in running it. As to the artwork, the less said of it, the better . . . except to note that if the best piece in this book is actually at the back in the ad for the publisher's next release, then perhaps, no artwork and a lesser page count is definitely better than, to be polite, disappointing artwork. None of it really feels suited to the setting or the genre, and is invariably poorly handled, such that it detracts greatly from the look of the book. Furthermore, the book's maps are too big and too generic feeling, again at odds with the setting and genre.

That *Researching Medicine* is aimed at long-time fans of *CyberGeneration* cannot be denied, especially considering that the game has figured little on the gaming shelves in the last 10 years. Being successful beyond this niche may prove something of a hurdle for the publisher, but fans at least will appreciate this new book, which is designed as a starting point back into what is now an old game, while also adding a small amount of source material. Hopefully, all of *Researching Medicine's* detracting physical production errors can be put down to first time teething problems, as otherwise, this is a reasonable little adventure that will work well in the hands of an experienced GM.

--Matthew Pook

Pyramid Review

Cthulhu 500

Published by [Atlas Games](#)

Designed by Jeff Tidball

Art by Scott Reeves

Edited by Michelle Nephew

110 full-color cards, rules sheet; \$19.95

required but not included: six-sided die and lap counters

Attention, racing fans. Roll down your tailgates, break out the Space Mead, and get ready for high-speed thrills. Atlas Games is waving the green flag -- at least, it looks like a flag -- and the *Cthulhu 500* is underway.

The object of the game is to be the farthest ahead in the race when the checkered flag waves.

Players pick one of eight vehicles, each with a different set of statistics for how it performs on the track. One or two of them also have special abilities beyond these numbers. Vehicles get two cards each -- one is placed in the middle of the table to show its position in the race, and the other sits in front of its owner where everyone can see what kind of upgrades and crew it has.

The cars' order is determined at the start of the game, and their positions change throughout play. The lead car is placed at one end of the line, and whoever's bringing up the rear is at the other. The game is abstract: There's not a real track, so position is relative. Each vehicle wants to pass the one in front of him, and the car in front wants to "pass" the one at the back. If the lead car passes, his card goes to the end of the line, but a lap token is placed on the vehicle to show that he's lapped the competition. (Counters for the laps aren't included -- a couple dozen ought to do the job.) If every car manages to "pass" the rearmost, they all get a lap token, and now the car that's at the front of the row is in the lead. Since it's all relative, the players could all take their lap tokens off at that point. Of course, it never works that rhythmically in practice, but so long as everyone loses an equal number of tokens, order is maintained.

On your turn, you can take two actions, the passing attempts being one example. You and your opponent roll a six-sided die (also not included) and add bonuses like your driver's skill, the car's base Speed score, and the equipment attached. Faster cars can pass better, but usually have higher Complexity scores -- this will cost someone when they try to repair damage.

Playing an Action card allows you to get things done, like take a Dreamlands Shortcut, cast a spell against an opponent's pit crew, or fix a damaged vehicle without making a pit stop. You can add people to your pit crew like the High Priest of Mojocross, or get more work out of the slovenly zombies by putting Herbert West in charge. Other actions require that you make a pit stop.

In a pit stop, you can put one of your crew behind the wheel (some beings are better at driving than repair work, and vice versa). You may switch Tires (you'll go faster with the Rats in the Whitewalls). There are Mods to add -- some of these may be specialized like Sponsors (a la the Sponsor that Must not be Named -- though this is as much to avoid litigation as anything), but most are booster devices like the Crankcase of Charles Dexter Ward. You can also roll for your crew to repair damage. Pit stops may be a tradeoff, though. Every time you pull over, the car behind you can

attempt to shave off your lead with a free passing attempt (it costs them no actions, but dice must still be rolled).

Aside from free passing attempts, a player not currently taking his turn may use Reaction cards. These have conditions to which they may react, and typically this is something as straightforward as responding to someone's passing attempt or their announcement of a pit stop. Others require specific circumstances, like taking a Turn out of Space and Time that can only be used when someone discards a card.

When the deck has been exhausted once, the Checkered Flag card is shuffled in with the discards. When that card come up in the new deck, the game ends immediately and whoever's in the lead (has the most lap tokens and/or is furthest ahead in line) wins.

Computer generated images are always a gamble, one that rarely pays off. The graphics used here are, strangely, more effective than more traditional art would be. There are as many "Eww"s as "Ooo"s, and the surreal, sometimes Dali-like things staring back at you (many of which are smiling too pleasantly to settle anyone's mind) are entrancing. The cards feel a bit on the thin side, however, and a tougher stock might have been in order.

The game takes three to eight players, though it's a little on the slow side with only three. The cards tend to have a synergistic effect when more players can play off one another, and the deck gets drained faster. Even then, the game comes with many options for speeding up play or drawing things out, so players can get the length of game that makes them comfortable.

As a side note, if you aren't familiar with *Cults Across America*, the *Cthulhu 500* started as a little sliver of that game. Designer Jeff Tidball has carried that same mincing sense of humor and lighthearted approach to design into his card game. It's hard to appreciate just how cleverly the cards all work together until you see them in action. What seems like an unfair advantage for one vehicle or sponsor falls prey to another, less obvious game mechanic later on.

Cthulhu 500 has solid mechanics (in the rules, anyway . . . those things in the pit crew seem a little unstable), a terrific sense of humor, and a nifty concept that places it squarely in the winner's circle.

--Andy Vetromile

Dork Tower!

Dork Tower!

Stormy Weather In Store

Irony: Incongruity between what is expected and what is actually true.

For example, let's say one lived for 24 years in Florida. Hypothetically speaking, mind you. And, in that time, he hasn't had any significant encounter with a hurricane in . . . oh, a couple of decades. And he moves to Pennsylvania. And within 60 days of his moving to Pennsylvania a downgraded dreg of a hurricane – let's call her Jeanne – drops enough water in that state to make my, er, *his* life slightly miserable.

Hypothetically speaking.

Strangely enough, something just like this happened to me on Tuesday. Apparently, when you build your state entirely out of granite, it doesn't drain worth squat. So when you get, say, eight inches of rain in an hour, and it's raining for 18 hours straight, you've got a recipe for problems. As a way of illustration, let's look at the numbers as they relate to my new Day Job:

Percentage of Employees Who Endured Some Problem Directly Tied to Storm 100%

Percentage of Employees Whose Cars Were Rendered Inoperable by Storm 66%

Percentage of Employees Whose Phone Systems Were Rendered Inoperable by Storm 33%

Number of Weeks Prior to the Storm Our Warehouse Had Its Roof Patched 2

Those of you who read [last week's column](#) will recall my travails in getting a truck across the state to load up various paperwork and file copies for our records (most of which is irreplaceable). This led directly to the most bitterly amusing episode of the Tuesday storms, when we looked from our offices into the warehouse and noticed the retrieved boxes getting supremely soggy from the inch of water on our warehouse floor.

I've woken up next to a harsh mistress, and her name tag says "Irony."

So, as I'm trying to figure out why the heck my brakes seem utterly locked (after performing like a champ during the storm itself) and trying to devise a plan for towing a car whose wheels will not turn, I find myself figuring out how to turn this week's gripefest into a column.

And that's when I realized how much possibility there is in using incidents that aren't normally associated with in an area. Let's face it: Hurricanes and Pennsylvania are not exactly synonymous. But it's possible. So are blizzards in Atlanta, floods in Death Valley, and earthquakes in Gotham City.

And when these conditions happen, everyone in the area gets absolutely dumbstruck as they try to deal with the new situation. Sure, everyone in South Florida has their hurricane preparedness kit (usually consisting of half a roll of tape and a dead D-cell). But there are no such preparations in Pennsylvania. And it results in some moron trying to drive past a set of road flares into a lake-like side street, little knowing that his brakes would lock 12 hours later.

I think, at their core, the best roleplaying game sessions are those that bring something different to the mix. It's good to [unexpected the expected](#). And an easy way to do that is to mix up expectations.

Of course, these unusual happenings aren't limited to the weather. Most locations and genres have their expected conventions and story ideas, but digging a bit deeper can turn up things that make the players go, "Whoa!"

For example, an adventure set in the Middle East (the parts that *aren't* war-torn) would be an obvious location for a terrorism-based plot. But what if the heroes stumble onto a plot to, say, kidnap the First Lady? She might have been out there as a top-secret morale boost for the military in a seemingly safe part of the world, and unsavory elements

discovered her presence. Presidential plots are common in Washington D.C., but they *aren't* in other parts of the world, even though they are feasible. (President Bush made a surprise visit to the front-line troops in Iraq last Thanksgiving, for example.)

Or envision a Space adventure where the heroes are assigned to deal with a crisis on a space station: They've lost contact with the station, and although it's a routine mission, the higher-ups are preparing for the worst -- which, of course, the PCs would probably expect. The heroes get a dossier, a map of the station, a list of personnel on the station, and so on. They take a transport to get there . . . and the entire adventure takes place on the way *to* the station: Their ship is assaulted by space pirates, a mysterious space anomaly needs to be dealt with, or the like. It's a typically elaborate gaming adventure, and the heroes *finally* resolve everything and get back on track to the space station . . . only to learn that, in fact, their original mission was entirely routine. ("Sorry; our Hypercom receiver and the Diagonster must have both failed. We're fine. Sooo . . . how're you?")

And, of course, the GM now has a fully detailed space station, ready to use in a future adventure. The fact that the heroes already have a history with it will make that future tale even better.

As a final example, consider a Fantasy game where the heroes are visiting a dwarven undermountain city. While typical adventures might revolve around retrieving a magic item or going further into the mysterious mountain, an unexpected – but still feasible – plot can be woven around a peasant rebellion . . . something usually associated with human kingdoms. How do the heroes react, especially since so many of the rules that cover similar situations in humanity's realm – such as fleeing or retreating to the castle on the hill – don't apply?

Sometimes good plots can stem from something that *can* happen in a place, even if it isn't *likely* to happen there. Opening your mind to the possibilities can make a familiar land seem alien again, and a story that would be hoary elsewhere look fresh.

Just remember: When your car won't move because its wheels are locked because of an unexpected hurricane, those are the brakes.

--*Steven Marsh*

Iron Ref 3: Valley of the Refs

Three competitors. Three minds of the roleplaying world, each representing a different gaming genre, have accepted the Iron Ref challenge.

Three secret ingredients. Selected by a special guest, three ingredients -- plot elements, story pieces, or other oddities -- are selected for the challengers to incorporate into their concoctions.

2,500 words. Each competitor has twenty-five hundred words -- and no more -- to devise a generic scenario in their genre incorporating all three secret ingredients.

24 hours. And they have one day to work their magic.

However, this competition has been even *more* grueling for our competitors! We've run three people through the gauntlet. Our first parts ran in August and September, and this is the end of the beginning. One winner will be chosen each week; 50% of the rating will be based on *your* ratings, and 50% will be based on a 1-5 rating of a group of three celebrity judges whose identities have not been revealed yet.

The winner for each of the three events will face off against each other, with the results of that cosmos-shaking climax scheduled to run the first week of November.

Who shall emerge, victorious, as the Iron Ref?

* * *

Our challengers, and their respective genres, are:

Greg Porter, a self-described "14th-Level Freelancer," author of many classic games, has stepped on a whole colony of butterflies in the Mesozoic era to represent the **Time Travel** genre.

Aaron Rosenberg, owner of [Clockworks Games](#) and creator of *Chosen*, *Spookshow*, and *Asylum*, has donned his 10-sider hat to represent the **Western** genre.

Owen K.C. Stephens, the local hero of *Pyramid* with [Icosahedron Adventures](#), will be tackling the **Fantasy** genre.

* * *

The secret ingredients were acquired from three wise men caught wandering a desert by **Kenneth Hite**, the mastermind behind [Suppressed Transmission](#), and designer of so many cool things that [Google](#) just throws its hands up in frustration.

Stop reading if you don't want to know the secret ingredients!

This competition's secret ingredients are:

- A whirring mass of gears and cylinders
- An inscription in an unknown language
- A red-headed stepchild

Fiddly Bits

The third Iron Ref competition was held from 2:15 A.M. Wednesday, July 21, Eastern Time until 2:15 AM Thursday, July 22, Eastern Time. We had planned to go midnight to midnight, as we did in our first competition, but e-mail problems conspired against our great competition. Nevertheless, our challengers compensated mightily for this inconvenience, and all was right with the event.

This is the third part of our third Iron Ref competition. Our first one was [February 2, 2001](#), and the second was [August 3, 2001](#).

The first part of this competition was [August 6, 2004](#). The second part was [September 3, 2004](#).

Without further adieu, then, here are the results of this competition:

Time Travel: [Proxymate Causes](#), by *Greg Porter*

Western: [The Treasure of the Golden Hills](#), by *Aaron Rosenberg*

Fantasy: [The Key](#), by *Owen K.C. Stephens*

Exploring the Unknown Sea

by Paul Drye

Almost all fantasy adventures take place on dry land. Some may take place under the water, but there's no doubt that most GMs are missing the boat on a major opportunity for adventure: the seas themselves. There are at least two settings on the ocean surface that are rarely touched: the magical oceans of the medieval mind and the more realistic explorations of the Late Middle Ages.

Way, Haul Away

Naturally, if you're going to get your adventuring group sailing the seas, you're going to have to get them on a boat first. A good ship to give the adventuring group is a caravel, a type of ship developed at the end of the Middle Ages for the purposes of exploration. Unlike earlier ships it could sail relatively well against the wind, and they were strongly built. While their exact arrangement varied over time, a typical caravel would be as follows:

The ship is about 70 feet long (not counting another 15 to 20 feet for the bowsprit, a mast sticking out the front at an angle), 25 feet wide, and has three masts besides the bowsprit. It weighs 70 tons. Depending on how fast one wanted to go, it has as many as five sails: square ones on the bowsprit and foremast; a large square sail on the mainmast plus a smaller one above the crow's nest; and a triangular ("lateen") sail on the small mast (the "mizzenmast") to aft. The square sails on the main and foremasts might be replaced by lateen sails if more maneuverability was needed. The whole ship is decked over, and two cabins are added on top, one at the front and one at the back. The triangular cabin at the front (the "forecastle," pronounced "foxel") is for high-placed crew and passengers, while the sterncastle is for the captain.

The tops of the castles were used for combat purposes, as in pre-gunpowder days a height advantage was critical to pouring crew-damaging arrows and ship-damaging heavy stone and metal objects down onto an opposing ship. In a world with magic this is probably less of an issue, as a wizard or sorcerer (especially one with fire spells) will be a devastating weapon. Piracy is difficult under these circumstances, as a pirate is loathe to destroy his opponent and its loot, while the victim has no such qualms. GMs will want to establish a reason why a flame-wielding guardian isn't on board every ship; possibilities include a shortage of available personnel, a sea god-enforced inability to use fire spells while on the open ocean, or specific spells known to pirate wizards or sailor-god clerics that counteract the threat -- fire-extinguishing spells, or spells that temporarily render wooden planks and cloth sails fireproof.

Belowdecks the ship was divided into two compartments, the hold to forward and steerage aft. The hold was used to carry cargo, up to forty tons, while many of the crew slept below the deck in steerage; this was not a comfortable experience, as caravels carried tons of rock for ballast and this left only about five feet of clearance between the wooden floor belowdecks and the underside of the deck above. GMs interested in historical accuracy should note that the stereotypical sailor's hammock was not introduced until the 1500s, after Columbus encountered them in the West Indies.

Also in steerage, as the name implies, were the tiller and compass used to steer the boat. The large wheel abovedecks for turning the ship was a later invention; in the 14th and 15th centuries, the tillerman was down in steerage and couldn't see where he was going. Fortunately this is not a problem on open ocean, and he could rely entirely on the compass and orders shouted from above. The ship could sail in water as shallow as one fathom (six feet, or about two meters).

Total crew complement would be 15 to 20, with an additional three or four officers.

The Gales They Did Roar

GURPS GMs can find information on winds and sailing ships on p. VE158-159, while **d20 System** gamers might want

to refer to the excellent *Seafarer's Handbook* from Fantasy Flight Games (though a realistic campaign will need to shear out some of the wilder flights of fancy). Whatever the system, though, certain points should be kept in mind when dealing with pre-Columbian sea-faring.

Speed of travel depends a great deal on wind speed and direction, and can range from nothing at all to 14 miles (about 12 nautical miles) per hour with a strong wind from behind. With square sails, a caravel had to sail with the wind contained in the 90 degree arc behind it, though with more lateen sails rigged it could handle winds that came from the side and still make progress. Lateen sails were unstable with the wind coming from directly behind, however, and the crew would switch to square-rigged sails if the winds were favorable.

Medieval ships, no matter how rigged, could not sail directly into the 180 degree arc from which the wind was coming (if this arc contained the direction one wanted to go, this was a "scant wind"). If this happened, the ship would tack -- sail at an angle to their destination to bring the wind to their side or behind them, then back again, zig-zagging towards landing. If the wind was coming from an arc centered on the direction they wished to travel -- the size of the arc depending on the type of ship but usually more than 90 degrees at this time -- no forward movement was possible. Even with a wind suitable for tacking, the maneuver was hard work requiring good timing by the captain and coordination on the part of the crew. Each time the ship changes course while tacking, it must "slam" across the wind, which leaves open the possibility of facing the wind too long and falling "in irons" -- the sails collapse while facing the wind, and the ship stops spinning towards the opposite tack. At this point, a Catch-22 exists: the ship needs headway (forward movement) to refill her sails, but she needs to refill her sails to get headway. Modern ships often have backup engines to use; adventurers have magic, prayer, and luck. Less competent sailors will want to use jibing instead, where the ship turns away from the wind through nearly 270 degrees to reach the second course. Though far less effective, it is much harder to lose all momentum this way.

GMs looking to up the level of realism a little should also realize that prevailing winds over any sufficiently large area (such as the Atlantic Ocean, or fantasy world equivalent) blow in one direction at mid- to high latitudes, in the opposite when one reaches the tropics, and are quite calm around the equator. Note that Columbus sailed across one of the wider portions of the Atlantic: he took advantage of the prevailing winds that blow from the coast of Africa to the Caribbean. Further north (between Ireland and Newfoundland, for example) the wind blows towards Europe, while the short hop from Sierra Leone and Recife, Brazil often has no wind at all. Modifiers to rolls for wind direction and strength are suggested, regardless of the game system used.

Bring Down The Sails

Having put the adventurers on a boat moved them out of sight of shore, there are two possibilities for what they might then find.

The Mystical Ocean

For most of the Middle Ages, the Atlantic was a nagging hole on the mental maps of Europeans. To fill it, they invented a wide variety of non-existent islands that were "out there somewhere," and populated them with things that reflected what dwelled in the pre-modern mind: demons and angels, strange people and even stranger animals. Imaginary places such as Frisland, Hy-Brasil, Estotiland, and Antilia filled the North Atlantic.

From an adventuring perspective, one feature of this phenomenon makes it easy to introduce the mystical ocean to a campaign: these places invariably have been visited in the past by dubious-looking old mariners who are now stuck on shore. Plot hooks are made easy by dropping one of these fellows into a seaside inn, and having him pass on miraculous stories and an inaccurate map or two. GMs are encouraged to investigate the names Nicolo and Antonio Zeno if they want some good models for this character.

Going on the Grand Tour: Adventures in a mystical ocean are traditionally very episodic, and lend themselves to a long series of short game sessions. Generally each island is small, and contains only one area of interest. These are usually related in some way or another to the deities of the game world, and examples might include:

- An island containing a rich castle or mansion, which at first seems like a wonderful place until it becomes apparent that the inhabitants are under some offended god's curse.
- An island of monstrous people -- no heads, for example, or no legs and walking around on strong arms and hands.
- An island tormented by some evil presence into becoming a volcano; ending the presence will restore it as a green and pleasant place.
- A small island that dives under water shortly after (or while!) the players visit it. This is traditionally because the "island" is actually the back of a very large whale, but GMs should remember that well-read players will probably be wise to this particular explanation.
- An island where wishes come true, with the usual pitfalls of this particular piece of magic.
- An island containing a magical garden which contains a very magical lake: its water cures any ill. Reaching this island can often be the goal of the adventure -- someone back on the mainland is dying, and a flask of miracle water is the only hope.

Besides island encounters, the GM can also throw in other artifacts of the medieval mind:

- Sea serpents
- Derelict ships mysteriously sailing themselves
- The titanic waterfall at the edge of the flat world
- Ocean water that starts boiling if the characters sail too far towards the equator or is as thick as maple syrup in the north.

Reading for Mystical Ocean Adventures

- *Navigatio Sancti Brendani Abbatis* ("The Voyage of St. Brendan"), in English translation at <http://www.o-r-g.org/~azaroth/university/brendan2/node3.html>. This account of a sea voyage to the west of Ireland was written at a time when the Atlantic was a great mystery to Europeans. Bizarre to modern eyes, it was taken as truth for a very long time after it appeared.
- *The Voyage of the Dawn Treader*, C.S. Lewis. While pitched at children, reading this short novel from an adult perspective reveals all sorts of fantastical elements in a mystical vein. Very much a modern take on St. Brendan.
- *The European Discovery of America: The North Voyages A.D. 500-1600*, Samuel Eliot Morison. Out of print but available in most libraries, Chapter II covers St. Brendan in some detail, while Chapter IV debunks a remarkably long list of proposed Atlantic islands and pre-Columbian voyagers to the New World, including such interesting characters as Earl Henry Sinclair. There is also some discussion of potential forgotten Portuguese exploration up the coast of North America prior to Columbus, the only voyages between the Vikings and the Spaniards that Morison (a heavyweight scholar on the Age of Exploration) takes seriously.

The Realistic Ocean

Most people, if they think of the issue at all, begin the Age of Exploration in 1492 with the voyages of Christopher Columbus. Some might think of the Scandinavian discovery of Newfoundland and Labrador in the 11th century, but generally the whole issue of oceanic exploration feels too late in time to be appropriate for a fantasy campaign.

In fact there was some movement on this front for a nearly two centuries before the famous voyage of the Niña, Pinta, and Santa Maria; for example, the Madeira Islands were discovered in the 1420s, and the Canary Islands no later than the 1340s. While small in comparison to what was brought into the European sphere from the sixteenth century onwards (and largely forgotten as a result), they're more than large enough and early enough to supply models for adventures in a world set in its own Middle Ages. Stick some small islands several hundred nautical miles off the coast of a campaign world's main continent, and you can use them in several ways:

The Straight Dungeon Crawl: This kind of adventure borrows as much from campy spy movies as history, by putting the headquarters of some shadowy organization on the islands, and gradually leading the players here for the climactic adventure. Worshippers of the Evil-Of-The-Month, hidden cabals dedicated to the overthrow of something-

or-other, "opposite races" (good goblins, evil elves) -- the possibilities are endless. If a campaign world has some sort of ancient, extinct civilization, this is the perfect place to put their last remaining outpost. In the real world, stories circulated that the Canary Islands were the tops of the mountains of Atlantis; a world with a similar legend could have some very interesting sites on its mid-ocean islands.

The "New Lands" Adventure: If there's a small, poor kingdom on the coast of the campaign world's large ocean, one motivation to head out and explore would be finding new lands to conquer. The adventurers are the second group to go to the islands -- they've been discovered recently, and now the king wants to add them to his kingdom. Out go the characters to tame the countryside. This was the motivation for both the Scandinavian discoveries of Iceland and Greenland as well as the Iberian colonization of the Canaries, Madeira, and the Azores, so the GM will want to consider which of the two to use as a model. The former produces adventures in icy, brooding lands full of forbidding cliffs and forests, while the latter puts the characters in an alien tropical or semi-tropical environment that's probably rich in valuables like gold, spices, and rare woods.

In either case, this is the ideal setting for high-powered characters who are in a position to be rewarded by their king. "Thank you for saving our kingdom, here's a noble title. One small catch about your new fief, though...."

The "New Lands" Adventure, One Generation On: Here the islands have been known for twenty years or so, and the necessary ground-breaking is already done. There's one small but thriving town on a good harbor, and sea trade is beginning to swell. Unfortunately, so are attacks by pirates, thieves' guilds warring over the new town, and the anger of those pesky natives. Plus any ancient evils in the land are bound to start coming awake with all the new activity bothering them. Lower level characters would do better here, as they'll have towns and other resources to fall back on like they would on the mainland.

The Trading Adventure: Played the wrong way, this isn't an adventure at all -- "Have the forty tons of grain in the hold moved at all since we left port? No? Well, keep an eye on it just in case...." But with the right cargo, things can get interesting. One useful possibility is livestock. Menageries were very fashionable in the courts of medieval kings, and the more dangerous and exotic an animal, the better. Even sticking to the non-monstrous, a giraffe or an fully-grown male elephant seal in the hold ought to be entertaining. GMs in search of even more spice are directed towards the opening scenes of "Jurassic Park," or a translation of "The Voyages of Sinbad the Sailor." And speaking of spice, turn the forty tons of grain into pepper or sugar and the mariners are sitting on a fortune -- every pirate, privateer, and other variety of high seas mountebank will be after it if some loose-lipped sailor passes on the secret while in his cups.

There's also the issue of getting there to pick up the cargo in the first place. Wherever "there" is, someone had to be the first to make the voyage. It might as well be the adventuring party.

Reading for the Realistic Ocean

- *The Voyage of the Matthew*, Peter Firstbrook. A profusely illustrated book about one of the earliest voyages to North America (John Cabot's English-run expedition in 1497), and the effort to recreate it in 1997 for a BBC/PBS joint venture. Widely and cheaply available in many bookstores' remainder bins.
- Discoverers Web -- <http://www.win.tue.nl/cs/fm/engels/discovery/>. As well as extensive material on the early part of the Age of Exploration, there's plenty of material here on earlier and later sea-faring for GMs not overly concerned with anachronism.

Putting It All Together: Auresta

In 908 the caravel "Three Sisters" was caught in a fierce gale while sailing from Finidel to Muileir, and was blown west-northwest for several days. When the storm ended she was well out into the Fiarnan Ocean, and as she traced her way back to shore she came across an island some 600 nautical miles from the coast. After filling her water casks there she was able to make a safe return to Finidel, where the story of their discovery soon spread. Two years later, King Ervil sent his first expedition to claim and tame Auresta, as the well-watered and forested island had come to be known.

At the head of the expedition were Lord Farnal Tallis and his wife the Lady Cian, a duo of adventurers newly added to the nobility, and granted the "Barony of Auresta" as their new lands. They quickly proved their worth by finding the island's lone inhabitant, the powerful dragon Nikebur. Tricking him into defeat, his hoard of golden and bejeweled items from a previously unknown civilization funded the construction of Edun Keep at the mouth of Siamis Bay. The port town of Uttarma soon sprung up around it, as more adventurers came to follow up on the discoveries of the Lord and Lady, the shipyards of Finidel started using the island's tall trees for ship masts, and fishermen began harvesting the bountiful surrounding seas.

In the twenty years since then settlement has spread up the island's largest river, the Cail (which runs through Uttarma), though most villages are small. The only other town with more than 500 people is Etha, about fifteen miles upstream from Uttarma where the Cail meets its main tributary, the Rhybra.

Siamis Bay itself is notable for the ancient statue carved into the promontory on its north side, which depicts an armored figure with a grief-stricken face, leaning on his sword with his head bowed. Ten times life size, the "Old King" (as Uttarmans call him), has been examined several times by hopeful adventurers, but so far no-one has discovered anything more dangerous than irate seabirds roosting in his various nooks and crannies.

Northwest of Auresta are two smaller islands, also included in the Barony. So far as anyone knows, Mareth and Maresis are uninhabited, but fishermen have begun noticing lights on the smaller of the two islands. Dubbed "Ghost Lamps" by the superstitious seamen, they are in fact the torches and lanterns of a pirate band who have set up on Maresis. Ships have begun to disappear, but this has started too recently for anyone in authority to find it odd yet.

The south of the island is very mountainous, and a half-dozen rivers come pouring out of them at speed -- several spectacular waterfalls shoot over the side of coastal cliffs directly into the ocean. The only notable settlement in Auresta not on the Cail river system is here: Engsea, at the head of Muirenn Harbor. A small fishing village, the inhabitants of Engsea make no small part of their living catering to adventurers heading for the cold, gray mountains of the interior.

Finidel's newest barony is growing fast, but there are still many places in it which have never felt the tread of a human foot. What remains to be found there will only reveal itself slowly.

More Questions than Answers

Bright Lights, Big Dungeon

By Chris Aylott

"It must be great to work in a bookstore. You have so much time to read!"

"It must be great to work in a game store. You get to play all the games!"

Those two lines always make me laugh on the outside while crying in my heart. Fact is, I spend more time balancing the books than reading them. I've got a great new demonstration copy of *Memoir '44* that's seen a bunch of plays . . . by everyone but me. And sometimes entire years go by where I don't get to hack one measly little orc.

I'm not complaining about this -- much -- just noting an unromantic reality of small business. Since I work while many of my friends play, I don't get as much playtime as I'd like. That goes double for the months since mid-June, which have mostly been spent taking care of the World's Greatest Baby.

It takes serious effort to me to carve out time for gaming . . . so how the heck did I end up running not one, not two, but *three* games of *The World's Largest Dungeon*?

Tell Me More of This Dungeon, Sage

For those of you who have been hiding in a *GURPS Fourth Edition* book, *The World's Largest Dungeon* is an 840-page monstrosity of a *Dungeons and Dragons* adventure from Alderac Entertainment Group. It's really 15 dungeons in one, covering levels one through 20 and just about every monster in the *Monster Manual*.

After 10 years selling hobby games and 20 playing them, I'm jaded. This book tripped my Igor reflex. It had to be mine, even if all I ever did with it was play target practice and try to drop all five pounds of it on the cat. I was really hoping to run the game, of course. I just wasn't sure I could find anyone who would want to play it.

I shouldn't have worried. I sprung the campaign on some long-time friends from college and they pounced on it. We're scattered across the continent (some of us haven't even seen each other since the early '90s), so we're playing by posting entries into a Live Journal. We've been playing for a month and it's just like old times. We affect a worldly air of parody -- the paladin was named Twinky McRighteouspants -- but I notice we're claiming all our pluses and trying to squeeze every last experience point out of each room.

That wasn't enough, though. Looking for more excuses to play, I convinced my wife and business partner Deb that I should grab the GM screen and run the game as a pickup game in the store. I figured three or four of our local teenagers would be interested, and that we'd accumulate more players over the first few sessions.

Sixteen players showed up for the first session, and I hastily divided the game into two groups, each running for two hours on Saturday afternoon. Come noon, I grab the WGB, take her downstairs to our game room, and plop her on my lap while I run the games, one after the other with occasional breaks for diapers and snacks.

I didn't expect that kind of crowd. (If you remember my column about our [charity book sale](#), you may suspect I'm not good at expectations. You're probably right.) I figured most of our teenagers are more interested in playing *Magic* and *Legend of the Five Rings* than roleplaying. They do love trading card games, but it turns out they're more than willing to put them down for the right game.

I'm not the only one engaging in irrational dungeoncrawling exuberance. Blogs and fan websites for *The World's*

Largest Dungeon are popping up all over the web. Threads are popping up on RPG bulletin boards as people compare notes on running the game or preparing characters to play in it. **World's Largest Dungeon** fandom may not be a mass movement, but it's caught the enthusiasm of some very talkative gamers.

So what's going on here?

A Few Words with the Dungeon's Master

World's Largest Dungeon line developer Jim Pinto says, "The online commentary has been awesome," noting that fans "really seem to be enjoying" the dungeon. He attributes the success of the book to relatively mundane reasons.

"Region A is solid," Jim says. "Michael Hammes did a great job . . . so [the fans'] initial reaction to the product is all his doing. We really did make a solid book. Even if the story isn't what people want, they have 1,612 encounters to draw on for the rest of their gaming lives. That's six cents per encounter, math geeks. And the dungeon crawler in everyone is excited to about the opportunity to claw through layer after layer of prison-infested mayhem."

Despite his confidence in the book, Pinto was "surprised and flattered" by the appearance of blogs and other net commentary on the dungeon. "I've never written a hit project [before]", he says. "The online commentary has been awesome . . . but I'm anxious to read reviews of Regions F, G, J, K, the heart of the dungeon. That'll be the real test."

The World's Largest Sandbox

James Beadle didn't expect much for the **World's Largest Dungeon**. He says he bought it because, "I'm part of the aging gamer demographic and as such I have disposable income." Beadle felt "it would be a collection of monsters and NPCs if nothing else," but was "pleasantly surprised" by the quality of the writing.

"Most dungeons are room-clearing experiences," he says. "Kill the monster, take the loot, trip the trap, et cetera. [**The World's Largest Dungeon**] has roleplaying in it. That appeals to me, and my players."

Beadle says he expected to use the book purely as reference material, "pulling an encounter here, an NPC there." But when he finally got his hands on the book and "saw the quality of the maps, the premise, the actual content," he decided to run it. This hasn't stopped him from making plenty of changes of his own, filling in empty rooms, increasing the variety of low-level encounters, and adding more roleplaying encounters to bring the storyline to the forefront.

The results appear to be a hit. Beadle and his regular gaming group ("The Sanguine Sentinels") started playing **The World's Largest Dungeon** a few weeks ago at their annual weekend game retreat. "We typically play a host of different board games and RPGs," Beadle says, but for this retreat "we played it for 28 hours and didn't touch anything else." The players then put a long-running **Dungeons & Dragons** campaign on hold to continue playing in **The World's Largest Dungeon**.

Beadle isn't sure why his players have responded so strongly to the game, but he thinks it might be the sheer challenge of the dungeon. "Each player gets two characters, then must play recruits from the dungeon itself -- in other words, monsters that join the party. If one character makes it to the end, the players win." At the time of the interview, Beadle's group of player characters had spent 15 game days in the dungeon and were near the end of Region A, with only three deaths in the party so far. He says he thinks they'll make it to the dungeon's exit, "but I think a lot of monsters are going to be in that ending group."

Mind if We Play Through?

Alex Russo is a typical gamer teenager. He started out in the hobby playing **Dungeons & Dragons** with some friends, shifted over to playing **Magic: the Gathering** and other card games, and has come back to the **d20 System** with a vengeance for this campaign. He's playing a lawful-evil necromancer named Prodius in one of my face-to-face

campaigns.

Russo says he was attracted to *The World's Largest Dungeon* because he was "curious to see how it turned out. A campaign as one big dungeon is easy to mess up, but if it can be done right it has great potential. Plus the book is *huge* and \$100!"

After two sessions, his party is about 20 rooms into the dungeon. So far the game is holding his interest, "but if the storyline doesn't start picking up soon it could get reeeal boring."

He's not sure if he or the rest of his group will make it all the way from beginning to exit. "As I said, the book is huge and some games no matter how good they just seem to lose interest after the first few months; maybe it's because the concept doesn't change and people like fresh stuff." If the party does make it through, however, he's confident he won't need more than his wizard. He says, "As long as the rest of the party can act as my own personal human shields until I reach a higher level, I'm set."

(Russo says the monster he most wants to fight is a nightshade. After a quick look ahead through the book, all I can say is that he may end up regretting that wish . . .)

After All, the Book's Only Slightly Shorter than Everest

When I talk with players and GMs about *The World's Largest Dungeon*, "it's huge!" is the theme that keeps cropping up. Each person has their own version of why they're playing, but "it's huge" seems to be at the heart of the challenge that players are posing for themselves. Can I climb this mountain? Can I beat this campaign, or run it to the finish so my players can beat it?

Perhaps each of us approaches the same challenge from a different angle. My angle seems to be the opportunity to give up control. For years I've run my own games, which always focused more on weaving together plot and character than on traps and tactics. It's strangely liberating to turn myself over to the imaginations of other writers, to focus on the challenge of executing their ideas.

Running this game is like being a musician playing a symphony instead of the composer of the symphony. Can I make it through this piece and keep it interesting from the first note to the last? When I play the piece for different groups, can I play it better each time? Are the little variations of each performance enough to keep the piece fresh for them and for me?

It's hard to tell if our individual excitement about the campaign is going to mean anything in the long term. This may just be another brief flash in the gaming pan, another Hot New Product to be discussed for a month and then forgotten. It's safe to say that many groups that start the dungeon will never finish it, because many groups have abandoned much shorter mega-modules. *Return to the Temple of Elemental Evil* was only 192 pages, only one quarter as large, and how many parties got bogged down in that campaign?

But this is also the month when *Dungeon Magazine* presented an article on "The Best 30 Adventures of All Time." I've only played through some of the adventures on the list, but I was amazed how many memories were brought back by flipping through the article, memories that were shared by other gamers of a certain age in the store at the time. I've already watched my two face-to-face groups compare their opponents and strategies with each other after the game; they're excited by shared experience.

Maybe that desire for shared experience drew Jim Pinto into playing the campaign he labored nine months to develop. He says it's "frustrating and exciting" seeing how his fellow employees respond to *The World's Largest Dungeon* in the Alderac house game. He doesn't know how long he'll be able to participate -- apparently he remembers too many details of the rooms -- but it's clear he's not ready to put his dungeon away just yet.

And me? I'm curious what'll happen when the World's Greatest Baby is old enough to play *Dungeons & Dragons* . . .

Maybe someday I can talk her into running the campaign for me . . .

Pyramid Review

d20 Future

Published by [Wizards of the Coast](#)

Written by Christopher Perkins, Rodney Thompson, & JD Wiker

Edited by Tammie Webb Ryan & Michelle Vuckovich

Art by Dave Johnson, Timothy II, Kalman Andrasofszky, Daniel Falconer, Langdon Foss, Grafikismik, Matthew Hatton, Karl Kersch, Stephan Martiniere, Warren Mahey, Christian Piccolo, Joel Thomas, Chris Trevas, Francis Tsai, & Ronald Wimberly

224-page full-color hardcover; \$34.95

Wizards of the Coast has now formed a troika of sorts with their roleplaying volumes. *Dungeons & Dragons* covers the fantasy genre and *d20 Modern* the contemporary, and now *d20 Future* is supposed to handle all your sci-fi needs. It's not really a core book, however, as you need *Modern* to use it to the fullest. It's not a standalone product, and the new material (including features like action points and wealth bonuses) means the *Player's Handbook* won't cover everything.

As thin as the setting may have been in *d20 Modern*, the background material here is almost nonexistent in spite of drawing a lot from other sci-fi works in Wizards of the Coast's and TSR's past. The bits they do have are mixed in with some character types. The campaigns chapter is preceded by new feats, high-tech skills, and advanced classes -- such as the xenophiles who seek all things alien, the space monkeys who clear planets for colonization, and the ambassadors to other stars. Some of them are even intriguing enough to start charging the creative batteries. But the rest are mixed into the settings chapter to give them a little context.

These are folks like the bughunter, the soldier who gets called in anytime the local fauna start munching on settlers; or the dimension ranger who travels among parallel worlds to keep an eye on developments, find solutions to twin problems, stop invasions, or just explore things one world over. Few of the classes come off so esoteric that the reader would really be at a loss to understand them without the accompanying world information, but perhaps the authors felt the need to bulk up an otherwise slim Settings chapter.

And that's a shame, too, because in the few paragraphs we get about each of these possible roleplaying arenas, we see some good ideas not getting fleshed out. They're doing their own work a disservice by not going into further detail about some of these. Sure, a couple are worked-over re-dos of things everyone else (including Wizards of the Coast) has already done, such as the "Star Law Officers" who uphold the law in the galaxy, but "From the Dark Heart of Space" is a nice horror and skiffy mix (a la movies like *Event Horizon*), and "Dimension X" actually has its heroes trying to stop the unmaking of parallel universes before it gets to their sphere. The writing here gives you a taste, and then stops.

Fans of some of the earlier efforts from Wizards of the Coast (or those works from when it was still TSR) will find nods to some old favorites such as *Star*Drive* and *Star Frontiers* (though nods only). The Klicks from the former are brought into line with the *3.5 Edition* rules, as are the Dralasites, Vrusk, and others from the latter game (although.

sadly, the evil and mysterious Sathar remain absent and mysterious). As little attention as cross-dimensional travel gets, time travel is hardly mentioned, and post-apocalypse roleplaying not only sees no mention of *Gamma World* (an official, licensed Wizards of the Coast product), what there is seems dry as dust.

After that, your background material is mostly progress levels (where the campaign is, technologywise) and some stuff on creating believable star systems. This second part isn't as extensive (or, ultimately, dull) as similar material from, say, the *Farscape RPG*, but then again it also seems to stop pretty suddenly.

The rest of the book is a series of how-tos on the hot topics of the far future. Mutations, cybernetics, vehicles, gear, starships, mecha . . . all this and more is included. Each of these components has its own system. There are Mutation Points for buying mutations, and the number of MPs from beneficial effects must balance with the points from drawbacks. Mecha have slots to be filled with gear, the number depending on the unit's size. Cybernetics are more limited . . . you can only have one more device than your Charisma bonus before you start losing your humanity (noted as negative levels). Robots come in several types like biodroids, bioreplicas, and biomorphs, the naming conventions of which make it hard to recall the differences, and each may have its own rules for building it or using it as a PC.

A lot of work went into the bits and pieces, but while reading the sections (the technology, particularly) it's hard not to get the feeling some of this could have been condensed, combined, or cross-referenced in some way to make it all more accessible and to make the creation processes part of a unified whole. In some ways the chapters feel more like a sci-fi checklist than a focused but expandable system for world-building.

The work of artistic visionaries such as James Holloway have been reinterpreted, and the book is full of sharp-looking starships, angular weapons, and colorfully drawn and painted alien races. Overall it looks much like its Modern counterpart.

d20 Future is more a toolbox for GMs looking to take their campaigns into the future (or off-planet, or into the world next door) than a cohesive look at gaming there with the *d20 System*. You have everything you need except guidance or a sense of wonder. The good news is you're not buying another iteration of the *d20 System* rules; the bad news is you still spend almost as much for a series of methodologies that lack dramatic fusion. Even dismissing a setting, *d20 Future* could still use an injection of the marvel that ought to characterize the future itself.

Spank the Monkey

Published by [Gigantoskop](#)

Designed by Peter Hansson

Illustrated by Peter Svärd

120-cards, six-page rules sheet; \$26

Just when you thought that nobody else could come up with another dodgy title for a game following on from [Roll Call 3: Country Matters](#), along comes one more contender for the "Least Tastefully Titled Game of 2004" award. Yet you have to admire the chutzpa, if not the gall of Swedish publisher, Gigantoskop. After all, they took their first game, checked with English speakers for the veracity of its title, and *still* decided to call it *Spank the Monkey*. Fortunately, the title is the only dubious thing about this game.

Designed for two to six players, the idea behind the game is very simple. A mischievous monkey has gotten loose in the junkyard where you work. With it currently scampering from one junk pile to the next, your boss is none too happy, and directs all of his employees to go capture the pernicious primate. To do that, you need to go grab whatever items of scrap you can find and build them up in a tower in order to reach the same level as the monkey, where you can give it a good spanking! And with the reward of every recyclable can in the yard and free time with the garbage compacter at stake, the race is on to deliver to get on up and deliver that stinging slap. If that means taking out the towers built by your rival employees, then so be it! Of course, it helps that their towers of trash are potentially as unstable as your own . . .

Spank the Monkey consists of a simple rules sheet and a deck of 120 cards, to which must be added a single six-sided die, and a token of some kind. The rules are clearly written and easy to understand, but it is the cards that are really eye-catching. Brightly done in full color, each is nicely illustrated in a cartoon style, and all are very attractive. The illustrations also have a slightly grimy look to them that adds greatly to the feel of the game.

The cards come in six different types. The first is the "Monkey Height" card, of which there is only one in the game. A token is placed on this card during the game to indicate how high the monkey's junk pile is from turn to turn. The most basic card type in the game is the red Junk card. It is marked with one or more dots that indicate how much each piece of junk adds to a player's tower, as well as with a number indicating its strength. This represents how difficult it is to destroy when attacked. Junk cards also have one or more descriptive qualifiers, including "Furniture," "Illegal," "Leisure," "Organic," "Machine," and so on. These determine how effective the other cards in the game will be when played to affect each individual piece of junk.

The card may also have special instructions, such as the "Merry-Go-Round," which forces every player to pass a card from their hand to the person on their right. Many other cards also move the monkey up and down its junk tower when played. In all cases, the instructions on all of the game's cards are very clear and obvious in their use.

The blue Reinforcement cards each strengthen an individual piece of junk in a player's tower when placed alongside its card. The orange Attack cards let players go on the offensive against a rival junk tower, while the attacked player can counter with the green Defense cards. The multi-colored Special cards have a variety of different effects, such as "Floodlight," which allows a player another turn immediately following his current one. Or "Helium Balloon," which will keep a junk tower standing even if the junkyard suffers from the effects of the "Earthquake" Special card, or if the tower suffers from a collision.

Some favorite cards include:

- The "Missile" Junk card, which -- though strong -- destroys everyone's tower when it is itself destroyed.
- The "Boomerang" Attack card, which cannot be discarded, and always returns to a player's hand if the attack fails; thus the only way to be rid of it, is to make a successful attack.
- The "Police Raid" Special card which forces all players to remove any Junk cards labeled Illegal from their towers.
- The "Gorilla" Special card, which turns the Monkey into a Gorilla when a player attempts to spank it, making it harder to be rid of.

The game starts with the token placed on the starting height for the Monkey on the "Monkey Height" card, the value of which is determined by the number of players. Each player receives a hand of five cards. A turn consists of five phases, beginning with the Draw phase in which a player refreshes his hand. In the Build phase, he adds a Junk card to his scrap tower, building a column of cards across the table. By placing a single Reinforcement card alongside its card, any piece of junk can be strengthened.

During the Attack phase, a player can make as many attacks on his rivals' piles of trash as he has Attack cards. These come in three varieties. Hand Attacks can only be made from atop a tower against a piece of junk at the same level in another tower. Throwing Attacks can be made at any piece of junk, whatever the level. Sneak Attacks vary from card to card and are all different. For example, the "Termites" Attack card will only attack the bottom piece of junk in a tower, and if successful, will continue chewing on the next piece of junk in subsequent turns until the defending player can fight off the infestation. Attacks are conducted by rolling the die to get equal to, or greater than the defending Junk card's strength, including bonuses from its Reinforcement card. Both Attack cards, and Defense cards will modify the roll.

Should a successful attack destroy a piece of junk in the middle of a tower, then the ones above it will come crashing down. There is the chance that this will destroy the items of junk as they collide into one another. If a player rolls badly enough, his whole junk tower can be destroyed!

If a tower reaches or surpasses the height of the monkey's junk tower, then its player can attempt to *Spank the Monkey*, and thus win the game. This requires nothing more than rolling against a simple chart included in the rules. The last phase lets a player discard one or two cards, which is useful if he wants to maintain a healthy flow of cards through his hands.

Many of the cards interact in clever ways. For example, while the "Chicken Wire" reinforcement works well with any piece of junk, it gives double the bonus when used to bolster the "Chicken Coop" Junk card. Likewise, the "Scythe" Attack card works better against Organic Junk cards. Some Junk cards provide excellent bonuses, but only as long as they remain at the top of a player's tower. Thus a player must decide if he wants to keep the benefit of the "Old Cannon," which allows an extra sneak attack (but has the chance of blowing up when used) each turn, or continue building his junk pile to reach the monkey.

There is a theory that any sentence or phrase can be improved with the addition or insertion of the word, "trousers." Another theory holds that it works better if the word in question, is "monkey." So any game with "monkey" in the title has got to be good, then. Well, yes -- and despite the dubious title, *Spank the Monkey* is a lot of fun to play. It is also easy to learn, and there is even the slightest of Green messages running through design and look of the game. With its high degree of interaction between the players' junk towers, that allows everyone to dish the scrap on their rivals, combined with a very attractive look, all work to make *Spank the Monkey* one game worth coming back to play again and again.

Hex-Hex

Published by [Smirk & Dagger Games](#)

Designed by Curt Covert

100 cards, full-color tokens, rules; \$18.95

Some games, such as *Uno*, don't have a terribly vindictive element. Oh, sure, effects might hamper another player, but it's not personal; you're just trying to accomplish your goal, and are chugging along, regardless of the other players' efforts. This is *not* the case with *Hex-Hex*, the new card game which combines the speed and accessibility of *Uno* with a vengeance and unpredictability that ensures no two games will look alike.

At the start of each hand of *Hex-Hex*, all players are dealt five cards each. One player then targets a hex at another player, who then uses a card to direct that hex to another . . . who then directs it to another. This repeats until one player cannot play any cards to direct the hex in front of him to someone else. At this point the hex "goes off," subtracting a point from that player and adding a point to the one who directed that spell in him. So, for example, the middle of a hand of *Hex-Hex* might look like this:

- Beth, who has been given the hex by Andrew, plays "Turn Aside Left," which sends the hex back to Andrew.
- Andrew plays "Boost Left/Right," which sends it left or right (Andrew's choice) and causes it to do another point of damage. Andrew decides to send it to Carl.
- Carl plays "Twain," which splits the hex in two, sending one left (to Dave) and right (to Andrew). (Each hex is boosted, and will thus cause more damage eventually.)
- Andrew casts "Deflect Across," which sends his hex to Dave. At the same time, Dave casts "Double Back," which would double his hex and send them both at the person who targeted him (Carl). Carl casts "Null," which cancels Dave's "Double Back." Dave, still dealing with the hex he couldn't "Double Back," casts "Called Shot," which lets him choose a target. He chooses Beth.
- Beth is down to her last card, so it's legal for her to play "Dismiss," which dispels the hex and gives her two points instead of taking one away. Dave can't do anything else with his cards, so the hex goes off, hurting him for two points and giving one point to Andrew (who most recently redirected the hex to him).

Most cards are fairly straightforward, such as "Turn Aside Right" or "Deflect Across." Many cards deflect the hex but have some other effect, such as "Twain" and "Cut to the Chase" (which gives the hex to someone else and forces everyone to discard randomly down to two cards). Other cards disrupt others' plans, such as "Detonate," which causes the hex to detonate immediately. Others can only be used when you don't have any other cards that can deflect the spell, and include "Reflection," which causes both the targeted player and the one who targeted him to receive damage.

Still others change the basic flavor of the game. One version of "Maddening Compulsion," for example, passes the hex to the player's right; that player *must* then use some means to move the card to *his* right, who must then move it to his right . . . and so on, until a player doesn't have a choice and the hex goes off. "Hex Sign" dispels a hex on the person playing the card, and everyone then engages in a game of rock-paper-scissors, where the other players gain or lose

points based on what they throw. And "Deception," which is played at the beginning of the hand, allows the player to play his cards face down; he can lie about which card he is playing, resulting in a loss of points for someone if he's challenged (either the deceiver if he was caught lying or the challenger if the player was telling the truth).

Since players do not get more cards in a hand, each hand is fast-paced and quick; you'll start with five possible cards in the beginning but get whittled down in possibilities. A hand will generally last no more than a few minutes, with a game consisting of as many hands as everyone agrees to -- generally enough so everyone gets to deal at least once. At the end of a game, the person with the most points wins. (In the event of a tie, tie-breaker hands are played until there is a victor.)

At the end of a game, the winner gets to "Lay Down the Law" -- he gets to make up a rule that will be used for subsequent games played in that session. For example, he might say that "Detonate" cards will detonate *all* hexes in play; or he might say that anyone who points a finger during the game loses a point. This is an intriguing aspect of the game, creating changes in strategies and interactions during a session. It adds a nice sense that previous games have an impact on the current game, and by the end of the evening a session of *Hex-Hex* might be a weird, chaotic mass of strange new rituals.

Hex-Hex is not without its flaws, however. First, it absolutely requires more than two players and generally works best with at least four. A two-player version of the game is worse than moot. (In theory, more than six people can play if two sets are combined.) Second, the speed of the game can also mean that it's possible some players may not get to play any cards in a hand. This is especially likely with five or more players. This is exacerbated by the third problem: The cards are printed on some of the stiffest cardstock known to man. Shuffling the oversized deck is a challenge . . . so much so that the company's FAQ recommends that the cards be side-shuffled (which would result in either a long process or a lousy shuffle).

Finally, the rules are not as clear as they should be, especially given the nature of the game. For example, "laying down the law" has almost no concrete rules, and nothing outside of common sense seems to keep someone from defining a rule that says, "I, Steven Marsh, will always start the game with 50 more points than the rest of you." Reading the website's FAQ is almost mandatory, and even so there are bound to be situations in the first few games that a group will need to sort out. Fortunately, there don't seem to be any game-breaking decisions that can be made, and a group that keeps its common sense and remains consistent in its interpretations should do fine.

In all, *Hex-Hex* is a remarkably fun, fast-paced game. Its emphasis on speed, unpredictability, and continuous play make it an ideal beer-and-pretzel game for those able to get together a bunch of friends to play.
